In recent years irrigation and milling machinery from America has been successfully introduced into Syria, especially into Palestine. Small flour mills with stones are preferable, as the flour must be ground very fine, and iron discs for such grinding are not suitable. The discs become hot and "burn" the flour. The attempts of local merchants or importers (without technical knowledge) to introduce in the Near East grist mills, or flour mills with iron discs, as used in the British colonies, which are cheap, but cannot produce the very fine flour which the Oriental peasant requires, prejudiced that line of British small agricultural machinery, and gave American and Austro-Hungarian manufacturers an opportunity to secure a large share of the market with their small horizontal stone mills. British flour mills fitted with Derbyshire stone have been found suitable in some agricultural districts, but in quotations it is advisable to quote also the price of the mills without the stones, as many buyers prefer to fit them with local mill-stones, which are suitable for grinding very finely either wheat or barley, or both, mixed, as is often done in the Near East. It is hoped that some means will be found before the summer comes to supply Palestine, Egypt, and Greece with pumping and milling machinery, which, according to recent reports, are very much needed in the rural districts.

Barter in Teheran.

It is reported that some enterprising people in Teheran propose to establish a large "American store" in that town, chiefly for the sale of hardware, kitchen utensils, and small machinery for domestic use. Instead of taking payment in cash, the idea is to trade with the natives for small-sized rugs, skins, and other Persian products. There is doubt that the enterprise will be very successful, for it is a kind of dealing that appeals to Orientals, who, in their desire to obtain something that they fancy, may easily give a fine Persian rug or a valuable skin for a saucepan or a dollar clock.

THE IMPERIAL OTTOMAN BANK.

As a result of recent military events, the London and Manchester offices of the Imperial Ottoman Bank are again in a position to do business with their Jerusalem and Jaffa branches. These, of course, are not the only branches with which, since the war began, the bank has been for a time unable to communicate or do business with. The full list of branches in communication with London and Manchester is as follows:—Paris and Marseilles; Alexandria, Cairo, Port Said, Mansourah, and Minieh, in Egypt; Larnaca, Famagusta, Limasol, and Nicosia, in Cyprus; Salonika, Mitylene, Rhodes, Busreh, Jerusalem, and Jaffa.

Messrs. David Sassoon and Co., Ltd., announce that they have removed from 12, Leadenhall Street to 9, King William Street, E.C.

LANCASHIRE COTTON.

A Stronger Market.

(From Our Own Correspondent.)

MANCHESTER, Wednesday.

The strong feeling in the market has been well maintained. It has been very difficult for buyers to operate without paying full prices. Rather violent fluctuations have occurred in American cotton rates. Owing to the further cut in production, it does not now require a large amount of fresh business to keep the position of producers healthy, especially in view of the extensive requirements of the Government and the home trade. Although stocks of Egyptian cotton in Lancashire are extensive, further supplies are not coming in very freely, and the advance in war risk insurance rates from 5¼ per cent. to 6 per cent. has had the effect of stiffening values in Liverpool. Egyptian yarns continue to do very well, and we are able to report a larger turnover, especially in combed qualities. Producers have been very independent when fresh business has been offering. Shippers of cloth to Egypt have recently been much relieved by the larger amount of tonnage available, and substantial clearances from Manchester warehouses have been effected. The improved inquiry has continued, and miscellaneous sales have totalled to very fair dimensions. India has given rather increased support in light fabrics and printing cloths. Only occasional transactions have been mentioned for China, chiefly in Mexicans. Very few manufacturers are at all anxious for fresh orders. American yarns have been decidedly strong, and prices tend to advance, quite irrespective of raw cotton rates. There has been an urgent demand for prompt delivery, which has not been easily met. Export numbers have been sold in fair quantities for France, but Indian demand has been rather quieter.

COTTON PRICES IN INDIA.

Replying to a communication from the Controller of Prices regarding the desirability of preventing speculation and fixing a maximum price for cotton, in view of the recent rapid rise (says Reuter's Bombay correspondent in a message dated March 4), the Cotton Trade Association gave it as its opinion that it is inadvisable to interfere with the price, which is not abnormal but is due to the shortage of the world's supply. The association agreed on the necessity of steps for the control of speculation by outsiders. If a permanent remedy is sought the Government should grant the association a charter enabling it to control contracts similarly to the Liverpool Association.

NEWS FROM ALL SOURCES.

Messrs. Thomas Cook and Son have reopened their office in Jerusalem.

India's imports in January amounted to Rs1,02,10,000, an increase of Rs7,52,000 on the figures for the corresponding month of last year, while the exports amounted to Rs1,53,48,000, an increase of Rs7,16,000.

Commander A. Houghton, R.N.R., President of the Mercantile Marine Service Association, whose death occurred recently at Liverpool, served for 25 years in India under the British India Steam Navigation Company, for 17 years being in command.

This year there is 35 per cent. more land in Egypt growing cereals than there was last year. All the crops are reported from 1 to 2 per cent. above normal, with the exception of wheat in Lower Egypt, which is 3 per cent. below, owing to the insufficiency of chemical manures. Cotton sowing is delayed on account of the cold and wet weather.

Sir C. Kirkman Finlay has resigned his seat on the boards of the Anglo-Persian Oil Company, the Bakhtiari Oil Company, the First Exploitation Company, and the British Tanker Company, and the vacancies thus created have been filled by the appointment of Mr. R. I. Watson, who is a director of the British Petroleum Company and a member of the London Board of the Burmah Oil Company.

SUEZ CANAL TRAFFIC.

Under the rules of the Suez Canal Company, if any cargo is once carried in a space exempted from the tonnage of the ship, that space is added permanently to the tonnage of the ship, and canal dues are charged on that space for ever afterwards. This prevents owners from carrying any goods whatever in the superstructures and other exempted spaces, and it is most important at the present time that ships should fill up every available space with foodstuffs and other essential commodities.

The Board of Trade recently proposed to the Suez Canal Company (says the *Board of Trade Journal*) that as a war emergency measure the above rule should be suspended during the war, and that if the cargo were carried in an exempted space, dues should be charged on that space on each occasion on which it was occupied by cargo, but that the space should not be permanently added to the tonnage of the ship. The Suez Canal Company at once, without any hesitation, accepted this suggestion as soon as it was put before them, and official letters have been sent to the Shipowners' Associations informing them of this decision.

G.C.R. AMBULANCE TRAIN.

An ambulance train for the American Army has just been completed at the carriage works of the Great Central Railway, and on its way to the port of embarkation the public will be given an opportunity of seeing it at the principal towns through which it passes, as follows:—London, Marylebone Station, Saturday, March 16; Leicester, Central, Sunday, March 17; Nottingham, Victoria, Monday, March 18; Lincoln, G.N. Passenger, Tuesday, March 19; Cleethorpes, Passenger, Wednesday, March 20; Sheffield, Victoria, Thursday, March 21; Manchester, Central, Friday, March 22; Liverpool Central, Saturday, March 23. The train may be styled as a "first aid" or "clearing" train, its prime functions being that of removing the sick and wounded from the battle area rather than that of a strictly "hospital" train. A charge of 1s. will be made to view the train, and the entire proceeds will be handed to the Red Cross for the purpose of providing additional comforts, etc., for our sick and wounded soldiers.

THE SERBIAN MISSION.

The Lord Mayor of Liverpool has received a letter from the Serbian Minister, written on behalf of the Serbian Government, expressing sincere thanks for the manner in which the members of the Serbian Industrial mission were entertained in that city.

COMPANY REPORTS.

Smyrna-Aidin Railway.

The report of the Ottoman Railway from Smyrna to Aidin states that the Ottoman Government still remains in possession of the railway and its revenues. The accounts now presented are for the half-year to December 31, 1917, and incorporated therewith are the accounts from Smyrna to August 31, 1914, since which date no further returns have been received. These accounts are subject to adjustment as and when later returns are received. Certificates for the debenture interest for the half-year to December 31 last, amounting to £74,175, have been posted to the Four per Cent. and Five per Cent. debenture stockholders, in accordance with the resolutions passed at the special meeting of shareholders held on June 10, 1915.

COMPANY NOTES.

Dividends, Payments, etc.

The directors of the Assam-Dooars Tea Co. have declared an interim dividend of 5 per cent., less income-tax, the same as a year ago.

In view of the delay in the mail service from the East, rendering it impossible to hold the general meeting for a few weeks, the directors of the Eastern Bank, Ltd., have declared a dividend for the year ended December 31, 1917, at the rate of 7 per cent. per annum, less income-tax. Warrants will be posted 28th inst.

Oil Outputs.

Baku Russian Petroleum.—Production week ended January 26, 63,375 poods.

Maikop Orient Oil.—Plot 435a, well 3.—Production for week ended February 23, 13,400 poods.

Bibi Eibat Oil.—Production for week ended January 20, 36,967 poods, or 596 tons.

British Burmah Petroleum.—Total production of crude oil by this company and Rangoon Oil Company, Limited, amounted to 72,207 barels for February.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business continues on a very restricted scale and the reactionary tendency noted last week in connection with subscriptions to War Loan has continued, but in the present state of the market business one way or the other has an altogether disproportionate effect upon prices. Most of the changes this week are again to a somewhat lower level, but few shares have changed hands on the way down, and any renewal of demand would therefore meet with a quick rebound in prices. All the news to hand from the other side continues very satisfactory in every respect.

In Government stocks the market has been exceptionally firm and both Unifieds and 3½ per cent. Prefs are ¼ better at 87 and 74 respectively, but the scarcity of sellers continues to interfere seriously with business.

In Banks, Agriculturals after dropping to 6¼ sellers, at which price several hundred were absorbed, are finishing unchanged at 6 5-16, some good buying having taken place on the decline. A fairly large business has been done in Agricultural Prefs round 6⅞, a decline of ⅛, since last week. Anglo-Egyptian Banks have been an exceptionally firm spot and are a further ¼ up at 15. National Banks have receded ⅜ to 18⅛ on some small selling in a market without support.

In Railways Delta Light have remained firm at 7. The traffic receipts continue very satisfactory. In Land shares Aboukirs are 6d. lower at 24s., and Behéras on some trifling transactions have fallen ⅛ to 13⅜. Behéra Prefs are unchanged at 4⅛ ex. div. Delta Lands have changed hands in a small way at 14s. 6d., a decline of 6d.; whilst Foreign Trusts are 3d. higher at 10s. 9d.. some business having been done as high as 11s. Gharbieh Lands are ⅛ off at 2 without coming to business, and Union Foncières have shed 1-32 at 3 1-16. In New Egyptians transactions have been on a fair scale and the price is 6d. down at 18s. 6d. Sidi Salems have receded 2s. 9d. to 46s., in consequence of a few sales on an unwilling market, and United Egyptian Lands are 3d. easier at 1s. 6d.

In Miscellaneous shares a fair amount of business has been going on in Markets round 26s. 9d., and also in Salts and Sodas chiefly between 40s. and 40s. 6d.: but the price in the latter instance closes 6d. down at 39s. 9d., there being sellers to-night on the market at 40s. In Khedivial Mails the generally easier tendency of shipping shares has caused a decline of 1s. 6d. to 38s. 9d.

Greek securities have been neglected apart from some transactions in Monopolies at 50½, a decline of ½. There are still sellers of "Currant" Bonds at 95. Bank of Athens shares have risen ¼ to 3½.

INDIA GOLD STANDARD RESERVE.

The following statement shows the form in which the balance of the India gold standard reserve was held on February 28:—In India: Nil. In England: Cash placed by the Secretary for India at short notice, £6,014,499; British and Colonial Government securities (value as on September 30, 1917), £18,833,135; British Government securities since purchased (cost price), £9,123,177—total, £33,970,811.

The *Deutsche Tageszeitung* says that supplies of petroleum in Germany are much less than last year despite all reports of progress in the production of oil in Roumania. The paper states that large quantities of petroleum are converted into lubricating oils for use in submarines.

The Greek Government is drawing up a Bill for the introduction of the metric system.

The accounts of the Tunis tramways for 1917 show a net profit of 686,597 francs, as against 619,746 francs in 1916. It is proposed to pay a final dividend of 1 franc per share, making, with the dividend of 3 francs paid last December, 4 per cent. for the year.

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

NOTES OF THE WEEK.

Actual military news from the Eastern front, or fronts, has been lacking during the week. Neither in Palestine nor in Mesopotamia has any advance been made; on the other hand, the Turks made their anticipated entry into Erzerum—which they seem to have set on fire, as a prelude, no doubt, to the further disciplining of the wretched Armenians; the Bulgarians have made a violent attack on Monastir, and the Germans have pursued their "mission of liberation" as far as to occupy Odessa.

The Bulgarian activities have led to some speculation as to a possible offensive against Salonika. Bulgaria having obtained the Dobruja, naturally turns her attention to Macedonia; her desire to recapture Monastir is notorious. Austria, as well as Bulgaria, has ambitions to possess Salonika—a rivalry which has led to some heartburning in the past, and may again in the future; and Baron von Kühlmann, who evidently carries more and more weight in German foreign policy, is a resolute Easterner, as Prince Lichnowsky's Balkan revelations have proved. The general expectation of a Balkan offensive by Germany has derived some support from obscure hints in the German Press, which may mean anything or nothing, and from a chance sentence in a recent survey of the military situation by Mr. Bonar Law, who was not very optimistic as to the future of the Salonika force.

The German occupation of Odessa is another matter altogether. The enemy have now definitely got control of the Warsaw-Kieff and Lemberg-Odessa railway lines, and this serves three different objectives. It gives them the dominating factor in the collection and distribution of food in the Ukraine, which is of very great importance for the hungry folk of the Central Empires; it gives them the Russian Black Sea Fleet, which, although no longer a fighting force, is presumably still useful for purposes of transport; and it opens out to them a road into Central Asia. In this respect it is a further chapter in that great struggle between rail-power and sea-power into which the war has now developed.

The next move of the Germans in this region, if they are to make good their boast of securing a direct route between Berlin and Persia, will be awaited with interest. So far they have met with little opposition on their trip through the Ukraine to Odessa; they may find the going more difficult when they reach the Caucasus. But from this quarter the only news that has filtered through is a repetition of the statement that the Caucasus Republic has opened peace pourparlers with Turkey at Trebizond.

As regards the Roumanian negotiations, General Avarescu has resigned his post as Prime Minister, not altogether unexpectedly. Appointed at a critical moment at a time of supreme crisis, he was unable to secure the terms which he had hoped for from the Germans, and his resignation has been followed by the appointment of M. Marghiloman, who is understood to be more Germanophil. The main German demands are said to be (a) the prolongation of the former commercial treaty; (b) the delivery of surplus agricultural produce as long as the Central Powers require it; (c) the obligatory delivery of the oil surplus; (d) the guarantee of the interests of the Central Powers in regard to Roumanian railways; and (e) the guarantee of their shipping interests in the Lower Danube.

These drastic terms, it is clear, are equivalent to the systematic subjection and economic exploitation of Roumania for an indefinite period. It may be taken for granted that it will be Germany, and not Roumania, that will decide as to the amount of the surplus produce, as well as the rates paid for this export; the Roumanian railways will be run as a provincial section of the Prussian State Railways. And the contention of German professordom, originally put forward by Moltke, that the Danube, being a German stream at its source, must be a German stream throughout the whole course to its mouth, appears to have emerged in the last stipulation.

There have been various political activities in Bulgaria. M. Momchiloff, Vice-Presdient of the Sobranje, declares himself satisfied with the Dobruja settlement, and quotes Marshal Mackensen as expressing wonder that Bulgaria should for forty years have suffered and not tried the impossible to obtain restitution of this Bulgarian land. In other words, the German General is amazed at the moderation of his friends. M. Momchiloff remarked further that "Bulgaria will have her Dobruja without any diminuation of her sovereignty over the province, and without agreeing to economic stipulations. Let us have patience a little longer. Let us have confidence in the fidelity of our Allies and the star of Bulgaria." The published treaty of peace did not make it clear, nor is it yet certain that the sovereignty of Bulgaria over the Dobruja was

Digitized by Google

recognised by the Central Powers—the province was stated to be ceded to them generally. Unless a further agreement has been arrived at between Bulgaria and her Allies—and M. Momchiloff does not even suggest it, whereas he would surely have published it had he had so valuable a document within his knowledge—the disposal of the Dobruja is left to Berlin to bargain with her Ally over it. For the moment, however, all is for the best in the best of all possible worlds at Sofia, with a faint suggestion, however, that "the fidelity of our allies" may become the fly in the ointment.

Conceivably, Bulgaria is to have the Dobruja, if she in turn consents to a frontier rectification with Turkey. These bargainings about territory, which are unwisely dismissed by idealists elsewhere as trivial in comparison with the new world order which is to be evolved, are the very stuff of statecraft in the Balkans, and not in the Balkans only. Turkey is said to have put forward her own demands for a rectification of frontier in the Adrianople district, and the return of the Adrianople-Dedeagatch line which was ceded to Bulgaria four years ago, and she claims that in this matter she has the support of Berlin. The statement is inherently probable, since Germany is almost bound to give Turkey some further compensation for her loss of Palestine and Mesopotamia, and the strip of territory in question was Turkish until the Balkan war. Germany at least has no objection to Turkey in Europe.

The mystery of King Constantine's allowance now appears to be solved. In a Bill laid before the Greek Chamber altering the law with regard to the royal allowance, it is announced that the Greek Government intends to give the ex-King a pension of half a million drachmae; the Government, however, reserve the right to suspend it at will. In other and less official language, the allowance is dependent on his good behaviour. Should he forfeit it, he would no doubt apply successfully to Berlin for a grant from his brother-in-law. The pension is not illiberal—King James II. received nothing from England after his misadventure—but it is not really a large charge on the Greek people, King Alexander's civil list being reduced from 2,000,000 drachmae to 1,600,000. Only 100,000 drachmae can, therefore, be said to be paid to King Constantine, at which price his transfer from Athens to Switzerland is cheap indeed.

The German design on Petrograd and Moscow gradually becomes clearer, but it still lacks definiteness—Moscow, it must be remembered, is the beginning of the trans-Asian railway. But to the south the enemy display no hesitation. They are already at Nicolaieff, east of Odessa, an important shipbuilding centre, and are now engaged in girdling the Black Sea, while inland they are on the road from Kieff to Kharkoff, the great industrial centre of Southern Russia; in these countries they are clearly aiming to secure an economic control intended to be permanent.

The Turks, too, are doing their share in the advance. The reoccupation of Kars may be reported any day, and they will no doubt soon be able to announce their entry into Batum, which is not only an industrial centre that will be useful to their masters in Berlin, but will serve as a jumping-off ground for the Caspian, whence the road to Persia and India opens out before them. It is a grandiose project, and there has been some disposition in England, particularly in quarters that are not too markedly favourable to the prosecution of the war to the bitter end, to treat this as a fantastic scheme repudiated by the sober statesmen of Berlin. But events are proving before our eyes that the Emperor William, like Napoleon and others before him, is dazzled by the prospect of eastern conquest, and that, foiled of his hopes of dominating the west, he has been driven eastwards. It still remains true that the Marne, Ypres, and Verdun were decisive battles in history, but while they saved the outer world from Teutonic mastery, their repercussion on the eastern frontier was not foreseen.

It is impossible, of course, to predict the German movements in the new eastern campaign; nor would it be wise, until more direct evidence arrives, to connect the local outbreak of the Marris, in Baluchistan, with German intrigue. But it is by no means impossible that they are now planning a forward move against the British force in Mesopotamia, and concerting measures for an advance into Persia. As to the former, it would probably be some months before they could throw an army against our forces in Baghdad—they are hardly likely to attempt a campaign during the heat of the coming summer—and General Marshall and the British Government have, therefore, ample time to make their dispositions.

At a time when there is some reason to suppose that the misunderstandings between Italians and the representatives of the Southern Slavs are in a fair way to be replaced by a working agreement between the two peoples regarding their future relations the articles appearing in our issue of last week and this week from the pen of Mr. Richard Bagot will be found of special interest. Writing with a profound knowledge of his subject, Mr. Bagot sets forth clearly the reasons which brought Italy into the war, and places the part which Irredentism played in the matter in its true perspective. On this evidence it is easier to understand recent Italian policy; how it is possible to regard in 1917 claims which seemed so urgent in 1915 as far less important than the necessity for a friendly relationship with the Jugoslav State that is to be.

Prince Lichnowsky has been punished, as was to be expected, for his indiscretion as to his views of German policy in Morocco and the Balkans before the war, as confided by him to his friends, who confided it to a neutral newspaper. It is quite clear that Prince Lichnowsky belonged to the older type of German politicians—a type which had considerable following and influence as recently as ten years ago. He inherited Bismarck's opinion that the whole of the Balkans were not worth the bones of a single Pomeranian soldier, and he distrusted altogether the policy of overseas adventure in Morocco, which culminated in the diplomatic defeat of Germany at Agadir. Undoubtedly his leading idea was to cultivate good relations with England and indirectly with France, and his tribute to Sir **Edward Grey** (as he then was) is frank and sincere. It is curious that the most convincing justification of British policy in the Balkans, which has often and with some reason been criticised here, should come from the last German Ambassador to London.

Since Prince Lichnowsky's opinions as to both the Balkan and Morocco policies of Berlin could scarcely have been unknown in the Wilhelmstrasse, it would remain somewhat of a mystery why he was ever appointed to London, were it not for the fact that Germany may have realised the advantage of having, as it were, an honest dummy to cover her real aims. Prince Lichnowsky was the face, Baron von Kuhlmann the brains behind the face, of German diplomacy in London before the war. It was not merely a dishonest but a dangerous policy which Germany pursued in London, but it does in fact seem to have achieved its purpose of misleading those who naturally thought that Prince Lichnowsky, as the accredited representative of his Government, was expressing their actual view. On the stage it is said that the good actor is not he who only feels his part, but is his part; Prince Lichnowsky came under this classification, because he was not an actor, but was sincere, and his sincerity misled England as to Germany's real aims. Against this type of diplomatic cunning nobody can be immune, for it strikes at the very root of all international intercourse.

The official account of the part taken by the Indian Cavalry in the fighting near Cambrai seems to have proved a disappointment to that large section of the public which expects in such narratives warmth, colour, and, above all, adjectives. Sir Douglas Haig is economical of these munitions, and the general reader must

Digitized by Google

be content with his acknowledgment of the "most gallant and valuable service" rendered by the regiments engaged. To those who can read between the lines the report is more satisfying: the cavalry were set hard tasks, and they did what was expected of them in their traditional style. There is really nothing more to be said: people who have seen the Indian cavalry at work know what that means, and the rest of the world must rely upon its own imagination.

Talking of the Indian Army in the West, it will be interesting to see whether the Jats, who have added so greatly to their military reputation during the last three years, decide to take an active part in the political game in India. They have every right to do so quite apart from their recent services in the field, which, by the way, they are not likely to minimise, for a hundred odd years ago they were well in the running for the high stakes of Empire, and there is little doubt that, if India had been left to herself, they would have at least divided the country with the Marathas, probably extending their rule southward to the historic boundary of the Vindhyas. The English, however, came first, and the Jats then settled down to the performance of a less conspicuous but much more useful task.

That task was to adapt their agricultural system to the new conditions created by the construction of the earliest canals. They had little help from outside in those days when agricultural experts had not been invented, but they worked out the problem successfully, and, while they vastly improved their own position, they made the canals pay, and thus established irrigation as a practical policy for the country at large. They have, therefore, a triple claim to make their voices heard in the governance of India. There are nearly seven millions of them all told, hard fighters, hard workers, with an excellent conceit of themselves, and, though wanting in eloquence and forensic skill, quite able to hold their own in practical debate. They would contribute an element of the utmost value to the new councils, and India will undoubtedly be the gainer, if they decide to devote to politics some portion of the energy with which their community is so plentifully endowed.

The Jats, however, are not India, and his Majesty's gracious reception of representatives of the Chin Hills Labour Corps comes aptly to remind us of the solid, if inconspicuous, services rendered to the Empire by a very different section of the population. The Chins are, of course, recent additions to the Empire's strength, and surely it was unkind of a news agency to announce to the world that they "were formerly rebels." The fact is that when circumstances brought them within the orbit of Western civilisation, they did not at first take kindly to the idea, and they resisted it in the manner traditional to their country, part of the mountainous tract which so effectually separates Upper Burma from the plains of Eastern Bengal. If this be rebellion, we must agree with the chroniclers in applying the same word to the heroic resistance offered by the Rajputs of Udaipur to the rising tide of Moslem civilisation.

In any case, the Chins have now submitted to the inevitable, as is shown by the fact that no small proportion of their numbers are at present working hard on the Western front, and seeing for themselves one aspect at least of that civilisation of which they have so recently become partakers—the civilisation of shells and tanks and aeroplanes, designed to serve the same purposes as their more primitive *dahs* and spears. We wonder what they think of it all! Perhaps, however, it is more to the purpose to speculate on the effect of their return home, with pockets full of money, and all sorts of new wants which their hillside villages will not be able to meet. Changes are bound to follow, and probably not all of them will be for the better; but we may fairly hope that the balance will be favourable, and that these years of healthy and disciplined life will lead to a permanent alteration of some of those habits which their best friends deplore.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 18.

The School of Law.

Sir William Brunyate, the Acting Financial Adviser, gave a highly interesting lecture this week to the students of the Sultania School of Law, on the subject of books recommended for private study. In addition to the students and the Law School staff, the audience included the Prime Minister, the Acting Judicial Adviser, and a number of leading lawyers. It is proposed to invite members of the legal profession to deliver periodical addresses to the students, and Sir William's lecture was the first of the series.

Government Officials and the War.

The Government officials are again agitating for further war bonuses. The special committee which sat last summer to consider the position of the smallest category of employees has advised that the bonus then granted up to the end of the calendar year should be continued in the current year, and a further credit of some £E88,000 was passed at the last Council of Ministers to enable these payments to be made up to the close of the financial year, i.e., March 31. After that date they will be included in the ordinary Budget. This sum brings the total amount spent in this direction since August up to £E327,500. The officials in the categories just above those already dealt with have now sent in petitions for similar treatment, and the Government is considering their position. There is, indeed, little doubt that for people with fixed incomes the present steady rise in the cost of living is a very serious problem, and in view of the fact that most commercial institutions of any standing have granted their personnel additions to their ordinary pay to enable them to meet the heavy calls now made on them in every direction, there would appear to be some justification for the adoption by the Egyptian Government of measures similar to those introduced by the Home Government in the treatment of its smaller personnel.

The Petroleum Crisis.

There are signs that the petroleum crisis with which we were threatened is abating. Distribution centres have been opened up all over the city, and in each section special committees have been formed for the control of the supplies to be portioned out to each consumer. The scheme organised by Mr. Monteith Smith, the Petroleum Controller, appears to be working very well in Cairo, and he has now turned his attention to Alexandria, where he has been able to secure the services of Mr. Ralph Carver, of the firm of Carver Bros. and Co., as his representative in that city for the control of the local distribution. It is evident from the speediness with which the previous confusion has disappeared and from the absence of complaints that,

whilst hoarding may have been a contributory factor, the main reason for the previous disgraceful state of affairs was the absence of any proper organisation. We now have what appears to be an efficient system of control, and there is every reason to hope that as far as petroleum is concerned the situation has been settled.

The Cotton Situation.

In view of the remarks made in this correspondence last week it is interesting to note that a Commission consisting of Sir H. L. Smith and Messrs. Fountain and Carter has arrived in Cairo from London in order to study the local cotton situation.

The members will not make a long stay in Egypt, but during their visit they will confer with the authorities and principal residents interested in the cotton industry. Their first two days have been occupied in visiting the High Commissioner, the Financial Adviser, the Ministers, etc.

A Hydrobiological Institute in Alexandria.

Some little while back I referred to a project for the creation of a hydrobiological institute in which the Sultan, then Prince Fuad, took a very great interest. The project has now materialised, and a decree has been issued instituting "L'Institut Sultanien d'Hydrobiologie Appliquée et d'Acclimatation." The statutes set forth that the object of this institution is the study of the marine flora and fauna in Egyptian waters, both maritime and inland, and generally all that has a bearing directly or indirectly on that study, and that to attain this object it will be necessary to make a census, and study the habits of the fish, migratory and otherwise, to be found in Egyptian waters, to make attempts at acclimatising fresh varieties of fish which might be useful to Egypt, to develop the industrial potentialities of the Egyptian Fisheries, to encourage and facilitate scientific research by the distribution of prizes, and to create aquariums for the purpose of interesting the general public. The headquarters of the Institute will be in Alexandria, and it will receive a subvention from the Government and the Municipality. Its foundation members include the late Sir Armand Ruffer, Dr. Granville. Rear-Admiral Sir Henry Robinson, Colonel G G. Hunter Pasha, Mr. A. King Lewis, and Mr. A. G. M. Dickson. There will be a council of thirteen members, of whom two are to be Government delegates. For the first year Dr. G. Granville is president, and the two Government delegates are Captain Flower and Hopkinson Pasha. Little has hitherto been done to foster the local fishing industry, which as a matter of fact has distinctly retrograded of late years, and which in view of the urgent necessity for increasing the food supply of Egypt could have rendered material assistance in this respect had it been properly directed and organised. The Hydrobiological Institute of Alexandria, which owes its inception and foundation entirely to Sultan Fuad, should, therefore, fill a much-needed want in Egypt, and deserves every support.

SUDAN NOTES.

(From Our Correspondent.)

Khartoum, February 3.

War and Prices.

The effect of the war on prices is now being more fully felt in Khartoum, and indeed throughout the Sudan. Stores of all sorts are beginning to run out, and there is great difficulty in getting new supplies. Moreover, the considerable demand for the native commodities has caused the price of meat to be raised, and stock is realising unprecedented prices. Animals that in pre-war times were worth only £6 or £7 are now fetching £20, and millet also is obtaining a very high price. Owing to a certain amount of competition, the price of gum rules higher than the opportunities of shipping would seem to justify. There is further a brisk trade in small quantities of henbane and similar drugs. Sennar has suffered rather a reverse, as the natives have grown a considerable quantity on irrigated land in the hope of the high prices holding. But the market is somewhat glutted, and the price is now only £1 as compared with the £2 previously reached, and it is a question whether this is adequate to justify the use of irrigated land.

Transport Problems.

Visitors to the Sudan are frequently impressed by the great possibilities of the country, but they are prone to forget the very great distances that raw products have to pass before reaching the normal forms of transport. Even when the Nile has been reached there may be a very long journey before the market can be attained, and the price, more especially with coal at its present rates, makes the moving of freight a serious consideration. The chief forms of export are grain, cattle, cotton and gum. These all up to the present, and mostly from their nature, are scattered over a wide area, and they have to be brought up to the nearest point of rail or water transport by some other means. In the South, where the "fly" exists, the only form of transport is the carrier, and that implies that the weight to be carried is limited, apart from the expense being very great. Further North the camel does indeed supply a form of transport, but there is a very great demand for camels for war purposes at the present time, and moreover it is slow and only practicable for a certain time of year, as the rains make the use of camels difficult and for economic purposes impossible. Cattle, it is true, can be moved on the hoof, but even so there is the necessity of finding grazing and watering for them on the way. The use of petrol-driven cars and trolleys has naturally been widely considered, but there are certain disadvantages that make this form not altogether convenient. A car is dependent on petrol, which is by no means easy to store in a country where the temperature is liable to rise as high as it does in the Sudan, and difficulties of getting adequate repairs in the wilds are obvious. In some parts, especially in the extreme South, the value of steam-driven cars and trolleys is a possibility that will doubtless be the subject of experiment, but over very large expanses the lack of water makes this form impossible. Normal wheeled traffic entails almost as much trouble for the making of roads as motors of any sort, and water in sufficient quantities to supply the needs of the animals at the short distances apart that would be needful is only to be found in favoured places. It would appear that there are very great difficulties in the way of solving this problem without risking a great deal of money on a doubtful chance.

The Need for Light Railways.

The railway is the most obvious solution, but the amount of material to be moved along any one line is so small that it would not require one train a week, except in unusual circumstances, and the traffic would not justify the capital expenditure. It is in cases of this sort that the light railway, such as is common in Belgium or Italy, might provide the solution. The cost of building in the first instance is no doubt considerable; but the working expenses are very low, and there is no need for great speed, nor would it be impossible in some localities at least to run the engines on local fuel—*i.e.*, the wood of the forests through which such a line would run. Statistics are not attainable, but it would be interesting to know how far the cost of the transport of, for example, the Darfur expedition on camels would have gone to meet the price of a light railway over the same distance. The present rates for transport from Nahud to el Obeid are said to be 15s. a cwt., and though this is a tremendously inflated price, it is likely to be very high for a long period. If the total expended on the transport of merchants' and Government stores were added together at the present rates, there is little doubt that the substitution of a form of light railway would be seen to be at least as cheap. A light railway it would have to be, for this could be run on the same lines as the Khartoum Railway, which is in fact a light railway, and presumably this type of engine would not want the large amount of water that the heavy gauge railway requires. For instance, such a line from Gedaref to Mafaza and on to Sennar would find a very adequate amount of freight in the millet and gum grown in the immediate vicinity of the line, whilst a similar line to Nahud from the present railhead at el Obeid would open up large markets of gum and possibly of grain that have hitherto not been available to the market. If the fourth-class passengers on the normal railway are to be taken as a guide, such a line would not lack traffic for passengers only, and though the service might not run with perfect accuracy it would strike no unfamiliar note even then.

It is almost impossible to estimate the amount of trade goods that are carried out on these lines at present by camel, and the figure, if known, would only be a guide to the amount that can be easily absorbed. If there were greater facilities of transport, there is little doubt that there would be more to travel. In each case, too, the trade would be reaching out to possibilities of touching outside spheres, in the one case Abyssinia and in the other Wadai, whence there are caravans now to el Fasher.

MOROCCO.

(From Our Own Correspondent.)

Tangier, January.

The Subjugation of the Tribes.

The winter seems to be having its usual effect on the work of subduing the remaining independent tribes in the mountains to the north-east of the French zone. The rain to some extent, no doubt, makes the supplying of the troops engaged in the task of holding and extending the frontier of a pacified country more difficult, but the weather conditions press much more hardly on their opponents. The cold and heavy snow in the mountains, besides the hardship caused to the mountain tribes themselves, inflict heavy losses on their flocks, which are now in many cases cut off from their old winter pastures on the plains. The tribes are compelled to recognise the precariousness of their position, and enter into negotiations with the French authorities, which, though perhaps designed chiefly to gain a temporary respite and help to tide over the difficulties of the winter months, often result in permanent submission.

It is not always fully realised how steadily progress has been made, by means both military and pacific, in opening up the country between North Morocco and Algeria. A few years ago the mountain tribes, self-governed and warlike, held, almost without a break, the line of the Atlas from north to south. Since then the great Makhzen Kaids of the south, the Glawa, and others, supported by the French military authorities and by the military posts, advanced further and further into the mountains, have completely broken the continuity of this line and greatly extended the Government authority east and south of Marakesh. In the north, the line from Fez through Tazza to Ujda, on the other side of the Atlas, strongly held and open to traffic, tends to cut off the mountain tribes of the centre from the independent tribes in the Spanish zone, and the road across the mountains, recently traversed by columns advancing to meet each other from the two sides of the Atlas, from Bu Denib and Mekinez, which will form a direct route from Fez and Mekinez to the Tafilet district, will, when held by the posts which will soon be formed, divide still further into blocks the still resisting tribes, and diminish very greatly their power of opposition.

The menace from hostile tribes once entirely removed, and the normal gauge line from Ujda through Tazza to Fez established, relations between Algeria and Morocco will become much closer, and there will be a great probability that some at least of the trade which now comes through the western ports will be diverted to Mediterranean ports and reach Morocco across the Algerian frontier, where the Customs dues are not 50 per cent. of those levied at the Atlantic ports.

A BALUCH TRIBE IN REVOLT.

The India Office issued the following statement on March 20:—

The attitude of the Marris, in Baluchistan, which has been unsatisfactory for some time, has recently culminated in a series of outrages.

Aided in some cases by Khotrans, they have cut telegraph wires, fired on trains, and destroyed Government property in several localities in and adjacent to their tribal area; they also organised and carried out attacks in force on our posts at Gumbaz and Fort Munro where they were completely repulsed and suffered many casualties. Their attitude, however, is still defiant, and punitive measures are now being undertaken against them.

Our aeroplanes have on two occasions recently bombed their tribal concentrations with effect.

His Highness the Khan of Kalat has very generously presented Rs. 4,000 (£266) for the provision of comforts for the sick and wounded in the operations.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, February 24.

The Currency Problem.

Athens is now suffering from a shortage of small change. The silver one-drachma and two-drachma pieces have suddenly disappeared, and the smaller denominations in nickel and copper are the only change now available. The high price of silver has apparently induced speculators to accumulate the silver coins, and as the public are evidently also hoarding, the Ministry of Finance has issued a notice to the Press to the effect that the real value of the drachma is only sixty centimes, that the drachma will not be accepted outside Greece beyond the intrinsic value of sixty centimes, that anyone requiring to buy silver coins should not pay more than the legal currency, and anyone demanding a higher rate will be punished under the law; that the State have ordered bank notes of one and two drachmas, and before putting them into circulation will deposit their equivalent in gold at the National Bank, and that, as soon as the notes ordered are put into circulation, the Government contemplate withdrawing the one and two silver drachmæ from circulation, in which case those silver coins will then only have their actual value as a piece of silver.

It is hoped that this announcement will check the hoarding.

The Census.

The results of the census showed that 30,000 bread tickets in excess of the population were in circulation, and a saving to this extent will be effected. The population of Athens amounted to 253,000 and of the Piræus 128,000.

The Lamia Outbreak.

The court martial continues to deal with the seditious movement at Lamia and Thebes. Several death sentences have been passed and carried into execution, and many have been degraded and sentenced to terms of imprisonment. The deportation of undesirables continues, and these measures cannot but have a salutary effect and act as a deterrent to the hare-brained imbued with royalist sentiments. Mme. Tsellos, the wife of a former Cabinet Minister, has been placed under arrest for having ordered a supply of photographs of the ex-King. The photographer has also been arrested for having printed numerous copies of a photograph of Constantine which had been received from Switzerland, and which were going to be used for propagandist purposes.

Mobilisation.

A decree has been issued calling to the colours four classes of reserves from this district and some of the islands, and this process of gradual mobilisation is likely to continue. Possibly as a precautionary measure, the fourth regiment of the Archipelago division has been brought down from the front. They marched through Stadium Street on their way to their barracks in their fighting kit and iron helmets escorted by a band of music and a squadron of cavalry, and were given an enthusiastic reception. After their arrival at their barracks they had an address of welcome from M. Venizelos.

A British Visitor.

There was quite a flutter on Thursday at the arrival of a distinguished British official. The secret of his identity was well kept, and it was not generally known that Sir Eric Geddes had been in Athens until the following day, when he was again on his journey. He was received by the King and lunched with the British Minister, M. Venizelos, M. and Mme. Politis, and Admiral Condouriotis being invited to meet him. Before Sir Eric left he had a conference with M. Venizelos and his colleagues, and then paid a visit to the arsenal. The papers attach much importance to this visit to Athens.

Yesterday an interesting lecture on the Philhellenes Hastings and Finlay was given by Mr. A. J. B. Wace, the Director of the British School of Archæology, to the members and visitors of the Athens branch of the Anglo-Hellenic League. The lecture was given in the hall of the Archæological Society before a very large and distinguished gathering of British, Americans, and Greeks. M. Venizelos was present, as well as the Earl and Countess Granville and the Legation staff.

This was the second lecture of the season, the previous one on Sir Charles Dilke having been given by Professor Andreadis a short time ago.

A PILGRIMAGE TO NICÆA.

THE CITY OF THE CREED AND THE CRUSADERS.

*(Concluded.)**

The three greatest events in the history of Nicæa are the meeting of the Great Council of the Christian Church in 325 A.D., the siege of the city in 1097 by a great army of Crusaders, and the establishment of an empire of Nicæa in 1204. Those who have read Marion Crawford's fascinating novel "Via Crucis" will remember that he lays an important portion of his plot at Nicæa. He is dealing with the ill-conducted Second Crusade under Conrad and Louis the Seventh of France, and represents the tidings of the first defeat of a portion of Conrad's army being brought to the army of the French King while encamped on the south side of Lake Ascanius. But the Second Crusade, like the second Council, has to do with Nicæa incidentally, as it were, and does not become a part of its vital history.

We sat for several hours that Whit Sunday afternoon among the ruins of what tradition and scholars now assert to have been the palace of the great Emperor Constantine, who presided over that first Council, held also near Whitsuntide. The deserted city before us was clad in all the beauty that the spring, with her ever-youthful touch, can command. The mountains to its right and left, beginning with brilliant green, were shaded off into purples, pearly greys, and blues. The air was fragrant with the flowers of the acacias. From the thicket of young mulberry trees, with which a portion of the space enclosed by the ancient walls of the city is covered, came the liquid, whistling aria, and then the happy lilting measure of the nightingale. Every now and then a bird, a near relative at least to the blue-jay, would flit from one tall acacia to another, displaying a ravishing flash of colour. The storks, the Hadji Babas (pilgrim fathers) of the Turks, were clattering with their bills their characteristic signals to each other from the ruined towers. At our side were the lovely waters of Lake Ascanius, no less beautiful than those of Geneva or Maggiore. The long stretch of walls and towers in front took on the rich colours of the glowing sunset. It was the place and the hour for the telling of great deeds.

We spoke of the Council; of the great Emperor halting between two opinions, not yet declaring himself a Christian, but wise enough to see that the band of stern men in his army who had accepted the Nazarene belief were more determined, more to be depended upon and more united in their common faith than were the adherents of a dozen different forms of Paganism; of the ardent fires of religious faith blazing up during every moment of the sitting of that great body of Bishops from every part of the then-known world; of Arius, with his determination to make an individuality of the God-man distinct and separate from the Father and the Holy Ghost; of Athanasius, the fiery young enthusiast from Alexandria, still more determined to support the unity of the Godhead. There were men in that Council (in *The* Council it might be called) with only one leg or one arm, and with other marks of physical torture suffered at the last great persecution under Diocletian, who had died only five years earlier. Profession of Faith, to these scarred "confessors," was a matter not of sentiment, but of the deadliest earnestness. That is why they builded better than they knew when they formulated the Creed which, in substance, is accepted practically by all Christendom to-day.

But other scenes associated with the place were brought with almost equal vividness to our minds that evening, as, for example, those connected with the siege of 1097. The Seljukian Turks were then in possession, and their Sultan was outside the walls with an army to harass the besiegers. The Crusaders under Godfrey de Bouillon, with their hundreds of thousands, were encamped on the heights to the right and left of where we were sitting. We recalled their horror when on their arrival they came to the camp of their predecessors of the previous year under Peter the Hermit, and found no traces of him or his followers but their bleaching bones; the mutual cruelties of the armies one to the other; the heads of the Turkish captives thrown into the city by Christians; the heads of Christian prisoners thrown over the walls as an answer by the Turks; the long protracted siege with hunger and slaughter unspeakable; the attempt of the Sultana to escape from the city by way of the lake; her capture by the Crusaders, and then the surrender of Nicæa to the soldiers of Alexis, who had come from Constantinople by night along the lake and had entered the city without the knowledge of the besieging army; the Crusading army's natural cry of "treachery" against the Greeks, while their leaders, who with wise forethought had determined not to allow the demoralisation of their army by allowing them to sack a Christian city, remained in their tents and said nothing of their agreement with Alexis. "Thus," said our historian, "the great body of the Crusaders was enabled to go upon its way to the Holy Land and enter upon its lawful business."

Then, passing over the intervening period, we spoke of the year 1204, when after various vicissitudes Nicæa was once more the capital of an empire. Under Theodore Lascaris, driven from Byzantium by the conquering Latins as a result of the Fourth Crusade, all that was most valiant in the Greek race sought refuge here. Greek learning made its home within these walls. Priests and monks brought their precious manuscripts here, dreamed of a glorious past, and looked forward confidently for the re-establishment of an empire whose capital should be again on the Golden Horn; worked so earnestly for it that soldiers and priests together realised their dream in 1258. That their dream was a brief one made it none the less real.

The city was captured by the Ottoman Turks in the fourteenth century, and the old walls are desolate to-day, except for the perennial beauty with which they are clothed by nature. Ivy and creeping plants of many kinds climb up from the ruined moat and drape with cool and picturesque hangings the towers and battered parapets that now have no armies to guard them and no enemies who would attack them. The roads that once led from every civilised country Nicæaward are mostly overgrown and deserted. But Nicæa, the tomb of three empires, set apart though it be in a far and now mostly forsaken land, in spirit still influences the world.

GERMANY AND THE CAUCASUS.

Mr. Ghambashidze, honorary secretary of the Russo-British Chamber of Commerce, gave a lecture last week on the Caucasus at a meeting of the United Russian Societies Association, held at King's College, Strand. He said that, owing to the danger now threatening from the Turks and Germans, the Caucasus had become almost the centre of the Middle Eastern situation. Of the 60,000 German colonists in the Caucasus, many had amassed large fortunes, though they had arrived in the country as poor peasants. In the face of the dissatisfaction of the natives of the Caucasus, owing to the insufficiency of land for their own purposes, Germany had decided to transfer her colonists from the Caucasus to German East Africa; but it was questionable now whether it would be possible for that scheme ever to be carried out. Whereas the Christians of Armenia and Georgia naturally were bitterly opposed to Turkey, it was quite otherwise with Tartary. Turkey was managed, not from Constantinople or Berlin, but by the Tartars in Baku, which was the centre of the Pan-Islamic movement. A Tartar doctor from Baku was vice-president of the Committee of Union and Progress in Constantinople, which had fostered the revolution in Persia. This situation constituted a great danger for the Allied cause. The oil deposits of Baku could be placed at the disposal of the Central Powers at a certain price. There was also a great amount of copper in the Caucasus, whose mineral deposits were sufficient to supply the munition factories of the whole world, though there was not a single factory there for the supply of the Caucasian Army, which had had to obtain all its munitions through Petrograd. When the Germans got to Batoum, on the Black Sea, they could do almost anything they liked. Among other things it would be possible to build there submarines for use in the Mediterranean.

TANGIER TO TEHERAN.

The War Office announcement regarding our occupation of Hit stated that the Turks had "retired to Salahie (seven miles upstream)"; another, later, announcement reported that they had continued their retirement as far as Baghdadie, or Khan Baghdadieh. These names may give rise to some confusion amongst those who do not know the country. The Salahieh—really we *must* have that final "h"—referred to is not the spot famed for its fine ruins, which lies some 160 miles farther upstream. It is, I suspect, a very modern place, and a very insignificant one, too. At any rate, I never heard of it when I covered the ground, and I cannot find it on any of some half-dozen maps. Khan Baghdadieh also is a mere halting place of no importance at all. In fact, with the possible exception of Meyadin, there is absolutely no place of any size between Hit and Deir (Deir-el-Zor); but there are some extremely picturesque villages, such as Anah and Fehemi, and the scenery is very fine. The ruins at (the upper) Salahieh, or Khan Khalessi, are also very interesting, and wonderfully situated on the edge of the bluffs overlooking the Central Mesopotamian plain—El Jezireh, as the Arabs calls it.

***

A touching example of a rather rare quality, gratitude, was recently given in Egypt, when a prisoner, about to be released, presented his shirt to his gaoler, who had shown him numerous little kindnesses. The sequel to this pleasing and moral little tale is, however, not quite happy. The shirt, it seems, was not the grateful prisoner's to give away; and as a result he and his benefactor were arrested and sentenced to a month's imprisonment each. One wonders whether they will swop shirts when the month expires!

***

Examples of Germany's treachery continue to accumulate steadily and not slowly. We remember how, while swearing friendship for Islam, she was actually plotting how best to undermine Moslem influence in Africa, and how to outrage Moslems' feelings by the introduction of pig-breeding into their midst. Her scandalous breaking of her pledged word, and her cynical disregard of all considerations of humanity and of decency in regard to the sinking of defenceless ships, neutral as well as enemy, has led the world to regard her as the "mad dog" of Europe. Her fondness for working underground and for employing agents of the Bolo and Abbas Hilmi type have only served to accentuate the contempt felt by all honest men for her unique methods of "diplomacy." One almost wonders why the news agencies should think it worth while to add to the sorry story. But it must be acknowledged that often the news of these German "activities" is distinctly interesting, if no longer instructive.

***

I am thinking, of course, of the instructions issued to the Turkish commanders on the Persian front by their German taskmasters, through the agency of one, Major Druffel, a German staff officer. Briefly put, these precious instructions were that the Turks should "discreetly" stir up the Kurds to harass the Russians in their withdrawal in every possible way; the greatest possible loss was to be inflicted on them, and the withdrawal was to be made "as costly to them (the Russians) as possible." The precious instructions do not mince matters at all. "In fact," they say, shamelessly, "the armistice should make no difference whatever to their action"—that is, to the action of the Kurds. In some ways the amazing document might almost have been taken from the pages of "Hajji Baba." Its tone and composition would not, for instance, have disgraced Shir Ali Beg. But, on the other hand, I like to think that no Persian "officer and gentleman" of the present time would ever demean himself by such treachery as this latest example of the Germans In matters of this kind the Orient must evidently look to Prussia for guidance in the future.

***

In pre-war days the price of provisions was hardly regarded as a first-class subject of conversation; but the war has rubbed off a good deal of polish here and there, and I gather that even in the Innermost Circle of the very Smartest Society people nowadays talk frankly of the "awful prices" of various edibles. That being so, there can be no harm in a mere freebooter like myself, with no pretension to manners, touching on the subject; and I may acknowledge without shame that I have been reading with lively interest a list of the "Current Bazaar Rates" in Busreh and Ashar. For the benefit of the British housewife—and the poor conversationalist!—I may perhaps reproduce a few prices. Thus a kidney costs 1 anna, and a liver 5 annas; a small chicken fetches 1 rupee, while a large one—who chooses the adjective, buyer or seller?—costs twice as much, and a "fowl, large," is 3 rupees. Eggs are 1 rupee a dozen. The Busreh housekeeper is lucky in being able to obtain dried figs (1 rupee 8 annas per oke) and dried apricots (2 rupees), water melons (1 rupee per wogia) and pomegranates (1 rupee 4 annas per wogia). Dates cost 8 annas for 7 lbs., instead of the 2s. a lb. that *we* must pay! Potatoes are 12 annas for an oke; and other vegetables to be obtained are tomatoes, bringal, carrots, pumpkins, dry onions, turnips, and radishes. So, even though there is no quotation for cucumbers, French beans, ladies' fingers, or spring onions, the choice of vegetables is comparatively large. Sugar and best tea are 2 rupees 8 annas and 3 rupees the oke respectively; cheese is 5 rupees 8 annas the wogia; and ghee—which is the great cooking fat of the country and of the Near East generally—is 7 rupees 8 annas the wogia. Kerosene is 3 rupees 8 annas the tin, and cigarettes vary from 1 anna to 2 rupees 12 annas per packet—a wide range of qualities seems to be indicated! For the benefit of the uninitiated, it may be well to mention that an oke equals two and four-fifths of a pound, and a wogia equals seven pounds.

CORSAIR.

CORRESPONDENCE.

MONTENEGRO.

To the Editor of THE NEAR EAST.

Sir,—Your correspondent, Mr. Taylor, in a recent issue credits me with ideas about Serbia and Jugoslavia for which there is no foundation, as I mentioned neither, save in a quotation. Another of your correspondents says:—"From long experience I would suggest that it is useless for any outsiders to attempt to meddle with matters which are purely internal affairs of the South Slavs." No doubt; but your correspondent herself has never been able to refrain from meddling with the affairs, internal and external, of many Balkan people, and no doubt did find it useless, especially as regards Montenegro, for without sympathy there is no understanding.

I see or hear from Montenegrins almost daily. Five have just been here, using, I noticed, the terms Serb and Serbian in the way it is necessary and desirable to use them, and, as regards any supposed leaning to Austria, as I have seen it stated elsewhere some have, I do not recall one in or out of Montenegro who did not regard Austria as a natural enemy. Diverse opinions are in every land, and political rebels to their Governments, but that does not always imply they are not loyal to their country. I think, if anyone here can speak of what Montenegrins feel, I can, for not only have I seen many here, but I receive letters and greetings from them from many lands, and have been the depository of their hopes, fears, and property, and throughout this war have given unceasing time and trouble to the alleviation of their wants.

I have just received on the best authority the assurance that Montenegro has not the smallest intention of making peace with Austria. But when one contemplates the fate of Roumania it may yet be she will have no choice but to submit. Whatever be the goal Montenegrins of diverse opinions aim at, and however divergent be their ways, it is, I think, always the same goal, and I find it difficult to exclude any Montenegrins from that belief.

Ere the actual outbreak of hostilities the Austrian Minister at Cetigne expressed to the Montenegrin Government his appreciation of its correct attitude over the Serajevo murder plot, and desired to know whether in case of complications with Serbia Montenegro would remain neutral, and intimated that in that case Austria would be prepared to concede territorial compensations to Montenegro, such as Skutari and its territory, Spizza, Budua, a part of Bosnia, rectifications of frontiers, etc. Montenegro's answer was to draw the sword and range herself beside Serbia, though all her resources were exhausted by the two previous wars, and she had neither men nor money, munitions nor food. The Montenegrin Government telegraphed to M. Pasitch:—"La Serbie peut compter sur l'appui fraternel et illimité du Montenegro, en ce moment d'où dépend le sort de la nation Serbe, et en toute autre occasion"; and the King of Montenegro telegraphed to his grandson, the Crown Prince of Serbia:—"Mes Montenegrins et moi sommes déjà sur les frontiers, prêts à mourir en defendant notre independence nationale." Well did they assist Serbia, for they held the positions they had taken from the Austrians to cover the Serbian retreat through Montenegro, which left their already starving country bare.

There has certainly been much unwise meddling with the internal affairs of the people of Albania by outsiders, with very unhappy results. When Count Berchtold and the Marquis di San Giuliano asked M. Philip Nogga, an Albanian, what Austria-Hungary and Italy could do for his countrymen, he replied:—"The most helpful thing would be to desist from distributing money among them, under any circumstances or for any purpose however praiseworthy"—an illuminating comment on the "philanthropic" efforts of people of various nationalities, which were often mistaken for or resolved themselves into political propaganda which

Digitized by Google

created strife among the Albanians themselves, as well as with their neighbours.

The Albanians deserve sympathy. Their wrongs cry to heaven. Their cause has practically been ignored during this war, but not forgotten by all. They have lacked wise, discriminating friends. I agree with a remark once made to me by the late Bulgarian Minister here, M. Hadji Mishef, though I have no intention of doing more here than quote it, and that as a warning:—"Albania," he said, "was a chief contributory cause to the Balkan War, to the second war against Bulgaria, and to this third great war. When the war is over the Albanian question will remain." Few questions stand alone; they are intricately mixed up the one with the other, and though we use the words "chance," "by accident," and so on, I think most events are the logical outcome of what went before—links in a long chain of circumstances, though, even when looking back, it is not always easy to see it. A long acquaintance with many lands and their political questions, including a long familiarity with Germany, had prepared me for the many curious events of 1911, when war against us by Germany had, I have much reason to believe, been decided upon; and experiences and study of the situation in Germany, on the Adriatic littoral, in Corfu, in Montenegro, and in other places prepared me for further developments when war was frustrated in 1911, and prevented by famine, or an organised famine possibly, in the spring of 1912. Therefore, when in the waning summer of the latter year I left Montenegro, knowing war was to be in the Balkans, and that Montenegro had fixed upon the day, which she dared not postpone, as Austrian intervention had to be forestalled, and though matters called me back to England, in Vienna I assured myself of many things, warned some people of Austrian activity, and during long train journeys studied the curious pan-Germanic literature I had picked up in Vienna and elsewhere, and I foresaw clearly that not only was war in the Balkans coming, and that much would revolve round Albania, but that the dreaded European war was inevitable. But I trusted that the supposed cleverness, knowledge, and wisdom of the Entente Powers would be powerful enough so to control events, and by non-interference in the Balkan War, prevent our enemies, Germany and Austria, from precipitating the conflict until the favourable moment for us. The policy, however, entered upon by the Entente, and particularly by my own country, I did not foresee, and it astounded and dismayed me, and when the strange inharmonious concert of the neutral Great Powers started on its abnormal course I saw the great war looming nearer ahead, and our enemies being placed by our aid in a better position to wage it against us. Then, as now, I believed, and believe, that the most gigantic blunder was being perpetrated by our own Government, and that we would rue it for ever.

Meeting most of the Balkan peace delegates when they came to England later, and learning much of some ambassadorial views, which were not, perhaps, quite those made public through the abortive Ambassadorial Conference, where the three cousins, Prince Lichnowsky, Count Mensdorff Pouilly, and Count Benckendorf played leading parts, I was only more confirmed than ever in my belief as to the impossibility of evading the great war, if the fatal policy pursued was continued in the Balkans, as it was. The contending interests were too many and too great to permit of any real disinterested action on the part of the Great Powers—more rightly called Great Pirates in that case—and many curious little illustrative incidents came my way, which it is discreet for the present to consign to silence.

When the Great Powers in 1913 delivered their final ultimatum to King Nicolas over Skutari, I said to the King that if they took Skutari from him under such circumstances it made the great European War a certainty, for, for one thing, it meant the planting of Teutonic influence in Albania (one of the things the Balkan War was to prevent), which, with Constantinople in German power, was to form the nutcrackers to crush the Balkans between them and leave Germany, not Austria, who was merely her catspaw, in a position akin to that we occupied in regard to Egypt; for from German sources, especially from some in close touch with the German Emperor, I had learnt more than enough of what their real aims were.

They did take Skutari from Montenegro after she had won it to give it to the new State of Albania—set free from centuries of Turkish misrule principally by Montenegro—to which eventually, to please Austria and Germany, a German Potsdam officer prince was appointed as ruler, and, escorted by the Great Powers, that Prince went to his new kingdom. He did not get much beyond his port of entry, and was received by his "loving subjects" with shot and shell, whereupon the latter became "rebels."

But Germany was delighted, and the name of Albania was affixed to every possible article in shop windows, including feminine adornments, every German woman bursting forth in "Albania" blouses or sashes, and "the new German province" was on every tongue.

"Das Deutsche Leid," which pervaded Germany in so many poems and such pathetic fashion, was the ceaseless "sorrow" they had not been able to inflict their "Kultur" by fire, sword, or peaceful penetration on the lands lying between them and the Adriatic, on the Adriatic shores, and far beyond them; and Germany, in sentimental sorrowing greed for the possession of everyone's else property is a memory not to be forgotten.

When the Balkan War was over, in 1913, after a brief visit to England, where no one would listen to anything save "atrocities," and where the adherents of Bulgars, Greeks, Serbians, and so on bombarded one with pamphlets and "proofs" of the enormities of every one country but their own or their pet one, I went to friends in France and asked them to motor me all over the Franco-Belgian frontier to see where the Germans had entered in the war of 1870-71, and where they would enter in the coming war, just as they did; and then I went to the Grand Duchy of Luxembourg to see where they would enter there, just as they did; for within a year the great war came, and my friend's château was the first one entered in France by General von Kluck and his staff on the heels of the retreating British on August 25, 1914; and Montenegro and Serbia were fighting our common enemy, and under circumstances of such disadvantage, the result of the work of this Entente in concert with our enemies, the other Great Powers, that their task was rendered a doubly difficult one.

The Englishmen who worked so ardently to defeat and ruin Serbia and Montenegro, and to put our known enemies into Albania, are responsible for criminal folly for which there is no pardon. That they might not have realised fully what they were doing is no excuse. It was often enough pointed out to them. Yet some of these same people are still busy with the same methods and same evil policy, continuing the mischief and doing irreparable harm.

War was inevitable—the incident to serve as an excuse could easily be found or created; but, save for this foolish meddling, it might have been frustrated so far as to enable our side to control the time of its coming until we were more prepared—if that ever would have been—and the auspices more favourable.

Montenegro, to the delight of our enemies, was cast down, abandoned, and defeated, owing much of her disaster to Serbia and the Serbian staff she had been forced to have for her army, all this being quite in accord with the strange policy pursued against her for so long. And some of her enemies among her Allies saw in it a fitting opportunity to try to kick and rob her when she was down, though it was no employment for any honest or honourable person.

But there are defeats which are victories, as may be shown in this case. There is a star shining in the East, and we know the setting of a star is in no man's hand. The spirit that endureth is one of the most powerful things on earth, and the Montenegrins have it to the full. The proud may be cast down and the humble exalted, and yet over the gates of Montenegro may be written the words of a very old motto: "De ira eruté" . . . by the grace of God . . . saved.

I am, etc.,

C. D. MACKELLAR.

THE DEATH OF PRINCE MIRKO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have read with pleasure the letter from Mr. Janitch in your last issue on the death of Prince Mirko.

We are none of us in a position either to defend Prince Mirko, in view of the fact that he has been a prisoner in the hands of the Austrians, suffering from an illness which, unfortunately, has ended fatally. But what is most pleasing to me, as it will be to everyone who wishes to spread amity and fraternity instead of discord among the South Slav peoples, is to recognise this spirit in the remarks of Mr. Janitch, and, if he will allow me, I congratulate him upon it.

We in England who are interested wish to see the South Slav peoples united in the right sense of the word, and they will only fall in the regard of all right-thinking people in this country if, at a time like this, they engage in any campaign of slander or discord, or show any attempt to take advantage of the situation for political aggrandisement.

On the other hand, it is not for any Englishman to interfere in the internal politics of the Slav countries. This is their affair, and their affair alone, but we can all sympathise with their aspirations, and all join in an enthusiastic desire to help them by every means in our power, not only to recover their own countries, but to see that the future atones for the past suffering, and that liberally and amply.

The only protest that can be made is against those Englishmen who identify themselves with a campaign of slander and attack. They associate themselves with one section of a political propagandist party who are already discredited by all who are made aware of their tactics.—I am, etc.,

ALEX. DEVINE.

Northwood Park, Winchester, March 16, 1918.

NEAR EAST BOOKSHELF.

AMPHIBIOUS WARFARE.*

To the phalanx of writers on personal records of the war, such as Ian Hay, Bartimeus, Ole Luk-Oie, and Sapper, comes a new author, "Conrad Cato" by designation, with a small volume on the trials and tribulations, humour and heroism of our river Navy in Mesopotamia. Nor is the newcomer the least worthy and entertaining of his kind; like an impressionist of incisive brushwork, he paints a delectable series of convases, the background whereof is the low banks of the Tigris and Euphrates stretching away almost endlessly in and out of floodtime to where the horizon line is broken irregularly by hills and mud-fortresses belching forth shell and shrapnel, by palm-groves and Arab villages baking in the glow of a tropical sun. The details of the picture are H.M. sloops, steamers, trawlers, barges, armoured "bellums" (gondola or punt-like native boats), and floating artillery devices of a picturesque if not very stable nature. The whole, were it not for the halo of tragedy which is War's prerogative, would be a delightfully naive and ingenuous chronicle of river picnics in the old Garden of Eden. As it is, however, the heroism and bravery, nonchalant as they are unaffected, of our naval officers and men in the campaign which ended in the capture of Baghdad, are overshadowed by the lamentable tragedy of Kut. So even are doings of our river boats ineffaceably tinged with the memory of that great and wonderfully noble failure—namely, the sinking of the relief ship Julnar within sight almost of the starving garrison in the beleaguered fort.

The height of our amphibians' glory—if such it can be termed—was reached in the operations which ended in the fall of Amarah, about which, as our author tells us, the only noteworthy comment of the Press was a petulant outcry by one of the weekly journals, wanting to know, "When is this picnic in Mesopotamia going to cease?" Roughly, the operation consisted in driving the Turks from their terra-firma positions in a flooded country to the north of Kurnah—a venture that necessitated a good deal of amphibious thought on the part of the General (General Townshend, as yet unknown to fame) and his staff. Artillery had to be accommodated on twin-bellums joined by means of planks—a most unreliable platform for 4-inch guns!—and the troops had to be taught to punt themselves across No Man's Land to the foot of the Turkish trenches. To the river sloops and launches again fell the lot of previously engaging the enemy batteries, of supporting the slow advance of the troops, and of towing such barges into position as were to be converted by sappers into bridges across unfordable canals—these few details will show the ingenuity displayed by our amphibious thinkers in overcoming a situation of an exceptionally complex nature. Our victory over the enemy was decisive, and he fled precipitately from his defensive positions in full retreat up the river in steamers, barges, maheilahs.

The total British force at the moment, counting in all the crews of the launches, the General, his staff, and a dozen privates, amounts to eighty-eight officers and men.

A naval lieutenant is sent ashore in a skiff with six Tommies, and he makes straight for the Turkish barracks, where he finds quite a lot of soldiers, such as one often does find in barracks. He seeks out the commanding officer, and asks him how many men he has there. The number was between 400 and 500. "Is that all?" asks the naval lieutenant, then tell them to pile arms and fall in on the river bank. They will be stowed in barges and sent down the river at the first opportunity." Now, the commanding officer does not know that the total British force at Amarah is only eighty-eight, nor that the British Army is at least twenty-four hours behind the Navy. All he knows is that he has seen a steamer-load of discomfited infantry tearing up the river with an armed launch in chase, and that armed launches have guns. So he deems it wise not to argue the point. . . . And that is the story of the taking of Amarah.

With this quotation we may leave the first part of the book. It is followed by a number of short stories illustrating the humour and temper of the naval officers when the thermometer is somewhere near 120° F. in the shade and mosquitoes are about as pleasant as the ping! ping! of machine-gun bullets flying low across No Man's Land. Most of the stories are concerned with the doings of one Toby, a real or imagined character, who enters effectively in one tale entitled "Unmixed Bathing." Having been invited by four enthusiasts to go out shooting with them, he refuses, and they go off by themselves. Luck is against them, and in the afternoon they return to their "bellum," cursing their luck. They are met by an Arab sheikh who speaks broken English to them, is an admirer of the British naval officer, and tells them a lot about Arab lore. Yes, he has four wives. Would they like to see them? Well, if they promise not to approach them nor to attempt to speak with them, his boat will guide them to where his wives are bathing in a pond not far away. Our heroes jump at the offer, and off they trudge. They go miles and miles, getting hotter and hotter, more and more wearied until—they lose their guide. Filled with righteous wrath, they return to their "bellum," only to find Toby lounging therein and sipping a cooling drink. Beside him lie the discarded garments of an Arab sheikh!

* "The Navy in Mesopotamia—1914 to 1917." By "Conrad Cato." (Constable. 3s. 6d. net.)

SHIPS AND AIRCRAFT.*

The two great volumes associated with the name of the late Fred T. Jane are too well known to need commendation to British readers; but a reminder may be given that they are still making their appearance during the war. *Jane's Fighting Ships*, rightly styled an encyclopædia of the navies of the world, is now edited by Mr. Maurice Prendergast. In deference to the requirements of the Defence of the Realm Act, the volume appears without the familiar silhouettes of British men-of-war, and naturally there can be no mention of the large number of new ships completed since the outbreak of the war or now building. A similar embargo applies to other navies; but it has been possible, in spite of these handicaps, to bring out a book of absorbing interest. The information regarding the German Navy is a special feature.

All the World's Aircraft is freed from some of the restrictions attaching to its naval colleague. The "errors of judgment" which have presented the enemy with some of our own models intact—the kindness has been reciprocated even more generously, be it remembered—have rendered secrecy in regard to these machines no longer necessary. The result is that some idea can be formed from this book of the wonderful variety of craft that go up into the air, from the monster Handley Page to the waspish "Scout Experimental," which tucks itself away under half a wing of its big brother. The novelty of the air service causes more interest to attach to aircraft illustrations than to those of ships, and with these the volume is wonderfully supplied. It is, moreover, a complete *vade mecum* for the air service, not the least important section being an introductory glossary of terms. It is well that the reader should be reminded that the Service is still in its infancy, for who can doubt that the achievements of what is virtually the tenth year of its existence will be speedily left behind. Hence the tables showing "the step-by-step progress," though short enough, are most eloquent. An engineering section describes the world's aero-engines and aeromotor development in 1916; there are chapters also on historical aircraft, on war balloons and parachutes, and a brief history of modern aeronautics by Mr. C. G. Grey, who is also the editor of the volume. The intelligent interest in aeronautics that this book stimulates is a duty to our generation.

La Bulgarie en Guerre. By Léon Savadjian. Preface by Maurice Muret and Letter from George Fazy. (Geneva: Georg and Cie.)

De la Succession d'Autriche. By Etienne Fournol. (Paris: Berger-Levrault. 3f. 50.)

Bharata. By Kedar Nath Das Gupta, in conjunction with Margaret G. Mitchell. (London: Union of the East and West. 1s. net.)

We are asked to state that Mr. Van de Linde's "Reminiscences," recently reviewed in these columns, were published for the benefit of the Chartered Accountants' Benevolent Association. The author has contributed upwards of £4,000 to its funds. He duplicates new subscriptions and defrays its working expenses in order that the entire income may be devoted to the relief of needy applicants.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. March.	1918. March.		1336. Jomada II.	5678. Nisan.
22	9	Friday	9	9
23	10	Saturday.....	10	10
24	11	Sunday	11	11
25	12	Monday	12	12
26	13	Tuesday	13	13
27	14	Wednesday	14	14
28	15	Thursday	15	15

A Greek Legation is to be established in Tokyo.

Mr. Augustus van Millingen returned to Egypt last month.

Dr. Margaret Dobson will shortly go to Egypt on war service.

Greek reservists of the 1909 and 1910 classes have been called to the Colours.

M. Misu, the Roumanian Minister to the Court of St. James, has left Berne for Roumania.

According to a Bucharest telegram to Amsterdam, M. Marghiloman has been appointed Roumanian Prime Minister.

Sir Arthur Hirtzel underwent an operation in a nursing home on March 22, and is reported to be progressing satisfactorily.

It is reported that a French officer has taken charge of the Department of Military Justice at the Greek Ministry of War.

Second Lieut. A. P. Dale, who has been accidentally killed while flying in Egypt, was the Unionist agent at Chesterfield.

Mr. Contomichaelos, president of the Greek community of Khartoum, has given LE.1,000 to the schools of that community.

Mr. George Enger, who has been on a visit to the Sudd region to study the commercial possibilities of the district, has returned to Egypt.

M. Radoslavoff, the Bulgarian Prime Minister, stated in the Sobranje that Bulgaria supported the idea of an independent Albanian State.

Lord Inchcape has consented to act as trustee and as a member of the National Committee on Sea Training, in place of the late Earl Brassey.

On March 21, the commencement of the Persian New Year, the Persian Minister received members of the Persian colony and friends at the Legation.

Austrian and Turkish ambulances, according to the frontier correspondent of the Amsterdam *Telegraaf*, have arrived at Cologne and Düsseldorf.

Prince Alexander, the Prince Regent of Serbia, attended a Requiem Mass at the Serbian Church at Corfu on March 14 in memory of his uncle, Prince Mirko of Montenegro.

The engagement is announced between Captain F. Gwatkin, Lancers, Indian Army, and Alys, youngest daughter of Colonel E. C. Stanton (late R.E.), of Allington Lodge, Merton Park.

Miss Gertrude Bell has been awarded the Founder's Medal of the Royal Geographical Society for her important explorations and travels in Asia Minor, Syria, Arabia, and on the Euphrates.

The "London Gazette" announces that the King of the Hellenes has conferred the honour of Commander of the Order of the Redeemer upon Captain Francis R. Scarlett, D.S.O., R.N.

Mr. Thomas Fraser, of Chesterfield Gardens, Hampstead, one of the managers of the Chartered Bank of India, Australia, and China, who died on January 18, left estate of the value of £53,964.

The Serbian Legation in London again denies in the most categorical terms that there have been peace *pourparlers* between Serbia and the Central Powers. "Serbia remains true to her ideals and faithful to her friends."

Dr. Trumbitch, president of the Jugoslav Committee in London, was received by Mr. Balfour at the Foreign Office on March 20 (states Reuter's Agency). Dr. Trumbitch explained fully to the Secretary for Foreign Affairs the aspirations of the Jugoslavs for their liberation from Austria-Hungary and their union with their kinsmen in Serbia and Montenegro in one independent State. Mr. Balfour, in reply, warmly expressed the sympathy, which is traditional, of Great Britain for the subject nationalities.

Sailendra Nath Ghose, who is under indictment at San Francisco with other Hindus and Germans, charged with plotting a military uprising in India, has been arrested and admitted to bail in £5,000.

Lady Mond will preside on March 26, at three, at 35, Lowndes Square, at a meeting in aid of the Serbian Relief Fund, when Father Nicolai Velimirovic will speak on "Features of Serbian History."

Bulgarian officials in occupied Serbia are reported to be forcing the Serbian population at the point of the sword to sign documents designed to make the world believe that the people desire union with Bulgaria.

A census of Busreh and Ashar made in August, 1916, gave the total civilian population as 28,213. According to a municipal estimate, the numbers are now close upon 59,000, excluding formed Labour corps.

In an interview with a representative of the Amsterdam "Jewish Correspondence Bureau," Dr. Heemskerk, ex-Prime Minister of Holland, advocates the formation of an independent Jewish State in Palestine.

A Constantinople telegram to the *Cologne Gazette* announces that, on the urgent proposal of the Minister of Marine, Djemal Pasha, the Chamber of Deputies voted an extraordinary naval credit of £T1,000,000.

Three designs were received for the Australian monument to be erected on the banks of the Suez Canal, two from Australians and one from an Italian. It was expected that the decision would be taken early this month.

The engagement is announced between Lieut. Harold P. B. Hoare, Indian Army, only son of the late Rev. H. G. Hoare, and Mrs. Hoare, Peshawar, and Kathleen Marion, second daughter of Mr. J. S. and Mrs. Manning, Madras and Reading.

Miss Constance Clark, of the nursing staff of the Royal Naval Hospital at Malta, has had conferred on her the French silver medal for the treatment of epidemic diseases, in recognition of her services to French naval officers and shipwrecked sailors.

On the departure from Jassy of General Berthelot with the French Mission, a deputation from the Roumanian Parliament handed him an address. The scene was a most poignant one, both the Roumanians and the Frenchmen being visibly affected.

Wild elephants have caused considerable havoc in the paddy fields in the neighbourhood of Kurumbranad (Malabar district, Madras). One of the herds, numbering between forty and fifty, is led by a magnificent bull, the sight of whom frightens away the watchers protecting the crops.

The King inspected a party of officers and non-commissioned officers of the Indian Labour Corps, under the command of Captain E. O. Fowler, I.A.R.O., at Buckingham Palace, on March 16. The party is composed of men from the Chin Hills in Upper Burma, who are on leave from the front.

What is described as probably the best Y.M.C.A. hut of its kind in Mesopotamia was formally opened and dedicated on January 7 at the British Advance Depôt at Amarah. The hut, which is built of brick, with a corrugated iron roof, is 140 ft. long and 30 ft. broad, and is lighted with electricity.

The Czech Press Bureau states that while in Great Britain, France, and Italy the movement for a united action of the Slavs and Latins of Central Europe is steadily growing stronger, the Slavs in Austria also are actively engaged in coming to a common agreement in their opposition against the Central Powers.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

The King has been graciously pleased to appoint Major-General Sir George Kenneth Scott-Moncrieff, K.C.B., C.I.E., Director of Fortifications and Works, War Office, to be an additional Member of the Second Class or Knight Commanders of the Most Distinguished Order of St. Michael and St. George.

While protesting against their non-admission to the Greek Parliament, the deputies for Northern Epirus have submitted to the Chamber a memorandum enumerating the trials to which the Greek population of Northern Epirus is being subjected by bands of Albanians, and recording that these Greeks are deprived of national education, of opportunities of practising their religion, and of all their political and communal rights.

An infantry sword has been added by the Serbian Ministry of War to the collection of swords of the Allies at the Tower of London. This is the only example in the collection that has been actually in service. It was used by Colonel Voislav St. Pavlovitch, colonel of the 4th Infantry Regiment, a kinsman of King Peter I. He was killed, sword in hand, at the head of his regiment on the Salonika front in November, 1916.

Among other signs of the Italo-Jugoslav rapprochement, says the Rome correspondent of the *Morning Post*, is the Serbian Government's decision to send 200 students now in France and Switzerland to prosecute their studies in Italian technical and normal schools. The Italian Government has promised to accord facilities to Serbian students at Italian Universities, and a Serbian elementary school will be opened at Rome shortly by the Serbian authorities, which Italian children also can attend.

The Montenegrin Premier, through Sir Roper Parkington, Consul-General, denies the report that Prince Mirko had abandoned the cause of his country. Prince Mirko was unable to leave Montenegro when the country was evacuated, as he was suffering from a pulmonary affection to which he has just succumbed. Though compelled to remain in Montenegro, he did all in his power to assist his countrymen against the invaders. It was in consequence of a decree of the Austrian authorities that he was removed to a sanatorium near Vienna, where he died, faithful to the last to his King, his country, and the Allies.

Reuter's Athens correspondent, in a message dated March 15, says:—The Government yesterday laid before the Chamber a Bill altering the law which dealt with the Royal Civil List and fixing the allowance to be paid to ex-King Constantine. In the preamble to the Bill the payment of an allowance to the ex-King is said to be justified by the Government's decision to annul the Budget grant to King Constantine. An annual allowance of 500,000 drachmæ (£20,000) is now accorded to the ex-King, the Government, however, reserving the right to suspend payment of it at will. King Alexander's Civil List is reduced from 2,000,000 drachmæ to 1,600,000 drachmæ (£64,000) An annuity of 300,000 drachmæ (£12,000) is granted to the Queen Dowager Olga.

APPOINTMENTS, PROMOTIONS, ETC.

Lieutenant-Colonel H. D. Pearson, Royal Engineers, Director of Surveys, Sudan Government, has been awarded the Distinguished Service Order.

Bimbashi F. A. L. Lawrence has been transferred from the Sudanese to the Western Arab Corps; Bimbashi E. R. Sauter from the Sudanese to the Equatorial Battalion; and Bimbashi W. M. H. Pollen, M.C., from the Equatorial Battalion to the Sudanese.

OBITUARY.

The death took place, on February 21, at Alexandria, of M. Nicolas Lombardo, one of the oldest members of the Italian colony in Egypt.

The death has occurred at Hsipaw, Burmah, of Mr. William Vivian Hoey, of the Indian Civil Service. He was educated at Bedford Grammar School and Brasenose College, Oxford.

Major-General Harding Steward, C.M.G., who died at Newton Lodge, Nailsworth, Glos, on March 15, in his 83rd year, served in Malta, the Ionian Isles and elsewhere with the Royal Engineers.

Admiral John William Brackenbury, C.B., C.M.G., who died at his residence at Hampstead on March 15, commanded the "Thalia" in the Egyptian War, 1882, receiving the Egyptian medal, the bronze star, and the Third Class of the Medjidieh.

Colonel Samuel Hunter Cowan, whose death has taken place at Torquay at the age of seventy-six years, obtained a commission in the Royal Artillery in 1859, and was appointed assistant superintendent in the Survey Department, Bengal, in 1867. He held charge of the Cachar Survey and later of the Hugli River Survey.

Lieut.-Colonel John Hobart Tyler, whose death has occurred at his residence in Clevedon, was attached to the 60th Rifles during the Mutiny, and served at the siege of Delhi and was severely wounded. He was for a considerable time officer in charge of the guard over the King of Delhi, and was twice mentioned in despatches.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

"NAVAL & MILITARY" HOTEL
HARRINGTON ROAD, SOUTH KENSINGTON, LONDON.
Only 200 yards from District Station and "Piccadilly Tube" (S. Ken. Station). For all Services and the General Public. Two Lifts. Excellent Cuisine. Exceptional Reception Rooms. 100 Bedrooms.
Cables: "NAVAMILOT LONDON." Telephones: KENSINGTON 5425 (4 lines.)

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 5 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

THE NEAR EAST.

Editorial and Publishing Offices:

DEVONSHIRE SQUARE, LONDON, E.C. 2.

Telegrams: "EASTAPROX, AVE, LONDON." Telephone No.: 618 London Wall.

FRIDAY, MARCH 22, 1918.

GERMANY'S GAMBLE IN ASIA.

All that is happening in the East points to the fact that Germany is about to embark upon a gigantic gamble in Asia. The purpose of the German Government is probably threefold; it wishes to hearten its own people with a view to strengthening their powers of resistance; it hopes to galvanise the Turks to further effort; and it is minded to stake out as wide a claim as possible in order to have a substantial margin for bargaining when the inevitable day of reckoning comes. If by chance the collapse of Russia were to be repeated in other countries of the Alliance, then the gains in Asia would represent the coping stone to world-domination; but if something has to be sacrificed in the West or overseas, the foundations now being laid around the Black Sea and the Caspian will at least stand Germany in good stead when the time comes to pick up again the threads of a policy which by a miscalculation has on this occasion overreached itself. The war has taught the Allies that German designs cannot be treated with indifference; even where they fall short of complete realisation, they are usually formidable enough to be more than embarrassing. For the moment the Germans appear to have everything at their feet. Russia, for all the blustering of the Bolsheviks, has been pushed impotent on one side; the treaty with Roumania is not yet ratified, but Mackensen is completely master of the situation in that country. More important still, Odessa and Nicolaieff have been reached by German troops. It is hardly to be expected in the hopeless chaos in which the whole of Russia finds herself that effective steps will have been taken to prevent the whole of the shipping at these ports from falling into German hands. Even if the bulk of it should have sought refuge elsewhere, it can only be a matter of time before the Germans, with the help of the Turkish navy, will have taken possession of the Black Sea Fleet and of all the vessels sheltering in Russian harbours. Then with Batum and Kars, according to the terms of the Brest-Litovsk treaty, ceded to Turkey, they will be established at the two ends of the railway system which leads to Baku on the Caspian Sea and Tabriz in North-Western Persia. Germany will have established her footing in the Middle East, and will have in her grasp a far less vulnerable route to India than the one which, passing through Baghdad, would have to skirt the shores of the Persian Gulf.

The vista thus opened up is already being painted in attractive colours for the edification of the German public; for optimism just now is at a premium, and *Zukunftsmusik* is the official remedy for domestic troubles. As the programme is not entirely dependent on the victorious advance of any considerable Turco-German force, but relies mainly on the helplessness of the populations concerned to withstand German intrigue, its defeat will not be effected completely by the final success of the Allies in the West. For this reason the menace ought to be combated on the spot. The first rift in the enemy's lute is supplied by the people of the Caucasus, who are displaying no readiness to acquiesce in the surrender of Russian territory to the Turks, although it would be a mistake to place much reliance upon their capacity to stay the German advance. A further asset for the Allies is to be found in the Persians themselves. They are essential to the success of the German scheme, in so far as their territory constitutes a large section of the prospective corridor to India. The railway from Krasnovodsk, on the eastern shore of the Caspian opposite Baku, to Tashkend, with its branch line to the Afghan frontier, offers a second string to Germany's bow, but would by itself be unequal to support the German scheme, if Persia proved unfriendly. The attitude of Persia must at best be an expectant one. She can hardly be blamed for failing to grasp the real inwardness of the situation in Europe. Russia, the personification of the all-powerful, who had to be placated at every turn by Great Britain, she sees humbled to the dust. Is it to be wondered at that the Persians find that there was something behind German boasts and German gold? The Teheran Government may be capable of forming a shrewder estimate of the position; but its authority to-day is restricted. It knows that Persia cannot stand alone; that she must look to a European Power, if only for the indispensable financial assistance without which Teheran could not hope to remain even a figurehead. Not unnaturally it desires to recover its lost authority, and therefore must lend an ear to any definite expression of opinion in the country. The peculiar situation in Azerbaijan, when Russia was still Imperialist, lent special weight to that province. To-day it is the part of Persia most exposed to Bolshevik and, consequently, German influence. For this reason the course of events in Azerbaijan needs to be closely watched.

The immediate task of the Allies ought to be the strengthening of the two forces which offer to bar Germany's way eastwards from the Black Sea. Direct intervention in the Caucasus is out of the question. It has not even been possible to send a mission to Tiflis. Great Britain, however, occupies a unique position in Persia, and there should be no difficulty now in making it clear to the Persian Government and people that the British have no other desire than to see them a united and efficient State. Organised and enlightened administration, however, cannot be established by a hopelessly corrupt bureaucracy, nor does constitutional government necessarily spell sound finance. It may be that the signal success achieved by Sir Percy Sykes and his South Persian Rifles will convince the Persians that their chances of national salvation lie in having the work of government carried out by Persians under efficient foreign supervision. The early introduction of this principle on a comprehensive scale offers the best bulwark against German penetration. In the meantime, the attention of the enemy must be diverted from grandiose schemes for the future to more urgent problems nearer home. Neither General Marshall nor General Allenby can annihilate distance, and Aleppo remains a long way from Hit and from Nablus. But Turkey no longer has her heart in the war; and if she can be made to realise the irresistible nature of the advance from these two ends of her empire, there may be a call for the diplomatist to complete the work begun by the soldier. There remains in the hands of the Allies the most effective weapon of all, the utilisation of the Japanese Army not only to drive back the insignificant forces with which the Germans are now able to overrun Russia, but also to bring back self-respect to the Russians and enable them to rally for the defence and integrity of their own country. The Allies' hesitation in coming to a decision on this point has, it is to be feared, given time for party politics in Japan to exercise a dilatory influence. A clearer comprehension of the extent of the German menace would, perhaps, have allowed the Japanese expedition to be by now well on its way westwards across Siberia.

PRO-AUSTRIAN PROPAGANDA AND ITALY—II.

BY RICHARD BAGOT.

In the preceding portion of this article, the misconceptions, carefully fostered by the pro-Austrian propagandists in this country regarding the mental capacity of the Italian people to be a judge of Italian national interests and necessities, were briefly considered. We may now pass to the examination of the present attitude of Italy towards the questions in which she, more than any of her Allies, is vitally concerned; the justice of that attitude and its loyalty towards the primary objects for which the Allies are waging war on the Central Empires; and the injustice and disloyalty to the cause of the Allies of which our Austrophils, consciously or unconsciously, are guilty by lending themselves as instruments of a propaganda the sources of which must be only too evident to those acquainted with the mazes of pro-German and Vaticanist intrigues both in Italy and elsewhere.

It has frequently been stated, and with entire truth, that the entry of Italy into the war was due to the influence of a minority. But there would appear to be some danger of its being forgotten that this minority trusted to the good faith and loyalty of Great Britain, France, and Russia, which Powers had lost no opportunity of pointing out to the Italians that only by ranging themselves on the side of the Triple Entente, fighting for the protection and the rights of weaker nationalities, could Italy hope to accomplish the liberation of her own unredeemed peoples, the legitimate rectification of her frontiers, and the final completion of her national unity. It has already been shown how Irredentism had practically ceased to be anything more than a pious tradition among the great mass of the Italian people—and allusion was made to the somewhat cynical attitude frequently to be met with in central and southern Italy towards the idea of liberating Austrian subjects of Italian race from the hateful and tyrannical Hapsburg rule. It would be misleading, however, to take that cynicism too seriously; and, so far as the argument occasionally heard, to the effect that the Italian subjects of Austria had it in their own power to free themselves from the Hapsburg yoke by emigration, is concerned, it must be remembered that such an argument is certainly not employed by patriotic Italians belonging to any region of the Italian kingdom. It was precisely among that minority which brought Italy into the war that the true spirit of Irredentism had never ceased to exist. Three reasons may be said to have made it possible for a minority to persuade the majority of the Italian people to abandon neutrality and to confront with equanimity, and even with enthusiasm, war with a powerful and treacherous neighbour, and the certain prospect of war also with Germany. The first of these reasons was the universal indignation caused by the discovery that the national honour was being outraged by the intrigues carried on between a certain political group and Prince von Bülow, with the object of bribing Italy to maintain neutrality at the price of a pretended cession by Austria of territory, a cession which would obviously have been revoked in the case of a final victory on the part of the Central Empires. The second reason was the horror and indignation caused by the monstrous acts of unbridled barbarism committed by the Germans in Belgium, in France, and on the seas—acts which were rightly regarded by the Italian people as a direct menace to the principles of Latin civilisation. The third reason was the contempt and disgust inspired by the cynical indifference to those acts, and the manifestly pro-German and pro-Austrian attitude assumed by the Vatican and by the new Pope, Benedict XV.—an attitude maintained until it became evident that the war could end in no overwhelming, if any, victory for the Central Empires. It has, we believe, scarcely been realised in this country how much peace meant to Italy. The nation had barely commenced to recover the effects, moral and economic, of the war with Turkey. Italian commerce, finance, and social progression of all kinds had in the fifteen or twenty years prior to 1914 been steadily and rapidly advancing, and the maintenance of peace alone could contribute to a further development and continuance of those conditions. It was no unworthy motive of egoism, whether "sacred" or not, which caused the majority of the Italian people to suffer itself to be persuaded by a minority and to abandon peace and prosperity—for war. The nation had to choose between fighting for the great principles of Latin civilisation, and a passive attitude towards the foes bent upon the destruction of that civilisation; between national honour and national dishonour; between the realisation of the policy of the great Italians of the Risorgimento and the policy of the sacristy and the "commercial penetration" of Berlin and Vienna. The Nationalist and Interventionist parties could scarcely be blamed if, conscious that neutrality signified the pursuance of a policy dictated by the enemies, external and internal, of Italy, they sought to reawaken in the hearts of the people the spirit of Irredentism by insisting upon the political and material advantages of grasping so great an opportunity of rectifying frontiers which constituted a permanent national weakness and danger, and of extending the spheres of Italian supremacy. The Irredentists, among whom Irredentism, and all for which it stood, was still a sacred aspiration yet to be realised, could scarcely be blamed if they recognised that the moment had arrived for the completion of Italian unity. We are not concerned in these pages with the justice or injustice of Italian claims over the eastern Adriatic provinces. Like all national and political movements, Irredentism has ever had its *intransigeance;* and it has been certainly unfortunate that its more exaggerated supporters have been led into equally exaggerated claims by a political group which a very large—perhaps the great majority—of the Italian people, as has already been observed, has somewhat humorously qualified as *i nostri Prussiani*. We are concerned, rather, with showing how the propaganda now being carried on in this country in favour of a conciliatory policy towards Austria-Hungary cannot but be regarded with the greatest suspicion on account both of its original sources and of its ulterior objects, as well as on account of the consequences its adoption by the British Government would inevitably produce.

The pro-Austrian propagandists have found in this country a field exceptionally suitable to their purposes. The British public is, and always has been, even more ignorant, if possible, of the Austrian system of government and of Austrian foreign policy than it has been of modern Italy and the character and aspirations of the modern Italian people. A sentimental and curiously erroneous conception of the individuality of the late Austrian Emperor, based, apparently, on sympathy with him for a series of family tragedies which his own actions and conduct were largely responsible for bringing about, and also on the fact of his unusually lengthy reign, was sufficient to distract the mind of a people traditionally indifferent to the foreign policy of Continental States and their rulers from the almost unexampled record of political treachery, intolerance, and oppression of his subjects of alien race which characterised the reign of Francis Joseph—a reign in the course of which over 70,000 persons suffered death for political offences often of the most trivial nature, and sometimes for reasons which had not even the excuse of being of a political character. The Austrians and Hungarians of the upper class have been frequent and welcome guests in our midst, and have won English sympathies by their love of and proficiency in shooting and hunting, as well as for the superficial charm of their social qualities; while some of us have enjoyed their hospitality in their own country, and have been impressed by the princely scale of that hospitality and the magnitude of their estates. But we have not, like the Italians, had them for rulers and neighbours. We have experienced neither their political treachery nor their ruthless cruelty towards all whom they suspected of being political opponents. We have known the Austrians and the Hungarians only as social acquaintances anxious to make a favourable impression upon us.

Those among us who have followed with interest—

Digitized by Google

and, it may be added, with intelligence—the various phases of Italian public opinion during the last two years can scarcely have failed to recognise that it has steadily drifted further away from imperialism, and from the imperialistic programme of the intransigent Irredentists and Nationalists. The Pact of Corfu, of July last, could hardly have been signed during the year following the entry of Italy into the war without creating a storm of Interventionist indignation both genuine and assumed. Instead of this, the leading journal of Italy representing the best elements of the public opinion—the *Corriere della Sera*—made itself the champion of the most practical part of the Jugoslav aspirations, and insisted that only the liberation from Austrian rule of the Slav populations on the eastern shores of the Adriatic, and their unification into an autonomous State or States, could create an effective barrier against Austro-German schemes in the Balkans and the Nearer East, and at the same time secure to Italy her necessary security and influence in the Adriatic waters.

The immediate and rapid recovery of the Italian army from the sudden and most grave reverse which destroyed in a few hours the fruits of two years and a-half of splendid victories gained in the face of well-nigh insuperable difficulties—a disaster which was directly due to treachery—was, it will be remembered, immediately followed by an insidious attempt on the part of the clerical and official socialist "neutralists" to remove from power not only General Cadorna, but also Baron Sonnino, both of whom stood for unswerving allegiance to the Allied cause, and to a resolute war policy. The object of this intrigue was obviously to prepare the ground for the return of Signor Giolitti and his pacifist and pro-German party, which might be depended upon to carry out the programme of the Neutralists. It is, indeed, that programme which our Austrophils in this country are seeking to further by their propaganda in favour of a conciliatory policy towards the "ancient ally," with whom "we English have no quarrel," and which, it may be observed, is so curiously in harmony with the peace proposals and with the "neutrality" of Benedict XV.

As has been observed, our Austrophils are careful not to explain to us the conditions which they would offer to our "ancient ally," in order to induce her to commit the supreme folly of taking a step which there is no reason to suppose that she has any real intention of taking—although there are undoubtedly reasons to suppose that she is at this moment allowing us to believe that she would not be averse from doing so. We are told, somewhat vaguely, that we should not desire the dismemberment of the Austrian Empire, and that it is very egoistic of Italy to do so; and yet at the same time we are told that we and our Allies are fighting for the rights and for the protection of the weaker nationalities. It is scarcely conceivable that, at any rate during the present phase of the war, Austria would consent to retire from the conflict except on the conditions that she retained her hold over at all events the eastern Friuli, Istria, and Dalmatia, as well as over Bosnia and Herzegovina. We must presume, therefore, that we have not been fighting in this war with the object of securing to the weaker nationalities their rights and liberties, since we should, by leaving those regions to the rule of the Hapsburgs, prove ourselves to be quite the reverse of champions of political and racial independence and liberty. But perhaps our advocates of a conciliatory policy towards Austria which is to bring about her detachment from Germany and her retirement from the war are ingenuous, or ingenious, enough to believe that Austrian guarantees of political liberty and autonomy to her alien subjects in those regions would be worth the paper they were written on, or that they would not share the fate of other scraps of paper. Such ingenuousness would be quite conceivable. It would also no doubt be highly diverting to the two Emperors. It would not, however, be so diverting to Italy, who, after all, is our Ally. There exists, indeed, no Italian worthy of the name who would not feel that should Austria emerge from this war with her usurped territories intact, with her Italian and her Slav subjects unliberated, and with the Hapsburg power unbroken, Italy would have been indeed betrayed into the hands of her enemies by those who had professed themselves her friends and induced her to fight on their side by pledges they had deliberately broken. Were Austria not to be dismembered as a result of this war, what Power, it may well be asked, could insist upon her fulfilling any guarantees of liberty or autonomy for her alien subject races? Would Great Britain, or France, or America be in a position to do so? Would Germany, the bitter foe of Latin civilisation, be disposed to assist in a liberation of the Jugoslav and other races which could only tend to the strengthening of Italy and the creation of a new barrier to German aims in the Balkans and in the eastern Mediterranean? But perhaps this pleasing duty would be left to that nebulous body, the League of Nations. Speaking on August 6 last, Mr. Lloyd George observed, with reference to the Austro-Italian questions, that, "though we agree with President Wilson that the break-up of Austria-Hungary is no part of our war-aims, we feel that unless genuine self-government on true democratic terms is granted to those Austro-Hungarian nationalities who have long desired it, it is impossible to hope for the removal of those causes of unrest in that part of Europe which have so long threatened its general peace." Precisely. But with an Austria left in undisturbed possession of those regions in which nationalities hitherto under her rule have, as Mr. Lloyd George rightly says, long desired genuine self-government on truly democratic terms, what reason is there to suppose that such terms would ever be granted? Surely, no one having the slightest acquaintance with the history of the House of Hapsburg, and with the system of Austrian government, could suppose that such terms ever would be granted to alien races under the Hapsburg sway! It is not easy to understand how, without the dismemberment of the Austrian Empire as at present constituted, Mr. Lloyd George's and President Wilson's ideals could be realised; and it is, therefore, a little perplexing to be told in the same breath that such a dismemberment does not form any part of our war-aims. It is also perplexing to the Italians and, it must be presumed, to the Jugoslavs. Neither is the situation made any clearer by the amazingly ingenuous statement made by another politician, M. Pichon, who remarked in a recent speech that the subject peoples of Austria-Hungary should be left to the Hapsburg rule "provided that autonomy or genuine self-government is given to them on the first opportunity." It is greatly to be feared that, under the rule of the Hapsburgs, the opportunity would be very long in presenting itself; and, in the meantime, the general peace alluded to by Mr. Lloyd George would continue to be threatened.

It would be, to say the least, not a little unfortunate were the pro-Austrian propaganda now being carried on in our midst—a propaganda the sources of which are perfectly well known to the Italians and to all who are really acquainted with revolutionary and other intrigues in Italy and the Allied nations—to receive any real support in responsible quarters in this country. For this reason all those who recognise that unity and reciprocal loyalty between the Allies are indispensable to the triumph of our common cause, and who realise that the primary object of Germany has always been to promote discord and ill-feeling among her foes, must regret that any steps should have been taken which could justify the suspicion that the British Government had directly or indirectly played into the hands of those seeking to further Austro-German aims by endeavouring to find a basis upon which to assume a conciliatory attitude towards Austria-Hungary, or that it was in any way deceived by the specious "detachment" theory so cunningly devised in the Ballplatz and the Wilhelmstrasse. Apart from the obvious disloyalty to Italy of which this country would be guilty were any agreement made with Austria which did not secure to our Ally all that she now claims as her indisputable rights, we should be faithless to that cause of protection of the weaker nationalities and of the safeguarding of their rights and liberty, for which we profess to

Digitized by Google

be fighting, were we, relying on Austrian guarantees or promises, to leave the subject nationalities of Austria under the sway of the Hapsburgs. Such secret diplomacy as this would, it may be hoped and believed, rouse the indignation of every honourable Briton both here and beyond the seas. Our Empire needs no peace made in Germany or in the Vatican; and neither does Italy. It would be well if our Austrophils were made to realise this. Our quarrel with Austria and our quarrel with Germany is one and the same. It is also the quarrel of France, of Italy, and of all our Allies. There may be more ways than one of finally settling that quarrel; but it is not at the price of disloyalty either to those fighting on our side who have trusted to our word or to the cause which we have declared to the world to be our primary object for having entered this war. It is natural that, in view of the ignorance of the real Austria and of Austrian methods of government, which has always existed in every class in this country, our pro-Austrian propagandists, both in our Press and in our Government departments, should find the whitewashing of what they please to call our "ancient ally" —of her connivance at and participation in the German outrage on humanity and civilisation—a comparatively easy task. It would, indeed, be a brilliant diplomatic victory for our Foreign Office could it succeed in persuading Austria at this moment to confess herself utterly defeated and impotent to prevent that dismemberment which could alone be a genuine guarantee of liberty and self-government to her oppressed nationalities and of restitution to Italy of her national frontiers and territories. But it is certainly on no such assumption as this that the wire-pullers of the pro-Austrian propaganda are proceeding. They are endeavouring, for very obvious reasons, to find means whereby the Hapsburg autocracy with its buttresses of ultramontane clericalism, political and religious intolerance, and mediæval conceptions of social rights, may be left intact; and whereby—though we must believe that only the instigators of the movement, and not our ingenuous politicians, recognise this—the autocracy of the Hohenzollerns and the militarism of Germany should emerge all the stronger for being relieved of a partner whose defection could be dealt with at leisure in future years, and whose present needs were becoming not a little embarrassing. In the meantime such a permanent estrangement and, indeed, legitimate anger against Great Britain would be fostered among the Italian people as would cause Italy for her own protection, and for her own internal welfare both social and economic, speedily to seek re-admission into a German alliance; while the peace proposals and the "neutrality" of Benedict XV. would have secured their principal object for which, as it would seem, our Vaticanists in this country, in Canada, and in Australia are so indefatigably working.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Soldiers in India (Commissions). March 11.

Sir CHARLES HENRY asked the Under-Secretary of State for War whether, when a soldier serving in India has been recommended for a commission and on account of age is not eligible to receive one in the Indian Army, arrangements will be made that he shall be transferred from India in order that he may obtain his due recognition and be granted a commission?

Mr. MACPHERSON: Any soldier who is ineligible on account of age for a commission in the Indian Army, but conforms in all respects to the qualifications necessary for a temporary commission in the British Army, can, if recommended by his commanding officer and the General Officer Commanding in Chief in India, be sent home for admission to an officer cadet unit to train for commissioned rank, though, if he is a candidate for an infantry commission, he would normally be sent for his course of training to the officer cadet unit which now exists in India for the purpose of training candidates for that arm. The same procedure applies in the case of a grant of a permanent commission in the Regular Army to soldiers serving on normal Army engagements, with the exception that, if the recommendation of the General Officer Commanding in Chief in India is approved, the soldier is not sent home for further training.

Mesopotamia (Replacement of Troops). Mar. 11.

Sir JOHN JARDINE asked the Under-Secretary of State for War whether he can definitely state that any arrangements are being made, in consideration of the bad climate of Mesopotamia, the changes of temperature from the bitter cold of 29 degress to the heat of 130 degrees, and the increase of fevers, jaundice, and cholera in the hot weather, to replace any units of troops which have already withstood two hot weathers in successive years by units at present cantoned in the healthy conditions of Indian military stations?

Mr. MACPHERSON: Arrangements are in hand which will materially reduce the number of units which have been in Mesopotamia for two hot weathers, but the present scarcity of shipping precludes the regular replacement of whole units in Mesopotamia by those in India. The general officer commanding in command grants such leave as he finds possible, giving preference to those who have been in Mesopotamia for two hot weathers, but this privilege is bound to depend upon the military situation at the time and the availability of transport. The improvement of general conditions in Mesopotamia has resulted in a large decrease in sickness, especially in enteric, malaria, dysentery, and cholera. Except during the height of the hot weather the climatic conditions about Baghdad compare very favourably with those in India.

Prisoners of War in Turkey. March 18.

Mr. HANSON asked the Under-Secretary of State for War whether he was aware that the Turkish authorities refuse to allow their English officer prisoners to buy soldier's ration bread with which to satisfy their hunger, on the ground that Turkish officers in our hands are not allowed this concession; whether he was aware of the price which the said officers are charged for bread, which they are compelled under these circumstances to buy in the bazaar, with the result that many officers with limited means and with a wife and family to support are reduced to great financial extremity; and whether the military or Indian authorities will take some effective step or steps to relieve this situation?

Mr. MACPHERSON: Representations to the effect that British officer prisoners of war in Turkey are not allowed to purchase food at Government contract rates have recently been received, and it is known that the price of foodstuffs in Turkey is now very high. The Netherlands Minister has been authorised for some time past to supplement materially, and gratuitously, the amount paid to British officers by the Turkish authorities, but owing to the totally inadequate means of communication it is probable that this does not always reach the prisoners. The question is under consideration whether, in view of the continued rise in prices, the payments made by the Netherlands Minister should be increased.

In reply to a question by Colonel Sir RANDOLF BAKER about prisoners, British and Indian, taken by the Turks since the war began, Mr. HOPE gave the following written reply:—

Of the British prisoners, including the Royal Navy, 438 officers and 3,780 other ranks are known to have been captured by the Turks. Of these 32 officers and 274 other ranks have been repatriated or escaped. Fourteen officers and 1,413 other ranks have died, and 392 officers and 2,183 other ranks are still in prison camps, according to the latest returns. These figures are exclusive of one officer and 635 other ranks of the Kut garrison who have never been traced.

Of the Indian native prisoners 221 officers and 7,169 other ranks are known to have been captured. Of these six officers and 1,146 other ranks have been repatriated or escaped. Four officers and 1,298 other ranks are known to have died, and 211 officers and 4,725 other ranks are still in prison camps, according to the latest returns; 2,600 of the rank and file of the Kut garrison have never been heard of.

Eastern Campaigns.

Major DAVID DAVIES asked whether the military operations in the Eastern theatres of war came under the supervision or control of the Supreme Allied Council at Versailles, in order to give the fullest expression to the doctrine of the single front, and to obtain complete unity of action amongst all the Allied forces.

The CHANCELLOR of the EXCHEQUER: The answer is in the affirmative.

A Gallipoli Medal?

Mr. MACPHERSON, in reply to Colonel YATE, stated that there was no intention to issue a special Imperial medal or ribbon for the operations in Gallipoli.

Brigadier-General MCCALMONT: Do I understand from the use of the word Imperial that there is an intention of issuing a colonial decoration?

Mr. MACPHERSON: I do not know what the Australian authorities themselves have done, but the view of the military authorities at home is as I have stated.

British Prisoners.

Mr. J. F. HOPE, Lord of the Treasury, in reply to Sir R. COOPER, said that the question of arranging for the internment in a neutral country of British and Turkish prisoners of war was carefully considered by his Majesty's Government, but was not found to be practicable, for lack of accommodation in any available neutral country, as well as on account of the difficulty of transporting the large numbers of Turkish prisoners from Egypt, India, and Burma to any suitable neutral territory. As my hon. friend is aware, an agreement for the repatriation of British and Turkish prisoners on the ground of health has been signed, and only awaits ratification by the Turkish Government.

THE PRESS ON THE NEAR EAST

America and Turkey.

A noticeable development of the war is the hardening of American opinion against Turkey all the more remarkable in view of the altruistic character of American relations with the Ottoman Empire in the past. As a typical utterance on the subject may be quoted a brief statement by Mr. W. H. Taft, entitled "Americanism versus Ottomanism," which appears in *The New Armenia*:—

Ottomanism represents the very antithesis of Americanism. It is a lawless form of mediæval autocracy imposed on subject races by pressure from without; sustained by fraud and force; knowing no law; despising justice; alien to every instinct of humanity; deaf to sympathy and glorying in the shame of its power to injure and destroy.

Americanism is a constitutional form of government by the consent of the governed; sustained only by the force of intelligent public opinion; evolved by experience and ever evolving into larger and wider conceptions of justice; tempered by the principles of equity; swayed by the emotions of charity; keen to respond to the calls of humanity and glorying in its victories of peace.

Eastern diplomacy is outwardly bland and exuberant. It is secretly adamant and utterly indifferent to performance. It is opportunist. It says one thing and does another, or leaves its promise unfulfilled, and all with equal equanimity. Those who practise it are like those mentioned by Macbeth: "They palter with us in a double sense; they keep the word of promise to our ear, and break it to our hope." Its rule is to evade, revoke, and delay at all costs, promise the best, and do the worst.

American diplomacy may err in the direction of emphasising the national characteristic optimism of our people. It is not bland. Sometimes it is blunt. But its optimism is not a cloak for opportunism. It says what it means, means what it says, and does what it says and means. Its rule is to devise the best possible, and strive for the best obtainable.

The two systems have nothing in common, and between two such diverse systems a rapprochement of international intercourse is almost impossible. It is well nigh hopeless to expect the old East to alter its methods. It is unthinkable that we should change ours

We are not at war officially with the Ottoman Empire. But we are and have been everlastingly at war with Ottomanism and every other disguise for irresponsible autocracy since we became a nation. The Ottoman Empire is not only doomed. It is not merely moribund. It is dead—and we are waiting with what patience we may for the final obsequies. When that takes place, as it surely will, and at no distant date, we shall be prepared to say: "The king is dead, long live the State."

Two Views of Greece.

Mr. C. M. Villiers-Stuart, in the *Fortnightly Review*, has contrived to depict some old scenes in new language. The ground will be familiar enough in its details to many, but the merit of his contribution consists in the method he has chosen of presenting the two views in juxtaposition. They are the English view and the Greek view. "We see Greece as the champion of the finest flower of Paganism; they see her as the protagonist of Eastern Christianity." The foreigner turns first instinctively to the Parthenon, and on this building the writer has the following remarks to make:—

There are two world-famous shrines, the Parthenon and the Taj Mahal, which every pilgrim makes a point of visiting by moonlight. Over their beauties, especially seen in these circumstances, the writers of text-books rave. About the Indian Taj, I would venture to say that the pilgrims and their guides are wrong, for colour is the life of the East—as water is its soul—and the garden tomb of the Lady Arjumand, lovely at all times, should be first seen touched by the rosy-fingered dawn. The Parthenon, on the other hand, is a European triumph; it conforms to our rules. It had colour in profusion when it left the sculptor's hands, but it was used in the dry Western way, as a conscious decoration to define and bring out the form, not in its emotional sense as used in Byzantine, Persian, and Indian building. There is beautiful colour there to-day, in the contrast of the golden-white Pentelicon marble with the pale blue background of distant sea and sky, or as it stands out in sharper relief against the mauve and purple downs of Hymettos. But the critics are right here: the great temple of Athena makes the deepest appeal in the warm southern moonlight.

Then, when the detail shows as plainly as by day but the local colour is lost, the beauty of the Parthenon's perfect form holds one fast. The huge Doric pillars, springing from their rock-like platform, at first sight recall the temple's forerunners by the Nile; the grave Egyptian feeling is quite unmistakable. But this impression quickly fades; the whole mind is absorbed and held captive, not by the vast scale, but by the extraordinary sense of life with which each part is interpenetrated, by the subtlety and balanced grandeur of the Greek genius.

On the Greeks also the ideas and institutions of a remote past continue to exercise a living influence. But it is not the past which the Athens "schools" have studied so diligently. "It is the glamour of the Eastern Empire and its old rivalry with Rome which fires their imagination and for them constitutes the absorbing question of the future." Mr. Villiers-Stuart continues:—

Athens almost forgotten, Constantinople lost, Mount Athos became the central rallying point of the Greeks. The monasteries on the westernmost finger of the Chalcidice peninsula are so seldom visited, indeed so little known, that the part they have played in Balkan history is apt to be overlooked. The fact that no woman may land there may possibly have contributed to this neglect. The few Western travellers who have been enterprising enough to do so seem to have gone more in search of old manuscripts than of anything else. But the wonderful series of buildings on the mountain tell their own tale; with the sole exception of Pompeii, nowhere in Europe are there such ancient specimens of domestic architecture. The collection of jewellery is said to be unique. And there to this day the Icon painters exercise their art in an unbroken school of monastic tradition. Their saints, it is true, have now a smooth prettiness not uninfluenced by the Neapolitan painters of the Catholic revival. But their halos and skies are still of beaten gold, and their stately attitudes and almond-shaped eyes are directly inherited from ancestors of the fourth-century mosaics

The reason that these treasures escaped the Turks is not far to seek. The monks of Mount Athos, wise in their day, submitted to Mohammet II. with a good grace before the fall of the capital. In this way they retained their power and their privileges. Protected by the Turkish fleet from attacks over sea and secure on land in the isolation and natural strength of their rocky peninsula, they have handed down, almost untouched by the changes around them, the learning, the art, and the peculiar point of view of Christianity in one of its earliest phases. For, broadly speaking, the Greek Church represents Christianity up to the close of the twelfth century, the Roman Church the inspiration of the later Middle Ages, and the Church of the English Prayer-Book the Christianity of the sixteenth and seventeenth centuries in contact once more, through the Renaissance, with the clear light of classical Greek reasoning. In the twentieth century the spirit of Christianity awaits a fresh form of fulfilment.

Hence, according to our author, the Greek insistence on the part they have to play in the Balkans. He concludes:—

We begin to realise how lasting is this old influence of the East on the West now our latest crusade to Byzantium has brought us in contact with it once more, though, as a matter of fact, we have found its manifestations rather perplexing to deal with. We are so accustomed to think of Athens as Greece and Greece as Athens, the city is so fixed for us under its ancient aspect as the bulwark of Europe against Asia, that it is not a little disconcerting at first to find the country in its own mind standing for the union of the Balkan nations and the rebuilding of the Eastern Empire. This is a project dear to Greek hearts.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedouin, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The unpromising nature of the position with regard to Egyptian cotton was discussed by our Cairo correspondent last week, and in view of what he then said my readers will not have been taken by surprise by the decision of the British and Egyptian Governments to acquire the cotton crop. Briefly stated, the root of the trouble has been the shortage of transport, which has so seriously interfered with the shipments of cotton and seed from Egypt that our correspondent says that it appears to be inevitable that about one-third of the old crop will remain unshipped when the new crop comes on the market. That contingency made Government intervention inevitable, if a serious cotton crisis was to be avoided, and so far as can be seen the steps taken will prove quite effective in coping with the situation from Egypt's point of view. The purchase of the crop at 42 dollars per cantar—which approximates to the current price—will give stability to the trade and insure the cultivator good profits.

***

While one of the most difficult problems in regard to the Egyptian cotton crop is thus disposed of, another and an almost equally serious one remains to be solved. Our correspondent gave some illuminating figures regarding the congestion of cotton stocks at Alexandria. With the present shipping facilities the congestion must prove a cumulative process, and to avoid this and at the same time to relieve the situation in Lancashire, where many mills at the present time are dependent on supplies of Egyptian cotton, the Government will have to increase the tonnage available for cotton shipments. The position is one which, our correspondent thinks, called for an earlier and more extensive curtailment of the acreage under cotton, which would have enabled Egypt to grow more cereals and would have freed tonnage for other purposes. This was not done, however, and instead of wasting regrets over such omissions it will be more profitable to look to the future and ask whether the acreage under cotton will not have to be diminished this year. On the face of it there seems an almost unanswerable case for some further reduction.

***

Lancashire, as a whole, has so far shown less anxiety than might have been expected over the cotton-crop purchase, and there is a tendency in the cotton centre to await further developments before attempting to gauge its effects on the industry. Indeed, for some reasons the action of the two Governments is welcomed, notably because it will mean that a stop will be put to the speculative character of the Egyptian market. The point on which doubt is felt is whether Government control will mean that Lancashire will get less cotton than would otherwise be the case. I scarcely think there need be much fear on this score, for Lancashire's dependence on Egyptian cotton is fully realised, and the last thing the Government would desire would be to take any steps which would result in accentuating the industry's difficulties.

***

Practically the only new light thrown on the Central Powers' terms to Roumania during the past week is in a Budapest telegram to the Dutch Press purporting to give the views held in "well-informed quarters." I may remind my readers in passing that Continental diplomacy attaches a precise significance to all such terms as "semi-official," "demi-semi-official," etc., and as "well-informed quarters" ranks rather low in this curious hierarchy the views quoted may not amount to much. Still, for what they are worth I give them, as a certain interest attaches to them from the stress laid on the economic value of Roumania to the Central Powers. There are only five conditions, and, *mirabile dictu* they are all commercial. Provision is made for the prolongation of the German commercial treaty; surplus agricultural produce is to be delivered so long as the Central Powers require it; there is to be obligatory delivery of the oil surplus; and the interests of the Central Powers in Roumanian railways and as regards shipping on the Lower Danube are to be guaranteed.

***

Whatever their origin and value, these terms are illuminating as showing that the trend of opinion in the Central Powers is flowing more and more in the direction of the complete exploitation of the unfortunate country that is for the moment more or less at their mercy. This is further illustrated by a report in the *Tägliche Rundschau* to the effect that all Roumanian heights of strategic importance commanding the passes into Roumania will be ceded to Austria-Hungary. Adding to these terms the proposed cession of the Dobruja to Bulgaria and the seizure of Constanza, and we have, I should think, a fairly complete index of the enemy's intentions. Obviously they mean to bind Roumania hand and foot, so that after the war she will prove a convenient stepping-stone Eastwards. Fortunately for Roumania, the last word on the subject lies with the Allies, and not with the Central Powers.

***

Count Reventlow, in a curiously frank article in the *Deutsche Tageszeitung*, has been outlining German, or, rather, the Pan-German ambitions with regard to Egypt. He lays special stress on the economic value of Egypt, especially as a cotton-growing country, the point being that he considers that "the deliverance of Egypt from the British yoke" is possible, and that Germany is, of course, the destined heir to the country. Reading between the lines, I gather Count Reventlow's view is that Egypt could be exploited by Germany with even greater success than the Balkan countries, which should make very pleasing reading for Egyptians. I think we should be grateful to the Count for this lucid exposition of Pan-German designs in this direction, which must have given the German authorities "furiously to think" whether their publicists as a whole are not a greater hindrance than help.

***

Mr. T. H. Mawson, the town-planning expert, has just returned from Salonika, where he has been acting as the senior member of the Commission appointed by the Greek Government to elaborate a scheme for rebuilding the town. The plans include a great extension of the docks, the remodelling of the railway system, and the construction of two new railway stations, connected by an underground electric railway. That more or less sums up the commercial side of the scheme. Provision is also made for a greater Salonika, constructed in accordance with modern principles. It is proposed to divide the city into three zones, divided from one another by large public parks, while there are to be a series of public gardens and squares and broad avenues. No difficulty is anticipated as regards the expenditure that will be entailed by these comprehensive plans, as the Greek banks are overburdened with deposits as the result of Greece's war-time prosperity. It is stated, however, that co-operation of British financial houses will probably be welcomed as a further safeguard from the Greek investors' point of view of the soundness of the scheme.

***

Considerable attention is being paid, I understand, to the possibility of the revival of the cinchona industry in Ceylon. The present price of quinine is very high, and it is felt that cinchona cultivation would give the island a most profitable industry. It is worth noting in this connection that the Indian Government is giving every encouragement to the increased cultivation of crops. Unfortunately conditions in Ceylon are not the same as in India, and the lands once devoted to cinchona cultivation are now planted with tea. In the circumstances that seems an insuperable difficulty, as it is not to be expected that planters would willingly reduce the production of tea, except as a temporary expedient to meet war conditions.

COTTON GROWING IN THE BRITISH EMPIRE.

The Part Played by Science.—II.

By JOHN W. MCCONNEL.

From our summary in the previous article it will be quite evident that there are great possibilities opening before the Empire for the development of cotton growing, and while there is no need and no room for disparagement of earlier efforts, yet, at the same time, there are substantial reasons for believing that in the present day we have resources of knowledge and available methods of work which are quite different from those which could be used at an earlier date. Scientific research into the laws of nature and the universe is indeed the panacea of the moment. It is recommended for the advancement of all our industries, and nowhere is there a louder call for research and science than in regard to the growing and the using of plants. It is sufficient to refer to several of the brilliant essays in "Science and the Nation," published last year at the Cambridge University Press. Again, sugar, whether derived from the cane or beet, has benefited by science; Professor Biffen's work on wheat is well known; the freeing of the vine from phylloxera affords another illustration.

This brings us to our special inquiry. Is science capable of supplying the clue by which we may unravel the intricacies of difficulty and doubt which at present smother the most earnest workers on the improvement of cotton? In this connection it is well to remember the distinction already referred to. There are two quite different sets of problems to be solved by the scientific cotton grower. There is the nature of the cotton derived from its ancestry, and, on the other hand, there are the modifications of the plant and of its products, both the seed and the lint, which result from all the conditions of the soil and climate and human care under which it is grown. In other words, there is the study of heredity and the study of environment. It is fairly clear that the writers of our earlier books on cotton hardly recognised this distinction. And the earlier practices of would-be cotton growers ran the gamut from thinking that any cotton would grow anywhere to believing that nature abhorred the introduction into any country of new varieties drawn from elsewhere. Even now there appears a lamentable want of certainty on the whole subject. It is doubtful if any scientist is prepared to state the definite limits of the theoretical cotton plant in regard either to its habit of growth as a plant or to the different qualities, length, fineness, etc., of its lint. Even if it is difficult to separate the practical effects of these two interacting components, still there can be little doubt that they are, when scientifically considered, quite separate, and to a very considerable extent will require to be separately studied.

Research Work Required.

It seems hardly possible that any very great progress can be made in the improvement of cotton in any particular characteristic whether in the direction of increased quantity or of better quality until more is known of the genetic foundations of the particular characteristic. It is already known that such characteristics as time of maturity, liability to shedding, as well as colour, length, and fineness of lint, and many other characteristics, do follow definite laws in their inheritance, but the study of all this has been carried so small a distance towards complete knowledge of the subject, and the characteristics are in many cases known to be so complex that there is an obvious and crying need for much more work to be done. Such work is not likely to be directly profitable to anyone in particular, but it is essentially necessary as the foundation on which practical improvement can hereafter be built.

On the other hand it appears that in all agricultural work, as well as in regard to cotton in particular, it is only just beginning to be recognised that there are scientific as well as unscientific methods of measuring the effects of environment. Sad experiences appear to await inventors or improvers in agriculture when they come to test their discoveries on a large scale. The foundation of all satisfactory work in comparisons of different treatments of anything must lie in the elimination of other interrupting influences. Apparently it is peculiarly difficult, when examining the effects on plants of any particular influence, to be sure that other influences have been reduced to a common level. Some of our cotton experimenters are still shown by their own reports to be depending on results obtained in different plots, without having made any very serious efforts to be sure that all other conditions are identical. Naturally, it is a great improvement on the older methods when a system of carefully-designed scatter plots is made use of. But even more can be done by adopting Dr. Ball's practice (described in the book previously referred to) of regularly recording through the season certain material particulars concerning the growth of many individual plants, so scattered in the various competing crops as to secure the cancelling out of all disturbing elements. Additional advantages gained by this system are that it enables the chief observer to notice other important points, such as the effects, both immediate and deferred, of changes of temperature or moisture: also the work of a season would not be entirely lost in the event of some storm or other disturbing cause debarring the whole crop from reaching its normal fruition. The study of environment certainly calls for the employment of scientific methods.

Problems to be Solved.

Then there is another distinction to be drawn. Research is a term which covers many divisions of work, and in its practical application to cotton it will be necessary to recognise these divisions and to make the appropriate provision for each of them. The field of research ranges from the abstract study of cotton, as one among a thousand vegetables, to the minutiæ of practical advice for the growing of a particular cotton in the best way in a particular place. Some of the more practical problems ought to be, and will be, the business of the individual planter, or small group of planters. Others will be the concern of an island or a district, and among these problems will be, in many cases, the administrative work necessary to secure that one bad planter does not injure his neighbour, either by neglecting known remedies for pests, or by growing a different kind of cotton from his neighbours, and so contaminating the future seed supply. Other problems, again, are of a less directly practical nature. Important as it may be to the future of all cotton growers and all cotton users to learn the true nature of the physiological development of the cotton fibre, and the limitations and possibilities of heredity, it is obviously unreasonable to expect any particular cotton growing community to bear separately the cost of such work. It is indeed of real importance that this distinction of the kinds of research work necessary should be specially considered in relation to the proper apportionment of the cost. So far as can be seen at present, the ideal system would provide for the cost of directly practical work being borne locally; and in regard to work of a more remotely profitable kind, it seems reasonable that great countries, such as India, Egypt, perhaps the West Indies as a whole, perhaps before long Uganda and Nigeria, should have strong departments for the scientific study of cotton, separate from, and in addition to, those concerned with the application of science to the practical agricultural work of growing cotton. Beyond and above all this, however, there is evidently need for a well-equipped central association for research in regard to the growing of cotton, and it is only reasonable to expect that this should be largely maintained and directed by the British cotton spinning and manufacturing industries.

There is, however, one more thing to be said about this research work. What is apparently as much needed at the moment as anything else is some organisation for collecting and co-ordinating all modern research work on cotton. It ought to be made possible for any worker in cotton to start with a full knowledge of what is already known. Something of this kind is, of course, already done. The *Agricultural News of the West Indies* frequently reprints articles on cotton as on other things, from papers in other parts of the world, while the *Agricultural Journal of India* has reprinted, and afterwards has published as a separate bulletin, some excellent papers read at the West Indian Conference on Cotton in 1916. This is a very promising sign, but much more could be done by a central institute. Another function is thus suggested which might be filled by the cotton research association of the Empire. It should become the centre to which will naturally flow all increases of knowledge about cotton, and from which at frequent intervals this knowledge will be distributed in an intelligible and usable form. When that is properly undertaken it will no longer be necessary for each worker to begin at the very beginning. It is also possible that then some of the older officers of agricultural departments who may have hitherto somewhat blocked the possibilities of progress will find their powers of resistance somewhat weakened.

Isolation of Pure Strains.

It would be presumptuous for the present writer, who claims no equipment of scientific knowledge, to attempt any complete description of the scientific work required to be done. A few words may, however, be devoted to naming some of the general principles. Cotton, in practice, is grown as an annual, and is largely cross-fertilised by the agency of insects. It will, therefore, be very generally admitted that the only basis for improvement is to be found in the isolation of pure strains. To achieve this, continual and persevering effort is required. Nothing but confusion worse confounded can result from the propagation of hybrids, whether such hybrids are produced by Nature or result from intentional crossing by the experimenter.

It is, however, a very different matter to suggest that much, or rapid, progress can be made by intentional crossings of pure strains, even when these have been successfully separated. Many of the desired characteristics in cotton appear to be of extremely complex natures. Many of them are also so largely affected by environment that the limits and potentialities of heredity must often be difficult to trace. The apparently simple and very important quality of length in the fibre, while undoubtedly governed by heredity, is known to be varied by the nourishment of the plant while the fibre is growing; so that not only will different members of a pure race of plants give fibres of different lengths if the soil and other conditions differ, but even the same plant will give fibres of different length at different times in the year, and in addition, the fibres on different parts of each seed will in every case to some extent and in some cases enormously vary in length.

This illustration is typical of the difficulties in regard to every other desired characteristic (and most of these are more difficult to measure), and it shows what a mass of careful and detailed study will be required on the laws, both of heredity and environment, before any very great progress can be made. In the meantime, in every country where even decent cotton is now grown, the first rule undoubtedly ought to be to select and obtain pure strains of what is now available. Great improvement will result from this alone, for there is already reason to think that any pure strain of cotton, *ipso facto*, works better in the spinning machinery than its impure relatives. After this first and great step has been taken, and when each district of each cotton growing country grows one pure type of cotton, further progress will be much easier to make. Another thing that is a fundamental need will become possible when there are pure cottons available from different places. Then it will be possible to ascertain scientifically and state in precise language what are the exact qualities in the fibre which lead to specific qualities in the yarn spun. At present this is only known in a very general way. And the users and growers of cotton are in much the same position as smelters and users of iron were in before they made use of chemical analysis.

In the meantime, there are all the laws of plant growth, and their relation to fibre development to be analysed. The cotton plant as an annual has to complete its life history from the germination of the seed to the opening of the cotton boll and the picking of the lint within the time climatically available in each locality. Frost may limit the period at either end. Rains are required when the plant is growing, and are injurious or fatal when they exceed greatly the limiting amount required

Digitized by Google

at any stage. Great heat may be injurious. These are natural phenomena uncontrollable by human agency, but the plant itself is variable, and there are kinds which suit these conditions in one place, and are unsuitable in others. The period required from the germination of the seed to the opening of the bolls ready for picking may be as little as fifty or as many as two hundred days. In the past problems in regard to this have been solved empirically. But science will surely have something to say both about genetic properties and modifications of agriculture as the study of the living plant develops.

LANCASHIRE COTTON.

The Egyptian Crop Purchase.

(From Our Own Correspondent.)

MANCHESTER, Wednesday.

The feature of interest in the market this week has been the decision of the Government to purchase the Egyptian cotton crop for next season at a fixed price, and users and merchants have discussed the situation very freely. On the whole is it believed that this action will not adversely affect Lancashire trade; in fact, supplies for this country should be more assured. A decided advance in values, however, has occurred in Liverpool during the last few days and spinners have purchased on a free scale. Stocks at the mills in Lancashire are undoubtedly extensive, the majority of users being well bought. Details relating to the conditions under which purchases will be made are awaited with some anxiety. Egyptian yarns, have, of course, been put up in price to meet the higher cost in the raw material, and although operations have been somewhat irregular substantial contracts have been arranged in some quarters. Some Bolton mills have sold their production until the end of this year. Operations in piece goods for Egypt have been somewhat irregular. The higher prices required by sellers have somewhat checked trade. Offers for India remain scarce, and there is no hope of a larger turnover until the selling basis in the bazaars improves. China buyers have been content to purchase small lots in well-known "chops." The strength of spinners of American yarns has been more pronounced than ever, and a large business has been under consideration at hardening rates. There has not been much done in export yarns.

EGYPTIAN WHEAT PRICE FIXED.

It is officially announced that maximum prices will shortly be fixed for wheat and wheaten flour, ranging from the producers' sale price to the consumers' purchase price, says Reuter's Cairo correspondent in a message dated March 18. This tariff will remain in force for at least a twelvemonth.

WAR GIFT FROM EGYPT.

The Council of Ministers has decided, says a Reuter message, that the Government of Egypt shall contribute £3,000,000 towards the cost of the war as a mark of gratitude towards Great Britain for her protection of Egypt. The Government will also include £500,000 in the next Budget to meet military expenses incurred in Egypt in connection with the war.

JAPANESE SHIPPING ENTERPRISE.

The Osaka Shosen Kaisha has decided to commence a service between Bombay and Marseilles, via the Suez Canal, in connection with its existing Japan-Bombay service. This service will, for the present be run monthly with three steamers. The Company's interests in the Red Sea, Suez Canal and Mediterranean Sea are to be represented by the Messageries Maritimes Company, and in the United Kingdom by M. Samuel and Co., general agents, and the company has its own special representative for the United Kingdom and the Continent, resident in London, with his office at the general agency.

Lecturing on Serbia at Manchester University on March 18, Dr. Douritch stated that, under present conditions, that country was economically in an exceedingly sorry plight. The cultivation of the land was almost entirely being carried out by the women.

EGYPTIAN COTTON CROP.

State Purchase at Fixed Price.

Reuter's Cairo correspondent, in a message dated March 16, reports that the following official statement has been issued there:—"In view of the abnormal conditions arising from the war, whereby the Egyptian cotton trade is affected by the shortage of shipping and the reduction of the cotton area, and also the necessity of the British Empire and its Allies to meet their essential requirements, his Majesty's Government and the Egyptian Government, acting in concert, have decided to acquire the cotton crop from August 1. A Cotton Control Commission will be appointed for this purpose, and will be assisted by an Advisory Board, representing exporters, growers, and banks. From August 1 until further notice the Commission's purchase of next season's crop and the residue of the present crop will be delivered at Alexandria on the basis of 42 dols. per kantar for fully good fair Sakellaridis. No further export licences will be granted except for the Commission's purchases. Licences already granted are being cancelled, except for cotton held in port and sold for export before August 1. The Commission is prepared to sell until further notice on the basis of 48 dols. per kantar f.o.b. at Alexandria fully good fair Sakellarides. The Commission will prepare in due course a schedule of types of cotton with the purchase and sale prices based on the above standard prices, communicating samples to the principal consuming countries. The Egyptian Government, in a lengthy explanation of the considerations which made it lend itself to the above arrangement, says that the most important advantage is in a fixed price instead of leaving cultivators exposed to the inconveniences of variations in demand, of lack of transport, and other considerations beyond the control of the Government. Forty-two dollars is more than twice the pre-war price and ensures generous profits to cultivators, but the Sultan's Government would not have consented to deprive cultivators of greater profits if they had not been assured of other advantages from the above arrangement. If Egypt has the semi-monopoly of a raw material of which Great Britain and her Allies have imperious need, Egypt at the same time is dependent on the same Powers, particularly on Great Britain, for other commodities and facilities no less necessary. Egypt cannot continue to profit by such facilities unless it lends itself to a policy of general solidarity. The Government has obtained an assurance that Egypt will continue to profit even in the period of reconstruction after the war from its share in articles of primary necessity which must be regulated owing to the scarcity and the large demand for them. The British Treasury is prepared to lend £10,000,000 sterling to meet the financial demands of the combination, and an equal sum will be advanced by a group of banks at limited interest under the guarantee of the Egyptian Government. If American prices rise the sale price of 48 dols. will eventually be increased, and the profits of such increase will be credited to the Egyptian Government."

The Commission of Control.

An official communication announcing the decision of the British and Egyptian Governments to take over the Egyptian cotton crop states that a Cotton Control Commission has been appointed, consisting of the Hon. Ronald Lindsay (chairman); Mr. B. Hornsby (deputy-chairman); Mr. K. P. Birley, Mr. Ralph Carver, and Mr. King Lewis.

The Commission will be assisted by an Advisory Board (representing the export houses, cotton growers, and banks), the composition of which will be announced in due course. The Commission will be prepared as from August 1, 1918, and until further notice, to purchase cotton, both the next season's crop and the residue of the present crop, delivered at Alexandria at a price based on 42 dols. per kantar for fully good fair Sakellaridis. From and after the above date no further export licences will be granted except for cotton purchased by the Commission, and all licences already granted will be cancelled except for cotton held at a port which has been sold for export before that date. On and after August 1, 1918, the Commission will be empowered to take possession of all unlicensed cotton held at Alexandria on terms specified in the present notice. The Commission will also have all necessary powers to utilise on equitable terms the pressing and warehousing facilities which they may require.

Within the limits and subject to the conditions of the rations officially fixed from time to time for each country of destination, the Commission will be prepared to sell the cotton purchased by them at a price based until further notice on 48 dols. per kantar f.o.b. Alexandria for F.G.F. Sakellaridis. The Commission will prepare and publish in due course a schedule of types of cotton, with purchase and sale prices for each type based on the above standard prices. It is proposed to communicate samples of the types to the principal consuming countries. A further notice will be issued shortly setting out the proposed rules and methods of procedure of the Commission. The present intention is to utilise as far as the Commission find practicable the existing machinery and organisation of the trade to give effect to the scheme.

Lionda and Company, Ltd.,

34, Fenchurch Street, LONDON, E.C. 3.

Tel. Address: "EXPLIONDAC FEN, LONDON."

During the War, Tel. Address: "LIONDA THIRTYFOUR FENCHURCH, LONDON."

Export Department:

Heavy and Light Chemicals, Colonial Spices, Metals, Dried and Salted Fish, Matches, etc., Paper of any description, and all kinds of British, Scandinavian, Dutch and American Produce.

Hellenic, Sudanese and Egyptian Produce:

Are always Buyers of Currants, Figs, Olive Oil, Locust Beans, etc., Gum, Senna Leaves, Beeswax, Hides and Skins, Cotton Seed, Onions, etc., etc.

Chartering and Insurance Department:

British and Neutral Steamers chartering effected on the Baltic. Insurances of any description effected through Lloyd's and Government.

Coal Exporters, &c.

SALONICA HOUSE: Postal Address: G. N. LIONDA, SALONICA, GREECE.

Tel. Address: "GEORGE LIONDA, SALONICA."

Bankers: In England—The National Bank of Egypt, 6 and 7, King William St., London, E.C.; The London and South-Western Bank, Ltd. (F.B.), Fenchurch St., London, E.C.
In France—Société Générale, Boulevard Haussmann 29, Paris.
In Greece—Ionian Bank, Ltd., Salonica; Banque Populaire, Athens, Piræus.

BULGARIAN TRADE ORGANISATION.

In preparation for the expected boom in trade after the war, Bulgarian capitalists and men of affairs have of late exhibited great activity in organising well capitalised banking and business concerns, says the United States Consul-General at Sofia, Mr. D. I. Murphy, in a recent report. As an indication of the extent of the movement, begun only a few months ago, the following showing of the banking and commercial establishments registered in Sofia up to December 1 may be of interest. The list does not include registrations in the other thirteen judicial districts of the country :—

Name of Company.	Capital. Francs.
Branch of Ruschuk Bank	20,000,000
Bulgarian Central Bank	3,000,000
Bank of Bulgaria	5,000,000
General Credit Society	6,000,000
Rose Bank	4,000,000
Bulgarian Bank "Soedinenie"	5,000,000
Bulgarian Fund Bank	5,000,000
Bulgarian Savings Bank	1,000,000
Bulgarian Bank of International Commerce	1,000,000
Society "Kniga," to supply paper and stationery	2,000,000
Bulgarian Society "Nicotea," for commerce in tobacco	6,000,000
National Society "Sugar Industry"	8,000,000
Society 'Longoza," to supply building materials from State forests	3,000,000
Bulgarian Anonyme Society "Orient," for commerce in all kinds of goods, real estate, and industrial operations	2,000,000
Bulgarian Cement Society "Lev"	4,000,000
Steamship Society "Dunav" (Danube)	4,000,000
Commercial Society "Soedinenie," to deal in raw and cured hides and skins and carry on commercial operations	5,000,000
Bulgarian Economic Society, for the purchase and sale of real estate, erecting and selling houses, loans, and mortgages	5,000,000
Mill Society "Bistritza," for constructing and exploiting modern automatic bakery	2,000,000
Cyclop Society, for making and dealing in construction materials	1,200,000
Bulgarian Iron Society, to trade in iron, iron ware, paints, and like articles	2,000,000
Mine "Courilo" Society, to exploit coal mine at Courilo and to build factory for making briquets	4,000,000
Sofia Co-operative Meat Society, to improve the meat trade and regulate sale of meat	1,000,000
Society "Belo More" (Ægean Sea), to engage in commercial and economic enterprises and foreign representation	30,000,000
Balkan Silk Factory Society, to promote all commercial and industrial enterprises connected with the manufacture and sale of cocoons, silk, silk cloths, etc.	1,200,000
Central Construction Society "Sredetz," to construct private and public buildings and for commerce in all kinds of building material	10,000,000
Society "Obedinenie," to carry on banking operations; to engage also in commerce and industry, cattle-raising, and trade in farm products	10,000,000
Society "Serdika," to engage in commerce, industry, and operate in real estate	5,000,000
Insurance Company "Rodina," to engage in insurance and re-insurance business in Bulgaria and abroad	60,000,000
Society International Transport "Maritza," to transport merchandise by land and water and engage in other operations connected therewith	5,000,000
Society "Streha," to engage in trade in automobiles and accessories, materials, etc.	40,000,000
Bulgarian Credit Stockholders' Society, to engage in banking, commercial, and industrial operations	2,000,000
Society "Iber," to exploit a steam furniture factory at Dolna Bania and for operations in lumber and building materials	2,000,000
Society "Kotva," to manufacture cement and hydraulic lime and to construct buildings of cement	3,000,000
Commercial and Industrial Stockholders' Society "Budeshte," to establish printing office, publish newspapers and books, and deal in paper	500,000
Stockholders' Society, to exploit sugar factory at Ruschuk	100,000
Society "Otechestvo," to engage in banking operations and industrial operations	20,000,000
Society for Commerce in Tobacco and Cigarettes, to plant, manufacture, purchase, manipulate, and sell tobacco and cigarettes	2,000,000
Austrian Insurance Company "Phœnix," Vienna, branch Sofia	6,000,000
Bulgarian Forest Commercial Bank, Sofia, for operations relative to forest economics	50,000,000
Total	346,000,000

EGYPTIAN FINANCES.

Position Further Improved.

(From Our Own Correspondent.)

Cairo, February 18.

The nine months ended December 31, the accounts in connection with which have just been published, show a further improvement in the financial position of the Egyptian Government. Revenue during the period amounted to £E17,088,271 and expenditure to £E13,732,346 as compared with £E15,266,367 and £E12,975,919 respectively up to the end of the previous December. There is thus an increase of £E1,821,904 in revenue and one of only £E756,427 in expenditure. As a result there is for the nine months a surplus of no less than £E3,355,925—over one million more than at the same date of 1916, when the figure was £E2,290,448. In this connection it is interesting to note that the total surplus in the latter financial year was £E2,686,668, so that we may expect the amount to be carried forward to the reserve on April 1 to be in the neighbourhood of four millions.

Revenue.

The principal items of revenue have been land tax, £E4,909,722; customs, £E2,138,046; tobacco dues, £E1,370,987; mixed court fees, £E731,289; native court fees, £E317,236; railways, £E3,617,364; domains receipts, £E836,197; ghaffir cess, £E637,712; miscellaneous receipts, £E429,424; interests on funds, £E257,978; post office, £E262,871; excise, £E197,363; house tax, £E264,094. The chief increases have been railways, £E281,272; judicial fees (including £E124,854 under mixed courts), £E162,657; customs, £E82,251; land tax, £E74,328; domains, £E52,559. Tobacco dues decreased by £E161,413 and port dues by £E45,074; whilst the two new items, ghaffir cess and excise mentioned above contributed to the general increase to the extent given against each of them.

Expenditure.

Under expenditure the main items have been Sultan's civil list, £E244,959; state domains, £E211,862; post office, £E240,473; public instruction, £E304,077, public health, £E298,646; mixed courts, £E200,476; native courts, £E303,966; irrigation, £E831,774; railways, £E2,055,802; police, £365,432; ghaffirs, £E540,026; war office, £E723,669; Pensions and indemnities, £E539,539; public debt, £E4,128,984; provincial administrative services, £E320,947 and central administration ministry of the interior £E275,825. The most noteworthy increases have been irrigation £E200,099, and war office £E101,110; and the largest decrease was in railways £E599,969.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to December 31, 1917 (New Style: January 14, 1917, to January 13, 1918):—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Dec., 1917		2,404,732	1,557,000
Do. do. do 1916		1,515,273	925,000
Estimated Receipts for 12 months (Law of Control)		28,900,000	10,700,000
Actual do. do., 1917		33,523,091	14,262,000
Do. do. do., 1916		34,229,959	25,827,000
Difference between estimated and actual receipts for 12 months	1917	+ 4,623,001	+ 3,562,000
	1916	+ 5,329,959	+ 15,127,000

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

INDIAN TRADE DEVELOPMENT.

Mr. Austen Chamberlain, presiding at a meeting of the Indian Section of the Royal Society of Arts last week, when a paper on "English Commerce with India, 1608-1658" was read by Mr. W. Foster, Registrar of the India Office, said he could not help being struck with certain analogies between some of the events dealt with in Mr. Foster's paper and some of the events of to-day. There was the story of the partial failure of the indigo trade, just as we had seen it again in our day, although he hoped to see that trade get a fresh lease of good fortune as science and skill were brought to bear upon the cultivation and preparation of indigo for the market. Notwithstanding many vicissitudes, the development of India's trade had proceeded steadily. He did not doubt for a moment that in this matter the war would have brought great advantages to India. The Indian Government and the Indian people had been stimulated to develop and make use of their own resources. They had been forced to look round and see how far they could provide for themselves articles, or substitutes for articles, which they had bought elsewhere.

TRADE WITH SERBIA.

Influence of the Recent Mission.

If indications count for anything the optimistic views expressed by Dr. Douritch in an interview published in these columns on March 1 on the results of the recent tour of the Serbian Industrial Mission are fully justified, for there seems no doubt that the visit has created the desired impression as to the value of the Serbian market and as to the imperative need for close economic relations between Great Britain and Serbia in the future. Discussing this question with a representative of THE NEAR EAST recently, Mr. E. A. Brayley Hodgetts, London representative of Nobel's Explosives, Ltd., and chairman of the Russian section of the London Chamber of Commerce, emphasised the educational value of the tour. "Everyone recognises now," he said, "that the Balkan Peninsula is one of the most important territories in Europe owing to its geographical position; also that it is a region which is believed to be very rich in minerals, though owing to Turkish domination, little developed; and that it offers a very large field for engineering work in the way of railway development, etc."

"The Balkan States," Mr. Brayley Hodgetts continued, "have, of course, suffered since their liberation from Turkish rule by being hampered in developing their raw materials by Austria, which would not encourage any such enterprises, and Serbia was kept in economic subjection, every effort being made by the Dual Monarchy to keep it an agricultural country. Now everything points to Serbia becoming the dominant partner in the Balkans after the war. The Greater Serbia which the Serbs justly desire to see re-established, and the gravitating force of the Jugoslavs towards Serbia, is likely to give Serbia a very much more important position in the Balkans and even in South Eastern Europe generally than many people to-day surmise. The Serbians are naturally anxious to develop the industrial side of their country, and after the war they will look to the Entente nations to help them in carrying out the industrial exploitation of the large territories that will be comprised in the Greater Serbia. It is evidently in the interests of this country that we should cultivate at as early a date as possible friendly relations with the leaders of Serbian industry and finance in order to accomplish the necessary pioneer work."

British Engineers' Opportunity.

Mr. Brayley Hodgetts laid great stress on the opportunity awaiting Great Britain in this connection—an opportunity of a type which, he points out, she had not taken full advantage of in the past. "Great Britain," he said, "allowed Germany to forestall her in the chemical industries, but she may still claim to be—as she has been all along—the premier engineering country in the world. After all modern engineering was first fostered and developed in this country, and it was from Great Britain that European countries obtained instruction in the manufacturing industries. Indeed, it is to us that Germany, France, Russia, Spain and Italy owe their knowledge of manufactures. It seems to be the mission of this country to perform this kind of pioneer work which in the result creates for Great Britain new and influential customers. From this sound point of view the visit of the Serbian Industrial Mission has been welcomed in this country, and it is to be hoped that the visits paid to the various industrial centres will have convinced the Serbians that in Great Britain they have a powerful and influential Ally willing and able to help them to attain the great position in South Eastern Europe to which they are looking with justified ambition."

"In the development of what is virtually a new country," Mr. Brayley Hodgetts concluded, "Serbia will naturally require manufactured goods of every kind, including large quantities of explosives, that chemical product without which large public engineering works are to-day inconceivable. Indeed, one wonders how the world was able to get on before Alfred Nobel invented dynamite. Before the war Serbia, owing to her economic bondage to Austria, was compelled to draw her supplies of this and nearly every other manufactured commodity from that country. Henceforward she will go into the open market and satisfy her requirements at the best obtainable prices, and in coming to Great Britain for her supplies she will be given that fair and considerate treatment which has always characterised our manufacturers in their dealings with foreign customers."

PATRAS FRUIT CROP.

Last Year's Poor Yield.

The 1917 citrus fruit crop of the consular district of Patras was greatly damaged by the long and excessively dry summer, and also by the ravages of the Mediterranean fly, says a recent United States consular report. Official statistics place the crop at about half that of 1916, which latter in its turn was much reduced by ravages of the fruit fly. Official tentative estimates of the crop of 1917 for the district are:—Oranges, 180,000 short tons; lemons, 700,000 tons; citrons, 6,500 tons. No estimate is made for mandarines, the official statement reading:—"The great damage caused by *Ceratitis Capitata* has not permitted even an approximate estimate of the mandarine crop." Oranges, mandarines, quinces, and to some extent citrons have been attacked by the fruit fly, with great damage to the first three. Many of the oranges, mandarines and quinces fell off before maturity: such as reached the local markets were more or less infested with the maggot of this fly. There was practically no first-class fruit to be had. The shortage of the citrus fruit crop does not affect the export trade directly to any extent, since none of this fruit, except citrons to a limited extent, is exported.

Mr. G. N. Lionda, managing director of Messrs. Lionda and Co., Limited, 34, Fenchurch Street, E.C.3, has returned to London on the conclusion of his visit to Salonika and Athens. Mr. Lionda went to Greece for the establishment of a new office at Athens, and in connection with other important banking and commercial enterprises.

THE GREEK BUDGET.

Loan from the Allies.

In Parliament this evening (says a *Reuter* message from Athens dated March 13), M. Negropontes, the Minister of Finance, submitted the Budget for 1918, the principal figures of which are the following:—Receipts, 300 million drachmæ; proceeds of loans, 850 million drachmæ; expenditure, including payment of debts, 910 million drachmæ. The surplus of 240 million drachmæ will be devoted to covering all deficit to the end of 1917. Comparing the Budget with those of the two previous years, the Minister said that the State must find the necessary resources to cover a total sum of 846,000,000 drachmæ for extraordinary needs. To cover these there were two means—taxation and loans. Political conditions did not permit of great fiscal reforms, but an Income Tax Bill would be introduced on a basis of scientific reform. As these measures did not suffice to meet the urgent needs of the country, and as an internal loan presented difficulties, it was necessary to have recourse to a foreign loan of 750,000,000 drachmæ. The loan showed the goodwill of the Allies and was concluded on advantageous terms. In conclusion, the Minister expressed the hope and the conviction that when the war ended in the triumph of civilisation Greece would find herself materially and morally strengthened and able to continue the career marked out for her by her magnificent vitality. It is announced that the Government will submit a Bill to Parliament for increasing the Ministers' monthly salaries from 800 to 1,000 drachmæ, plus an extraordinary monthly allowance of 500 drachmæ.

INDIAN SESAMUM CROP.

The *Indian Trade Journal* publishes a final forecast of the acreage under sesamum in British India, and the estimated crop yield, based upon reports received from provinces which contain, on an average, 77 per cent. of the total area under sesamum in British India. The total area reported is 4,094,000 acres, which is 18 per cent. less than the area under sesamum (revised estimate—4,994,000 acres) last year. The total yield is estimated at 340,000 tons, a decrease of 26 per cent. as compared with the revised estimate of the yield last year. The season, on the whole, has not been favourable, the crop having been adversely affected by the heavy and continuous rains of September and October in almost all provinces.

ROUMANIAN COMMERCE, LTD.

Roumanian Commerce, Ltd., has been registered as a private company, with a capital of £10,000 in 5,000 preference shares of £1 each and 100,000 founders' shares of 1s. each, as merchants, bankers, concessionnaires, agents for Roumanian Governmental Departments and others, etc. There is an agreement with Otto Fulton. The subscribers (each with one preference share) are Otto Fulton, 22, Uxbridge Road, Ealing, W., and J. H. Procter, 25, Hartington Road, Grove Park, Chiswick.

Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.
Checks and arrests FEVER, CROUP, AGUE.
The Best Remedy known for COUGHS, COLDS, ASTHMA, BRONCHITIS.

ACTS LIKE A CHARM IN DIARRHŒA, CHOLERA, DYSENTERY.

Of all Chemists, 1/3, 3/-, 5/-.

Always ask for a 'Dr. Collis Browne' THERE IS NO SUBSTITUTE.

ENGINEERING NOTES.

The Ukraine Market.

Of all Russian provinces the Ukraine is the one best known to British manufacturers, and especially to engineers and machinery exporters, and it has, for long, been closely associated with modern British industry and commerce. To the business man the Ukraine is best known not only as a central market of All the Russias, but also as a most convenient centre for conducting a general trade with many important districts of the Near and Middle East. The foremost commercial centre in the Ukraine is Odessa, with its famous harbour in the Black Sea. It is one of the most prosperous, while the least Russian, of Russian towns. Situated between the mouths of the rivers Dnieper and Dniester, the place has many and exceptional facilities for trade. Its well-being is to a large extent due to British enterprise, for English firms have constructed the waterworks, designed the harbours, and paved the streets, while half the trade has been carried on by English steamers. Odessa is the landing place for all agricultural machinery and implements destined for use on the vast fertile lands of Southern Russia..

"An Agricultural Show."

Some years ago, when the present writer visited Odessa and was passing one of the principal jetties, accompanied by an official of the British Consulate, the latter, pointing to a very large part of the jetty which was covered with all kinds of machinery, said: "All that machinery came from England. Does not the sight remind you of an agricultural show in England?" The remark was not incongruous, for there were in groups or lines portable engines, threshing machines, winnowing, reaping, mowing, and sowing machines, harrows, ploughs, chaff-cutters, flour mills, windmills, hay-presses, sheep-shearing machines, shovels, etc., all of an excellent finish and appearance, admired by groups of very interested people speaking various languages, for the trading people and those interested in farming in and near Odessa are of all nationalities. Unfortunately, such a proof of British trade supremacy in that important region could not be seen for some time before the war. The systematic energy and "trade pushing" methods of the Austrian and German manufacturers, the practical salesmanship of the American agent, and the apparent apathy of the British manufacturers changed those conditions, and with the exception of two or three British firms who retained residential representatives and depots in Odessa, all others seemed to "wait" for the buyers, or to depend on the occasional inquiries and orders of the machinery exporter and merchant at home. Yet notwithstanding the altered conditions, and the creation of South Russia into a so-called independent State, there is still an excellent chance for the British manufacturer to recapture the lost trade in that region. Whatever may be the political or commercial influence of Germany there, the Ukrainian—to give him the new name—landowner, farmer, or master of industry, believes in the superiority and value of British machinery, and will always be glad to obtain it if the manufacturers give him adequate means and opportunities to keep in touch with them. This can be done by judicious advertising and occasional visits of competent representatives. The names of the important Ukrainian towns, Nicolaieff, Taganrog, Berdiansk, Ekaterinoslaff, Kharkoff, Kherson, and Kieff, the capital, with many other smaller but rich towns in the adjacent agricultural, mining, and industrial districts, are too well known to British engineer-manufacturers and exporters to say more here as to the great value of the newly created State as a market for machinery of all kinds, and as a convenient centre for the distribution of goods to the Near and Middle East and to South-Western Siberia. The planning of a well-directed campaign for the capture of such a valuable commercial centre in the forthcoming trade war ought, if it is to be effective, to be considered now.

Donetz Coal Basin.

It was recently reported from Kharkoff that the electrification of the Donetz coal basin had been commenced, and that a sum of 50,000,000 roubles had been paid for this purpose. Steam-driven turbines are to be installed, and fuel for the boilers will be supplied from the waste gases of the coke ovens. In connection with this enterprise some important chemical works will be erected for the purpose of utilising by-products from these ovens; and the erection of a factory for the manufacture of aniline colours is also contemplated. It is hoped that the new Government will not place any obstacle in the carrying out of such an important scheme.

Machinery for Morocco.

The advice given to British manufacturers of farming and agricultural machinery that it would be to their interest to watch the Morocco market, and especially to study the classes of articles most in demand and found by experience to be suitable for that country, must be borne in mind when they attempt to introduce their manufactures in that market. It is said that some ploughs that were sent to Morocco from this country were cast aside by the native ploughmen as unsuitable. This is not an unusual occurrence. Natives, as a rule, in Asia and Africa seldom take to a new implement, tool, or method, at once. Much persuasion is often required before they see the difference between rustic hand-made native implements and those made in Europe. With regard to ploughs it is advisable that manufacturers should take into consideration the kind of soil, and in some cases the climatic conditions of the country where the ploughs will be employed. In Morocco as in many districts of the Near and Middle East the native plough in some cases gives better results than the ordinary modern European plough; the former does not go far enough down to disturb the subsoil which, when untouched, retains its moisture; whilst the latter goes too far, disturbs the subsoil and for a year or two the results are not very satisfactory for the farmer. For such soils a light shallow plough is preferable; and if ordinary heavier modern ploughs are used it is advisable to roll the ploughed surface well to prevent the moisture escaping. In some parts of Morocco, however, notably in the Tangier district, the land is hard and compact, and in such cases heavy ploughs are needed for breaking up the land. To avoid disappointment, therefore, it is advisable in giving or taking orders for ploughs or other cultivating implements to obtain technical advice as to the kind and condition of the soil for which such implements are needed. Generally, the native farmer of Morocco gets on well enough in the use of European agricultural implements if he has skilled advice as to working them, but if left to himself, at the first difficulty he meets he considers them faulty and casts them aside.

A Plough Required.

A plough is much wanted in Morocco capable of uprooting the Palmetto plant, which grows all over that district. An implement of this kind is used in New Zealand. The ordinary European ploughs are not capable of uprooting this plant, as it is stubborn and deep-rooted, and requires removal by hand, which is a tedious and expensive process. British plough makers should pay attention to this requirement, for Morocco is a new and promising market.

NEWS FROM ALL SOURCES.

A branch of the Bank of British West Africa, Limited, has been established at Ebute Metta, Nigeria.

Exporters in Great Britain of yarns, woollen and cotton textiles, hosiery, and laces to Portugal, Morocco, and all ports in the Mediterranean, Egypt, India, China, Straits Settlements, Bangkok, Saigon, Java, Japan, and Manila are requested at once to register the names of their firms with the Secretary of the Textile Exports Shipping Committee. Room 45, Parr's Bank Buildings, 3, York Street, Manchester. Failure to register will preclude any shipper from obtaining space in a rationed steamer.

INDIAN TREASURY BILLS.

Up to March 9 Indian Treasury bills have been sold to the following amounts:—Three months' bills, face value Rs. 11.05.95.000; six months' bills, face value Rs.19.90,25.000; nine months' bills, face value Rs.86,70,000; total Rs. 38.88.70.000, equal, at 1s. 5d. the rupee, to £27,545.000. The total sales up to March 2, as already announced, amounted to Rs.38,17.30.000 (equal, at 1s. 5d. the rupee, to £27,039,200).

COMPANY NOTES & REPORTS

Southern Punjab Railway.

The report of the Southern Junjab Railway Company for the year to September 30 last states that the net revenue was £304,473, of which £87,030 is payable to the Secretary of State for India as the share of surplus profits due to the Government, and £10,000 is transferred to a contingencies account, leaving £207,442, which, added to £108,404 brought forward, makes a total of £315,847. After deducting dividends paid there is left £173,847. The directors recommend a final dividend on the Ordinary stock of £7 per cent., making £12 per cent. for the year, subject to English income-tax, leaving £103,847 to be carried forward.

Dividends, Payments, etc.

Khedivial Mail Steamship.—On March 31 the dividend of 5½ per cent. per annum on the Cumulative Preference shares, less tax at 5s., for six months to December 31, 1917, will be paid at Messrs. Glyn, Mills, Currie and Co., London. The preference transfer books will be closed from 25th to 31st instant, inclusive.

Messrs. R. Raphael and Sons, Austin Friars House, E.C., announce the numbers of Piraeus, Athens and Peloponnesus Railway 4½ per cent. bonds which have been drawn for repayment at par on April 15.

The directors of the Assam Railways and Trading Company have declared an interim dividend of 2 per cent. on the "B" stock, payable 30th instant to holders registered 13th instant.

The directors of the Bengal Dooars Railway Company recommend a final dividend on the Ordinary stock of 3½ per cent. and a bonus of 2 per cent., subject to English income-tax at 3s. 9d. in the £, payable 12th proximo, making 9 per cent. for the year ended September 30 last.

The final dividend on the Six per Cent. preference shares of the Madras Electric Tramways (1904) for the year ended December 31, 1917, will be payable on the 30th instant

The directors of the Mysore Gold Mining Company have declared a balance dividend for 1917 of 2s. 6d. per share (less tax at 5s.), payable April 5 to holders registered 14th instant, making 85 per cent. for the year, against 95 per cent.

The directors of the Assam Oil Company have declared a final dividend for 1917 of 3½ per cent. on the Preference shares, payable 30th instant to holders registered 13th instant.

Eastern Bank. The transfer books will be closed from 23rd to 28th instant, inclusive.

The directors of the Eastern Telegraph Company announce that owing to continued delays in obtaining the necessary returns from foreign stations and administrations it will be impossible to present the accounts audited in respect of the year 1917 during May. They have decided to make an additional payment on May 15 on the ordinary stock equal to a dividend of 1½ per cent., and bonus of 2 per cent., making 8 per cent., free of income-tax, the same rate as was paid for the previous year.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah, production for week, 21 tons (last week 21 tons); Hurgada, production for week, 11,465 tons (last week, 2,780 tons).

Baku Russian Petroleum.—Production, week ended February 2, 62,475 poods.

Black Sea Amalgamated.—Week ended February 2, 21,506 poods (347 tons).

European Oilfields.—Production for week ended February 10, 58,400 poods.

Maikop Combine.—Week ended February 2, 24,993 poods (403 tons).

DEUTSCHE ORIENT BANK IN EGYPT.

Lord Robert Cecil, Minister of Blockade, answering a question by Mr. G. Faber, said:—Mr. R. E. Moore, resident partner in Egypt of the firm of Messrs. Price, Waterhouse, and Peat, was appointed controller of the Deutsche Orient Bank in Egypt in November, 1914. The liquidation of the bank is nearly, if not quite, complete. I understand that the premises have not been sold.

TRADE OPENINGS IN GREECE.

British merchants and manufacturers will do well to keep the Greek market in mind, since at the present time owing to the restrictions placed on trade by the war there is a growing need in that country for articles of almost every kind, in particular for stationery, paints and oils, clothing, cutlery, chemicals and drugs, dry goods, agricultural machinery and implements, haberdashery and hardware.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

At the end of last week our market had further reacted downwards upon a continuation of the selling which had been in evidence during the preceding fortnight; but, since the beginning of the present week, there has been a cessation of this downward tendency, and a good deal of fresh buying has been going on. This change in market conditions was brought about by the announcement that the British Government had arranged to buy the new crop of Egyptian cotton as well as any bales left over from the old crop at 42 dollars per cantar for the Sakellarides quality. This means that the native in Egypt, whether shipping facilities are available or not, is now assured of an excellent sale price for his cotton; and the arrangement covers a period which will extend to about August, 1919; so that the Egyptian cultivator can now make his plans for a long time ahead. The result will probably be for the next year or eighteen months a continuation of great prosperity. Mortgage, industrial, and commercial companies will go on effecting large encashments; while the agricultural land companies will continue to find a ready market for the sale of their lands in the circumstances.

In Government stocks, Egyptian Unifieds have again been in constant demand and are a further ¼ up 87¼, but transactions have been limited owing to the scarcity of sellers. Some small business was done in Egyptian 3½ per cent. preferences round 74, but there are large unsatisfied buyers.

In Bank shares, Nationals have remained neglected and unchanged, but Agriculturals have improved 1-16 to 6⅜. There have been a fair amount of transactions again in Agricultural preferences round 6⅞ and 7, and the price is ⅛ up at the latter figure. Anglo-Egyptian banks have also been in some demand round 15. Delta Light Railways are rather quieter at 6⅞, with some small transactions passing.

In Land shares, Aboukirs are again 6d. easier at 23s. 6d., and Behéras are ¼ down at 13½, at which price some business was done. Delta Lands, after receding to 14s., are closing unchanged at 14s. 6d. Foreign Trusts are fractionally lower at 10s. 6d. In New Egyptians the price at one time declined to 17s. 6d.; but few transactions took place at this level, and a very large demand subsequently both for Egypt and locally caused a recovery to 18s. 9d., at which price the shares are 3d. higher than last week. Sidi Salems close 1s. lower at 45s., after being done at 44s., but there was some very good buying at the decline. In Union Foncières the price, after reacting to 3, closes 1-32 up at 3 3-32 on both Egyptian and local support.

In Miscellaneous shares a fair amount of business has been doing in markets without altering the price, and some large transactions have taken place in Salts and Sodas between 39s. 6d. and 40s. Khedivial Mails are 9d. up at 39s. 6d. on a renewal of buying from Egypt.

In Greek securities there has been rather more doing. A fair parcel of Larissas was done at 56, a rise of 1 point, and some business also took place in 1914 Loans at about 71. Rentes have improved 2 points to 47, and, generally, the market is strong. Bank of Athens shares are again ⅛ higher at 3⅝, and some small business has been done in Piræus Athens 4½ per cent. bonds round 72¾.

The National Bank of Greece announce that the dividend for the second half-year of 1917, amounting to 140 drachmæ per share, will be paid by the Bank of Athens, 22, Fenchurch Street, E.C., against surrender of coupon No. 10.

Oil Shares.

Anglo-Egyptians (B) rose 1s. 3d. to 37s.—38s. Otherwise prices were practically unchanged.

Paris Bourse.

Egyptian Unifield 95.30 (unchanged); Serbian 1895, 56.90 (unchanged); Turkish Unified, 62 (against 62.40); Credit Foncièr Egyptien, 758 (against 752.50); Suez Canal Shares, 4,625 (against 4,607).

THE SUDAN TIMES.

PUBLISHED TWICE A WEEK IN ENGLISH AND ARABIC.

For Advertisement Rates, etc., address—

THE MANAGING EDITOR, THE SUDAN TIMES, KHARTOUM.

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, PORT SAID, and KHARTOUM.

Subscribed Capital - - £1,500,000
Paid up Capital - - 500,000
Reserve - - - - - 710,000

The Bank undertakes every description of Banking Business on most favourable conditions.

IONIAN BANK, LIMITED.

Incorporated 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - - 75,000

HEAD OFFICE—
26, Abchurch Lane, London, E.C.4.

BRANCHES—
Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Faschen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £850,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Anwaz, Birjand, Bushire, Hamadan, Isfahan, Kasvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

THE GENERAL ANGLO-SERBIAN INDUSTRIAL & FINANCIAL COMPANY, LIMITED,

106, Bishopsgate, London, E.C.2

The Company has been formed to promote British Trade and Industry in SERBIA and other BALKAN STATES.

The Company is a Promoting Company, and is prepared to consider any proposals for the Financing and carrying on of any business in the above countries.

Agents in ROME, and as soon as circumstances will allow Branches will be opened in SERBIA and other BALKAN STATES.

Correspondence is invited from those interested in SERBIA and the BALKAN STATES, or contemplating business with these countries when communication is restored.

GRANT & CHINN,

The British Sanitary Engineers of Egypt and the Sudan,

CAIRO and ALEXANDRIA.

Telegraphic Address: "TUBULAR."

Agents for SHANKS, OF BARRHEAD; and THE BERKEFELD FILTER CO.

NOTES OF THE WEEK.

In less crowded days the brief communiqué in which General Allenby has recorded the passage of the river Jordan by his troops this week would have attracted considerably more notice. The crossing was not undisputed by the enemy, but his resistance failed to prevent the British from establishing their hold on the other bank. The country in which we are now operating is a difficult one, and presents many awkward military problems. The presence of the Duke of Connaught in Jerusalem is to be noted, after his preliminary tour in Egypt.

In Mesopotamia heavy rains have fallen, and military operations have come to a standstill for the time. It is improbable that news of any further advance will arrive for the present from this quarter; but the splendid results achieved during the past year are now becoming fully apparent, and they have played, and will continue to play, their full part in the securing of the Middle Eastern position against those German plans for the conquest of Persia and India which were enlarged upon by the Berlin Press a week or so ago.

The tremendous events on the Western front have naturally had the effect of withdrawing attention from the East, and the position in this respect is not likely to change much during the next few weeks. It would, however, be highly unwise to assume that the enemy plans in the East have been modified, still less abandoned. The Germans regard themselves as having won the war against Russia and Roumania, although they grudgingly admit that the British are in process of doing the same thing against Turkey; and their attitude is that, if they win the war in the West, these victories in the East would then become of secondary importance; while if they are again reduced to a deadlock in the West, they have so much in hand in the East to go on with.

In the event of defeat in the West, they would use their annexations in the East as materials to bargain with; in the event of victory, no doubt they would grasp all they could on both sides; stalemate would see the peace offensive again launched, with suggestions for a negotiated peace of give and take—in which we should give and the Germans take. But the renewal of the offensive in the West proves definitely two things: First, that the Germans think they can beat us, as to which there is nothing to be said until we prove to them that they cannot. Secondly, that even victory in the East at the price of exclusion from the rest of the world would not in the long run satisfy Germany.

The fighting in the West may have one curious reaction on the Eastern situation. It was reported some time ago that Turkish and Bulgarian, as well as Austrian, troops had been sent to the Western front, and it was accepted that these were despatched thither in accordance with the Prussian doctrine that it is wise to take hostages from among one's allies as well as from one's enemies. But the presence of Bulgarian troops in the West having been brought to the notice of President Wilson, has led him to consider the possibility that these may come into conflict with American troops. In that case he has made it clear that a declaration of war by the United States against Bulgaria would follow forthwith. This would not, of course, make much difference to Germany, but it would not be particularly welcome to Bulgaria.

The new Roumanian Cabinet which M. Marghiloman has formed is largely composed of officials. In the present unhappy position of the country its business is to make peace on the best terms it can; there is no reason to believe that it will be able to secure any substantial modification of the terms laid down by the Quadruple Alliance. M. Marghiloman is *bien vu* both at Berlin and Vienna, and his Cabinet has been praised by the German Press as "respectable," which in Teuton phraseology is one degree removed from nonentity. As to the Premier himself, it is sufficient to recall that a month ago he was issuing wireless appeals to the King to perform "the inevitable act" of abdication. It is to be presumed that he will not repeat that advice for the present, but the fact that it was given, and that the man who gave it has now become the first subject of the State, shows the pass to which Roumania has been reduced.

The friends of M. Marghiloman claim that, whereas M. Carp was an avowed pro-German, M. Marghiloman was never more than a neutralist. The precise definition of his opinions has now perhaps little more than personal importance; the orientation of Roumania is for the present directed towards Berlin, and Wilhelmstrasse would protest vigorously against any independent

Digitized by Google

policy—as may be seen by its urgent message addressed to the Bolshevik Government this week. Even in internal affairs the Roumanian Premier will have only the shadow of freedom, and an announcement that he hopes to carry out the policy of agrarian and electoral reform that was recently voted at Jassy must be read with the implied condition that permission and support for this programme are first obtained from Berlin.

It by no means follows automatically that this permission will be given. It is not necessarily to the interest of the German Government to allow Roumania to set her house in order; any step that may strengthen Roumania by removing internal friction will probably be discountenanced by the German Foreign Office on plausible grounds as against its own interests. Its policy everywhere, as the present war has shown, from Mexico to China, is to encourage friction in other States, as likely to tend to its own advantage.

The lines of German policy in this particular matter can easily be foreseen. The movement for political and electoral reform in Roumania has naturally derived its main support in Liberal circles, and it has, to say the least, only been grudgingly accepted as a national necessity by the Conservatives. Now, the weight of German policy is always and everywhere thrown against electoral reform on democratic lines, and she has no sympathy with the emancipation of the peasants; her influence will, therefore, be given to maintaining the Roumanian Conservative party in power, or, more correctly speaking, in office; and she will undoubtedly attempt to come to a permanent understanding with them on the basis that they rule Roumania and Germany rules them. The bargain will not be so brutally enunciated, but these will be the essential elements.

On those lines German capital will feel reasonably secure in the development of Roumania on German lines. Roumanian directors will no doubt be allowed for what will be nominally Roumanian enterprises, but these will be little more than men of straw, taking their orders from the German controller in the background. The system is a familiar one, and the Deutsche Bank, which is already established at Bucharest, thoroughly understands its working. It aims at reducing Roumania to a German economic satellite. Possibly for the time being it may have some appearance of success, but we refuse to believe that the strong national feeling of Roumania, which has been fortified both by the war and by the cruel fate which has put her out of the war, will in the long run acquiesce in this rôle of satellite so clearly marked out for her.

There is far more chance of a permanent German success in this direction in the Baltic provinces and in Finland than in Roumania. Along the Baltic German influence has been strong for centuries; in Roumania it is of recent growth, it has been largely underground, and its true nature is now thoroughly understood. Nor can any economic measures get over the fact that in Roumania the sympathies of the bulk of the people are, and have for long been, with the Latin and not with the Teuton States. Unless the present settlement is upset, therefore, at the general Peace Conference, the domination which Germany is openly aiming at in the Balkans merely contains within itself the seed of future wars, for the same considerations will also apply, with somewhat diminished force, to Bulgaria.

For the present Germany certainly has the advantage in the Balkans, and she will make full use of her time. Our newspapers are again allowing their headlines to suggest that the present battle in the West is "the Kaiser's last thrust," and that if, as is expected, his armies cannot break through, he will be compelled to sue for peace. This remains to be seen. On the other hand, if the war reverts in a few weeks' time to an indecisive trench warfare on a new Western front, Germany may indeed attempt a fresh peace offensive. But in view of the temper, not merely of the German Government and the pan-Germans, but of the bulk of the German people, Socialists as well as Conservatives and National Liberals, there does not seem the faintest hope that Germany will put forward the terms which the Allies are in the least likely to accept. The Kaiser revealed himself again last week as being against what he calls "a soft peace"; if he fails to defeat us in the West, he will presumably call on us to accept the Eastern situation as a *fait accompli*, while we make concessions in the West and overseas. In view of the present temper of England, which, conformably to our traditions, is firmer at this moment of supreme crisis than at any time in the past two years, those proposals would be indignantly rejected. We will no more contemplate a German victory in the East than in the West, and the same may be said of the other parties to the Alliance.

The fact that this commits us to a seemingly indefinite prolongation of the war, as Lord Leverhulme, in a widely-quoted interview, has recognised this week, cuts in two directions. It means, of course, that Germany will still further lose touch with the extra-European world—but that in itself forces her all the more strongly towards the East. She will utilise her opportunities to the full in the Balkans, the Ukraine, and in Turkey; and she will lay her plans on the assumption of permanent control in those regions. It appears to be generally admitted that she will not be able to draw large supplies from those countries during the present year, but she will call on her people to hold out until 1919, when the fruits of victory will, she hopes, at last be apparent in grain and oil.

The territorial cessions which Austria demands from Roumania are said to include the strip of territory extending from a point east of the Red Tower Pass to a point on the Danube near Ghilramar. This district has an area of some three thousand miles, and includes the Vulcan Pass, the Porta Orientala, and the Iron Gates—the strategic keys of the country. Count Czernin—who but a few short weeks ago was professing to advocate a peace without annexation—proposes to make this country an Austro-Hungarian Crown land, with its capital at Turnu Severin. Further than this, opposite Predeal, Austria demands the annexation of Roumanian territory about ten miles wide as far as Bushteji, and thence eastwards for a distance of some eighty miles; while from Ocna northwards a strip of twenty miles in width is claimed over a front of about 140 miles. The total claim is about seven thousand square miles, no inconsiderable amount. The aim in this case is apparently not merely the lust of land, but a demand for full military security against invasion in the next war—a similar demand, it will be remembered, was put forward in the last settlement with Italy in the middle of the nineteenth century, and has considerably handicapped our Allies in their Alpine campaign in the present fight. The certain political result of this military measure will be to foster the irredentist feeling in Roumania, but presumably Austria has allowed for that.

In connection with the enforced Roumanian cession of territory to Bulgaria and Hungary, the Berlin paper *Tägliche Rundschau* reports that Roumania will receive as compensation "not only districts in Bessarabia taken from it by Russia in 1878, but a not inconsiderable extension of territory beyond the Pruth." The truth of the report is doubtful; what is certain is that, if Roumania is to be treated as a mere satellite of the German Powers, as is evidently the intention, a strip of territory one way or the other will not matter. More probable is the report that the Chotin district of Northern Bessarabia will be united to the Bukovina. This is an accession which Austria has long coveted to round off her furthest province; and now that she has thrown off the mask of "no annexations and no indemnities," which was a useful snare with which to entrap the Bolsheviks, her traditional policy of expansion is naturally to be gratified. The Emperor Charles would then be able to boast that, whereas his prede-

Digitized by Google

cessor began his reign by a war which lost him territory, the present reign has begun by adding to the Hapsburg dominions.

No further news has been received from the East as to the progress of the negotiations between the Caucasus Republic and the Turks at Trebizond, nor do the German newspapers appear to be better informed than ourselves—they are given up for the moment to accounts of the brutal manner in which the Armenians have treated the Turks who have marched forward to Erzerum—a hypocritical performance that should have evoked a feeling of disgust even in Germany, one would have thought. But meanwhile the formation of yet another republic is announced—a Tauridian Republic, which includes the whole of the Crimea. The only thing that is known about this republic is that it is under Bolshevik influence.

The Egyptian Budget for 1918-19 balances in the neighbourhood of £E23,000,000, save for a small anticipated deficit of £E350,000. This represents a 50 per cent. increase on the figures of six years ago, and is, indeed, more than £E3,000,000 higher than last year's Budget. Egypt has fared consistently well throughout the war after a preliminary setback in the early days. Although prosperity at the present height may be temporary, it rests on foundations making for steady progress. Prices have ruled high for cotton and cereals, and the British forces in the country have more than compensated for the absence of the ordinary tourist. But production is increasing, and on scientific lines. The chief drawback is that important public works are to a large extent in abeyance, but in this connection it must not be lost sight of that Egypt is devoting most of the money that might be set aside for a construction programme at the end of the war as a monetary contribution to the cost of the war. It may well be that the Egyptian, having experienced the advantage of "good money," will see the necessity of keeping production up to a level that will assure him a similar income when prices resume a more normal figure.

There appears to be some trouble in the Greek Chamber over ex-King Constantine's pension. It is not to be wondered at. Pro-Germanism is in the very bones of that monarch, and his exile to Switzerland has clearly tended to aggravate, if that is possible, this disease, to which the husbands of German princesses are particularly liable and which in their cases is usually incurable. The exiled monarch is busily intriguing, and it is certainly rather hard that Greece should have to pay for a King whom she does not want to see back again. The idea that King Constantine would be reduced to beg his bread from charitable Swiss peasants, if Greece stopped his allowance, is, of course, absurd; he would simply draw on his brother-in-law in Berlin, from whom he has certainly earned a pension. In these circumstances few could question the right of the Greek Chamber to stop his allowance.

In this connection it may be noted that our contemporary *Truth*, which is often well-informed, states that the opinion is generally held in Zurich that King Constantine will soon leave that city for Germany, where the Royal Schloss at Homburg is understood to have been placed at his disposal, and where the ex-Queen would find the congenial society of some of her relatives close at hand. The personal attendants of the ex-King are said to include a German naval and a German military officer.

So many authoritative, and contradictory, announcements have been made in this country about impending visits of political deputations from India that there is natural hesitation in accepting the latest report, which tells us that the extreme section first secured the postponement of a deputation representing various shades of opinion, and then hastened to despatch one of their own. The story is, however, not improbable: for the last two years the Home Rulers have played their cards far more skilfully than the Moderates, and if the latter have now allowed themselves to be euchred, the result will not surprise spectators who have watched the game attentively. The "unity" of the movement, of course, remains unimpaired by such transactions, and our visitors will doubtless be quite ready to speak in the name of India, sinking the fact that their monopoly of the platform results from the exercise of a presidential casting vote.

What the members of the deputation hope to accomplish is not altogether clear. Mr. Montagu has heard their sentiments already, and the only other persons who count at the present stage are the Ministers of the War Cabinet, who will, we fear, be too busy this summer to spend much time in listening to the oft-told story of the visitors' grievances and aspirations. As for the British public, we are quite sure that it does not intend to be worried over the details of the Indian Constitution: it has accepted the declaration of policy made last August, and it means to leave Ministers to carry that policy into effect. Audiences will doubtless be forthcoming—sympathisers, pacifists, and busybodies of all sorts—and there will be much mutual admiration and little scrutiny of the credentials of either side; but at the end of these things Home Rule will stand precisely where it stood at the beginning.

It does not, however, follow that the visitors will altogether waste their time, though the benefits may be different from those they hope to secure. They will come to this country able and astute men, but at the same time somewhat bookish and provincial, with a narrow outlook and a natural ignorance of the real meaning of the terms most often in their months. Here they will have an opportunity of learning many things. They may see, for instance, what autocracy really means, though we hope such tangible bits of information as bombs or torpedoes will not come their way: they may learn by observation something of the working of a democracy, and they may realise what India will be like when weavers, and potters, and leather-workers can rise to be Ministers of State. If they make the most of their opportunities, they will return to India even wiser than when they started, and in that event their journey will not have been thrown away.

One point which our visitors might well be given special opportunities of studying is the restriction of individual freedom necessitated by a state of war. India is very slow in learning this lesson, and much is still written and spoken there which would not be tolerated in this country, while the recent news that the agitation against preventive internment is being more actively worked up is disquieting from every point of view. Nobody likes the idea of internment, a word which, by the way, suggests all sorts of horrors conspicuously absent from the actual process, but in the conditions prevailing in Bengal it has been proved to be the most effective measure for controlling the activities of the friends of the enemy, and to observers in this country that consideration is decisive until the war has finally been won. A study of the regulations for the Defence of the Realm and of the action taken under them would be excellent discipline for those who hold a different view.

We have written above of India's ignorance of England, so it is only fair that we should recognise that there is ignorance also on the other side. An enthusiastic "war worker" asked us bitterly this week whether India was ever going to wake up, instancing in particular the failure to adopt the practice of daylight saving, which has again come into force in this country. It was, of course, easy to emphasise that in this matter at least India—the real India—has been wiser than the West, and that, as she still regulates her activities by the sun, it is quite unnecessary to tamper periodically with the clocks, which are, moreover, too scarce to make any particular difference. We wish all misunderstandings on both sides could be removed with no greater difficulty.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 25.

Receptions at the Palace.

The Sultan is giving a series of evening receptions to the leading Government officials and notables. The first took place some ten days ago, when most of the guests were Egyptians. On Thursday evening last the second one was held, and the guests on this occasion included the High Commissioner and Lady Wingate, General Sir Edmund and Lady Allenby, the Ministers, the Diplomatic Corps, the senior Government officials, and the leading European notables. A special theatrical entertainment was given by a French troupe, and a most sumptuous buffet was provided.

The Petroleum Question.

I have reason to believe that the Government will very shortly exact measures for dealing more effectively with the question of local supplies of foodstuffs as well as of articles of daily necessity. As a start very wide powers have been granted to the Petroleum Controller under a proclamation just issued. Under this measure petroleum is declared to be an article subjected to military control; its transport and sale are prohibited without special permission from the Controller; no one may retain in his possession more than is necessary for the purposes of his business or for his ordinary consumption during a period of ten days; the Controller is empowered to require declarations as to the quantity held by each person and to make regulations for the sale and distribution of petroleum; and any offence against the proclamation or any breach of the terms of any permit will be deemed an offence punishable under martial law. Thus the problem of petroleum is being drastically dealt with, and it is to be hoped that similar measures will be taken with regard to other commodities which are beginning to arouse attention, and which, if not firmly tackled, may assume serious proportions in the very near future. The tariff has long become a dead letter, and the more affluent condition of the producers of agricultural commodities, since it does away with the necessity which existed previously to sell in order to have funds for everyday requirements, is inducing them to hold up supplies, a change in the local situation which calls for an immediate amendment of the existing legislation so as to enable the authorities to deal with this new class of hoarders in an effective and satisfactory manner.

Education in Egypt.

The two Commissions appointed some while back to study the introduction of elementary education and the creation of a State University have made good headway with their work, and the first-named one should soon be in a position to draft its report. It is understood that as matters stand at present the recommendations of that Commission do not differ much from the terms of the original project submitted to it for consideration. It should, therefore, be possible to give effect to this scheme of extending elementary education throughout the country within a short time after the presentation of the report, if it were not for two obstacles standing in the way of any speedy realisation of the proposal. In the first place new buildings have to be constructed for these schools, and the cost of erection would be a heavy charge on the Government. Secondly, the staff of qualified teachers is inadequate. One of the great criticisms of the existing elementary schools—I refer to those which are privately run—is that a great proportion of the teachers are not in possession of the proper educational certificates.

The housing problem might in some districts temporarily be overcome by the renting of local buildings, but generally speaking new premises would in every case have eventually to be provided. The financial difficulty might be met by the Provincial Councils, who have the power to allot a certain proportion of local taxation to educational projects, and who could, when proper material becomes available, arrange to allocate a fixed sum annually in their Budget to new works in the form of the construction of elementary schools and to their future upkeep. It is in this manner that the system of elementary schools will most probably be financed, for it is obviously more equitable to meet local elementary education by local contributions than to make it a charge on the State Budget as a whole. As regards the dearth of teachers, the Government is extending its training institutions as much as possible, and practically every Mudiria has its normal school. The production of a sufficiently numerous teaching staff will take some time, of course, but it is expected that as and when schools become ready there will be available a very large proportion of the staff required.

In this connection one wonders why the Egyptian University does not assist in the production of teachers. Its governing body knows or ought to know by now that that institution has not fulfilled its object, and that its days as a University are numbered, and so instead of trying to justify its existence, or, rather, make believe by statistics that it is filling some useful purpose, by starting classes for external students at the School of Law to enable them to sit at the annual law examination, it would surely be better if it opened courses for the training of teachers. This is a suggestion which might well be taken into account by the governing committee. Neither the opening of classes for training teachers nor the qualifying of students to sit at examinations other than the Egyptian University examinations enters really into the rôle of that institution, but whereas its present departure tends to increase the ranks of an already overcrowded profession, and so is doing no useful service to the State, the one suggested would meet a real want and be of national utility.

The Cotton Seed Situation.

The situation in Alexandria having improved, the Cotton Seed Control Board now announces that it will be prepared to resume acceptance of cotton seed in Alexandria on and after the 26th instant. In the meantime the difficulty encountered in shipping the seed out of the country has compelled the Government to suspend temporarily part of Law No. 29 laying down the measures to be taken with a view to reducing the propagation of the pink boll worm. In the terms of Article 1 of this law all premises where cotton seed is stored between May 1 and August 1—the period during which the moth is known to emerge from the chrysalis—must be provided with means for preventing the moth from flying out into the open; in other words, all apertures must be closed with wire netting. As a result of the present shipping situation it is evident that an abnormally large portion of the cotton seed crop will still be in the country during the period mentioned, and since there is possibly not sufficient wire netting available locally, and since most of the premises where cotton seed will be stored this year will not be used permanently for the purpose, it has very rightly been considered unfair to shoulder the local industry with the extra expense and trouble in this respect, and Article 1 of the Law has, therefore, been suspended for the current year.

In addition, Articles 2 and 3 of the same Law ordering the installation in all ginning factories of approved apparatus for the destruction of the pink boll worm in the freshly ginned seed, which was suspended last year, has been reimposed. The suspension, it may be recollected, was put into effect because it was found impossible to get the necessary machinery from England before the final date fixed for its installation, i.e., September, 1917, but sufficient plant has now been received to meet the needs of the ginneries in Upper Egypt, and an *arrêté* has therefore been issued ordering all ginneries in that area to instal the necessary apparatus before July 15. Factories in Lower Egypt have been given up to the same date in 1919 to comply with the requirements of the law, as there is every reason to expect that this extra period will be sufficient to enable the ginners concerned to obtain delivery and erect the necessary plant.

CONDITIONS IN PALESTINE.

(From a Syrian Correspondent.)

Some interesting information on the economic situation in Turkey is supplied by a resident who has recently arrived in Egypt from that country. My informant begins by giving the last official list of prices of foodstuffs in Constantinople as follows:—

	Piastres.		Piastres
Bread, per kilogramme	25	Sugar, per kilogramme	100
Meat ,,	40-70	Coffee ,,	400
Haricot beans ,,	3	Petroleum ,,	80
Flour ,,	50	Coal ,,	3
Potatoes ,,	18	Eggs, per piece.....	21/2
Milk ,,	15	Fowl ,, ...	45
Butter ,,	110		

As to articles of clothing, a suit costs from 1,500 to 2,000 piastres and a pair of boots from 600 to 1,000 piastres.

In explanation of the economic ruin to which Turkey has been brought, he points out that, as an essentially agricultural country, she ought to have been self-supporting if sufficient human and animal labour had been left. But the Young Turks have not only denuded unnecessarily the country of men and beasts of burden, without any regard for economic requirements, but have committed the further suicidal crime of making an agreement with their German masters that the latter were to be paid for supplies of munitions of war in foodstuffs. As the munition account ran up into several millions the requisition of foodstuffs by the Turkish Government to meet the liability was carried out in proportion. As an instance the fact is cited that the town of Edremid alone supplied one million marks worth of oil during the first year of the war.

In the second year of the war the prices of foodstuffs were still fairly reasonable, as may be seen from the following figures that ruled at Angora.

	Piastres.		Piastres
Wheat, per kilogramme...	4	Honey, per kilogramme	12
Butter ,, ...	9	Milk ,,	2
Rice ,, ...	5	Meat ,,	3

The issue of paper currency had not yet been made, and the stocks in the country, which had always exported considerable quantities, were slow in being exhausted owing to the sea blockade. These prices, however, were doubled six months later, and when my informant left the town German agents and members of the Committee of Union and Progress were taking over all that they could lay hands on. Although railway transport was exclusively taken up by the army, the latter favoured the Unionists' agents by allowing them a few trucks to Constantinople, where their goods were sold at extravagant prices.

The final heavy drain on men and beasts of burden brought about the supreme crisis from which Turkey is now suffering so acutely. To illustrate the utter dearth of beasts of burden my informant reports that he personally saw an unfit and cast-off horse sold in a village for 4,000 piastres.

If this state of things obtained in the purely Turkish part of the Empire one can easily imagine how much worse conditions were in the non-Turkish provinces, especially in Syria and Palestine. The climax of cruelty was reached when the Turks were being driven northwards. In their hurried retreat systematic spoliation degenerated into looting, plunder, and even destruction. Detailed accounts are beginning to appear in a Zionist organ published in Cairo. I append an extract from a letter in the current issue, which refers to the situation just after the capture:—

The Turkish Evacuation.

"At Jerusalem the situation is fearful; thousands are literally starving. Although the British Government is doing all in its power to alleviate the prevailing distress, yet it is still acute. The scarcity of foodstuffs is such that only the few persons of means can afford to supply their needs; the overwhelming majority of the poor cannot do so. What aggravates this pitiful situation is the practical absence of clothing material, which is unobtainable at any price. Crowds of men, women, and children are to be seen half-naked and barefoot."

At Jaffa things are no better owing to the manner in which the evacuation was carried out. Practically all the inhabitants were driven out to the north, and the huts of Kefar Seba and of Jemma and the hovels of the backyards of Galilee, as well as the cemeteries of all those places will long tell of all that this unhappy population has suffered. It is only the few who have been lucky enough to escape to the south, who are now gradually returning to the town, destitute and in rags.

The colonies to the south of Jaffa are in a much better condition. The war had taught them thrift, and as practically everyone has his vineyard and almond grove, these colonies on the whole did not experience absolute hunger. It is especially in cattle and clothing that the need is mostly felt. In the colonies lying north of Judæa, where the Turkish retreat was slow, the situation is precarious. Worse than locusts, the Turks destroyed what they could not carry away. In the largest and richest colony, Petah-Tikwah, worth about 15 million francs, whose population runs into several thousands, not including the refugees from Jaffa, the total damage amounts to several millions; many vineyards and orange groves with their buildings, motors, and machines were destroyed. The quiet little centres of Ain Ganim and Machné-Jehuda suffered severely. If at Beer Toubia, Ekron Gdera the Turks satisfied themselves with mere plunder, or the requisition of the last loaf of bread or head of cattle, and indulged only occasionally in damaging certain houses, amongst which is the fine synagogue of Gdera, such was not the case at Ain Ganim and Machné-Jehuda, where the buildings were demolished and burned. The Turks left neither houses nor orchards; they did not even spare the renowned vegetable gardens there. The ruined inhabitants of these places have come to swell the number of destitute at Jaffa. Many of the inhabitants of Petah-Tikwah who were once well-to-do have been reduced to poverty, and now lack both food and clothing."

In contrast to this picture of lawlessness and wanton destruction we can fortunately turn to the intelligent organisation and humane solicitude shown by the British administration. Entering a country just devastated by the enemy, with damaged or destroyed lines of communication to repair and new ones to lay down, involving the transport of an enormous amount of material under difficult conditions, aggravated by the absence of local means of animal transport and inclement weather, and with a large army of fighting and auxiliary troops to keep supplied with food and munitions, the military authorities have yet been able to devote some care to the needs of the civil population. A British lady engaged in relief work wrote to a Syrian friend similarly engaged:—"Our men are going on diminished rations in order to keep the poor people from starving." Could the contrast be more striking? And yet there are still some people who express impatience over the apparent delay in the settlement of the arrangements for provisioning Palestine and establishing trade relations, within restricted limits, between that country and Egypt. The writer is in a position to state that, far from the question not having been given a sufficiently prompt attention by the authorities, it has been a matter of anxious thought for them. To that end a special administration has just been created, called the Occupied Enemy Territory Administration, for the purpose of utilising to the utmost extent, through licensed firms, the limited transport facilities which the military authorities can at present afford. It is expected that this new agency will be in working order very soon.

One thing is certain that, although the economic condition may still leave much to be desired, there can be no fear of actual starvation, and that relief is very near at hand. Further than that the outlook for next summer is decidedly bright, as the authorities have, with intelligent foresight and commendable sympathy, already supplied the peasants and landowners with seed corn for the next harvest; and as the country is now being opened to trade, further attention will be devoted to matters of detail, such as the replenishing of the stock of cattle for ploughing purposes and the supply of petroleum for motor-engines in the fruit plantations in Jaffa and elsewhere.

TANGIER TO TEHERAN.

Before the war most people in this country persisted in believing that Baghdad was in Persia. On one occasion I had an argument on the subject with a young woman in a post office, who finally consented to believe that the city was in Turkey only when I assured her that I had been there myself. As for Busreh, few Englishmen had ever heard of the place in their pre-war days. But to-day both places are known to most of us—by reputation at any rate. An old West Country dame has given Busreh a title that might fairly stick to it, if it had the chance. She was telling a neighbour of her son's arrival in the port, and the neighbour was momentarily puzzled. "Busreh?" said she interrogatively, "Busreh?" "Yes, my dear," explained the other. "The place where the dates come from." And Number Two beamed understandingly. Shall we ever, I wonder, have a "Charley's Aunt" from Busreh?

***

It was the "star" turn at the Y.M.C.A. hut that evening. An Australian was describing in eloquent and moving terms the capture of Bethlehem. His own company had been the first to enter the village in the late afternoon, and he was recalling the memories that crowded in upon them during the hours that followed. "I guess the shepherds watched their flocks *that* night" was the contribution of the inevitable voice from the audience.

***

During the past week I have heard the war described as the greatest game of chess that has ever been played and at the same time the strangest. The reason given for the latter adjective was that in this particular game all the Rooks are on one side, all the Knights on the other, while the Bishops are neutral.

***

What bade fair to be a promising romance, in which "a beautiful Turkish lady" played a prominent part, has turned out to be nothing but a very ordinary intrigue. In a message dated March 19, the New York correspondent of *The Times* reported the arrest of the said "beautiful Turkish lady" with three companions, who were all "believed to be active members of the German espionage system"; and the American papers, we were informed, had been enabled "to publish a thrilling spy romance." Knowing something of the power of the American journalist in the romantic line, I can readily believe this; for certainly all the ingredients for a first-class "shocker" seemed to be provided. The fair Turkish lady's companions in adversity were a Baron, a Count, and a lady who, though described as "a native of Berlin," preferred the title of Madame to that of Frau (this, too, after receiving a substantial sum from Count Bernstorff!). The b. T. l. apparently passed under several aliases at one time and another; she lived in considerable style at the Hotel Baltimore; she seems to have been at home in several capitals; and she was given to entertaining officers at "very pleasant little parties."

***

All this, as I remarked above, looked promising, even though the fascinating fair had such an unattractive name as Storsch. In fact, her ugly surname—acquired in the course of her variegated career from a French husband from whom she was subsequently divorced—was to some extent atoned for by her first name, Despina. But the American police seem to have been suspicious of her cosmopolitanism, so to say, and accordingly she suffered arrest. Fortunately for herself, if unfortunately for the end of the story, certain mysterious code documents, which were seized by the secret service officers when the luckless four were taken prisoners, turned out to be nothing worse than "love epistles couched in affectionate terms, the hidden meaning of which was at first undecipherable." So Madame Storsch, the Count, the Baron, and the second lady are, after all, to be "deported simply as undesirables"—to quote a Reuter's message which gives the end of the story.

***

The love letters, by the way, were apparently written by—or to?—"a neutral diplomatist." It strikes me as fortunate that this fact did not transpire in time to be turned to account in the debate on Foreign Policy and the Shortcomings of our Trained Diplomatists in General (that is not what the newspapers called it, but it conveys the idea, I fancy) last week. Even Mr. Balfour might have found it hard to defend a diplomatist (neutral or otherwise) who had indulged in such indiscretions as sending or receiving "love epistles couched in affectionate terms," even in code. I wonder whether the secret police who decoded the interesting documents had a *very* amusing time! If the letters were Oriental in expression, they would probably give the decipherer considerable trouble, at any rate; for, after he had decoded, say, "My gazelle-waisted palm branch," or whatever it might be, he would still wonder whether he *could* really have got at the writer's innermost meaning. But perhaps he was satisfied as soon as he found that the letters *were* "love epistles couched in affectionate terms." For such things have usually no meaning, hidden or otherwise.

***

One aspect of the Lichnowsky affair has been overlooked in this country; but it is very typical of Germany. Prince Lichnowsky wrote the famous notes for the family archives, and in his explanation to the Imperial Chancellor he states: "I considered I might show them, on the assurance of absolute secrecy, to a very few political friends in whose judgment, as well as trustworthiness, I had equal confidence." He proceeds to stigmatise the circulation of the documents as an "unprecedented breach of confidence." I am not so sure about that—in Germany; but I am sure that, outside Hunland, no such breach of confidence could have occurred, at least in the circles of society within which we may conclude Prince Lichnowsky moves. But here we have German *Kultur* in a nutshell. Every stratum of society is so honeycombed with espionage that even those of the highest rank cannot trust the smallest circle of their intimate friends. Mr. Gerard, the American Ambassador, in his "Memoirs," comments on this phenomenon. Sir Valentine Chirol, who has a particularly intimate knowledge of Germany and the Germans, refers to the same characteristic in a letter to *The Times*, in which he shows how Germany's highest representatives abroad are encouraged by the Government, *anglice*, to play mean and dirty tricks on one another. The fact is that the German's outlook on life, his code of honour—in fact, his whole mind—is an Augean stable. How is the Herculean task of cleansing it going to be carried out?

***

In former days Arabia must have been a paradise for the poets. The production of a poem of merit secured for its author not only praise and honour, but also, in many instances, more substantial rewards that might well give rise to jealousy amongst the poets of lands less appreciative of their art than Araby. To a certain extent this love of poetry still survives among the Arabs and Arabic-speaking peoples. The desert Arabs, I am told, are the poet's most enthusiastic admirers, if not his most intelligent critics; but in the larger towns and cities it appears to be becoming rather "unfashionable" to be too enthusiastic over poetry or the poets. Be that as it may, the poet evidently finds appreciation—and solid proof of it, too—in Egypt. I have just been reading of one highly esteemed poet, Hafiz Bey Ibrahim, reciting an ode of his own composition in the amphitheatre of the Egyptian Ministry of Education. That in itself is no mean honour, one imagines, and the ode appears to have been greatly enjoyed, although it contained over two hundred verses! One wealthy Cairene has presented the gifted poet with a diamond ring valued at £200 (Egyptian); while another is said "to propose to give the poet a still more valuable present." Lucky Bey! If it is no longer fashionable to stuff a poet's mouth with sugar plums, he may at least still hope for other, and more agreeable, recognition.

***

If you ever read the "agony column" of *The Times* or the *Morning Post* you are probably familiar with the "Will any kind person adopt beautiful baby boy?"—or girl, as the case may be—style of advertisement. Such appeals would probably be common in the Egyptian journals just now, if anybody set the fashion, for, according to the *Wady-en-Nil*, the Government officials are indulging in such remarks as: "I should be obliged if anyone would take charge of my children and reduce my financial burden," or, "I have a big family and the price of bread takes most of my pay," etc. This is, of course, apropos of the agitation for further war bonuses, to which THE NEAR EAST's Cairo Correspondent referred last week. The Egyptian papers received lately contain many allusions to the subject, and petitions appear to have been raining in on the Government in connection with this cost of living problem.

***

Unless the newly established Sultanien Institute of Hydrobiology performs a miracle in the way of getting to work quickly, we can hardly hope that it will do much to relieve the harassed Egyptian housekeeper of her share of the great food problem, which is exasperating the world at large. For we all hope that the war has now entered on its last stage. The institute is bound to prove a blessing to Egypt, however, and it ought to "fill a want" that really has been "long felt." Ancient Egypt appears to have been well off for fresh-water fish, if we may judge by the sculptures, which frequently show us fishermen spearing fish, taking them in nets, and so forth. But modern Egypt has strangely neglected the excellent chances provided by the Nile and the Balu Yusuf Canal. It is true that European sportsmen occasionally fish these waters, and that native fishermen, professional and amateur, do so also to a slight extent; but, in comparison with what might be, next to nothing has been done. The Institute will doubtless alter that in time, and the Egyptians will have cause to bless Sultan Fuad for his happy thought in calling it into being.

NEAR EAST BOOKSHELF.

GERMAN FRIGHTFULNESS.*

Mr. Arnold Toynbee has rendered good service to civilisation by his crushing indictment of German policy in Belgium and Northern France. That it was prompted by the Higher Command is shown by an official "Manual of the Rules of War," issued by the Berlin General Staff in 1902. This code of military operations, designed for the use of officers on active service, declared that humanity in every form was contrary to the nature and aim of warfare. It also left the choice of methods for cowing the civilian population of an invaded country entirely at the discretion of army leaders. The fact that five years later the German representatives at the Hague Convention acquiesced in clauses which should have had a diametrically opposite effect led to a general belief that future wars would be waged with due regard for international law. Hence the thrill of horror which ran through the civilised world when it became known that Germany treated the Hague Convention as yet another "scrap of paper." The evidence establishing her guilt rests on official reports published by the British, French, and Belgian Governments; not to mention the testimony of neutral eye-witnesses proving the perpetration of wholesale massacres, arson, rape, and pillage by the locust-like horde that swept through Belgium and Northern France in August, 1914. Mr. Toynbee has marshalled his damning facts with consummate skill; and the value of his book is increased by maps and photographs enabling the reader to form a mental picture of the horrors of German invasion. It is passing strange that Bavarians, Saxons, and Würtembergers should have far excelled their Prussian masters in the shedding of innocent blood. The latter might plead in extenuation the fierce passions generated by economic and political rivalry; but South Germans have no such excuse to offer. Their conduct during the autumn of 1914 reveals the sinister action of the Prussian cancer on races of low mentality and coarse animal fibre.

F. H. S.

DIPLOMACY OUT OF DATE.†

Serbia has many skeletons in her cupboard, and in this respect is not alone among States, whether inside or outside the Balkans. Hers, however, are almost entirely of recent origin. Their exposure to the public gaze, therefore, seems to make the dis-service usually associated with this step even more marked than it would be if the skeletons had been of a respectable antiquity. But such is the effect of the book of memoirs which Count Mijatovich has published. Of his devotion to Serbia there can be no question; he has spent long years in her service, both as Cabinet Minister and as diplomatist; he enjoyed the confidence and friendship of her rulers. As he has had special opportunities of watching events, *quorum pars magna fuit*, that ended in the great war, the instincts of the historian told him that the contributions which he could make to the general knowledge of the trend of European politics would be of value. Keeping this goal in view, he has indulged a happy vein of story-telling, with the result that he has compiled a most interesting book. Our only fear is that his candid narrative is not calculated to raise Serbia in the estimation of those who hold that the Balkan States are inclined to arrogate to themselves a position to which they are not entitled. Nowadays secret diplomacy has lost caste; but in these pages it runs riot, and in some instances—notably in connection with the secret treaty between Serbia and Austria-Hungary (1880)—it is clear that our author's line of reasoning belongs to the old school, and would not pass muster in a more democratic age. It is a matter of general knowledge that the Balkan States in the old days played a prominent part in promoting or keeping alive friction in Europe. Count Mijatovich's narrative explains in part how this was done. King Milan himself cheerfully admitted, we are told, that he declared war on Bulgaria in 1886 with the idea of provoking war between Russia and Austria. Perhaps the chief service that the author has rendered by his frankness, which, he informs us, is at once his "strength and weakness," is to point to a condition of things that must not be allowed to repeat itself. The story of the Obrenovitch régime is not a happy one. It will seem to many a pity that Count Mijatovich, as he omits all mention of certain events in Serbia in 1899 which did not redound to the honour of his friend, Dr Vladan Georgevich, did not spare the memory of the misguided King Alexander. For in this respect the troubles of Serbia are not to be regarded as at an end, if we are to take all that we read in this book *au pied de la lettre*. For the Count is a firm believer in "the occult." His own future was mapped out for him when a boy, and he is convinced that the last prediction, which promises him death at the hands of a political assassin, will yet come true. We trust not. Another seer who occupies a prominent position on the author's stage is Matha of Kremna, who predicted the assassination of King Alexander, the accession of Peter Karageorgvitch, and the occupation of Serbia by a foreign army. The rest of this prediction runs:,—

> But some time afterwards a man will arise from among the people, a relation of the Obrenovitch dynasty, who will gather the people around him and succeed in driving out the foreign army and unite all Serb countries in one State.

We can but hope that the Serbians will recover their country sooner than this prophecy would seem to imply. It is claimed for Princess Nathalie, who obtained a divorce from (the late) Prince Mirko of Montenegro, that she is the last legitimate descendant of the Obrenovitch family. Her children, indeed, might save the reputation of Matha of Kremna; but the reader, unless he be a member of the Psychic Society, while grateful to Count Mijatovich, will be tempted to hope that his excursions into the occult, like those into secret diplomacy, belong to a dead past, which has been at last interred for all time.

THE COTTON WORLD.*

The life of modern Lancashire is, or was until war broke out, symbolised by the hum and drone of its cotton mills. Cotton in bales come from the south, east and west, pass through the wonderful processes of spinning and weaving, emerge therefrom in the shape of cloth, and, pausing only slightly, take ship again for the world's four ends. Thus the whole social and economic structure of Lancashire is built upon cotton, on its price, on harvest prospects, on the shortage or abundance of crops, on rates, on the relations between capital and labour, and a myriad other problems of international as well as of national importance. The result is that the men who stand at the apex of the cotton industry in Lancashire are men indeed, and none has within the past few decades earned a more deserving title in this respect than Sir Charles Macara, with whose doings our readers, both at home and in Egypt, are acquainted in connection more particularly with the cotton problems of the valley of the Nile from Ghezira to the Delta. Mr. Mills, in his portraiture of modern Lancashire, has therefore had a happy idea in taking as the central figure the striking personality of the baronet who did so much to regularise the flow of cotton into and the flow of cloth out of the Manchester Ship Canal, and who, in all his vast dealings with capital and labour, aimed continually at harmonising the demands of the classes so as to prevent deadlocks in the trade and moments of strife or stagnation in the economic life of Lancashire. The result is a readable picture of Manchester, Bolton, Oldham, and the minor milling centres before 1914. The last chapter, which we perhaps prefer, is devoted to Sir Charles's activity during the war—to the suggestions which, in his capacity as a great organiser of men, he made to the Government of the day, of how some were accepted and carried out, and others, ignored at the time, were adopted in principle at a later date. This chapter, with all its disappointments, is an object lesson in how to muddle, and is, without in any way aiming at it, a powerful indictment of the mismanagement of national organisation by "an orgy of departmentalisation"—an evil of which we are only now beginning to feel the first effects. The appendices of Mr. Mills' book include most of Sir Charles Macara's speeches and writings on cotton problems, the majority of which are already familiar to our readers.

BOOKS RECEIVED.

Peace Problems in Economics and Finance. By Uriel D'Acosta. (London: G. Routledge and Sons, Limited. 2s. 6d. net.)

Occasional Addresses, 1893-1916. By the Right Hon. H. H. Asquith. (London: Macmillan and Co., Limited. 6s. net.)

Two useful maps have just been issued by Messrs. George Philip and Son—of Palestine, Syria, and the Sinai Peninsula, politically coloured, and of Mesopotamia and Asia Minor, physically coloured. The latter (3 ft. by 2 ft. 3 ins.) includes the Balkan Peninsula, together with the Black Sea and the Caucasus. It is, therefore, of special interest at the present juncture. The Palestine-Syria map enables the British operations to be followed closely, and gives a good idea of the physical difficulties ahead of General Allenby. The price of each map is 2s. 6d. net; mounted on cloth to fold, 6s. net; with rollers and varnished, 8s. 6d. net.

*"The German Terror." By Arnold Toynbee. Hodder and Stoughton, 20 Warwick Square. Price 1s. net.

†"The Memoirs of a Balkan Diplomatist." By Count Mijatovich. (London Cassell and Co. 16s. net).

*"Sir Charles W. Macara, Bart: A Study of Modern Lancashire." By W Haslam Mills. (Sherratt and Hughes, Manchester.)

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. March. 29	1918. March. 16	Friday	1336. Jomada II. 16	5678. Nisan. 16
30	17	Saturday.....	17	17
31 April.	18	Sunday	18	18
1	19	Monday	19	19
2	20	Tuesday	20	20
3	21	Wednesday	21	21
4	22	Thursday	22	22

All British officers serving in Roumania are reported to be well.

Nine classes of Jews and Moslems in Epirus have been called to the Greek Colours.

Prince George of Serbia visited the King and Queen at Buckingham Palace on March 23.

Mgr. Melitius, late Archbishop of Cyprus, has been appointed as Archbishop of Athens.

An Armenian Information Bureau has been instituted with headquarters at 153, Regent Street.

It is reported that the first disbanded Roumanian Army Corps has arrived in the occupied territory.

Colonel Milivoj J. Nicolaievitch, Military Attaché to the Serbian Legation in London, has left for the Western front.

Professor Undecteur, of the Sofia University, has been appointed Bulgarian Minister Plenipotentiary to the Ukraine.

The will of Mr. George Lyell, of Horsell Lodge, Woking, Surrey, formerly of Calcutta, has been proved at £206,093.

M. Venizelos, the Greek Prime Minister, has expressed his thanks to the donors to the Lord Mayor's Fund on behalf of the victims of the Salonika fire.

A hospital train conveying 153 seriously wounded Serbians, including about twenty officers and three French soldiers, from Austria arrived at Lyons on March 21.

After four days of conferences a complete agreement between the leaders of the Serbian parties as to the formation of a Coalition Cabinet could not be reached.

Lady Lawrence, widow of the first Lord Lawrence, Viceroy of India, 1864-1869, left unsettled estate of the gross value of £11,767, of which £10,442 is net personalty.

Major-General George Rennie Manderson, R.A., C.B., of Fullands, Taunton, Somerset, formerly of Hartnolls, Tiverton, Devon, Mutiny veteran, left estate valued at £17,165 gross.

Captain J. R. W. Gillan, Gordon Highlanders, has been taken on the strength of the Egyptian Army as a Special Service Officer with the rank of Bimbashi and posted to the Sudanese for duty.

Captain F. Y. Goring, Roval Sussex Regiment, has been taken on the strength of the Egyptian Army as a Special Service Officer with the rank of Bimbashi, and posted to the Sudanese for duty.

Meat in Cyprus, writes a correspondent, has been very scarce. Clothes cost about five times pre-war prices; while leather and many manufactured goods are becoming more and more scarce.

Captain Douglas Pass, who is a prisoner of war in the hands of the Turks, has given, through his wife, £5,000 in War Bonds and War Loan towards the erection of a residential college at Bristol University.

The *London Gazette* states that the King has given authority to Mr. Shirley Clifford Atchley, translator at the British Legation at Athens, to wear the Insignia of Chevalier of the Order of the Redeemer, conferred on him by the King of the Hellenes.

Mr. Lukach, who has been appointed Commissioner of Famagusta, Cyprus, while recently acting as Commissioner of Papho, succeeded in collecting over £1,000 for the Red Cross, and that in a district which has always been regarded as the poorest in the island

Reports from the United States Minister at Jassy show that although the terms of peace have not been signed Roumania's boundaries are being altered under the clause providing for the rectification of the frontier, and that Roumania is being subjected to the most drastic persecution.

Jewish crowds gave the Zionist Commissioners an enthusiastic reception on their arrival in Cairo. Sir Reginald Wingate, High Commissioner, and General Allenby were represented at the station.

Messages of congratulation were received by the Persian Minister, Mirza Mehdi Khan Musthir-ul-Mulk, from Mr. Balfour and the principal members of the Foreign Office, on the occasion of the Persian New Year's Day.

The marriage between Captain Cyril Noyes, M.C., Indian Infantry, eldest surviving son of the Rev. H. E. Noyes, D.D., and Violet Gaddum, eldest daughter of Colonel and Mrs. Lucas, of Ringmore, Devonshire, has taken place in India.

The publication by Czech newspapers in Austria of the full text of the Allied Socialist Manifesto of February 23 has not been permitted, and even the summaries that were published grossly distorted the reference to Austria-Hungary.

According to a Bucharest telegram *vid* Berlin, negotiations among the members of the Quadruple Alliance, as well as between the Quadruple Alliance and Roumania, are proceeding satisfactorily, and a substantial *rapprochement* is within reach.

The Agent-General for Victoria (Sir Peter McBride) has received authority to pay to the Lord Mayor of London's Armenian Relief Fund £2,000 from the Lord Mayor of Melbourne's Armenian Relief Fund, making the total amount of charitable funds received from Victoria for distribution by him £439,961.

A Persian gun captured in Mesopotamia by the late General Maudé is to be placed in Trafalgar Square. Major-General Sir W. T. Furse, Sir Douglas Dawson, Sir Alfred Mond, M.P., H.M. First Commissioner of Works, and the Permanent Secretary of that department visited the Square this week and selected a site.

The Grand Council of the Primrose League, which is organizing a campaign with regard to German designs in the East has arranged with the National War Aims Committee for the delivery of lectures, illustrated with large scale maps, to League Habitations on "German Aims, Causes of the War, and the Dangers of a Premature Peace."

The Postmaster-General announces that according to information furnished by the Swiss Post Office the transmission of parcels addressed to prisoners of war in Turkey (including civilians) is again suspended; and, until further notice, such parcels cannot be accepted at post-offices. Letters for prisoners of war in Turkey are still being forwarded.

The marriage of Captain S. H. La Fontaine, M.C., Intelligence Officer, East African Forces, and Assistant District Commissioner, British East Africa Protectorate, second son of Mr. and Mrs. S. La Fontaine, 10, Nottingham Place, W., and Agnes Helena, daughter of the late Rev. R. W. Thrupp and Mrs. Thrupp, St. Francis, Worthing, will take place at Philbeach Gardens on April 3, at 12.

The Times Athens correspondent states that the Greek Government submitted to the Chamber on March 14 a Bill reducing the King's allowance from £80,000 to £64,000. The Queen-mother Olga is allowed an annual grant of £12,000. Another Bill empowers the Government to grant the ex-King an annuity of £20,000 as compensation for the appropriation of the ex-King's property in Greece. The right to stop this annuity is reserved by the Government. It is reported, however, that the Greek Budget Commission at its next sitting will propose the rejection of Article I. relating to the annual allowance of £20,000 to ex-King Constantine. The Commission will justify its proposal by Constantine's continued anti-national attitude.

The services for which Captain C. A. M. van Millingen, M.C., the Rifle Brigade, elder son of the late Professor A. van Millingen, M.A., D.D., of Robert College, Constantinople, was awardod the Military Cross are thus described in a Supplement to the *London Gazette* of March 18:—"For conspicuous gallantry and devotion to duty when in command of three officers and ninety-seven other ranks, which resulted in the killing of one enemy officer and twenty other ranks, the capture of six prisoners, and much damage to enemy dug-outs and material. When his right party was held up by an enemy strong point he personally led them forward, the post being rushed and all those in it killed."

Messages received from Brigadier-General Hawker, Military Governor of Baghdad, by the Armenian Refugees Fund, state that the main street of the city is now lighted with electric light, and the British authorities are making all kinds of improvements. The Governor is controlling the grain supplies for the population, with a ticket system of control, and sells about 85 tons a day to the civil population. Some Armenian refugees have arrived at Baghdad, and General Hawker has arranged for the able-bodied men among them to go to the French Legion being formed at some place near Syria. The Governor has also ordered the registration of Armenian girls employed in Baghdad.

The Secretary of State for the Colonies has conveyed to the Officer Administering the Government of Ceylon by telegram the following message from his Majesty: "I have received with heartfelt regret the news of the death of Sir John Anderson, and am sure that the people of Ceylon will join with me in mourning the loss of their distinguished Governor, whom I had known and held in the highest regard for many years.—GEORGE R.I."

Reuter's Delhi correspondent states that Lady Chelmsford, presiding over a meeting of the Executive Committee for "Our Day" on March 20, announced that the total collections throughout India amounted to £815,000. The principal contributors to this result were Bombay with 20½ lakhs of rupees, the United Provinces with 19 lakhs of rupees, Bengal and Punjab with 16 lakhs of rupees each, and Burma with 9 lakhs of rupees, while the Indian States gave over 20 lakhs of rupees.

Sir Alfred Mond, speaking at a meeting of the Serbian Relief Fund held on March 26, said that no nation had suffered as Serbia had suffered, and no country had been more true to the Allies. At an hour when we ourselves were going through moments of anguish and arduous trial, when we were feeling to the full the brunt of the war and the strength of the brutal enemy opposed to us—that was the hour in which we should do our utmost to help the Serbian people, who were waiting for their day of liberation.

OBITUARY.

SIR JOHN ANDERSON.

We regret to announce the death of Sir John Anderson, Governor of Ceylon, which took place in Colombo on March 22. Sir John was born in 1858, and took his M.A. degree at Aberdeen in 1877 with first-class honours in mathematics, gaining also the gold medal for the most distinguished graduate of the year. Two years afterwards he entered the Colonial Office as a second-class clerk. In 1891 Sir John was appointed Joint Commissioner with the late Sir J. F. Dickson to inquire into certain matters connected with the registry of the Supreme Court of Gibraltar, and in the following year he was attached to the staff of the British Agent for the Behring Sea Arbitration in London and Paris. In 1896 he became a first-class clerk, and in 1897 a principal clerk. Sir John was Secretary to the Colonial Conferences of 1897 and 1902. In 1899 he again visited Gibraltar to inquire into the rates of pay in the Civil Service, and in 1901 he was in attendance on King George, then Duke of Cornwall and York, on his visit to the Colonies as the representative of the Colonial Office. He was appointed Governor of the Straits Settlements and High Commissioner for the Federated Malay States in 1904, and he held this office until 1911, when he came home to take up the appointment of Permanent Under-Secretary of State for the Colonies. In 1915 he went to Ceylon as Governor and Commander-in-Chief. Sir John received the C.M.G. in 1898, and was created K.C.M.G. in 1901, G.C.M.G. in 1909, and K.C.B. in 1913.

Mr. Harry Gavin Young, late of the Indian Police Department, has died at Locks Heath, near Southampton.

Mr. Frederick George Wigley, C.I.E., barrister-at-law, who died suddenly from pneumonia on March 22, was appointed personal assistant secretary to the Bengal Legislative Department in 1896, and secretary to the Bengal Legislative Council in addition in 1900. Subsequently he served in the Home Department of the Government of India.

Colonel George Stewart Ommaney, who died on March 21 in London, was the youngest son of General Edward Lacon Ommaney, and was formerly in command of the 3rd Queen Alexandra's Own Gurkha Rifles, retiring from the Indian Army in 1910. He served in the Afghan War, 1879-80, and in the Sikkim and Waziristan Expeditions of 1888 and 1894. When the present war broke out he volunteered for further service, and for a time commanded a reserve battalion of the Welsh Regiment.

Captain William MacAndrew Marshall, I.A., elder son of Colonel Marshall, of Langford, Jersey, was killed on March 19, aged twenty-nine. He was educated at Elizabeth College, Guernsey, and passed fifth out of Sandhurst into the Indian Army. He was appointed to the Dogras, and, having passed the Higher Proficiency Persian examination, was anxious to do political work. He was posted to Hanza-Naga, in the Gilgit district, but on the outbreak of war he rejoined his regiment and did duty at the depot until September, 1916. Then he went with them as adjutant, and was at the fall of Kut, after which he shared in the pursuit of the Turks to Baghdad. Subsequently he was appointed assistant political officer of a large district adjoining Baghdad.

Major R. D. de la Cour Corbett, Indian Infantry, died while a prisoner of war at Changri, Turkey, on December 25, 1917. He was born in 1881, and was gazetted to the Royal Irish Rifles in 1901, transferring to the Indian Army in 1904. In 1908 he was sent on famine duty in the Utroula district, and was appointed tutor to the young Raja of Awa in 1912. When war broke out he rejoined his regiment, and went to Mesopotamia in November, 1914. He was one of the brave band who, under General Townshend, were besieged in Kut, and was taken prisoner at the fall of that place and sent to Kastamouni, in Asia Minor, and subsequently to Changri.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

TURKEY AND THE STRUGGLE IN FRANCE.

This week and, doubtless, for several weeks to come the whole world will have its attention riveted on the Western Front, for the intensity of the stupendous struggle in France has the effect of making the other theatres appear for the moment very remote. Among the belligerents probably the Turks alone find themselves able to watch the battle with any measure of detachment; for by this time they must have realised how little their interests coincide with those of either group. One of the first reflections to which the news of Germany's efforts will have given rise in Constantinople is that, while there were so many men available as cannon-fodder for the German and Bavarian Crown Princes, the few that might have helped to preserve the integrity of the Turkish Empire could not be spared. No assurances, however confidently they may be given, it would be thought, can make the Turks forget that they alone of the four Allied Powers can point to territory in the enemy's possession, and as the months and years pass the prospects of its recovery are found to recede. If they are of a contemplative turn of mind, they will begin to consider the alternative to a victory all along the line for the Central Alliance. If concessions have to be made, in what direction may they be expected to be offered? In other words, where will Germany and Austria-Hungary find it easiest to make some sacrifice. Before the Russian collapse the four Powers appeared to stand or fall together. Turkey was essential to Germany's aspirations for world-dominion, for to be shut off from the Persian Gulf or from the Red Sea by the loss of Turkish territory meant the defeat of her plans. Events in Russia have disclosed an alternative route to German world-power; it may not have all the advantages of the other, but a strong point in its favour is that it is far less exposed to outside interference, while at the same time it relieves Germany of her dependence on Turkey's good will for the realisation of her hopes.

A variety of circumstances justify the belief that the working arrangement between the Germans and the Turks has not stood the strain of the prolonged war. The comparative ease with which at first Germany established her power in Constantinople promised the very best results from German absorption of Turkey. But the Turks have become restive, and the Berlin Government has had time to realise that a strong or aggrandised Ottoman Empire will not prove such a pliant tool as a weak one whose main idea was to play off the Powers one against another. The Central Asian scheme with its corridor through the Caucasus not only offers what promises to be a simpler route, but it also enables Germany to revert to her former policy of bringing Turkey into line with her wishes by being a consenting party with the other Powers to the partition of the Ottoman Empire. In this way Germany would have a second string to her bow; for if the disintegration of Russia should prove short-lived, there will no longer be a Turkey rendered aggressive by dislike of German overlordship or by theories of *Weltpolitik* inculcated in her by association with the Central Powers for the purposes of the Great War. It would be amazing if the Turkish Government, after all that has happened, still retained any illusions in regard to German disinterestedness. An eloquent example of German methods has been furnished by the clause in the Roumanian treaty, which provides that the Dobruja should be ceded to the Central Powers —not to Bulgaria. It may be that the *caveat* is for Turkey's benefit, and that the territory in question is to be handed over to the Bulgarians when they have consented to a rectification of the Thracian frontier in favour of the Turks. But the lesson is unmistakable—that Germany expects her allies to accommodate themselves to her views, and will take good care that they do so. If, then, the Germans fail to deliver a knock-out blow in France this time, the Turks know that they can hope for nothing better than a peace by negotiation. In such an eventuality they have the certainty that the Central Powers will do all that they can to see that the real sacrifices to the Entente demands shall be supplied by the Turks, part of whose territory has already been taken hostage. Even the complete victory that the Germans claim to be counting upon might well be received with mixed feelings in Turkey, for against the retrocession of Palestine and Mesopotamia would have to be set the permanent establishment of German control over the Ottoman Empire as surety for German loans.

That reflections of this nature are not unknown in Constantinople is proved by the remarks of the Grand Vizier, recently quoted in the *Frankfurter Zeitung*, to a German correspondent on the subject of Palestine. With the defeat of the Allied Powers, and with German friendship as tactful as before in these internal affairs, Turkey would have no cause to consider Zionism or Jewish susceptibilities; but Talaat Pasha was at pains to hold out an olive branch to Jewry. As there had never been any anti-Semitism in the empire, he pointed out, Turkey did not require to demonstrate her good will towards the Jews. In the past the existence of the Capitulations had compelled the Turkish Government to look askance at Jewish immigration on any large scale, as the majority would be Russian subjects. They would retain their nationality, and their presence would imply an increase in the power and authority of the Russian Consul. With the abolition of the Capitulations, all that had been changed. Immigrants who came for permanent settlement would become Turkish subjects. The Jewish community would have its own schools, with Hebrew as the language of instruction, and would be free to practise its own religion. Even in regard to local and municipal autonomy, while the Jews could not expect privileges not accorded to other subjects of the empire, means could be found within the Constitution to satisfy their demands. The Grand Vizier recognized that Zionism, in view of the cooling off in the relations between Germany and Turkey, is too formidable a factor to master, even in the event of complete victory for the Central Alliance. He may even appreciate the fact that, with Mesopotamia restored to Turkish rule, a Jewish Palestine, not under Turkey, would through the medium of its Arab population exert throughout the Arab world just the influence required to give a practical direction to the aspirations of autonomy aroused by the war; while with Mesopotamia as a British Protectorate, it would only be a matter of time before Arab progress brought about the eclipse of Turkey's position in the Moslem world. For many reasons indeed the clash of arms in France must evoke much heart-searching in Turkey, and, however much that critical field may absorb our attention, the Allies should yet find time to give a thought to the position of the Ottoman Empire.

BETWEEN THE DEVIL AND THE BLACK SEA.

BY A ROUMANIAN.

There would be matter for wise speculation in a comparison between the hopes and aims which inspired the various countries at the beginning of the war, and the situation in which they now find themselves. Much has since changed, but little has changed as the respective Governments wished it to. If the statesmen who now lead the various countries at war would indulge in such commendable meditation, they would experience something of a shock in finding how little a share they had in bringing about that for which they now are blamed or praised. They would discover that their activities have consisted mainly in a continuous adaptation to circumstances and situations which were sprung upon them; and that upon their ability to do so promptly and without friction depended their main chance of convincing the political factors that they were responsible for the good things and innocent of the bad things which happened to their countries.

But this is not to be an essay on political determinism, and I must apologise to my readers for being led to philosophise in attempting to see through the Roumanian situation—for this is the chosen subject of this article. It is by no means an easy matter to work out in clear outline the thread of Roumanian policy; and a publicist tackling the theme sociologically, that is by attempting to found it on a survey of the character and tendencies, of the likes and dislikes of the Roumanian people, and of the influence which historical and geographical factors had upon their political development, would soon resign his task in despair. Not even Mayfair could boast of a greater discrepancy between the inner self of the social body and the character of its relations with like bodies near and far. Roumania's foreign policy has not been a policy, it has been a series of accidents brought about by the dabblings of European diplomacy. Leaving aside the general factors of democracy and nationalism, which influenced the whole European world, what most prompted the Roumanians to shake off a century-long Turkish domination were the consciousness of their creed and their Latin origin. The first had been stimulated largely by the rise of a powerful Greek Orthodox empire in the East, whose rulers set themselves the task of re-instating the Cross on the dome of Santa Sophia. But in their efforts to do so they not unnaturally, and, but for the manner, indeed, inevitably, strove to build for themselves a secure highway towards Constantinople by fastening their influence, if not their domination, on the Roumanian regions on the Danube, and this of necessity engendered suspicion and antagonism among a people speeding towards national independence. The second and far more powerful impetus in that process was provided by the close and enthusiastic intellectual contact with French civilisation. The awakening of the consciousness of Latin origin supplied the Roumanians with a justification for independent existence in the midst of a mosaic of Slav and Mongol peoples, and at the same time with a vitalising ideal, that of perpetuating Latinism upon the soil of ancient Dacia.

The fulfilment of that ideal had hardly dawned when, as a result of circumstances which admit of no logical explanation, Roumania found herself under the guidance of a German prince. The prince, who was King Carol, is open to no other imputation than that he was a German, and as such desirous of linking up the fate of Roumania with the foreign policy of Germany. But he found that a difficult pursuit, until the demurring flirt, who was Roumania, received a jerk from behind which sent her head over heels into the arms of the Central Powers. I refer to the ungenerous treatment which Roumania received at the hands of Russia after the Russo-Turkish war in 1878, when she lost Bessarabia; that experience, coupled with the short-sighted neglect in which she was held by the Western democracies, forced her to move subserviently for nearly forty years in the orbit of the Central Powers. That uncongenial association, though strengthened by a secret treaty of alliance with Austria-Hungary, never resulted in a friendly understanding between the parties concerned. The Roumanians in the kingdom could not possibly have abandoned all hope of union with the three and a-half millions of Roumanians in Hungary, and the increasing persecution to which this population was subjected only served to render the position more impossible.

At the time of the conclusion of the treaty of alliance with Austria-Hungary, King Carol admitted the justice of Roumania's national aspiration, while at the same time suggesting that a truce was desirable for the purpose of allowing both parties to develop in peace. But his very words implied that the truce would be brought to an end by a crisis which would bring to the fore the national problems of Eastern Europe. When the present war broke out, however, King Carol thought it possible to follow up to the utmost his *Realpolitik*, in opposition to the most intimate sentiments of his people. The great influence which he wielded only succeeded in keeping Roumania neutral, and though the King died soon afterward, circumstances abroad and at home made it more difficult to revert to a decision which would have carried the whole people with it at the beginning of the war, and which in the end did bring Roumania on the only possible side of the fence. The tergiversatory policy of M. Bratianu, coupled with the unmistakable treachery of the Tsarist régime, caused Roumania to face her enemies deficient in preparation, with disastrous results for herself. Followed a brilliant victory, and then, as the result of circumstances over which she had no control, the final collapse.

The Roumanians cannot easily forget the treatment they received at the hands of the Bolsheviks; nor that they are the original cause of Rouniania's present plight. But while the Bolsheviks are dangerous fanatics, the Germans and their confederates are cold-blooded robbers, and between the two it is not difficult to choose. The terms which the Central Powers are now imposing upon Roumania are not only unjust and brutal, they also seem astonishingly impolitic, since they bar for ever the road to an understanding between the Central Powers and Roumania. The former do not seem to be much concerned with the possible consequences, however. They are primarily anxious to satisfy their immediate material needs; hence the incongruity of the conditions which they enforce upon Russia and Roumania, as well as of the concessions which they granted to the Ukraine. The only provision they make for the future is to sow wherever they tread the seed of conflict between the various surrounding States, so as to divert their attention and energy from the accounts they have to settle with the Central Powers.

Such is the case with Poland and the Ukraine; with Great Russia, Finland, the Ukraine, and Turkey; such is now the case with Roumania and Bulgaria; and the Central Powers generously press Roumania to occupy Bessarabia, and thus create one more possibility of conflict between Roumania and a reorganised Russia.

But, as the Roumanian saying goes, "The reckoning at home seldom proves true at the market," and after all the Central Powers, perhaps, do well to grasp now whatever they can get, for opportunities will soon become scanty. While Hoffmann is frowning his brows à la Bismarck, the circle of death is tightening round the Central Powers. The creation of an independent Poland and of an independent Ukraine complete the

WHITE HORSE WHISKY.

DIGESTIVE AND NON-GOUTY.
By Appointment to

KING GEORGE.

KING OF SPAIN

Digitized by Google

circle of attractive centres towards which the subjected peoples of the Dual Monarchy must gravitate. The Ukraine and Poland may accept now a compromise, Roumania may be humiliated, but the Dual Monarchy will finally pay the price. As far as Roumania is concerned, the attitude of the Central Powers is not quite illogical, since the results of the Russian Revolution have served to make Austria-Hungary the only enemy of Roumania. Three were the powerful arguments which were contending against Roumanian intervention on the side of the Allies: anxiety as to her economic situation, if Russia acquired Constantinople and the Straits, danger of Russian Imperialistic ambitions, and anxiety as to the fate of the Roumanians in Bessarabia. The Russian revolution has solved all these problems. Though a new quarrel has been sprung upon Roumania by Bulgaria, yet that is mainly the doing of the Central Powers, and the wrong will be probably redressed before long. There will then be one duty and one hope left for Roumania: to free the three and a-half million Roumanians in Hungary. Roumanian foreign policy is fatally one of antagonism to the Central Powers; no treaty, no class-politics could divert it, and if Roumania can rely upon the sympathy of the Western democracies, the peoples of the West need be in no doubt as to her faithfulness and gratitude.

ARCHÆOLOGICAL NOTES.

Racial Types.

In "Ancient Egypt" last year Professor Flinders Petrie reproduced from sketches and photographs taken a long time ago by the Russian Egyptologist, Professor Golenicheff, ten sculptured reliefs of Asiatic prisoners depicted by Egyptian artists upon the temple of Abu-Simbel. These are executed with the greatest care with the object of representing the racial type of the people, or tribe, of which each individual was a member.

M. Golenicheff renounces the idea of identifying their characteristics with those of any special people, but Professor Flinders Petrie, assisted by the great collection of examples of racial types known to the Egyptians, which he has been collecting for many years, not only makes the attempt, but in the majority of cases achieves a certainty of attribution.

The designer of this long relief of kneeling prisoners, united by a neck-rope, began with those from Asia Minor beyond the Taurus, and, including an undoubted Hittite, proceeds down the Mediterranean littoral of Syria and Palestine. One type is pronouncedly Phœnician and wears the seaman's cap of those old mariners.

The figures are of great interest to ancient Hebrew history, several of them being peoples mentioned in the early Old Testament books. The Philistine does not appear in this series, but is well known from other Egyptian reliefs.

A Loan Contract.

Occasionally among the thousands of papyri of the early Christian Era found in Egypt a manuscript imported into the country may be found; one instance of this is a document in the Cairo Museum which contains a contract concerning a loan, drawn up at Constantinople. It was found at Aphrodite, in the Fayoum, and takes the form of acknowledgement for a loan (by two persons named Flavius Victor and Flavius Apollos) amounting to 20 golden solidi. The lender was a banker named Anastasius, and the receipt states that the borrowers, were to pay interest at the rate of 8 per cent. This reward for the accommodation is important, as it confirms the literary history of late Roman legislation; because by a law of Justinian, confirmed by the 136th Novellus, and the ninth Edict, which regulated bankers' rights, 8 per cent. had been declared the maximum. Two of the witnesses are employees or friends of the banker, while a third is an Egyptian who was at Byzantium at the time.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

The Tomb of an Egyptian Queen.

In the *Journal of Egyptian Archæology* Mr. Howard Carter describes a tomb excavated from an entrance cut into the cliff at about half the distance from its base to the summit, in a valley at the back of the mountain face in rear of the temple of Der-el-Bahari. The tomb was purposely placed in such a strange position to prevent its presence being detected, but the precaution has proved unprotective. Mr. Howard Carter shows that the sepulchre was certainly made for the famous Egyptian queen Hatshepshut, for in one of its innermost chambers is a magnificent sarcophagus bearing hieroglyphic inscriptions concerning her, and her relation to various deities.

A more magnificent, because completed and fully decorated, tomb for this lady is well known to tourists in the so-called Valley of the Tombs of the Kings, and therefore some explanation is desirable as to the reason why a duplicate place of internment should have been provided for her. Mr. Howard Carter suggests, and doubtless correctly so, that this newly-found tomb was made, and the sarcophagus carved, engraved and placed therein while Hatshepshut was merely a queen by right of being wife of the Pharaoh, for the site is selected in the valley close to where the tombs of princes and princesses were usually placed. When she became a queen regnant she was entitled to a burial-place in the more honourable valley of Bibar-el-Maluk, or "Valley of the Kings."

The sarcophagus was found standing partly over the entrance to the descending passage leading to the crypt, to be its final resting-place, a crypt that has never been completed. Its lid, which also bears inscriptions, was found placed beside it, having probably been removed by plunderers many centuries ago, for thieves had burrowed their way into the sepulchre. By the time the tomb had been completely excavated as to its chambers and passages, excepting the last and lowest crypt, Hatshepshut had become queen, and so no part of the interior is decorated in any way. The texts upon the sarcophagus not being sufficiently eulogistic for the extreme and exceptional position to which she had attained, a new one had to be provided for her fresh burial chamber, and so the one Mr. Carter found was left in the tomb which was not occupied.

J. OFFORD.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Roumania (British Legation). March 20.

Mr. NOEL BUXTON asked the Secretary of State for Foreign Affairs the present location of his Majesty's Legation to Roumania lately located at Jassy.

The SECRETARY OF STATE FOR FOREIGN AFFAIRS (Mr. Balfour): As far as is known, his Majesty's Legation is still located at Jassy.

Army Pensions (Royal Warrant).

COLONEL YATE asked whether officers, warrant officers, non-commissioned officers, and men who are compulsorily retained in India after their pensions have become due are permitted to draw their pensions; and, if not, will he say why such permission is refused?

Mr. FISHER: The provisions of the Royal Warrant of December 3, 1917, apply to warrant and non-commissioned officers of the British Army serving in India, and arrangements for putting them into effect will be announced in India shortly, including an extension of the period for electing to take pension on completion of twenty-two years' service. The question of the extension of the provisions of the Royal warrant to warrant and non-commissioned officers and men of the Indian Unattached List is before the Government of India. In India, as elsewhere, commissioned officers retained in the Service cannot draw pension.

Royal Indian Marine Transports.

COMMANDER BELLAIRS asked, in view of the numerous old cruisers we possess, and the Far East being out of the war zone, whether there is any reason for the Royal Indian Marine transports "Dufferin," "Hardinge," "Northbrook," and "Dalhousie" being used as inefficient war vessels instead of carrying troops; whether he is aware that fine large British India boats are doing this transport work in the Indian Ocean, when, by reason of their speed, they are most suitable for the war zone; and whether he will take steps to release the Royal Indian Marine transport vessels for transport duties?

The PARLIAMENTARY SECRETARY TO THE ADMIRALTY (Dr. Macnamara): The possibility of releasing the Royal Indian Marine ships referred to by my hon. and gallant friend from their present service was fully considered in 1917, but it was decided by the Board that this could not be done. I may mention that the "Hardinge" does in fact carry out a good deal of trooping work in addition to her other duties.

COMMANDER BELLAIRS: Will the new Board reconsider the matter?

CAPTAIN G. A. LLOYD: Can the right hon. gentleman state to

Digitized by Google

the House the very fine war services which the "Hardinge" and the other steamers referred to have done in the Red Sea?

DR. MACNAMARA: I will put the point.

Deceased Officers' Estates (Charges).

MR. CURRIE asked the Secretary of State for India whether he has sanctioned the widow of an officer who has given his life for his country being charged anything between £50 and £100, in name of official expenses, by the Administrator-General for Madras, etc., for the mere completion of her title as executrix, apart altogether from Government duties here and in India, to a small parcel of shares in a Madras rupee company, valued for probate at £400 odd; when, if ever, the scale of official fees and costs exigible in this office were last revised; whether the India Office has any control over the charges made by the leading firms of Service bankers in London for transacting this class of business for officers or their widows, or for civilians; whether delay of a year and upwards is not uncommon in the Madras Administrator-General's office; and whether he has power to restrict the official fees in the case of small estates?

The PRESIDENT OF THE BOARD OF EDUCATION (Mr. Herbert Fisher): If the hon. member will kindly let me have the name of the deceased officer to whom he refers, the Secretary of State will cause inquiry to be made. The Administraor-General's commission in the case of an estate of the value of £400 would in the ordinary course be 5 per cent., or £20, and might be reduced to £10, while if the estate were that of an officer transferred to the Administrator-General under the provisions of the Regimental Debts Act, the maximum commission would be 3 per cent. In addition, there would be some legal charges; but, if the officer were killed in action, there would be no Government duty on the first Rs.5,000.

The present rules were approved by the Governor of Madras in Council in 1914, and amended in 1917. The India Office has no control over the charges made by bankers for transacting this kind of business. The period required to settle an estate would depend on the nature of the assets and liabilities. The Secretary of State is not aware that needless delay occurs. The amendment of the Rules in 1917 provided for the reduction of the Administrator-General's commission in simple cases by any part not exceeding one-half.

Ex-King Constantine.

March 21.

LORD R. CECIL, Minister of Blockade, replying to Mr. LYNCH said that he had no information as to a reduction of the pension to ex-King Constantine. As far as he knew, the statement made to his Majesty's Government by the Greek Government that ex-King Constantine had in fact received nothing still held good.

Mr. LYNCH.—How does that tally with the fact that it has been resolved in the Greek Parliament to reduce the pension?—LORD R. CECIL.—I am not aware that it has been so resolved. Mr. PEMBERTON BILLING.—Can the noble lord say whether the British Government, officially or unofficially, are conducting any communications with ex-King Constantine?—LORD R. CECIL.—No, sir, none whatever. In reply to a further question as to whether the reply covered all payments arising out of the Civil List of Greece as well as the pension, LORD R. CECIL said the question was probably prompted by a statement which had been published in the newspapers. From that statement, read carefully, it was not clear that it referred to the ex-King; it might equally refer to the present King of Greece. He might be wrong, but his impression was that what had happened was a reduction in the Civil List of the present King.

British Prisoners in Turkey.

Mr. STEWART asked whether any recent information had been received about the conditions prevailing amongst our prisoners of war in the hands of the Turks; whether any arrangements for the exchange of prisoners were arrived at between our representatives and the representatives of Turkey when they met recently in Switzerland; and whether there is any prospect of these arrangements being carried out and exchanges effected.

Mr. HOPE, replying to Mr. STEWART, said: A good deal of information has been lately received respecting internment camps in Turkey from a number of British prisoners of war recently repatriated from that country as invalids, and I am glad to say that this information is not more unfavourable than might have been expected. I may say in general there seems to be a slight tendency towards the better treatment of prisoners in Turkey, but their difficulties are constantly increasing on account of the increasing scarcity and dearness of provisions and on account of the depreciation of Turkish paper currency. The Agreement signed by British and Turkish Delegates at Berne in December provided for the mutual repatriation on a wide scale of incapacitated or invalid prisoners. This Agreement has been ratified by his Majesty's Government, and it is to be expected that it will also be ratified by the Turkish Government, to whom its terms will, no doubt, be satisfactory.

"THE NEAR EAST" DIRECTORY.

Owing to pressure upon our restricted space, it is found impossible for the present to publish the directory of former British residents in the Near East. Inquiries for the present addresses of many of those residents, however, continue to reach us, and in the case of those who sent their names for insertion in the directory we are generally able to supply the information. The Editor would be glad if those who have changed their addresses during the last twelve months or so would kindly notify him, in order that the directory may be kept up to date.

THE PRESS ON THE NEAR EAST

Law Reform in Egypt.

A correspondent in *The Law Times* raises the question of the reforms in the judicial system of Egypt which will have to be introduced as a result of the change in the status of the country. The subject, he points out, is of interest to lawyers in England, as there is now a small number of English barristers and solicitors practising in Egypt, and there will be in the future an opening for many more. He fears that the Commission appointed by the Egyptian Government to study the question of reform may have their views coloured by the Continental system which they have had to work. On the other hand, the Advisory Committee in this country is a legal one, and so should be particularly open to representation from the Bar Council, the Law Society, and other professional bodies. The writer continues:—

The new law for the whole of Egypt will probably be founded on the present mixed codes, and, as there must obviously be an appeal to the Privy Council (which there is not under the present system), the law and practice will no doubt gradually be brought into harmony with English ideas of justice, as has happened in the case of other colonies governed by foreign law; but wise legislation at the present time would undoubtedly do very much to hasten the process and avoid friction.

There are certain reforms in the civil law which are of particular interest to English lawyers and their clients. For example: (1) There is the question of land transfer. At present there is a Registry of Deeds (not a register of titles) in the Mixed Tribunals, but there is an *ad valorem* stamp duty of 2 per cent. on sales, which is so heavy as to discourage registration. In the boom of 1906 it happened in many cases that the same piece of land was sold over and over again on the instalment plan, but no documents were registered, and, when the financial crisis came in 1907, there was an inextricable tangle to unravel. (2) There is no law of mortgage. There is probably no finer security in the world than agricultural land in Engypt, and, even under present conditions, a large amount of English capital is invested on mortgage in Egypt, but under the present system a mortgagee cannot enforce his security except through the courts, in which the delays and expenses are intolerable. In a country like Egypt, where many of the landowners are illiterate, it may very well be advisable to provide for some application to the court on somewhat similar lines to that at present necessary in this country under the Courts (Emergency Powers) Acts, but under the present system in Egypt an unscrupulous mortgagor, who is just as likely to be a European as a native, may delay the enforcing of the security for years. (3) There is the question of limited companies, the law as to which is very incomplete and antiquated as a whole. For example, an Egyptian limited company can only be formed by a decree of the Sultan, which has to be applied for separately in each case and in itself is inconvenient, and there is a provision that a quarter of the capital must be subscribed in cash, which makes things very difficult. Of course, this law has been evaded, but the evasions are not always successful or satisfactory. At one time promoters in Egypt adopted the plan of registering companies in England, but found that such companies were liable to be declared "null and void" by the Mixed Tribunals as being a fraud on Egyptian mixed law.

The English lawyers practising in Egypt, who are acquainted with both systems, have recently, in response to a request from the Judicial Adviser, addressed a collective letter—which is very moderate in its tone—to the Commission in Egypt, in which they suggest, apart from reform in civil law: (1) That English should be the language of the new code (with translations in French and Arabic), and that, after a proper interval, English should be the language used in the courts, except when Arabic is necessary. (2) That there are many features of English procedure which should be introduced, *e.g.*, (*a*) discovery of documents. At present each side communicates to the other only such documents as will support its own case, which is clearly not the best way of getting at the truth. (*b*) Methods of obtaining speedy judgment where there is no real defence. Under the present system the delays are intolerable. (*c*) Remedies by way of injunction, *mandamus*, and prohibition. Under the present system there is no remedy against the person of a recalcitrant litigant. (*d*) The introduction of oral evidence and cross-examination. For all practical purposes this is at present non-existent, which in many cases leads to a denial or failure of justice. (3) The introduction of English criminal law and procedure is strongly insisted on. English criminal law has been successfully introduced into other British possessions, *e.g.*, Canada, St. Lucia, and Cyprus. It is believed that there is no case of a foreign criminal law having permanently maintained itself in a British possession. There can be no doubt that it would be a great hardship on British subjects in Egypt, especially the poorer ones like Maltese and British Indians, to be made subject to a code of criminal law based on the Continental system.

Georgians and Armenians.

The disintegration of Russia lends importance to the fortunes of the separate units formerly merged in the Russian Empire. In view of Germany's effort to penetrate into Central Asia, special interest attaches to the Georgians and others who occupy the territory immediately to the south of

Digitized by Google

the Caucasus. Taking as his text a lecture recently given by Mr. David Ghambashidze, a Georgian, at King's College, a writer in the *Nation* contributes an article on the numerous races and sects to be found in this part of the world. The numbers of Caucasian races, he holds, have been absurdly exaggerated, and he continues:—

Apart from the remains of the Circassian gardeners (Mohammedans) along the north-western slopes of the main range, looking out to the Steppes, and apart from the wilder Lesghians of Daghestan (also Mohammedan) upon the high north-eastern plateau above the Caspian, there are only four races which count: the Georgians, the Russians, the Armenians, and the Tartars. The Georgians and Russians are probably about equal in numbers—about three million each. The Tartars have increased rapidly, and may now be counted as nearly two and a-half million. What the Armenians are since the massacres of the war no one can tell; before that there were about one and a-half million in the Russian Caucasus.

Tiflis and the Koura valley; Signakh and the Alazan valley (a region overflowing with wine and all fertility); all the rich valleys and plains of the Rion westward to the Black Sea are Georgian by race and immemorial occupation, though Russian settlers abound. East of Tiflis the country becomes more and more like a desert till Baku and the Caspian are reached, and throughout that district the Tartars predominate. In Tiflis there is a rich Armenian quarter, but most of the Armenians are scattered in patches over the southern province, around Kars and Erivan. Thousands have swarmed over from Asiatic Turkey, driven by the Kurds to seek refuge under the Russian flag, no matter how cruelly Gollitzin and similar agents of the Tsar might oppress them. Unhappy is the nation which has no frontier! Armenians have not even a city which they can call their own. The centre of their race is but a church—the church and monastery of Etchmiadzin. There St. Gregory the Illuminator beheld the vision from which the name is derived ("The Only-Begotten has Descended"); there he established the Armenian Church, one of the earliest forms of Christianity, and there the Armenian Katholikos lives. But what will happen to Armenians now that Russia cannot give them even a stepmother's protection? A large part of the country over which they are scattered, perhaps even including Erivan and Etchmiadzin itself, is to be handed back to the Turks, and the villagers delivered up to their ancient enemies like cattle for the slaughter.

For many years, Armenians disputed with Tartars for supremacy in the great oilfield of Baku. Both races organized bands of assassins, to the upkeep of which even British managers were compelled to contribute under fear of death. From time to time violent civil or racial war raged in the shoddy streets, and when the present writer was entertained by a Tartar who had risen from a porter to be the richest illiterate in the world, a company of soldiers was always kept in the back premises to guard the palace. But now the Tartars appear to have triumphed. They are almost incredibly rich. Twelve years ago they had no newspaper; now they have twenty-eight. At that time, they possessed one "man of culture," famous for his translation of Milton's "Hail! holy light" into the Tartar dialect of Turkish; now they publish libraries. Mr. Ghambashidze tells us we must look to the Tartars of Baku as the true directors of Turkish policy, the real inspirers of Pan-Islam and the Pan-Turanian movement. If that is so, the prospect for all that we mean by civilization in the highly civilized provinces of the Caucasus is black.

Articles to Note.

"Notes on Surgery at Salonika." By Colonel Sir T. Crisp English, K.C.M.G., and Colonel R. E. Kelly, R.A.M.C., in the *British Medical Journal*.

"Salonika's Citadel," in the *Manchester Guardian*.

"Palestine and Jewish Nationalism," in the *Round Table*.

"THE BAGHDAD TIMES."

We have received the first numbers of *The Baghdad Times*, which began publication as a daily newspaper on January 1. It is a four-page newspaper, priced at one anna, and it gives the official reports from the various fronts, pictures, and a leading article. From one of these we extract the following alluring paragraph:—

"Most of those who read these lines are thousands of miles from home. How many, we wonder, reflect upon the manifold advantages that they enjoy which they would never have had if they had not come to Mesopotamia! Where else in this war can the hard-working soldier, after the strenuous labours of his day's routine, be lulled to sleep by the melodious cry of the jackal?"

The article is entitled, appropriately, "A Better 'Ole," and the writer seems to have found it.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The fact that Turkey is Germany's ally seems to have been forgotten by enterprising German business houses, judging by the reports of the methods of commercial penetration adopted by them in that country. Apparently they have been profiting at the expense of their ally by a system which can only be described as "compulsory purchase." The method by which it is worked is that the Turkish banks inform a merchant house that they hold a bill for German goods, and the unfortunate Turk is practically obliged to accept the bill by the knowledge that otherwise insuperable difficulties will be placed in the way of his doing business by the banks in the shape of refusals to grant credit, etc. In the circumstances it is hardly surprising that Germans are devoutly hated in Turkish business circles to-day, and I think it extremely probable that if they have the opportunity after the war many Turks will never do business with Germany again.

***

The registration of the National Metal and Chemical Bank, the formation of which was the subject of reference in these columns recently, was effected last week. The capital of the bank is £1,000,000, divided into £10 shares, all of which have been privately subscribed and the articles of association are in accordance with the model drawn up by the Board of Trade for companies engaged in vital industries. Directorships of the bank are confined to British subjects, and there are safeguards against the control of the bank passing into foreign hands. While the bank will undertake ordinary banking enterprises, its principal object will be to help in the development of the smelting and chemical industries of the Empire. This task is essentially one calling for specialised knowledge, which is not at the disposal of the ordinary bank.

***

The efforts of tanners in this country to take the exports of Indian "kips" in the future are likely, it seems, to meet with support from Canadian tanners, who are stated to have taken the greatest interest in a collection of Indian hides which was sent to the Dominion by the Hides and Tanning Materials Committee of the Imperial Institute. Already several inquiries have been received from Canadian firms as regards supplies of the hides, and it is considered probable that when Government restrictions on the disposal of Indian hides are relaxed, a considerable trade will be done direct with India.

***

The importance of increasing the supplies of cotton grown within the Empire in order to safeguard the needs of Lancashire was discussed by Mr. Edward C. de Segundo in the course of an address this week before the London Section of the Society of Chemical Industry. He called attention to the rapidly increasing proportion of American cotton spun in American mills, which, he pointed out, was a grave menace to the spinning industry of Lancashire. No less than fifty-four per cent. of the cotton grown in the United States was now spun there, he said, while a similar movement was taking place in India, which country was also exporting large quantities of cotton to Japan. The remedy was, in his view, for the Government to speed up the cultivation of cotton in the Sudan.

***

The Egyptian Budget, which has just been introduced, provides for a revenue of £E22,900,000 and an expenditure of £E23,250,000, leaving a deficit of £E350,000 to be met from the reserve fund. This estimate thus surpasses that of the record Budget of 1917-18 by £E3,375,000 as regards revenue, and £E3,725,000 as regards expenditure. The main items from which increased revenue is expected are customs, tobacco, and excise duties, £E1,060,000, of which an allowance of £E634,000 is made for the new sugar excise; railway, telegraph, and telephone receipts, £E2,156,000, of which the newly-acquired telephone service is responsible for £E200,000; judicial fees £E191,000, interest on investments £E148,000, and the Domains, £E122,000, due to the high prices obtained by the State crops. On the expenditure side the increased estimate is principally due to the higher level of prices, the extra cost of fuel for railways alone being budgeted for at £E950,000, while the increased salaries of small officials, amounting to £E564,000, and provision for the £E500,000 voted towards the cost of the war, help to bring the total to its high figure.

***

The most obvious aspect of the estimate is the excess of expenditure over revenue, which in the light of last year's returns must be regarded as an excess of caution on the part of the authorities. In his letter last week our Cairo correspondent gave the figures for Egypt's finances for the nine months ended December 31, showing that revenue amounted to £E17,088,271 and expenditure to £E13,732,346, giving a surplus of £E3,355,925—rather a million more than at the end of December, 1916—and he expressed the view that the amount to be carried to the reserve would be in the neighbourhood of four millions. So far as can be seen, the factors which have brought about this increase in revenue—the excellent returns given by cotton and cereals, and the prosperity brought to the country by the presence of the British troops—will have just as great an effect in the coming year, and as there is no reason to suppose that this incidence will be unduly neutralised by high prices—the principal factor in expenditure—it will be a matter for considerable surprise if the Egyptian Government has not a satisfactory surplus at its disposal on April 1, 1919.

There are one or two interesting points in the report of the Indian Public Works Department Reorganisation Committee, appointed in 1916, which has now been published. It is recommended by the committee that public works (excluding irrigation with which they were not dealing) should be transferred from the Department to local bodies, and they point out that while the Government must secure the maintenance of the main arteries of communication, this does not require a separate engineering staff. In this connection they say that "the maintenance of all roads under proper safeguards should in principle be the function of local bodies, and the policy of government should be directed towards the eventual introduction of the system in its entirety." The construction of buildings for Government purposes should in their view be also entrusted to local authorities.

***

Another important recommendation concerns the encouragement of contracting firms. Hitherto, the number of these firms in India available for the construction of public works has been strictly limited, and the committee are of the opinion that everything possible should be done by the Government to encourage the establishment of such firms. Various measures are suggested for this purpose, notably that tenders should be invited for complete works, and that the system of lump-sum contracts should be introduced. It is recognised that the growth of these firms must be a very gradual process, but it is the committee's view that their proposals would result in the development of the desired class of contractors to whom Government work could be entrusted.

***

The contradictory character of the reports which have reached this country of late with regard to the Roumanian oilfields has been very marked, so much so, indeed, that it was obvious that either the German and Austrian Press were writing in ignorance of their subject, or else they were following instructions in order to deceive the Allies as to the true position of affairs. A very interesting light is thrown on these vacillating reports in a despatch from the Paris correspondent of the *Financial Times*, which is quoted in full in another column. He says that the object of the Central Powers in giving currency to reports suggesting that the oilfields are in a practically unworkable condition is to induce shareholders in the Allied countries to get rid of their holdings, so that the enemy may obtain the controlling interests in the oil companies. That they should attempt to get control of the oil industry by such means, when they have let it be thought that the produce of the oilfields would be a part of their peace terms with Roumania, indicates very clearly that they know that the end of the war will make such terms worth the paper on which they are written.

COTTON GROWING IN THE BRITISH EMPIRE.

The Part Played by Science,—III.

BY JOHN W. McCONNEL.

Bulletin No. 1. Central Research Farm, Khartoum North. 1915.
West Indian Bulletin, Vol. XV., No. 4, and others. Various Papers on Cotton, 1916-1917.
Papers on Cotton in India by various authors, reprinted from the Agricultural Journal of India. 1913-1917.
Scientific Reports of the Agricultural Research Institute, Pusa. 1914-15—1916-17.
Reports on the Progress of Agriculture in India. 1914-15—1916-17.
The Agricultural Journal of Egypt. Vols. V., VI., and VII. 1916-1917.
The Pink Boll Worm, by F. C. Willcocks, Entomologist to the Sultanieh Agricultural Society. 1916.
Reports of the Departments of Agriculture in Uganda. 1915, 1916, 1917.
Report of the Department of Agriculture in Nyassaland, 1916.
Reports of the Department of Agriculture in Nigeria. 1915-1916.

To anyone who takes the trouble to read the reports cited at the head of this paper it will be obvious that there are innumerable puzzles to be elucidated by future researches into the nature and development of cotton. It is really like that dream of Nebuchadnezzar for which he demanded interpretation without record of the things dreamed. Science has to define what is wanted before it can begin to supply the want. And then the proper supply of the want will depend on the scientist being able to assign the proper value to each of the two interacting but unknown quantities, the value of heredity and the influence of environment.

The reports we have before us show the work that has been done in the last three or four years. It must be recorded that the impression they convey is, on the whole, most encouraging. It would be quite out of place in a paper of this kind to attempt any analysis of these publications, and still more to discriminate minutely between them. There are, however, some general lessons that may be drawn. The Khartoum report and the West Indian bulletins alike indicate that a very high standard of work is aimed at and, indeed, reached. We find in both a carefully-drawn distinction between the entirely theoretical lines of study and the practical harnessing of research and pure science so that they may promote economic efficiency. The value of purity of breed is thoroughly appreciated in both places, and the impossibility of making any progress merely by selecting plants in the field on account of their growth, habit, and fibre. It is, however, noticed in the West Indies, where the islands are small, and where circumstances have led to there being comparatively little opportunity for crossing with other strains that, in consequence, the fields are in any case comparatively true to type.

Another point that is brought into prominence is the importance of the study of individual plants. Work after the example of Balls' observations on growth has been most carefully done and is lucidly explained. Again, great importance is attached to the opinion and still more to the practical mill tests of cotton by spinners. This is a most hopeful sign, for it seems impossible that any real improvement in quality can be achieved until some means is devised for obtaining not merely a general appreciation, but specific criticism, of particular characteristics from those who use the cotton. The interested reader can only regret that this exceptionally good work is found in areas in which so little cotton is grown. These West Indian islands can never, from their natural limitations of area, be large producers, but they are training a school of cotton workers which should in time be one of the great assets of the Empire. The Sudan, though its cotton production is still trifling, has great possibilities, and one can only hope that the Government of the Sudan will make use of the science it has at its command, and will be guided by it in all its future development. The financial resources of the Sudan are no doubt small, but expenditure on the agricultural department of a country that must depend on agriculture cannot wisely be curtailed. The Sudan has an immense territory, and includes all sorts of climates, and it is earnestly to be hoped that very soon after the war a scheme of branch agricultural stations, dependent on and directed by the Central Research Farm, will be elaborated so as to cover systematically the whole area.

Progress in India.

In regard to the Indian papers, the present writer has to confess to having experienced an agreeable surprise. It has been his fortune in previous years to take part in deputations about cotton to successive Secretaries of State for India, and he had formed the impression that no improvement would ever be willingly permitted. But the whole tone of these reports, which come from India itself, is wonderfully and delightfully different. Throughout them there runs a spirit of life and progress. It is no doubt certain that a far larger staff is required to deal with the immense areas which must for many years depend entirely on British agricultural science for their progress. It is stated that India spends on agriculture no more than £1 per annum for every thousand of the population. In comparison, the figures for this country are £46, for the United States £36, for Queensland £92. It seems obvious that under such limitations Indian agriculture must continue to be backward, and cotton will suffer along with everything else. It is also possible that much of the work now being done would be raised to a more effective level if it were more generally recognised that scientific treatment will solve practical problems. It would very likely be wise if more were done in the way of conferences between men working on cotton in different parts of India. But whatever room there may be for improvement, there can be no doubt that there is a new spirit abroad, and if science is worth anything at all, progress, both in regard to quality and quantity, ought before long to be evident.

The African reports are also, in their way, encouraging. Care is being taken and good work is being done. Cotton growing is still really in its infancy, and it is not surprising that the methods followed are far from perfect. All that can be said here is to express the hope that the Government responsible for each area will be liberal in its expenditure on research and scientific direction in agriculture. It seems certain that any reasonable outlay in this direction will quickly pay for itself. In Uganda the value of cotton annually exported is £300,000 or over, while all other agricultural products together are less than £300,000. Thus it would seem reasonable for the Government to consider whether a judicious enlargement of the outlay on agricultural research and control might not add largely to the prosperity of the country. One interesting feature of cotton in Uganda is that the supply of seed is strictly controlled by the Government, and that over large areas an effort is made to keep to one type. When the Government goes one step further and adopts the necessary measures to secure that the supply of planting seed is all developed from a pure source, Uganda will be really on the high road towards success. In Nigeria cotton does not yet supply so large a proportion of the total production of the country, but there appear to be great tracts in Northern Nigeria which are particularly suitable for cotton. Here, again, there is no doubt that the country will benefit by increased expenditure on scientific growing and control. One can, however, hardly expect that in colonies so little developed very much scientific work will be done, except such as is directly remunerative, and it seems that these are places where some arrangement might be made for help being given by the British spinning industry.

Egypt's Dependence on Cotton.

The last papers on our list are those published in Egypt, and it is rather difficult to speak of them. In considering the scientific work on cotton in Egypt the statistical position must be remembered. Cotton is the great product of Egypt. The prosperity of Egypt, and consequently the cheerful acceptance of the British rule by the dwellers in Egypt, rich and poor alike, absolutely depends on cotton. The value of cotton and cottonseed annually exported is about £30,000,000, and forms about nine-tenths of the total exports. On the other hand there are serious indications that there is something wrong with the crop. For several years past there has been a noticeable decrease in the production per acre. To some extent this may be attributed to the pink worm pest, which began its ravages in 1913, and is in no way up to the present under control. Good work appears to have been done in the way of studying the insect, both by the Agricultural Department and by Mr. F. C. Willcocks, entomologist to the Agricultural Society, whose excellent monograph is mentioned in our list of reports. It is worth mentioning that the pink worm was first noticed in Egypt by M. Andres, his assistant. Control, however, has not yet been made effective. There must, moreover, be other evil causes at work in addition to the pink worm.

The average production over the last twenty years has been :—

	Cantars per fedda.n
1898-1902	5·19
1903-1907	4·45
1908-1912	4.16
1913-1917	3·94

The reduction of from 5.19 cantars to 4.16 cantars occurred before the pink worm was introduced into the country. The figure for the five years, 1913-1917, is an average made up from two years in which it did comparatively little harm, and three years in which it ravaged nearly the whole country, and in these three years the average was only 3.62 cantars. The production for the present year is not yet known, but it is not at all likely to exceed the average of the other three years of full infestation. Thus it appears that causes unknown have reduced the production from 5.19 cantars to 4.16 and that the pink worm has made a further reduction to 3.62, or thereabouts. On the present acreage, at pre-war prices, this means a reduction of the total value of the crop from about £37,000,000 to £26,000,000. The whole subject demands the most careful investigation.

There is another very serious matter also demanding investigation. It has always been the case in Egypt that fresh strains of cotton have succeeded each other, and that each in turn has with greater or less rapidity deteriorated in quality, and perhaps also in productivity. The latest strain, known as Sakellaridis, which has now come to be almost exclusively grown in Lower Egypt, and which was at first quite the best cotton ever largely produced in Egypt, is complained of by many users as having deteriorated in quality.

Egypt can afford almost any expenditure if it is necessary to maintain or improve her cotton crop. And a cursory reading of the reports of scientific work on cotton now conducted in Egypt hardly give the impression that it is being kept on the high level attained a few years ago. This is a matter of very great importance to Egypt. It is of almost equal importance to Lancashire, and the hope must be expressed that so soon as the war is over, or even before, the question of applying all the resources of natural science to the growing of cotton will receive the serious attention of both the British and the Egyptian Governments.

Recognition of Science.

On the whole, however, this cursory summary of the literature available shows without doubt that the place of science in cotton-growing in the Empire is really recognised, at least by many of those personally engaged in the development of cotton. Doubtless there is room for more to be done. In every one of our cotton-growing Colonies it is evident that more liberal expenditure

DELICIOUS COFFEE.

Digitized by Google

on agriculture is required, and will bring rapid and large returns. It is quite clear that in many places, for instance in Egypt, Uganda, and some of the West Indian Islands, cotton, even as now grown, is far the most profitable crop that can be grown. It is evident, also, that it is urgently necessary for the Governments of India and of Egypt, and of each colony, to recognise that natural science will open the door to prosperity in agriculture. Agricultural control and direction, demonstration farms, experiment stations, of which some will be limited to the practically useful, while others will reach the almost purely theoretical, are all wanted in greater or less degree in each cotton-growing country; and, as the key to all this, we must hope before long to see some central institution provided which will be capable of collecting and co-ordinating and distributing all the scientific work of all the local workers. One thing that is both encouraging and discouraging is to notice how few are our present workers on cotton-growing. They are units where they ought to be tens at least. It is encouraging, because if these few men can make the progress of which there is evidence one can calculate with confidence on the results that would be produced by an adequate staff. But it is discouraging because there is no strong school of tropical agriculture which can give the necessary additional training to the workers who are needed. It is, moreover, obvious that, even if such a school is brought into being, it will fail to attract many students until there are more posts available in which they can see definite prospects for their future careers.

Still, taking all things into consideration, there are good reasons for hoping and expecting that in a comparatively short period of years the aspiration that the Empire may be able to grow its own cotton will be very largely realised. It is, moreover, probable that the cottons of the future will be in many respects better than those of to-day.

The *Neue Freie Presse* states that an Import and Export Company is being formed in Austria by the Creditanstalt, the Bodenkreditanstalt, and the Anglobank, with a capital of 15,000,000 kronen (£625,000). According to the *Fremdenblatt* this company will absorb the export firms of Alois Schweiger and Company (which had branches in this country and in India), the Austro-Oriental Trading Company (which traded with Egypt and Turkey), and the Austrian Export Company, formerly A. Janowitzer (which traded with India and other countries).

BRITISH TRADE WITH GREECE.

Post-War Prospects.

Some very interesting views as to the prospects of British trade with Greece have been given to a representative of THE NEAR EAST by Mr. G. N. Lionda, managing director of Lionda and Co., Ltd., 34, Fenchurch Street, E.C., who has just returned to England after a prolonged visit to Athens and Salonika in connection with various commercial enterprises. Mr. Lionda, who is a prominent member of the business community both here and in Greece, was for some eighteen years an official of the Bank of Athens, and his position and experience give great importance to what he has to say on the subject.

"Conditions in Greece at present from the commercial point of view," Mr. Lionda stated, "are most favourable for the growth of British trade, as it is fully realised to what an extent Greece's trade was in the hands of Germany and Austria, and there is a general desire to prevent the possibility of a recurrence of this state of things after the war. Greece, a natural ally of the Allies, geographically and ethnologically, should, therefore, be an important factor in British trade, but it must be borne in mind that under existing conditions, such as imposed by manufacturers on this side, British traders will be unable to compete in the Greek market with the Central Powers, whose commercial organisation has hitherto proved to be far superior to that of this country."

Trade Methods of Central Powers.

Mr. Lionda went on to illustrate the methods of Germany and Austria in Greece. "They shipped goods on c.i.f. terms," he pointed out, "and granted very extensive credit. In addition, they appointed their best agents to the various Greek commercial centres, and also sent well-equipped travellers to study any deficiency and to see what British traders were doing to enable them to overcome any difficulty in the way of quality, price, etc. No detail which might in any way assist their trade returns was too insignificant for their attention, and when it is remembered that they had to encounter unorganised opposition for the most part, their success is not in the least a matter for surprise."

"At the present time," he went on, "Greece is overburdened with money. Roughly speaking, £40,000,000 is deposited at the various banks in the whole of Greece, but, substantial as this sum is, much more money will be needed after the war for the first necessities of life, and for various enterprises, and, of course, British capital will be required." Discussing the measures necessary for the development of British trade in the country, Mr. Lionda laid great stress on the imperative need for organisation. "Manufacturers above all others," he said, "must spare no pains to establish their position in Greece now, as the commercial fight is going to be a most bitter one. There is no need for them to send out travellers to Greece at present, for they can achieve the desired end just the same with the collaboration of Hellenic firms established in this country having their own houses in Greece. When the war ends, however, the question of sending out suitable travellers speaking foreign languages with the same facility that German and Austrian travellers did will arise. Besides this there must be the closest co-operation between British and Hellenic financial houses, and it is essential that an Anglo-Hellenic bank should be established with Anglo-Hellenic capital organised in the same way as the Deutsch-Orient Bank and the Deutsch-Palestina Bank, and this bank must have the whole-hearted support of the big financial houses in this country in the same way as the Deutsch-Orient Bank and the Deutsch-Palestina Bank were aided at every turn by the Deutsche Bank, the Dresdner Bank, the Disconto Bank, and other important German financial houses.

Banking Facilities Required.

"British manufacturers," added Mr. Lionda, "must make up their minds now, in order that they may not again be too late, to come into touch with the leading Greek exporters, and they must also commence now to change their methods and ways of doing business. As to new banking facilities, it is essential that any serious steps in this direction by British, Greeks, and Serbians should receive the fullest support of the British Government. I understand in this connection that certain negotiations are going on with financial groups in Greece and in this country. Unless, however, the Government gives unstinted support without being taken as a pessimist, I fear that there will be many difficulties in withstanding the onrush of German and Austrian traders after the war. One more point is, that instead of sending consular representatives to the Near East it would be better for the British Government to select business men with adequate commercial experience, and appoint them as commercial attachés with a free hand to deal with and report on any matters touching the welfare and development of British interests in the Near East."

"There is one matter in particular at the present time which requires attention," Mr. Lionda remarked, "and that is that it is most advisable that the Shipping Controller in this country should allow without delay a British or Greek steamer to resume the traffic with Greece, and at regular intervals, in order to encourage the Greeks who are all, I am proud to say, on the side of the Allies in every respect." In conclusion, Mr. Lionda briefly touched on the present state of Greece, which he said could not be better than it was at present, and paid a glowing tribute to the administration of M. Venizelos, to which he declared, this satisfactory position was entirely to be attributed.

ATHENS BOURSE REFORM.

The Government has laid before the Chamber (says a Reuter message from Athens) a Bill dealing with the reform of the Bourse, on the following lines: 1. The setting up of a Governmental bureau of control, as a set-off to the creation of the Bourse Council, on which there will be representatives of the Bourse and of finance. 2. The creation of two classes of intermediaries, that of stockbrokers, who are equivalent to the "agents de change" in France, and that of brokers, equivalent to "coulissiers." 3. The recognition of dealings for the account, which can no longer be disputed without serious reason. 4. The determination of a Bourse monopoly reserving the right of operating solely to "agents de change," furnishing a certain sum of money as a guarantee, which will go to the common fund to cover members' obligations.

POWER LINE TO MOROCCO.

Regular Service of First-Class Steamers taking cargo to and from **London** and **Rabat, Larache Tangier, Casablanca, Mazagan, Saffi** and **Mogador.** Loading Berth—MOROCCO WHARF, WAPPING

ENGINEERING NOTES

Ukraine's Commercial Importance

In last week's notes reference was made to the importance of Ukraine as a market for agricultural machinery, and as a commercial centre with convenient and economical routes for the distribution of all kinds of merchandise throughout the markets of the Near and Middle East. Recognising its value in these respects, some enterprising firms—American and German being more prominent—have in recent years established offices, sub-offices, agencies, and showrooms there, in order to be in a better position to deal promptly with business and to be able to despatch representatives and mechanics at the shortest notice to any part of Russia, Persia, and the districts bordering on the Black and the Caspian Seas. A glance at the map will give an idea of the importance of Ukraine from the commercial as well as from the political standpoint, and will explain the eagerness with which the Germans sought to conclude peace and make economic "treaties" with that Russian province. From a commercial point of view it is of the utmost importance that adequate measures should be taken at once to thwart the German efforts to render Ukraine an economic annex of Germany. With the rich plains of Southern Russia under German domination, and a reorganised Germano-Russian engineering industry in that region, British engineering enterprise in the East will be much affected and seriously handicapped in the forthcoming trade war.

The Siberian Market.

Siberia is commonly considered as a land of vast and dreary steppes, and is associated with frost, and snow, and political exiles. This idea is altogether erroneous, for the country has vast expanses of virgin soil of wonderful fertility, and though the summer is short, the climate uncertain, and the locusts destructive, there is scope for almost limitless production. But the natural advantages of the land remained undeveloped until the construction of the Trans-Siberian Railway, which brought the country into touch with the Western world. Since then Siberia has made great progress, and in recent years British agriculturists and farmers have found Siberia a serious competitor in their home markets. As an instance dairy produce may be mentioned. The imports of this produce from Siberia in 1900 represented a value of £980 000: in 1901 the figure rose to £1,655.000; and in 1902 to £2.196.000. The imports went on increasing until Russian butter was coming to London at the rate of 1.000 tons a week, with large quantities of eggs and poultry besides. These results may seem more remarkable if it is mentioned here that the first dairy in Siberia for making butter for export was not set up until 1893; and that the first person in Siberia to make butter according to modern methods was an Englishwoman, married to a Russian. In the production of cereals, Siberia has similarly advanced, and most of the agricultural machinery and implements that are used in Western Siberia have passed through Ukraine, or have been supplied by the sales offices or agents of American, British, or other firms established in Odessa, Kharkoff, or Moscow. In recent years American firms have done most of the trade in that line, with British, German, and Canadian firms following in that order.

American Methods.

The methods of distribution of agricultural implements and machinery in Siberia that have been followed by an American company, which did a large share of the trade in that line are very interesting, as they were evidently well suited for the market. The head sales office for Russia of the company was in Moscow, but for Western Siberia and the Ural district three branch offices were maintained, the towns of Ekaterinburg, Omsk, and Novo-Nikolaievsk being selected for the purpose. Each branch office was kept permanently supplied with a sufficient stock of machines, parts, etc., to supply at any time the needs of the district which it covered. The manager and assistant manager of each branch office, as a rule, received a commission on sales, in addition to their salaries as officers of the company. Under the supervision of each branch office were a number of sub-agencies situated in the more important centres of the district. In addition to the above, there were a large number of agents or dealers selling machinery and parts on a commission basis. These agents were scattered all over the territory in such a manner that practically no section was left unrepresented. Each agent was supplied with a full sample collection of machines, and in some cases also with a limited stock. A permanent staff of salesmen was also attached to each branch office. These salesmen visited practically every village for the purpose of taking orders, distributing advertising matter, collecting money, and controlling agents. There remains to be mentioned the technical men who were regularly sent out from Moscow to mount machines and to be available should difficulties arise in any district.

The Credit Question.

In Western Siberia sales of harvesting machinery for ready money were practically unknown before the war. The usual terms were from 20 to 30 per cent. cash, and the balance on credit over a period of up to two years. In some cases it was even three years before the peasant discharged his liability. The machinery would arrive in the spring, and the first settlement would be made at the end of the season. But at the present time sales of agricultural machinery and implements are being conducted on a cash basis. With regard to the period after the war, it is generally agreed that no credit is likely to be granted for the first few years, but a moderate credit system will be gradually introduced later.

A Superheater.

A superheater which has recently been brought out is a device for superheating paraffin in such a manner that it becomes transformed into pure gas, propelling a motor-car in the same way as petrol gas. In this appliance the proportion of exhaust heat (which is not large) is directed in its entirety to the gasifying of the fuel without heating, and, consequently, rarifying the air charge. The superheater in question is designed expressly for the Ford cars, for the reason that the Ford engines are suitable for paraffin consumption. To fit this appliance no alteration is required in the car beyond removing the inlet pipe leading from the carburetter to the cylinders and replacing it by the superheater. With petrol at its present price and so difficult to procure this appliance should appeal to owners of Ford cars here and in the East, where a great number of them are employed for commercial purposes as well as by private owners.

Lionda and Company, Ltd.,
34, Fenchurch Street, LONDON, E.C. 3.

Tel. Address: "EXPLIONDAC FEN, LONDON."

GERMANY AND ROUMANIAN OILFIELDS.

Attempts to Obtain Control.

Numerous reports of a pessimistic nature, telegraphed via Amsterdam and Geneva, are reaching the Paris Bourse representing the condition of the various Roumanian petroleum works as in a dilapidated and ruined condition, says the Paris correspondent of the *Financial Times*. In many cases the wells are stated to be in a semi-hopeless condition. It is alleged that the German engineers have been unable to reopen the shafts of the Colombia Oil Company, and have, therefore, abandoned the works. The same reports are now being spread about the Astra Romana wells and the Roumanian Consolidated Oilfields. It is quite obvious that these reports are telegraphed to Paris in order to induce Entente holders of Roumanian petrol shares to sell at any price. The German and Austrian papers, such as the *Berliner Tageblatt*, the *Frankfürter Zeitung*, the *Neue Freie Presse* of Vienna, and others, are now giving publicity to reports diametrically the opposite to those which they printed a few months ago. Thus on November 2, 1917, the *Frankfürter Zeitung* reported that a very considerable portion of the normal peace production of Roumanian oil was being obtained through the old wells alone. The Astra and the Steaua Companies were continuing their normal extraction of oil under their own managers. The Roumanian Consolidated Oilfields was then stated to be working satisfactorily under a German receiver. The same was the case of the Romana Americana Company. If, therefore, we are now told the contrary it is evident that the German newspapers are simply obeying an order that has been given to them. The *Neue Freie Presse*, which now gives publicity to despondent rumours, stated a few weeks ago that the Roumanian wells were extracting at the rate of 1,800,000 tons of oil per annum.

A current of arbitrage transactions on the various Roumanian oil shares, mostly for Swiss—presumably German—account, has recently set in on the Paris Bourse. It is interesting to note the efforts now being made to concentrate in German hands by every possible means the various Roumanian properties which have remained non-German. Thus, according to the *Berliner Tageblatt*, the Deutsche-Erdoel-Gesellschaft, with a capital of 30,750,000 marks, has acquired from a Dutch syndicate a large parcel of shares in the International Roumanian Oil Company. According to the *Finanziel Veekblad*, the Steaua Romana, in which a notable portion of the capital is French, is now patronised by the Deutsche Bank, and intends to assume control of the "Astra Romana" belonging to the Shell Royal Dutch Syndicate. Finally, the Amsterdam *Telegraaf* states on reliable authority "that the entire question of the oil-bearing lands of Roumania will ultimately be resolved into one of a practical German monopoly." If there is some foundation, as seems probable, for the rumour that Germany is to expropriate all the Roumanian oil companies and hire them out for ninety years to a consortium of German banks, it is to be feared that such a monopoly would constitute the first step in the economic battle which Germany intends to wage after the conclusion of peace. The position cannot be watched too closely in view of the vast interests which Entente capital holds in Roumanian oil properties, more especially as the Germans are already hastening to liquidate the interests of Entente companies in the part of Roumania occupied by their troops.

INDIAN INDIGO CROP.

The *Indian Trade Journal* publishes a final general memorandum of the acreage and yield of the indigo crop in 1917-18, based upon reports received from provinces containing practically the whole area under indigo in British India. The total area, estimated at 600,600 acres, is 10 per cent. below the area in 1916-17 (770,000 acres—finally revised figure). The total yield of dye is estimated at 87,000 cwt. as against 95,700 cwt., the finally revised estimate of 1916-17 or a decrease of 8 per cent. The season was not altogether favourable. Heavy rainfalls and floods affected the crop in Bihar and Orissa, and in parts of the United Provinces. In Sind the crop suffered from low inundation in the beginning of the season.

LANCASHIRE COTTON.

A Quieter Market.

(From Our Own Correspondent.)

Manchester, Tuesday.

The demand in the market has been rather quieter, but spinners and manufacturers have been very difficult to deal with, and for anything wanted full prices have had to be paid. The war news has been rather disturbing, and has had some effect upon trade. It is understood that representatives of the Government are consulting with spinners and merchants in Lancashire with regard to the distribution of Egyptian cotton when the crop is taken over for next season. An active demand has again been experienced in Egyptian cotton on the spot in Liverpool, and prices are being well maintained. The receipts at Alexandria so far this season are 5,026,089 cantars, against 4,643,364 cantars last year. Egyptian yarns have been very strongly held, and numerous spinners have met with an encouraging demand. Many Bolton mills are reporting record profits for the past half-year. Piece goods for Egypt have moved off rather quietly. Leading shippers are now showing rather less enterprise, but there is plenty of stuff on order in Lancashire for export. Standard cloths for India and China remain slow, especially sized goods. A very fair inquiry has again come through in finishing and bleaching materials for several outside markets. Manufacturers remain very independent. American yarns have been stiff in quotation.

INDIA'S TRADE AND FINANCE.

In their weekly bullion letter Messrs. Samuel Montagu and Co. give the following official table showing the balance of trade of India, and presenting the intensity of the currency problem facing the Indian Government during the abnormal war conditions that prevail :—

—	1914-15.	1915-16.	1916-17.
	£	£	£
Imports of merchandise — Ex - Government stores	91,953,000	87,991,000	99,748,000
Net imports of—			
Gold	5,637,000	764,000	2,797,000
Silver	6,676,000	3,717,000	2,214,000
Enfaced rupee paper	238,000	603,000	347,000
Interest on enfaced rupee paper	228,000	213,000	195,000
	104,732,000	91,760,000	100,873,000
Exports of merchandise — Ex - Government stores	121,061,000	131,587,000	160,591,000
Net export	16,329,000	39,827,000	59,718,000

COMPANY NOTES & REPORTS

Dividends, Payments, etc.

The directors of the National Bank of Egypt have declared a dividend for 1917 of 8 per cent., *i.e.*, 16s. per share, as against 6 per cent. for 1916, £52,000 to statutory reserve, £200,000 to special reserve, and £49,000 carried forward, against £31,353, £80,000, and £22,179 respectively for 1916.

The directors of the Bengal Iron and Steel Company state that it will be impossible to hold the annual meeting in March, but the Board have decided to pay on the 30th instant an interim dividend of 6 per cent. on ordinary shares for the first quarter of the year. Last year the dividend was the same.

Coupons of the Greek Five per Cent. Funding Loan of 1893, falling due April 1, 1918, should be presented at the office of Messrs. C. J. Hambro and Son for payment in accordance with instructions received from the International Financial Commission, Athens, of 120 per cent. in gold of their face value, being 32 per cent. ordinary interest and 22 per cent. per annum augmentation on account of surplus revenues of 1917, payable on the coupon of the first quarter of the year. Coupons of the Greek Four per Cent. Rentes falling due April 1 will be paid 80 per cent. in gold of their face value, being 32 per cent. ordinary interest and 24 per cent. per annum augmentation on account of surplus revenue of 1917.

The National Bank of Egypt announces that coupon No. 27 of the Agricultural Bank of Egypt Three and a-Half per Cent. bonds due April 1 will be paid at its offices in Cairo, Alexandria and London, 6 and 7, King William Street, E.C.4.

The ordinary annual general meeting of the Bank of Roumania will be held on April 10 at Winchester House, Old Broad Street.

Rangoon Para Rubber.—Owing to delay in final completion of accounts and to difficulty in financing estate requirements brought about by temporary stoppage of shipment of rubber from Rangoon to London, the directors regret that the annual general meeting will have to be postponed until April 23, and payment of dividend of 6¼ per cent. delayed until May 7.

The Argus Printing Co., Ltd. (10, Temple Avenue, E.C.4), issue a handy writing pad with calendar and memorandum slips attached.

According to *Die Zeit* the petroleum production in the Boryslav-Tustanowic district of Galicia in 1917 amounted to 70,350 cisterns (of 10,000 kilogs each).

Digitized by Google

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Tuesday.

Our market this week has been under the shadow of the military operations now taking place on the Western front, and business meanwhile is practically at a standstill.

In Government stocks Unifieds are fractionally lower at 87, with some transactions at an even slightly lower price; but the market in this stock remains firm and there are few sellers about. In Egypt 3½ per cent. prefs., although some small business was done round 73½, there are still a good many unsatisfied buyers round 74.

In Bank shares Nationals are ⅛ easier at 18, but the preliminary figures just announced are exceedingly satisfactory, showing as they do that the profit last year was equal to more than double the dividend of 16s. per share which was to be paid, as against 12s. for 1916. Agriculturals have remained a firm spot but inactive, and Anglo-Egyptians are ⅛ easier at 14⅞.

In Railways, Delta Lights have receded ⅛ to 6¾, but the shares on offer have been absorbed. As regards Land descriptions Aboukirs are 6d. easier at 23s., and Behéra prefs. are ⅛ lower at 4½. In Gharbieh Lands the price is also ⅛ down at 1⅞, there being sellers at 2, with buyers at 1⅜. New Egyptians have lost 6d. at 18s. 3d., at which price some business was done to-day. The only other alteration is a fall of 3-32 to £3 in Union Foncières, but the business done has been quite infinitesimal.

In miscellaneous shares Alexandria Waters are ⅛ lower at 12⅛, and both Salts and Sodas and Khedivial Mails are 6d. easier at 39s. 6d. and 39s. respectively. A fair business took place in Khedivial Mails at the price mentioned.

In Greek securities the market has remained exceedingly firm; but, apart from a rise of one point in Monopolies to 51½, at which price a fairly large transaction took place, there has been no other alteration to record. Bank of Athens shares are again ⅛ firmer at 3⅜ in sympathy with the rise in Athens, but no business has been transacted.

EGYPTIAN TARIFF VALUATIONS.

Revised Duties on Cotton Yarns.

The Egyptian *Journal Officiel* published a list of revised tariff valuations for use in assessing the duties on cotton yarns imported into Egypt from February 5 to April 4, 1918, or until denunciation, as follows :—

Description.	Import valuations per kilogramme.
Cotton single yarns grey and bleached—	Milliémes
From India—	
Nos. 4 to 12	200
Nos. 14 to 20	255
From other countries—	
Nos. 4 to 12	345
Nos. 14 to 20	355
Knittings—	
From India—Nos. 3 to 12	260
From other countries—Nos. 3 to 12	370
Cotton sewings grey or bleached—	
From India	375
From other countries	405
Cotton doubled yarns, grey and bleached Nos. 40/2	480
Cotton double yarns, No. 20	480
Turkey red cotton single yarns	455
Other coloured cotton single yarns	455
Gassed or mercerised or prepared yarns bleached or dyed—	
From India	ad valorem
From other countries	ad valorem

The tare allowance for bales is fixed at 3 per cent. Duty is leviable on the valuations shown at the rate of 8 per cent.

INDIAN TREASURY BILLS.

Up to March 16 Indian Treasury bills were sold to the following amounts:—Three months' bills, face value, Rs.12,00,20,000; six months' bills, face value, Rs.19,97,60,000; nine months bills, face value, Rs.7,53,15,000; twelve months' bills, face value, Rs.87,00,000; total, Rs. 40,37,95,000 (equal at 1s. 5d. the rupee to £28,602,100)

March 14, 15, 16, 17, 18 ..	760,000	890,000

The directors of the Ionian Bank, Limited, recommend a final dividend of 3s. per share with a bonus of 1s. per share, both free of income-tax, subject to audit for the half-year ended December 30, 1917—January 12, 1918, making, with the interim dividend, 7 per cent. per annum for the year 1917.

At an extraordinary general meeting of the London County and Westminster Bank, Limited, on March 26, Mr. Walter Leaf presiding, the resolution passed at the extraordinary general meeting held on the 11th inst., under which the amalgamation of the undertaking with Parr's Bank was agreed to, was confirmed as a special resolution.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Samoht, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc, Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances &c

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, PORT SAID, and KHARTOUM.

Subscribed Capital - - £1,500,000
Paid up Capital - - 500,000
Reserve - - - - - 710,000

The Bank undertakes every description of Banking Business on most favourable conditions.

IONIAN BANK, LIMITED.

Incorporated 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - 75,000

HEAD OFFICE—
25, Abchurch Lane, London, E.C.4.

BRANCHES—
Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Faschen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £650,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Anwaz, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANQUE FRANCO-SERBE.

Head Office—
14, RUE LE PELETIER, PARIS.

Paid Capital - Frs. 12,000,000

Central Office—Belgrade.
Branches—Skoplye (Uskub), Bitolj (Monastir).

London Office—
27, THROGMORTON STREET, E.C.

Correspondence is invited from all those having Serbian interests or contemplating business with Serbia when communication is restored.

NOTES OF THE WEEK.

While the first act, as it were, in the great battle in the West is over, and the world awaits the raising of the curtain on the next scene before Amiens and on the Somme, military events of great importance have also been occurring in the East. People at home, with their eyes directed on France, have naturally paid small attention to the bulletins from Mesopotamia and Palestine, and the daily papers have shown a tendency to forget the Balkans altogether. This attitude, however natural, is unwise; for, although the vital decision will be in the West, the future of the world and of its development after the peace, and indeed the actual details of the treaty of peace, may very largely depend on the position as it develops in the East during the next few months.

It is certain that Britain will have to put forward a very considerable increase of military effort in the future, to last, at any rate, until the American Army is in full force in France. That effort will naturally and inevitably be directed towards the Western front and home defence mainly, if not solely; but at the same time it would be unwise, as some of our extreme Westerners have argued, to proceed from this fact to starve our Eastern Expeditionary Forces. If we did not possess India, and if, therefore, we had no Asiatic policy, this would be a conceivable, although not a very ambitious, standpoint; but our possessions and our present commitments will not allow any stagnation here, with the consequent reduction of prestige which such a stagnation would bring.

It is true that, if we lose in France, we lose everything, but the converse is not necessarily true—that, if we gain in France, we gain everything we have fought for. Now, we do not intend to lose in the West, and that being so, it is impossible not to recognise that the events of the past year have had a very considerable effect on the future of Asia for a long time. In politics as in philosophy, it is true that things are what they are, but the remainder of the proposition in political terms is that they will be what we will them to be. And in the East we will them to be the very considerable diminution of the Turkish Empire.

Two additional steps have been taken towards the achievement of that aim during the past week. General Allenby's forces, having crossed the Jordan—an interesting account of which difficult enterprise has now been received from the war correspondent on the spot—made a destructive raid upon the Hejaz Railway, several miles of which were torn up. Our troops then returned, but in the course of the week from March 25 to April 1 we took 700 prisoners with several guns. Turkish opposition in Palestine does not seem to get more effective, although it would, of course, be folly to pretend that they are beaten; they may be able to put up a very pretty fight or so yet before this modern crusade is over.

A still more striking performance is reported from Mesopotamia, which has led to one of the most brilliant and certainly by far the quickest pursuit of any enemy in the war. It is only ten days since the War Office reported that heavy rains had fallen, which made any forward movement for some time ahead appear to be out of the question; but the deluge does not seem to have disconcerted General Marshall's plans in the least. He struck hard at the Turks at Khan Baghdadie, beyond Hit; they were evidently taken by surprise, surrounded, and forced to surrender; five thousand prisoners were captured, as well as a large amount of booty. In view of the already weakened state of the Turks in this region, after their many defeats during the past year, this additional reduction of their forces must represent a most serious loss of their hitting, if not of their staying, power; and this great success (which passed almost without comment) was followed by a further rapid advance along the Aleppo road and 73 miles beyond Anah, which resulted in the capture, according to a laconic communiqué, of "a few more Germans."

Obviously the Turks had no stomach for further fighting at the moment, as the advance could not have been made at such a pace, if there had been the least opposition. This progress is of very great importance, since it brings us beyond Abu Kemal, from which post runs the old desert road to Palmyra; we are now not far from Khan Kalasi, on the ruins of the city of Salahieh (which traditionally derives its name from Saladin). Our troops have advanced altogether 130 miles in less than a week—a feat which must make many a weary cavalryman on the Western front pale with envy, and which will long live in the records of war; and it may also be noted that we are now within 250 miles of Aleppo.

Count Czernin's latest speech cannot be regarded as sincere. He makes a point of not having demanded a square foot of territory from Russia, and says that, if Roumania had agreed to peace at the same time, she might have had the same terms. The measure of the truth of that is that Germany has annexed Russian while Austria has annexed Roumanian territory; probably Count Czernin has heard of burglars dividing the spoil. It is idle to pretend that Roumania would have escaped her fate had she given way a whole month earlier.

Digitized by Google

Indeed, the Austrian politician himself admits as much when he divides the acquisitions into military guarantees and commercial advantages: the militarists of Austria were hungry for the one, the business men for the other.

He proceeds to announce once again that Serbia is anxious to make peace, only the Entente will not let her —the Germans used to say the same thing about Belgium. But Austria, it appears, is anxious to come to terms with "a beaten enemy"—we know from the example of Roumania and Russia what those terms would be—and certain acquisitions of Serbian territory are mentioned, but not defined. But it appears from the speech that Austria's main desire to come to terms with Serbia arises from the fact that, having conquered Serbia in the field, she now wishes to conquer her "morally." When we remember Forgach, Agram, and Austrian policy at Belgrade, the comparison of Count Czernin with Pecksniff seems feeble.

The terms of peace between Russia and Roumania have now been published. Their main feature is that they provide for the evacuation of Bessarabia by Roumania within two months, and our unfortunate Allies do not therefore obtain that measure of territorial compensation for their losses in the Dobruja and elsewhere which was suggested in the Austro-German Press. We were always doubtful whether this inspired suggestion, frequently made in Berlin and Vienna, was made in good faith; it is now evident that it was only put forward to deceive. There are some other clauses in the agreement which have no particular importance; but the treaty here can in no sense be called a settlement, the whole situation still being obscure and fluctuating.

The Lichnowsky memorandum may or may not have any effect on German public opinion, presuming that the latter has any real existence, but as an historical document it is of first-rate importance. It does not perhaps add much to our existing knowledge of Balkan politics before the war; Prince Lichnowsky's interest in the Near East was obviously of a secondary character (as was Sir Edward Grey's), and the testimony he gives to the honesty of British diplomacy in the Balkans, although welcome, still leaves open the question of its wisdom in many details.

The key to Prince Lichnowsky's whole attitude is to be found in the words, "Central Europe is mediævalism, Berlin-Baghdad is a *cul-de-sac*, and not a road into the open, to unlimited possibilities, and to the world mission of the German people." The ex-Ambassador, in fact, was a Westerner; he believed in colonial expansion, and the details which he gives of the negotiations with England as to the opening of Africa to German enterprise show him as by no means an unsuccessful diplomat. In 1912-4 he did, in fact, secure, with British consent and even goodwill, that "place in the sun" which Germany demanded in the tropics. It was not his fault, and certainly not that of Downing Street, that Germany lost that place by preferring war.

On the other hand, for one who looked on the Berlin-Bagndad project as a *cul-de-sac* he certainly did a great deal to turn the *cul-de-sac* into a high road. One cannot help making a wry face over the concessions to which Lord Grey put his hand. "The so-called Baghdad Railway Treaty," says the Prince, "aimed at the division of Asia Minor into spheres of interest, although this expression was carefully avoided in consideration of the Sultan's rights." Lord Grey made the concession—a very considerable one—of allowing the continuation of the Baghdad line to Busreh, which had previously been categorically refused. "The shipping on the Shatt-el-Arab was to be in the hands of an international commission. We (Germany) also obtained a share in the harbour works at Busreh, and even acquired shipping rights on the Tigris. . . . By this treaty the whole of Mesopotamia up to Busreh become our (German) zone of interest." This is, of course, a tribute to the British determination to go to the utmost limit in order to get on better terms with Germany, but it is very doubtful whether these extensive concessions would have been ratified by public opinion in England.

Against these concessions, we were practically confined to the Persian Gulf, where we had had a strong position already for two hundred years, and, in addition, the Smyrna-Aidin Railway, French Syria, and Russian Armenia were also recognised as "British economic territories." In other words, it was a typical German agreement—she obtained a great deal from us directly, and recompensed us in a shadowy and indirect fashion by promising us good treatment in the house of our friends. It is no wonder that German commentators have already admitted that these terms were extraordinarily generous. It is an excellent thing to seek peace and ensue it, but this agreement came near the Danegeld method of preserving the peace. Why Germany did not accept it remains a mystery; but had she done so it is probable that her appetite would have grown by what it fed upon, and in another few years still more far-reaching demands would have been put forward, presumably for the extension of the Baghdad Railway to India, and further economic rights up to the Indian frontier.

Mr. Balfour's distrust of the Baghdad Railway policy, which was shown as far back as 1903—a distrust which moved Lord Morley's indignation, and apparently that of some of his colleagues in Mr. Asquith's Government—was fully justified. The Baghdad Railway scheme may have been originally a *cul-de-sac*, but when it debouched into the Persian Gulf, and was intended to lead on to India, it cannot be maintained that that standpoint was true any longer. The only possible defence of these concessions is that we did not understand the German political mentality; but that is no defence at all, since it is the business of statesmen to understand the political mentality of other countries.

One good thing has come from these revelations. If they are inaccurate—and we believe that, broadly speaking, they are accurate, since they not only bear the impress of truth, but agree with the recollections of those who followed pre-war Anglo-German policy pretty closely—they can be denied. It can no longer be maintained that the British Government has no knowledge of these matters; the case for reticence has gone by the board, since Prince Lichnowsky's apologia has leaked out. That is a minor point: the main thing is that in no conceivable circumstances, save an absolute defeat of the Entente, could these terms again be offered to Germany. We know her aims, and that one demand leads to another. It is evidently a consciousness of the fact that the war has destroyed all chance of the realisation of these aims that leads the ex-Ambassador to his pessimistic but true conclusion that the British will maintain their hold on Southern Asia, that the Anglo-Saxons and the Latins will control the outer world, and that Germany will be confined to Germany and Austria. The one point on which we should differ from him is his suggestion that France will count for less in the future. He does not seem to have appreciated the extraordinarily brilliant work of France in Africa during the past generation; and although France has lost heavily during the war, her spiritual renown never stood higher than to-day. It is not in England that he will find any echo of this sentiment.

Fighting is reported to have taken place in the districts of Batoum, Kars, and Ardahan. The Armenians and Georgians, it is stated, have formed an army for the defence of the country against the Turks, who, in virtue of the Brest-Litovsk Treaty, have attempted to carry into effect a military occupation of the country. News of the formation of a Trans-Caucasian Government had already reached us, and from a message sent by the German Foreign Office to the Swedish representative at Tiflis, it is clear that the Berlin Government is viewing the course of events in that part of the world with some concern. Whatever may be the situation in other parts of the former Russian Empire, there would seem to be a clear-cut issue in the Caucasus. To Armenians and Georgians Bolsheviks and Turks alike are

Digitized by Google

enemies, and it is satisfactory to know that they have lost no time in organising for the defence of their rights.

On the other hand, the position in the Caucasus might be complicated by the Tartars of the Baku district, to whose support the Turks are looking for the success of the Pan-Turanian movement. It is conceivable that, in the event of a successful invasion, these Tartars might have thrown in their lot with the Turks. But behind the sturdy resistance of the other races they ought to have time to realise that Turkish anxiety to make common cause with them is based on no altruistic solicitude for the Caucasian population, but on the desire to use the wealth of these districts for the furtherance of Ottoman aims, which merely make a cloak of Islam, without conforming to or believing in its tenets. In this connection an article on the Caucasus, of which the first instalment appears this week, should prove of special interest. It deals first with the early history and with the population of this region, and will then touch upon more recent developments, together with the economic potentialities. Great Britain cannot afford to ignore the future of the Caucasus, as in the event of the permanent disintegration of Russia it would become an important gateway to India for Germany.

The announcement that an airship has been seen over Crete, coupled with the rumour of aeroplane raids over Egypt, suggests an extension of the air war to the Mediterranean. It is, of course, over two years ago that Zeppelins were active over Greece, and although these instruments of war have been somewhat discredited in the West since then, they may still have some opportunity of doing damage in districts less well equipped for aerial defence. The range of the aeroplane has grown very considerably during the past year, and destructive raids from Turkey or Bulgaria over Egypt are by no means impossible, while against Athens—which the Germans, judging by their barbaric attempts against Venice and Naples, would have peculiar enjoyment in damaging—they would be still easier. It is unlikely, however, that any aeroplane attacking Egypt would be able to carry sufficient bombs to do much damage, owing to the length of the flight from base to objective.

There is a moral for everyone interested in the material development of India to be drawn from the experience related by Mr. McConnel in the article on cotton-growing which we published last week. Mr. McConnel tells us that he first tried the India Office, and formed the impression that nothing would be done; then he tried India, and found that much had already been accomplished. Of late years Delhi has been far ahead of Whitehall, just as some of the provinces have been ahead of Delhi, in pressing forward the application of science to the agricultural and industrial problems of India. Ambitious schemes have been formulated in, shall we say, Allahabad, or Poona, or Nagpur, reduced to modest dimensions in Delhi, and then "held up" in London, till the workers have been discouraged, and the public has naturally blamed the whole organisation for the action or inaction of a part.

The India Office has seen sundry war changes, and it goes without saying that much better things are hoped for in the future. With so many seats in the building occupied by secretaries and other high officers from India—some retired, others only tired—many ambitious schemes ought to find an old friend able and willing to urge them forward through the slack water and refloat them as often as they run aground; but we cannot expect that the navigation will ever be free from danger. In any case, the man who wants to get something done should understand that he must first get his scheme launched in India, which is by no means difficult, if it be anything like seaworthy, and he need do nothing in Whitehall till the scheme is on its way. The time for real work comes when the files have crossed the water.

If, however, the scheme is likely to be costly, the promoters must be prepared to do some lobbying in India, for in these democratic days projects can no longer depend entirely on their merits. There are many voluble claimants for the limited funds available for new developments, and since even Finance Ministers conceal a good deal of human nature beneath a stern and rugged exterior, it usually happens that most of the money goes to the men who can make the most noise. Promoters have now to reckon with this fact: it is good to have the departmental Minister on your side, but it is even better to secure the active support of a band of prominent politicians, men who have the courage of their interpellations, and who will not be deterred by false modesty from pressing home their demands. It seems rather a cumbrous way of getting things done, but, as we have said, these are democratic days, and the people love to have it so.

The death of General Sir Alfred Gaselee will be deeply regretted in the ranks of the Indian army, with which he served for upwards of forty years, and in which he had secured universal affection and respect. The record of his active service is extraordinary, and it may fairly be said that he was usually to be found fighting somewhere on the frontier, except when circumstances took him further afield, as to Abyssinia in 1868 or to China in 1900. He always distinguished himself on these varied fields, but his chance came when he was given a brigade in the operations in Tirah, where his success opened the way to higher appointments, and he became Quartermaster-General in India, and subsequently commanded the old Northern Army.

China was, however, the scene of General Gaselee's most anxious task. He commanded the British forces in the joint operations rendered necessary by the Boxer rebellion, and thus had practical experience of an experiment towards a League of Nations conducted on definitely Prussian lines, an experiment which might have led to disastrous results but for the ability and tact of the Indian commander. As it was, our troops obtained an insight into German methods which caused a deep impression throughout India, and still counted for much in 1914. Since then there has been no lack of evidence in the same direction, and we suspect that the Indian Army, which has a long memory, still regards General Gaselee as the typical representative of its ideals and the antithesis of all that it hates and condemns.

SERBIA AND THE JUGOSLAVS.

At the Royal Victoria Hall in South London on April 2, Dr. May Dickson-Berry lectured on Serbia and the Jugoslavs, her address being illustrated by the magic lantern. The slides showed the history and geography of the country, its beautiful scenery, its architecture, the picturesque costumes of the peasants, and many other matters of interest. The costumes, the audience were told, varied from one place to another; but they were always very bright in colour, and were decorated with beautiful embroidery. The summer costume of the men greatly differed from that worn in winter, the most conspicuous summer garment being an embroidered shirt, which was always worn outside the trousers; while in winter nearly everyone wore a sleeveless sheepskin coat—though this was sometimes worn in summer also. The people were described as being very kind and hospitable, and intensely patriotic. The history of their race and country was not to them something to be learned at school, and speedily forgotten; it entered into their very life; and one of the lantern slides showed a cottage, on the outside walls of which its owner had made pictures of Serbian heroes. Such drawings roughly made, said Dr. Dickson-Berry, were not uncommon. Many quaint old customs survived. The Serbian equivalent to the mediæval bard still went about singing and reciting in the villages, and people visited the graves of their relatives and placed food and wine upon the tombs. After this ceremony a religious service was held, and the food was given to needy people. At the time the lecturer was in Serbia with her husband, the recipients of these gifts were generally Austrian prisoners.

Ethnographic maps thrown on the screen showed the distribution of population in that part of the world. Serb, Croat, Bosnian, and Dalmatian, Dr. Dickson-Berry said, were all of the one race, the principal differences among them being due to religion. The Serbs were generally members of the Orthodox Greek Church, the Croats were Roman Catholics, and the Bosnians were largely Moslem. All were in sympathy with the idea of the founding of a great Jugoslav state, and, in the early days of the war had deserted to the Allied cause by thousands. An endeavour had been made to prevent this by placing German troops behind the Slavs, and, on the least sign of hesitation by the latter, they were shot down by machine guns. They had gone over to the Allies nevertheless, and a Jugoslav army had been formed, which had fought most gallantly in the Dobruja and elsewhere. The realisation of the idea of Jugoslav nationality would defeat entirely the pan-German scheme of a middle European block under Prussian military and economic control.

THE PALESTINE CAMPAIGN.

The sudden and—to us—unexpected attack on the Turkish forces on the plateau of Moab seems to have been a brilliant affair, carried out with General Allenby's usual lightning dash. Clearly the Turks were ill prepared for this fresh attack when our Army was already so heavily engaged in western Palestine. The description of the crossing of the Jordan as given by Mr. Massey is most vivid, especially to those who know the spot. The deep channel of the Zor, which the Jordan has through long ages cut for itself through the alluvial deposits of the Ghor, presents a most formidable barrier to any one advancing eastwards. The descent from the Jericho plain to the river bank is steep, and after rain exceedingly slippery. Between the slimy cliffs and the river is a stretch of muddy soil which, when the Jordan is in flood—as it is often at this season—soft and slippery enough to make any progress most difficult. The Jordan banks are of treacherous loose mud, and wooded to the water itself; the river, which here is yellow brown with sediment, is swift and full of cross currents, and a most dangerous one for a swimmer. The further side is covered by a tangled growth of thorny shrubs, and rises terrace by terrace to the level plain. The scanty fords are all difficult in time of flood. The main crossing was made at the ford just below the Monastery of St. Gerasimos, built upon the ruins called Kasr Hajlah. This marks the site of Beth Hogla (Josh. 15, 6). The convent is one of the few inhabited buildings on the banks of the lower Jordan. The site is important, because close to it is the spring of Ain Hajlah, and also, in the Zor, the ford Mahadet Hajlah and the traditional scene of the baptism of Christ. To this spot thousands of pilgrims come annually (in peace times) to be baptised, a custom going back very many centuries.

The first attempted crossing was at El Ghoraniveh; for some years there has been a bridge, which, however, was destroyed by the retreating Turks. Here, though the banks are far better and the presence of a road to the shore on each side rendered crossing more hopeful, the swiftness of the current and the prepared opposition made a front advance impossible. It was only after the entrenched position of the Turks had been outflanked by mounted men, who crossed at Mahadet Hajlah, that a bridge could be constructed here.

A feint further north at El Mandesi ford, a little south of the mouth of the Auja, as well as the crossing of a small party near the mouth of the Jordan, served to confuse the Turks and disperse the opposing forces. The crossing of the main body was effected by Saturday, March 23, and during that and the next day strong attacks were made on many roads leading on to the Moab plateau. The main line of attack was up the beautiful Wady Sha'ib, up which runs the new carriage road to Es Salt, and thus to Amman. The lower part of the valley is known as Wady Nimrin, after the ruins of Beth Nimrah (Joshua 13, 27; Num. 32, 3, 36), which lie up a hill called Tell Nimrin in this valley. The valley is most picturesque; I recall no district in Palestine where the wild flowers in spring are more profuse. As one ascends from the Jordan valley to Es Salt—a height of over 3,000 ft.—one passes belt after belt of varied flowers, each altitude being characterised by certain kinds. As Es Salt is approached several springs are passed, and immediately below the town the valley is full of watered gardens and orchards. Es Salt is still a place of considerable importance, the capital of the district of El Belka and the chief centre for education and commerce in Moab. The people—both Moslems and Christians—both in their costumes and their ways preserve much of the Bedouin type. There are Christian schools belonging to the Latin, the Greek, and the Anglican Churches, and the C.M.S. has a fine Medical Mission Hospital there. The city is built chiefly upon the steep sides of a lofty hill, which culminates in a ruined castle of the Crusading period, if not earlier. On the whole this is a prosperous place, with abundant water, some beautiful gardens and orchards, and ample pasturage around. In its near neighbourhood—on the road between it and Jerash—are large groups of fine old trees, the surviving remains of a once extensive forest; it is thought probable that Es Salt is derived from the Latin *Saltus*, a name given to such a district of wooded mountain land.

Es Salt was captured on the morning of March 25, and no time was lost in pressing on over the lofty, wind-swept plateau of Moab towards Amman. This place is one of great military importance as one of the chief stations on the Hejaz Railway. The chief reason for the raid was to reach the railway, and, according to the latest accounts, "several miles of railway track, with culverts and an important bridge, were effectively demolished." This line is of such vital importance to the Turks that this must be a heavy blow and a great cause of panic and disorder.

Amman itself is one of the most famous sites in this region. Originally Rabbath Ammon—the fortress of the Ammonites—captured by Joab, acting for David, it became later on the yet more famous Philadelphia, one of the greatest cities of the Decapolis. The very extensive ruins there include a great theatre, the outlines of which, with its forty-five tiers of seats, that once accommodated 4,000 spectators, can still be traced running round a great semi-circle excavated on the hillside. Among the columns, ruined temples, and other Greek buildings distributed along the banks of the Jabbock, lie the primitive dwellings of the large settlement of Circassians who for over a quarter of a century have been developing this region. The Amman railway station itself is some three miles further down the valley of the Jabbock. Both north and south of this the line bends eastwards in great curves to the very confines of the desert itself. Such a destruction of the line as has now taken place must greatly embarrass the Turks, especially those further south, who are already harassed by our Arab Allies, who are advancing from the south. Also it will destroy any sense of security they may have been indulging in with regard to this region. Amman itself being doubtless very thoroughly defended has not been touched at present, and we learn that after capturing 700 prisoners, four guns, several machine guns, and a number of motor lorries, our force is falling back upon their base at Es Salt. This diversion should very greatly relieve pressure upon our forces to the west of the Jordan, who have been making sure but slow progress against strong opposition.

E. W. G. M.

[Of Amman and Es Salt a correspondent writes:—Of the ruins that remain at Amman none is older than the Greek period. In the days of the Crusaders the place was raided once by Godfrey de Boulogne, and a second time by his brother Baldwin of Edessa, the second Latin King of Jerusalem. Right across country, six hours' ride from Amman, is Assalt or Es Salt, supposed to be Machaerus, the scene of John the Baptist's execution. The summit of Gebel Yousha (Joshua) is reached in about an hour and a-half from Es Salt, whence is obtained a lovely view of the Jordan and the Ghor.]

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB, J.P.
Vice-Chairman: SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £30 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, March 10.

Public Functions.

Public ceremonials and demonstrations are the order of the day, and King Alexander is indefatigable in his attendance at such functions. Yesterday his Majesty paid a visit to the reservists at Chalkis and delivered an inspiriting speech. From all accounts the reservists are generally responding well to the call to the colours. Last week a demonstration was held at the Piræus by the reservists, at which M. Repoulis presided, and the whole proceedings were characterised by great enthusiasm. A distinct change for the better appears to have set in, be it superficial or not, since the events at Lamia and Larissa, due no doubt in a great measure to the firmness displayed by the Government. It cannot be said that the mobilisation is popular, as may be easily understood after what the country has gone through during the past three years; but it is probably being realised that this step is necessary for the welfare of the country, and the nation may be expected to become resigned to the necessity.

On March 7 the taking of Janina in the Balkan War was celebrated by a review of the troops on the Champs de Mars, which was attended by the King, the members of the Government, and the Diplomatic Corps. The Macedonian regiment which recently arrived from the front came in for much acclamation, and their officers have been given a reception at the Military Club, at which the King was present.

The opening of Parliament by King Alexander was a brilliant ceremony, the streets being lined by the Macedonian troops in their metal helmets.

From Day to Day.

The vigilance of the police continues in a commendable manner, and punishment is inflicted whenever necessary. The editor of the newspaper *Chronos* was recently fined 10,000 drachmæ, with eight years' imprisonment, for publishing an article disapproved by the Censor. The police have this year wisely prohibited, in connection with Carnival Week, the appearance of masked men and women in the streets and the use of confetti, which on former occasions led to the streets of Athens being filled with crowds.

There is a project to create a new police force, and it is proposed to obtain the assistance of instructors from England to organise it.

The conferring of the Order of the Bath and the Legion of Honour on King Alexander appears to have given much satisfaction, and the *Patris* says that these distinctions conferred on King Alexander by Great Britain and France are more than a mere act of courtesy towards the King of a friendly and allied people. They express, it adds, the unalterable esteem and sympathy which the Allied Powers have always entertained for the Hellenic people. This truth is further amplified by the message which the first commoner of England, Mr. Lloyd George, has addressed to the Hellenic people, and is emphasised still more emphatically by Mr. Bonar Law's recent utterances in the House of Commons.

King Alexander has honoured the British and French Ministers by his presence at dinner.

A certain amount of paper money is already in circulation, and has had the effect of arresting the process of hoarding silver coins. In addition to the internal loan, the Government contemplate issuing Treasury Bonds against the loans they are receiving from the Allies.

CYPRUS NOTES.

(From a Correspondent.)

Weather and War.

There has been a good deal of cold, bracing weather. Sufficient rain has fallen to encourage hopes that cereal crops will bring to the island a self-supporting year, although there was a great deal of grumbling in many parts as to an insufficiency of seed corn. The critical spring period, however, has still to be passed.

Mails, now so anxiously looked for, arrive with trying irregularity. War news brings no prospect of improvement as regards travelling, and families that have not left the island for years now hope that next, if it cannot be this, year may afford a chance of getting home.

Precautions Against Epidemics.

Owing to an outbreak of foot-and-mouth disease, which was new to Cyprus, it became necessary last year to declare a number of areas as infected. The measures taken have been so successful that many places have now been declared free. It would seem to be a common experience, all the world over, that new maladies, both in the animal and vegetable kingdoms, should follow the introduction of new conditions, and in Cyprus several complaints are attributed to the period of the British occupation. On the other hand, the Government has been very successful in keeping the island free from many outside dangers. The dreaded *phylloxera*, for example, regarding which there was for many years great local anxiety, and which would ruin the vine industry, has been kept from its shores by rules of such stringency as to evoke protests even from the Directors of Agriculture. The vigilance of the Medical Department has probably saved the island from various epidemics that have attacked neighbouring countries and places of pilgrimage; and the appointment of a Government Veterinary Surgeon has been attended by excellent results.

Village communities have continued to avail themselves here and there of the law which enables them to prevent the keeping of goats within their borders; but this law only provides an unsatisfactory compromise with the evil which it aims at suppressing. One village, for instance, may, by the required majority, vote for application of the law; a neighbouring village, where it may be needed quite as much or more, fails to act owing, it may be, to the preponderance of a clique or faction, which overawes the fainthearted majority against its better judgment. It is to be regretted that the depredations of goats are not dealt with in a drastic and systematic manner in the general interests of landowners, including the Government. The argument in favour of reducing the pest within harmless limits is unanswerable, if the official estimates of damage to both State and private property have any meaning. It seems of little advantage that such figures should be published, unless the lesson to be derived from them leads to practical enactments commensurate with the evil. The havoc wrought by goats has been demonstrated most conclusively ever since the first years of the occupation, and yet every year the matter seems to be brought up as if it were the discovery of a new danger.

General News.

In the vine districts villagers are obtaining very good prices for their wines, while raisins fetch double and treble pre-war rates. The carob merchants only have reason to fear that they may be hard hit, as there is no prospect of improvement in the matter of shipping.

Game (hares and partridges) have been fairly plentiful, but woodcock are comparatively scarce this winter. Sportsmen, both British and native, have had good days. Almost prohibitive prices are asked for cartridges.

THE SULTAN OF TURKEY AND ISLAM.

The following is a translation of the Order promulgated last January by the King of the Hejaz regarding the omission of the Sultan's name from the Friday prayer:—

In conformity with the terms of the Royal proclamation, stating: That we announce to all Moslems of the Turkish Empire, especially the army and its officers, that, if they do not rise for the overthrow of the Turanian oppressors and utterly renounce them, our last hope of the restoration of the glory of Islam to that country, and of the reunion of its people in the bond of Islam, will be lost; and the first act of our renunciation of it will be the omission of the name of its Sultan from the Friday prayer, we having so far retained that name out of reverence for the memory of his predecessors, and in the hope that one would arise to deliver his country from the usurpation of the men of the Turanian band; and as the delay allowed to them has long expired, the Royal Hashemite Order has this day been issued—giving effect to the foregoing pledge—for the removal of the name of their Sultan from the public prayer, commencing from the first Friday after the present date, and for communication in that sense to be made to the proper quarters.

According to *El Qibla*, the following is the formula to be used in future in the Friday prayer, after the blessing on the Family and the Companions:—

O God, sanctify the souls of the Imams who were zealous for the Faith, who judged with justice and followed it. O God, prolong Thy help and support, make eternal Thy protection of Thy servant and the son of Thy servant, who humbles himself before Thy majesty and Thy glory; the warden of Thy strong place, the city of his forefather, the Chief of the Prophets; the Sherif and Emir of Mecca; the King of Arabistan; the pupil of every eye; our Lord the Sherif Hussein, son of our deceased Lord, the Sherif Ali—(here follows the pedigree). Be to him a trusty guardian, a counsellor, and a helper. Aid him, O God, in all that pertains to the land and the people, to the concerns of all the people of our Lord Mohammed, on Thy earth or upon Thy sea. As it may please Thee, O God, guide aright all the rulers of the Moslems, and bring to nought the unbelievers, the innovators, and all who devise evil against Thy servants, the Faithful, in East or West. Amen. O God, O Lord of the two worlds, grant Thy pardon to the Faithful men and women. . . . (to the end of the established prayer).

TANGIER TO TEHERAN.

Anah, which our troops entered a few days ago, is (as I remarked recently) a picturesque place. It has, or used to have, an extraordinary number of water-wheels, also of empty houses, and it is the "furthest north" on the Euphrates for the date palm to grow in any numbers. The reason for the number of empty houses, I was told, was that when anyone tired of his dwelling he just walked out of it and built himself a new one. Why the old ones were not occupied by new tenants I could not ascertain on either of my visits to the place. One pretty feature of the village is the quantity of coarse maiden-hair fern that grows over many of the mud-built houses and water-channels. It grows as thickly—or almost so—as the ferns in Smugglers' Lane, at Salcombe, and in many another shady Devon lane, and its beautifying effect upon the crude architecture of Anah is undeniable. The people, too, are rather pleasant looking and well mannered. On the whole, there are worse places to spend a couple of days in than Anah.

***

I do not know what genius is responsible for the Turkish reports of the fighting in Mesopotamia, but he appears to be quite clever in his own style. His adroit way of ignoring such trifles as our capture of any particular spot, however important it may be, is wonderful, and in the art of putting the best face possible upon an unpleasant situation he is an expert. His method, as far as I can fathom it, is to report any reconnaissance of ours as "a determined attempt to advance," and the withdrawal of a scouting party as a "crushing defeat." Of course, it is gloriously simple, but is not simplicity of this kind akin to genius? At any rate, the reports to which I refer have afforded me a good deal of amusement of late.

***

The fact that ex-King Constantine had to send his two spies into Greece by submarine seems to have surprised some people, who fail to realise the change that has come over Greece and the Greeks of late. But Tino, like his German friends, likes underhand methods; so undersea boats doubtless possess a particular attraction for him.

A message sent by General Hawker, Military Governor of Baghdad, to the Armenian Refugees Fund, gives some information about improvements introduced into the city by the British. Some of these would certainly give a great shock to the shades of Mansur, Haroun-er-Rashid, and Jaafer, should these famous worthies ever revisit the scene of their former activities. There is, for instance, the installation of the electric light in the main street. Would that, I wonder, be welcomed by the trio of shades in question? Some of their adventures would look a trifle queer in the powerful light of a big arc lamp, and I am not quite sure that they would regard the light as an unmixed blessing. They would probably prefer electric torches of their own. But the ghost of another former "great one" of Baghdad would certainly rejoice. That really progressive man, Midhat Pasha, who was for a while Vali of Baghdad, would be glad to see "light, more light," the wider roads, and the greater cleanliness that the British have introduced.

***

The introduction of electricity will, however, almost certainly lead to the elimination of the *farnoosji*, or "lamp-boy," who, with his great lantern formerly marched ahead of you when business or pleasure took you abroad in the city after dark. He and his *farnoose* were picturesque survivals of old times, but they certainly did not light your path as efficiently as the more prosaic electric lamp. How many an anxious moment have I experienced when, on my way out to dinner at some friend's house, I have found myself picking my way amidst puddles and lakes of mud while the *farnoose's* light flickered feebly in the draught, or the *farnoosji* sauntered ahead oblivious to my distress. One horrible memory of the kind still haunts me vividly. On a state occasion, when I was to dine with the Consul Beg, I nearly lost my balance at a particularly unsavoury spot, because my lamp-boy had got too far ahead. One foot shot from under me: the other followed suit. I had visions of my shirt-front and evening dress in sore distress. Even as they passed before by mind's eye, I performed feats worthy of a Blondin at his best; and as a result I kept my feet, and reached the Residency unsoiled; but the memory of that bad half-minute inclines me to cast my vote in favour of electricity, rather than of the glorified link-boy.

NEAR EAST BOOKSHELF.

HOME LIFE IN THE BALKANS.*

The Balkans, it is to be feared, are in danger of being associated in the mind of the British public mainly, if not exclusively, with battle, murder and sudden death. It is well, therefore, to be reminded of the more peaceful aspects of their daily existence, and this Miss Garnett has done in a volume which is full of interest and displays no small measure of painstaking exploration in a useful field. The characteristics and social customs of a people reveal both what is good and what is bad in them; and from these the careful student may be able to form some idea of the prospects that lie before the race: In this respect Miss Garnett's contributions to our knowledge of Albania is, perhaps, the most valuable section of the book. Here is a classic instance of a house divided against itself; but as it has contrived to make some sort of a stand against disruptive influences, it is necessary for the future welfare of the country—and in a corresponding degree for the peace of Europe—that the reason for this fact should be appreciated. Our author reminds us that the Albanians have the same language, customs, traditions and aspirations. They are divided in matters of religious belief by three creeds—the Moslem, Orthodox Greek, and Roman Catholic; but apart from the fact that the Moslems constitute about one-half of the population (with the majority of the remaining half Orthodox), Miss Garnett bears testimony to "the prevailing tendency on the part of the highlanders to become Moslems, and of the Orthodox Christian agriculturists to emigrate to Greece and elsewhere," and she considers it probable, therefore, that in course of time the country may become entirely Moslem. The fact that not only are some religious ceremonies and pilgrimages carried out in common by both Moslems and Orthodox Christians, but inter-marriage is also not infrequent between the two creeds supports this theory in so far as the "pull" in such circumstances rests with the party which starts with numerical superiority. Clearly the political solution of the Albanian question must take into consideration these and similar factors with a view to following the line of least resistance that is going to make for unity in the country. On the subject of vendetta, Miss Garnett supplies no evidence to assist her readers in forming an opinion as to whether the practice is or is not on the wane. She quotes, without repudiating the description of the Albanian nation as being "without a literature, without art, and almost without a history"; but explains the neglect of the mother tongue as arising from the profession of three creeds, "Turkish only being taught in the Moslem schools, Italian in the Roman Catholic, and in the Orthodox Christian, Greek." The first contribution of the Allied Powers towards the future settlement of the Albanian question would seem to have been an unqualified acceptance of the principle of partition. Whether that will outlive the doctrine of "no annexations" remains to be seen. It has to be borne in mind that the peace of Europe predicates peace in every part of it, and that the Allied goal will not be attained if Albania is to be left as a fruitful source of unrest owing to the failure to respect the wishes of the people in so far as they lend themselves to practical application.

The other nationalities dealt with in this book are the Macedonian Greeks, the Wallachs or Vlachs, the Bulgarians, and the Osmanlis. Miss Garnett brings out prominently two facts well known to all who have had the opportunity of studying the adherents of the Orthodox Churches, the many links between pagan and modern beliefs, and the hold which religion has on the populace from birth to death. In the case of the Greeks there is no difficulty in tracing the connection between many of the customs and superstitions of classical times and those of to-day. Some, indeed, survive without the cachet of religion, as may be seen—though Miss Garnett does not mention this point—in the reluctance of the Greek shepherd to enter a cave at noonday, the hour sacred to Pan. All visitors to Greece are struck by the custom at funerals of carrying the body to the graveside in an open coffin. Miss Garnett mentions the custom without offering an explanation. Two are usually offered, but the present writer does not know which, if either, is historically correct. On the one hand, the custom is described as merely precautionary—to diminish the chance of premature burial in a country where interment has to take place not later than the day after death; another explanation attributes the custom originally to a Turkish regulation enforced to prevent smuggling in closed coffins. A burial practice that has been handed down from Mycenæan times, and is still followed, is that of burying in the grave articles cherished by the deceased. The modern Greek method, however, is to place the souvenirs in a glass-case at the head of the grave.

The primitive agricultural methods of Greek Macedonia are noted by our author, and in keeping with them is the poverty of the people concerned. A variety of circumstances may be held to have been responsible in the past, and it will be of interest to see whether the Allied occupation of the country round Salonika, which has brought a sense of security to the inhabitants never experienced before, in addition to such practical advantages as roads and motor transport, will mark the opening of a new era in this matter. Into the question of the relation between ancient beliefs and superstitions on the one hand and a backward state of civilization on the other there is no need to enter. Many of the picturesque survivals of past times will be regretted, if they have to be sacrificed to the cause of progress; but it is impossible to read Miss Garnett's attractive book without being reminded that the troubles of Europe for some time past have been intimately connected with the Balkans and have arisen in part from the failure of the Balkan peoples to advance as rapidly as the more Western nations.

It is not possible within the limits of a review to do justice to Miss Garnett's excursions into Balkan folk-lore or to her detailed descriptions of home-life. She rightly says that "it would prove a stupendous, if not an impossible, task to collect all the folk-beliefs and customs of the Balkan Greeks and their neighbours." In regard to the Osmanlis, her account of the status of Turkish women will be read with special interest, and will, no doubt, clash with many preconceived ideas on the subject. She does not apparently hold with the theory that associates harem life with prison bars. The existence may be an empty one, but, on our author's showing, it cannot be called irksome; and now have we not accounts of Turkish V.A.D.'s or similar amazing developments? It may be, however, that harem life depends upon the harem and the husband. A conscientious foreign observer, studying British customs and beliefs before 1914, might have heard the women of Great Britain described on many a suffragist platform in such terms as would have satisfied him that "slavery" was still the rule in this country. Such are the limitations that present themselves to all who set out to obtain a generalized picture of a foreign people. Much depends on the attitude of the investigator, and on his or her qualifications. Fortunately, Miss Garnett occupies a strong position. Her knowledge of the people she describes is intimate, and with it she combines sympathy and thoroughness.

* "Home Life in the Balkans." By Lucy M. J. Garnett. (London: Methuen and Co. Price 10s. 6d. net.)

SOMEWHERE NEAR ARMAGEDDON.†

"O, unbeliever, we have in no wise need of the friendship of unbelievers!" So Shah Tahmasp to Anthony Jenkinson and Edward Clarke, who had journeyed in 1562 through the dominion of Ivan the Terrible, *viâ* Moscow, the Caspian Sea, and Guilân, to proffer presents and friendship from Queen Elizabeth. But history is an ironic jade; and the actual Shah of Persia has now to make up his mind as to the respective values of the present offers of friendship from King George and Kaiser Wilhelm. He might even be glad of the active amity of two other "unbelievers," the Emperor Yoshuhito and President Wilson. But choose he must, and now this is the question: "Do you wish the whole of your country to become a battleground, or only a little corner of it?" or, as put by Kaiser Wilhelm: "Do you want a really decent Armageddon à la Prussian militarism? We feel sure you must say yes." Probably the Shah and his advisers have already decided which way health and wisdom lie, and the Allied champions of a clean earth also.

The province of Guilân hugs the south-western shores of the Caspian Sea, and is somewhat in the shape of a pear. It is about the size of the Counties Kent, Surrey, Sussex, Hants, Wilts, and Dorset, or two-thirds of Wales, say about 3,500 square miles. The whole western and southern boundary is delimitated by great mountains sloping east and north towards the Caspian, and enclosing a crescent-shaped, fertile, river-scored plain. Our author's book describes it geographically, economically, and historically in great detail, and it is from the latter section that we take our early and striking quotation. Resht, its capital of over 30,000 inhabitants, is probably by now in the hands of the Bolsheviks, alias Germany. So far as the man in the street knows, it is somewhere near to Armageddon, and our only potential outpost is 7,000 South Persia Rifles. very much south. The three pawky maps are, for a bulky volume like this, distressingly inadequate.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. April.	1918. March.		1336. Jomada II.	5678. Nisan.
5	23	Friday	23	23
6	24	Saturday.....	24	24
7	25	Sunday	25	25
8	26	Monday	26	26
9	27	Tuesday	27	27
10	28	Wednesday	28	28
11	29	Thursday	29	29

H.H. the Raja of Ratlam is staying at Harrogate.

Madame Take Jonescu has left London for the country.

The present session of the Bulgarian Parliament has been prolonged until April 7.

Dr. Ante Trumbitch, President of the Jugoslav Committee, has left London for Rome.

The Dowager Marchioness of Dufferin left London on March 27 for Clandeboye, Belfast.

The Countess of Yarborough has arrived in town from Brocklesby Park, Lincolnshire.

General Danglis, Commander-in-Chief of the Greek Army, is paying a visit to the Salonika front.

All over India prayers are being offered for the success of the British and Allied Armies.

Lieutenant-Colonel N. Arion, C.M.G., Military Attaché to the Roumanian Legation, arrived in London from France last week.

M. Jean Caradjas, who has been appointed First Secretary to the Greek Legation, arrived in London on April 2 and took up his duties.

Lord Willingdon, Governor of Bombay, sailed from Bombay at the end of last month on a short sea voyage to recuperate from his hunting accident.

It is stated that the persecution of the Greek and Armenian population in the villages along the coasts of the Black Sea is proceeding on a scale which will mean regular extermination.

Colonel George Ostoitch, the newly-appointed Military Attaché to the Serbian Legation in London, arrived in London on April 2 from Salonika. He is aide-de-camp to the Crown Prince of Serbia.

The Persian gun captured in Mesopotamia by General Maude, which is to be placed in Trafalgar Square, is one of four guns found by the British troops in Baghdad when they entered the city.

Reuter's Athens correspondent states that, as a result of the charges brought forward by the Public Prosecutor, the court-martial has ordered criminal proceedings to be taken against ex-King Constantine.

After proclaiming the independence of the country, the Diet of the Caucasus has approved the basis of separate peace with Turkey, providing for the re-establishment of the 1914 frontiers and the autonomy of Armenia.

Colonel Nicolaievitch, formerly Military Attaché to the Serbian Legation in London, who has been appointed in the same position to the Legation in Belgium, is leaving London this week for Havre to take up his duties.

M. de Strandtman, First Secretary to the Russian Embassy in Rome, has refused to accept promotion at the hands of the Bolshevist Government, and has joined the Serbian Army as a volunteer on the Macedonian front, with the rank of captain.

The Anglican Bishop in Jerusalem, Dr. MacInnes, was enthroned at St. George's Church on March 1, in the presence of a large gathering, including the Grand Rabbi of Jerusalem, a representative of the Mufti, and representatives of the Greek, Armenian, Coptic, Abyssinian, Syrian, and Protestant Churches.

A "Book of Thanks," a record of appreciation of a gift of £5,000 for the benefit of munition workers, has been sent to H.H. the Maharaja of Gwalior by the Welfare and Health Section of the Ministry of Munitions. The "Book of Thanks," a beautiful volume, bound in Indian blue leather, illustrates by means of photographs the purposes assisted by the Maharaja's foresight.

The Sultan of Turkey has conferred on Field-Marshal von Hindenburg the Medjidie Order, with brilliants and swords, and on General von Ludendorff the Iftihat Order, with brilliants and swords, "on the occasion of the recent victories."

A Royal Warrant issued in Army Orders states that the King has authorised the altering of the title of "The Camel Corps" to "The Imperial Camel Corps," and that it shall be deemed to be a Corps for the purposes of the Army Act.

M. Michel B. Boerescu, the Roumanian Chargé d'Affaires, entertained at luncheon on April 2 M. D. de la Chaussée, Secretary to the French Embassy, and General Georgescu, the representative of the Roumanian Army attached to the British Headquarters.

The marriage arranged between Lieutenant Harold Rodocanachi, R.F.A., second son of Mr. and Mrs. Pandia Rodocanachi, and Melita, elder daughter of Mr. and Mrs. Vassiliadi, will take place at the Greek Church, Moscow Road, on Thursday, April 11, at two o'clock.

Out of consideration for the susceptibilities of the Queen of Roumania, who declared, says the *Weserzeitung*, that she would never return to Cotroceni if the peace negotiations were concluded there, the negotiations with Roumania have been transferred to the Ministry of Commerce.

The Viceroy of India, with the approval of his Majesty, has appointed Sir E. V. Levinge, K.C.I.E., C.S.I., I.C.S., to act as Lieutenant-Governor of Bihar and Orissa during the absence of Sir E. A. Gait, K.C.S.I., C.I.E., I.C.S., who has been granted leave on medical certificate for six months from to-day.

The Church Missionary Society has received a cable stating that Dr. Vernon Harold Starr was stabbed at Peshawar on March 17, presumably by a fanatic, and that he died twelve hours later. He joined the staff of Peshawar Hospital in 1910, and exercised a notable influence upon the hill tribes as well as the people of the Peshawar Valley.

It is notified in an Army Council Instruction that officers and men who have been returned home on account of malaria will not in future be available for posting to a theatre of war where malaria is prevalent—namely, Salonika, Egypt, Mesopotamia, or East Africa. They will, however, be available for other theatres of war when otherwise fit.

While the economic negotiations between Roumania and the Central Powers are proceeding the chief political negotiators will return home. Talaat Pasha has left, and will be followed by Count Czernin, Herr von Kuhlmann, and M. Radoslavoff. When the economic negotiations are ended, the negotiators will return to Bucharest to sign the treaties.

The Duke of Connaught arrived here this morning, says Reuter's Athens correspondent in a message dated April 1, and was received on the landing stage by Lord Granville, the British Minister, the staff of the British Legation, and a representative of the Greek Minister for Foreign Affairs. To-morrow morning he will formally present to King Alexander the Order of the Bath, which was recently conferred on his Majesty by King George. On Wednesday the British Minister will give a dinner at the Legation in honour of King Alexander and the Duke of Connaught.

The following telegraphic message of congratulation has been received by Sir Douglas Haig from the Commander-in-Chief, India:—"The Army in India is watching with sympathy and entire confidence your conduct of the present struggle, and your old subordinates are convinced that you and your brave troops will see this battle through to a successful issue." Sir Douglas Haig replied as follows:—"All ranks of the British Army in France send grateful thanks for the message which you have been good enough to send to us. We are all greatly touched and encouraged by the sympathy and confidence of our comrades in India."

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

In the past two months, says *The Times* Delhi correspondent in a message dated March 22, Indian Army recruiting has beaten all records. The Punjab has contributed 25,000 and the United Provinces 12,000 combatants. Agricultural operations will influence recruiting in the next few months, but the general prospects continue excellent.

The following telegram has been sent by the King to General Marshall, the Commander-in-Chief in Mesopotamia:—"In the midst of the great struggle in Western Europe I wish to assure you that I follow with constant interest the splendid progress made by the gallant troops under your command. I congratulate you and all ranks on the success of your latest achievements.—GEORGE R.I."

At the instance of a few relatives and friends a proposal is now on foot for a national memorial to Lieutenant-General Sir Frederick Stanley Maude, K.C.B., C.M.G., D.S.O., in recognition of his great services to the Empire and to perpetuate his memory. It is proposed, under the sanction and with the approval of the Secretary of State for War and the Minister of Pensions, that this should take the form of a convalescent home for men maimed and crippled in the Great War. Suitable premises are available in the neighbourhood of London. Messrs. Cox and Co., 16, Charing Cross, S.W.1, and Sir C. R. McGrigor, Bart., 93, Panton Street, S.W., have consented to receive donations, which will be acknowledged in the Press.

The report of the Budget Committee dealing with the question of the allowance to ex-King Constantine (says Reuter's Athens correspondent in a message dated April 2) contains the following passage:—"The Greek State would not hesitate to grant to the ex-King the necessary means for maintaining himself outside Greece in as much luxury as is possible, but the question arises whether the ex-King deserves such generosity at the hands of the nation. It is common knowledge that he has not sincerely kept the engagements he took on leaving Athens. He has turned his house at Zurich into a reactionary and anti-national abode and a centre of intrigue against the most vital Greek interests, with the object of turning to the disadvantage of the country the rtsuggle in which she is engaged." The Committee expresses the belief that even should international undertakings authorise the grant of this allowance, "our great Allies, who are aware of what is going on in Zurich, will be willing to relieve Greece of her undertaking."

APPOINTMENTS, PROMOTIONS, ETC.

The King has approved the appointment of Mr. John Ghest Cumming, C.S.I., C.I.E., Indian Civil Service, to be a Member of the Executive Council of the Governor of Bengal, in succession to Mr. Nicholas Dodd Beatson-Bell, C.S.I., C.I.E., Indian Civil Service.

OBITUARY.

Mr. Edmund Elliot Lowis, late of the I.C.S., died at Weston-super-Mare on March 25 at the age of eighty-one. He retired in 1891.

Major-General Walter Stuart Hore, honorary colonel of the 120th Rajputana Infantry, died on April 1 at Lemore, Eardisley. He took part in the Abyssinian Expedition of 1867-8.

The death has taken place at Madras of the Rev. Christopher Francis Breay, senior chaplain of the Indian Ecclesiastical Establishment. He was educated at Merton College, Oxford, and went out to India in 1892.

Mr. Stapleton Cotton Hogg, late Assistant Financial Secretary, India Office, died at Hove on March 25, aged seventy-eight. He was the sixth son of the Right Hon. Sir James Weir Hogg, Bart., and brother of the first Baron Magheramorne.

Lieutenant-Colonel Samuel Arthur Cooke, Indian Cavalry, who died at Southsea on March 26 from illness contracted on active service, received his commission in 1890, and transferred to the Indian Staff Corps in 1891. He served in the operations on the North-West Frontier, 1897-8, and in the Tirah Expedition.

General Sir Alfred Gaselee, G.C.B., G.C.I.E., died on March 29 at his residence at Guildford, aged seventy-three. The son of the late Rev. John Gaselee, Rector of Little Yeldham, Essex, he was born in 1844, and received his commission in the 93rd Highlanders in 1863, transferring to the Indian Army in 1866. His war service included the Bezoti and Jowaki Expeditions, the Afghan War of 1878-80 (when he took part in the Kabul-Kandahar March), the Zhob Valley, Hazara, and Isazai Expeditions, while he commanded the British contingent of the Chinese Expeditionary Force in 1900. He commanded the Northern Army in India in 1907-8, and reached the rank of general in 1906, retiring in 1911. General Gaselee was created K.C.B. in 1898, G.C.I.E. in 1901, and promoted G.C.B. in 1909. He was aide-de-camp to Queen Victoria from 1893 till 1901 and to King Edward in 1901. He had been colonel of the 54th Sikhs since 1904.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

"NAVAL & MILITARY" HOTEL
HARRINGTON ROAD, SOUTH KENSINGTON, LONDON.
Only 200 yards from District Station and "Piccadilly Tube" (S. Ken. Station). For all Seryices and the General Public. Two Lifts. Excellent Cuisine. Exceptional Reception Rooms. 100 Bedrooms.
Cables: "NAVAMILOT LONDON." Telephones: KENSINGTON 5425 (4 lines)

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

MAKING HEADWAY IN THE EAST.

The centre of gravity in this war remains in the Western theatre, where it is believed that the point must sooner or later be reached at which the German nation will be compelled to admit the defeat of all the plans and aspirations that militarism has compelled it to make its own. But a variety of forces other than the men and material under the command of the Generalissimo of the Allied armies in France will combine to bring about that stage, and these in turn will be the resultant of influences at work beyond the confines of Germany. In spite of all the concentration of effort required for the mighty stroke that Germany has now delivered between the Scarpe and the Oise, she has found time to devote attention to the potentialities of Roumania and the Ukraine, with a view to counteracting the effect of the naval blockade. Similarly the Allied countries can testify to the confidence they have in their own cause by not losing sight of the advantage to be derived from the defection of Turkey and Bulgaria from the Central Alliance. These two States have contributed materially to the enemy's powers of resistance, and when they fall away the effect on Germany and Austria-Hungary will be more than a moral one. For this reason the Allies, in spite of the tension of the Western front, can afford to allow themselves to be heartened by the British successes in Palestine and Mesopotamia. The greater the defeat of Germany's plans in France, the more will she react to disappointment in the East. Unless the stupendous bid for an early decision, to which the Germans would now seem to be committed, has been prompted entirely by counsels of despair—and it will be well not to count too much upon this comfortable theory—we may feel certain that the progress of the Palestine and Mesopotamian forces is being watched anxiously at German Headquarters. All hope of obtaining further assistance from the Turks may have been abandoned, and their collapse may have been discounted long ago in the military plans of the Central Powers, but the task of announcing the fact to the German public will be an exceedingly unpleasant one for the Berlin Government, as it must shatter the last illusion remaining to that much-deluded people in regard to a war which has taken such a terrible toll of them in life and treasure.

The success at Khan Baghdadieh has proved as complete as that at Ramadieh last October, but with this difference—that General Marshall was able to follow at once in pursuit of the Turks who had escaped, and would seem to have accounted for practically the whole Turkish force immediately confronting him. The captures, he reports, prove to be of great importance, and much valuable information has been obtained. We may hazard the guess that it was on the strength of this information that the pursuit is being pushed with such boldness. Pressing on, part of the British force reached Anah, sixty miles above the scene of the fighting, which, to judge from the stores taken there, must have been one of the enemy's chief depôts on the Euphrates. Anah is one-third of the distance between Baghdad and Aleppo, and its occupation brings General Marshall and General Allenby equi-distant from the latter town, although the difference in the nature of the country ahead of the two forces presupposes a much slower rate of advance for the Palestine Expedition. Anah has since been left behind, and troops are now reported at Abu Kemal, seventy miles beyond. General Allenby, in turn, by cutting the Hejaz Railway, has freed himself from the menace of a flank attack, and there are possibilties in his geographical position which are necessarily lacking to General Marshall, with his base at Baghdad, several hundred miles from the sea. Distances of this nature cannot be annihilated when it is a question of equipping and provisioning a large expeditionary force; moreover, climatic conditions may sooner or later restrict the campaigning season on the Euphrates, although, if it were a matter of moving to a joint timetable, these are not likely to deter the veterans of Expeditionary Force D. Both in Mesopotamia and in Palestine the nature of the Turkish resistance bears out what is known from other sources, that the Turks as a fighting unit are in a bad way. Unfortunately they have in their favour the great distances that separate the nerve centre of the Empire from its outlying provinces, and the Turco-German authorities may feel reasonably confident that the issue of the war will be settled one way or the other long before the British forces can hope to reach Constantinople by way of Mesopotamia or Palestine. At an earlier stage in the war, it is understood, the Turks were saved at the eleventh hour from a complete collapse by our failure to press home the advantage we had gained. It is to be hoped that there will be no repetition of that mistake at this juncture. If the reports of the internal conditions in Turkey are held to be reliable, a comparatively small effort only may be required in support of the double thrust from the south-east and south to convince the Turks that, as far as they are concerned, the game is up.

While the main facts of the general situation are patent to all, and it is not difficult to see the direction or directions in which military action might profitably be undertaken, the question of its feasibility belongs to a closed book. Until it is opened by the responsible authority the subject may be left for another of some moment to the present and future well-being of the districts now in the occupation of British troops. In the general satisfaction evoked by Great Britain's decision to facilitate the national development of the Jews in Palestine, there is a danger of the feelings of the majority of the inhabitants of that country being overlooked. Before the war the population of the country was understood to be about 700,000, of whom 125,000 only were Jews. The frequent references to a Jewish Palestine have aroused, there is reason to believe, misgivings among the Syrian population, some at least of whom would seem to have formed the hasty conclusion that their future destinies are about to be committed entirely into the hands of individuals with whom, as neighbours, they may not have been in the past on the best of terms. Such fears, it ought not to be necessary to point out, are groundless. Well-informed Zionists are the first to realise that the time has not yet come—nor is it even in sight for the present generation—for an independent Jewish State. According to the author of "Palestine: The Rebirth of an Ancient People," local autonomy "is all that the Jews of Palestine ask—the development of the system which has already been inaugurated and whose success has been proved by experience." The Jews, he adds, desire no favours as compared with other inhabitants of the land. No official pronouncement regarding the future government of Palestine has yet been made; but both Jews and Syrians may be satisfied that the régime will be friendly to Great Britain, and therefore friendly to their own interests. There is every reason to suppose that the economic development of Palestine, mainly by the instrumentality of the Jews, will be of special benefit to the Arab population, and through them to the Arabs of the neighbouring lands. In this connection it is not without interest to note that the Hejaz organ *El Qibla* recently quoted with approval from a Syrian newspaper published in Brazil a warning that the Syrians who, in pursuit of safety or wealth, had left their country or had remained in it inactive and oppressed, must not expect to have a voice in determining its future, unless they take steps now to qualify for that privilege. Some allowance must be made for the enthusiasm born of Arab successes against the Turks; but the moral for the Allied Powers would appear to be that, in order to prevent the possibility of friction arising from misunderstandings, an early opportunity should be taken to make a clear statement with regard to the future of Palestine.

THE CAUCASUS.

ITS PEOPLE, HISTORY, ECONOMICS, AND PRESENT POSITION.

By D. Ghambashidze.

I.

The Caucasus has come into prominence very much lately, and as there is considerable ignorance about it, not only among the general public but in the English Press, it will be interesting to give rather detailed information on the subject.

Physical Features.

The Caucasus is situated between 38°-47° Northern latitude and 38°-50° longitude East of Greenwich. It borders in the North on the Don Cossack district and the Government of Astrakhan, in the South on Eastern Turkey and Persia, in the East on the Caspian Sea, and in the West on the Black Sea. It is divided by the chain of the Caucasian Mountains into the North Caucasus and Trans-Caucasia. The total area of the Caucasus is 272,000 square miles. The Caucasian mountain chain stretches from the Black Sea to the Caspian Sea, and is about 1,000 miles in length. The central chain from the mountain of Elbruz to Kazbek is about 130 miles long, and in some places about 18,000 ft. high. The highest peaks are :—Elbruz, 18,470 ft. and Kazbek 16,346 ft. The chain is intersected by four passes, the biggest among them being the Georgian military road between Tiflis and Vladikavkas. Among the rivers the most prominent are:—Kuban, 420 miles long; Ingur and Rion, 200 miles; Terek, 350 miles; Kura, 690 miles; and Aras, 520 miles.

The climate of the Caucasus is very varied, thanks to the vertical configuration of its surface and the unequal fall of rain. For instance, at Sochi, on the Black Sea, the rainfall is 3,000 mm., and at Baku 241 mm. per annum. In the western part of the Caucasus the climate is sub-tropical; in the eastern part dry, owing to the influence of the winds from the Trans-Caspian district. Under the protection of the Caucasian Mountains and plenty of moisture there is very rich vegetation, and at a height of 4,000 feet there are forests of oaks, beeches, chestnuts, boxwood, etc. In Trans-Caucasia the vegetation is of the same character as in Asia Minor and along the shores of the Mediterranean. Along the Black Sea shore and round Batoum are grown oranges, lemons, bamboos, cork trees, etc. At a height of 9,400 ft. there are wonderful rhododendra, and Alpine grass is met even at a height of 11,500 ft.

Among the animals, bears are prevalent, and near Lenkoran, on the Caspian Sea, there are even panthers and tigers. In the high mountains there are still to be met bison, wild goats, hogs, foxes, reindeer, antelopes, etc. Along the River Rion, in the western part of Georgia, there is an abundance of pheasants. Altogether there are 400 varieties of birds.

Population.

There has been much misunderstanding and exaggeration about the mixture of races in the Caucasus, some of the so-called "experts" having spoken of sixty races. In point of fact the mixture of races is similar to that of the Balkan Peninsula.

The total population of Caucasus is about eleven million, divided into:—

1. Russians: 2,400.000, chiefly Cossacks, in the north of Caucasus. In Trans-Caucasia the Russian population did not exceed—before the Revolution—180,000, including the army and sectarians. Total, 2,580,000.
2. Caucasian Mountaineers: (*a*) Circassians, 200,000; (*b*) Lesgians and Chechens, 680,000; (*c*) Ossetians, Nogais, Kalmyks, Ingushes, 395,000. Total, 1,275,000. With a few exceptions they are all Mohammedans.
3. Georgians: About 3,000,000, including 200,000 Mohammedans living in the districts of Batoum and Ardahan, and 300,000 Lazes living in the district of Trebizond.
4. Armenians: 1,490,000, living mixed with the Tartars in the districts of Erivan, Elisavetpol, Baku, and Kars.
5. Tartars and Persians: 2,300,000.
6. Germans: In the north of Caucasus, 42,000; in Trans-Caucasia, 18,000. Total, 60,000. The Germans were brought to the Caucasus from the south of Germany at the instigation of Emperor Alexander I.
7. Greeks: 60.000. They immigrated to the Caucasus from Asia Minor.
8. Jews: In the north of Caucasus 64,000. They immigrated from Palestina in the first century, and speak a mixture of old Hebrew and Tartar.

The variety of races inhabiting the Caucasus can be explained by the geographical position of the Caucasus as a bridge between Asia and Europe, over which many peoples have wandered. The historical transformations in Western Asia have always directly affected the development of the Caucasus.

History of the Caucasus.

From times immemorial, long before Alexander the Great, many peoples have tried to conquer the Caucasus. Big towns existed in that region long before Athens and Rome were known. Greeks, Persians, Turks, Skethians, Huns, etc., tried to obtain a foothold there. When speaking about the history of the Caucasus during the last five centuries, we have to consider the following three factors:—

1. The expansion of the Russian Empire towards the south and the constant desire to reach Persia and Turkey.
2. The continuous struggle of Turkey and Persia to obtain a foothold in the Caucasus.
3. The isolated position of the ancient kingdom of Georgia in Trans-Caucasia as a buffer between the clashing ambitions of Russia on one side and Turkey and Persia on the other.

From among the many races in the Caucasus, only Georgia existed as an independent and powerful kingdom up to the end of the eighteenth century. Georgia, or the Iberian State, existed long before the Christian era. The country received its first lessons in civilisation from the Greeks. In the third century B.C. Alexander the Great conquered Georgia and established his administration; but a national hero, Pharnavaz, organised a revolt, expelled the Macedonian governor, and founded the Georgian dynasty. During his reign Georgia was converted to Christianity by St. Nina. The Greek Emperor sent the bishop with priests to Georgia, and the King and the people were baptised in the year 332. King Vakhtang Gorgaslan (446-499) completed the conversion of Georgia, and Georgia became a considerable power in the Middle East.

In the year 458 the first Georgian Bishopric was founded at Metzkhet, and in 542 the Emperor Justinian recognised the independence of the Georgian Church, whose Primate was styled Katholicos-Patriarch. In the seventh century Georgia was invaded by the Arabs, and the ancient kingdom was split up into several principalities—Kakhetia, Imaretia, Mingrelia, and Abkhazia—so that the Arabs only ruled the country around Tiflis. Under David III. (1080) the country was again re-united, the Mohammedans expelled, and the greater Georgian kingdom, extending from the Black Sea to the Caspian Sea, and from the mountains to Kars was constituted. He reorganised the country, built churches and schools, and made Georgia a centre of culture and civilisation. The celebrated Queen Thamar reigned from 1184-1212 and her great achievements made the country famous. She successfully waged war against the Turks and the Greeks and helped to form the Empire of Trebizond. The period of her reign is considered the golden period in the history of Georgia; but soon after her death the Mongol hordes under Genghiz Khan invaded the country, and from 1236-1393 it was subject to constant invasions on the part of the Mongols, Tartars, Turks, and Persians.

The position of Georgia, as an isolated Christian Kingdom in the East, was very critical. She was surrounded by enemies such as Turks and Persians, and she naturally began to look towards the north, especially to the Moscovite country, where she expected to find sympathy and relief on account of the common faith. Soon, however, the Tartar invasion stopped all connections between Russia and Georgia. The latter opened up very close relationship with Byzantium, and only when Constantinople was taken by the Turks in 1453 was Georgia obliged to look towards Moscow. After the suppression of the Tartar rule Moscow rulers began to pay attention to the Caucasus. In 1555 Ivan the Terrible sent some Cossacks down the River Terek, who in 1567 formed a military district. The son of Ivan the Terrible, Theodore, opened diplomatic relationship with the Georgian King Alexander II. But this was also interrupted, as there were no proper communications between Georgia and Russia.

From 1602-1607 Persia started to invade Georgia, and tried to prevent any alliance between that country and Russia. They took from Georgia about 15,000 prisoners and made a colony of them in Persia near the town of Shiraz. In 1619 the Georgian King Theymouraz approached the Russian Tsar Michael Theodoravitch with a view to organising a combined expedition against Persia. But the proposal was not executed. The infuriated Shah of Persia again invaded Georgia, which was unable to obtain help from Moscow as, at that time, Russia was at war with Poland and Sweden.

The next King of Georgia was Vakhtang VI., a very learned ruler and founder of the first Georgian printing office in Tiflis in the year 1712; he edited the ancient Georgian annals, and was the author of the code of law of Georgia. Peter the Great was very anxious to extend his influence round the Caspian Sea and to penetrate into Persia and, for that purpose, he concluded an alliance with Vakhtang VI. and built sailing ships for transporting troops from Astrakhan to Persia. In 1721 about 50.000 Russian troops arrived at Derbend, occupied Derbend and, in conjunction

Digitized by Google

with the Georgian troops, proceeded further to Baku. Persia did not take up the challenge and ceded to Russia, Derbend, Baku, Gilan, Mazandaran, and Astrabad. But Turkey was very much alarmed and immediately occupied the Persian provinces of Tabriz and Erivan.

With the accession to the throne of Katherine I. relations with Georgia were renewed, and Vakhtang VI., together with a thousand representative Georgians, went to Moscow, where this colony was of great assistance in cementing the relationship between Russia and Georgia. Many notables received vast estates in the Ukraine. In 1727 King Vakhtang acted as mediator between Persia and Russia, and concluded a very favourable treaty for Russia. But in 1734 Persia again invaded her lost provinces and retook them. King Vakhtang waited in vain for the arrival of troops from Russia and, being very much distressed, died in 1737 in Astrakhan, where he was buried in the Uspensky monastery.

The Crown Prince Vakushti was, at that time, in Moscow, where he organised a very big printing office chiefly for the publication of ecclesiastical literature. He was educated by Catholic missionaries in Tiflis, and was a very good linguist. His book of the geography of Georgia is still recognised by the Academy of Science as the best reference book. In the reign of Queen Elizabeth, according to the Treaty of Belgrade—1739—between Russia and Turkey, the north-western portion of the Caucasus was entirely abandoned to Turkey. In 1747 the Georgian Army defeated the Persians and annexed the provinces of Erivan and Ganja, making them tributaries to the State. In 1754 Persia again invaded Georgia, and was again defeated.

With the ascendancy of Katherine II. to the throne of Russia, relations with Georgia were once more reopened. At that time a celebrated King, Heraklius II., reigned in Georgia, whose great intellectual capacity and fighting power was so enormous that Frederick the Great of Prussia sent a special military mission to make inquiry about his methods of warfare. Katherine the Great, in her letter to Voltaire, praised him very much for his stubborn fighting with the Turks and Persians in defence of Christianity. In 1768 Russia declared war on Turkey, and concluded an agreement with King Heraklius II. for joint action, and sent an expeditionary force to assist the Georgians, commanded by General Gottlieb Kurt Heinrich von Totleben. In 1769 the Russian Expedition arrived on the frontiers of Georgia, and, after receiving formal permission to pass the Georgian territory, joined the Georgian Army. On March 17, 1770, the joint forces attacked the fortress of Akhaltsykh, but Totleben treacherously turned back and abandoned Heraklius. A very stubborn battle was fought against the superior forces of the Turks, and the latter were heavily defeated. But they recovered and, together with Persia, began to press Georgia very heavily, and it was decided to enter into formal alliance with Russia, for which purpose a special delegation was sent to Russia. But the policy adopted against Turkey by Russia at that time did not permit of the conclusion of the treaty.

Meanwhile, Katherine began very energetic work in constructing fortresses in the north of the Caucasus. In 1782 the Ukrainian Cossacks settled there and founded the town of Ekaterinodar. In 1783 Crimea was annexed, and the Crimean Khan Shagin-Girey was defeated by General Suvoroff. This alarmed Turkey and Persia very much, and they again began to invade Georgia. As no help came from Russia, King Heraklius despatched a special delegation to the Austrian Emperor Joseph II.—mediation was offered by the Catholic Missionaries Dominique and Mavros—asking for an alliance for combined action against Turkey. The suggestion was very favourably received, but Katherine II. hurried to prevent such an alliance, and sent a special delegation to Georgia headed by Count Potemkin. This delegation was met by the Georgian envoys Princes Bagration and Chavchavadze, at the fortress of Giorgievsk, and the Treaty of July 24, 1783, was concluded between Russia and Georgia.

This Treaty contains thirteen articles and four supplementary articles, and was printed in the Russian Code of Law in Petrograd in 1831. According to it the Russian Empire granted protection to the isolated Christian Kingdom of Georgia. It solemnly promised to respect its internal independence and the dynasty. Georgia had full right to maintain its national army and Russia had no right to interfere internally. It also promised to respect the independence of the Georgian Church. In return, Georgia was obliged to give assistance to Russia in her wars with Turkey and Persia, and if such wars had been waged successfully, Russia would have been obliged to return to Georgia the territory recovered from Turkey. This Treaty was ratified by both monarchs, and it has its international importance and value.

On January 27, 1784, Russian troops arrived in Tiflis—but this alliance infuriated Turkey and Persia, and they invaded Georgia in 1785. At this time the second war on Turkey was declared by Russia, and on October 14, 1788, the Turkish fortress of Anapa was attacked and captured; but, according to the Treaty of 1791, at Jassy, it was returned to Turkey.

Meanwhile, Persia invaded Georgia in 1795 with eighty thousand men and, as there was no help forthcoming from Russia, after a stubborn fight the Georgians were defeated and the Persians occupied Tiflis. In 1796 a relief expedition arrived from Russia commanded by the Georgian General Prince Tsitsianoff. This expedition cleared the Persians out of the Georgian territory, threw them out of all provinces of Eastern Caucasia, and pursued them up to Tabriz. But the relief expedition again returned to Russia, and Georgia was left alone. Thanks to the urgent requests of the Russian Ambassador in Tiflis, General Kovalski, a new expeditionary corps was sent.

On January 18, 1801, Russia violated her Treaty with Georgia, annexed that country and made it a Russian province. The Russian troops were commanded by General von Knoring. The behaviour of Knoring was atrocious. The expectations of Georgia were cruelly disappointed, and the Russian troops were despatched to the western part of Georgia which was ruled by King Solomon II. He offered resistance, and, being very badly treated, left the country and went to Trebizond, where he died in 1815, and was buried in the Greek Cathedral there. In 1827 another war with Persia broke out, and the Russian troops, commanded by the Georgian General Prince Eristov, occupied Erivan and Tabriz. According to the Treaty of Turkmenchai, February 9, 1828, Persia lost the province of Erivan, had to pay twenty million tomans as compensation, and had to abandon the right of maintaining the fleet on the Caspian Sea. The celebrated Russian writer, A. S. Griboedoff, took a prominent part in concluding this Treaty and was appointed Russian Ambassador in Teheran, where he was killed on January 30, 1829. His remains were transferred to Tiflis and buried in the Georgian monastery of St. David.

After the conclusion of the Persian war the Russian administration in Georgia began to withdraw all the privileges granted to the Georgian nation, and Count Paskevich acted with such harshness that the nobility and the people revolted, and the Provisional Government of Georgia was proclaimed. The revolt, however, broke down, and thirty-four Georgian generals and officers were deported to the north of Russia, where they received consideration due to their rank.

In 1829 war with Turkey broke out, the fortresses of Kars and Akhaltsykh were taken and, according to the Treaty of Adrianopol, Turkey was obliged to evacuate the Black Sea shores from Anapa to Poti.

At this stage a new religious movement began amongst the mountaineers of the Caucasus, under the name of Muridism, which originated from Asia Minor. It assumed a political character, and was directed against the Russian rule, which was so harsh, and facilitated the spread of this new movement. The leader was the celebrated Shamil. This genius among mountaineers baffled the world with his powers of resistance. The fight began immediately after the termination of the war with Turkey and continued till 1835. All the mountaineers of Eastern Caucasus were on his side. At that time Count Vorontsoff was appointed commander-in-chief of the troops operating against the mountaineers. He arrived in Tiflis and inaugurated a very friendly policy towards the Georgians, taking into consideration the very important military assistance which they were able to give against the mountaineers. Count Vorontsoff made improvements in the Civil Service of the Caucasus, and made special recommendations to the Emperor Nicholas I., to whom he wrote the following:—

"Every reform and measure introduced in Georgia must be carefully weighed, as this nation, which has voluntarily entered into alliance with Russia and whose services in defence of Christianity are immense, deserves every consideration. Harsh measures would not prevail, and would produce very tragic results."

The activities of Count Vorontsoff were many-sided, and he made numerous improvements which had very beneficial effects.

CORRESPONDENCE.

THE GERMANIC ALLIES.

To the Editor of THE NEAR EAST.

Sir,—Mr. Richard Bagot has done a public service in exposing in your columns the folly of those who imagine that Austria-Hungary can be detached from Germany and induced to sign a separate peace on any terms compatible with our war aims as defined by either Mr. Lloyd George or President Wilson. Our former relations with Austria, even if it were historically correct to speak of her as "our ancient ally," have nothing to do with the present situation. We might just as well—and with even more reason—talk of Prussia as "our ancient ally." All that we have to bear in mind to-day is that the Prussianised Germany of the Hohenzollerns and the Dual Monarchy of the Hapsburgs have stood jointly and severally for the last three and a-half years and still stand for the principles of ruthless domination over subject races against which we are pledged to fight to the bitter end. Count Czernin's language may occasionally be lest truculent than Count von Hertling's. But is there a single one of the many concrete issues involved in this war towards which his attitude differs in the slightest degree from that of the German Chancellor? There are apparently still some Englishmen to whom Czechs and Jugoslavs are mere names, and who cannot, therefore, realise what the perpetuation of Austro-Hungarian domination would mean to them, but even they can hardly ignore the significance for all oppressed nationalities under the Hapsburg rule of Count Czernin's declaration that in fighting to preserve Hapsburg to Germany the Dual Monarchy is merely fighting its own battle. If for Count Czernin the question of Alsace-Lorraine has no more existence than for Count von Hertling, what chance is there of his admitting the existence of a Jugoslav question or a Czech question on which he would be prepared to negotiate with the Allies, or to agree to a settlement in any way based on those democratic terms of genuine self-government which can alone secure a real and permanent peace? German ascendency in Austria and Magyar ascendency in Hungary are the twin-brothers of Prussianism, and with it they stand or fall.

No less futile is it to attempt to differentiate between Austro-Hungarian methods and German methods. It was Austria's brutal ultimatum that precipitated, and was intended to precipitate, the war, and, if Serbia is more remote from us than Belgium, the martyrdom of the small Slav kingdom has been no less cruel than that of the unfortunate little country across the Channel, whose long-drawn cries of suffering reach more easily to our ears. And what of the treatment meted out throughout the war by Austria-Hungary to the alien nationalities under her own rule? Such a record of arbitrary arrests and transportations and hangings and shootings even her German allies can hardly beat. There was one occasion when Austria-Hungary, had she wished to dissociate herself in the slightest degree from German frightfulness, might have done so without any detriment to her own belligerent interests, as she necessarily plays a very subordinate part in naval warfare. That was when Germany made her announcement of ruthless submarining. It would have been at least a sign of grace had she confined herself to tacit acquiescence in her ally's action. But, far from that, she went out of her way to proclaim her endorsement of it. Again, more recently, she seemed for a moment to have some searchings of heart as to participation in renewed German aggression upon prostrate Russia after the Brest-Litovsk "Treaty," but if she ever really had any, they soon evaporated, and her armies marched shoulder to shoulder with the Germans to fresh "victories" in Ukrainia. As to the sort of peace which alone commends itself to Austro-Hungarian statesmanship, have we not just had a sample of it in the terms imposed upon derelict Rumania?

We have a hard row to hoe, but we shall make it none the less hard by courting fresh illusions. Prince Lichnowsky's memorandum must surely have convinced even our blindest Austrophils that Austria-Hungary shares to the full the blood-guiltiness of Germany in regard to the origin of the war, and there is not a phase of the war during the last three and a-half years in which she has not continued to share Germany' rssponsibility for the methods and purpose with which the war has been waged. How, then, can there be peace between us and Austria-Hungary when no Englishman worthy of the name would venture to talk of peace between us and Germany?—I am, etc.,

VALENTINE CHIROL.

THE PRESS ON THE NEAR EAST

Jewish Settlements in Palestine.

It is up to the Jews, in common parlance, to make good in Palestine. The basis of their future organisation, if it is to be successful, must be production; for this reason importance attaches to the record of the settlements which hitherto have represented all that Zionism has been able to point to in support of its aspirations. A correspondent of *The Times* gives an account of some of these settlements as they were found by the Expeditionary Force. He writes:—

The Southern Palestine colonies are tidy villages, with lands which are far more thoroughly and scientifically cultivated than almost all the Arab estates or the Turkish Crown lands in the Plain of Sharon. The writer visited several Jewish colonies in the plain and in the foothills of the Judæan Plateau, and one of the two small colonies which exist in the mountains of Judæa. Of those in the plain, Rishon Le Zion and Rehoboth may be taken as typical. The former colony lies a few miles south-west of Jaffa. It is inhabited mainly by Jews of Russian origin, and was founded in 1882, and, after some fifteen years of difficulties which were surmounted largely owing to the munificent assistance of Baron Edmond de Rothschild, became, and is now, a thriving agricultural settlement well known throughout the Levant on account of the attribution of its name to the good wine produced by Palestine colonies, and Rishon in particular. It boasts the most capacious wine cellar in the world, contains three large wells, a club, a good library, public baths, which are much appreciated by our troops who are quartered near the municipal buildings, and a hospital with six wards. There are over 1,300 inhabitants living in stone houses, each with its garden around it—a physically and mentally active and healthy folk, who cultivate some 3,000 acres. A fine palm grove and long avenues of trees along the streets give the settlement the appearance of an oasis amid rolling plains, flowery green enough during the rainy season, but dry brown in the summer, which lie between the coast dunes and Ramleh.

Four miles south thereof lies Rehoboth, founded in 1890 by Russian-Polish Jews. It has a population of over 900 souls, including 270 Yemeni Jewish workmen, whose introduction proved a great success. Here, too, as in almost all Jewish colonies, each family has its own house, not luxurious but comfortable, well built, with garden and stable. The wide, sandy roads that run through the village are bordered with avenues of mulberry trees. The communal buildings and the notably large "Beth-am" or people's house, synagogue, and library show that here as in other Jewish colonies material comfort is far from being the only object attained. The population is impressively healthy, and the writer has seldom seen so many pretty children as in Rehoboth. Altogether here is a model agricultural community of independent and prosperous smallholders.

The Ex-Khedive.

The association of the ex-Khedive with Bolo in an abortive attempt to play Germany's game in France is the theme of an article in *The Fortnightly Review*, in which Sir Malcolm McIlwraith rings down the curtain on the public life of Abbas Hilmi. He fears that amid the mass of evidence given before the court-martial the precise rôle and participation of the ex-Khedive and of his satellite, Yussef Saddik, may not have sufficiently emerged for the British public.

And in view of the great importance which this personage has had for us in the past as the Sovereign of Egypt, with whom we had to deal for upwards of twenty years, and who, throughout that period, exercised far more power and influence in the country than is usually realised in England, it is desirable to draw attention to his conduct briefly before it passes into oblivion, amid the many more weighty matters which absorb us at the present time. Its importance lies in the fact that—as perhaps we have now learnt by the tragic events of 1914 and since—we are, as a nation, somewhat too prone to underestimate both the reality and the dangers of the hostile sentiments entertained towards us by other nations and their heads; and, even after such revelations, to treat them, once we are "out of the wood," with exaggerated and sometimes foolish generosity.

Sir Malcolm McIlwraith pieces together the story of the intrigue as far as it concerns Abbas Hilmi, and shows how it fits in with what was already known of the ex-Khedive's character and special weaknesses. He considers Saddik to have been the chief villain of the piece, for it was he who first met Bolo and introduced him to the Khedive.

This man, he continues, was originally a lawyer of good ability, and was at one time one of the native judges of the Mixed Tribunal of Mansourah. He early became prominent, however, in that quiet little town, by noisy demonstrations of bitter Anglophobia and political intrigue; and since judges, even in Egypt, cannot be allowed to mix themselves up habitually with seditious propaganda, he was removed from the Bench. Thereafter, he became a financial broker, and, developing considerable business ability, is supposed to have made large sums of money at different times, which he spent with equal facility. Later he was taken into the personal service of the Khedive and filled many positions in his household, both in Egypt and in Constantinople. His

Digitized by Google

main duty, however, was no doubt to look after his Highness's very complicated financial affairs, and he usually accompanied him to Paris in the summer.

In the end the three confederates did in fact obtain many millions of marks from Germany, "that not usually too credulous Power," and then fell out over the division of the spoils. Saddik brought an action against the Khedive in Switzerland to recover a portion of the funds deposited in a Swiss bank. This supplied the French police with one of the first indications of what was going on. It led to the severance of the long connection between Saddik and the Khedive, and the former, attributing his dismissal to Bolo's influence, gave full information to the police agent Casella as to Bolo's relations with the Khedive. The projected coup, of course, was a failure, the Germans had paid their money for nothing, and tried to make Abbas Hilmi disgorge the funds he had received. In consequence he found it necessary to leave Vienna hurriedly, and returned to Switzerland.

Touching upon Bolo's excuse for having had dealings with the Khedive, an enemy of the Entente, Sir Malcolm McIlwraith quotes the saying attributed to the Khedive: "How could anyone ever say that I was the enemy of France," and adds:--

> "The truth is that, as some wise and witty Frenchman once remarked, 'En administration, on aime toujours quelqu'un *contre* quelqu'un.' During the many years in which we had to contend with French opposition in Egypt, the Khedive loved the French against ourselves. When we settled our differences with them by the Anglo-French Entente of 1904—and, still more, since the war—he has loved Germany against us both. If Germany should win the war and dominate the Near East, his affections would doubtless be transferred elsewhere, or, even possibly, at last be bestowed on us. Fortunately, it may be regarded, even now, as reasonably certain that Germany can never win the war sufficiently for the Khedive's sentiments to matter any longer. By this last adventure he has doubtless compromised himself almost as much in the eyes of the Germans as in those of the Allies, and no fresh political upheavals are conceivable under which so generally discredited a personage could return to public life."

Cyprus.

Captain K. C. Ferguson describes Cyprus as a neglected island in the current issue of *Chambers' Journal*, and in the compass of a short article he contrives to give us an interesting summary of its history, while introducing some pertinent remarks on the present and possible future. In 1878 *Pax Britannica* came to the land.

Our administration was somewhat hampered by the fact that Cyprus remained a Turkish possession. The scanty revenue of the island was burdened by the payment of an annual tribute to Constantinople, and the term of our occupation was vague. Such conditions did not favour the maximum benefit to the island. Nevertheless, clean-handed British officials set about improvements in the internal economy of the country. The Council, presided over by a High Commissioner, and comprising British, Turkish, and Cypriot members, worked as well as its peculiar constitution would allow. Between the Turk and the Cypriot there is no love lost, and, truth to tell, the former is in many ways the more acceptable. He has distinct manly virtues, and when he is guided by methods more enlightened than his own, the evil traits in his character cannot assert themselves so lamentably. In a few years there came about a state of things unknown to the existing generation of Cypriots. Good roads replaced the roughest mule-tracks. A well-organised police force assisted in maintaining law and order. Justice was administered. Agriculture was encouraged, and forests were conserved. The gratitude of the natives is on record. But to-day a new generation is to the fore, and the old evils are forgotten. Loyalty to Britain is not always found. When the first ambiguous account of the battle of Jutland came through, a noisy faction in Limassol held champagne lunches in honour of the British "defeat"! Tino had a considerable following.

Now, since the declaration of war with Turkey, Cyprus has definitely become a British possession; but, even so, the man in the street cannot yet tell what its fate may be in the coming peace settlement. The writer fails to see any good reason for handing it over to a foreign Power. The island is self-supporting. The ruinous tribute to Turkey has ceased, and with the fuller development of its natural resources its revenue will be greatly increased. In other words, it can run itself financially. No advantage would accrue to the natives were it handed over to Italy, France, or Greece, as some suppose it may be. Further, as has been said, it lies over against the mouth of the Suez Canal. Do we desire a foreign fortified base in this position? Britain has ruled the country for forty years, and the people know our ways. Some of them have told me that they dread the British may evacuate it.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Not the least interesting portion of the report prepared for the Bureau of Labour Statistics at Washington on social and economic conditions in enemy countries is the statement regarding the position in Bulgaria and Turkey. In the former country, owing to its predominantly agricultural nature, the food situation has been by no means acute according to the report. In Sofia itself, however, the position is stated to have been rendered difficult owing to the great increase in the population, which has considerably increased the complexities of distribution, and now "all new-comers who have no war business to keep them in the city have been ordered to leave." As regards supplies, the report refers to a statement by the Bulgarian Minister of Agriculture, quoted in the *Balkanska Poste* of July 17, to the effect that while the number of domestic animals had decreased, a sufficient meat supply was assured, and that there were 8,000,000 sheep in the country giving 5,000,000 lambs a year. According to the Minister, the chief food difficulty of Bulgaria has not been due to shortage but to transportation difficulties arising from lack of labour.

***

A very different picture is given in the report of conditions in Turkey, and one which, indeed, fully confirms the view that the civilian population there has been enduring extraordinary hardships. It is interesting to note the statement that the Turkish people have not been suffering through any failure of their crops, "for the crops have on the whole been good and the acreage increased"; on the contrary their food shortage has been due "to the corruption and graft of officials, and to the fact that Germany has taken vast quantities of Turkey's supplies away from her." The report adds that "this greed of Germany to supply her own lack and the extortion of Turkish officials combined have been more than sufficient to reduce the people of that country to a far worse condition than that obtaining in any of the other Central Empires, so called. In Germany and Austria the word starvation is still something of a figure of speech. In Turkey it is a word to be taken literally." The position is very aptly illustrated by the quotation of some of the prices which the Turks now have to pay for goods. Bread, it seems, has risen 1,100 per cent., sesame oil 1,300 per cent, wood 600 per cent., and butter something like 900 per cent.!

***

In the light of the appalling conditions that prevail in Turkey, it is possible to gauge very accurately the extraordinary "enthusiasm" with which the population views the continuance of the struggle. If only it were possible to take a plebiscite of the Turks on the question of peace at any price, I am convinced that the only votes for war would be cast by the leaders of the Committee of Union and Progress, and only by them because they fear Turkey's release from the German yoke will bring them well-merited punishment for the unhappy state into which they have brought their country. From the Allies' point of view the picture is most hopeful, for the Turks cannot be so blind as not to realise that they have to thank Germany for their food shortage, and I shall be very surprised if this knowledge does not eventually lead to such an intense hatred of Germany as to make any attempt on Germany's part to exploit Turkey after the war absolutely futile.

***

The past year has been most satisfactory for the Chartered Bank of India, Australia, and China, and for the first time its profits exceed four hundred thousand pounds, the figures being £402,795 as against £381,260 in 1916. The gross profits were £94,300 more than those of 1916 at £923,000, but the growth of expenses limited the net profit to £21,500. £100,000 is again placed to the reserve, while the amount allocated to the pension fund is increased from £20,000 to £25,000, and the amount written off premises is £40,000 as against £30,000. The distribution to shareholders has been increased to the record figure of 19 per cent. as against 17 per cent. in 1916 and 14 per cent. in 1915, and £167,261 is carried forward as against £157,465 in 1916 and £130,205 in 1915.

***

The results achieved by the Chartered Bank must be regarded as remarkably good in view of the fact that the Eastern banks have been compelled to place restrictions on the exchange requirements of their customers owing to conditions arising out of the war. Evidently whatever has been lost in this direction has been more than made good through the prosperity of Indian trade and in other ways. Before leaving this subject I feel that a word is called for regarding the exceptional financial position of this bank. The present allocation to the reserve raises that fund to £1,900,000, at which figure it passes the amount of the bank's paid-up capital by £700,000. Put in other words, the reserve is now equal to 166 2-3 per cent. of the capital. Deposits during the year showed a substantial increase of £4,416,000, the figure being £28,042,100, while cash and bullion increased from £5,919,700 to £8,739,300. With so gratifying a position before them, following a succession of such excellent years, it is to be expected that the shareholders will heartily welcome the proposal to increase the directors' fees from £6,000 to £10,000, which is to be made at the coming general meeting.

The report of the National Bank of India, which has just been issued, also discloses a marked expansion in profits, the total being £353,139 as against £297,474 in 1916. The dividend is maintained at 16 per cent., but in addition a bonus distribution of 4 per cent is proposed, making the yield 20 per cent. free of tax. £100,000 is placed to the reserve as against £50,000 in 1916, and the carry forward is increased from £106,689 to £139,829. Other points of interest are that the deposits have increased from £19,551,978 to £24,685,344, cash in hand from £4,397,834 to £7,081,381, bills of exchange from £9,592,894 to £12,076,258, and discounts and loans from £7,281,822 to £7,331,665.

***

I hope that those people who have seen fit to take exception to bank amalgamations in this country have been following the course of events in Germany of late. There is no misconception in Germany as to the influence on a country's commerce of strong banking institutions, and, indeed, it would be almost impossible that there should be, seeing the immense part played by the Deutsche Bank and its subsidiary enterprises in the Near East and elsewhere before the war. German business men are perfectly well aware of what they owe to their banks, and in consequence there has been a constant tendency during the war to strengthen their banking institutions with a view to an even more elaborate campaign of peaceful penetration in the future. Among the latest instances of this trend of events are the gradual development of the Dresdner Bank, which has absorbed the Rheinisch-Westfälische Disconto Gesellschaft in Aix-la-Chapelle, and also the Märkische Bank, and the extension of the influence of the powerful Deutsche Bank, which during the past few months has established quite a number of branches in the Near East.

***

This development of German banking enterprise is one of the principal factors to be taken into consideration with regard to post-war trade, and the only way to limit the operations of these banks is to oppose them by banking institutions of similar strength. Hence banking amalgamations here are essential—"a necessary evil" I suppose we shall eventually persuade opponents of the movement to admit—and it is also no less essential that our banks should take the same interest in foreign trade as their German rivals and establish branches abroad, and, generally speaking, give every facility to British overseas trade that the German banks have given their customers in the past. Failing that, as I have often pointed out before, campaigns to extend British commerce in foreign countries, and more especially in the Near East, can only lead to indifferent results.

COTTON-SEED UTILISATION.

British and American Methods.

Lancashire's need for new and greater sources of cotton within the Empire to meet the situation that will arise after the war, owing to the increasing extent to which America is utilising her own cotton, and also owing to the development of the spinning in India of Indian cotton (which, by the way, has never been altogether satisfactory from the Lancashire spinners' point of view) and also to its export to Japan, will no doubt result in a great increase in cotton acreage in Egypt, the Sudan, and other parts of the Empire. Happily this is not one of those cases where over-production is a thing to be feared, for the demand for cotton is practically unlimited, and the world can readily absorb all it can get. While there can be no difficulty on this point, so much cannot be said as regards the strains of cotton that are desirable. Here, there are two main factors to be considered which may or may not prove reconcilable. In the first place, spinners' requirements have to be satisfied. That is, of course, the main consideration, and the second and subsidiary factor concerns the requirements of the oil crushers who take the cotton seed which forms on the average something like two-thirds of the weight of a cotton crop. And at this point a further consideration arises. There are, as a matter of fact, two main systems of cotton-seed crushing. The British method has heretofore tended to subordinate everything to the production of cake rather than of high-grade oil, while the American method is so devised as to secure several products from the cotton seeds in the process of extracting a pure oil and making a pure cake.

It scarcely needs to be pointed out that the same variety of cotton seed is not suitable for the two systems. British crushers naturally prefer what is known as "bald" seed—i.e., seed that has little or no fibre left on it after the ginning process. The cotton which produces this seed does not fill a large place in the world's output, and most of it is grown in Egypt. By far the greater part of the cotton grown in the world is of the "Upland" or "Woolly" variety, and this type bears a quantity of short fibre as well as the long staple cotton. Probably over 95 per cent. of the seed grown in the United States is of this type, and the question is whether the results obtained there are such as to make it worth while for British crushers to adopt the American method; and, if so, whether it would be possible to produce sufficient cotton of the "woolly" variety within the Empire to meet their needs. It is not the purpose of the writer of this article to outline a policy in this connection, but rather to compare the British and American methods, particularly in the light of two inventions by Mr. Edward C. de Segundo, for which important results are claimed in the direction of obtaining still further products from the seeds.

The Two Systems.

The British method of whole-seed crushing is to take the seeds to the crusher straight from the cleaning machine. This method is not altogether satisfactory for a variety of reasons, the chief of which is that the resultant crude oil is highly coloured, and has a bad flavour, and the residue of the seed, after expression of the oil, contains the remains of the kernels and the shells with whatever fibre is left on them after the ginning process. The American system, known as the decorticating method, is first to treat the cotton seed to a second ginning process. One of the machines mostly used for the purpose is the "Carver Linting Machine" and in the best practice in pre-war days it was usual to take off by its means from 1 to 1½ per cent. of the fibre. This product, known as "high-grade linters," was readily saleable at a good price even before the war, but during the war it has attained a remarkable value. This first cut still left more fibre on the seed than is necessary for the separation of the kernels from the shell in the process of decortication, and so it has been the custom for United States millers to pass the seed through the linting machine a second or even a third time to remove all unnecessary fibre. The product thus obtained, called "second-cut linters" had practically no value before the war, though the war has given it a considerable, though an entirely fictitious, value. Then follows the decorticating process by which the shells are separated from the kernels, and to ensure the success of this process it is essential that sufficient short fibre should be left on the shells to enable them to mat together, as, in proportion to the extent to which the seed is unduly denuded of fibre the tendency of the shells to fall through the sieves with the kernels increases. Owing to the great war-demand for cotton fibre, the seed has been more and more closely linted during the last three years. Whereas in 1914, the average amount of linters made was about £65 per ton of seed, in 1917 it has risen to £148 per ton of seed, with the inevitable result not only of prejudicially affecting the quality of the linters made, but also lowering the grade of oil and of cake. After the decorticating process, the kernels go to the press-room and yield 15 per cent. to 19 per cent. of crude oil of a high quality, easily refined to an edible oil unrivalled for the manufacture of margarine and artificial lard.

New Processes.

It is maintained that as regards both systems, but more especially as regards the decorticating system, the position has been entirely changed by the introduction of Mr. de Segundo's "Seed Defibrator" and "Hull Defibrator." The former machine, which is intended to be used after the "Carver Linter" has removed the "high-grade linters," is designed to strip the fibre off the seed that the "Carver Linter" leaves on. This machine ejects the fibre and the cotton seed in different directions, and by an ingenious contrivance the very fine fibres and dust are also collected so that the cotton seed leaves the machine clean and free from dirt, while the fibre known as "seed lint" forms a new and valuable product in the place of "second cut linters." One of the chief merits of the machine is its ability to remove these short cotton fibres from the woolly varieties of cotton seed without injury either to the cotton fibre or to the seed. It has been stated by authorities on cotton seed in London and elsewhere, who have inspected woolly cotton seeds treated by Mr. de Segundo's Seed Defibrator, that the market value, from the British seed crusher's point of view, is thereby increased by about 20s. per ton owing to the physical conditions of the woolly seeds having been brought approximately to that of Egyptian or "bald" seed. As to the "seed lint" product it is believed that there will be an excellent market for it under peace conditions, and in view of its remarkably high cellulose content it may reasonably be expected to realise a correspondingly high price. A well-known firm of manufacturers of artificial silk in England have tested the seed-lint produced by this machine, for the production of artificial silk on a manufacturing scale, and have written to say that this material is in every way suitable for their purposes. Reports from Messrs. Cross and Bevan, consulting and analytical chemists, of London, show that the yield of cellulose obtained from seed-lint is as high as 86 per cent., or within a few per cent. of that yielded by raw long cotton. Thus, the material removed by Mr. de Segundo's Seed Defibrating machine, not only operates to enhance the market value of the woolly seeds, but is, in itself, a commodity capable of useful industrial application. This factor renders the machine a very useful one in the British system. Applied to the American (or decorticating) method, it would, of course, be set to leave enough fibre on the seed to prevent the hulls from intermingling with the kernels during the process of "decortication."

Mr. de Segundo's second machine, the "Hull Defibrator," is employed after the decorticating process, and is designed to deal with the 40 per cent. of hulls. This machine, which has been in use in the United States for some years, strips the hulls of whatever fibre remains on them (estimated at about 20 per cent. of the weight of the hulls) and delivers the fibre and the clean shells separately.

Naturally the amount of fibre removed at this stage depends on how much has been taken off by the "Carver Linting Machine" and by the "Seed Defibrator." The fibre has proved to be of good quality, and of considerable value for the manufacture of explosives and for paper making, though it is a product rather less fine than the "seed-lint" which is recovered from the seed direct before it has undergone the mechanical treatment in the decorticating machine, whereby the fibres are to some extent shortened. Nevertheless, the value of the hull-fibre, as produced by this machine, is evidenced by the fact that upwards of 7,000 tons have been

sold in the United States for the manufacture of explosives, and that this fibre was being used by papermakers in England in increasing quantities before the war. The remaining product, the shell-bran, or defibrated hull, is useful as a roughener in the manufacture of mixed feeds, possessing the great advantage that it is free from cotton fibre, which, as is well known, being largely composed of cellulose, is practically undigestible and possesses little or no nutritive properties.

In this brief outline of the present position with regard to the utilisation of cotton seed it has been impossible to do more than merely touch on the main points in the two processes, and it must be left to those concerned to say what modifications of the British system, if such should be deemed desirable, are most likely to serve our purposes after the war, when it will evidently be essential to utilise all our natural products to the fullest extent.

LANCASHIRE COTTON.

Market's Strong Tone.

(From Our Own Correspondent.)

Manchester, Wednesday.

Business in the market during the past week has been disturbed by the Easter holidays, and negotiations between buyers and sellers have been resumed in a rather half-hearted fashion. The tone remains strong, the tendency of prices being against buyers. A considerable demand has again been experienced in Egyptian cotton. We are still waiting for more information from the Government with regard to the distribution of the crop for next season. Rather varied success is being met with by spinners who have turned machinery on to the Egyptian staple. Producers of Egyptian yarns remain deeply sold, and combed qualities are particularly strong. Some users report a little more irregularity in carded counts. There has not been very much activity in piece-goods for Egypt. Clearances in Cairo, however, are said to be healthy. Shippers of cloth to India and China continue to receive poor advices from the other side. It seems quite impossible to lift prices in Calcutta, Bombay, and Shanghai more on to a level with Manchester values. Sized goods have been very slow, but a fair amount of inquiry has come through in finishing, printing, and bleaching descriptions. Prices in American yarns have hardened. Great scarcity exists in medium numbers of wefts. Ring beams are not easily obtained quickly. There has not been much doing in export bundles.

EGYPTIAN COTTON CROP.

It is announced in the *Board of Trade Journal* that it has now been ascertained that the total area in Egypt to be planted with cotton during the forthcoming season will be less by not more than 13 per cent., as compared with last season, and not 20 per cent. less, as stated in the previous issue of the *Journal*.

INDIAN COTTON.

The Committee appointed by the Indian Government to consider the possibilities of extending the cultivation of longer-stapled cotton in India is now busily at work. Reports to the British Empire Producers' Organisation make it tolerably clear that an immense increase in the Empire's cotton supply may be in due time expected from that country. It is true that until quite recent years the many attempts to introduce longer-stapled cotton into India had resulted—with a single exception—in hopeless failure. On the other hand, it has recently been demonstrated that, as far as climate goes, longer-stapled cotton can be grown over a very large part of the country, though for some districts a special type of this cotton may have to be evolved, as has already been done in the United Provinces and in the Punjab. Adequate irrigation will, however, in many districts have to be provided, and the cultivator will have to be ensured such a price for the new grade cotton as will induce him to grow it in preference to the short-stapled variety. These should not be insoluble difficulties.

INDIAN FINANCE.

The Second War Loan.

The session of the Legislative Council ended to-day says *Reuter's* Delhi correspondent in a message dated March 22. A number of Budget points have been debated at length during the past month. The Indian members have been unanimous in their expressions of approval of the Budget and of regret at the approaching departure of Sir William Meyer, member of the Council in charge of the Finance Department. Sir William Meyer having announced that the surplus for next year now stood at £2,582,000, and that an extra grant of £200,000 would be made to technical and agricultural education, reiterated his heartfelt acknowledgment of the generous tribute to his work from his non-official colleagues.

The Viceroy, in closing the debate, dealt with the importance of ensuring the success of the second Indian War Loan, and explained that the money would be entirely devoted to the purchase in India of foodstuffs and equipment for the Empire and the Allies. One reason for not imposing extra taxation was that a considerable surplus was anticipated and a very large amount of money had been transferred to England which could not at present be brought back for expenditure in India. Lord Chelmsford, referring to India's share in the war, said emphatically, "We are helping to the utmost of our ability." He hoped India would surpass her previous war loan effort, and urged the formation of unofficial propagandist committees to help the war loan, but condemned all undue pressure or compulsion. He associated himself fully with the tributes paid to Sir William Meyer, and said, "No man has spent himself more freely in the cause of the Empire. He has never failed to find funds for military purposes or hesitated in discharging the paramount duty of financing the military demands to the full. The Government," he said, "took responsibility equally with Sir William Meyer for the Budget proposals, and the Council deeply resented the unfair attacks which had been levelled at him."—

ENGINEERING NOTES.

Electric Machines for India.

According to an official report, electrical machines to the value of Rs. 3,613,000 were imported into India in the year before the war. As far as power machinery is concerned, however, electrical machinery for use in connection with water-power plants has the best future. There are at present two large works of this nature in India, the one on the Cauvery Falls, in Mysore, from which transmissions have been carried to the Kolar goldfields and the towns of Mysore and Bangalore, and the Tata hydro-electric works in Lanauli, near Bombay, which are to supply power for 900,000 spindles and 7,500 looms in Bombay. The total number of electric plants in India is already large, and is increasing. Most of the larger towns either already possess electrical works for lighting and tramways, or are on the way to establish them. Consequently the use of electricity may fairly be said to be only in its initial stage, and one may, therefore, confidently anticipate a gradually increasing market for electrical machinery. As there is no Indian machinery industry, everything that works require of this character must be imported. The greater part of the trade—in fact, 90 per cent.—was supplied, before the war, from the United Kingdom, whilst Germany and the United States followed a long way in the rear.

Small Motors for Egypt.

There is a considerable demand in Egypt for small motors (petrol motors, oil engines and gas engines), small electric motors for works, such as printing works, pumping, etc., dynamos for lighting purposes, and large motors for cotton-spinning works and large pumping plants. Great Britain has been the leading supplier of electric, gas and petrol motors, in spite of keen competition from Switzerland. Since the outbreak of the war, and especially the restrictions on the export of machinery from this country, American and Swiss agents have been very active in the Egyptian market. The former, however, are not making much progress in this line of machinery, owing, it is believed, to the idea among buyers that the cheapness of American productions is off-set by the cost of repairs and spare parts made necessary by defective working. They are, therefore, more disposed to purchase European machinery if and when they can get it. In view of this prejudice, American firms have made arrangements enabling repairs to be made as cheaply as possible in the country itself, at the same time availing themselves of every possible opportunity to give the natives a working knowledge of the machinery in order that they may avoid unnecessary breakages. The imports of the above class of machinery into Egypt in the year before the war amounted to nearly £500,000, and it will be a pity if through war restrictions, or the apparent inactivity of British manufacturers, foreign competitors succeed in securing the trade.

INDIAN SILVER RESERVE.

A further reduction in the holding of silver is shown in the Indian currency returns given below. The reserve of 1,075 lakhs is lower than at any period since February 19, 1906, when it was 1,060 lakhs. Commenting on the position, Messrs. Samuel Montagu and Co. say that a temporary lessening of the holding is far less material now that steps are being taken to release a portion of the extremely large stock of silver held in the United States against currency. If the proposed step is carried out the equivalent of about 155,000,000 ounces of fine silver will be at once available for such purposes as the United States of America may decide. Inasmuch as that country has urgent need of credits in India for the purchase of Indian products, and it has been decided to fix the cost of supplying rupees in India at 34½ cents per rupee, there is but little doubt that silver will be supplied by the United States for Indian coinage, as required, in order to render this arrangement easily operative.

GERMANY AND ROUMANIA'S CURRENCY.

Forced Note Issues.

When the Roumanian Government was compelled to leave Bucharest the National Bank of Roumania was placed in charge of a delegation consisting of two of the managers and two auditors, says the Paris correspondent of the *Financial Times*. All right to issue notes was taken from this delegation. The German authorities on arrival at Bucharest placed a sequestrator in charge of the bank who compelled the delegation to issue Bank Treasury notes for three, six and twelve months, bearing interest at 2½, 3½, and 4½ per cent. These Treasury notes were utilised in the following way. The district authorities, in order to cover the cost of local administration and the fines levied on them by the Germans were obliged to apply to the National Bank for advances to meet the calls made upon them. In order to provide the necessary cash to make these advances, the bank issued Treasury notes, discountable at any time at 1 per cent. over and above the face value. On the other hand, the German military authorities pay for all cereals and other objects in Roumania requisitioned by them in lei notes issued by the "Banca Generala Romana," which is the recognised emanation of the Berlin Disconto Gesellschaft, and which notes, issued by a specially constituted paper money committee at the said bank, are covered by German mark notes deposited with the Berlin Reichsbank by the Disconto Bank. The counter-value is issued in lei notes in Roumania by the Banca Generala. Thus while the "covering" German and Austrian notes remain at the Reichsbank, the lei notes manufactured at the Banca Generala paper money factory in Bucharest are issued as forced currency to Roumanians in payment of all purchases made by the German authorities and German troops. Thus this practically worthless paper currency—supposed to be covered in Berlin by German and Austrian notes in the hands of the Reichsbank—is the only visible sign of a vast portion of the private and public wealth of Roumania, and constitutes one of the forms of the so-called "peace without money indemnities" of the Germans. The Roumanians are thus left with paper issued by a local German bank, the Banca Generala, on cover, or supposed cover, of German and Austrian paper money deposited by a Berlin bank with the Reichsbank.

The Indian trade returns for February show an increase in imports of £1,990,000 and a decrease in exports of £724,000, compared with February of last year.

COMPANY NOTES & REPORTS

Chartered Bank.

The report of the Chartered Bank of India Australia and China states that the accounts show a net profit, after providing for all bad and doubtful debts, of £560,261, inclusive of £157,465 brought forward. The interim dividend at the rate of 14 per cent. per annum paid in September last absorbed £84,000. The amount now available is therefore £476,261, and the directors propose to pay a final dividend at the rate of 14 per cent. per annum, together with a bonus of £1 per share, making 19 per cent. per annum for the whole year, free of income tax; to add £100,000 to the reserve fund, which will then stand at £2,000,000; to add £25,000 to the officers' superannuation fund; to write off premises account £40,000, and to carry forward £167,261. A resolution will be proposed that the fees of the directors be increased to £10,000 per annum. The amount was fixed at £6,000 in 1906, and the business of the bank has been very greatly increased since that date. The dividend and bonus will be payable on and after April 17.

National Bank of India.

The report of the National Bank of India, Limited, states that the net profits for the year to December 31, after providing for all bad and doubtful debts, amount to £353,139, and, adding £106,689 brought forward, the available total is £459,828. An ad interim dividend at the rate of 16 per cent. per annum, free of income tax, was paid for the half-year to June 30, amounting to £80,000. The directors now recommend a further dividend at the same rate and a bonus of 4 per cent., making 20 per cent. for the year, free of income tax, and an addition of £100,000 to the reserve fund, raising it to £1,350,000. They propose to write £10,000 off house property account and to add £10,000 to the officers' pension fund, leaving £139,828 to be carried forward.

Bengal Dooars Railway.

The report of the Bengal Dooars Railway Company, Limited, states that during the second half of the year to September 30, 1917, the gross earnings were Rs8,69,312, as compared with Rs8,74,083 in the corresponding period of 1916. The working expenses were Rs3,76,075, against Rs3,96,578, and the net earnings were Rs4,93,237, as against Rs4,77,505. The coaching earnings for the year amounted to Rs4,35,773, compared with Rs3,97,309 for the corresponding year of 1915-16, an increase of Rs38,464. The total amount received on account of goods traffic was Rs12,84,193, against Rs13,72,603 in 1915-16, a decrease of Rs88,410. The amount at credit of the net revenue account is

£58,458. Out of this sum the directors have placed £8,000 to the credit of the reserve fund, bringing it, with interest, up to £138,714, and there then remains a balance of £50,458, which the directors recommend should be dealt with as follows:—In payment of a final dividend of 3½ per cent. on the ordinary stock for the year, and a bonus of 2 per cent. (both subject to income tax), £22,000, leaving to be carried forward £28,458. The ordinary stock dividend warrants will be posted on April 11.

Dividends, Payments, etc.

Messrs. J. Henry Schröder and Co. announce that they have now received funds towards the payment of the coupons of the Royal Roumanian Government Four and a-Half per Cent. Gold Loan, 1913, due on the 1st instant.

The Bank of England is prepared to receive the coupons due the 15th inst. on Egyptian Preference bonds.

Coupons for interest on the Greek Government 4 per cent. Loan of 1910 falling due on April 1 should be presented for payment, between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, or to Erlangers, 8, Crosby Square, E.C., where lists may be obtained.

Half-yearly coupons for interest on the Ottoman 4 per cent. Loan on the Egyptian Tribute, due April 10, will be paid on and after that date at the banking house of Messrs. Glyn, Mills, Currie and Co., 67, Lombard Street, E.C.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

This has been a very slack week, and the Easter holidays have contributed to the inactivity. Whilst on the one hand there has not been much pressure to sell, on the other hand buyers have been few and far between, and, in a general way, a waiting attitude is being adopted. The news which continues to come from Egypt remains of a most satisfactory character, and, with any general revival of confidence, the market should soon shake off its lethargy and go ahead once more.

Egyptian Unifieds are ½ down at 86½, but the business put through has been on quite a small scale. On the other hand, Egyptian 3½ per cent. preference remains firm at 74 with unsatisfied buyers, and sellers still scarce.

In Bank shares, Nationals have shed ¼ at 17¾, and Agriculturals 1-16 at 6 5-16, but transactions have been of a trifling character. In Agricultural preferences the price is 3-16 lower at 6 13-16, at which figure some fair amount of business has been transacted. Land Banks were nominally ¼ down at 6½.

As regards Railways, Delta Lights are 1-16 lower at 6 11-16, at which price some business has been done.

In the Land department there is a drop of ¼ in Behéras to 13¼, some small sellers coming on an unwilling market. Delta Lands have reacted 9d. to 13s. 9d., on some persistent small selling on a market devoid of support, but all the shares on offer at the lower level have now been taken. In New Egyptians there has also been a decline of 6d. to 17s. 9d.; but here also there has been good buying on the decline, and Egypt has also been purchasing again.

Amongst Miscellaneous shares, Markets are 3d. quieter at 26s. 6d., and Salts are 6d. down at 39s., there being good buyers for the latter at 38s. 6d., with sellers at 39s. 6d. In Khedivial Mails there is a decline of 6d. to 38s. 6d., but there are no sellers under 39s. The preference shares are unchanged at 3¾ xd.

Amongst Greek securities, there has been a further appreciation almost all along the line on buying for Greek account, but business has been rather restricted by the small quantity of stock offering. The 1881, 1884, and 1890 loans are all 1 point up, at 60 for the 1881 and 1884, and 51 for Larissas. Rentes have been done for a fair quantity round 48xd., which represents a rise of about 2 points since last week. Fundings have more than recovered their dividend at 54xd. The 1910 loan is also quoted about ¾ higher at 58xd. Bank of Athens shares remain a firm spot at 3¾, and there has been a persistent demand for Piræus-Athens 4½ per cent. bonds round about the current price.

ROUMANIAN OIL INDUSTRY.

According to the *Neue Freie Presse*, cited in a Vienna telegram to Sunday morning's *Vossische Zeitung* (says Reuter's Amsterdam correspondent in a message dated March 31), individual Roumanian oil enterprises will remain independent, but performing paid work for the Monopoly administration. The share capital of the Monopoly administration will probably amount to between 200 and 300 million francs. The administration will consist of representatives of Germany, who will be in the majority, Austria-Hungary, and Roumania.

INDIAN TREASURY BILLS.

Up to March 23 Indian Treasury Bills were sold to the following amounts:—Three months' bills, face value, Rs.13,31,35,000; six months' bills, face value, Rs.20,10,70,000; nine months' bills, face value, Rs.8,24,20,000; twelve months' bills, face value, Rs.88,95,000; total, Rs.42,55,20,000 (equal at 1s. 5d. the rupee to £30,141,000).

Egyptian Delta Light Railways—Coupon No. 41, due April 1, on the 5 per cent. debentures, should now be lodged at the Bank of England for payment.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Samoht, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc, Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances &c

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, PORT SAID, and KHARTOUM.

Subscribed Capital - - £1,500,000
Paid up Capital - - 500,000
Reserve - - - - - 710,000

The Bank undertakes every description of Banking Business on most favourable conditions.

IONIAN BANK, LIMITED.

Incorporated 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - 75,000

HEAD OFFICE—
25, Abchurch Lane, London, E.C.4.

BRANCHES—
Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Faschen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £850,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Anwaz, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

THE
GENERAL ANGLO-SERBIAN INDUSTRIAL & FINANCIAL COMPANY, LIMITED,
106, Bishopsgate, London, E.C.2

The Company has been formed to promote British Trade and Industry in SERBIA and other BALKAN STATES.

The Company is a Promoting Company, and is prepared to consider any proposals for the Financing and carrying on of any business in the above countries.

Agents in ROME, and as soon as circumstances will allow Branches will be opened in SERBIA and other BALKAN STATES.

Correspondence is invited from those interested in SERBIA and the BALKAN STATES, or contemplating business with these countries when communication is restored.

GRANT & CHINN,
The British Sanitary Engineers
of Egypt and the Sudan,
CAIRO and ALEXANDRIA.
Telegraphic Address: "TUBULAR."
Agents for SHANKS, OF BARRHEAD; and THE BERKEFELD FILTER CO.

NOTES OF THE WEEK.

The position on the Western front continues to absorb attention, and it will remain urgent and critical for months to come. How urgent it is may be judged from the fact that for the first time since 1914 the head of the Government has mentioned as a possibility—distant, indeed, but still a conceivable contingency—that we may have eventually to retire from France and to fight the war at sea. That we should continue to fight, even in those unhappy circumstances, while we have a boat left on which to mount a gun, is as certain as the rising of to-morrow's sun.

Mr. Lloyd George, in introducing his Man-Power Bill, did wisely to refer to the accusation brought against him by the extreme Westerners, that forces had been diverted from the Western to the Eastern fronts which might have saved the necessity of this further draft on our resources. It is perfectly true, as he said, that if you have an Empire you must defend it; the German menace to the East, which is still serious, owing to the collapse of Russia, might by this time have been excessively dangerous, even had Russia not indulged in a revolution, if we had let things slide in Mesopotamia and elsewhere. The Germans were making mischief in Persia with a view to our embarrassment throughout Central Asia long before our advance up the Tigris.

Similar arguments may be adduced in favour of the Palestine campaign, which was entirely preventive in its origin, although it has since been affected by larger political issues of international importance. The Germans have never forgotten the saying that Egypt and the Suez Canal are the spinal cord of the British Empire, but they are perceptibly further from that vital spot than they were two years ago. It may be a belated recognition of this fact that caused the Germans to send a division of their own men to Palestine, where they have been located east of the Jordan, or it may be that Turkey's appeals for help could no longer be disregarded.

Our three eastern campaigns—if the stranded Enoch Arden force, as it has been called, at Salonika, may be given that word—have taken four divisions, of which one is in Mesopotamia, and three are in Palestine and Egypt; the Salonika force has been reduced by two divisions. They have achieved very considerable results, and, in comparison with the ghastly Gallipoli gamble, they have won great success at small cost. It may, of course, be argued that these troops could have been used to better purpose in France. The subject is too large to be argued in a note; but had they been so employed, we doubt if (a) they would have turned the tide so far in the West as to have rendered the latest call-up unnecessary, or that (b) any British Government which cared in the least for our prestige in Asia or Africa could have ignored the steadily increasing menace which the Germans would have brought against us in the East, had we neglected more distant problems for the Western front.

The Turks have been in a grandiloquent mood this week. Besides their account of the Caucasus campaign, in which the percentage of truth and falsehood is difficult to analyse, they have issued a story of a great victory over the British in Palestine. They have beaten us so often in Palestine that it must be a matter of constant wonder to the intelligent neutral, if so unlikely a person exists any longer, how it is that General Allenby succeeds in advancing at all. Their latest exploit is to convert the British raid on the Hejaz Railway into a severe defeat; but as it happened that the railway was cut and destroyed according to our programme, we need not take the Turkish bulletin very seriously. It is interesting to note that even their inventive powers have not yet supplied a public explanation of the great British advance in Mesopotamia.

The raid had at least one important result—it located a German division east of the Jordan. It is probable that these men may have been sent down recently from Aleppo, the enemy headquarters, and it is possible that we may find more of them in reserve—the German manpower is not so short as some of our discredited prophets would have us believe. This new factor in the campaign will have to be taken seriously; it is conceivable that it implies a new German tonic administered to the fainting Turk. It may be remembered that some time ago the German Press remarked, with the suspicious unanimity born of Government inspiration, that the Pope's interdict on any attempt to recapture Jerusalem was unworthy of serious attention.

But the truth is apparently more depressing than fiction, since all these victories have failed to impress the Vice-President of the Turkish Chamber, who is now in Berlin. Hussein Jahid Bey has made a statement in the *Vossische Zeitung* regarding the painful position of Turkey. "Our efforts at the Dardanelles, in Galicia, and in the Dobruja," he says, "were naturaly bound to consume our strength to the point of exhaustion. All this fails to cause despondency, since we are convinced

Digitized by Google

that the decisive questions of the world will be fought out on the Western front. Therefore, we endure temporary misfortune in quietness and full confidence in German arms."

It is not for us to dispute the ardent Westernism of the Oriental, the more particularly since we are fighting in the West and Turkey is not; nor are we concerned to deprecate the stoic statement that Turkey is not despondent. But the two admissions of the Vice-President are ample—first, that Turkey has already consumed her strength to the point of exhaustion without profit, but rather with loss to herself; and, secondly, that Turkey is unable to reconquer her lost provinces, but looks to Germany to do it for her.

There has been exceptional military activity in the regions round the Black Sea. The Turks report a violent battle on both sides of Lake Van, the occupation by them of Vastan and Arin, an attack on Sarikamish, and the occupation of that town. They state further that the enemy was pursued in the direction of Kars, and that the Ottoman advance towards Batum is in progress. No account of these proceedings has been received as yet from the Caucasian Republic, but news is forthcoming that the Armenians have thrown the Turks out of Erzeroum—a matter on which the Turks maintain a corresponding reserve. In view of the existing difficulties of communication, it may be some little time before fuller information as to this new campaign is received.

On the other side of the Black Sea, the Germans appear not to have been idle. They announce the occupation of Ekaterinoslav, one of the great towns of Southern Russia, and the occupation of which is clearly intended to control the Crimea, as well as to hold another stage on the road to Astrakhan and the Caspian; the position in Odessa remains obscure. The Germans were reported to have been thrown out of that city some days back, but no confirmation of the report has been received, and their announcement to the Bolshevist Government that Odessa is to be regarded as the property of the Ukraine does not necessarily connote that Germany is a disinterested spectator of the contest. Negotiations are reported, however, for the neutralisation of the Black Sea—this following on a statement that the Russian Black Sea Fleet was preparing for action—and the sittings of the Commission to discuss the question are to be held at Odessa, according to the German papers, and not at Focsani, as the Roumanian and Ukraine authorities desired. In these negotiations, apparently, Turkey has invited Russia to participate, and M. Tchitcherin has accepted the proposal.

The sittings of the Commission will, of course, be dominated by Germany, who wishes to neutralise the Black Sea, in order to get rid of any obstacle which might trip up her stride to the East. Regarding the settlement of Roumania as accomplished, Bulgaria and Turkey as firmly bound to her, and the Ukraine as in process of peaceful absorption, the road is now clearing for her further advance, and it would not be surprising to hear of German troops on the Volga. Access to the Caspian Sea, of course, would at once be used as a means of stirring up trouble in Persia; and this is only the preliminary move, as it were, in the game, which aims at Afghanistan at least as much as at Persia. In the latter country, however, the Germans seem to have had even less success than in the former, if the account of German intrigues at Kabul, which was published in the *Vossische Zeitung* a fortnight ago, has any truth in it. One point, at least, in these revelations can be accepted without reserve—it is that M. Trotsky has shown "much sympathy with the idea that liberated (*sic*) Russia should co-operate with Germany in order to liberate India entirely from England." Whenever one hears the guttural Teutonic accent so clearly behind the mockery of Russian idealism one recognises the essential Bolshevist.

Apparently King Constantine is to forfeit his pension. Nobody can suggest that he has not deserved this treatment—the further revelations of his doings before his enforced abdication, and the reports of his proceedings since he has been in Switzerland, are sufficient condemnation of any tenderness being shown towards him by his late subjects. There can be no reason to doubt that he was at the bottom of the recent abortive mutiny, and an attempt at communicating with his supporters in Greece by means of a submarine is also credited to him. In these circumstances he can hardly expect to remain a pensioner of Athens; his proper course is to apply for funds to Berlin.

The exchange of messages between the City of London and the people of Mecca is a sign of the times. The Mayor of the sacred city of the Moslem world congratulates London on the "invincible heroism" of the British Armies in the West; we, for our part, cannot refrain from recognition of the work done by the Moslems in Arabia to free themselves from the Turkish yoke; an interesting summary of what has been accomplished in this direction was given by Lord Robert Cecil in the House of Commons this week.

Count Czernin's reputation for honesty, which had about reached the level of the German mark on the neutral exchanges before his recent speech, has now sunk to the level of the Austrian krone, since his exposure by M. Clémenceau; lower than this it can hardly go. In these circumstances, his attribution to Serbia of a desire to make peace with her enemies, a desire which he suggested was only restrained by the statesmen of the Entente, scarcely needed the indignant refutation which it received from the Serbian Government. We cannot, of course, gauge the cross-currents of Viennese diplomacy, but it would seem that the lie was not worth the telling, when it and its fellows were certain to be so quickly exposed.

The messages which have just been exchanged between the Prime Minister and Lord Chelmsford undoubtedly strike the right note in emphasising the danger to India from the existing situation in the East. The danger was realised almost instinctively in this country as soon as the collapse of Russia opened the road to German tyranny in Asia, but India's outlook on world-politics is still to a large extent conditioned by a past which has become irrelevant. She has been accustomed to rely through the centuries on her mountains and her seas, and has claimed the privileges of an unconcerned spectator in regard to events beyond these barriers; the claim has from time to time been refuted by hard facts, but the mental attitude persists, and these reminders will serve a useful purpose in bringing the realities of the situation home to people who would otherwise ignore them.

On the sea, indeed, there is no danger, so long as the British Fleet retains its mastery, but the passes on the North-West remain to tempt any adversary who commands the requisite forces, and India can never afford to shut her eyes to a menace in that quarter. It is a sign of the times that Lord Chelmsford should refer specifically to the need for awakening the people's leaders to a keener sense of the danger: the expression is, of course, susceptible of various interpretations, but taking it to apply to the prominent politicians, the darlings of leagues and congresses, no one conversant with Indian politics can deny that an awakening is needed, and by a curious coincidence the necessity has been illustrated by one or two items of news which have recently been published.

Mr. Tilak, for instance, would not, we believe, resent the suggestion that he might be described as a leader of the people, and on the very day when Lord Chelmsford's message was published we read that Mr. Tilak had declared his intention of telling the people of this country that, unless Home Rule were granted, they would stand in danger of their Empire being crippled, if not lost. That reads rather like a threat, and it will be interesting to see whether Mr. Tilak takes this line on English platforms, or whether the influence of the environment results in some modification of his attitude; at any rate, it is noteworthy as an illustration of the

Digitized by Google

provincial, if not parochial, outlook of one type of popular leader as the term is understood in India.

Let us turn to another "leader," the irrepressible Mr. Gandhi, who is now out to win the war by persuading Bombay peasants to refuse to pay their land revenue until certain differences with the authorities are adjusted to their satisfaction. If he will forgive the comparison, Mr. Gandhi strongly reminds us of the immortal swineherd Ho-Ti; his sense of the relation of means to ends is so peculiar that in another environment he would be quite ready to burn down a house whenever he wanted a dish of roast pork. He has a keen eye for a grievance, and, for all we know, the peasants may in this case have some grounds for complaint, but there can be no justification whatever for striking at the fundamental obligation to pay the revenue, almost the only indigenous institution which commands the unqualified admiration of the outside world.

We do not suppose that the Bombay Government will be seriously embarrassed by this action, but it may form an awkward precedent in the days that are at hand. "Responsible" administrations will have to collect revenue, much more probably than is collected at present, and Indian Ministers of the future will have small cause to thank the man who first taught the taxpayers to strike, a lesson which, once learnt, is certain to be put in practice at inconvenient moments. One is tempted to picture Mr. Gandhi as Chancellor of the Bombay Exchequer confronted with a peasantry on strike, and to speculate on the drastic measures he would be likely to adopt; but the picture is scarcely convincing, for, if there be one certainty in the future of Indian politics, it is that, whatever party may hold the reins of power, this gentleman will usually be found in opposition.

The *Rheinisch-Westfälische Zeitung* has published what purports to be the text of an appeal addressed by the Chief of the Druses to the Central Powers for help in repelling the British. How much truth, if any, there may be behind this report it is difficult to say. The Druses have always been regarded, and not without warrant, as a somewhat mysterious people. But in the past they have exhibited no particular liking for the Turk, while they have, on the other hand, shown a friendly disposition towards the British. In view of these facts, it is at least permissible to suspect that the German journal's information is not entirely trustworthy.

Surprise is being expressed in some quarters that the Central Powers have not shown any sign of evacuating Roumania now that peace has been signed; a statement in the Bucharest *Tageblatt*, however, shows that they have no intention of doing so, and that the people have, as hitherto, to render "unquestioning obedience" to the orders of the military. It may be assumed, therefore, that Germany will not withdraw what is in effect an army of occupation until she is satisfied that the keys of the whole situation are in her hands; and this will presumably include not merely the resignation of territory to Austria but the complete fulfilment of the programme of economic arrangements by which Roumania is to be exploited. Those who lean to the idea of a peace by negotiation in this country, if there are any such left, may well take note of these proceedings.

The Germans are also said to be initiating a political campaign in Roumania which is to set all parties by the ears, and in particular to be directed towards the exclusion of M. Take Jonescu from political life. This is the same manœuvre which was practised several years back against M. Delcassé in France, and which was tried, although without success, by the Germans against Lord Grey after Agadir, when they endeavoured to get up a campaign against him in the British Press as a provocative and impossible Foreign Minister. In this last case the myth was so absurd that only the *Daily News*, so far as memory serves, was credulous enough to swallow it; but it is a favourite German trick in many countries. The remedy is a simple one—to abate party controversies at home, and never to believe that a German speaks the truth even by accident.

THE PALESTINE CAMPAIGN.

It is now clearer, as many of us supposed last week, that our advance east of the Jordan was of the nature of a raid, and apparently our men have been withdrawn from the Mountains of Moab, not, as our enemies suppose, as a result of pressure, but by predetermined plan. It is, therefore, worth our while to estimate, as far as we can, the very substantial successes which will have attended this daring effort. First, it is clear that very important facts have been ascertained with regard to the strength of the enemy's position around Amman. It is evident that this very vital front has been powerfully fortified. Germans as well as Turks have been encountered and heavy casualties have been inflicted upon them. Many hundreds have been captured. Secondly, the Hejaz railway—so vital to the Turks—has been very severely damaged over many miles, thereby greatly embarrassing the enemy and largely disorganizing their military plans. Doubtless our Air Service will see to it that the repairs will not be effected without great difficulty and delay. Thirdly, in our advance all his depots along the road to Es Salt seem to have been captured and destroyed. Thus Mr. Massey states: "I cannot estimate the amount of material captured: but, judging from the depots I have seen, it must be considerable. Another gun was taken at Es Salt, and also about twenty German lorries." Fourthly, we have substantially rendered assistance to our Arab allies. To resist our attack Turkish troops were withdrawn from the north and from the south, and it is impossible not to connect with this the latest news that on April 7 El Kerak was occupied by Arab troops. Very possibly this was one of the objects of the raid. Not only is El Kerak —the ancient Kir of Moab—an extremely important post, which the Turks would certainly not give up without a bitter struggle: but by holding El Kerak and, as they will necessarily do, its natural outlet to the south-east corner of the Dead Sea, we have for the first time got into direct contact with the Arab forces. Before their retreat from the northern shores of the Dead Sea the Turks were bringing supplies of various kinds from the Kerak district to the north shore of the Sea by means of motor and steam boats. Now we shall be able to help our allies in the reverse direction. El Kerak occupies a dominating position, 3,115 feet above the Mediterranean, and is the capital of a considerable *liwa*, or district, around: it lies upon a hill surrounded by deep gorges, and its massive ruined castle is one of the most magnificent ruins of the Crusading era. It dominates the Dead Sea, and from it the Mount of Olives is visible on clear days. Although twenty miles from the Hejaz Railway, it is believed to be connected with it by a good road constructed since the war: and, holding a fortress of such strength, the Arabs, who are splendid fighters, should be able to make the position of any Turkish force anywhere to the south extremely insecure. The inhabitants of the Kerak district are bitterly anti-Turk, and may in many ways assist their deliverers against their hereditary enemies. It is safe to predict that the success of our raid will give our enemies a renewed sense of unease and will necessitate the diversion of considerable forces, which might otherwise be opposed to us in Western Palestine, to their provision against the repetition of such a surprise visit on a larger scale.

I must, in conclusion, briefly refer to a short note which appeared last week just under my Notes on the Palestine Campaign. A correspondent there states that: "Of the ruins that remain at Amman none is older than the Greek period." This is not strictly true, for apart from the fact that some of the walls of the Acropolis are probably older and that under the present surface there must be extensive remains of Rabbath Amman, there are in the neighbourhood of Amman some of the oldest ruins in the land in the form of megalithic buildings and dolmans belonging to the pre-historic times. Further, this correspondent states that Es Salt is "supposed to be Machærus, the scene of John the Baptist's execution." This is a theory which I have never heard, and is certainly opposed to all the evidence. Machærus is undoubtedly from Mukaur considerably further south in the neighbourhood of the Wady Zerka Maan, where there are very extensive ruins. Es Salt has been suggested as the site of Ramoth Gilead, but

Digitized by Google

there are very serious difficulties, and such a view is not generally held. Thirdly, the mountain in the neighbourhood of Es Salt is Jebel Osha, 3,595 feet high, which dominates the land, and is visible from the Mount of Olives. It is nothing to do with Joshua, but is called after the prophet Hosea, whose " wely " is here shown by the Moslems. From here, as the writer suggests, one of the most magnificent views of the Jordan valley is obtained, the mountain Ebal Gerizim, and even Tabor being visible to the north.

E. W. G. M.

THE REBUILDING OF SALONIKA

DEVELOPMENT OF THE HINTERLAND.

By Thomas H. Mawson.

(Senior Member of the City Planning Commission for the Rebuilding of Salonika.)

It is unfortunate for the proper understanding and development of our immense natural opportunities in the Orient that our gaze is concentrated with so much anxious thought on what is taking place on the Western front. Under any less absorbing strain the mind of commercial and industrial England would be devoting itself with the greatest energy to the creation of vast financial enterprises for the rebuilding of Salonika, and the development of the extensive tracts of fertile lands in Macedonia. These areas have now been opened up by the creation of an extensive and well-co-ordinated system of railways and magnificent arterial roads, laid down at enormous cost by the armies of the Allies. The opportunities thus operating for British energy and British finance are so important that, notwithstanding our many anxious occupations, I venture to urge my countrymen to take time by the forelock and to organise at once for big enterprises which are unusually full of promise.

Before describing these possibilities, let me remind my readers that, owing to our occupation of Macedonia and the vast sums of money spent by the Allies, Greece has become a very rich country, that in consequence a large proportion of the necessary capital would be subscribed locally. What is needed is that these undertakings should be promoted by British firms of acknowledged organising ability and repute, and that in each department the scale of operations should be commensurate with the work to be accomplished. The immense popularity of our army in Macedonia has prepared the way for British energy, and I am in a position to state that the Greek Government would welcome us both for the rebuilding of the city and in the development of the natural resources of Macedonia.

To obtain some sort of perspective of these possibilities, one must grasp the fact that Salonika is the most important port in the Ægean, that it is the natural gateway to the Balkan States, and that Serbia hopes to have her own free port in the Gulf of Salonika. Therefore, whilst the pre-war population was only some two hundred and twenty thousand, the city is certain to contain with the next twenty years a population of half a million. This means that not only must the old city be rebuilt on big lines, but that very considerable extensions will be necessary.

The central area of the city actually destroyed by the fire was about a mile and a-quarter in length and a little more than half a mile in width. Within this area there lived a population of seventy thousand inhabitants, for whom rehousing is a first necessity. The fire, however, destroyed all the principal hotels, banks, schools, a large number of churches, and also the best shops and commercial premises within the city. So extensive was the fire that M. Venizelos instructed the Commission to proceed with their plans on the assumption that the city had been entirely destroyed. This permitted the planning of the new city on the best known economic and æsthetic principles, and the Commission have taken full advantage of this instruction and have provided initial plans. Their report includes the following recommendations, all of which offer wide opportunities for British contractors:—

1. A large extension of the docks in conjunction with a considerable development of the railway and warehousing service.

2. New Union Railway stations for passenger service, one at the east end of the city and another at the west end, along with an electric underground railway system connecting those terminals, which are about four miles apart. This electric railway will be placed under the Rue Egnatius, and therefore will intersect longitudinally the busiest part of the city.

3. A new water supply for the city and its suburbs.

4. A main drainage system for the whole of the city along with lifts for the lower part of the city and outfall works.

5. Electric power and light stations and the installation of light and power throughout the city.

6. The extension and renewal of the electric tram system for the city and adjacent suburbs. As planned, this system should prove a good paying concern, whether worked by the municipality or by a private company. The present powers have only a short period to run.

7. The formation of a new street and boulevard system.

8. The building of the principal Government and municipal offices, law courts, and post office. The building of the city business and commercial premises, and also the new residential quarters. For all these operations special facilities and concessions will be offered by the Greek Government to approved firms.

9. In addition to these great works connected with the reconstruction of the city, there is little doubt that Salonika will become a manufacturing centre. The rebuilding of the city and its extension alone will create enormous demands for cement, sanitary pipes, patent flags, and curbs, for which excellent gravel, stone, and sand are to be found in abundance. Saw mills, carpentry shops and workshops for the manufacture of furniture, commercial and domestic equipment will also be required, whilst the manufacture of bricks and roofing tiles will be another industry to which a great impetus will be given.

These are merely a few of the larger industrial activities which the rebuilding of the city will bring to the fore. Other opportunities of a more directly financial nature which may be developed are fire, life, and shipping insurance, the erection and running of large stores for merchandise of all kinds. I imagine also that many factories for the development of native industries and the packing and export of fruit, cotton, tobacco, and maize, to mention only a few of the native products, will afford outlets for capital.

Great as are the opportunities connected with the rebuilding of the city, those of the hinterland are even greater. These, if fully developed, would add to the commercial supremacy of Salonika, which is the port of entrance and export, and also the centre for insurance, banking, and exchange.

We must remember that before the war there were four principal causes which prevented the economic development of this rich territory:—(1) The unsettled state of the administration and the constant wars which in some localities practically annihilated the population. (2) Pestilential malaria, with which the native did not know how to deal, or which from a fatalistic attitude of mind he regarded as the visitations of Providence. (3) The lack of railways, good roads, and means of transport. (4) The need of scientific knowledge in regard to the best methods of cultivation, mechanical labour-saving appliances, and co-operative buying and selling.

Respecting the first, we may reasonably expect that a permanent and progressive Government under the most able direction of M. Venizelos will quickly secure that stability which is the first essential of progress. As to the second, I am told by those who have studied the question that the canalisation of the Vardar, Doiran, Struma, and other marshes would effectively destroy the malaria mosquito. The third condition has been splendidly met by the Allies, who have constructed

Digitized by Google

hundreds of miles of the finest roads in Europe and laid down a complete system of military railways which open up the country for quick transit in a perfectly wonderful way, and at the same time reduce the cost of haulage by at least two-thirds. The last condition would be met by the introduction of capital, scientific direction, and British energy.

That the great Greek Minister contemplates a revival of prosperity in this direction is proved by the fact that he is setting up a new department of the Ministry of Communications for the purpose of replanning the ancient ruined villages, and for the planning and construction of other villages in strategic districts. In Old Greece, at least one English syndicate is at work with success already assured, and on principles approved by the Greek Government, and it is an extension of this work which is so much desired for Macedonia.

In considering these possibilities we must remember that very little of this land is at present under cultivation, that the greater part of it can be successfully irrigated, and that it is suitable for almost any kind of crop, ranging from cotton to maize, and from vines to strawberries.

From the mining point of view I am not able to give any sound advice; but I am told that prospecting is being energetically prosecuted, and that anthracite coal has already been discovered. If this latter report be true, Macedonia is, indeed, the land of golden promise.

In conclusion, may I add that my friends are constantly asking how the rebuilding of the city of Salonika is to be paid for. Well, I cannot yet say, but I may state that a city which has neither debts nor taxes is in an exceptionally favourable position for the raising of loans.

CONDITIONS IN NORTH-EASTERN PERSIA.

(From Our Correspondent.)

Meshed, November 28.*

Drought and Poverty.

For more than a year and a-half the Meshed district has had no rain or snow, and the drought is becoming very severe. The price of wheat has risen from a normal of about twelve tomans per kharver (650 lb.) to forty-five or fifty tomans. The poor people who receive about the same wages as they did before are paying about four times a normal price for bread. For them, extras such as tea, sugar, fruit, etc., are entirely out of the question as being beyond the capacity of their purse. Thousands of them have not tasted meat for many months. All their money goes for bread, and a great many of them cannot get enough even of that. I am told on good authority that babies are being left in the streets to be picked up by any one who will take them and care for them, and that about twenty-five such foundlings have been taken to the hospital of the shrine of Imam Riza. The case is quoted of a man who became desperate from the lack of food for himself and family, but one day brought home ingredients for an "osh," which is a sort of stew very common in this country, and secretly put poison into it. The whole family ate heartily, and all died. I cannot vouch for the truth of this story, but, whether true or false, it is a fair illustration of the straits to which many of the poor people are being reduced.

The following incident I can vouch for. The carcase of an animal was thrown out into the open just outside one of the city gates. (The people do not always take the trouble to cart dead animals outside of the city. They quite as often leave them in the street or in any other piece of open ground, and the street dogs do the rest.) As soon as this carcase was thrown out, people went running to the spot and began cutting off and carrying away chunks of the meat, while the dogs stood around wagging their tails patiently waiting for their turn to finish up what was left. I can also vouch for the following story having been told to a doctor of my acquaintance. A "hammal" (a man who earns a living by carrying loads on his back) went to the doctor, who discovered that the man had appendicitis and required an operation; he offered to take the man into the hospital, to do this operation free, and to bear all the expense of the case. The man said that he could not have it done, because his family of eight persons was dependent upon the three or four krans a day that he and his son earned. That is pitiful when you remember that the combined earnings of the father and son will buy scarcely six and one-half pounds of bread a day for eight people to live on. Where are their clothes, fuel, and other necessities coming from?

Among the villagers, upon whom the cities are dependent for food, the live stock is being greatly depleted for lack of fodder. Dry leaves off the trees are selling for four tomans a kharver, whereas two tomans used to be about a normal price for a kharver of good straw. Animals are dying, and others are being killed, because there is nothing to feed them on. A sheep with her lamb at her side is selling for eleven krans, whereas the lamb alone used to sell for fifteen krans. This does not run up the price of meat at present, but it will later on. But every camel, horse, mule or donkey that dies or is killed does help to increase at once the price of every kind of farm produce and every article of every kind that has to be transported, because there is no transport except by animals.

A Local Demonstration.

Yet I have been told by a very rich landowner, whose barns are full of wheat, that there is wheat enough in the province to feed the entire population plentifully for three more years, even though the three coming harvests should fail entirely. We have been reading in the papers about the sin of profiteering in England and America, especially in regard to foodstuffs and other necessities, and of the efforts of the Governments to cope with the evil and to regulate prices. There is a good deal of wealth in this province of Khorasan, but it is owned and controlled by a comparatively small number of men, and thus far the Government has either been unable to regulate the prices of foodstuffs or is indifferent to the subject. Behind the provincial Government is the Central Government in Teheran, which changes hands too often to wield any real power. Kamran Mirza, who had been Governor-General of Khorasan for about a year, recently resigned and returned to his home in Teheran. A few weeks later the announcement was made that Prince Nieer-ed-Dowleh, who resigned this Governorship about eighteen months ago, had been appointed again. One of his first nominations was that of Salar-i-Nusrat to be Chief of Police. A few nights afterwards a prominent Persian gave a dinner, at which were about thirty guests. Between seven and eight o'clock in the evening masked men entered the place, shot down the servant at the door, entered the room where the guests were sitting, and engaged in promiscuous shooting. The Chief of Police was shot through the abdomen. A rich wheat owner threw himself out of the window, and in thus saving his life he broke his arm in two places. The servant who was shot at the door died next morning. The Chief of Police is recovering. Bazaar gossip says that this was a demonstration merely to show what would happen if the Teheran Government were to send Nieer-ed-Dowleh here as Governor-General. And yet there are a great many people who would be glad to see him come. During the next few days a crowd of men were at the telegraph office sending messages to Teheran. That is a way they have in this country. When the populace or a faction seriously object to a measure, or want to demand something, they go to the telegraph and stay there for a few days, either till they get what they want from the central authority or until something else happens. In this instance what happened was that after a few days an official announcement came that Prince Nieer-ed-Dowleh had resigned and would not be sent to Khorasan. It would be of interest to know whether he had had to pay for the appointment which he resigned. Governor-Generalships in this country may sometimes be sugar-coated, but they are not generally made of sugar inside. A man must pay a large sum for his appointment. This sum is regulated either by the size of the resources of the province or district to which he is appointed or else by the power of the central governorship to extract money from him. In either case, on taking up the duties of his appointment, the first thing he must do is to reimburse himself for the amount he has paid to the Central Government. This process of reimbursement must necessarily make for him both friends and enemies. The rich man who gets off lightly is his friend and swears by him. The rich man who pays heavily is his enemy and swears about him. If an archangel or a prophet should come here as Governor-General, he would find it a hard task, for if he was not susceptible to graft I hardly see how he would reimburse himself for the initial amount he had paid to the Central Government for the privilege of coming here and conducting a strong, good government. The trouble is that the system is bad.

Trade and Finance.

Business is at a very low ebb. Prices are very high. Pounds sterling are selling at thirty krans or less, as compared with fifty-five before the war. Russian roubles are selling at eight shahies, as compared with one hundred and sixteen shahies before the war. Imports from Russia are practically stopped. The other day I needed a few nails,

B

* Delayed in transmission.

Digitized by Google

and I paid at the rate of a hundred and twenty krans for six and one-half pounds, whereas the price used to be four or five krans for that quantity. We are dependent on Russia for hardware. A little petroleum and a few other things come from Russia occasionally, but not at all in sufficient quantities to meet the demands. Some goods are smuggled in, but the amount does not suffice to meet the needs. One thing has happened during the last months which has brought a certain amount of relief in regard to some things. Large quantities of tea, sugar, and matches have been brought in from India, and the prices of these articles have been very considerably lowered, while at the same time the merchants bringing in these goods are making a good margin of profit. I suppose great Governments do not usually engage in philanthropy, and yet we do hear of their occasionally doing so in war time. If only the English would promote an enterprise in some form to facilitate the transport of merchandise from India into Khorasan and right up to Meshed, it would not only be philanthropy, but should yield large money profits.

Mr. Nicolsky, who for the past three or four years has been Russian Consul-General here, has been appointed to the corresponding post in Teheran, and will leave in a few days. He is a very genial man, and will be greatly missed by his many friends.

AGRICULTURAL DEVELOPMENT IN MACEDONIA.

(From a Correspondent.)

Greece has declared her intention to cultivate a large area in Macedonia. To the ordinary man in the street this conveys nothing, but to many, like myself, who have spent many months there, it is of great interest. To begin with, there exists no possible doubt of the fertility of the soil; it is rich, vastly so, more especially where the Allies have had numerous kraals of horses and mules. I know of such a place of about 1,000 acres, which if developed would certainly yield beyond anticipation. Its value is further enhanced by its proximity to the sea, and a landing pier. However, before any definite scheme can be approved, the vital question of irrigation must be solved, and the development of the railway system must be urged. It is well known that the system has been extended since the Allies' occupation; to what extent I am not prepared to state; suffice to say that much more will have to be done. Of course, this will probably be a serious obstacle; tunnels must be bored, and bridges and embankments built. Still, there is no lack of material. Then the question of road transport will have to be considered. It would be absolute folly to rely upon the present method, which is by unwieldy, springless, jolting bullock wagons. Personally, I firmly believe that motor transport will stay. Merchants have seen the possibilities and immense value of quick transit; this opens up further possibilities. In fact, with the development scheme, scores of trades would begin, the foremost being agricultural machinery. The present-day farmer possesses little, if any, up-to-date machinery. One sees the plough of Biblical days in use, oxen in the yoke, and so on. The Greek farmer must not be blamed wholly for this; fear of depredations, lack of State aid and encouragement, and lastly, and certainly not least, that bugbear of the Balkans, petty wars, all of which have hindered progress, as is so much regretted now. Next, the state of the roads must be improved, and very much so, the few good ones to be found at present having all been made during the war for military requirements. These are excellent, and will remain the main arteries, but there is plenty of material for making the necessary network. The cost will be comparatively small. Further, one must bear in mind the incalculable improvements made by the Allied forces, not only topographically, but on the moral of the people.

There remains the most important problem of labour, and it must be understood that, like all Easterns, the Greek peasant treats his wife as very much his inferior, and is quite content and happy to watch her do all the work. In short, she is the bearer of the burden; hence she enters largely into the labour question, and I firmly believe female labour on the land will predominate over male. Especially will this be the case in remote places among the hills. The emancipation of woman has not troubled Greece very much. I should like to mention here that strict laws will have to be made to counteract depredations and thieving. It is common knowledge that the average native is very susceptible to the latter failing, and will all unconsciously kill the goose that lays the golden egg. Firm steps must be taken to prevent those petty wars which have been part and parcel of the Balkan people's existence, thus rendering the possession of property an uncertainty.

And now with regard to irrigation. It would not be possible to irrigate the southern part of the province as the Egyptians and Turks do; the water supply would not admit of this being done. One solution would be to conserve the large volumes of water which come down from the surrounding hills in the rainy season. When one realises that for practically five months in the year there is hardly any rain, something must be done; true, there are springs, and on one side of the hills are two large lakes, but these only irrigate one side. Then there is the Struma Valley, which is as fertile as it possibly can be. Even here the irrigation arrangements are open to improvements; albeit the largest and best crops are grown here. There are acres upon acres of vines, peaches, almonds, figs, mulberries, etc. Add to this the many huge tracts of land extending to the slopes, yielding splendid maize, barley, and cotton crops, and you will get an idea of what an ideal place it is for the cultivator. A word or two about the Struma River. The current is exceedingly swift, and with power stations along the banks the question of electricity could be solved, the necessary material being brought on the railway north of the river, and having Seres as its principal stop.

With so many things to make life pleasant, there are two drawbacks which affect this region the most—malaria and dysentery. There are myriads of mosquitoes, but much has been done in attempts to exterminate them. The two years' campaign against them has achieved good results; as may be seen from the Health Report of the British Army in Salonika, 1917. The climate for eight months October-May is temperate, the remaining four months being more or less hot. American enterprise is in evidence, as was shown by the extensive flourishing crops and good buildings of a farm, the property of an American, before the war. Modern machinery was also there, and everything pointed to a successful venture. There is plenty of game and fishing in many districts for the sporting farmer.

THE NEW METROPOLITAN OF ATHENS.

The Holy Synod of Greece has unanimously elected as Metropolitan of Athens the Archbishop of Kition (Cyprus), Meletios, Metaxakis. No other candidate was proposed. The Metropolitan of Athens is also the permanent president of the Holy Synod of Greece, a body comprised of five or six Bishops, annually elected by the outgoing Synod, and approved by the Government. The Synod meets in Athens, and acts as the head of the Greek Church in the Kingdom of Greece. Not infrequently these holy fathers are much interested in politics, and mix in political intrigues to an extent that the canons of the Church forbid, as in the case of the late Synod, which, under the presidency of the late Metropolitan of Athens, Theokletos Menopoulos, excommunicated M. Venizelos, or allowed the public and the clergy to anathematise him when he went to Salonika and formed the National Government. On the return to power of M. Venizelos, the members of the Synod were tried and sentenced to degradation and incarceration. The ex-Metropolitan of Athens is at present incarcerated in a monastery in Crete.

The new Metropolitan Meletios is from Crete; he studied in the Theological College of the Cross in Jerusalem, and was appointed Chief Secretary of the Holy Synod of Jerusalem, in which position he distinguished himself against the Panslavist intrigues which at that time disturbed Palestine, over the question of the Patriarchical Throne of Jerusalem. He has been the organiser and editor of the official periodical, "The New Sion," which became famous for its powerful articles (written by him) in defence of the Greek Church and its rights in Palestine. He went afterwards to Constantinople and Athens, and at one time he was proposed as a candidate for the Patriarchate of Constantinople. Ten years ago he was elected Archbishop of Kition, in Cyprus, where he was much liked. During the two Balkan wars he went to Greece, where he proved himself a conspicuous champion of Hellenic interests. He is the author of some very interesting books published in French, English, and Greek. One of the latest refers to the rights of Hellenism on Mount Athos.

ARMENIA'S AWFUL AGONY

increases. The almost incredible hardships and horrors of the past seemed to have reached the limit of human endurance, but now the whole nation is

FACED WITH ANNIHILATION.

Boghos Nubar Pasha, President of the Armenian National Delegation in Paris, declares that the Armenian Nation, throughout its whole history of catastrophes, has never been so near complete annihilation as it is to-day. Armenians of Turkey hitherto have always found shelter and protection with their brothers of the Caucasus when danger threatened them. Now that supreme refuge is torn from them, how are they to be saved?

See *Daily Chronicle*, March 7th, 1918.

Great Britain stands for the relief of the weaker Nations.

IS ANY NATION WEAKER THAN ARMENIA?

—so persecuted, so ravaged by famine, by pestilence, by exposure and by sword?

The people wander from place to place in hopeless homelessness, and count themselves fortunate if they can find the shelter of the overhanging side of a friendly hayrick.

Death is claiming the young in large companies. Of 200 children who reached a certain centre near Erivan 196 died.

The Armenian Refugees (Lord Mayor's) Fund is doing all it can to succour the terror-stricken sufferers, and has sent out the sum of £75,000 in relief since its inauguration in 1915.

Our Workers Remain at their Posts.

OUR NATIONAL HONOUR IS AT STAKE.

We have given our promise to defend the weak and helpless. We cannot remain passive in a case like this. Our gifts can save life if they are sent NOW. It is estimated that even the small sum of £1 will sustain the life of one refugee for one month. What amount will you give? Will you send it to-day?

TANGIER TO TEHERAN.

Some time ago I was constrained to join issue with the Editor of a contemporary—it was *The Young Man and Woman*—on the subject of the interpretation of certain Biblical passages. He had been reading or looking up Daniel xii., and had discovered that the Turkish year was 1335. Here obviously was the fulfilment of Daniel's prophecy, and accordingly the readers of the magazine were assured that the matter admitted of no doubt. It was that Turkey would come to an end in 1917—the last possible date that fitted in with the 1335 theory. Of course, as the date drew nearer and Turkey showed no signs of throwing up the sponge, the inevitable hedging began to take place, and ultimately it was pointed out that, however improbable the statement appeared now, it would be found one year, perhaps, or two years later, that in October, 1917, the actual break-up of Turkey began.

***

No doubt it was a harmless pastime and less pernicious than a sixpenny competition, but it gave offence, I know, to the religious feelings of some people. Others besides the Editor of *The Young Man and Woman* have been trying hard at the 1335 days of Daniel xii. 12, and, of course, many had worked the time out to the end of March, the day varying according to the date chosen as the first day of the war—*i.e.*, for Germany or for ourselves. A correspondent in the *Pall Mall Gazette*, I notice, plumps for March 30, and argues that, as it was on that day that the German offensive was brought to a standstill, we have here the fulfilment of the prophecy in regard to the decisive battle of Armageddon. In other words, some well-meaning person comes forward to apologise for Daniel by explaining that the prophecy was really quite a good shot, and only wants a little latitude at one end or the other to make it to all intents and purposes accurate. I cannot help thinking that when Biblical prophecies are fulfilled they will manage the matter without elaborate explanations and adjustments by the limited intelligence of human beings.

***

"Turkey's Painful Position" was the heading over a paragraph in *The Times* a few days ago; and when I saw that the message referred to an interview granted by Hussein Jahid Bey to a German journalist I had a momentary hope that one Turk was waking to the truth. But I was disappointed as soon as I read on. The "painful position" to which the Vice-President of the Turkish Chamber alluded was the enemy occupation of Turkish territory. The "pain" appears to lie in the fact that in this matter Brother Turk stands alone among the Central Powers' gang: Hussein Jahid Bey would find the position less painful if Brother Bulgar were in similar plight. But if I may offer him a word of advice it is that he should not worry over the *present* position. The really painful time for the Turk will come when Dame Europa takes him on her knee—face downward—preparatory to punishment and expulsion from her school.

***

The *Vossische Zeitung* published recently some particulars of the activities of a certain "Indian Prince" who was described as "a leading member of the Indian Independence Movement." The individual referred to seems to have been quite useful to the Kaiser and Bethmann-Hollweg, to say nothing of the Sultan of Turkey and his Grand Vizier; for he was entrusted by them with many letters to the Ameer of Afghanistan and to Indian princes. Perhaps he had a weakness for playing at postman? More probably a deficiency of mental balance induced him to intrigue in order to make him feel important. Be that as it may, his goings and comings appear to have had little or no result. In fact, it looks like a case of "nobody seemed one penny the worse." This may give "rise to no little surprise" on the part of the Prince; but it will hardly surprise anyone else. The Ameer of Afghanistan is unlikely to be led into foolishness by the Kaiser's blandishments, even when they are embodied in "an autograph letter"; and the Indian princes who really matter have given ample proofs of their loyalty. The worth of the princely messenger boy may be gauged by the class of his friends. It was "not possible" for him to cross Russia until the Bolshevists gained the upper hand; but "Trotsky and Joffe showed him much sympathy." Just so! Now we know what manner of man he is.

***

The recent further exposure of the conditions under which Fort Rupel was handed over to the Bulgarians serves to show more clearly than ever how utterly ex-King Constantine ignored Greek sentiment and Greek interests in pursuit of his own objects. The fact that it was impossible to give instructions to the garrison until the last moment is highly significant. The garrison was doubtless a picked one; but, even so, it was feared that the old hatred of the Bulgarians could not be entirely smothered at the behest of Tino. And no wonder; for that hatred was the growth of very many years, while Constantine's policy was but a thing of yesterday; and while one was truly national and racial, the other was distinctly "international," in the worst sense of the word. Naturally Greece declines to give Tino any more pocket money.

***

I see that Halil Bey, the Turkish Minister for Foreign Affairs, has been orating again, and that he has protested, in the Turkish Chamber, against the British occupation of Egypt. "The sword," he finally declared, "will solve this question." Halil reminds me of that pertinacious legal gentleman who still went on arguing after his client was hanged. At least, I was under the impression that the sword *had* solved the "question," and that we were in occupation of the country referred to. Despite its dignity and fine phrasing, the protest seems, therefore, a trifle belated.

CORSAIR.

THE FUTURE OF ALBANIA.

Captain L. S. Barnes lectured before the Royal Geographical Society on April 8 on the future of the Albanian State. He said the subject was technical and controversial. His own qualifications for dealing with it depended partly on visits to the country and partly on information obtained from other people who had lived there. In the early spring of 1911 he had gone to Durazzo, thence to Tirana—the stronghold of the family of Toptani, of which Essad Pasha was a member—and thence to Kruje, the ancient capital of Skanderbeg. Later, when there was a revolt of the Catholic tribes of Northern Albania against the Young Turks, a grandson of Garibaldi had organised a band of volunteers to go to the assistance of the Albanians. Captain Barnes had joined in this, but the Italian Government, prompted by Austria, had vetoed the movement; and all that he had seen of Albania on that occasion was the country round Argyrocastro, near the Greek frontier, where he had spent a few days.

The map which Captain Barnes showed to illustrate his proposals gave Albania a considerable extension of territory on the north and some extension on the east. Of the northern area, he said that part of it had been given to Montenegro in 1880, but it was strictly Albanian territory. There was here no marked geographical boundary, for the mountains ran north and south, while the ethnographical line dividing Albanian from Montenegrin ran east and west; but this ethnographical line was well marked. Farther east the problem was more difficult. There, as elsewhere, his general principle was to endeavour to draw the boundary along the line of nationality; but the problem was complicated by the intermingling of races, and by the fact that economic, commercial, and strategical considerations had to be taken into account. The Kossovo vilayet was mainly inhabited by Albanians; but he proposed to leave it to Serbia, partly from sentimental and partly from commercial and geographical reasons. On the other hand, the whole basin of the White Drin should go to Albania. South of this, where the population was on the one side Albanian, and on the other Macedonian, there was a region where the Bulgarians had established schools, and the population had become sufficiently Bulgarian to warrant exclusion from Albania on ethnical grounds. For commercial and geographical reasons, however, it ought to be included in Albania. In the south of Albania the boundary line could hardly be bettered. The Albanians were dissatisfied because it excluded from their territory a district inhabited by pro-Albanian Vlachs; but, had the line been drawn otherwise, it must have included a much larger number of pro-Hellene Vlachs, or else have divided the Vlach community. The Greeks for their part claimed Argyrocastro, but without any warrant. The future Albanian State would have to be cantonal, and to a large extent patriarchal. Probably there would be a prince. Much would depend on who was chosen for this position.

Sir Thomas Holdich, who presided, said that Serbia would object to the inclusion of the whole basin of the Drin in Albania, for it was in this direction that Serbia looked for her outlet on the Adriatic. Mr. Cotton Minchin, ex-Consul-General for Serbia, said that Serbia should get her outlet on the Adriatic by a union with Montenegro. Miss Durham said that in most ways the frontier drawn by Captain Barnes was satisfactory. There were many good harbours available for the Jugoslav State if it was founded. It would not be a source of strength to Serbia to include within her borders a million hostile Albanians; for these were a virile and energetic race who had never been entirely subjugated.

The Agricultural Relief of Allies Committee is providing for the maintenance and instruction in British farming methods of a number of Serbian youths, who will be trained on farms in summer and receive scientific instruction at an agricultural college in the winter.

The Postmaster-General announces the loss at sea, through enemy action, of parcel mails for the hospitals and fleet at Malta, containing parcels which reached the General Post Office, London, for despatch, about February 20 last.

NEAR EAST BOOKSHELF.

MOSQUES AND THE MOOSKY.*

Shortly subsequent to the Ides of March, 1918, we accompanied this erudite, but poorly illustrated incursion into the Saracenic and the Arabesque, through alleys and lanes we know right well; but book-reviewing, during the Devil's Western desperation of Armageddon, has frowned upon our spirit of criticism until now. Now that the Devil has been exposed before Amiens, we can recommend this little book for the 1918-1919 bright Cairo winter mornings when countesses, arch-duchesses, and ladies from Chicago shall revisit the capital of Arab art. Mrs. Devonshire, who has been on her errand of mercy conducting wounded Tommy from Whitechapel, Adelaide and Dunedin around the narrow lanes of Masr-el-Ateeka, has produced a little Baedeker—the booklet here reviewed. More enterprising publishers would have done the cultured authoress better justice, and we are glad to learn that she is at work on a more ambitious volume.

Mohammedan architecture affords a most curious study; for the children of Ishmael, before they learned of Jewry and Christianity, were content with tents, an occasional block of stone, or hovels roofed with camel-dung or clay. How and why did they burst out into gems like the Alhambra and the mosque of Ahmed Ibn Tuloon? Or that beautiful modern kiosk of Ismail's palace at Ghezira? What is the answer? Christian—that is, Greek—slaves, compelled to a new poetry by a resolve to please their fanatical Arabian masters! The story of the Arabesque is full of the genius of these successors of the glories of Pericles—especially after the ignorant, uncultured Ottoman adopted the idealism of Mohammed. But let us not forget also the fires of Zoroaster and the cynic poetry of the Persian, or the fabled glories of Babylon and Nineveh. All these, apparently, the Greek could copy and refine; but the Pyramid of Cheops remains frowning down upon the Parthenon, and still more contemptuously upon Saracenic art. It has always seemed to us that the Sphinx says: "Away, you artists, with your baubles! Think again!" None the less, in our own rambles in the odoriferous Saracenic lanes of Cairo we have often paused, with our authoress, to admire this Arabesque audacity, faith and poesy, and have concluded—or do now conclude—that all things are beautiful in this ordered world; once it be rid of the foulness that now challenges it.

THE EXPANSION OF INDIA.†

This book aims at doing something to counteract a very real evil in modern Indian education, where the student is too often spoon-fed out of what are politely called text-books, though cram-books would be a more correct description. The writers have brought together a series of extracts, for the most part contemporary, tracing the development of frontier and political policy, so that the student can read and consider what Ellenborough, or Dalhousie, or Canning urged in defence of the policies associated with their names, and also some of the criticisms which their arguments called forth. The idea of the book is unquestionably good, and there is little fault to be found with its execution. Some of the extracts strike us as just a little "scrappy," while we doubt the advantages of including the smooth phrases of secondary writers like Edwin Arnold or Bosworth Smith, but, taken as a whole, the materials provided should suffice to give a valuable training in the study of facts and in drawing conclusions from the records of the past. The authors promise companion volumes dealing with internal and economic policy during the same period, and we look forward to the appearance of these, which are in our opinion even more urgently wanted.

SKETCHES OF BENGAL LIFE.‡

We hope this book may be taken as evidence that Sir Rabindranath's recent incursions into politics are not to deprive us of what we value much more highly—his light-bringing and thought-compelling sketches of life in Bengal, especially the Bengal of these days, when so much very new wine is being stored in such very old bottles. The sketches themselves are of the type with which readers are familiar, short and slight, with little plot, and based usually on a single incident: each one of them seems by itself to tell us little, but we finish the book with a feeling that we know the Bengalees rather better than we did before, and a sense of gratitude to the writer for the pleasure he has given us.

* "Rambles in Cairo." By Mrs. R. L. Devonshire. (The Sphinx Printing Press, Cairo.)
† "The Expansion of British India, 1818-1858." By G. Anderson and M. Subedar. (G. Bell and Sons. 4s. 6d.)
‡ "Mashi, and Other Stories." By Sir Rabindranath Tagore. (Macmillans. 5s. net.)

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedouin, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

TURK AND ARMENIAN.

The following passages are from a letter just received by the Armenian Information Bureau from Bishop Asilian at Jerusalem:—

"The Turks have taken from the hands of the Armenians the ancient monastery of Sis, the seat of the Armenian prelates. They have turned the monastery into a Turkish orphanage, and it is used by the Turks themselves as a kitchen and dining-room. The marble throne of the prelate is smashed to pieces. In the mausoleum of the ancient Armenian kings the tombs have been opened, and the valuables contained in the coffins stolen. The inscriptions and beautiful marble carvings on the monuments have been obliterated." The writer adds that "Adana and Marash are places of execution for the intellectuals and élite. Aleppo was a sorting station, whence denuded and utterly exhausted immigrants were herded off to meet their doom in the depths of Arabia. The daily death roll amongst these unfortunate people averaged 200 from sickness, and 300 from starvation."

17	4	Wednesday	6	5
18	5	Thursday	7	6

The Session of the Bulgarian Sobranje came to an end on April 8.

Athens Boy Scouts were reviewed by the Duke of Connaught on April 3.

Princess Zoe Ghyka, a member of the French Red Cross, has arrived in London from Roumania.

Sir Charles Stewart-Wilson, K.C.I.E., has been appointed a director of the Bengal-Nagpur Railway.

Dr. R. A. Cleveland, Chief Medical Officer, has returned to Cyprus, and taken up his duties at Nicosia.

Mme. Misu, the wife of the Roumanian Minister, and Mlle. Misu have left London for Townhill Park, Bitterne.

Lady Goold-Adams, the wife of Major Sir Hamilton Goold-Adams, Governor of Queensland, has given birth to a daughter.

Sir Malcolm McIlwraith is to give a Rhodes lecture on the Egyptian law system at University College, London, on May 6.

The Secretary of State for India has appointed Mr. George Matthai to the Indian Educational Service as Professor of Zoology, Lahore.

Mr. Alan L. C. Stuart, president of the Larnaka District Court, is acting as King's Advocate during the absence of Mr. Russell, on leave in Egypt.

Lieutenant-General Sir H. V. Cox represented the Secretary of State for India at the funeral of General Sir A. Gaselee, which took place on April 3.

The Joint Hon. Secretary of the Edinburgh Scrap Metal and Free Gifts War Fund has sent £50 to the Indian Soldiers' Fund, for Indian prisoners of war.

The King of the Hellenes has appointed Captain C. V. Usborne, R.N., and Staff-Surgeon E. D. Rutherford, M.B., R.N., Commanders of the Order of the Redeemer.

Lieut.-General Maharaja Sir Pertab Singh and Lieut.-Colonel the Raja of Ratlam had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on April 4.

Dr. Miloutin Yovanovitch, the newly-appointed Serbian Minister for Denmark, arrived in London on April 5 from Corfu on his way to Copenhagen to take up his official duties.

The Duke of Connaught arrived in Rome from Greece on April 6, and was welcomed with the greatest enthusiasm, the crowds shouting "Long live Britain!" "Long live the Duke of Connaught!"

The Elsie Inglis (London) Unit of the Scottish Women's Hospitals, which left London at the end of February, has reached Salonika on its way to join the Jugoslav Division on the Macedonian front.

A Royal decree signed on April 1 calls up for April 16 the Greek Reserve Classes of 1909-1910 in Arta and Epirus, while artillery officers of the Reserve Class of 1907 have been called to the colours for April 18.

Sir James Meston, the late Lieutenant-Governor of the United Provinces, who is to succeed Sir William Meyer at the end of August as Finance Member of the Viceroy's Executive Council, has arrived in London on leave.

The engagement is announced between Captain J. W. Thomson Glover, Indian Infantry, attached Royal Flying Corps, son of the late David Thomson Glover, and Mrs. Thomson Glover, Richmond, Surrey, and Cicely Phyllis, daughter of Mr. and Mrs. F. B. Summers, Froyle Place, Alton, Hants.

The French Minister at Athens went to the Royal Palace on April 6 and formally presented to King Alexander the Insignia of the Grand Cross of the Legion of Honour conferred upon his Majesty by the French Government.

The Bucharest correspondent of the *Pesti Naplo* (Budapest) reports that owing to the complexity of the questions involved the ratification of the peace treaty between the Central Powers and Roumania is only to be expected in about six weeks' time.

The British and French Government sent congratulatory telegrams through their respective Ministers to the Greek Government on the occasion of Greek Independence Day, emphasising their satisfaction at Greece's participation in the great struggle on behalf of the world's liberties.

What is regarded as an official statement is published by the Bucharest *Tageblatt* to the effect that, even after the signature of the treaty with the Quadruple Alliance, the military authorities, both in Bucharest and in the provinces, will continue their work, and Roumanians must obey their orders.

Lieutenant J. Crawford, who was at Constantinople before the war, and who was in one of the first parties of Englishmen who arrived in London to join up, returned to London on April 5 from the Eastern Mediterranean, where he has been stationed for the past two years.

A Reuter telegram from Cairo dated April 3 states that Sir Reginald Wingate, the British High Commissioner, has been the recipient of messages of universal sympathy on the death of his younger son, Major Malcolm Wingate, who was killed on the battlefield of France on March 21. The Sultan called at the Residency to express his sympathy.

According to official information received, says *The Times* Athens correspondent, Greek volunteers from South-Eastern Russia have enlisted among the troops of the Caucasus Republic under Greek-born officers who were lately in the Russian Army. A second division of Greeks is being formed there, and fighting has already begun against the Turks.

On March 27 a son was born to Captain J. B. Barron, M.C., Worcestershire Regiment, and Mrs. Barron, who is a daughter of Bishop Blyth. Captain Barron is now on his way out to Palestine, to take up some special work for which his previous residence of seven years in Jerusalem and his knowledge of the country and the language, well qualify him.

Mr. H. Charles Woods, who went to America in November last, at the invitation of the President of Harvard University and to deliver a course of lectures upon "War and Diplomacy in the Balkans" before the Lowell Institute in Boston, was the guest of the Canadian Clubs of Montreal, Ottawa and Toronto last month. At luncheons given to him by these institutions Mr. Woods spoke upon the danger of German domination in the East.

A series of conferences on "Serbia and Her Jugoslav Brothers" has been arranged by the Serbian Red Cross for April 19, May 3, May 17, and May 31, at 9, Ennismore Gardens, S.W.7. The Serbian Minister will preside on April 19, when Lady Swaythling will speak on "The Serbian Woman in the War." On May 3 Mrs. Aldridge will speak on "Experiences in Serbia and Macedonia," and the two subsequent addresses will be on "The Battle of Kaymakchalan and the Recapture of Monastir by the Serbian Army," by Lieutenant Pavle Aleksitch, and on "In Roumania," by the Hon Mrs. Haverfield.

Mr. W. H. Thomas, chairman of the Executive Committee of the Montenegrin Red Cross and Relief Fund, in an appeal for funds states that since Montenegro was occupied by the enemy his committee has been feeding and clothing between 7,000 and 8,000 prisoners interned in Austria, besides hundreds of refugees in France, Italy, Switzerland, and in this country. The funds of the committee are approaching exhaustion; in a month, unless assistance is forthcoming, the committee will be obliged to stop its work. Donations may be addressed to the hon. treasurer, Lady Roper Parkington, Claridge's Hotel, Brook Street, W., or to Mr. W. H. Thomas, at 18, Ironmonger Lane, E.C.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS

AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1.

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

Digitized by Google

It is notified in Army Orders that British Service officers in receipt of Indian rates while serving out of India and Mesopotamia who, while unfit for general service, are paid at the British rates laid down in the Pay Warrant, are entitled while so paid to draw the increased rates of pay and the allowance for children mentioned in the Royal Warrant of January 25 last. When the officer is passed fit for general service and resuming Indian rates of pay the allowance for children will cease.

The anniversary of Greek Independence Day was celebrated in London on April 7. At the Greek Church in Moscow Road a Te Deum was sung after the Liturgy, the Great Archimandrite, Dr. Pagonis, officiating. Among those present were the Greek Minister, the personnel of the Legation, and several Greek naval and military officers. The Greek Minister and Mme. Gennadius entertained at luncheon the principal members of the Greek community and the personnel of the Legation, and afterwards held a reception.

The Manchester Syrian Relief Fund has benefited to the extent of £1,000 as the result of an entertainment given by the Minnehaha Minstrels. During an interval Mr. Jebara, the hon. secretary, read a letter from Sir Edward Tootal Broadhurst, the chairman of the Manchester Committee, in which he said that few people had suffered more from the Turk than the inhabitants of Syria and Palestine. About half the population had already perished, and with the living remnant famine and disease were rampant. As our troops advanced relief could be given. Food, doctors, hospitals, medicine, and clothing were all needed. The fund now amounts to over £7,500.

OBITUARY.

Colonel Henry Monteath Caine, late of the 27th Inniskillings and the Army Pay Department, whose death has just occurred at Camberley, served in the Mutiny campaign, for which he received the medal.

A Reuter message from Rangoon states that Mr. C. E. W. Molesworth, Assistant Commandant of the Rangoon Military Police, was sniped and killed on March 24 during the operations in the Chin Hills.

Major-General Thomas Maubourg Bailie, whose death has just taken place at the age of seventy-four, served for some years in India as well as in Malta, Gibraltar, and Egypt. He retired from the Army some twenty years ago.

Major Thomas Anthony Stewart Swinburne, D.S.O., Royal Engineers, who has been killed in action, entered the Royal Engineers in 1905, and served for six years with the Sappers and Miners in India, and saw active service in the Persian Gulf.

The Rev. Stephen Campbell, who has died at Cushendall, was Canon Missioner at St. George's Collegiate Church, Jerusalem, and was formerly vicar of St. John the Baptist, Clay Hill, Enfield.

Mr. W. S. Howard, late of the Indian Public Works Department, who died on April 4, at The Limes, Bayshill, Cheltenham, entered the service in 1859, was appointed Chief Engineer in 1888, and was subsequently Secretary of the Government of Bombay in the Public Works Department.

We regret to announce the death in action, on March 21, of Captain and Brevet Major Malcolm Roy Wingate, D.S.O., M.C., R.E., younger son of General Sir R. F. Wingate, Sirdar of the Egyptian Army and High Commissioner in Egypt. Educated at Winchester College, he obtained a commission in the Royal Engineers in 1912 from the Royal Military Academy, Woolwich. At the beginning of the war he went to France. He was mentioned in despatches in February 1915, and again in March of the same year, and was awarded the M.C. and the Croix de Guerre. In the same year he received the D.S.O. "for conspicuous gallantry on numerous occasions under dangerous conditions, especially at Givenchy on January 27, 1915, when he led a small party and blew in the head of the enemy's sap at the White House." Subsequently he served on the Staff of the Engineer-in-Chief at General Headquarters as staff captain, and later on as staff officer. He considered, however, that his place was at the front, and asked to be allowed to return to a field company, which was eventually permitted. He was again mentioned in despatches in May and December, 1917, and was promoted to the rank of brevet major on January 1, 1918.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

OGILVIE.—On April 3, 1918, at 111, Burnt Ash Hill, Lee, London, S.E., the home of her parents, Mr. and Mrs C. W. Dawson, the wife of Lieut. Ogilvie, Seaforth Highlanders, of a daughter.

MARRIAGE.

LA FONTAINE—THRUPP.—On April 3, at St. Cuthbert's, Philbeach Gardens, Earl's Court, by the Rev. Henry Westall, Captain S. Hubert La Fontaine, M.C., second son of Mr. and Mrs. Sydney La Fontaine, 10, Nottingham Place, W., to Agnes Helena, daughter of the late Rev. R. W. Thrupp and Mrs. Thrupp, St. Francis, Worthing.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—

FRIDAY, APRIL 12, 1918.

THE CONFERENCE AT ROME.

The Congress of representatives of the oppressed nationalities of Austria-Hungary now meeting at Rome is to be welcomed on two grounds: it should prove an object-lesson to all those who are tempted by ignorance to adopt the attitude that the Allies have no particular quarrel with Austria-Hungary to justify war with her *à l'outrance*, and it should enable the Italians and Jugoslavs to translate the general terms of their former understanding into a definite agreement embodying the territorial delimitations of the two countries in so far as the eastern side of the Adriatic is concerned. As was pointed out in these columns at the time, the preliminary conference held in London between representatives of Italian political parties and the Jugoslav Committee was content to establish a common ground for a future concordat. It disposed of the idea of insuperable antagonisms between the two peoples, and indicated the principles on which a common frontier might be traced to the satisfaction of both races. But until the actual boundary line has been drawn throughout its whole length, there is always the possibility of local friction endangering the success of the general agreement. It is to be hoped, therefore, that, although the Congress may be intended to serve a wider purpose, advantage will be taken of the occasion that brings representatives of Italy and the future Southern Slav State together to decide upon a frontier which can be embodied without further discussion by the Allied Governments in their settlement of the Near Eastern question. The link that brings Poles, Roumanians, Jugoslavs, and Italians together in conference is the fact of their joint oppression by Austria-Hungary. They meet to testify to a common determination to continue their struggle for liberty until it has been secured in the only form possible, and to pledge themselves to a common purpose in the future, when their new States shall have been set up and will form an effective barrier to the revival of Austro-German dreams of domination in South-Eastern Europe. The Rome meeting will at least convince those who are unacquainted with the inner history of the Dual Monarchy that among themselves the subject nationalities are satisfied with the justice of their respective causes. None is afraid of imperilling its own prospects by associating with a cause which may be shown to be artificial; for the story of the oppressed peoples of Austria-Hungary does not rest upon mere grievances or dubious disabilities, but is based on the public evidence of the Government's broken faith, persecution, and systematic tyranny.

The only point in connection with the Rome Congress that is open to challenge is that it should have been necessary in this, the fourth year of the war. No doubt the delegates of the different nationalities hope to inspire fresh strength and courage among their less fortunate compatriots who are still under Austro-Hungarian jurisdiction; but in the main their purpose would seem to be in the nature of propaganda work among the Allies. A variety of circumstances has given rise to the fear that the Allied Governments may allow themselves to be duped into the belief that a difference in the degree of guilt in connection with the world war as between Germany and Austria-Hungary may be held to justify a mitigation of the penalty to be exacted from the latter. In so far as there may be ground for this fear it is an indication that the Allies are still without a clear understanding in regard to their war aims or are prepared to allow these to deviate from fixed principles and become the sport of expediency or a subject for bargaining. This, indeed, has been the case in respect of the questions outstanding between the Italians and Jugoslavs. Although the value of the principle of nationality as a basis for the permanent peace of the world is better appreciated to-day than it was three years ago, the Entente Governments must have been well aware at the time of the conclusion of the treaty with Italy in April, 1915, that they were embodying in that document terms which could never be acceptable to their Serbian Allies. But in spite of the knowledge that Italy was indulging Imperialistic aims to an extreme degree the agreement was ratified and remained a potent cause of friction between some members of the Alliance. Changes of Government and the sound common sense of the parties concerned have made good the defects of Allied diplomacy. As was explained in these pages a few weeks ago by Mr. Richard Bagot, the extreme policy that was incorporated in the Treaty between Italy and the Entente Powers represented the aspirations of a single party and had not been approved by the great mass of the Italian people. The latter now realise that the formation of a great and independent Slav State, with proper access to the Adriatic, alone could ensure permanent peace, and are now about to lay the foundation-stone of complete political and social harmony and friendship between the two races.

The ignorance that failed to appreciate the extent to which the aspirations of the extremists among Italians and Jugoslavs overlapped is also responsible, it is to be feared, for the theory that Austria-Hungary is, perhaps, not so bad as she is painted, and that the Allies can come to terms with her without departing to any serious extent from the strict letter of the principles laid down in their published war aims. Such a theory is vicious in point of view of history and of common sense. The record of the Hapsburg Monarchy is a long story of political treachery, intolerance, and oppression. It shares to the full the guilt of Germany in regard to the origin of the war, and it is impossible to differentiate between the methods and the aims with which the war has been waged by the two countries. Germany's crimes have been perpetrated for the most part on conquered peoples in the name of war; Austria-Hungary has found scope for hers among the subjects of the Hapsburg Throne, in continuation of a policy long since accepted as the traditional method of Hapsburg rule. Nor is it reasonable to suppose that the Dual Monarchy under its present régime would cut itself adrift from Germany, if it could. Apart from the certainty of German revenge, it must realise that the step would be the inevitable prelude to the secession of those nationalities which it is striving so hard to keep within the Empire. A rule that has subsisted on force for so long must rely upon the same agency for its maintenance in the future. Accordingly, Austrians and Magyars continue to fight, as Count Czernin would have it, for their right to oppress their subject races, and are glad enough to be able to reckon upon Germany's powerful support. The joint testimony of Poles, Roumanians, Jugoslavs, and Italians is too emphatic to be set aside by vague recollections of dynastic friendships or sentiment based on an exchange of social amenities. The peace of Europe requires that the ill-assorted empire of Austria-Hungary should be split up into its component parts. If, when the possibility of self-determination has thus been attained, these elect to come together again, the resultant State can at least be relied upon to conform to the principles of sane democracy and not to be an instrument of one of the worst tyrannies.

THE CAUCASUS.*

ITS PEOPLE, HISTORY, ECONOMICS, AND PRESENT POSITION.

By D. Ghambashidze.

II.

During the reign of Alexander II. the Crimean War broke out. It ended with very disastrous results for Russia. The Congress of Paris on March 18, 1856, deprived her of the right of interference in Turkish affairs and of the exclusive right of protecting the Christian inhabitants of Turkey. The Black Sea was neutralised, the size of the fleet reduced, and, what is more, Russia was forced to cede to Turkey the districts of Kars and Bayazid, also the southern part of Bessarabia.

During the Crimean War the mountaineers profited by the occasion to continue their attacks, and this time they were supported by the adversaries of Russia, with the result that the struggle was prolonged. Alexander II. appointed Prince Bariatinski as the first Viceroy of the Caucasus, and, as his assistants, the Georgian Generals, Princes Orbelliani and Melikichvili, who started various attacks on the strongholds of Shamil. On August 25, 1859, Shamil was defeated and taken prisoner, but his family were deported to Russia and his sons were given an education at the Military Academy in Petrograd. At the same time a movement began among the Circassians, who were being hemmed in among the mountains by the Cossacks. On June 13, 1861, they formed a Union and elected a Council of fifteen Eldermen. They divided their country into twelve districts and appealed for help to Turkey and to England through the British Consul, Mr. Dickson, at Soukhum. The Circassians were pressed from the North and from the South. From the South there were six Georgian regiments operating against them. At that time Alexander II. arrived on the spot and gave the command of the armies operating against the Circassians to the Georgian General Orbelliani. Prince Bariatinski went to Russia and General Orbelliani was appointed as Viceroy.

In 1864 the Circassians were finally defeated and pressed back towards the seashore. They were given the choice—either to submit or to emigrate to Turkey. Only 90,000 consented to remain, mostly old people; four hundred and eighteen thousand emigrated to Turkey. In this way the war with the mountaineers, which lasted forty years, terminated. Unnecessary cruelty was applied to the Circassians by the Russian Government in forcing them to leave their country and to emigrate to Turkey, the more so as their revolt against the Russian Government was chiefly caused by economic reasons, as the Cossacks were gradually depriving them of their lands, which they had cultivated with the greatest care. Even to-day in the mountains there are ruins of beautiful old orchards—witnesses to the peaceful occupation of the Circassians. The policy pursued was also unwise, as this colony of Circassians in Turkey always took a prominent part in every war against Russia and fought with the greatest fanaticism. It will be remembered, too, how cleverly Abdul Hamid created Circassian colonies in the Balkans, and how he used them against the Bulgarians.

In 1864 the autonomy of the Georgian province Abkhazia was abolished and the Georgian General Djemardjidze was appointed Governor-General of Dagestan. In the same year serfdom was abolished in the Caucasus. On January 4, 1867, the autonomy of the Georgian province of Mingrelia was abolished. In 1877 the Russo-Turkish War began. The Georgian regiments under the command of General Amiradjebi took the fortress of Ardahan. On November 6 the fortress of Kars was taken—the Russian troops were outside the gates of Constantinople, and the Treaty of St. Stefano was signed. Subsequently, at the Berlin Congress, this Treaty was abrogated, and Russia was forced to return Erzeroum to Turkey, but received permission to annex Kars, Ardahan and Batoum districts, being obliged by Article 59 to maintain Batoum as a free port.

These annexed provinces were the former territory of the Georgian kingdom under the domination of Turkey for two centuries. The Christian Georgian population of these places had been forcibly converted to Islam by Turkey, but they had always considered themselves Georgians by race, and when they were annexed the Georgian nobility asked the Russian Government for permission to open Georgian schools and to cement their relationship with their Christian brothers. This wise suggestion was not adopted, and the Russian Government, with unnecessary brutality, began to oppress the Georgian Mohammedans, forcing about 100,000 of them to emigrate to Turkey, in 1880, when they were received with the greatest courtesy by the Turkish Government and were settled around Broussa. In this way these fine representatives of the Georgian race were separated from their country for the further benefit of Turkey.

The Emperor Alexander III. abolished the viceroyalty in the Caucasus and appointed a Governor-General. In 1886 Batoum ceased to be a free port.

The military operations in the Caucasus had made the entire population a community of warriors, and up to 1874 the Georgian National Army remained intact and at considerable strength. In 1887 conscription was introduced, but it applied only to the Christian population, and relieved the Mohammedans of military duty. In 1900 Prince Golitsin introduced a law forcing the Georgians to do their military service in the remotest parts of the Russian Empire, where they suffered much from the cold climate.

On September 26, 1901, the jubilee of a hundred years' alliance between the kingdom of Georgia and Russia was celebrated in Tiflis, for which purpose the Grand Duke Michael Nicholaivitch arrived in Tiflis, and read the following manifesto of the Emperor Nicholas II.:—

> "On this glorious day of union of the Georgian kingdom with Russia I am filled with the greatest joy in remembering that great event of our history. A hundred years ago the Georgian King Heraklius II. voluntarily placed his kingdom under our protection, uniting it with our Empire with indissoluble ties. From the very beginning the Georgian people and nobility have displayed the greatest loyalty, and, with their bravery, have been instrumental in helping us to fight common enemies. In recognition of their valuable services, I beg to express herewith my Imperial thanks to the Georgian nation and the promise of my special attention and care to this brave nation, which is united with us by common ties of religion."

It was tragic that after violating the Russo-Georgian Treaty of 1783, and depriving the Georgian nation of its rightful position, Tsar Nicholas II. could find nothing to say but a few empty compliments, which were in no way taken as satisfaction of the national aspirations of the Georgians.

It is also worth mentioning that the Romanoff dynasty, especially throughout the nineteenth century, always proclaimed a special desire to act as defender of Orthodox Christian nationalities; yet on May 26, 1811, the independence of the Georgian Church—which had existed since 542 and had been respected by nearly all the Mohammedan invaders—was abolished, at the instigation of General Tormasoff. The Katholicos-Patriarch of Georgia, Antonius II., was invited to Petrograd under the pretext of conferring with the Holy Synod, and was never allowed to return to Georgia. The property of the Georgian Church, to the value of 700,000,000 roubles, was confiscated, and, out of twenty-eight bishoprics, only six were allowed to remain. An Exarch of Georgia was appointed by the Russian Holy Synod, and throughout the nineteenth century the Georgian Church was reduced to a dependency of the Russian Holy Synod.

In spite of unjust treatment the Georgian nation made remarkable progress, especially during the second half of the nineteenth century. Its literature considerably advanced; the number of daily papers and weeklies in 1913 was twenty-four, and the number of books published in the same year on various subjects was about 240 in 460,000 copies. It must be remembered that 75 per cent. of the total population can read and write, and there are many schools and libraries. Eighty-five per cent. of the total population is composed of peasants, whose chief occupation is agriculture (very intensive)—tobacco, wine, cotton, silk-growing, and other forms of high agriculture.

The co-operative movement is very strong in Georgia. There are about 400 co-operative societies, and nearly 70 per cent. of the peasants are members.

During the last eight centuries the nobility of Georgia has devoted its attention chiefly to military matters and

KING GEORGE.

KING OF SPAIN

Digitized by Google

the military calling. There were about 5,700 officers in the Russian Army—among them very distinguished generals, like Princes Bagration, Amilakhvari, Tchavachavadze, Orbelliani, Amiradjebi, and others. Prince Imeretinski acted as Governor-General of Poland, and through his wise rule won great respect among the Poles. Incidentally, he was instrumental in obtaining the Emperor's permission to erect a monument to the great Polish poet, Mickevich, in Warsaw. General Kazbek acted as commander of the fortress of Vladivostok, and General Orbelliani was Commander-in-Chief of the Russian troops stationed in Finland.

Among the Georgian Bishops the most celebrated was Bishop Gabriel, whose famous sermons have been translated into English by the Rev. D. Malan, of Oxford. There were also a great many Georgian Professors at various Russian universities—among them the celebrated physiologist, Professor Tarkhanoff; the philologist, Professor D. Tchubinoff, and M. Petrieff, the late Dean of Odessa University. Distinguished Georgians, such as Princes Tchavachavadze and Eristoff were members of the Russian House of Lords. M. Tseretelli, the celebrated Georgian deputy of the Duma, acted as one of the leaders during the present Revolution.

Among the great authorities on Georgia in this country may be mentioned the late Miss Marjorie Wardrop, and Mr. Oliver Wardrop, her brother, who together translated into English the celebrated Georgian poem of the twelfth century, entitled "The Man in the Panther's Skin." They were also instrumental in presenting to the Bodleian Library at Oxford a great number of Georgian books.

The Armenians.

The Armenians, like the Georgians, are an ancient, Christian, civilised race, whose independent kingdom was submerged by the Mohammedan invasion many centuries before the Georgian kingdom's loss of independence. Their real home is in Turkish territory, only a portion of it being situated in the extreme south of Trans-Caucasia. So long as their kingdom remained independent, the Georgians always offered hospitality to the Armenian refugees. The Georgian King Heraklius II. especially encouraged their immigration to Georgian territory. The residence of the Armenian Katholicos-Patriarch was at Etchmiadzin.

Until the first half of the nineteenth century relations between the Georgians and Armenians were very friendly, but after the war between Russia and Turkey great numbers of Armenian refugees penetrated Trans-Caucasia and also settled on Georgian territory, especially in the South, and quite a considerable number of them devoted their attention to commerce. On this and the agrarian question there has been growing animosity between the two nations, which has been sedulously fostered by the extreme party of *Dashnaktsutiun*. Whilst the Armenians had no other place of refuge from Turkey but Trans-Caucasia, the Georgian peasants found their own lands not quite sufficient for them; and this naturally produced great tension. This was the greater because for twenty years some of the Armenian political parties advanced an unjustified claim to the historical territory of Georgia. The Russian Government treated the Armenians in quite a friendly way until the end of the nineteenth century, when Prince Golitsin inaugurated a very harsh policy against them, forcibly depriving them of the property of their Church and closing the Armenian schools. During the viceroyalty of Count Voronstoff Dashkoff the Russian Government protected the Armenians.

The Tartars.

The Tartars who inhabited the Eastern part of Trans-Caucasia throughout the nineteenth century were of a somewhat low standard of civilisation. In 1906 they began to publish their first daily paper, called *Irshad*. At present the number of their dailies and weeklies is about twenty. Up to 1906 they had practically no published books; in 1913 the number of books published on various subjects was seventy-three—126,000 copies.

Baku became a great centre of national wealth of the Tartars, where they owned a very substantial portion of the oilfields; it also became a spiritual centre of pan-Islamic propaganda. They were in very close touch with the Young Turks of Constantinople, considerably assisted the revolution in Persia, and played a very prominent part in the general organisation of all Mohammedan races inhabiting the former Russian Empire. As a great many Armenians in Trans-Caucasia are mixed up with the Tartars, very considerable tension has been produced between the latter and the Armenians. This was cleverly utilised by Prince Golitsin, and was followed by the Armenian-Tartar massacres of 1904 and 1905.

In the religious sphere the Tartars enjoyed complete immunity from the Russian Government, and, what was more, up to the end of 1916 they were not called up for military service.

The Russian rule of the Caucasus, and especially of Trans-Caucasia, from 1903 up to the Revolution, was very greatly influenced by the policy of Count Voronstoff, who tried to protect one of the nationalities of Trans-Caucasia in preference to others. But the Revolution of 1905 and the Tartar-Armenian massacres placed him in such a difficult position that he had to present a confidential memorandum to the Emperor, explaining that it was impossible to govern big provinces situated so far from the centre of the Empire without some sort of self-government. The result of this memorandum was that his powers were considerably increased, and he was in the position of a little Tsar in the Caucasus. He devoted particular attention to the spread of Russian influence in the northern part of Persia, where his experiments produced such deplorable results for the Persian situation, and particularly for the unity of Persia. He also inaugurated a policy of construction of the Black Sea Coast Railway and of the electric railway along the Georgian military road to increase further the centralised system which has been so fatal for the progress of Russia. Throughout his rule in the Caucasus he was practically controlled by the members of the Caucasian General Staff, from which representatives of the local nationalities were removed.

The general staff referred to was busier with political matters than with military, particularly instigating the Kurds against the Armenians, increasing the number of police in the Caucasus, and, again, removing the local elements from the administration.

The Revolution of 1905 had a very great effect in Trans-Caucasia, where all the nationalities, like the Georgians and Armenians, advanced their claims to self-government. Particularly vital was the agrarian question on account of the very unjust policy of the Russian Government in withdrawing the Georgian peasants from the Black Sea shores and planting there the peasants from the interior of Russia, and giving the best part of the land to the retired Russian generals. It was quite obvious that such a policy must produce animosity, as there was not enough land for the Georgian peasants themselves. There was also a strong demand on behalf of the Georgians, Armenians, and the Tartars for recognition of their languages. Needless to say, the Russian Government turned a deaf ear to all these just demands, and further enhanced its policy of oppression. At the outbreak of the present war all the Caucasian nationalities responded to the call: and the suggestion was made to the Government by the Georgians and Armenians that their reserves should be confined to the defence of the Caucasus from the Turkish side, the more so as the difficult ground of the mountains required a special knowledge which they, as natives, possessed exclusively. But, instead of that, about 300,000 Georgian reserves were despatched to Poland and Galicia.

This policy was changed with the appointment of the Grand Duke Nicholas as the Viceroy of the Caucasus, who started despatching fresh Georgian and Armenian reserves to the Turkish front. The only result of this was a very substantial offensive, which was followed by the occupation of Erzeroum and Trebizond, and the greater part of Turkish Armenia.

Whilst the Grand Duke was actuated by the desire to meet the claims of the nationalities, so far as it was possible under autocracy, General Yudenitch began to pursue a very aggressive policy against the Armenians and Georgians. As soon as Turkish Armenia was occupied, thanks to the active participation of Georgians and Armenians, he issued an order that, in those occupied territories the Armenians and Georgians should not be allowed to settle, and he intended to create a Cossack colony in this district. It is difficult to understand how such a plan coincides with the widely spread policy of the Allies—protection of small nationalities!

In connection with the war it must be mentioned that although the Caucasus possesses deposits and raw material for producing huge quantities of ammunition, the Russian Government has not permitted the construction of a single ammunition factory, and the Caucasian front had to rely upon ammunition being transported from Archangel. There were many other anomalies during the war traceable to the same causes as operated in other parts of Russia, thanks to the autocratic régime. These are known to-day throughout the civilised world, and we do not need to enumerate them.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Eastern Theatre of War.

April 9.

Earl CURZON, in replying to a question by the Marquess of Crewe, stated that so far from our forces at Salonika having been increased, it was matter of common knowledge that they had been considerably reduced for the sake of the Western front. The Allied armies there, though operating in a secondary theatre of war, were performing military services of primary importance, desistance from which would have involved the abandonment of Greece, the restoration of King Constantine, and the handing over to the enemy of the most formidable group of naval and submarine bases to be found in the Eastern Mediterranean. Similarly as regards Palestine and Mesopotamia, he need not enter on that occasion into a defence of either of those campaigns. Those who attacked them seemed to forget that we were an Eastern as well as a Western Power, and that the pillars of our Dominions were planted at Cairo no less than in these islands. In those campaigns we had not only taken two capital cities, but we had forced the Turk to withdraw the whole of his fighting forces from Europe, and we had even compelled the Germans to spare not only a German field-marshal but a German unit to assuage by their presence the discomfiture of their Turkish Allies, an entire German battalion having been discovered only during the last few days in occupation of an important position to the east of the Jordan. No British troops had been taken from France for any Eastern theatre of war.

HOUSE OF COMMONS.

Arabia in the War.

April 9.

Lord R. CECIL, replying to Sir J. Jardine, said:—I will, with the permission of the House, describe as briefly as possible the course which the operations of the forces of our Ally, the King of the Hejaz, have followed since the declaration of Arabian independence was announced at Mecca in July, 1916. At that time the Turks had in Hejaz an army of 20,000 picked regular troops with a proportional complement of artillery and plentiful supplies of transport, food, and ammunition, besides having a military railway in direct communication with their northern bases. The Arabs who rallied to the standard of liberation were neither organised nor equipped with modern weapons; nevertheless the towns of Mecca, Taif, Jeddah, Yambo, Wedj, Akabah, and Teima were seized at the commencement of the national movement. Consequent upon this, numerous Arabian tribes and a number of officers and men, prisoners of war in our hands, joined voluntarily the army of the King of the Hejaz, and were organised by him into a permanent and disciplined force for the purpose of holding what had been won and extending the area of Arab independence. The result of the efforts of this national army under the leadership of the Shereefs Ali, Abdullah, Faisal, and Zaid is that the Red Sea coast of the Hejaz has been completely cleared of Turks along a distance of 800 miles; the military railway has been continuously interrupted; and severe losses have been inflicted on the material and rolling stock. The city of Medina has been blockaded for the last 12 months. The Shereef Faisal's force has advanced its front from Mecca to north of Tafileh, on the shores of the Dead Sea, a distance of some 800 miles, and General Allenby's recent raid at Amman had the effect of assisting the Arabs to maintain their position. The casualties inflicted on the Turks up to date are very considerable, and it may be safely said that from the declaration of Arab independence up to the present time the Arab forces have occupied, isolated, or accounted for fully 40,000 Turkish troops and over 100 guns. Although engrossed in this difficult military struggle for national liberty the Government of the Hejaz have been able to inaugurate a new era of civil order and justice unknown in the Hejaz since its subjection to Turkish rule. The National Arab Government have, moreover, succeeded in arranging for two consecutive pilgrimages to the Holy Places. On these occasions the pilgrims were, as never before, accorded comfort and medical care, and both pilgrimages were marked by a complete absence of epidemics or any of the usual concomitants of robbery, extortion, and disorder. In Eastern Arabia the Emir of Riadh, Ibn Saud, has proved our unswerving Ally, and has established the independence of the greater part of Nejd. The Emir of Hail is still personally under Turkish domination, but has not been in residence in his capital for a year.

Troops in Mesopotamia.

Mr. MACPHERSON, replying to a question by Sir J. Jardine about troops stationed at Ramadieh and Hit, on the Euphrates, said:—No sick or wounded are retained at Ramadieh or Hit. They are evacuated by motor ambulance convoy or boat to Dhibban, and thence by ambulance tonga trains to Baghdad, where there is ample hospital accommodation. Medical officers are present with units, field ambulances, and casualty clearing stations, but no nurses, for the reasons given above. Fresh vegetables up to full ration scale have been sent from Baghdad, as the quantity available locally is negligible. While troops are on operations no fruit is issued, but there are ample stocks of dried and tinned fruits in the area.

A Message from Serbia.

The SPEAKER reported the receipt of a telegram from the Serbian Parliament expressing their admiration of the heroic resistance of the British Army to the onslaughts of the enemy, their sympathy with the spirit of determination and sacrifice of the British nation, and their firm belief in the final victory of the Allied Forces. He added that he would send a suitable acknowledgment.

Roumania Still an Ally.

Mr. MORRELL, on behalf of Mr. King, asked the Secretary of State for Foreign Affairs, whether Roumania is now an allied or a neutral State, and whether Roumanian nationals in this country enjoy the status and privileges of citizens of a neutral power; whether he could give any information concerning the King of Roumania and the present seat of the Roumanian Government and court; whether the British Minister, recently at Jassy, remains in Roumania; and whether he has telegraphic and other means of communicating with the Foreign Office.

Mr. BALFOUR in reply, said:—According to the information in my possession, Roumania is still an Allied State, and Roumanian nationals in this country enjoy the status and privileges of citizens of an Allied Power. As far as is known, the King of Roumania and his Court are still at Jassy, which is also at present the seat of his Government. His Majesty's Minister is also there, and in almost daily communication with me by telegraph.

THE PRESS ON THE NEAR EAST

The Strangulation of Roumania.

The real significance of the German conditions of peace imposed upon Roumania are well brought out in an article in the *Secolo* of Milan. Dealing first with the circumstances leading up to the signing or initialling of the treaty, the writer says:—

The resignation of the Averescu Ministry, Mackensen's new "ultimatum" for the immediate resumption of the peace negotiations, and the presentation of a list of the persons who are to be banished are all facts which prove that outside a group of the Germanophile party in Bucharest, which is ready to accept anything, Roumanian politicians and public men generally do not wish to sign the so-called peace which the Central Powers intend to impose on their country. None of them could sign a treaty which would signify the complete subjection of their country to the Central Powers. Marghiloman, the chief of one of the Germanophile groups in Bucharest—the other is led by Peter Carp—would have liked to ascend to power after the signature of the treaty, but nobody was willing to assume the shameful task. So Marghiloman was compelled to assume power before the conclusion of peace.

It is easy to understand this aversion, since Germany's peace conditions are so brutal that even the most ardent Germanophiles were unable to regard them as acceptable. This explains the reservations of Carp in these circumstances. Carp is a fanatical pro-German, but at the same time he is a proud man. Doctrinaire and tenacious, he was ingenuous enough to believe that Germany, in recompense for his devotion, would have been less harsh towards his country. Now he has an opportunity of convincing himself—others knew it long ago—that Gretchen is merely a character in literature, that German sentimentality does not exist, and that Germany has no pity for the vanquished. Not desiring to subscribe to the ruin of his country, Carp stood aside, leaving the road open for Marghiloman.

In Roumania everybody knows that Germany's conditions mean the total servitude of the country to the Central Powers. These conditions are of a double nature—territorial and politico-economic.

After describing the territorial concessions, the article continues:—

But the German peace conditions are not confined to territorial annexations. They include annexations of a novel kind, hitherto unknown in the history of humanity—namely, economic annexations of a very special character. Roumania will be compelled to sell to the Central Powers the surplus of her national production at prices fixed in advance. She will no longer be able to produce and sell freely to whomsoever she likes; consequently she will not be able to buy wherever she likes. One clause which is really monstrous concerns the oil-bearing region of the country. The whole of this district, which, beginning at the Carpathians, descends deeply into the Roumanian plain, will be declared an extra-territorial region and placed under the control of Hungary. Germany, Austria, Hungary, Bulgaria, and Turkey will superintend the refining of petroleum and divide the production between themselves, while Roumania, which has no other form of fuel, will only be entitled to a part of the production.

The freedom of navigation on the Danube will exist no longer for Roumania, except under the strict control of the Central Empires. Driven from the sea, Roumania will not even be free on the Danube. Thus a whole country, with all its wealth and all its inhabitants is declared to be the monopoly of the conquerors.

Judging from the conditions which have so far been made known by the Austro-German Press, there can be no doubt that the definitive treaty will reveal in all its horrors the impossible situation that has been created for Roumania. This treaty will be a model for the strangulation of a people. That Roumania is allowed to have an autonomous Government and a Roumanian administration is a matter of no importance; it does not alter the fact that the enslavement is a reality. As a result of the peace treaty Roumania will cease to exist as an independent country. It will be completely under the domination of the Central Empires. The latter, under the pretext of ensuring the carrying out of the clauses of the treaty, will impose on Roumania organs of control which will act with absolute

Digitized by Google

authority. Under a disguised form Roumania will become a German protectorate.

Future of the Balkans: Austrian View.

The following extracts from an article in the Austrian *Der Tag* are interesting as throwing light upon Austro-Hungarian hopes and aspirations regarding the future of the Balkans:—

The position with regard to Roumania is this. She has now lost the help of Russian troops and is much too weak to resist the Central Powers alone; so that she has fallen into their hands and must accept the terms of peace dictated by them. First and foremost, her breach of faith must be atoned for by the dethronement of her present royal house, and the reversion of the Crown to another line, which will give Austria and Germany full security for a hold in the future over Roumania's military and political position. Free navigation and traffic on the Danube from Orsova onwards, with the surrender of at least one of the mouths of this river to Austria and Germany, suitable reparation of territory and a corresponding war indemnity, even if this is given in part in material, goods of every kind and in metals, should be demanded. The Dobruja, which, with regard to position as well as population, belongs to Bulgaria, must be restored to her. If the efforts of the Roumanians living in Bessarabia to annex this country to Roumania could be happily furthered by the Central Powers the advantageous result would probably be that Roumania would be grateful for the unexpected enlargement of her territory and the re-union with her compatriots through the action of the Central Powers, and would find it much easier to transfer the crown to a loyal house agreeable to them. Roumania in the hands of one that did not assure complete security to the Central Powers, or was perhaps even secretly hostile would be a standing menace to East Hungary. . .

For the political reorganisation necessary in the Balkans the following is laid down. From Serbia, which with its murderous royal house kindled this awful world conflagration, by the assassination of our Crown Prince, and thereby burdened itself with immeasurable guilt, the full penalty must be exacted. King Peter, with all his criminal, curse-laden house must abdicate, Serbia must cease to be an independent State and must be organically split up. This must also be the case with Montenegro, equally guilty as she is of the origin of the world war; because the continued existence of these two eternal hotbeds of conspiracy would be too great a standing menace to the new political and military developments of the territories on the Danube of Austria and Hungary. Now Austria, as the conqueror, is in a position to get at the root of the evil, and this rare opportunity must not be missed, as any such neglect would otherwise be bitterly atoned for in the future. Serbia east of the Morava, the Lepenec and the Vardar, which is already to a considerable extent inhabited by Bulgarians, must be surrendered to our ally and friend Bulgaria, who can be trusted to possess the determination and strength to enable her gradually to absorb peaceably the Serbian population of this district. On the west of the Morava, Serbia together with Montenegro is to be annexed to Croatia, Bosnia and Dalmatia, with the exception of the southern regions, which are inhabited by Albanians, and therefore to be restored to them again. At present she is to have no parliamentary representation, but is to lie under a strict military rule in which she will have no free hand. This combination would remove once and for all the danger of frontier unrest from the Danube States, and would moreover in the same way bring about some fulfilment of the Great Croatian desire for a union of the Croatian Serb peoples. It would thus fittingly help to reconcile these to their fate as vassals of the Danube States, and this would be of the utmost value for the health and peace of the national relations of the latter. The loyal Croatians, Bosnians and Dalmatians would, therefore, owe these States a special debt of gratitude, and, supported by a Government that knew what it wanted, it would furnish a counter-balance to the somewhat preponderating population of the newly annexed territory.

Finally, with regard to Albania, the Danube States which as we have already mentioned, would avoid wherever possible the approach of distant foreign people, would scarcely tolerate the close society of this country with its particular population, which is neither Croatian nor Serbian, but composed of peoples essentially different from our own. On the other hand a great, strong and dependable Albania would be very useful to us. The parts of Serbia and Montenegro east of the Bulgarian river Morava, the Lepenec and Vardar and south of the Teplitza, the Ibar, the Reschka, Ludska and Moratschka, which are inhabited by Albanians but have been torn from their possession, would have to be annexed to Albania. This would enable her easily to absorb the foreign peoples of this region, and thereby a respectable State owing a debt of gratitude to us could be built up, which could be relied on to offer strong resistance to all foreign lust of occupation.

This independent Albanian State should be subject to a ruler who could be relied on as well disposed towards Austria and Germany and as an adherent of their policy, and certain economic privileges for Austria and Germany, notably in connection with trade with Salonika, should be secured to it. This would be an important factor in the solution of the Salonika problem. Turkey must remain in possession of her present territory in the Balkans together with Constantinople and the Straits.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I hope British merchants and manufacturers will give careful consideration to Mr. Mawson's remarks in this week's issue as to the nature of the opportunities that await them in the development of Salonika. Those of them who read these columns will be aware that I have never ceased to urge the importance of the Near East markets after the war, not only on account of their commercial promise, but also because only by strenuous business competition on our part will it be possible to limit the "peaceful penetration" of the Central Powers in those important regions. As I have pointed out, various factors will combine to give trade in the Near East a southward trend in the future, and that in its turn will give an immensely enhanced value to Salonika, as in all probability the chief channel of Balkan trade. Needless to say, the possession of branches at that port would place our business houses in a vastly better position for entering the Balkan market as soon as the war ends, and what better time could there be for deciding to open branches there than the present in view of the projected reconstruction of Salonika on lines which will enable it to cope with probable developments.

***

That, however, is the long view, and the immediate prospects to which Mr. Mawson directs attention are the openings for British capital in the rebuilding of Salonika and in the development of Macedonia. Both these projects, he points out, offer extensive fields for business enterprise, and it is to be hoped that his statement that the Greek Government will welcome British co-operation will serve to remove any doubts that may exist in the minds of British contractors as to whether it is worth while attempting to participate in the carrying out of the vast plans now under consideration. In this case one thing will probably prove a stepping-stone to another, and British contractors who decide to help in rebuilding Salonika and in developing Macedonia will naturally establish offices of some kind at the port as the most efficacious means of securing and conducting business, and once established there I think we may take it for granted that the field for business enterprise that they will see open to them will induce them to exchange temporary for permanent premises.

***

Mr. Mawson's estimate that Salonika will contain a population of half a million within the next twenty years, as against a pre-war population of only some two hundred and twenty thousand, suggests very forcibly the comprehensive character of the replanning of the city. The plans, which were made, he tells us, on the assumption that the whole city had been destroyed—by far the best method if the new city is to be really satisfactory—provide for the extension of the docks, railways, and warehouses, for an electric underground railway connecting the two railway termini, a new water supply, a main drainage system, electric power and light installations, the building of Government offices, etc. These schemes, together with the great housing programme that will be necessary, will give ample openings to British contractors; if only they will bestir themselves to secure the business that is literally waiting to drop into their mouths.

***

One effect of the reconstruction of Salonika, Mr. Mawson thinks, will be to make the port a manufacturing centre. This outcome seems very probable, since, as he points out, the rebuilding of the city will create an immense demand for certain materials and commodities which can readily be manufactured there. And it is only to be expected that this increase in the city's activities will be followed by developments in many other directions. In this connection Mr. Mawson mentions a few financial opportunities, such as insurance, the erection of large stores, and the establishment of factories for the export of the country's produce. In all these directions there are openings for British capital and British enterprise, and our business men will be sadly at fault if they neglect this unsurpassed chance of getting a footing in what may truly be called the gateway of the Balkans. I shall not comment on the present occasion on Mr. Mawson's remarks apropos of the development of the hinterland except to say that British firms established at Salonika will be in the most advantageous position to take advantage of the openings that will present themselves there and in the Near East generally.

***

With the expenditure at £19,176,560, and the revenue at £19,244,000, the Bulgarian Budget estimate for 1918 shows a substantial advance on that for the previous year, when the totals under both headings were £17,519,134. Since 1914 the increase has been both continuous and rapid, as will be gathered from the modest Budget estimate of that year of £10,270,504 for expenditure and £10,279,800 for revenue; and the fact that the war has so far been responsible for an increase in the estimate of just under 100 per cent. must be making the Bulgarians wonder whether war is worth while after all, especially as the territories they have temporarily occupied only figure on the expenditure side of the estimate.

***

The Indian Trade Commissioner, Mr. D. T. Chadwick, who is now duly established at 60, Winchester House, Old Broad Street, after some little delay owing to the many calls on the Office of Works at the present time, will have a great opportunity before him in the years immediately ahead of us, as it is quite certain that trade relations between India and this country ought to be greatly increased after the war. India's expected development will naturally mean that she will require larger overseas markets, and it is obviously a matter of Imperial concern that she should find the necessary trade openings as much as possible within the Empire. Her direct representation in the City by Mr. Chadwick, who will be responsible to the Department of Commerce and Industry at Delhi, should prove a most useful step to that end, just as the concurrent appointment in Calcutta of a British Trade Commissioner, Mr. T. M. Ainscough, is expected to promote the trade of the United Kingdom in India. Emphatically this is a case of organisation in time, and as a result there should be a rapid expansion in the exchange of commodities between the two countries as soon as trade conditions become normal.

***

Some frank comments on Turkish finances are made in the *Neue Zürcher Zeitung*, which says that the loan recently arranged in Berlin by Javid Bey was absolutely necessary to keep Turkey going, thanks to the protracted disorganisation of the whole economic machinery of the country. The writer goes on to say that there is at present a complete want of connection between Turkey's economic situation and its finances, and that the country is practically bankrupt. Even more interesting is the statement that "there is a marked antagonism to the German influence in business—an antagonism that makes it certain that Germany may in the future be a guest in the Turkish house, but never its master," which fully confirms my recent remarks on the subject of the changed attitude of Turkish business men towards Germany.

***

An illuminating instance of the unnecessary extent to which the Empire was dependent on external sources for its supplies before the war is to be found in the case of the sugar industry. In 1913-14 the world's sugar production amounted to 18,731,000 tons, of which we were responsible for 3,281,000 tons. Of this meagre total India contributed 2,291,000 tons, and Egypt 69,000 tons, while the balance came principally from Australia, 255,000, and Mauritius, 250,000 tons. India, despite her comparatively large production, was not able to meet her own requirements, and in the year under review imported 100,000 tons from the enemy, besides taking large consignments from Java and Mauritius, while Egypt, previously an exporting country, also consumed its own crop.

***

The position of India and Egypt deserves special attention because both countries are admirably situated for the production of sugar on a vast scale, provided suitable encouragement is given to the industry. It was precisely because this was not done before the war that little progress was made in either country. As regards India, the duty on imported sugar of 10s. a ton was quite inadequate, and apart from that there was little or no encouragement for increased production owing to the competition of the State-

aged industry of the enemy countries. During the war a considerable advance has been made, notably in Egypt, where sugar production has been immensely increased; but if this tendency is to continue in the future there would seem to be nothing for it but a system of bounties or some similar encouragement until the Empire has reached the ideal stage of producing all the sugar necessary for its requirements.

***

Presiding at the general meeting of the National Bank of India this week, Mr. Robert Williamson, the deputy chairman, said that the results of the year's working had been much better than were anticipated, though the difficulties referred to at the previous meeting still existed, and had increased. "They may be summed up," he said, "in a few words—short supply of tonnage, the high price of silver and scarcity of rupees, an insufficient supply of India Council bills, making it difficult for the banks to return to the East money brought home from there." It is naturally impossible to say what will be the effect of the continued incidence of these factors, but it is possible that the prosperity of local enterprises and undertakings in India to which Mr. Williamson pointedly referred may again prove a counterbalancing factor of considerable importance.

***

Reference was also made to the satisfactory conditions in India by Sir Montagu Turner at the general meeting of the Chartered Bank. "As regards our business in India," he said, "it is satisfactory to note that the crop reports up to date are most satisfactory. The area under cultivation in the Punjab has increased; rain, which was needed, has fallen, and at present we may look forward to bumper crops. India as a whole is in a state of great prosperity. Her industries are thriving and her revenues are increasing." Needless to say, the operations of the Chartered Bank were conducted during the year under very difficult conditions, and in this connection Sir Montagu's statement should be noted that the chief aim and object of the bank "has been, in co-operation with other exchange banks, to finance, to the utmost of our resources, shipments of national importance from Eastern ports to this country." This drain on their resources, he pointed out, had not enabled them at all times to satisfy the full requirements of their friends and customers in the ordinary course of business. "All engaged in business," he added—"exporters, importers and dealers—have much to contend with, but we can only look forward to the time when war has ceased and trade has resumed its normal course. I might also refer to the scarcity of tonnage, which restricts operations and is felt at all points alike. That, unfortunately, is a difficulty which is likely to increase rather than to diminish in the next few months."

COMMENTATOR.

The Bondholders' Report.

Greek and Turkish Finances.

The Council of the Corporation of Foreign Bondholders has just issued its forty-fourth annual report, for the year 1917, in which, as might have been expected, Greek and Turkish finances come in for considerable attention. Very little fresh light is thrown on Turkey's financial position in the report, while as regards Greece, the chief interest lies in the statement regarding an anticipated larger distribution for interest and amortisation in 1918. We give below some extracts from the report.

Greece.

The gross receipts from the Monopolies and the Piræus Customs, assigned to the bondholders in the arrangement of 1898, amounted to 60,056,960 dr. in 1916, against 58,231,475 dr. in 1915 and 63,087,551 dr. in 1914.

The net amount available in 1916 for increase of interest and amortisation, including balances from the previous year and interest saved on bonds redeemed, was 8,414,735 fcs., against 8,680,282 fcs. in 1915. Out of this sum the distribution in 1917 by way of increased interest, which was estimated in the council's last report at 24 per cent. of the original interest for the first two and 22 per cent. for the third groups, actually amounted to 22 per cent. for each of the three groups. As regards sinking fund, the actual distributions to the three groups agreed with the estimates—viz., 14, 14, and 16 per cent. respectively. It is anticipated that the distribution in 1918 by way of increased interest will be 22 per cent. to Group I. and 24 per cent. to Groups II. and III., and, by way of increased sinking fund, 14 per cent. to Group I. and 12 per cent. to Groups II. and III.

Turkey.

No report of the Ottoman Public Debt Administration has come to hand since that for the year 1914-15, summarised in the council's last annual report.

No reliable information is obtainable as to the receipts of the debt administration during the fiscal years 1916 and 1917. In foreign publications, however, the receipts for the first five months of these years were stated to have been £T2,173,145 and £T3,416,455 respectively, but it is not clear whether these figures include revenues other than those ceded to the bondholders, as in 1913-14, which was the record year, the receipts from the ceded revenues amounted to £T2,222,552 during the corresponding five months.

The following information with regard to the financial position of Turkey is based upon statements made early in 1917 by the Minister of Finance.

As regards debts contracted during the war, Turkey had borrowed about £T137,000,000 from Germany and about £T8,000,000 from Austria, while £T35,000,000 was due for internal requisitions, and for arrears of pay and of debt service, etc. In this way the debt, which before the war amounted to about £T150,000,000, would be increased to about £T330,000,000 by the end of the third year of the war. This was exclusive of a further £T50,000,000 promised by Germany, represented by German Treasury bills to be deposited with the Debt Council as security for a corresponding issue of paper money by Turkey. As regards this paper money, there had already been five similar issues amounting to £T85,000,000, covered partly by German Treasury bills and by deposits of gold in Germany and Austria of £T5,660,000. In consequence of these issues the value of paper money had tended to depreciate, and early in 1917 the Turkish gold pound was worth three, and in Aleppo, Baghdad, and other places, four and even five paper pounds, while of the £T50,000,000 of metallic currency, which ought to have been in circulation, there was no trace. Arrangements had, however, been made for maintaining the value of the paper, the Turkish Government having entered into an agreement with Germany by which it was provided that after the termination of the war the Turkish pound would be accepted by Germany as the equivalent of 18.50 marks.

As to revenue and expenditure, in the financial year ended February 28, 1917, the former had amounted to £T21,000,000, and the latter was estimated at £T83,000,000, showing a deficit of £T62,000,000, exclusive of interest on the loans contracted during the war, which is suspended during the duration of the latter. The Budget for 1917-18, submitted to Parliament in March, 1917, estimated the revenue at £T23,000,000 and expenditure at £T46,000,000. This latter figure had, however, been increased by the Chamber to £T53,000,000, making a deficit of about £T30,000,000, which the Government were authorised to meet by Treasury bonds, loans, issues of paper money, etc., and it was estimated that another thirty to forty millions would have to be added if the war lasted until September, 1918.

The service of the existing public debt would require £T21,000,000, as compared with £T9,000,000 before the war, and in order to meet it supplementary sources of revenue would have to be found. It was suggested that taxes on war profits might bring in a considerable increase of revenue, but the Minister admitted that such taxes would be difficult to apply.

The Minister added that Germany would ultimately be repaid her advances if she gave Turkey time, and he is also stated to have remarked that "neither the formidable total of the public debt nor the frightful figures of the Budget are calculated to inspire calm and serenity."

The Council desire to point out that, although some of the issues of paper money above mentioned are stated to be guaranteed by German Treasury bonds for an equivalent amount deposited in Germany in the name of the Council of Administration of the Ottoman Public Debt, the responsibility for their redemption in no way rests upon the latter, but upon the German Government. The debt council's signature merely testifies to the deposit of securities, and does not carry with it any obligation as regards the redemption of the said issues.

SCIENCE AND COTTON.

Characteristics of Plants.

Dr. Lawrence Balls gave an interesting lecture on April 10, before the Royal Society of Arts, on "Some Instances of Applied Science in the Cotton Trade," in the course of which he said that the greater precision brought into the study of heredity by the rediscovery of Mendel's Law led to a class of work which was first exploited by Professor Johannsen of Copenhagen, known as pure line studies, or pure strain studies. Johannsen worked with beans, and showed that from cultures of bean plants, which were considered uniform from a horticultural standpoint, it was possible to isolate many separate kinds which differed, for instance, with regard to the average size of the seed they produced. When the author began his researches into the course of heredity in cotton in 1905, they had very little previous knowledge to guide them. A general conviction existed that the yield of the Egyptian cotton crop was deteriorating, and there was an impression (which they now knew to be erroneous) that this deterioration would be dealt with primarily by appropriate breeding of new kinds of cotton. They began by taking natural seed from single plants of the 1904 crop, and raising small families from these in 1905. Using methods suggested by analogy with previous experimental work, the detailed examination of these families showed in the course of 1905 that the commercially-grown seed with which they had started was very far indeed from being the seed of "pure lines" in Johannsen's sense.

In the first place, even though they were not able to examine more than a limited number of the characteristics of the plants, and although the families they raised were quite small, it was most unusual to find a family in which all the plants resembled one another. Now, the fact that a group of plants derived from a common parent was not constitutionally uniform, indicated that the parent plant must have been a hybrid, and this great abundance of hybrids thus detected in those plants of 1904, which they had taken at random to begin with, indicated that an appreciable amount of inter-crossing must be taking place between flower and flower under the conditions of the ordinary Egyptian field crop of cotton. Further, even with this rough material from which they started, they were able to show in 1905 that certain plants on their plot had undoubtedly originated through cross-pollination in the previous year, and not earlier. This work was extended to provide a numerical determination of the chance of crossing as compared with the chance of self-fertilisation, which chance was found to be approximately one in ten.

In this early stage of the researches it seemed (as indeed it was) much more useful to attempt to trace the working of Mendel's Law by study of these natural hybrids, or, better still, by the deliberate making of hybrids for experimental purposes, than merely to isolate pure lines. Further, their experimental work was directed primarily to the study of crosses between American upland cottons and Egyptian—practically an inter-species cross—rather than to inter-Egyptian crosses. The attempt was an ambitious one, and was only made possible by the enlightened attitude of the Khedivial Agricultural Society, and its then president, the late Sultan of Egypt. At the same time it was well worth the trouble, for in many cases they traced definite simple rules of inheritance on Mendelian lines through most complex phenomena, and in even more cases they found most complex inheritance in cases which, on the face of them, appeared to have been quite simple.

Introduction of New Cotton.

At the end of 1912 came an insistent official demand from the Agricultural Department, to which they had been transferred, for a new cotton to replace the deteriorated brown Egyptian or Afifi. One thing at least was perfectly obvious, in the light of their seven years' experience, namely, that it was the easiest thing in the world to introduce a new cotton. Alternatively, one of the most difficult things in the world was to predict what the agricultural behaviour of plants in bulk would be, from the behaviour of a few parent plants grown on a breeding-plot. Lastly, it was self-evident to them that to introduce a new variety of cotton in an impure state (however slight the percentage of impurity), or even allow it to become contaminated by natural crossing (much less by seed mixture), during its propagation from the breeding-plot to field cultivation, was simply to condemn one's work to the same failure which had sooner or later resulted with every other variety of cotton which had ever been developed in Egypt or anywhere else in the world. This meant, in practice, that a system of continual seed renewal was inevitable.

In developing this system, they had first to consider what cottons should be propagated as most nearly meeting the official demand. Obviously, the prime essential was that the strain should be a pure one; further, it was undesirable to introduce the use of any but Egyptian stocks. All strains brought from their deliberate hybrids of American or even Egyptian cottons were therefore ruled out, and they restricted their work to strains which had been obtained simply by choosing individual plants of commercial Egyptian varieties. These plants and their descendants had been self-fertilised for a number of generations, ranging from seven to two, and all their various characteristics measured, registered, and studied until such of them as had been original hybrids had been split down to purity.

Without entering into details, they might note that most of the transference of pollen from flower to flower in Egypt was effected by bees; if bees could be kept away, foreign pollen was also kept away, and so for the first stage they sowed the protected seed from single pure-strain plants in cages. For the following year (1913) the seed from these cages, again spaced at wide intervals so as to obtain the largest possible production of seed per plant, covered areas of 20 acres or so, and obviously could no longer be protected by gauze, so they endeavoured to deceive the bees by surrounding such areas with a belt of plants some seven to ten rows deep.

Such was, in outline, the system they devised, and this was to have been combined with a system of seed distribution year by year, so as to provide for continual and perpetual renewal of the seed of all Egypt year by year as a matter of pure routine from the handfuls of various suitable strains, maintained pure with all laboratory precautions at the Central Seed Station at Giza; the inevitable deterioration of a variety of cotton exposed to contamination in the field would thus be counteracted by continuous renewal year by year from the pure stock. With the departure of Mr. Holton, and then of the author, from Egypt at the end of 1913, this work was practically put in abeyance.

Length of Staple.

One of their most pressing needs at the present time was the provision of a language common to both the spinners and the growers of cotton, such that the grower could be informed exactly what kind of cotton the spinner requires. This language could only be synthesised by scientific study of the properties of yarn in relation to the hairs of which it was composed. It would have been gathered that the ordinary commercial crop of cotton was an impure culture, which, from the genetic standpoint, was so far from being a pure strain in Johannsen's sense that it approached rather to an analogy with humanity; for although each individual plant was not unique in constitution, yet there were innumerable differences existing within a single field. Amongst these differences were those relating to the length of the lint, over and above such modifications of lint-length as might be caused by environment. Further, these genetic differences took two forms: first, there were differences in what they might call the mean maximum length of the lint produced on any one seed, and, secondly, there were differences in the degree of variation in lint-length on different parts of the same seed. Consequently, in respect of the latter, a single plant (or equally a pure-strain population of plants) might produce most irregular lint, the hairs from one end of each seed being very much shorter than those from the other end, while every graduation was found between these extremes. On the other hand, suitably chosen pure strains were capable of making lint not only more regular in staple than were their present cottons, but might conceivably produce a greater degree of natural regularity than machinery could enforce.

In the ordinary way, the length was determined by examination of the lint cotton from which the seed had been removed in the process of ginning. The expert grader pulled a tuft of hairs from this lint in a particular manner, usually laid the tuft on his coat sleeve, and then assessed, with or without a measuring scale, the length of the tuft: in this case the length measured was the length of the majority of the longer hairs. Various methods had been tried in order to bring greater precision into these definitions. In 1863, Mr. C. O'Neill measured a few dozen cotton hairs one by one, and published the data obtained, which had been frequently quoted. Other similar sets of determinations had since been made, but the difficulty inherent in all these methods was that of sampling; it was extraordinarily hard to ensure that the hairs removed for measurement were free from even a moderately high "sampling error."

There was an alternative way of measuring length of staple, which practically disregarded the waste component, and being effected upon the seed-cotton was therefore useless to the users of the ginned lint. It began with the practice in America of combing out the lint hairs on either side of the seed in the form of two wings, and measuring the length of these two wings. When the author began his study of cotton, it seemed self-evident that this was a bad way of doing a good thing, for if the hairs were combed differently, so that they formed a halo round the seed with each hair lying approximately along a radius of the halo, and with the longitudinal axis of the seed lying in the plane of the halo, then the cotton which produced a circular halo with the seed in the centre was obviously more uniform than that which gave an eccentric halo, so that the method provided some indication of regularity of staple.

Apart from this, however, and confining their attention to the mean maximum width of the halo, commonly attained at the butt of the seed, it was found that this could be measured to within a millimetre, and, as data accumulated, they found further that by so doing they had obtained an unexpectedly precise method of lint measurement.

An Important Invention.

The limitation to the method was its inapplicability to ginned lint, and hence to all consumers' problems, while a further limitation resided in the fact that it gave a numerical statement of the mean maximum length only, and not of the frequency distribution of short hairs in the sample. This latter could only be assessed conveniently by eye-judgment. Consequently, some method was most obviously needed which would handle ginned lint; would handle it in sufficient quantity to blot out the sampling error; would determine, not only the mean maximum length, but also the distribution of lengths of all kinds; and, equally important, would do all these operations quickly. This method was now available through the invention of a comparatively simple mechanical arrangement which could be worked up to various degrees of operative complexity for the sake of making the mechanism automatic; a provisional patent had been obtained, and one form of it was able to be shown by the lecturer by the courtesy of his directors in the Fine Cotton Spinners' Association.

COTTON SEED UTILISATION.

Value of Cotton Seed Flour.

To the Editor of THE NEAR EAST.

Sir,—In the article entitled "Cotton Seed Utilisation," appearing in your current issue, you draw attention to the distinction between the British and the American systems of milling cotton seed in the production of oil and cake, and you point out the difference, not only in the number but in the commercial value of the products obtained from the seed by the American method as compared with the British method.

All that you say is perfectly true, but it occurs to me that those of your readers who are not conversant with the history of cotton seed oil milling on both sides of the Atlantic may be left under the impression that the British seed crusher has persisted in his method in a spirit of pure conservatism, and has deliberately refused to march with the times. Such is by no means the case, but to go into explanations would be impossible in a letter. From a careful study of the conditions of the cotton seed oil industry, both in the United States and in Europe, for the last ten years, I may say that the seemingly irrational British method is the result of necessity rather than choice. The British seed crusher is by no means insensible to the superior character of the products obtained by decorticating cotton seed.

The changes in the conditions of the seed crushing industry brought about by the war have been so rapid and so remarkable that it has been difficult to keep pace with them. As has proved to be the case in many other industries, all precedents have been modified, and some have had to go by the board. Let us hope that it will prove to be the case also with a number of our time-honoured prejudices, and that they will perforce take to themselves wings and fly away.

Perhaps one of the most remarkable effects of "war-time emergencies" upon the cotton seed oil industry has been to bring into well-deserved prominence the value of cotton seed flour as a diluent for wheat, and indeed as a substitute for meat. This product is obtained by milling the residue of the kernels of the cotton seed (which, as you correctly described, are first of all separated, by the American method, from the containing envelope or shell of the cotton seed) after the oil has been squeezed out. The value of properly prepared cotton seed flour as a foodstuff for human beings has been well known in the United States for the past twenty or thirty years. It was first prepared by Col. J. W. Allison (one of the pioneers of the cotton seed oil industry in the United States) as early as the year 1876. This flour contains nearly five times as much protein as wheat flour. It is practically starch-free, whereas wheat flour contains a high percentage of starch, and it has from 7 per cent. to 10 per cent. of fat, as against 1½ per cent. to 2 per cent. of fat in wheat flour. These figures show that cotton seed flour should not properly be described as a *substitute* for wheat flour. It is, indeed, *sui generis* a foodstuff, and the fact that it is rich in the constituents in which wheat flour is poor, and *vice versâ*, places us in a position materially to reduce the proportion of wheat flour in our bread; to use a suitable quantity of potato flour, and yet, by the admixture of a comparatively small percentage of cotton seed flour, to maintain the protein and fat content of our loaf at the same figure as that shown in the all-wheat loaf.

In a paper entitled "Some Cotton Seed Products in their Relation to Present-day Needs," which I recently read before the Society of Chemical Industry (London Section), and to which you were good enough to refer in a recent issue of your journal, I dwelt in some detail upon this subject, and showed that a mixture of 5 per cent. cotton seed flour, 10 per cent. potato flour, and 85 per cent. wheat flour (percentages calculated on solids only) would—assuming a moisture-content in the bread of 35 per cent.—yield a loaf containing a little more protein and a little more fat than the average wheat loaf of pre-war days. I exhibited samples of loaves and rolls made from this formula, and also from a mixture containing 25 per cent. of cotton seed flour (6 per cent. potato flour and 69 per cent. wheat flour), which were baked by a London baker, with cotton seed flour obtained from the United States. The opinions expressed by members who tasted these samples of bread (the opportunity so to do was taken to the full extent of the samples exhibited) was that the bread was very palatable—in fact, it was said to resemble in appearance and texture a well-known proprietary bread.

Now, it is worth pointing out that the average wheat consumption in Great Britain for a period of years immediately preceding the war was something like 7,000,000 tons, of which the home crop afforded but 1-5th, so that we have been importing about 5,500,000 tons of wheat per annum. Were we in a position to use 5 per cent. of cotton seed flour and 10 per cent. potato flour, mixed with our wheat flour, we should be able to reduce our wheat imports by something over one million tons per annum.

Cotton seed flour fit for human consumption can only be obtained from properly decorticated cotton seed. Properly to decorticate cotton seed involves (in the only successful decorticating process known to-day) the presence of a considerable quantity of short cotton fibre or "fuzz" on the shell of the seed; such as is found in the woolly or upland varieties, as distinguished from the bald varieties of cotton seed. In order to mill this cotton seed to the best advantage, commercially and industrially, the short lint must be removed in three grades, as you have pointed out, therefore the production of cotton seed flour involves the whole question of "decorticating versus crushing whole," and it would appear that this subject is now engaging the attention of those chiefly concerned.

Since reading my paper I have received advices from the United States which indicate that the attitude of mind of the general public in that country in regard to the value and importance of cotton seed flour has undergone a rapid and significant change. In a leading article in the March issue of the *Cotton Oil Press* it is stated that "the public is not only ready for cotton seed flour, but the demand is already far ahead of the supply, and is increasing rapidly." The mill which hitherto was the only one that made a speciality of the manufacture of this flour is now being enlarged, and another factory started work during the month of February.

In view of the fact that the question of manufacturing cotton seed flour in this country may be raised before long, it is not only relevant, but important, to point out that in so vitally important a matter as a modification of a staple article of diet like bread, it is of correspondingly vital importance that certain standards should be laid down, and their observance insisted upon.

It is by no means sufficient merely to grind cotton seed cake to a very fine powder in order to produce a flour fit for human food. Such a matter as the preparation of a diluent for wheat should be most carefully supervised by competent authorities, and the observance of the proper precautionary measures in the milling of the cotton seed meal, necessary to ensure the production of a flour fit for human consumption, should be rigidly enforced by law.

Mr. John A. Todd (the well-known authority on cotton economics), in his work, "The World's Cotton Crops," gives facts and figures relating to the cotton situation in India, from which it may be concluded that that country offers the best prospect of a speedy increase in the supply of cotton, of which the world is now so sorely in need. He writes:—

> As a cotton-growing country, India has many great advantages. In spite of her enormous area, she is fairly well supplied with means of communication, especially by rail. Her population is enormous, with a density per acre in certain parts which is unequalled in any agricultural country in the world. Most of the native races are born agriculturists, and, although their standard of living has in the past been very low, they are quick to recognise the possibility of improving it, as cotton-growing enables them to do.

Your readers in India should thus be particularly interested in the present cotton situation. The ravages of the pink boll worm are seriously imperilling the Egyptian crop, and, so far, all attempts to get rid of this pest have proved unsuccessful. A great opportunity now offers for India largely to increase her importance as a contributor to the world's supply of cotton. It is well known that by careful selection and grading of the seed used for planting, the length of the staple produced in India could rapidly be increased, and in the interests not only of India herself, but of the British Empire generally, the authorities concerned would do well to act upon the recommendations expressed by such eminent experts as Mr. Todd, Dr. Lawrence Balls, and others who have made a life study of cotton economics.—Yours very truly,

E. C. DE SEGUNDO.

Dashwood House, New Broad Street, E.C.,
April 9.

According to the Cairo correspondent of the *Morning Post*, the official Bulletin of crops shows that, generally speaking, the wheat is of good quality. In Lower Egypt the crops are slightly below the normal on account of the variable weather. The harvesting of barley has already commenced.

LANCASHIRE COTTON.

An Uncertain Position.

(From Our Own Correspondent.)

Manchester, Wednesday.

The man-power proposals of the Government have had a disturbing effect upon trade in the market this week, and in most quarters there has been less initiative than for some time back. The uncertainty as to the position of affairs from a business point of view in the near future has increased. Producers have been slow to commit themselves to deliveries later on, and buyers have been nervous as to placing orders of weight. It is recognised that the extension of the military age will mean further injury to our export trade. News relating to the Egyptian cotton situation has been rather scanty, but the demand continues healthy. Rather more offers have been mentioned from Alexandria. Egyptian yarns have again advanced in price, and steady buying has occurred from day to day. Spinners as a body are more independent than ever. Without there being any general flow of business in piece goods for Egypt a fair amount of inquiry has been about. Much difficulty has been experienced, however, in arranging terms of fresh contracts. India has given rather increased support in light fabrics such as dhooties and jaconets. Occasional lines have been put through for China in well-known makes of grey shirtings. A little more activity has been reported for Java. The home trade continues to do well. There continues a famine of supplies of American yarns, and small lots for quick delivery have been sought after. Prices have again hardened. Rather irregular operations have occurred in shipping bundles.

Cotton Spinning Profits.

The cotton spinning trade of Lancashire at the present time is enjoying considerable prosperity, and it is estimated by leading authorities that never before in the history of the industry have spinners made more money than at the moment. Mr. Frederick W. Tattersall, of Manchester, has prepared an analysis of the stocktaking results of nineteen large concerns whose figures have been published since the beginning of this year. Six companies for three months' trading have reported a total profit of £28,920, whilst thirteen companies for the past six months have made £95,287. The share capital of these concerns amounts to £669,991, with loans of £273,197. After allowing for depreciation and interest on loans the profit on share capital works out at over 45 per cent. per annum, whilst on share and loan capital combined there is a gain of over 32 per cent. per annum. These figures are extraordinary, and it is expected that the June stock-taking results will also be very encouraging. A decided rise has occurred during the last few months in the prices of shares.

ENGINEERING NOTES.

Machinery for Mesopotamia.

The great possibilities of Mesopotamia and Palestine as fields for the disposal of suitable agricultural machinery have often been pointed out in these notes. It is, therefore, satisfactory to hear that several British firms who specialise in the Eastern markets are already paying considerable attention to these fields, with a view to supplying them with suitable implements and machinery. In Mesopotamia, where irrigation is the main problem, a Directorate of Irrigation has been established in addition to a Directorate of Local Resources. Small irrigating pumps, driven by steam or oil, are being used on the banks of the Tigris, and encouraging progress has been made in the development of the country. It is anticipated that the yield this year will be 25,000 tons of wheat and 100,000 tons of barley, in addition to fair crops of other grains. Tractors, threshing machines, and hand implements of several kinds have been sent from India and Australia as well as from this country. There is no doubt that when the country becomes more settled, there will be wonderful opportunities for those who pay careful attention to the special requirements of this comparatively virgin field.

Openings in Palestine.

In Palestine, according to a recent Reuter message from Jerusalem, although the British occupation only dates back a few months, local conditions have undergone a vital change and everywhere there is evidence of reviving industry and prosperity. What has contributed more than anything else to immediate relief has been the employment of thousands of natives upon the repair of roads. Everybody realises that a new era has dawned for the land. The Bedouin can graze their flocks in peace and security, husbandmen can till the soil with the knowledge that they will not be robbed of the fruit of their labour. The railway to Egypt will ensure them the easy disposal of their surplus yield and the means of satisfying their wants as regards imports from abroad. With these facts in view, British manufacturers ought to lose no time in taking advantage of business opportunities in that region, not forgetting that friendly foreign competitors are already in the field.

A Hand Plough.

With the cultivation of small plots of land or allotments for the production of food, in accordance with the Cultivation of Lands Order, a small and useful implement has been brought out which is apparently giving satisfactory results. It is a small hand-plough which, undoubtedly, will be of much interest to any smallholder or gardener in the East. This little plough weighs only 20 lb., and can be worked by one or two men, according to the texture of the soil, and will do the work four times as quickly as a spade. The only part liable to wear or breakage is the share, which can be replaced for 1s. The implement can be converted into a cultivator or a ridger in a few minutes, and the plough, with its full set of attachments, is only 70s. As an ordinary single-breasted plough the price is merely 40s. The handles fold up over the breast when the implement is not in use, so that it takes up very little storage space. It appears that inquiries concerning this plough are already being received from India and some parts of the Near East. The outlook, therefore, for its adoption and extensive use in the East appears to be as promising as it has been in this country.

The Cairo correspondent of the *Times* reports that the Egyptian Supplies Control Board has fixed maximum prices for the new crop of wheat for each stage of production, both those to be paid to producers and those to be paid by consumers. The prices are approximately double those before the war.

POWER LINE TO MOROCCO.

DIRECTORS' REPORT.

(Presented at the Sixty-fourth Ordinary General Meeting, 10th April, 1918.)

The Directors have now to submit to the Shareholders the Balance-sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £560,261 3s. 3d., inclusive of £157,465 10s. 2d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £84,000. The amount now available is therefore £476,261 3s. 3d., and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum, together with a Bonus of One Pound per share, making Nineteen per cent. per annum for the whole year, free of Income-tax; to add £100,000 to the Reserve Fund, which will then stand at £2,000,000; to add £25,000 to the Officers' Superannuation Fund; to write off Premises Account £40,000, and to carry forward the balance of £167,261 3s. 3d.

A Resolution will be proposed that the fees of the Directors be increased to £10,000 per annum. The amount was fixed at £6,000 in 1906, and the business of the Bank has been very greatly increased since that date.

The Directors have to announce with regret the retirement of their esteemed colleague Sir Henry Stewart Cunningham, K.C.I.E., who for 2[illegible] years rendered valued service to the Bank as a member of the Board.

Sir Duncan Carmichael, of Messrs. Gray, Dawes, and Co., London, has been elected a Director, and the Shareholders are now invited to confirm his election.

The Right Hon. Lord George Hamilton, G.C.S.I., and Mr. William Foot Mitchell, the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A., and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Wednesday, the 17th April.

By Order of the Board,
A. S. HEWETT, Secretary.

COMPANY MEETING.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

Increased Profits.

The sixty-fourth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia, and China was held on April 10 on the bank's premises at 38, Bishopsgate, E.C., Sir Montagu Cornish Turner (the Chairman) presiding. Mr. T. H. Whitehead (one of the managers) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I propose that the directors' report and balance-sheet and profit and loss account be taken as read. The report which I have the pleasure to submit for your approval to-day will doubtless be considered satisfactory in view of the prevailing conditions of stress and trouble under which we have to conduct banking operations. Our chief aim and object has been, in co-operation with other exchange banks, to finance to the utmost limit of our resources shipments of national importance from Eastern ports to this country. To this end the Secretary of State and the Government of India (as represented by the Food Commissioners at home and in India) have called upon the services of the exchange banks, who have loyally responded, and, we believe, have earned the approval of those in authority. With this enormous drain on our resources we may not have been able at all times to satisfy the full requirements of our friends and customers in the ordinary course of business, but we have done our best, in spite of lessened Council assistance. We have all recognised that in war times the demands of the nation are of paramount importance and must be met first and foremost. As might be expected, exports from this side to the East and Far East have declined considerably, which, by reducing the demand for bank remittances, have further increased our difficulties, and have forced exchange banks to rely more than ever on Council bills for laying down funds on the other side. All engaged in business—exporters, importers and dealers—have much to contend with, but we can only look forward to the time when war has ceased and trade has resumed its normal course. I might also refer to the scarcity of tonnage, which restricts operations, and is felt at all points alike. That, unfortunately, is a difficulty which is likely to increase rather than to diminish in the next few months.

RESERVE STRENGTHENED.

The statement of accounts now before you is specially noticeable in the fact that our proposal to add £100,000 to the reserve will bring that fund up to the satisfactory figure of £2,000,000, as compared with our paid-up capital of £1,200,000. It has been the consistent policy of the directors for many years past to add to the reserve, thereby assuring the financial stability of the bank and improving the value of the shares in the market. Further, it is in a measure owing to this consistent policy of husbanding our resources and building up our reserves that we are able to pay the handsome return which shareholders now enjoy. I feel confident that the policy pursued will meet with your hearty approval. Taking the figures of the report issued in 1906, you will find that the reserve fund then stood at £975,000, increased to £1,475,000 in 1907, partly by the addition of the premium on the new shares issued in that year, and gradually increased year by year up to the present figure. Turning to our balance-sheet, we have every reason to congratulate ourselves on steadily expanding figures, pointing to healthy development all along the line. Our totals now aggregate £36,126,432 12s. 1d., as against £33,390,841 14s. 11d. at December 31 last year, an increase of £2,735,590 17s. 2d., and even these figures would, in the ordinary course, have shown considerable increase had our complete returns not been delayed by the shipping difficulties. Our current and fixed deposit accounts, now amounting to £28,042,148 18s. 7d., an increase of £5,338,052 12s. 9d., evidence the continued confidence our home and Eastern friends place in the stability of the bank.

Turning to our profit and loss account, our net profit for the twelve months was £402,795 13s. 1d., against £381,259 17s 10d. in the previous year, and after placing £100,000 to reserve fund, adding £25,000 to officers' superannuation fund and writing £40,000 off premises account (which latter item we considered necessary in view of our having had to acquire new premises at certain points to meet our increasing business), we recommend a final dividend at the rate of 14 per cent. per annum, together with a bonus of £1 per share, equal to 19 per cent. per annum, free of income-tax, and carry forward £167,261 3s. 3d., against £157,465 10s. 2d. brought in. While our profits have so largely expanded, our expenses have but naturally, under present abnormal conditions, increased also, but it is satisfactory to know that 30 per cent. of that increase is due entirely to the higher rates of exchange ruling in the East. With these remarks I beg to move the first resolution:—"That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted."

The resolution was seconded by Sir Alfred Dent, K.C.M.G., and was carried unanimously.

The Chairman next moved:—"That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31 last, together with a bonus of £1 per share, both free of income-tax, be now declared, payable on and after the 17th instant." Lord George Hamilton, G.C.S.I., seconded the motion, which was unanimously agreed to.

It was further unanimously resolved:—"That the remuneration of the directors, as from April 1, 1918, shall be the sum of £10,000 per annum, to be appropriated out of the funds of the company, as provided by clause 77 of the deed of association." The Chairman explained that it was not the intention of the directors to draw the full amount of the increased remuneration, as they wished to keep a little in hand in case it might be thought expedient in future years to add to the number of the board.

The election of Sir Duncan Carmichael as a member of the board was confirmed, and the retiring directors, Lord George Hamilton and Mr. W. Foot-Mitchell, were re-elected.

The auditors (Mr. D. C. Wilson and Mr. H. C. K. Stileman) were reappointed.

A hearty vote of thanks to the chairman, directors, and staff at home and in the East terminated the proceedings.

COMPANY NOTES & REPORTS

Mercantile Bank of India.

The report of the Mercantile Bank of India for the year 1917 states that net profits, after providing for bad and doubtful debts and including £32,177 brought forward, amount to £208,182. The directors have added £50,000 to reserve fund, making £650,000, £11,000 to officers' pension fund and written £10,000 off freehold banking premises. They recommend a dividend on the "A" and "B" shares of 6 per cent., less income-tax, making 12 per cent. for the year, and a bonus of 2 per cent., less income-tax, leaving £58,432 to be carried forward. Deposits appear at £9,812,321. Meeting, Winchester House, E.C., 19th instant, noon.

Dividends, Payments, etc.

The Bank of England announces the numbers of 696 bonds of the Greek Guaranteed Two-and-a-half per Cent. Gold Loan of 1898, which have been purchased for the Sinking Fund and cancelled.

The directors of the Empire of India and Ceylon Tea Company, Limited, have declared an interim dividend of 9d. per share, less income tax at 5s., payable on April 22.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

In the early part of the week there was here and there some improvement in Egyptian securities, but during the last few days the less satisfactory news from the front and the fresh man-power proposals have been weighing on the market, with the result that in some cases prices are again finishing lower.

It is not that there are any large sellers about, but under present conditions buyers are adopting a waiting attitude, and every small seller who comes along has a disproportionate effect upon the market.

Unifieds have been a firm spot, with buyers about round current prices, but with sellers few and far between; and the same remark applies to Egyptian 3½ per Cent. Prefs.

In Bank shares Agriculturals were at one time lifted, on some persistent buying, to 6 17-32, but they are finishing to-night only 3-32 better than last week at 6 13-32. Although nothing is yet officially known as to the dividend, it is generally believed that 8s. will be paid, as against 7s. last year. In Agricultural Prefs. there has again been a fair number of transactions at 6 13-16. National Banks have remained a nominal market in the neighbourhood of 17¾.

In Railways some sellers of Delta Lights came along to-day, with the result that the price dropped 3-16 to 6½, at which price some transactions were done.

In Land shares there has been a marking down in many instances on attempts to sell small lots of shares on an unwilling market. Aboukirs have dropped 6d. to 22s. 6d., Egyptians and Foreign Trusts 3d. to 10s. 3d., New Egyptians 9d. to 17s., and Delta Lands 3d. to 13s. 6d.

In Miscellaneous shares Egyptian Markets are 6d. easier at 26s., and Khedivial Mails 9d. down at 37s. 9d.; but transactions have been of quite a trivial character.

In Greek securities the market has continued exceedingly firm, with buyers about round current levels, but sellers scarce. Through an oversight, Greek Monopolies were given in our last week's list as unchanged at 51½, but, as a matter of fact, some pretty large transactions had taken place round 53: and at this latter price there were, and still are, unsatisfied buyers.

BANK OF ROUMANIA.

The Earl of Bessborough, speaking on April 10 at the annual meeting of the Bank of Roumania, said the auditors had written that, owing to the circumstances which now existed in Roumania, it was not possible for accounts to be presented. The directors were unable to present the accounts for the year 1917, and he did not propose to recommend the payment of a dividend under those circumstances. At the present time all communication with Roumania was suspended, but when they were able to present a balance-sheet they would do so.

BANK AMALGAMATIONS.

The committee, presided over by Lord Colwyn, appointed to consider and report to what extent, if at all, amalgamation between banks may prejudicially affect the interests of the industrial and mercantile community, and whether it is desirable that legislation should be introduced to prohibit such amalgamation, is meeting every day this week.

NOTES OF THE WEEK.

On the Western front the great battle continues with undiminished force, and its gravity increases as the enemy draws nearer the Channel ports. The Government has taken, very late indeed in the day, steps to meet the situation in the new Man-Power Act, which corresponds roughly with the German measure of August, 1916. It is understood that the new forces are to be enrolled at once, but the course of the debate showed that some uncertainty prevails in regard to the precise interpretation and effect of the Act. Meanwhile the national will remains adamant.

On the Eastern fronts there has been much activity, mostly of a minor character, in every theatre of war except Mesopotamia. In the Salonika area we have had successful encounters with the Bulgarians; in Palestine General Allenby has straightened his line by a slight advance. There have been some brisk encounters with the Turco-German forces, but these have failed to affect our positions, and since even the bulletins issued from Constantinople do not claim any great advantage, the results of the enemy's attacks must have been modest indeed.

The Turks have announced further advances along the road to Kars, and they are now in occupation of Batoum, while the German force which took Ekaterinoslav is also pushing its way farther east. It is clear that these two operations, although marching through widely separated districts, are linked up, in the view of the higher command, in order to threaten the Caspian and the Middle East; and in the same way an attempt is being made to cut Russia and Roumania off entirely from the outside world by the German contingent in Finland, which is apparently working for the seizure of the railway from the Arctic and the isolation of Archangel. It must be admitted that the Finns appear to have asked for the bait which they have so readily swallowed; but this is a mere subsidiary of the German plans for dominating the Middle East. The situation here is certain to develop rapidly during the next few months.

A report, unconfirmed but not improbable, states that Germany has imposed an indemnity of four hundred millions sterling on Roumania, and it is said that this demand was only made five days after the conclusion of peace. That the Central Powers would attempt to extort money as well as territory and economic advantages from their helpless opponent is very likely; for reparation Roumania can only wait on the victory of the Allies. But the news from this quarter remains conflicting and sparse. By one account, Bulgaria is still dissatisfied with her share of the spoil; by another, it is said that the peace negotiations are suspended owing to the intricacy of the questions at issue, a suggestion which may be partly derived from the fall of Count Czernin; by a third, in a Hamburg paper, it is stated that the cession of Bessarabia to Roumania is causing acute tension in the Ukraine.

As to this last, no actual information of the cession of Bessarabia to Roumania has been received. The Central Powers, as their record shows abundantly, are not likely to do anything to compensate an enemy for ravished territory; but they may be moved to action by the cynical theory that it is well worth while to sow dissension between Roumania and the Ukraine on the chance of catching some miserable fish in the troubled waters. As there is no mention of Bessarabia in the published peace treaties, it may be assumed that the whole question was postponed for further consideration; the fact, now generally admitted, that the expected supplies of grain from the Ukraine will not be forthcoming this year, is not likely to dispose either Berlin or Vienna to be over-indulgent to the statesmen of Kieff.

An interesting account of the peace negotiations between Germany and Roumania has appeared in *The Times*. The Germans insisted on a change of Government at the peace treaty, but King Ferdinand, although compelled to submit, held his head high, and told Baron von Kühlmann that an independent country had the right to any Government it chose. It was the fact that the Roumanian Army, deserted by its ally, could not have held out longer than a month which finally decided the Crown Council that peace was inevitable, unless the country was to commit suicide.

The political sensation of the week has been the publication of the Austrian Emperor's letter, indirectly addressed to the French Government a year ago, on the terms of peace. The authenticity of this remarkable document is incontestable, and is not seriously contested by Vienna; it admits that the claims of France to Alsace-Lorraine are just, that Belgium must be restored, and Serbia also. As regards both Russia and Italy the Emperor keeps silence. The letter may be read in many ways, but a very simple and natural solution suggests itself at once.

Digitized by Google

It is that the young Emperor, at the time of writing, was more anxious to get back the Italian provinces lost by his predecessor than to enlarge his Empire in the direction of the Balkans; and while the annexation of Serbia could only be recognised as a conquest, the annexation of Lombardy and Venetia—if he could get them—might be casuistically interpreted as a restoration of territory temporarily lost. But to do that he must try to place the restoration of Alsace-Lorraine to France on the same footing as the restoration of Venetia to Austria—which implies a rather larger ignorance of history than is usual at the present day—and by so doing he might have hoped to antagonise France and Italy, to increase his own dominions incidentally, and—what is of even more importance—to give Viennese policy a new orientation, or rather to revive an old one, by making friends of France and Austria, and thus emancipating himself from Germany.

We can all of us sympathise with the wretched young ruler who discovered so soon after his accession that he was Germany's vassal, and that his predecessor's policy had deliberately accepted that attitude. His desire to be independent of Berlin was credible and praiseworthy. But his policy was perhaps a little amateurish—a fault that is excusable, no doubt, in a young monarch. The real significance of his attitude is not in regard to any particular territorial adjustments mentioned in the letter, but in the wish to leave the German coalition.

The German answer to this will probably be a bribe as well as a threat. The Emperor Karl has eaten the leek, and received a certificate of good conduct from the Kaiser, which is presumably worth as much as such certificates usually are. The German reward will be in the shape of more territory, either in Italy or the Balkans; but the light which the letter has thrown on the Austrian Emperor's mind is that the Balkans do not tempt him, whereas Italy does. It remains to be seen whether he will obtain either. In any event, the accession of Baron Burian to the post so hastily resigned by Count Czernin makes it clear that the attempt to throw off German dominion for a French *rapprochement* has definitely come to an end, for Baron Burian, as a follower of Tisza, is an adherent of Berlin.

The Conference of the oppressed Austrian races at Rome, which was also attended by Mr. Wickham Steed and Dr. Seton-Watson, has accomplished useful work, and its influence will become increasingly visible. It has long been the traditional policy of Austria to set one Slav race against another by favouring one at the expense of a second, and then reversing the process when the time seemed ripe; but that policy was doomed to failure as soon as the Slavs came to an agreement among themselves and with the Italians, both of the unredeemed provinces and of the Kingdom of Italy. These essentials of union and progress seem to have been satisfactorily accomplished at Rome.

It remains now to translate this policy into action. If, as we believe, an independent Jugoslav State is essential to the settlement of the Balkans and to the security of Italy and Europe, and if, coincident with that policy, the emancipation of the Czechs and Poles should be carried out, it must be remembered that Vienna will do its utmost to maintain the old system of division between the Slavs. Some indication of this was given by the fomentation of discord between Poles and the Ukraine in the recent clause of the peace treaty regarding Cholm—which benefited the Ruthenians, the recent *protégés* of Berlin and Vienna, at the expense of the Poles—and similar attempts will be made to sow discord among the Southern Slavs, and between them and Italy, where German propaganda is still disquietingly active.

The Russian Government is still childishly innocent—or it professes to be, which is not necessarily the same thing. It has protested to Germany against the renewed Turkish outrages on the Armenians, for which, as it says quite truly, the blame must be given to Germany as well as Turkey. The Russian Government "ordered" the independence of Armenia some time ago, and proclaimed its will that a constitutional assembly should be set up to discuss matters with the Turks, and apparently with anybody else who happened to be there; the Bolsheviks now seem annoyed that nobody took the least notice of their order, while the Turks merely marched forward and destroyed whatever they chose.

The Germans appear to be engaged in the pleasant occupation of dividing the bear's skin before the bear has been killed. A Colonel Immanuel has been discussing German plans in the East, on the basis that Mesopotamia will be returned to Turkey at the end of the war, and that thereupon intercourse will be established directly between Berlin, Batoum, and Teheran. "The task of delivering Persia and Afghanistan from English influence will devolve on the German Empire," is the conclusion of this politician, but he prudently defers the fulfilment of that task until after the war. It is as well to have it in black and white that the German plans for peaceful penetration in the post-war period are already being matured.

Mr. Lloyd George's statement last week as to the number of our troops engaged in the Eastern area has revived, and even embittered, the unfortunate controversy between Easterners and Westerners. The latter, indeed, have given him the lie direct. There is no room in a note to discuss this everlasting question again beyond remarking that the Prime Minister's arithmetic sometimes partakes of the imaginative character we all admire so much in his oratory, and that his critics occasionally disguise something like pacifism under the guise of Westernism; but in this matter, at least, we are not the only sinners.

The Germans, by despatching forces to Palestine and the Crimea, and aiming, as they are now openly doing, at the conquest of Persia, are even more thorough-going Easterners than Downing Street. The Palestine campaign is the direct outcome of their threat to Egypt, and that threat could not be disregarded, unless we had been prepared to see the British Empire cut in two. The Salonika force, which is a more debatable question, is the sequel to our political failure in the Balkans in 1915-16. But if it had not been despatched, Greece would have been openly on the side of Germany by this time, and King Constantine would still have been in Athens instead of lamenting his lost pension in Switzerland. The adherence of Greece may not be a decisive asset in the war, but it is an asset nevertheless, for it is an earnest of a juster settlement of Balkan questions than would otherwise be conceivable.

In the leading articles of the *Baghdad Times*, which seem to echo the accents of a voice that was once not altogether unknown in Fleet Street four years ago, the question of Government versus private enterprise, so burning a topic on the Thames, is shown to be at least as important on the Tigris. The writer obviously belongs to the individualist school which goes, or rather went, by the name of Herbert Spencer before the world realised that the synthetic philosophy had something of the ridiculous as well as the ponderous; but he admits that Government enterprise in Mesopotamia has been successful, and that, too, quite apart from the transport of the armies, which is necessarily a Governmental enterprise. But the new methods of administration, of bringing law where there was anarchy, and making crops grow where was only desert, in other words, of evolving civilisation out of barbaric chaos, have clearly impressed the writer as an instance of successful State enterprise on a large scale. It is a pity that so few details of this constructive work, which only began after the capture of Baghdad last year, have yet been published in this country; and the *Baghdad Times* rises superior to the temptation to describe the changes which are daily taking place in their midst. Or it may be the censor who restrains their pens, since he even forbids the publication of the names of the units taking part in the local football matches.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 4.

The Question of Supplies.

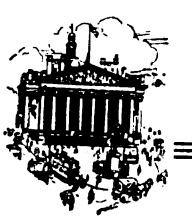
An unexpected development has taken place this week in connection with the question of supplies. Mr. J. I. Craig, who was appointed Controller of Supplies last autumn, has resigned, and his place has been taken by Mr. W. Ross Taylor, Legal Adviser to the Ministries of Public Works, War, and Agriculture. Mr. Ross Taylor will have an advisory board to assist him, consisting of Mr. A. T. McKillop, Inspector-General of Agriculture; Mr. G. Burnett-Stuart, Director of Personnel, Ministry of the Interior; Mr. F. P. Watson, Assistant Controller of the Department of Supplies; and Mr. A. T. Loyd, Director of the War Trade Department. It is understood that there will also be a large committee consisting of the above-mentioned officials, representatives of the Army, and some Egyptian officials.

There is reason to believe that very drastic measures in connection with the question of cereals, which constitutes the most urgent matter at present, are under consideration by the Government, and it is highly probable that maximum prices will be applied not only to merchants, but also to the producers. In this connection it is interesting to note that a public meeting was held this week by the leading grain merchants, who explained their position and called upon the Government to extend the tariff law to the cultivators. The grain merchants are undoubtedly right in fixing the responsibility for the present situation on the agricultural element, which owing to its prosperous condition is able to withhold its surplus production from the market, if the price offered does not suit it, and which cannot at present be touched by the tariff law; the latter being applicable only to merchants.

It is satisfactory to note that the Government has realised the difficulty of the situation, and that it is taking steps to ensure that as equitable a solution as possible shall be arrived at for all parties interested in the question.

The Village Council.

In August last the Council of Ministers approved of the proposal for the creation of what were to be called village councils, and the Ministry of the Interior has now issued an *arrêté* laying down the conditions under which these new municipal institutions are to be created and the powers which they are to exercise. Village councils may be created in any village asking for their constitution, and they will be entirely under the control of the Ministry of the Interior. Each council is to consist of the Mamur Markaz (District Administrative Officer), the local Public Health Officer, and four elected members. The Mamur will be president, but the Mudir has the right at any time to preside at a meeting. The members of the council will be elected by those villagers who pay at least P.T.10 per annum in Ghaffir Tax, and who sign an undertaking to accept any local taxation which the council may decide to levy; and the minimum qualifications of a candidate to the council are that he is an elector, is twenty-five years of age, and can read and write. Each of the elected members is to hold office for four years, and every two years half of their number are to be replaced or re-elected. The functions of the councils are to collect the dues accruing to each of them, to carry out the scavenging work of their village and the upkeep of the roads, to control the water supply, the local lighting and sanitary arrangements, and the fire brigade, and to execute any work which the Ministry of the Interior may decide to entrust to it. Each council is empowered to levy local taxation to provide funds for the carrying out of its functions, but all its decisions in this respect must first have the sanction of the Government. Meetings of the councils must take place at least once a month, and their deliberations will not be public. In each village possessing a village council there is to be a permanent committee, consisting of two of the members and one co-opted member, who will hold office for one year, and who will carry out the administrative work and deal with the finances of the council. From this it can be seen that full effect is being given to the general desire that has manifested itself amongst the mass of the population for more direct participation in local government. On the manner in which the concessions now accorded are handled will depend the further advance in the direction of collaboration in the government of the country to which the Sultan made reference in his accession rescript.



Government Appointments.

I understand that Kaimakam T. Russel Bey will shortly be appointed Commandant of the Cairo City Police, in place of Colonel Harvey Pasha, who went on leave last autumn, preliminary to his retiring from the service; and that Bimbashi Archer will be promoted to the post of Assistant Commandant thus left vacant. Kaimakam Garvice Bey, Acting Commandant of the Alexandria City Police, is to be confirmed in that position. Sir David Semple, Director-General of the Department of Public Health, is retiring at the beginning of the new financial year, as also is his second-in-command, Dr. Cyril Goodman. The former will most probably be succeeded by Dr. Alexander Granville, who was recently appointed President of the International Quarantine Board at Alexandria, in succession to the late Sir Armand Ruffer. I understand that in that case he may combine his recent post with the Public Health one; this will pave the way for the amalgamation of the Quarantine Board with the Egyptian Public Health Administration, which must inevitably take place in the near future.

Prisoners of War's Daring Attempt at Escape.

During the past fortnight a very daring escape was attempted by Germans confined at the Prisoners of War Camp at Maadi. Suddenly one morning, so the story runs, an urgent telegram was received from Suez to the effect that five Germans had been arrested there, and that they admitted coming from Maadi. An investigation was at once opened. Later in the day a message was received from Giza, on the opposite side of the river, stating that four Germans had been found there, stark naked, as they had swum the river and lost their clothes on the way over. This left three prisoners still unaccounted for; two of these have since been recaptured, one as far north as Mehalla Kebir. The remaining one is believed to have been drowned in crossing the Nile. This is the first escape on any scale made by prisoners of war for some considerable time in this country.

Egyptian papers received this week contain news of the death, at Mentone, of Mr. William Chevalier, who was for over forty years an official of the British Consulate-General at Alexandria. He retired on pension twelve years ago. He leaves three sons, all resident at Alexandria, and one daughter. Mr. Chevalier was seventy-four years of age. During his long residence at Alexandria he made many friends, who will much regret to hear of his death.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, March 23.

The Budget.

The Chamber of Deputies resumed its duties on the 12th inst., and the following day the Minister of Finance presented the Budget for the current year. He spoke of improvements made in the accountancy of the Ministry and explained his Budget, which shows a deficit of 211 millions of drachmas, the expenditure being 1,361 millions against receipts of only 1,150 millions. To meet this deficit there is the loan from the Allies of 750 millions, and it is proposed to issue Treasury bonds, which it is hoped will be taken up freely by the public. The decree prohibiting the remittance of funds out of Greece appears to be not without its drawbacks. There is evidently plenty of money in Athens, judging from the extent of gambling that has been going on at cards and on the stock exchange, and it seems a pity that one is not able to invest in foreign securities. The Government hope that the effect of the decree will be to encourage the purchase of Greek Treasury bonds, but, other means of investment being limited, there is not much encouragement to those inclined to be thrifty.

The Chamber has voted the sum of 1,600,000 drachmas per annum for King Alexander's civil list, and a yearly grant of 500,000 drachmas for the ex-King and 300,000 for the Queen-Mother.

Mobilisation Continues.

The gradual process of mobilisation continues. Two more classes, 1909 and 1910, have been called up. So, also, have nine classes of Jews and Moslems of Epirus.

Some excitement has been caused by the capture of five Greek officers who were recently landed by a German submarine on the coast of Peloponnessus, coming apparently from Switzerland to stir up trouble here.

Athens-Salonika Traffic.

Arrangements are being made to organise a service of fast trains between Athens and Salonika, and Parliament has been asked to vote a credit to improve the line. There is now a very large traffic on this line, as, apart from military requirements, practically all passenger traffic between Athens and Salonika is by land instead of by water as formerly. Travellers experience great difficulty in obtaining even standing room in the trains, and the scramble for places which occurs daily at the Piræus and Athens stations calls for some radical remedy.

Apart from meat, which is very scarce and difficult to obtain, there is a great improvement in the food question; arrivals of foodstuffs have been satisfactory, and local produce has become more plentiful.

New Archbishop's Pastoral.

On Thursday the new Archbishop Meletios Metaxakis took the oath before the King, and later on the ceremony of enthronement was performed in the Cathedral Church. In a long pastoral address which was subsequently delivered the Primate expressed a hope for certain reforms and greater learning in the Greek clergy, and laid emphasis on the necessity for faith. He spoke of his satisfaction at, and the importance of, the liberation of Jerusalem, and referred to Cyprus, which he knew so well and where anxieties for union with the mother country were so great. He said that Greece had the good wishes of England; that it only required Greeks to show by right conduct that they were aware of their rights, as well as their obligations; and that, after a period of misleading, Greece had again found her path of duty, and to-day understood that in taking part in the great struggle it was for her good. In conclusion, he said that Macedonia awaits its new liberators, Asia Minor its saviours, and San Sofia, in the Queen of Cities, its officiating clergy.

Cyprus and the Dodekanesos.

An article in the *Nea Ellas* says it is difficult for the Government to protest officially; but every Greek has the right to protest that their friends and allies, the Italians, by occupying the Dodekanesos and Northern Epirus, prevent the sons of these territories from offering their blood for their country and for the cause for which the Allies are fighting. In spite of the gratitude and the love which every Greek entertains towards very phil-Hellenic England (the article says), we do not think we shall be considered too insistent in wishing that Cyprus should be ceded to Greece at once, and that its people should be armed to participate in the common struggle. It is a blow to us (it continues) to see the Japanese and Chinese called upon to fight for the triumph of civilisation and humanity whereas there are 700,000 inactive Greeks in the Dodekanesos, Epirus, and Cyprus capable of placing in the field of battle two army corps, which could soon operate in neighbouring territories.

TOBACCO IN CYPRUS.

(From a Correspondent.)

The question of tobacco growing as a new industry in Cyprus has been one of increasing interest during the last few years, and it may now be said that some definite conclusions have been reached. The success achieved by some Syrian refugees at Larnaca, who grew tobacco of two kinds in 1916-17 and made very large profits, led to an immediate and keen desire on the part of many Cypriots to follow the lead, just as, a few years previously, the successful working of asbestos on Mt. Troödos led to a rush of applicants for permits to prospect for metals in all directions. The villagers were no doubt exploited by the newcomers to a considerable extent, especially those who contracted to grow Latakia tobacco on their lands, but who received very poor prices as a result of their labours. To the Syrians referred to, however, is due the impetus that has been given to what may become a very important and opportune addition to Cyprus products. In Syria Cypriots have been proverbially regarded as dull and simple folk, just as the Bœotians were, of old, by the Athenians; but, as a matter of fact, many stories are current to show that the Cypriot can more than hold his own in quick-wittedness against people of other lands. Anyhow, there has been a veritable *kapnomania*, or tobacco madness, owing to the profits made by many growers, and in the ordinary course of things large areas of land would have been put under cultivation of the leaf.

The Government, however, foreseeing that the result might be unduly to diminish food-producing crops, decided that the planting of tobacco should only be allowed under licences to be issued by the six District Commissioners. Unfortunately, however, as only too often happens in Cyprus, the instructions given were not very clear. The cases of all applicants had to be fully investigated, and different views appear to have been taken in different parts of the island. There were great delays in consequence. The general impression created was that Government desired to restrict as far as possible the growing of tobacco, and even that it was prejudiced on principle against the new industry. The villagers, at any rate, very naturally took this view. Applications for licences had to be made by November 30, 1917, a very late fixture, as in many parts of Cyprus seed-beds should be prepared in December. Very few licences were, indeed, issued before February. A certain number of villagers, however, prepared seed-beds early, in anticipation of obtaining licences in due course, but at their own risk and under fear of prosecution. Then Government fixed March 1 as the limit for planting—the date being extended to April 1, and again to April 15, but not until numerous complaints had been made and deputations of growers had made urgent representations. The result of all this procrastination and misunderstanding has been not only that those who sowed lands at their own risk, or under doubt as to their liabilities, were able to demand excessively high prices for their seedlings, but also that a very considerable area of land in respect of which licences were eventually granted could not be planted.

All this has naturally given rise to a good deal of grumbling on the part of agriculturists, who, moreover, complain that preference has been given to capitalists, or to well-to-do persons, who can hire land and labour. It is true that a licensee is bound to grow a certain quantity of corn; but Syrians and others who speculate in tobacco growing no doubt concentrate their energies as far as possible upon the "weed." It is probable that if the regulations had been more carefully devised and carried out, double the amount of land might have been devoted to tobacco this year without prejudice to cereal crops and harvest work.

The important matter, however, is that tobacco growing has now been shown to be, under war conditions, a very paying industry, and full advantage should be presumably taken, at a time of decreasing imports, to encourage and establish it on a firm footing. Cyprus tobacco may yet make a name for itself and compete successfully with others after the war. It will be interesting to know what decisions will be arrived at in respect of some consignments of cigarette tobacco of the last crop yet to be despatched to London, where "Cyprus cigarettes" (not of island leaf) have been coming into favour of late years. It is already reasonable to assume that if a wise policy is adopted by the Government, the expansion of this industry should bring very great benefit both to the rural classes and to the revenue of the island.

PALESTINE'S FIRST NEED.

Although the political settlement of Palestine, with schemes for the repatriation of a large Jewish population (and for a kind of Hebrew republic under, perhaps, Anglo-Egyptian suzerainty), is mainly being canvassed at the present time, it is well that those responsible for the future of the country should not lose sight of the fact that the introduction of certain simple measures for the material benefit of Palestine is urgently needed, and that it will pave the way for the adoption of more ambitious political schemes.

The greatest of all Palestine's needs is afforestation. For centuries the land has been denuded of its trees, with most disastrous consequences. For the heavy rains at certain seasons, instead now of benefiting the soil, over more than four-fifths of its area carry away in rushing torrents down the wadys and the many streams which temporarily pour down the hillsides and ancient terraces much of the little soil that the almost sterile high lands and valley slopes have left on them. Experts in forestry and irrigation explain how the absence of trees tends to reduce such a country as Palestine to barrenness. The amount of moisture retained by trees is immense. Woods and forests would form a catchment for the rainfall, and in time, by the decay of their leaves, form a humus soil beneath which would be invaluable. There are trees of very rapid growth, such as the cotton wood, which are probably suitable for many districts, and for the few marshy, and therefore malarious, tracts the Tasmanian Eucalyptus, which can endure cold, might be utilised. Even as recently as the era of the later Empire the Roman Emperors held valuable forests in Palestine. Absalom, riding, was caught by the hair among the trees; but to-day one might gallop from Dan to Beersheba without having to duck one's head to avoid a branch. The hills need persistently clothing with vegetation, as the Germans have done at Kiaochou. For the more cultivable districts fruit-bearing trees should be utilised, and, to give shade along the roads, limes and trees which are found to flourish on the boulevards of Port Said and Alexandria.

Another measure which is no less necessary is the storage of water, not by gigantic engineering enterprises, but by the simple process of erecting small dams and interceptions across the higher reaches of wadys, and by such barrages, with spillways, to provide that all the year round some water for agriculture and for flocks and herds lower down should be available. This work would create a series of small lakes or reservoirs of from 500,000 to 2,000,000 gallons of water that would last through the dry season and add needed moisture to the air. The slopes of the wadys above the dams should be planted with suitable trees, and the stream would be rendered perennial. Such basins could be made the homes of innumerable waterfowl, geese, and ducks, that are most easily reared, and are useful exterminators of mosquitoes and flies.

The replanting of the country will be indefinitely retarded, if goats are not deported or kept strictly in compounds, for they foil all attempts at plant propagation by devouring the young shoots and leaves, and have helped to ruin many Mediterranean lands. Of course, wells and pumps are useful adjuncts and give immediate results in limited localities; but the writer's object is to produce a prosperous future at small expense. All these schemes, it is recognised, cannot be allowed to outgrow the supply of labour. On this point experience alone can decide whether requirements will be met by the Jews and by the Arab population adapting itself to the new conditions.

In Southern Palestine, towards Sinai and the Suez Canal, the first thing to do is to reopen the hundreds of natural springs in the wadys, which, under centuries of misrule, have been allowed to become choked up; and to replant the native shrubs and trees round them. The recent survey carried out by the Palestine Exploration Fund showed how, in Byzantine times, even all the districts round Beersheba and Pelusium and many parts of the Sinai Peninsula, by means of most careful water conservation and irrigation, supported a large population. *Gaffirs* must be appointed to prevent the camels of the Bedouin eating the early leaves. These animals since Great Britain has guided the destinies of Egypt have destroyed half the already too scanty vegetation in the valleys between Koptos and Kosseir.

These are not stupendous proposals, but they should produce a prosperous Palestine, with a happy peasantry. The country now possesses an advantage it never had before, in a first-class railway connection with Egypt. All the surplus agricultural small crops, grapes and vegetables, will find a ready market in the growing Egyptian cities and the shipping upon the Suez Canal. Egypt's population augments rapidly now that capital in that country is secure. One far-seeing man in London during the last five years has spent over £100,000 in a single date plantation near the Pyramids. Palestine, with Cyprus as its maritime guardian, is the hinterland for Egypt and the Canal. If Great Britain hesitates to bring it under her influence for her own benefit, she dare not neglect to do so for the sake of India and Australia, who have given freely of their best and bravest for the country and the common cause.

J. OFFORD.

SAMARIA AND GALILEE.

At Gresham College, in the City of London, on Mondays, Dr. E. W. G. Masterman is delivering a course of University Extension Lectures on Palestine, the course being arranged by the London University Zionist Society. Last Monday his subject was "Samaria and Galilee." Samaria, he said, was a much more fertile land than Judæa, which was a high and somewhat sterile plateau running up at points to as much as 3,000 feet. Going northwards from Jerusalem along the great high road, immediately you got beyond the bounds of Judæa you found the country more broken up, and very much more planted with olive and fig trees. The mountains were not so high, and there were wide open valleys. There was not the waterless wilderness on the east; and the western hills were covered with a soft chalky deposit, which produced rather a tame landscape, but provided a very good soil for cultivation, especially suited to the vine. The geographical centre of Samaria was Nablus—the name was an altered form of Neapolis—lying between the mountains of Gorizim and Ebal. Between these ran the great high road from the sea coast to the Jordan and the lands east of the Jordan. Both were sacred mountains. To Mount Ebal had been brought the stones of the Jordan; and Mount Gerizim was the sacred mountain of the Samaritans, as Zion had been that of the Jews. Its top was covered with ruins, amongst which were those of the ancient Samaritan Temple. The sect still existed, and once a year assembled on Gerizim to keep the Passover in precisely the ancient form that one may find described in the Book of Exodus. At one point between the mountains lay a vast natural amphitheatre, which, it was conjectured, was the site of the ancient reading of the law; and the traditional tomb of Joseph was near the spot where had formerly stood the ancient city which had been succeeded by Nablus. This site was venerated by Samaritans, Jews, Christians, and Moslems.

Nablus to-day was inhabited by fanatical Moslems, who dreaded the coming of the Franks; little boys threw stones at the traveller, while the father looked on smiling. Its industry was the manufacture of soap from the olive oil produced in the country around. The city of Samaria had anciently been a fortified place of very great strength. It had been destroyed by Sargon when the kingdom of Israel was broken up, and had not recovered its importance until Herod the Great made it one of his great and ornamental cities. In excavating its site a great number of potsherds had been discovered, scrawled upon with ancient Hebrew names and short remarks about property. It had been a very delicate matter to float away the dirt upon the potsherds without at the same time washing away the writing; this having been done, the script was found to be the same as that of Siloam. Many names in the Bible were found among the writings. Apparently they belonged to the time of Ahab.

The plain of Esdraelon was sometimes included with Samaria, and sometimes with Galilee. Its soil was rich, and if the rains lasted well into the hot weather, very good crops were obtained. Certainly Galilee was the most fertile part of Palestine, as well as by far the most charming. It had a more varied scenery, and was on the whole better supplied with water. In Upper Galilee, in autumn, when that land would otherwise be dry, there were tremendous dews. Haifa, on the coast of Galilee, would some day be the great port of Palestine. With a good bar out into the bay, it would probably be a better port than Beyrout. The railway from Haifa to Damascus nowhere passed over a greater height than 2,500 feet; that from Beyrout passed over a range of mountains 7,000 feet high, then descended into Syria, and then passed over another range 5,000 feet high.

CORRESPONDENCE.

THE METROPOLITAN OF ATHENS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to THE NEAR EAST of March 29 (page 256) and of April 12 (page 294), I think you will find that Meletios Metaxachis, who has been elected Metropolitan of Athens, was Bishop of Kition (Cyprus)—see Cyprus Handbook, 1913—and *not* Archbishop, as that title belongs to the Archbishop of all Cyprus, and not to any of the local sees of Kition, Paphos, or Kyrenia.—I am, etc.,

Κυπρεος.

April 13, 1918.

JUGOSLAV DESIRES.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your report of the interesting lecture by Dr. May Dickson-Berry, at the Royal Victoria Hall, on April 2, the lecturer appears to have stated that the Serb, Croat, Bosnian and Dalmatian, were all "in sympathy with the idea of the founding of a great Jugoslav State." If for "State" the word "Federation" had been employed the accuracy of the assertion could not have been questioned. It is deplorable that so many persons who might have been supposed to have truer knowledge of the sentiments and aspirations of these peoples should have been captured by the ambitious ideal of one only of them. That it is not the desire of the Jugoslavs to be absorbed in a new "Great Serbia" has been abundantly evidenced by their own vigorous protests; note, for example, the second article in "Yougoslavie" (No. 1, February, 1918). The brave Montenegrins are not once mentioned in your report, though they are our Allies equally with the Serbians, and have as passionate love of freedom and independence as any nation in the world. They scornfully refused the offered bribes of Austria to remain neutral, and promptly entered the war in defence of their sister State Serbia, though it meant certain ruin for the time being. All who are familiar with these facts expected that the spirit of justice, to say nothing of generosity, would have assured for Montenegro constant recognition of her services and her rights. Instead of which she has suffered neglect even from the noble-minded, and infamous slanders from treacherous enemies.—I am, etc.,

PERCY W. AMES.

77, Primrose Mansions, Battersea Park, S.W.

GREETINGS FROM THE HEJAZ.

The following telegram has been received by the King from the King of the Hejaz:—"I crave permission to tender to your Majesty my heartfelt congratulations on the magnificent and unmatched gallantry which your Majesty's Armies on the Western front are displaying at the present time. That the banners of the true cause for which they are fighting with such undaunted bravery may be crowned with victory by the Almighty is my earnest prayer and wish."

King George replied:—"I am deeply touched by your Lordship's message. It breathes that spirit of confidence and unity of purpose which binds together all the Allied forces on all fronts and in all lands in an unshakable determination to achieve the liberation of mankind from tyranny."

The Hejaz Government telegraphed to the British Government:—"His Majesty King Hussein commands me to express his wholehearted admiration of the magnificent defence which the British Army is maintaining in face of the German Empire's desperate and unavailing offensive. His Majesty begs that his congratulations should be conveyed not only to the Commander-in-Chief, but as well to the gallant Commanders and troops serving under him."

The British Government replied:—"His Majesty's Government caused your Lordship's message to be conveyed to the British Commander-in-Chief and the Army Commanders and troops in France. The Commander-in-Chief, Sir Douglas Haig, and his Army Commanders, expressed their high appreciation of your Lordship's sentiments."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

TANGIER TO TEHERAN.

Readers may have observed that I have a very soft spot in my heart for diplomatists—probably because those I have met have been such pleasant company. At any rate, a friend who knows my weakness has sent me the following definition:—"When a diplomatist says 'yes,' he means 'perhaps'; when he says 'perhaps,' he means 'no'; when he says 'no,' he is no diplomatist." This may be very old, but it is new to me, and I find it amusing. It is based, of course, on: "When a lady says 'no,' she means 'perhaps'; when she says 'perhaps,' she means 'yes'; but when she says 'yes' she is no lady."

***

In the official statements regarding the fighting on the Euphrates, mention has been made once or twice of the islands that are so numerous below Anah. Haditha, for example, the first place beyond Hit at which caravans usually halt, is very pleasantly situated opposite islets that are thick with date-palms, and similar islets are to be seen in the neighbourhood of Fehami, the next halting-place. One report speaks of some of the enemy forces seeking refuge on these islands, and subsequently wading ashore, to surrender. The autochthones struck me as being very much at home in the water, the youngsters seeming to take to it as naturally as a duckling would. The river served as a road for them, and a villager wishing to call on a friend downstream would simply strip, tie his clothing into a bundle, to be carried on his head, and step into the water. Many of the people used a dried gourd to support them, and we often saw men and boys walking about carrying their floats under their arms. A point I noticed about these Arabs, as about others, was that on coming out of the water they made no pretence at drying themselves, but simply slipped into their clothes at once.

***

I heard the other day a new name for ex-King Constantine. It was "'Tino, the Trouserless," and it was the invention of an individual who holds republican views almost as strong as those which Mr. Lynch, the Member for West Clare, seems to delight in obtruding on the House of Commons. Whether the title will catch on I know not, but, being alliterative, it may do so; and if it does, it will probably annoy 'Tino considerably; for his sense of humour, never robust, appears to have died recently. The reference is, of course, to the ex-monarch's new garments that are lying in the shop of a London tailor, awaiting a permit for shipment. But for decency's sake, let us hope that the new name is not justified by facts.

***

What made me think of 'Tino was not his wardrobe, or secrets connected with it, but some remarks made by a Greek friend about those of his countrymen who had backed the wrong horse—put their money on "The Trouserless," in fact. It is not surprising that these indiscreet ones should now be bitterly regretting their lack of political judgment. My friend mentioned particularly Professor Lambros, who (he said) had been banished to some small island, the name of which I have forgotten. Lambros is probably one of the very least offensive of 'Tino's supporters; and a man of particularly mild character. But the islanders would have none of him. They protested that his presence in their midst would give them a bad name, and they regarded him—or affected to—as a most dangerous, dare-devilish kind of individual. And the end of it was that poor Lambros was compelled to move on.

***

A friend out East has earned my warmest thanks by sending me a copy of *The Palestine News*. It is the second number of the paper, and I gather that No. 1 was out of print almost as soon as it was off the machines. It is a truly creditable production, its twelve pages being full of good things—news that the soldiers will be interested in and articles that will not bore them. Personally, I found the column headed "Beersheba to Beeroth" quite fascinating. The title has a somewhat familiar air, and the writer of the stories—well, "he can tell 'em." He is interested in the habits of the local fauna—or so I gather from his notes in No. 2. The idleness of the local jackals and the intrusiveness of "those local blue rat-moles, who open tunnels in the tents of colonels and turn their faces towards the owner of the tent," provide him with material for philosophic reflection. And his unblushing attempt to convince his readers of the existence of "Palestine crocodiles" has, I observe, induced some unwary one to advertise for a pair of these monsters—or, on second thoughts, has it? Perhaps the advertisement is of his own insertion, intended to lend support to his shameless taradiddle. By the way, others of the "adverts." make suspiciously good reading. But one is truly pathetic; it is of an hotel, and it announces that: "Visitors will greatly oblige the Management by bringing their own Rations with them." There is a homely ring about that, is there not?

NEAR EAST BOOKSHELF.

THE INDIAN HOME RULE CAMPAIGN.

A stout bundle of the recent publications of the Bombay Home Rule League has been sent to us for review, and we may say at once that the various pamphlets furnish, when taken together, an interesting and enlightening view of the aims and methods of the movement. Campaign literature is a thing apart, and must be judged by its peculiar canons; having chosen your object, you have to make it attractive to the general public, and success depends partly on the selection of the motives to which you shall appeal, and partly on your ability to make people think that those motives have some organic relation with the object you have chosen. We have therefore to consider separately the object, the appeal, and the logic of these publications.

The object is definitely political, to secure a fundamental change in the Indian constitution and administration. We accept the statement contained in the first pamphlet that the organisers of the movement are not inimical to the preservation of British rule, a statement which we interpret to mean that they are content that what is technically called British sovereignty shall continue. Under this sovereignty they want responsible government, and the only thing which distinguishes them, on paper, from other politicians is that they want it to come more quickly. The grounds for forcing the pace are not clearly stated, and this part of the case would attract the attention of cross-examining counsel if the matter had to be fought out on forensic lines; but, speaking generally, the definite object of the movement is to bring about in a great hurry certain changes which most people agree must come by-and-by.

This object, however, does not of itself make a satisfactory appeal. The people whose support is sought for have but little interest in political changes, and some more powerful motive must be found if they are to be stirred to political activity. The organisers have evidently recognised this fact, and while some play is made with abstractions such as Truth and Justice, the real appeal is definitely to the pocket. Estimates of average income are deftly used to demonstrate that "hundreds of millions" of Indians yearly fail to make both ends meet, and almost all classes are told that under Home Rule they will be much better off than now; the upper classes will have dignified and lucrative posts, involving, indeed, "heavy responsibility and strenuous exertion," but still decidedly attractive; the "inborn warrior class" will find suitable careers in the Army, the Navy, and the Police; and the merchants will have markets in which "the Angel of Plenty shall crown the labours of her servants." There remain the masses, and here the bids for support are somewhat less liberal. The promise that "the labourer's food, and seed for the next sowing, shall be the first charges on the crops," sounds well, but means very little when it is analysed, and for the rest there are education, and village-government, and the other boons which towns are so apt to offer to that country of which they know so little.

Such is the appeal—definite pecuniary benefits for the classes, and vague generalities for the bulk of the population. It is carefully chosen to secure a maximum of effective support while avoiding any really dangerous commitments. Home Rule, if established at once, would undoubtedly mean an oligarchy of the classes, and the history of India for at least a thousand years justifies the conclusions that the oligarchs would share the spoils among themselves. To this extent the logic of the appeal stands above criticism: "Put us in power, and we will give you posts," is a straightforward offer, and an offer which would almost certainly be carried out. The case is somewhat different as regards the vaguer promises. We are not told, for instance, how the change will produce the profitable markets promised to the merchants, though a suggestion of protective tariffs is made in one pamphlet; while as to the poverty of the masses, we must really quote the argument at length. The writer of pamphlet No. 2, having established the fact that poverty exists, proceeds as follows: "Even with her present revenues much could be done for the good of India's children. But as the control of both income and expenditure is not under popular control, the progress of India is not the sole or main consideration. The remedy, therefore, is Home Rule." We are profoundly grateful for that "therefore," which puts the case in a nutshell. We grant the major premiss that India is poor, that her income is insufficient to provide all that the people can reasonably be said to need. To our mind that is the dominant fact in the India of to-day, and it ought to be the dominant consideration in the minds of India's rulers. It constitutes a clear call to action addressed to every section of the community. The Government is already pledged to a policy of active development, but the success of its efforts depends on the reaction of the people as a whole. The true lesson for India is this: "Save instead of spending; invest instead of hoarding; do the most and the best work you can, and bring up your children to do better work than their father." The Home Rule lesson is different: "Spend your time in political agitation, and see what good things will fall into your mouth." It is not an original policy; the same offer has been made in many countries, sometimes unsuccessfully, at others, as so recently in Russia, with somewhat startling results. It is now being made to India, and, as the papers before us show, it is being made with much persistence and with some measure of ability; we do not yet know what India's answer will be, but we can at least be confident that if she chooses to pluck the tempting fruit, it will be dust and ashes in her mouth.

A CREED IN THE MAKING.*

This book is accurately described by its title. It consists essentially of materials for study, and consequently literary criticism of the contents would be entirely out of place. Professor Browne gives us original or translated documents illustrating the history and progress of this new religion both in its Eastern home and in the United States, where it has gained a substantial body of adherents; the sources of the various documents are clearly stated, and the student is supplied with the information required to enable him to judge of their importance. To the ordinary person the effect of reading the book is somewhat as if the clock had stopped for centuries: at one time we are reading of miracles and martyrdom—the real thing, and no modern imitation—and at another of centenary celebrations in a Chicago hotel, including, as might be expected, a cinematograph exhibition. This confusion of the centuries, which will strike some people as grotesque, and others perhaps as verging on the profane, is, however, necessary for a correct appreciation of the significance of the movement, and the juxtaposition of such varied elements gives no ground for complaint. We notice that Professor Browne is not now inclined to lay great stress on the practical or political importance of the movement. He finds its chief interest in the light which it throws on the genesis and evolution of other religions, and whatever may be the ultimate results in the world of action, the facts embodied in these documents will always be important for the student of that fascinating subject.

CZECHS AND JUGOSLAVS.

Writing in the chief Czech organ, the *Narodni Listy*, of March 31, Dr. Knamar, the eminent Czech leader and deputy, says: "The Jugoslavs and Czechs were never in a pleasant situation. Fate has raised them in the way of the imperialistic ambitions of their more powerful neighbours, and they have had nobody except themselves to protect them. The Czechs, like the Jugoslavs, stand in the way of the historical German expansion towards the Adriatic. The deep convulsions of the world war have moved our consciousness; and the ardent desire to be free and independent at last united us into a firm and indissoluble union. We have forgotten old misunderstandings because we know that the realisation of our claims and aspirations depend on the victory of one and the same idea; upon the salvation of humanity from new horrors of war by means of the destruction of every tyranny of one nation over another, and on the victory of the idea of self-determination and liberty of every nation. Strengthened by the spirit of self-conscious democracy, we both believe that victory is within our power, within our united firmness and perseverance. And so we shall go on fighting until we have attained our aims together, even against the overwhelming power of our common enemies, to the ultimate victory of right and justice."

*"Materials for the Study of the Bábi Religion." By Professor E. G. Browne. (Cambridge University Press. Price 12s. 6d. net.)

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

23	10	Tuesday	12	11
24	11	Wednesday	13	12
25	12	Thursday	14	13

Earl Curzon of Kedleston is confined to bed by a chill.

The Roumanian Minister is leaving Jassy shortly for London.

The Serbian Minister returned to the Legation in Queen's Gate on April 14 from Oxford.

A Bucharest telegram says that M. Konstantin Stere has been selected as Governor of Bessarabia.

On Monday, at 100, York Mansions, Battersea Park, Lady Richard Udny gave birth to a daughter.

The Countess of Minto has succeeded the Dowager Countess of Bradford as Lady-in-Waiting to her Majesty.

Mr. Henry Cowper Gollan, C.B.E., Attorney-General, Trinidad, has been appointed Attorney-General of Ceylon.

News of the union of Bessarabia with Roumania has provoked much indignation among all circles of the Ukrainian population.

It is announced that King Ferdinand of Bulgaria, accompanied by the Prime Minister, will visit Constantinople next month.

Next Tuesday will be the anniversary of the birthday of Princess Xénie, daughter of King Nicholas of Montenegro. She was born at Cettinje in 1881.

An American Red Cross Commission of sixty members has been sent to Palestine to co-operate with the British in the Syria and Palestine Relief Fund.

A. O. Williams Bey, Director of the Cairo Post Office, who was temporarily lent for duty to the Department of Supplies, has reverted to his duties at the Post Office.

We are pleased to learn that H.E. the Greek Minister, who was confined to his room at the commencement of the week by an inflammation of the eye, is now quite well again.

Dr. Trumbitch, President of the Jugoslav Committee, and Dr. Bozidar Marcovitch, editor of *La Serbie*, with a military commission of Jugoslavs, are about to visit the Italian front.

Mr. F. Ongley, Registrar-General in Cyprus, has retired, and has taken up work in London in connection with the war. Mr. Ongley is one of the oldest island officials in point of service, and has spent all his time in Cyprus.

Mr. and Mrs. Bowring, who left Cyprus on February 7 on medical advice for Egypt, returned on March 17. It will be remembered that Mr. Bowring suffered from so-called "Malta fever" for over two months. He returns much benefited for the change.

Mr. A. C. Hann, the manager of the Alexandria branch of the National Bank of Egypt, has been appointed Sub-Commissioner of the British Red Cross and Order of St. John for the Palestine area. Mr. Hann is proceeding to Palestine immediately to take up his duties.

The engagement is announced between Major John Wilberforce Hare, D.S.O., Royal Garrison Artillery, son of C. E. Hare, of St. Martin's, Lee-on-the-Solent, and Irene Victoria (Ivy) Eardley-Wilmot, daughter of Colville Eardley-Wilmot, late Ceylon Civil Service.

We regret to learn from letters received from Cyprus dated the middle of March, that the High Commissioner, Sir John Clauson, had been indisposed for a considerable time. He was able to transact business, but had been confined to Government House for some months.

Mr. Antoine Saktouris, Diplomatic Agent and Consul-General of Greece in Cairo, arrived in Khartoum on March 11, having been deputed by his Government to visit the Hellenic community in the Sudan.

A drawing-room meeting in aid of the Serbian Relief Fund was held at the Mansion House, Newcastle, on Thursday afternoon of last week, when an address was given by Miss Latham, London, of the British Field Hospital, who is at present on leave from the Balkans.

Mr. Sidney H. Wells, Director-General of the Department of Technical Education and of the Civilian Employment Bureau, Egyptian Government, recently underwent a slight operation at the Anglo-American Hospital. We are glad to learn that the operation was quite successful.

In order to mark the centenary of the conclusion of the first treaty between the British Government and the Bikaner State, the Maharaja has given three lakhs of rupees (£20,000) for war purposes, including one lakh from his privy purse. The King-Emperor has graciously accepted the gift.

Colonel Millivoy Picolaievitch had the honour of being received by the King at Buckingham Palace on April 13, upon relinquishing his appointment as Serbian Military Attaché, and Colonel-Major Georges Ostoïtch had a similar honour on that day, upon his appointment as Serbian Military Attaché.

The engagement is announced between Lieutenant-Commander H. C. Lukach, R.N.V.R., Commissioner of Famagusta, Cyprus, only son of Mr. and Mrs. J. H. Lukach, of the Curzon Hotel, London, and Miss Joyce Fremlin, only daughter of Captain J. L. Fremlin, 19th Lancers (Fane's Horse), and Mrs. Fremlin, of Green Elms, Mortimer, Berks.

The Rev. Arthur Cayley Headlam, D.D., whose appointment to be Canon of Christ Church, Oxford, and Regius Professor of Divinity at the University of Oxford has recently been approved by the King, was engaged, as a young don, in archæological work in Asia Minor, and in 1893 published "Ecclesiastical Sites of Isauria."

Public interest, says the *Morning Post*, in Athens is centred on the trial of MM. Meidanis and Xinpoulos, magistrates, and M. Chalcocondilis, editor of *Nea Himera*, charged with being implicated in the forgery of a letter from M. Venizelos to General Korakas, or in making use of a letter known to be a forgery, for political purposes.

Prince George of Serbia, Mme. Yovanovitch, the wife of the Serbian Minister, and the personnel of the Legation were present on April 13 at a demonstration of the London Units of the Scottish Women's Hospitals at Waterloo Place, to give a send-off to a contingent of the Transport Staff which is joining the Elsie Inglis Field Hospital in Macedonia.

The marriage took place very quietly on March 27, at St. Luke's Church, Parkstone, of Lieutenant-Colonel Vivian Fergusson, D.S.O., R.H.A., and Dulce Alice Mollie D'Ewes, elder daughter of F. W. Allen, Indian Civil Service. The bride was given away by her mother and attended by her sister, Miss Marigold Allen. Major the Hon. Evan Baillie, M.C., R.H.A., was best man.

Mr. R. W. Frazer, the distinguished Orientalist, and late secretary to the London Institution, has been appointed secretary of the Royal Asiatic Society, in succession to Mr. H. A. Rose, late of the Indian Civil Service. Mr. Rose was appointed to succeed Miss Hughes—who resigned on her marriage to Mr. Frazer in the late autumn—but lately vacated the secretaryship to resume his war work with the Indian Labour Corps in France.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

A marriage has been arranged, and will shortly take place in Egypt, between Lieut.-Colonel F. F. Carroll, D.S.O., Egyptian Army, of Moone Abbey, Co. Kildare, and Evelyn Edith Mary, only daughter of Colonel E. E. Bernard, C.M.G., Financial Secretary, Sudan Government, and Mrs. Bernard.

Captain the Hon. James Neil Archibald Primrose, M.C., of Gt. Stanhope Street, W., and the Manor House, Postwick, Norwich, younger son of Lord Rosebery, M.P. for North Cambridgeshire from 1910, joint Chief Whip with Lord Edmund Talbot, who was killed on active service in Palestine on November 15, has left unsettled estate of the value of £135,295, including personalty of the net value of £126,217.

The *London Gazette* announces that Major-General George de Symons Barrow, C.B., Indian Army, has been made a K.C.M.G. in connection with the military operations in Palestine resulting in the capture of Jerusalem. Among other recipients of distinction in this connection are Temporary Lieut.-General Sir Henry G. Channel, K.C.M.G., C.B., who has been made a K.C.B., and Major-General Edward W. C. Chaytor, C.B., C.M.G., New Zealand Force, who has been made a Knight Commander of the Order of St. Michael and St. George.

Under the will of the late Mr. John Gorman Ford, of the Diplomatic Service, the British Museum has recently acquired a small but valuable collection of coins. Mr. Ford was chiefly interested in coins as specimens of Greek art, and the 164 pieces in the bequest are, with the exception of two late Roman gold coins, all Greek of the finer periods. The Greek mints in Sicily, especially Syracuse, and those in Southern Italy, such as Heraclea, Tarentum, and Metapontum, are well represented, says the *Times*. Of the last-named there is an apparently unique and hitherto undescribed coin bearing the head of Heracles with his club over his shoulder. Other parts of the Greek world were not neglected by the collector, and the Museum accordingly comes into possession of some exceptionally fine specimens of the coinage of the kings of Macedon from Philip II. onwards, and also of the Hellenistic kings of Syria. With the coins come a small torso of a nude Aphrodite in Greek marble, and some engraved gems.

APPOINTMENTS, PROMOTIONS, ETC.

Kaimakam A. Crawford Bey, Western Arab Corps, has been struck off the strength of the Egyptian Army with effect from March 1.

Captain J. Esmonde-White, Royal Artillery, has been taken on the strength of the Egyptian Army as Special Service Officer with the rank of Bimbashi, and posted to the artillery.

Major Ernest S. Oliver, Army Veterinary Corps, has been taken on the strength of the Egyptian Army from February 17 with the rank of Bimbashi, and posted to the Sudan Government. Major Oliver has been granted the temporary rank of Kaimakam.

The Alexandria Municipal Delegation decided last month, upon the request of the military authorities, to allow Mr. McLean, chief engineer of the municipal service, to go to Jerusalem and consider the measures proposed to be taken by the authorities there for introducing improvements into the Holy City.

Major R. F. B. Knox, Captain H. A. S. Whiteloche, and Lieut. W. A. Stewart have been taken on the strength of the Egyptian Army as Special Service Officers with the rank of Bimbashi, and posted the first and third to the Sudan Government, and the second to the Medical Corps.

OBITUARY.

Colonel George Adolphus Jacob, Litt.D., late of the Bombay Staff Corps, has died at Oakridge, Redhill, at the age of seventy-seven years.

The Rev. James Stone, vicar of Hildenborough, Tonbridge, whose death, at the age of seventy, occurred on April 13, at one time represented the Church Missionary Society in Southern India.

Deputy Surgeon-General James H. Loch, late of the Indian Medical Service, who has died at Guildford in the eighty-sixth year of his age, served with the Oudh Field Force in 1855 and at the Relief of Azamgarh in 1858, receiving the medal for his services.

The death occurred recently in India of Pandit Sir Sundar Lal, Rai Bahadur, C.I.E., in his sixty-first year. Besides being the leader of the Allahabad Bar, he took a prominent part in the affairs of Allahabad University, and at the time of his death was Vice-Chancellor for the second time. He represented the University on the Provincial Legislature, and was latterly a member of the Viceroy's Executive Council. Sir Sundar Lal was the first Indian to be appointed to the Bench of the Judicial Commissioners Court of Oudh, and was also for a time a Judge of the Allahabad High Court.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

"NAVAL & MILITARY" HOTEL
HARRINGTON ROAD, SOUTH KENSINGTON, LONDON.
Only 200 yards from District Station and "Piccadilly Tube" (S. Ken. Station). For all Services and the General Public. Two Lifts. Excellent Cuisine. Exceptional Reception Rooms. 100 Bedrooms.
Cables: "NAVAMILOT LONDON." Telephones: KENSINGTON 5425 (4 lines.)

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

EDUCATION AND POLITICS.

The recent outburst of political discussion has inevitably reacted on each and every branch of the Indian administration. Officials who have been hitherto content to spend their lives in the service of the silent masses have now been forced to realise that these masses must for the time being count for less, and that ideals and methods must be brought into harmony with the changed environment, in which ultimate authority is claimed, and in practice to some extent exercised, by the small minority conventionally described as the educated classes of the country. A new orientation has thus become necessary, and while every department is affected to a greater or less extent, there can be no doubt that the heaviest burden falls on the educational institutions, which are bound not merely to keep abreast of the time but to look a generation ahead, and mould their present methods to their estimate of future needs. The task is one which calls for hard and clear thinking, and it is unfortunate that this essential has not been very conspicuous in such pronouncements on the subject as have recently appeared in India. The current argument may be stated concisely in the following terms. It is admitted that the masses of the people must presently have votes: illiterate voting is an unsatisfactory business from almost every point of view; consequently, the most urgent necessity is the immediate extension of primary education. That argument is to our minds both fallacious and dangerous. The fallacy lies in the fact that the proposed measure will not meet the emergency. If there are not to be illiterate voters, then any substantial measures of political reform must be postponed for something like a generation, and that course is obviously impracticable; the decision to advance has been taken, and the advance cannot now be stopped. The danger lies in the fact that the educators are not ready. So far as the greater part of rural India is concerned, it is at present an open question whether the primary schools are harmful or merely useless, and only a short time has elapsed since the official recognition that the present need is for a policy of wide and bold experiment to devise a curriculum which shall at any rate be worth its cost. That policy will take time to carry out, and it would be little short of madness to discard it now, and force the discredited curricula on a population which is already familiar with their defects. The hard facts of the situation lead, therefore, to the confusion that the masses must learn to vote before they learn to read; it is for the authorities, on the one hand, to devise methods by which illiterate voting may be safeguarded for the time being, and on the other to push forward with greatly increased energy the experiments in primary education already determined on. Money must be freely spent for this purpose, and no time must be lost in utilising the results on the widest possible scale, but to press untried or discredited systems on a reluctant country would serve only to delay the attainment of the object sought.

To our mind the most pressing need for educational development arises at the other end of the scale. For the moment it is even more important to train leaders than voters, and the questions to be faced concern the high schools and colleges from which the leaders of the future must be drawn. The reality of this need will be apparent to anyone who has studied the proceedings of the Indian Legislative Councils. The student will find among the unofficial members of these bodies a high standard of eloquence and industry, along with a genuine if somewhat narrow devotion to the public interest, but he will find also, after allowing for a few conspicuous exceptions, a deficiency in mental equipment which goes far to sterilise these valuable qualities; he will find, in a word, that combination of earnestness and ignorance which, as we have so lately seen, may become the most potent force for evil known to the modern world. The ignorance of which we speak is not manifested merely in regard to concrete facts: it is of that deeply-seated type which results in an entirely false view of the current of affairs, and in a failure to appreciate the forces with which it comes in contact. India has no monopoly of this quality, but the past history of the country gives it a peculiar tone: the long centuries of absolute and irresponsible government, whether Hindu or Moslem, have left their mark so deeply that even the central idea of a self-governing State is as yet but rarely grasped; the professed democrat thinks instinctively in terms of autocracy, and regards the most complex problem as capable of solution by an authoritative word, a word before which the minority must silently bow. India needs better leaders, if she is to complete the long and perilous journey on which she has started.

Much might be written as to the apportionment of blame for this unfortunate position, but the time for that discussion has passed. The position exists, and it forms part of the environment in which political reforms have to be introduced. Its existence should be regarded, therefore, not as an excuse for wordy recriminations, but as a trumpet-call to fresh activities. The schools and universities throughout the country must recognise the need, and must equip themselves to meet it with the least possible delay. The emergency cannot be met merely by alterations in the curricula; changes of detail are doubtless necessary, but the most essential thing is the introduction of a new spirit, equally distinct from the old vocational attitude and from the chauvinism manifested in more recent years. There is no longer any room for doubt regarding the aim in view. It is to build up a great Indian nation, strong enough and sane enough to govern itself and to take equal rank with the other free nations of the Empire. In the effort to achieve this aim every schoolboy and every undergraduate has his part to play, not, as the present custom is, by noisy demonstrations in honour of some short-lived idol of the platform, but in disciplining his own mind and in equipping himself with habits of most thoughtful and careful study, habits which can later on be placed at the disposal of the nation. It is such training and discipline as this that the schools and colleges must be organised to promote. With all their admitted imperfections they have already rendered great services to the Indian people; they have provided the country with diligent and competent administrators, with lawyers, doctors, engineers, and other servants of the public. They have proved their ability to furnish vocational training of real value, and they have now to face the harder task of providing citizens worthy to take up the burden which is about to fall upon their shoulders. In one respect they enter on this duty at a favourable time, for the rising generation is characterised by the possession of an abundance of mental and moral energy such as has not been at the disposal of the country for many centuries. This outburst of energy, which it is the fashion to describe as nationalism, may prove to be either a blessing or a curse, and the schools and colleges will have a preponderating voice in deciding which result shall be attained. The stream is already flowing strongly, and the current gathers volume year by year. Is it destined by-and-by to devastate the wide plains in an uncontrollable torrent, or is it to spread over them more and more widely in orderly and fertilising streams? That, to our minds, is the real question confronting the educators of to-day, and its importance for the future of India is so great that all other problems, even the instruction of the masses, must, if necessary, be subordinated to its prompt and satisfactory solution.

THE CAUCASUS*

ITS PEOPLE, HISTORY, ECONOMICS, AND PRESENT POSITION.

By D. Ghambashidze.

III.

Turning to the economic situation in the Caucasus, it must be mentioned that here again the old Russian Government has never given a chance to the inhabitants to develop properly the almost unlimited natural resources of the country. The Russian Government, whilst hampering the economic development of the whole of Russia, has placed exceptional restrictions on the economic development of the Caucasus. But, in spite of these restrictions, there has been considerable activity for the last twenty years. In order better to illustrate the situation we give here certain data:—

In 1913 the crops of cereals in the whole of the Caucasus yielded 204 million bushels. But with the proper application of modern methods of agriculture, the output could be increased at least twenty-fold. In the same year 190,000 acres were cultivated as vineyards, and there were about 210,000 small vineyard peasant proprietors. Forty million gallons of wine were produced. The quality of the wine is excellent, and in those cases where modern chemistry was applied it was as good as that of the French and Italian wines.

In the same year there were 19,188 tobacco plantations, mostly in the western part of the Caucasus, which yielded about 23,000,000 lbs. of tobacco leaf. The greater part of this crop was raised from Turkish seed, was of good quality, and capable of being blended with high-grade Turkish tobaccos. It is worth noting that the popular Russian cigarettes are all manufactured from the Caucasian tobacco.

In the same year in Trans-Caucasia 112,000 acres were used for growing cotton, and 150 million lb. of ginned cotton were produced. With the proper organisation of irrigation, especially in the eastern part of Trans-Caucasia, the crops could be increased at least thirty-fold.

Among other branches of agriculture, silk production is the most prominent in Trans-Caucasia. This industry has existed for the last thirteen hundred years, and there are about 3,000 villages and 400,000 families engaged in it. In 1913, 14,400 lb. of grain were cultivated and about 433 million lbs. of cocoons were produced, which were chiefly exported to Marseilles and Milan.

Around Batoum, on the Black Sea, there are tea plantations. In 1895 there were only six acres. In 1912 there were 1,700 acres. In 1895 only 85 lb. of leaf were obtained; in 1912, 1,106,597 lb.; in 1895, 20 lb. of tea were produced; in 1912, 268,540 lb. This branch of cultivation is still in the experimental stage, but there are vast possibilities for expanding it in the near future.

Bee-keeping is also one of the ancient occupations in the Caucasus. In 1912 there were about 26,067 apiaries, with 596,924 beehives, and the production amounted to 5,653,302 lb. of honey and 656,820 lb. of wax. It is worth noting that the Russian Holy Synod has not given a chance to the Georgian Church to develop this minor industry very considerably. Had the reverse been the case, the Caucasus could have supplied all the demands of the churches all over Russia for wax for candles. But considerable quantities of so-called wax (actually cerosene) have been imported from abroad.

In 1913 the numbers of the domestic animals in the Caucasus were as follows: Horses, 1½ million; mules, 160,000; cows and oxen, 5½ million; buffaloes, 638,160; sheep, 15,000,000; goats, 767,613; camels, 16,000; pigs, 980,000. Altogether about 20,000,000. The country has vast possibilities for cattle breeding.

In the same year 10,000,000 acres were covered by forests, chiefly oak, pine, birch, etc. There were also fine varieties of boxwood and walnut. This industry in the Caucasus has been very feebly developed, for the reasons indicated above. In 1913 there were about 17,700 small workshops, including also a few large factories which employed about 127,846 workpeople and produced goods to the value of about £20,000,000.

Mining is at present very feebly developed, but it could be made a most important branch of the economic activity of the Caucasus. The mineral resources of the region are vast. There is a legend among the people there that when God Almighty created the world he dropped all the minerals on the spot where the Caucasus is situated. The unexploited deposits of copper are practically unlimited. In 1912 there were fifteen copper refineries, out of which only nine were working. These produced 9,656 tons of copper. In the same year 26,000 tons of silver, lead and zinc were produced, 900 tons of iron, 9,000 tons of sulphur, and 68,000 tons of coal. Of particular importance is the manganese ore entirely produced in Georgia, of which in 1912 885,000 tons were exported abroad. Of this Germany had 275,000 tons. Altogether Germany took for ten pre-war years from 41 per cent. to 47 per cent. of the total quantity exported.

The importance of the great oilfields of Baku is well known. Baku is connected with the Black Sea port of Batoum by the Trans-Caucasian Railway and the pipe line. The total length of the Caucasian Railway is about 3,500 miles. The trunk line from Batoum to Baku goes through Tiflis, and there is also a direct line from Tiflis leading to Tabriz, in Persia.

The outbreak of the Revolution of March, 1917, was enthusiastically greeted by all the peoples of the Caucasus, who were quite confident that their just outstanding claims would be at last realised. They watched patiently for a couple of months, but discovered, to their great disappointment, that those who were at the head of the Government in Petrograd did not pay much attention to the vital problems of Russia, preferring to indulge in oceans of beautiful phraseology.

For the first two months, whilst the Cadets were the actual leaders of the Provisional Government, the question of nationalities was not carefully considered. The Cadets were perfectly honest patriots, but they did not display the wisdom of the practical politician; and, instead of working for the conversion of Russia into united States—which would have meant its salvation, on account of the mixture of nationalities in the country—they proclaimed a centralised system of government. They appointed a special Commission, consisting of four members of the Duma—Mr. Kharlamov (Russian) (chairman), Mr. Tchenkeli (Georgian), Mr. Djaffaroff (Tartar), and Mr. Papajanoff (Armenian)—to administer the Caucasus, in place of the Viceroy, the Grand Duke Nicholas, who was recalled. This Commission was given very small powers to deal with local matters, and had to refer for decisions to Petrograd.

Later on came Kerensky's Government, and the question of nationalities became acute. The following nationalities advanced their claims for self-government, besides the Finns and Poles, who claimed complete independence:—the Esthonians, Letts, Ukrainians, Moldavians, Tartars, and Georgians. The Armenians proclaimed that the question of their future was of an international character, and, therefore, they were waiting for the peace conference to settle it.

The demands of the nationalities of the Caucasus for self-government were met by complete refusal, until they came to the conclusion that, unless they looked after themselves, Petrograd was not going to trouble about them. The Georgians, Armenians, and Tartars, therefore, arranged their National Assemblies, at which each nationality elected a supreme National Council. These National Councils tried very hard to work in harmony with the Soldiers' and Workmen's Councils, but they found it quite a hopeless task. In a country like Russia, where 85 per cent. of the peasants cannot read or write, it is sheer madness to attempt Socialistic experiments; and the Workmen's and Soldiers' Councils throughout the whole of Russia had on their executive committees practically every class, with the exception of workmen and peasants. The climax was reached at the Moscow Conference, when Prince Kropotkin made a very passionate appeal to transform Russia into a federated republic. But this appeal was made in vain—nobody seemed to care about it.

Meanwhile, the nationalities of the Caucasus continued the process of nationalisation. The schools were converted into national schools; the Georgians restored the independence of their Church, which suffered so much humiliation from the Russian Holy Synod from 1811-1917, and Bishop Kirion was consecrated as Katholicos Patriarch of Georgia. The Russian Holy Synod again started a tremendous campaign against the Georgian Church, and at the Moscow Church Council it was proposed to proclaim the Georgian Church schismatic. About twenty members of the Council, headed by the most eminent Bishop Andrew of Ufa, vehemently protested against the proposal as being contrary to Christian tradition and unjust to the Georgian Church as defender of Christianity for ten centuries, and left the Council. It is pleasant to know that the body of Russian

* The first part of this article appeared in THE NEAR EAST of April 5, and the second part in last week's issue.

Digitized by Google

ecclesiastics, who were for a long time governed by the imbecile Rasputin, should still have some fine personalities among them.

At the very beginning of the Kerensky regime the Georgians and the Armenians proposed that all their units on the Austrian and German fronts should be transferred to their native country, where they would form a national army corps. This very fair demand was supported by the Allied Governments, but it was not granted until three days before the fall of Kerensky's Cabinet.

In November of last year the Bolsheviks seized Petrograd and overthrew Kerensky's Government. This was a signal to the nationalities of Trans-Caucasia to break off all relationship with the Central Government, and, in the same way as the Ukrainians and the Don Cossacks, they formed a Trans-Caucasian Republic. The elected Government was composed of three Georgians, three Armenians, three Tartars, and two Russians, the Prime Minister and Foreign Minister being Mr. Gegechkori (Georgian). The Georgian and Armenian troops were subject to the orders of this Government, and Trans-Caucasia was governed as a separate republic.

The mountaineers of the Caucasus and the Kuban Cossacks formed themselves into a distinct republic, with a joint Government, but it proved impossible for them to work together, as the traditions of Shamil still survived, and the differences between them, especially on the land question, were unsurmountable. There were sanguinary fights between them for some four months, which constantly increased in bitterness.

Finally, in December of last year the mountaineers separated themselves from the Cossacks, and constituted the independent Republic of Dagestan, in the north of the Caucasus. The President of the new State is a Lesgian, Colonel T. Tchermoeff, a striking personality, and one of the most progressive Mohammedans. The members of his Cabinet are also men of character. He invited representatives of the Georgian National Council to attend the congress of mountaineers in Dagestan, an historical spot where Shamil made his last defence.

At this congress the Mohammedan clergy, together with the celebrated Sheikh Najmudin, attended. This latter dignitary had been very active amongst the mountaineers preaching a "Holy War" against the Christians. Colonel Tchermoeff strongly insisted that he should abandon his fanaticism, not only as undesirable and dangerous, but also as highly insulting to the Mohammedan religion. In this way this memorable gathering provided a good object-lesson for the Young Turks of Constantinople, who want to compensate themselves for military disasters by organized massacres. The Trans-Caucasian Republic, and particularly the Georgian Supreme National Council, have achieved enormous success, thanks to the intelligent co-operation of Colonel Tchermoeff and other leaders.

With the commencement of the Brest-Litovsk negotiations and the Bolshevik comedy the Ukrainians sent a special delegation to negotiate peace with the Central Powers in order to safeguard themselves from being sold by the Bolsheviks. The Trans-Caucasian Republic, having its territory close to the Turkish frontier, was confronted with violent Bolshevik propaganda, and special agents of the Bolsheviks penetrated the purely Russian troops on the Turkish frontier and started a criminal propaganda amongst them, inciting them to murder the Georgian and Armenian Christian races, who refused to accept class warfare as a substitute for national self-respect. Unfortunately, the Russian troops began their devastating work; but they were promptly disarmed by the Georgian and Armenian armies, and most of them then left for the interior of Russia. The defence of Trans-Caucasia was left entirely to the Georgian and Armenian troops. The only danger was from the Baku Tartars, whose leaders were very busy propagating the Pan-Islamic and Pan-Turanian movements. In these circumstances the Trans-Caucasian Government had to sign an armistice with the Turkish military command, with the proviso that until the peace treaty was signed the Turkish troops would not be transferred to Mesopotamia.

When the Bolsheviks at last signed peace with the Central Powers and Turkey they also agreed to cede Batoum and Ardahan districts, which are an integral part of Georgia, and populated by Georgian Mohammedans, and the Kars district, largely populated by Armenians; and also agreed to the reoccupation of the entire territory of Turkish Armenia by Turkey. This criminal act aroused great indignation amongst the Georgians and Armenians, the more so as the Trans-Caucasian Republic does not recognize the Bolsheviks, and could not allow them to negotiate with anybody on their behalf. The Turkish Government had not the courage to propose the above-mentioned cession of territory to the Trans-Caucasian Government direct, but arranged it behind their backs with the Bolshevik desperadoes. Immediately the Brest-Litovsk negotiations finished the Porte addressed a Note to the Trans-Caucasian Government, expressing its desire to enter into peace negotiations after the cession of the above-mentioned territories, which cover about 4,000 square miles. This offer was indignantly refused.

The Turkish Government next entered into negotiations with the demoralised sailors of the Black Sea Fleet, requesting them to bombard the Georgian towns on the Black Sea coast. Accordingly, a dastardly attempt was made on the defenceless port of Soukhum, where there is a large concentration in the hospitals of wounded and consumptive soldiers. Immediately after this a large Turkish force advanced on Trebizond and Erzeroum, and approached the old frontiers of Trans-Caucasia. This emergency was immediately met. The Georgian and Armenian National Councils concluded a defensive alliance, and, as is well known, fierce fighting broke out with the Turks. The Georgian and Armenian armies are operating together, and the entire population of Georgia has been mobilised. This heroic action is worthy of high admiration, for the Georgians and Armenians are completely isolated from any Allied assistance; and are threatened in the rear by the Tartars, who are in sympathy with the Turks. The struggle will be a fierce one. The Georgians and Armenians will show adventurers like Enver Pasha and Talaat Pasha that self-respecting nations, however small they may be, will not allow themselves to be treated in the same way as the Bolshevik rabble.

It is interesting to note the reasons which prompted Turkey to undertake this dangerous operation. First, she looks for compensation for those military disasters which Great Britain inflicted upon her by detaching Mesopotamia, the whole of Arabia, and Palestine. Secondly, she wants to establish direct contact with the Baku Tartars, in order further to extend her influence in Turkestan, and with the Mohammedans inhabiting the south-eastern part of Russia. Thirdly, there is the desire to utilise the Trans-Caucasian railways, and, through Baku, to penetrate to Afghanistan. She also claims that the Georgian Mohammedans who inhabit the Batoum district, which is an integral part of Georgia, ought to be considered as Turks. But she forgets that even amongst the Mohammedans the principle of nationality has been established as supreme. During the Balkan War Albania broke away from Turkey, in spite of 75 per cent. of the Albanians being Mohammedans. In this war the Arabs of Mesopotamia and Arabia are fighting against her, in spite of being better Mohammedans than the Turks, as it is certain that the Arabs are not only the originators of the Islamic religion, but much superior as a race to the Turks.

The Georgian Mohammedans in the Batoum and Ardahan districts number 200,000. They were forcibly converted from Christianity to Islam after the devastating wars with the Turkish invaders. They have the same blood as the Christian Georgians, and they will never consent to be separated from their race. There is ample proof of this in the fact that in the present war against Turkey in the entire Georgian army there are three divisions composed purely of Georgian Mohammedans.

This struggle will be watched with lively interest by the entire civilized world, and by all friends of small nationalities. It will create great suffering for the Georgians and Armenians, but these two races represent the traditions of many centuries of self-defence. Especially will the well-known bravery of the Georgians be demonstrated once more.

It is the sacred duty of the Allies to help the Georgians and Armenians in every way, so that they may not share the same cruel fate as other small nationalities who have suffered so bitterly in the present struggle.

THE MOSLEM WORLD.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Malta and the War.

April 11.

Colonel YATE asked the Prime Minister whether his attention has been called to the speech delivered by the Governor of Malta to the 1st and 2nd Battalions of the Malta Militia on March 15, 1918, calling upon them to represent the honour of Malta in the face of the enemy and to form a battalion for active service at the front; whether only 150 men out of the whole of these two battalions responded to this appeal; and whether, under these circumstances, compulsory service will be forthwith introduced into Malta, and all men of military age and fitness called out for service, either in combatant units or labour battalions as may be deemed best?

Mr. HEWINS (Under Secretary for the Colonies): No, sir. My attention has not been called to the speech in question.

Prisoners in Turkey.

Colonel FABER asked the Prime Minister whether it is possible to publish a list of our officers and men who are known to be alive and prisoners of war in Turkish hands; and whether, seeing the state of suspense that exists in the public mind about these prisoners, he can make any statement to alleviate it?

Mr. MACPHERSON: I regret I can add nothing to the full answer which the member for Central Sheffield gave on March 18 last to the member for North Dorset, except that the untraced British officer therein referred to is now found not to have been missing at Kut, and should therefore be excluded from the figures. All information we have is communicated to the relatives and all new information is published, and I am afraid to publish a new nominal list at the present time would only lead to misunderstanding.

Colonel FABER: Arising out of that, could my hon. friend furnish the names of those in the internment camp near Constantinople?

Mr. MACPHERSON: I will look into that, and furnish the names if possible.

Colonel THORNE asked the Secretary of State for Foreign Affairs if he is aware that the Austrian military authorities are preventing parcels of foodstuffs being sent to our prisoners of war in Turkey; and if he will take action in the matter?

Mr. J. HOPE: The transmission of parcels for prisoners of war to Turkey through Austria was stopped by the Austro-Hungarian Government for several periods last year, and has now been stopped since the beginning of March, the reason given being the congestion of traffic. Although his Majesty's Government are informed that the present stoppage is not likely to be of much longer duration, they propose to take action in order to put an end to it and to prevent similar stoppages in future.

Mr. HUME-WILLIAMS asked the hon. member for Sheffield (Central Division) whether Turkey has yet ratified the agreement as to an exchange of prisoners arrived at several months ago at Berne; and, if not, whether he can state the reason of the delay?

Mr. HOPE: The Turkish Government has not yet ratified the Berne Agreement, but his Majesty's Government cannot believe they will not ratify it, seeing that it will be of no less benefit to Turkish than to British prisoners of war.

Mr. HUME-WILLIAMS asked when the camps in which British and Indian prisoners captured by the Turks are now interned were last inspected; and what is the most recent information received as to the numbers, health, and general condition of such prisoners?

Mr. HOPE: The last inspection of internment camps in Turkey was that undertaken by the Swiss delegates of the International Red Cross Committee in December, 1916. As my hon. friend is aware, the agreement concluded with the Turkish delegates at Berne provides for the inspection of prisoners of war camps. Since the report of the Swiss delegates no further formal reports have been received, but a great deal of information reaches his Majesty's Government from various sources, and tends to shew that the treatment of British prisoners has, if anything, become somewhat better in recent times, but that they are suffering great hardships from the economic conditions prevailing in Turkey.

Baluchistan Air Raid.

Mr. TREVELYAN asked the Secretary of State for India whether the statement that our aeroplanes have been bombing the tribal concentrations of the Maris of Baluchistan means that purely military posts have been attacked or places where women and children are liable to be present?

Mr. HERBERT FISHER: The telegram received by the Secretary of State for India speaks of "tribesmen" and "an enemy gathering" of Maris having been bombed by our aeroplanes. There is no reason to suppose that places were thus attacked where women and children were likely to be present.

Friendly and Neutral Aliens.

Mr. KING asked the Minister of National Service what is the present policy being followed towards friendly and neutral aliens who are men of military age in this country; and whether Roumanians and Russians are regarded as aliens of friendly or neutral nationality?

Mr. BECK: I would refer the hon. member to the answer given by the Chancellor of the Exchequer on Tuesday, and to the answer given yesterday by the Secretary of State for Foreign Affairs.

King of Greece (Decoration).

April 15.

Mr. LYNCH asked the First Lord of the Admiralty whether the Duke of Connaught utilised any war vessel in his journey to Greece to confer a decoration on the King; and, if so, by whose authority this was done?

Dr. MACNAMARA: Yes, sir; and by the authority of the Admiralty.

Mr. LYNCH: Do the Government consider this a proper use for a warship, considering the present situation has been brought about by the attempts to bolster up that dynasty?

Dr. MACNAMARA: His Majesty's Government having called upon the Duke of Connaught to undertake this duty, we were bound to take steps to provide safe and proper passage, and did.

Prisoners of War (India).

Sir J. D. REES asked the Secretary of State for India whether the Report of the Swiss Red Cross Commissioners who visited India last year to investigate the condition of prisoners of war in that country has been, or will be, published or made available for perusal by members?

Mr. HERBERT FISHER: The full Report of the Swiss Delegates of the International Committee of the Red Cross, Geneva, on their visits to the prisoners of war camps in India was published by the Committee in June, 1917, through the Librarie Georg et Cie., Geneva, and the Librarie Fischbacher, 33, Rue de Seine, Paris. Extracts of the report, together with a descriptive article by one of the delegates, have been published in pamphlet form by Messrs. Fisher Unwin. Copies of both publications have been placed in the Library.

Ex-King Constantine.

April 16.

Mr. LYNCH asked whether the Secretary of State for Foreign Affairs would ascertain definitely whether the Greek Government had recently reduced the pension payable to ex-King Constantine; whether Constantine was believed to have instigated the plot discovered in Greece for the overthrow of the present Parliamentary system there; whether he had been in communication with his son, King Alexander; whether King Alexander had means of communicating with him; and whether the Secretary of State for Foreign Affairs proposed to intervene in this matter.

Lord R. CECIL: I understand that the Budget Committee of the Greek Chamber have recommended the cancellation of the allowance allotted, though never in fact paid, to the ex-King; the answer to the second part of the question is in the affirmative; that to the third and fourth parts is, so far as is known, in the negative. As regards the last part the answer is also in the negative.

British Prisoners in Turkey.

Answering Sir R. Cooper, who asked if any attempt had been made to negotiate with the Turkish Government for the repatriation of British prisoners of war of over two years' standing; and, if not, whether negotiations to that end would be initiated, Mr. HOPE said:—On the general subject of negotiations with the Turkish Government with regard to prisoners, I would remind my hon. friend of the fact that an agreement was signed between British and Turkish delegates at Berne some months since, but has not yet been ratified by the Turkish Government. The basis of this agreement is repatriation on grounds of health rather than length of captivity; and until this agreement is carried out it would seem premature to start fresh negotiations on another principle, apart from the inherent difficulties of the course suggested in the question.

Later, Mr. HOPE, replying to Mr. Macmaster (U., Chertsey), said that in regard to the condition of British prisoners in Turkey, their treatment at the hands of the Turks appeared to have somewhat improved, but they were suffering very considerable hardships owing to the economic conditions that prevailed in Turkey. There was no limit on the amount of correspondence, parcels, or money which British prisoners of war were allowed by the Turkish authorities to receive, although money was not issued to the prisoners in large amounts at a time, and the delivery of everything sent from this country was subject to the irregularities and delays characteristic of Turkish administration.

Lieutenant-Colonel Sir F. HALL asked whether, in view of the terrible privations to which these prisoners of war were exposed, the hon. gentleman would see that, if possible, steps would be taken to accelerate the delivery of parcels to them.

Mr. HOPE: I think that every possible step that can be thought of has been and is being taken.

Mr. HOPE, in a written reply to Colonel Sir Frederick Hall, who asked a question regarding the condition in which British prisoners are living in Yozgad, Turkey, states that the general conditions there are not different from those at other officers' camps in Turkey. The climate is healthy, and, apart from the high cost of living and the difficulty of obtaining certain supplies, the general conditions and the treatment of the prisoners are tolerable.

Stocks of clothing are constantly sent to prisoners other than officers at this, as at other, camps, by the Netherlands Minister at Constantinople. On December 7 last food and clothing to the value of £T25,630 were despatched to the various camps. The Government have no knowledge of the statements in the question regarding the inadequacy and poor quality of the food supplied to the prisoners. Food parcels are sent from this country, and, though they take long to arrive, the majority appear to reach their destination in due course. In all countries officer prisoners have to pay for their own food. There is no recent information of the price of bread at Yozgad. The price appears to vary considerably in different parts of Turkey.

Allowances are already made to all officers and men, in addition to their pay, to enable them to obtain the necessaries of life, and steps are being taken to increase them. Food is already sent from this country, but it is probably more desirable that clothing should be purchased locally, and this is done by the Netherlands Minister at Constantinople, who has better facilities for securing its delivery to the prisoners.

THE PRESS ON THE NEAR EAST

The Lebanon.

In an article which appears in the *Queen* (April 6), and is entitled "The Glory of Lebanon," the author writes:—

The term "Lebanon" covers two high mountain ranges, separated by a plateau more than 2,000 ft. above sea-level. The eastern range is the Anti-Lebanon, grand, stern, barren, and swept by deep black shawods. Here there are fewer peaks, but a long line of ramparts stands turreted and pinnacled against the clear blue sky. As they drop lower and vanish southwards, Hermon rises up like a mighty giant, with patches of unmelted snow even in July. This is the Mount of Transfiguration, "high" and "apart." Though only 9,800 ft. high, Hermon looks down on almost the whole of Palestine. Seen from Galilee it appears to be a dim white cone, and this is also the shape of the wonderful shadow thrown by the mountain, at sunrise and sunset over the earth and up into the sky. On its summit once stood the Temple of the Sun, and facing it from the north were the Baal groves of the Anti-Lebanon, the "high places" of Scripture. One of them can be easily traced, and is regarded with superstition by the inhabitants of a village about a mile distant. A group of fine old evergreen oaks, with prickly leaves and furry acorn-cups, screens the remains of a semi-circular altar built of rough stones. Owing to a custom still prevalent, and probably of heathen origin, the spot is covered with fragments of pottery, and bears the name of "The Mother of Pieces," for when there is sickness in the village the natives go out to the Baal grove, carrying a new pitcher, which they shatter on the ruined altar to ensure the recovery of the patient. Not far from this village is a famous vineyard named after Bacchus, and within a ride lies the quiet nook where the Abana has its source.

On the Tigris.

The *London Magazine* contains an article "With the Flag to Bagdad," by Percy Kessel, an air-mechanic who, as a photographer with the forces, had many experiences in Mesopotamia which he did not enjoy. Here is one that befell him on the river steamer:—

After our tea we thought of bed, for it is the "early bird that catches the best spot." Some would have to stand all night. Talking sympathetically to one of the crew, I "wangled" a hammock for the night. With this slung between two posts on deck I was A1. Many others started turning in, and soon every inch of the deck was covered.

All went well for an hour or two, then a storm broke. The awning above us began to leak, and very soon we were all soaked. There was nowhere else to go, so we just had to stick it. Turning over in my clammy blanket, I dozed.

Presently—thud!

The rain had tightened my hammock-ropes, and the one at my head had given way.

With my feet still tied up to the deck-post, I slowly came to my senses.

Who was that groaning? The sound was very near, yet I could see nothing wrong. I put my hand out, and suddenly it dawned on me. I had fallen on top of the person who had been sleeping on the deck under my hammock. I wriggled to one side, made my apologies, and then went to sleep again, with my feet still held up to the post.

Amusing to read of, such things as these are not enjoyable to go through. They are, however, only minor troubles when one is taking part in a great war. The following passage shows that the German does not always foresee everything, as certain critics seem to imagine he does:—

The attempt to relieve General Townshend in Kut had failed, but preparations were soon in hand for another attempt. We still had wireless communication with the imprisoned army, which proved useful on more than one occasion. One morning the message came through that "Fritz" was just leaving his aerodrome. The German aerodrome was under observation by the British in Kut, and the enemy's goings and comings were reported.

The emergency pilot and observer for the day were immediately sent up, and when the Fokker arrived he had a hot reception. The machines wheeled round each other, with the guns barking.

Again they charged, banking out of each other's way just a second too late. The wing tips collided, and the machines staggered a second before they continued their flights. The fight was unfinished. The German flew away surrounded by shrapnel bursts from the anti-aircraft guns. Our pilot managed to land, and it was found that nearly two feet of the wing had been carried away by the collision.

Every time the enemy flew over he found some of our men already up and waiting. He began to "smell a rat," and soon afterwards the German aerodrome was moved to a more secluded spot.

From an authoritative source Reuter's Agency learns that the statements appearing from time to time in the German Press as to any alleged success of the German propaganda in Afghanistan may be regarded as unworthy of attention. The facts are exactly opposite to what the Germans expected. The Amir has throughout the war adhered fully to his policy of the maintenance of neutrality, and his Majesty's relations with the Indian Government were never more cordial than at the present.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The discussion on bank amalgamations at the annual meeting of the Chambers of Commerce last week showed that the main reason for such opposition as there is to this movement is the fear that it may be injurious to the commercial interests of the country. No sense of hostility to the large joint stock banks was displayed, nor was it maintained that hitherto there had been any lack of support for local enterprises; but there was, on the other hand, a feeling of doubt as to the consequences of the establishment of money trusts. That this should be so is, perhaps, not unnatural in view of the immense responsibilities that will rest on the banks after the war. Not only will it fall to them to provide the wherewithal for the development of our industrial activities, but they will also have to maintain the balance between home industries and foreign enterprises. These aspects seem to me to strengthen the case for banking amalgamations, for it is surely obvious that the larger corporations will take the widest view of their responsibilities, and will not be liable to the fault of allowing the scales to incline too much either way.

***

The main feature of the meeting in question was an eloquent defence of amalgamations by Sir Edward Holden, who maintained that their effect would be to render more funds available for distribution among manufacturers to enable them to increase their outputs to the greatest possible extent at the end of the war. The withdrawal of foreign money at present employed here, he pointed out, is then likely to create a difficult position as regards exchange, for which the best, if not the only, remedy will be the rapid expansion in our exports of manufactured goods. With regard to this question and the problem of the reduction of the amount of artificial currency there can be no doubt as to the utility of combinations of strong banks. Evidently what Sir Edward had to say on the subject convinced the majority of his audience for the original resolution "viewing with apprehension" the series of amalgamations eventually was transformed into a recommendation that the Board of Trade should keep a watchful eye on any such schemes in the future.

***

In view of the fact that India is enjoying unprecedented prosperity at the present time, the Budget, which makes no provision for new war taxation or for increased war expenditure, can scarcely be said to err on the side of enterprise. The Indian financial position is, of course, one of peculiar difficulties which critics on this side are apt to under-estimate and make inadequate allowance for, but in the present case criticism of the Budget comes from India itself, where, judging by a message from the Karachi correspondent of *The Times*, there is considerable dissatisfaction at the financial proposals. "Considering the prosperous and peaceful state of India," the correspondent writes, "informed opinion regards India's financial effort as wholly inadequate and discreditable to the Government; moreover, the absence of further taxation and an active war campaign are resulting in a very dangerous rise of prices, most of the military expenditure being provided for by additions to and inflations of the currency."

***

The report of the Commission on Egypt's Commerce and Industry which was appointed a little over two years ago has now been issued. As it will in due course be the subject of detailed criticism in these columns, I will only say now that the commissioners appear to have done their work exceedingly well, and to have made a thorough survey of the varied factors involved in the commercial and industrial development of the country. Obviously two of the most important questions at issue are the kind of new industries that are suitable for Egypt and the value of State aid to industry in the shape of fiscal charges and bounties, and they both receive due attention in the report, as also do such subjects as technical education, the relation of the Egyptian Customs to the economic interests of the country, and the organisation of a department corresponding to our Board of Trade.

***

While on this subject, I may say that I think it much to be regretted that the report should only have been published in French, for it is obviously desirable that the Egyptian population should have every facility for obtaining information on a matter which concerns them so closely as the industrial future of the country. An Arabic translation would naturally have involved additional time and expense, both matters of some import at the present time, but in view of the importance of the subject dealt with it was certainly called for, and I regard the complaint of the Egyptian papers on this score as entirely justified.

***

I am glad to learn that there is a distinct possibility of the revival of tobacco-growing in Egypt. The project has been under discussion for some time, and it may now be said to have reached a practical stage, as negotiations are said to be in progress between the Ministry of Agriculture and the Ministry of Finance in regard to the selection of extensive areas of Government land for the purpose of experiments in tobacco cultivation. There seems no good reason why Egypt should not grow good tobacco, and if it is proved to be possible every effort should be made to encourage what would be a most valuable addition to the country's industries.

***

The report of Ransomes and Rapier, the Ipswich engineers and ironfounders, shows a record of good progress during the past twelve months, the net profits being £18,800, an advance of £2,700 on the previous figures. The dividend is maintained at 10 per cent., free of income-tax, and £5,000 is placed to the reserve, while the carry-forward is £21,600, as against £17,400. With the present addition the reserve fund now reaches £73,000, and as the issued share capital is only £90,100 the position of the concern is very satisfactory.

***

Among the difficulties confronting Egypt just now is the increasing shortage of the manufactured articles for which the country has been dependent on Europe in the past. This shortage has given business people in Egypt an opportunity of showing what can be done in the way of substitution with the means at their disposal, and by all accounts they have proved quite ingenious in coping with the emergency. For instance, furniture, which has always been imported, is now being manufactured on a small scale in the country. This industry, of course, can at best be purely temporary, as the country has an insufficient supply of raw materials for the purpose, and I mention it merely as an indication of trade conditions there at the present time.

***

The outstanding feature of the trade of the Sudan in January was a remarkable increase in imports, the figures being £E432,836, compared with £E170,857 for January, 1917. Exports amounted to £E220,626, an increase of £E16,182 on the corresponding figures for the previous year, so that the Sudan commences the year with an adverse trade balance of £E212,210. India and Aden and Egypt are responsible for most of the increase in imports. Thus the Sudan imported goods to the value of £E177,382 from India and Aden as against £E7,875 in the previous January, while the Egyptian figures rose to £E137,135. Conversely, Great Britain's exports to the Sudan dwindled from £E56,224 to £E2,405. Egypt took practically the whole of the exports, her figures in this case and as regards imports into the Sudan, showing, our Cairo correspondent points out, an increase of 60 per cent.

***

The reports of the Mysore Gold Mining Company and its companion undertaking the Ooregum Gold Mining Company of India, which have just been issued, show that the two companies achieved somewhat different results during the past twelve months. The Mysore concern made a decreased profit of £404,296, the reduction being due to increased costs of working. The expenses of the Ooregum Company, on the other hand, were lower than before, owing to curtailment of development and reduction in the quantity of residue treated, while the output of gold constituted a record, and as a result the balance on the revenue account is £170,300, as against £167,400. Despite this favourable result, however, the dividends remain at 40 per cent. on the Preference and 30 per cent. on the Ordinary shares.

EGYPT'S TRADE.

Increased Imports in January.

(From Our Own Correspondent.)

Cairo, March 10.

During January imports amounted to £E3,222,291 and exports to £E3,940,945. This is an increase in the former case of £E367,854, but a decrease in exports of £E1,437,681, the figures for January, 1917, having been respectively £E2,854,437 and £E5,378,626.

Imports.

The chief imports during the month were: Meat, £E109,148; coffee, £E48,972; tea, £E77,754; spirits, £E66,688; stationery, £E77,609; coal, £E328,973; textiles, £E1,428,160 (including cotton textiles) £E906,786, woollen ditto £E81,307, cotton threads £E67,964, sacks £E105,334, and ready-made underclothing and hosiery £E63,889); manufactured iron and steel, £E212,571; and tobacco, £E242,628. No sugar, petroleum, benzine or manures were imported during the month, rice imports fell from £E245,087 to practically nil, and tobacco decreased by £E85,856. On the other hand, coal increased by £E127,641 (the quantity, however, fell off by over 9,000 tons), textiles by £E727,581, of which £E456,858 was represented by cotton textiles, and manufactured iron and steel by £E109,824.

Exports.

Under exports the principal items were:—Eggs, £E90,983; cotton seed, £E150,215; sugar, £E168,906; cotton, £E3,377,078; and cigarettes, £E30,555. No oil cake was exported, cotton seed fell £E135,024 and cotton £E1,308,623, and the only increase of any importance was £E149,909 in sugar, whereof 3,400 tons more were exported during the month.

Increased Trade with Great Britain

Great Britain's share rose very considerably. In imports her total was £E2,092,482, or 64 per cent. of the whole, as against £E972,860 a year ago. Under exports her total was £E3,445,809, about 90 per cent. of the whole, as opposed to £E2,727,238 a year ago, when the gross amount was £E1,437,681 less. The Empire supplied all the coal, 90 per cent. of the textiles, and practically all the manufactured iron and steel and writing and printing paper. All the eggs, cotton seed, gold ingots, wool, senna and rags went to England, as well as 90 per cent. of the cotton and practically all the gum. Amongst the other countries the only increases of any importance under imports were France, who doubled her share to £E104,209, and Japan, who rose from £E16,697 to £E63,037. Under exports the falling off was even more general, and outside Great Britain the only increases were Greece from £E5,649 to £E68,386, and French Mediterranean possessions from £E2,134 to £E125,615 (due to sugar). Raw silver to the extent of £E279,739 came in during the month; of this all but £E1,319 was new coinage, supplied by the United Kingdom and India.

Imports of Cotton Piece Goods.

The January Customs return, from which the above figures are taken, contains a new table showing the quantity and value of cotton piece goods imported into the country. The table is divided into six sections—grey, bleached, printed, dyed in the piece, dyed in the yarn, and mosquito net. From this we see that the only categories where Great Britain had any competition were goods dyed in the piece and in the yarn, of which Italy sent small consignments. The details of the cotton piece good imports are only recorded from January of this year, so there will be no means of comparing with previous years.

The Sudan.

Trade with the Sudan progressed during January. Imports into Egypt came to £E215,597 and exports to the Sudan to £E137,135, increases of 60 per cent. in each case. The chief imports into Egypt were live stock, £E71,735; maize, £E26,718; sesame, £E22,384; gum, £E46,132; charcoal, £E6,756; and senna, £E3,325. The principal exports from Egypt were sugar, £E22,390, and cotton textiles, £E21,476.

WATER-POWER IN INDIA.

Future Possibilities.

Speaking before the Royal Society of Arts on April 18, on "Water-Power in India," Mr. Alfred Dickinson, M.Inst.C.E., M.I.E.E., M.I.Mech.E., said that the most important scheme thus far was that of the Tata Hydro-Electric Power Supply Company. It was frequently said that engineers lacked imagination, and that there was no such thing as romance in engineering. He believed that the Tata Hydro-Electric scheme disproved those statements. The general impression was that water-power was the utilisation of the water of existing rivers or lakes. The Tata Hydro-Electric undertaking was not of that character; it was a scheme to provide, approximately, 100,000 water horse-power from valleys which had from time immemorial been dry for nine months of the year, and where no water had been previously stored. The valleys were so dry that one of the initial difficulties in converting them into lakes was to provide water for use in building the masonry dams.

When the scheme was in process of development he was advised by engineering friends not to risk his reputation by being associated with "such a perfectly absurd engineering proposition," and on generally accepted engineering principles he admitted that if the scheme had been placed before him for advice he would have reported against it. Many looked upon the question, not as a serious engineering proposition, but as a fairy tale. But even in engineering the exception proved the rule. The Tata Hydro-Electric scheme could only be justified on that ground. This would be appreciated when it was stated that, even after the work of building the dams had been in hand for some very considerable time, the company were advised that the supply of water would be insufficient because the catchment area could not yield water to fill the lakes. Those versed in these matters would agree that the engineer did not lack confidence who advised that rain falling during the monsoon on a total catchment area of 22 square miles would be sufficient to enable, roughly, 100,000 water horse-power to be developed for 3,600 hours in each year, but it was confidence begot by experience and knowledge, and now justified by results. The catchment area was exceptional to the extent that almost all the water falling ran off.

His view was that the Indian Government should at once undertake a complete investigation of the possible sources of water-power in the Indian Empire, and the information obtained should be available for public use. Perhaps this would follow as a corollary of the investigations of the Industrial Commission now sitting in India.

Private enterprise had already done much, and was doing more. Messrs. Tata, Sons and Co., Bombay, had been the pioneers, and continued to lead the van. As a result of investigations made at their expense, it could now be demonstrated that, by constructing a dam across a valley in the Western Ghats, water from the Koyna River could be harnessed so as to provide approximately 300,000 h.p. continuously. The preliminary estimates of cost showed this scheme to be a thoroughly sound commercial proposition.

In his opinion this was a discovery of the highest importance to the whole of the East. If a Niagara had been announced the world would have been agog, perhaps more from a spectacular than a power-producing point of view. When the possibility of supplying 300,000 h.p. for every hour in the year is appreciated it would be seen that it was equivalent to supplying to industries during the normal working hours of 3,600 per annum no less than 730,000 h.p. for each and every working hour of the year.

Its Industrial Value.

He was investigating the possibility of utilising for power purposes the irrigation lake at Periyar, in the Madras Presidency. So far the investigations showed that a thoroughly workable and commercial scheme for the manufacture of nitrates on a large scale could be established. He was aware that power could be obtained from the Bari Doab Canal and the Dudh Sagar Falls, and he had every reason for believing very considerable power could be secured in many parts of India. The advantage of water-power development in India would be apparent to those interested in, and who appreciated the industrial awakening of this vast Empire, for water-power development could and would materially hasten that awakening. The rapidity of industrial and agricultural development would, in his view, be largely dependent upon a closer union between the East and West.

Although much had been done, to use a vulgarism, India's industrial possibilities had scarcely been scratched. It was well known that not infrequently the obvious was overlooked. His view was that so far as the captains of finance and industry of the West were concerned, they had not been altogether ignorant of the possibilities of industrial development in India, but hitherto they had not shown the necessary confidence by taking part in their helping forward rapid development. They had an opportunity to finance and construct the Tata Hydro-Electric scheme, but failed to appreciate its importance, and it was left to India to find the requisite capital, to the great advantage of the Indian investor, for it was the only electrical undertaking of magnitude which, in the first year of its working, had earned and paid a dividend on its full capital; and, although it was as yet incomplete, it was earning a profit of over £190,000 per annum.

TRADE OF ARABISTAN.

Growing Importance of Mohammerah.

The following report on the trade of Arabistan during the year ended March 20, 1917, from the Acting British Consul at Arabistan, reveals a surprising development in the trade passing through Mohammerah during that year (says the *Board of Trade Journal*), the value of imports and exports having doubled as compared with the preceding year, and amounting to over £3,500,000. It is true that the decline in the value of the pound sterling accounts for a certain portion of this increase, and that the figures for the other ports, Bushire and Bundar Abbas, will, for the same reason, be far larger than in previous years; but such features as the large import of cotton piece goods (in volume they amounted to 5,000 tons), and the extraordinary increase in the use of the parcel post via Mohammerah are of exceptional note.

Mohammerah is the port of supply for the entire province of Arabistan and, to a very large extent, for the province of Ispahan and the Bakhtiari country as regards imported goods; and the port of shipment for goods from the interior of Persia. In normal years Russian goods are largely imported into Persia through the Caspian Sea. In 1916-17, however, owing to the conditions created by Turkish operations on and about the frontier of Persia, which necessitated the imposition by the Russian Government of severe restrictions on exports to Persia of the chief commodities, with the main object of preventing leakage of goods of Russian origin into enemy hands, the port of Mohammerah became practically the only port of supply of imported goods to the principal markets in central, northern and north-western Persia. Merchants of standing in Hamadan, Sultanabad, Resht, Teheran and Tabriz have had to depend on Mohammerah for part at least of their import trade.

Value of Trade.

The total value of the trade of the port during the year attained the unprecedentedly high figure of £3,665,961, as compared with £1,845,465 in 1915-16, an increase of £1,820,496, or 98.65 per cent. The value of the imports amounted to £2,572,036, as compared with £1,105,347 in 1915-16, an increase of £1,466,689, or 150.78 per cent.; while the total value of exports was £1,093,925, as compared with £740,118, an increase of £353,807, or 47.80 per cent. The following are the chief factors which may be said to have contributed towards this large increase in the value of the trade, especially the increased value of imports:—

(1) The deflection of a large part of the import trade of the port of Bushire to Mohammerah, owing to the closing of the Bushire-Shiraz route, by which considerable trade used in normal times to be done with Central Persia and Fars.

(2) Reduced import of goods of Russian origin, owing to restrictions imposed by the Russian Government on exports from that country into Persia.

(3) Increased freight rates on goods imported from the United Kingdom via India owing to there being no direct sailings to the Gulf Ports, and also the high freight rates on goods imported from India, which went far to swell the value of imported merchandise.

(4) The fact that a very large trade in piece goods and other light merchandise from the United Kingdom was done by the parcels post, the high rate of parcel postage greatly enhancing the value of such goods.

Imports and Exports.

The following table shows the value of the principal imports into and exports from Mohammerah during 1916-17, as compared with 1915-16:—

Imports.	1915-16.	1916-17.
	£	£
Cotton piece goods	262,628	1,366,743
Cotton yarn	28,810	96,192
Cast iron manufactures	417,066	257,412
Tea	108,693	189,115
Crystal sugar	39,053	154,555
Loaf sugar	34,526	57,650
Rice	29,892	98,205
Woollen, and woollen and cotton mixed, goods	4,253	26,524
Metals	30,607	54,972
Tissues of silk	1,348	11,001
Drugs	3,286	15,668
Spices	12,486	11,394
Indigo and other dyes	1,005	24,827
Chemical products	21,324	9,684
Haberdashery	3,987	13,192
Exports.		
Opium	102,038	194,481
Carpets	51,409	102,575
Tobacco	17,517	101,339
Gums	30,643	83,622
*Kerosene oil	393,811	472,150
Wool	43,325	58,924
Wheat	27,862	3,001
Almonds	21,743	13,552

* This figure is only a rough estimated value.

It should be remembered that a very small percentage of goods imported at Mohammerah is required for consumption in the town and suburbs, and that the importance of Mohammerah lies in the fact that it plays the part of a distributing centre for the principal towns in the interior of Persia. Goods for the interior are transported by river steamers and sailing craft up the Karun as far as Ahwaz. From Ahwaz they are forwarded by caravans to the Bakhtiari country, Ispahan, Teheran, Resht, Hamadan, Sultanabad, and Tabriz. Goods for consumption in the Khuristan district are forwarded from Ahwaz to Shustan by sailing craft and from Shustan to Dizful by caravans.

Imports from Japan.

One of the results of the war has been the placing on the market of considerable quantities of goods bearing Japanese trade marks. Most of the undermentioned goods are now imported into Arabistan from Japan.

Enamelled-ware, hosiery, handkerchiefs, haberdashery, glass and glassware, toys, cotton vests, beer, silk cloth, inferior woollen cloth, jute tissues, cotton thread (for sewing), safety matches, lampware, scent and soap and other toilet requisites.

It should be noted, however, that such goods are not imported direct from Japan, but from India, where they are apparently largely imported and re-exported thence to Persian Gulf ports.

Development of Parcels Post.

One of the notable features of the year under review has been the steadily increasing trade carried on through the parcels post by merchants in central and northern Persia. The gradual growth month by month of trade through this service shows that it may assume large proportions should the present unfavourable conditions in regard to tonnage continue.

Of the total number of 29,860 parcels received in 1916-17, 19,080 were cotton and woollen goods from the United Kingdom, and silk piece goods (of Chinese and Japanese origin) from India. Over 50 per cent. of piece goods parcels were Manchester cotton goods, such as white shirtings, dyed cotton goods, drills, etc.; about 40 per cent. were woollen goods from Bradford; and 10 per cent. contained Chinese, Japanese, and Indian silk goods. A considerable quantity of drugs was also imported, coming chiefly from France; sewing cotton from the United Kingdom and India; and footwear, hosiery, wearing apparel, stores, tobacco, and other light goods.

Merchants in the interior have realised that by means of the parcels post system they can get what goods they want in the shortest possible time, and they do not seem to mind the extra expense involved so long as quickness of despatch and safe arrival of the goods is ensured. The time that would elapse between the placing of orders to be shipped by steamer and the arrival of goods at destination would probably be from six to eight months under present conditions; when the difficulties of obtaining cargo space are very great, and at times insuperable. Goods imported by post are taken delivery of by firms in Mohammerah on behalf of merchants in the interior of Persia, and forwarded to Ahwaz by river boats or sailing craft. At Ahwaz they are made up into packages and forwarded to destination by caravan.

Customs Premises.

Up to March 20, 1917, the Customs House at Mohammerah possessed only one large closed godown, which was quite insufficient to afford cover and protection to the very large quantity of goods imported at the port; and on account of insufficiency of accommodation goods had to be stored in an open yard enclosed by fencing. Considerable damage was thus suffered by goods so stored, especially during the winter rains, and resulted in complaints on the part of the local mercantile community, whose crying need had always been for more godowns. The first signs of a prospective improvement in this direction were noticed about August, 1916, when the Director of Customs entered into a contract with a British engineering firm of Bombay for the erection of two corrugated iron sheds. About 80 tons of iron materials required for this purpose arrived from Bombay about the end of the year, and the erection of two sheds—one large, measuring 174 ft. by 59 ft. by 13 ft., and the other small, measuring 69 ft. by 59 ft. by 13 ft. were completed on May 10, 1917. These two sheds and the old large godown will, it is hoped, afford sufficient accommodation for all cargo and protect it from damage by rains.

Greece is to receive a loan of £8,800,000 from the United States as soon as the Greek Parliament passes the necessary authorising legislation.

ENGINEERING NOTES.

Ploughing by Gas-power.

Progressive landowners and agriculturists in the East, who have adopted modern methods of cultivation by the use of mechanical power, and especially those who depend principally on the employment of their petrol or oil tractors for seasonable field work, find themselves in a serious predicament just now owing to the fact that petrol is quite unobtainable and paraffin oil is very scarce and high in price. The fact that their confrères in the West are not in a better position is small consolation to them; and some have already covered up their tractors in their sheds, and brought out the mules, horses, and bullocks to haul the old implements again. It should, therefore, interest them to know that there is another suitable fuel for their tractors, which, in certain cases, would help them out of their predicament. It is the coal gas, popularly called "town gas," which they can use as a substitute with economy and success. In previous engineering notes we referred to the utilisation of coal gas as a substitute for petrol for motor-cars and other commercial vehicles, and mentioned various devices or attachments that have been invented for that purpose. A great number of motor vehicles have since been fitted with these attachments, and the sight of luxurious cars, heavy wagons, cabs, and all kinds of commercial vehicles with huge gasbags, or containers, on top running about in London and the country is now quite familiar. The latest advance in that direction is the equipment of agricultural tractors with the necessary devices and gas-containers which enable the tractor to be driven by coal-gas. This transformation does not necessarily interfere with the existing petrol or oil equipment. The equipment of an agricultural tractor with a gas container of the best known system has recently given such good results that the Board of Agriculture, it is said, is so interested in this development that it has had moving pictures taken of the tractor engaged in ploughing and other operations.

The Gas-Tractor.

The method of utilising coal gas as fuel for agricultural tractors is by storing the gas in flexible containers, carried on the top of the tractor, as in the case of ordinary motor-cars and other automobile vehicles using gas. This system of storing has the advantage of being the most economical, since it avoids the cost of compressing the gas, which is an appreciable item, as well as the slight loss in calorific efficiency. The flexible container is carried on a tray, supported by wooden uprights bolted to the tractor's frame. Its capacity is 250 cubic feet, and it is said that 500 cubic feet of gas will suffice to plough half an acre of fairly level land. As special conditions are usually made by gas companies for the use of gas for power purposes the cost of ploughing by this means is very low. There is no doubt that the system can be employed to great advantage by agriculturists within reasonable distance of a supply station. The practical radius from the centre of supply over which it is possible to carry on work can only be determined by experience. In the case of the tractor in question, the gas was carried to the field in a portable holder carried on a trailer, and containing sufficient to charge the flexible bag on the vehicle three times, or enough to plough about three-quarters of an acre. To the cost of the gas must be added the expense of the journeys with trailer between the field and the supply station, and this, of course, can be estimated with fair accuracy by the tractor owner, who can easily ascertain the distance over which he can afford to transport the gas to bring it well within the cost of other fuels. In the East the system will be particularly advantageous to landowners and farmers nearer towns where coal gas is produced, and these are numerous in the principal agricultural districts where tractors are used all the year round for various operations.

Engineering Developments.

According to reliable information, agricultural engineering firms in France are making great efforts to extend their production of agricultural machinery and implements, and most of them are enlarging their factories with a view to meeting the increasingly heavy demand which, apparently, is not only from France, but also from other countries, especially from the East. A new company has quite recently been formed under the title of the Société Lyonnaise de Construction de Machines Agricoles, with a capital of 4,000,000 francs. This will be by far the largest agricultural engineering concern in the country. It has been founded by a powerful group, which intends to carry on the manufacture of agricultural requisites on a very large scale. Similar preparations to extend the production of agricultural and other machinery, in response to a great demand from all quarters, are in progress also in other Allied and friendly countries, and British manufacturers should take note of it.

Machinery for Crete.

In previous engineering notes we have pointed out the importance of Crete as a market for all kinds of machinery and implements, and as a promising field for many engineering enterprises in connection with local industries, mines, tramways, railways, etc. Crete is a most fertile island, and her unique position in the Mediterranean offers great advantages from a commercial point of view. The island stands on the high road along which commerce between East and West is carried on, and in a position which places her within from a few hours to two or three days' sail of any market on the Mediterranean Coast, and particularly that of Egypt, which her agricultural products can reach in fresh condition. The island is famous for its olive oil, oranges, lemons, almonds, chestnuts, pomegranates, raisins (a considerable quantity of which is now imported annually into England), sultanas, wines, locust beans, valonea, soap, cheese, etc. In recent years the agricultural population has shown a remarkable desire to increase the use of modern machinery and implements. The British Consul at Canea, the capital of Crete, says, in a recent report, that the question of supplying agricultural implements and machinery for the use of the island is one which is likely to increase in importance in the near future. Already there has been a tendency in that direction, fostered by the Department of Agriculture, and side by side with the primitive methods of agriculture generally prevalent throughout the island, machinery of an up-to-date description is now being used. In Candia and the neighbourhood oil engines are largely in use, and have been imported almost exclusively from the United Kingdom. It would be well, however, for British makers to extend their consideration to Canea and the district, where a similar class of engine is in use for pumping water and for operating corn mills and olive presses. Before the war a German oil engine, which was the first to be introduced, maintained its hold on the market. In small accessories and parts our Teutonic rivals have paid great attention to local requirements, and established a remunerative trade. The implements and machinery, says the Consul, required in Crete are chiefly of the simplest description, such as small ploughs suitable for ploughing on hillsides, other types of light ploughs, with wheels and shafts proportionate to the small native bullocks, mules, and horses, small harrows, drills, mowing and reaping machines, thrashing machines, grain sorters, presses for forage and hay, and automatic windmills with water pumps.

LANCASHIRE COTTON.

Fall in Prices.

(From Our Own Correspondent.)

Manchester, Wednesday.

The marked drop in raw cotton rates has been the outstanding feature of interest in the market this week, and all other matters have been overshadowed by this development. Business in all quarters has been thoroughly demoralised, and the majority of buyers and sellers have decided to mark time until the outlook is clearer. Egyptian cotton prices have been easier in sympathy with the fall in American qualities. The change of sentiment has been chiefly due to the distinctly improved reports relating to the prospects for the crop in the States next season. Of course, the war news has had a depressing effect upon trade generally. So far as supplies are concerned, nothing particularly new has transpired relating to Egyptian cotton. In most counts and qualities Egyptian yarns have been firmly held, but here and there small concessions in price have been obtained where definite business has been offering. Less activity has prevailed in piece goods for Egypt than for some time back. Standard cloths for India and China have been slow of sale. Some producers of light fabrics, such as mull dhooties, have recently obtained relief as a result of the larger turnover for Calcutta. Numerous manufacturers have been quite indifferent as to booking fresh orders. American yarns have been very irregular in price when tested.

COMPANY NOTICES.

THE AGRICULTURAL BANK OF EGYPT.—NOTICE IS HEREBY GIVEN that the FIFTEENTH ORDINARY GENERAL MEETING of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo on Tuesday, the 30th April, 1918, at 4 o'clock p.m., for the purpose, among other things, of:—

Receiving the Directors' Report;
Receiving the Auditors' Report;
Approving the Accounts for the period ended 31st January, 1918;
Declaration of Dividends;
Election of Directors;
Election of Auditors and fixing their remuneration;
And the transaction of the general business of th Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 9th April, 1918), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

F. T. ROWLATT, President.

Cairo, 14th March, 1918

NATIONAL BANK OF EGYPT.

NOTICE IS HEREBY GIVEN that the necessary number of Shares not being represented at the Ordinary General Meeting of the Shareholders held on the 6th April, the MEETING has been ADJOURNED until Thursday, the 25th April, at four o'clock, at the Head Office of the Bank in Cairo. Shareholders desiring to take part in the General Meeting may deposit their Shares in London not later than the 19th April at the London Agency of the National Bank of Egypt, 6 and 7, King William Street, London, E.C.4.

For BUILDING UP your HEALTH take ("The best PICK-ME-UP.")
WILKINSON'S (ESTD. SINCE 1829.)
ESSENCE OR FLUID EXTRACT OF RED JAMAICA
SARSAPARILLA
"We cannot speak too highly of it." Lancet.

"The only preparation for removing what may be called the sequelæ of a mercurial course."—Sir R. Martin.
The late Lord Clyde said:—"I am never without it, for when feeling depressed or out of sorts from anxiety or fatigue, a dose or two animates me."
"It cured me of Torpid Liver after all other remedies failed."—Earl of Aldborough.
N.B.—Indispensable to all who value Health.
A WORLD-WIDE REPUTATION FOR OVER THREE-QUARTERS OF A CENTURY.

COMPANY NOTES & REPORTS

Mysore Gold Mining.

The report of the Mysore Gold Mining Company for the year ended December 31 last states that 307,126 tons of quartz were milled for 160,627 ozs. of bar gold; average 10.4 dwts. 261.299 tons of tailings treated for 26,705 ozs. bar gold; average, 2 dwts.; and 262,156 tons slimes produced 29,965 ozs.; average, 2.3 dwts. Total production, 217,317 ozs. bar gold (equivalent to 198,446 ozs. fine), of a realised value of £842,057. Deducting for royalty, etc., £49,347, and adding interest, etc., £11,022, total to credit of revenue account is £803,731. Expenditure on revenue account £399,436, profit £404,296. The amount brought in, less final dividend for 1916 and remuneration, was £3,678. Of the total of £409,066, expenditure on capital account (£100,137) and other items absorb £326,022, leaving £83,044. Final dividend for 1917 of 2s. 6d. per share, less tax at 5s. in the £, payable April 5, leaves £6,794. Royalty payable to Mysore Government on the final dividend leaves £3,955. Liquid assets appear at £53,309; reserve fund, not included, at £150,000; and materials in stores and in use £141,595. The reduced profit is mainly due to heavily increased costs, higher rate of exchange also appreciably affected working expenses. It is proposed that the first interim dividend in respect of 1918 shall be paid in October next and the balance dividend in April, 1919. Meeting, Cannon Street Hotel, E.C., April 25, 12.30 p.m.

Darjeeling Himalayan Railway.

The report of the Darjeeling Himalayan Railway Company for the half-year ended September 30 last states that capital expenditure amounted to Rs17,880. The balance of net earnings, after providing for Debenture interest, estimated payment due to Government, etc., amounts to Rs2,19,766, which with unclaimed dividends to September 30, 1914, makes Rs2,20,339; Rs2,29,643 was brought forward, making Rs4,49,981. The directors recommend dividends of rupees six and annas eight per share on ordinary shares, and rupees two and annas eight per share on preference shares, carying forward Rs2,24,350.

Darjeeling Himalayan Railway Extensions.

The report of the Darjeeling Himalayan Railway Extensions Company for the half-year ended September 30 last states that capital expenditure amounted to Rs1,51,036. A debenture loan was raised amounting to Rs7,00,000. Both the lines were worked by the D.H. Railway Company on the terms of the contract—namely, at 50 per cent. of the gross earnings of the Extensions. The net earnings of the Extensions, supplemented by the rebate from Government, yields a balance of Rs1,11,585. The directors recommend a dividend of rupees two and annas eight per share, and to carry forward Rs2,210.

Rangoon Para.

The report of the Rangoon Para Rubber Estates for the year ended December 31 last states that as the result of a re-survey the total area of the estate is 3,194.18 acres, planted being 2,267.52 acres, and reserve land 709.11 acres. Of the planted area 2,201.09 acres will be in bearing this year. Thinning out has been continued, the number of trees removed in 1917 being 12,618. There has been a recrudescence of "black thread" disease, which, notwithstanding the energetic measures taken to deal with it, attacked 58,932 trees out of 183,421, necessitating tapping operations being suspended on these for about three months. Output was 362,580 lbs., being 42,580 lbs. in excess of the manager's estimate. His estimate for 1918 is 400,000 lbs. The profit is £13,824, and £184 was brought forward, making a total of £14,008. The directors recommend a dividend of 6½ per cent., leaving to be carried forward, subject to manager's commission and bonuses to staff, £2,286. There is no liability for excess profits duty. Meeting, 5, Whittington Avenue, E.C., 23rd inst., 11.30 a.m.

Dividends, Payments, etc.

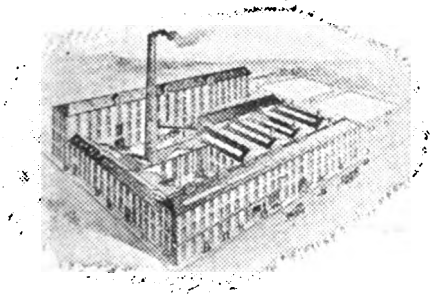
The necessary number of shares not being represented at the ordinary general meeting of the National Bank of Egypt, held on the 6th instant, the meeting has been adjourned until the 25th instant, at 4 o'clock, at the head office in Cairo. Shareholders desiring to take part may deposit their shares in London not later than 19th instant at the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

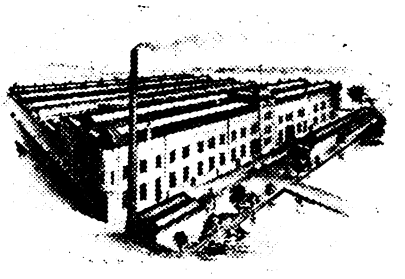
The ordinary general meeting of the Union Fonciere d'Egypte will be held at Alexandria on 15th proximo. Shareholders desiring to attend must deposit their certificates with the Banque Belge pour l'Etranger à Londres.

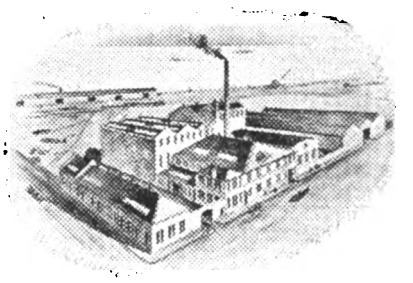
Burma Railways.—Transfer books of the 3 per cent. debenture stock will be closed from the 29th instant to May 14 inclusive.

The Debenture stock transfer books of the British Burmah Petroleum Company, Limited, will be closed from the 18th to the 30th inst., both days inclusive, for the purpose of the preparation of the warrants for the interest payable on May 1.

The directors of the Peninsular and Oriental Steam Navigation Company announce a dividend at the rate of 5 per cent. per annum on the preferred stock (less income-tax), and an interim dividend at the rate of 12 per cent. per annum on the deferred stock of the company (free of income-tax) for the half-year ended March 31 last. Warrants will be posted on May 15.







The Bank of Athens announces that the annual meeting of the bank will be held in Athens on May 8.

INDIAN GOLD STANDARD RESERVE.

The India Office has issued the following statement, showing the form in which the balance of the gold standard reserve was held on March 31:—In India; nil; in England: Cash placed by the Secretary of State for India in Council at short notice, £6,000,499; British and Colonial Government securities (value as on March 31, 1918), £28,452,943; total, £34,453,442.

Cable Address: "Lobs, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** Codes used: A.B.C., 4th & 5th edns. A 1., Lieber, and Bentley's.

Manufacturers of SACKS and BAGS of LINEN, COTTON and JUTE, for all purposes. Also of WATERPROOF CANVAS and TARPAULINS, Specially prepared for tropical climates.

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Street, Wednesday.

Business has continued on the smallest possible scale since our last issue. The tone has remained weak, and here and there, where a few shares have been pressed for sale, the decline in prices has been quite disproportionate to the business done. In ordinary circumstances, there might have been no alteration in prices at all, but at the present moment buyers are adopting a waiting attitude, and shares can only be disposed of if sellers are prepared to make substantial concessions. The military news from the Western Front, the Man-Power Bill, and the coming Budget have all been depressing factors, while Egypt has not been giving any support although all the conditions over there, and all the news received here continue to be most satisfactory. There also, no doubt, buyers are awaiting the course of events.

Egyptian Government stocks have remained unchanged, but, whilst some business has been done in Unifieds round the current price of 86½, there have been no transactions in 3½ per cent. preference, as sellers have been entirely lacking.

In Bank shares, apart from a transaction in Nationals at 17⅜, there was no other business done in this security, and the price closes ¼ lower at 17⅝. Agricultural Banks are also 5-32 easier at 6¼, some trifling transactions having been carried through. Other banking shares are all unaltered.

In the Railway group Delta Lights have declined 1-16 to 6 7-16 on some few shares being thrown on an unwilling market.

In Land shares Aboukirs have dropped 1s. 3d. to 21s. 3d., Behéras ¼ to 13, Delta Lands 6d. to 13s., Foreign Trusts 3d. to 10s., New Egyptians 3d. to 16s. 9d., Sidi Salems 2s. 6d. to 42s. 6d., Union Foncières 1-16 to 2 15-16, and United Egyptian Lands 3d. to 1s. 3d.

In Miscellaneous shares some business has been done in Alexandria Waters round 12, a decline of ⅛, and Sodas have lost 6d. at 38s. 6d., but no business has been done in these. There has also been a decline of 3d. in Khedivial Mails to 37s. 6d.

In Greek securities the market has continued to be a very firm one, but no business has been carried through as there have been no sellers.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to January 31, 1918 (New Style: January 14 to February 13, 1918) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Jan., 1918		4,568,184	4,159,000
Do. do. do 1917		2,173,884	1.455,000
Estimated Receipts for 1 month (Law of Control)		2,408,333	891,666
Actual do. do., 1917		—	—
Do. do. do., 1916		—	—
Difference between estimated and actual receipts for 1 month	1918	+ 2,159,850	+ 3,267,333
	1917	+ 765,551	+ 553,333

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

There has been little movement on two of the Eastern fronts during the week. In Mesopotamia heavy rains have fallen, which appear to have stopped all operations, at least for the moment. In Palestine no particular activity has been reported, and the German official claim in the Reichstag to have "thrown the British back across the Jordan" seemingly refers to the British raid on the Hejaz Railway earlier in the month. It is amusing to notice that the Germans are imitating the Turks in trumpeting forth this feat, such as it was, as a victory. They may yet confer the same title on the latest raid, reported this week, by the Arabs on the same line, which must have been seriously damaged. This brilliant little feat of arms by our Allies yielded three hundred prisoners, and has no doubt rendered the Turkish position still more insecure.

Curiously enough, the greatest fighting activity in the East has been reported from Salonika, where a spirited offensive has been in progress. From the brief *communiqués*—the armies there seem destitute of war correspondents—it is evident that the Serbs and other Allied forces attacked the Bulgars with some success, and attained their objective. It remains to be seen whether this proves an isolated episode or the prelude of greater events.

The position of the peace negotiations with Roumania remains obscure. One report has it that Bessarabia is to be divided between the Ukraine and Roumania. Another suggests that the amount of the indemnity demanded after the preliminary peace details were settled is still undecided; but there appears no longer to be any doubt that an indemnity is to be insisted on, and, indeed, the German papers are now with one accord all talking of large indemnities from all the Allies. A third report has it that there is disagreement between the Central Powers not only as to the division of the spoils, which is natural, but as to the position of King Ferdinand.

So far as the spoils go, it is clear that Hungary and Bulgaria get the territory, while Germany secures the economic control—much to Bulgaria's disgust, which now realises the exact meaning of the curious phrase regarding the control of Constanza, and the reason for the recent activities of the Deutsche Bank in Bucharest. Germany, too, has apparently secured control of the produce of Roumania in food and petrol—the surplus is to be exported after a German-controlled commission has decided Roumania's own requirements, which will not be very generously calculated—and this point is of very considerable importance, in view of the shortage in the Central Empires and the failure of the Ukraine to relieve their necessities. There is no doubt that Roumania is to be drastically plundered, but the confession of the Burgomaster of Vienna, that Austria can only turn to Germany to relieve the food situation, shows that Germany, as was to be expected, has constituted herself plunderer-in-chief.

On the question of King Ferdinand, a curious statement has been published by the Vienna *Reichspost*, to the effect that the immediate reason for Count Czernin's resignation, or rather dismissal—the Austrian journal uses the two words alternatively—was not the Emperor's notorious letter concerning Alsace-Lorraine, as had hitherto been not unnaturally presumed, but differences of opinion regarding the negotiations with Roumania. "Count Czernin did not want to interfere with the dynastic question, and even pleaded that King Ferdinand should be left on the throne. That in this respect the Minister did not act in accord with the Crown will become evident by events," says the *Reichspost*, "in the immediate future."

We cannot pretend, of course, to say how far this report is accurate. The Austrian Emperor has got himself into a desperate tangle, and after his egregious subterfuges and contradictions, will seize any opportunity of extricating himself. This may be one more—is it the fifth or the sixth?—attempt to get the bucket of Imperial reputation out of the well of truth into which it inadvertently dropped. But except on this ground one cannot imagine the *Reichspost* being allowed to publish a report which could be easily contradicted—and up to the present no contradiction has been issued. On the other hand, if the report is untrue, it admits itself that the real facts will shortly be forthcoming.

It does not appear evident why the Emperor Charles insists on King Ferdinand's abdication, but the past sixteen months have sufficiently demonstrated that the latest of the Hapsburgs possesses a very curious individuality, which has not yet been completely analysed by the Chancelleries. It must be remembered that the Emperor offered the King a safe conduct through Austria to Switzerland; but, as in the case of a similar offer to the College of Cardinals electing a Pope, it was not stated that the safe conduct would be operative for a return journey. This may be the origin of the curious reports of King Ferdinand's abdication as a *fait*

Digitized by Google

accompli which were spread through the whole European Press some weeks ago; but the part played by Berlin in these obscure matters does not yet appear. The rumours of Herr von Kühlmann's impending resignation in favour of the stiff Helfferich may be connected with this disagreement.

In this connection the remarks of Dr. Stresemann, of the German Reichstag, may be worth notice. After speaking of the objections raised to von Kühlmann's policy (which, he adds significantly, were not of an economic but of a totally different character, thus pointing to the dynastic problem), he goes on to say that during the Bucharest deliberations "the question of the balance of power in the Balkans and the neutralisation of the divergent interests of the four Central Powers was also discussed." This is highly significant. It admits, what we already knew, that the Central Powers' theory of Balkan reconstruction is planned entirely in their own interests; it simply excludes the idea that at any future time the Entente can have any interest in the subject, and it is quite evident that Russia, who has disembarrassed herself of a Balkan policy altogether, has also not been consulted.

These things are natural, knowing what we do of the temper of Berlin. But Dr. Stresemann's remarks indicate that there have already been differences of opinion as to this new policy. The Middle Europe scheme foresaw no difficulties as to the balance of power in the Balkans, and the divergent interests of Austria and Germany in the Near East, which have been patent in Vienna ever since Germany embarked on her Balkan policy, appear to have become marked again; while undoubtedly Bulgaria's interests, now that she has for the time being secured some at least of the territory she desired, are to have as little German control of her movements as possible. Bulgaria would prefer the hegemony of the Balkans centralised at Sofia, with no balance of power at all. These differences of opinion will be extraordinarily difficult to reconcile, if indeed reconciliation is possible.

The apparently inspired intimations in Germany that Dr. Helfferich is again to hold high office will be of interest to Roumania and Serbia. He is the nominee of the Pan-Germans, who are now triumphant all along the line, and it was he who in 1915 looked forward to the prospect of the Allies "dragging through the centuries the chain of the indemnities" which they were to pay victorious Germany. Dr. Helfferich might succeed in extorting more from Roumania, but even he would find it difficult to obtain from ruined Serbia that which is not there.

Ex-King Constantine seems at last to have become perturbed at the accumulating proofs of his treachery. On his latest exploits he is indeed silent, but he has been stung by the fresh revelations of the Görlitz affair and the surrender of the Greek army corps. The King has inserted a note in the *Neue Zürcher Zeitung* protesting against the accusations of M. Politis, the Greek Minister of Foreign Affairs, but stating that the exile "will not abandon the reserve imposed upon him by circumstances." This, of course, is no answer at all, or rather it is the answer of the prisoner in the dock who says he will reserve his defence when the fact is he has no defence whatever. If the King had had anything definite to say, no doubt he would have said it.

It is stated that on the return of the demobilised Roumanian soldiers from Moldavia there were great patriotic demonstrations in Bucharest, and a good many inflammatory speeches were made. All these were repressed by the German authorities, and in future all gatherings of demobilised men and tokens of sympathy are to be suppressed, while the demobilised are compelled to register themselves at a special office. It is said that these measures, which signify a continuance of German control after the war is over, have excited the indignation even of the few Roumanian Germanophils who were left. But what else did they expect? It is a piece of typical German policy.

The Turkish campaign in the Caucasus seems to have slowed down, the latest *communiqué* only reporting the capture of Ozurgeti, twenty-five miles north-east of Batum. The Ottoman reports in this region are far more laconic than those they issued from the Palestine front, possibly because there is no counter-*communiqué* from the other side; there is no hint of any opposition, although it is highly unlikely that the Turks are being welcomed everywhere as old friends. The Germans, on the other hand, operating in concert with the Turkish advance, although along a different route, are still pushing forward through the Crimea; the Russian Government has protested that the region of the Don Cossacks and the Crimea are the territory of the Petrograd Government and not of the Ukraine, and that therefore the German activities in the Ukraine must not be extended into those territories. Germany, with her eye on Persia and Afghanistan, will take about as much notice of this protest as the guillotine takes of the bone it severs.

It is satisfactory news that Turkey has now ratified the agreement for the exchange of prisoners between themselves and us. Full details are not yet available, but it was stated some time ago in the House of Commons that the agreement was more satisfactory than had been expected; a fact which may not be unconnected with the consideration that, whereas the Turks only hold ten thousand British prisoners, we hold fifty thousand of theirs. On the other hand, it is understood, all civilians over military age are to be repatriated by both sides, without limit, and a man for man exchange of civilians of military age. So far as the military are concerned, *The Times* announced some months ago that the agreement provided for the immediate preliminary exchange of 1,000 invalid British and Indian combatants against 1,500 Turks—an official standard of value into which it would not be too courteous to our enemies to inquire—and subsequent exchanges on the basis of a low schedule of disability similar to that existing in regard to internment in Switzerland.

The Egyptian Budget for 1918 is very satisfactory, and gives evidence of the well-maintained prosperity of the country, largely due, of course, to two factors—the increased price of cotton and the profitable presence of British troops. The latter can hardly be reckoned a permanent factor, but it is improbable that the high price of cotton will come down for many years, in view of the fact that the demand for cotton goods is everywhere increasing, and particularly that the United States now uses a far larger proportion of its own crop at home than ever before. This activity in America is not likely to cease, but is more likely to extend beyond its present development; for that reason, therefore, the British cotton manufacturers will have in future to rely more and more largely on cotton produced within the Empire, in which Egypt stands well to the fore as a cotton-growing country.

The fight for cotton is certain to be a severe one after the war. Not only are cotton goods now manufactured in India, but China is also building large cotton factories. Local circumstances and the price of silver happen to favour these factories being built at a cheap rate, and Chinese labour is also notoriously cheap; it is probable, therefore, that Asiatic production of the manufactured article will compete seriously with Lancashire in the future. With that factor to bear in mind at the selling end of the scale, and the new difficulty of obtaining the raw material from the United States at the buying end, any country which can supply Lancashire with cotton in increasing quantities and at a low price is certain to find a steady demand—a fact which will not be forgotten in calculating the economic future of Egypt.

Indian politicians are not likely, we fear, to be entirely satisfied with the official explanation of the Cabinet's refusal to allow the Home Rule delegates to visit this country. It is certainly unpleasant when you offer yourself for a visit to be told so bluntly that you

Digitized by Google

are not wanted, and we can scarcely expect would-be missionaries to the British Demos to be content with having had an opportunity of converting Mr. Montagu. For ourselves, we still think a visit to this country would probably have done the delegates some good, a contingency to which the official explanation does not allude; but war is war, and we hope the politicians will take the refusal in good part, and will not desist from the endeavour to learn something about those parts of the Empire which for the present they are unable to visit in person.

They might, for instance, derive some benefit from studying the scheme for the introduction of village councils which our Cairo Correspondent described last week. It is, of course, too early to hazard a confident opinion as to the prospects of the scheme in question, but it presents certain features which are of particular interest to India. In Egypt the villages are to ask for the councils; in India, when councils are created at all, they are too often crammed down the villagers' throats. In Egypt, voters must bind themselves to pay the village taxes; in India it is commonly considered that no power to tax can be safely given. Thus any Egyptian councils which come into existence are likely to be genuine affairs, whereas the tendency in India is to generate institutions which under the guise of self-government are, in their actual working, the creatures of the local bureaucracy. Judged as a school of politics, the Egyptian scheme seems worthy of careful consideration.

To the advanced politician, however, who regards village councils merely as playthings, we may commend a study of the report of the Irish Convention, the ground covered by which will be found to be by no means unfamiliar. Ireland is nearly as much interested as India in the question of Civil Service appointments, and the recommendations on this point will be found suggestive, while Indians who are enamoured of the existing Legislative Councils will be glad to see the prominence given to the representation of "interests" rather than localities. The proposed Irish Senate would contain representatives of learning, religion, commerce, the landed interest, and minorities of various sorts, and, if it comes into existence, will closely resemble an ordinary Indian Council, though it will include one element—that of Labour—which has still to make its voice heard in India. It almost looks indeed as if India had been consciously selected as a model.

The most important lesson to be drawn from the Convention's report is perhaps less obvious. India has of late been making strenuous efforts to close deep cleavages of opinion by honeyed words, and in Ireland the same attempt has definitely failed. Irishmen, when they choose, can talk as sweetly as Indians, but the result of three months of effort is that the cleavage stands out as distinctly as before; it is a hard and an ugly fact, which we hope will one day cease to exist, but while it is there it must be recognised as an essential feature of the problem to be solved. The cleavages in India are not less deep, and it is folly to pretend that they can be ignored. We hope that they, too, will eventually disappear, but meanwhile there they are, and the success of the new constitution will depend very largely on its frank recognition of this fundamental fact.

Mr. Chamberlain's admission to the War Cabinet will be welcomed by the large body of Indian opinion which was quick to recognise his ability as an administrator during his term of office in Whitehall. Judged by the high standard which prevails in India and some other outlying portions of the Empire, the Cabinet has hitherto been by no means strong on the administrative side, and, with Lord Milner now engrossed in the duties of the War Office, there will be no lack of the work which Mr. Chamberlain can do so well; he will not win the war "off his own bat," but he will stand for that business-like concentration on essentials, without which the war is scarcely likely to be won.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 11.

The Duke of Connaught.

The Duke of Connaught returned from the Sudan on the 3rd inst., and has since had an extremely busy time. Every day he has visited some hospital or other military centre in order to present medals and decorations; and, in addition, there have been several official and social functions which he has had to attend. On the evening of his arrival from Khartoum the High Commissioner and Lady Wingate gave a dinner party at the Residency, when his Royal Highness invested the Sultan of Lahej with the insignia of a Knight Commander of the Indian Empire and H.E. Adly Yeghen Pasha with that of a Knight Commander of St. Michael and St. George. He also handed the insignia of the British Empire to the members of the Egyptian and Sudan Civil Services who were recently admitted to that Order. On Monday a garden party was given at the Residency. On this occasion H.H. the Sultan was present for a short time, and amongst the guests invited were the Sultania Princes, the Sultan of Lahej, the Ministers, Lady Allenby, and the Diplomatic Corps. The British community turned up in full force, and the gardens presented a very picturesque appearance. Prior to the arrival of the other guests, the Duke of Connaught held an investiture for the officers who had recently been appointed to or promoted in the Orders of the Bath and St. Michael and St. George; he also bestowed medals.

On the following evening the Sultan gave a banquet at Abdin Palace in honour of his Royal Highness, the guests including the Princes of the Sultania family, the High Commissioner and Lady Wingate, the Ministers, the foreign representatives, the Advisers and Under-Secretaries, and the senior Army and Navy officers, as well as some of the leading British residents and their wives. On Wednesday afternoon an investiture was held on the racecourse at Gezira, where his Royal Highness afterwards reviewed the Cairo garrison. This function was a very interesting one, and was watched by a large number of residents, who were accommodated on the grand stand. In the evening another dinner was given at the Residency, the guests on this occasion including H.H. Prince Kamel ed-Din, Sir Ismail Sirri Pasha, Yussef Wahba Pasha, Ministers of Public Works and Finance, Sir William and Lady Brunyate, and some of the leading Government officials. The Duke has now gone to Alexandria, where he is carrying out similar presentations of medals and decorations. It is understood that before leaving Egypt he will proceed to the Palestine front.

Vegetable Production in Egypt.

This week a vegetable show was held in Cairo under the auspices of the Egyptian Horticultural Society. The show, which was opened by H.E. Ahmed Hilmy Pasha, Minister of Agriculture, was very well attended, a large number of the visitors being Egyptians. The exhibits covered a wide range, and included the ordinary vegetables in daily use, as well as such better-class varieties as asparagus, etc. On the whole, they were very good, and, although some of the exhibits did not quite come up to standard, nevertheless, in view of the lack of attention accorded in the past by the Egyptians to vegetable production, they were satisfactory as showing that interest in the question is awakening. There is indeed every hope now that in the near future vegetable production will be carried out on an extensive scale. There is plenty of room for it, and the creation of vegetable gardens will certainly not interfere with the cultivation of the staple of production of the country. The whole question is receiving the very earnest attention of the Egyptian Horticultural Society, the committee of which is making great efforts to arouse public interest and encourage production, not only in Cairo, but also in the provinces through the Provincial Councils.

The show included a small exhibit of locally made cheeses, which were excellent both in appearance and taste, and certainly approached very closely to the standard of European cheeses. Dairy farming has been somewhat neglected in Egypt, and the country has to a very

Digitized by Google

great extent been forced to depend on importation. The war has, however, very much restricted the foreign source of supply, and the agricultural authorities have taken due advantage of this opportunity to stimulate local enterprise. Judging by the small exhibit referred to above, a good future lies ahead of dairymen in this country, if they will only take the trouble to study the public taste, and also if only local consumers will encourage the effort which is now being made.

Civilian Employment with the British Forces.

Last summer I reported that a special bureau had been formed for the selection of civilians for work with the British Forces in Egypt, with a view to liberating some of the great number of able-bodied soldiers who had been up to then occupied with office and other non-active work. The bureau was placed under the direction of Mr. Sidney H. Wells, Director-General of the Department of Technical Education, and offices were opened in Alexandria and Cairo at the end of August. Considerable progress has been made with the project, and since October 11, the day on which the first candidate was approved, over 5,000 civilians have been passed into the employment of the British Forces quartered or based on Egypt. This figure does not include infirmary attendants, of whom not far short of 1,000 have been selected and appointed.

Thus the immediate needs of the military forces are being provided for, and considerable numbers of soldiers have been liberated for more useful employment nearer the front line. Egypt does not, of course, possess an unlimited supply of men and women qualified for civil employment, and there is every reason to fear that the demand will soon outstrip the supply. As, however, there exists a large reserve of untrained workers who, if properly prepared, could become of use in this connection, arrangements have very wisely been made to train up suitable men in adequate numbers to meet the demands, which are certain to be very great in the near future. Three schools have already been created, and are in full working order. One provides for the training of motor drivers, one for clerks, whilst the third is for servants for officers and messes. In addition, an increasingly large number of ex-apprentices of the trades schools are being taken over by the mechanical services of the Army.

The work entailed in selecting and appointing the candidates is very considerable; for not only has the usual routine connected with the registration and final allotment to be carried out, but credentials have to be carefully scrutinised, political antecedents have to be looked into, and each candidate has to be passed as medically fit. However, Mr. Wells and his staff, with voluntary assistance from outside, are managing to cope with their huge task; and the result must be regarded as eminently satisfactory, both from the point of view of the man-power scheme and of the young Egyptians themselves, who, in addition to finding remunerative employment, are being submitted to a discipline and an experience of British methods which, both materially and morally, cannot fail to be for their eventual good.

ST. GEORGE'S COLLEGE, JERUSALEM.

(From a Correspondent.)

Cairo, March 1.

As an educational centre, Jerusalem used to rank next to Beyrout among the towns of Syria and Palestine. Prior to the war there was a large number of primary and secondary schools, all of which, with the exception of the Government and German schools and a few Jewish ones, were closed and ransacked during the upheaval. To British readers of The Near East, especially those who had occasion to know the value of the great work done in Palestine by St. George's College under the efficient and sympathetic direction of the late Bishop Blyth, it must be highly gratifying to learn that this institution is soon to open its doors once more under the direction of Mr. Reynolds, who was sent from Egypt by Bishop MacInnes, the Bishop in Jerusalem.

This college admitted in the past both boarders and non-resident pupils, but it will now, temporarily, receive students only of the latter category. It is hoped, however, that as Bishop MacInnes has now gone to Jerusalem he will, with his great energy and far-reaching influence, soon triumph over present difficulties, and provide means for receiving also boarders.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, March 30, 1918.

The Ex King's Spies.

The great German offensive is naturally being followed with very keen interest here, and fresh rumours crop up almost hourly, spread either by political factions or with a view to influencing the Stock Exchange. Considerable attention has, however, been devoted to the case of the two Greek officers who came to Athens from Goerlitz on a mission of espionage, and in the Chamber on Monday M. Venizelos made a statement regarding them. Their names are Jean Hadjopoulo and Jean Calamaras, and their story is as follows:—

Last December the ex-King's aide-de-camp Papparigopoulos arrived at Goerlitz and convened a meeting of all the Greek officers there. He told them that the ex-King, who had been obliged by the Entente to leave his throne provisionally, wanted to know the feelings of the officers at Goerlitz, and whether they were disposed to give him their support. Many declared themselves in favour of Constantine, but about seventy were not so demonstrative, and were then put under different treatment. Subsequently Papparigopoulos inquired whether Calamaras and Hadjopoulo would undertake a confidential mission, and they agreed to do so. Later they were taken to Berlin, where Papparigopoulos told Hadjopoulo that answers were required to the following questions:—(1) What is the feeling of the people towards the ex-King and Venizelos? (2) What is the importance of the Greek army, and to what extent is it Venizelist? (3) What is the strength of the Allies on the Macedonian front? (4) What is the number of the officers in the Army of National Defence? (5) Where are the Allied troops stationed? (6) What is the condition of communications, especially of railways? (7) To what extent are the Greek coasts surveyed by the Allies?

Arrangements were then made for the two officers' journey, funds were supplied, and in due course they found themselves on a submarine at Pola, which eventually landed them at Kiparissia, and thence they found their way to Athens.

The story of both officers is practically identical, with the exception that Calamaras was given four sheets of paper on which was supposed to be invisible writing. He was instructed to give these sheets of paper with his own hands to King Alexander, and the names of several men were given him for the purpose of getting into communication with the King. These mysterious sheets, it is said, have not been found, neither have they been delivered to the King. The men were apparently discovered in Athens quite by accident. A suspicious conversation in the street was overheard, and, being traced and watched, they were subsequently arrested, as were two other men, named Counoupis and Galabocas, and the sister of Calamaras, Antigone Anastassopoulo.

The Court Martial.

The court-martial commenced its sittings on Thursday, and the evidence produced on that day led to the arrest of General Pallis, formerly head of the ex-King's military household, who had been approached with a view to getting him to act as a medium for delivering the letter to King Alexander. In his speech for the prosecution the following day the Public Prosecutor commented severely on the ignoble part played by Constantine in this affair, and said that anybody who in his weakness had been indulgent towards him could after this no longer doubt his treachery. The Allies, he suggested, should modify their attitude towards him, and Switzerland, whose neutrality he had violated, should no longer grant him hospitality.

The verdict was pronounced at a late hour yesterday. The two officers and Counoupis, their accomplice, were sentenced to death; the woman was sentenced to penal servitude for life, and Galabocas, the other accomplice, to fifteen years' penal servitude.

Miscellaneous News.

On Wednesday a strike of the electricians at the electric power station deprived Athens and the Piræus of electricity, stopping the Piræus Railway runnings and the tramway services. Towards evening it was expected that the capital would be in darkness that night, but just as candles and other means of lighting were being sought for and brought into use an outburst of light indicated that the strike was at an end.

Spring is late in making its appearance this year: snow has again fallen in the neighbourhood, and cold weather continues. The continuous rains should not only allay the anxiety of a shortage of water this summer, but will doubtless have an excellent effect on the crops.

BAGHDAD: THEN AND NOW.

(From Our Own Correspondent.)

Baghdad, February 17.

The Coming of Law and Order.

Since the advent of the British, Baghdad has become a very different place from what it was under the Turkish regime. On the outbreak of war the condition of the town, bad enough at the time, became infinitely worse; Turkish levies, both in money and men, became heavier and heavier. The inhabitants feared to leave their houses even in daylight, and commerce consequently languished until, shortly before the British occupation, the bazaars were closed and deserted.

The situation, therefore, which the late General Maude had to deal with was a difficult one, and it speaks well for the ability and energy of those concerned with the administration of the district that one short month after the occupation normal conditions were restored; the hitherto dead city came to life, the bazaars were re-opened and resounded with the cries of buyers and sellers, and the streets were thronged with contented and prosperous citizens. Law Courts, schools, and post offices were re-started under efficient management, and a civil police force was formed. The schools, under a local board of education, were much more sought after, and the attendance was larger in all grades than it had ever been before.

About six months before they evacuated it the Turkish administration, then under Khalil Pasha, decided to drive a wide road through Baghdad from north to south, with turnings which branched at right angles from it to the river. This project, which was completed very shortly before they left the town, and which has proved of great use to their successors, was carried out by the Turks with their usual high-handedness and lack of justice. The road, now known as New Street, was constructed without regard to rights or property; the owners of the houses which were demolished to make way for the road all lost heavily, and in some cases were entirely ruined.

Turkish Methods—and British.

The Turks, moreover, neglected the many old and historical buildings and monuments of the town, whereas we have executed such temporary repairs as will preserve them until they can be permanently restored. No large building operations can be undertaken at present, owing to the abnormally high cost of labour and materials. The sanitation of the city generally, and of the myriad narrow Eastern streets in particular, has improved beyond recognition, and the first to admit this beneficial change are the inhabitants themselves. The roads are also kept in repair, parties of the road-menders patrolling and mending them daily. This constant work of repair is very necessary owing to the absence of steam rollers and of an adequate supply of road metal.

Mesopotamia has not escaped the universal rise of prices, but there is plenty of well-paid employment for everyone; and although all imported goods are high-priced, and naturally hard to get, the local merchant manages to obtain a fair stock; and this branch of business is quite brisk. Since Mosul and Persia are at present closed as far as trade intercourse with Baghdad is concerned, the town cannot be as well supplied as it is in peace time, but the Expeditionary Force has brought a lot of money into the country, and there is a good demand for the available merchandise. This fact tends to counterbalance the rise in prices, and, as far as war conditions allow, life has resumed its normal course.

Relations with the Baghdadis.

Relations between the inhabitants of Baghdad and the occupying force are most cordial, in spite of the fact that the former have been somewhat inconvenienced by the occupation. Before leaving the Turks blew up and burned much valuable property, including the historical Bab-el-Tilism (Tilism Gate), which had been used as an ammunition magazine, and which was blown up at seven o'clock on the evening before they evacuated the town. This gate bore a beautiful inscription of the Khalif Nasir, dated A.H. 618 (A.D. 1221). It was a splendid octagonal tower, but the door had been bricked up ever since the time of Sultan Murad the Fourth, the Turkish conqueror who rode through it in triumph in the year 1638. Round the top of this closed gateway ran a remarkable decoration, consisting of a pair of dragons with the writhing bodies of serpents. They confronted one another with open jaws above the summit of the pointed arch, and between them sat, cross-legged, a small figure with a hand outstretched into each gaping mouth. Many people lost heavily through the destruction caused by the evacuating force, and though few have lost financially by the occupation, some inconvenience has unavoidably been caused to householders by the fact that a good many houses have had to be hired as billets and Government offices, owing to the impossibility—already referred to—of erecting permanent buildings. All billeting, however, has been done with as much regard to the wishes of the inhabitants as possible.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, The Near East, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"The Welfare of Egypt," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"Turkey, a Past and a Future," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"Germany, Turkey, and Armenia." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"Loyal India," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"The Clean-Fighting Turk." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"Horrors of Aleppo," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"Martyred Armenia." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedouin, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"Turkish Prisoners in Egypt." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

TWO BOLSHEVIST CRIMES.

Presiding at a lecture on Russian Armenia, given on April 18 at King's College, Lord Bryce said that the Bolshevist Government had committed two acts which excited our regret and condemnation. They abandoned the front toward Turkey, and took no steps to secure that the Armenians and Georgians should be in a position to defend themselves against the brutal Turks. The other offence of the Bolshevists was to make a treaty with Germany by which they surrendered territory which was taken from Turkey in the war of 1877, in absolute contradiction of the principle of nationality which the Bolshevists professed and of their claim of the right of peoples to determine their government. The Georgians and Armenians were a valiant people; there were no better fighters in the world.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

SYRIA AND THE WAR.

By K. Jebara.

Since this terrible war broke out Syria has attained some prominence in the political world, and it is surprising that most people in England know so little about that ancient country and its people.

The Syrian coast stretches from Arish in the south to the Bay of Alexandretta in the north, about 350 miles in length; inland the country extends between 150 and 350 miles from the sea to Arabia and the Euphrates. Nature has endowed it bountifully, with a healthy climate, a copious rainfall in the season, and a fertile soil. The Lebanon, with a little attention to modern sanitation, might be made a health resort for East and West. Mr. Asquith was quite right when he said that the fairest land on earth was governed by the worst government on earth. It is difficult to give a correct estimate of the population, but it is computed at about 3,000,000. The majority is of Arab origin, but there is a considerable mixture of races, mostly on the coast, owing to the successive invasions and occupations of the Assyrian country by Persians, Greeks, Romans, Crusaders and others. Under any government but that of the Turks, which blighted the resources of all Western Asia, its population will in all probability increase threefold or fourfold in a century. We learn from authentic history that between 20 and 30 million people once inhabited this productive strip of land between the ocean and the desert. Every spot was cultivated; much that is now desert was once a veritable garden, producing all kinds of grain, fruit and other necessaries of civilised life.

In religion the largest proportion of the population is Mohammedan, of all sects, including Druses and Nosaries; but there are about three-quarters of a million Christians and about 150,000 Jews. Ever since the Turks came into possession of the country, four centuries ago, they pursued the policy of setting one sect against the other and of planting the seeds of hatred and bigotry in the hearts of the people. This resulted, as they foresaw and desired, in internecine strife and periodical massacres, in which the Christians suffered most.

The last organised massacre due to official instigation by the Turks took place in 1860, when about 40,000 Christians were put to the sword. Europe was then up in arms, and, thanks to the French Government, an armed expedition in agreement with the other Powers was sent to put the country in order. As one result autonomous government was granted to Mount Lebanon, where the great majority of the people is Christian. Since that period various missions, both educational and religious, from Western Europe and America have embarked upon benevolent work of one kind and another for the country; and thanks to the institutions established by them and the keen competition that sprang up between them, the inhabitants, first the Christian and then the Mohammedan, have been taught the value of education. They derived immeasurable benefits from the great institutions established at Beyrout, two of which, the American and French Colleges, are on a level with the Universities of Europe and America. These and other colleges have turned out into the world thousands of able men who have occupied prominent positions in politics, science, literature and trade. Some of them have helped the British Occupation in Egypt, as the late Lord Cromer testified in his books; and others have made their mark in the United States, South America—in fact, wherever they go.

This spread of education served to open the eyes of the people to the misgovernment of the Turk, and emigration on a large scale followed very quickly. It is computed that more than half-a-million Syrians left the country during the last thirty years; there are more than 10,000 in the United States, about 70,000 in each of the Republics of Argentina and Brazil, a large number in Australia and in Canada—in fact, in all parts of the world.

Long before the war started, even the Mohammedan population—especially the educated class—realized that there could be no progress for the country under the Turkish rule, and that the policy of the Young Turks was to Turkify all those who are under their rule, and to kill the new national spirit. They, therefore, as well as the Christians, began to agitate for some kind of home rule and autonomy. An appeal was made to the French Government, through their council in Beyrout, to intervene on their behalf with the authorities in Constantinople to grant them their request. This appeal was signed by about eighty men, representing the best, the most influential and the educated elements. Unfortunately, when the war broke out the Turkish Secret Police obtained access to this document; and, though absolutely harmless, it cost the signatories their lives.

Knowing well that the sympathy of the population, more especially of the Christian portion, is entirely on the side of the Allies, and as there was no one to protect them, the Turks wreaked their vengeance on the helpless subjects of the Empire. Time and space forbid going into details of the horrors perpetrated upon these Syrians—suffice it to say that in some districts, especially in Mount Lebanon, more than half of the population was done to death, mostly by systematic starvation, the Turks taking the food from them and sending it to their taskmaster, the German. This cruelty, visited upon defenceless people, has naturally stirred their compatriots abroad very deeply, and it is pleasing to record that the Syrians resident abroad have from the first been volunteering for service against the common foe. At first this volunteering was done quietly and in small numbers; but now, the Allies having signified their sanction through the French representative in Brazil and Argentine, the Syrian community there, also those in Egypt, Europe and America have formed themselves into associations, raised large funds to help a voluntary* movement, and called upon every one who can take up arms to proceed and fight on the side of right and justice, to help in liberating his country from the yoke of the Turks. We hope the day of deliverance is not far distant when Syria will once more take its wonted place amongst the civilised nations of the world.

THE PALESTINE CAMPAIGN.

The recent news from Palestine, though somewhat scanty, is very significant.

During the second week of April there was heavy fighting among the foot-hills of Samaria bordering upon the plain of Sharon. The Turks appear to have had their forces strengthened by the arrival of several battalions of Germans and by Turks from Mesopotamia. Clearly the Germans are beginning to feel uneasy at the way things have been going. Desertions among the Turkish troops have been increasingly frequent, and their long series of defeats have been telling upon their moral. The satisfactory thing is that, in spite of the stiffened resistance and the improved quality of the enemy's forces, progress—slow but sure—has been made. The fortified posts El Kefr, Rafat (with the adjoining Min Arara), and Berukin, all to the north of the deep and stony Wady Ballût, have been captured. It is a most difficult country, especially with respect to transport, but advances must be maintained in line. Attacks have also been made on our advanced posts astride the Nablus road.

On our extreme eastern flank, after the retirement of our large raiding party from Moab and Es Salt, the Turks collected considerable forces at Shunet Nimrin, at the entrance to the mountain pass to Es Salt, and also on the adjoining hill of El Haud. Apparently they believed that our withdrawal was a disorganised retreat, and that all they had to do was to follow up their "success" by driving us over the Jordan.

On the early morning of the 11th inst. they began by a violent bombardment across the river upon our advanced line on the Jericho-Beisan Road—some 9 miles north of Jericho—during which the Camel Corps came in for a considerable share of hundreds of shells rapidly delivered. This, however, was a diversion, and was met by heavy artillery response. The main attack was made against the Australian Light Horse, who had entrenched themselves behind wire entanglements to the eastern side of the Ghoraniyeh bridgehead. The attack was of a determined description, and was pressed with vigour the whole day long. The Australians, supported by our artillery on the western side of the Jordan, offered a magnificent resistance, and with comparatively little loss inflicted heavy casualties upon the Turks, many hundreds having been killed. The eighty-three of the enemy captured alone outnumbered our total losses.

Of course, we must be quite prepared to find the Turks circulating the news of this engagement as a brilliant success to *their* arms!

The Arab forces in the South meanwhile have been continuing to consolidate their position, and now Maan, on the Hedjaz Railway, is added to their captures. Further south their successes have been even more considerable.

E. W. G. M.

The India Office issued the following on Tuesday:—

"The units of the Dera Ghazi Khan column of the force employed in punitive measures against the Marris are about to disperse to their stations.

"The Marri Nawab and several chiefs of important sections have come in, and the whole of the Khotran tribe have surrendered unconditionally."

* I heard recently 400 volunteers have gone from Brazil.—K. J.

NEAR EAST BOOKSHELF.

THE JEWISH CHILD.*

This handsome volume of some 450 pages, written by a Jewish medical man of distinction, brings before the public, in an agreeable and often amusing form, a mass of facts concerning the folklore, biology and sociology of the Jewish people. It may in truth be called, as Sir James Crichton-Browne remarks in his introduction, a medley, but it is one at once "instructive and entertaining," especially to those —an increasing number—who delight in those traditions which make up the science of folklore.

Many of these ancient teachings contain gems of truth, others are purely mystical or speculative. The author will not carry many with him in his attempt to harmonise these ideas with modern scientific views, but the fact remains that the Jewish people under the spell of this lore has managed—often against the heaviest of drawbacks from their environment—to attain an infant mortality lower than their Christian neighbours, and an influence, too, out of all proportion to their numbers. Much of this doubtless is due to that profound interest, which seems instinctive in the race, in everything connected with marriage and the begetting and nurture of children. It has been their ideal to produce and perpetuate "healthy and beautiful men and women." The Jewish mother is bidden to suckle her child, and as a whole she is more careful than those around her in its infant welfare. The Jewish father's highest duty is his son's education, and, according to these precepts, he is to send him to school at six years of age. In earlier centuries, when elementary education in many lands was neglected and voluntary, the difference between the Jewish and Gentile boy in respect to mental training must have been great.

There is an interesting chapter upon "Purity of Descent," in which the unsettled question of how far the Jews are to be considered a "pure" or a "mixed" race is discussed. The verdict is given in favour of the former view. That head measurements are a fallacious guide is shown by the very various measurements among Jews in different countries. Is this a proof of intermarriage or almost entirely of environment? The American statistics of Professor Boas seem to be conclusively in favour of the latter. The results of intermarriage are illustrated by an interesting plate. The concluding chapter—on the "Biostatic and Physical Characteristics of the Modern Jewish Child"—is an able summary of scientific facts. No one can study this book without attaining a clearer insight into the underlying influences which have moulded this gifted race and ensured their survival and increase amid the nations of the world.

PALESTINE AND PROPHECY.†

It is evident that there is a boom in books on prophecy among a certain school of religious thought to-day, as the booklet on "Great Britain, Palestine, Russia, and the Jews" is one of a long series issued by the "Prophecy Investigation Society." The main part of this work, and certainly the most readable, consists of a series of addresses given many years ago by the late Canon Hoare of Tunbridge Wells; they are partly devotional and partly prophetic. Other chapters, which would be more correctly placed as supplementary notes, have been added quite recently. The main line of argument is well known. The Jews are to return to Palestine, where they will sooner or later be converted to Christianity; they will be invaded and afflicted by Russia, Germany and Turkey, as "it is not likely that the forthcoming peace that must soon be declared will be satisfactory to them." These Powers, therefore, after some respite, will unite to set things right from their point of view, and, after horrible afflictions, in which Great Britain is apparently—our Navy being "the Ships of Tarshish"—to come to the rescue, they are to be delivered by Divine intervention.

The programme may afford comfort to some minds who are assured of its certainty, but our "war aims" seek for something less pessimistic, and most students of the Bible to-day will disagree entirely with this line of argument.

A summary of Prince Lichnowsky's disclosures has been prepared by Mr. C. A. McCurdy, M.P., under the title "Guilty." It is issued by the National War Aims Committee, and is being distributed gratis by Messrs. W. H. Smith and Son.

CORRESPONDENCE.

"A WAR BIBLIOGRAPHY FOR THE NEAR EAST."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The "War Bibliography for the Near East," published in your issue for March 1, was full of interest. It no doubt does not claim to be exhaustive. May I suggest the following additions?

"La Serbie d'Hier et de Demain," par Nikola Stoyanovitch. (Berger-Levrault, Paris et Nancy, 1917.)

"Le Monde Balkanique," par Alphonse Muzet. (Ernest Flammarion, Paris, 1917.)

"La Yougoslavie," par Pierre de Lanux. (Payot et Cie., Paris, 1916.)

"La Ville Convoitée: Salonique," par P. Risal. (Perrin et Cie., Paris, 1917.)

"Le Sort d l'Empire Ottoman," par André Mandelstam. (Payot et Cie., Lausanne and Paris, 1917.)

Of these the last is by far the most important. It is a book of over 600 large 8vo pages, richly "documenté." The author was First Dragoman to the Russian Embassy in Constantinople. His indictment of the present rulers of Turkey and their German masters should be read by all who are interested in that unhappy country.—I am, etc.,

Kremjan, Serbia, April 8, 1918. F. G. CLEMOW.

[We are greatly indebted to our correspondent for his letter and for the additions to our "War Bibliography," which certainly did not claim to be exhaustive.—ED.]

THE WOMEN OF SERBIA.

Lady Swaythling, speaking at a meeting at 9, Ennismore Gardens, London, S.W., last Friday, said that there was a Serbian proverb to the effect that the house stood not upon the earth, but upon the woman. In Serbian folk-lore woman was painted in the richest colours of poetic fancy and romance. In her relation to the great legendary heroes she appeared as the personification of purity and as endowed with every noble virtue. She wielded a mystic power over the unknown elements of the universe, and watched over the hero, guiding and protecting him. There was nothing erotic in this relationship; she was a sister to him, giving him the companionship of a sister's heart and soul. She shared in his heroic deeds and played an active part in finding solutions to the national problems with which he had to cope.

Serbia had a great past, and in the Middle Ages its women were justly celebrated for their love of learning, and were generous patrons of the arts. At the present day there was no branch in the economic life of that country in which the woman did not co-operate on terms of equality with the man. There was in Serbia a legal tradition that a certain proportion of a peasant's land, together with animals and tools, was inalienable from himself and family. Thus each family owned at least a part of its estate, and of that part the woman had the main direction. The majority of the people were of the peasant class. Here the women were engaged in agriculture. They dug, sowed, reaped, looked after the cattle, tended the gardens and orchards, took the goods to market, went to the forest and felled trees, and so on. In spring, summer and autumn the peasant woman was out of doors from morning until evening working on the land; in the winter she was busy all day long spinning and sewing everything that was worn by herself, her husband and children. This circumstance of the clothing being made entirely by the women accounted for the fact that to this very day the Serbian peasantry still wore their picturesque national costume. The Serbian woman took great pride in her work, which embraced everything even remotely connected with her house and the interests of her children; and it was rare to find one who was not familiar with her nation's history, or who did not know the names of the political and military leaders of her people, the great public institutions and the manner in which they were organised. Her greatest pride was to have one or two sons in the army. One phenomenon of Serbian social life in which the woman played a great part was the *zadruga*, a co-operative community based on family ties. In its most typical form this was only to be found among the Serbs. Order and discipline were its foundation, and very often it was under the control of the oldest woman, who assigned to each member his or her work. There were many highly educated women in Serbia—doctors, professors, architects, etc.; many official careers were open to them, and they had the same rights as the men.

His Excellency the Serbian Minister, who presided, said the Serbian woman had been a faithful companion to the Serb in his struggle for national liberty and independence. He also paid a tribute to the work that English women had done for Serbia.

Messrs. Cassell and Co., Ltd., have published a full translation of Prince Lichnowsky's memorandum under the title, "My Mission to London" (price 6d. net), with a preface by Professor Gilbert Murray. The main contents of this famous document are too well known to need recapitulation here; but we would call attention to the advantage of having Prince Lichnowsky's testimony in a complete and handy form. It cannot be studied too carefully by Britons, and, indeed, by the world at large. There is no weightier treatise on the origin of the war.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. April.	1918. April.		1336. Rajab.	5678. Iyar.
26	13	Friday	15	14
27	14	Saturday.....	16	15
28	15	Sunday	17	16
29	16	Monday	18	17
30	17	Tuesday	19	18
May. 1	18	Wednesday	20	19
2	19	Thursday	21	20

Prince George of Serbia visited the Serbian Minister on Saturday.

The French Ambassador was visited on Saturday by the Serbian Minister.

M. Spyridon A. Vaglianos, Secretary to the Greek Legation, has left London for Athens.

Earl Curzon is now much better, and left town on Saturday to spend the week-end at Hackwood, Basingstoke.

M. Pavlé Karovitch, Secretary to the Serbian Legation, has left London for Aberdeen on short leave of absence.

Captain Matila Costiesco-Ghyka, Assistant to the Military Attaché of the Roumanian Legation, has left London for Paris.

Next Friday will be the anniversary of the birthday of Princess Helen of Greece. She is the eldest daughter of ex-King Constantine.

In response to Mr. Lloyd George's message to the Viceroy calling on India to redouble her efforts, the Nizam of Hyderabad has offered £100,000 to help in the war

The Bishop of Chichester has dedicated a memorial window in Lower Beeding Church, Sussex, to Captain Robert Egerton Loder, Royal Sussex Regiment, who fell in the battle of Gaza.

It is announced that Brigadier-General Percy Hamilton and Lieutenant-Colonel Markham Carter, Indian Medical Service. have been made Companions of the Order of the Bath (Military Division).

Mr. Page, Assistant Director of Steamers, is retiring shortly from the Sudan Government service. He is proceeding on an extended tour up the Nile to study the fuel and timber resources of the country.

As the result of the brutality of the Turkish soldiery and populace, the emigration into the Caucasus of Greeks inhabiting the Black Sea littoral is continuing, and is assuming the character of a general exodus.

M. Radoslavoff, Bulgarian Prime Minister, declared in the Sobranje that Bulgaria was greatly interested in the formation of an independent Albanian State, and would support all Albanian aspirations in this respect.

Dr. Edward Thomas Wilson, who died on Friday at Cheltenham in his eighty-sixth year, was the elder brother of the late Major-General Sir Charles W. Wilson, who commanded the Gordon Relief Expedition to Khartoum in 1885.

The marriage between W. P. Archdale, Barahat, Sudan, and Miss Alice E. P. Talbot will take place at St. Peter's Church, Cranley Gardens, on Saturday, the 27th instant, at half-past two o'clock. All friends will be welcome at the church.

Lady Roper Parkington, hon. treasurer of the Montenegrin Red Cross and Relief Fund, has just received 10,000 dollars from the Canadian Red Cross, Toronto; £100 from His Exalted Highness the Nizam of Hyderabad; also a donation from Mrs. Lloyd George.

Lieutenant Alan Lubbock, R.G.A., youngest son of Mr. and Mrs. Frederick Lubbock, of Sevenoaks, was married on Saturday afternoon to Miss Helen Mary Bonham-Carter, only child of the late Mr. and Mrs. John Bonham-Carter, of Petersfield. The ceremony took place at Holy Trinity Church, Sloane Street, and among those present were:—Mr. and Mrs. Frederick Lubbock, Colonel and Mrs. Abdy, Captain Abdy, Mrs. Guy Lubbock, Sir Maurice and Lady Bonham-Carter, Mr. Henry Bonham-Carter, Miss Joan Bonham-Carter, Colonel and Mrs. H. Bonham-Carter, Mr. Walter Bonham-Carter, Miss Edith Lubbock, and Colonel and Mrs. Malcolm Bonham-Carter.

The Postmaster-General announces that considerable delay may be expected in the arrival of mails which left Egypt on April 4, containing about a fortnight's correspondence from Egypt and the Palestine front. Possibly some of the mails have been lost.

The Egyptian Ministry of Agriculture proposes to create two posts of inspector-general, one for Lower Egypt and the other for Upper Egypt. It is rumoured that Mr. Cartwright will be appointed to the former, and Mr. Bergenstock to the latter, according to Egyptian papers just to hand.

On Saturday, at Buckingham Palace, the King inspected a party of officers and non-commissioned officers of the Indian Labour Corps, under the command of Captain G. P. Taylor. The party is composed of men from the State of Manipur, on the North-Eastern Frontier of India, who are on leave from the front.

M. Repoulis, Greek Minister of the Interior, at the inauguration of a Workmen's Co-operative Bakery at the Pirœus, exhorted the Greek workmen to emulate the patriotic example of their French and British comrades, who, he said, are now fighting not only for their own liberty, but also for that of the whole of mankind.

The Postmaster-General announces that, according to a communication received from the Swiss Post Office, the Hungarian Post Office is unable, on account of congestion, to accept parcels for transmission to prisoners of war in Bulgaria, and until further notice such parcels will not be accepted at post-offices in this country.

The marriage took place last Saturday, at St. Margaret's, Westminster, of Captain Richard Alfred Jennings-Bramly, R.F.A., only son of the late Major Alfred Jennings-Bramly, 19th Hussars, and Mrs. Jennings-Bramly, of Clarence Parade, Southsea, and Miss Ida Phyllis Baugh le Patourel, younger daughter of the late Paul Baugh le Patourel, civil engineer, Calcutta.

A marriage has been arranged, and will take place shortly, very quietly, at Chesham Bois, Bucks, between Lieutenant-Colonel R. A. Thomas, R.A., son of A. H. Thomas, of Gampola, Ceylon, and Kathleen Mary O'Connell Bliss, daughter of George Cecil Bliss, of Glenlyon, Agrapatana, Ceylon, and granddaughter of the late William Henry Bliss, of Oxford and Rome, and of the late Colonel George Hewett, C.B., Indian Army, of Hove, Sussex. No invitations are being sent out.

On the anniversary of the United States' entry into the war, King Nicholas of Montenegro telegraphed to President Wilson:—"We, Montenegrins, modest but faithful Allies of the Entente, can never forget the gratitude due to yourself personally for having inspired the minds of a great nation. You will permit an aged head of a country to send you his warmest congratulations and assure you of his admiration for your nation." President Wilson replied:—"Your gracious and welcome message comes to us as the voice of a nation in which the people of the United States have always had the liveliest interest, and with whose struggles and aspirations they have always felt a very genuine sympathy. We welcome it as the voice of a friend, and send to you in return assurances of our sincere friendship and of our confidence that we shall before long be associated in the final triumph of a just cause."

The retirement is taking place this month of Captain William Alfred Wheler, after 54 years' service with the P. and O. Company. Captain Wheler was born in 1843, and joined the P. and O. service as a junior officer in 1864 from the Indian Navy. In later years he held a number of important commands. *The Times* recalls that among the ships which he commanded was the Avoca, employed as a hospital ship for the Indian Contingent in the Egyptian War of 1882, and he was awarded for his services the Egyptian medal and the Khedive's Bronze Star. He commanded the Geelong, which was employed by the Egyptian Government in trooping in the Red Sea between Suez and Suakin in the Egyptian campaign of 1885, and also the Coromandel when used as a hospital ship in the Ashanti campaign. He became commodore of the P. and O. fleet in 1901, his last ship being the Persia. In 1904 he was appointed the company's agent at Cardiff, from which position he is now retiring.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON. Claridge's Hotel, Brook Street, London, W.1.

OBITUARY.

Captain Ernest Montague Money, of Minster-on-Sea, died on Saturday at the age of sixty-nine years. He joined the Indian Civil Service, Bengal Establishment, in 1871.

The death has taken place at Kurseong, Northern Bengal, as the result of a riding accident, in the thirty-fourth year of his age, of Mr. Robert Vickers Dixon, civil medical officer of Kurseong.

Major Mark Saurin Wynne, late of the Loyal North Lancashire Regiment, who died at Mellaston last week, near Pembroke, in his seventy-ninth year, served in the Afghan War in 1879, and was present at the capture of Ali Musjid, for which he received the medal with clasp.

Sir John Willoughby, who died in London last week, after a short illness, served in Egypt in 1882, and in the Nile campaign two years later. He took part in the cavalry charges at Kassassin and Tel-el-Kebir. He was mentioned in despatches and received the medal with clasps.

Captain W. J. Berthon, late of the Bombay Staff Corps, who has died at Cheltenham, aged 78, was so like the late Lord Salisbury that he had had some curious experiences through being mistaken for him. He took part in the Persian Expedition, and later in the suppression of the Indian Mutiny, but was invalided out of the Army in 1869.

Brevet Lieutenant-Colonel A. Keene, C.M.G., late Royal Artillery, died on Sunday at Guildford, aged sixty-three. In the Afghan War of 1878 he took part in the march from Quetta to the relief of Kandahar, receiving in recognition the medal and mention in despatches. Five years later he saw service in the Burmese Expedition, was again mentioned in despatches, and received the D.S.O.

Colonel Adolphus Vallings, late of the Indian Army, died last Friday at St. Leonards-on-Sea, aged eighty. He took part in the Sikkim Expedition in 1861, and later served on the North-West Frontier, and was present at the forcing of the Umbeyla Pass. He served also in the Dour Valley Expedition, in the Afghan War of 1878, and in the Mahsud Waziri Expedition. He was twice mentioned in despatches.

Mr. William Hoey, Lecturer in Hindustani to the University of Oxford, died on Sunday. He entered the Indian Civil Service in 1870, and retired in 1900, most of the intervening thirty years being spent in the United Provinces. He was interested in archæology, and in this connection undertook some exploration work in the Gonda District; and was the author of some valuable historical books.

The death is announced of Major-General Charles Frederick Gregorie, aged eighty-three years. He entered the Army in 1855, and served in the Indian Mutiny, for which he received the medal and two clasps, and in the Egyptian War of 1882, for which he was regarded with the medal and clasp, the 3rd Class of the Order of the Medjidie, and the Khedive's Star. He was also mentioned in despatches, and received the C.B. He had been colonel of the Royal Irish Regiment since 1897.

Brigadier-General Harry Townsend Fulton, C.M.G., D.S.O., who died of wounds in hospital in France on March 29, was born in 1869. In 1894 he joined the Indian Staff Corps as lieutenant, being at the end of 1897 appointed to the 2nd Gurkha Rifles. He served on the North-West Frontier in the Malakhand and Mohmand Expedition in 1897-98, taking part in the operations in Bajour and in the Tirah campaign. In the South African War he saw much service, and was mentioned in despatches. After service with the New Zealand Expeditionary Force in Samoa in 1915, he went to France, where he served up to the time of his death. He was made temporary brigadier-general on March 1, 1916, and during last year was awarded the C.M.G., the Croix de Guerre, and the brevet rank of lieutenant-colonel, and was twice mentioned in despatches.

Major-General Philip Durham Henderson, C.S.I., who died on Friday at 47, Warwick Road, S.W., was born in 1840, the second son of Major-General R. Henderson, R.E., educated at a private school, and joined the 2nd Madras Cavalry in 1857. In 1870 he was appointed an Attaché in the Foreign Department of the Government of India, and a year or two later was promoted Under-Secretary. In 1875-6 he was political officer on the Staff of the Prince of Wales during his visit to India, and was given the C.S.I. He was appointed general superintendent of the operations for the suppression of thuggee and dacoity in 1878, and from 1892 till 1895 he was Resident in Mysore and Chief Commissioner of Coorg. He married in 1864 a daughter of the late Lieutenant-General P. Cherry, of the Madras Cavalry, and had two sons and two daughters.

DOMESTIC ANNOUNCEMENTS.

MARRIAGE.

ENNOR—LA FONTAINE.—On April 20, at St. Marylebone's, by the Rev. W. Alan Gardner, assisted by the Rev. J. H. Roberts, Frank Harvey Ennor, 2nd Lieutenant, Grenadier Guards, son of the late Adolphus Frank Ennor and Mrs. Ennor, of 20, Hyde Park Place, to Kathleen Louise, youngest daughter of Mr. and Mrs. Sydney La Fontaine, of 10, Nottingham Place, W.1.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—

AUSTRIA AND THE ALLIES.

No attempt to explain away the wording of the Austrian Emperor's letter to his brother-in-law, Prince Sixte of Bourbon-Parma, is likely to invalidate the fact that an olive-branch was definitely held out to France. The theory that the message may have been sent in collusion with Germany may be dismissed as out of the question in view of the course of events since M. Clemenceau's disclosure was made. Austria-Hungary has played her part during the last twelve months in the German peace campaign, but the methods adopted have not done the violence to Germany's *amour propre* that was inflicted by the offer to support France's claims to Alsace-Lorraine, even though the word "legitimate" may have been, as we are now asked to believe, a translator's gloss. The underlying suggestion that the letter was not the outcome of the young Emperor's spontaneous initiative rests, no doubt, on a sound basis; but in their search for the inspiration the curious may find a more plausible field for speculation otherwise than in the north. It would seem to be generally accepted that the Emperor Karl does not take kindly to German domination; and in this respect, if report be true, he will have discovered even before his accession a fellow-feeling in the allied kingdom of Bulgaria. Whether his relations with King Ferdinand have at any time been close enough to allow the latter to assume the rôle of prompter there is no means of knowing; but it is not without significance that at least two of Germany's allies do not allow the glamour of her military support to affect their opinion of her political methods. For the time being, however, the chief interest attaching to the incident centres in the opportunity that it has given Germany of strengthening her hold upon the Dual Monarchy. The exchange of messages between the Emperor William and the Emperor Karl, the resignation of Count Czernin and the appointment of Baron Burian admit of no other explanation. Austria-Hungary has been brought to heel. When it was realised that both the Emperor and his Foreign Secretary were capable of bona-fide excursions into the realm of peace, distinct from the fictitious overtures required from time to time by German policy, the dangerous combination was broken up. Count Czernin is replaced by Baron Burian, who at least is a Magyar, and therefore may be expected to approach more closely to Prussian requirements.

For the Allies this very definite tightening of the German grip upon Austria-Hungary must finally dispel any hopes that may have been entertained of detaching the latter from her alliance. The process of enlightenment had already begun when it was found that Count Czernin could make no honest response to President Wilson's statement of the Allies' war aims. Special consideration, it is true, has always been shown to Austria-Hungary. This is accounted for in part by the subordinate position that she occupies in the Central Alliance, and by the enormity of Germany's crime against civilisation. But it is also the outcome of a failure to appreciate the real situation in Austria-Hungary and the manner in which she has ministered to German ambitions and made them possible. The tendency still exists apparently to think of the Dual Monarchy as a single nation, capable of keeping its present unity and maintaining an existence apart from Germany. Against this misconception may be set the fact that out of a population of fifty million the Germans number twelve million, the Magyars ten million, and together these twenty-two millions impose their rule on the remainder, who comprise, among others, twelve million Southern Slavs, five million Poles, four million Ruthenes, and three million Roumanians. If Austria-Hungary is to be made the enemy of Germany, what is to be the position of the twelve million Germans, at present the bulwark of Germany's domination of the Monarchy? Is it conceivable that a frame of mind which makes of these Germans and of the Magyars the ruthless oppressors of their fellow-subjects is going to discover cause for dissatisfaction with the Germany that enables them to maintain their hold over a more numerous population? But if some wave of feeling should pass through the land and sound the death-knell of the present system, must it not of necessity intensify the resolve of the subject nationalities to break away from all association with past tyranny and link themselves up with their kinsmen over the border? Their secession entails the break-up of Austria.

The Allies, therefore, must look beyond the gratification of the natural desire to detach the second partner of the Central Alliance. We may feel sure that Germany would not remain a passive spectator of Austria-Hungary's attempt to secede, and what support could be offered by the Allies to the latter? Moreover, what would be the position of the Dual Monarchy if separated from Germany? It must be ruined financially and in the whole economic sphere. Are the Allies to take the additional burden of its economic reconstruction upon their shoulders as a *quid pro quo* for peace with Austria? And on what terms could they agree to the resumption of diplomatic relations with the Hapsburg Government? Is it to remain the present dynastic State, still containing the seeds of all the troubles that have vexed Europe for a century and plunged the world into the present war, or are some paper assurances to be given in regard to self-determination for the subject peoples? No such assurances, we may feel confident, would be accepted by the nationalities concerned, and the Allies' agreement would be wrecked at the outset. The logic of the Allied position, it is to be feared, can only be brought home to the Central Powers as the result of a military defeat, which will compel them to accept the dissolution of Austria-Hungary. When that stage has been reached, it may be all to the good that the Emperor Charles should have shown himself more enlightened than the regime to which he has succeeded. The future of the dynasty may be in his hands at this moment; but it is more than probable that, unless his plans are being well laid now, the time will come when a decision on the subject will suddenly be removed beyond his control.

THE "SICK MAN."

A correspondent writes:—The Ottoman Empire was estimated to extend, before this war, over 794,000 square miles, and to include a population of 21,180,000. Since it elected to throw in its lot with Germany, in 1914, it has suffered the following diminution:—

	Area in sq. miles.	Population.
Mesopotamia	65,000	1,500,000
South Syria and Sinai	15,000	500,000
Turkish Arabia	150,000	1,000,000
By Massacre, Starvation, Disease, Flight, and Battle	—	1,800,000
	230,000	4,800,000

The above figures are, of course, approximate. They tend to show that the Turk has lost more than a quarter of his territory and more than a fifth of his subjects. At this rate it is legitimate to say that Enver, Talaat, and Jemal Pashas have "backed the wrong horse." Meanwhile, on their right flank appears an Hellenic army about 300,000 strong, and yet their Prussian-driven, ill-fed, unmedicated troops totter forward towards the Caucasus to encounter Georgian resistance.

"LAW REFORM IN EGYPT."

In the issue of THE NEAR EAST for March 29 some extracts were given from an article with the above title contributed by a correspondent to the *Law Times*. The article consists mainly in an appeal to professional bodies, such as the Bar Council and the Law Society, to appear before the advisory committee now sitting in London for the purpose of considering the new legal system for Egypt and to endeavour to secure the adoption of English ideals and methods. The writer instances the laws as to land transfer and mortgages, and as to companies, as requiring reform; and also urges the adoption of certain reforms in procedure. These are all important matters, especially for investors, but it is proposed to treat of the subject from a rather different standpoint in the following note.

In the article in question the matter is approached from the legal point; it is, however, of such great importance to the world at large, and especially to the British business world, that no apology can be needed for dealing with it from that point of view, as it must be to the interest of British manufacturers, traders, and business men, both privately and through the chambers of commerce, to take their part in securing that the new laws and Courts in Egypt shall give adequate protection to business and commerce, shall discourage the dishonest trader, encourage fair dealing, and provide for the upright and expeditious administration of the law by the Courts and Court officials. What business man with experience of Egypt would say that the Mixed Codes and Mixed Courts are worthy representatives of these ideals in a British Protectorate? Every man of the kind could give examples from his own experience of the inadequate state of the law, of the facilities it gives to the dishonest trader to evade his just obligations, of the gross delays in the law courts, and of the defects of administration by the host of ill-paid minor officials. Take, for example, the question of bills of exchange. In every country that calls itself civilised a trader's credit and honour depend on his punctual meeting of his liabilities on bills, but in Egypt the allowing a bill to be dishonoured is only too often looked on as a means of obtaining an extension of credit. It is true we cannot make men moral by Act of Parliament—at least, not immediately—but we can and should, so far as possible, remove temptation from their path by making judgment follow speedily on the offence and by making the defaulter pay all the expenses of his suffering creditor. That brings us to the question of costs, which cries loudly for reform.

Who has not heard of dishonest debtors putting forward every kind of technical point and false suggestion and contesting a case to the last moment, on the chance of snatching a decision, or merely for delay, because they know that the the worst they will only have to pay the other side a few pounds for costs which very possibly run into hundreds, and which, if they were in England, they would have to pay? Having eventually obtained judgment, how is it to be enforced? The debtor, following the old-established Egyptian custom, may have hidden his money in a hole in the ground or otherwise made away with his visible assets, and there are no means of bringing him before the Courts to examine him as to his means, or, if it can be proved that he has means, *i.e.*, that he can pay, but will not, to have him committed to prison. It is true that if he is a trader—but only if he is a trader—he can be made bankrupt; but why should bankruptcy be limited to traders? There are many other classes who are not traders but yet enter into business dealings, and incur liabilities which they are unable or unwilling to meet. But when the debtor is made bankrupt there comes the administration of his estate. In Egypt this is entrusted to one of the Syndics (a body of gentlemen appointed by the Courts, but not paid by the Government), who are remunerated by fees or commissions out of the assets of the debtor's estate. This naturally leads to over-administration of the fat estates and neglect of the lean ones, with the consequent failure to investigate frauds, if the estate cannot bear the expense of investigation, a fault which was apparent in English Bankruptcy Law before Mr. Joseph Chamberlain's Act of 1883.

The delays and complications in effecting an arrangement or composition between a bankrupt and his creditors are also very trying. Speaking generally, the whole of the Bankruptcy law and administration require remodelling.

The above points are only referred to as examples of the defects in the existing system and in its administration, which must necessarily be reconstructed now that all residents in Egypt are to be governed by one law. There can be no doubt that Egypt expects, and would accept, a new system of law and legal administration based on English ideals and methods; and admirable mataerials for new codes can be found in English and Indian legislation.

One point is just mentioned in the *Law Times* article which deserves fuller emphasis. That point is the question of the language of the new codes and of the new Courts. That Arabic must be retained as the native language goes without saying, but in practice there must be a European language too, and most Englishmen will hold that that language should be English, with a transition period during which French (and possibly Italian) might be permitted as well. If the codes are drawn in English and cases are pleaded in English the pleadings and decisions will—even in the Courts of First Instance and at once, without awaiting the gradual influence of the Privy Council—be inspired by English ideas; but if a foreign language is used for the codes and pleadings the progress of such ideas will be retarded and hampered. If the codes and proceedings are in English, cases will come up on appeal to the Privy Council in their original language, whilst, if they are in any foreign language, translations will have to be made at great expense. English is even now one of the official European languages of the Mixed Tribunals, the others being French and Italian, and judgments have recently been delivered in English, but the present judges as a whole cannot be said to have encouraged the use of our language. The use of English in Egypt has grown enormously of recent years, and students of the younger generation have learnt English where formerly they learnt French or Italian. The change would be gradual. The present mixed codes and administration were established so recently as 1874; they are not native to the soil and have not existed long enough to obtain any element of permanency. The time has now come to get rid of the system of internationalism under which the administration of law in Egypt has hitherto been conducted and to substitute a British system.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Prisoners of War at Changri. April 17.

Mr. J. F. Hope, replying to Colonel Burn, said :—The promise given by the Turkish delegates at the Berne Conference that the prisoners of war at Changri should be moved to another camp has been only partly carried out, as about half of them have not yet been transferred. An urgent remonstrance on this head was recently addressed to the Turkish Government. So far as his Majesty's Government are aware, there were no British officers at Changri for a long time before the transfer thither of those from Kastamuni in October, 1917. It is possible that the transfer has occasioned considerable delay in the arrival of parcels.

Revolutionary Movement in Bengal. April 18.

Mr. Fisher, President of the Board of Education, replying for the India Office to Sir J D. Rees, who asked whether a committee of Indians and Europeans, with a Judge of the English High Court as chairman, had been appointed to investigate the revolutionary movement in Bengal, and, if so, whether it had submitted a report to the Government of India, said :—The answer to the first question is in the affirmative. The inquiry is as to the nature and extent of the criminal conspiracies connected with the revolutionary movement in India, and as to the legislation, if any, necessary to enable the Government to deal effectively with them. The Secretary of State is not aware that the committee has as yet submitted a report. Mr. Fisher added that the Judge of the High Court appointed was Sir Sidney Rowlatt, who was now in India for the purpose of the inquiry.

An "Indian Prince." April 22.

Sir J. D. Rees inquired whether the Secretary of State for India knew anything of a person described in the German Press as "the Indian Prince Mahendra Prato," who was said to have represented himself as an agent of the King of Afghanistan?

Mr. Fisher, President of the Board of Education, said :—The person described as an "Indian Prince" is doubtless Mohendranath Pratap, the individual mentioned by the late Secretary of State for India in a statement made to the House on November 29, 1916, as having been sent to Afghanistan by the German Government. This individual has no claim whatsoever to the title of "Prince," being merely a small landowner from a British district in the United Provinces. His estates were attached by the Government of India in 1916.

The Turks' Prisoners of War. April 23.

Major David Davies asked whether the honourable member for Sheffield would say how many British and native troops had been taken prisoners by the Turks and how many of these had been officially notified as having died or who had never been heard of, and what percentage this figure is of the total number made prisoners by the Turks; and whether he had any information as to the fate of one officer and 635 other ranks and 2,600 of the rank and file of the native troops, which comprised about 40 per cent. of the Kut garrison captured by the Turks?

Mr. J. F. Hope, Lord of the Treasury, said: Of the British missing, including the Royal Navy and Colonials, 458 officers and 4,051 other ranks are known to have been captured by the Turks, of whom 14 officers and 1,497 other ranks have died; 596 other ranks are still untraced. Of the Indian natives missing, 221 officers and 7,169 other ranks are known to have been captured by the Turks, of whom five officers and 1,341 other ranks have died, and 2,600 other ranks are still untraced. Since my reply on March 18, 39 more British prisoners belonging to the Kut garrison have been traced. The 596 British and the 2,600 Indian natives, who are mentioned above as untraced, formed part of the Kut garrison.

Mr. Butcher asked whether the honourable member for Sheffield could state the reason why the sending of clothing to British prisoners of war in Turkey has been prohibited by the War Office; whether he was aware that the effect of this prohibition is to cause great suffering to those prisoners, who are frequently interned in cold places where warm clothing is essential; whether he was aware that the Dutch Minister at Constantinople has no clothing available with which to supply our prisoners; and whether permission could be given to the recognised care associations to send underclothing in reasonable quantities to these men?

Mr. Hope replied that the American Ambassador at Constantinople, and later the Netherlands Minister, advised the local purchase of clothing for British prisoners in Turkey, and stated they were able to provide what was necessary. In view of the very bad facilities for transport to Turkey, and great delays and loss incident to this method of despatch, the arrangements made locally were thought preferable, and had so far worked well. The Netherlands Minister had probably better facilities for distribution than could exist in the case of postal parcels, and up to last December he had despatched articles to various camps to the value of £T25.000. The Minister had been recently asked again by telegraph whether he could still make proper provision locally, and on receipt of his reply the question of despatch from this country could be again considered.

PROMINENT INDIAN INDUSTRIES.

THE PRESS ON THE NEAR EAST

"Side-Shows."

The military school of thought represented by the extreme Westerner is well taken to task in an article entitled "Side-Shows in the War," by Mr. Archibald Hurd in the April number of the *Fortnightly Review*. He begins by showing that the story of the growth of the British Empire is in the main a narrative of "side-shows." Canada was conquered as the result of one "side show"; the American "plantations" were lost in the course of another; India, as we know it to-day, is the fruit of other "side-shows." "Side-shows" gave us Australia, South Africa, the West Indies, and all the outer fringes of the British Empire which to-day constitute its strength as a group of trading communities dependent upon merchant shipping, and therefore requiring coaling stations in all parts of the world. At the outbreak of the present war it was Germany's aim to break up this far-flung Empire, and it was her firm belief, of which abundant evidence exists, that she had laid her plans well for breaking it up. Could we afford to ignore these plans? Mr. Hurd's view is as follows:—

Our military force being exiguous, it is suggested that from the opening of the war onwards, and particularly after the new Army had been created, we should have poured every man at our disposal into France, without regard for the safety of the outer Empire, which was definitely menaced, and without endeavouring to counter the machinations of the enemy. India, Egypt, Malta, Gibraltar, and our interests in Persia, to say nothing of our position in the Far East and the Pacific—could we afford to leave them without protection? The best defence is offence; any other policy is folly. Only a Power with the command of the sea can use a small army effectively. On that principle our military organisation has been based, the Army being created for oversea expeditions. Once the seas are commanded, the Power with the predominant naval force can conceal its military movements; it thus obtains the advantage of surprise, and the advantage of surprise means that a very small military force can achieve a great objective. If the military force is used at short range, being employed where the enemy expects that it will be employed, it naturally follows that a much larger number of men must be used.

He cites three instances of sea-power being used at long reach. It is no argument, he adds, against the use by a maritime country of its main power to quote instances in which the objective was not attained. More often than not the policy has been good, but the execution bad. He considers that history in regard to the Dardanelles Expedition will record that the proposal to attack Turkey was a stroke of genius which, under proper management, would have succeeded, thus appreciably shortening the war. Here is his defence of the Salonika "side-show":—

What would have been the course of events to Greece, if we had not given our adherence to the proposal to land troops at Salonika? Would a British officer to-day be organising the Greek navy? The First Lord of the Admiralty has told us that "at the request of the Greek Government, British naval officers are assisting our Greek Allies in the reconstruction and reorganisation of their navy and dockyards, and Captain Clifton Brown, of the British Navy, is head of the British Naval Mission to Greece and is Chief Naval Adviser to the Greek Minister of Marine, with the rank of Rear-Admiral in the Greek Navy. The reorganised naval forces of Greece are already co-operating in the war in the Mediterranean, and rendering increasingly valuable service to the common cause." At the same time the Greek army is being prepared to participate in the war on the side of the Allies. Should we be confronted with the present situation, if we had not utilised our sea power to land a force at Salonika? Is it an exaggeration to suggest that but for that action King Constantine would still be on his throne, co-operating by every means in his power with his brother-in-law, the German Emperor, the ports and islands of Greece being utilised as bases for submarines? It may well be that but for the Salonika expedition we should have had to abandon the Mediterranean, driven out by enemy submarines, as Nelson had to abandon it in his day. What, then, would have been the course of events in Egypt?

Then again as to Egypt and Mesopotamia:—

In his War Diary, Mr. J. W. Gerard, formerly American Ambassador in Berlin, records, under date of June, 1916, that "The Germans expect that by September preparations will be finished, and the Suez Canal will be cannonaded, bombed, and mined, so that it will dry up, and then the Indian-Afghan troubles will begin." Would the British Government, in order to avoid the condemnation of indulging in "side shows," have been wise to take no steps to defend the Suez Canal and Egypt against the menace which the enemy offered? Do those critics who have been so forward in criticising British policy since the Kut incident, revealing wisdom after the event, reflect on the results which would have flowed from failure of foresight on the part of the British authorities? As it was, the Turks in force advanced up to the Canal, confident of penetrating into Egypt. Was it a mistake to throw them back and to adopt an offensive policy? If they had succeeded in their purpose, what would have been the outlook to-day for the British Empire with its main artery cut? It was one thing to evacuate the Mediterranean in the last great war, when the Suez Canal had not been made, and our direct east-and-west commerce was of small proportions; but if this war has taught us one lesson more than another, it is that we must maintain our position in Egypt, if we are to continue our beneficent work in India.

And Mr. Hurd's conclusion is as follows:—

The present war has not been fought, possibly, as the elder Pitt would have fought it, but, on the other hand, we have utilised our sea power, and we have done so with fine results. Not only have the enemy's main fleets been neutralised and his commerce driven off the seas, but by the use of the seas we have been enabled to undertake a series of "side shows" which have brought to the dust the enemy's ambitions, have firmly re-established British power in the East as in the West, have contributed to convince Americans that this nation is not effete, and have reminded the peoples of the Dominions, with their ships and men with the Grand Fleet in the North Sea, of the virtue which lies in the long arm of sea power. We might have fought this war as though we were a continental Power, throwing all our forces into the struggle in France when the new Armies came into being. But in that event what part would Italy be taking in the war? What would have been the fate of Greece? Would the British flag still fly in Egypt? Should we have the assurance that British influence had been supported in Asia Minor? And, finally, what would have been the course of events in India?

The moral of this war is the moral of all the wars in which we have been engaged, namely, that our strength is drawn from the sea, and can be best employed by utilising the sea—the sea and secrecy. That is the legend writ large over the whole British Empire. When we are tempted to reflect on failures of policy during the past three and a half years we may well take courage, casting our eyes also on the other side of the record, where stand the triumphs which small military forces have achieved against overwhelming strong opponents at the end of the long tether of British sea power, nurtured in peace and sustained in war by a people who learnt from Napoleon that "England can never be a continental Power, and in the attempt must be ruined." We owe the British Empire to-day to "side shows," and the history of the British Empire holds the condemnation of the ignorant criticism which has recently found expression.

The Arab and "Kultur."

On April 15 *The Times* published an article "The Moslems of Jerusalem," contributed by a correspondent in Jerusalem. He writes:—

The Moslems of Jerusalem, like all really religious people, are not bigoted. Fanaticism they leave to the pig-eating, brandy-drinking young Turk. Having long been in contact with Europeans and Americans, being well educated, often travelled, and knowing our record in Cyprus, Egypt, and India, they are the last people to listen to the preachments of a Holy War made in Germany and brought about by the Jacobin Clubs of Stamboul. Performances such as those of the German Baron von Perfall, who when stationed at Bethlehem in command of the Motor Lorry Column, with headquarters at the French Carmelite Convent, converted the grotto of Our Lady of Lourdes into a latrine, tore up the books of the Convent library, destroyed the trees and vines belonging to the Convent, even pulling up the roots, did not impress them as proofs of German Kultur.

The Armenian massacres and the oppression of the Arabs disgusted them with the "Liberalism" of the "inexperienced idealists" of Constantinople. Even the wilder Beduins of Eastern Palestine and Central Syria treated the unhappy Armenian exiles with kindness in comparison with the Turks.

The action of King Hussein of the Hejaz, and his successful campaign against the Turks had also a marked effect on Moslem opinion in Jerusalem:—

The knowledge that a prince enjoying a high reputation for political sagacity and religious orthodoxy in the Arab world and of the lineage of the Prophet had dared both to protest against the political oppression and subversive religious innovations of the Turks, in the name of the Arab race, and to uphold this protest by force of arms on the side of the Entente Powers filled them with hope and enthusiasm. The leading Arabs in Jerusalem, far from regretting the past, seek profit in the opportunities of the present and look forward to development in the future which will show the world that the spirit which manifested itself in the great civilisations of Damascus, Baghdad, and Cordova has not yet died. It is their hope that the Arab race, now that it has awakened from the strangling nightmare of four centuries of Turkish misrule, will one day become self-respecting and respected by the world, and that it will prove that Islam must not be judged as a spiritual force by its perversion among the corruptions of Constantinople or the ignorance of Anatolia.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Enemy banking enterprise proceeds apace. The latest development is a combine by four Austro-Hungarian banks—the Land Credit Institution, the Credit Institution for Commerce, the Lower Austrian Discount Association, and the Hungarian General Credit Bank—for the purpose of forming an Austro-Roumanian bank, with its headquarters at Bucharest. The capital of the institution is fixed at 20,000,000 francs (£800,000), and the bank will undertake all kinds of financial business, including the financing of industrial enterprises and the granting of credits to agricultural concerns. In other words, it is intended to serve as one of the weapons for completing the economic penetration of Roumania after the war.

***

The satisfactory position in Egypt at the present time is clearly brought out in Sir William Brunyate's Note on the Budget of 1918. The balance of trade during the past three and a half years represents, he states, an addition of £E50,000,000 to Egypt's resources, and he points out that the effect of the prosperity of the country is reflected on every side, notably in the prompt repayment of mortgage loans. There has also been a marked decline in the demand for new loans, and this has enabled the mortgage companies to make extensive investments in Allied war loans.

***

It will be noted that Sir William says that the fuel situation in Egypt was mainly saved by the development of the Red Sea oilfields, and by the adaptation of engines to produce gas distilled from vegetable refuse. There are now grounds for hope that adequate supplies of oil will be shortly available. As regards Egypt's industrial development, he advocates systematic research, and instances the mineral possibilities of the Red Sea littoral and the manganese mines of the Sinai Peninsula as affording excellent scope for this purpose.

***

Evidently the plans of Greece regarding the rebuilding of Salonika in order to make it equal to coping with Balkan trade in the future have aroused the envy of the Central Powers, for the *Berliner Tageblatt* gives an elaborate explanation of the way in which Germany and her ally will "dispose" of Salonika. Bulgaria, says the *Tageblatt*, has demanded the cession of the port, but "this wish cannot be fulfilled because, in the event of England refusing to surrender Cyprus, Malta, Gibraltar, Egypt, and the occupied districts of Palestine and Mesopotamia, Salonika is to be made a free harbour and a naval base of the Central Powers, while being left nominally in Greek possession."

***

No doubt, as Bulgaria sees the Central Powers absorbing territory right and left, she feels entitled to amend her own requirements. At the worst the demand may prove useful one day as an excuse for a rupture with her allies in the event of non-compliance with her wishes. If, however, she is set on obtaining Salonika she is scarcely likely to be satisfied with an explanation of the kind suggested by the *Tageblatt*. That is all there is to be said on this point, and with that we may leave the enemy Powers to compose their differences as best they may, and console themselves with further impossible schemes of aggrandisement. For Greece the episode must be interesting, if not entertaining. Our Allies are to be permitted to plan the development of Salonika, but Germany will only allow them the nominal possession of the port, which is to be used by the enemy for naval purposes and to direct trade into channels favourable to Germany. It is a pleasant scheme, and one which should remove the last vestige of doubt among the Greeks that, like the rest of the Allies, they are fighting for their very existence.

***

The statement of the Board of Trade that the orders given at the British Industries Fair amounted to nearly £1,500,000 is the best possible justification for this war-time innovation which we all hope will prove a permanent feature of the business life of this country. Even this total, excellent as it is, could, it seems, have been easily passed if the exhibitors had been in a position to take all the business that was offered. In the circumstances one may justifiably look forward to a great extension of the fair when normal conditions permit unrestricted exhibition of British goods.

***

Presiding at last week's general meeting of the Mercantile Bank of India, Mr. R. J. Black referred to the rapid progress and expansion of the bank during the last decade, and in particular during the past five years. Deposits had risen in twenty-five years from £1,138,163 to £9,812,320, loans and advances from £362,629 to £3,761,149, and bills receivable from £1,177,580 to £4,326,689. The first allocation to the reserve fund was £10,000 in 1896, and in the last ten years it had been increased from £210,000 to £650,000. Mr. Black further instanced the appreciation that had taken place in the shares, and pointed out that while the lowest quotation for the "A" shares was about £9 and for the "B's" between £3 and £4, to-day they both stood round about £32-£33.

***

Turning to the past year, Mr. Black said that the epoch-making event of the year was the disappearance of the 1s. 4d. rupee, and in this connection he stated that while the continued advance in silver last year pointed to this possibility, the further advance last week to 1s. 6d. came as a complete surprise to most of them. "Putting on one side any difference of opinion that may be held in regard to the legislation of 1899, I do not think," he added, "it can be gainsaid that fixity of exchange fostered confidence, and whatever happens in the future, the element of doubt which its removal, whether temporary or not, creates, will take long to subside. The immunity from anxiety over the fluctuations in exchange we have enjoyed so long no longer exists; the future, as in so many other things, is in the melting pot, and what it may have in store for us it is quite impossible to speculate upon. There is no improvement in the currency situation in India; the introduction of notes of a lower denomination than Rs.5 has perhaps hardly had time to show much perceptible effect, but it may still be necessary to take more drastic measures to meet the abnormal situation that has been created by the war."

***

The National Bank of Egypt made a gross profit during the past year of £767,144, an increase of no less than £142,000 on the previous figures. Besides providing for the statutory reserve, the directors propose to allocate £200,000 to a special reserve to meet contingencies, while the shareholders, in addition to the statutory dividend of 4 per cent., will receive a distribution of equal amount, making the dividend per share 16s., as compared with 12s. for 1916. The shares, which are of the value of £10 fully paid, stand at 13, so that the yield is not unduly attractive, but the high price of the shares is due to the belief that in due course there will be a considerably larger distribution. In the light of present events this view seems justifiable.

***

The Sudan Gold Field Company's profits on the past year's working show a decline of £7,879 13s. 8d. This is due in some measure, it is stated, to the larger tonnage of ore put through the mill for a practically corresponding quantity of gold recovered, "but is mainly accounted for by the unparalleled conditions prevailing, resulting in a serious shortage of native labour, the necessity to economise in the use of all supplies, consequent upon the uncertainty as regards deliveries of material and the risks attending sea transport, and particularly to the largely increased cost of all mining requisites." The directors have decided to make no distribution on account of the profit, as there is no immediate prospect of any mitigation of the adverse circumstances; indeed, it is suggested that there is a probability that they will become more accentuated during the current year.

***

Very rapid progress has been made by British Dyes, Limited in developing the dye-making industry in this country, and there now seems every hope that when the war ends the Germans will find their position with regard to this industry very different from the monopoly they enjoyed in the past. The whole question resolves itself into one of research work, and if the company obtains the support necessary for carrying out its comprehensive plans, the outlook will undoubtedly be very bright.

Double Income-Tax.

The Case of Indian Investments.

It was not to be expected in the prevailing circumstances that this year's Budget would contain any concession on the vexed question of double income-tax. Equally it was scarcely in doubt that the question would again receive some passing notice, for the growing agitation against the imposition of this tax on Indian and Colonial investments during the past few years has made it almost impossible for a Chancellor of the Exchequer to pretend to ignore the presence of this grievance. As a matter of fact, it received its usual meed of attention—neither more nor less—for Mr. Bonar Law briefly indicated in his Budget statement that he would follow the principle adopted by his predecessor, and that the additional 1s. on the income-tax would not have to be paid where the combined tax amounted to 6s. That is no doubt all that can be hoped for at this juncture, for no one expects the Chancellor to abstain from utilising any source of revenue when the needs of the war impose so severe a tax on the national resources. It would have been better, however, if Mr. Bonar Law could have coupled with his reference to the subject some indication that the injustice of the system of double taxation as regards Imperial securities is recognised by the authorities, and that at the earliest possible moment steps will be taken to remedy this anomaly.

Unfortunately, it has to be admitted that the remedy becomes more difficult with each year that the war continues, for the sum involved is not a small one; on the contrary, it forms a very substantial contribution to the Exchequer. The possibility has to be faced, therefore, that post-war Budget requirements may make it impossible to surrender the whole of this sum for a number of years after the war. In view of that contingency, it is necessary to examine the incidence of this tax on various classes of Imperial securities with a view to determining whether any particular benefits would accrue from preferential treatment as regards remedial measures. Here it may be stated that holders of Indian and Colonial securities suffer equal hardship from the tax, and have an equal claim to concessions, but at the same time an important distinction has to be drawn between the two classes of investors. Holders of Dominion securities can settle where they have financial interests if they choose, but India is unsuitable for permanent residence, and there is thus no option for those who hold Indian investments but to pay the double tax. Again, Dominion securities appeal to the general investor, while investors in Indian securities are drawn in the main from people with commercial or occupational connections with the country. A considerable proportion of those affected, indeed, are men who, in one capacity or another, have spent the best years of their lives in India, and it is but a poor return for their services to penalise their savings when they come to pass their retirement at home.

All these aspects and others are well-known, and it is therefore superfluous to labour them. It is necessary, however, to point out one further, and in our view a decisive, reason why as soon as the financial position permits any concession on the double income-tax Indian investments should receive prior consideration. As we have indicated above, British investors in Indian securities are drawn from a very limited class, and at the same time India is practically dependent on this country for capital, since Indians as a whole have not yet taken kindly to supporting commercial and industrial enterprises. They are certainly improving in this respect, but the fact that the Indian War Loan last year, which was given every support in the way of publicity, only realised a very moderate total, shows the ground that still has to be covered before India's development meets with due support at the hands of Indians themselves. As yet Indians are almost wholly unversed in the proper application of their capital, and their education in this respect will take time. Pending an alteration in their outlook, British capital will be the mainstay of India's advancement, and if this is to be available to the extent that will be needed if Indian industries are to be developed after the war in accordance with expectations, it is obviously essential that nothing should be left undone to render Indian investments as attractive as possible, and this presupposes the removal of the double income-tax.

EXCESS PROFITS DUTY.

Among a number of awards in response to applications made to the Board of Referees for increases of the excess profits statutory percentage announced in the *London Gazette* is the following:—Gold Mining in Egypt and the Sudan—Application was made by Atallah, Limited, and the Sudan Gold Field Company in regard to the business of gold mining in Egypt and the British Protectorate of the Sudan. The percentage is increased to 27½ per cent., plus 1 per cent. and 2 per cent. respectively.

EGYPT'S PROSPERITY.

Prospects of the Oilfields.

In a note on the Budget of 1918 (says Reuter's Cairo correspondent), Sir William Brunyate, Acting Financial Adviser to the Egyptian Government, says: "The phenomenal increase in the price of cotton is maintained, and the country continues to profit by the presence of the British Forces. According to the estimates for 1917, the cotton crop yield amounts to £E50,000,000, as against £E39,000,000 in 1916."

After dealing with the various difficulties which Egypt has had to surmount in regard to the supply of fuel, he declared that the situation was mainly saved by the development of the Red Sea oilfields and the adaptation of engines to produce gas distilled from vegetable refuse. The latter, he added, had proved to be a most valuable discovery, and was due to the researches of Mr. J. Wells, former Inspector-General of the Mines Department. "There is reasonable hope," continued Sir William Brunyate, "that an adequate supply of oil will shortly be available. For internal consumption the Hurgada oilfield, discovered in 1914, is now yielding 15,000 tons per month. The balance of trade for the last three and a-half years represents an addition of £E50,000,000 to Egypt's capital resources. This prosperous situation is reflected on every side and mortgage companies find their loans repaid in advance. Demands for new loans have markedly slackened, and thus these companies have been able to invest £E7,000,000 in Allied War Loans. Bankers state that cotton loans up country are below normal and owners generally are able to carry their holdings. The Empire Cotton Growing Committee in London is strongly pressing the resumption of reclamation schemes in the Nile delta, which were suspended at the outbreak of war, but the whole labour resources of Egypt have been placed at the disposal of the military authorities and an undertaking has been given that no new public works will be undertaken involving a serious call for local labour, except in cases of grave urgency. Therefore the resumption of this work is impossible until the military embargo is removed."

Sir William Brunyate, referring to the large increase in the National Bank note issue, says:—"Apart from the larger cash balances at the banks it is clear that notes are now taking the place of gold for purposes of hoarding, but as the increased note issue is now represented by British Treasury bills and other securities deposited in London, an increase in the hoarded notes represents a corresponding increase in the resources which Egypt is placing at the disposal of the Allies." The Financial Adviser also strikes an optimistic note regarding the industrial possibilities of Egypt and suggests a systematic policy of research, pointing out that the mineral possibilities of the Red Sea littoral and the Sinai Peninsula offer a large scope for this purpose, instancing the phosphate rocks already working on the Red Sea littoral and the manganese mines of the Sinai Peninsula. The creation of a Ministry of Communications for Egypt, he concluded, is now under serious consideration. On the whole Sir William Brunyate's note is a most striking document, and creates the most favourable impression concerning the present position and the future prospects of Egypt.

INDIAN COTTON SPECULATION.

A settlement has been found for the financial disturbance caused by reckless speculation in Broach cotton (says *The Times* Bombay correspondent, in a message dated April 14). The Government has undertaken to issue an ordinance fixing the price, if the trade agrees on a price. The trade has agreed on 712 rupees (£47 10s) per kandy, and an ordinance is expected to be issued shortly. Government assistance is conditional on measures to prevent these annual orgies of speculation, arising from the absence of a periodical settlement of differences and the narrowness of the principal forward contracts. Forward business in next season's crop is not permitted until a clearing house is established.

GREEK CROPS IN 1917.

Western Greece Tobacco.

The crop of 1917 has been harvested and is now in the drying barns (says the United States Consul at Patras) in a recent report. It will not be ready to place on the market before May or June, 1918. And the better grades, which need considerable manipulation in order to prepare them for sale, will hardly enter the market before the fall of 1918, according to dealers' reports. The total crop, all varieties and grades, is now estimated to be about 13,500,000 lbs. The crop of 1916 was estimated at some 5,000,000 lbs., which was a decrease of about 15 per cent. from the normal crop, owing to unfavourable seasons. The great increase in the crop of 1917 is due to stimulation in production brought about by attractive prices.

The following table shows the estimated quantity of each grade produced in 1917, as well as the average prices of that grade per 100 lbs. quoted f.o.b. Patras, February 14, 1914, November 14, 1916, and December 31, 1917.

Grades.	Crop, 1917. Lbs.	Price per 100lb. Feb.14, 1914. $	Nov.14, 1916. $	Dec.31, 1917. $
Patofyllo	800,000	—	20.50	28.50
Tsembelia I.	1,200,000	24·28	52.25	(a)
Tsembelia II.	2,300,000	17.44	38.10	59.25
Tsembelia III.	2,400,000	10.60	22.90	45.50
Aromatic I.	3,000,000	40.01	68.25	123.00
Aromatic II.	2,000,000	33.17	53.75	110.00
Aromatic III.	1,000,000	15.05	40·90	96.00
Basma	800,000	48.22	64.00	123.00

(a) None offered.

The movement of tobacco to the American market has been very active as compared with former years, despite the abnormally high prices. Tobacco invoiced through the Patras consulate during 1917 was declared at a total of 549,038 lbs. net, with a value of $990,682, as compared with 95,753 lbs. valued at $42,853 during 1916. The above values include all packing charges, together with all insurance, but not ocean freights.

By a law which became effective November 23, 1917, a tax in the form of an export duty of 2 drachmae per kilo (8¾d. per lb.) is laid upon tobacco exported abroad from any Greek province, except that of Argolis-Corinthos. Tobaccos from the latter Province have a duty of 1 drachma per kilo.

Citrus Fruit.

Information obtained from sources believed to be reliable places the Greek orange crop for 1917 at 44,000,000 oranges (says an American Consular report), the yield of the different districts being estimated at: Messenia, 7,000,000; Lacedæmon, 12,000,000; Epirus, 5,000,000; island of Crete, 20,000,000. Second in popularity and use, although grown in perhaps greater quantity, is the mandarin, the 1917 yield of which approximated 45,000,000 pieces—15,000,000 in Laconia and Hermoni and 30,000,000 in Crete.

Lemons were produced as follows: In Hermoni, 25,000,000; Cyclades, 5,000,000; Euboea, 2,000,000; a total of 32,000,000. There was an excellent crop of lemons in Chios, but on account of the presence of phylloxera in the orchards, no exportation of fruit was permitted.

No statistics are obtainable relative to the crop of cedrats, as they are grown in northern Epirus, and communication with that portion of Greece is almost impossible. The citron crop, mainly produced in Crete, was excellent, but because of transportation difficulties and the scarcity of sugar for use in preserving, the crop is almost unsaleable.

Olives.

As was foreshadowed in a report from this office dated October 30 (says the United States Vice-Consul at Athens, Mr. C. M. Corepa), the Greek olive crop and olive oil yield has been seriously under the average. As a striking confirmation of this shortage may be noted the recent action of the Ministry of Revictualling and Supplies, which has raised the minimum price of olive oil from 3.20 drachmæ per oke (equal to 7s. 4d. per gallon), to 3.80 drachmæ per oke (equal to 8s. 8d. per gallon).

While it is possible that there is some hoarding of olive-oil and olives in the provinces according to the most optimistic estimate the olive-oil crop is perhaps 15 per cent. short, and the olive crop 10 per cent. below the normal production.

BURMA RICE CROP FORECAST.

The final forecast of the rice crop in Burma for the year 1917-18 states that the total area sown with rice in the province is estimated to be 10,702,443 acres, an increase of 132,199 acres over the area planted with rice in the year 1916-17 and an increase of 6,157 acres above the figures of the fourth forecast. The total matured area for the province is now estimated at 10,482,648 acres, against an area of 10,233,000 acres actually matured in the year 1916-17. For the whole province the yield is estimated at 95 per cent. of the normal, as against a yield of 93 per cent. finally fixed for 1916-17 after the crop had been threshed. The district figures indicate a provincial outturn of 92¾ million cwt. of cleaned rice, against last year's revised yield of 91½ million cwt., an increase of 1¼ million cwt. The surplus available for export is estimated at 2,700,000 tons of cargo rice, equivalent to 45¾ million cwt. of cleaned rice.

INDIA'S WHEAT CROP.

The area sown to wheat in Bombay and Sind, including the Native States, is reported to be 3,102,000 acres, as against the preliminary estimate of 2,609,000 and 2,879,000 acres last year's final total. The yield is estimated at 3,808,000 qrs., against 3,575,000 qrs. The total estimated yield in the Punjab and Bombay, the two districts for which so far estimates have been received, amounts to 20,015,000 qrs., against 16,800,000 qrs. last year.

INDIAN IMPORTS OF PLANTS.

The *Indian Trade Journal* of February 15, contains a copy of a Notification amending Notification No. 13C., dated November 7, 1917, in which it is provided, *inter alia*, that no plant shall be imported into British India by land or sea by means of the letter or sample post. The present Notrfication provides that sugar cane for planting, intended to be grown under the personal supervision of the Government Sugarcane Expert, may be imported by him by such post.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—

	1917. Francs.	1918. Francs.
April 13, 14	510,000	370,000
April 15, 16, 17	340,000	810,000

TRADE OF KHORASAN.

Marked Increase in 1916-17.

The value of the trade of Khorasan in the year ended March, 1917, excluding that through the parcels post, amounted to £3,339,702, as compared with £1,948,798 in 1915-16, says a Consular Report published in the *Board of Trade Journal*. The value of the trade through the parcels post rose to £283,694 from £30,282 in 1915-16. In estimating the importance of these figures the decrease in the local value of the rouble and the general increase in local prices must be taken into consideration.

The value of imports into Khorasan from India in 1916-17 was £120,239, as compared with £101,734 in 1915-16. The relative figures of imports from Afghanistan and Russia were £142,592 and £41,456, and £1,058,977 and £770,088, respectively.

The increase shown under Afghanistan was in reality an increase in imports from India; quantities of goods which had travelled from India by the Herat route, having been shown by the local Customs Department as imports from Afghanistan. The Herat route is the trade route to the East via Kariz. The distance between the two towns is 231 miles.

Imports from Russia.

It may be observed that the increases in value shown in the return of imports from Russia were in many cases accompanied by a decrease in quantity; the prices of certain articles having risen enormously. Where the reverse is the case, the aricles imported were of inferior quality. Certain articles appeared as fresh importations, such, for example, as "window glass"; these were imported to replenish exhausted stocks or in consequence of some prohibition which had been removed. Similarly, a large decrease or, in certain cases, an almost total cessation in the importation of an article represented the result of a prohibition newly introduced.

A drawback of seven-eighths of the Indian Customs duty is allowed on goods exported to Persia, and the North-Western railway allows a rebate of two-thirds, and the East Indian and Oudh and Rohilkhund railway a rebate of one-third, of the freight on goods for Persia.

The value of exports to India by the trade routes fell from £22,357 in 1915-16 to £9,194 in 1916-17, the principal articles which showed decreases being manufactured silk and provisions; but there was a rise of £10,000 in exports to Afghanistan, which includes the value of such articles exported to India by the Afghan route. Exports to Russia increased from £975,356 to £1,968,322. the articles which were chiefly responsible for this being wool, cotton, opium, and dried fruits, all of which were requisitioned in large quantities for military purposes.

The only item which calls for special remark is the enormous increase in the value of the opium exported to Russia by parcel post. The price per lb. rose phenomenally, and a much larger amount was required for military use.

Sir John Wolfe-Barry, chairman of the Eastern Telegraph Company and Associated Telegraph Companies, and engineer of the Tower Bridge and other works, who died January 22 last, aged 81 years, left £225,033 net personalty.

ENGINEERING NOTES.

Cheap Electricity for the Farmer.

The great advantages which the farmer obtains from the utilisation of electricity, when it is cheaply obtained, have often been pointed out in these columns in connection with various regions in the Near East, where electricity can be generated at a very low cost by the utilisation of the water-power from waterfalls and rivers. In Switzerland the farmers and peasants use electricity for many farming and domestic purposes at very cheap rates, whilst in America the price of electric power is within the reach of the purse of the poorest farmer, and, according to recent rates, a farmer can buy enough electricity with one penny to milk ten cows, churn 20 lbs. of butter, separate 1,400 lbs. of milk in a cream separator, do two large family washings, heat an electric flat iron for half-an-hour, run a sewing machine for four hours, pump water enough to last the family two days, and serve many other useful purposes. This is calculated at the rate of 10 cents per kilowatt-hour, the price usually charged in the United States, and a price which can be secured in Serbia, Macedonia, Greece, Egypt, Syria, Mesopotamia and elsewhere if the water force of rivers and waterfalls be utilised.

New Industries for Engineers.

The Minister of Reconstruction has appointed a committee of manufacturers and business men to consider the provision of new industries for the engineering trades. The duties of the Committee will be to compile a list of the articles suitable for manufacture by British engineers, which are either not made in the United Kingdom or were made in insufficient quantities, and for which there is likely to be a demand after the war.

An Appropriate Suggestion.

The Machine Tool and Engineering Association, which comprises some of the leading engineers of the United Kingdom, is preparing a report to be presented to the Minister of Reconstruction on the trading conditions which may be expected after the war. It is suggested that the Government should subsidise the industry to help it to fight American and German competition, and the proposal is meeting with a certain amount of support. At the annual meeting of the association recently, the project was ventilated and warmly recommended. The scheme formulated some two years ago, when ten British machine tool firms made arrangements whereby each should manufacture specific tools only in order to lessen internal competition, is now almost in working order.

Credit in Morocco.

Machinery manufacturers and exporters, who hitherto were not inclined to do business in the Moroccan markets owing to the long-credit system prevailing in that country, will be interested to hear that one of the results of the war has been practically to end that system. Almost all transactions are now conducted upon the basis of cash against receipt of shipping documents through local banks. For machinery, as well as other heavy goods, manufacturers require orders to be covered by confirmed credits opened in Europe or the United States. Moroccan buyers or merchants in such cases have been compelled to adopt this financial procedure, with the result that more ample facilities for banking and credit transactions between Morocco and Europe, as well as the United States, have been introduced.

Threshing Machines for Morocco.

Before the war, threshing machines of British make were in fairly wide use in Morocco. Some of them, operated by motor engines and used by native farmers in the country districts, have given satisfactory results as regards the quantity and quality of grain threshed. But it appears that the farmers find fault with them on the ground that they "do not tear the straw sufficiently small," as in the case of threshing done by oxen, treading out the grain in the primitive native fashion. This is a drawback from the Arab's point of view, as the straw broken by the feet of the oxen when threshing in the native way makes it tender and, in the farmer's opinion, sweeter and more suitable for fodder, the use it is put to in Morocco as well as in all other tropical or semi-tropical countries. The straw produced on the native threshing floor is the staple food for cattle and other animals during the dry months, and farmers think of that straw as much as of the grain, for sometimes, in case of shortage, they have to pay very high prices to obtain it from other farmers. The fault which the Moroccan farmers find with the British-made threshers is one which threshing machine manufacturers and exporters must take into consideration before sending out machines. Evidently some of the threshers which have been sent to Morocco are machines fitted only with straw-cutting apparatus, which can cut the straw in small lengths, but does not bruise it, a process which breaks and softens the hard straw and makes it similar to the straw produced on the native threshing floor. This is done by an additional fitting, the bruising apparatus, which works in conjunction with the straw-cutting arrangement. Thus, in taking an order for a threshing machine it is necessary to find out whether the machine is wanted with or without "straw cutting and bruising apparatus." New buyers or commercial houses which act for buyers living abroad do not always know these technical details, and as manufacturers receive and carry out the orders to the letter, disappointing results will often occur.

Enemy Preparations for Peace.

In an article on this subject, the *Neue Freie Presse* observes that Austrian and Hungarian financial houses have been considering various enterprises in the Balkans. A few establishments—sugar factories in Serbia and Bulgaria, a mill in Sofia, and a petroleum concern in Roumania—have been organised, and other plans are being worked out. Austrian manufacturers have made arrangements for the installation of machinery and plant which, in the case of certain large works, will involve the expenditure, within a comparatively short time, of a very large amount. The solution of machine work for manual work, begun under the pressure of war, will persist in peace-time. In coal-mining this transformation is very conspicuous. Electrically-propelled conveyances are replacing cars drawn by horses; and aerial ropeways are becoming common. In the State coal mines important mechanical plant has been installed. Similar transformations are reported by employers in other branches of industry; and from engineering shops it is announced that orders for cranes, lifts, etc., are so numerous that all of them cannot be executed. Agriculture alone, it is stated, is slow in adopting these new methods, for even now on quite large estates manual labour and horse-power are still used for driving threshing machines. But agriculturists are imbued with modern ideas.

EGYPTIAN COTTON CROP SOLD.

A Reuter message from Madrid states that the diplomatic representatives of Great Britain and Spain at Cairo have agreed to the sale to Spain of the whole of the forthcoming Egyptian cotton crop and the remainder of the last crop, dating from August 1, 1917, at the price of 42 talari (£8 8s.) per cantar.

LANCASHIRE COTTON.

Market Still Unsettled.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market has not yet recovered from the shock as a result of the slump in raw cotton rates last week, and trading has been of limited dimensions. The situation has been much discussed, but very irregular fluctuations continue to take place in raw cotton rates, and the changes are not easily accounted for. The tone remains unsettled, and buyers and sellers have not been at all in the mood to enter into negotiations of importance. Egyptian cotton rates have been much firmer than American descriptions. Difficulties in importing from Alexandria tend to increase, but the healthy demand on the spot in Liverpool continues. It is of interest to note that the Cotton Control Board has decided to take another census of raw cotton stocks in the hands of spinners. Egyptian yarns have been very strongly held. Full prices have to be paid for anything wanted. The engagements of producers remain very extensive. A quieter demand has again been experienced in cloth for Egypt. Something has been done in miscellaneous fabrics, but standard goods have not attracted much attention. Advices from India at the moment are not very encouraging, and dealers in the bazaars seem determined to carry on with such supplies as they have in hand until there is more certainty as to the future level of values in Lancashire. Demand for China has seldom been mentioned. More activity has prevailed in fine cloths and heavy materials for the purposes of the war, both the French and British Governments being in the market for substantial supplies. American yarns have tended to stiffen in price, and the scarcity of stocks has resulted in spinners being able to secure record prices for anything sold, but the turnover has been limited. There has not been much doing in export yarns.

SILVER CURRENCY FOR INDIA.

In a written reply to Sir J. D. Rees, who asked what measures had been adopted to provide India with a sufficiency of metallic currency, the Secretary for India says:—Between February, 1915, and March 31, 1918, 214,000,000 standard ozs. of silver of the approximate value of £34,800,000 were purchased for coinage. By exchange with the Imperial Government the Government of India acquired in 1917 £3,000,000 in sovereigns in India, against the like amount previously held by the Secretary of State in London; and under an Ordinance of June 29, 1917, they also acquired £12,800,000 of gold imported into India by private importers. This year £2,000,000 gold bullion has been acquired in India from his Majesty's Government. I may mention, too, that a Bill has just been passed through the United States Congress empowering the United States Government to melt and sell 350,000,000 dollars to pay for imports and for other purposes. It is hoped that a portion of this silver may be shipped by the United States Government to India.

COMPANY NOTES & REPORTS

Madras Electric Tramways.

The report for the year ended December 31 last shows a gross profit of £27,831. After debiting interest and London office expenses, making provision for the debenture stock sinking fund, and transferring £8,000 to depreciation and renewal account, there remains £13,522. Adding £4,315 brought in gives £17,837. The directors recommend a dividend of 4 per cent. on the ordinary shares, making 8 per cent. for the year, free of income-tax; transfer to general reserve fund £3,000; and carry forward, subject to excess profits duty (if any), £4,257. Traffic receipts and expenditure in Madras increased 10.3 and 6.8 per cent. respectively. Debenture stock fund sinking fund is now £9,129. Meeting, Dashwood House, E.C., 29th instant, 11 a.m.

Sudan Gold.

The report of the Sudan Gold Field Company, Ltd., states that 33,300 tons of quartz were milled during the year, which yielded 14,270 ozs. of bar gold, an average of 8.6 dwts. per ton. 22,000 tons of tailings treated produced 1,328 ozs. of bar gold, an average of 1.2 dwt. per ton. The total production of bar gold was 15,598 ozs. (or 14,115,464 standard ounces), of a realised value of £55,046. At December 31, 1916, £12,108 stood at the credit of profit and loss account, in respect of which a dividend of 1s. per share was paid on March 28, 1917, and after providing for the usual percentage to the directors and managers on such dividend, plus royalty due to the Sudan Government, there remained £4,936 to the credit of 1917. This, with the profit now shown of £11,194, placed at the disposal of the company £16,130. The following allocations have been made:—To income-tax, £1,478; to deposit provisionally with the Inland Revenue on account of excess profits duty for 1916, £3,561; to depreciation of buildings, machinery, and plant, materials in store, etc., £3,440; to surface and mine works, £2,000; to mining and general expenditure, £4,000. This leaves £1,649 to be carried forward. There being no immediate prospect of any mitigation of the adverse circumstances contributing to the less favourable result of the past year's operations; indeed, a probability that they will become more accentuated during the current year, the directors have decided that it would not be advisable to make any distribution on account of the profit now shown. Of the very moderate amount of working capital at the disposal of the company, some £12,000 had to be deposited with the Inland Revenue on account of a claim preferred for excess profits duty. In this connection, however, it will be gratifying to the shareholders, as it is to the directors, that the appeal against this claim has resulted in an award by the Board of Referees entitling the company to a refund of the amount involved.

General Ceylon.

The report of the General Ceylon Rubber and Tea Estates, Limited, states that the accounts for the year to December 31, 1917, show a profit of £51,183. After providing for London charges, there remains £34,831 at the credit of profit and loss, to which has been added £32,082 brought forward, making a total of £66,913 to be dealt with, and the directors now recommend a final dividend of 10 per cent., free of tax, which, with the interim dividend of 10 per cent., makes 20 per cent., free of tax, for the year. This leaves a balance of £30,313, which the directors propose to carry forward. The crops from the company's estates amounted to 1,363,764 lbs. tea, exclusive of bought leaf (13,460 lbs.), against 1,736,126 lbs. tea for the previous season. The estimates for 1918 amount to 1,572,600 lbs. tea. The rubber crop amounted to 1,085,478 lbs., against 901,963 lbs. last year, the average cost f.o.b. and net price realised being 10.76d. and 1s. 10.75d. per lb. respectively, against 10.25d. and 2s. 3.72d. for 1916. In accordance with the agreement for restricting rubber production, in which this company joined, the crop for the new season is confined to 868,000 lbs.

National Bank of Egypt.

The report of the National Bank of Egypt for the year ended December 31, 1917, states that the gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for bad and doubtful debts, amounts to £767,144 1s. 6d. After deducting from this sum: For directors' fees, £6,400, for current expenses, £207,828 0s. 10d., there remains an amount of £552,916 0s. 8d. The directors propose to allocate: For depreciation of Government and sundry securities, £31,415 3s. 11d., for depreciation of securities deposited in guarantee for the Note Issue, £2,250, leaving a net profit of £519,250 16s. 9d. In conformity with Article 49 of the bank's statutes a dividend of 4 per cent. is payable on the share capital, £120,000, and 10 per cent. of the net profit must be passed to the statutory reserve fund, £51,925 1s. 8d. After these statutory deductions there remains £347,325 15s. 1d., to which must be added the balance carried forward last year, £22,179 19s. 7d., making a total of £369,505 14s. 8d. The directors consider it prudent to allocate to special reserve to meet contingencies a sum of £200,000, which leaves £169,505 14s. 8d. From this amount the directors recommend the payment of an additional dividend of 4 per cent. on the share capital, which will absorb £120,000, and leave a balance to be carried forward of £49,505 14s. 8d. Each share will thus be entitled to a dividend of 16s., equivalent to 8 per cent. on the share capital. The general meeting was to be held at the head office of the Bank in Cairo on April 25.

Dividends, Payments, etc.

The directors of the Ooregum Gold Mining Company of India recommend a balance dividend for the year 1917 of 1s. 6d. per share, less income-tax at the rate of 5s. in the £, on both Preference and Ordinary shares, payable 27th inst. to holders registered 9th inst. The above dividend will make a total distribution for the year of 40 per cent. on the Preference and 30 per cent. on the ordinary shares.

The directors of the Dooars Tea Company, Limited, have declared an interim dividend of 1s. 3d. per share, less income tax at 5s.

The directors of the Bombay Electric Supply and Tramways Company, Limited, recommend a dividend on the ordinary shares at the rate of 10 per cent. for the year to December 31, 1917, together with a bonus of 4 per cent.

City of Bombay Improvement Trust Four per Cent Guaranteed Debentures of 1900.—Coupon due May 1, will be paid from that date at the Hong Kong and Shanghai Banking Corporation, 9, Gracechurch Street, E.C.3.

The directors of the Assam Company have declared an interim dividend of 7½ per cent., or £1 10s. per share, less tax, on account of the 1917 crop, payable to holders on June 1.

The Bank of England is prepared to receive the coupons due 1st proximo on Egyptian Unified bonds. The necessary lists can be procured on application at the Dividend Pay Office, 3, Princes Street, E.C.

The numbers are announced of 120 bonds, amounting to £6,560, of the Imperial Government of Persia Five per Cent. Sterling Loan, 1911, which have been drawn for redemption May 15.

The directors of the Agricultural Bank of Egypt recommend a dividend of 8s. per share on the Ordinary shares and £40 per share on the Deferred shares.

The directors of the Anglo-Egyptian Bank, Limited, have declared an interim dividend of 5s. per share, free of income-tax, being at the rate of 10 per cent. per annum for the half-year to February 28, payable on June 1.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for the week, 21 tons (previous week, 22 tons); Hurgada, 5,377 tons (previous week, 5,495 tons).

INDIAN TREASURY BILLS.

Up to April 13 Indian Treasury bills were sold to the following amounts:—Three months' bills, face value Rs.15,61,95,000; six months' bills, Rs.20,32,65,000; nine months' bills, Rs.8,43,40,000; twelve months' bills, Rs.90,80,000; total, Rs.45,28,80,000.

Lionda and Company, Ltd.,
34, Fenchurch Street, LONDON, E.C. 3.

Tel. Address: "EXPLIONDAC FEN, LONDON."
During the War, Tel. Address: "LIONDA THIRTYFOUR FENCHURCH, LONDON."

Export Department:
Heavy and Light Chemicals, Colonial Spices, Metals, Dried and Salted Fish, Matches, etc., Paper of any description, and all kinds of British, Scandinavian, Dutch and American Produce.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale of Hansen's, London, England

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been a better tendency in our market this week and a revival of business, but so far buyers are feeling their way very cautiously in view of the probability of some further important fighting on the Western front. The better tendency has been contributed to in a very fair measure by a renewal of demand from Egypt in certain directions, and undoubtedly there would be a very general and marked improvement in prices on any very favourable news.

Unifieds have risen two points to 88½, and a similar improvement has taken place in Egypt 3½ per cent. prefs.; which are quoted about 74 ex div. City of Alexandria Bonds have also appreciated half a point to 79, at which price a small transaction was carried through.

In Bank shares Nationals have been the feature, rising ⅜ to 18 on a somewhat tardy recognition of the excellent balance sheet and profit and loss account. Agricultural Banks are also 3-32 higher at 6 11-32. The dividend is now officially announced as 8s., against 7s. last year, and the profits show a very large expansion which would have enabled a very much larger dividend to have been paid had the Board so decided. The result of the very conservative policy now adopted will be that a very large amount will remain in hand to equalise dividends in years to come, should that be necessary. There has been an enquiry also for the Preference shares of this Bank, which, as a result, have improved ⅛ to 6 15-16 after some business at 6 13-16. Anglo-Egyptian Banks have also risen ¼ to 15½.

In Railways Delta Lights at one time changed hands at 6¼, but they are closing unchanged. Amongst land descriptions, some small transactions have taken place in Abonkirs round the current price as well as in Delta Lands. New Egyptians have improved 6d. to 17s. 3d., and United Egyptian Lands are 3d. up at 1s. 6d.

Amongst miscellaneous shares Alexandria Waters are ⅛ up at 12⅛, after some business round 12; but Khedivial Mails are 6d. lower at 37s. Salts and Sodas remain unchanged at 38s. 6d., after having been down nominally to 37s. 6d.

In Greek securities the market has continued very strong, and in several directions prices are again higher; but practically no business has been done as there have been no sellers. Monopolies, 1890's, and Fundings are all a point higher at 54, 58 and 55, respectively. The 1914 loan has been marked up two points to 73. In nearly all cases there are buyers about at the current prices but no sellers.

THE NATIONAL BANK OF GREECE.

According to the new regulations there must be two joint Governors of the National Bank of Greece. At a meeting of the shareholders of the bank in Athens M. Diomedes and M. Drossopulos have been elected Joint Governors of the Bank with the approval of the Greek Government. M. Diomedes is an intimate friend and supporter of M. Venizelos, having been Minister of Finance in the latter's Government, and is well known in Paris and London, which he has quite recently visited on a special mission. M. Drossopulos has been in the service of the National Bank for many years.

M. Neicoff has been appointed Bulgarian Consul-General at Kieff.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Samohi, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc., Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances &c.

NOTES OF THE WEEK.

The announcement of heavy rains in Mesopotamia one week seems now the invariable warning of a further military advance the next. The great chase of a couple of hundred miles or so a month ago followed a few days after a *communiqué* confined to meteorological matters; the advance towards Mosul, of which news was published on May 1, followed a similar routine. This new move has evidently been made in strength, and it is clearly of great importance. Kifri has been captured, and the Turks retreated towards Kirkuk, 150 miles north of Baghdad. But on April 29 our cavalry got astride the enemy's communications towards Tauk, and soon afterwards our infantry advanced against Tuz Khurmatli, and seized that town. Altogether 1,800 prisoners, a few guns, and some transport have been taken, and the pursuit of the Turks continues along the main road to the north, where it has now reached as far as the Tauk River.

This road, from Baghdad to Mosul, is the historic main route of traffic between Middle and Near East, the road by which the traders and conquerors for centuries have come and gone between Persia and Anatolia and Constantinople. Mosul itself lies 230 miles further up the Tigris than Baghdad, and British troops will probably soon be in occupation of the place, which is described by Sir Mark Sykes as a "foul nest of corruption, vice, disorder, and disease; neither art nor industry has flourished here for the last 200 years. The population is rotted by distemper, corrupted and rendered impotent by drink, stupefied and besotted by vice—the degradation is not only physical but mental, for tales are whispered of dark and hideous sorceries and incantations."

So evil a picture did Sir Mark draw of the place that he goes so far as to say that Mosul was a menace to the surrounding country, and that "the projectors of the new railway would do well to try to avoid the town." That was, of course, written some years before the war, when the last thing in the world that was expected was a British expedition up the Tigris; Mosul may not have changed much since then, but a British occupation would soon make a considerable alteration.

Some idea of the change it would effect may be gained by the despatch published in the daily Press from Mr. Candler in Mesopotamia, which usefully supplements the details given in last week's NEAR EAST by our own correspondent in Baghdad. The country is being rapidly drained and irrigated, and brought under cultivation, and the work of civilisation follows close on the heels of the Army. It is a revolution which will restore Mesopotamia to the rank of the great producing countries of the world, and make Baghdad again one of its leading commercial cities. There is no reason whatever why the process should not be extended further up the Tigris; indeed, it will be essential in the interests of the troops themselves that the first steps to that end should be taken immediately. It is, of course, unthinkable that this constructive work, which has made such great progress during the last year, should be abandoned at the conclusion of peace, or handed over to the Turks, who were incapable of beginning it, and would be incapable of maintaining it.

On the Palestine front General Allenby has again advanced north and east of the Jordan, and our mounted troops are within two miles of the Es Salt. Many prisoners have been taken, while west of the Jordan the village of Mezrah has been occupied. The Turks have reported a British request for an armistice, an example of imaginative fiction reared on a very slender basis of fact; further south our Arab Allies have again damaged the Hejaz railway and effectively occupied a section, fifty-three miles in length, to the south of Maan. The Turks must now find it increasingly difficult to put this line to military use.

The offensive on the Salonika front continues rather than progresses. Both sides have been active, and both sides—*mirabile dictu*—have claimed successes; the military critics have preserved a stolid silence. The upshot appears to be that the British, after doing some damage to the Bulgars, have again evacuated the unhealthy villages on the Struma which were given up a year ago.

The Turks have, meanwhile, reported the reoccupation of Kars, and in this connection the Petrograd report should be noted that a Turkish delegation has invited the Caucasian Republic to send representatives to Trebizond to negotiate peace with the Ottoman Empire. Since similar negotiations were begun, but apparently broken off owing to a divergence of opinion a few weeks ago, it by no means follows that the present invitation will result in any definite conclusion. The concerted German operations to the north, through the Crimea, have now reported the occupation of Theodosia, while the Russian Government in Petrograd shows itself increasingly disturbed at this advance through its territory—as also are the Germans, to do them justice, at the unexpected lack of food and booty in the Ukraine.

The Russian protests will probably be disregarded by Berlin, but that very fact may tend to hasten any regenerative movement in Russia, on which, however, it would be useless to build any hopes at the moment. A Cologne paper, meanwhile, reports that an extremely disturbed state of affairs exists in Baku, that the export of petroleum to the Black Sea ports has ceased, and that certain oil wells have been destroyed. Much as it goes against the grain to believe anything that is published in a German newspaper, there is probably an element of truth in this account. It will, of course, be made a pretext, if such were needed, for a German control of Baku; but the control was planned before the pretext was discovered.

The conference of oppressed Austrian races at Rome has been quickly followed by revolutionary outbreaks of Slavs, Czechs, and Poles in Austria itself. It is quite clear that the Austrian Empire as it stands is doomed, and the Emperor is evidently conscious of the fact. Much depends on his choice of alternatives—whether he subsides into the rôle of German vassal, attempts to stem the revolutionary tide by concessions to his non-German subjects, or simply drifts in the hope of something turning up. The first rôle certainly irks, the second does not attract him, the third is therefore more probable at this moment. But we may expect the drifting dinghy of Austrian statecraft to be violently agitated from time to time by its Imperial master as a fresh bend of the political river reveals some new racial snag.

Incidentally the political agitation in Austria has involved the Vatican. The Bishop of Laibach espoused the cause of the Jugoslavs, and it was subsequently stated that the Pope had ordered proceedings to be taken to discipline the patriotic prelate. A later denial by "a personage of Vatican diplomacy" that any such action had been taken did not read very convincingly; and, in view of the known influence of Austrian statecraft at the Vatican, it would be well to await further developments of the case. In the meantime the Bishop of Königgratz, in the heart of Bohemia, has also entered politics, and demanded the formation of an independent Slav State, including the German districts of Bohemia, Morava, and Silesia. It will be interesting to see whether this priest is also dealt with; Bohemia has not always been an easy country for the Church to control, and they have not forgotten history altogether at the Vatican.

The Germans have obligingly explained their ambitions in Asia to the world, and they have now made clear the position of Roumania in their scheme of eastern conquest. In the *Deutsche Politik* a writer indicates that "Germany's West Asiatic road is now fortified by the extension of Turkey and the incorporation of Roumania." While Turkey is emerging from the war with large gains from Russia—the losses to England are tactfully ignored—a "series of border peoples" has been created subsidiary to the Central Europe Alliance, and stretching from Finland to Central Asia. These will assist in "broadening Germany's narrow Balkan road through Bulgaria and Turkey to the broad coastal route through Lithuania and the Ukraine, and through Caucasia and Central Asia. The inevitable result is that Roumania, thus ringed in, must finally be incorporated in the connected system of Central Europe and Near Asia."

This writer, who at least does not suffer from limitation of vision, predicts that the Black Sea will become a Turco-German lake, and that, "in spite of Venizelos and Pashitch," Greece, Serbia, and Montenegro will be brought into the same system. This is only the beginning, however; there is to be "a further extension of the Turkish prestige into Central Asia. The December treaties spoke only of Persia; the March treaties now speak also of Afghanistan." And General Marshall, we may add, has in April done something more than speak—he has advanced another wedge between the Germans and their distant goal. It was, perhaps, an unfortunate moment for a German writer to prophesy the increase of Turkish prestige in Central Asia.

These views, which are undoubtedly shared by the German Government, will presumably be pressed upon the Roumanian Government. Herr von Kühlmann, who is reported by his enemies in Berlin to have found time for love as well as diplomacy during his recent visit to Bucharest, returned to that city last Sunday with Baron Burian, and the whole question of the peace negotiations with Roumania is to be gone into again. But various things have happened since the negotiations were mysteriously broken off—among others, that on April 9 the Bessarabian National Assembly voted for union with Roumania by 86 votes to 3, and a few days later the Bessarabian Minister proceeded to Jássy to present the homage of the Bessarabian people to the King and Queen of Roumania. Various celebrations have been held to commemorate the event, which springs freely from the desire of Bessarabia—to use the political slang of the day, it is an act of "self-determination."

How the German negotiators will take this act remains to be seen. There are some indications that they may oppose the union of the two countries, and it is also still possible that the Austrian determination to make King Ferdinand abdicate may be used as a lever to oppose the union. It is suggested, too, that Germany is bitterly disappointed, that even the Marghiloman Government has turned against it, and that it desires to place M. Carp in office, since he is relied upon as a thorough-going pro-German. The Carp Cabinet would not survive the evacuation of the German troops.

The German idea that Roumania may be considered as a "converted enemy," a theory adumbrated in *Deutsche Politik*, becomes increasingly ludicrous, and reminds one again of Prince von Bülow's proverbial remark, "Politically we Germans are asses." They may build magnificent schemes of domination in Near and Far East to their hearts' content, and they may control the economic and interfere in the political life of the countries concerned. But they will find themselves steadily confronted with a silent strike of all the best elements in the countries which they have humiliated, and at the first opportunity everybody will rise against them and curse them. The Germans have brought their fate upon themselves by their own acts, but for the time they are blind to its consequences. May they long continue blind to a system which has left them no friend outside Finland!

There have been one or two amusing episodes in Bulgarian politics. A suggestion appeared some days ago in a Berlin newspaper that Bulgaria demanded the cession of Salonika, but this ambition, it was said, could not be gratified, because, "in the event of England refusing to surrender Cyprus, Malta, Gibraltar, Egypt, and the occupied districts of Palestine and Mesopotamia (*sic*), Salonika was to be made a free harbour and a naval base of the Central Powers, while left nominally in Turkish possession." This admirable *non sequitur* might have passed as a joke—it has at least been appreciated in London as a pleasant jest—but the Bulgars took it seriously, and declared that they had no desire for Salonika; what they really want, according to Dr. Tontcheff, Bulgarian Minister of Finance, is a common frontier with Hungary, and part of Serbia—e.g., the Morava, "which suffices us."

For all that, it is matter of notoriety that Bulgaria desires Salonika, and has done so for years. But if Greece were to be dispossessed by the Central Powers, there is a more potent claimant in Austria, whom Bulgaria cannot well offend; hence this modesty. It appears that Bulgaria will also have to resign to Turkey the Karagatch railway and the left bank of the river Maritza as far as Kuleli-Burgas, this being demanded by Turkey in compensation for Bulgaria's acquisition of the Dobruja. There is clearly a certain amount of quarrelling still going on in the Central Alliance.

The categorical assurance which the United States Minister at Athens has made is certain to be well received in Greece, and to have a considerable rallying effect upon Greek public opinion, in the event of it having been at all influenced by the recent intrigues of King Constantine. The assurance is to the effect that the Government and people of the United States are determined that the integrity of Greek territory shall be preserved, and Greek rights secured in the final peace negotiations.

India will again be worthily represented at this year's meetings of the Imperial War Cabinet, at which the Secretary of State will be supported by the Maharaja of Patiala and Sir Satyendra Sinha, the former speaking for the Princes, and the latter for the people as a whole. Sir Satyendra's selection needs no justification, for during last year's meetings he successfully established his claim to be regarded as a statesman of the Empire, and if any criticism is heard it will come from that section of Indian politicians who have borrowed the principle of rotatavism along with other Western ideas, and think that everyone should have his chance in turn. The theory is sound enough so far as politicians are concerned, but statesmanship is an altogether different matter; you may use up a new President of the Congress every year, but for the business of the Empire it is wiser to keep the best man when once he has been found.

For this reason we should have welcomed the return of the Maharaja of Bikanir, who visited this country a year ago. Autocrats have, however, duties which cannot be laid aside without more or less serious inconvenience, and since a new selection has been found necessary, no better choice could have been made. The Maharajah of Patiala, as the head of the Sikhs, stands for the modern fighting races of India, just as his predecessor represented the ancient Rajput chivalry, while his latest undertaking to raise three additional battalions of infantry furnishes fresh evidence, were fresh evidence needed, of his whole-hearted devotion to the cause of the Empire. His presence will strengthen the position which India has already secured in a region where action counts for more than words.

The announcement of these selections makes a noteworthy departure from precedent in referring to the "Indian States," entities which have hitherto been described officially by the dubious adjective "Native." We notice that a Bill recently introduced in the Legislative Council at Delhi provides for the elimination of this epithet in regard to the Army; it has already been discarded in ordinary administrative use, and may now be definitely written down as obsolete. May we suggest to Indian politicians and journalists that in recognition of this concession to modern sentiment they should abandon the use of the word "Colonial" as applied to the affairs of the Dominions? The two epithets stand on the same footing: etymologically and historically accurate, they have in process of time become distasteful to the people principally concerned, and that is an entirely adequate reason for their discontinuance.

We have referred to the representatives of the Indian States and the Indian people. Last year there was also a representative of the Indian bureaucracy, and the question is being asked why no corresponding appointment has so far been announced. Possibly Mr. Montagu, fresh from his visit to India, feels himself qualified to dispense with such assistance, or perhaps he is content to rely on the presence of Sir James Meston, who is supposed by the public to be enjoying a holiday in this country; but we suspect the true explanation to be that the men whose counsel would be best worth having are so fully occupied in their own provinces that it would be a mistake to bring any of them over unless the need were absolutely unavoidable.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 18.

The Duke of Connaught.

The Duke of Connaught spent several days in Alexandria, where he held a presentation at Mustapha Camp, in addition to being present at a mass Church Parade at the same place. He also visited the various hospitals, as well as Victoria College, which he inaugurated nine years previously. His Royal Highness then left by special train for Ismalia, where further inspections and presentations of medals and decorations took place, and whence he proceeded to General Allenby's headquarters in Palestine.

The Nile.

Sir Murdoch Macdonald, Adviser to the Ministry of Public Works, has returned to Cairo from his trip to the Sudan. The preliminary work which has already been started in connection with the Upper Nile projects is in full progress, and excavation of the foundations for the dams is proceeding apace. The operations so far carried out quite fulfil the expectations of the engineers. The Nile readings continue to be very satisfactory. The White Nile is very high compared with recent years, and parts of the river and its tributaries which are usually unnavigable at this date are still open to traffic. The prospects of summer water are excellent; which is very comforting in view of the extent to which the country now depends on its own food production.

Egypt's Contribution to the War.

The past will stand as an eventful week in the annals of this country. In the first place, we have had the vote of £E3,000,000 made by the Council of Ministers towards the War expenditure of the British Empire; and this has been followed by the announcement of the arrangement under which the cotton crop is to be purchased for account of the British and Egyptian Governments.

As regards the Egyptian contribution towards the British Exchequer, it has taken the form of writing off an amount of £E3,000,000, which appears in a special suspense account as a charge against the British Government. It should be explained that since the early days of the war the Ministry of Finance has kept a suspense account, to which have been debited the cost of all the services rendered and material supplied by the State Railways and other administrations to the British Army. It was understood that this account should not be settled until the conclusion of the war, when it would be easier to determine whether the items were a fair charge to the British taxpayer, and, if not, what proportion should be borne by the Egyptian Government itself. Although some of the work, executed primarily for the military authorities, was of a nature ultimately to benefit this country, and in the case of such items a portion, if not all of the cost might equitably be considered as chargeable to the Egyptian Treasury, for the most part the total of this account, which at present amounts to £E3,000,000, approximately, is undoubtedly imputable to the British taxpayer, and the decision constitutes a gift on the part of Egypt of that sum to Great Britain. In addition, the Budget for the new financial year is to have a credit of a further £E500,000 inscribed in it for the same purpose.

The reasons given in the Council for this decision are that, in view of the immunity enjoyed by Egypt from the terrors and sufferings inseparable from invasion and the benefits which the country had derived, thanks to the protection afforded by the British Army and Navy, the time has come for Egypt as a whole to make some greater contribution to the general cause. The spontaneity of the decision, which I have reason to believe owes its inception to the initiative of the Prime Minister, H.E. Hussein Rushdi Pasha, and which was taken unanimously by the whole Council, is a very welcome sign. Combined with the fact that it has been received with open approval by all sections of the local community, it shows that the Egyptians, who

Digitized by Google

have already displayed their sympathy by their generous contributions to the Red Cross, realise that Great Britain, in fighting for the liberties of smaller nations, is, after all, defending those of the children of the Nile, and that they are prepared to shoulder their share of the burden which the British Empire has assumed.

The Purchase of the Cotton Crop.

The announcement with regard to the cotton crop was not altogether unexpected. In the first place, the visit of the Commission, consisting of Sir Hubert Llewellyn Smith and Messrs. Fountain and Carter, albeit nothing official was known outside, was considered as portending some decision in connection with the cotton situation; whilst it had been becoming more and more obvious to those who have been watching developments that the State purchase of the cotton-seed crop was bound to be followed sooner or later by a similar step in the matter of cotton itself. The conditions under which the scheme is to be carried out are most favourable to this country. The purchase price is a very generous one, and allows an ample margin of remuneration to the growers, who will find a ready and steady market for their cotton in the same manner as they have obtained one for their cotton seed since last September. In return for the limitation of its profits, the country is to be accorded equal rights with the Allies in the repartition of the coal and raw material which it requires. The provision for the division of any profit that may be derived from the sale of cotton between the two Governments and the allotment to the Egyptian Government of any profit resulting from any eventual increase of the sale price means that the Egyptian Exchequer will obtain its rightful share of the profits made hitherto by the middle-men out of the handling of the crop, of which not one penny piece could under the circumstances be touched by local taxation, either direct or indirect; whilst the decision not to raise the purchase price, in the event of an increase in the sale price being decided upon, is an exceedingly wise one, since it removes all motive for speculation, from which the local trade as well as the growers have suffered very much in the past. The Government has thus acquired control over the entire cotton crop, and, as the official explanation very rightly points out, the scheme, whilst providing ample profits for the grower and enabling Egypt to take her proper place in the pooling of resources adopted by the Allies, cannot fail in the long run to conduce to greater stability and prosperity of the country's most important crop.

As far as can be gathered at present the new arrangement has been most favourably received. All the details have yet to be worked out, but the composition of the Cotton Control Board is such as to afford an assurance that the scheme will be put into effect in a manner satisfactory to all elements concerned.

One important question will have to receive early consideration. It is the price which the growers ought to be paid for their crops on the field. The purchase price of 42 dollars is, of course, for ginned cotton at Alexandria, but many of the growers, especially the smaller fellaheen, who predominate, do not gin their own crops, but sell them in an unginned condition. The agricultural class is to-day not so driven to dispose of its crops in order to pay debt and tax instalments, etc., as it was prior to the war; and, therefore, the danger of its falling a prey to the middle-man is by no means so great; still, as the general policy nowadays is to protect both the producer and the consumer and to limit the profits of the intermediary, some step in the direction of ensuring the payment in the field to the grower of an equitable price for unginned cotton will have to be taken. As the Alexandria purchase price for seed is also controlled, this ought not to be difficult.

An interesting point in the official announcement is the mention that the Cotton Control Board will have power to make use of any storage accommodation which might be necessary. The local situation as regards stocks is still far from satisfactory, and since there appears little prospect of its being sufficiently relieved between now and the autumn by the provision of shipping to permit of the balance of the old crop of cotton and seed being exported, and since the retention of seed in the interior will seriously interfere with ginning operations and consequently with the smooth working of the scheme as far as concerns the growers and ginners, it follows that this provision of storage accommodation will have to be extended to seed as well as cotton. Thus the powers conferred on the Cotton Control Board will tend to assist the Cotton Seed Control Board in its work, and overcome the difficulties which it has encountered in connection with the reception of the cotton-seed crop in Alexandria.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, April 6.

The Duke of Connaught's Visit.

The visit of H.R.H. the Duke of Connaught to Athens has evoked much enthusiasm, and has been the outstanding event of the week. His Royal Highness, who was the guest of the British Minister, called on King Alexander soon after his arrival, and the call was returned in the afternoon.

The following day the ceremony of investing the King with the Order of the Bath took place at the Palace at eleven o'clock. Shortly before that hour four Court carriages proceeded to the Legation to convey the distinguished party to the Palace with several Government officials. The Duke was accompanied by the British Minister, the Earl Granville, and the diplomatic staff of the Legation, all in full uniform. At the Palace a detachment of Evzones rendered the honours. In presenting the decoration, the Duke said that he was particularly happy to have been deputed by the King of England to perform this duty, and that the King hoped this would be considered a pledge of the sentiments of sympathy which he entertains towards his Hellenic Majesty. The Duke hoped that his visit to Athens would be taken by King Alexander, as well as by the Hellenic people, as a proof of the long ties of friendship which unite the two liberal countries. In his capacity of Head of that Order he was particularly happy to present the insignia, and he assured his Majesty of his ardent hopes, as well as those of King George, for the prosperity of his Majesty.

Anglo-Greek Friendship.

In his reply King Alexander said he was profoundly touched by these kind expressions, and he thanked King George and the glorious British people for the honour they had been so good as to confer on him. The King said that powerful England will find in the Greek people and in himself a faithful ally and friend, and that the glorious but at present small State of which he is the head will do all that is possible with the view of responding to the noble friendship and sympathy of the English people.

King Alexander then conferred the Cross of the Saviour on Colonel Murray and Captain Ascherof, the Duke's aides-de-camp.

That afternoon the Duke visited some of the sights of Athens and had tea at the Palace. In the evening the King entertained him at dinner, the British Minister and several other distinguished guests being present.

On Wednesday a review of the Greek Boy Scouts took place outside the British Legation, proving quite a pleasant little function. In the afternoon a review of the troops stationed here was held on the Champs de Mars, and attracted large crowds, the principal streets being decorated for the occasion. That evening King Alexander dined at the British Legation, and the dinner was followed by a brilliant reception of the members of the diplomatic body, the naval and military missions of the Allies, and the staff of the Legation. The handsome uniforms and the beautiful dresses of the ladies made up a scene such as Athens loves, and Lord and Lady Granville's guests spent a most enjoyable evening.

The Duke left Athens the following morning. His visit was marked by great cordiality, and his three days' stay in the Greek capital should go far towards extinguishing the smouldering embers of pro-Germanism.

Easter Celebrations.

Easter was celebrated under a temperature more resembling Christmas, the surrounding mountains being covered with snow. Chaplain-Major Pilley, who officiated at Christmas, again came from Salonika to conduct the Easter services, and attracted large congregations on Good Friday and on Easter Day at St. Paul's Church. In the afternoon a double christening took place, the infant sons of Lieut. Arthur Hill, R.N.V.R., and of Mr. Albert Maltass being baptised.

THE CAPITULATIONS COMMISSION.

REPORT ON PAST YEAR'S WORK.

(From Our Own Correspondent.)

Cairo, April 1.

A highly interesting note on the work which it has been able to do so far has been published by the Capitulations Commission. This Commission, which was appointed in March, 1917, by decision of the Council of Ministers for the purpose of considering the reforms which the abolition of the Capitulations might render necessary, has been composed of T.E. Yussuf Wahba Pasha, Adly Yeghen Pasha, Abdel Khalek Sarwat Pasha, Ministers of Finance, Education and Justice respectively; Lord Edward Cecil, Financial Adviser; Sir William Brunyate, Judicial Adviser; Mr. James Haines, Adviser to the Interior; M. Francis Laloe, Vice-President of the Mixed Court of Appeal; and M. Eduardo Piola Caselli, Sultanian Adviser. As a natural sequel to changes in the Financial and Judicial Adviserships, the gentlemen officiating in those capacities have replaced the original holders of those offices. Sir William Brunyate has acted as Commissaire Rapporteur, and M. J. Wathelet, Secretary to the Judicial Adviser, has acted as Secretary-General to the Commission, which has held no less than seventy-five sittings since its appointment.

Judicial Organisation.

A draft Judicature Law providing for the setting up in Egypt of a system of unified courts to take over the whole of the jurisdiction exercised by the Native Court, the Mixed Courts and the Consular Courts, as also the penal jurisdiction of administrative commissions, had been prepared, and the Commission's activities have been directed to the consideration of this project, the main lines of which are as follows:—

In matters of personal status the existing jurisdiction of the Mahkamahs Sharieh as regards Mohammedans is to be retained, but the Meglis Hasbys (Courts of Wards) are to be suppressed, and their jurisdiction is to be handed over to the new Courts. Likewise as regards non-Moslems, the councils of the religious communities are to be retained, but their jurisdiction in matters of guardianship and curatorship are to be assumed by the new Courts. The Consular Courts will provisionally retain their jurisdiction in matters of personal status concerning the subjects of the Capitulatory Powers so long as those courts continue to exist. As regards matters of personal status coming within the jurisdiction of the new courts, persons subject to that jurisdiction will have the right to claim the application of their own personal law.

The courts which it is proposed to set up include a Supreme Court sitting in Cairo, four Courts of Appeal, sitting in Cairo, Alexandria, Mansura and Assiut, eight Central Courts, sitting in those four towns as well as in Tanta, Zagazig, Beni-Suef and Luxor (or Kena), Mudiria Courts sitting in the Governorates and Mudirias, and Markaz Courts sitting normally in each markaz.

As regards jurisdiction to be enjoyed by the various new courts which it is proposed to set up, the Supreme Court will have powers going rather beyond those of a Court of Cassation and approximating those of a Court of Review. It will decide not only questions of law, but within certain limits also questions of fact, and it will be able to give a final decision on the whole case, if it is ripe for judgment. In addition, the Supreme Court will be entrusted with general supervision over the working of the inferior courts; it will take part in the preparation of their internal regulations, and it will exercise disciplinary control over the magistracy.

The Courts of Appeal will be entrusted with the service of the Courts of Assize and with the hearing of civil (including commercial) appeals from the Central Courts. The Assize Courts will consist of four magistrates, and an equal division of opinion as to any questions of fact, or as to the sentence, will be interpreted in favour of the accused.

The Central Courts will be entrusted with general civil jurisdiction in first instance, save as to matters within the jurisdiction of the Markaz Courts, and also with the hearing of civil and commercial appeals from the Mudiria Courts. The latter will be served by a judge of the Central Court delegated for the purpose, and will have civil jurisdiction up to £E200, and criminal jurisdiction in respect of offences not expressly reserved for the Assize Courts; the maximum sentence which these courts can inflict being fixed at three years' imprisonment. The Mudiria Courts judges will also hear civil and commercial appeals from the Markaz Courts, for the general supervision of whose work they are intended to be responsible. The Markaz Courts will also be served by judges sitting alone, and they will have civil jurisdiction up to £E50, with criminal powers up to three months' imprisonment (or six months in case of theft), or a fine of £E20.

It may be of interest to mention that the present system of Courts consists of Mixed Courts—a Court of Appeal in Alexandria, and Courts of First Instance in Cairo, Alexandria, and Mansura, with a delegation at Port Said; native Courts—a Court of Appeal in Cairo, Courts of First Instance in Cairo, Alexandria, Tanta, Zagazig, Mansura; Beni-Suef, Assiut, and Kena; ninety Summary Courts in the various Markazes, with civil jurisdiction up to £E150, and dealing with misdemeanours and police offences; Markaz Courts in each Governorate, dealing with minor misdemeanours and police offences; and 236 Cantonal Courts. Courts of Assize are constituted from among the Native Court of Appeal judges, and both the mixed and native systems have a Court of Cassation of their own. One interesting point about the proposed new Courts is that the defect in the existing system, viz., the absence of any jurisdiction of criminal appeal on facts, is to be remedied. The project provides for the resurrection of the Markaz Courts, which were suppressed, except in the Governorates, on the creation of the Cantonal Courts; but it is to be assumed from the wording of the note that the latter will still remain.

Judicial Safeguards for Foreigners.

Provision is made for judicial safeguards for the protection of foreigners, and a special chapter in the draft deals with this subject. Generally speaking, a foreigner entitled to privilege as such will have the right to claim that any civil or criminal case in which he is concerned shall be tried by a foreign judge or by a chamber in which the foreign judges are in the majority (in the case of an Assize Court one-half at least), and also that any inquiry into an offence committed by him shall be conducted by a foreign magistrate. Provision is also made for protection in the case of the issue of warrants for arrest, search, etc. In the case of the Supreme, Appeal, and Central Courts, where the President is an Egyptian the Vice-President will be a foreigner and *vice-versâ*.

With regard to the procedure to be followed in criminal cases, it is proposed that a preliminary inquiry shall be held by a magistrate whenever circumstances make such inquiry desirable before trial. Prosecutions will in general be in the hands of the Attorney-General's Department, the members of which will not be magistrates, but will be administratively under the Ministry of Justice. Before the Markaz Courts the Department may be represented by officers of the Judicial Police specially delegated for that purpose; private prosecutions before the Lower Courts may be permitted with the sanction of the Court and without its being necessary to claim civil damages.

The Commission reports that it has examined the draft law in connection with the various matters which have formed the subject of its discussions, and that practically the whole of the ground has been covered. Subject to the suggestion of minor amendments on points of detail, and to occasional dissent on other minor points by individual members, the draft as it stands has been unanimously approved by the Commission; and although it has throughout assumed that in the absence of practical unanimity on its part its recommendations will be subject to critical re-examination, in practice no such divergence of views has occurred as to call for the application of this principle.

The Commission has discussed at length the provisions as to the working of the new Courts in criminal matters. It approves the system of concurrent jurisdiction set forth in the draft, and with regard to the difficult and complicated problem of *flagrante delicto* it is of opinion that the powers entrusted to officers of the judicial police should be defined by reference both to the nature of the offence and to the standing of the various categories of officers. Much discussion has been devoted to the duties of the Attorney-General's department in the preliminary proceedings, the means of recourse open to the parties at the time of the inquiry, the relations of the penal to the civil action, the procedure to be followed when the author of the offence is unknown, the withdrawal and abandonment of prosecutions, the examination of accused persons, their right to give evidence, etc.; and with regard to the safeguards for the protection of foreigners the Commission is of opinion that those set forth in detail in the draft are adequate. The jurisdiction of the all too numerous patriarchates, vicarates, and rabbinates existing in Egypt, and the internal organisation of the religious communities and the administration of their property were discussed, and the Commission, while postponing making any formal proposals regarding these matters, nevertheless expresses the view that the jurisdiction of these bodies should be reduced as much as possible.

(To be continued.)

CORRESPONDENCE.

BIBLICAL PROPHECY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have no intention of holding a newspaper correspondence with "Corsair," whoever that writer is; but in justice to myself I ask for space to reaffirm my statements: the 1335 prophecy in Daniel xii. 12 was fulfilled to the minute in October, 1917. The Holy Land passed out of the Turk's power, and Turkey fell, never to rise again as an Empire in the world. All that is happening now is smoke and noise at the end of the event. The Papal power was predicted to cease in July, 1870. It took place to the day, but the Powers of Europe did not recognise the fact for some time. Why does your contributor dabble in a subject he evidently knows nothing about? There has been no "inevitable hedging" on my part. If your readers wish to do me justice I ask them to read my two books, "The Bible and the War" and "Revelation in the Light of the War" (Garden City Press, Ltd.). My advice to "Corsair" is not to touch the subject until he has studied it. The people to whom a discussion of the contents of the inspired Word of God gives offence are not religious. "Corsair" is wrong in any such description of them, whoever they are.

I am, etc.,

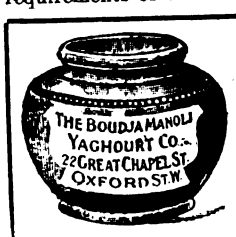
WALTER WYNN,
Editor, *Young Man and Woman.*

31, Temple House, Tallis Street, London, E.C.4.
April 26, 1918.

["Corsair's" reply to the above letter will be found on page 364.—ED.]

BATOUM.

The port and fortress of Batoum, which is situated on the south-eastern shores of the Black Sea, and which the Turks claim to have taken on April 15, after stubborn defence by the Georgian Army, is one of the chief ports of Georgia and the whole of Trans-Caucasia.



According to the decision of the Berlin Congress in 1878, this town, together with the district of Batoum, was ceded by Turkey to Russia, and was occupied by her on August 28, 1878. In this way one of the oldest provinces of the kingdom of Georgia was liberated from the oppressive rule of the Turkish invader. At the Peace Conference of Brest-Litovsk the Bolsheviks surrendered Batoum to the Turks behind the back of the Trans-Caucasian Republic. This decision was not recognised by the Republic, and the Turkish invasion is being resisted to the utmost by the Georgian troops. In taking Batoum the Turks were very substantially assisted by the Black Sea Fleet, controlled by the Bolsheviks.

The port of Batoum has a population of 30,000 inhabitants, mostly Georgians. It is the residence of the Georgian Bishop of Batoum, and a most important point in the proposed Odessa-Batoum-Baku line leading towards Afghanistan and India, which the Germans and Turks hope to control. The port, from the time of its liberation from Turkey up to the beginning of this war, has been the chief town for exports from Turkestan, Persia, and Trans-Caucasia, and was also used as an importing centre for the same districts.

Its importance becomes more apparent when we consider that it is a terminus of the Trans-Caucasian Railway from Baku, which is about 600 miles long, and also of the pipe line connecting the oilfields of the Baku district. There is also direct connection by rail from Tiflis with an important town in the north of Persia—Tabriz. From Baku, across the Caspian Sea to Krasnovodsk, there is direct connection with the Trans-Caspian Railway line, leading towards the frontiers of Afghanistan and Chinese Turkestan.

It is obvious that if mastery of this district and lines of communication are obtained by the Central Powers they will have a quicker and more convenient road towards India, and thus be in a more favourable position to cause annoyance, if not anxiety, to the British Empire. The Allies should remember that small nations like the Georgians and Armenians are trying to defend this line, and that they ought to be given the necessary assistance without delay.

The Zionist Commission recently returned to Jerusalem from a tour of several of the Jewish colonies in Palestine, where it was received with great enthusiasm, and found the population happy at their liberation by the British. The condition of the colonies, with the exception of Petach Tikvah, was satisfactory, but there is need of men, and cattle and equipment are lacking. It is considered that financial assistance for the purposes of reconstruction and reparation can best be rendered in the form of long-term loans. The Commission, however, is investigating the requirements of the colonies, and will report at a later date.

EARLY BABYLONIAN LAWS.

Dr. E. W. G. Masterman is delivering a course of lectures on Tuesday afternoons at the London University, his subject being the Near East in Ancient Times. In his last lecture he gave an account of the laws of Babylonia as codified in the reign of Hammurabi—the Amraphel of the Bible—who reigned about 220 B.C. An extraordinary conical stone was found by a French explorer, M. de Morgan, having on it a representation of the great king making obeisance to Shamash, the Sun God. Arranged on the sides of the stone was an inscription. This had originally contained 282 columns, but six had been cut away by the King of Elam, who had captured the stone and taken it away to his palace at Susa. The code of laws was a perfect revelation of the state of civilisation to which the people had risen. It showed that regular judges were appointed, and that all the legal decisions of these judges were inscribed in archives, with the names of judge and witnesses. It was the law of the country that a legal decision once given was irrevocable. A judge who reconsidered a decision was liable to heavy punishment. If he had wrongfully inflicted a fine, he paid twelve times the amount. Assessors sat with the judge. A girl had not a free choice in selecting a husband, but marriage was extraordinarily sacred. The punishment for adultery was the drowning of both parties. The wife was by no means a chattel of the husband. If deserted, she had the right to marry again. Supposing he was captured by brigands or in the wars, if he had left property behind sufficient to support the wife, she had to wait for his return; but if he had left her indigent, she was free to marry again. A divorced woman and her children had to be supported. She could not be divorced because of an incurable disease. She could divorce her husband for misconduct, and demand the return of the dowry he had received with her on marriage. There was a class of temple votaries comparable to the vestal virgins of Rome. These had to maintain an especially high standard of virtue and propriety. If, for example, one of them was found going into a beershop she was liable to severe punishment. Class distinctions were very marked. There were three classes—nobles, slaves, and a kind of middle class, whose name suggests at once poverty and freedom. The slaves were not badly treated. A slave might marry a free woman, in which case the children were born free. He had the right to acquire property, and if he accumulated sufficient he might buy his freedom. If captured in war and then liberated, he was freed thereby from servitude to his original master. The wealthy noble class had at once special rights and special disadvantages. He who injured one of these was more severely punished than if his victim belonged to a lower class; but, on the other hand, a nobleman caught stealing was more severely punished than an inferior convicted of the same offence. The middle class were probably usually small traders, but presumably might rise to a higher position. There were two classes of merchants—those who went with the caravans and those who ventured their property but remained at home. If the travelling merchant was attacked by robbers and the property entrusted to him was carried off, if his payment was to have been by a share of the profits it was held that he had ventured his life and the other partner his goods, and that the partner who had provided the goods must bear the loss; but if the travelling merchant lost the goods through his own fault he had to refund their value. There were special laws for doctors and for builders. Many parallels and many contrasts suggested themselves between this early Babylonian code and the laws of Moses.

ZIONIST COLONIES IN PALESTINE.

Speaking at Gresham College, London, on Monday, Dr. E. W. G. Masterman gave some particulars of the Zionist colonies in Palestine. He said they had been started thirty years ago by a small band of Russo-Jewish students. Although without technical qualifications, adequate equipment, or knowledge of the country and its language, and despite being unaccustomed to hard work or the privations of the pioneer, they had laid the foundation of the modern Jewish settlement in Palestine. To-day the plantations in Jewish ownership in that country covered about 20,000 acres. Of these there were about 3,000 acres of vineyards, 2,250 acres of orange groves, 8,250 acres of almond groves, 2,250 acres of olive plantations and 3,500 acres of woods. The last were chiefly eucalyptus, and were the beginning of the re-afforestation of Palestine. The total value of the plantations was between £1,000,000 and £1,200,000. One thing, said Dr. Masterman, was very necessary; it was that the rights of the Moslem fellaheen should be preserved. These had no other land, and their ancestors had been in Canaan before even the first coming of the Hebrews. The villages they inhabited, with their olive and fig trees, and a certain amount of land, should be made inalienable, and the present generation should not be allowed to part with what should remain to be the inheritance of their children. There was a vast amount of land they never would develop, and it would be enormously for their benefit if Jewish colonies were established where they could get employment, and so minimise their present poverty; but if they were dispossessed they would form a great mass of discontented people little better than serfs. There was in the Orient the same feeling about land to-day as in the time of Naboth, and the fear of being dispossessed, together with a suspicion of England's intentions with regard to the Holy City, had greatly stiffened the Turkish resistance to our advance.

NEAR EAST BOOKSHELF.

"MALARIA" (1) AND "ANTIMALARIAL WORK" (2) IN MACEDONIA.

These two little books deal from two different aspects with the most insidious of all the enemies of the armies of the Entente in Macedonia. They will reveal, to many for the first time, the terrible handicap against which our Salonika forces have been holding their own. Fortunately, recent discoveries, with which these writers deal, have brought this terrible disease within some degree of prevention and cure. Without our present knowledge on the subject our military occupation of much of this district might have been quite impossible. Even as it is, the account of the severer forms of malaria in the "Manual" is painful reading. This work, translated from the French, gives a succinct account of the diagnosis and treatment of malaria, which should be invaluable to our military medical officers on this and other of our Eastern fronts. Though on some minor points there may be disagreement—as both Sir Ronald Ross and Professor Laveran, two of the greatest living authorities, point out—yet the mere fact that the book comes with their approval should be a sufficient guarantee of its scientific accuracy and usefulness. The medical officer at the front needs something handy and portable for speedy reference, not an exhaustive and bulky text-book; and this is what is here provided. Although primarily intended for the professional man, the general reader will find much of interest in it.

The slim volume of "Antimalarial Work" is fascinating reading for all; certainly it is as much designed for the military and general reader as for the medical officer. It gives a graphic account, illustrated by many appropriate photographs, of the measures which are being taken to protect the army against malaria by destroying the sources of infection, and incidentally it makes an appeal for greater official sympathy and support—without which only very imperfect success can be attained.

It is now everywhere recognised that all malarial infection is carried from the sick to the healthy by means of the genus of mosquitoes known as the Anophelinæ. The best way, therefore, to prevent the spread of infection is to destroy these carriers of disease. An account is here given of the efforts made to destroy the fully-developed mosquitoes in the "dug-outs" and other places, and the more hopeful attempts to get rid of the larval forms by drainage of shallows and pools where the pests breed, or by killing them in these waters by means of petroleum. Those unfamiliar with this work, of such growing importance to European life in the tropics, would do well to study this account. In a land so full of lakes and sluggish streams as Macedonia it needs much enthusiasm, energy, and patience to fight such an uphill battle. Only next in importance is the isolation of the sick, so that mosquitoes cannot by feeding upon their blood receive the malarial plasmodia into their systems, and the destruction of these organisms in the patient's blood by means of quinine given prophylactically or curatively.

Malaria is a problem of such importance to the British Empire that all citizens of these isles should have some knowledge of the subject, and nowhere will they find more compressed and up-to-date information than in these two recent books.

A "RE-INCARNATION" NOVEL. (3)

In "A King in Babylon" we have a party of American mummers—"movie" actors seems to be the correct description of them—dumped in an Egyptian oasis, where adventures of the most kinema-dramatic nature come upon them thick and fast. The "leading man" and "leading lady," it transpires, had already been on this earth some thousands of years ago; and the former, who in his previous incarnation had been no less a personage than one of the Shepherd Kings of Egypt, had behaved in a particularly unchivalrous way to the latter, whom he had, in fact, had walled up alive. Frankly, we have no particular sympathy with either of them, although it is certainly a painful thing to think of an ex-Pharaoh reduced to the level of a cinematograph artist. It is quite probable, however, that readers with more modern tastes will find "Jimmy" Allen tolerable—even though he *is* "cursed with the fatal gift of beauty" (p. 28)—and Mlle. Roland agreeable, in spite of her temperamental eccentricities. For the author tells his tale remarkably well, and it is only because we dislike his material that we have not enjoyed the book thoroughly.

We must, however, protest against the caricature of an Egyptologist presented in Professor Davis. Egyptologists and excavators are a queer class, no doubt, but they are not quite so queer as this energetic professor. Neither do they have quite such a free hand in regard to their operations as the book would lead the reader to suspect: the Egyptian Department of Antiquities has a way of its own. Moreover, we cannot help wondering how pictures taken under the conditions described would prove at all convincing to any audience. But trifles like these should not be allowed to deter the reader from tackling the book for himself or herself. He will probably find it very enjoyable, and wonder what on earth the present scribe would have for his money!

BAGHDAD THE PROSPEROUS.

Reuter's Agency is informed that, according to a telegram just received from Baghdad, the highly satisfactory results that have been produced in the Baghdad vilayet by a year of British military administration have not failed to make an impression on the local population. In the words of an Arab proverb, "The Arab's intelligence is in his eyes," and all can understand the picture that is presented this spring. The care which the military administration has expended on agricultural development and on irrigation is bearing fruit in abundance. On land which has lain untilled for many years the rural cultivators and the tribesmen now see crops ripening, and they compare the prospect before them with the harrowing reports of starvation which refugees have brought down from Turkish and Persian territory. By timely aid famine has been averted in the occupied territories on the Persian frontier, a region which the Turkish armies had devastated.

The energetic development of roads and railways and the improved sanitary conditions have gratified the townsmen, and in all places the civil population have welcomed the establishment of dispensaries for their use. Friendly relations prevail everywhere between the British troops and the civil population; the respect which our soldiers display towards local prejudices, and the readiness of all ranks to associate with the local population and to help them whenever they can, have created a most favourable impression. The tribesmen have witnessed the digging up and sowing of many hundred acres of land by the troops, and the use of artillery horses, and even mechanical tractors, to plough large areas.

A revival of trade is commencing. Merchants constantly express their satisfaction at the unprecedented security on road and river, by which they are profiting. The prices of commodities and the rates of transport are falling, despite the restrictions imposed by the war conditions. In the Basrah vilayet, in which we have now carried on the work of administration for three years, the normal conditions of peace prevail, and the inhabitants seem fully to realise that the British Government means well by the Arab race.

Without the co-operation of the tribal chiefs and local notables, through whose assistance it has been possible to make rapid progress, the results attained in both vilayets could not have been secured.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. May.	1918. April.		1336. Rajab.	5678. Iyar.
3	20	Friday	22	21
4	21	Saturday.....	23	22
5	22	Sunday	24	23
6	23	Monday	25	24
7	24	Tuesday	26	25
8	25	Wednesday	27	26
9	26	Thursday	28	27

Count de Salis has been elected a fellow of the Arcadian Academy at Rome.

The Maharaja Dhiraj of Patiala has subscribed £50 towards the Ramsay Memorial Fund.

Lieutenant-Colonel N. Arion, Military Attaché to the Roumanian Legation, left London on April 26 for Sharnbrook.

Major-General Sir Percy Cox arrived at Windsor Castle on Saturday as the guest of the King and Queen, and left on Monday.

Sir Walter Lawrence and Lady Lawrence arrived at Windsor Castle on Saturday as guests of the King and Queen, and left on Monday.

The anniversary meeting of the Royal Asiatic Society will be held on Tuesday, May 14, at 4 o'clock, at 22, Albemarle Street. Lord Reay will preside.

Lord Islington, who has suddenly been taken ill, underwent a successful operation on Tuesday at 17, Park Lane. He will not be out of danger until after Saturday.

The *Morning Post* has reason to believe that quite a month ago M. Gennadius, the Greek Minister, submitted his resignation to the Greek Government, who have not yet signified their acceptance of it.

The thirty-first exhibition of the Ridley Art Club will be held from May 4 to May 18 inclusive, at the Grafton Galleries. The exhibition, which will be open each day from 10 a.m. to 6 p.m., will be in aid of the Serbian Red Cross.

In the Skupshtina on Sunday last, when Serbian war credits amounting to 250,000,000 dinars (about £10,000,000) were about to be voted upon, the Opposition left the Chamber, thereby leaving insufficient members to form a quorum.

Canon Heywood, Secretary of the Church Missionary Society in the Bombay Presidency, has been consecrated Bishop of Mombasa in Bombay Cathedral by the Metropolitan (the Bishop of Calcutta) and the Bishops of Bombay and Lahore.

A marriage has been arranged, and will take place early in August, between the Rev. Percy John Ryall, B.A., of Burma, only son of the late Edwin Ryall, of Canterbury, and Maud, youngest daughter of Mr. J. P. Rowlands, of Liverpool.

A marriage has been arranged, and will shortly take place, between Mr. W. Cay Williams, the Leicestershire Regiment, attached R.A.F., and Mona, youngest daughter of Mr. and Mrs. Leonard Macarthy, Benwell Park, Newcastle-on-Tyne.

The engagement is announced between Captain G. L. M. Clauson, General Staff Intelligence, Cairo, eldest son of Sir John Clauson, K.C.M.G., C.V.O., High Commissioner of Cyprus, and Lady Clauson, and Honor, only child of Mr. Ernest Innis Husey, M.V.O., and Mrs. Husey, of 24, Gloucester Square, W., temporarily at 290, St. James's Court, S.W.

Queen Alexandra, with the Princess Royal and Princess Maud, attended a memorial service at St. Martin-in-the-Fields on Monday to commemorate the siege of Kut-el-Amarah and those who fell in its defence and during captivity. Major-General Sir C. Townshend was represented by Lady Agnes Durham, and the congregation was a large one. The Bishop of Kensington gave an address.

At St. Paul's, Camberley, on Tuesday, the marriage took place of Lieutenant Francis G. Dyer, R.N.V.R., of Cheltenham College, second son of the late Dr. A. E. Dyer, Mus.Doc., and Miss Kate Madeline Farran, second daughter of the late Sir Charles Farran, Chief Justice of Bombay, and Lady Farran, of Brackendale House, Camberley. The bride, who was given away by her brother, Mr. F. St. Clair Farran, was attended by Miss Esmé Farran, and Mr. W. S. Drew was best man. The Rev. J. C. Orr, Vicar of Whitwell, Isle of Wight (cousin of the bride), and Canon Waterfield, Principal of Cheltenham College, officiated.

A costume lecture on "Cities of Central Asia and Germany's Menace to India," with lantern slides, will be given by Miss Annette M. Budgett Meakin, F.R.G.S., at Wigmore Hall, on Thursday, May 9, at 6. Colonel the Earl of Denbigh will preside.

The Rev. A. G. Fraser, Principal of Trinity College, Kandy, Ceylon, and Temporary Chaplain to the Forces, had the honour of preaching the sermon on Sunday morning in the Private Chapel, Windsor Castle, when the King and Queen were present.

The engagement is announced between the Rev. Egbert Francis Odling, son of the late Tom Francis Odling, C.M.G., formerly of the British Legation, Teheran, and Gladys Victoria Woollerton, daughter of Dr. and Mrs. Woollerton, of Wendover, Bucks.

The engagement is announced between Lieutenant Eric R. Burton, Indian Cavalry, only son of Frederic Walter Burton and the late Mrs. Burton, of Oxted, Surrey, and Gladys Gordon, only daughter of Lieutenant-Colonel and Mrs. Frazer, of Bromley, Kent.

M. Michalacopoulos, Greek Minister of Agriculture and late Minister of War, is at present in London (Reuter's Agency is informed) on a special mission connected with the Greek Army. The Minister, who has been in Paris on similar business, expects to remain in this country about a fortnight.

The engagement is announced between Thomas Robert Druitt, Lieutenant, the King's (Liverpool) Regiment, attached R.E., only son of Mr. Thomas Wyard Druitt, F.R.G.S., and Cynthia Frances, daughter of the late Colonel G. F. Newport Tinley, C.B., C.M.G., Indian Army, of Tower Hill House, Kingsclere, Hants.

The *London Gazette* announces that the King has been pleased to appoint Honorary General his Majesty Chowfa Maha Vajiravudh, King of Siam, G.C.B., G.C.V.O., to be an Honorary Knight Grand Commander of the Most Exalted Order of the Star of India. The appointment is to bear date from April 1, 1918.

A telegram from San Francisco says that Herr Ropp, former German Consul-General at San Francisco, and Herr von Schack, who had been found guilty of violating United States neutrality by fomenting revolution in India, were yesterday sentenced to the maximum penalty of two years in a Federal penitentiary and fines of £2,000 each.

A public Rhodes lecture on "The Law and the Law Courts of Egypt" will be delivered at University College by Sir Malcolm McIlwraith on May 6. Lord Justice Swinfen Eady will preside. Admission will be by ticket, to be obtained by sending a stamped addressed envelope to the Secretary, University College, London.

A marriage has been arranged between Mr. Thomas Martland Ainscough, O.B.E., his Majesty's Trade Commissioner in India, eldest son of Mr. J. M. Ainscough, J.P., of Lindley Mount, Parbold, near Wigan, and Mabel Gertrude Lincolne, of the Medical College Hospital, Calcutta, third daughter of Mr. W. Lincolne, of Ely, Cambs.

A farewell dinner, over which Sir Horace Rumbold presided, was given on April 25 at Berne to Lieutenant-Colonel H. P. Picot, who is leaving that place after having been in charge of the arrangements for British interned since May, 1916. Colonel Picot, who was formerly Military Attaché at Berne, at one time held a similar appointment in Teheran.

Sir Mark Sykes, M.P., will preside at an informal reception to be held by the President and Council of the Armenian United Association of London in the Savoy Hotel, Strand, on the Armenian Easter Sunday, May 5, when Mr. Ghambashidze will give an address on the "Alliance between the Armenians and the Georgians." Invitation cards may be obtained of the Secretary, Armenian Information Bureau, 153, Regent Street, W.1.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

APPOINTMENTS, PROMOTIONS, ETC.

According to the Athens *Hestia*, Count Bosdari, Italian Minister at Athens, has been recalled.

Bimbashi Archer, of the Cairo City Police, has been granted the rank of Kaimakam on promotion to the appointment of Assistant Commandant of the Cairo City Police.

The King has approved the appointment of Mr. Maurice Henry Weston Hayward, I.C.S., to be a Puisne Judge of the Bombay High Court from May 20, 1918, on the retirement of Sir Stanley Lockhart Batchelor, Kt., I.C.S.

The appointment of Miralai Purvis Bey as Director of the Egyptian Coastguards Administration in succession to Lewa Hunter Pasha has been finally approved, with effect from April 1. Purvis Bey will be given the rank of Lewa (Major-General), and will be succeeded as Assistant Director by Kaimakam Morris Bey, of the Coastguards Administration.

The Sultan of Egypt has conferred the Order of the Nile (2nd Class) on Rear-Admiral Jackson, C.B., M.V.O., and the 4th Class of the same Order on Commander Viscount Broome, R.N.; Commander Crocker, R.N.; Commander Stanley, R.N.; Lieutenant-Commander Pridham-Wippell, R.N.; Lieutenant Brand, R.N.R.; and Chief Gunner Frederick Charles Russell, R.N.

The King has been pleased to approve the appointment of Brigadier-General Sir William Henry Manning, K.C.M.G., C.B., Governor of Jamaica, to be Governor of Ceylon. Sir William Manning retired from the Indian Army in 1910, after twenty-four years' service. He was appointed Governor and Commander-in-Chief of the Nyasaland Protectorate, and held that position until 1913, when he went to Jamaica as Governor.

In an Army Order the Sirdar announced to the Egyptian Army the retirement of Lewa R.C.R. Owen Pasha, C.M.G., Governor of Mongalla, and referred to the eminent services rendered by him to the Egyptian Army and Sudan Government during the fifteen and a-half years which he passed in the Egyptian service. Owen Pasha held the appointments of Assistant Secretary-General, Assistant Civil Secretary, Director of Intelligence and Sudan Agent, and during recent years the post of Governor of Mongalla and Officer Commanding the Mongalla District.

OBITUARY.

The Indian mail brings news of the death of Professor James Nelson Fraser, M.A., Principal of the Training College for Teachers in Government Secondary Schools, Bombay. Educated at Rossall School, and Balliol College, Oxford, he was appointed Professor of English Literature in the Deccan College, Poona, in 1896.

Major Charles Willington Lane, M.C., Dragoon Guards, who died of wounds at a casualty station abroad on April 4, was the only son of Colonel and Mrs. Lane, of Rathkenny House, County Meath. In his early days in the Army he saw service in Egypt and India. He was serving in Northern Nigeria when the war broke out, and afterwards saw much fighting on the Western front.

The death is announced of Lieutenant-Colonel Francis A. W. Armitage, D.S.O., West Yorkshire Regiment, attached Hampshire Regiment. He went to India in 1902, and took part in the North-West Frontier Expedition of 1908, for which he was given the medal. In the present war he saw much fighting on the Western front, and was four times mentioned in despatches. He was killed on April 22, aged 34.

Lieutenant Gerald B. Brown, M.C., S.C.S., son of Mr. James Brown, J.P., cotton master, of Mere Oaks, Wigan, died at Khartoum on April 21 from malaria, aged 26. He was educated at Bowden College, Cheshire, and at New College, Oxford, and was the captain of the Oxford University Hockey Team. On leaving Oxford he went to France for purposes of study, and on the outbreak of the war joined the Forces, being a lieutenant in the 5th Manchester Regiment. He saw service in France, and was awarded the Military Cross. After leaving France he was given an appointment in the Soudan Civil Service. Lieutenant Brown was one of five brothers who have served in the Army during the war.

Acting Lieutenant-Colonel Bertram Nowell Elliot, D.S.O., R.M.L.I., who was killed in the operations against Zeebrugge and Ostend, was born in August, 1880, and was granted his commission in the Royal Marines in 1898. The award of the D.S.O. was notified in the *London Gazette* on November 19, 1915, "for his services in laying mines and in charge of minefields in the Serbian rivers for several months. This work has very many times been carried on under the fire of the enemy's patrols, and always with a fine courage and much skill in organisation." He was decorated by the King of Serbia with the 4th Class of the Order of the White Eagle and the 3rd Class of the Order of St. Sava, and was mentioned in despatches for his services with the British Naval Mission in Serbia under the command of Rear-Admiral Troubridge.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

FRIDAY, MAY 3, 1918.

THE UNITED STATES AND BULGARIA.

Last week the United States Senate discussed the subject of American relations with Bulgaria and Turkey. A motion was submitted calling upon the Senate Committee on Foreign Relations to report a resolution introduced last year declaring war upon Turkey and Bulgaria. In the end a substitute resolution was accepted proposing that the President be requested, if not incompatible with the public interest, to inform the Senate whether there were any reasons against declarations of war on Turkey and Bulgaria. The mover of this resolution would seem to have had a conference at once with the President, for on the next day he announced that he did not propose to press the matter any further at this time. The incident is of interest, as it proves that President Wilson still holds to his contention that no purpose would be served by a declaration of war on Bulgaria by the United States, but that, on the contrary, his Government, by avoiding a formal breach, may be able to further the interests both of Bulgaria and of the Allies. There is reason to believe that information which reached the President shortly before the question was raised in the Senate will have confirmed him in this view. Public opinion in Bulgaria has not been allowed to lose sight of the fact that the country is not at war with the United States. Towards the end of last year a prominent Bulgarian newspaper published a leading article in which the United States were invited to assume the rôle of arbiter in the Balkans. Not only must this article have received the sanction of the Censor, but that formidable personage appears to have raised no objection to the same journal opening its columns to an American writer, who in reply suggested that, if Bulgaria were really fighting only for national unification and for righteousness, justice, and democracy in the Balkans, she should see that America was apprised of this fact and should let her cause become America's cause and her might America's might. In spite of the spirit of sturdy independence that King Ferdinand appears to have adopted towards his powerful allies, many things have helped to bring home to the Bulgarians that the glorious comradeship in arms on which the Emperor William likes to dwell in his speeches inevitably carries with it the economic and political domination of Germany. The object lesson provided by events in Russia will have satisfied them that they have as much to fear from their new patron as they ever had from Imperialist Russia, but with this difference, that, whereas in the past they could count on help from other quarters, now, as things are, they are in danger of being left entirely at the mercy of the Germans.

In these circumstances it is not unnatural that the Bulgarians should be reminded of the policy of reinsurance which commended itself to Bismarck as eminently sound statesmanship, and should begin to look around for a friend outside the Central Alliance. They will find President Wilson ready to meet them halfway. It is one of the ironies of the situation that so little should separate Bulgaria and the Allies. This does not imply that support will be forthcoming for every demand that has been put forward in Bulgaria's name; but where her claims can be shown to rest on a reasonable basis they are assured of more careful consideration than they met with in the fateful negotiations of 1915. The alacrity with which she has repudiated any claims to Salonika suggests that she realises now that other things than territorial acquisitions have to be taken into account. If the war ends with the Central Powers victorious all along the line in the East, there cannot be the least doubt that Bulgaria's position in the world scheme will be as unenviable as that of the Ukraine or Lithuania. This fact can no longer be disguised from the Bulgarians. They have been content to leave the direction of their foreign affairs in King Ferdinand's hands hitherto, and they may have no reason to be dissatisfied with the policy that has given them more than they anticipated. That policy, however, consisted merely in taking the line of least resistance. On the strength of Germany's help Bulgaria has achieved some remarkable conquests, but she stands committed to remain a vassal of Germany and to pretend a friendship for Turkey which she does not feel. It is one thing to put up with inconveniences for the duration of a war; it is a very different matter to accept them as a permanent feature of the national life. The Bulgarians were doubtless elated at first by the conquest of the Dobruja; but their exhilaration will have been chastened by the terms on which that territory is to be held with reservations in Germany's favour, and by the fact that they have to surrender to Turkey a strip of territory on the Maritza River. It would seem as if King Ferdinand held out as long as he could against this concession to the Turks; but as the handing over of the Dobruja is the *quid pro quo*, he has no option in the matter. For the thinking section of the Bulgarian people the question now arises, whether the line of least resistance can stand as a permanent policy; in other words, whether, now that they have proved to the world their determination to win back the territory they claimed, they will not find that their real interests lie elsewhere than as a mere stepping-stone for German ambitions.

Perhaps the most difficult part of any scheme of action that President Wilson may have in contemplation will be to secure complete acquiescence from the countries in the Balkans that are our Allies in the settlement that will meet Bulgaria's legitimate aspirations. In this question, however, the guiding principles are clear and unmistakable. The widest scope must be given to the claims of nationality, and the future harmonious development of the Balkans as a whole must be kept sedulously in mind. The Bulgarian people are not likely to proclaim the fact from the housetops, but they must have realized now almost as fully as the Allies that German domination in the Peninsula will be prejudicial to friend and foe alike. The more Germany's aims in the West are thwarted by the Allied resistance, the more will she look to the East to recoup herself for her war losses. That stern necessity will leave her little room for studying the interests of the small nations standing in her way, and where she is free to work her own will the country that opposes her designs by claiming some measure of independence is likely to suffer more than those that are already humiliated and under her control. Some such considerations as these must have passed through Bulgarian minds; the leaven will work the more rapidly when it is found that Germany's prodigious sacrifices on the Western front are failing altogether to achieve her purpose. The moment, therefore, is opportune for meeting any overtures, however tentative, on the part of Bulgaria; for the Allies have nothing to lose from a clear statement of their position and their intentions in regard to the Balkans.

GERMAN EMIGRATION POLICY AND EASTERN EUROPE.

By D. MITRANY.

Germany's anxiety to conclude a separate peace with the Ukraine was generally regarded as being due to a desire to secure supplies of corn, and that, no doubt, was the immediate aim. But, in addition, the Germans very probably aimed at gaining anew a foothold in Eastern Europe, which they hoped to dominate and which the circumstances of the war had almost completely emancipated from their influence. Close connections between the Ukraine and Germany would secure to the latter a plentiful supply of cereals and of a varied mineral wealth, as well as a valuable market for German industry; not to speak of an alternative route to the Near East by way of the Black Sea. In view of all these possibilities, it is not without interest to survey the method of quasi-colonisation of which Germany made use in the past, and which she is likely to adopt again in the future, in order to bring under her influence the economic life of the newly-formed States of Eastern Europe.

The political power of the German Empire, the rapid development of its industry, and the liberal policy of its private finance, should have sufficed to secure for Germany a preponderant position in the economic life of the countries concerned. But the Germans were not satisfied with entering into commercial and political agreements; they transplanted into those countries a numerous and very able German population, which linked them securely to the Teutonic Empire. The process is an old one, and has undergone an interesting transformation since its incipience: while in more recent years it had supplied a somewhat transient town-population, mostly merchants and clerks, which made up to some extent for the deficiency in a trading middle-class that characterises the agricultural countries on the Lower Danube; originally it aimed at establishing permanent agricultural colonies of German settlers.

It is interesting to find that the first to direct attention to the possibilities for colonization offered by south-eastern Europe was von Moltke. In 1835, when a captain in the Prussian Army, von Moltke was called to Constantinople to assist in the reorganization of the Turkish Army. He travelled by way of present-day Roumania, crossing the Danube at Giurgiu, and recorded his experiences and impressions in his "Letters on Conditions and Events in Turkey," written between 1835 and 1839. In one of these letters, written in October, 1835, from Bucharest, he complained that "so many of our compatriots emigrate in order to seek a better existence in foreign continents, while hardly any attempt to draw upon the sources of wealth of this rich land, where, if only security were established, all labour would find ample reward."

Moltke's letters were not published until 1841, but very probably they were known before that date to the celebrated German economist List, for we find him developing the same thesis in almost identical words in his principal work, entitled "A National System of Political Economy," which also was published in 1841. In the last pages of this book, after deprecating the preference which German emigrants give to North America, he urges that they should be systematically directed instead to European Turkey and the regions on the Lower Danube, for "in no direction so much as in this is the emigration of Germans so easy for individuals to accomplish, or so advantageous for the nation." What repels the emigrant is the insufficient security offered by those regions; but List considers that the German States, in alliance with Austria, should be able to exercise such influence with Turkey as to bring about an improvement in the public conditions of those countries and make them more attractive to the German emigrant, "especially if the Governments themselves would found companies for colonization, and take part in them themselves, and grant them continually their special protection."

List's works and teachings exercised a powerful influence in their time, and therefore one is probably justified in assuming that the arguments quoted above were responsible for the various steps which the German and Austrian authorities took in the fifties of the last century for the purpose of extending their influence in Roumanian regions. About that time two papers and several printing-presses were started by Germans in Bucharest, and for the first time the German and Austrian colonies in that town were granted the formal protection of their respective Governments. But even more significant is the fact that a small colony of German agricultural labourers settled down on farmed land in the neighbourhood of Braila in 1842.

The perpetual struggle which the Roumanian peasant has had to carry on against foreign invaders has caused his piece of land to mean more to him than a mere means of existence: in it are rooted all his spiritual and national liberties; he holds tenaciously to it, and generally prefers to starve on his own piece of soil rather than enjoy a prosperity elsewhere. In the circumstances it is not surprising to find that the German colony near Braila failed to prosper, and a few years after its establishment its members, about twenty families in all, acquired land and moved into the Dobruja. That province then still formed a part of the Ottoman Empire. It was a barren region, the perpetual battle-ground between Russians and Turks, and consequently sparsely inhabited by variegated groups belonging to the neighbouring peoples. Here the Germans found suitable conditions of settlement, and to the original settlers were added in subsequent years a few more colonies, such as those of Atmagea (1848), Catalin (1853), Cincurova (1859), Fachri, in the Southern Dobruja (1874), etc., etc. These colonies have remained in existence to the present day. Their villages make a pleasant impression, and not only do their members speak German, but they have even maintained the dialects of the regions whence they came.

That there was not merely a question of finding a place in the sun for a certain surplus of population is shown by the great number of private and public organizations bent upon furthering colonization, which grew up in Germany about the middle of the last century. In 1847 Prussia endeavoured to interest the other German States in a common scheme for colonization, and only the political circumstances of the time prevented the National Convention of 1848 from taking into discussion a bill specially prepared by the Committee of National Economics. The idea of creating a department of State to organise colonization was also raised in the Bundesrat. Fifteen private organizations already existed at that time for the furtherance of colonization; their representatives, together with a large number of German economists and politicians, met in a congress of the National Central Committee for German Colonization, which was founded in 1848. The burden of the prolonged discussions of that congress was the diverting of emigration from the West to the East, with a view to ensuring to Germany undisputed domination on the Danube from the source to the sea.

But all these efforts were bound to fail. The appalling and uninterrupted chain of struggles of which the European Near East has been the scene have given a national importance to all such institutions as the Church, the schools, etc., and to property in land more than anything else. Land was the only possession which the perennial invaders could not bear away with them; and there is, therefore, nothing which the peasant more resents than an attempt on the part of such invaders to get hold of the land by settlement. This is strikingly evidenced by the racial purity maintained by the various peasant populations, notwithstanding the variegated character of the numerous invaders who swept over those regions. It is also evidenced by the epilogue of the German efforts in that direction. According to a Swiss journal (*La Liberté*, Fribourg, February 2), a Hungarian concern is now engaged in transplanting the German colonists from Dobruja to Transylvania with a view to re-populating certain districts.

That seems to put an end to the German dream of establishing permanent outposts on the Lower Danube. But the Germans have not unnecessarily persisted in a scheme which they must have long since recognised as futile. From a more intelligent consideration of the circumstances there resulted a complete change in the type of emigrants who found their way towards Eastern Europe, and in the character of their settlement, and in this new aspect German colonization has been largely successful. But this point will be dealt with more fully in a subsequent paper.

THE RED CROSS IN PALESTINE.

In a report addressed to Sir Arthur Stanley, Chairman of the Joint Committee of the British Red Cross Society and the Order of St. John, Dr. Alexander Granville, British Red Cross Commissioner at Alexandria, gives some particulars regarding a visit of inspection to hospital and medical units on the Palestine front. He writes:—

"I was particularly pleased with all that I saw, and found everyone in authority loud in their praises of the work which the Red Cross had done to assist in alleviating the sufferings of the sick and wounded.

"We have a splendidly situated base store at Kantara, which feeds our depots at Port Said, Ismailia, and Suez, as well as the hospital and medical units from Kantara up to Rafa. In Jerusalem we have a particularly fine store in a building which has been generously placed at our disposal by the Mother Superior of the Marie Reparatrice Convent. In Jaffa we have been given the use of a very well situated house for our stores and officers.

"Our Red Cross invalid kitchens at El Ariah are a great success. We have two excellent cooks running these kitchens, and the work which is being done by them is particularly noteworthy. I hope to be able to establish very soon two other Red Cross invalid kitchens on this front. I returned to Alexandria feeling sure in my mind not only had we gained the confidence of everyone with whom we had come into contact, but that the Red Cross had established a reputation of being where we were most wanted, and willing to do what was expected of us."

TANGIER TO TEHERAN.

When I was a small boy we were taught that Napoleon at the Battle of Waterloo declared that the British were beaten but did not know it—or words to that effect. We were also taught, I think, that at the opening of the battle, when he found our army facing him, instead of retreating, he exclaimed, exultantly: "I have them now!" Subsequent events showed that even so great a man as Napoleon may make mistakes; and if to-day the mere Man in the Street fails to realize that we were beaten at Waterloo, we can hardly be surprised. Similarly, if I remain a little sceptical about certain persons' readings and renderings of prophecies of Daniel—not, be it noted, about the prophecies themselves—I believe that most of my readers will pardon my presumption.

***

These remarks have been called forth by a letter addressed to the Editor by the editor of the *Young Man and Woman*. The epistle referred to will be found on another page, and readers will doubtless consider that it speaks quite eloquently for itself. But the writer must pardon me if I remain unconvinced that his statements are correct even when he "reaffirms" them. I have no wish whatever to "dabble" in the subject of the prophecies—I confess quite frankly that I "know nothing about" them; but it seems to me that I am not alone in that respect—and my comments and criticisms have been concerned only with the readings of those who profess to interpret them. In the circumstances, I trust that the writer of the letter will excuse me from reading his two books on the subject, the titles of which (with the publishers' name) he gives in full in his communication. While thus declining to benefit by the advice so freely tendered, I shall continue to feel myself at liberty to touch upon the subject if I feel so disposed. For, after all, I have already discovered that even those who *have* "studied" it do not always see eye to eye on more points than one.

***

The title, "People's Commissary for Foreign Affairs," is certainly a resounding one, and its present holder—who is, of course, M. Tchitcherin—evidently tries to live up to it, so to say. At any rate, his despatches and communications generally are usually very pompous in their wording, if they fail to carry with them that weight which is lent to such things by the presence of force behind them. But now and again one wonders whether he is not bent on enlivening them with a joke. For instance, when, in protesting against the burning of a village (Russian) and the massacre of all its inhabitants by the Germans, he refers to Germany as "a civilised country," how are we to take it? Is it irony? *Is* it a joke?—One would not ask the question in connection with such an outrage, if M. Tchitcherin were not a Bolshevist.—Is it flattery? Or is it just a proof that the People's Commissary for Foreign Affairs is a victim of the habit of using cant phrases?

***

Mr. Somers Clarke has sent to the *Egyptian Gazette* an extremely interesting account of some events that occurred at the funeral of "a much respected sheikh," who died on February 28 at a village named Hilal. During his lifetime the only supernatural gift the sheikh appeared to possess was the power to influence sparrows, being able to protect the crop from their depredations, in some way not clearly specified. But, dead, he developed extraordinary powers indeed. His body was just about to be placed in the grave, when the bearers "felt themselves impelled" to carry the bier back again to the sheikh's house. And that was but the beginning of the manifestation of this strange force. The bearers were moved, by the same power, to enter the house of the skeikh, to leave it again at once, to set the bier on the ground while a *fat'hah* was recited, to parade the streets of Hilal with their burden, to return to the cemetery and the graveside. But even then the sheikh was not content. Back to the village went the procession, the bearers being now "impelled to make rapid turns, like the revolutions of a wheel." Then, "after they had returned to Hilal and manœuvred about a little, they were suddenly impelled to leave Hilal and go across the desert to a little village called Nusrab, which lies to the south."

***

At Nusrab the alleys were promenaded, as at Hilal, until, "arriving at an unoccupied place behind the Mosque, the bier became overwhelmingly heavy, so it was set down upon the ground, the *fat'hah* was recited, and then a Zikr was held by a ring of people standing around, lasting perhaps three-quarters of an hour. This concluded, the impulse again fell on the bearers and the procession returned to Hilal." Here the bier was placed on the floor of a rest house, where "it remained firmly fixed," until a son of the sheikh, who had come from Luxor, had "made his appropriate lamentations" over it. Thereafter, "the bearers with perfect ease removed the bier, carried it to the grave and completed the burial."

***

Now, what can one make of such a tale? Personally, as Mr. Somers Clarke clearly accepts the account as accurate, and as I have faith in his judgment, I am ready to believe that the events recorded really took place. My theory is that they were the results of hypnotism of some kind—or thought transference may be the better expression. Some one in the crowd of mourners probably thought that the sheikh would not like to be buried without his son having "made his appropriate lamentations," and the rest followed more or less automatically. For, as Mr. Somers Clarke points out, there is a belief amongst the Egyptians that the spirit of a holy man will often impel the bearers of his corpse in some particular direction. Lane, in his "Modern Egyptians," refers to this belief, and gives a somewhat startling example of it, which Mr. Somers Clarke reproduces. For the rest, we may all form our own opinions; and as to the truth of the matter—Allah knows!

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Dr. Seton Watson.

April 25.

Colonel FABER asked the Prime Minister if he would state if the position of Dr. Seton Watson in the service of the Government is a confidential one in which he has access to State Papers; whether he was or had been attending the Jugoslav Conference in Rome or had been in Rome whilst this conference was sitting; and, if so, whether, in view of his anti-Montenegrin sympathies, some explanation could be given of his association with a propagandist movement against Montenegro, an Allied State?

Mr. BONAR LAW: Dr. Seton Watson, as already explained in reply to a former question, is at present in Italy on confidential Government service. His Majesty's Government is not aware that Dr. Seton Watson is taking part, or has ever taken part, in any propagandist movement against any Allied State.

Flax and Cotton Supplies.

Brigadier-General CROFT asked the Under-Secretary of State for Foreign Affairs whether there is a shortage of flax and cotton supplies; and, if so, whether he would give an undertaking that no linen and cotton products should be permitted to leave this country except for purposes in Allied countries?

Lord WOLMER (on behalf of the War Trade Department): The answer to the first part of the question is in the affirmative. With regard to the second part, His Majesty's Government are not prepared to accede to the recommendation of my hon. and gallant friend that the export of linen and cotton products should be discontinued except for purposes in Allied countries. This would even exclude exports to India, the Dominions, and other British Possessions. The prohibitions affecting the export of linen apply to all destinations, and the export of linen goods suitable for war purposes is only allowed under licences which are restricted to the Allies and British Possessions and Protectorate. As regards cotton, adequate supplies are at present available for home use and that of our Allies. Exports to other countries have been greatly reduced, and are being carefully watched.

"Turkish" Cigarettes.

Sir BERTRAM FALLE asked the President of the Board of Trade if he was aware that there are quantities of Turkish and Egyptian cigarettes for sale in this country notwithstanding that we are in the fourth year of the war; and if he could say where all this tobacco comes from, if from heavy stocks or what other source?

Mr. WARDLE: There is a small and rapidly diminishing quantity of pure Turkish and Egyptian cigarettes beng manufactured in this country from stocks imported prior to the outbreak of war. The majority of so-called Turkish and Egyptian cigarettes are made largely from a similar type of tobacco grown in Greece, Cyprus, Nyassaland, China, and Japan.

Prisoners of War in Turkey.

April 29.

Mr. PETO asked whether, as the Berne Agreement of December 28, 1917, had now been ratified by the Turkish Government, negotiations would now be commenced forthwith with a view to arriving at an agreement for the mutual repatriation of all officers and men of the Navy and the Army of the two countries

SCHOOL OF ORIENTAL STUDIES.

Digitized by Google

who had been prisoners of war for a period exceeding eighteen months.

Mr. J. F. Hope: No agreement exists with any enemy country for the repatriation of such prisoners, but only for their transfer to a neutral country. His Majesty's Government consider that it would be preferable to await the results of the Berne Agreement, now ratified by the Turkish Government, before considering so complete a departure from previous Allied policy as is suggested by my hon. friend. Transfer to a neutral country is, I fear, impracticable in the case of British and Turkish prisoners, as has been already stated.

Mr. Hume-Williams asked who would choose the first 1,000 prisoners who are to be repatriated under the recent agreement; when the 1,000 have left Turkey, who is to choose prisoners for repatriation from among the remainder, and what standard of sickness will be applied; and whether it will apply to all who now or in future may be within the standard.

Mr. J. F. Hope: The first 1,000 British invalid prisoners of war to be repatriated from Turkey under the Berne Agreement will be chosen by the Turkish authorities without the formality of official medical inspection, in order to save the time which the latter would necessarily take. The Turkish authorities may, of course, be expected to choose for repatriation those prisoners whose state of health renders them least likely to be of use to his Majesty's Government, and these will naturally also be the prisoners whose state of health renders their repatriation most urgent. We assume that the Turkish authorities in making the selection will avail themselves of the opinion of the British medical officer prisoners. After the repatriation of the first 1,000 the selection for repatriation will be made by medical commissions composed of two Turkish doctors and one British prisoner doctor. The standard of disability for repatriation from Turkey under the agreement is the same as that in force with Germany for the purpose of transfer from that country for internment in Switzerland. It will apply to all prisoners who now fall, or who may in future come to fall, within its terms.

Mr. Hume-Williams further inquired whether any arrangements had yet been made with the Netherlands Minister in Constantinople or with any other representative of a neutral Power to visit Turkish camps where prisoners of war are interned in pursuance of the recent agreement; and, if so, what the arrangements were and how soon the inspection would be made.

Mr. J. F. Hope said that immediately on the receipt of news of the ratification of the Berne Agreement by the Turkish Government the Netherlands Minister at Constantinople was requested by telegraph to take steps to carry out its provisions in regard to the inspection of internment camps by his representatives. As the Dutch Government were kind enough to appoint two gentlemen to their Legation at Constantinople for this duty some time ago his Majesty's Government hoped that the inspections would be able to be carried out at an early date, but they had no positive information on the subject.

ITALIANS AND JUGOSLAVS.

At the conference held in Rome on April 8, 9, and 10, which was attended by recognised spokesmen of the subject nationalities of the Central Empires, the following resolutions, we are informed by the Italian Information Bureau, were passed unanimously:—

"The representatives of the nationalities subjected entirely or in part to the rule of Austria-Hungary—Italians, Poles, Roumanians, Czechs, Jugoslavs—have agreed to affirm their principles for common action in the following manner:—

"I.—Each of these peoples proclaims its right to constitute its own nationality and unity as a State, to secure this and to attain to full political and economic independence.

"II.—Each of these peoples recognises in the Austro-Hungarian Monarchy the instrument of Germanic domination and the fundamental obstacle which hinders the realization of their aspirations and their rights.

"III.—The Assembly therefore recognises the necessity for a common struggle against the common oppressors, in order that each people may achieve its full liberation and complete national unity within the limits of free unity as a State.

The representatives of the Italian nation and of the Jugoslav nation agreed in particular as follows:—

"I.—In the relations between the Italian nation and the nation of the Serbs, Croatians, and Slovenes—known also under the name of the Jugoslav nation—the representatives of the two peoples recognise that the unity and independence of the Jugoslav nation is a vital interest of Italy, just as the completion of Italian national unity is a vital interest of the Jugoslav nation. For this reason the representatives of the two peoples undertake to do all that may lie in their power so that both during the war and at the time of concluding peace these final ends of the two nations may be completely reached.

"II.—They declare that the liberation of the Adriatic Sea and its defence against the present or eventual enemy is a vital interest of the two peoples.

"III.—They undertake also to settle amicably and in the interests of the future good and sincere relations between the two peoples the various territorial controversies on the basis of the principle of nationality and of the right of nations to decide their own fate, in such a manner as not to injure the vital interests of the two nations as they will be defined at the moment of concluding peace.

"IV.—Groups of one nation which will have to be included within the boundaries of another will be guaranteed the right to the respect of their language, their culture, and their moral and economic interests."

PRESS ON THE NEAR EAST.

Islam and the War.

The current issue of the *Quarterly Review* contains an instructive article on the Moslem attitude towards the war, by Sir Valentine Chirol, who has had a special opportunity of studying the subject at first hand in India. After analyzing the position of Islam in the world and referring to the deep-laid plans of Germany to enlist Moslem support by means of Pan-Islamism, Sir Valentine Chirol discusses how it is that Pan-Islamism, when put to the supreme test, has so far failed. He continues:—

Amongst the more general causes of its failure must no doubt be reckoned the fatalism common to most Orientals, and especially characteristic of all Mahomedans, which leads them to accept all things—including alien rulership—as preordained. Nor had they any serious grievance against their alien rulers, who as a rule scrupulously respected their religious and domestic customs, and where, as in India, they formed only a minority of the population, effectively guaranteed their rights against the encroachments of other communities. So far as material prosperity is concerned, they were unquestionably far better off under their alien rulers than their co-religionists under Mahomedan rulers. Least of all had the Mahomedan troops, who "eat the salt" of alien rulers, any cause to be discontented with their lot. The Indian sepoy and the Algerian spahi—which are only different forms of the same word—had generally far more confidence in, and often far more personal devotion to, their Christian officers than to those of their own stock. Even in the Russian service Mahomedans were exceptionally well treated, and sometimes rose to very high rank—much higher than they could attain to in the British or French services. The Mahomedan, moreover, has an innate respect for constituted authority; and though at times he may "see red" and break through the accustomed bonds of discipline, there was nothing at the first outbreak of war to tempt him to incur the tremendous risks of disloyalty. For when the war began it involved only two groups of European Powers—infidels all in the eyes of the orthodox Mahomedan; and though in India particularly our alliance with Russia was distasteful to him, there was nothing to attract him towards Germany. Many Indian sepoys, indeed, retained a vivid memory of the overbearing attitude of the Germans in China during the joint operations against the Boxers, and of their brutality towards the unfortunate Chinese people.

The fact is that Pan-Islamism lost much of whatever vital force it possessed when Abdul Hamid disappeared and "Young Turkey" came into power with the Constantinople Revolution of 1908. The seal was put upon its discomfiture by the action of the Shereef of Mecca, of whom Sir Valentine Chirol writes:—

The valuable services which the King of the Hejaz has rendered to us in the field, and especially by shutting off the Turks and their allies from all access by land to the Red Sea, where they had hoped to establish fresh bases for their mines and submarines, have been, perhaps, less important than that which he rendered to us in refusing from the very first to endorse the Constantinople *Jehad*. Had he endorsed it, the effect in Arabia itself would have been electric.

The article proceeds to survey the effects of the war on the Mahomedan peoples outside Turkey. Of Persia it says:—

Hatred of Russia rather than any Pan-Islamic sentiment drove the majority of the people of Persia to side, so far as they could safely venture to do so, with the Turks and their Germanic allies. The masses in Persia are fervent Shias, whereas the Turks are Sunnis; and the memory of the extortions practised upon him by the Turkish authorities at Kerbela rankles in the soul of every Persian pilgrim.

The subject of Pan-Turanianism, which the article next discusses, has already been dealt with at length in the pages of The Near East, and Sir Valentine Chirol confirms the view that the collapse of Russia opens up to Pan-Turanianism unexpected possibilities of political expansion.

The position in the Middle East may thus be modified in the immediate future to our serious disadvantage, and open up even

the borderlands of India to Turco-German aggression. But the alliance between Pan-Germanism and Pan-Turanianism can hardly be permanent, and there are elements of weakness in Pan-Turanianism itself which are bound in the long run to defeat the achievement of its programme. Its most enthusiastic exponents in Constantinople admit that Turkey cannot hope to ride both horses—Pan-Islamism and Pan-Turanianism—at the same time, and they declare quite openly that, of the two, the Nationalist horse is the one they must run to win. They can only use Pan-Islamism as a pace-maker. They are, in fact, conscious that between the two ideals there is a conflict which may be postponed or smoothed over for a time, but is ultimately inevitable. There are, indeed, signs that in Turkey itself all the elements of a conflict are already present, though the war keeps them for the present under restraint. Such measures as the diversion of the revenues administered by the Department of the Evkaf from the time-honoured purposes of pious foundations to the creation of a "National" Bank, and other undertakings for the economic restoration of the country on "National" lines; the transformation of the *Medresses*, or schools, in which little else but the Koran and Mahomedan theology have been expounded, into "National" schools for the teaching of "Turkology" and other profane sciences; the transfer to the civil courts of a considerable portion of the jurisdiction hitherto reserved to the *Sheria*, or religious courts, are measures which profoundly affect not only Mahomedan orthodox traditions, but many powerful vested interests. To the innate conservatism of the Turkish masses all the social innovations of the Nationalist movement must be as repugnant as to the higher classes the breach effected in the seclusion of the harem by the appearance of women in public life, or the appointment of a notorious agnostic to the high office of Sheik-ul-Islam.

* * * * *

Amongst Indian Mahomedans one may safely assume that the very slight impression made by Abdul Hamid's Pan-Islamic propaganda, already weakened before the war by the Turkish revolution and the dubious orthodoxy of the Young Turks, will prove to have been entirely wiped out both by Turkey's active co-operation with Germany in a war of which they have shared the sacrifices and the glories with the whole British Empire, and by the open substitution of Nationalist for Islamic ideals in the Pan-Turanian programme.

Unless the power of the ruling clique in Constantinople is finally crushed during the war, Pan-Turanianism may be a disturbing element for many years to come in Western and Central Asia. But it cannot conceivably repair the breach which its alliance with Pan-Germanism has made in the House of Islam so long as the vast majority of the world's Mahomedans, who have loyally stood to their allegiance to the Western Powers in the face of Turkey and turned deaf ears to the *Jehad* she has vainly presumed to preach, have a firm and continued assurance that their religion is as safe in the hands of their non-Mahomedan rulers as are their temporal interests.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I would call attention to an instructive article, which appears on the next page, on the subject of India's currency problem. The absorption of currency in that country has long been a serious problem in finance, and it tends to become still more so in view of the present position of silver. Unfortunately, the larger the circulation of money the greater the amount available for hoarding, and the well-informed writer of the article suggests that only a year of scarcity is likely to release the hoards to any considerable extent. The subject has a political side, for if the confidence of the native were shaken by fear of political developments in the direction of giving more authority to those whom he has no special reason to trust, his purse-strings will be tied all the tighter.

***

A sentence in a Chamber of Commerce *Journal* recently caught my eye. It read: "Our industrial salvation lies in looking to the East." Naturally I was compelled to read the whole article that led up to this eminently satisfactory dictum; but hardly followed the lines I had anticipated. The burden of the writer's remarks was to the effect that the shortage of shipping was likely to act as a tremendous stimulus to production in India, Japan, and China, because the fewer imports of manufactured goods would compel the Middle and Far Eastern countries to break out into industrial activity. Accordingly he took a very gloomy view of our economic outlook, unless the construction of ships was considerably accelerated.

***

This, to my mind, does not look at the picture in the right perspective. By all means let it be Ships, More Ships, and Still More Ships, in order that British products may reach overseas markets. But we cannot adopt the view—at least as far as the Middle East and India are concerned—that industrial activity in those parts is to be viewed askance, and, if possible, thwarted. After all, there are still undeveloped markets in the world, and competition is not necessarily unhealthy. The British manufacturer does not have to rely upon the absence of competing goods to capture or to retain his market. In so far, however, as the writer in the *Journal* preached the gospel of "Up and doing" he was on safe ground. He might have added that, if the development of industry he was inclined to dread did materialise, the British manufacturer might still find new outlets for his goods in the Middle and the Near East.

***

I am surprised to find that a good number of people still look upon the Near East as a region that will remain under the domination of the Central Powers, virtually to the same extent, if in a different manner, as it is at present. There could be no more hopelessly mistaken idea. The Allies would not have achieved victory if that were the case. I much prefer the robust faith of an Oxford professor, who reminded his audience that among the gains of the war was to be reckoned the fact that after the war the English language will have such a position as it has never had before. Armed ruffians, he said, can do some things, but one thing they cannot do; they cannot endear their language to those who have suffered from their violence. He thought that neighbourhood, kinship, and the necessities of commerce might retain for the German language a certain measure of custom in Sweden, Switzerland, and Holland, but he could not imagine Serbia, Norway, or Denmark being content to speak German. Then came this gem: "For the most part Germans will have to be content to be addressed in their own tongue only by those who fear them, or by those who hope to cheat them."

***

This is surely a shrewder estimate of the attitude of the Balkan countries towards Germany and Austria-Hungary. Even Bulgaria and Turkey, I feel fairly confident, will want a holiday from Germany and all her ways, while Roumania and the whole of the new Jugoslav State will loathe the sight and sound of all things German. That will not mean that they will be content to go permanently without the manufactured goods they need, but it does mean that they will ask for and expect to be supplied with British, French, or American goods. I should like to see manufacturers and merchants realising this fact and acting upon it. Not only will it be to their interest to cater for these markets, but it will be more or less of a bounden duty, with a view to enabling the peoples of the Near East to retain their self-respect and develop their capacity for withstanding the German thrust towards India.

***

In this connection attention may be called to the report that a number of great German and Austro-Hungarian concerns have formed a huge combine under the name of the *Europäische Handelsgesellschaft* at Bremen. The objects of the new organisation are said to be: To control and centralise the import trade of war products, animals, vegetables, textiles, minerals, and all kinds of raw materials from Russia, Persia, China, Roumania, and Finland; to organise a boycott and undermine the financial and commercial position of the pro-Entente neutrals. Officially the company will be liquidated, we are told, at the end of one year after peace is signed; but it will then enter upon an unofficial existence. I hope our pacifists, who inveigh against the enormity of contemplating the introduction of economic safeguards against Germany after the war, will note this indication of the lamb-like policy their friends are likely to adopt.

If any Egyptians are still in doubt as to the relative advantages of the British and the Turkish connection, they will do well to study the financial and economic positions of the two countries. Tables of retail prices at Cairo and Alexandria between 1916 and 1918 show an increase in the index numbers from 108 to 205 at the former, and from 130 to 210 at the latter, 100 being taken as the price of each commodity in July, 1914. The articles showing the worst records are flour (294 for Cairo, 341 for Alexandria in February, 1918), soap (320 and 233 respectively), and bread (313 for Cairo). In a recent *exposé* of the situation in Turkey Javid Bey, the Minister of Finance, stated that whereas the increase in the cost of living since the outbreak of war was 124 per cent. in Berlin, 178 per cent. in Vienna, in Constantinople it was no less than 1970 per cent.

***

He explained that a man, who before the war could live on £T2½ a month, could now only satisfy the same needs with £T41. As individual instances of the increase in prices he cited corn, which had risen 500 per cent., and petrol 2,000 per cent., when paid for, that is to say, in metallic currency; but in the case of paper money, which is presumably the ordinary medium of exchange to-day, the relative increase would be three times as much. The whole economic outlook in Turkey is considered to be sufficiently gloomy to call for the most drastic measures after the war for restricting and controlling not only exchange matters, but also all commercial operations with foreign countries.

***

It was quite obvious that the report telegraphed from Madrid last week that the Egyptian cotton crop had been sold to Spain was incorrect, for, apart from the fact that Spain could have no conceivable use for so much cotton, it would be unthinkable that the Allies in general and this country in particular could afford to dispense with this source of supply. It now appears that the report was based on a misunderstanding, due to the misinterpretation of a Spanish official telegram from Cairo.

***

A summary of the work in Ceylon of the Industries Commission up to date makes it evident that there are excellent prospects for starting new industries in the island. Unfortunately, the fuel question is bound to be a serious handicap to all industrial developments in Ceylon, and in the circumstances I am of opinion that the soundest policy for the present, at any rate, will be to concentrate on improving industries already established in the island in preference to attempting any new departures.

THE INDIAN BUDGET AND THE CURRENCY PROBLEMS.

The Hidden Hoard.

The Financial Statement for the ensuing year was submitted to the Imperial Legislative Council at Delhi, on March 1, and full particulars were received on this side about three weeks ago. Affairs at the front and the tension which preceded the announcement of the Home Budget have been so much more prominently before the public that consideration of the financial position in India has had little attention, but a brief study of the situation discloses many points of special interest. In the first place the retiring Finance Minister has to be congratulated upon the highly satisfactory surplus shown by the previous year's figures, a welcome result which no doubt had some influence with the Indian Government in their decision not to impose any increase in taxation for the current year. Sir William Meyer in his valedictory remarks refers to the difficulties and anxieties caused by the war in Indian finance, but apart from this, important factor, internal conditions reflect the prosperity with which India has been favoured during a succession of years of plenty.

One of the most striking points in his speech relates to the continued heavy absorption of currency. During the previous year the net issue to the public was 35 crores of rupees and for the current year as much as 24 crores had been issued already in addition to over five millions of sovereigns. This disappearance of coin has been one of India's problems for years, and it may well be asked where does all this currency go to. The only answer to this enquiry is that the well-known hoarding propensity of the native of India has been developed during the war, and the rupees are held up in hoards. It must also be borne in mind that large amounts of rupees have been shipped to East Africa and Mesopotamia for the requirements of our Forces, but the total has been spread over many months and is not sufficient to affect the general position.

It is hard to believe that such an enormous accumulation of wealth is lying idle, but it is a fact beyond dispute that this practice extends from the highest in the land to the lowly cultivator. It was hoped that the establishment of Swadeshi Banks would gradually educate the native to trust his savings to their care, but the collapse of a number of these institutions some years ago aroused suspicion and distrust which will take years to allay. No doubt a certain amount of rupees has gone into the melting pot for ornaments, but only to a trifling extent. In the case of sovereigns, however, they have been largely disposed of in this manner, and it was stated only recently in the *Times of India* weekly money article, that it was computed that as much as 30 million sovereigns had been melted down during the past three years.

A series of bounteous seasons has brought prosperity to the country and a considerable accession of wealth to the people. Having been accustomed to buy silver and silver ornaments in the neighbourhood of 75 rupees per 100 tolas, the native declines to buy at the present abnormal price, and prefers to conserve his rupees until the day when silver comes back to his level. The same may be said of piece goods, for which the demand has sensibly shrunk owing to higher values.

This absorption of currency is the most serious problem in finance which has confronted the Indian Government in recent years. If gold were available freely, it would readily displace rupees, but the scarcity of the yellow metal is probably felt more acutely in India than elsewhere, and ordinary sovereigns have long stood at a premium of 1½ to 2 rupees.

In this connection the establishment of a branch of the Royal Mint in India is a step forward—long advocated in certain circles. The Mysore gold output provides a supply which can now be treated and coined in the country, thus eliminating the risk and expense of transit and insurance to and from London. The lack of a refining plant has been felt in Bombay for many years, and this will no doubt form part of the equipment of the Mint. So far as the outlook is concerned the Indian Government has now completed arrangements for a large supply of silver to augment the shrinkage in the currency. It has recently been announced that they have secured from the United States Government 150,000,000 ounces, which is the larger portion of the amount at the disposal of that Government, owing to the melting down of 350,000,000 silver dollars sanctioned by the Senate. With the price in America practically fixed at a gold dollar per ounce very little variation need be expected in the London price, which now stands slightly under the parity at 49¼ pence, so that the Exchange Banks may consider themselves fairly safe against a repetition of the surprise which faced them a few weeks ago, when the Secretary of State suddenly raised rupee rates one penny.

It is to be hoped that the troubles surrounding the currency question in India have thus been surmounted for some time, and it is only reasonable to assume that a certain proportion of rupees will gradually flow back to the Treasuries during the slack months of the Monsoon. It cannot be expected, however, that conditions will approach anything like their normal state so long as the war lasts, unless perhaps in the event of a year of scarcity in India, which would undoubtedly have the effect of loosening the purse strings and releasing rupees from their hidden hoards.

CO-OPERATION IN INDIA.

The Department of Revenue and Agriculture of the Government of India has issued statements in book form showing the progress of the co-operative movement in 1916-17. The number of societies rose to 23,036, as against 19,675 in 1915-16. These comprised 757 central societies (including provincial banks and unions) and 21,070 agricultural societies (including cattle insurance and re-insurance societies), as against 605 central and 18,051 agricultural, and 1,019 non-agricultural societies in 1915-16. The membership at the end of the period was 1,045,425, as against 918,436 in the previous year, and the capital was Rs1,223 lakhs, as against, roughly, Rs.1,032½ lakhs.

INDIA'S SILVER HOLDING.

Messrs. Samuel Montagu and Co. report that the price of silver has now reached a point at which silver costing a dollar per fine ounce on the other side of the Atlantic can be supplied to this market at a reasonable profit (insurance, carriage, etc., included). Unless something unexpectedly happens, future movements of the price are likely to be on a very limited scale. An important act of legislation has been passed by the United States Senate, which, while demonstrating the cordial co-operation in finance between the United States of America and Great Britain, relieves the strain of providing silver for Indian coinage. The Bill grants power to melt 350,000,000 silver dollars (about 271,000,000 fine ounces), and to dispose of the bullion, to be replaced by subsequent purchases. As information has been cabled from India that the Indian Government has secured 150,000,000 ozs. from the United States Government, a further 121,000,000 ozs. are available for such purposes as the United States Government may decide. The amount of 150,000,000 ozs. is sufficient to provide 4,363 lakhs of rupees, a sum which should be adequate to meet currency demands for some considerable time. It was announced in Parliament on the 24th inst. that about 198,000,000 fine ounces had been purchased for coinage between February, 1915, and March 31, 1918 (average price 39.03d.). The holding of silver by the Indian Treasury on January 31, 1915, was 3,030 lakhs, and on March 31, 1918, 1,079 lakhs—a reduction of 1,951 lakhs. As 198,000,000 ozs. of silver can be minted into 5,760 lakhs of rupees, the net absorption in the period mentioned was 7,711 lakhs. Therefore, even at the high rate of absorption indicated, 150,000,000 fine ounces of silver would suffice to maintain the silver holding at the same level for about 12½ months.

Below are given the latest Indian currency returns:—

In lakhs of rupees.

	April 15.	April 22.
Notes in circulation	10,183	10,198
Reserve in silver coin and bullion	1,259	1,169
Gold coin and bullion in India	2,330	2,300
Gold out of India	45	45

Under an Ordinance passed in India on April 15, the silver holding includes silver in or en route from the United States.

BAKU OIL WELLS.

According to a Reuter message from Amsterdam the Berlin correspondent of the *Koelnische Volkszeitung* says that an extremely disturbed state of affairs appears still to prevail at Baku, as a result of which the export of petroleum to the Black Sea ports has ceased. It is also reported that the oil wells have been destroyed.

Mr. Walter St. D. Jenkins, Assistant Director of Navy Contracts, has been appointed by his Majesty's Government as one of the Government Directors on the Board of the Anglo-Persian Oil Company, Ltd.

EGYPT'S TRADE.

February Imports and Exports.

(From Our Own Correspondent.)

Cairo, April 1.

The Customs returns for February show an increase in both imports and exports as compared with the corresponding month of the preceding year. During the month imports came to £E3,750,381 and exports to £E3,918,067, as against £E2,174,750 and £E3,730,287 in February, 1917. So far this year imports are £E1,943,485 up and exports £E1,249,901 down on the figures for last year.

Imports.

The chief items under imports were hides, skins, and tanned goods, £E38,003, of which 60 per cent. came from England and 30 per cent. from France, rice £E25,689, wheat and maize flour £E43,873, and natural indigo £E32,110—all these from India—coffee £E47,714, two-thirds from India, tea £E36,380, of which 90 per cent. from British Far Eastern possessions, stationery £E109,191, of which 60 per cent. came from England, matches £E145,163, two-thirds from Sweden and the rest from Japan, coal £E746,382, and soap £E51,257, all from England, medicinal preparations £E49,898, of which 80 per cent. from England, and textiles £E1,591,240, two-thirds were sent from England, who supplied (with India) all the cotton yarn and thread, all the woollen textiles and 90 per cent. of the cotton piece goods, India as usual sending all the sacks (£E157,497), manufactured iron and steel £E108,709, of which over 90 per cent. came from England, and tobacco £E195,853, which came as to 60 per cent. from Greece and 13 per cent. from Japan.

Exports.

The main heads of exports were eggs £E71,876, hides and skins £E39,065, cotton seed £E139,541, sugar £E100,484, gum £E31,557, cotton £E3,407,150, and cigarettes £E34,786. England took all the eggs, cotton seed, 20 per cent. of the gum and two-thirds of the cotton. Over 80 per cent. of the sugar went to French Mediterranean possessions and 14 per cent. to India, which also took all the small quantity of salt exported. America took 15 per cent. of the cotton, and Italy 8 per cent., the rest being divided between Spain, Switzerland and France. No cotton cake or wool was exported during the month. Cotton exports increased by £E376,207 in value and 66,985 cantars in volume; sugar fell off by £E48,329 and 2,415 tons.

Great Britain's share is steadily rising. Compared with February, 1917, her sales to Egypt very nearly trebled, whereas the total imports only rose by 70 per cent., whilst her share of the exports increased by 60 per cent., as against an increase of but 5 per cent. in the total figure. Indian imports quadrupled during the month, but Australian decreased very much, owing to a fall in meat imports. All countries showed a diminution in imports with the exception of France, Japan and Sweden, whilst under exports Spain and Italy were the only countries which had any marked increase, the rest for the most part having very considerable decreases.

The Sudan.

Trade with the Sudan continued to be satisfactory. Imports from that country into Egypt amounted to £E212,064, as compared with £E167,883 during the previous February, and exports in the opposite direction rose from £E89,440 to £E116,112. The chief imports into Egypt were maize £E26,481, dried french beans £E12,143, sesame £E19,490, gum £E44,664, charcoal £E5,462, and livestock £E70,145. The principal exports from Egypt into the Sudan were refined sugar £E15,765, cotton piece goods £E16,047, and tobacco £E13,277.

A NEW COMPANY.

Egyptian Vegetable Produce, Ltd., 52, New Broad Street, E.C.—Registered April 19 to carry on the businesses of growers, buyers, preservers, of de-hydration or other processes, bottlers and packers of fruit, vegetable, and other perishable produce, etc. Nominal capital £35,000 in 50,000 £1 participating preference shares and 100,000 1s. ordinary shares.

EGYPTIAN CROP REPORTS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in March :—

Cotton.—Although changeable, the weather has been on the whole favourable. Water supply has been abundant. In Upper Egypt and the southern part of the Delta the greater part of the area intended for cotton has been sown. Germination has been regular, but the cold weather at the beginning of the month slightly checked the growth of the early-sown cotton, which was also somewhat damaged by rain, thus necessitating some resowing. Slight local attacks of mole cricket, cut-worm and sore-shin are reported, the last-mentioned necessitating an additional small amount of resowing.

Wheat.—The crop, on the whole, has not been adversely affected by the variable weather which ruled during the month of March. Damage from rains at the end of February and in the course of March is very limited and confined to the recently-watered low-lying lands. Water supply plentiful. Baladi wheat, especially the late-sown, is seriously attacked by rust in several provinces, and particularly in Sharqîya, Qalyûbîya, Beni Suef and Giza, where the damage caused is reported as being considerable in places. The Hindi wheat is remarkably free from this pest. The attack of smut, while general, does not appear to be doing much harm. Early plants are in their ripening stage and the general condition of the crop is satisfactory; in spite of the rust attacks mentioned above the notation figure for country remains unchanged.

Barley.—The weather has been favourable though variable, and the showers of rain had no damaging effect on the crop. Water supply ample. Attacks of rust and smut are slight and of no great consequence. The crop is well advanced and on the verge of maturity.

Beans.—The weather, on the whole, has been favourable, the rainfall during the month having done more good than harm. Some trifling damage was caused by high winds in Daqahlîya. Water supply sufficient. Rust is fairly common but the damage done is insignificant. The predominance of broomrape has only been noticed in local areas such as in parts of Sharqîya, Qalyûbîya and Minya, where small areas under beans have been destroyed by the parasite. The bean crop is distinctly better than last year.

Onions.—Weather favourable and water supply ample. A weak attack of mildew is reported from Beni Suef, and damage is slight. The crop is maturing, and harvesting of the ripe onions has taken place on early-sown areas. An average yield per feddan is expected.

Lentils.—The crop is healthy and in a satisfactory condition. Harvesting has commenced in Asyût and the provinces further south.

Sugar Cane.—The delivery of last year's crop to sugar factories is practically over. Preparation of the land for the new crop and planting are in full swing. Owing to the restriction of cotton acreage, the area under sugar cane this year is expected to considerably exceed that of last year. Weather conditions are said to have materially reduced the sugar content of the canes coming to the mills at present.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The conditions prevailing in the market during the week have been very perplexing. A further slump in American cotton rates has occurred. The tone in Liverpool and New York has been very unsettled. Spinners and manufacturers here have stood their ground remarkably well, and buyers of yarn and cloth have found it practically impossible to obtain any concessions in price. Business has been of restricted dimensions, neither buyers nor sellers being disposed to enter into negotiations of importance. Numerous rumours have been circulated, followed by contradictions. We are undoubtedly passing through a very anxious time for all engaged in our industry. Egyptian cotton prices all round have been well held. There is no particular news relating to the crop. Yarn producers are exceedingly busy, and in most counts and qualities demand exceeds supply. In cloths suitable for Egypt there has been no activity worth mentioning. Favourable advices have been received as to the conditions in Cairo, but the confidence of shippers as to placing orders with manufacturers has been destroyed. The turnover in certain light fabrics for India has been fairly substantial, and some producers of mull dhooties and jaconets are now more deeply sold. Scarcely anything at all has been done for China and the minor markets of the Far East. Printing cloths have not attracted much attention for South America. Some manufacturers, owing to the scarcity of yarn, are now reducing their production from 60 to 50 per cent. The position of supplies of American cotton has caused increased apprehension. Of the stock in Liverpool, of 200,000 bales only 30,000 bales are unsold. Spinners of American yarns have been very independent. Stocks at the mills are non-existent, and producers can afford to dictate terms of fresh contracts to their customers. Only a sorting up trade has transpired in shipping yarns.

POWER LINE TO MOROCCO.

Regular Service of First-Class Steamers taking cargo to and from **London** and **Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi** and **Mogador.** Loading Berth—Morocco Wharf, Wapping.

SAILINGS FORTNIGHTLY.

The hulls of the above steamers are insured under the Government War Risk.

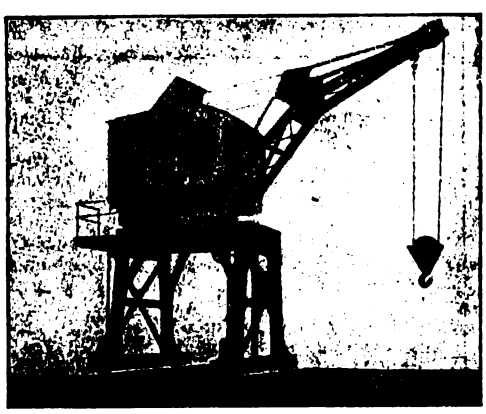
ENGINEERING NOTES.

Repairing German Ships.



It seems that the reason for the extraordinarily rapid repair of the German ships in the United States harbours is that American engineers discovered a method of welding the fractured cast-iron without removing any part of the damaged machinery from the ships. The process is so very efficient that the repaired parts, it is asserted, are now stronger than before.

A Hemp Harvesting Machine.

Hemp is an annual plant, the woody fibre of which constitutes the hemp of commerce. The plant grows generally to a height of 5 to 9 feet, but in the East it seldom reaches the latter height. When fully grown the stalks are harvested by hand in a rather primitive way, tied into bundles and steeped in water for some days; afterwards they are spread on the grass to bleach. The subsequent operations of cleaning, heckling, spinning, etc., in order to make it into twine, canvas, sacking, etc., are so tedious that peasants in the East, when they wish to speak of something difficult, often use the expression "as troublesome and tedious as the manipulation of hemp." Harvesting hemp by hand is a difficult operation, and peasant labourers are not always willing to undertake it, hence, apparently, the restriction in the cultivation of the plant in some parts in the East, where proper machinery has not yet been introduced for the purpose. In recent years special machinery has been introduced for certain operations after harvesting. As a rule, the machinery is similar to that used for flax, which has been described in previous notes. Flax harvesters, however, are not always suitable for harvesting hemp; therefore a new hemp harvester which has recently been brought out will interest hemp growers in the East. This harvester has been devised with the idea of enabling hemp to be grown on a large scale. The hemp harvesting machine is of necessity much larger and heavier than a wheat or flax harvester, for hemp at its best, as mentioned above, grows to a height of from 5 to 9 feet. This height, which produces the best fibre, necessitates a wider platform on the harvester, and the reel has to be much higher and fitted with special fans. A heavy knife, with special guards, is also essential. In order that the hemp may be spread on the ground so that it can ret properly, and so that each swath may be moved out of the way of the horses and the harvester on its next round, the hemp is moved to the right and placed down at right angles to the machine. A circular carrier accomplishes this purpose, and this mechanism lays the hemp in a nearly straight line, and at almost a perfect right angle to the harvester. Three machines are required to complete the cycle of harvesting hemp and producing the fibre. The retting process requires from two or three weeks to two or three months, depending on the humidity and temperature. Then when this process is complete, the hemp-binder picks up the hemp and ties it into bundles. These are shocked in a similar way to the treatment of maize, with the exception that the shocks are made more open to permit a freer circulation of air. When the shocked hemp is ready it is taken to the breaker, and from the breaker it goes to the scutcher, which combs out and removes the pith and pulp from the fibre.

A New Wheel-less Plough.

A new plough which has recently been brought out, and is attracting considerable attention, will undoubtedly interest numerous agriculturists in the East, who, as a rule, complain that mechanical ploughs or tractors are too liable to get out of order, or to break down, especially when operated by unskilful hands. This new plough is made as a unit with the tractor, and one of its most noteworthy features is its extraordinary lightness of draught, due to its light weight and the design of breasts and shares. Primitive simplicity, combined with modern efficiency, has evidently been one of the chief aims of the designers, for it is constructed of less than half the number of parts to be found in other one-man ploughs. It weighs only about a third of other implements of the same capacity; it is wheel-less, and the quality of its work is, according to those who have seen it at work, all that could be desired. It is a two-furrow plough, but by merely moving a rocking lever one furrow can be "cut out" and the headlands marked off with one furrow only. When the plough strikes any ordinary obstruction it rides over it; and if the share should get underneath a stone or a tree root a safety pin breaks and saves the plough. Owing to this pin, and to a number of other features incorporated in the design, ploughing can, it is said, be carried on at a speed hitherto unknown in this country. By moving the rocking lever to the desired extent, when laying out a field, the inside furrow can be made to plough shallow and the outside one deeper, so that a "back" can be thrown up as perfectly as with a horse-drawn implement. A control-lever beside the driver not only lifts the plough at the headlands, but also regulates the depth of work, which can be adjusted whilst the tractor is in motion. In finishing headlands, a great advantage is claimed for this plough. The large disc coulters on the implement prevent the loose sods at the furrow ends from choking up. The entire construction is, it is claimed, so strong and simple that it is practically impossible for anything to go wrong, and any novice can handle it.

10-ton Electric Jib Crane.

CRANES

For RAILWAYS, DOCKS, HARBOURS and WORKS.

COMPANY NOTES & REPORTS

Burma Chemical Industries.

The report of the Burma Chemical Industries, Ltd., just issued, shows a total profit for the year of Rs.96,664, and a dividend of 22½ per cent. is recommended.

Ionian Bank.

The report of the Ionian Bank, Limited, states that the net profit, after payment of all expenses and making provision for all bad and doubtful debts, depreciation of securities, losses, and for excess profits duty, amounts to £72,884, to which has to be added £7,147 brought forward, making a total of £80,031, out of which an interim dividend at the rate of 6 per cent. per annum, free of income tax, absorbing £14,567, was paid on September 18, leaving a balance of £65,464. From this sum the directors have placed to reserve £10,000, bringing it up to £85,000, and added £3,837 to staff pension fund, bringing that fund to £20,000. They have further deducted £23,070 for the purpose of reducing to market value the £76,900 Greek Government Guaranteed Two and a-Half per Cent. Gold Loan of 1898, held by the bank and deposited with the Bank of England under the Greek law of 1898 relating to specie advanced against forced currency. By this step two items disappear from the balance-sheet which for some time have appeared in previous ones; on the debtor side £3,076, the reserve to reduce to par the book value of these bonds, and on the creditor side their book value, £79,976. Henceforth this security will appear under the head of investments, although held by the Bank of England under the joint control of the International Financial Commission and this bank. There remains a balance of £28,557 to be dealt with, and the directors recommend a final dividend at the rate of 6 per cent. per annum, together with a bonus of 1 per cent., free of income tax (making a total distribution for the year of 7 per cent.), which will absorb £19,423, leaving £9,133 to be carried forward. The dividend and bonus, if agreed to, will be payable on and after May 14.

Aboukir.

The report of the Aboukir Company for 1917 states that the only sale was that of 14 feddans 1 7-24 kirats. The rent roll for the three Aboukir divisions and the Bourlos Estate for 1918 (figures for 1917 in parentheses), is as follows:—Total area, 12,184 feddans; area let, 7,676 feddans (7,230); rental, £E38,395 (£E33,671); average mm., £E5,000 (£E4,660) average rent £E5 per fedden. The trading profit was £21,096, against £407 in the previous year, and balance of payment to Egyptian Government on their taking over the main canals and drains was £6,154, while provision for income tax was £1,700, leaving £13,152; £588 was brought in, making £13,740; added to reserve £10,000, leaving to be carried forward £3,740. The directors are unable to recommend the payment of a dividend.

Agricultural Bank of Egypt.

The report of the Agricultural Bank of Egypt for the year ended January 31, 1918, states that the net profits for the financial year 1917-18 amount to £E1,047,462.935. After deductions for various services there is left a balance of £E447,284.162 available to the extent of one-half (£E223,642.081) for the ordinary shares and one-half for the deferred shares.

The amounts therefore available for dividend on the ordinary shares are as follows:—Balance from the year ending January 1, 1917, £E80,978.627; interest for the year, accrued on the above balance, £E3,711.492; total, £E84,690.119; to which must be added, for dividend at the rate of 5 per cent. per annum, £E120,900, and the further amount available, £E223,642.081, making a grand total of £E429,232.200. The directors propose to pay a dividend at the rate of 8s. per annum for the financial year 1917-18, amounting to £E193,440, and to carry forward the balance of £E235,792.200. The amounts available for dividend on the deferred shares are as follows:—Balance from the year ending January 31, 1917, £E41,519.161; interest for the year accrued on the above balance, £E1,902.948; and the further amount available, £E223,642.081, making a total of £E267,064.190. The directors propose to pay a dividend of £40 per share, amounting to £E78,000, and to carry forward the balance of £E189,064.190. In view of the important balances carried forward from 1916-17 to the credit of the ordinary and deferred shareholders, the directors consider that interest should be credited for the year on such sums. As regards the proposed dividend, they strongly recommend a further increase of the amounts to be carried forward for the same considerations by which they have been guided in fixing the dividend of last year. The large collections of 1917-18 are due to exceptional causes and cannot be regarded as normal; it is advisable therefore to ensure, if possible, some uniformity in the dividends for the years to come. On January 31, 1918, the total arrears outstanding were £E403,786, against £E817,254 on January 31, 1917. Of this sum £E141,186 represent interest. The whole of the remainder, viz.: £E262,600, representing capital overdue, has, as required by the Statutes, been deducted from the profit and loss account before arriving at the balance available for distribution.

The sums collected during the past year from the annual instalment due and from the arrears of past years are considered satisfactory. £E629,994 were collected out of the annual instalment of £E702,019, and £E485,493 from the arrears, making a total collection as regards these two items of £E1,115,487. The company's encashments therefore exceed the annual instalment by £E413,468, and the total of outstanding arrears is decreased by this amount. The war has brought great agricultural prosperity to Egypt, and it is chiefly due to the high prices realised for agricultural produce that the arrears have been reduced to £E403,786 as compared to £E817,254 last year and to £E1,394,546 at which they stood on January 31, 1915. There is every reason to expect that the cereal crop of the year under review will be sold at good prices, and that the 1918 cotton crop will be realised at prices considerably higher than those prevailing before the war, owing to the arrangements made by the British and Egyptian Governments.

The agricultural prosperity of Egypt owing to the war is also shown by the result of the land sales during the past year. The area of land which the Bank found it necessary to acquire during 1917-18 was 1,144 feddans, as compared to 2,610 feddans in 1916-17, and we have sold 3,646 feddans as compared to 2,923 with previous year; the land holding has thus decreased by some 2,501 feddans.

Dividends, Payments, etc.

The Anglo-Egyptian Land Allotment Company announces that coupons No. 9 of the Ordinary shares and No. 1 of the Founders are now payable at the Anglo-Egyptian Bank, 27, Clement's Lane, E.C., the former at piastres 28 per share, and the latter at piastres 2.5, both at 97½ rate of exchange, less tax.

The ordinary general meeting of the Ionian Bank, Limited, will be held at the offices of the company, 25, Abchurch Lane, E.C., on May 13.

Oil Outputs.

ON 'CHANGE.

THROGMORTON STREET, Tuesday evening.

Our Stock Exchange being closed to-morrow, this has been a very short week. On the whole the market has been firm, with a small amount of business passing at steady prices, and, with any assistant improvement in war news, the market looks ripe for a general advance.

Egyptian Government stocks have continued in strong demand, and a certain amount of business has been done round current prices; but had sellers been more numerous, the business transacted would have been on a much larger scale.

In Bank shares Agriculturals are 1-32 firmer at 6⅞, at which price a few hundred shares changed hands to-day. Agricultural Preference have again improved 1-16 to 7, there having been a small persistent demand for these shares. In Anglo-Egyptian Banks a fair number of shares have changed hands round 15½, and Land Banks have improved ⅛ to 6⅞; but no business has been carried through, as there have been no sellers.

In Land shares Aboukir, in spite of the excellent report and accounts issued to-day, have dropped 6d. to 20s. 9d. The report shows that the debt to the bank has been reduced by half to about £19,000, and that the profits for last year could have provided a dividend of over 6 per cent. on the ordinary shares, and this practically without any sales of land whatever. Allotments are unchanged at 4⅛ ex. dividend. The rate of 7 per cent. paid on these shares as against 3½ per cent. last year was a very pleasant surprise as well as the initial dividend of about 6d. per share on the deferred shares. In Delta Lands some 500 shares or so were done round the current price. Gharbieh have been wanted at 1 13-16, but there are no sellers under 2. In New Egyptian some transactions have taken place between 17s. and 17s. 6d., and a fair amount of support has come from Egypt. For Behéras and Union Foncière there are some buyers at low prices, but sellers show no disposition to reduce their limits.

Amongst Miscellaneous shares Khedivial Mail are again 6d. lower at 36s. 6d. and some small transactions have taken place in Markets, Salts and Alexandria Water at about current values.

In Greek securities the market has again been very strong, but practically no business has been done. Monopoly and Funding have risen a further point to 55 and 56 respectively without satisfying buyers. In the other Greek stocks there are also buyers round last week's prices, but no sellers. Ionian Banks are up ½ to 5 on the very excellent report just issued, a dividend of 7 per cent. free of tax being paid as against 6 per cent. last year.

Indian trade returns for March show that, as compared with last year, imports decreased by £1,640,000 and exports by £1,034,000.

The British Chamber of Commerce of Egypt has altered an article of its Statutes with a view to permitting "any person, or firm, not being British subjects, to subscribe to the 'Monthly Journal,' such subscription not constituting any right to membership, or attendance at any meeting of the Chamber."

NOTES OF THE WEEK.

On the Eastern fronts the week has seen an important development of the operations in Mesopotamia. Last week our forces pushed forward on the road to Mosul; it is now reported that they entered Kirkuk on May 7 without opposition. The Turks retired before our advance, leaving 500 men behind in the hospital, and also three damaged aeroplanes. Kirkuk is about two-thirds of the way on the road to Mosul; it remains to be seen whether the Turks intend to give further ground. It was obvious from the British announcement issued last week that our advance was not intended as a mere reconnaissance.

In Palestine, on the other hand, our troops have met with a check. For the second time within five weeks they pressed east of the Jordan to the south of Es Salt. German and Turkish prisoners were taken, but in the course of these operations a mounted brigade was attacked by a superior force of the enemy, and compelled to fall back, while the horse artillery batteries supporting the brigade had to abandon nine guns.

The fighting continued for several days, and it was announced on May 6 that the situation had altered to our disadvantage. The enemy appears to have been reinforced by troops brought down by the railway from Damascus, and this left no option but to retire. We hold the bridgehead across the river, and the operations of these few days have given us nearly a thousand prisoners; but the fact remains that we have not succeeded yet in the trans-Jordan campaign.

It is suggested that the Turks have weakened their Mesopotamian front by the withdrawal to the Palestine area of the two German divisions which were understood to have been sent there. What the truth of that may be we cannot say; if it is the fact, it would explain the lack of resistance shown to the Mesopotamian force in its famous ride forward a few weeks ago; and it would also indicate, of course, that in the opinion of Berlin the road to Egypt is, for the moment at least, of more importance than the road to the Persian Gulf and India. That may be due entirely to military considerations, as it is quite likely that the Germans preferred to defend Palestine rather than Mesopotamia on the score that it affords shorter and more rapid transport; but it is worth noting that it coincides with a political push by the African party in Berlin, where the Zimmermans and Solfs have been very vocal of late.

An article in the *Münchener Neueste Nachrichten* has some bearing on the increased Turkish activity in Palestine. Major Endres, in that paper, states that General von Falkenhayn is no longer in charge of the Turco-German operations, and has been replaced by General Liman von Sanders, who was formerly head of the German military mission at Constantinople. Falkenhayn has, or had two years ago, a considerable war reputation, but when he was sent from Berlin to Aleppo it was suggested that this was a species of Stellenbosching. Apparently he has not justified himself in Asia Minor—certainly the Turkish disasters of last year reflected no great lustre on him—and he seems now to have come altogether "unstuck." Whether his successor will be able to arrest the military decay of the Ottoman Empire seems problematical.

As to the British forces opposing him, it would obviously be improper to do more than place on record General Maurice's much-discussed statement regarding the Prime Minister's recent declaration. On April 9 Mr. Lloyd George said: "In Mesopotamia there is only one white division at all, in Egypt and in Palestine there are only three white divisions, the rest are Indians or mixed with a very, very small proportion of British troops in those divisions—I am referring to the infantry divisions." "That," says General Maurice, laconically, "is not correct." Further comment on the General's correspondence and the Prime Minister's accuracy seems undesirable. The whole subject will be discussed in the House of Commons, probably with the usual heat and absence of light which distinguishes current home politics.

On those portions of the Eastern fronts in which British troops are not engaged the Germans have been more active than the Turks. They have announced the capture of Sebastopol, and also of Taganrog, which lies forty miles west of Rostoff-on-Don, on the Sea of Azov. and they have secured the great Donetz coal-mining area. Incidentally they have seized the Russian Black Sea Fleet and the Russian merchant vessels, so that the Black Sea is now in effect a German *mare clausum*, as was foreseen.

How this procedure can be reconciled with the Treaty of Brest-Litovsk by no means appears; it must in fairness be admitted that it does not trouble the Germans

another protest, but protests not backed by force are utterly useless; the Ukraine Government is said by the Germans to be headed by a convinced pro-German. Presumably they saw to it that such a person was placed at the head of affairs at Kieff, in order to fulfil their aim of turning the whole country into a German province. But the German aim is fixed further afield: the Ukraine is only the high road to the East, and the enemy are certainly taking up the attitude that high roads are made to be trodden on.

Whatever ambitions the Germans may cherish further East, they cannot be altogether comfortable as to the reception they will obtain in Persia—if they get so far. Persia has this week announced that the 1907 treaty is no longer operative, as indeed it ceased to be in fact when the Russian Government, one of the chief signatories, collapsed; and the Shah has also contributed a hundred thousand dollars to the American Liberty Loan through the United States Minister at Teheran. Subscription to a loan, as the Germans will not need to be reminded, is usually looked upon as a sign of sympathy with the cause the loan is intended to assist, and is a step which indicates at least an attitude of benevolent neutrality on the part of the subscriber.

The German peace terms to Roumania are even more harsh than was at first anticipated. They include (a) the surrender of territory, (b) the limitation of internal sovereignty, and (c) the surrender of economic control. Each point demands separate consideration. As regards territory, the soil ceded by Roumania appears to coincide roughly with the details already published in THE NEAR EAST; the inhabitants of those regions are to have the option of choice regarding their nationality. If they choose to become Austrian, or Bulgarian, presumably the path will be made fairly easy for them; if they declare themselves Roumanian, they will probably have to realise their property for whatever it will fetch, and quit the country. So much for the Austrian talk of "no annexations"; Roumania cedes territory and obtains nothing.

As regards the second point, the German-Austrian armies are to continue in Roumania for some time after the conclusion of peace—a fact which should be remarked by those who still maintain that the Germans are short of men on the Western front—while the Roumanian armies are to be demobilised, and their peace strength is stated in the treaty. The last time on which such a humiliating condition was exacted was when Napoleon imposed it on Prussia over a hundred years ago; a condition of this kind, it need hardly be said, is fundamentally different from paying an indemnity or handing over a fleet or munitions of war. These last only affect the present; the limitation of future armaments touches the future, and is, therefore, a distinct limitation of national sovereignty.

As regards the economic conditions, which will be examined in detail next week in our commercial columns, they carry out in commerce the same limitation of sovereignty as the army conditions do in the military sphere, but even more drastically. Roumania will at least be in control of the army that she is allowed to maintain; it is doubtful whether she will be able to control her commerce. It is true that she is to have "an assured trade route to the Black Sea" by way of Constanza, but how far the assurance will hold good, and what, in any case, it will be worth when the Black Sea is in Turco-German control, and Roumanian produce is controlled by a German-Austrian Commission, is more than dubious.

The Germans are good imitators. They have formed a Committee for the purpose of furthering Jewish colonisation in Palestine. But the Committee (which includes such men as Dr. Delbrück, Count Westarp, and Herr Erzberger, the Catholic and author of the now notorious peace resolution) is in any event a little late in the day; it is not to include any Jews among its members, which is a tactful recognition of Jewish disabilities still existing in Germany; and it is to work within the limits of German Oriental policy, which means that German interests will be considered first and those of the Jews, who, after all, arrived in Palestine even before the Kaiser, very much last. We need not expect much of this project.

A grandiloquent scheme has appeared in a Swedish newspaper, the *Folkets Dagblad*, which professes to derive its information from Finnish politicians who are pushing Germany's interest in what is now becoming a German province. It is suggested that the Finnish railway system should be enlarged, and direct communication be established between the North Cape and Constantinople; by which means Germany would hope to cut off Russia altogether from Western Europe, and obtain a line of subsidiary states along her eastern border from the Arctic to the Caspian. It is further suggested that Japan might be given Siberia, if she joined this Alliance—and incidentally deserted her Allies. (The recurrence of this suggestion for an alliance between Germany and Japan proves quite clearly that Berlin desires it, but why she should consider it necessary to insult Japan on every occasion by presuming her desertion of her Allies is not clear.)

The Finns are a cultivated race who, to spite Russia, love Germany, and seem likely to elect a German prince to be their king; but, although love in this instance is particularly blind, the rudiments of sanity should still be left at Helsingfors. The fantastic idea of a north-south railway from Finland to Turkey, which would have hardly any traffic, should not deceive them; what is intended is that Finland and Lithuania should become German colonies in the Baltic, as Turkey and the Ukraine are on the Black Sea. It is very extraordinary how exactly German policy is now reproducing the methods of Napoleon in setting up a whole series of paper states, with paper constitutions, in order to provide against any restoration of the fallen enemy. These paper states had the stability of paper a century ago—there is no reason to suppose they will be much more stable now.

A curious statement has been made by M. Radoslavoff in the Sobranje to the effect that Bulgaria is greatly interested in the formation of an independent Albanian State, and will support all Albanian aspirations in this respect. Exactly what Bulgaria's special interest in Albania may be it would be difficult to define; but the remark was probably made in order to warn Austria, which has her own ambitions in this part of the world, that she will have to reckon with Bulgaria in the settlement. One cannot conceive that the warning will have much effect in Vienna, where they understand well enough that a good many other people besides the Bulgarians will have a voice in the future of Albania.

The official announcement of the results of the War Conference at Delhi cannot, we fear, have told very much to the man in the street, but when carefully examined it will be found to bring out clearly the essential conditions governing the war-activities of India. To put it quite shortly, India is possessed of resources which are actually great, and potentially almost unlimited, but the supply is to a large extent unorganised, while compulsory organisation is in most cases ruled out by obvious considerations. That being the case, reliance must be placed largely on social pressure: opinion must be informed, or even created, and the energies of individuals must be set to work so as to produce the maximum result. The function of the Delhi Conference was to press forward organisation on these lines, and not to produce immediate results of a sensational kind.

Looking at the problem in rather greater detail, we may classify the resources of India as men, money, and essential supplies. As regards men, a *levée-en-masse* is obviously out of the question, while conscription limited to the classes of known or suspected military value would be so exceedingly invidious that it must be regarded only as a last resort. There remains the quota-system, which has been adopted during the past year with startling results, the usual number of recruits having actually

Digitized by Google

been multiplied thirty-fold. That is a great achievement, but the success has been very unequal; some tracts have done magnificently, while others have fallen far behind the quota they were asked to produce, and the obvious need now is to stir up the people of influence in these defaulting districts. If all can be brought into line with the best, the needs of the situation will probably be met.

The position in regard to money is substantially the same. Any attempt at a compulsory levy of capital would be doomed to failure in a country where money is so very ready to go underground; but last year, and largely as the result of social pressure, India lent over thirty-six millions sterling, or well over sixty millions, if Treasury Bills are taken into account, an enormous figure compared with the two or three millions for which Financial Members used to beg in times of peace. In this case, also, as in the case of recruitment, the achievement was very far from uniform; some provinces did splendidly, but others have been very backward, and the task to be attempted this year is to bring the average up to the best, ensuring a real success for the loan which is to be issued, and, we hope, bringing back some portion of that silver, the absorption of which presents at the moment one of the most urgent problems before the Administration.

As for other essential supplies, the work of the Indian Munitions Board has already borne abundant fruit, and the hope is now justified that while these activities have been directed primarily to helping in the war, they have also laid the foundation of a large and permanent development of production. Here, again, energy must be organised to cope with the difficulties attendant on the supply of labour and capital, and to ensure a local market in the numerous cases where efficient production depends on a large turnover. And so we reach the conclusion that the main need in India now is the widespread and intensive organisation of much energy which has hitherto run to waste, and that formula will be found to cover the most important recommendations of the Conference.

Englishmen, who do such things almost instinctively, may ask what is the necessity for all this to-do. The answer is that India's natural bent is towards improvisation rather than organisation. Previous Governments could put enormous armies in the field, but could not keep them there for more than a few months; they established great charitable and educational foundations, and let them fall into swift decay; throughout the history of the country the twin principles of creation and destruction have gone hand in hand. For some time now India has been learning the meaning of the new commandment which bids us "keep on keeping-on," but until the lesson is finally mastered, her immense potentialities will never be entirely realised.

THE QUEEN'S MESSAGE.

A Reuter's message from Salonika, dated May 4, announces that the British Commander has issued a special Order of the Day to the Salonika Force containing the recent communication from Queen Mary embodying her message from the women of Great Britain at home to the men of the Navy, Army, and Air Force, and the Commander-in-Chief's reply. The latter is as follows:—"In the name of the Army under my command, to whom I have communicated your Majesty's gracious message, I desire to convey to your Majesty and the women of the British Empire our thanks for your prayers, our admiration for your courage and sacrifices, and our pride in the confidence you place in us."

Among other messages received in reply to the Queen's letter is the following from the Commander-in-Chief in India:—"The Army and Air Force in India are profoundly touched by your Majesty's gracious message. With the help of God we will not fail to be worthy of the trust you have confided to us."

From Mesopotamia comes the message:—"Your Majesty's kind and gracious message has profoundly touched the hearts of all ranks in Mesopotamia. We realise only too well what a noble part the women of the British Empire are playing in this gigantic struggle for the liberty of mankind, and cannot but admire the fortitude with which all are facing the trials imposed upon them. Our sympathy and thoughts are with you, and will be to the end. May God keep you safe and sound until we return."

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 25.

The Question of Supplies.

The question of the control of supplies has now been put on a proper basis. An agreement as to the policy to be followed and the form of control to be set up has been come to between the Egyptian Government and the military authorities, who are interested in the matter not only from the political standpoint but also from the point of view of their own supplies; and a notice has been issued over the signatures of the Prime Minister, H. E. Hussein Rushdi Pasha, and the Commander-in-Chief, General Sir Edmund Allenby, confirming the creation of a Supplies Control Board, about which I wrote you in a recent letter. The new Board is composed as follows:—Mr. W. Ross Taylor, president; the Director and Deputy-Director of Supplies and Transport, military members; Messrs. A. T. McKillop, G. E. Burnett Stuart, F. P. Watson, and A. T. Loyd, civilian members; and Gaafar Pasha Wali and Mohammed Shafik Pasha, Under Secretaries for the Interior and Wakfs respectively, as consultative members. The President is the executive officer of the Board, which will report through the Financial Adviser, Sir William Brunyate. The new Board has had conferred on it, by decree, the powers hitherto enjoyed, first, by the Tariff Commissions which were set up in each Mudiria and Governorate at the beginning of the war for the fixing of prices of foodstuffs and articles of prime necessity; secondly, by the Supplies Commission, which, until last autumn, was entrusted in an advisory capacity with the supervision of all questions of supplies; and lastly, by the Department of Supplies, which was created last September on the proposal of the Supplies Commission. All orders issued under the authority of the Supplies Control Board will be deemed to be orders issued under Martial Law.

There is no doubt that proper action has at last been taken in this very important matter, and that the concentration of control in the hands of one body, having full executive powers, is far more likely to lead to a satisfactory handling of the critical situation and a successful solution of the problems with which the country is faced than the splitting up of authority, with its consequent overlapping and lack of co-ordination. The new Board has a stupendous task before it, but as it will enjoy executive powers, backed by the military authorities, and in addition will be able to draw on every administration and community for advice and assistance, it starts with every advantage, and should come through the ordeal with benefit to the country and credit to itself.

Enemy Airship off Egyptian Coast.

The military authorities have issued an official *communiqué* announcing that a hostile airship had been observed off the Egyptian coast, and warning the public of the possibility of an air raid from the direction of the sea. At the same time detailed directions have been published as to the rules to be observed in the event of such an attack taking place. Since Thursday Cairo and the other towns and cities have been in darkness at night, but the news of the danger of a raid has left the public everywhere very calm. No further information has been afforded as to where the airship was seen or whence it had come, but the general opinion is that it has its jumping off ground somewhere near Aleppo, and that the main object of its appearance is to do scout work for the German and Austrian submarines.

The Bishop in Jerusalem.

Bishop MacInnes has returned from Jerusalem, where he was enthroned as Anglican Bishop on Sunday, the 17th inst. By all accounts the ceremony was most

FOR INSURANCES OF ALL KINDS.
F. W. CUMING & CO., LTD.,
THE GENERAL INSURANCE OFFICE OF EGYPT.
ALEXANDRIA: 5, RUE AVEROFF. CAIRO: 23, SOLIMAN PACHA.

Digitized by Google

impressive. It was attended by representatives of all the churches, Eastern as well as Western, including delegates of the Jewish and Moslem communities, the civil authorities, the Military Governor and his staff, representatives of the various missions, and masters and pupils of the schools. The Bishop, who was attended by his domestic chaplain, the Rev. J. Wright, the Rev. Ibrahim Baz, of the Church Missionary Society, and the Rev. Waddy Stacey, of the Australian Imperial Forces, was met at the entrance to the Cathedral by the Sub-Dean, Canon Hichens, the clergy, and the choir. After a few prayers the Military Governor, Colonel Storrs, read the King's mandate authorising the consecration and assigning to the Bishop the care of the Anglican Churches throughout Syria, Palestine, Egypt, the parts about the Red Sea, the Sudan, Cyprus, and parts of Asia Minor, which was followed by the reading of the Archbishop's certificate by Canon Hichens. The Bishop next made the solemn promise to keep the charge committed to his care; and he was then solemnly enthroned. After a few more prayers he delivered the sermon, first in English, then in Arabic, and the service concluded by the reading of some Arabic collects and the Benediction.

Dr. MacInnes, who is now in Cairo on a short visit prior to returning to Palestine, appears to have been delighted with the reception accorded him. He was cordially welcomed by all the religious communities, the heads of which showed themselves very friendly disposed. This was especially the case of the Grand Rabbi and the Mufti, the latter of whom was only prevented by illness from attending the enthronement ceremony, and sent prominent members of his family to represent him. It is interesting to note that it was at the Mufti's personal request that the Bishop delivered a short address in Arabic after his sermon.

In the course of his tour it was only natural that the Duke of Connaught should visit the Cathedral, and it is noteworthy that he, for the first time, visited the chapel dedicated to St. John of Jerusalem, for the decoration of which, at his suggestion, subscriptions were collected from the Knights of the Order. This is the chapel where in the early days of the war the Turks carried out excavations in order to find the "canons" which they had been informed were in the Cathedral. Your readers will recollect the story, and many of them no doubt have regarded it with some incredulity. His Royal Highness has, however, had an opportunity of seeing the excavations, and of being told the story first hand by Canon Hichens, who received the Turkish emissaries on that occasion.

The relief fund is doing very good work, and is actively assisting the Military Administration in alleviating the distress existing in Palestine. Very great difficulty is being experienced in getting up supplies and in obtaining workers, and it is at times impossible to meet all the calls made on the fund.

THE MARRIS' REPENTANCE.

The India Office on Saturday made the following announcement:—

The Marri operations have been successfully concluded. Government terms were announced at Kahan on May 2, and were signed by the Marri chief and tribal headmen. The former, on behalf of himself and the tribe, expressed contrition for their late misdeeds and guaranteed good behaviour for the future. The withdrawal of the troops from the Marri country has commenced.

General George Scriven, Attaché to the United States Embassy at Rome, pays a tribute to the work of the Italians in that part of Albania, Macedonia, and Epirus which is occupied by Italian troops. "Without the Italian occupation," he says, "the poor Albanians would have starved; the Italians have given them employment, food, education, security."

BACHELOR, Anglo-Indian, retired, having large Orchard, Garden, etc. (Bucks), and interested in small agricultural pursuits, wishes to meet with another (with small capital) to SHARE ROOM and HELP.

Rough (though comfortable), healthy, and cheap.

Apply "BUCKS," c/o the Editor.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

A Dangerous Pest.

The British community has suffered a loss, under very sad circumstances, by the death of Mr. Euan Lucie Smith, of the Chief Secretary's Office, and Clerk to the Legislative Council, who has died from the effects of a bite from an insect called the sphalángi, a dangerous flying pest, something like a large winged ant, which is much addicted to feeding on the carcases of dead goats and sheep that have succumbed to anthrax. Peasants, as a rule, leave them exposed instead of burying them. The native belief is that the insect itself secretes a poisonous virus, but Dr. (now Captain) G. A. Williamson, when District Medical Officer at Larnaca, made a special study of cases treated in the Larnaca Hospital, and, in a paper contributed to the *British Medical Journal*, claimed to have proved conclusively that they were caused by the anthrax bacillus transmitted as stated. Villagers not infrequently fall victims to the effects of sphalángi bites owing to their failure to obtain immediate medical attendance; but this is the first time that a British resident has been bitten with serious or fatal results, or perhaps at all. Much sympathy is felt for Mrs. Lucie Smith, a daughter of the late Archdeacon Spencer, who was for many years Chaplain and Director of Education in Cyprus.

The Ex-Bishop of Kition.

The appointment of the Greek Bishop of Kition, Meletios Metaxarkhes, to be Metropolitan of Athens, deprives the Orthodox Church of Cyprus of its foremost prelate. Meletios has long been regarded in Greece as one of the ablest members of the Eastern Orthodox hierarchy. He was appointed Bishop of Kition, which includes Larnaca and parts of the Limassol districts, about ten years ago, and came to Cyprus at the same time as his friend the Bishop of Papho. He at once took steps to bring about a better state of things in the island church, which admittedly stands in need of drastic reforms. One of his best works has been the establishment of a seminary for the education of priests at Larnaca; the raising of the standard of qualifications amongst parochial clergy being one of the most pressing needs. The Bishop is a man of fine presence and speaks French. He has supported the agitation for union with Greece. The British Press in general has inaccurately stated that the Archbishop of Cyprus had been appointed to Athens. The Archbishop is Kyrillos Basileon, elected in 1916.

During the temporary absence of the Chief Justice, Sir Charles Tyser, Mr. Stanley Fisher, Puisne Judge, has been acting, Mr. J. R. Holmes taking the place of Mr. Fisher.

ROUMANIAN NOTES.

(FROM A CORRESPONDENT.)

Following the signing of the Russian peace the Central Powers presented an ultimatum to the Roumanian Government. Roumania was threatened with a new offensive, unless peace negotiations were entered into without further delay. Thereupon M. Bratianu and his Government resigned, leaving to General Averescu the task of forming a new Government and negotiating peace. But it is in no way clear so far what was the effect of the ultimatum upon Governmental circles. There are two versions. The more widely accepted statement is that all the members of the Cabinet, Liberals and Conservatives, were in favour of the continuation of hostilities, and that they were supported in this by strong influences in high quarters. But General Averescu, who possessed the confidence of the Army, strongly argued in favour of peace negotiations, and the political leaders preferred to resign rather than act against the opinion of the most responsible military leader.

That version does not harmonise, however, with a semi-official *communiqué* published in *L'Indépendance Roumaine*, which formally stated that the resignation of the Cabinet was due to differences of opinion which had arisen *within* the Government (of which General Averescu was not a member), as to the reply to be given to the German ultimatum. It is suggested that M. Bratianu and his Liberal followers pleaded for peace, whereas M. Také Jonescu urged that they should fight to the end, withdrawing, if need be, into Bessarabian territory. There is one circumstance which seems to lend colour to the latter interpretation of events. Upon assuming office General Averescu, a non-party man, called together all the members of Parliament who were in Moldavia at the time, in order to explain the situation to them, and ask for their support. At the meeting M. Bratianu, on behalf of the Liberals, M. A. C. Cuza, on behalf of the "Union of Members of Parliament," and M. Trancu-Jaski, on behalf of the Labour Party, pledged their support to the Averescu Government. But

neither M. Take Jonescu nor any of his followers rose to take part in the discussion. It is impossible for the time being to find out the plain truth, but one thing is certain, that internal politics influenced as much as the external situation the reply given to the Central Powers.

As to the peace negotiations, the fact that the Allied Powers agreed to M. Mishu's departure from London is being interpreted as meaning that Roumania was allowed a free hand in her dealings with the Central Powers. There are even rumours abroad that all military and political conventions between Roumania and the Allies were denounced as early as the beginning of February. (This stands in contradiction to Mr. Balfour's recent statement that, "as far as treaties could make her," Roumania was still an Ally.) In the end neither General Averescu nor M. Mishu was selected to deal with the Central Powers, the task being deemed more fit for their Roumanian friends, MM. Marghiloman, Arion, etc. The Roumanian peace delegates were M. C. Argentoianu, Minister of Justice, General Lupescu, MM. Burghelea and Papinin, Ministers Plenipotentiary, and Colonel Mircescu.

It is not difficult to anticipate what the result of the negotiations will be.* The following quotations from the *Bukarester Tageblatt* read very much as an excuse in anticipation of the conditions to be imposed upon Roumania. The economic measures, the paper says, will only mean a strengthening of the relations which existed between Roumania and the Central Powers before the war, "and this cannot be a drawback for the country, since its economic conditions and geographical situation indicate that it must remain in the closest economic relations with the Central Powers, which are in a position to buy all her products and give her in exchange all she needs. . . . It is difficult to find a parallel in the world's history of a treatment so mild as that of Roumania by the Central Powers, especially as it was due to no other reasons than moderation. Russia, which was accustomed to keep what she conquered, and England, who by conquest formed an Empire, would have dealt differently with a country in a situation similar to that of Roumania. . . . What has saved Roumania is the desire of the Central Powers to restore her to her economic and political destiny, which make of Roumania a link in the Central-European system." M. Stere, however, the editor of the pro-German *Lumina*, utters the truth in a sigh, when he says that "this is not the moment to recount what the war has cost us until now. What it will cost us henceforward is much more painful. . . ."

THE LATE MME. JONESCU.

We much regret to announce that Mme. Jonescu, wife of M. Také Jonescu, the prominent Roumanian statesman, died last Friday night, May 3. The previous day, when riding in Hyde Park, she met with an accident, her horse falling, when near the Serpentine Bridge, and throwing her badly. She was at once removed to St. Mary's Hospital, Paddington, where it was found that her skull was fractured and that she was suffering from other injuries.

Mme. Jonescu was English by birth, her maiden name being Smith, and before her marriage she resided in Brighton with her mother. She met M. Jonescu on his first visit to London, and after their marriage she went to live in Bucharest. There she very soon identified herself with her husband's countrymen and his political interests, and gradually acquired a position as a recognised leader of society in the Roumanian capital. As *The Times* correspondent formerly in the Balkan Peninsula writes:—"It was no easy task for the foreign wife of a young politician, possessing no foothold in the dominant oligarchy, and to whom the path of promotion also was closed among the coterie of the so-called 'Liberal' Party, to achieve social distinction in the exclusive and somewhat narrow and unsympathetic *milieu* in which she found herself and to establish her position as one of the leading hostesses in Bucharest, and thus contribute materially to the success of her husband's career. Yet Mme. Jonescu founded a *salon* which became the centre of all the most distinguished elements in the Roumanian world of politics, diplomacy, science, and literature. Remarkably handsome in her youth, a brilliant musician, a gifted linguist, and an accomplished horsewoman, she was also a capable politician, fully acquainted with all the problems of home and foreign politics." It was in her summer residence at Sinaia that the now celebrated first "Treaty of Bucharest" was signed. She was a favourite with the late Queen Elizabeth of Roumania ("Carmen Sylva"), and was held in high esteem by Queen Marie and other members of the Royal Family.

When war broke out Mme. Jonescu's sympathies were, of course, with the Entente, as were her husband's; and very soon they took a practical turn in work on behalf of the sick and wounded. British prisoners in Bulgaria especially had cause to be grateful to her for her exertions on their behalf; and the British Red Cross Mission returning from Serbia found a very warm welcome at her house.

She came to this country a little over a year ago, having to make a long and roundabout journey, which resulted in a breakdown. Lately she recovered sufficiently to resume some of her activities on behalf of Roumania.

*Our correspondent wrote before the text of the treaty was known.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedouin, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

GEORGIANS AND ARMENIANS.

Colonel Sir Mark Sykes, M.P., presided at a lecture given last Sunday at the Savoy Hotel by Mr. Ghambashidze to the Armenian United Association of London. Mr. Balfour by letter conveyed his deep sympathy with the Armenian and Georgian peoples, and his great satisfaction at their attainment of that unity of purpose which provides the surest guarantee of the fulfilment of their legitimate aspirations.

Sir Mark Sykes said the occasion was historic so far as England was concerned, for it was the first on which the Armenian and Georgian peoples had met on a common platform. Out of the war they had seen a growing *rapprochement* between the Zionist Jews and the Arabs. He hoped they were at the beginning of a great alliance of the Zionist Jews, the Arabs, the Armenians, and the Georgians.

Mr. Ghambashidze said that, though deprived of Russian protection, Armenians and Georgians were still struggling against hopeless odds for justice and freedom and the arrangement of nationalities according to human rights. Cut off from aid, their women were working the guns, and the men were fighting in the plains, while the Russian soldiers under the Bolsheviks were looting and killing in the villages. While defending their blood-soaked lands to the last, they continued to stand against German expansion to the Persian Gulf. They might easily join a new Russia formed into confederated States, but there must be no talk of autonomy under Turkish protection.

In connection with this meeting, it is of interest to note that the Committee of the Lord Mayor's Fund for the Armenian Refugees have a party of relief agents on the Caucasus front who are doubtless engaged in tending the sick and wounded at this moment. This unit was sent out in 1916 under the Rev. Harold Buxton, and is now headed by Mr. Alfred Backhouse. No direct news of the party has been received since January, but information received from the U.S.A. Consul in Tiflis during March suggests that all hands are vigorously occupied in Red Cross and ambulance work.

M. Henri Bergson (according to the "Jewish World") has offered to Dr. Weizmann his services as member of the Faculty of the Jewish University which is to be established in Palestine.

According to an Athens telegram, Colonel Hazzopoulos, Commander of the Fourth Greek Army Corps, which surrendered to the Germans and was interned at Görlitz, was murdered as a result of a conspiracy among some of the officers of the corps, who appear to have taken sides against ex-King Constantine, and was not, as stated by the Germans, due to apoplexy.

THE YEMEN IN EARLY DAYS

It is not often that those interested in the history of pre-Islamic Arabia have an opportunity of perusing a new biographical and historical epic composed in the middle of the fifth century. Such an event has now occurred by the publication by Signor Eugenio Griffini of what he terms "Il Poemetto di Qudam Ben Qadim, Nuova Versione Della Saga Jemenica del Reggente 'Abd Kulal." This title conveys the fact that Signor Griffini has identified Qudam Ben Qadim with the governor 'Abd Kulal, who acted as Regent of the Yemenite kingdom during the minority of Tubba-'al-Asgar; and whose tomb is extant in Yemen.

In 1883 Messrs. Brill, of Leiden, printed a catalogue of Arabic manuscripts in a private collection from Medina, among which was a poem "by Qadam I. Qâdine el Hamdar" which bore a colophon stating that it was copied in the year 1140, equivalent to A.D. 1728. This text is, therefore, a late one, and hence defective in many respects. Signor Griffini, for the purpose of his edition, has been able to avail himself of two better manuscripts. One of these is an Arabic codex recently acquired by the Ambrosian Library, dated 1055 of the Hegira (A.D. 1645); the other is in Signor Griffini's possession, and is a copy of some much more ancient recension made at Sana'a in the Yemen in 1915. The triple texts comprise a total of 119 verses; all of which except six occur in at least two of the texts. The Arabic text occupies twenty-five pages of the "Revista degli Studi Orientali" of Rome's University.

The epic poem contains a description of Qudam's views upon religion and ethics, laws and constitution, government and administration; also a summary of the history of North Arabia, the art of war, and notices of famous personages in ancient Yemen. This internal history of early Northern Arabia, with the names of its sheikhs, princes, and kings, with their wars and deeds, also gives a good deal of geographical information. Then follows an autobiography of Qudam with genealogy the account of his death being necessarily pseudepigraphic. Some views which the poet expresses upon the history and affairs of foreign countries are of more interest to us, perhaps, on account of an expedition made by the Yemenites against the Byzantine Emperor (or Empress); of another against the Persians, and one to Babylon; also of some sort of embassies or communications with India, Tibet, and China. The temerity with which these Yemenites undertook hostilities against great powers like Byzantine, Rome, and Persia foreshadows the tremendous war power which was to carry the Arab followers of the Prophet over Syria and Egypt like a whirlwind and ultimately to the banks of the Indus, the Danube, and the Rhone.

The religion of these pre-Moslem Zaidites was monotheistic. They adored Allah only, and considered themselves connected with the family of David, and tribe of Joseph. But, mention is made of adoration at one time of an idol called Budd. Noah prophesied that Japhet should "dwell in Shem's tents and Ham be their servant." The Arabic Shemites in fulfilment of this have never been the servants. The Turks have endeavoured to make them serfs of Janhet, but the victory of the King of the Hejaz has again restored them to their promised position.

JOSEPH OFFORD.

EGYPTIAN LAW AND LAW COURTS.

Speaking at University College, London, on Monday, Sir Malcolm McIlwraith said that for practical purposes Egyptian law might be divided into law applicable to foreigners, either among themselves or in relation to natives, and law applicable to natives only. The foreign population numbered only two hundred thousand out of twelve millions; but were much more important than these figures suggested, because of their wealth, intelligence, and political importance. The whole law in relation to them hinged on the Capitulations, privileges of a legal and fiscal character, one effect of which was that foreigners were not subject to the local law or law courts. Consular Courts were maintained by the various foreign nationalities, and it was still the case that when the disputants were of the same nationality they resorted to their Consular Court. Formerly, when they were of different nationalities, recourse was had to the court of the defendant, but a Commission which sat in Constantinople in 1873 had led to the establishment of the Mixed Courts to try cases between foreigners of different nationalities and between foreigners and natives. These courts had also jurisdiction between foreigners of the same nationality when land was involved. The Mixed Courts began to sit in 1875, and a code was promulgated for them to administer. It was in the main a copy of that of Napoleon, but did not contain any family law, that matter being reserved to the Consular Courts. On the other hand, there were in it certain laws for the protection of foreigners not to be found in the original on which it was modelled. Until recent years it had been very difficult to get this code amended in any way, for the consent of every signatory Power had to be obtained. The ordinary method of revising the code had been for the Egyptian Government to present to every Government concerned a statement of the reforms required, and for a Commission to be formed to consider these reforms. This system was a most unpractical one, for the Commission consisted of diplomatic members unversed in law and of legal members who knew little of the country, and who, moreover, were so busy with their own affairs that they had not time for the Commission. The result was that such Commissions sometimes dragged on for years. As the result of negotiations carried on from 1904 to 1911, this cumbersome system had been practically superseded by another one, which consisted in having further recourse to judges and legislators. This had enabled the passing of certain laws of too controversial a character to be got through the international Commissions. Of these laws the most notable was the Homestead Law of 1912, which established the immunity of the homestead if the area did not exceed five feddans. This law was due to Lord Kitchener, and was based on the Punjab Land Alienation Act of 1900. The legislation applicable to foreigners was practically a system of pure French law, French case law and commentaries being elements of it. Only French was employed. Egyptian native tribunals had been established in 1883, but very little of the original scheme survived. In native courts the proceedings were in Arabic. A comparatively recent innovation had been the establishment of cantonal courts, consisting of local notables, on the model of the Courts of Justices of the Peace in England. Lawyers had not looked favourably on the proposal to entrust the administration of justice to men without legal training, and sometimes hardly able to read and write; but Lord Kitchener, who had originated the idea, persisted with it, the courts were established, and had proved a great success.

ARMENIA'S AWFUL AGONY.

The following telegram from Tiflis, dated March 29, 1918, explains the need for prompt, vigorous and generous action:—

"There is extremely critical political situation in the Caucasus. The Turkish advance terrifies the Armenians. There is danger that the whole Armenian race will be exterminated should the combination of these forces be successful. Should the Armenians be rightly directed and financed there is among them great potential military force, and this would furnish a reasonable hope that the race might be preserved by their own efforts. I am about to leave now for the front to build up a system of transportation by ambulance to reorganise and maintain hospitals. My appointment as Red Cross Commissioner has been requested by Consul Smith. Men from the locality who are available will be able to relieve great suffering. There is no one else to meet the necessities. To make a beginning the sum of $400,000 and $100,000 monthly will be necessary. Everyone is working beyond his strength, but nevertheless they are enthusiastic and their strength is good for relief work."

(Signed) YARROW.
American Red Cross Commissioner.

Our own agents are on the spot and working with the American Red Cross Society.

Please send your help to the

Armenian Refugees (Lord Mayor's) Fund,

96, VICTORIA STREET, LONDON, S.W.1.

At a sale held at Chipping Norton recently in aid of the British Farmers' Red Cross Fund, a set of Nos. 1 to 4 of the first daily newspaper printed at Baghdad for the British troops was sold for £10.

A Greek naval officer, in an article in the "Hestia" on the British raid on the Flanders coast, says:—"We must bow to this marvellous British achievement. At Chios one of our heroes, Kanaris, held a torch that burned a fleet; but at Zeebrugge every cabin-boy became a Kanaris."

M. Venizelos, speaking to the Deputies who were returning to their constituencies for the Easter holidays, expressed absolute confidence in the final victory of the Allies. "Go and tell the Greek people," he said, "that everything goes well."

The *Egyptian Gazette* announces that a committee has been formed under the chairmanship of M. Laloe, Vice-President of the Mixed Court of Appeal, for preparing the project of a law to govern the barristers of both the Native and the Mixed Tribunals when the project of unifying the Courts of Egypt has been finally passed

NEAR EAST BOOKSHELF.

WISE SAYINGS OF MR. ASQUITH.*

When a politician reprints his public speeches he rarely succeeds in interesting readers of the day, because such utterances relate to phases in history which have lost their importance. Moreover, the war now raging has thrown all previous events out of focus; we lay down the record of many a busy life with astonishment that the doings that filled it should have been so trivial. Mr. Asquith's first essay in literature gives unqualified pleasure, because none of the addresses which it reproduces trench on the domain of controversial politics. They display a degree of general culture amazing in one who, to quote the modest preface, "spends most of his days and nights in the Law Courts and the House of Commons"; they have equal value for the man of letters and the man of affairs. Every journalist may profit by absorbing the late Prime Minister's chapter on "Criticism." "Partizanship," he writes,

which in the active conduct of public affairs is an almost indispensable motive power, is fatal to the wholesome exercise of the critical faculty. The moment the critic becomes the disciple, or, still worse, the propagandist, of a school—the moment he assumes the prophetic mantle and begins to deal in sentences of excommunication and threats of anathema—he abdicates his proper function, which is that not of a preacher, but of an interpreter.

Regarding "Biography," again, he opines that "no picture of a man, whether by himself or others, is either true or adequate which does not give us also his environment"; and that the few really great biographies which have as yet appeared "bring comfort, enlarge sympathy, expel selfishness and quicken aspiration." Of the English Bar, Mr. Asquith speaks as an expert, and explains the solidarity of a powerful profession by remarking that:—

The arduous struggle, the blows given and received, the exultation of victory, the sting of defeat, which are daily experienced, far from breeding division and ill-will, only bind us more closely by the ties of a comradeship for which you would look in vain in any other arena of the ambitions and rivalries of men.

Our author is on less familiar ground when he endeavours to account for the vogue attained by Edward Fitzgerald's "Rubaiyat of Omar Khayyam." He ascribes it to the fact that, "apart from the strange fascination of the metre, there is, within a narrow compass in point of bulk, a wholeness and completeness in Omar which belongs only to the highest art. Now, every student of trans-ancient literature knows that Fitzgerald's book far transcends the limited horizon of Omar Khayyam's muse; that its author, after saturating himself with Persian poetry, distilled into his version its very quintessence. The qualities which Mr. Asquith praises are in sooth the fruit of a European's genius. But the popularity of his immortal booklet is easily explained. It saw the light at an epoch when pessimism was very rife. His contemporaries were beginning to ask themselves whether Bacon was not right in deeming the "mechanical arts and merchandize," which had been their waning century's pride, symptoms of national decadence. The teachings of a genial epicurean found echoes in many a soul which was drifting without guidance in an ocean of wrecked beliefs. Mr. Asquith's quotations are, perhaps, the most felicitous feature in a book which has not one dull page. Besides proving his erudition, they have been selected with a degree of literary taste which is not its invariable accompaniment. There is, indeed, a notable omission, probably due to the author's innate modesty, and many readers will hope that future editions may be graced by his portrait in the picturesque garb worn by rectors of a Scottish University.

F. H. S.

SECRET SERVICE UP TO DATE.†

A detective story with absolutely nothing missing, whether it be viewed in the light of the conventional canons or of the time of its appearance. Interest is sustained throughout, and the author by dating his narrative before the war successfully camouflages his designs. We are plunged into a most picturesque tragedy, encouraged to find a different perpetrator at every turn, and when thoroughly bamboozled we are brought up against the fact which we had completely forgotten, in the interest of the plot, that the author is Mr. William le Quex. All is then explained, and the reader can at once tell himself that he might have told himself so. The *mise-en-scène* is cleverly worked out, and certainly some people will be kicking themselves that they did not think of it before Mr. le Quex did. "The Blue Goddess" belongs to Egypt, and Near Easterners should read the book.

† "The Little Blue Goddess." By Wm. Le Quex. (Ward, Lock and Co., Ltd. 5s. net.

THE GOAL OF INDIA.*

In these days every lover of India has his vision of the "goal" and of the "path" by which it may be reached. The politician looks for parliamentary institutions, the economist thinks of a higher standard of life, the statesman hopes for a new and mighty influence for good, in a world where such an influence is assuredly to be desired. Mr. Holland sees the realization of all these visions in the Christianization of India—not, of course, in the progressive subjection of the country to the domination of external missionary societies, but in the growth of a great national Indian Church, in which the spiritual gifts of the people may at last find that full expression for which they have never ceased to strive. It is a noble vision, and it may one day be a reality. But, however that may be, this presentment of it deserves careful study by everyone who wishes to understand the nature of the forces now at work in India. On the whole, Mr. Holland has succeeded in his difficult task. His book is at times a little breathless, and specialists might question some of his statements on particular matters of fact, but its general effect is in our opinion substantially true, and the union of insight and sympathy by which it is marked should set a standard for discussions of the kind. The writer steadily tries to see the best in the objects of his criticism, and if his charity momentarily fails him in dealing with the unwholesome movement inspired by Mrs. Besant, we at least have no quarrel with him on that score, for by no possibility can our own charity be stretched so far. The difficulties in the way of an Indian Church are by no means ignored, though we estimate some of them more seriously than Mr. Holland seems to do; at any rate, there is no question that the "unhappy divisions" of Christianity constitute most formidable obstacles to its progress among a people trained to refine and distinguish unnecessarily even in the ordinary run of affairs, and there are some grounds for the pessimistic anticipation that India may contribute an increase of sectarian bitterness rather than that unity to which the West has not yet been able to attain. Pessimists, however, can spoil any vision, and this book should be regarded as an inspiration rather than a treatise. As such it is well worth reading.

BOOKS RECEIVED.

"Serbian Grammar." By Dragutin Subotii, Ph.D., and Nevill Forbes, M.A. (London: Oxford University Press. 7s. 6d. net.)

"Jerusalem: The City of Many Sieges." By Robert Williams, F.R.I.B.A. (Alexandria: Whitehead, Morris and Co. (Egypt), Limited. £T6.)

* "The Goal of India." By Rev. W. E. S. Holland. (London: United Council for Missionary Education, 8, Paternoster Row. Price, 2s. net.)

EDUCATIONAL.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB, J.P.
Vice-Chairman: Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £55, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

11	28	Saturday.....	30	29
			Shaaban.	Sivan
12	29	Sunday	1	1
13	30	Monday	2	2
	May			
14	1	Tuesday.....	3	3
15	2	Wednesday	4	4
16	3	Thursday	5	5

Lord Islington is making most satisfactory progress.

Abdul Aziz, the former Sultan of Morocco, has left Nice after a prolonged stay.

H.I.M. the Shah of Persia has bought 100,000 dols. (£20,000) worth of United States Liberty Bonds.

M. Pavle Karovitch, Secretary to the Serbian Legation, has returned to London from Aberdeenshire.

A further sum of £750 has been remitted by the Lord Mayor of Melbourne to the Armenian Relief Fund.

Lord Oranmore and Browne, who left London for Ireland last week, has returned to 12, Cavendish Place.

Lord Robert Cecil has been suffering from a chill, and has been absent from the Foreign Office for a few days.

The Greek Government has conferred the Order of the Saviour on Hussem Rushdi Pasha, Prime Minister of Egypt.

Captain Matila Costiesco Ghyka, Assistant to the Military Attaché to the Roumanian Legation, has returned to London from Paris.

On Sunday afternoon, the Serbian Easter, H.E. the Serbian Minister and Mme. Yovanovitch received the members of the Serbian colony at the Legation.

The Imperial War Museum have selected a coloured plate of the picture, "The Rout of the Turkish Invaders," by A. O. Lamplough, to be included in their collection.

Lady Cheetham has been appointed Principal Commandant of the V.A.D.'s working in Egypt and Palestine under the joint V.A.D. Committee of the British Red Cross and Order of St. John.

On Monday evening, May 13, at eight o'clock, in the Theatre of the Royal Geographical Society, Burlington Gardens, W., Mr. MacLeod will lecture on "The Achievements of France in Morocco."

The Greek Minister and Mme. Gennadius entertained at luncheon on Sunday at the Legation M. Michalacopoulos, the Greek Minister of Agriculture, Mme. Michalacopoulos, and the *personnel* of the Legation.

Under the auspices of the Persia Society, Professor E. G. Browne, M.A., will lecture next Monday afternoon (May 13) at 22, Albemarle Street, his subject being "Sidelights on the History of Mediæval Persia."

Major-General Sir Lee Stack, Acting Sirdar and Governor-General of the Sudan, left Khartoum in the middle of last month for a trip on the White Nile, during which he purposed visiting the White Nile, Upper Nile, and Mongalla Provinces.

Judge Halton has accepted the appointment of Commissioner in Cairo under the Joint War Committee of the British Red Cross Society and the Order of St. John, in succession to Colonel Sir John Rogers, K.C.M.G., D.S.O., who has resigned the post on leaving Egypt.

The engagement is announced between Captain Hubert Stanley Kreyer, D.S.O., the Yorkshire Regiment, younger son of Lieut.-Colonel F. A. C. Kreyer, Indian Army (retired), and Mrs. Kreyer, Armidale, Upper Richmond Road, Putney, and Alice Leonie, second daughter of the late Captain J. H. H. Berkeley, late 83rd Regiment, and Mrs. Berkeley, Queen Alexandra's Court, Wimbledon.

In celebration of the Serbian Easter a Serbian service was held at the church of the House of Charity for Distressed Persons, Greek Street, Soho, last Sunday. The Rev. Father Nicolai Velimirovitch officiated. The congregation included the Serbian Minister and Mme. Yovanovitch, M. and Mme. Gavrilovitch, M. Pavle Karovitch, Colonel J. Nicolaievitch, Mlle. Vouka Nicolaievitch, Mlle. Zora Nivolaievitch, Colonel George Ostoitch, Military Attaché, and several members of the Jugoslav Committee.

Dr. and Mrs. S. M. Zwemer have left Egypt for America on furlough in order to secure educational advantages for their children. While in America their address will be care of the Board of Foreign Missions, 25, East 22nd Street, New York City.

Sergeant-Major Flora Sandes, attached to the 2nd Serbian Infantry Regiment, left London on Monday to rejoin her regiment at Salonika, after a few months' sick leave. While home on leave she has worked for Mrs. Haverfield's Fund for providing comforts for Serbian soldiers and prisoners.

On Monday evening a Serbian literary dinner was held at the Lyceum Club. Mrs. Dickinson Berry presided. Mr. Herbert Carter recited Serbian poems, Miss Helen Rootham sang Serbian songs, and Mr. Edward Russell, an American worker with the Serbian Red Cross, spoke on "Serbian Art and Poetry."

A marriage has been arranged, and will shortly take place, between James Douglas Scott, late second lieutenant R.F.A., third son of the late R. Scott and of Mrs. R. L. B. Gall, of 2, Minto Park, Calcutta, and Bridget Violet, second daughter of J. A. Penfold-Wyatt, of Harsfold Manor, Winsborough Green, Sussex.

The marriage arranged between Captain Lionel S. Williams, District Frontier Administration, Egypt, youngest son of Colonel R. B. Williams, C.B., late Somerset Light Infantry, and Mrs. Williams, of Pinkhurst, Lustleigh, Devon, and Sylvia Pauline, elder daughter of Mr. and Mrs. De Gay, of Melbourne, Australia, will take place shortly in Egypt.

The marriage arranged between Lieutenant-Colonel Arthur Trevor, C.S.I., C.I.E., eldest son of Sir Arthur Trevor, K.C.S.I., 16, Harcourt Terrace, and Lucy, eldest daughter of Lieutenant-Colonel H. Peers Dimmock and Mrs. Dimmock, 23, Homefield Road, Wimbledon, will take place at St. Mary's Church, Wimbledon, on Saturday, June 1, at half-past two o'clock.

Last Friday being Good Friday according to the Greek Calendar, a special service was held at the Greek Church, Moscow Road, Bayswater, in the evening. Dr. Pagonis, the Great Archimandrite, officiated, and among those present were the Greek Minister and Mme. Gennadius, the *personnel* of the Legation, M. Michel Boeresco, the Roumanian Chargé d'Affaires, Lieutenant-Colonel N. Arion, Military Attaché, and many members of the Greek colony.

The marriage is arranged to take place at St. George's Church, Camberley, on Thursday, June 6, between Lieut. Charles Eyres Lushington, R.F.A., eldest son of Mr. C. M. Lushington, C.C.S. (retired), and Mrs. Lushington, of Shalbourne, Camberley, and Veronica R. Hammond, younger daughter of Colonel Sir A. G. Hammond, V.C., K.C.B., D.S.O., late Commandant Q.V.O. Corps of Guides, Indian Army, and Lady Hammond, Sherborne House, Camberley. There will be no reception, but all friends will be welcome at the church.

The Zionist Commission in Palestine has created a relief department, under the presidency of Mr. Leon Simon, a member of the Commission, for the administration of relief of Jews in the Holy Land.

The annual meeting of the Church of England Zenana Missionary Society was held on Friday, May 3, at the Caxton Hall, Sir W. Mackworth Young, K.C.S.I., presided, supported by the Hon. Lady Peek Sir Robert Williams, Bart., Bishop and Mrs. Copleston, and others.

Lord Inchcape presided over the annual meeting of the Strangers' Home for Asiatics, held last Friday at the institution in West India Dock Road. Among those present were:—Lady Inchcape, Lady Wyllie, Lady Barr, and Lieutenant-Colonel Sir James Dunlop Smith. In the course of his remarks Lord Inchcape spoke highly of the fine services and gallantry of native seamen in the mercantile marine during the war. During last year 1,236 Asiatics were admitted to the home, mostly from torpedoed vessels, and 170 of them were entirely destitute.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS

AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

The May number of the *Zionist Review* contains many interesting features, one of them being an article by the famous literary critic, Georg Brandes, a man of Jewish birth, but until recently entirely estranged from his people, who gives reasons for his belated, but whole-hearted adhesion to the Jewish national movement.

On Saturday, at Buckingham Palace, the King inspected a party of officers and non-commissioned officers of the Indian Labour Corps, under the command of Captain J. McPherson and Captain H. W. Alderson, Indian Army Reserve of Officers. The party is composed of men from the Ranchi District of the Province of Bihar and Orissa, who are on leave from the Western Front.

The systematic pillaging of the Macedonian, Greek, and Serbian provinces occupied by the Bulgarians continues. According to a recent decree, vacant properties and various objects without owners are declared the property of the State, which disposes of them as it pleases. Bulgarian officers and officials are now either murdering or expelling the owners and then sending the goods to Sofia.

According to a copy of the *Patris* received last week the Anglo-Hellenic Society of Athens at its annual general meeting elected as president M. Delta, and as members of the Executive Committee Messrs. Butler, Cottrele, Petrocochinos, Carousos, Calopothakis, and Damalas. At the same meeting it was decided to affix a commemoration plate on the old house "where Lord Byron saw and loved the Maid of Athens," and another on the house in which General Church died.

Considerable confusion is caused, the War Office announces, by the use, in the address of parcels, etc., for members of the expeditionary forces, of initial letters only to represent the title of the force with which the addressee is serving. The public are therefore strongly advised invariably to write in full the postal titles of the Expeditionary Forces, which are as follows:—British Expeditionary Force (France), Italian Expeditionary Force, Mesopotamian Expeditionary Force, Egyptian Expeditionary Force, East African Expeditionary Force, and Salonika Force.

APPOINTMENTS, PROMOTIONS, ETC.

The Sultan of Egypt has been pleased to confer the 3rd Class of the Order of the Nile on Miralai C. H. Little Bey, D.S.O., Miralai E. A. T. Bayley Bey, D.S.O., and Miralai F. de W. Harman Bey, D.S.O.

The Sultan of Egypt has issued his order for the appointment of Ismail Sidky Pasha as President to the Sultanieh Geographical Society. This post, which was formerly filled by his Highness, has remained vacant since his accession to the throne.

Egyptian papers received this week announce that Major Pringle, Chief Inspector of Stores, Ministry of Finance, is retiring shortly from the service on pension, and will be replaced by Mr. Bowden-Smith, Assistant Chief Inspector of that Department.

With reference to the reported resignation of M. Gennadius, the Greek Minister to the Court of St. James's, it is officially stated that the Greek Government have refused to accept the resignation, the reasons which induced it having now been satisfactorily removed. This announcement will be received with sincere pleasure in London, for M. and Mme. Gennadius are both extremely popular.

OBITUARY.

It is announced that Major Ralph de Seton Dudgeon, Indian Army, Controller, Military Finance, died at Lahore, on April 29, of enteric fever.

Lady Playfair, widow of Lieut.-Colonel Sir Robert Lambert Playfair, K.C.M.G., for thirty years Consul-General at Algiers, died on Thursday at St. Andrews.

Captain Edward Gerald Lawton, East Surrey Regiment, attached Egyptian Army, has been killed on active service. Aged 23, he was the second son of Mr. J. H. and Mrs. Lawton, of Kew, and was educated at Harrow and Sandhurst. He joined the East Surrey Regiment, with which he went to France in August, 1914, and fought at Mons, Le Cateau, and the first battle of the Marne, where he was wounded in both arms. After leaving hospital he returned to France in September, 1915. He was transferred to the Egyptian Army in March, 1916, and took part in the fighting in which it was engaged. On April 12, while engaged on active operations, he was ambushed, and received a spear wound in the left side, and he died the same evening. He had the Mons star and ribbon.

DOMESTIC ANNOUNCEMENTS.

DEATHS.

MALTASS.—On May 4, at the Norland Hotel, Grandville Square, Neville Edward (formerly of Constantinople), aged 58.

THOMSON.—On May 6, at 1, Marine View, Kingsway, Hove, after a long illness, Gladys May Thomson, daughter of Mrs. Olivia A. Thomson, of Constantinople.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

PERSIA AND HER FUTURE.

An interesting communication has been made by Persia's representatives abroad to the Governments to which they are accredited. The Persian Government, it is announced, regards as null and void all treaties imposed upon it in recent years, especially the treaty of 1907 between Russia and Great Britain regarding their respective spheres of influence in Persia. Whereas, the Note continues, other treaties may subsequently be revised, this shall not be the case in regard to the Treaty of 1907, which, together with its appendices, is to remain definitely annulled. A variety of considerations may have prompted the Persian Government to take this step at the present time. If it is an indication that, with the restoration of order by the agency of General Sykes's gendarmerie, Persia begins to feel stronger politically and hopes to prepare the way for her national development, then the pronouncement is to be welcomed. The Anglo-Russian Agreement of 1907—to which Persia herself was not actually a party—was not intended to survive the present war. Before the revolution the Russian Government had virtually conceded the point, and it was understood that the Persian question was the subject of negotiations between Russia and Great Britain. The Russian revolution gave the Agreement its *coup de grâce*. Consequently the denunciation of the treaty by the Persian Government has only a *pro forma* significance, and was assured of the British Government's approval, if the Teheran authorities saw fit to conform with diplomatic usage by consulting it before taking action. The moment for the step is not inopportune, in view of the situation in Russia. For the Bolshevik Government the affairs of Persia have no interest whatsoever; and it is to the advantage of the three States concerned to have a superannuated agreement out of the way. Strictly speaking, Persia has neither the right nor the power to dispose of the Anglo-Russian Agreement in this or any other manner; but in the existing circumstances her action may be allowed to stand. It has the advantage of simplifying the position in Persia at a time when no diplomatic relations exist between Great Britain and Russia.

Unfortunately for Persia and for Great Britain, the declaration that the Agreement of 1907 is null and void does not solve the Persian problem, which still has to be faced by both countries. That Agreement was intended to serve a double purpose; it aimed at an amicable settlement of all outstanding questions likely to disturb good relations between the two contracting parties, and at the same time it was hoped, at least by Great Britain, that it would prepare the ground for better conditions in Persia. This expectation, it is well known, was not realised. Commenting upon a Blue-book on Persia published in July, 1913, Lord Curzon said: "The picture delineated in this Blue-book of Southern Persia is a picture of a country in the throes of dissolution, given up to rapine and brigandage, where trade is at a standstill, where armed bands rove about the country doing as they please, where British officers are fired at and robbed, and in one particular unfortunate case an officer was killed; a country where the central Government is impotent and local Government ignored." The conditions in Northern Persia, Lord Curzon pointed out, were different; not that there was no insecurity, but life and property were relatively safe owing to the presence of an overwhelming force of Russian troops in that part of the country. Until the formation last year of the South Persian Rifles, under General Sir Percy Sykes, there had been little or no improvement in the general situation. The Central Government proclaimed the neutrality of Persia, but it was as powerless to prevent lawless bands from doing the bidding of Germans and Austrians as it was to keep North-Western Persia from becoming the battlefield of Russians and Turks. Recent events, however, have introduced one important modification in the Persian problem. To-day the interests of the parties concerned—Persia and Great Britain—are identical; formerly, when Russia played the dominant part, this assurance could not be given. With the elimination of Imperialist Russia, and with its Bolshevik successor repudiating all interest in anything outside a class war, Great Britain is now at liberty to pursue her own policy in regard to Persia. That policy remains to-day what it was seven years ago, when Lord Morley described it as being "faithful to the good of Persia; to lose no chance of easing the distracted situation in which the Persian Government now is, by counsel, attention, and such assistance as from time to time we may consider it prudent to give." In a word, Great Britain desires to see a strong and a settled Persia; strong, in order that she may be able to manage her own affairs and to resist foreign encroachment; settled, in order that trade may revive and the country advance towards financial independence and material prosperity.

Great Britain's policy for Persia is also the only one that the country, if rightly advised, would choose for itself. The two chief obstacles in the way of the adoption of this policy are the Germans and the Young Persians. In the exhilaration born of freedom from Russian domination in the north there is the danger that the Young Persians, who politically are still very young, may feel that the moment has come to throw off all restraint and to conduct the affairs of the State in their own way and for their own benefit. They can count upon receiving every encouragement in this course—from the Germans. Persia in their hands would speedily share the fate of Bolshevist Russia, if Great Britain were content to look on and maintain a passive attitude. To prevent this disaster from overtaking the country Great Britain must be at pains to avoid the Allied policy of *laissez faire* which allowed the Russian revolution to pass into the hands of the Bolsheviks. No policy that the British Government might adopt in regard to Persia is likely to be mistaken for a perpetuation of Russian methods. It will be to Germany's interest to have British policy misrepresented in this light; but the good sense of the better elements in Persia will satisfy them of the sincerity of Great Britain. No mere reference to Persia's great past is going to be of help to her at the present time. She has been proved so bankrupt of administrative capacity that she will have to begin her lessons in statecraft all over again. To her present bureaucracy she owes in the main her dissolution, and it is too much to expect that a mere handful of half-baked students are to prove equal to the task of administering the whole country on sound lines. To bridge over the period between the elimination of the old corrupt official and the time when an adequate Civil Service will have been trained to take charge the Persians must accept the assistance of those who have had more experience in successful administration than they have. The suggestion, however, will not necessarily come from them. Unless the British Government is prepared to be always at hand with advice, there is the danger that the government of the country will pass into the hands of those who shout loudest, and whose chief conception of statecraft will be to repudiate all help from without. Such a course must once more open the flood-gates of anarchy and gravely imperil the peace and welfare of India.

GERMAN EMIGRATION POLICY AND EASTERN EUROPE.

By D. MITRANY.

The interesting attempts made by the German world in the first half of the nineteenth century to extend its influence over Eastern Europe by means of agricultural colonies, especially along the main lines of communication, have been sketched in a previous article.* They failed because the bond which ties the peasant population of those regions to the soil is as much national as economic. An economic bond could be unloosed by a favourable exchange of economic advantages; one forged by national sentiment can be broken only by force. In other words, the Germans could have settled on the Lower Danube only by displacing the native communities, a task by no means easy.

Failure did not lead, however, to the abandonment of the policy, which was only "reconstructed," in keeping with the conditions prevailing in south-eastern Europe, and in that new form was largely successful. For its understanding it is necessary to say a few words with regard to the social evolution of those populations, considering primarily Roumania, though the facts apply to a large extent also to the other states of south-eastern Europe.

For nearly five centuries the regions on the Lower Danube were under Turkish domination. During that period the officials were recruited almost to a man from among the Turks and the Greeks, which two nationalities also reigned supreme in the economic life of those countries. The native population supplied the large mass of peasant serfs, and the considerably smaller class of landowners, the so-called *boyards*, the chief of whom occupied various honorary, if influential, functions at the Court. When the Roumanians succeeded in freeing themselves from the Turkish suzerainty, the Russian protectorate, and the Greek economic domination, these various foreign elements disappeared, the limited better-educated and socially higher class of the native population came to the leadership and took possession of political power and functions; whereas the illiterate and impoverished peasantry found itself unable to take an active share in the new order of things. The economic development which followed upon the liberation of these rich lands from the omnivorous domination of Turks, Russians, and Greeks, was so rapid that it did not allow of a normal growth of a national middle-class of traders and artisans, with the result that the place was again occupied by foreigners, this time Germans from Austria and Germany, Jews from Russia and Galicia, and, to a smaller extent, Greeks, Bulgarians, Armenians, and Italians.

The neighbouring Saxon colonies in Transylvania have at all periods provided a certain number of artisans, merchants, and members of the liberal professions to the Roumanian countries. But only a few of them remained, for during the four centuries of Turkish domination conditions were so insecure that often the best thing that could happen to these artisans was to get home again with nothing in return for their services. By the end of the first quarter of the nineteenth century Turkish dominion began to decline in the Roumanian countries, and the greater security and abundance of work and money which prevailed during the Russian occupation (1828-1834) attracted many skilled workmen from across the Carpathians. This movement and the circumstances which induced it were emphasised after Roumania was placed under the protection of the Great Powers (1858), and especially after the accession of the German Prince, Carol of Hohenzollern, to the Roumanian throne (1866). Various subsequent events further strengthened it. As a result of the tariff war which broke out between Austria and Roumania in 1886 the industry of Transylvania and Bukovina suffered heavily. When, therefore, the Roumanian Government in 1887 introduced a law intended to further home industry many manufacturers from those provinces settled or founded branches in Roumania. Thanks to the character of German banking, the movement has since been a continuous and a growing one, naturally resulting in a great influx of German clerks, artisans, and engineers.

This peaceful invasion was assisted by the fact that the Roumanian peasant, who is deeply attached to the land and disinclined, on account of social and climatic circumstances, to regular work, settles down with difficulty to industrial labour. On the other hand, the ideal of the middle and upper classes is politics and officialdom. As M. Carp, sometime Prime Minister and leader of the Conservative Party, once put it:—"The Roumanian is born a bursar, lives an official, and dies a pensioner." If not welcomed, the Germans were, in these circumstances, tolerated. In 1910 their number reached a total of about 50,000, Bucharest alone (350,000 inhabitants) giving hospitality to about half that number. A German writer candidly remarked a few years ago:—"One should only try to imagine what an enormous economic and political difference it would necessarily make if, instead of Germans, there were as many Englishmen living here." It must be observed, however, that only about one-third of this total are citizens of the German Empire; the majority are Austrians, including a small number of German-Swiss. The banking, transport, and insurance industries absorb the majority of these German clerks, all of them industries which control the trade and offer the best opportunities for becoming acquainted with the economic and social life of the country. Those who after a few years return home become valuable collaborators with the German merchants and manufacturers, who are ever anxious to adapt themselves to the particular taste and requirements of the various markets. Those who remain preserve their language and customs unimpaired, are faithful customers of German industry, and contribute to the constant expansion of the consumption of German products. The German and Austrian Governments establish and support German schools for the benefit of these emigrants, and they are in general the object of much attention.

When contrasted with the departed foreign element, the qualities of the German newcomers could not fail favourably to impress the native population. They and the educational associations they set up were able to exert a powerful influance on the budding spiritual life of Roumania, the more so because England and France short-sightedly neglected the new independent countries in the European Near East, which they could easily have brought under their intellectual influence, since the political emancipation of those regions sprang from, and was fostered by, French and English liberal ideals. Further—and here it should be pointed out that Austrians formed the large majority of the Germanic population of Roumania—the various German institutions and associations set themselves the task of creating a "spiritual home" for the numerous German colonists, and of giving those natives who desired it the opportunity of getting into touch with German civilisation, but wisely refrained from making this connection oppressive or from interfering in Roumanian affairs. That such a policy was not fulfilling the intentions of the politicians in Berlin is evidenced by the attempt which was made after the events of 1870-71 to bring the German community of Bucharest under the dominating influence of a small minority composed of citizens of the new German Empire, in the main Prussians. Defeated then, the "Imperialists" returned to the charge a few years before the war, and tried to put to use the increasing financial needs of the community. The attempt was strongly opposed by the majority; "for, if successful," wrote a well-known member of the interested party, "the Germans of this country would then have lost the only place where common activity with a higher ethical end in view still existed, and, sooner or later, our community would become exclusively 'Prussian,' a result to which the Germans of Bucharest cannot look forward. . . ."

The same writer admitted that, after a close intercourse of over half a century, "respect for everything German had increased, but not love." The strenuous efforts made by the Germans during the war to increase their influence with the populations of occupied territories will no doubt lead to a similar result. The peoples of South-Eastern Europe, who have hardly emerged from a long and noxious foreign domination, naturally revolt at any attempt to establish another foreign influence among them, however efficient and polished the new agent may be. If they desire a warmer welcome, the leading classes of Germany must abandon the idea that the small and new States of Eastern Europe are convenient appendices to the German economic machine. Not even the Bulgarians will submit to that, once the alliance with Germany has ceased to be a paying concern. The Serbians, the Roumanians, and the others are, sometimes extravagantly, jealous of their independence; and unless they are short-sightedly neglected by the Western democracies they will always prove, even to the modern Teutonic Knights, that in the end spirit is more powerful than organisation.

TANGIER TO TEHERAN.

That the Germans have an absurdly high opinion of themselves, their merit, and their *Kultur*, we all know quite well by now; and we have learned, with as much amusement as surprise, that they look down on all other peoples—not excluding their Allies—with contempt. But even so, it is amazing to find them so careless in the matter of concealing that contempt. Even a thick-headed Prussian, one would have thought, would have had sufficient sense to imitate the gentleman in "Aunt Jack," who, when he was told by the magistrate that he would be committed for contempt of court, replied: "But, your Worship, I expressed no contempt. On the contrary, I carefully concealed my feelings." But no! The German, so far from troubling to conceal *his* feelings, seems, when those feelings are super-mannish, to revel in revealing them. We remember, for example, the pig-breeding circular of the affable gentleman in East Africa—was it not? And now we have the polite correspondence unearthed in Persia.

***

The Fates certainly do seem to be unkind to those Germans who commit their thoughts of other people to writing. In this case we have a German official, Herr Wustrow, who was at one time a German Vice-Consul, and later Dragoman to the German Legation at Teheran, girding ferociously at a people with whom he and his fellow-*schweinhunde* have—as yet—no quarrel. This apostle of *Kultur* compares the Persians with jellyfish; he calls them "scum"; he considers that they "can only be tamed by force"; and he insults them generally with truly German thoroughness. His efforts are ably backed by those of another German agent in Persia, a Doctor Niedermayer, who describes the Persians as "incredibly gross swine" and a "scum of a people." Both these gentlemen (!) were, I understand, employed in endeavouring to stir the Persians up against ourselves and our Allies; and it is safe to assume that when it suited their purpose they indulged in flattery of the grossest kind. If they victimised any Persians with their "pretty talk," it would be interesting to know what the victims thought of the revelation of their "well-wishers'" true feelings.

I have already expressed my admiration of the ingenious gentlemen who prepare the Turkish *communiqués*, and my indebtedness to them for much harmless amusement. Since my acknowledgment, however, fresh gems have been forthcoming. There was, for instance, that artfully-worded message which, almost sympathetically, indicated that Aden, besieged by the gallant forces of the Turk, was in a state of semi-starvation at least. Unfortunately, I have mislaid this choice bit; but I remember that the artist in words who created it had evidently had his eye on an audience that might, perhaps, forget that:—(1) Aden is on the sea; and (2) that the British Navy still manages to keep the seas open for traffic. It must be very awkward for a conscientious Turk to hold the balance even in face of such unpleasant facts. If only he were a German, trifles of this kind would not, of course, worry him in the least.

***

It is just when the *communiqués* have to make some reference to naval matters that they are most intensely amusing. They maintain their principal characteristics still; but one feels that their perpetrators are not sufficiently sure of their ground to do anything thoroughly artistic in the way of lying. Perhaps they are a little frightened by the number of funny stories that have been told about the Turkish Navy at any time during the past half-century or so. At any rate, they are extremely discreet. Thus we find that the report of May 4, which chronicles the German occupation of Sebastopol, does not actually state that the Sultan's Navy took any part in the "capture" of the Black Sea Fleet that used to be Russian; but it tries hard to suggest that such was actually the case: "The Sultan Selim (ex Goeben) and the Hamidieh, as well as some of our torpedo-boats, arrived in the roadstead of Sebastopol on the evening of May 2, after having made a very difficult passage across the minefield." After that, of course, there was no more to be said: the Russians hauled down their colours to the daring Turco-Germs. At least, that is the suggestion conveyed to my mind. As an essay in the art of *suggestio falsi* it is not altogether to be despised.

PRESS ON THE NEAR EAST.

On the Watch.

In a leading article *The Times* (May 3) refers to the advance in Mesopotamia, and expresses the opinion that: "The advance of Sir William Marshall's right flank in Mesopotamia, of which further details were published yesterday, is presumably not a challenge so much as a further measure for the protection of Persia." After reviewing briefly the recent operations, the article concludes:

Now that the Russian troops have withdrawn from this region, it becomes more than ever necessary to take such precautions as are possible in order to stop the entry of small mobile forces of the enemy into Persia. In all such movements the principal object in view is to prevent the approach of hostile bands towards the Afghanistan frontier, where they seek to penetrate in the hope of fomenting strife. Probably we cannot block all the routes, but we can do a great deal to thwart the schemes which are undoubtedly being planned by the Germans and Turks.

War-Time Prices.

An article entitled "Jassy in War Time," which was published in *The Times* last Saturday, contained some startling figures of the increase of population in the capital of Moldavia as a result of the exodus from Bucharest, and of the consequent high prices of all kinds of foodstuffs and many articles of necessity. Thus we are told that useful things—

such as socks, stockings, and leather, which were sold at fabulous prices, such as 10 lei (8s.) for a handkerchief, the same sum for a pair of socks (worth about 1s. 6d.); 250 lei (£10) for a piece of leather, just enough to make a pair of shoes or regulation boots. In August two shops with provisions were opened. A few of the prices will show what real shortage means:—A pound of ham (sometimes uneatable), 35 lei (£1 8s.); a pound of cheese, 32 lei (£1 6s.); a pound of butter, 52 lei (just over £2).

All these prices were willingly paid, for there was plenty of money, but even the richest of the population had nothing to wear or eat. The Government could not intervene, for it would have stopped even this trade, which proved to be better than nothing.

A little later we read: "When the Maximalists came into power, and every village considered itself a free and independent body, one could buy food in Bessarabia by bribing the president of the local Soviet. But this did not last very long, for the population became very hostile to the Roumanian raiders, on account of the enormous increase of prices." The lot of the poor, who naturally suffered most, was pitiable indeed:—

Underfed, crowded in small dirty rooms, having to spend a hard winter without wood and a hot summer without water, the people presented a really pitiable appearance. The epidemics were terrible, especially of spotted typhoid, in the winter and spring of 1917. In Jassy alone there were over 15,000 cases, and if the scourge was stopped after three or four months it was due to the extraordinary devotion and self-sacrifice of the Roumanian and French doctors. More than 150 Roumanian doctors and about ten French doctors and nurses paid with their lives for their devotion. Special food and medicines were very scarce, and the British Red Cross Society and the Order of St. John of Jerusalem rendered most valuable service by supplying the hospitals and the civilian population from their stores, thus helping to save many lives.

But, the article concludes:—"In spite of this awful misery life went on gaily at Jassy. The streets were crowded with people promenading, and in the theatres and cinemas there was never a seat left unsold."

Martyred Roumania.

Right up to the time of her death Mme. Take Jonescu lost no opportunity of working for a more complete understanding in this country of Roumania and the Roumanians The *Observer* of April 23 contained an article from her pen, entitled "The Tragedy of Roumania." It begins:—

A relentless and tragic fatality has pursued Roumania from the first fortnight of her entering into the war. At the beginning, when the armies advancing victoriously in Transylvania and counting on the stipulated offensive at Salonika to occupy her Danubian neighbour, were hurriedly recalled to stem the Bulgarian advance, facilitated by General Sarrail's failure to undertake the awaited offensive, and by the inability of the small Russian contingent to render effectual aid. Again, when the divided army, outnumbered by von Mackensen's immensely superior forces, was forced back into the plains, and the Russian reinforcements arrived too late and in insufficient numbers to avert the fall of the capital and the retreat into Moldavia. Finally, when the reorganised Roumanian Army, successfully holding the line of the Sereth, and inflicting enormous losses on the German divisions, were compelled by events on the Russian front to stop the victorious offensive, rendered futile, even dangerous, by the defection of Russian arms in Bukovina and Galicia. The subsequent Bolshevik declaration of war completed the impenetrable ring of Roumania's enemies, and closed the only available outlet for her armies seeking a passage of retreat.

Very few readers will disagree with the writer's description of Roumania as "this martyred nation"; and we fear that her suggestion that, amidst the great events on the Western Front, the details of the terms that Roumania has been forced to accept "have not received the attention they would have obtained at any other moment."

The territorial exactions, picturesquely described by Count Czernin as rectifications of frontier, deprive Roumania of about 250.000 square kilometres, or, approximately, a fifth part of the country. Taking into consideration the total land surface, these annexations represent what for France would mean the loss of seventeen departments, or for Germany the sacrifice of Bavaria, Wurtemburg, and even also part of the Grand Duchy of Baden.

But more important even than the actual extent of the districts wrested from her is the nature of the lands claimed, which constituted Roumania's natural protection against a powerful and aggressive neighbour. Those rocky passes, more efficacious than any artificial fortresses, are now declared strategically necessary as a safeguard for the Austro-Hungarian Empire of 60 millions against the attacks of the 7½ millions of Roumania's inhabitants, and the infinitely smaller nation loses every strong position available for resistance to so formidable and unscrupulous a foe. In future the entire country is strangled; the mountain barrier forming a protective frontier now bristles with the enemy's cannon, and is transformed into a perpetual menace.

The article concludes:—

May the spectacle of Roumania's fate furnish one more lesson to the pacifists of this and every belligerent country! Though at the first mention of peace the Conservative Ministers of the late Coalition Cabinet resigned *en bloc*, there is no doubt that the Prime Minister was offered relatively acceptable terms as a basis in order to induce him to enter into negotiations; but once the unwary fly had fallen into the poisonous web the German spider, as in Russia, progressively augmented his pretentions. The newly formed Cabinet under General Averesco's presidency was unable to accept the monstrous conditions put forward Only the few pro-German politicians, representing no significant portion of the nation, could be induced to affix their names to the document sacrificing the honour and the independence of their country.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Delhi Conference. May 1.

Mr. FISHER (Minister of Education), replying to Sir J. Rees, said:—The Delhi Conference has been held in response to the Prime Minister's message inviting the Government and the people of India to redouble their efforts in the common cause. The Viceroy's object in convening it was to invite the co-operation of all classes in sinking domestic discussions, in securing their active support of measures for developing the man-power and resources of the country, and in cheerfully bearing the burdens necessary to that end. Particulars as to the offers made by the Indian princes and ruling chiefs have not yet reached the Secretary of State.

Surgeon-General MacNeece.

Mr. MACPHERSON (Under Secretary for War), replying to Sir Watson Cheyne, said:—The Army Council have received and considered a statement by Surgeon-General MacNeece in regard to the findings of the Mesopotamia Commission in his case, and they have formed the opinion that no blame can be attached to him in regard to the manner in which he carried out his duties in connection with the medical services during the campaign.

The Kut Prisoners. May 6.

Major D. DAVIES asked whether the Government had any information of the fate of the 596 British troops and 2.600 native troops who were taken prisoners by the Turks in Kut; whether the Government had reason to believe that these men had met their death other than in action or through sickness; and whether they would take steps to secure this information from the Turkish Government.

Mr. J. F. HOPE: I regret that no further information has been received regarding these prisoners. It is feared to be only too likely that the majority succumbed on the march into the interior. As regards the last part of the question, we have repeatedly urged the Turkish authorities to keep us supplied with full information regarding all prisoners in their hands, and the Netherlands Minister at Constantinople has quite recently been requested to press for information as to all prisoners of whom no news has yet been received.

Enemy Missionaries in India.

Mr. H. A. L. FISHER (President of the Board of Education) informed Sir A. Fell that early in 1916 the Government of India, in accordance with a policy then decided on, repatriated the great body of missionaries of enemy nationality. Exceptions were allowed only in cases where, by reason of age, sex, prolonged residence out of Europe, or other similar circumstances, removal from India was unnecessary and would have been a hardship. Missionaries of Swiss nationality in India, so long as their conduct was irreproachable, enjoyed freedom of movement as did other neutrals. The authorities had full powers to deal with any

foreigner who wrongfully described his nationality or was found to work adversely against British interests. There was no reason to think that the measures taken by the Government of India to eliminate German interests and influence from India had been ineffective. There were certain factories in Southern India connected with a well-known mission under German influence in which Swiss agency was employed, but steps had been taken to secure the elimination from those concerns of German capital and influence.

Turkish Prisoners of War. May 7.

Mr. J. F. HOPE, answering a question put by Mr. Butcher, said that one officer and eighty other ranks had been repatriated as invalids by the Turkish Government under an agreement come to before the ratification of the Berne Agreement. All arrangements had been made to return under the same agreement a corresponding party of about 100 Turkish invalid combatants from Egypt—some of them had, in fact, embarked—when typhus broke out. He was informed that it had been impossible to find transport for these men since all fear of infection ceased, but that every endeavour would be made to send them to Turkey as early as possible.

REMITTANCES TO PALESTINE.

A general licence has been granted by the Treasury authorising remittances to the occupied parts of Palestine, provided that they are made either through the Post Office attached to his Majesty's Forces operating in Palestine, or through Messrs. Thomas Cook and Son, or a branch of the Imperial Ottoman Bank, or of the Anglo-Egyptian Bank, Limited, or of the Anglo-Palestine Company, Limited, for the time being authorised to carry on business in Palestine.

Special Roumanian Missions visiting England, France, and America have been recalled by the Roumanian Government to Jassy.

Speaking at Liverpool on Monday, the Earl of Denbigh said that the dangers of the East were as great as those of the West, and if this country were so foolish as to agree to any peace which merely secured the evacuation of Belgium and France and gave Germany a free hand in the Near East we had been simply putting our heads into a noose. It was as great, if not a greater, part of the German scheme of domination to squeeze Great Britain in Egypt and India as it was to squeeze Belgium and France in relation to their Channel ports.

PALESTINE: A MOSLEM VIEW.

Members of the Moslem community resident in England have submitted to Mr. Balfour, as Secretary of State, a representation of the feelings of the Moslem subjects of his Majesty in regard to the future of Palestine. They point out that through a period of 1,800 years the followers of Judaism have had no vestige of claim to the land "of which they had possessed themselves some centuries before their dispersion by the slaughter and despoilment of its original inhabitants." They submit that during the 1,300 years, excepting the short interruption when the Crusaders held the country, the Moslems have acted with justice and toleration towards other creeds and peoples; indeed, that the Jews have always enjoyed greater toleration in Moslem lands than in most Christian countries. But as regards Palestine, they protest against any proposal to place Jews in a privileged position in respect to the other communities, "the spirit of exploitation, for which the Jewish race is singularly distinguished," being likely to bring them into collision with their neighbours. The petitioners submit that "should it be considered necessary, under the right of self-determination, to create an autonomous State in Palestine, with Jerusalem as its capital, it should be a Moslem State, with a Council consisting of members representing the Jewish, Christian, and Moslem communities in proportion to the number of their followers, with equal rights and status for all its citizens, and equal opportunities for free development without artificial political backing for any one community."

EGYPT'S WAR CONTRIBUTION.

The Government has sent the following telegram to the High Commissioner for Egypt in response to the Egyptian offer to contribute immediately £3,000,000 in respect of war expenditure already incurred, and to provide a further £500,000 in the Egyptian Budget for 1918-19, as reported in our Cairo Correspondent's letter last week:—

"You should convey to the Sultan and to his Ministers the warm thanks of his Majesty's Government for the generous contribution which Egypt is making towards the cost of the war. You should express the lively satisfaction of his Majesty's Government at this signal proof of Egyptian goodwill and loyalty towards the Protecting Power, under whose guardianship Egypt has remained safe and prosperous during the present times of general adversity, and is assured of her continued welfare and prosperity in the future."

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The terms of the disastrous treaty forced on Roumania by the enemy Powers have now been published. I shall reserve detailed comment on them until next week, and will merely say now that, especially as regards economic conditions, they are very much what was expected. In other words, Germany and her ally have succeeded in the complete humiliation of Roumania—for the time being.

***

The report of the Agricultural Bank of Egypt is in every way a most promising document, and bears incontrovertible witness to the prosperous conditions now existing in the country. Only three years ago the arrears of annual instalments of loans due to the bank amounted to £E1,394,546; this total has now been reduced to £E403,786, and the additions under this head in the past year were trifling. The net profits show a further large increase of £E187,610, the figures being £E1,047,463, as against £E859,853. The ordinary dividend is raised from 7 to 8 per cent., and the deferred dividend is maintained at £40 per share, to which it was raised from £15 per share in 1916. The bank anticipates a continuance of favourable conditions for some time, but is not unmindful of what may happen after the war, and with a view to uniformity in regard to future dividends, the balance to the credit of ordinary shareholders has been increased from £E80,978 to £E235,702, and that of the deferred shareholders from £E41,519 to £E189,064.

***

The death of Mr. N. E. Maltass, London agent of the Imperial Ottoman Tobacco Regie, removes one of the best-known and most popular members of the British community concerned with trade in the Near East. His connection with the Near East may be said to have extended over a lifetime. He was born at Smyrna, and was in business there for a number of years, subsequently coming to London. Then he went out to Constantinople, where he was agent for the Leyland Line and for the Royal Insurance Company. Two years in Calcutta as agent for another insurance company followed, and then Mr. Maltass returned to London for the same company, and eventually obtained the agency of the Imperial Ottoman Tobacco Regie. Mr. Maltass, who materially increased the business of the Tobacco Regie, was very successful throughout his business career, and in every post was held in high esteem because of his great business capacities, which at all times enabled him to carry out the duties required of him with distinction.

***

For lack of space I have to hold over until next week particulars of this year's Sudan Budget. The figures for revenue and expenditure are £E2,255,000, an advance of, roughly, £E450,000 on the previous figures. Needless to say, the Budget is the largest in the history of the Sudan, and it is most satisfactory to know that the increasing expenditure inevitable in the case of a young country like the Sudan is more than compensated for by the revenue returns due to the rapid development of the country.

***

Considerable interest attaches to the annual report of the Deutsche Bank on account of the references that are made to the bank's extensive interests in the Roumanian oilfields. These, the report says, owing to events in the Balkans and Russia, will "prove of special importance to the Deutsche Bank in view of its close identification with the Steaua Romana Company." German prospects in Roumania compared with the previous year, the report adds, "have very considerably improved, and the Deutsche Bank has been directly benefited through being enabled to dispose in Holland of moderate amounts of its holdings in Roumanian petroleum shares." This liquidation is decidedly interesting, as it can scarcely be taken for an indication that the astute financial house entertains any great expectations of the exploitation of Roumania as a result of the war. On the contrary, it rather suggests profit-taking in anticipation of an inevitable slump in the market.

***

No less worthy of note is the passage in the report referring to the bank's interests in Asiatic Turkey. For obvious reasons it is difficult in this case to display even the dubious optimism which has prompted the bank to reduce its interests in Roumanian oil shares. But the Deutsche Bank has never been other than courageous, and so we are told that the position is "no less favourable" than in regard to Roumania. Here, too, this excellent forecast is subjected to a gentle process of watering down, for it is added that with regard to the Baghdad undertakings the bank's interests have for years been "assessed at such figures that losses thereby can hardly accrue to the Deutsche Bank." In plain English, the bank has "cut its losses" on the Baghdad line.

***

Apropos of the reference last week to the growth of the co-operative movement in India, it is interesting to note that there are signs that the movement is also gaining ground in Egypt. It may, of course, only prove to be a temporary revival, but the indications point otherwise, and I shall not be surprised if, within a few years, the co-operative movement is firmly established in the country. It is certainly just what the fellaheen require to relieve their economic difficulties.

The strong position of the National Bank of Egypt was brought into clear relief by the speech of Mr. F. T. Rowlatt at the annual meeting last month. The net profits amounted to £519,250 16s. 9d., as against £313,533 6s. 2d. for the previous year, and this substantial increase would have permitted a much larger distribution that 16s. per share Very wisely, however, in the prevailing circumstances a conservative policy was followed and £200,000 of this amount was placed to the special reserve, while the carry-forward was £49,505 14s. 8d., as against £22,179 19s. 7d. in 1916. As the indications point to the continuance of the conditions in Egypt which are so favourably reflected in the balance-sheet shareholders have every reason to regard the future with considerable confidence.

***

For years insistence has been laid in these columns on the need for the establishment of English as the official language in Egypt, and at last, judging by a resolution of the Egypt, Levant, and North Africa section of the Manchester Chamber of Commerce (which will be found on another page), business men in this country are beginning to realise the advisability of the change. "Tourist," in THE NEAR EAST of April 26, pointed out the value of the adoption of English for use in the Courts, and I subscribe to his view that the time has come for ending the system of internationalism which has in the past not only hampered the work of the Courts, but has also proved a grave inconvenience as regards the promotion of trade between Egypt and this country. It would be difficult to find a more propitious moment for the change, and I am sure in making the alteration we should have the heartiest co-operation of our Allies, who would be the first to facilitate anything that would tend to improve conditions in the country.

***

The chairman's address at the recent annual meeting of the General Ceylon Rubber and Tea Estate is of considerable interest from the light it throws on the present situation in the tea industry. The company's tea crop last year amounted to 1,363,764 lb., a decrease of 372,362 lb. on 1916, this being due to a bad autumn season, and also to the increasing influence of the rubber shade. Owing to this shortage, and also to the rise in the cost of material, etc., the f.o.b. costs were .85d. more than for the previous season, and the net average obtained was just over 8.38d., against 8.46d. As regards the disposal of the crop, it was stated that the Food Controller anticipated being able to take 66 per cent. for the United Kingdom, and it was thought there would be no great difficulty in selling the remainder locally or in other countries.

THE EGYPTIAN BUDGET.

(From Our Own Correspondent.)

Cairo, April 1.

The Council of Ministers have now approved of the Budget for the ensuing financial year. Once again the figures constitute a record. Revenue has been fixed at £E22,900,000 and expenditure at £E23,250,000, leaving an estimated deficit of £E350,000 to be debited to the general reserve.

The following table gives an interesting comparison of the Budgets just prior to the war and during the last two years, with the actual results obtained:—

Estimate.

—	Revenue.	Expenditure.	Deficit.
	£E.	£E.	£E.
1913-14	16,130,000	18,614,000	2,484,000
1914-15	17,588,000	18,162,000	574,000
1915-16	14,756,000	15,900,000	1,144,000
1916-17	16,530,000	16,630,000	100,000
1917-18	19,525,000	19,525,000	—
1918-19	22,900,000	23,250,000	350,000

Actual Result.

—	Revenue.	Expenditure.	Surplus.
	£E.	£E.	£E.
1913-14	17,703,898	17,659,961	+ 43,937
1914-15	15,389,124	16,857,743	−1,468,869
1915-16	17,759,418	16,594,666	+1,164,752†
1916-17	19,927,274	17,240,606	+2,686,668
1917-18	17,088,271*	13,732,346	+3,355,965

*For nine months ending December.
†Apart from this surplus an amount of £E1,270,407 was written off depreciation of reserve securities.

These figures show that revenue has consistently been fixed in the Budgets at figures which in every case have proved to be below the actual amount eventually collected during the whole of the preceding financial year, and that the actual results have, especially since the war, turned out to be very much better than the estimates. The new estimates are about £E6,000,000 more than the total collected during the nine months ending December 31, 1917, and, whilst it is impossible to say whether that difference will be collected during the remaining three months, there is every reason to expect that the final figure will not be far off the 1918-1919 estimates.

Revenue.

The increase in revenue over the estimate for the preceding year—an increase which amounts to £E3,375,000—is made up as follows:—Customs, tobacco, and Excise duties, £E1,060,000; judicial fees, £E191,000; railways, telegraphs, and telephones, £E2,156,000; State domains, £E122,000; ghaffir cess, £E156,000; interest on investments, £E148,000, a falling off having been budgeted for in ports and lights dues (£E39,000), miscellaneous receipts (£E194,000), and extraordinary receipts (£E244,000).

Of the increase in direct taxes, the new sugar Excise accounts for £E634,000, the balance being due to the rise in the value of Customs entries. The continued prosperity of the people is certain to bring about an increase in land transactions, hence the higher estimate for judicial fees. The high prices which all crops have been commanding, and will continue to command for some time yet, has justified an increase in the expected receipts of the State domains, the total for which at the end of the nine months up to December 31, 1917, was within £E40 of the figure fixed for the whole of the new financial year. Of the increase recorded against railways, etc., £E200,000 is represented by the estimated revenue from the telephone system, which the Government has now taken over, whilst all but £E7,000 of the balance is to come from the increased rates for passenger and goods traffic. The increase in the ghaffir cess is set off by a corresponding increase in the pay of the force, whilst the higher proceeds from investment of funds is due to the Government's participation in the profits on the bank-note issue. The decrease in ports and lights dues is owing to the continued shipping restrictions; miscellaneous receipts are expected to fall off owing to no profits on the coinage of silver being foreseen (indeed, it is feared that no silver will be procurable); whilst the decrease under extraordinary receipts is due to the fact that last year's Budget included credits resulting from the closing of certain special accounts, the balances of which were passed to this head of revenue.

Expenditure.

The estimated expenditure for the new financial year includes the £E500,000 voted the other day by the Council of Ministers as Egypt's contribution during 1918-1919 towards Great Britain's war expenditure, and also £E564,000 to be paid to the smaller employees as war gratuities. The remainder of the increase of £E3,725,000 is due to the great rise in the cost of material, food, fuel, and labour. In its covering note the Finance Committee gives an interesting table showing how the increase is divided up under the various heads. Thus we find that whilst maintenance of canals, drains, buildings, and roads, etc., account for £E118,433, stores, uniforms, and rations figure for £E447,969, and fuel for £E1,048,761, or nearly double what it stood at in the previous Budget.

Turning to departments, we find that the following are the main increases:—Survey, £E48,372, due to the necessity of increasing the staff in order to cope with new duties, chiefly those of recording crop areas; Government Press, £E49,512, due to the high cost of paper; Mecca and Medina caravans, £E43,020, due to the extra cost of the wheat sent every year to the Hejaz; Frontier Districts Administration, £E133,798—the total last year was £E88,041—(this is the Administration formed to deal with the new territories acquired on the frontiers since the war. Its creation has reduced the work of the coastguards; the latter, however, have now been entrusted with the administration and development of the fisheries, which require very considerable and close attention). Public instruction, £E110,875, of which £E45,000 is for food, £E13,500 for supplies, stores, etc., and £E37,000 is for salaries; Public Health, £E70,972, due to high cost of food and stores, which is the same cause for the increase of £E48,615 in the Prisons estimates; Irrigation, £E170,649; Agriculture, £E38,761, of which £E25,000 is for new works, and £E15,000 for measures to combat cattle plague; State Railways, £E1,085,221, of which £E950,000 alone is for extra cost of coal. (In this connection it is interesting to note that the estimated net revenue of the railways, £E1,204,000, represents about 4 per cent. on its capital value); Telephones, £E140,000; Ghaffirs, £E142,823, covered by the increase in receipts already referred to; and War Office £E117,845 due for all but £E17,000 to the extra cost of provisioning the Army. (The note adds that this increase would have been greater but for the difficulty in obtaining military stores at the present time.)

As already mentioned, this year's Budget is a record one. The figure fixed for the revenue is about £E5,000,000, or 30 per cent. in excess of the actual revenue realised in 1913-1914, and £E3,000,000 above that of 1916-1917, the last complete year recorded so far. The note of the Finance Committee points out, however, that the apparent growth of revenue in recent years is to some extent misleading. A comparison, for example, of the year 1916-1917 with one like 1905 affords no reliable guide to progress or the reverse, unless due allowance is made for the different features in the Budgets or accounts under comparison.

The year 1905 produced a total actual revenue of £E14,810,000, or £E5,117,000 less than the total receipts of 1916-1917, but in the former year items representing in the aggregate £E601,000 were paid direct into the reserve, whereas in 1916-1917 and subsequent years they have been included in the general revenues. Similarly there have been many other alterations in sources of revenue and in the manner of accounting. These changes materially affect any attempt at comparison; and such comparison, if all these different features were taken into consideration, would show that the growth in revenue has been nowhere near so great as it would appear to be.

Moreover, the expansion in the accounts rendered during the past three years has been brought about by the fact that both sides have been inflated by the same abnormal causes, which cannot, however, be expected to continue once the situation created by the war has disappeared. There is indeed every reason to expect that the revenues will undergo a considerable diminution after the war; for, in the first place, Customs rates have in certain instances been raised purely as a war measure and values have been enhanced by the state of the world's market and shipping, with the result that the dues collected have been artificially inflated; secondly, railway traffic has been increased by the carriage of stores and men for the Army, and the public rates have had to be raised to meet the extra cost of fuel, etc., but if, as may be anticipated, agricultural and commercial prices fall after the war, the high rates introduced to make the railways pay may become too onerous to maintain; thirdly, a drop in the value of agricultural commodities will also necessarily affect the returns from the State Domains, whilst the profit from the note issue, amounting this year to £E500,000, cannot be looked upon as a permanently recurring item of revenue.

In these circumstances, therefore, although the present situation reflects an extraordinary condition of prosperity, it would be wrong to take too optimistic a view of the future. It is true that the factors which will operate to bring about a reduction in the revenue will also similarly influence State expenditure, but it is by no means certain that the reduction in expenditure will be simultaneous with or proportionate to that recorded in revenue. Moreover, maintenance work, repairs, etc., which have had to be stopped since the outbreak of war and the non-execution of which has naturally reduced present

expenditure, will have to be taken in hand immediately peace conditions intervene, and as a result the post-war budgets will be laden with the additional expenditure which the postponement of this necessary work will have entailed.

There is, therefore, every prospect of a very serious situation confronting Egypt when peace conditions set in once more. Whilst the level of the expenditure may have to be maintained, it is almost a foregone conclusion that funds will only be secured to meet these charges if fresh sources of income are created. The imposition of an excise duty on sugar and the arrangement for the State purchase of the cotton crop and the limitation of cotton prices with the proviso that the Egyptian Government shall benefit from any profit derived from the eventual sale of the cotton thus purchased, although they are merely war measures, may be regarded as paving the way towards securing to the Government a greater and more direct participation in the prosperity of the country than it has been possible for it to obtain hitherto. In this respect there are considerable sources of revenue as yet untapped, and the injustice of the present state of affairs is patent; its adjustment would be so beneficial to the country in general that the financial authorities can be certain of every support in any scheme imposing on all elements trading in this country an equitable contribution to the cost of administration and of carrying out the various projects which are vital to its development and its future welfare, and from which those elements will be amongst the first to benefit.

INDIAN DUTY ON EXPORTED INDIGO.

An Act has recently been passed providing for the levy of a cess on indigo exported from British India. The Act, entitled the Indigo Cess Act, came into operation on April 1. It provides that there shall be levied on all indigo produced in India and exported from any Customs port to any port beyond the limits of British India or to Aden, a cess at the rate of one rupee per maund of 82,2 lb. avoirdupois, provided that where any preparation of indigo mixed with any other substance for use as a dye is so exported, the cess shall be levied on such proportion of the total weight of such preparation as the Governor-General in Council may determine by rule under this Act. The proceeds of the cess collected under this Act shall be applied to meet the cost of such measures as the Governor-General in Council may consider it advisable to take for promoting research in the interests of the indigo industry in India.

EGYPT'S OFFICIAL LANGUAGE

Use of English Advocated.

The *Monthly Record* of the Manchester Chamber of Commerce states that the following letter was addressed to Sir F. R. Wingate, High Commissioner for Egypt, on April 6—a copy being sent to the Secretary to the Advisory Committee on Egyptian Legislation :—I subjoin copy of the resolution supported by the Board of Directors of this Chamber, which has been unanimously adopted by the Egypt, Levant, and North Africa Section of the Chamber. The Board of Directors realise that British interests suffer a grave disadvantage owing to the fact that the English language is not the official European language of the country—French or Italian having the preference in all legal proceedings. This is a manifestly incongruous state of affairs in view of the British protectorate over the country, and my Directors certainly consider that the time has arrived when a change should be made in this respect.

The resolution is as follows :—"That the Egypt, Levant and North Africa Section of the Manchester Chamber of Commerce strongly urge the Capitulations Commission and the Advisory Committee on Egyptian Legislation to recommend (*a*) the establishment of English as the official European language of Egypt at the earliest possible moment; and (*b*) the incorporation in the Egyptian legal code and procedure of such items of English Law and procedure as may be practicable."

I am earnestly to commend this subject to your notice. A copy of this communication has been addressed to Mr. Liddell, Secretary of the Advisory Committee on Egyptian Legislation in London.

In acknowledging this letter on April 9, the Secretary to the Advisory Committee on Egyptian Judicial Reform stated that the Committee were already giving their attention to both these points raised by the Chamber.

AMERICAN SILVER FOR INDIA.

Several consignments of silver bullion derived from the melting of silver dollars under the authorisation of the Pittman Act are now on their way to the Calcutta Mint, says *The Times* New York correspondent in a message dated May 3. At New York, $25,000,000 (£5,000,000) have already been melted. The Government is freely purchasing silver in the open market at $1 an ounce.

The importation of articles of luxury into Greece is being prohibited.

LANCASHIRE COTTON.

Market Unchanged.

(From Our Own Correspondent.)

Manchester, Wednesday.

The conditions prevailing in the market have not shown any distinct change. Spinners and manufacturers have ignored the ups and downs in raw cotton rates, and remain firm in quotation. Fresh business has not been sought after, and buyers have not been in the mood to operate with any freedom. As anticipated, the workpeople in all branches of the industry have decided to apply for an increase in wages, the demand being for an all round advance of 30 per cent. It is expected that some amicable settlement of the claim will be arranged. The question of supplies of American cotton continues to be much discussed, and it is understood that some members of the Cotton Control Board have had interviews in London this week with the Board of Trade and the Ministry of Shipping. In local trade circles it is believed that a further cut in production is inevitable in the near future. The prospects for the Egyptian cotton crop continue generally healthy. Egyptian spinners continue to meet with an encouraging demand for both carded and combed yarns. The question of delivery now and again prevents contracts being arranged. Prices, if anything, have rather tended to go against buyers. There has not been much activity in piece goods for Egypt. Some leading exporters have found it necessary to make provision for the future, but there is hesitation in paying to-day's prices for lots of weight. Only a miscellaneous business has been done for India. Operations for China have been very limited. American yarns have been well held in price with a steady demand. Sales have been restricted owing to the small supplies offering. Not much has been done in yarns suitable for shipment abroad.

INDIAN COTTON CROP.

The final general Memorandum on the Indian cotton crop of 1917-18 has been published by the Director of Statistics for the Government of India. It deals with the final reports on the early and late crops. The total area reported under cotton is 24,781,000 acres, which is 3,036,000 acres, or nearly 14 per cent., more than the revised figure of last year. The total estimated yield is 4,036,000 bales of 400 lbs. each, which is 10 per cent. below the revised figure of last year, when the yield was 4,502,000 bales. The yield per acre in 1917-18 is given as 65 lbs., as compared with 83 lbs. in 1916-17.

The *Coupons Bulletin*, published by the company of official stockholders in Paris, makes no mention of the detachment of coupons of the Roumanian loans of 1896 and 1898, which fell due on May 1.

ENGINEERING NOTES.

Paper Bottles.

A machine has been invented capable of manufacturing paper milk bottles at the rate of 5,000 per hour. It is 90 feet long, and costs over £3,000. Wood pulp is the raw material employed. The process does not require high-priced paper pulp; any fibrous wood is said to work equally well. One ton of pulp will produce 60,000 bottles. Owing to the low cost of manufacture the paper bottles are said to be cheaper in the long run than the glass bottles now in use. Only three men are required to work the machine, and from beginning to end the milk bottle is handled only by steel fingers, and it is claimed that the apparatus meets all sanitary requirements.

A Milk Powdering Machine.

With the restrictions on the sale of milk and the higher prices of this commodity in consequence a large field has been opened for the sale of milk powder; for this product takes the place of fresh and condensed milk in the household, and is extensively used in the manufacture of chocolate, biscuits, confectionery, etc., and for making various chemical and pharmaceutical preparations. In the Near East, where sheep and goat's milk is mostly used, fresh milk is generally obtainable in the spring and summer when it is abundant, while condensed milk is a luxury. A new machine therefore for making milk powder from full as well as from skim milk will be of much interest to many people in the East, as well as in this country, who in view of present circumstances may decide to take up such an interesting and promising industry. This new machine reduces the milk to powder by passing it between steam-heated rollers, and is capable of dealing with from 90 to 100 gallons of full milk, or from 135 to 145 gallons of skim milk per hour.

Bullet-proof Glass.

"Triplex glass" is the name of a material which is now being extensively used for motor-cars and aeroplanes where safety is a consideration. It consists of two layers of ordinary glass with a layer of xylonite sandwiched in between. Certain transparent cements are added, and the whole is welded together by very high pressure. The resulting material is quite transparent, but so tough that a Mauser rifle bullet fired at 25 yards has failed to perforate it. It cannot be cut through even with a diamond. The possibilities of such a material are obviously immense, and it is already being used in a variety of directions, such as for armoured cars, port-holes in mine-sweepers, and observation panels in airships, etc. It may also be used in the near future by railways for the windows of carriages, as when an accident happens serious injuries are often sustained owing to broken glass.

Openings in Mesopotamia.

Firms manufacturing agricultural implements are now beginning to realise the immense possibilities that lie before them in connection with the development of Mesopotamia. The climate of Mesopotamia is so propitious and the soil so rich and conducive to cereal raising that it is possible to get two or three crops in the year, and it has been recently stated by well-informed British authorities that in the future the country "will become one of the finest wheat fields in the world." There is every prospect, it is declared, that Mesopotamia will provide a market of great value to our implement firms, and the British possession of Baghdad is clearly as important from the trade as it is from the political point of view. In this connection it is worth mention that already there is talk of considerable buying by the British Government of scythes, spades, forks, rakes, and hoes for use in Mesopotamia.

New Industries Committee.

In previous Engineering Notes a brief allusion was made to the newly-appointed committee of manufacturers and business men to consider the provision of new industries for the engineering trade. According to recent information, we understand that the duties of the committee are to assist the engineering trade in dealing with the problems which will inevitably arise in the establishing of new industries, in order to provide employment for the new labour and plant which have come into being during the war. It is important for the trades generally, as well as for the individual manufacturer, that the committee should be informed of all new projects for expansion of business after the war, to secure as far as possible supplies of materials, and to prevent the disappointment and failure that might result if a number of concerns, ignorant of developments contemplated elsewhere, devoted their energies to the same article, thus creating a production in excess of actual requirements. It is noteworthy that the gentlemen who are giving their time to the work of this committee are themselves manufacturers with experience in the industries, and their fellow-manufacturers will be invited to state what are the difficulties which they anticipate in extending their industries after the war, in order that, so far as may be practicable, they may secure the assistance of the Government in overcoming these difficulties. Manufacturers will be encouraged to rely upon their own efforts, and upon good organisation and management, rather than upon protective tariffs which involve a political issue not within the purview of the committee.

Preparing Serbian Agriculturists.

In dealing with industrial and agricultural prospects in Serbia after the war, we referred to the instinctive industrialism of the Serbians, and to the well directed energy which they are displaying for anything that may be conducive to the regeneration of their country. Another proof of this timely and well-aimed energy and decision is the preparation of competent agriculturists for their country. Serbian boys have arrived in this country to learn the principles of scientific agriculture. They will work on farms during the summer and enter agricultural colleges next winter for the theoretical side of the work. After that it is hoped they will be able to return to Serbia as missionaries in agriculture, charged with the duty of restoring Serbian agriculture.

Prize for Mixed Oil Fuel.

According to a recent announcement the Government has decided to offer a prize of £2,000 for a process of making a mixture of dehydrated coal tar with mineral petroleum oils suitable for Admiralty use as a fuel oil. This is to be awarded to the first competitor submitting a successful process which is capable of ready and economical application without undue absorption of material and labour. The process may be provisionally protected and patented, but the Government must have free use of it under the patent. Further particulars may be obtained from the Controller, Munition Mineral Oil Production Department, 8, Northumberland Avenue, W.C.2.

BATOUM.

The Black Sea port of Batoum, which the Turks have now captured, affords a good illustration of the ousting of British trade by Germany. From 1884 to 1900 some 75 per cent. of the exports and imports were controlled by Great Britain, but during the ten years prior to the outbreak of the war German control had monopolised 65 per cent. of this trade, and Great Britain's share was reduced to 7 per cent. The bulk of the German trade, however, continued to be carried in British bottoms.

From 1884-1914 the following products were exported to the countries of Western Europe from this port:—

Petroleum, 22,661,532 tons; manganese ore, 1,676,824 tons; wool, 99,832 tons; liquorice root, 369,563 tons; grain, 406,265 tons; silk cocoons, 23,451 tons; oil cake, 76,100 tons; tobacco, 2,796 tons; albumen, 7,520 tons; hides, 5,363 tons; lucerne seed, 9,460 tons; salt, 3,650 tons; almonds, 5,692 tons; cotton seed, 40,661 tons; walnut logs and boxwood, 65,053 tons; carpets, 23,800 tons; other articles, 331,998 tons. Among the chief imports were tin plates, timber, bricks and tiles, metals, machinery and hardware.

The returns of shipping of all nationalities which entered and cleared in the foreign trade of the Port of Batoum from 1883-1914 were as follows:—

	Vessels.		Tonnage.
British	4,287	....	7,362,326

CYPRUS CROP PROSPECTS.

(From a Correspondent.)

The barley harvest, which approaches, should be satisfactory. It is hoped that the rainfall will have been sufficient to fill the springs, and that the summer crops will fare better than they did last year. Shipping difficulties are most aggravating for carob merchants while record prices are being offered in many foreign markets that are badly in need of them. There have been some fresh consignments of tobacco to London, and it is hoped that favourable reports will be received regarding them, as many hopes are based on the future of the new industry, especially, of course, in respect of the leaf, which is being offered for the manufacture of cigarettes.

COMPANY MEETING.

National Bank of Egypt.

The eighteenth annual general meeting of the shareholders in the National Bank of Egypt was held on April 25 at the head office of the bank in Cairo, Mr. F. T. Rowlatt (the Governor) presiding:

The chairman said:—Gentlemen,—We have the pleasure of submitting to you the balance-sheet and profit and loss account for the year 1917. After providing for general expenses and depreciation on securities, the net profits amount to £519,250 16s. 9d., as compared with £313,533 6s. 2d. for the previous year, and we propose to dispose of these profits in the following manner:—To statutory reserve, £51,925 1s. 8d.; to special reserve, £200,000; for an 8 per cent. dividend to the shareholders, £240,000. This will leave, including the £22,179 19s. 7d. brought forward from the former year, £49,505 14s. 8d. to be carried forward to the profit and loss account for 1918.

As the war continues, and bearing in mind our balances with banks in enemy countries, we feel we cannot be wrong in acting cautiously by proposing to put £200,000 to the special reserve. At the end of 1917 you will observe that we only had to depreciate securities by £33,000, whereas at the end of 1916 we had to depreciate them by £115,000; therefore the profits for 1917, before depreciation of securities, are £124,000 more than the corresponding profits for the year 1916. Our various securities are valued at a quotation not exceeding that on December 31, 1917.

Turning to current expenses, you will notice that they are £18,000 higher than the figure for 1916. Salaries and bonus to the staff account for £10,000 of this increase—an item that we are sure, under present circumstances, will have your full sympathy. The extended bank-note circulation has naturally entailed extra expense, and an exceptional though small sum is accounted for by maintenance of Alexandria warehouses.

I think, gentlemen, that we may look upon the results of the year as quite satisfactory; the conditions that obtained in 1916 have been continued and further accentuated in 1917. The high prices realised for Egyptian produce, the favourable trade balance, and the disbursements connected with the requirements of the army have resulted in a considerable development of the bank-note circulation and of the deposits with the bank. By investing in British Treasury Bills and meeting the increased demand for financing the cotton crop we have been able to make profitable use of the extra money at our disposal.

We alluded above to the increased amount of money lodged with the bank owing to the present economic conditions: our balance-sheet totals to £28,024,000, as compared with £21,626,000 on December 31, 1916. On the assets side, the total of £8,121,000 of Government securities is represented as to £7,300,000 by British Treasury bills for the most part, by War Expenditure Certificates, and National War Bonds—the remainder by first-class Government securities. The Government securities, London acceptances, money at call and short notice in London, bankers' accounts, and cash amount to £19,000,000 Our advances on merchandise, chiefly cotton, amount to £4,500,000, and beyond this we are owed by the Cotton Seed Control Board for the purchase of cotton seed over £1,000,000 under the responsibility of the British Government This item is included in the figures of £1,736,000 under the heading of advances otherwise secured. Our other loans call for no special remark.

We regret to say that, owing to the bad state of his health, Mr. C. de Tschudi has found it necessary to resign from the board of directors. We have enjoyed his sound judgment and friendly collaboration since the foundation of the bank in 1898, and we are certain you will join us in wishing him many years of well-earned repose. We have the pleasure to say that Mr. H. E. Barker, of Alexandria, and Mr. Robert Rolo, of Cairo, have accepted our invitation to join your board of directors. We have only to ask you, in accordance with the statutes of the bank, to kindly confirm these nominations. No members of the board fall for re-election this year. We have recently lost the services of Mr. A. G. M. Dickson, who for many years was sub-governor of the Bank in Alexandria; he has taken up an important post as manager of the British Trade Corporation. He has gone with our gratitude for valuable services, and our best wishes for his future. We have had the pleasure of promoting Mr. Hornsby to the post of sub-governor in Alexandria. We cannot better conclude these few remarks than by expressing to the sub-governors, managers, and staff our sincere appreciation of their services.

COMPANY NOTES & REPORTS

Eastern Bank.

The report of the Eastern Bank, Ltd., for 1917, states that the gross profits, after providing for contingencies and including the balance brought forward, amount to £143,853, and after deducting expenses of management, directors' and auditors' fees, there remains £77,918. A dividend at the rate of 7 per cent. per annum, less tax, was paid on March 28, absorbing £42,000, and the directors now recommend placing £20,000 to reserve fund (making £90,000), and to carry forward £15,918. The branch has been re-opened at Baghdad, where the bank has been appointed bankers to the Government of India. The balance-sheet shows:—Reserve fund, £70,000; current and deposit accounts, £5,049,972; bills payable, £298,368; acceptances, £204,628; loans payable against bills and securities, £440,000; cash on hand and at bankers, £2,039,453; bullion on hand and in transit, £156,654; British and Indian Government and other securities, of which £35,000 London County Council 3½ per cent. stock has been deposited as security for Indian Government accounts, £236,090; bills receivable, £2,154,068; loans receivable and advances, £1,868,001; sundry accounts, including exchange adjustments, £152,063. Meeting, 4, Crosby Square, E.C., 15th instant, 12.30 p.m.

Dividends, Payments, etc.

The directors of the South Indian Railway Company, Limited, have declared an interim dividend of 1¼ per cent. (or at the rate of 2½ per cent. per annum), less income tax, from surplus profits, in addition to the interest guaranteed for the half-year to June 30, 1918—namely, £1¼ per cent., less income tax, making a total distribution for the half year of 3 per cent., or at the rate of 6 per cent. per annum.

The directors of the Bombay Gas Company, Limited, recommend a final dividend at the rate of 4½ per cent (less income tax), making, with the interim dividend of 3½ per cent., a dividend of 8 per cent. for the year 1917, payable on June 1.

The transfer books of the Eastern Bank will be closed from May 14 to May 30 inclusive.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

This has again been a very quiet week as far as actual transactions are concerned, but the tone has been a good one and prices are mostly firm. In Egyptian Government stocks Unifieds have been dealt in round 86¾ ex. div., which is practically the same as last week's price of 88½ cum. div. The 3½ per cent Prefs. have been done for a few thousand pounds at about current prices. City of Alexandrias have again been in demand, and the price has been raised one point to 80.

In Bank shares some transactions have taken place in Nationals round 17 5-16 ex. div., which is about ⅛ down; but Agriculturals have remained firm and Agricultural Prefs. have been in constant demand throughout the week, closing 1-32 higher at 7 1-32. For Anglo-Egyptian Banks also there has been a steady demand and the price is 1-16 up at 15 3-16.

In Land shares some small transactions have been put through in Aboukirs and Behéras; but both close unaltered, although at one time Behéras were ¼ higher at 15¼. Behéra Prefs. are quoted 4¼ ex. div., which is the same as 4¼ cum. div. last week. In Delta Lands some few hundred shares have again been dealt in round 13s. New Egyptians have been steadily enquired for during the week but there has been no change in the price. Sidi Salems have come to life again, and the price has improved 1s. 3d. to 43s. 9d. on the publication of the report and accounts for 1917. United Egyptian Lands are 1½d. firmer at 1s. 7½d., there being a fairly substantial buyer about and sellers rather scarce.

In Miscellaneous shares there have been no changes in price worth recording, but a certain amount of business has been transacted in Salts and Khedivial Mails.

Greek securities have continued a strong market, and a further advance has taken place in several directions. Business, however, has been on an exceedingly small scale owing to the lack of sellers. The 1881 and 1884 loans are 2 points higher at 62. Monopolies and the 1890 loan are both one point higher at 56 and 59 respectively. A small transaction in Currant Bonds took place at 93, but otherwise there are no sellers under 95. Ionian Banks have risen ¼ to 5¼, and some fair transactions have taken place in Piræus Athens Peloponnesus 4¼ per cent. railway bonds round 70½ ex. div.; at which price there are further buyers.

INDIAN TRAFFIC RECEIPTS.

The latest Indian traffic receipts are shown below. Except where otherwise stated the figures relate to the preceding week:—

Railways.

	Amount. Rs.	Inc. or Dec. Rs.	Aggregate. Inc. or Dec. Rs.

THE AGRICULTURAL BANK of EGYPT.

The necessary number of shares required to pass the Resolutions at the Fifteenth Ordinary General Meeting of the Agricultural Bank of Egypt, held in Cairo on Tuesday, the 30th April, 1918, not having been represented thereat, notice is hereby given that the FIFTEENTH (ADJOURNED) ORDINARY GENERAL MEETING of the said Bank will be held at the Head Office of the Bank in Cairo on Thursday, the 16th May, 1918, at 4 o'clock p.m., for the purpose, among others things, of:—

Receiving the Directors' Report.

Receiving the Auditors' Report.

Approving the Accounts for the Period ended 31st January, 1918.

Declaration of Dividends.

Election of Directors.

Election of Auditors and fixing their remuneration.

And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of five shares has the right to attend the General Meeting provided the shares are deposited at least five days before the day of the Meeting (the last day for depositing the shares in London is the 8th May, 1918), when cards of admission and proxy forms will be handed to them at one of the following places:—

In Egypt.—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.

In London.—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

F. T. ROWLATT, President.

Cairo, 30th April, 1918.

ALEXANDRIA WATER COMPANY, LIMITED

Notice is hereby given that the fortieth ORDINARY GENERAL MEETING of the Shareholders will be HELD at the Company's Offices, Alexandria, on MONDAY, the 3rd June, 1918, at four o'clock in the afternoon, for the transaction of the ordinary business of the Company, pursuant to Act of Parliament.

Holders of Share Warrants to Bearer desiring to attend or to be represented at the Meeting must deposit their Share warrants in London before the 20th May, 1918, or in Alexandria before the 30th May, 1918, until after the Meeting, at Messrs. Barclay and Co., Ltd., 1, Pall Mall East, London, S.W., or at the Anglo-Egyptian Bank, Ltd., Alexandria, or at some other approved bank in London or Alexandria.

Dated, Alexandria, the 15th April, 1918.

By order of the Board,
H. R. C. BLAGDEN,
Managing Director.

THE GHARBIEH LAND COMPANY (Cairo)

The Ordinary General Meeting of the above Company will be HELD in CAIRO on the 31st May, 1918. Shareholders wishing to be represented at that Meeting should lodge their Share-Warrants with the Anglo-Egyptian Bank, Limited, 27, Clements Lane, E.C., not later than the 16th May.

BANKING ANNOUNCEMENTS.

ANGLO-EGYPTIAN BANK, LIMITED,

NOTES OF THE WEEK.

General Marshall's forces in Mesopotamia continue to advance, and the mounted troops operating on the Kifri-Mosul road are now within eighty miles of the latter town. In the fortnight that has elapsed since the capture of Kifri they have covered a hundred miles. The fact that nothing has been heard for a long time of any force on the Tigris above Samarra will have been noted. An advance up the river from this point, though not impossible, would be a stupendous undertaking. It would seem as if the Turks, in view of their shortage of troops, had had to choose to which of the two theatres they would divert such reinforcements as they could muster. They decided not unnaturally that the graver menace threatened them in Palestine; a further factor may have been the unwillingness of the German Command to allow German divisions to be sent to Mesopotamia. General Marshall has known how to take advantage of his opportunities.

At Altun Keupri, which was reached on May 11, British troops are advancing further north than a point on the Turco-Persian frontier which was the scene of constant encounters between the Turks and the Russians. The enemy's object was probably to rouse the Persian frontier tribes against the Allies, rather than to undertake from here any serious invasion of Persia, and he effectually kept General Baratoff's forces tied to this region. If any Turkish troops remained after the disappearance of the Russians, they will hardly have waited for General Marshall to reach Altun Keupri. Not the least useful effect, therefore, of the Mesopotamia advance will be to relieve the Persian frontier of Turkish pressure. By this time the border tribes will have been able to revise the opinions of the British that they may have formed on the evidence of Turkish and German agents. News from Baghdad and the reports of their own countrymen who have been in contact with Sir Percy Sykes' South Persian Rifles will now be supported by the most convincing of arguments, a British advance and a Turkish retreat. The operations against Turkey may be a "side-show"; but they are doing invaluable work for the settlement of the Near and Middle East after the war—a cause which ranks second in importance only to the winning of the war.

In Palestine General Allenby has not yet succeeded in liquidating the position created by the enemy's appearance in strength between the Jordan and the Hejaz Railway, and possibly there may have to be a new orientation of our strategy before any striking developments can be expected. As we still hold the bridgeheads over the Jordan, the offensive rests with the British Commander, who has evidently succeeded in drawing a large portion of the enemy's reinforcements to this district. But the course of the campaign suggests that sufficient allowance had not been made for Turkey's powers of resistance in difficult country and when stiffened by German troops. Mr. Lloyd George's statement that in Egypt and Palestine there are only three white divisions, the rest being Indians "or mixed with a very, very small proportion of British troops in those divisions" had been challenged—as we saw last week—by General Maurice. The Prime Minister was able to show that his figures were based on an official report, and were strictly accurate for the moment at which the report was submitted to the War Cabinet. He added: "What really happened was this. Orders had been given for the change to take place at that time, and the change was not complete." From this it has to be inferred that before long there should be an improvement in the position in Palestine.

The terms of the Bucharest Treaty are discussed elsewhere in this issue, but attention may be called to the fact that the policy of which the treaty is the exponent is endorsed practically by the whole of such public opinion in Germany as is articulate these days. For the Pan-Germans indeed the conditions imposed on the Roumanians are not severe enough; but in general there is complete satisfaction that Germany should have discarded the hypocrisy of the Reichstag resolution and made up her mind to extract all she can from the conquered country. The most important document is the special Economic Treaty, which contains the Petroleum and the Economic Agreements. According to the latter, Roumania has to sell to Germany and Austria-Hungary the surplus production of 1918-19 of all kinds of grain, including oil seeds, fodder, pulse, poultry, cattle, meat, fibrous plants, and wool. She is forced to agree further to sell the surplus of this production to the Central Powers for the seven years subsequent to 1919 should Germany and Austria-Hungary require this surplus.

The average non-German will be left in amazement at the mentality revealed in the terms imposed on Roumania. There were some—if not actually a good number of—pro-Germans in the country both before the war and up to the peace negotiations. It will be difficult to believe that there will be any when the full significance of the Treaty has sunk deep into the

Roumanian mind. Here, then, is Germany toward the close of the fourth year of the war deliberately extending the policy of "oppressed nationalities." The doctrine is conveniently expressed by the inevitable professor who declares that the proper maxim for Germany is "to extract from the situation as much material advantage as the military state of affairs permits."

It may be from a feeling that they have somewhat overshot the mark that the German Government have now notified the Commissaries of the Russian people that Roumania has annexed Bessarabia with the approval of the Central Powers. The Roumanians will, perhaps, be well advised to fight shy of a gift proffered under such conditions. Their claims to Bessarabia are admitted, but effect should be given to them with the mutual consent of the peoples concerned, rather than at the bidding of Germany and Austria-Hungary, with a view to covering their own spoliation of Roumanian territory. Doubtless the Roumanians will adopt the same attitude to their annexation of Bessarabia as they have manifested to the Bucharest Treaty. They will wait and see, and will take their stand with King Ferdinand, who still retains "every hope in the future of my brave and valiant people."

Certainly the Bucharest Treaty marks the high water of German ascendancy in the war, for it coincides with an important meeting between the Sovereigns and chief statesmen of Germany and Austria-Hungary, at which the German hold on the Dual Monarchy as it has been evolved by the course of events is consolidated and regularised. In official phraseology the old alliance between the two countries has been extended and deepened. There is reason to suppose that the effect of the meeting at the German headquarters has been to intensify Austria-Hungary's political, military, and economic subjection to her powerful neighbour. Thus Germany has realised her Central Europe scheme as far as Austria-Hungary, Roumania, Bulgaria, and Turkey are concerned. The uncertainty of the latter's future in view of possible developments in Palestine and Mesopotamia has made it necessary to aim at an alternative extension through Russia and across the Black Sea. If she is allowed to keep this *bloc* under her domination, she can regard with equanimity sacrifices in the West.

Attention is at last being directed in Bulgaria to that country's position in regard to the war, and particularly to financial questions. Last month the *Preporetz*, the organ of the Democratic Party, pointed out that the credits voted during the present war amount to over four and a-half thousand million levas. To this sum have to be added war credits of nearly a thousand million levas for 1912, which, with the consolidated debt, bring Bulgaria's indebtedness up to six and a half thousand million levas. There has been a satisfactory gain of territory; but it entails expenditure for administration, to say nothing of possible assistance "to the suffering populations." Another grievance is to be found in the fact that the two divisions that took part in the action against Roumania "returned with empty sacks," and no great confidence is felt in any ultimate settlement with the other members of the Central Alliance. As the war continues Bulgaria's financial burden grows. At this point the Democratic organ is led to reflect that for Bulgaria the war is really over; it leaves the position of the Central Powers unspecified, but it adds: "When will the war end? Our neighbours the Turks will require at least another year to turn the enemy out of their country. And how long will they need to strengthen the newly acquired territories of Batoum, Ardahan, and Kars, which they are only now entering?"

The report that Bulgaria has been induced to make territorial concessions to Turkey acquires added interest from a perusal of the Bulgarian Press prior to the announcement. Feeling on the subject was clearly running high in the country, and the Press of all shades of opinion was reading some pointed lessons to the Turks. In the end a compromise was arranged, but it may be doubted whether it has been regarded in Sofia as a permanent solution of the difficulty. Bulgaria seems destined to have an unfortunate experience with regard to "scraps of paper." She can point to her treaty with Serbia and to the London Agreement. It was mainly to remove her grievances in respect of these undertakings that she entered her present alliance, and now she finds that yet another signed arrangement has to go by the board. The incident will not endear either the Germans or the Turks to the Bulgarians.

In her search for the commodities of which she is deprived by the Allied blockade Germany is pressing farther East, as if on the principle that, if only one-tenth of the normal acreage in the conquered territories is now under cultivation, she must proceed to lay hands on ten times as much as might otherwise have satisfied her. With Rostoff in their possession, German troops are now in direct railway communication with the Baku oilfields. The agricultural resources of this portion of the Caucasus are considerable, and it is reported that there is still a large accumulation of grain stocks in the country. It is unfortunately not within the power of the Allies to cope at present with German designs in these regions. No doubt the expectations in regard to grain will be disappointed here as they have been elsewhere; in any case, difficulties of transport increase as the German foraging parties go farther away from the Fatherland. Organisation and forced labour will do much; but until Russia, with or without Japan's help, takes the remedy in her own hands, the Allies are powerless.

Mr. Montagu has concluded his six months' visit to India, and is back again in England. He has adhered strictly to his "terms of reference," which stipulated for a free and informal exchange of opinion with the authorities and with representatives of all shades of political thought in India. So far as is known, everyone who had his say to say has said it, directly or vicariously. Mr. Montagu listened to the speakers and read the memorials of those who elected to submit their views in writing. Whatever opinions he may have formed have now to be considered by the British Government, and will in due course be referred to Parliament. The main lines of the policy to which practical effect has yet to be given have already been set down; they are directed towards increasing "the association of Indians in every branch of the administration and the gradual development of self-governing institutions, with a view to the progressive realisation of responsible government in India as an integral part of the British Empire."

Reports from India bear witness to the stimulating effect of the Delhi Conference. As was suggested in these columns last week, India's war effort has suffered in the past from lack of organisation. To remedy this state of affairs recourse must be had to educating public opinion in regard to the need for a greater effort and to the co-ordination of the energies of individuals. The experience of Great Britain has proved the need of a publicity bureau, and India is now to have one of her own. By the formation of Provincial, State and local committees it is hoped that a generous rivalry will be encouraged both among the political divisions of the country and among unofficial bodies. The proposal has been made to raise half a million recruits during the present year, and with a judicious allocation of this number between the several Provinces and States the scheme should be capable of realisation without difficulty.

In the midst of this rally to the Imperial cause it is inevitable that the "small band of extremists" should make an effort to gain a hearing for themselves. It may be well not to ignore them, however much they prove to be out of touch with the sentiment of the country; for it has to be remembered that it is in part due to their propaganda in the past that the need for publicity work of a different kind is established now. They will, no doubt, be powerless to resist or check the results of the Delhi Conference; but they may be shrewd enough to take cover behind more moderate opinion in an attempt to use the emergency as a case for bargaining, and offer help on condition that their demands are granted.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 1.

His Highness the Sultan.

H.H. the Sultan celebrated his birthday on Tuesday last, and the day was kept as a Government holiday by all the administrations. A reception was held in the morning at Abdin Palace. There was a very good attendance, especially of notables from the provinces, and amongst the earliest callers was the High Commissioner. On this occasion the Sultan conferred a number of grades and decorations on Government officials and provincial notables; this is the first general list of honours since the accession of his Highness last October, and the first issued since December, 1916. These honours are not in recognition of any war work: in the case of notables they are bestowed for the prominent part they have played in the administration of their districts; whilst those conferred on officials are in recognition of their services in their particular posts, and are based on the salary each draws. The present list is an exceedingly small one, it having been decided to restrict very drastically the number of officials and notables on whom honours should be bestowed on these occasions. At one time—not so very long ago either—it was quite usual to offer an official a decoration if it were not possible to give him an increase in salary, or even to refuse him an increase on the score that he had had a decoration recently. Fortunately, under the Sultanian *régime*, such procedure no longer holds good, and a commendable effort is being made to raise the tone of Egyptian grades and decorations by laying down very definite limits within which such honours may be bestowed and, what is still more important, adhering strictly to them.

The Zionist Movement.

The members of the Zionist mission have arrived here and have been very busy preparing for the work which lies ahead of them. The mission consists of Dr. Chaim Weizmann (president), Dr. M. Edler and Messrs. Leon Simon, Joseph Cowen, and Israel Sieff (secretary), Major the Hon. Ormsby Gore and Captain James de Rothschild accompany the mission as *liaison* officers. A most enthusiastic reception was accorded these Zionist delegates by the Jewish communities in Alexandria and here, and every effort has been, and is still being, made to assist them. They were received in special audience by the High Commissioner, and subsequently were entertained to luncheon by him together with the leading local Zionists. The mission is leaving very shortly for Palestine.

The Cairo Racing Season.

The Cairo racing season, which started on October 27 and has continued every week since, came to an end this week. It has been a very successful one, and we have had some excellent racing, though at times, owing to constant running, some of the horses have shown decided signs of getting stale. On the whole, however, the scheme of holding weekly meetings alternatively at Gezira and Heliopolis has been satisfactory. The two racing committees are to be congratulated on the success of the season, which has very much improved the financial position of their clubs. It is also satisfactory to hear that under the arrangement made at the beginning of the season, when it was decided that a substantial portion of the net proceeds should go to war charities, the latter will benefit, in the case of the Gezira Sporting Club alone, by about £E4,000, very little of which, let it be noted, would have gone to those objects if the opponents of racing in this country had had their way.

The "Capitulations" Note.

The details given in the note issued by the Capitulations Commission show that it has covered a very considerable amount of ground during the eleven months which have elapsed since its first sitting (April 5, 1917). The progress made is all the more remarkable, seeing that the members as well as the outside authorities, whose opinion and collaboration have been sought, are all unusually busy men, whose work had already been markedly increased by the war. It is also very satisfactory to note that the Commission is working so harmoniously with the outside elements which are so vitally interested in the reform contemplated, and the cordial co-operation of which is so essential to the successful elaboration and introduction of those reforms.

So far, apart from certain references in the Greek press, generally approving the principles enunciated in the note, and an article in *Wadinnil* drawing certain deductions from the statements made therein, the local press has made no comments. There are possibly three reasons for this unusual silence of the fourth estate. In the first place, there is on the part of most people an earnest desire not to hamper in any way the important work which the Commission is doing; secondly, all available space, especially at the present juncture, is taken up by the war news and comments thereon; and, thirdly, there is no doubt that fear of the Censor is causing people to refrain from publishing the views they might have to offer on the subject. Whatever the reason for this unusual silence, it is a matter for sincere regret that no comments are being made; for any reasoned and moderate discussion in the local press could not fail to be of material assistance to the Commission in the execution of the immense amount of detail work which still lies before it.

THE CAPITULATIONS COMMISSION.

REPORT ON PAST YEAR'S WORK.—II.*

(From Our Cairo Correspondent.)

The Bar.

The Judicature Law provides for the fusion of the existing native and mixed Bars. The Commission recommends that a Bar Council be created in connection with each Court of Appeal, with power to create delegations in connection with the Central Tribunals, which may ultimately be formed into separate Bars. The Bar attached to the Supreme Court will be subject to special regulations. The members of the existing Bars will be admitted as of right to the new Bar, but for admission in the future it will be necessary to follow an adequate course of study and to obtain the required certificates, in addition to which an examination will follow the period of apprenticeship. The Bar Council will have control over admissions and discipline, subject to an appeal to the Court of Appeal.

Foreigners will be admitted to the Bar upon any full qualifications accepted by their respective countries of origin; they will have the right to be admitted as apprentices either upon an Egyptian qualification or if they possess certificates opening the profession to them in their own country. Foreign advocates would be entitled to a representation in a fixed proportion in the Bar Councils, and in Cairo and Alexandria, if the President is an Egyptian the

Vice-President would be a foreigner, and *vice versa*. The Commission is also of opinion that, if the Mixed Bar so desire it, discipline over foreign advocates might be entrusted to committees comprising, whenever possible, a majority of foreigners.

Civil and Penal Legislation.

The Judicature Law lays down that the new Courts shall not commence working until after the promulgation of a Penal Code generally applicable in Egypt, and also of new Codes of Criminal and Civil Procedure. A draft Penal Code had already been prepared by a committee sitting at the Ministry of Justice, and this draft was referred to a sub-committee, which has made considerable progress with its task, whilst in the matter of civil procedure the Commission acknowledges that it has been much aided by the work of a Commission which sat before the war, at the same Ministry, to deal with the revision of the Code of Civil Procedure. As regards the latter, certain matters of fundamental importance have already been discussed. The Commission considers it essential that in all civil and commercial cases the issues both of fact and of law should be cleared up before the case is heard in open Court, and for that purpose it is in favour of attaching to the Central Courts registrars with some of the power of assistant judges. The Commission is also satisfied that the administration of justice has heretofore been hampered by the exclusion of evidence of the parties themselves and, before the Mixed Courts, of their relatives and servants; and it is in favour of the conduct of civil cases upon the basis of the parties being required under criminal sanction not knowingly to mislead the Court on questions of fact. Should this principle be adopted the Commission is of opinion that a summary procedure might usefully be introduced for the enforcement of practically undisputed claims.

Civil and Commercial Codes.

At the outset of its labours the Commission decided that a satisfactory revision of the existing legislation could be accomplished only if members of the Bench and the Bar and representatives of the commercial and banking establishments were associated with the work. It has endeavoured to carry out this idea, in the first place, by nominating sub-commissions, upon which are serving representatives of the elements mentioned, and, secondly, by drawing up and distributing among those willing to assist lists of questions on matters of special importance as to which expressions of opinion were particularly desired. Thirty-five judges of the Mixed and Native Courts and thirty-six advocates have offered their services, indicating the subjects on which they consider they could usefully collaborate. Two lists of questions have been distributed and have produced a considerable number of answers which are of very great value; and the Commission, in taking this opportunity of expressing its gratitude for the ready assistance given and its recognition of the impartial spirit in which the replies have been given, regards this feature as showing that it is working in perfect harmony with the leading representatives of opinion in Egypt.

Regarding civil law, the Commission is of opinion that the matter calling for most urgent consideration is the law of property in land. A *questionnaire*, with special reference to real securities in general, and consisting of 68 questions dealing with mortgages, pledges of land, rights of privileged creditors, procedure in execution of creditors' right over land, etc., has been prepared and freely distributed amongst judges, lawyers, chambers of commerce, mortgage banks, and others, with a view to eliciting expressions of opinion as to the defects in the existing legislation and the practical needs which it fails to meet. In view of the importance of the subject the replies will be published. Another question calling for serious study is the organisation of land registration. The International Commission of 1903 and the technical sub-commissions set up by it drafted two laws for establishing land registers and for creating registers of title to land, and these drafts have been re-examined by the Commission. The question of the unified land registries necessary as a consequence of the unification of the Courts, the notarial offices, the system of entries in the land registers, and, in particular, the methods by which rights of succession to real property will be dealt with, have been studied, and a sub-commission has been appointed with a view particularly to the study of questions of practice which have an important bearing on the solution of these questions. This sub-commission has already pointed out that the draft laws made inadequate provision for the practical difficulties that arise in the delimitation of registered plots or for those relating to the *personnel* necessary for the application of the law.

The Law of Obligations.

At a very early stage in its discussion of the Law of Obligations the Commission raised the point as to whether it was desirable to preserve the peculiar and privileged position secured to traders by the existence of a separate commercial code, and it decided that in the modern world no sound reason exists for such preservation. In support of this conclusion the precedent of England, as also of certain modern codes, and the opinion of several eminent jurists and considerations based upon the special position of Egypt and its present practical needs are cited. The Commercial Code will therefore be abolished, some of its provisions finding a place in a Code of Obligations applicable to traders and non-traders alike, and others being dealt with by separate laws. Of the latter, that relating to Commercial Paper has been made the subject of a *questionnaire* distributed among the principal banking institutions and various specially selected members of the Bench and Bar. As the note states, it is generally recognised that the existing law on the subject is defective, and reform has long been called for. The provisions of the draft uniform law adopted at the Hague Conference of 1910 and the English Bills of Exchange Act, 1882, have been taken as the bases of the suggested reforms, and the numerous replies received are unanimous in demanding serious alterations in the existing legislation, a pleasing feature about them being that the respondents manifest no bias in favour of the special legislation of their own country.

The note points out that in view of the political situation in Egypt it is more especially to British precedents that Egypt ought to look for filling gaps and remedying defects in her existing legislation, and that this being notably the case in commercial matters upon which there has been recent English legislation, the Commission has adopted this point of view in dealing with the question of bankruptcy. The unification of the commercial and civil law leads naturally to an extension of the principles of bankruptcy to all insolvent debtors, whether they be traders or non-traders. The sub-commission appointed to study the reforms necessary in this connection in bankruptcy procedure has already reported. The important changes which it proposes are drawn almost entirely from English Bankruptcy Law, and have been generally approved by the Commission.

The question of legislation regarding trade-marks, in connection with the inadequacy of which merchants have made repeated complaints, has also occupied the attention of the Commission. New legislation based upon the English Law of 1905 is proposed, and the sub-commission to which the preparation of a draft law was entrusted has already submitted its report. Likewise in connection with the question of commercial frauds, as to which urgent complaints have been received, a sub-commission—on which mercantile interests are largely represented—has been appointed, and its report, the Commission expects, will throw much light upon existing commercial conditions in Egypt. Finally, a *questionnaire* on partnership and a law dealing with the organization of chambers of commerce and of stock and produce exchanges are in course of preparation.

Administrative Law.

The Commission has also discussed the question of the revision of the whole body of administrative regulations, at present notably defective and incomplete, owing to the existence of the Capitulations. A detailed *questionnaire* has been prepared and distributed to the departments concerned, and a special sub-commission has been appointed to advise the latter and control the revision of the regulations in order to secure uniformity and consistency. Pending the completion of this work, the Commission has taken steps with reference to certain special reforms. A sub-commission has been appointed to study the question of local administration, and another to inquire into the little-known and ill-protected customary village rights, the disappearance of which, as the note points out, would be regrettable from both a social and political point of view; and to report both as regards the communal rights not recognised by the Code and the customary rights affecting land situated in the bed of the Nile, as also the question of compensation to be granted for land washed away by the Nile. Finally, seeing that the irrigation system forms the economic basis of the country's prosperity, the Commission has undertaken a re-examination of a draft law on irrigation, prepared some time since by one of its members; and the principles resulting from the discussion which have ensued, and which ranged over the whole matter of the relations between the Irrigation Department and individuals, will serve as a guide to the lines upon which administrative legislation should proceed.

On Saturday, at Buckingham Palace, the King inspected a party of officers and non-commissioned officers of the Indian Labour Crops, under the command of Captain H. S. Muggridge, Indian Army Reserve of Officers. The party is composed of men of the United Provinces, who are on leave from the Western front.

AMERICAN GREEKS AND THE WAR.

(From a Correspondent.)

New York, April 22.

Seldom, if ever, before have New York's Hellenes demonstrated their patriotism and loyalty to their adopted Motherland so strikingly as during festivities held last week in commemoration of two historic events—the anniversary of the proclamation of the Independence of Greece, in the year 1821, and of the declaration of war against Germany by the United States a year ago.

One of the manifestations of this feeling took the form of a dinner, given at the Ritz Carlton Hotel, in honour of the well-known Philhellenist, Mr. William Harman Black, Special Corporation Counsel of the City of New York. This dinner was given by the members of the Greek-American National Union, and Mr. D. J. Theophilatos, chairman of this patriotic body, and also of the Committee of the Greek-American Boy Scouts, acted as host and toastmaster. Among the guests were:—

Mrs. Lillian R. Sire (Chairman of the Reception Committee), Mrs. Mary M. Lilly, Mrs. Sava Kehaya, Mrs. James Moran, Mrs. John J. Boylan, Mrs. J. O'Leary, Mrs. Helen Volga, Miss Alexandra Pilalas, Miss Helen Vlasto, Miss Maria Vlasto, and Miss Alkmini A. Stathopoulos, the Hon. Francis Caffey, the Hon. Edward Swann, the Hon. Peter Hendricks, Senators J. J. Boylan and James A. Foley, Mr. Theodore P. Shonts, Mr. Frederic B. Lynch (Chairman of the Democratic Party of the United States), Mr. N. Bistis (Secretary of the Greek-American National Union), Hon. David Hirshfield, Mr. G. Gordon Battle, Mr. Solon Vlasto, Mr. Ery Kehaya, Mr. Sava Kehaya, Mr. N. E. Marcoglon, and Mr. A. D. Barouxakis.

Mr. D. J. Theophilatos paid a tribute to the valuable work successfully carried out by Mr. Harman Black as the principal organizer of the Greek-American National Union. Afterwards he proposed a toast to the glorious land which more than half-a-million Hellenes had adopted as their own, the great Republic which entered the war solely in defence of the rights and liberties of mankind. This toast was received with repeated and enthusiastic cheers for America and her President.

The most impressive feature of the demonstrations, however, was a great meeting, of some 6,000 or 7,000 people, held in the Carnegie Hall, which was filled to overflowing. This was organized by the Committee of the Greek-American Boy Scouts, for the double purpose of raising funds to purchase tobacco for the American boys in the trenches and of "boosting" the third Liberty Loan. A patriotic drama was followed by a drill display by the Scouts—a display which did great credit to them and their instructor, Major P. Siori.

Mr. D. J. Theophilatos, the first of several distinguished speakers, emphasized the spontaneousness of the American Hellenes' loyalty to their beloved Motherland and the enthusiasm with which they are rallying to her "Star-Spangled Banner." The Hon. J. J. Boylan, Senator, and Mr. G. A. McDonald, Vice-President of the Mayor's Committee for the National Defence, delivered stirring patriotic addresses, which were received with hearty applause. Mr. W. H. Black, the last speaker, at the close of his remarks, expressed America's wish that Greece, fighting by the side of America and her Allies, should as soon as possible see her capital transferred from Athens to Constantinople as recompense for the blood that she, too, may shed in the common cause.

No dream has for years penetrated the spirit of Hellenism throughout the world as has that of Constantinople becoming the capital of a greater Greece. Therefore the suggestion of Mr. Black that this cherished ideal of a noble race may now be on the threshold of fulfilment electrified the thousands of Greeks who were present. They sprang to their feet, waved hats and handkerchiefs, and cheered long and frantically for America and President Wilson and for their Allies, France and England.

FOR DISABLED GREEK SOLDIERS.

(From a Correspondent.)

It will be remembered that during M. Venizelos' recent visit to London Sir Lucas Ralli handed to him a cheque for £5,000, to dispose of as he might see fit. At a recent meeting held in Athens in connection with the formation of a society for the assistance of soldiers crippled in the war, M. Venizelos, speaking in support of the measures proposed, said: "Allow me to add that, as there will be a need of money from the very first, I place at the disposal of this society £3,000. This does not come from my own pocket. Sir Lucas Ralli in London placed £5,000 at my disposal, and of this I devoted £2,000 for the purpose of founding a Chair in Modern Greek at London University. The remaining £3,000 I place at this society's disposal. Allow me also to add the widow's mite, another £20 (500 dr.) from my own purse."

THE WORK OF FRANCE IN MOROCCO.

Locturing before the Royal Geographical Society on Monday Mr. Norman McLeod said that previously to 1911, when the work of penetration by the French began, Morocco, although so close to Europe, was cut off from it by racial and religious antagonisms, and dwelt in a state of isolation which had lasted four hundred years. The social, economic, and administrative life of the cities was that of mediæval Europe, but without its good humour; in the country the population was in the tribal stage of development. In the interior there were no railways, telegraphs, newspapers, or other conveniences of modern civilisation; indeed, no wheeled vehicle was to be seen, except a little stage coach belonging to the Sultan; and there were no roads suitable for wheeled vehicles. The difficulties of travel were aggravated by the fact that about two-thirds of the country was normally occupied by tribes at feud with the Government. When a stretch of such unfriendly country lay between the traveller and his destination, he went by a circuitous rout or paid blackmail.

The lecturer gave statistics showing the work that had been done chiefly in the last six years, four of which have been years of war. In 1912 there had been no ports, only open roadsteads; now the ports were furnished with quays, stores, sanitary services and the like; and the deep sea port works at Casablanca were three-quarters finished. Casablanca had grown into a well-equipped town with 82,500 inhabitants, of whom 37,500 were Europeans. In 1912, except that a short line from Rabat to Casablanca was in the early stages of construction, there were no railways whatever. Since then 511 miles of light military railways had been laid, and about 100 miles more were under construction; while the permanent wide gauge railways that were to supersede these were in the survey stage. As to roads, apart from 700 miles of caravan track made practicable for wheeled vehicles in dry weather, 514 miles of first-class roads and 41 miles of second-class roads had been made; 564 miles of first-class roads and 61 miles of second-class roads were under construction, and 216 miles of first-class roads and 178 miles of second-class roads were under survey. The added figures of exports and imports for 1911 had amounted to £5,880,000, those for 1916 were £12,434,000. Post offices had increased from 56 in 1913 to 138 in 1917; mails went by rail or motor now in as few hours as they used formerly to take days. The postal traffic had increased from 2,371,224 items in 1912 to 13,624,881 items in 1916. There were 2,338 miles of telegraphs. In 1912 there had been 9 French primary schools for Europeans, 14 Franco-Arabic schools for Moors, and 14 Franco-Jewish schools. In 1917 there were 83 French schools, including some secondary schools, 62 Franco-Arabic schools, including a Franco-Arabic college at Fez, and 35 Franco-Jewish schools. As to public health, apart from British missionaries and a few European doctors and dispensaries in the coast towns, until 1912 every disease had its way unchecked; now there was a complete medical service for most of the country, and in 1916 there had been no less than 900,000 medical consultations at its establishments.

In the course of a short discussion that followed, Mr. Cunningham Graham described his own experiences in Morocco. He said that when he first visited the country the journey from Tangier to Fez took eight or ten days if the roads were good. At last you emerged upon a little plain, and in a gulley of the hills like a white cloud Fez burst upon you. Its brown, granulated walls hemmed it in. It was entered by horse-shoe arches over which were generally the heads of rebels. Up in the pure sky shot the minarets. Palm trees waved. There was no noise, dust or smoke; it was a city of Arabian nights—beautiful as a dream, and unlike any other in the world, excepting, possibly, the cities of Central Asia. You entered the town and the spirit of your dream was altered. There were press, hurry, commerce, mules, crowds of men in every direction, and narrow streets like sewers in which all the filth of all the houses was thrown out. Unburied horses and mules lay at the corners in the outskirts of the town. Life was of no value. He remembered talking to a reaper who had come from the wildest part of Morocco, and who had lived in Algeria. He asked him which country he preferred. The reaper replied: "Algeria. That is a country. The Government does everything for the people. I was there at the fête of the Republic. The first day we had the races, the second day I went to the theatre, where a hundred Christian girls, each of them worth four thousand francs, danced. But the third day was the best; they brought out a French soldier and cut off his head with a machine!" Such was the attitude of mind of this Moor that he had taken an execution for an entertainment.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

TANGIER TO TEHERAN.

In forwarding his account of the *Bonnet Rouge* trial on May 3, the Paris correspondent of the *Times* made use of an expression which has given me quite a lot of pleasure. Certain information, he writes, "was conveyed to the German authorities by a band of spy Pashas surrounding the Khedive." That "band of spy Pashas" is a masterly touch. On the programme of an opera-bouffé it would make the fortunes of the piece. How the late W. S. Gilbert would have enjoyed its piquancy. Can you not see him describing his leading villain as, say, "Boko Pasha . . . Leader of a gang of spy Pashas," and giving us a glorious chorus of the said S.P.'s? But I wonder what Abbas Hilmi would think—nay, does think—of it all?

***

A correspondent who has read Mr. Somers Clarke's account of strange happenings at the burial of a sheikh at Hilal, in Egypt, has written me a most interesting note on the subject. From this I gather that the records of Ancient Egypt contain accounts of similar happenings in the days of the Pharaohs. Indeed, one of the Pharaohs is credited with a performance which quite puts in the shade any modern examples of the kind. For my correspondent tells me that on a *stela* from Abydos it is stated that "in the temple there of the deified Pharaoh, Amosis I., in the fourteenth year of Rameses II., the statue of the dead King god 'made a divine decision in a legal dispute.'" This the deceased monarch did by "having his statue carried by the temple priests upon a 'divine barque' or ark, like the sled bearing the Ark of the Covenant." My correspondent does not quite remember how, but he thinks that the dead King, by "weighing on" the priestly bearers, guided them to the culprit's house. At any rate, on arriving thereat the burden suddenly became so heavy that "the god's indication of the guilty party could no longer be denied." I should have liked to know what the crime in question was, and how King Amosis came to be interested in it. But my correspondent does not tell me, and I expect that the *stela* contained no details of the kind. When a scribe set out to carve a story on stone he had no soft job, and I suspect he was always tempted to "skip." But, even as it stands, the story is quite interesting, and it affords another instance of the survival of old beliefs and old, old customs in the Nile valley.

***

When Baron von dem Bussche told an interviewer that Germany and her allies would always be glad to help forward Jewish aspirations—or words to that effect—I ventured to suggest that the Chosen People, who are usually credited with some astuteness, would take such protestations at their true worth. Events have justified my judgment: almost weekly there have been examples of the enemy's "consideration" for the Jew, and of the Jew's appreciation. As a recent illustration take the following Reuter's message:—

> Amsterdam, May 2.—A Vienna telegram to the Jewish Correspondence Bureau states that the Austrian authorities have closed all Zionist headquarters and meeting places in Cracow. In Vienna many Socialist Zionists, even young students, have been arrested, and the pro-Ally Zionist Society there has been dissolved.
>
> These facts, remarks the Bureau, shed a singular light upon the Government's semi-official declaration that it was favourably disposed towards Zionism.

Vienna, like Berlin, will have to "try again." *Some* birds cannot be caught by putting salt on their tails, though that method may be effective with the Turkey.

***

That enterprising journal, the *Basrah Times*, is now publishing an illustrated supplement. The pictures are reproduced entirely at the Government Press, Busreh, and many of them, one gathers, are from photographs submitted by readers of the paper. In the copy which lies before me as I write (that for March 25) the selection of subjects is distinctly good, and most of the pictures possess a clearness that is often lacking in certain of the cheaper illustrated papers published in this country. One of the larger pictures shows "A Football Group at Ezra's Tomb," a blending of East and West, of Old and New, that is rather startling. Another depicts "An Arab boy, with his miniature *dhows*, made of kerosene tins." This serves to show that Arab boys are not unlike British boys in their tastes in soms ways—a fact which I had observed for myself some time ago. And then we have two views of that fraudulent "Garden of Eden"—Kurnah. One shows "The Reputed Tree of Good and Evil"; the other, "Serpent Alley (leading out of Temptation Square)." With all due respect, I would suggest that there is something wrong with the last heading. Surely, the Serpent is usually supposed to have led *to*—not "out of"—Temptation Square. But perhaps nobody ever gets led into temptation (square) in Kurnah nowadays?

ARMENIA'S AWFUL AGONY.

The following telegram from Tiflis, dated March 29, 1918, explains the need for prompt, vigorous and generous action:—

"There is extremely critical political situation in the Caucasus. The Turkish advance terrifies the Armenians. There is danger that the whole Armenian race will be exterminated should the combination of these forces be successful. Should the Armenians be rightly directed and financed there is among them great potential military force, and this would furnish a reasonable hope that the race might be preserved by their own efforts. I am about to leave now for the front to build up a system of transportation by ambulance to reorganise and maintain hospitals. My appointment as Red Cross Commissioner has been requested by Consul Smith. Men from the locality who are available will be able to relieve great suffering. There is no one else to meet the necessities. To make a beginning the sum of $400,000 and $100,000 monthly will be necessary. Everyone is working beyond his strength, but nevertheless they are enthusiastic and their strength is good for relief work."

(Signed) YARROW.
American Red Cross Commissioner

Our own agents are on the spot and working with the American Red Cross Society.

JEWS IN TURKEY PERSECUTED.

The brutal maltreatment of the Jews in Palestine under the Turkish régime is known to all the world, but little has hitherto been heard of the outrages practised in Mesopotamia. There is, however, an enlightening and perfectly authenticated report of Turkish methods in Baghdad. All the Jews were ordered to hand in their gold and silver money, and were given notes in exchange. These notes were already depreciated, and the sudden flooding of the market with additional paper produced a state of chaos. Inevitably, with a paper currency so debased as this, the whole credit system collapsed, and trading became almost impossible. The Turkish Government became annoyed at this, and sharply rebuked the local officials. The latter, resolved to remove this stigma on their efficiency, summoned a number of rich Jews to the Court of the Prefect of Police one night, and accused them of trafficking in the notes, which was construed as a deliberate attempt to impair the credit of the Turkish Government. The Jews were tortured and murdered, and their bodies thrown into the Tigris. Some of their mutilated bodies afterwards floated ashore. All this was discovered when the British entered Baghdad.

In the case of the persecutions at Aivali, it was found beyond all doubt that these had been directly instigated and organised by the Germans. The Turks even owned to this. There is little doubt that these atrocities on the Jews are indirectly the work of the same hand. Doubtless their suggestions find a ready welcome at Constantinople. A German general is in supreme command at Aleppo, and his consent would have to be gained.

The Secretary of State for India in Council has decided that five prize cadetships at the Training College, Wellington, shall be offered at the Army Entrance Examination, which will commence on July 2, to the candidates who pass highest on the successful list, and who select that Training College as their first preference. These prize cadetships will carry the remission of the sum of £35 ordinarily required in aid of the contingent expenses and an outfit allowance of £65 in lieu of the present £50.

NEAR EAST BOOKSHELF.

MAGYARIZATION.*

It is of urgent and supreme importance that England and France should accept the plain fact that the Magyar, the Hungarian, is nothing but a Hun. He is the A.D.C. of the Prussian. He is the half-brother of the Ottoman. He is the *cousin germain* of the Bulgar. Unless Mr. Lloyd George and M. Clemenceau understand this hard fact—as certainly the latter understands it—the world will never be "safe for democracy." During a whole generation no Hungarian nobleman must ever be allowed to set foot across the doormats of the Jockey Clubs of France and England. The day of be-ribboned Hungarian gentleman-jockeys is gone for ever; Kossuth is as dead as mutton. When Esterhazys (and Lichnowskys) doff diplomatic dress, and present themselves in yokel garment, before the tribunal of an outraged world, then, and only then—remembering the tragedy of Roumania, of which this volume is our text—let us listen to their apologies.

This is a book of ghastly, indignant reading. It is the tragedy of Roumania; second only to that of Serbia. We knew most of it before we read it; but now we know all of it; now we know the hopeless horror of it, until Prussian and Magyar militarisms are smashed to atoms. The young Emperor Karl shall have a shooting-box in Scotland if he will; but the King of Hungary shall be handed over to a Roumanian firing-squad.

In short, we reach an impasse, a cul-de-sac. "No man can serve God and Mammon." The double crown of the Hapsburg cannot survive the pulverizing indictment of our author. The Emperor Karl cannot satisfy at one and the same time his German, Slav, Roumanian, and Italian subjects. We do not envy the Emperor Karl, nor his lunatic master the Emperor Wilhelm. Both are called to the bar of justice, and with them, as our author insists, every Magyar villain that ever ground his heel on Transylvania and Roumania. Paris and London to-day, but, above all, as this book shows, Petrograd in 1916, you have much to answer for! You two first, you still pretend to believe that the Magyar is a gentleman! You last, you treacherously led Roumania to her doom! Our author implores you to revise your ignorance; and, if you read his classic "apologia pro vita mea," you will undoubtedly revise it.

We refrain from quoting a line from the work of an industrious, patriotic, historiographer, who, as a Roumanian, has but one refrain—bring the Magyar to the scaffold. But what we will venture to add is this: the best minds of France admit their error and are furiously impatient of the Lansdownes and Lonsdales, of *outre-manche*. If you wish to read the tragedy, the Calvary, the heroism of Roumania, read here! Honi soit qui mal y pense: you will carry on to victory. "The mills of God grind slowly, but . . . ."

ASOKA.†

The aim of this series of small and attractive volumes is to bring the treasures of India's past within the reach of every educated Indian, and the editors are determined that each book must be at once scholarly and sympathetic. Dr. Macphail's account of Asoka satisfies these tests; he has drawn fully on the available sources, his archæological knowledge is up to date, and his book will enable the reader to grasp not only what is known, but also how very much is still unknown, of the life and acts of the great ruler of Pataliputra. India has a fit of hero-worship just now, which may lead her young men very far astray, and Dr. Macphail's insistence on the limitations of our knowledge is particularly timely. We know little, and much of what we know is *ex parte*: the Edicts tell us what Asoka wished to be known, but that can scarcely be the whole story, and there are practically no independent sources by which their statements can be checked. Suppose we had no knowledge of Elagabalus beyond a series of inscriptions dictated by himself: he would probably stand out as a figure at once grand and attractive, and the possibility should serve as a warning to the student of Indian history, where *ex-parte* evidence so often predominates. Dr. Macphail realizes this danger, and his book can consequently be recommended to the large class of readers who wish to know the facts but are not in a position to weigh the evidence for themselves.

CORRESPONDENCE.

THE FUTURE OF CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I be permitted a few words in your columns about the letter written by Mr. W. H. Williamson and published in THE NEAR EAST of March 8, 1918?

My purpose is not to test the sufficiency of the facts given in the letter of Dr. Lanites (see N.E., p. 672, December 21, 1917), as to whether they warrant in themselves the inference intended to be drawn; but it is to show that Mr. Williamson could be doing no justice to the readers of THE NEAR EAST in stating a sweeping and unsupported belief, touching the very point at issue, in defeasance of an inference perhaps justifiable under those facts. To attain his object he should have introduced facts of equal or higher probative effect; perhaps those on which he relies, if any there be, may prompt another man of equal intelligence to arrive at a substantially different conclusion.

Mr. Williamson in his second and third paragraphs challenges the legitimacy of the claim for annexation. In the fourth there is a departure; he grants the legitimacy of the claim, and avoids it by what he suspects will lead any British Government to oppose the claim. If the claim is illegitimate it requires very little effort to abate it, and it would be needless to go, as Mr. Williamson did, to military considerations which make annexation impossible. He adopts an inconsistent attitude; and his last argument can only operate as an admission that the claim is legitimate, but that it cannot be acceded to on account of military impossibility.—I am, etc.,

M. M. H.

Limassol, Cyprus, April 10, 1918.

THE ANGLO-ALBANIAN SOCIETY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—On February 28 a meeting of the Executive of the Albanian Committee was called in a committee room at the House of Commons at which Lord Lamington presided. It was unanimously agreed that the former Albanian Committee, having finished its work, should be considered as dissolved, and that the time had come for the formation of a society consisting of friends of the Albanian people who, while sympathising with the aspirations of all Balkan people for freedom and the right of self-development, have as their main object the maintenance of the rights and welfare of Albania.

The society, under the name of the Anglo-Albanian Society, was accordingly constituted.

Lord Islington's health continues to improve.

Prince George of Serbia visited the Serbian Legation in London on Tuesday.

Mr. Percy C. Lyon, C.S.I., has been appointed treasurer of Oriel College, Oxford.

Lord and Lady Barrymore left 20, Hill Street, on Tuesday for Marbury Hall, Cheshire.

At Janina, Greece, on April 28, the wife of Mr. Charles Greig, H.M. Consular Service, gave birth to a son.

Lord Hardinge and the Hon. Diamond Hardinge arrived at Windsor Castle on Saturday as guests of their Majesties.

Sir W. H. Manning, the newly-appointed Governor of Ceylon, has left Jamaica to take up the duties of his new position.

M. Michel B. Boeresco, Roumanian Chargé d'Affaires, called upon Mr. Balfour at the Foreign Office on Monday afternoon.

M. Také Jonescu, who was at Jassy when he heard of the death of his wife, is expected to arrive in London very shortly.

General Georgescu, Royal Roumanian Army, had the honour of being received by the King at Buckingham Palace on Saturday.

Mr. Bhupendranath Basu arrived in Mr. Montagu's party on Sunday, and has taken up his duties as a member of the India Council.

Lady Stack and Mrs. Wheatley left Khartoum at the end of last month for Erkowit, where they will be in residence for the summer.

Captain Yovan Yovanovitch, of the Serbian Army, had the honour of being received by the King at Buckingham Palace on Saturday.

An attempt to form at Sarajevo an exclusively Croatian Austrophil and anti-Yugo-Slav party, under Bishop Stadler and Dr. Pilar, has proved unsuccessful.

Sir John Prescott Hewett, G.C.S.I., presided at the meeting of the Grand Council of the Officers' Families Fund held at Lansdowne House last Friday.

Mr. Montagu, the Secretary of State for India, and the party which accompanied him on his mission to India arrived in London on their return on Sunday.

Colonel J. W. H. Houghton, Assistant Director of Medical Services, who is reported wounded, was British Red Cross Commissioner with the Greek forces in the Balkan campaign of 1912-13.

The engagement is announced of Captain G. L. Stanley Smith, R.G.A., only child of Colonel and Mrs. Stanley Smith, 33, Sussex Square, Brighton, and Peggy, younger daughter of Mr. and Mrs. D. D. Street, Colombo, Ceylon.

Major-General Colin Mackenzie, who is reported wounded, saw service in the Egyptian Expeditions of '82 and '92, in the Burmese War of 1886, and in several frontier expeditions in India, as well as in the South African War.

At a meeting of the Central Asian Society to be held on May 22, at half-past four in the afternoon, at 22, Albemarle Street, Mr. Arnold Toynbee will read a paper on "Islam in Russia since the Revolution." Colonel Sir Henry Trotter, K.C.M.G., C.B., will preside.

A marriage has been arranged between Lieutenant-Commander Colin Alexander Gordon Hutchison, Royal Navy, eldest son of the late James Alexander Hutchison and of Mrs. Hutchison, of Merrow, Hatch End, Middlesex, and Gwendolen Mary Leslie Sayers, only daughter of Major Robert Cecil Sayers, East Surrey Regiment, Commandant Military Detention Barracks, Malta.

The King of Montenegro (says the *Morning Post's* Rome correspondent) has been staying at Rome, visiting Queen Elena and his grandchildren. Prince Peter of Montenegro, with his staff, has also been at Rome.

The Roumanian Legation in London desire to acknowledge the many letters and telegrams of condolence on the death of Mme. Také Jonescu. M. Boeresco, the Roumanian Chargé d'Affaires, is forwarding these messages direct to M. Také Jonescu.

The engagement is announced between Lieutenant-Colonel Lionel Seton Bayley, R.A., younger son of Sir Steuart Colvin Bayley, G.C.S.I., and Lady Bayley, and Sybil Dora, second daughter of the late Major L. F. Barton, the Royal Scots, and Mrs. Barton, of 43, Courtfield Gardens, S.W.5.

It is announced that the King has approved of Lieutenant-General the Right Hon. Sir Bryan Thomas Mahon, K.C.V.O., C.B., D.S.O. (colonel, 8th Hussars), General Officer Commanding-in-Chief the Forces in Ireland, being appointed a Knight Commander of the Order of the Bath.

The engagement is announced between Captain M. Costiesco Ghyka, only son of Colonel Matila Costiesco and Princess Marie Ghyka, of Dumbraveni, Roumania, and Eileen, daughter of the late Sir Nicholas O'Conor and Lady O'Conor, of Dundermott, County Roscommon, and 29, Chester Square.

Rear-Admiral M. E. F. Kerr, C.B., M.V.O., who has just been promoted a vice-admiral, served with the Naval Brigade in the Egyptian War of 1882, and again in the Sudan in 1891. He has been Naval Attaché in Turkey and Greece, among other countries, and holds several foreign decorations.

The Sultan of Egypt has ordered that a special museum be opened in which the old arms used in the Egyptian Army since its creation, the uniforms of the soldiers, cavalry, artillery, infantry, bandsmen, and pioneers will be exhibited. It will also contain all the regulations, military, etc., issued. Experts are busy arranging for this museum, which will be housed in the Abdin Palace.

A Reuter's message from Zurich dated May 8, but only received in London last Friday, says:—Ex-King Constantine, after having undergone in the Sauerbruch hospital a slight operation, necessitated by an abscess, was taken back to his villa. He then had an attack of influenza, but the acute phase was passed on Sunday. His general condition is satisfactory, and the improvement continues.

Both the retiring Commander-in-Chief in Ireland and his successor have had much experience of the East. Sir Bryan Mahon was in command at Salonika before he went to Dublin, and before that he had served in India, Egypt, and the Sudan, to say nothing of South Africa and the Dardanelles Expedition. His successor, Major-General David Levinge Shaw, served in the Afghan campaign in 1879-80, on the North-West Frontier, and with the Tochi Valley Expedition; and in 1914 he was appointed Resident at Aden.

In the Probate Court on Monday Mr. Justice McCardie granted an application to presume the death of Sir Marc Armand Ruffer as having occurred on or since April 15, 1917. In making the application, Mr. Harvey Murphy said that Sir Marc had held a number of important positions in Egypt. He was on board the transport Arcadian, which was torpedoed and sunk by a U-boat in the Mediterranean, near the island of Milos. There was a suggestion that he might have been rescued and might now be on one of the small lonely isles off the Grecian coast. The evidence pointed the other way. He was seen clinging to the roof of the wireless house, and afterwards floating in the water apparently lifeless.

Lord Reay, President of the Royal Asiatic Society, at the anniversary meeting on Tuesday presented the triennial gold medal of the Society to Mr. Vincent Smith for his books on Indian Art, History, and Numismatics. The works thus honoured were:—"A History of Fine Art in India and Ceylon." Oxford, 1911; "Akbar, the Great Mogul, 1542," Oxford, 1917; "The Early History of India from 600 B.C. to the Muhammadan Conquest, including the Invasion of Alexander the Great," Oxford, 1914; and "Coins in the Indian Museum, Calcutta. A Catalogue," Oxford, 1908. Besides these works, Mr. Vincent Smith has published many articles on Indian Archæology and History in Oriental journals.

A memorial service for Mme. Také Jonescu was held at the Church of St. Mary Abbots, Kensington, on May 9. The Rev. E. M. Roberts officiated. Among the mourners were Mr. and Mrs. Herbert Syrett, Mr. and Mrs. C. G. Syrett, Mrs. Moody, Miss Moody, and Alderman and Mrs. Boreham. The Secretary for Foreign Affairs was represented by Mr. R. F. Synge, the Roumanian Government and M. Jonescu by M. Michel B. Boeresco, Roumanian Chargé d'Affaires; the Roumanian Government Commission by Lieutenant-Colonel N. Arion, Military Attaché. Others present were the Greek Minister and Mme. Gennadius, the Serbian Minister and Mme. Yovanovitch, Mme. Misu and M. Nicolas Misu, Princess Despina Karaja, Prince Antoine Bibesco, the Earl of Bessborough, Lady Primrose, Lord Moulton, the Hon. Mrs. Fletcher Moulton, Sir A. K. Rollit, Consul-General for Roumania; and General Georgesco, Chief of the Roumanian Military Mission. The interment took place at Hove Cemetery.

OBITUARY.

Colonel George Lecky, late of the Indian Army, has died at Bristol at the age of seventy-six.

A Reuter's telegram from Rabat, via Paris, announces the death of the mother of Mulai Yussef, Sultan of Morocco.

The Rev. Horace E. M. Atkins, Senior Chaplain on the Indian Ecclesiastical Establishment, died on April 29 at Bangalore, aged forty-nine.

Colonel William McWatters has died at Alverstoke at the age of seventy-five years. He joined the Army Medical Service in 1865 and served in the Afghan War of 1878-80, for which he had the medal, and in the Hazara Expedition of 1891, when he was mentioned in despatches.

Surgeon-Major-General Charles Hervé Giraud, late Army Medical Staff, died last Friday as the result of a street accident at Fulham, in his eighty-fifth year. He served in the Indian Mutiny, and was present at the action at Sissea Ghat. Later he served in the China War, and in the South African War of 1879-81.

The death occurred at Cheltenham on Sunday of Colonel Robert Blackall Graham, formerly of the Bengal Staff Corps. As a cavalry officer he took part in the suppression of the Indian Mutiny, being present at the action of Cherpoora, and later saw service in the Afghan and Burmese campaigns, for each of which he possessed the medal.

Sir Alexander Pedler died suddenly on Monday afternoon while attending a committee meeting at the Ministry of Munitions. He was born in 1849, and was educated at the City of London School and the Royal College of Science. In 1873 he was appointed to the Bengal Education Department, and served as Professor of Agricultural Chemistry at the Presidency College. He was formerly Director of Public Instruction for Bengal, Vice-Chancellor of the University of Calcutta, and additional member of the Legislative Council of the Governor-General of India. He was a Fellow of the Royal and Chemical Societies, and contributed a number of papers to the leading scientific publications. He was created C.I.E. in 1901, and was knighted five years later.

It is announced that Major Francis Shuldham Watson, D.S.O., R.G.A., died of wounds on May 2. He was the second son of the late Colonel John Whaley Watson, Bombay Political Department, and of Mrs. Watson, of The Cottage, Swainswick, near Bath. He was educated at Haileybury, passed into Woolwich in 1897, and obtained his commission in the Royal Garrison Artillery in 1899. He served in the South African War, receiving the Queen's medal with three clasps. He was stationed in Singapore when the war broke out, but returned home in 1916, and trained a battery and proceeded to France in March, 1917. Major Watson had just been awarded the D.S.O. for his services in the recent fighting. His youngest brother, Captain C. R. Watson, Punjabis, was killed in Mesopotamia in April, 1916.

A parcel post service has been opened in Palestine.

M. Tchaprachicoff, who has been appointed Bulgarian Minister to Russia, has proceeded to Moscow to take up his new post.

M. Marghiloman, Prime Minister, and the whole of the Roumanian Cabinet are reported, from German sources, to have resigned.

It is stated by the *Frankfurter Zeitung* that 233 out of 263 political communities in Carinthia, Austria, have sharply protested against the plans for dividing the Slovene country.

The annual pilgrimage of Moslems to Nebi Musa, "the tomb of Moses," at the north-west end of the Dead Sea, was made on Friday, April 26, the military authorities giving every possible help.

Vienna communal councillors, according to the *Münchner Neueste Nachrichten*, have voted against the constitution of a Slav State as harmful to the interests of Vienna and the Monarchy.

In a message dated May 7 Reuter's Athens correspondent reports:—"The following list of food prices per lb. in Constantinople has been smuggled out after escaping the Turkish censorship:—Bread costs 9½d. to 1s. 1d. (taking 100 piastres as equivalent to 16s.); beef, 5s. 4d.; mutton, 6s. 5d.; fresh butter, 22s. 5d.; cooking butter, 10s. 8d.; potatoes, 2s. 1d.; lentils, 3s. 8d.; haricot beans, 4s. 3d.; sugar, 7s. 5d.; cooking oil, 10s. 8d.; olives, 4s. 3d.; flour, 3s. 8d.; soap, 7s. 5d.; tea, 117s.; coffee, 42s. 8d.; milk, 2s. 8d.; rice, 6s. 5d.; macaroni, 5s.; fish, 5s. 4d. to 10s. 8d. Eggs cost about 5d. each. A lounge suit costs £28, and a pair of boots £8 16s."

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

THE BUCHAREST TREATY.

The terms of peace which the Central Powers have imposed upon Roumania are a fitting corollary to Prince Lichnowsky's memorandum. That document established on incontrovertible evidence Germany's responsibility for the outbreak of the war. The treaty recently signed in Bucharest reveals the objects for which Germany drew the sword, and proves that, in spite of four years of war, she has learned nothing and forgotten nothing. Having succeeded in uniting practically the whole world in arms against her, it might have been thought that she would be at pains at the earliest possible opportunity to give the lie to those who charge her with being the arch-enemy of the world's peace, the incarnation of militarist lust for conquest and power. She claims, and the German Government has hitherto persuaded the people, that she is fighting a defensive war, to protect herself against the unprovoked attacks of enemies, who are goaded by jealousy of the rapid and successful rise of the German Empire. Consistency would require that, when she has defeated one of the smaller nations leagued against her, she should prove herself free from projects of world-domination by exacting no more than adequate securities against any further resort to arms on the part of the conquered people. Fortunately, the Germans are incapable of such finesse. The conquest of Roumania has followed hard on the collapse of Russia, and Germany for the moment sees only what she regards as the impending realisation of her cherished aims in the Near East. The West, she argues, will probably follow suit; in any case, it can be trusted to look after itself. It is by way of Eastern and South-Eastern Europe that the goal of German ambitions is to be reached, and here is the first stage successfully accomplished. With Russia and Roumania at her feet, there is no need to worry about the attitude of the rest of the world. The one thing to do is to make sure of the ground already won, and this the German plenipotentiaries in Bucharest have proceeded to do most effectively. The result is a treaty that, if it were allowed to stand, would rivet for all time German fetters on the hapless Roumanians. It is no question of mere vindictiveness; it is rather the callous and calculating pursuit of a definite purpose that requires Roumania to be delivered politically and economically into German hands.

If the Bucharest Treaty were restricted to the purely military clauses, its terms would be severe enough. Not only is provision made for demobilisation, but the peace strength of the Roumanian Army is fixed. All surplus stores and equipment are to be given into the custody of the supreme commands of the Austro-German forces, and even the amount of ammunition to be left to the troops under arms is stated. Demobilised Roumanian troops are to remain in Moldavia until the evacuation of the occupied territories; but no period is fixed for this latter event. In common with many other important details, this matter is left for an agreement to be reached upon it at a later date. In the meantime the army of occupation remains a charge on the Roumanian Government, and enjoys the right to requisition all that it can squeeze out of the country, "always observing a proper regard for an orderly plan of procuring these commodities, as well as satisfying the home needs of Roumania." The experience of Russia and the Ukraine supplies a telling illustration of this proper regard. The cession of territory, as stipulated in the peace preliminaries, comprises the Dobruja and "a rectification in favour of Austria-Hungary." In regard to the former, the significant provision is made that Bulgaria is to receive, with frontier rectifications, the Bulgarian territory that was taken from her by the Bucharest Treaty of 1913, while the remainder of the Dobruja is ceded to the Powers of the Central Alliance. The ultimate fate of this northern portion is not specified; but it is generally understood that it is intended to be surrendered to Bulgaria when all outstanding questions between Constantinople and the Sofia Government are satisfactorily adjusted. A solitary concession is made to Roumania in that she is promised "an assured trade route to the Black Sea, viâ Cernavoda and Constanza." The stipulation, however, is probably more important than the Central Powers imagine; for it concedes the point that the route to Constanza is essential to the economic life of Roumania, and, therefore, disposes of any claims that Bulgaria hereafter may put forward to the whole of the Dobruja. The frontier rectification in favour of Austria-Hungary is said to comprise over two thousand square miles, and to include the coal mines of Petroseny and forests to the value of £150,000,000. In this as well as in other respects the treaty is careful to provide that Roumania shall be bled as white as the Central Powers can contrive. The indemnification of war costs is mutually renounced; but Germany is credited with having appropriated Roumanian goods to the value of £50,000,000, which will not be repaid, and there is ample scope for further exploitation in the clause of the Treaty which provides that money spent by the enemy Powers in the occupied territories on public works, "including industrial undertakings," shall be made good on their transfer. But Roumania is intended to feel the turn of the screw at its worst in the so-called Petroleum Agreement, which appears as an annex to the main Treaty. According to this document a company, known as the Oil Lands Leasing Company, to be formed by the Central Powers, is endowed with exclusive rights of the most far-reaching character for thirty years, with the right of prolongation for two subsequent periods of thirty years, making ninety in all. Provision is made for a State trading monopoly in oil in Roumania, the exercise of which is to be vested in another company formed by the Central Powers. Thus Roumania's most valuable source of revenue, next to her grain fields, is to be surrendered. Her development, even apart from the incidence of German control in other directions, would thus be permanently arrested, and she would become, as indeed it is the intention of Germany that she should remain, a mere Austro-German province, with nominal rights of sovereignty.

The sympathy of the Allies goes out at this time to the Roumanians, who may be confident that they are not forgotten in their hour of trial. They have adopted the only course open to them, and in stooping to conquer they must go through with their part until the time comes for their liberation. The severity of the conditions imposed upon them will make it easier for the Allies to require the whole Treaty to be torn up. It shows too clearly the cloven hoof of German designs in the East, and forms a potent warning to those who affect to believe that attention need only be given to the western theatre of the war. Germany is probably ready to-day to accept all the Allies' demands in regard to Belgium, France, and Alsace-Lorraine, if she could be confirmed in the hold that she has now established in Eastern Europe. With the other Powers intent on making good the ravages of war when peace is restored, she could count on being able to pursue unmolested her plans for the complete absorption of the Balkan Peninsula. The corridor to the East would be widened and securely buttressed. "Central Europe" would then extend, preferably to the Persian Gulf, but if that route were barred, across the Black Sea to the Caspian and Central Asia. The goal would remain the same—for Germany has no other ambition to gratify—the destruction of the British Empire. An opportunity was afforded her in the conquest of Roumania to show herself the champion of some ideal that would win her friends among the nations of the earth. She has deliberately chosen to plant her heel on the neck of a prostrate enemy for no other purpose than to promote her own aims of conquest. In the face of such an ambi-

Digitized by Google

tion the world can never know lasting peace. The Allies, therefore, must continue the war until the military power of Germany has been broken, and so broken that her own people recognise that the militarism of which the Bucharest Treaty is an eloquent exponent does not pay and cannot be tolerated. There has been a tendency in the Allied countries to concentrate attention on our own war aims. At this juncture they are less important than the necessity of understanding the enemy's war aims. In the attention given to the Western Front these are apt to be overlooked. The conditions of peace imposed on Roumania, however, call the world roughly back to things as they are, and for this reason we shall do well to keep continually before us all that the Roumanians are called upon for a season to endure.

PALESTINE SUPERSTITIONS.

SHADOWED HOUSES.

A good many people are busying themselves about Jerusalem just now, settling her future for her in the kindest way; others are content to take her present only, and to follow day by day the brief official notes that record the process of her liberation. But to those old residents who have known her long and under varying circumstances, in days that were hard and strait for her, who longed to help her then and yet could do so little for her; who now are far from her, and whose days of service, it may be, are done—what remains to us? Well, we have her past, just the span of a generation, a moment only of a country's life; but it is ours, beyond contest, and for always. We can dream away whole hours recalling that past. Dark nights are vivid with the sunshine of Palestine; and as we walk through London streets their clamour somehow dies away into the wide, silent spaces of the hills and valleys round about Jerusalem.

A perfect host of memories, grave and gay, comes crowding in upon one—"Do you remember me?—and me?—Ah, but I am a better memory still!" It is a puzzle indeed which to pick out, so, cowardly, I evade a choice, and take the first that come to hand.

Within sight of our windows at St. George's there was a one-storeyed house, standing in a charming garden. It belonged to an old Moslem effendi, very reverend in appearance until you saw his face all scored with deep lines of cruelty and selfishness. The outer wall of stones, loosely flung together in the good old Arab way, left all the beauty of the garden open to the passers-by. Many a time, returning from flower-walks, we stopped to look over the wall at the blossom-laden fruit trees, the yellow broom, veritable "burning bushes" as they were, the tall purple irises, the choice "Frangi" plants in pots and barrels. There was no order in the garden, no tidy paths and flower-beds, but the whole effect was charming, for it was full of colour and life and fragrance. One night there was a grand wedding at this house. The aged bridegroom had already one wife, of his own generation, but now he married again, a young girl of perhaps eighteen. The old wife made no secret of her anger and disgust, and certainly it was hard on her. After dark a long procession wound slowly down the road with flaring braziers, music, and firing of guns. The bride was being escorted to her new home; we could just distinguish her figure, closely veiled, walking under a rose-coloured canopy. One could not but pity her; she was so young, and life with those two set old people, one of them a jealous embittered woman, could hardly be all roses. The incident slipped out of mind for some months; and then one day a funeral procession emerged from that same house. The young wife had died very suddenly. Of what? No one knew; possibly her spirit was broken—"Crabbed Age and Youth cannot live together." But whispering voices said: "Does the old wife know?" Unkind insinuation, surely untrue.

But this at least is fact. From that day the house had a blighted look; neither trees nor flowers prospered in the garden, no voice broke the brooding stillness that lay upon it; pass it at whatever hour of the day you would, there never seemed to be any stir about it. Only once the old mistress of the house was seen in the garden, and as we passed she turned and looked full at us. The old forgotten story sprang suddenly to mind again, and looking at that miserable, stony, aged face, we whispered, half-involuntarily, "It *might* be true!"

In one of the side roads that lead to the Jaffa Road there is a large house, now almost a complete ruin. The Moslems tell a strange story about it. The ground on which it is built is part of that on which stands the tomb of a holy sheikh, and should not have been used for ordinary purposes; but B—— Effendi, a rich Moslem, built a house there, regardless of advice and warning. The outraged sheikh appeared once or twice while the house was in building, but all to no purpose; the house, a very large one, was finished, and stocked with beautiful furniture from Paris. When all was ready, B—— Effendi moved in. That very night the entire roof of the liwan, or central hall, collapsed, and the greater part of the house and furniture was hopelessly wrecked. B—— Effendi had neither heart nor means to rebuild it, and he died not long afterwards. His son, an equally headstrong person, lived for some time in the undamaged rooms, but he went mad within a year or two, and from that time no one has inhabited the ill-fated house. He still lives, hopelessly insane; and the house falls year by year into more desolate ruin.

Another house, also a neighbour to us at St. George's, we watched in building, for it was a really charming one, and the olive trees in the garden were amongst the most beautiful we had seen. The owner secretly annexed a corner of the adjoining land, which belonged to the Mosque, in order to straighten an awkward angle on his own plot. When this was found out public indignation ran high; but some slight flaw in the Deed of Wakuf (religious entail) enabled him to contest the case and win it. He kept the corner. But his fellow Moslems all declared that he would be cursed by heaven for having stolen land that was Wakuf. The house was finished, however, without any mishap, and the effendi and his family moved in. Within the first six months his little girl died of smallpox, his only son, a wild and lawless youth, committed suicide, and the effendi himself had a stroke, from which he was ill for a long time, and barely recovered. After that he came often to the point of letting the house, but at the last moment he always drew back, seeming unable to quit the home that had cost him so dear. When we left Jerusalem, in 1914, he was said to be drinking himself to death; but that gloomy prophecy appears to be still unfulfilled, for we distinctly recognised him in one of the photographs of Jerusalem at the Grafton Galleries.

One more story to close this page of strange memories. On the road to Jericho, after you pass Bethany, there is a tumbledown house of one storey. As children, we were not allowed by our Moslem servants to pass anywhere near it, for it was under the curse that always falls upon those who build houses for themselves on sacred ground. A portion of this man's property was considered holy ground for some reason which I have forgotten, but he, an unbeliever, scoffed at the folly of any ground being accounted holy out of which he could reap profit or advantage. So he built on it; but he never got beyond the first storey. Time after time the building fell in here, and broke down there, destroyed by unseen avenging hands. In the small portion that remained standing the scoffer made his home; but not for long. He was found dead one day, having died apparently in a fit. Did the avengers appear to him in that last moment, making terrible the passage out of this unlucky life?

All superstitions, are they? Perhaps. But living in the East tends to enlarge the borders of belief. When these things happen every day to people, or to places, that you know, you learn to take them simply, as the people do. We can believe or reject such tales as we will, of course, but to the people of the Land they are terribly true, and their beliefs are things to be reckoned with if we are to enter into their lives in any degree. Once more we are impressed by the deep sympathetic knowledge of the East, the instinctive *English* reverence for other men's prejudices and beliefs, that are shown in General Allenby's promise "that every sacred building, monument, holy spot, shrine, traditional site, endowment, pious bequest, or customary place of prayer. . . . will be maintained and protected according to the existing customs and beliefs of those to whose faiths they are sacred."

I think that only an Englishman could have made that promise. I am certain that only the English could keep it.

ESTELLE BLYTH.

We are informed that the Zionist Commission has taken over the schools in Palestine that were formerly conducted by German Hilfsverein. These were closed by British authorities, and are now re-opened as Hebrew schools.

PRESS ON THE NEAR EAST.

"Made in Germany."

The terms forced upon Roumania by the Central Powers are discussed by *The Times* (May 10) in a leading article. It begins:—

It is not to be supposed that we yet know the full scope of the terms which "Central Europe" has imposed upon hapless Roumania. But we know enough. The treaty as it stands is a striking example of German and Austrian statecraft. Like that which has led to the German military occupation of the Ukraine, it teems with the ambiguities, the equivocations, and the reserves in which the Wilhelmstrasse and the Ballplatz are past masters. There are to be "further agreements" on the admission of Consuls, on the settlement of damages caused by the war, on the allegiance of Roumanian inhabitants of the annexed territory, who are to have an "option" (like that promised by Prussia to a portion of the Danes in Schleswig and never granted them) on the date—a most vital matter—of the evacuation of Roumania by the enemy troops, and even on the definition of the new frontiers on the Danube between Roumania and Bulgaria and Roumania and "the allied Powers." On the other hand, the provisions which keep Roumania at the absolute mercy of Germany and her confederates are precise and take immediate effect. . . .

A little later Count Hertling and his peaceful assurances come in for consideration:—

In order to judge the settlement, which Count Hertling declares to have been "achieved by the grace of God," it is useful to recall that Germany and Austria loudly proclaimed their devotion to the principle of "no annexations and no indemnities" when they recognised the independence of the Ukraine, an event from which, Count Czernin has recorded, the peace with Roumania proceeded. "We demand neither annexations nor indemnities," he assured the Foreign Affairs Committee of the Hungarian Delegation in December, and he coquetted with "pacifists" and "defeatists" in all lands on this pretence. Now they can judge what assurances of the kind coming from him and his amiable accomplices in Berlin are worth.

Persia's Future.

In an article with the above title, the *World* refers to Persia's action in regard to the Anglo-Russian Agreement of 1907, which it regards as a step, pacific no doubt, but "pregnant with great possibilities." And it asks: "What about the other Treaties?"

There are several, the chief one being the Treaty concluded at Turkmanchai in 1828, after the Russo-Persian war. There were really two of them. One dealt with frontier rectification, the districts of Erivan Araxes and Nakhitchévan being allotted to the victor, while there was also a commercial agreement of a not too favourable nature to the defeated country. It established Consular jurisdiction of a very effective nature, dealt with the rights of Persian subjects claiming Russian protection—a deadly weapon in after-time—and laid down a 5 per cent. *ad valorem* duty. Presumably all these provisions will be modified or will go by the board, but they have not gone yet, for the good and effective reason that all other foreign Powers have based their Treaties on this, and there will have to be a vast amount of revision at a later date—after the war, presumably. Persia will, at all events, never accept the old-time measure of interference in her affairs which this Treaty gave the Powers, although Russia was the only one to exploit it prejudicially to the interests of the Persian people.

There is, though, one point in the abrogation of the Anglo-Persian Treaty which should not be lost sight of. Under it all concessions in the "spheres of interest" had first to be offered to or approved by—it was much the same thing—either Russia or Great Britain. One need not trouble about Russia, but take our position in the South. With the cancellation of this favoured position Persia could let oil-wells to Germany, could permit the Baghdad Railway which we have barred approach to the Persian Gulf through Mesopotamia, to cross into Persia and descend to the sea by a parallel route. As a result all our labours, all our sacrifices would be thrown away. It need not be supposed that Persia *will* do this, but she will be in a position to do it, and the fact should not be lost sight of.

"An Unhappy Document."

Under the above heading, *Palestine* makes an effective reply to the Memorandum presented recently by certain Moslems to the Foreign Secretary on the subject of Palestine. "We have reason for knowing," says *Palestine*, that "there have been associated with the production of this manifesto certain gentlemen who are not even Moslems, and have not either the competence or even the desire to represent Moslem interests."

To any careful reader this manifesto bears evident signs of non-Moslem inspiration. No Moslem, for instance, would be moved spontaneously to make certain attacks upon Jews, such as are contained in this memorandum, attacks which mirror the vulgarest anti-Semitism of the West. He would not speak so contemptuously of "the aspirations of the Jewish people to regain opportunities they had missed or misused nearly 2,000 years ago," for he would remember that it has been the fortune of Islam also to see its political glory wane. Nor, again, would he think it necessary to ascribe the fall of the Jewish State to "their own turbulence and the persecution of their Gentile neighbours," for he would remember that there is no more heroic page in history than the desperate struggle of a small people to maintain itself against the overwhelming power of mighty empire. Nor, again, would he speak of the Jewish settlers in Palestine as "animated with bitter hatred against the Gentiles," for a Moslem has never known Jewish intolerance. Nor, again, would a follower of the Prophet of his own volitions deny "all vestige of claim" to Palestine to the people from whose loins spiritually Islam itself has sprung, and whose passionate devotion to the land of their fathers through 1,800 years of exile will certainly not fail to find a response in the genuine Moslem heart. Such words have been insinuated into the ears of these three Moslem gentlemen by those who are not Moslems, simply because they are anti-Semites, and, indeed, the enemies of Islam for the same reason as they are the enemies of Judaism. It is not necessary, and it is not very profitable, to re-write either their Moslem history or their Jewish history.

In working out the details of the political settlement of Palestine every element will have to be consulted, as the writer recognises; and he tells us that "all Jews interested in the building up of a Jewish national home in Palestine will have to co-operate with every other element in the country."

For that reason such a manifesto as this which the three Moslem gentlemen have ventured to put forth is so deplorable. It is false in logic, false in fact, and false in spirit. It is intended not to bring Islam and Judaism together in the common task of civilisation, but to set Islam in antagonism to Judaism, and to make the Moslem an instrument for defeating the dearest and the undying hope of every conscious Jew. Happily, these three gentlemen speak for themselves, and not for the three hundred millions of Islam. The real leaders of Islam in Palestine and the neighbouring lands, the Arab spokesman, know very well that their hopes of an Arab revival and a new glory of the Arab peoples are bound up with Jewish hopes, that the two rise and fall together in the future as in the past. They are, therefore, discussing and deliberating in common with the Jewish leaders. A Jewish national home will arise in Palestine with their blessing, and will be a blessing to the Arab as to the Jewish people.

Turco-Bulgar Friendship.

The following is one of the "Notes of the Week" from the *Saturday Review* of May 11:—

Men home from the front assure us that soldiers cherish none of that hate for the enemy, so forcibly expressed here by old ladies and others in the habit of killing the Kaiser with their mouths. And a special brand of friendliness is reserved for Turks and Bulgars, because they are taught to fight like sportsmen. But the enemy's relations on the Struma front are by no means those of a happy family. When our shells destroyed a minaret, the Bulgars set up such shouts of delight that shots were fired and quite a small engagement took place between the allies. Bulgar prisoners tell us that they feel much safer when they wander near our lines, where capture means comfort, than in the neighbourhood of a Turkish camp, where a convenient mistake often supplies a shot in the back. The Turks' answer to this is that, when Bulgars roam round a camp, it is for no honest purpose.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Anglo-Russian Convention. May 13.

Sir JOHN REES asked whether the Persian Government had made any communication to his Majesty's Government regarding the Anglo-Russian Convention of 1907 or other treaties between the two Governments.

Mr. BALFOUR: We have informed the Persian Government that his Majesty's Government will be prepared to regard the 1907 Convention, in so far as it applies to Persia, as being in suspense. The Persian Government have not approached us in regard to any treaties existing between the two Governments.

Position of Roumania.

Mr. BALFOUR, replying to Mr. King, said he was aware that the terms of the treaty of peace signed by Roumania had appeared in the Press. He had no reason to doubt that the terms as published were authentic. So soon as the treaty had been formally ratified Roumania would cease to be an Allied State, and would assume the status of a neutral.

Our Forces in the East.

Mr. OUTHWAITE asked the Prime Minister whether in his statement that in Mesopotamia there was only one white division and in Egypt and Palestine only three white divisions he included the Australian and New Zealand troops there employed.

General Sir IVOR PHILLIPS: Before this question is answered, may I ask whether hon. members are in order in using the question paper of this House for giving information to the enemy?

The SPEAKER: I have frequently pointed out that it is not a point of order at all. If the Government think it is not advisable to answer a question it is open for them to say so.

General Sir IVOR PHILLIPS: If the Government are not able to stop a question from being put on the paper they cannot stop the information being given to the enemy. I am only speaking for the safety of our Army in the field.

Mr. OUTHWAITE: As a reflection has been made upon me, may I draw attention to the fact that the question refers only to the statement made by the Prime Minister as to the strength of our forces in the East? That was the statement which gave information to the enemy, if information were given. I am only asking whether certain troops were included. Therefore, does any charge rest against me such as has been suggested?

The SPEAKER: I do not know where the hon. member gets his information. (Hon. Members: From the Prime Minister.)

Mr. MACPHERSON (Parliamentary Under-Secretary to the War Office): It is not in the public interest to give further information as to the composition of the forces in Egypt and Palestine.

Mr. OUTHWAITE: May I ask whether it is not in the public interest simply because the Prime Minister misled the House and made an inaccurate statement?

The SPEAKER: The hon. member has asked his question and has had a reply.

THE SCARABÆUS.

The following information regarding the Scarabæus, the sacred beetle of Ancient Egypt, is given in the *Egyptian Mail* by the "Man at the Window":—

"Solomon was a wise old king, but he might have chosen a better example than the ant when he turned out that neat little proverb for loafers. True, ants are tireless workers, and have never been known to strike for short hours, yet, compared to the scarab, they are amateurs at perpetual toil. No marvel that ancient Egyptians held the busy black beetle sacred and carved its image on a thousand temple walls. It is a fanatic for work, and that, perhaps, is one reason why soldiers delight in watching its ways. 'Tis a pleasant occupation, praising the energy of others. Scarabs are blacklegs, and have black bodies, too, for that matter; while butterflies dance in the sunlight, letting all work and care go hang, the beetles toil patiently over hot sand, rolling before them big balls of malodorous matter. Nothing daunts them. The scarab's job is to get the ball to a safe spot and there bury it. And unless Fate sends a careless foot to crush it, Scarabæus does the job every time. It goes *magnun*, as they say, if molested, but as soon as the path is clear sets the ball rolling again, using its hind legs as propellers. The Australian porcupine is a master digger, but could pick up wrinkles from the scarab. After each journey to the surface the beetle forms its own body into a ball, and rolls down the burrow for another load of sand. It never wastes a moment till its treasure is hidden underground, when it may take a spell for a minute or two.

The Jewish Correspondence Bureau at The Hague states that the object of the recently-established Central Organisation of German Jews is, according to Dr. Eugen Fuchs, its President, to thwart the British Palestine policy.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Granted that the published terms of the Roumanian peace treaty are incomplete in some respects, notably in the absence of clear indications by means of maps or otherwise as to the exact limits of the territorial readjustments, it is possible, all the same, to gather a fairly concise view of the Wentworthian policy that the enemy Powers have carried out in regard to our unfortunate Ally. Briefly, from the economic point of view, the terms fall naturally into four divisions: (1) Territorial changes; (2) the control of the Danube; (3) indemnities; and (4) the oil industry. On the first point our knowledge is limited for the reason already stated, while as regards the last, it is impossible to pass a final verdict without knowing the exact limits of the rectification of Austria's frontier which might conceivably be drawn to include some portion of the oilfields.

***

The territorial adjustments leave Roumania very much worse off than before the Treaty of Bucharest in 1913. Not only does Bulgaria in effect receive back what she then lost, but Roumania is also deprived of the other part of the Dobruja between the Cernavoda-Constanza line and the St. George branch of the Danube. No reference is made to the triangular territory having a frontage on the Black Sea between the St. George and the Kilia branches of the Danube, so Roumania is presumably to be allowed to retain it—a concession worthy of the Central Powers, seeing that Roumania will only be able to maintain communications with it by the Danube. Matters would naturally be somewhat improved in the event of union with Bessarabia (which according to latest information seems to be an accomplished fact), but leaving that contingency out of consideration, it must be admitted that these terms and the frontier rectifications in favour of Austria make Roumania's position next door to hopeless.

***

In plain words, the position is that instead of having a more or less satisfactory outlet on the Black Sea, Roumania will for political purposes be as much surrounded by other countries as Switzerland is, for instance. That, bearing in mind who her neighbours are, is equivalent to a loss of all independence as regards her commercial relations. Certainly she is guaranteed a trade route to the Black Sea viâ Cernavoda and Constanza as compensation for the loss of her freedom, but in the circumstances this "privilege" can only be construed as a further opening for interference by the Central Powers in her affairs. In practice it will give them ample scope for directing her trade into channels favourable to themselves by a system of checks which will make trade in directions not approved by Germany and her ally too irksome to Roumanians for them to desire its continuance.

***

As if this of itself were not enough, the Central Powers also obtain the complete monopoly of the control of the Danube. Roumania is forced to guarantee free navigation of the Roumanian Danube, including the use of harbours, to the ships of Germany, Austria, and their allies. She is not to be allowed to levy any dues on their ships or rafts merely for the navigation of the river, and she is to levy no dues not allowed by a proposed new Danube Navigation Act, which is to be the subject of negotiations at Munich between Roumania and the enemy Powers. Finally, Roumania even loses her power over fiscal affairs, as the treaty compels her to abolish the *ad valorem* duty of one-half per cent. on imports and exports from her ports at the latest within five years after the ratification of the treaty.

***

The chief interest of the indemnification clauses lies in the fact that Germany has gone a somewhat roundabout way to obtain compensation. Evidently the Teutonic mind regards obvious "camouflage" of this kind as calculated to obscure the fact that indemnities are being exacted, though actually it only serves to bring the fact into plainer relief. Here there are only two or three points that deserve notice. In the first place Roumania is compelled to refund Germany's expenses in connection with military measures so far as they have not been met by the country or paid in newly-issued notes of the Banca Generale of Roumania. These notes, issued by the order of German authorities, are to be redeemed within six months after the ratification of the treaty, and are not to be put into circulation again, and in the meantime are to be recognised as legal currency. Further, Germans are to be indemnified for damage suffered by them on Roumanian territory, this applying to shareholders in Roumanian undertakings. But this is not all, for the amazing condition is included that the balances and deposits of the Roumanian National Bank are to remain at the German Reichsbank for five years as a security for the payment of interest on Roumania's Public Debt Service. These funds may be drawn on for interest and for the redemption of bonds, and will be retained for ten years should Roumania fall behind with an instalment.

***

No less sweeping is the agreement regarding the oilfields. The Central Powers will exercise their control over the oil industry through the Oil Lands Leasing Company, which is given exclusive rights for thirty years with the right of extension for two further periods of thirty years each. The Roumanian Government is to have a quarter of the foundation shares, and the interests of the Central Powers will be safeguarded by the creation of preference shares with a fifty-fold voting power. Two other companies will be created, the preference shares of which will be held by Germany and one-third of the ordinary shares by Austria, the one to consolidate liquidated oil undertakings and the other to receive the trading monopoly and to regulate the refining, distribution, and sale of petroleum. I may add that the Central Powers have generously conceded the right of Roumania to receive sufficient oil for internal consumption!

***

I have purposely dealt at some length with these aspects of the treaty in order to show the degree of mercy that the Central Powers show to those who are no longer in a position to oppose their will by force. It has been sometimes suggested in certain quarters that Germany and her Ally would be ready to make equitable terms provided they were only approached in the right way. I would ask those who hold this view—if there are any of them left, which I very much doubt—to take the trouble to read the Treaty of Bucharest, clause by clause, and then ask themselves if it offers the slightest indication of any tendency towards anything but the purest and most unadulterated Prussianism. It is beyond question the most humiliating document which any nation has yet compelled another nation to sign. Even in the enemy countries this is not unrecognised. Thus, the Vienna *Arbeiter Zeitung* says: "Such is the peace without political and economic violation which Count Czernin proclaimed before the beginning of the negotiations." Fortunately this document can have only a transient authority, and Roumania will be consoled during the temporary dominance of the Central Powers by the sure and certain knowledge that one of the first steps taken by the Allies when they win the victory will be to annul this treaty and to replace Roumania on her proper footing as an independent State.

***

Lord Chelmsford laid great stress in his recent speech on India's financial position on the importance of ensuring that the second Indian War Loan should be as successful as last year's flotation. He pointed out that the position briefly was that Rs.52 crores had been paid to the Home Government towards the £100,000,000 or Rs. 150 crores of the British war debt which India took over, that interest had to be paid on the balance, and that it was to the advantage of both countries that the deficit should be paid off. That, of course, is evident, and if only the Indian public could be brought to realise the position, I have no doubt the subscriptions would be all that could be desired. So far, however, I see no reason to modify my view that India as a whole still needs educating in the use of capital, and in the circumstances I am afraid undue optimism would be misplaced.

***

Elsewhere in this issue will be found a report of a very interesting lecture on the work of France in Morocco, by Mr. Norman McLeod, who fully bears out all I have said in these columns regarding the rapid development of the country. He points out that while in 1912 there were no ports, only open roadsteads, now the ports were furnished with quays, stores, etc., and Casablanca had grown into a well-equipped port. Since 1912, 511 miles of railways had been laid, and 100 miles were under construction, while 514 miles of first class roads had been made, 564 miles were under construction; and 216 miles were under survey. Finally, the increase in exports and imports from £5,880,000 in 1911 to £12,424,000 in 1916, rounds off the picture of Morocco's progress under the French régime.

***

It would be unwise, according to what I hear, to be too premature in forming conclusions as to the suitability of Cyprus tobacco for the London market. A consignment sent to this country some time ago proved to be not at all what was re-

Digitized by Google

quired, and it was not fit for cigarettes. Possibly special circumstances in the shape of climatic conditions, etc., may have been partly or wholly responsible in this case, and it will be interesting to see what verdict is pronounced on the next tobacco sent here from Cyprus.

***

Among recent developments in Bulgaria it is worth noting that a Stock Exchange has been opened at Sofia. The movement in favour of this step began in 1907, when a financial exchange law was first passed in Bulgaria. Last autumn, according to the *Frankfurter Zeitung*, a further effort was made, and this time the object was attained. It is stated that for the present the exchange will mainly deal with local securities.

***

A very satisfactory review of the operations of the Ionian Bank during the past year was given at this week's general meeting by the chairman, Mr. Falconer Larkworthy. The bank has made excellent progress during the last decade, and 1917, despite the effect of conditions in Greece, was a year of marked success. It is gratifying, therefore, to be able to record the chairman's statement that the results are not due to war conditions. "The profits shown on this occasion," he said, "are due to a normal increase of resources, and to the discriminating care of our managers in avoiding unprofitable and risky business." The gross working profits amounted to over £300,000, and the earning power, it was stated, was now much in excess of the dividend paid, and would provide for an extension of capital without prejudicing old shareholders. It may be noted that this question of a fresh issue of capital is now receiving the attention of the directors.

***

A large part of Mr. Larkworthy's speech was devoted to advocating a new banking system for Greece. This question is dealt with at length in a volume just issued by the Ionian Bank, described as a memorandum "explaining the desirability of supplementing the existing laws in Greece relating to the forced currency, and to the exchanges by adapting thereto that portion of the United States Federal Reserve Act relating to their banking system." The arguments adduced in favour of the proposal will be discussed in a subsequent issue, and I will only say now that the memorandum contains some very interesting references to the British banking system, particularly regarding the effects on it of the crisis of 1914, and also an admirable survey of the Federal Banking system of New York.

COMMENTATOR.

THE SUDAN BUDGET.

A Record Estimate.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, April 9.

Details of the Budget of the Sudan Government for the current year are now available. Revenue is estimated at £E2,255,000 and expenditure at a like amount, there being, as usual, no provision for a surplus or the opposite. These figures constitute a veritable record in the annals of Sudan finances. They are £E449,000 higher than the estimates for 1917, when the total of each side of the account was fixed at £E1,806,000.

The principal increases over the preceding year's Budget on the revenue side are provincial receipts (in which are included royalties, land, date and traders' taxes) from £E520,600 to £E618,450, customs by £E8,000 to £E208,000, general central services of the finance department from £E44,800 to £E195,000, posts and telegraphs by £E14,000 to £E90,000, and railways and steamers from £E765,000 to £E1,061,000. The only decrease is under agriculture and forests, which are reduced from £E23,600 to £E2,250.

Provincial Receipts Increased.

The provincial receipts have increased owing to improved internal economic conditions, which naturally bring about larger returns; they are also raised by the inclusion of the receipts from the sale of timber, which were formerly bulked together with the general receipts of the Agriculture and Forests Department, and are now allowed to be retained by the provinces which collect them. This is the reason why such a large decrease is recorded in the estimates from the department. The enormous jump made by receipts from the general central services of the Finance Department is due to the inclusion of the receipts from the new sugar excise duty. This tax was recently introduced in Egypt, and was applicable to all sugar produced at the refining factories and consumed in the country. For supply purposes the Sudan is considered as part of Egypt, i.e., as not being a foreign country, and consequently it was decided that the tax should be collected by the Egyptian authorities on all sugar issued from the factories whether for consumption in Egypt or the Sudan, and that the proportion on the quantity entering the Sudan should be credited by the Egyptian Government to the Khartoum Treasury. As regards the expansion in the railway and steamers estimates it should be pointed out that this is the first time that this item bears this heading. Hitherto the railways and steamers departments have been entirely separate administrations, but in the current year they have been amalgamated. In 1917 the receipts from the steamers were estimated at £E107,000, so the net increase on the combined head is £E189,000. This is due to the increase in the surtax on the transport of goods, the rates for which bore up to the end of 1917 a war surtax of 20 per cent. This has now been increased to 30 per cent., and the fourth-class passenger fares have also been raised, thus swelling the receipts.

Turning to expenditure, we find that provincial expenditure has risen from £E430,391 to £E500,546, general central services of the Finance Department by £E40,448, public works from £E84,604 to £E105,591, agriculture and forests by £E11,699, and railways and steamers from £E586,995 to £E897,576.

Administration of Darfur.

The increase in provincial expenditure is due to normal expansion and higher prices of material for the most part. The most important development in any sub-head is under Darfur, where the estimates have risen from £E10,800 to £E54,688. The explanation for this is that in 1917, the year when the province first came under the Sudan administration, it was not considered fair that the latter should bear the entire administrative expenditure, and it was agreed that it should meet it up to the total of the estimated revenue, which was fixed at £E10,800, and that the balance should be borne by the Egyptian Government. This year it has been decided that the state of the Sudan finances should permit of the whole cost of administration being borne, temporarily at any rate, by the Khartoum Treasury, and so the addition to the Darfur budget has been made. The increase under public works comes in a way from the rise in the cost of materials, but also from the fact that previously construction was debited to the general reserve, but that as this is a regularly recurring item it has been considered advisable to include it in the general budget under public works. The rise in the estimates for the railways is partly due to the amalgamation of the steamers with that administration, as explained above, and to the inclusion in the railways estimates of the steamers credit, which last year amounted to £E86,698. The balance of the increase under this heading is, of course, due to the heavy cost of coal and materials and more adequate provision for renewals and re-laying of lines. A new item appears this year on the expenditure side, viz., £E45.000 for war gratuities, which are to be paid on the same basis as those awarded in Egypt to Government officials, excepting that the benefit will be allowed to men drawing up to £E240 per annum, as opposed to the limit of £E200 per annum fixed in Egypt.

OIL IN EGYPT.

Mr. Hewins, answering Mr. G. Terrell, in the House of Commons on May 15, said the discovery of oil in Egypt was receiving the close attention of the Colonial Secretary. At present the fields were being worked by private enterprise, for which all facilities were being afforded by the Government. It was not in the national interest to give further details.

Dr J. Collis Browne's Chlorodyne

EGYPT AND PALESTINE.

Trade Relations Resumed.

(From Our Own Correspondent.)

Cairo, April 8.

Commercial relations between Palestine and Egypt are being resumed, and every effort is being made to encourage merchants in both countries, whilst at the same time controlling traffic from the political point of view as well as from the point of view of avoiding any waste of the restricted quantity of transport available for civilian traffic. The Occupied Enemy Territory Administration has just issued regulations regarding the granting of trading facilities between Egypt and Palestine. Provided they obtain authority to trade and to despatch the goods in question and appoint reliable agents at destination in Palestine, merchants in Egypt will be allowed to forward merchandise either by rail viâ Kantara to Jerusalem and Khan Yunis or by Government transport, through rates being quoted in either case. The authorities are exercising very stringent control in the matter of trade between this country and Palestine, but provided merchants confine themselves to bonâfide non-speculative transactions and conform to the requirements of the military authorities the exercise of this control should not set up any real obstacle to the re-establishment of commercial relations between the two countries. Indeed, it is highly probable that, thanks to this control, those relations will henceforward exist on a more mutually satisfactory basis.

A COMMON COMMERCIAL LANGUAGE

An address to the members of the London Chamber of Commerce and others on the subject of "A Common Commercial Language" will be delivered by Mr. A. Barton Kent, F.k.G.S. (Treasurer of the Common Commercial Language Committee), on Friday afternoon, May 31, in the Council Room of the Chamber. The Right Hon. Lord Southwark (ex-President of the Chamber) will preside, and applications for tickets may be made to the Secretary of the Chamber, 97, Cannon Street, E.C.4.

TRADING WITH THE ENEMY.

The Controiler of the Foreign Trade Department issues a new Consolidating List, containing the names of over 3,500 persons and firms with whom persons in the United Kingdom are forbidden to trade under the Trading with the Enemy (Statutory List) Proclamation.

THE
GENERAL ANGLO-SERBIAN
INDUSTRIAL & FINANCIAL
COMPANY, LIMITED,
106, Bishopsgate, London, E.C.2

The Company has been formed to promote British Trade and Industry in SERBIA and other BALKAN STATES.

The Company is a Promoting Company, and is prepared to consider any proposals for the Financing and carrying on of any business in the above countries.

Agents in ROME, and as soon as circumstances will allow Branches will be opened in SERBIA and other BALKAN STATES.

Correspondence is invited from those interested in SERBIA and the BALKAN STATES, or contemplating business with these countries when communication is restored.

CEREAL PRICES IN EGYPT.

(From Our Own Correspondent).

Cairo, April 1.

This week the Supplies Control Board has fixed the maximum prices for wheat, beans, barley, lentils and tibn (chopped straw). These prices are for each stage of production ranging from the prices to be paid to the producers to those payable by the consumers, and are fixed for each province. They will come into force from the date at which the crops are approximately ready for taking off the land. The prices are well above those ruling before the war; thus wheat will be saleable in Cairo and Alexandria at an increase of about 100 per cent. and beans and barley at about 80 per cent. above the highest prices ruling during the five years immediately preceding the war. Wheat and the other commodities are as a matter of fact at present selling at prices below those now fixed. No doubt the marked drop in prices during the last month has been to a great extent caused by the unloading of stocks in view of the wide powers accorded to the Board, but at the same time there is every indication that the margin now allowed over the pre-war levels is reasonable, considering all the circumstances and that it is one calculated to encourage cultivators to continue producing cereals, which is the all important consideration to-day.

INDIA'S COAL OUTPUT IN 1916.

A recently published Report on the Production and Consumption of Coal in India, prepared by the Department of Statistics, Calcutta, shows that the output of coal in India in 1916 amounted to 17,254,309 tons. The main contributions to this total were: Bihar and Orissa 10,767,683 tons, Bengal 4,992,376 tons, and Hyderabad 615,290 tons. Other figures were:—Central Provinces 287,832 tons, Assam 287,315 tons, and Central India 200,285 tons. The total output was well above the average, which was for the period 1911-1915, 15,440,000 tons.

CEYLON MAN-POWER.

The Ceylon Government has addressed a letter to the Chamber of Commerce and the Planters' Association (says a Reuter message) requesting them to consider what further European man-power can be spared from Ceylon. The Government view is that every man between twenty and forty should oe with the fighting forces unless he is informed by the Government that his present work is indispensable to the Empire.

The Egyptian Delta Land and Investment Co., Ltd., has removed its offices to 14, Sharia Sheikh Abou el Sebaa, Cairo, opposite the Catholic Cathedral.

LANCASHIRE COTTON.

Firmness of Market.

(From Our Own Correspondent.)

Manchester, Wednesday.

Although the tone of the market has continued quieter, a firm feeling has prevailed throughout, and concessions in price from spinners and manufacturers have not been easily obtained. There has again been a disposition to mark time pending certain developments in the situation. It is understood that the Cotton Control Board is about to make an important announcement relating to future production, and the wages question is still in abeyance. The conference of employers and operatives last Monday did not go into the matter very fully, and the meeting was adjourned until next Wednesday. It is rumoured that the weaving masters are objecting to paying the same advance as spinning employers, as one section is doing better than the other. Advices relating to the new Egyptian crop continue encouraging. It is extremely difficult, however, to arrange transactions with Alexandria, and a good deal of the business on this side which is offering cannot be done. Egyptian spinners remain in a strong position. Without there being any general buying movement, sufficient orders have been booked to keep sellers very firm, and in certain counts and qualities prices have tended to go against buyers. It is not possible to meet the requirements of producers of aeroplane cloths. There has not been much activity in piece goods for Egypt. Stocks in Cairo are said to be much larger than a little time ago, this development being due to bigger shipments during the last few weeks. Shippers to India have been content to purchase small lots, chiefly in light bleaching descriptions for Bombay. The time is not far distant when we shall have some news relating to the monsoon. Demand of any importance for China has been absent. A rather increased turnover has transpired for South America. American yarns have moved off quietly from day to day. The scarcity of supplies continues to be a feature. Extraordinary profits are being made by spinners. There has been very little doing in shipping yarns.

INDIAN TREASURY BILLS.

Up to May 4 Indian Treasury bills were sold to the following amounts:—Three months' bills, face value Rs20,47,15,000; six months' bills, Rs23, 42,55,000; nine months' bills, Rs10,15,25.000; twelve months' bills, Rs96,30,000—a total of Rs55,01,25,000. The amount of bills discharged on maturity up to May 4 was Rs12,95,40,000, the total amount of bills outstanding on that date being accordingly Rs42,05,85,000.

ENGINEERING NOTES.

Flax Machinery.

In previous Engineering Notes we have pointed out that machinery and implements for the cultivation and manipulation of flax and other fibrous plants are always of special interest to landowners and farmers throughout the East. There are vast lands in almost every Eastern country where the soil and climate are most suitable for the cultivation of flax, linseed, etc., and the crops never fail to give a good return to the cultivator. But the great difficulties which have to be contended with from harvesting onwards owing to the archaic methods that are still adopted for the manipulation of the crops and to indifferent knowledge of modern methods and modern machinery often have a disheartening effect and result in preference being given to other and less profitable crops. Thus, our object in paying special attention to any new or improved machinery for the cultivation and manipulation of flax, hemp, etc., is to help the cultivators and others interested in the growing of flax in the East; and in this we are encouraged by the numerous inquiries for further particulars that we receive from there, as well as from this country, whenever notes on this subject appear, which, by the way, is another proof that manufacturers or inventors prefer to be "discovered" by buyers rather than enter into competition to find them. This is a most uncommercial policy, especially in the present time, and one to be greatly deplored in view of the future trade-war.

A Flax Thresher.

This is a newly-invented machine which presents some interesting features and improvements for threshing or de-seeding flax, etc. The flax plants in the condition in which they are harvested are fed to a stripper by which the seed, chaff, etc., are stripped from the plants and then to a binder by which the plants are bound into bundles, the seed, etc., being passed on to a separator, which takes away the chaff and dirt. The plants are presented transversely to the stripper, and are slowly and gradually lowered into touch with it, so that the pins of the stripper gradually penetrate more deeply into the plants until the desired maximum degree of penetration is reached. Tests have shown that this machine possesses the important advantage of producing more effective stripping or threshing owing to the gradual process which prevents entanglement. Since both the fibre and seeds of the plant are used, the importance of careful and effective stripping or separation will be obvious.

Alcohol as Fuel.

The question of the use of alcohol as a liquid fuel was dealt with in these columns some time ago, when investigations were being carried on under the auspices of the Government into the possibilities of alcohol fuel. We pointed out at the time that, apart from many other regions in the Near East, Egypt, Palestine and Mesopotamia could provide the necessary raw materials for the production of alcohol in very large quantities by increasing the cultivation of certain indigenous plants which could be grown at a very low cost. For some reason or other the official investigations in question, which were carried on in this country and, we believe, in South Africa, ended without any practical result. It is, therefore, very interesting to hear that the whole question of the use of alcohol as fuel has been investigated by a committee of experts appointed by the Commonwealth Advisory Council of Science and Industry in Australia, which has already issued a very comprehensive and extremely encouraging report. With regard to the raw material, the report says that "the development of the cultivation of crops for the manufacture of power-alcohol is likely to play an important or even essential part in a complete agricultural policy. It may lead to the cultivation of areas unsuited for other crops." The report goes on to suggest that "if some stimulus or inducement were offered for the manufacture of alcohol, it appears that there is a favourable opportunity for the establishment of a new and important industry in the Commonwealth." Since, according to the report, the raw materials holding out the best prospects are sorghum stalks, cassava, and sorghum grain —which grow in abundance in the East—there is further evidence in support of our view that the Eastern regions we have mentioned may prove great sources of alcohol for fuel at the cheapest possible cost for local and European consumption. The Australian Committee's conclusion is that starting on the assumption that power-alcohol must be marketed at 2s. 6d. per gallon—a rather high price—and allowing 9d. per gallon for manufacture, 6d. for methylation and manufacturer's profits, 6d. for packing and distribution, and 3d. for the retailer's profit, the proposition is practical if sorghum stalks can be delivered at the distillery at 12s. 6d. per ton, cassava at £1 19s. per ton, or sorghum grain at 2s. 4d. per bushel. These figures are looked upon by the Committee as not being beyond attainment in Australia, and it is stated that sorghum grain, a very suitable crop for cultivation in Australia, will flourish in districts and under conditions fatal to the successful cultivation of other cereals now grown.

Alcohol as Power Producer.

Dealing with the engine problem, the report points out that while the heating value of alcohol is less than petrol, owing to the greater degree of compression than can be safely used with alcohol, a much higher efficiency can be attained in a properly designed alcohol engine than in a petrol engine. The result is that, according to the present prices of 2s. 6d. per gallon for methylated spirit and of 3s. 2d. per gallon for petrol, the fuel cost is only 3d. per horse-power hour for alcohol used in a properly designed engine, compared with 3½d. for petrol. The question of the cost of the fuel is not, however, by any means the sole, or even the most important, consideration. Adaptability to the particular purpose required is even more important. For example, steam-engines, gas-engines, gas-producer plants, and engines burning crude oil, kerosene, and petrol are now all in common use, but each possesses certain advantages which give it a distinct field. So that if the alcohol engine is found to have a similar special field, either by reason of the particular nature of the work it has to perform or by reason of its geographical location, for example, as being near the source of supply in which the alcohol is produced, it will be used as a source of energy apart altogether from any primary consideration of fuel cost. The most favourable opportunity for the development of alcohol engines is considered to be in the direction of stationary engines for general utility purposes, both in town and country, rather than for motor-cars, owing mainly to the difficulties of distributing the fuel so as to make it readily available all over the country (in Australia). The report does not favour the use of mixtures of alcohol with benzol or ether, although it recognizes that the principle of beginning with mixtures has certain advantages.

EGYPTIAN MARKETS.

An extraordinary general meeting of the Egyptian Markets, Ltd., will be held at Winchester House, E.C., on May 24, to pass resolutions giving effect to a suggestion emanating from the Government authorities in Egypt regarding the modification of the terms on which the Egyptian Government participates in the company's receipts. The following terms, approved by the Egyptian Council of Ministers, are recommended by the board for the acceptance of the proprietors :—

As from January 1, 1917, there shall be paid to the Egyptian Government, in lieu of payments provided by Article 8 of the said deed of concession, a royalty calculated on the gross receipts derived from the markets authorised under the concession :—To December 31, 1927, the royalty shall be equal to 40 per cent. of the gross receipts in excess of £44,000 in each year.

For 1928 the royalty shall be equal to 40 per cent. of the gross receipts in excess of the sum of £39,000.

From January 1, 1929, the royalty shall be equal to 40 per cent. of the gross receipts in excess of £35,500 in each year.

If the company shall raise with the approval of the Government, and expend for the purposes of the concession, any fresh capital, so as to bring the capital employed for that purpose to an amount in excess of £240,000. then the company shall be entitled to add a yearly sum equal to 5 per cent. of such excess of the yearly sum to be deducted from the gross receipts before any royalty to the Government becomes payable.

This arrangement will not apply to the revenues derived from slaughterhouses, which will be divided in the same manner as heretofore, subject to agreement to the contrary. The Government will not be entitled to participate in any of the revenues derived by the company from sources other than the markets authorised under the concession and from the slaughterhouses.

SUEZ CANAL DIVIDEND.

The Board of Directors of the Suez Canal have decided to propose to the general meeting of shareholders to be held on June 3 to allot the total revenue for 1917 as follows :—Capital shares, gross francs 77.108, net francs 65. Usufruct shares, gross francs, 52,108, net francs 42.630. Founders' shares, gross francs 29.356, net francs 24.794.

COMPANY MEETINGS.

Ionian Bank.

The ordinary general meeting of the Ionian Bank, Ltd., was held on May 13, at the offices, 25, Abchurch Lane, E.C., Mr. Falconer Larkworthy (chairman of the company) presiding.

The secretary (Mr. John Lindsey) read the notice and the auditors' report.

The Chairman said that it was with much pleasure and great thankfulness that he was now able to confirm the expectations expressed by him at the last annual meeting that the political and economic chaos of 1916 in Greece and the disturbances that accompanied it would practically leave the bank unscathed. In fact, there were very few banks which, in reviewing their business developments, could claim, after the third year of a great European war—and in the case of banks in Greece after two preceding local wars— as the Ionian Bank could do, that they had had no unfavourable experience, either in the shape of direct loss or strain or financial stress, except of insignificant character. The war had dominated economic interests in Greece, Egypt and this country, and the removal of the blockade of Greece, and the necessity which arose to meet the immediate food requirements of the country, placed on this and other interested banks responsibilities of unusual importance and character, which had been successfully carried out. These, consisting of managing and financing the imports of foodstuffs, and the handling of the cereal crops in Macedonia in connection with their friends the Bank of Athens and the Orient Bank, from a sense of great national need, had been undertaken not, primarily, with a view to gain, and their joint efforts had secured the thanks of the Greek Government, repeatedly expressed. Seeing the manitude of the funds required for these operations, as would be apparent from the balance-sheet figures, the directors thought it desirable towards the end of the year to limit the bank's business in Egypt; notwithstanding this, the shareholders would be pleased to hear that the net profit of the Egyptian business was greater than that of the previous year.

Banking System in Greece.

Referring to the need of an improved banking system in Greece he said that, in compliance with the wish of his Excellency M. Venizelos, President of the Ministerial Council at Athens, the directors had prepared a memorandum setting forth their views on the subject. They understood that M. Diomedes, the new Joint-Governor of the National Bank of Greece and former Minister of Finance, had been deputed by the President of the Council to examine and report upon the proposals contained in the memorandum. Greece, up to the present, while possessing a currency system of unique advantages and, in the directors' opinion, possibilities of general application to all civilised countries, had, literally, no banking organisation or protective co-ordination of banking and commercial interests whatever, for unifying and strengthening the position of banks, and for caring for the requirements of commerce and industry, such as were now supplied to member-banks by the Federal Reserve system of the United States. They appreciated the advantages which would be conferred on the banks generally, working in Greece, where there was no local Money Market, and also on the commercial interests of the country, through the merchants being able to get their legitimate requirements satisfied by the local banks in the shape of discounts or loans at all times of pressure or crisis. This could only be obtained by the establishment of a strong central bank with the power of note issue offering extended facilities for rediscounts or loans to existing banking institutions exclusively. Also, finally, as provided by the Federal Reserve Banking system of the U.S.A., the opportunity which it would afford friendly nations of simplifying and drawing tighter the bonds of international amity, by pooling their economic resources, and by the establishment of a peace union to which all friendly nations might be admitted on equal terms, with corresponding responsibilities. The directors looked beyond the present, to the time when the banking systems of the friendly nations of the world would be gathered up in one great organism, with one standardised banking practice, and working with one effective and elastic instrument of exchange.

The Chairman next dealt with the Federal Reserve system of the United States of America, and, advanced reasons in favour of its general adoption. He contended that, whether in England, Egypt or India, the key to the consolidation of their financial power and of the world was not, as President Wilson urged, to mobilise coined gold reserves under the supervision of the Federal Reserve Board, but to mobilise the liquid wealth of the respective countries—that was, to substitute for their coined gold reserves an inconvertible paper currency based on liquid wealth employed reproductively, and co-ordinated or pooled for the economic purposes of mankind. This, he said, was the only system that would give maximum efficiency and safety at nominal cost with great profit.

The question was sometimes asked, "What do the bankers say about the Greek currency scheme?" The only reply that could be given was: "We do not know, as not one has been willing to discuss its merits publicly." But there were occasional hints in the speeches of chairmen of the great English banks bearing on the questions of exchange, gold and paper currency. These showed that the idea of increased banking organisation and the maintenance of fixed rates of exchange within the British Empire would give to our dominions and colonies a substantial preference, and would serve to consolidate and promote trade within the Empire, to economy in the use of gold and enable our gold resources to be utilised elsewhere.

The Economic Situation.

Dealing with the economic situation in Greece, he said that, although there had been a great restriction of business in the usual mercantile channels, producers had been very favourably situated and had realised large profits. The prospects of Greek and all European shipping continued to be very doubtful, and as produce was being held up on a great scale at ports of shipment, this must react on trade generally, and particularly in Greece and Egypt, to the detriment of most interests, including the interests of banks. The mercantile fleet of Greece was now less than one-half of what it was at the beginning of the war. While freights were controlled by the Allies, the cost of coal was not controlled to the detriment of all contract services, which were being run at considerable loss.

While this bank from a sense of patriotism had been making sacrifices in the interest of the State in this country, Egypt and Greece, he regretted to say that but little consideration was paid by those in authority in this country to the representation of their hardships or difficulties, which could be removed with a minimum of trouble and with advantage to the State. Representations had been made by this bank with a view to simplify and make more safe their large financial operations in Egypt for moving the crops there, which had largely increased since the German banks were closed. Their aim was that the bank, instead of depositing gold coin in London which practically could not be obtained, should be allowed to deposit Government obligations in London, and against these receive temporary advances of paper currency in Egypt to be returned in Egypt as soon as their purpose was accomplished. They asked for no material sacrifice of any kind—merely for a business facility, which would do away with a wasteful system of financing and which, if granted generally to all banks, would be a great benefit to the commerce of the country. The Egyptian currency system required no amendment to allow of this bank's proposal being granted.

Coming to the balance-sheet the Chairman said that it embodied the results of a year that had had no precedent in the bank's history. The results were not exceptional nor due directly to war-conditions. They showed a gradual increment of movement, financial power and profit, stretching over many years, during which were gradually redeemed the sinister experiences in Egypt of an unexampled financial catastrophe. The profits shown on the present occasion were due to a normal increase of resources and to the discriminating care of their managers in avoiding unprofitable and risky business. It was to their credit that the gross working profits, which amounted to over £300,000, were subject to ordinary deductions only for interest, expenses and taxation, and not to those usually associated with the contraction of bad debts. Through the popularity the bank and its staff had attained, the small institution of ten years ago now occupied in regard to resources and influence the second position in Greece. There had been very small commercial movement during the year, but the bank had had a large share in Government business and a reasonable share in the import business not controlled by the Government. This private import business in its new form, necessitated by war conditions, was an unfortunate innovation as far as the bank was concerned, as it involved the provision of funds in foreign markets on a considerable scale not always against shipping documents, but in some cases against purchases liable to indefinite storage, connected with which there was risk of damage and loss of interest. Without some understanding with customers in regard to these items, the system could not outlive the present war conditions. The capital issued continued to stand at £485,580, or 97,116 shares £5 paid up. Their liabilities, including those on Government account, amounted to, in round figures, £9,500,000. The disproportion of their paid-up capital and reserve to these liabilities was now much greater than was usually considered necessary in well constituted banks, and especially than that existing in the case of banks competing with them in their Greek and Egyptian fields of business. The capital authorised amounted to £600,000, but nothing short of £800,000 or £1,000,000 would satisfy the full requirements of the case. Their earning power was now much in excess of the dividend they paid, and would provide for an extension of capital without prejudicing the old shareholders. As it was the proper policy to adopt in the event of their being able to secure the consent of the British and Greek Governments, the question was occupying the attention of the directors. By adding to the reserve fund a further £10,000 this fund would stand at £85,000. Deposits and current accounts stood at £5,936,105, showing an important increase of £1,427,382 over last year. Approximately half of this increase was due to the new branches of the bank.

Bank's Strong Position.

On the assets side shareholders would note the strong position of the bank in regard to available cash. The total of cash, investments and bills receivable was £3,715,742. All these assets were of a liquid character and represented a reserve of 73.6 per cent. on the demand liabilities of the bank, which at the date of the balance-sheet amounted to £5,044,654. Loans, current and other accounts showed an increase of £2,327,758. The long and oft-repeated chapter of provisions for depreciation of securities had not, unfortunately, come to a close in their case, as far as 1917 was concerned. Seeing the uncertainties that would attend the closing of their privilege of issue of notes in Greece in 1920, and the consequent liberation from the hands of the International Financial Commission of their 2½ per cent. Guaranteed bonds, amounting to £76,900, and the likelihood that they would be unwilling to retain these bonds as part of their assets at so low a rate of interest as 2½ per cent. until they were all drawn at par, the Court decided to bring the book value of these securities down to the market price of the day, and they had increased their reserve by £23,070, which made the total reserve now on this account £26,146. The reduction in value of their £300,000 3½ per cent. War Loan had induced them to reduce their holding by £60,000 and to provide a sum of £20,385 to bring down the book value to the market price on January 12, 1918. Their experience of their new branches and agencies was of an entirely satisfactory character, particularly of Salonika, which had earned exceptional profits. The chairman paid a warm tribute to the services of the staff and concluded by moving the adoption of the report.

Mr. John J. Stavridi seconded the motion, and Mr. A. Zygouras having congratulated the directors upon the results of the year's business, it was carried unanimously.

A final dividend at the rate of 6 per cent per annum, together with a bonus of 1 per cent., free of income-tax, making a total distribution for the year of 7 per cent., was declared; the retiring directors and auditors were re-elected; and a cordial vote of thanks was passed to the chairman and directors, as well as to the advisory committee at Athens, the members of the local Board at Corfu and the officials and staff at home and abroad.

The Financial Times.

The ordinary general meeting of The Financial Times, Limited was held on May 9 at the registered offices of the company, 72, Coleman Street, E. C., Mr. William Graham (the chairman) presiding. The Secretary (Mr. H. A. Randall, F.C.I.S.) having read the notice convening the meeting and the report of the auditors.

The Chairman said: Gentlemen,— When addressing you at the annual meeting of this company last year I drew attention to the great difficulties which the Press, and the financial Press in particular, had experienced during the year then under review, and on the present occasion I have unfortunately to express similar views with regard to the past twelve months. The past year has been a strenuous one for *The Financial Times*—possibly the most strenuous of the war period—and this chiefly for two reasons. The first is the further drain, both on the editorial and business staffs, caused by experienced men being called to the Colours; the second, and perhaps even more pressing trouble, has been the shortage of paper—a trouble which, unfortunately, is increasing and almost certainly will still further increase while the war lasts.

Turning to the directors' report and balance-sheet, you will see that the increased profit made for 1916 has been maintained. The figure of £20,062 3s. 8d., which represents the profit earned during the past twelve months, is slightly in excess of that earned for 1916, and is, I am sure you will agree, a very satisfactory showing under the present abnormal conditions. The usual amount has been placed to the staff pension fund and the necessary redemption of debenture stock has been effected, and you will notice that the issue of second mortgage debenture stock has been entirely redeemed, and will henceforth disappear from the accounts. The balance of profit, after meeting all fixed charges, represents a very creditable percentage on the ordinary share capital, but in view of the present political situation, we have thought it advisable strictly to conserve the finances of the company. In recommending a payment for the year on the ordinary shares of 4 per cent., the directors trust that the ordinary shareholders will feel that the wisest course has been adopted by limiting dividends and increasing the "carry-forward" by £6,000, and thus strengthening the position of the company as a whole.

The advertising revenue during the past year was, in spite of the dearth of practically all prospectus business, well in advance of that of the preceding twelve months, and the two special supplements recently produced, dealing with insurance and banking, constituted a record. The war has enhanced rather than diminished the influence and reputation of *The Financial Times*. Its prestige never stood higher. I think we may look forward with full confidence to the future of *The Financial Times*.

With regard to the other branches of our business, I am very pleased to state that the *Drapers' Record* and *Men's Wear*, the leading journals in the drapery and textile trades, have fully maintained their position and have proved, during these trying times, a great source of strength to the company. Our printing works—St. Clements Press—have been maintained in the highest efficiency, and have had a most successful year. I now have pleasure in moving: "That the report of the directors produced, together with the annexed statement of the company's accounts at December 31, 1917, be now approved and adopted."

Mr. F. F. Bridgewater (managing director) seconded the resolution, and no questions being asked it was put to the meeting and carried unanimously.

Mr. G. E. Hart moved the re-election of the chairman, Mr. William Graham, as a director of the company, remarking that that gentleman had guided the affairs of the company during the last three or four years with great success and great wisdom.

Mr. H. A. Randall said he had great pleasure in endorsing what Mr. Hart had said and in seconding the resolution for the re-appointment of Mr. Graham as a director of the company.

The resolution was unanimously agreed to.

Mr. Hart also proposed the re-election of Mr. Thos. F. Wallerson, the other retiring director, who, he said, brought an amount of City knowledge and experience to bear on the affairs of the company which was most valuable.

Mr. Randall seconded the motion, which was also carried unanimously.

Messrs. A. J. Davis and Co. were re-appointed auditors of the company for the current year on the motion of Mr. C. E. Charlton, seconded by Mr. Thomas Gallard.

A vote of thanks to the chairman concluded the proceedings.

Eastern Bank.

The eighth annual general meeting of the Eastern Bank, Ltd., was held on May 16 at the registered office, 4, Crosby Square, London, E.C., the Right Hon. Lord Balfour of Burleigh, K.T. (the chairman), presiding.

The secretary (Mr. R. Carter) read the notice convening the meeting and the report of the auditors.

The chairman, moving the adoption of the report, said that the directors, foreseeing considerable delay in holding the meeting, considered they were fully justified in declaring a dividend of 7 per cent., less income-tax, as against 6 per cent. paid last year. The report showed that the profits fully allowed of this payment, and the board asked the shareholders to confirm it as a final dividend for the year 1917. The net profits for the year, including £9,545 brought forward from last year, amounted to £77,918, and after placing £20,000 to the reserve fund and paying the dividend already mentioned, they carried forward £15,918 to the next account. The figures of the balance-sheet showed a satisfactory increase. The reserve fund, with the addition now being made, would stand at £90,000. Current and deposit account balances showed an increase of nearly £2,000,000, which was very satisfactory. Bills payable showed a decrease of about £42,000, while acceptances on account of customers was £49,000 higher. Loans payable against bills and securities were £310,000 less, a consequence of their increased resources in the shape of current account balances and fixed deposits. Cash on hand and at bankers, including bullion, stood at £2,196,106, the increase upon last year's figures being desirable in view of their increased liabilities on the other side of the balance-sheet. Securities stood at £236,089, being slightly more than last year owing to their larger holdings of Government securities. His anticipations as to provision for depreciation had been realised, and it was not found necessary further to write down their securities. The item of bills receivable, £2,154,000, was some £240,000 higher than last year, and loans receivable and advances showed an increase of over £500,000, chiefly owing to larger outstandings in the shape of sterling bills on the East, against which advances were made in London. The gross profits were £33,000 more than last year.

The Baghdad branch was reopened for business in April last year. Their representative found, on his arrival at Baghdad, that the bulk of the bank's property had been requisitioned by the Turkish Government, but their books were found intact, and he felt fully justified in saying that their losses as estimated had been provided for. Their business in Mesopotamia had also been satisfactory, though, owing to the disturbed conditions ruling there at present, exports from Busreh did not approach normal. There was in the meantime little or no scope for purely mercantile transactions in Baghdad, but they were doing their utmost to render assistance to the Government and the military authorities in that part of the world. Of this year's prospects he could only say that they appeared to be satisfactory, and the directors had every reason to hope that the shareholders would not be disappointed with the results.

Lieut.-Colonel J. Leigh Wood, C.M.G., seconded the motion, which was carried unanimously.

The retiring directors (Messrs. G. Bromley-Martin and J. C. Georges Bouillat) were re-elected, and the auditors (Messrs. Turquand, Youngs and Co., and Messrs. Lowe, Bingham and Matthews) were reappointed.

The proceedings terminated with a vote of thanks to the chairman, directors and staff.

COMPANY NOTES & REPORTS

Alexandria Water Company.—Meeting will be held at the company's offices, Alexandria, on June 3, at 4 p.m. Holders of share warrants to bearer desiring to attend or be represented must deposit their warrants in London before 20th instant, or in Alexandria before 30th instant, at Messrs. Barclay and Co., 1, Pall Mall East, S.W., or at the Anglo-Egyptian Bank, Alexandria, or at some other approved bank in London or Alexandria.

Suez Canal.—Holders of not less than 25 shares, who are desirous of being present or represented at the general meeting in Paris on June 3, must deposit their shares with the head office of the company, 1, rue d'Astorg, Paris, or at any of the company's appointed agents before 29th inst. Shares may be deposited in London with Messrs. N. M. Rothschild and Sons.

Subject to audit of the accounts for the year 1917, the court of directors of the Royal Mail Steam Packet Company recommend the payment of the usual half-yearly dividend on the preference stock; and a balance dividend of 5 per cent., less income tax, on the ordinary stock, making, together with the interim dividend paid in November last, a total of 7 per cent. for the year.

POWER LINE TO MOROCCO.

Regular Service of First-Class Steamers taking cargo to and from **London** and **Rabat, Larache, Tangier, Casablanca, Mazagan, Saffi** and **Mogador.** Loading Berth—Morocco Wharf, Wapping.

SAILINGS FORTNIGHTLY.

The hulls of the above steamers are insured under the Government War Risk.
For Rates of Freight, Sailing Dates, etc., apply to **THE POWER STEAMSHIP Co., Ltd.** (James Power & Co.), 158, LEADENHALL STREET, LONDON, E.C.3.

The Bank, through its Branches and Correspondents in Morocco, is fully equipped for all kinds of Banking business with that country and business between Morocco and Egypt is facilitated through its Correspondents in Egypt.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Our market this week has, on the whole, continued rather inactive, but the tone has again been quite a cheerful one. Fluctuations in prices have been rather unimportant, and the latter have been easily influenced by any small demand or offer. In Egyptian Government stocks Unifieds are again somewhat firmer at 87, and 3½ per cent. prefs. have continued very firm at 74. Both these stocks have been in persistent demand, but the business transacted has been exceedingly small, as even at the present comparatively high level sellers are very scarce.

In Bank shares, Nationals, after improving to 17½ on a purchase of a few hundred shares, are closing 1-16 firmer at 17⅜, some small sellers having since come into the market and the demand being satisfied for the moment. Agriculturals are, on the other hand, 1-16 easier at 6 5-16 on some small sales. Agricultural prefs. have been a very strong market, and are closing 1-16 up at 7 3-32 on a persistent demand which has only partially been satisfied. Anglo-Egyptian Banks have been another strong feature, and are a quarter higher at 15 7-16, with a fair amount of business passing.

In Land shares a fair number of transactions have taken place in Aboukirs round current level. In Behéras some small transactions have reduced the price to 13. Behéra preferences are 1-16 better at 4 3-16, but no business has resulted. Delta Lands, after being dealt in at 13s. 3d., and round 12s. 6d. for a fair quantity, are closing 3d. easier at 12s. 9d., while a similar decline has taken place in New Egyptians to 17s., round which price Egypt has lent support. In Sidi-Salems some business has been carried through round the current quotation, and Union Foncières have also changed hands at last week's price.

In Miscellaneous shares there has been a certain amount of activity in Markets without altering the price, but Salts and Sodas are 6d. easier at 38s. Khedivial Mails have again reacted 6d. to 36s.

In Greek securities business has again been at an absolute standstill, although there remain persistent buyers if any sellers should come along.

NOTES OF THE WEEK.

While the Allied armies are awaiting the shock of the enemy offensive on the Western front, probably the greatest service that the Allied Governments can render to the common cause is to see that they do not allow too much to go by default in the East, and that the important developments now taking place in that part of the world are properly understood. Germany may be putting forth her mightiest effort in France and Flanders, but it is equally certain that she is straining every nerve to present the Allies with as much as possible in the way of the *fait accompli* in the East by the time peace negotiations have to be undertaken in earnest. Everything points to an entirely new orientation of her policy, brought about by the collapse of Russia and the unexpected strength of the Allies in the West.

Confident that she now has Finland, Lithuania, Poland, and the Ukraine, together with Roumania, completely within her grasp, Germany is now proceeding to extend her domination eastwards as rapidly as conditions permit. A bold bid was made for the whole of Siberia at one blow by the sudden establishment of German authority in the Amur Province, which would have allowed the intervening territory to be absorbed more leisurely. But Colonel Semenoff and his handful of Cossacks have caused this plan to miscarry, and a more systematic policy of expansion has to be adopted. To the Ukraine and the Caucasus is now to be added, apparently, Transcaucasia. With this end in view negotiations are taking place at Batoum.

The position, it is true, is somewhat obscure. By the Brest-Litovsk Treaty the towns of Batoum, Ardahan, and Kars, with the territory in which they are situated, were to be handed over to the Turks. The Government of Transcaucasia repudiated this agreement, and made ready to defend their country. The Turks, however, occupied the territory allotted to them, and the negotiations that are now said to be taking place in Batoum are, no doubt, primarily intended to confirm the provisions of the Brest-Litovsk Treaty. In these circumstances the Bolsheviks would be party to them. Simultaneously, the Bolsheviks are to be found operating, nominally on their own behalf, at Baku, where their authority was also challenged by the inhabitants. They have secured possession of this town, and whatever their relations with the Germans may be, nothing short of intervention from without is likely to prevent Bolshevik rule from becoming synonymous with German. As if to leave nothing to chance, the Turks have been sent forward into Persia, by way of Ushnu and Sujgulak, to the south of Lake Urumiah, with the avowed intention of occupying Enzeli on the Caspian Sea. The seizure of this port by Turco-German forces would not only turn the Bolshevik position in Transcaucasia, if official Bolshevism adopted an attitude hostile to Germany, but would also provide a *point d'appui* for German activities against the British in Persia, India, and Mesopotamia.

Distances in this part of the world may be great, but it has to be remembered that the Germans have been covering the ground with remarkable rapidity. Rostoff is four hundred miles east of Odessa, but it was not long after the occupation of the former that the important city on the Don was entered by German troops. The distance between the southern shores of Lake Urumiah and Enzeli is less than two hundred and fifty miles, and if the Germans succeed in establishing themselves on the shores of the Caspian, their next move will be to occupy Krasnovodsk, the terminus of the railway to Bokhara, some six hundred miles towards the Indian frontier. It is not contended that a few German agents are going to undermine our Indian Empire; but the danger is that, with the ground being prepared as it is at this present time, Germany may be in a position, unless special steps are taken to checkmate her designs, to build up again her schemes of world-conquest on the foundation of her hold of the Near East and Central Asia.

It is not enough to say that these and kindred matters will be settled in the Western theatre of the war. There will be little inclination on the part of the Allies, when the war is over and the problems of reconstruction have to be faced, to devote their energies to hunting down German agents in Central Asia. The only way to eliminate German influence in this part of the world is to make sure that there will be no room for doubt in the minds of the inhabitants as to who came out " top dog " in the struggle. So long as German agents are free to roam at large, with or without a backing of Turkish troops, their mendacity and their money will enable them to place their own interpretation on what is happening in Western Europe. To secure that their stories are not believed, the agents themselves must be confronted with the manifestation of the Allies' superior strength on the spot, or sufficiently near to enable the bazaars to tell from their own

Digitized by Google

knowledge that the Turco-German cause has been shattered.

It is for this reason that the necessity for Japanese action in Siberia has been urged in these columns. Unfortunately, valuable time has been lost, and it is only now just possible that with the agreement between China and Japan all the obstacles in the way of such action have been overcome. Messages from the United States represent President Wilson as still wishing to see the Allies act on the invitation of the Russian Government; but if this entails recognition of the Bolshevik regime it is difficult to understand how common cause can be made with the cartel that has brought Russia to her present straits and is known to have acted in collusion with Germany. On the other hand, the Cossack force under Colonel Semenoff might offer the nucleus of a Russian administration for Eastern Siberia through which the Allies could treat with the saner elements in Russia proper that have not bowed the knee to Bolshevism. To regard the latter as a prodigal returning to the Allied fold is to ignore its original purpose. The Bolsheviks are concerned only with class warfare; they leagued themselves with Germany, because they hoped to be left at liberty to pursue their own aims. They have realised their mistake, and are now anxious to be rid of the Germans, but only with a view to getting on with their class war. If they accept help from the Allies, it will be with the same goal before them. Salvation will not come to Russia by such means, and the Allies have no right to assist in fastening Bolshevik control and tyranny on that unhappy country.

That no injustice is done to the Germans in attributing to them the most grandiose designs upon Central Asia, as the result of their successes in Russia, Roumania, and the Caucasus, is proved by the candour with which they are now themselves discussing their aims in this direction. A writer in *Deutsche Politik* has come out boldly with the new slogan, "Hamburg-Herat," which is to take the place of Berlin-Baghdad, and even Berlin-Bokhara. No doubt some allowance must be made for a Pan-German organ at this juncture; but that the *mot d'ordre* has been given to turn attention to Afghanistan is shown by an article of similar tendency in the once "Liberal" *Vossische Zeitung*. The object of the writer is to preach the doctrine that a German policy must be promoted in Afghanistan. This policy, which he proceeds to elaborate, takes the familiar form of urging the Afghans to burn their fingers in the fire in order that Germany may receive the chestnuts. Afghanistan is, of course, invited to help herself at the same time; but the aims in view go a long way beyond anything that the Ameer's subjects are likely to covet. The Ameer has known how to deal with German suggestions before, and it will not be lost upon him that the position of the Central Powers is now so parlous that they feel obliged to renew their overtures for Afghanistan's help. His good sense—apart altogether from his loyalty, to which abundant testimony has been borne by the Government of India—may be trusted to appraise all German bribes accurately.

In any other circumstances the completion of a swing bridge over the Suez Canal at Kantara and the consequent opening up of direct railway service between Cairo and Jerusalem would have been marked by some more outward manifestation of the importance of the occasion than a laconic announcement (delayed for several days) issued by the Egyptian Railway Administration. Certainly the linking up of Africa and Asia by the civilising influence of the steel track has to be reckoned among the by no means minor gains of the war. Railway communication between Egypt and Palestine has rendered General Allenby's expedition possible, and in due course it will simplify the settlement of the Holy Land, for the influence that will now radiate eastwards from Cairo is of a different order from that which the Committee of Union and Progress or the Turkish tax collector spread along the Hejaz line.

The construction of this bridge over the Suez Canal has not passed unnoticed in Germany. The more the appreciation of Germany's financial and economic bankruptcy, if peace brings not substantial relief from present conditions, gains ground, the greater the anxiety to discover possible means of escape from a disastrous position. Hence the emphasis laid now by the African and now by the Eastern school of thought on the necessity of adopting their respective policies. Germany would gladly appropriate the benefits attaching to both, and any antagonism between the two schools is only due to the fears of each that divided attention may prevent the full advantages that they have in view from being attained. As the linking up by railway of Germany's African colonies with Greater Germany in Asia Minor was part of the schemes put forward by these expansionists, an attempt will be made in some quarters to represent Great Britain as doing Germany's work for her; but the real feeling of the people will be more truthfully reflected in the mild lament of the *Kölnische Volkszeitung* that "Turkey and we have no reason to feel satisfaction with regard to the new bridge."

The progress in Mesopotamia reported during the past week is confined to an advance up the Tigris from Tekrit. In our last issue reference was made to the absence of news from this section of General Marshall's forces, and it was suggested that, although it was not impossible for an army to approach Mosul by river, the condition of the Tigris in these reaches made water transport a formidable undertaking. The advantages of a double line of advance are, however, obvious, and it is satisfactory to learn of a movement up stream. The point now reached is Fathah, forty-five miles above Tekrit. It is situated at the point where the Tigris cuts through the Jebel Hamrin, and consequently marks an important stage on the way to the north. Sixteen miles farther on is the junction of the Lesser Zab with the Tigris, and it was across this tributary that General Marshall's right wing operating along the Kifri-Mosul road drove the Turks on May 11.

A brief Constantinople *communiqué* announces that the Turks have occupied Khan Baghdadieh on the Euphrates. This village, which is a little more than a score of miles above Hit, was occupied by General Marshall's troops on March 26. A rapid pursuit of the Turks who had escaped capture on this occasion followed, and British cavalry advanced as far as Salahiyeh, some 130 miles up stream. It was realised at the time that the main force of the expedition could not keep pace with this brilliant dash of the cavalry; but in the absence of any serious opposition in this direction it was to be inferred that the ground won could be retained without difficulty. The event has proved that the column sent to round up the retreating enemy made no attempt to establish itself in its advanced position, but withdrew at once with its capture to the main body at Hit. If nothing more was intended, it seems unfortunate that no indication was given of what had taken place before the issue of the Turkish *communiqué*. It must have been known that the enemy had found out that the British troops were back at Hit, and by the time he had reached Anah, or a point still farther down stream, there would have been no harm in disclosing the situation, in order that the Turks might not have the opportunity of representing their recovery of Khan Baghdadieh as a military exploit.

Dr. Weizmann, the head of the Zionist Commission that recently went out to Jerusalem, set an excellent example in facing facts on the occasion of a speech delivered at a dinner given in the Holy City on April 27. In the first place, it is well known that there have been misgivings on the part of the Arab population lest the encouragement of the Zionist movement should tend to crowd them out of the country. Dr. Weizmann declared that there was land enough and room enough in Palestine to sustain a population many times larger than the present, and that all the fears expressed openly or secretly by the Arabs were due either to a fundamental misconception of Zionist aims and intentions or

Digitized by Google

to the malicious activities of their common enemies. Morally and materially, he added, it was to the mutual interests of Jews and Arabs alike to live in friendship and peace; for only under such conditions was the development of the country possible. The speech, which was translated by the Governor, Colonel Storrs, into Arabic, was made in the presence of the Grand Mufti, who in reply stated that he was convinced of the sincerity of the Zionist declaration, and hoped to work hand in hand with the Commission for the good of Palestine.

Another misconception that Dr. Weizmann was at pains to remove was that the Jews intended to take the supreme political power of Palestine into their hands at the end of the war. He cited the warnings of Albania and Russia, and said that self-government in modern times was a complicated science which no one could learn in a day. It would need a long and hard apprenticeship under well-trained and trustworthy teachers, and Zionists, he said, desired the supreme political authority in Palestine to be vested in one of the civilised democratic Powers, which should be selected for this purpose by the League of Nations. He held that it was not for him to say at present which Power it would be, but before long Jewry at any rate would make up its mind. On one point Dr. Weizmann was emphatic: the Zionists did not believe that any internationalisation of Palestine or any partition or any form of dual or multiple political control could benefit or be tolerated in the country. "Palestine in its integrity must have one just, fair, and responsible guardian, and only one." The principle, it may be laid down as an axiom, is of universal application, and it is to be hoped that no attempt will be made to violate it in any settlement after the war for which the Allies make themselves responsible.

Yesterday was the third anniversary of Italy's entry into the war, and the occasion was appropriately marked in London by a significant speech delivered at the Mansion House by Lord Robert Cecil on behalf of the Secretary of State for Foreign Affairs. The third year of the great war has been a memorable one for Italy, for it witnessed the splendid effort that enabled the Italians to rally after their retreat on the Isonzo, and their truer appreciation of the principles to which the Allies stand pledged. Within the last few months there has been a spirit abroad in Italy and, it may be said, among the peoples whose home is on the other side of the Adriatic, which has rendered possible the laying of the foundations of a lasting understanding for the settlement of South-Eastern Europe. For two years not even association in a joint struggle against a common oppressor had succeeded in accommodating the rival ambitions of Italians and Jugoslavs; but the recent Congress at Rome has proved that the old difficulties have been overcome, and it is a source of no small additional strength to the Allies that the many component parts can now face the final stages of the war without the suspicion of any gap in the solidarity of the alliance.

The Entente Powers have done well to take note immediately of the regulations imposed upon Roumania by the Central Powers in regard to the navigation and control of the Danube. They have pointed out that the clauses of the new treaty contravene international agreements and conventions to which the several States were signatories, and that in these circumstances they must consider as non-existent any arrangement made independently of the Entente Governments. If official Germany had felt the least inclination to abandon or to modify the line of policy that brought on the present war—our pacifists fondly imagine that they have discovered something more than traces of such an inclination—she would certainly have refrained from interfering with the Danube Commission. But the opportunity of rounding off the complete political and economic subjection of Roumania for the furtherance of German designs farther East was too strong, and the final touches were applied to the spoliation of the

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 8.

The High Commissioner.

The news of the death in France of the gallant son of H.E. the High Commissioner and Lady Wingate was received here with very deep regret, and their Excellencies have received expressions of sincere sympathy from all communities and all parts of the country. His Highness the Sultan, as soon as he was advised, proceeded to the Residency, in order personally to convey his condolences. Her Highness the Sultana Mother sent her Master of Ceremonies, and the Ministers called for the same purpose, while there has been a continuous stream of callers—British, Egyptian, and foreign—who have inscribed their names in the book as a sign of their sympathy.

The Duke of Connaught.

His Royal Highness the Duke of Connaught has left Egypt on the completion of his mission. Before his departure the Duke paid a visit to the Public Works Ministry, where he was received by the High Commissioner, the Minister, Sir Ismail Sirry Pasha, and the Adviser, Sir Murdoch Macdonald. His Royal Highness discussed at length with the Minister and the Adviser the new schemes for the irrigation of the Sudan and Upper Egypt, the sites for which he had recently visited. He inspected the plans for these, also the new contour maps showing the projects for the drainage and reclamation of the vast areas in Lower Egypt which are at present water-logged and unproductive; and displayed very great interest in these questions.

The Food Question.

There has for some time been talk of general food rationing. If it is decided to make such departure—which it must be admitted would be very difficult to enforce—the reason would be, not that there is any serious danger of shortage, but that a greater consumption is taking place than is really necessary, with a consequent wastage of material. It would certainly be a good thing if rationing were carried out in the hotels and *pensions*. Experience of feeding in these establishments shows that the menus contain more courses than are necessary, and that they could be cut down without any harm to the guests and with benefit to society in general. The managements would be quite prepared to conform to any order in this respect, but they cannot do anything on their own initiative, since it is their *clientèle* which insists on having full menus.

It would also not be at all a bad idea if the giving of dinners and the holding of *fantasias* were forbidden. The indigenous element and the Levantine profiteers have made so much money that high prices do not deter them from indulging their predilection for show and over-eating, to the detriment of the other, less fortunately situated, communities, who not only find it difficult to obtain necessaries, but also have to pay exorbitant prices, because the supply has been reduced and the cost consequently forced up by the elements already referred to. It would, indeed, be a very good thing for everyone if dinner-parties and *fantasia* were declared illegal. Those in high authority could assist in this, and set an example, by refraining from their usual entertaining, while the doctrine of abstemious and unostentatious living could well be taken as their text by the Ulema on Fridays in the mosques, where the explanation from the pulpit of Government instructions in times of epidemic, etc., has been found to be more fruitful in results than all the meetings of villagers held by senior

officials of the administrations concerned in the execution of these instructions.

Egypt's Part in the War.

Information which I have received shows that applications received up to date for British National War Bonds amount to just under £2,000,000. This is money directly subscribed in Egypt, and does not take account of investments made by people in this country through banks at home. It shows that Egypt is still continuing to take her part in the war, towards the expenditure of which she had previously subscribed nearly £50,000,000 in the shape of investments in war security. Applications are daily being received for National War Bonds, in favour of which an excellent propaganda is being carried out here; and the general result should be a satisfactory tapping of the considerable wealth which has accrued to this country as a result of the war.

All Saints' Church.

The annual general meeting of All Saints' Church was held, as usual, at the Residency, by kind permission of the High Commissioner, who was in the chair. The financial situation of the church has improved during the past year, thanks to larger collections, and it has been possible to allocate more substantial amounts to various church and charitable funds. His Excellency reported that progress had been made with the project for the erection of a cathedral in Cairo. As mentioned at the time in this correspondence, a magnificent site has been given by the Egyptian Government, and the late Sultan contributed £E1,000 towards the building fund. Advantage has been taken of the presence in Egypt of the designer of Liverpool Cathedral, Mr. Scott, to engage him as architect of the building which it is proposed to erect; and an amount of £E3,700 has already been collected towards the cost of the cathedral scheme, while there is reason to believe that other considerable amounts will become available at the proper moment. The present is not the time to appeal for funds or to carry out building work, but, his Excellency said, everything is being done to assure that, after the war, when the opportunity arises for a public appeal, the Cathedral Committee will be able to lay before the public a definite scheme for the erection of the cathedral according to plans which it is hoped to publish in due course. In conclusion, Sir Reginald Wingate paid a warm tribute to the honorary secretary, Mr. A. P. Bolland, who after ten years of devoted work has been compelled to resign that position owing to the onerous duties falling to him in his official capacity.

CAIRO, April 15.

His Highness the Sultan.

His Highness the Sultan continues to be most busy visiting and inspecting public institutions. During the past ten days he has visited the Higher School of Agriculture at Giza, where after making the round of the class rooms, he inspected the dairy and the fruit garden attached to the school and watched the work that the students were carrying out. Next he went to the Ministry of Public Works, where the Minister and Sir Murdoch Macdonald showed and explained to him the relief maps of the Nile and of the new irrigation works in the Sudan, which had been inspected by H.R.H. the Duke of Connaught when he visited the Ministry. Afterwards his Highness went to the Sultania Library, and was shown some of the treasures stored there in the shape of ancient papyri, manuscripts, etc. His Highness subsequently drove out to Fostat, where are the ruins of the old city established as the new capital of Egypt by Amr Ibn El Aas when he conquered the country, in 640 A.D. Very extensive excavations have been carried out on this site since 1912, and the Sultan was much interested in the account which was read to him by Aly Bey Bahgat, the Curator of the Arab Museum, who is in charge of the work. His Highness also drove up one morning to the Old Cairo Citadel, "Kalet El Gebal," where he visited several of the more interesting of the mosques and afterwards the palace where Mohammed Ali used to live. The Sultan proposes very shortly to pay a round of visits to the various private schools of note, starting with that of the "Collège des Frères." This is an entirely new departure, for in the past the private schools have not generally received any such official recognition as a visit from the head of the State confers.

Fodder and Fuel.

The Supplies Control Board has now forbidden the use of wheat and barley tibn as fuel. This is a very sound measure. The scarcity of fuel has, not unnaturally, induced cultivators to burn agricultural residue, including tibn, of which there is always a very large quantity available. On the other hand, the shortage of fodder, which is a serious matter for the military authorities, renders it essential that the local supply should be increased, and since the experts regard wheat and barley tibn as a good substitute for, or at any rate as a good addition to, the normal animal rations, it is eminently desirable that these two commodities should not be wasted as fuel, especially as tibn of other varieties, not so useful for fodder, but equally useful as a combustible, are available in considerable quantities.

As regards the fuel situation, all the problems connected with the distribution of petroleum appear to have been solved, and no further complaints are being received as to difficulty in obtaining supplies. Some further relief has now been afforded by another reduction in the price of cotton seed cake. Under the cotton seed control scheme provision was made to meet the country's requirements of edible and lubricating oil, imports of which from abroad have for some time ceased for all practical purposes; and the crushers were rationed with seed, which was sold to them at the same prices as those paid by H.B.M.'s Government. In consideration of the advantageous conditions under which they were being permitted to obtain their raw material the authorities have insisted on fixing moderate prices for the sale to the public of the resultant oil and cake, and the present reduction in the price of the latter is the outcome of this arrangement.

Although cotton seed cake has now been brought within the reach of most fuel consumers, any material relief which may be afforded in this respect to the fuel situation will depend upon the further quantities of cotton seed which H.B.M.'s Government may place at the disposal of the local crushing industry. If sufficient raw material were placed at the disposal of the crushers to meet the fuel as well as the oil requirements of the military authorities and civilian population, it would be unnecessary to import the quantities of liquid fuel and coal which are now being brought in, and a certain amount of shipping might thus be set free for more important objects. The accumulation of stocks in this country, to which reference was recently made in this correspondence, and the above-mentioned possibility of relieving the shipping difficulty would appear to be very cogent arguments in favour of this suggestion.

Sugar Exports.

The export of sugar has been forbidden, except under licence from the Supplies Control Board. Since the war the monopoly of export has been in the hands of the Société des Sucreries, who are the only refiners in the country, and who were allowed the monopoly of export in return for their undertaking to meet the civil and military requirements of Egypt and the Sudan at fixed prices, which have always been much below those ruling outside Egypt for refined sugar. No announcement has as yet been made as to whether the agreement with the Sucreries is to be varied, nor as to the conditions under which licences will henceforward be granted. Whatever is done, however, it is to be hoped that an arrangement will be made whereby the sugar Excise duty recently introduced can be made applicable to sugar exported as well as to sugar consumed locally.

Considering that the price at which Egyptian sugar is sold to the foreign markets is so very much higher than the Egyptian manufacturers' price, even allowing for freight expenses, and that the latter are being enabled, as recent balance-sheets show, to make exorbitant profits free of local taxation; and considering that the local consumers of Egyptian sugar are being made to pay a tax on every oke they consume, a fact which must tend to increase the amount available for export, it would seem only fair that the manufacturers and the middlemen should be compelled to contribute a reasonable portion of the profit that is now accruing to them

Digitized by Google

solely owing to the war and thanks to the protection afforded by the British Forces. The amount accruing to the Egyptian Treasury as a result of the extension of the Excise duty to exported sugar would be considerable; and, although there may be difficulties in the way, they should not, under the present conditions, prove unsurmountable.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, April 19.

Anniversary of Greek Independence.

The ninety-seventh anniversary of the Independence of Greece was celebrated, in perfect spring weather, on Sunday, the 7th inst. In the early morning a salute of 101 guns was fired, and the streets were soon filled with sight-seers to watch the King and his Ministers going to and returning from the Cathedral Church, where the religious ceremony of thanksgiving took place. The speech of the day was made by M. Repoulis, the Vice-President of the Council of Ministers, whose oratory always attracts a large audience; and on this occasion the Olympic Theatre, where he spoke, was the scene of a very large gathering. The King, on his return from the Cathedral, attended a meeting at the University, and in the afternoon reviewed the troops stationed here. The review attracted large crowds, and the fine bearing and warlike appearance of the troops left an excellent impression. Athens was quite *en fête*, the streets being decorated with English, French, and Greek flags, and illuminated in the evening. On this occasion messages of congratulation were sent to the Greek Government from England, France and America. In the message from the British Government the hope was expressed that the present co-operation of Greece on land and sea would cement the traditional friendship between the two peoples, and that the desire of the British Government was to make every effort so that Greece should emerge from the war with renewed force and energy.

The Forged Letter Trial.

Considerable interest was attracted last week to the inquiry into the matter of the letter published in the *Nea Hemera* shortly after the events of December 1, addressed to General Korakas and purporting to have come from M. Venizelos.

The letter said, *inter alia*, that King Constantine should be removed and that the troops be disarmed. M. Venizelos, of course, immediately denied the authenticity of the letter; but it was not until after the introduction of the present régime that inquiries were set on foot to discover the author of the forgery, and the present trial at the Court of Appeal is the outcome of that inquiry. The ex-director of the *Nea Hemera* was accused of publishing a letter knowing it to be false, and M. Meidanis, an ex-judge, was put on trial for improper judicial procedure knowing the letter to be a forgery. The trial occupied several days, and the evidence once more revealed to what extent efforts were made at that time to discredit Venizelism. The Court pronounced the letter to be a forgery, found both the accused guilty, and sentenced them to imprisonment for nine months, of which six months have already been served.

The censorship has been the object of some resentment lately, because it has withheld all newspapers from England and France, even those addressed to the Legations. The effect of a measure of this sort is to convey the impression of an alarming situation and to provide a pretext for the Royalists to aggravate matters by spreading false rumours.

Greece and the Allies.

In the Chamber recently M. Stratos, who was at one time Minister of Marine, criticised the loan, and drew attention to what he described as the financial burdens on the country. He said that these loans tied Greece to the Entente even after the war, and expressed the opinion that in the circumstances some conditions should be laid down. For instance, he thought that the question of Northern Epirus and of the contested islands should be cleared up, that Cyprus should be handed over to Greece, and that the Greek colonies in Turkey should receive some form of autonomy. In conclusion, he said that the Opposition would not, however, impede the Government in carrying out measures for the welfare of the country. Replying to M. Stratos, M. Venizelos said it was not the loan which influenced the policy of Greece to the Entente, but rather her military co-operation with the Allies, and, even more than this, her geographical position and Hellenic interests, which are indissolubly bound up with those Powers who are mistresses of the Mediterranean; and as long as Greece is opposed by her hereditary enemies and by those whose interests have always been opposed to Greek interests, she cannot change her policy. With regard to compensations, M. Venizelos pointed out that, for reasons which all the world knew, it was impossible to give any details, and he dwelt on the course it was the duty of Greece to follow in this war to prove to the world that she remained a factor worthy of respect and attention.

The Advance in Macedonia.

The advance in Macedonia by the English and Greek troops has produced much enthusiasm, and any successful operations will undoubtedly have a good moral effect on those now joining up, the further classes and reserves of officers being summoned to the colours.

In spite of an improved situation regarding foodstuffs, many of the hotels are ceasing to provide meals, thus making the restaurants still more crowded, as, owing to the difficulty of housekeeping, many families find it cheaper to take their meals at the restaurants.

The Ex-King's Treachery.

On Thursday evening the Minister of Foreign Affairs caused a little excitement in the Chamber by presenting certain documents in connection with the events of December, 1916. In October of that year M. Benazet, a French Deputy, came to Athens and had a long interview with the ex-King, who on that occasion promised: first, to demobilise part of the army; secondly, to receive favourably an application from the Allies to transfer the troops to the Peloponnesus; thirdly, to hand over to the Allies the war material required by them. These conditions were embodied in a long telegram which M. Benazet sent to the French Government, which telegram was subsequently read to the ex-King, who expressed in writing his entire approval of its contents. Constantine's subsequent action, as is known, was in direct opposition to the promises he formally made to the French Government, and led to the treachery of December, 1916.

The Commission inquiring into the actions of the Lambros Cabinet some time ago applied for these documents, but the French Government was unwilling to permit their publication as long as Constantine was not acting in any way against the Allies. However, once he had shown that his attitude was not only inimical to Greece but also to the Allies, the French Government considered themselves justified in sending the documents to the Greek Government.

CYPRUS NOTES.

(From a Correspondent.)

There has been another gap as regards incoming mails, and war telegrams have been all the more eagerly awaited.

A Well-Merited Honour.

The King has been pleased to confer the honour of membership of the Order of the British Empire upon Mr. Vrasidas D. Laniti, chief clerk to the Commissioner of Limassol, who has been for about thirty-seven years in the Government service, and for nearly the whole of the period in that office. It is the first time that such a distinction has been conferred on a native official, and its bestowal has given the greatest gratification to all, owing to the high character, the unfailing tact, and the popularity of Mr. Laniti. An excellent English scholar and zealous official, he possesses in a remarkable degree those qualities which merit recognition in the eyes of a British administration. The High Commissioner, Sir John Clauson, has conveyed to him his cordial congratulations by letter.

The Order of the British Empire was conferred last summer on the Principal Forest Officer, Mr. A. K. Bovill; and it has also been recently conferred on Mr. E. Nicolls, Director of Public Works.

The Vacant See of Kition.

Arrangements will shortly be made for the election of a prelate to succeed the Greek ex-Bishop, Meletios, now Metropolitan of Athens. The late Bishop, as well as his confrère at Papho, came from other parts, greatly to the benefit of the island Church after the deadlock which for nine years left Cyprus without an Archbishop. It is to be hoped that a wise selection will now be made of a person qualified and willing to take up the thread of the late Bishop's work with energy, as there is still pressing need for activity in the work of ecclesiastical reform, which all educated Cypriots keenly desire.

ROUMANIAN NOTES.

(From a Correspondent.)

The Question of Bessarabia.

Your readers have been kept informed of the various developments in Bessarabia. Last December a "Council of the Land" composed of 150 members, elected on universal and secret franchise, with proportional representation, proclaimed the autonomy of Bessarabia, under the name of the "Moldavian Republic," and adopted a constitution strongly reflecting the socialistic principles of the revolution. The position of the new republic within the Great Russian Federal Republic was left to the Constituent Assembly to decide; and the question of union with Roumania was not publicly raised, but was mentioned in the Press and by various leaders as a possible later contingency, dependent mainly upon the introduction in Roumania of social changes in harmony with the Bessarabian Constitution. But the new State had hardly set out to apply the Constitution it had given itself when the peace of Brest-Litovsk caused a complete change in the situation.

Bessarabia being one of the most fertile parts of Southern Russia, it was to be suspected that the Central Powers would not be displeased to see the Ukraine lay hands upon it. Confronted with that possibility, separated from the rest of Russia—from which assistance was in any case not to be expected—Bessarabia decided upon the only alternative likely to strengthen her position—namely, union with Roumania. It so happened that the Bessarabian decision coincided with the initial stages of the peace negotiations between Roumania and the Central Powers; and the latter, discovering at last a possibility of proving their professed friendship for and sympathy with Roumania without themselves paying the expenses, began to proclaim vociferously at home and abroad that they would very kindly permit the "annexation" of Bessarabia by Roumania, to compensate her for the territory lost to Austria, Hungary and Bulgaria. That was by no means approved by everybody in Central Europe. The Bulgarian Press chastised Czernin for his misplaced "generosity," and insists that Bulgaria must have a common frontier with the Ukraine (why not with Prussia?); the Hungarians are amazed at the "infantile" policy of allowing the creation of a Roumania with ten million inhabitants; and the Pan-Germans . . . but it is not worth while mentioning what the Pan-Germans think. Now that peace with Roumania has been signed, and in order to quiet roused spirits and give a warning to the undisciplined Roumanians, a message from Vienna declares that "the Central Powers will judge the question in the light of the future political attitude of Roumania. They therefore reserve their decision."

Facts versus Theory.

If it be their interest, and if they get the chance, we quite believe that the Central Powers will not hesitate to interfere with the decision of the only two parties concerned. But unfortunately for their theory that "annexed" Bessarabia was a gift from them, there are certain hard facts which form the best commentary on their insolent pretensions.

To begin with, the negotiations leading to the union were initiated by the Bessarabian leaders themselves before the principles of the peace between Roumania and the Central Powers were even laid down. Moreover, and above all, there is the fact that the pact of union was unmistakably the outcome of the Bessarabian will rather than of Roumanian compulsion. Article 1 of the Convention, for instance, decrees that the Bessarabian Assembly is to be maintained, and that its decisions "are to be accepted by the Roumanian Government." "Bessarabia retains her district autonomy and her National Assembly," proclaims Article 2. All legislation and the Budget must be passed by the latter, which also appoints the various officials through its executive (Article 3). "The present laws and local organisations of the Zemtsva and the towns are to remain in existence" (Article 5). Bessarabia shall have "two representatives in the Roumanian Ministerial Council" (Article 7). And finally we have the provision (Article 12), which prescribes a franchise basis never used before in Roumanian elections. "The Roumanian Parliament shall immediately decree the convocation of a Grand National Assembly, to which representatives will be elected by universal, direct, and secret franchise on the basis of proportional representation"—the very system prevailing at the Bessarabian elections—"which shall embody in the Constitution the above principles and guarantees."

That is an interesting and, so far, a unique example of how self-determination can work without friction or bloodshed, and with progressive effect, when not interfered with by diplomatists and generals—especially generals.

THE FREEING OF SYRIA.

(From an Occasional Correspondent.)

Cairo, April 10.

Returning Prosperity.

Both economically and administratively the constructive stage in Southern Palestine may well be said to have been reached. With commendable foresight the question of a supply of seed corn, especially in the Gaza district, was tackled immediately after the liberation of the district, and as water has been provided by gigantic effort, it is hoped that the fruits of this foresight will be reaped very soon. A double purpose will then be served: the supply of a part of the military wants, and the relief of the civil population's requirements with local produce, in the shape of grain, fruit, and vegetables. The exports of grain, chiefly barley, from the port of Gaza used to attain in years of plenty about 30,000 tons, representing, of course, the surplus of local needs. Although, after the terrors of three years of war, the inhabitants, through diffidence or despair, did nothing or little in the way of winter sowing, yet the security of British rule soon restored confidence, and late and restricted as the sowings have been, the crop is said to be unusually promising. In these times, when the problem of transport is becoming increasingly difficult, the freeing by so much of railway freightage may be readily appreciated.

After the grain crop in the early part of the summer, comes the olive crop in autumn; and, although many trees have been destroyed—some wilfully by the Turks to supply the needs of their railways, and others by the accidents of war—yet there must have remained enough to yield olives and olive oil in quantity sufficient to weigh in the balance of transport. By the irony of Fate, or rather of war, the country of olives *par excellence* has been seeking its olive oil, or rather its substitute, cotton-seed oil, from Egypt. Thanks to the permanent supply of water along a strip of fertile land on the western border of Southern Palestine, and to the existence of Jewish colonies, more or less intact, in the south, which are expected to revive rapidly under the beneficent new rule, the country may soon be expected to supply its own needs and part of those of the occupying army in the way of grain, fruit, and vegetables. This hope is strengthened by the fact of the recent visit to Palestine of the Zionist Commission. The Commission may well be trusted to help largely in bringing back to Jaffa and its suburbs, and to the Jewish colonies, their pre-war prosperity in the quickest possible time, under the helpful guidance of the British authorities, who are anxious to relieve not only the half-starved inhabitants, but also the overtaxed railway authorities.

But the problem of provisioning Palestine, which is so intimately connected with that of transport, will not be entirely solved until the region lying east of the Jordan is cleared completely of the Turk. The occupation of Kerek by the Arab troops, their recent successes along the railway line between Maan and Medauara, and the brilliant British dash on Amman all augur well for such a happy consummation. In connection with this question of transport, it may be mentioned that at the outset even the accumulated stores of the Syria and Palestine Relief Fund could not be dealt with, anxious as the authorities themselves were to afford this relief.

Turkish Methods—and British.

The work of administrative reorganisation has already been begun, and what the Turks were unable to do in centuries of peace the British are accomplishing in spite of the stress of the greatest war in history. Jerusalem is to be endowed at last with a supply of pure water, and officials from the Egyptian Tanzim Department have already made the preliminary study for the re-laying out of the town on modern, and sanitary, lines. The turn of Jaffa and other lesser centres, as well as of the Jewish colonies, will soon come; and the financial and technical co-operation of Zionist associations may be expected to help largely towards the speedy accomplishment of this work of material reform. In the other departments of civil administration—judicial, fiscal, municipal, police, and gendarmerie—all that is possible

Digitized by Google

is being done in the way of preparation within the limits of martial law.

The Syria and Palestine Fund.

The part played by the Syria and Palestine Relief Fund in this work of economic reform is such that a brief survey of its activities should in this connection be made. The data have been extracted from a report drawn up by the manager in Cairo, who was kind enough to furnish me with a copy.

Thanks to the intelligent foresight of the originator of the Fund, Bishop MacInnes, the machinery for help was started working a year ago—*i.e.*, a good many months before Southern Palestine was liberated and could receive relief. The co-operation of representatives of twelve British societies and of several business men was secured, and correspondence was started with America, and as a result a generous supply of workers and funds was procured. Thus, considerable stores of uncut material and garments for women and children, as well as blankets, drugs, and hospital and dispensary equipment were ready to be sent off as soon as the way opened up. Khan Yunis was the first stage on the long road of distress, and although this was but on the border-line, the accumulated stores were quickly swallowed up, and the magnitude of the task that lay before the Fund soon loomed up in its true proportions. The worst period through which the inhabitants passed was that following the immediate entry of the British troops. Supplies from the Turkish side were naturally cut off, while from the British side none could be had at the initial stage, when all the means of transport was hardly sufficient for military requirements. The position was such that even the Relief Fund could not be given the means for the transport of about 300 tons of foodstuffs and other material; and as sea-transport by privately-owned vessels in the early part of winter was costly, the Fund preferred to keep the stuff in the hope that the authorities would soon find their way to carry it.

The Fund followed the sound principle of making gratuitous distributions only where it was ascertained that the recipients were quite unable to pay for the stuff; in other instances it was sold at cost price, and thus beggary was discountenanced, and the danger of pauperization avoided. This system worked so well that at one time the sum of £3,000 came back to the Fund. The supply of food was not the only problem. As the Turks had taken away all the pre-war equipment of hospitals, and no Europeans were left, the sanitary conditions, which even in peace times left much to be desired under Turkish rule, sank to their lowest level; and this, combined with malnutrition, want of clothing, and so forth, had greatly favoured the propagation of disease. First, attention was of course directed to the establishment of orphanages, and at Jaffa 250 children are now well cared for. At Jerusalem there is another orphanage with 400 girls, and another boys' orphanage is in working order. These numbers are expected to be considerably increased now that, on the withdrawal of the British troops from Es Salt, about 3,500 of the inhabitants, mostly Christians, and including 1,600 Armenian deportees, have been brought over to the Jerusalem area to save them from Turkish vengeance. It is said that on the Turks' return to Es Salt they condemned to death 300 of those who were unfortunate enough to remain behind. As the Es Salt refugees have been unable to carry anything away with them, the strain on the Relief Fund, already severe, was suddenly much increased.

The scope of the Fund embraces also dispensary and school work, soup kitchens, and the providing of industrial work for women and girls. Hundreds have been employed already, and many more are waiting to be supplied with material. With the constant influx of refugees the number is progressively increasing. Although the energy of the Fund's workers was concentrated at first on the principal centres of Jaffa and Jerusalem, it was not long before it extended to the outlying villages, such as Bethlehem and Ramallah. In both of these places the once flourishing industries of mother-of-pearl and olive wood work, as well as embroidery, are being helped into new life again. Hebron has marked the last advance of the army of relief workers. The recent arrival from Egypt at Palestine of motor-cars and lorries will go a long way towards solving the problem of transport, which so far has hampered the activities of the Fund.

The Bishop of Jerusalem's unflagging efforts have been crowned with the highest success. The sympathetic and devoted collaboration of Lady MacInnes must have been an invaluable aid in enabling him to pursue so indefatigably his work along the rugged steps that marked the first stage of this great enterprise. At the administrative base in Cairo the work of management has been entrusted to the proper man. Mr. Marshall Fox, apart from his pre-war experience, had the opportunity to acquire additional knowledge of relief work in the Armenian Refugees' Camp at Port Said, where he assisted that gifted organiser Mr. Hornblower. This local experience meant probably the saving of hundreds of pounds in the purchase of material and the reduction of expenses. Those who take any interest in the Holy Land and in any movement meant to alleviate the sufferings of its unfortunate inhabitants cannot find a better instrument for their charitable efforts than this Fund.

EASTER CEREMONIES IN JERUSALEM.

There was a time, and that not so very long ago, when the ceremony of the Holy Fire in the Church of the Holy Sepulchre at Jerusalem gave rise to unedifying scenes, and there is no possible doubt that the Turkish system of dealing with the ceremony either provoked or connived at serious disturbances of the peace within the church.

This year, however, amid an entire absence of military force, the Military Governor of Jerusalem, ably assisted by Haddad Bey, the Chief of Police, maintained public order and secured a decorum on the part of the exceedingly diverse congregation which goes far to substantiate the theory that the Turks deliberately gave rein to manifestations of religious exaltation on the part of excited enthusiasts in order to bring discredit upon Christians, and to keep alive old feuds, which had their origin in the days of misunderstanding and oppression.

The ceremony of the Holy Fire of 1918 passed without any incident which could give rise to complaint from the members of any of the numerous communities represented in the Church; and the confidence reposed by the Military Governor in the good sense and self-restraint of the people was fully justified. A few police sufficed to keep clear the passages for the various processions whose progress in times past had strained the resources of a numerous force of Ottoman troops, and when in the excitement of the distribution of the Holy Fire the crowd pressed unduly upon Mgr. Porphyrios II., the Archbishop of Sinai, who was acting for the absent Orthodox Patriarch, the Military Governor in person restrained the people by a simple motion of the hand, and by this action dispelled for ever the legend that the presence of Turks is necessary to maintain order in the holy places.

SERBIAN IMPORTER CHARGED.

At the Mansion House on May 17, S. Simitch, a Serbian, was summoned for obtaining a cheque for £2,500 from William Duckworth by alleged false pretences. The defendant, who pleaded "Not guilty" and reserved his defence, was committed for trial and allowed bail.

The case for the prosecution was that in April the prosecutor, an essence and chemical manufacturer carrying on business in Lime Street and at Manchester, agreed to purchase 200 lb. of saccharine for £3,100 from the defendant, an importer and commission agent in Great Tower Street. The agreement was that Mr. Duckworth should send tne defendant £2,500 on account of the purchase, that Mr. Simitch should forward him the delivery order, and that the balance, £600, should be paid immediately the goods were in Mr. Duckworth's warehouse. Mr. Duckworth sent the defendant a cheque for £2,500, but the saccharine was not delivered to him. The prosecutor's London manager said that on May 8 he asked the defendant about the saccharine. The defendant made a statement about being disappointed by a firm from whom he proposed to buy 200 lbs. of saccharine. On being asked what he had done with the £2,500, the defendant said :—"I don't know. I have been a damned fool. I lost £400 or £500 playing cards. I cannot tell you what has become of the balance, but it is all gone."

In order to maintain the food supply of Egypt, the Supplies Board is making compulsory the cultivation of cereals and vegetables on waste land, vacant building sites, etc., within certain specified areas.

Sixty well-known Greek families and many other Christians have been deported from Mersina, Turkey, on suspicion of espionage.

At Buckingham Palace, on Monday morning, the King inspected a party of the Indian Labour Corps, consisting of officers and non-commissioned officers of the North-West Frontier and Burma Companies, under the command of Captain H. L. Holman-Hunt and Lieutenant F. C. Smith, Indian Army Reserve of Officers, who are on leave from the Western front. At the inspection his Majesty invested Captain H. L. Holman-Hunt with the Insignia of a Companion of the Most Eminent Order of the Indian Empire.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at Devonshire Square, London, E.C.2.

ISLAM IN RUSSIA SINCE THE REVOLUTION.

Mr. Arnold Toynbee, lecturing before the Central Asian Society on Wednesday, said that in Russia, before the revolution, Islam was an unknown field. The reason for this was that under the old regime, although Russia was teeming with national life, this was all suppressed, and the country presented itself to the outer world politically not as a nation or commonwealth of nations, but as a military machine. Russia, nevertheless, was about the third Islamic Power. The number of Moslems under its rule—nineteen millions—was hardly less than that under France, and greater than that under Holland or any independent Moslem State. The sixteen million Russian Moslems who spoke Turkish were about double the number of those who spoke that language in the Turkish Empire. Russian Moslems were typically transitional, and included in their ranks the Tatars of the Kazan district, who were more Europeanised than any other Moslems; the peasants of Firghana, who specialised in the production of cotton for the Russian mills, primitive peasants producing within their own oases all the necessaries of life, and nomads of the steppes; while, in Baku, Moslem Tatars had shared in the development of the oil industry, and a certain number of them were very rich, self-made men With these divisions there were certain great principles of unity. The first of these was Islam, in which the sense of brotherhood had remained extraordinarily strong—all the stronger because it felt itself to be on the defensive against penetration from Europe. The second was the Russian State. The great lines of railway which connected the various parts of the Russian Empire also played a great part, but most important of all was the economic reciprocity which created an interdependence of the different countries under Russian rule. On the other hand, while the Russian conquest was fundamentally a unifying force, it was the policy of the old Russian Government to keep the various Moslem communities disunited—there was one centre for the Tatars of the Volga, another for the Bashkirs, and so on—and there were great differences of interest. The Kirghiz and the Bashkirs were directly threatened by Russian colonisation, while Firghana and Baku profited by the Russian conquest.

After the revolution, the first tendency that became apparent was one towards unity. The Tatars of Kazan, who had been longer under Russian rule than any other Moslems, and who entirely felt themselves to be citizens of Russia, led a movement for cultural autonomy. They wished the Moslems of Russia to govern their own religious affairs, to have schools in their own languages, and so on; but to regard themselves politically as citizens of Russia, and, instead of trying to form political organisations of their own, to feel themselves Russian citizens, and to try, by working inside Russia, to exercise as great an Islamic influence as possible. This tendency prevailed during the first period after the revolution. In April, 1917, there was a Moslem conference in the Caucasus, when the Shia Sheikh-ul-Islam and the Sunni Mufti—the heads of the two communities in the Caucasus—publicly embraced in the pulpit; and there was even talk of abolishing the separate ecclesiastical organisations and uniting all the Moslems of the Caucasus, Sunni, and Shiah into one body. In the following May there was a Moslem conference at Moscow, at which all the Moslem groups in Russia were represented by 800 or 900 delegates, of whom about 100 were women: This conference had appointed an all-Russian ecclesiastical council, and produced a weekly bulletin, not confined to the affairs of the Russian Moslems, but showing a great interest in the course of the Russian revolution. Politically, the movement of which this conference was part was pronouncedly Liberal, but its dominant note was Islamic brotherhood, the Russian State being taken as the best instrument for the nineteen million Russian Moslems to realise their brotherhood. The Moslem deputies worked with the Cadets until they broke with them over the question of Constantinople. Since then they had gravitated towards the revolutionary groups.

A second tendency had shown itself among Russian Moslems, that towards federalism with political and territorial autonomy. The first sign of this had been among the mountaineers of the Caucasus. The Daghestanis held a conference, at which they complained that the Azerbaijanis were trying to Turkicise the Caucasus. Their main idea was a State of their own, which might be federalised with Russia or not. At Bokhara, also, which had been autonomous, even under the Empire, there was a local revolution; and the Khan was forced to grant a constitution. Then there was a reaction, led by mullahs, and given a fanatical turn. It had been put down, but was symptomatic of a tendency which was steadily winning—a tendency to political autonomy at the expense of pan-Islamic unity within the Russian State.

In the course of a short discussion that followed, Mr. Ispahani said that in the time of the Tsars he had lived for years among the Russian Moslems. In those days they had always complained that they were not allowed to practise their faith freely or educate their children in their own way. The present Russian State allowed this, and there might be more contentment in consequence.

NEWS IN BRIEF.

Tag Day in Toronto for the Armenian relief realised £2,400.

Archbishop Antonius, formerly Archbishop of Zhitomir, has been appointed Metropolitan of the Ukraine.

The Egyptian Prisons Department has decided to employ some of the criminals from the Manshieh Prison upon repairs at Abdin Palace.

The Metropolitan of Athens has been to the front to bless the armies and address the troops, by whom he was greeted with indescribable enthusiasm.

The French hospital ship "Lafayette," which arrived at the Piræus recently with a number of Greek wounded on board, has been visited by enormous crowds.

The Czecho-Slovak National Council in Paris, with Professor Masaryk, Dr. Benes, and Colonel Stefanik at the head, who are organising the Cezcho-Slovak Army in France, have just opened a London office at Thanet House, 231, Strand, W.C.2.

Silver medals have been conferred by the Sultan of Egypt on ten members of the Labour Corps and fourteen members of the Camel Transport Corps, and bronze medals on twenty-three members of the Labour Corps and 100 members of the Camel Transport Corps. Practically all the recipients are natives.

Reuter's Athens correspondent reports (May 20):—The insurrectionary movement at Aidin (vilayet of Smyrna) is extending to Menemen, near Smyrna. At Manissa (north of Aidin) 2,000 Turkish troops which had been sent to quell the disturbances there deserted. Numerous desertions are also reported from the coast garrisons. The repression of the movement has been entrusted to Essad Pasha of Yanina.

Reuter's Amsterdam correspondent reports (May 22):—The *Weser Zeitung* announces the return to Germany of Captain Kurt Wagner, of the Hamburg-Amerika Line, who, it says, participated in Captain Niedermayer's mission to Afghanistan in 1914 and, after spending two years in Afghanistan, returned viâ Northern Persia, disguised as an Afghan.

A lecture-recital in aid of the Serbian Relief Fund will be given at the Physical Training College, Battersea Polytechnic, on Saturday, June 1, at 2.30, by Miss Vivian Edwards, on the "Ballads and Folksongs of Serbia." It will be illustrated by songs by Miss Edwards and by kolos or peasant dances by the students of the college in costume. Tickets (reserved and unreserved) have been fixed at popular prices, and can be obtained at the Battersea Polytechnic. (Victoria, 123.)

At a meeting of the Senate of the University of London, held on the 15th inst., an offer from the Greek Government of an annual grant of 7,500 drachmas for the endowment of a Chair in Modern Greek at King's College was gratefully accepted, as was also one from the Committee of the subscribers to the Koraés Chair of Modern Greek Fund of a benefaction amounting to not less than £600 a year in the first place for the endowment of a Professorship of Modern Greek and Byzantine History, Language, and Literature, to be tenable at King's College, the surplus to be applied to the provision of a library or scholarships or lectureships in the department to be attached to it.

Addressing the Indian Empire Club at the Knightsbridge Hotel, Lord Lamington said that the handful of English officials in India were a distinct blessing, because they were capable and unbiassed, and conducted the administration for the benefit of every individual Indian, even of the lowest caste. On the other hand, it was difficult to realise, except by residence, what tremendous pressure was put upon the Indian official to pay regard to his family interest. Although he did not agree with sending out Mr. Montagu, he would admit that he was wrong in that view should it turn out that the Minister's report indicated the dangers which would come from any large extension of Home Rule in India.

The Rome correspondent of the *Morning Post* writes:—Count Bosdari's successor as Italian Minister at Athens is Baron Romano Avezzana, the present Italian representative at the Montenegrin Court. He is a Neapolitan, and was popular in Montenegro. As he was at one time in the Italian Consulate at Smyrna, and at another in the Legation at Belgrade, he has had experience of the Near East. He has also been at Tokyo, Washington, and Teheran. General Avezzana was a well-known General of Garibaldi; consequently his relative has Garibaldian traditions, in accord with Italy's new policy in the Balkan Peninsula. His wife is an American—and wives are very important diplomatic assets.

NEAR EAST BOOKSHELF.

"LA NAVETTE"—"CARRY ON!"*

It was the morning (Monday, April 29, 1918) to review this very remarkable book; so, almost certain of our quarry, we turned to *The Times* correspondent's account of the storming of Kemmel Hill, and, unlike "barbarous Don Alfonzo," who did not find what made him "go on so," we found this: "Nine divisions in all were used, the two first-named being north of Kemmel, the 56th at Kemmel itself." Of course! Be it genius, whose vagaries are so like roulette, or be it sheer force of character, we had the canny feeling that, as our author, a simple German non-commissioned officer, was a unit of the 6th company of the 2nd battalion of the 88th regiment of the 42nd brigade of the 56th division, his division at least must have had the post of honour before Kemmel Hill. The effect of this discovery rendered us as happy as Doña Julia before she took the veil and penned her immortal letter of transcendent anguish.

For we had followed our author, in his German military career from October 1, 1913, to the outbreak of the Great War, then through Luxemburg, to the Meuse, to the Marne, before Rheims, in Artois, Picardy and Champagne, in Galicia, at the Kommandantur of Valenciennes, at Verdun, in the hospital at Frankfort, to the catacombic trench-digging on the Germano-Danish frontier prepared for a British landing, and so—"fed up"—in December, 1915, lightly over the Danish frontier into rest and freedom from Prussian militarism. This is one of the gems of war literature. We see German battalion life in the first two years of this war, naked and unadorned; the good and the bad; the courage and the cowardice; the carnage and the miraculous immunity; the pillage, the lust, the arson, the murder, the massacre, the debauch, the deliberate and justifiable turning of Prussian guns on treacherous Austro-Hungarian infantry, the respect for the Western, the contempt for the Eastern enemies; the fasts and the orgies, murmuring, mutiny, madness—the whole hell of it. Where every page is of compelling interest in what amounts to a grand indictment of Prussian militarism by a simple soldier who is tired, but no traitor, take this:—

As concerns the German ladies of the Red Cross, I am bound to say that they make life hard for the English and the Germans, but they cuddle and spoil the French like little children. I had the proof at Frankfort. The lady who looked after the French and myself was the wife of Dr. S——, who was at the front. She gave the lieutenant absolutely everything he wanted—even what the doctor forbade. To me she refused almost everything. As she spoke a little French, when her patient was not asleep she came and had a chat with him. The Frenchman, who had noticed that she refused me everything, told me he would ask her for anything I wanted as though it were for himself, so that all my wishes were supplied without her dreaming of it. She did not know I spoke French, and thought she need not worry about me when she chatted with her lieutenant. She asked him about Parisian life, especially about the women. "Don't you regret your sweethearts? It must be quite sad for a young man like you to be separated from his little girl," etc., she would purr. I, who understood it all and saw her little game, amused myself enormously in my bed, and had to fight hard not to laugh because of my wound. . . . Mme. S——, having discovered that I knew French, had me moved into another room, where I was tended by a male nurse.

Or this of the craven Lindwurm, our author's battalion chief in Galicia, who feared not only the enemy but the fleas, and lived alone and dined alone and allowed no one to come within six feet of him:—

Loffelhardt and I had a good idea. We put a certain number of these insects (very Polish ones, apparently) in a half-opened match-box, which we threw on his bed. . . . Lindwurm asked us to dine with him—a thing that had never happened before. "It's no use living alone," he told us, "for some day or other I shall end by catching fleas myself. It seems to me inevitable." It was comic to see him scratching now his arms, now his neck, and now his legs during dinner. "Gentlemen," he said at last, "I believe I've got fleas, but I cannot understand how it can be, for I have so much insecticide powder," etc.

"La Navette, alas," as M. Louis-Paul Alaux says in his preface, has now stopped. The German armies no longer swish and swash from East to West and West to East. It is all West now. But this fortuitous booklet helps us to keep a victor's gaze fixed unbendingly on Over-Rhine. It is to be hoped that Feldwebel C.'s story will have a great circulation in Germany and Austria.

BY THE TWIN RIVERS.†

This is, we believe, the first book issued from the Government Press at Busreh. It sets a standard which, in regard to matter, at least, it will be hard to maintain; while the printing and binding are, in the circumstances, extremely creditable.

The first half of the little volume contains a number of essays upon such subjects as "The Basis of Government in Turkish Arabia," "The Shiahs and their Position in Irak," and "Star Worshippers of Mesopotamia," written, as the Preface informs us, "by persons with special knowledge of the subjects dealt with." The second part is given up to half-a-dozen papers written by Miss Gertrude Lowthian Bell, and grouped under the heading "Asiatic Turkey." It is all good work and extraordinarily interesting, and the book cannot be ignored by anybody who is interested in Mesopotamia. The information given is sound, and the views expressed—though they may not please everybody—are usually equally sound. Moreover, one is delighted to find that the practical men who contribute the anonymous essays can spare time for what may be called the native point of view. Thus, in the second essay, we find the writer declaring—quite truly!—that the desert Arabs cannot be hastened into the adoption of European methods. And he adds:

Whether that which we have to teach them will add to the sum of their happiness, or whether the learning of inevitable lessons will bring the proverbial attribute of wisdom, the schooling must, if it is to be valuable, be long and slow. In our own history from the Moot Court through Magna Carta to the Imperial Parliament was the work of centuries, yet the first contained the germ of all that came after. The tribes of the Irak have advanced but little beyond the Moot Court, and should the shaping of their destinies become our care in the future, we shall be wise to eschew any experiments tending to rush them into highly specialised institutions—a policy which would commend itself only to those who are never wearied by words that signify nothing.

One wonders whether the writer had the word-spinners at Westminster in mind when he penned that last sentence! In any case, the advice given is excellent, as those who know the country and its people will agree. It is precisely those who have such knowledge who will best enjoy these papers, and who will find in them information that will fill the gaps which are so plentiful in the knowledge of even the best-informed traveller

Miss Bell is on ground that is comparatively familiar to Englishmen when she writes of Syria, the Lebanon, and Palestine. But all that she has to say is worth reading, and, as always, she writes most gracefully. Of Baghdad of to-day she says (p. 126):—

Broken, sunken, with ragged streets where the Turks cut thoroughfares through the town, but unspoilt by the vulgarities of Europe and the grimaces of the Levant, Baghdad lies in our hands as a trust and an opportunity to grow, if we will, into a splendid example of modern Arab civilization.

May those vulgarities of Europe long be kept at a distance from the City of the Khalifs! But one has one's doubts. Miss Bell herself writes:—

What we desire in Baghdad is the earliest opportunity for setting the ball of commerce rolling. With a population which will instantly raise its standard of living and a soil the undeveloped resources of which are ample to provide for enhanced requirements, our economic future need cause no anxiety.

A point that is clearly brought out is the fact that Mesopotamia has suffered little, if any, material damage from the war. Nowhere can we begin more speedily to make good the immense losses sustained by humanity. Indeed, we learned the other day that the work has already been begun.

A very satisfactory part of Miss Bell's study is that in which she describes how the Yezidis, who have themselves "suffered a long sustained persecution at the hands of their neighbours, Moslem and Christian alike," are now sheltering in their rocky strongholds several thousand Armenian women and children rescued from the Turk. Thus do the "Devil Worshippers" give the disciples of Kultur a lesson in humanity! It is good, too, to find the author writing that "there is little or no fanaticism among Arab Mohammedans," and that there has been no persecution of the Armenians in the Arab provinces. We can warmly recommend the book as a whole to all who wish to know what the Mesopotamia of to-day is like.

The Earl and Countess of Bessborough spent Whitsuntide in Ireland.

M. Michel Gavrilovitch, formerly Serbian Minister at the Vatican, has left London for Paris.

Lord Robert Cecil, M.P., is quite recovered from his recent chill, and is back at the Foreign Office.

Lady Ward, widow of Sir W. E. Ward, K.C.S.I., has left Ealing for 1, Gore Street, Queen's Gate.

Second Lieutenant C. R. R. Sefi, son of Alexander and Mrs. Sefi, is now a flying officer in Palestine.

The Earl and Countess of Yarborough are now at their residence in Arlington Street, where they will be for some time.

The new Duke of Northumberland (Earl Percy) was for a time attached to the Egyptian Army. He saw service in the Sudan in 1908, and was awarded the Egyptian medal and clasp.

Lady Pedler, 28, Stanhope Gardens, S.W., sends her heartfelt thanks to all kind friends for their beautiful flowers and kind letters of sympathy and inquiries. She hopes to acknowledge all personally later.

The Princess Towkieh, daughter of the Sultan of Egypt, has sent a sum of £E400 to the Pearl Necklace Fund which is being raised under the patronage of Lady Wingate.

In the Ukraine M. Doroshenko has been appointed Acting Foreign Minister, Professor Sienkovski Minister of Worship, and M. Lerche, former President of the Finance Committee of the Third Duma, Director of the Kieff Credit Society.

An engagement is announced between Captain Hugh Arthur MacMullen, M.C., the Royal Irish Fusiliers, only son of the late Major G. R. MacMullen, Indian Staff Corps, and Phyllis Grace, third daughter of the late H. E. Haddon, Indian Civil Service.

The marriage of Major Cyril Brittan Hosegood, R.E., son of S. C. Hosegood, Rockleaze, Bristol, with Sybil, daughter of James Stanes, Coonoor, India, will take place at the parish church, Westbury-on-Trym, near Bristol, on Wednesday, June 12, at 2.30 p.m.

The marriage of Lieut.-Colonel P. S. Lowis, D.S.O., R.G.A., second son of the late Colonel Ninian Lowis, and Miss Marie E. Currie, twin daughter of the late Robert George Currie, Bengal Civil Service, took place at St. John's Church, West Ealing, on Saturday.

King Nicholas of Montenegro on Sunday concluded a visit to Italy, where he had been to see his daughter, Queen Elena. During his stay (Reuter's Agency is informed) he visited the Italian front, reviewed two infantry divisions, and witnessed some naval manœuvres.

On May 8, at Bangalore, Madras Presidency, the marriage took place of Captain Adrian D. Stoop, Queen's R.W.S., eldest son of Mr. and Mrs. Fred C. Stoop, West Hall, Byfleet, to Audrey Deline, only daughter of Mr. and Mrs. F. W. Needham, of Jaidebpur, Dacca, India.

The marriage of Lieut.-Commander Harry Charles Lukach, R.N.V.R., Commissioner of Famagusta, Cyprus, only son of Mr. and Mrs. J. H. Lukach, London, to Joyce Evelyn, only daughter of Captain J. L. Fremlin, 19th Lancers (Fane's Horse), and Mrs. Fremlin, of Mortimer, Berks, was solemnized at St. Helen's Church, Larnaca, Cyprus, on April 21.

The marriage took place on Wednesday, at Simla, of Lieutenant-Colonel Edward Tennant, M.C., Scots Guards and R.A.F., eldest son of Francis Tennant, of Innes House, Morayshire, and grandson of the late Sir Charles Tennant, Bart., of The Glen, and Georgina Helen, eldest daughter of General Sir George Kirkpatrick, K.C.S.I., C.B., Chief of the General Staff, India, and granddaughter of the late Sir George Kirkpatrick, K.C.M.G., Toronto, Canada.

Mr. T. W. Haycraft, Chief Justice of Grenada, who was for many years President of the District Court of Larnaca, Cyprus, and subsequently in Mauritius, is now in London on leave. His only son, Captain T. Haycraft, R.E., who was severely wounded in France, is now again at the front.

General Sir Reginald and Lady Wingate hope that all those who have so kindly sympathised with them in their great sorrow will accept this expression of their heartfelt thanks, as they regret that at present they have found it impossible to answer the many kind letters they have received.

The engagement is announced between Lieut. St. Clair, M.C., Argyll and Sutherland Highlanders, attached R.A.F., only child of Mr. A. St. Clair, Priory House, Blakeney, Norfolk, and Miss Themer Langley, only daughter of Mr. John Langley, Under Secretary of State for Agriculture, Egyptian Government.

The marriage arranged between Harold L'Estrange, Captain, R.A.F., eldest son of the Rev. C. E. and Mrs. Tyndale-Biscoe, Srinagar, Kashmir, and Elsie May, eldest daughter of Major J. S. and Mrs. Crone, Wivenhoe, Coatham, Redcar, Yorks, will take place quietly at Christ's Church, Coatham, on Saturday, May 25, at 10.30.

The Athens correspondent of *The Times* states that a bazaar, organised in Athens by Lady Granville, wife of the British Minister, for the benefit of children of Greek Reservists, was a complete success, and the proceeds amounted to over £8,000. M. Politis, Minister for Foreign Affairs, has written to Lady Granville a letter of thanks on behalf of the Greek Government.

A Cyprus correspondent writes:—

There is much sympathy for Mr. E. McDonald, Commissioner of Kyrenia, and Mrs. McDonald, who have received news of the death of their only son.

The Chief Medical Officer, Dr. R. Cleveland, is on the sick list. During his absence on leave in England his duties were carried out by Dr. E. Corsellis, District Medical Officer at Limassol.

The office of the Registrar-General, who directs the Land Registry in Cyprus, is vacant owing to the retirement of Mr. F. Ongley. Among the candidates for the appointment is Mr. Dunk, the Assistant Registrar-General.

APPOINTMENTS, PROMOTIONS, ETC.

Temp. Kaimakam W. F. M. Bagshaw Bey, Assistant Director of Ordnance and Inspector of Explosives, Egyptian Army, has been promoted to the rank of Kaimakam.

El Lewa M. R. Kennedy Pasha, C.M.G., D.S.O., Director of Works, Sudan Government, has been struck off the strength of the Egyptian Army with effect from March 12.

Mr. G. Greathead, Assistant Director of Works, 2nd Circle of Irrigation, and Mr. G. Atkinson, Assistant Director of Works, Main Nile Irrigation, have been promoted Directors of Works.

Captain S. G. Kermack, Royal Field Artillery, has been taken on the strength of the Egyptian Army as Special Service Officer with the rank of Bimbashi and posted to the Sudan Government.

Major F. J. E. Archer, Norfolk Regiment, has been attached to the Egyptian Army as a Special Service Officer, granted the temporary rank of Bimbashi, and his services placed at the disposal of the Sudan Government.

Major R. Stevens, Captain G. Anson, Captain H. McD. Pollock, R.A., and Lieutenant R. White have been taken on the strength of the Egyptian Army as Special Service Officers, with the rank of Bimbashi, and attached to the Sudan Government, the Department of Works, the Artillery, and to the 15th Sudanese respectively.

Under date of May 21, the *Morning Post's* Paris correspondent reports:—Dr. Angelesco, the Roumanian Minister in Washington, who has just arrived in Paris, has forwarded his resignation to the Marghiloman Government. M. Misu, formerly Roumanian Minister in London, is staying at Berne. M. Také Jonescu is expected in Paris on his way to London.

The *Morning Post's* Rome correspondent reports that the Montenegrin Government has appointed General Gosdenovich to be its first diplomatic representative at Washington, where, in view of the large number of Montenegrins and other Southern Slavs in the United States, it is intended to establish a Montenegrin Legation. The Government will shortly nominate as Minister in London one of two Montenegrins whose names are under consideration.

The King has given permission for wearing the insignia of the following decorations:—

Order of the Nile—Grand Cordon.—Sir W. E. Brunyate, K.C.M.G., Judicial Adviser to the Egyptian Government.

Class 2.—Mr. M. Sheldon Amos, Acting Judicial Adviser to the Egyptian Government.

Class 4.—Mr. R. M. C. Moss, ex-Assistant Chief Engineer of Domains and Expropriations, Egyptian State Railways.

Heritage Group

Colonel Frederick Firebrace, R.E., of Bankton, Crawley Down, Sussex, chairman of the Great Indian Peninsular Railway Co., and a director of the Grand Trunk Railway, left property valued at £234,297.

The Hon. Sir Bernard Eric Edward Barrington, K.C.B., of The Old Lodge, Wimbledon Common, Under-Secretary of State for Foreign Affairs until 1907, left unsettled estate valued at £16,244.

The Elsie Inglis Unit of the Scottish Women's Hospitals, which left London at the end of February, reached its destination on the Macedonian front on April 1. The Jugo-Slav Division of the Serbian Army, to which the Elsie Inglis Unit is attached, has been in severe fighting since then, and the wards are now filled with sick and wounded brought straight from the front.

OBITUARY.

Colonel Thomas Turner, late of the Cameronians (Scottish Rifles), died on Sunday at Brooklyn, Frimley, Surrey, at the age of seventy-nine years. He obtained his first commission in 1855, and served with the Abyssinian Expedition in 1868, for which he had the medal.

Major-General John Swiney, Madras Staff Corps, has died at Sandford Lawn, Cheltenham, in his eighty-seventh year. All his military career, which began in 1849 as an ensign of the Madras Native Infantry, included service in the suppression of the Mutiny, and ended in 1890, was spent in India.

Lieutenant Edward Terence Heard, R.A.F., died on the 17th inst. from injuries received whilst flying. Formerly of King Edward's Horse, and of Bahr-el-Ghazal, Sudan, Lieutenant Heard was the only son of the late Edward Heard and of Mrs. A. F. Heard, of 31, Dorset Square, N.W. He was 28 years old.

We regret to learn of the death of Mr. Walter Snow, manager of Messrs. Cook's Nile steamer dockyard at Boulac, Cairo. Mr. Snow was a typical, hard-working Englishman, who knew all that was to be known in regard to his work, and could run, build, repair, and cater for the Nile fleet. He was a prominent Freemason, a generous friend, and an excellent manager of native labour. He leaves a widow and two daughters.

Colonel the Hon. Charles Byng died last Friday, aged sixty-nine. He was the son of the second Earl of Strafford and brother of General Sir Julian Byng. He saw service in the Sudan Expedition (1884-5). He took part in the actions of Abu Klea, El Gubat, and Metammeh, and the convoy attack of February 14, and was mentioned in despatches, received the medal with two clasps, the bronze star, and the brevet of lieutenant-colonel.

The death took place last week at a nursing home in London of Colonel George Philips, late Colonel of the 4th Hussars, and one-time Adjutant-General to Lord Wolseley. Colonel Philips, who was in his 82nd year, served in the Crimean campaign in the 49th Regiment, and afterwards in the 2nd Queen's Royals. He was a brother of Mr. F. C. Philips, the novelist, and his second wife was Lady Redhouse, widow of Sir James Redhouse, K.C.M.G.

News was received in Egypt at the end of last month of the death, in America, of the Rev. W. R. Coventry, of the American United Presbyterian Mission in Egypt. Mr. Coventry had been resident in Egypt for some twenty years. It was largely through his efforts that the Mission medical-boat called "The Allegheny" has been set to work along the Delta canals and the Mission railway carriage called the "Delta Car" along the lines of the Delta Light Railway.

Lieutenant-Colonel Walter J. Boyes, who died at Haslemere on the 12th inst., served for many years in the Suffolk Regiment. Most of Colonel Boyes' service was in India, where he served from 1864-81. He was adjutant of the 2nd Battalion, 12th Regiment, from 1867-72. He took part in the Duffla expedition on the Assam frontier of 1874-5, and in the Jowaki expedition on the North-West Frontier in 1877-8, obtaining the medal and clasp. In the Afghan campaign of 1879-80 he served on the Staff of General Sir Robert Bright, with the field force, in Northern Afghanistan, being present at the action of Saidabad, and receiving the medal and clasp and his brevet majority. He was secretary of the Indian College of Engineering at Coopers Hill from 1902 until that college was abolished.

DOMESTIC ANNOUNCEMENTS.

MARRIAGE.

LUKACH—FREMLIN.—On April 21, at St. Helen's Church, Larnaca, Cyprus, by the Rev. Canon F. D. Newham, Lieut.-Commander Harry Charles Lukach, R.N.V.R., Commissioner of Famagusta, Cyprus, only son of Mr. and Mrs. J. H. Lukach, London, to Joyce Evelyn, only daughter of Captain J. L. Fremlin, 19th Lancers (Fane's Horse), and Mrs. Fremlin, of Mortimer, Berks.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
FOR SUMMER SEASON—
PLATRES—Platres Hotel. 4,000 feet above sea level. Open from May till October.
TROODOS—Olympus Hotel. 6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres
Head Offices and Central Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

"NAVAL & MILITARY" HOTEL
HARRINGTON ROAD, SOUTH KENSINGTON, LONDON.
Only 200 yards from District Station and "Piccadilly Tube" (S. Ken. Station). For all Services and the General Public. Two Lifts. Excellent Cuisine. Exceptional Reception Rooms. 100 Bedrooms.
Cables: "NAVAMILOT LONDON." Telephones: KENSINGTON 5425 (4 lines.)

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter, Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.). 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables,)
Inclusive terms from 10/- to 15/- daily; 3 to 4½ guineas weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

FRIDAY, MAY 24, 1918.

MR. MONTAGU'S TASK.

It would be folly to assert that the reform of the Indian constitution is being undertaken at a favourable moment so far as circumstances in this country are concerned. The energies of England, and of the Empire as a whole, are concentrated on the war, and when the day's work is done there is but little, either of intellect or of sentiment, to spare for any undertaking, however momentous, which is not directly connected with that all-absorbing purpose. At the same time we are compelled to recognise the existence of a minority whose sympathies lie elsewhere, and these sympathies are being strenuously exploited by the extremist section, which is engaged in spreading false ideas and creating a misleading atmosphere. There is a genuine need, therefore, for insisting on the realities of a difficult and complex situation, and in our own case this need is accentuated by the fact that the attitude of this journal has been seriously, if unintentionally, misrepresented. We have been accused of taking up a purely negative position, and of supporting organisations described by their opponents as reactionary; the best way of meeting such charges is to state once again the light in which the situation presents itself to our mind.

In the first place we accept the declaration made by Mr. Montagu last August as an accomplished fact, and as furnishing a common standpoint for all who have the welfare of India at heart. For us there remains no question of policy: the declared object is "the gradual development of self-governing institutions with a view to the progressive realisation of responsible government," and, that promise having once been made, the good faith of England requires its prompt and generous fulfilment. It is unfortunately true that the wisdom of the promise has been questioned by men whose experience of affairs entitles their opinions to substantial weight, but that part of the case is now closed, and we look to these authorities to abandon useless protests and to devote their energies to the work of construction. In the same way we regard it as the duty of the Press to concentrate attention on the actual problem, and to refrain from clouding the issues by insistence on alternatives now definitely discarded. Let us, however, be quite clear as to the nature of the problems for which solutions have now to be found. It is no mere extension of the existing constitutional machinery: that would be by comparison a simple undertaking, and one which could be carried through in the ordinary course of the administration; it is rather the introduction of an entirely new idea. The constitution evolved under the inspiration of Lord Morley consists essentially of the grant of limited power, and almost unlimited influence, to a small section of the Indian population: it has hitherto contained no effective provisions for realising the cognate but distinct idea of responsibility, and the task laid upon Mr. Montagu is in essence to give adequate recognition to this idea. In the words of the declaration already quoted, substantial steps are to be taken with a view to the progressive realisation of responsible government, and if new powers are granted at the present time, their nature and extent must be determined in accordance with the ultimate aim, which is to make the Government responsible for its conduct to the people as a whole. This fundamental consideration must in our judgment be emphasised, because there is a very real danger that the official or bureaucratic mind may be tempted to adhere closely to the existing and familiar lines, and to evade the disagreeable necessity of exploring these untrodden regions. It would be an easy and a popular course at the present juncture to offer a carefully assorted selection of concessions and "boons," a politician-governor here, an executive council there, more numerous commissions in the army, relaxation of the provisions of the Arms Act, and various other items picked out from the musty programmes of past Congresses. Such measures may be in themselves desirable or they may not, but in the present circumstances they must be judged by the single test of their relevancy to the new ideal. If they can be shown to lead towards the progressive realisation of responsible government, then they will be deserving of support: if this cannot be shown, their grant will be devoid of justification, and will constitute a serious danger for the future. The history of the last few years affords ample evidence that the appetite for such "boons" is insatiable, and each successive distribution can tend only to the formulation of new claims and to the demoralisation of that nascent public life which has still to be guided through the snares and perils of youth and adolescence. Now, if ever, we must have done with the policy of sweetmeats.

The task assigned to Mr. Montagu is very different. He is bound by the decision of the Government neither to satisfy the desires of the small minority of native politicians nor to hand over the supreme authority to the great majority of the people, who do not desire to exercise it and are not yet competent to do so. He is required rather to make a fresh start, to lay the foundations on which responsible government may rest, and to lay them in such a way that the erection of the superstructure may proceed harmoniously and also expeditiously. The outline of the changes now required is clear. In the first place, representative members of the Legislative Councils have to be brought into effective touch with their constituencies; in the second, the constituencies have to be remodelled, with a large immediate increase in the number of electors; in the third, suitable provision has to be made for training the masses of the people in the elementary duties of citizenship, in deliberating and voting upon affairs of common interest, in controlling the action of their representatives, and, most important of all, in the exercise of the power of the purse; whilst lastly, arrangements have to be planned for the progressive enlargement of the constituencies as this training of the masses produces definite results. While, however, there can be no doubt as to the general nature of the action required to fulfil the pledge already given, we are bound to recognise that there may be grave differences of opinion regarding the precise lines on which that action shall proceed, differences which cannot fail to be accentuated by the doctrine of administrative uniformity which has spread of late from administrators to politicians, and which is accepted by them as requiring that the infinitely varied population of India shall henceforward march abreast. Any scheme which Mr. Montagu may produce is bound from the nature of the case to meet with formidable opposition, inspired perhaps less by reason than by passion or interest, and it is all the more desirable that unprejudiced critics in this country should realise beforehand the nature of the end in view, and should be prepared to judge the concrete proposals solely with reference to their value as conducing to this end. The present need is not for a perfect constitutional machine, equipped with all the latest mechanical devices, and warranted to give satisfaction in continued operation. Mr. Montagu's task may more fitly be compared to the sowing of seed, an act of no present interest and of no present use, but pregnant with the promise of growth towards maturity. We do not ask that his proposals shall be conducive to administrative efficiency, or that they shall commend themselves to the constitutional theorist; we hope that they may prove to be workable without imposing an excessive strain either on overworked services or on enthusiastic politicians, but we are prepared to accept many inconveniences and many illogicalities, provided that the scheme as a whole fulfils the conditions we have indicated and points the way to the progressive realisation of responsible government.

GERMANY AND THE MID-EAST.

AN AFGHAN POINT OF VIEW.

German action in Southern Russia and the region of the Black Sea creates a problem which might, unless counteracted, bring about a dramatic, or even a disastrous, change in the political conditions of the Middle East. It is impossible to ignore this growing threat. We may take it for granted that the German and Austrian forces, strengthened by Turkish troops, will not content themselves with founding German colonies around the coasts of the Black Sea. In all probability a supreme effort will be made to cross the Trans-Caspian Province, and carry German propaganda and German influence into Central Asia.

Turkestan, as those acquainted with its domestic politics are well aware, has long fretted under Russian rule. The people have grievances. Whether or not these grievances are well founded we need not inquire: it is sufficient simply to refer to them, and to be willing to look facts in the face. Although the Russian lash has compelled a troublesome people to live peacefully, we must recognise that they regarded themselves as being subdued and humiliated. Their fiery national feelings, however, have not been extinguished. The Khan of Bokhara is still, in a sense, a ruler of his country, but it would be hard to say to what extent he enjoys any independence of action. Neither he nor his people can forget that his sovereignty rests upon the goodwill of a foreign Power; and it must be remembered that when his privileges were curtailed his sympathies were not secured. Indeed, it cannot be far from the truth to say that he awaits a favourable opportunity to regain the power which his forefathers possessed.

The Russians renovated the old regime with considerations for the welfare of the people of the Khanates. Let it be said, in justice to them, that they have increased the financial resources of the Uzbegs tenfold; but the unfortunate fact remains that they have not gained their confidence or loyalty. The Russians' march through the Khan's territory is a tale of bygone days; but when the wind howls around the cottage and the fire glows in the twilight the Uzbeg family gathers round to hear time and again some old man relating many a sorrowful incident of the *Urussee* (Russian) march through the land. General Kaffaeman doubtless won a decisive victory, but victory at the price of a continued alienation of the vanquished is usually dear indeed.

As regards the sentiments of the Turcomans little need be said, for until the Russian occupation—and even after that event—their life was devoted to marauding expeditions, and a settled way of living was rarely met with amongst them. Their years began and ended in plunder, and they were not too rigid in their attention to religious observances. Yet the Turcomans loved that free life of the old days, and they, like others, resented the Russian penetration. Bearing this in mind, one is inclined to wonder whether the prevailing discontent in Turkestan has already paved the way for an invasion —Germanic or otherwise. In such an event, the occupation of the country would doubtless be facilitated by the Germans, with their customary hypocrisy, espousing —or proposing to espouse—the Turkestani national cause.

Now let us glance at the borderland of India, which could hardly fail to be affected by political disturbances in Russian Turkestan and Bokhara. If those disturbances were directed by German brains and fostered by German gold, the situation might easily become very grave. Chitral, Bunu, and Swat are regions which have ofttimes called for the anxious attention on the part of the Indian Government. The tract of hill country touching Chinese Turkestan in the north and Baluchistan in the south is inhabited by clans of nondescripts, which are perpetually at war with one another, and, occasionally, with the Indian Government. Their inroads into British territory have been not infrequent, and many an instance can be recalled of their disturbing the peace of Peshawar.

This disquiet has been attributed to a variety of causes. Some people declare that these border tribes are such intense fanatics that the slightest pretext adroitly manipulated will suffice to inflame them to wage a so-called *Jehad;* others maintain that the Jirgas are merely bands of highway robbers, habitually treacherous and untrustworthy. As a matter of fact, they inherit a spirit which is common to all the hill tribes of the world; they dearly love liberty, even to that extent when it becomes "licence." Bold as the assertion may seem, it is nevertheless true that the hill tribesman of the Khyber is his own government, and makes and obeys his own laws.

The nature of the country is not conducive to a settled life or to the profitable pursuit of agriculture. Cultivated lands and pastures are possessed by few; poverty is ever knocking at the door; actual destitution is a frequent threat, or even a sad reality. If there be no honest means of procuring the wherewithal of life, there is ever the temptation to seize by force what cannot otherwise be obtained. To combat this evil, the British Government has devised the excellent plan of distributing maintenance allowances, which are given to the head of each clan for his men; and by this means a certain amount of restraint has been imposed. These grants undoubtedly guarantee good behaviour, if only for a specific period. But the tribesmen of the Khyber Pass have always been a lawless people, and not even the great Indian conqueror, Baber, succeeded in curbing their predatory activities. Raiding is second nature to them; it may be restricted, but its attractions remain.

Coupled with this fighting spirit, which is in itself a continuous source of trouble, there is another agency at work to drive the tribesmen into most serious mischief. The Mullahs and the priesthood exercise a most potent influence over the minds of the people. Two great religious centres are at Swat and Bunair, and the power of the *Akhunds* (spiritual leaders) over the clans is greater than has ever been wielded by any monarch of India or Afghanistan. We may readily admit that these preachers have most at heart the sublime ideals of the Islamic faith, and that they take them as the basis of their teaching; yet equally must it be acknowledged that political complications giving rise to great anxiety have at one time or another been brought about by the *Akhunds'* influence. How far the spiritual leaders are directly responsible for the outbreak of some of these disturbances cannot be fully determined. Is Berlin innocent in this matter? In view of all that has happened, and of all that has been discovered regarding Germany's methods since the war began, it would be quite impossible to avoid suspicions of the activities of Germany in creating and fostering religious misunderstandings in Central Asia. There is nothing in the Moslem faith which is more alarming and at the same time more sacred than the term *Jehad*, and it should never be spoken of by any Moslem but with feelings of awe and utmost reverence. It pains one of the Faithful to perceive with what unworthy motives this "Sacred Call" has sometimes been given for political ends; and it is time to point out that the interpretation which Germanic intrigue has given to the 'Holy War" of the Moslems amounts to nothing less than sacrilege against the Gospel of the Koran. As in other Asiatic countries,

the baneful Berlin-made doctrines have not met with the approval of the people, so also they have not appealed in any marked degree to the men of Khyber.

Reverting to the consideration of the North-Western Frontier of India in general, and to priestly influence among the people of that region in particular, the fact stands out in bold relief that the tribesmen are largely under priestly predominance, and very submissive to the dictates of the *Mullas*. It is, therefore, within the power of these Mullas to control to a great extent the feelings of the borderland people. Insurrections and revolts have been successfully dealt with through their aid. Their part, therefore, as possible upholders of peace is of no small consequence.

The geographical position of the Khyber Pass makes it highly important for the Government of India and the Ameer to retain, or endeavour to retain, the sympathies of these hillmen. But another influence has to be considered: Bokhara might be won over to the German cause by the free distribution of money, backed up by promises to promote the Khan's political ambitions. It would be a serious matter, indeed, if the Khanates were drawn into the German snare. The danger, however, exists. It is important to realise that any pressure which may be brought to bear upon the people beyond the Oxus to wage war will undoubtedly, sooner or later, reach the Hindu Kush region. Once it extends to Wakhan it will be difficult to check its progress into the territories of Chitral and Gilgit, and by degrees the contagion may penetrate into the interior of India. Such pressure may in origin well be a foreign one, exerted with the purpose of inciting the Bokhariotes to declare war against their masters. The people, as has been said before, will fight with religious zeal, and the Khan will regard the opportunity created as a favourable one for winning back his former prestige. But the impetus which would reach the North-Western Frontier Province would take the shape of a war for the "defence of the Faith," and would finish by setting ablaze the whole country on the east of Afghanistan. The Ameers had never a full control over these mountaineers, and to a lesser degree the same remark holds good of the British; and a skilfully engineered propaganda could be stopped only by the Jirga Mullas. Thus, German influence could be exercised indirectly, but still effectively, on the very borders of India by putting pressure on an electric centre.

Let us next turn to Baluchistan. The Baluchis, though of different stock from the Afghans, or the Afridis, are yet good fighters. Their mode of life is more settled and homely; agriculture and trade are freely carried on between Afghanistan and Baluchistan; and although the Khan of Khelat is their ruler, the country is under the jurisdiction of the Indian Government. Baluchis have fought and won many battles, but, as regards their martial spirit, one cannot place them on the same level as the tribes of the borderland. Agents from the Central Powers have succeeded in penetrating Baluchistan, and not a little stir originated in consequence of their activities. The smuggling of arms through Baluchistan was once a common occurrence, and efforts have been made to create groundless dissatisfaction against Great Britain; but all were frustrated. Barges full of rifles, and other ammunition of war, are reported to have been captured by British patrol boats in the Indian Ocean, and along the Persian Coast. It is not unlikely that a secret distribution of gold might weigh with the Baluchis and that might easily be carried out by German-financed agents, in the market places of Seistan. But it would be difficult to plan a rising in Baluchistan based on racial or religious prejudices, for the people are not by nature freebooters, nor do they favour the misinterpretation of "Holy War." An insurrection would, therefore, have to be stirred up by real discontent with the governing class, and, happily, such dissatisfaction does not exist.

Thus the German menace in Central Asia might become a very real one. Russian Turkestan and Bokhara are potential storm centres, and from them might sweep a cyclone of war involving vast areas. Of one thing we may be assured, the Germans have a policy which they intend, if not thwarted, to carry out. That it is an ambitious one no doubt can remain, in view of what has already been written on the subject in their Press. Until, therefore, it is definitely known that steps have been taken to nip German machinations in the bud, students of mid-Eastern affairs will be tempted to view the situation with some anxiety. IKBAL ALI SHAH.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons. On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedouin, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

OUR TROOPS IN GREECE.

In a written reply to a question put by Mr. W. Thorne, Mr. Macpherson says that the general health of the troops in Greece is good, but malaria is still prevalent. The admission rate for malaria, although high, is, however, not due to serious cases. The death-rate fell from 5.64 per 1,000 in 1916 to 3.61 in 1917, and 2.51 for the first eighteen weeks of 1918.

It is denied by the Bulgarian Minister of War that Bulgarian troops are being employed on the Western front.

Greek reservists of the 1909 to 1914 classes from the Peloponnesus have been called to the colours for May 27.

A Reuter's message from Petrograd, dated May 17, reports:—Mussulmans and Soviet troops in Baku are in deadly conflict. A Moscow newspaper states that 2,000 have been killed and 3,000 wounded there. Various parts of the town, including entire streets and the Persian bazaar, are burning.

A meeting of notables, merchants, and others has been held in Cairo for the purpose of opening a subscription fund in aid of British sailors. The Governor of Cairo headed the list with £200, and £1,150 was subscribed at the meeting.

The Jewish Correspondence Bureau at The Hague states that reports regarding fresh Turkish atrocities in Palestine are confirmed from official quarters. The Bureau further adds: "The distress of the Jewish population has assumed an indescribable character as the result of the arbitrary and cruel measures of the Turks."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

TANGIER TO TEHERAN.

A short time ago, so the Greek papers announced, a number of Athenian ladies who continued to hanker after the return of 'Tino, and carried on propaganda accordingly, were appropriately dealt with by the Greek Government. They were, in a word, sent to various monasteries in the country, there to be kept in confinement until they showed signs of returning sanity. According to the Greek journals, the wives of two ex-Ministers, Madame Triantaphylakos and Madame Stratos, were among the ladies thus dealt with; and Madame Nadin Schliemann, wife of M. Agamemnon Schliemann, was a third. This M. Schliemann is a son of the much-advertised German who excavated the site of Troy with so much energy and enthusiasm, if not discretion. The son appears to have preferred politics to archæology, and it is said that it was he who organised the recent insurrection in Thessaly.

***

For the ladies who have thus become the unwilling guests of the (probably equally unwilling) monks I have no sympathy. My strictly moral feelings were rather shocked at first when I learned of the action taken; for I was a greedy reader of the "Ingoldsby Legends" in my young days, and as a result I have no faith at all in monasteries (or convents!). But a Greek friend to whom I hinted my distress has now removed it. He has sent me the translation of a telegram published in the Athens *National Herald*, which says:—

> The Holy Synod has placed at the disposal of the Government, to be used for auxiliary service, all the monks, deacons (servers) and students in seminaries who are under thirty years of age. To all these, if called upon, permission is given to put off clerical dress and to don military uniform.

This, I take it, is just a tactful move on the part of the Holy Synod. The young monks are to be removed from the path of temptation; and the Ministers' wives and the other ladies will have no chance of playing havoc with their susceptible feelings. But what about the elder original inhabitants of the monasteries? If the Ingoldsby Legends are to be trusted, even an elderly abbott is not always above giving the "glad eye" to a fair lady. I suppose we must just *hope* for the best.

***

I have been reading lately several descriptions of Baghdad given by soldiers, and I observe that the writers have all been much impressed by the beauty of the women's *izzars*, or cloaks. These silken garments, with their gold thread decorations, certainly do brighten up the not too colourful streets of Baghdad, and to look from an upper window along a road full of gaily-apparelled Jewish or Christian women (their Moslem sisters affect dark colours) on a holiday or fête-day is like looking on a moving flowerbed. For all that, it always seemed to me that the plain blue *izzar* of cotton (I think), with a fancy border, was quite as attractive as the brighter silk garments. Of course, the wearer has a good deal to do with the effect, and my views may be prejudiced. What strikes me as strange in the descriptions I have been reading is that the writers speak only of "the Jewesses" and "Armenians." Many of the Baghdad Jewesses are admittedly pretty; so, too, are Armenian girls. But *the* prettiest girl I ever saw in Baghdad was a Tel Kaifi—or so I was told. She might have been English by her looks; for she was very fair, with bluey-grey eyes, and a quite "pinky" complexion; and as she stood in a doorway, wearing a blue cotton *izzar*, with an old negress beside her, and smiled (at my companion, of course!) as we passed, she presented a picture that was altogether charming. It has often flashed across my memory since. And I cannot admire the taste of the soldier-men who prefer the dark Jewesses to that fair-haired Tel Kaifi type—if Tel Kaifi she was indeed. But perhaps the poor fellows have not had such good luck as W—— and I had that summer afternoon.

***

I see that a correspondent has been writing to the *Times of India* on the subject of the cleanliness—or the reverse—of Bombay. The *Times of India* welcomes the criticism, and frankly admits that in regard to the streets it would be possible to introduce considerable improvements. My own acquaintance with Bombay, extending over barely a week, does not qualify me to express an opinion of any value, but I may perhaps be allowed to endorse the great Bombay journal's defence of the city's claim to be known as "Bombay the Beautiful . . . in spite of the dust and the dirt." It is beautiful. It is also dirty—or so it seemed to me during my brief visit. But, after all, such things are matters of comparison only; and there is dirt and dirt. Compared with, say, Paris or London, Bombay has a good deal of "matter out of place"; but compared with some nearer neighbours, Bushire or Muskat, let us say, it is a model of municipal-made sweetness. Then, too, what about the *character* of the dirt? Bombay dirt is, surely, less dirty than Leeds dirt? At any rate, the dirt of the Orient has a way of being picturesque; and with memories of certain other dirt—*grimy* dirt—in my mind, I am prepared to champion it against the dirt of the Occident. But I suspect that my championship will not be sufficient cause for Bombay to take the criticisms of other travellers lying down.

***

Apropos of this subject, I remember that on my way out to Bombay an old Anglo-Indian told me that when the city was first provided with a system of drainage the innovation was immediately followed by a series of epidemics that played havoc with the population. These evils, he told me, the natives attributed to the change; and, to my surprise, he added that he shared that view. Whether he was exaggerating, in order to astonish me; whether he was merely "pulling my leg"; or whether he spoke the plain, unvarnished truth, I do not know. But of one thing I am now tolerably certain: that while in hot countries drains may be unnecessary, even a source of trouble, in small villages, they are an absolute necessity in a town of any size, if it is to be kept tolerably healthy. They must, of course, be intelligently planned and executed, otherwise they will almost certainly prove a curse rather than a blessing. But, given those conditions, I cannot understand anybody seriously arguing against their introduction. Yet I have heard it done, and more than once.

***

A correspondence on the subject of "The Film Censorship" has recently appeared in the columns of the *Egyptian Gazette*. Having only had the opportunity of reading two of the letters published, I do not know what lines it has followed; but I gather that several writers have protested against the character of the films shown. One, "Hopeful," declares his opinion that "in frequent cases the cinema becomes a broad gate leading to the above-mentioned houses." [The reference appears to be to "The Ramleh Pensions."] From the expression "broad gate," I gather that Hopeful holds a poor opinion of the entertainment provided by the "Photographic Penny Dreadfuls," as I have heard the "shows" described. At any rate, they would hardly seem to be the kind of place to which you would send your children. But apparently some parents in Alexandria hold quite another opinion. At any rate, here is an extract from the only other letter on the subject that I have read:—

> "As regarding grown-up people, I don't really consider as immoral films like 'La Curée' and 'Résurrection,' which are works of famous writers—very realistic, it is true, but lived through in the life. They won't influence or hurt persons who are experienced and mature. But what I deplore is that plays so disastrous to the young and inexperienced should be their daily food. Most mothers, and I am one of them, are more or less constrained to send their children to the 'house of desolation,' partly yielding to their obstinate wishes and partly from not having another substitute; because we must own that the cinemas are the main amusement in Alexandria."

It always seems to me that people who can enjoy that sort of thing have not grown up very high. But that is by the way! What puzzles me is the extraordinary view taken by the writer of this letter. The plays are "disastrous to the young," but mothers are "constrained," etc., etc. I should like to ask the lady: "*Why* yield to 'their obstinate wishes'"? Why not try a good, sound, old-fashioned spanking as a "substitute"? What on earth *did* the young folk of Alexandria do before the great cinema came along to be "their daily food"? Truly, 'tis a mad world we live in!

CORSAIR.

MAILS LOST AT SEA.

The Postmaster-General announces the loss at sea through enemy action of mails for Egypt, the Sudan, and Cyprus, containing correspondence for the Egyptian Expeditionary Force which was received at the Army Post Office, London, for despatch between midnight on April 24 and midnight on May 5; civil correspondence for Egypt and the Sudan which reached the General Post Office, London, for despatch between 10 a.m. on April 26 and 10 a.m. on May 6; and correspondence for Cyprus which reached the General Post Office between 10 a.m. on April 25 and 10 a.m. on May 4. No parcels were lost.

The Soviet Congress at Tashkent has proclaimed Russian Turkestan a Republic in conjunction with the Turkestan Federal Republic. It will be governed by a Council of Commissaries of the People.

PRESS ON THE NEAR EAST.

The Serbian Spirit.

In an article entitled "Austrian Peace Wiles," a special correspondent of *The Times* testifies to the splendid *moral* of the Serbian Army. He writes:—

Visiting this front again after an absence of eight months, I am able to report, not merely that the *moral* of the Serbian Army is still unimpaired, but that it is more perfect than it has ever been since its glorious series of victories in Macedonia in the autumn of 1916. . . . If there be one nation of all those fighting on our side which has proved itself invariably and utterly impervious to the wiles of Austro-German peace propagandists, it is certainly the Serbian. On this question the Serbian governing classes and the Army are solidly at one. The recent attempt in the Serbian Chamber to overthrow the Cabinet of M. Pashitch was prompted by differences on questions concerning purely internal policy. As regards the Army, peace overtures are continually made to it by the Austrians. Such overtures come daily in the form of leaflets wrapped round empty grenades. But the Austrians are not satisfied with sending over printed enticements. Since the withdrawal of their troops from Rumania they have been employing a certain number of Croatians in futile attempts to gain over the Serbs. It appears that behind each Bulgarian regiment confronting the Serbian Army is now stationed a company of these Austrian agents. Their duty is not to fight, but to come into the Bulgarian first-line trenches at intervals and shout peace arguments to their Serbian brethren. But both the leaflets and the verbal messages are treated with contempt and derision, and are usually answere by redoubled rifle and artillery fire.

'The Eastern Peril."

In an article with the above title the *Observer* (May 19) expresses the opinion that "our late miserable dissensions at home have not only caused many to forget the undiminished crisis in the West, but have concealed from almost everyone the gigantic tasks and vaster tendencies of German conquest in the East." The enemy has now thrown off the mask, has shown what his talk of "no annexations and no indemnities" was worth. Force is the recognised weapon, but "Machiavellian devices for sowing dissension," in order that Prussia may rule all, is not despised.

There was dispute amongst the Allies at the beginning about what they might do in the Baltic Sea, or what they might do in the Black Sea. Both seas are now absolutely German lakes. German armies and detached forces north and south are operating from Finland to the Crimea. From west to east they have penetrated hundreds of miles into the richest part of Russian territory. The Turks are occupying Batum, Kars, and Ardahan, are moving in connection on a broad front between the Euxine and Ararat towards northern Persia. Already Germany and her partners have effectively "annexed," either openly or under different disguises, about 500,000 square miles of territory, and 70,000,000 of people—forming the inhabitants of a number of client States well chained to the interests of their Teutonic masters. A settled aim is to get into direct continuous touch with all the Moslem population of Asia—with Turkestan and the Central Khanates, with the Chinese Mahommedans just beyond, and through Persia with Afghanistan and India. Already the Central League controls far over 200,000,000 of people. That is the scope of the design. Until it is understood and thwarted for ever, no possible terms which might be made in the West could purchase even tolerable safety for the Allies, or bring lasting peace to the world.

Of German dealings with the Ukraine we read:—

The Ukraine is in some ways the most interesting affair of all. Its deluded Nationalists were the first to conclude a separate peace with the enemy. They hoped to create their distinctive intelligent race of Little Russians into a free, powerful nationality of nearly 40,000,000 souls, with the agricultural wealth of the famous black soil, the best railway network in what was once Russia, and Odessa with a range of other ports on the Black Sea. Above all, they were to supply the Central Empires with grain. Over a million tons were to be supplied by the coming autumn. Hardly 100,000 tons have been received by Germany and Austria. The peasants, not knowing what the future might bring forth, clung stubbornly to their hoarded stocks. Besides, after war and anarchy, transport facilities are very bad. Friction, fierce hatred, arose between the people and the invaders.

Then the Germans, dealing with Ukrainians as with the Bolshevists, took matters into their own hands. They applied, and still are applying, the mailed fist and jackboot. On the plea that the Ukrainians were plotting a Sicilian vespers, the murder of German officers, the Nationalist and democratic Rada was dispersed by military force. A sham Hetman, General Skoropadski, was set up as a German dictator. Field-Marshal Eichhorn, the German commander, put the whole country under military tribunals. Deliveries of corn, also spring sowings, were ordered under pain of seizure, punishment, or death in case of open resistance. Here as elsewhere the landowners and the bourgeoisie were restored to property and office. The "Ukraine Republic" is henceforth to be called the "Ukraine State." It will doubtless receive in due course a puppet-monarch.

It is, says the writer, because of this Eastern position that the Reichstag resolution against annexations and indemnities has gone to water. "Because of that position, real franchise reform is being refused or evaded in Prussia and Hungary alike. Because of it reaction, caste ascendancy and conquest are triumphing to-day from the Allied line in the West far into the heart of what was once called Russia in Europe and further towards the Asiatic East. And yet the opportunities for reversing it all and bringing the enemy to ruin by the excess of his ambition are still priceless if they are only used in time."

"Capitulations."

Capitulations, whether in Morocco or in Egypt, are frequent sources of trouble. The Morocco Correspondent of *The Times* has written an article on the subject, entitled "Morocco Days," the sub-headings being "The Benefit of the Capitulations" and "A Case for the Hague." It describes the adventures of three people—"Maria de la Concepcion Josefa Jimenez de Monserrat et Garcia, Alonzo de Gama Vasquez, and Mohammed ben Abdul Kader el-Tadlaoui," who met and quarrelled late one night in the Place de France. Eventually all three appealed to their consuls, and each provided an affidavit—of the type usually produced in such cases. The article concludes:—

Armed with these affidavits—all on oath—the Vice-Consuls of the three Powers concerned opened their campaign. The three victims severally insisted that it was a criminal affair; the Consuls invited their own and each other's subjects to begin civil actions against each other, but with no success. A few months later the affair had left the Vice-Consular hands and was in charge of the Consuls, whose letters were a little more pompous but equally futile, and at times showed signs of ill-concealed annoyance disguised in strictly diplomatic phraseology.

A year having passed without any progress whatever having been made, except to fill cupboards with voluminous correspondence—numbered, docketed, typed, and indexed—the three Consuls, whose personal good relations had become strained by the complications of the affair, decided to send the case to their respective Diplomatic Agencies at Tangier, and by the next coast steamer three enormous cases of letters and documents—British, French, and Spanish—were shipped. At Tangier it was realised that the question was a grave one, affecting the whole principle of the Capitulations. The Diplomatic Agents referred it home to their Foreign Offices.

Now Maria, etc., etc., abandoning all hope of justice or compensation, had left the town where the incident occurred a week or two after the unfortunate affair for an unknown port in South America, where the music-hall troupe had a contract to fulfil. Her hand was no longer paralysed and her finger was cured. She had given no more thought to pearl necklaces or diamond rings or gold watches. Mohammed el-Tadlaoui had—also a month after the incident—volunteered to go and fight, together with many of his fellow-tribesmen, in France, and had fallen on the field of battle in October, 1914. The sailing ship on which Alonzo Vasquez served as mate was torpedoed on her voyage to Lisbon a week after he had made his affidavit in the British Consulate. There were no survivors. But that, of course, makes no difference to the importance of the case, which cannot be abandoned, as the principle of the benefit of Capitulations is at stake.

Despatch No. 374 has just arrived by King's Messenger. The Foreign Secretary states that he has proposed to the Ambassadors of France and Spain the settlement of the affair by arbitration at The Hague—after the conclusion of peace.

"Bosom Friends."

In an article, "Bulgaria and Turkey," the *Manchester Guardian* (May 18) expresses the belief—a natural one, too—that "The visit of the Emperor Karl and his wife, accompanied by the Foreign and War Ministers, to Sofia and Constantinople means that the Austrian Emperor has been chosen to adjust or arbitrate the rival contentions between Turkey and Bulgaria." After sketching the points of difference between Turkey and Bulgaria, the article continues:—

It would be idle to discuss the nice balance of justice in a thieves' kitchen, but the Central Powers have in reserve a club with which to bring Bulgaria to some measure of accommodation. They will not give her the northern half of the Dobrudja unless she gives something to Turkey, and to Austria and Germany also. Assuredly Bulgaria will emerge from the arbitrament dissatisfied. She is manifestly a puzzle just now to the Central Powers. All the other members of the group have some pretence to a motive for going on with the war—even Austria has her trouble with Italy. But if Bulgaria has her fist on all the Macedonian and all the Roumanian territory she covets, what motive has she for going on with the war? The retention by the Central Powers of Northern Dobrudja may be in part intended as a device for furnishing one. But it is certainly not powerful enough to get Bulgarian troops for the Western front, and is much more likely to disgruntle Bulgaria. Bulgaria is still worth watching and studying by Allied diplomacy.

Articles to Note.

"Mr. Carmichael: An Early Traveller in the Syrian Desert," by Douglas Carruthers and F. D. Harford, in the *Geographical Journal* (May, 1918).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

The report of the Treasury Committee on bank amalgamations will be judged satisfactory or the reverse, according as it is regarded from a local or from an Imperial standpoint. Two or three times recently I have had occasion to emphasise in these columns the need for the establishment of banks in this country sufficiently powerful to safeguard British interests after the war in matters of foreign trade, in view of the evidence we have of the tendency in Germany towards bank amalgamations with the object of an aggressive policy of commercial penetration in the future. The recommendations of the Committee, if adopted, are not likely to facilitate arrangements between British banks for the promotion of trade abroad; on the contrary, there seems every likelihood of their acting as a deterrent.

***

Briefly, the Committee is of the opinion that the approval of the Treasury and the Board of Trade should be obtained for future amalgamations, and suggests the passing of legislation requiring these departments to establish a special statutory advisory committee. The main grounds for objecting to further amalgamations are stated to be the danger of the reduction of the proportion of capital to liabilities by bank fusions, the possibility of reduced competition, and the risk of monopoly. While it would certainly be unwise to underestimate the force of these considerations, it is very questionable whether the likelihood of any or all of them operating to some extent makes it worth while to introduce Government control with the risk of hampering one of the chief, if not, indeed, the principal, factor on which we must depend for the adequate development of our post-war trade. Of course, the advisory committee may be so constituted that the objections I have advanced will not be present. I can only hope that will be the case.

***

An interesting development has followed the decision to carry out experiments in tobacco cultivation in Egypt, for a long report has been drawn up by the Greek cigarette manufacturers of Alexandria for presentation to the Greek Government showing the measures they consider desirable for the protection of Greek tobacco. The proposed measures include the reduction of freights and insurance premiums, and the removal of the tax of two drachmæ per kilo on exported tobacco. This action seems to me a very hopeful omen for the result of the experiments. At the same time it is not exactly calculated to encourage Egyptian industries, but I imagine that we may take it for granted that the Egyptian authorities will not allow their plans for the promotion of tobacco cultivation to suffer by any undue advantage accorded to the tobaccos of other countries.

A word is called for on the excellent report of the Fine Cotton Spinners' and Doublers' Association for the year ended March 31. The profits amounted to £701,132 after charging £180,000 to depreciation, writing off the balance of enemy debts, and providing for directors' fees, bonuses to management and excess profits' duty, and £140,799 was brought forward, making a total of £841,931. From this amount £125,000 is allotted to provision against depreciation of investments, £25,000 is placed to the pension fund, and £10,000 to the research fund. Dividends are recommended for the half-year at the rate of 5 per cent. on the preferred ordinary shares, and at the rate of 12 per cent. on the ordinary shares, and the carry-forward will be £152,431.

***

I have read with particular interest a note by the Acting Financial Adviser in Egypt appended to the Budget of 1918, and just circulated, on Egyptian oil development, in which he refers to the way in which the fuel situation was mainly "saved by two circumstances—the development of the oilfields in Egyptian territory on the Red Sea, and the adaptation of engines to produce gas distilled from vegetable refuse." He points out that the Anglo-Egyptian Oilfields Limited was the only company in operation at the outbreak of war, and that down to 1914 the only find of importance had been at Gemsah. Fortunately in that year a field was discovered at Hurgada, "the formation of which was found to be singularly regular, and the yield of which has steadily increased, until it now stands at over 15,000 tons of crude oil a month." In the meantime the Suez refinery has been enlarged, and the hope is expressed that "as much oil will shortly be available for internal consumption as can be dealt with by the country's existing transport facilities."

***

Greece imports the whole of her requirements of paints and varnishes, and while she drew fair supplies from this country before the war, Germany, as might have been expected, managed to find an opening there for considerable quantities of paints, notably inferior grades of ochre and vermilion. I hope our manufacturers are not overlooking this opportunity of extending British trade with Greece, as it is quite possible for us to supply all the paints that formerly came from the enemy.

***

The progress made by the Eastern Bank in 1916 was maintained and improved last year, and the dividend is increased from 6 to 7 per cent. The net profits, including £9,545 brought forward, amounted to £77,918, and after the usual disbursements £15,918 is carried forward. Shareholders will be gratified with the position disclosed in these figures, and with the enterprise of the management in regard to the business of the bank in Baghdad and in Mesopotamia generally. In his speech at the general meeting last week Lord Balfour of Burleigh remarked that the bank's business in Mesopotamia had been satisfactory, "though, owing to the disturbed conditions ruling there at present, exports from Busreh did not approach normal."

***

The report of the Assam Company has just been issued for the year ended December 31, 1916, the delay being due to the difficulty of shipping that year's tea crop, which was not dealt with until February, 1917. The year's working resulted in a net profit of £93,600, as against £105,600, but the decrease is far more than accounted for by the increased excess profits duty, which amounted to £76,900. The dividend is again 25 per cent., and the general reserve is increased by £40,000. The company is in a strong position, and shareholders have every reason for satisfaction with the report.

***

If, on the whole, the profits of jute companies in 1917 were not up to the standard of 1916, they were certainly very good. This much is clear from the reports of the three companies which make up their accounts to the end of December—the Titaghur Jute Factory, the Samnuggur Jute Factory, and the Victoria Jute Company. The first of these companies made a profit in 1917 of £353,800, against £524,600, but the difference is not so great as it appears, since a much heavier taxation was deducted from the 1916 profits. The net profits amounted to £162,100, against £268,100, but here again there was a compensating factor in a larger balance brought into the accounts which more than made up the difference. This company maintains its dividend at 40 per cent.; £30,000 is placed to depreciation of plant account, an item not allowed for the previous year; £120,000 is placed to reserve to meet income-tax obligations; and £53,500 is carried forward.

***

The position disclosed in the report of the Samnuggur Jute Factory is somewhat identical. Here the gross profits for the two years were £353,100 and £507,300 respectively; while the net profits were £145,300, against £235,400. The dividend of this company is reduced from 40 to 35 per cent.; £107,000 is allocated for income-tax obligations, and £26,600 is carried forward, against £130,100. The Victoria Jute Company's gross profits were £232,500, against £296,000—not so substantial a difference as in the case of the other two companies, but the excess profits duty, which did not appear in the previous accounts, takes £89,200, and a further £78,000 is placed to income-tax obligations. Thus, allowing for a dividend of 35 per cent. free of tax, as against 40 per cent. for 1916, only £15,300 remains to be carried forward.

GERMAN FINANCE IN THE NEAR EAST.

A. Wyatt Tilby.

An ancient fable records that a ponderous but respectable city accountant once remarked that "very few transactions of international finance would long survive a strict audit"; to which his neighbour at lunch replied that very few of the auditors would survive long either in that case. Without suggesting that even in Berlin they have a department for the sacrifice of too high-principled auditors, it must be admitted that international accounts are difficult to check, the interest on loans being paid not always in cash or goods, but very often in political influence, concessions, and other results which may not be easily rendered into figures. The new German finance in the East has proceeded largely on these lines.

Sixty years ago, in 1856, the first foreign bank was opened at Constantinople. It was an English concern, the original Ottoman Bank, and for thirty years British capital was predominant in Turkey. In 1887 the total capital of foreign banks operating in Turkey was a little over £10½ millions; of this amount £6.2 millions was British, £1.9 French, £1.3 Austrian, £0.6 German, and the balance, £0.3 Italian. Twenty years later, in 1910, the position had changed considerably. Out of a total capital of £25 millions, Britain provided £8.8 millions and was still the nominal leader; but Germany had risen from fourth to second, with £5.2 millions, Austria had the same amount, and France and Italy the balance of less than three millions each.

Influence of German Banks.

It is easy to account for the change. There had been a great demand for British money in the Dominions and South America, and our investors looked more kindly on Canadian railways and similar enterprises than on the Levant. French money, for the same reason, was invested in the new African colonies. Austrian policy, on the other hand, had been directed to the Balkans by Bismarck, and Austrian money followed; and when Bismarck fell and the German Emperor began to dream his Eastern dreams, German money followed. The German-Palestine Bank was founded in 1899, the German Orient Bank, a more ambitious institution, in 1906; by 1914 this undertaking had a dozen agencies in Turkey, branches in Alexandria and Cairo, and one even in Morocco. The existence of a Morocco agency is sufficient evidence that its activities had a political as well as a financial aspect.

The German banks, backed by German diplomacy, were largely occupied in obtaining railway concessions in Asia Minor, and these railways were built with German materials. They were a source of rich profit to German industry, which was investing part of its surplus capital in Turkey; but the full accounts of the Baghdad Railway have never been published. If they were, they would probably puzzle the auditors considerably. But the real aim was not a commercial but a political balance-sheet, and that aim was attained. At the outbreak of war Turkey followed Germany.

German finance had also been active in the Balkans. But hitherto it had made little of Bulgaria, which is not naturally a rich country; and it had made much of Roumania, whose great natural wealth promised, and gave, a rich return. Serbia, whose sturdy independence was a barrier to Austro-German polity, was ignored. But the war necessarily worked great changes in Balkan finance as well as Balkan politics. Roumania remained steadfastly neutral for two years in spite of German influence in Bucharest; Bulgaria saw her opportunity, and decided to throw in her lot with the Central Powers. Her first step was to demand a loan, and in February, 1915, the transaction was arranged. Since the fact could not be concealed from the Entente diplomatists at Sofia, a pleasant little fiction was published to the effect that the loan had been arranged before the war; it was represented as a straightforward business transaction, and the impression was given that Germany was rather reluctant to oblige.

The full details of these transactions may possibly be known to our great-grandchildren, who will presumably have other things to think about. But certain facts are already obvious.

The money which Germany advanced to Greece purchased three years' neutrality and precipitated a revolution. It did not, as was hoped, bring Greece into line with the Central Empires, but the three years' neutrality may have been worth the price. As a financial transaction it was a failure, as a political expedient it may be reckoned a dubious and transient success.

The amount of the loans to Bulgaria are unknown. A telegram from Sofia published on May 10 puts the amount at sixty millions sterling. But Sofia, like other debtors, does not always tell the full truth. If we reckon them at a hundred millions—part of which has been spent in Germany on munitions of war—Berlin has in return purchased not only an ally, but the right to control Bulgarian industry. The Deutsche Bank has opened a branch at Sofia, and it is reasonable to suspect that a commercial treaty has been signed.

Bayonet v. Banks.

In Roumania the bayonet has succeeded (for the time being) where the banks failed. German pre-war finance was thrown away; but now it is paramount, and backed by treaty. Under the German-controlled commission which is to order the future commerce of Roumania, German finance will run no risk whatever, so long as Germany retains her present supremacy in the Balkans. Loans will be made to Roumania for the development and reconstruction of her industries, presumably on the recommendation of the Deutsche Bank at Bucharest; these will probably be granted on reasonable terms, since dear money means dear produce, and it is to the interest of Germany as a purchaser of Roumanian produce to purchase cheaply, and even a conqueror cannot purchase goods at much below the cost of production for any length of time. (There is no fear that any other country will loan money to Roumania during the war, and after the war, if Germany were to win, she would take steps to compel Roumania to place all her loans in Berlin or Vienna.) But it is at the other end of the transaction that Germany will score—not in the direct financing of production, but in the purchasing. Roumania is to be rationed as to her own requirements, and the surplus is to be purchased by Germany. It will be found that Germany will fix the price that Roumania has to pay for her own goods high, and the price that Germany pays for the surplus low; this will keep the cost of living in Roumania high, and tend to reduce the cost of living in Germany, and so assist the reconstruction of German industry. It is the old tribute-money in modern economic form.

Serbia would evidently be treated in the same fashion were she to make a separate peace—with this exception, that Serbia would presumably be controlled from Vienna. If, as has been suggested, Austria desires to incorporate the whole of Serbia (except that part which Bulgaria claims) in a new Jugoslav province within the Empire on a new trialistic basis, the commercial development of Serbia would naturally fall to the Hapsburgs.

Greece may be omitted from the survey, as it probably does not enter into German calculations at the moment. The case of Turkey is more interesting. From the figures of the German loans to Turkey which were published a year ago, and which seemed reasonably probable, it may be taken that Germany has advanced to the Ottoman Empire from 1914 to the present time a sum of about two hundred millions sterling. A considerable part of this has been spent in Germany for munitions, but that may be disregarded. Now it is quite clear that Turkey cannot repay this sum; and if the war continues to the end of this year she will be unable to pay interest on it. The obligation has now also to be expressed in terms of blood as well as money, for German troops have now been sent to Palestine, and Germany will exact payment for these directly or indirectly.

It is evident that Germany did not altogether trust her ally over a year ago, since she compelled Ottoman consent to a commercial treaty—probably at the moment when Turkey first expressed qualms about her debt service. It was arranged that for a period of years after the war Turkey was to give Germany the practical control of her Customs; she was to bind herself to buy her goods from Germany, and probably to sell her produce to Germany if so required, although the latter would be a less essential part of the bargain. The fact that Germany found it necessary to make a treaty of this kind shows that she had grave doubts of Turkey's financial stability. We need not blame her for that.

Turkey's Falling Credit.

But since the treaty was made Turkey's political position has changed enormously for the worse. To buy the Ottoman Empire as it stood in 1916 for 150 millions would have been a profitable transaction enough; and Germany bought something more profitable still—the right to exploit it. But since then the price has increased, from the prolongation of the war, and the *peau de chagrin* has diminished. Six months ago Germany was in the position of having to pay more and to receive less.

It may be suggested that a certain scepticism as to the prospects of restoring Mesopotamia and Palestine was among the reasons which urged Germany to push Turkey along the road to Kars. The force of events—in other words, the British Navy—has driven Germany from Western to Eastern expansion, and it is clear that she believes that peace will be made on the basis that everybody holds what they have in the East. In that event, the more that she and her allies hold, the better. If Turkey could reach the Caspian, and peace could be made on that basis, Germany could afford to write off the two hundred millions advanced to Constantinople; the control of the Black Sea and Anatolia, the right to enter the Caspian, would be well worth the money. The capitulation of Turkey to Berlin would be final and complete.

German finance is already heavily strained; the bankruptcy of the German Empire is admittedly certain unless indemnities can be obtained. Since the prospect of these becomes more remote from the West, they must be sought in the East, and it must be noted that they are being obtained, not indeed in the form of hard cash, but in the shape of territory and the right of economic control. Against the expenses of the war with Russia, Germany proposes to set off the control of the whole region from the Arctic to the Black Sea. If she were to succeed, the real government of these districts would be in the hands of the Deutsche Bank, and that bank would seek its profits from three main sources—the Riga trade, the produce of Roumania and the Ukraine, and the exploitation of Turkey.

We must regretfully admit that, if that control were obtained—and it would open the door to Siberia, potentially a second Canada; to China, another India; and to more dubious prospects in Persia—if that control were obtained at the cost of a thousand millions sterling, Germany would still be able to claim that war, on the Eastern front at least, was a business that paid.

TRADE WITH GREECE.

Post-War Prospects.

The secretary of the branch in Greece of the British Chamber of Commerce of Turkey and the Balkan States (says the *Board of Trade Journal*) has furnished the following memorandum on the future of trade with Greece for the information of British manufacturers and merchants. The writer has had twenty years' experience in business in the East, and his suggestions for the development of British trade with that country are worthy of serious consideration.

Among the advantages offered to Greek merchants by Germans and Austrians were the following:—Long credits, quick deliveries, cheapness, large discounts, prices quoted c.i.f. the Piræus, quotations in the metric system, catalogues in French, frequent visits by commercial travellers with samples, anxiety to suit the requirements of the market, compliance with instructions as to Customs requirements, matching samples, attention to small orders as well as to important ones, and partial or total payment for advertising their goods in the Greek newspapers.

Prices and Credit.

Whether the British manufacturer will consent to make a cheap grade of article to compete with his rivals is a question; but it should be understood that the cheap article is essential for Greece. It is a poor country, where salaries and wages are low. Among the poorer classes the housewife cannot afford to buy a good article at a higher price. She buys what her purse can afford, knowing that a cheap article will last until she can spare the money to get a new one. She does not look for a good article at the price she pays. British manufacturers are not advised to give such long credits as the Germans. Of course, the length of credit depends entirely upon the class of merchandise in question. Although in the cloth trade, for instance, the Germans give from eight to ten months, ninety days would be a fair condition for British makers to fix. There are some classes of goods for which the Germans give no credit at all, but these are principally in articles sent by parcels post and in goods of a perishable nature. As a rule, ninety days should not be exceeded in any line, but, owing to frequent delays in delivery by British firms, the drafts should not be made acceptable until the arrival of the bills of lading in Greece.

Trade Requirements.

The very first thing a Greek asks as soon as he opens a catalogue, and before even examining the prices, is: "What are the discounts?" This is a peculiarity of the race. A high discount will catch his eye much more quickly than a low price. The Germans know this, and have price-lists printed with a higher original price and a correspondingly bigger discount; 25 per cent. and 10 per cent. and 2½ per cent. have a fascinating look to a Greek, and he seems to imagine he can make 37½ per cent. out of them. The discount greatly helps business, for the merchant is interested at once and studies the catalogue with a favourable eye. The Germans excel in quick deliveries, and British manufacturers are too frequently very remiss. The Germans appear to have everything ready in stock, and ship as soon as they receive an order. The British shipper often keeps an importer waiting for months on end before shipping. The result is that a German traveller may call in the meantime with a promise of immediate delivery (which promise he keeps), and the British order is, not unjustifiably, cancelled by the importer. A direct and regular line from London to Greece is greatly to be desired. This would make for much quicker deliveries, though the dilatoriness of certain British manufacturers would still have to be remedied.

Quotations.

The Greek importer always wants quotations c.i.f., because he has no means of calculating freights, etc., and he desires to know what the goods are going to cost him on arrival. He knows the Customs charges, and can add these on for himself. British firms frequently quote free on rail, but this is useless to a Greek, or, indeed, to any foreigner; for though he might ascertain the probable freight, he can have no means of knowing what the railway charges to the port of shipment may be. This does not seem to occur to the minds of some manufacturers. It is only a question of a little trouble to the exporter to fix a through rate. Quotation in the metric system is invariably done by Germans. Even the smallest Greek trader understands the metric system; while inches, pounds, gallons, etc., mean nothing to him. Every trader in Greece knows enough French to read a catalogue in his own line, while few know enough English. It goes without saying that these catalogues should also be made out in the metric system. The use of the metric system and the French language, and especially the latter, are not essential, but they are a great help to trade.

THE MOROCCAN MARKET.

Firms should send out their own representatives to study the market, says H.M. Vice-Consul at Tangier in a recent report published in the *Board of Trade Journal*. German firms used to send out travellers to acquaint themselves with shapes and patterns in demand. This remark applies to samples and patterns of cloth, laces, pottery, and cutlery. The travellers should be able to draw and colour the shapes in demand. In most of the large towns German firms had their own men, who were financed in furthering German interests. They studied the trade on the spot, and later set up business on their own account, moving generally to some other port. No detail was too small to escape their attention.

German firms on the coast established branches inland, which branches secured the right of holding two native agents (called "Semsars"), entitled to all the rights of German subjects, as well as of holding an unlimited number of "Mokhalats," agents whose protection extended only to the interests of the firm. It is difficult to give a definite idea of terms of credit expected by firms in Tangier. Each firm settles its terms to suit the convenience of customers. Credit generally varies from thirty to ninety days. Packing and shipping charges should be included in the original prices. At the present, owing to difficulties in transport, practically all the trade of Tangier is carried on with Spain.

CYPRUS HARVEST PROSPECTS.

(From a Correspondent.)

Harvest prospects since the good rains of March have continued to be favourable. There are hopes of a good carob crop. As regards tobacco, the result of much bungling has been, as anticipated, that by April 15—the final date for planting—large numbers of seedlings were not ready, and, according to some estimates, hardly a tenth of the lands which were marked out for the crop can be planted, which is much to be regretted. It is surmised that one of the reasons for limiting the planting to April 15 has been a fear, on the part of the Government, lest the work involved would clash and interfere with the supply of labour required for the harvesting of cereals. This is often barely sufficient for island needs. In pre-war times a considerable number of labourers came every year from Asia Minor across the narrow sea. Motley, picturesque groups of men and women, including gypsies, were welcomed on the north coast, often bringing various articles for sale, such as carpets, embroidery, and curios of many kinds. Wages for day labour still tend to rise, and there is no excuse for idle hands in Cyprus. Forests, mines, and public works offer employment. The liberal pay given to muleteers for Salonika, and the excellent Government arrangements connected with remittances to their families, attract many volunteers.

GREEK SHIPPING.

Sale of Ships to Foreigners.

M. Venizelos answering a question in the House of Deputies, in Athens, recently, stated that the Government did not intend to annul the measures taken for the prohibition of the sale of Greek steamships to foreigners, and added that by such sales the Greek mercantile marine had already lost many thousand tons.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to February 28, 1918 (New Style: January 14 to March 13, 1918):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Feb.,	1918	3,021,296	2,152,000
Do. do. do	1917	1,902,101	768,000
Estimated Receipts for 2 months (Law of Control)		4,816,666	1,783,333
Actual do. do.,	1918	7,589,480	6,312,000
Do. do. do.,	1917	5,075,986	2,223,000
Difference between estimated and actual receipts for 2 months	1918	+ 2,772,814	+ 4,528,666
	1917	+ 259,319	+ 439,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos Emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

GERMAN FINANCE IN THE NEAR EAST.

A. Wyatt Tilby.

An ancient fable records that a ponderous but respectable city accountant once remarked that "very few transactions of international finance would long survive a strict audit"; to which his neighbour at lunch replied that very few of the auditors would survive long either in that case. Without suggesting that even in Berlin they have a department for the sacrifice of too high-principled auditors, it must be admitted that international accounts are difficult to check, the interest on loans being paid not always in cash or goods, but very often in political influence, concessions, and other results which may not be easily rendered into figures. The new German finance in the East has proceeded largely on these lines.

Sixty years ago, in 1856, the first foreign bank was opened at Constantinople. It was an English concern, the original Ottoman Bank, and for thirty years British capital was predominant in Turkey. In 1887 the total capital of foreign banks operating in Turkey was a little over £10½ millions; of this amount £6.2 millions was British, £1.9 French, £1.3 Austrian, £0.6 German, and the balance, £0.3 Italian. Twenty years later, in 1910, the position had changed considerably. Out of a total capital of £25 millions, Britain provided £8.8 millions and was still the nominal leader; but Germany had risen from fourth to second, with £5.2 millions, Austria had the same amount, and France and Italy the balance of less than three millions each.

Influence of German Banks.

It is easy to account for the change. There had been a great demand for British money in the Dominions and South America, and our investors looked more kindly on Canadian railways and similar enterprises than on the Levant. French money, for the same reason, was invested in the new African colonies. Austrian policy, on the other hand, had been directed to the Balkans by Bismarck, and Austrian money followed; and when Bismarck fell and the German Emperor began to dream his Eastern dreams, German money followed. The German-Palestine Bank was founded in 1899, the German Orient Bank, a more ambitious institution, in 1906; by 1914 this undertaking had a dozen agencies in Turkey, branches in Alexandria and Cairo, and one even in Morocco. The existence of a Morocco agency is sufficient evidence that its activities had a political as well as a financial aspect.

The German banks, backed by German diplomacy, were largely occupied in obtaining railway concessions in Asia Minor, and these railways were built with German materials. They were a source of rich profit to German industry, which was investing part of its surplus capital in Turkey; but the full accounts of the Baghdad Railway have never been published. If they were, they would probably puzzle the auditors considerably. But the real aim was not a commercial but a political balance-sheet, and that aim was attained. At the outbreak of war Turkey followed Germany.

German finance had also been active in the Balkans. But hitherto it had made little of Bulgaria, which is not naturally a rich country; and it had made much of Roumania, whose great natural wealth promised, and gave, a rich return. Serbia, whose sturdy independence was a barrier to Austro-German polity, was ignored. But the war necessarily worked great changes in Balkan finance as well as Balkan politics. Roumania remained steadfastly neutral for two years in spite of German influence in Bucharest; Bulgaria saw her opportunity, and decided to throw in her lot with the Central Powers. Her first step was to demand a loan, and in February, 1915, the transaction was arranged. Since the fact could not be concealed from the Entente diplomatists at Sofia, a pleasant little fiction was published to the effect that the loan had been arranged before the war; it was represented as a straightforward business transaction, and the impression was given that Germany was rather reluctant to oblige.

The full details of these transactions may possibly be known to our great-grandchildren, who will presumably have other things to think about. But certain facts are already obvious.

The money which Germany advanced to Greece purchased three years' neutrality and precipitated a revolution. It did not, as was hoped, bring Greece into line with the Central Empires, but the three years' neutrality may have been worth the price. As a financial transaction it was a failure, as a political expedient it may be reckoned a dubious and transient success.

The amount of the loans to Bulgaria are unknown. A telegram from Sofia published on May 10 puts the amount at sixty millions sterling. But Sofia, like other debtors, does not always tell the full truth. If we reckon them at a hundred millions—part of which has been spent in Germany on munitions of war—Berlin has in return purchased not only an ally, but the right to control Bulgarian industry. The Deutsche Bank has opened a branch at Sofia, and it is reasonable to suspect that a commercial treaty has been signed.

Bayonet v. Banks.

In Roumania the bayonet has succeeded (for the time being) where the banks failed. German pre-war finance was thrown away; but now it is paramount, and backed by treaty. Under the German-controlled commission which is to order the future commerce of Roumania, German finance will run no risk whatever, so long as Germany retains her present supremacy in the Balkans. Loans will be made to Roumania for the development and reconstruction of her industries, presumably on the recommendation of the Deutsche Bank at Bucharest; these will probably be granted on reasonable terms, since dear money means dear produce, and it is to the interest of Germany as a purchaser of Roumanian produce to purchase cheaply, and even a conqueror cannot purchase goods at much below the cost of production for any length of time. (There is no fear that any other country will loan money to Roumania during the war, and after the war, if Germany were to win, she would take steps to compel Roumania to place all her loans in Berlin or Vienna.) But it is at the other end of the transaction that Germany will score—not in the direct financing of production, but in the purchasing. Roumania is to be rationed as to her own requirements, and the surplus is to be purchased by Germany. It will be found that Germany will fix the price that Roumania has to pay for her own goods high, and the price that Germany pays for the surplus low; this will keep the cost of living in Roumania high, and tend to reduce the cost of living in Germany, and so assist the reconstruction of German industry. It is the old tribute-money in modern economic form.

Serbia would evidently be treated in the same fashion were she to make a separate peace—with this exception, that Serbia would presumably be controlled from Vienna. If, as has been suggested, Austria desires to incorporate the whole of Serbia (except that part which Bulgaria claims) in a new Jugoslav province within the Empire on a new trialistic basis, the commercial development of Serbia would naturally fall to the Hapsburgs.

Greece may be omitted from the survey, as it probably does not enter into German calculations at the moment. The case of Turkey is more interesting. From the figures of the German loans to Turkey which were published a year ago, and which seemed reasonably probable, it may be taken that Germany has advanced to the Ottoman Empire from 1914 to the present time a sum of about two hundred millions sterling. A considerable part of this has been spent in Germany for munitions, but that may be disregarded. Now it is quite clear that Turkey cannot repay this sum; and if the war continues to the end of this year she will be unable to pay interest on it. The obligation has now also to be expressed in terms of blood as well as money, for German troops have now been sent to Palestine, and Germany will exact payment for these directly or indirectly.

It is evident that Germany did not altogether trust her ally over a year ago, since she compelled Ottoman consent to a commercial treaty—probably at the moment when Turkey first expressed qualms about her debt service. It was arranged that for a period of years after the war Turkey was to give Germany the practical control of her Customs; she was to bind herself to buy her goods from Germany, and probably to sell her produce to Germany if so required, although the latter would be a less essential part of the bargain. The fact that Germany found it necessary to make a treaty of this kind shows that she had grave doubts of Turkey's financial stability. We need not blame her for that.

Turkey's Falling Credit.

But since the treaty was made Turkey's political position has changed enormously for the worse. To buy the Ottoman Empire as it stood in 1916 for 150 millions would have been a profitable transaction enough; and Germany bought something more profitable still—the right to exploit it. But since then the price has increased, from the prolongation of the war, and the *peau de chagrin* has diminished. Six months ago Germany was in the position of having to pay more and to receive less.

It may be suggested that a certain scepticism as to the prospects of restoring Mesopotamia and Palestine was among the reasons which urged Germany to push Turkey along the road to Kars. The force of events—in other words, the British Navy—has driven Germany from Western to Eastern expansion, and it is clear that she believes that peace will be made on the basis that everybody holds what they have in the East. In that event, the more that she and her allies hold, the better. If Turkey could reach the Caspian, and peace could be made on that basis, Germany could afford to write off the two hundred millions advanced to Constantinople; the control of the Black Sea and Anatolia, the right to enter the Caspian, would be well worth the money. The capitulation of Turkey to Berlin would be final and complete.

German finance is already heavily strained; the bankruptcy of the German Empire is admittedly certain unless indemnities can be obtained. Since the prospect of these becomes more remote from the West, they must be sought in the East, and it must be noted that they are being obtained, not indeed in the form of hard cash, but in the shape of territory and the right of economic control. Against the exponses of the war with Russia, Germany proposes to set off the control of the whole region from the Arctic to the Black Sea. If she were to succeed, the real government of these districts would be in the hands of the Deutsche Bank, and that bank would seek its profits from three main sources—the Riga trade, the produce of Roumania and the Ukraine, and the exploitation of Turkey.

We must regretfully admit that, if that control were obtained—and it would open the door to Siberia, potentially a second Canada; to China, another India; and to more dubious prospects in Persia—if that control were obtained at the cost of a thousand millions sterling, Germany would still be able to claim that war, on the Eastern front at least, was a business that paid.

TRADE WITH GREECE.

Post-War Prospects.

The secretary of the branch in Greece of the British Chamber of Commerce of Turkey and the Balkan States (says the *Board of Trade Journal*) has furnished the following memorandum on the future of trade with Greece for the information of British manufacturers and merchants. The writer has had twenty years' experience in business in the East, and his suggestions for the development of British trade with that country are worthy of serious consideration.

Among the advantages offered to Greek merchants by Germans and Austrians were the following:—Long credits, quick deliveries, cheapness, large discounts, prices quoted c.i.f. the Piræus, quotations in the metric system, catalogues in French, frequent visits by commercial travellers with samples, anxiety to suit the requirements of the market, compliance with instructions as to Customs requirements, matching samples, attention to small orders as well as to important ones, and partial or total payment for advertising their goods in the Greek newspapers.

Prices and Credit.

Whether the British manufacturer will consent to make a cheap grade of article to compete with his rivals is a question; but it should be understood that the cheap article is essential for Greece. It is a poor country, where salaries and wages are low. Among the poorer classes the housewife cannot afford to buy a good article at a higher price. She buys what her purse can afford, knowing that a cheap article will last until she can spare the money to get a new one. She does not look for a good article at the price she pays. British manufacturers are not advised to give such long credits as the Germans. Of course, the length of credit depends entirely upon the class of merchandise in question. Although in the cloth trade, for instance, the Germans give from eight to ten months, ninety days would be a fair condition for British makers to fix. There are some classes of goods for which the Germans give no credit at all, but these are principally in articles sent by parcels post and in goods of a perishable nature. As a rule, ninety days should not be exceeded in any line, but, owing to frequent delays in delivery by British firms, the drafts should not be made acceptable until the arrival of the bills of lading in Greece.

Trade Requirements.

The very first thing a Greek asks as soon as he opens a catalogue, and before even examining the prices, is: "What are the discounts?" This is a peculiarity of the race. A high discount will catch his eye much more quickly than a low price. The Germans know this, and have price-lists printed with a higher original price and a correspondingly bigger discount; 25 per cent. and 10 per cent. and 2½ per cent. have a fascinating look to a Greek, and he seems to imagine he can make 37½ per cent. out of them. The discount greatly helps business, for the merchant is interested at once and studies the catalogue with a favourable eye. The Germans excel in quick deliveries, and British manufacturers are too frequently very remiss. The Germans appear to have everything ready in stock, and ship as soon as they receive an order. The British shipper often keeps an importer waiting for months on end before shipping. The result is that a German traveller may call in the meantime with a promise of immediate delivery (which promise he keeps), and the British order is, not unjustifiably, cancelled by the importer. A direct and regular line from London to Greece is greatly to be desired. This would make for much quicker deliveries, though the dilatoriness of certain British manufacturers would still have to be remedied.

Quotations.

The Greek importer always wants quotations c.i.f., because he has no means of calculating freights, etc., and he desires to know what the goods are going to cost him on arrival. He knows the Customs charges, and can add these on for himself. British firms frequently quote free on rail, but this is useless to a Greek, or, indeed, to any foreigner; for though he might ascertain the probable freight, he can have no means of knowing what the railway charges to the port of shipment may be. This does not seem to occur to the minds of some manufacturers. It is only a question of a little trouble to the exporter to fix a through rate. Quotation in the metric system is invariably done by Germans. Even the smallest Greek trader understands the metric system; while inches, pounds, gallons, etc., mean nothing to him. Every trader in Greece knows enough French to read a catalogue in his own line, while few know enough English. It goes without saying that these catalogues should also be made out in the metric system. The use of the metric system and the French language, and especially the latter, are not essential, but they are a great help to trade.

THE MOROCCAN MARKET.

Firms should send out their own representatives to study the market, says H.M. Vice-Consul at Tangier in a recent report published in the *Board of Trade Journal*. German firms used to send out travellers to acquaint themselves with shapes and patterns in demand. This remark applies to samples and patterns of cloth, laces, pottery, and cutlery. The travellers should be able to draw and colour the shapes in demand. In most of the large towns German firms had their own men, who were financed in furthering German interests. They studied the trade on the spot, and later set up business on their own account, moving generally to some other port. No detail was too small to escape their attention.

German firms on the coast established branches inland, which branches secured the right of holding two native agents (called "Semsars"), entitled to all the rights of German subjects, as well as of holding an unlimited number of "Mokhalats," agents whose protection extended only to the interests of the firm. It is difficult to give a definite idea of terms of credit expected by firms in Tangier. Each firm settles its terms to suit the convenience of customers. Credit generally varies from thirty to ninety days. Packing and shipping charges should be included in the original prices. At the present, owing to difficulties in transport, practically all the trade of Tangier is carried on with Spain.

CYPRUS HARVEST PROSPECTS.

(From a Correspondent.)

Harvest prospects since the good rains of March have continued to be favourable. There are hopes of a good carob crop. As regards tobacco, the result of much bungling has been, as anticipated, that by April 15—the final date for planting—large numbers of seedlings were not ready, and, according to some estimates, hardly a tenth of the lands which were marked out for the crop can be planted, which is much to be regretted. It is surmised that one of the reasons for limiting the planting to April 15 has been a fear, on the part of the Government, lest the work involved would clash and interfere with the supply of labour required for the harvesting of cereals. This is often barely sufficient for island needs. In pre-war times a considerable number of labourers came every year from Asia Minor across the narrow sea. Motley, picturesque groups of men and women, including gypsies, were welcomed on the north coast, often bringing various articles for sale, such as carpets, embroidery, and curios of many kinds. Wages for day labour still tend to rise, and there is no excuse for idle hands in Cyprus. Forests, mines, and public works offer employment. The liberal pay given to muleteers for Salonika, and the excellent Government arrangements connected with remittances to their families, attract many volunteers.

GREEK SHIPPING.

Sale of Ships to Foreigners.

M. Venizelos answering a question in the House of Deputies, in Athens, recently, stated that the Government did not intend to annul the measures taken for the prohibition of the sale of Greek steamships to foreigners, and added that by such sales the Greek mercantile marine had already lost many thousand tons.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to February 28, 1918 (New Style: January 14 to March 13, 1918):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Feb.,	1918	3,021,296	2,152,000
Do. do. do	1917	1,902,101	768,000
Estimated Receipts for 2 months (Law of Control)		4,816,666	1,783,333
Actual do. do.,	1918	7,589,480	6,312,000
Do. do. do.,	1917.	5,075,986	2,223,000
Difference between estimated and actual receipts for 2 months	1918	+ 2,772,814	+ 4,528,666
	1917	+ 259,319	+ 439,666

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos Emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

ENGINEERING NOTES.

Threshers for Greece.

According to a Greek contemporary, the Greek Government has decided to order abroad a large number of threshing machines to be used for the threshing of the whole crop in Thessaly. Special officials of the Ministry (of food supply) will be sent to keep a record of the threshed quantities. In this way the Government will not have to rely on the accounts given by the growers regarding the quantities of threshed wheat but on official investigations and figures. It is hoped that British manufacturers will participate in the order.

A "Multum in Parvo" Tractor.

With the existing scarcity of labour and the difficulty of obtaining agricultural machinery, any mechanical contrivance tending to minimise the need of manual labour, or any machine that combines in itself the functions of two or three or more machines should be of interest to the farmers and landowners. The acquisition, for instance, of a power ploughing tackle is desired by every farmer, but the majority of such tackles are beyond his reach. They necessitate, as a rule, the use or co-operation of other machines, implements or vehicles, which means higher purchase value and more working expenses, a question of great importance to the average farmer. Descriptions of ploughing tackles, motor ploughs, motor tractors, etc., have appeared from time to time in these columns, and in view of the apparent interest that is shown by landowners and farmers in the East, as well as in this country, in what concerns new or improved agricultural machinery which might be of adequate assistance to them in their present difficulties, a few notes on a new farm tractor may not be out of place. This machine combines in one construction the motor plough, farm tractor, three-ton truck, and portable power plant. It is claimed that it is capable of performing "all the work of the farm," for in addition to the four leading features mentioned above, it has others also which are equally interesting.

Its Value as a Plough.

Primarily, as with all farm tractors, this machine's function of first importance is ploughing, and it accomplishes this purpose in a very original manner. It does not pull its ploughs as other tractors do, but it carries them suspended from its frame. In this it resembles that type of tractor which is known as a motor-plough, the whole equipment of tractor and ploughs forming one complete machine. Three 14-in. ploughs are mounted in a separate frame, which is attached to the main frame of the tractor in such a way that, whilst they are readily removable when in use the tractor frame takes much of the side-thrust and other stresses off the plough and its connections. The latter can be made very light—hence reducing the work the engine has to do—it is impossible for the ploughs to be damaged when working on bad ground, as the drawbar through which the pull on the plough is applied is spring-controlled and inter-connected with the clutch in such a way that should the ploughshare strike a root or a rock the spring is stretched and the clutch pulled out of engagement. With the engine power thus withdrawn the machine stops and the obstruction can be removed. This feature is undoubtedly a very valuable one. Another is that the three ploughs function as to depth independently, so that each plough follows the inequalities of the ground over which it is travelling and cuts a furrow of even depth regardless of the nature of the ground. The depth is adjusted by a depth wheel, and the control of the ploughs is effected by a lever lying conveniently to the right hand of the driver, who by its means can lift the ploughs entirely clear of the ground, so that the tractor may be backed without difficulty if desired and carried clear when turning or making the headlands. This self-levelling floating plough is a noteworthy feature, as the tractor not only carries the plough, but also the weight of the earth which is being turned, as well as withstanding the heavy land-side pressure caused by the shares operating at an angle and by the pressure of the earth against the mould-board.

In its form as a motor plough the machine has three wheels, one a small trailer supporting the tail of the triangular frame, and the other two large chain-driven wheels of special construction as regards thread. These wheels, which, when working as a motor-plough, travel in front, are both driving and steering-wheels. The steering is effected by the control of the differential, throwing more of the power of the engine on to one wheel than the other, up to the point of throwing all the power on one and stopping the other altogether. When this is done, the machine simply drives around the fixed wheel as a centre pivot and is thus enabled to turn practically in its own length, not only making very narrow headlands, but, where desirable, enabling it to cut right-angled or even acute-angled furrows. If any other type of plough than that supplied with the machine and described above is required to be used, or when using harrows, cultivators and other implements, the change is effected by simply dropping the plough out of the frame and reversing the machine; the small wheel then going in front becomes the steering-wheel and the implements are attached to a drawbar furnished for the purpose at the engine end of the machine. In this form it becomes a tractor proper, and functions just as any other tractor.

Useful as a Lorry.

When required for conveying loads to market and for work on hard roads, it can be used either in this form, as a tractor, towing a train of waggons, or—which is to be preferred—carrying its load of three tons, becoming for the time being a three-ton lorry, with an 8 miles per hour road speed—quite fast enough for running on steel tyres. In order to enable it to do this two changes are effected in connection with its wheels' faces and the removal of the small supporting wheel and the ploughs.

The engine power of the machine is larger than usual, delivering, as a portable power plant, 35 h.p. to a 20-inch belt pulley, whilst 18 h.p. is its drawbar pull.

The Egyptian Government proposes to establish an advisory council of Egyptian cultivators to assist the Cotton Commission in determining cotton grades and other matters in connection with the scheme for purchasing the cotton crop.

EGYPTIAN EXPORT PROHIBITIONS.

The export from Egypt of the following articles has been prohibited:—(1) Copra except for the United Kingdom and British Possessions. (2) Cotton for Japan and Switzerland, exception being made however for cotton exported to Switzerland through the intermediary of the Société de Surveillance Suisse. (3) Sugar of Egyptian origin unless the export is authorised by means of a permit from the Supplies Control Board. This does not apply to articles in which sugar is included, such as sweets, jams and all kinds of sweetmeats, but the production of a certificate from the sugar refinery authorising the export of such articles is necessary. (4) Soap of all descriptions.

The redespatch of the following articles is prohibited:—Cotton thread, candles, coffee, indigo, linseed, pepper, spices and tea. Onions may be exported to the United Kingdom, Italy and France, and to their possessions and colonies, as well as to Switzerland, if sent through the Société de Surveillance Suisse, and to Greece on the production of an authorisation from the British Minister at Athens.

THE INDIAN COTTON SEED CROP.

Its Unrealised Value.

(From a Correspondent.)

Now that the Home Government is bestirring itself in the matter of research in so many directions, and the vital need of the cultivation of cotton of the American variety within the Empire has at last become recognised, and, indeed, the growing of such cotton in India is making rapid progress, it may be of interest to examine the potential value of the Indian cotton seed crop.

The export of cotton seed from India may be said to have commenced in the year 1897, when about 1,500 tons were sent to seed-crushing mills in England. In 1900-01 the quantity exported rose to about 11,000 tons; the next year it leapt up to 100,000 tons, and it has since reached about 350,000 tons per annum.

Practically the whole of the exports consist of a small fuzzy seed known as "Bombay" seed, but it must not be supposed that this is representative of the whole of the cotton seed produced in India. This particular class of seed has found its way into the export trade most probably because of the small amount of "fuzz" left upon it after ginning, thus enabling it more or less successfully to stand the long sea voyage without undue "heating." The amount of this "fuzz" is not over 2 per cent. of the weight of the seed, and if loaded fairly dry, the risk of heating is not very great. The woollier varieties of Indian seed, such as Tinnevelly, Cambodia, etc., which, after ginning, show, according to Mr. Hooper (of the Indian Museum), as much as 8 per cent. to 12 per cent. of lint, would almost certainly heat badly during the voyage, and if serious consequences in the shape of spontaneous combustion did not ensue the seed would, on arrival, be found to have greatly deteriorated in value for the purposes of oil and cake production.

Clean Defibrated Seed for Export.

In this connection it is worth while to consider the possibilities attaching to the employment in India of a recently introduced machine (reference to which was made in The Near East of April 5), by means of which the short lint or "fuzz" left on the woolly varieties of Indian cotton seed after ginning can be removed to any desired degree without injury either to the seed or to the lint product. We are informed that measurements made by an independent authority show that after the removal of about 1½ per cent. out of the 2 per cent. of fuzz remaining on the Bombay seed, the increase in weight of the seed contained in a given volume is about 12 per cent., owing to the seed bulking more closely. Clearly, this effect would be more pronounced in the case of the more woolly varieties of Indian seed, and thus, by means of this machine, such varieties could be rendered capable of being successfully exported. It is scarcely necessary to emphasise the many advantages of denuding seed intended for export of as much fuzz as possible before shipping, not only on account of the reduction in the risk of heating, but also because of the saving in freight charges, since the shipper pays freight on the ton measurement of 40 cubic feet, but sells the seed by the ton dead weight. But the main advantage lies in the premium which such cleaned defibrated seed would command in British markets. Experts in the cotton seed trade in London who have inspected samples of this Bombay seed before and after treatment in this machine state that the cleaned defibrated seed would sell at a premium of about 15s. over that of Bombay seed as now received at British ports. The reason is not far to seek. The way in which seed is handled in India prior to shipment is well known. Accidentally or otherwise, the seed contains a considerable amount of dust and dirt and other débris, which reduce the value of the seed not only in virtue of the reduction of the quantity of oil contained in a given weight, but also because of the expense and loss incurred in the preliminary processes such seed has to undergo in order to remove this foreign matter before the seed can be sent to the press room. This loss may reach 5 per cent. of the weight of the seed. Hence the oil content of one ton of cleaned defibrated seed will be proportionately greater than that of a ton of seed as now shipped. The following figures give an indication of the extra return which the shipper should realise by cleaning and defibrating "Bombay" seed in India before shipment:—

Let us commence with 2,400 lb. of Bombay seed. Deduct 5 per cent., or 120 lb., for dirt and débris. Deduct a further 1½ per cent. (say 36 lb.) for the fuzz removed. We are then left with 2,240 lb. of cleaned defibrated seed. The average value of Bombay seed in British markets during the three years immediately preceding the war was about £5 per ton, so that we may take the value of the cleaned defibrated seed at £5 15s. per ton. To produce this 2,240 lb. of defibrated seed the shipper has had to use 2,400 lb. of seed, which, at £5 per ton, would have fetched about £5 7s., so he is about 8s. to the good on this count for every 2,400 lb. seed used, or at the rate of 7s. 5d. per ton undefibrated seed. But this is not all. He would have paid freight on the 2,400 lb. of undefibrated seed, whereas he only pays freight on 2,240 lb. of defibrated seed, which, as we have seen above, bulks about 12 per cent. more closely; hence he can ship 12 per cent. more dead weight per ton measurement.

Sale of Lint Product.

Then there is the net return on the sale of the lint-product to be brought into account. On the basis of the value already established commercially for this product in Great Britain, the net profit on the sale of 36 lb. of this product, after deducting all costs of cleaning and defibrating the 2,400 lb. of seed should not be less than 2s., so that, taking the saving in freight at, say, 2s. 6d., the total extra return would amount to about 11s. 8d. per ton original weight of undefibrated seed. If the dirt in the seed were less than 5 per cent., this return would be higher and, of course, these calculations, which apply to the small Bombay seed with very little fuzz on them, would apply, *à fortiori*, to the other Indian varieties with 8 per cent. to 12 per cent. of fuzz upon them.

According to Sir A. D. Steel-Maitland, M.P.,* "the quantity of Indian cotton seed exported, chiefly to the United Kingdom, varies from 100,000 to 400,000 tons per annum, a slight increase in price being sufficient to bring forward largely increased quantities." On these figures, the extra revenue that India might have derived from the export of cotton seed could have reached over £200,000 in a year, a sum not to be despised.

The quantity of cotton seed produced in India is about 2,000,000 tons per annum. Of this, about 180,000 to 200,000 tons are used for planting. Of the remainder, the quantity exported—as we have seen—has not yet exceeded 400,000 tons. There remains, therefore, about 1,400,000 tons to be accounted for. No doubt a large proportion of this is fed direct to cattle, particularly in times of drought, but there must still remain large quantities that are absolutely wasted.

Now that the feeding of cattle has been brought to an exact science, and vast experience has been gained, notably in America, in the value of cotton seed meal and of the decorticated hulls of cotton seed in the feeding of cattle, it is not too much to say that the feeding of cotton seed direct to cattle is an absurdly wasteful proceeding. So far as the intelligent utilisation of cotton seed is concerned, India would appear to be about as far advanced as the United States of America were fifty years ago, when huge piles of rotting cotton seed lying around the gin houses were familiar sights. This is all the more extraordinary because whatever excuse may be made for the want of enterprise fifty years ago in the commercial development of the valuable oil-content of the cotton seed, the fact that as long ago as 1870 the annual crush of cotton seed in Great Britain was 200,000 tons, and the rapid, indeed spectacular, progress of this industry in the United States since, say, the year 1890 has removed any possible doubt as to the industrial value of the products obtainable from cotton seed, and it is therefore a standing reproach to commercial and industrial enterprise in India that at the present day a natural source of enormous wealth should be, to all intents and purposes, still neglected.

* See article entitled "Oils and Fats in the British Empire" in "Staple Trades of the Empire," p. 29. (J. M. Dent and Sons, Limited.)

VALUE OF PRECIOUS METALS.

Messrs. Samuel Montagu and Co., in their weekly bullion letter, say:—The expression "precious metal" has been commonly used to imply a reference to either gold or silver. To-day the range is wider, for several other metals have acquired commercial values far exceeding those of gold and silver. It is reported, for instance, that the United States Government has just commandeered the stocks of platinum, palladium and iridium in that country, and has fixed the respective prices at the dollar equivalents of £21, £27, and £35 per troy ounce. On these bases the prices for platinum is twenty-fold, for palladium, ten-fold, and for iridium thirty-fold that which once obtained. These high quotations, however, seem insignificant beside that for radium, which, at £16 per milligramme, works out at £500,000 per troy ounce.

LANCASHIRE COTTON.

Yarn and Cloth Prices Advanced

(From Our Own Correspondent.)
Manchester, Wednesday.

This has been a holiday week in Manchester trade circles, and the Exchange for business purposes was only open on Tuesday last. Owing to the Control Board having decided to restrict production to a further extent, a distinct advance has occurred in yarn and cloth prices. From June 10 American spinning mills and all weaving sheds will only be allowed to run 50 per cent. of the machinery for 40 hours a week instead of 55½ hours. Production in Egyptian spinning mills will be limited to 80 per cent. of the full working hours of 55½ hours per week. Favourable reports continue to be received relating to the Egyptian cotton crop. The American growth is also doing very well. Egyptian yarns are distinctly dearer, certain qualities being raised 3d. per lb. Business has been at a standstill. Very little fresh inquiry has been received in piece goods suitable for Egypt. Some local shippers are reselling in the Manchester market. Standard goods for India and China have been slow. At the time of writing the operatives' wages question has not been settled. American yarns have been put up in price to the extent of about 1d. per lb. There is every probability of the scarcity of supplies becoming more pronounced than ever.

INDIAN TRAFFIC RECEIPTS.

The latest Indian traffic receipts are shown below :—

Railways.

	Amount. Rs.	Inc. or Dec. Rs.	Aggregate. Inc. or Dec. Rs.
Delhi Umballa Kalka (May 11)	87,000	+ 5,509	+ 70,723
East Indian (May 11)..	26,83,000	+2,35,000	+9,12,000

Tramways.

Burma Electric (April)	£54,104	+ £1,450	+ £78,045

GREEK EXTERNAL DEBT.

The Council of Foreign Bondholders is informed that the surplus of the revenues assigned to the service of the Greek debt in respect of 1917 permits of the increase of the minimum rates of interest and sinking fund in 1918 by the following percentages of the original interest :—Loans of Group I., interest 22 per cent., sinking fund 14 per cent. ; Group II., interest 24 per cent., sinking fund 12 per cent. ; Group III., interest 24 per cent., sinking fund 12 per cent.

With the addition of the above percentages the total interest payable in 1918 is, 2.60 per cent. on the 4 per cent. Monopoly Loan, 2.70 per cent. on 5 per cent. Funding Loan, 2.80 per cent. on 5 per cent. Loans of 1881, 1884 and 1890, and 2.24 per cent. on 4 per cent. Rentes. The whole of the additional interest is payable on the April coupon in the case of the Funding Loan and Rentes, on the June coupon of the 5 per cent. Loan of 1890 and on the July coupon of the Monopoly Loan and the 5 per cent. Loans of 1881 and 1884.

BAKU OIL COMPANIES.

The boards of the petroleum companies in Petrograd have received a telegram from Baku, dated April 20 (says *Reuter's* Petrograd correspondent), stating that a contribution of 50,000,000 roubles has been imposed upon the companies.

PALM SUGAR PRODUCTION IN INDIA

According to a recent crop report of the Madras Department of Agriculture, the number of palm trees which are usually tapped for sugar in the Madras Presidency is estimated at 2,500,000, and the yield of jaggery (crude sugar) as 35,000 long tons. India's total production of palm sugar is about 300,000 tons, of which Bengal produces roughly one-third. India's total production of sugar both from cane and palms is somewhere about 3,000,000 tons.

NEWS FROM ALL SOURCES.

A special forecast of the wheat crops in India shows an increase of 8 per cent. in area and of 3½ per cent. in yield, as compared with 'ast year.

Liptons have opened a branch in Jerusalem at 5-6, Jaffa Street. This is the first branch opened by a British provision merchant in Jerusalem.

Mr. S. Derville and Mr. C. Verge have been elected vice-presidents of the Suez Canal Company in the place of Mr. S. Charles Roux and Voisin Bey, deceased.

The total approximate gross earnings of Indian State Railways from April 1, 1917, to February 16, 1918, show an increase of Rs.46,086,175 over the figures for the corresponding period of 1916-17.

Official estimates show that wheat in Lower Egypt is 2 per cent. below and the crop in Upper Egypt 1 per cent. above the average. Barley and all other crops are above the average.

Sir Frederick L. Sprott, late Chairman of the Bombay Port Trust, has been elected to fill the vacancy on the Board of the Great Indian Peninsula Railway in the place of the late Mr. A. H. Campbell.

Reuter learns from Serbian sources that prices of all commodities have been raised to an enormous extent in the Western Austrian Crown lands, particularly in Croatia. The price of milk is raised 800 per cent., that of eggs 1,090 per cent., a pair of fowls, formerly sold at 1s. 3d., is now worth a guinea, and a pair of ducks, formerly sold at 2s. 2d., now cost 75s. The price of lard and bacon is raised 1,500 per cent. A reel of cotton is dearer by 8,000 per cent. A pair of socks, formerly worth 5d., is now sold for 40s.

COMPANY NOTES & REPORTS

The report of the Indian Peninsula Rubber and Tea Estates for the year ended June 30, 1917, states that the whole of the expenditure on the estates has been charged to revenue, and £1,000 writen off for depreciation of buildings and machinery, leaving a net profit of £3,126. This, added to £2,837 brought in, leaves a balance of £5,963, which it is proposed to carry forward.

The Travancore Tea Estates Company in the year ended September 30 made a profit, including the balance brought forward, of £24.919, against £32,760. The final dividend is 5 per cent. (making 15 per cent. for the year), against 30 per cent.; and the carry-forward, subject to excess profits tax, if any, is £9,507, against £10,343.

The report of the Bengal Iron and Steel Company for the year ended September 30, 1917, states that net profit, including £26,570 brought forward, and after payment of excess profits duty, was £189,577. The portion of Manharpur prospecting and development expenses writen off absorbs £712; transfer to depreciation and colliery sinking funds £26,133, and Debenture stock interest £10,000. The directors recommend a dividend of 30 per cent. for the year on the ordinary shares—6 per cent. payable March 30, 1918, 8 per cent. June 29, 8 per cent. September 30, and 8 per cent. December 16, leaving £76,277 to be carried forward, subject to excess profits duty. The meeting will be held at the Cannon Street Hotel, E.C.4, at noon on June 5.

The report of the Assam Company for 1916 states that the accounts were delayed owing to a large portion of the crop being held up at Chittagong for want of transport facilities the last of the 1916 teas not being dispatched from that port until February, 1918. The profit on the 1916 crop was £204,285, less provision for excess profits duty £76,920, commission and bonus £28,229, and planting, etc., £5,551, leaving £93.585, against £105,626 for 1915. Total distribution 25 per cent., the same as last year; to general reserve £40,000, against £17,000; forward £3,501.

The report of the Calcutta Electric Supply Corporation for 1917 states that 26,596,827 units were sold, against 23,575,211 units. The number of houses connected at December 31 was 9,741, an increase of 280. Profits amounted to £173,949, which with the balance brought forward and interest received makes £241,070. The directors have placed £39,552 to the credit of depreciation and renewals account, and after providing for excess profits duty for 1915 and 1916 and an estimated sum of £15,000 for 1917 and other charges, there remains £81,512. It is proposed to add £2,500 to reserve fund, £4,000 to insurance fund, and pay a final dividend on ordinary shares for the half-year of 6½ per cent. actual, making 10 per cent. for the year, leaving £45,964 to be carried forward, after providing for directors' additional remuneration. Reserve for depreciation and renewals is increased to £229,560, and the reserve fund, with the addition of £4,674 from dividends on investments, will stand at £138,703. The directors have decided to establish a pension fund for the benefit of the staff and £7,500 has been placed to the debit of net revenue account so as to furnish a nucleus for the purpose of starting the fund. Expenditure on capital account amounted to £23,910, the total outlay to December 31 being £1,391,432. Meeting, 2, Broad Street Place, E.C., 29th inst., 2. p.m.

The report of the Indian Electric Supply and Traction Company, Limited, states that the surplus on the year's working in Cawnpore was £17,766, against £20,219 in 1916, and including transfer fees and exchange adjustment in England, the credit side of net revenue account shows a total of £18,189; London expenditure was £2.216, and after providing £3.900 for debenture interest a profit of £12,072 is shown. The amount brought in from last year was £1,756, and there remains a balance of £13,829. Of this amount an interim dividend of 2½ per cent. has already been paid, viz., £1.950. The board have placed to reserve for depreciation and renewals, £6,000; to Debenture issue expenses, written off, £1,000; and the payment is now recommended of a final dividend of 5 per cent., £3.901 (making, with the interim dividend paid on November 7, 1917, 7½ per cent. for the year); directors' commission on dividends, £292; leaving to be carried forward £685.

Dividends, Payments, etc.

The transfer books of the ordinary stock of the Burma Railways Company will be closed from June 15 to 29, inclusive.

The directors of the Bombay, Baroda, and Central India Railway propose, in addition to the half-year's guaranteed interest of 1½ per cent., of a final dividend of 1½ per cent., with a bonus of 1½ per cent., from the company's share of surplus profits for the year ended March 31 last, making a total payment in July next of 4½ per cent., less tax. The return on the capital stock for the whole year will therefore be 6½ per cent., less tax, against 5¾ per cent. for the previous year.

The registers of the 4 per cent. cumulative Preference stock of the Southern Punjab Railway are closed from May 18 to 31, inclusive. The dividend will be payable on June 1.

The directors of the Bengal-Nagpur Railway Company have declared an interim dividend of 15s. per cent. and a bonus of £1 per cent. on the capital stock in respect of the half-year ended March 30, payable July 1 to holders registered June 30, together with the guaranteed interest £1 15s. per cent. then due, making a total distribution of £3 10s. per cent.

The directors of the Agricultural Bank of Egypt have declared a dividend of 8s. per share on the ordinary shares, and £40 per share on the deferred shares, payable 21st. instant.

The directors of the Bengal Coal Company (Calcutta), after setting aside Rs. 120,000 for depreciation, Rs. 3,50,000 mines development, recommend a dividend at rate of 50 per cent. per annum and to carry forward Rs. 3.00,000.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah production for week, 21 tons (last week 22 tons). Hurgada production for week, 4,632 tons (last week, 4,477 tons).

British Burmah Petroleum, Ltd.—The total production of crude oil by this company and the Rangoon Oil Company amounted to 75,410 barrels for April.

Bibi Eibat.—Week ended March 17, 35,000 poods (565 tons); March 24, 31,250 poods (504 tons); March 31, 31,200 poods (503 tons); April 7, nil; April 14, 18,500 poods (298 tons); April 21, 16,500 poods (266 tons).

European Oilfields.—Week ended March 17, 56,100 poods; March 24, 56,250 poods; March 31, 57,350 poods; April 7, no work; April 14, 43,800 poods; April 21, 41,200 poods.

THE SALONIKA FIRE.

It has been officially reported to the Greek Government that almost all the claims of those who suffered losses from the great fire at Salonika have been paid by the various insurance companies.

INDIA'S NEW LOAN.

A Reuter message states that the Indian Government has notified the issue of a new loan. It takes the form of 5½ per cent. War Bonds, free of income-tax, payable in 1921, 1923, 1925, and 1926, and Post Office 5 per cent. five-year cash certificates. The whole of the cash subscription will be given to his Majesty's Government as part of India's contribution of one hundred millions.

PRICES IN SOFIA.

According to recent information, prices of food and clothing in Sofia have reached a remarkable level. Thus, 15 francs are charged for one kilo of sugar, the same amount of coffee costs 100 francs, pepper 120 francs, cheese 15 francs, fish 20 francs, tea 120 francs, honey 24 francs, soap 20 francs, and a fowl 30 francs. Milk costs 2 francs a litre. Clothing has risen on a similar scale, and a woman's costume costs 800 to 1,000 francs, and a pair of boots can only be bought for from 200 to 250 francs. Stockings cost 50 francs, and a pair of gloves 20 francs, while the price of having a pair of shoes soled and heeled is 50 francs.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned dates:—

	1917. Francs.	1918. Francs.
May 9..	110,000	160,000
May 10	180,000	470,000
May 11	110,000	110,000
May 12	200,000	40,000
May 13	130,000	360,000
May 16, 17, 18, 19	420,000	1,030,000
May 20	230,000	150,000

THE AGRICULTURAL BANK OF EGYPT

Notice is hereby given that at a General Meeting of the above-named Company, held in Cairo on the 16th May, 1918, it was declared that a DIVIDEND of 8s. per Share on the ORDINARY SHARES of £5 each and £40 per Share on the DEFERRED SHARES of £5 each should be paid on or after the 21st May, 1918, at The National Bank of Egypt in Cairo, Alexandria, and London (6/7, King William Street, E.C.4). Payment will be made in London less Income Tax.

The Sale Dividends will be paid to the Holders of Ordinary and Deferred Share Warrants to Bearer on presentation of the respective Dividend Coupons (Ordinary No. 15, Deferred No. 14) at the above Banks.

Forms for listing the above-mentioned Coupons will be supplied on application by the Bankers above mentioned.

Coupons must be left with the Bankers for previous examination.

By Order, F. T. ROWLATT,
Cairo, 17th May, 1918. President.

The Bank, through its Branches and Correspondents in Morocco, is fully equipped for all kinds of Banking business with that country and business between Morocco and Egypt is facilitated through its Correspondents in Egypt.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business has been somewhat interfered with this week by the Whitsuntide holiday, but there has been more interest taken in the market, and, were it not for the very great delays at present in telegraphic communication with Egypt, things would probably have been a good deal more active; as there are many indications that business is reviving again, and that we may soon see a recurrence of the very active conditions prevalent some time ago. Egyptian Government stocks have again been persistently inquired for, and both Unifieds and 3½ per cent. preferences are ¼ up at 87½ and 74½ respectively. Very little business, however, transpires, as buyers find it difficult to execute their orders owing to the scarcity of sellers. City of Alexandria Bonds have risen a point to 81, round which level some business has been carried through.

In Bank shares a few transactions have taken place in Nationals, but the price remains unchanged. As regards Agricultural Banks, these are somewhat firmer at 6 1-16 ex div., with only trifling transactions. Agricultural Preferences have continued in strong demand, and are again 1-16 up at 7 5-32, with no sellers on the market at the moment. Anglo-Egyptians have advanced a further ¼ to 15 11-16, the local demand here being of a persistent character.

In Railways there is some inquiry for Delta Lights round the current level, but shares are not offered. Amongst Land descriptions a very fair amount of business has taken place in Aboukirs without affecting the price, and there is a fair demand for Behéras somewhat under the present quotation; but no business has been done, as sellers are asking higher prices. Daira shares have advanced 6d. to 4s. in connection with the final liquidation recently announced. In Delta Lands a few transactions have taken place at about 13s., at which price, however, there are still some sellers. A feature of strength has been Egyptian and Foreign Trusts, in which some large transactions have taken place at advancing prices, and at the close the shares are 1s. 9d. higher at 11s. 9d. In New Egyptians there have been persistent buyers at 17s., but very little business has been done, as sellers are scarce at the present level. The price closes 6d. higher at 17s. 6d., at which a few shares changed hands at the close to-day. Sidi Salems have been a firm spot, and are 1-32 higher at 2 7-32. In Union Foncières some shares which were on the market round 2 15-16 have been taken, and since then some buying orders have come to hand, which, however, do not seem to have much chance of being executed, as there are practically no further sellers round the current price. In Miscellaneous shares there is almost no business or change in prices to record.

Greek securities have continued a strong market, with a further rise of one point in 1890's to 60, in 1914's to 74, and in 1910's to 59. Rentes have also advanced ½ to 48½. Apart from one fair-sized deal in 1910's, business in the various loans has been rather unimportant. Bank of Athens shares are again ⅛ higher at 3⅞, and Piræus Athens 4½ per Cent. Bonds continue in demand.

BANQUE FRANCO-SERBE.

Head Office—

In view of the Board of Trade Order prohibiting the delivery of newspapers to retailers on the terms known as "Sale or Return," which comes into force in the United Kingdom on June 24, readers of "The Near East" who are not already subscribers will materially help the Management by giving an order to their newsagent or to the Office of "The Near East," 1, Devonshire Square, E.C.2, for the regular delivery of the paper. Annual Subscription, £1; postage, 2s. 2d. (inland), 4s. 4d. (abroad).

NOTES OF THE WEEK.

In view of what is taking place on the Western front it would not be a matter for surprise to find other theatres of war maintaining silence out of sympathy, as it were, with the titanic clash of arms that they cannot hope to rival. Yet there is in reality no approach to quiescence on any front, and what may pass as an uneventful week in the bald language of official *communiqués* may sometimes mark a definite stage in the history of one of the minor fronts. This may ultimately prove to have been the case in the Balkans, where local actions have been multiplying for some time past, until they represent a degree of liveliness along the whole front that is calculated to keep the enemy far more occupied than he has been for a considerable period. The French in the centre and Italians and French on the left wing have been the most active; but it will not be overlooked that the Greeks have yet to win their spurs, and from all accounts must be spoiling for a trial of strength with the Bulgarians opposed to them.

Even if these small engagements along the Macedonian front herald no greater effort on the part of the Allied army, they can hardly fail, if repeated often enough, to increase the general war-weariness of the Bulgarians. For the first time reports of privations in Bulgaria are reaching the outside world. In normal times the country is practically self-supporting, and the earlier harvests of the war were reported to have been satisfactory enough to relieve the Bulgarians of any anxiety on the score of supplies. But either as the result of the strain on her man-power or on account of excessive contributions in kind levied upon her, Bulgaria is now said to be feeling something of the pinch from which other belligerents have already suffered so long. If there be any truth in the reports that are now reaching the Allied army in Macedonia, a judicious testing of the whole of the enemy's line must reveal one or more weak spots. The evidence of prisoners is not always trustworthy; but in this instance it would seem to be confirmed by information received independently in Switzerland.

The Turkish invasion of Persia is now assuming the proportions of an organised campaign. Last week reference was made to the advance on Ushnu and Sujbulak to the south of Lake Urumiah. A second Turkish force is now stated to be entering Persia from the Caucasus, making use of the Tabriz Railway. The cession of Batoum, Ardahan, and Kars, which was included in the terms of the Brest-Litovsk Treaty, was probably an attempt to throw a cloak of somewhat threadbare legitimacy over far-reaching designs farther eastwards. A railway runs through Kars to Alexandropol, where it joins the Erivan-Tabriz line. Advancing along this, the Turks have already reached the former town, and in the absence of any serious opposition may soon be expected in Tabriz. In the face of these developments it is difficult to see how Great Britain can postpone indefinitely action for the better defence of Persia and its capital. The Allies are far from liquidating the defection of Russia by even the splendid efforts that the United States have made during the year that they have been at war with Germany. It would seem to constitute a grave reflection upon the Allied reading of the world struggle, if they allow at this stage yet another country to be overrun, while one member of the Alliance—Japan—is taking no part in the military operations. Although the work of saving Russia from herself and the Germans may still have to be delayed, there are not the same obstacles in the way of Japanese co-operation in Mesopotamia for the protection of Teheran and Azerbaijan.

In Palestine a further lull in the operations has succeeded the enemy's concentration east of the Jordan. To the south, however, Arab troops belonging to the Hejaz continue their guerilla tactics against the Turkish forces in this region. It is unfortunate that a clearer estimate of the general situation cannot be formed from the official reports. Medina remains in Turkish hands, partly, no doubt, owing to the reluctance of the Arabs to expose the Holy City to siege operations. Their investment of the city, however, must have been spasmodic in the past, if the garrison can still make arrangements for the arrival of a convoy of three hundred camels. This particular convoy was captured, fortunately; but the number of raids to which the Hejaz Railway has been subjected suggests that the Turks have hitherto contrived to maintain traffic on the line and to repair

Digitized by Google

the damage done from time to time by the Arabs. This state of affairs makes the failure of General Allenby's army to occupy the railway permanently at Amman the more regrettable. The Arab efforts, which have been so well sustained over a long period, just lack the power to push their advantage far enough to enable them to do a definite piece of work once and for all. By now they might have disposed of all Turkish opposition between Maan and Medina, and be affording General Allenby invaluable help by advancing northwards along the railway line to Damascus.

Not the least notable exploit of the Arab forces is to have been the means, in conjunction with the Palestine Expedition, of rescuing a number of Armenians, men, women, and children, who had been deported by the Turks to the desert areas east of the Jordan. This incident led to an exchange of telegrams between the Armenians and the Friends of Armenia in London on the one part and the Hejaz authorities on the other (which are reproduced elsewhere in this issue). The reply of the King of the Hejaz was a very striking message. He pointed out that the Emir Faisal "in assisting the oppressed has only performed one of the first duties of our religion and of Arabs' faith," and continued, "We ask God before everything to give us strength to enable us to do them (the Armenian race and other races in similar plight) helpful service by which to prove to the world the true feelings of Islam, whose watchword is freedom." It requires little knowledge of the tenets of Islam to realise that these views are not those which the Constantinople authorities either in the time of Abdul Hamid or under the Committee of Union and Progress have held. As a matter of fact, the King of the Hejaz shows that he stands for the pure primitive Islam of early days, and he gives expression to the original Arab interpretation of life and religion.

We are glad to see that the authorities have taken steps to remove a grievance which was produced incidentally by the regulations issued last year to exclude alien influences from the Indian Civil Service. The rules in question required subjects of Indian States to obtain a formal declaration from the Governor-General in Council before they could enter for the competitive examination, and thus placed them at a disadvantage alongside the youth of British India, who were not compelled to comply with any corresponding formality. Under the new regulations subjects of the States will be admitted to the examination as of right, and we have no doubt that this fresh recognition of the essential unity of India, whatever its internal divisions, will be as welcome to the politician in British provinces as to the States whose subjects are immediately benefited.

The mail has now brought us the last, or almost the last, instalment of the long-drawn financial debates in the Indian Legislative Councils, and it is pleasant to be able to say that the reports leave on the whole a satisfactory impression regarding the progress made by these still experimental institutions. It is true that much nonsense has been talked, but that happens everywhere, and it is more important to note that the proportion of sense is rising steadily, and that quite a large number of the speeches have been of a kind which should be welcomed by the administration—critical, of course, but at the same time suggestive, and, in a few cases, of actual constructive value. The great need now is the development of a keener sense of responsibility, and if Mr. Montagu succeeds in introducing this element, there is no reason why the Councils should not eventually take an honourable place in the somewhat heterogeneous class-list of the world's deliberative assemblies.

A study of these voluminous reports gives fresh emphasis to a parallel—or contrast—which must have struck many of our readers regarding the position in England and in India at the present time. Each country has of late been busily engaged in trying to imitate the other, and each has experienced a certain amount of discomfort in the process. India, which knows all about bureaucracy, is eager to superimpose a democratic constitution upon the administrative machine, which, on the whole, has served her so well; and at the same moment England, the home of modern democracy, has been hastily constructing a central administration of a type for which she has not hitherto felt the need, though it is nearly as familiar in most parts of Europe as in the Asiatic countries from which it is derived.

We have recognised the progress made by India in her new enterprise, but we must admit that England has made a more rapid advance towards the goal at which she aims. Of course, she made many blunders at the start, and if the great Indian bureaucrats of the past from Asoka to Akbar, and from Thomason to Temple Mall, are still interested in the field of their earthly labours; they must have derived infinite amusement from the administrative antics of energetic men placed hurriedly in an altogether strange environment. Energy has, however, told, and while India is still in the first lap of her long course, the chains of bureaucracy are now firmly riveted on this country, which is already beginning to wonder how it managed for so long without possessing anything of the kind.

Some people, however, are never satisfied, and already we hear inconvenient questions as to the future of these things. When the immediate necessity has passed away will England continue to hug the bureaucratic chains which she has hastily forged, or will she hurl them aside and proceed to wallow once more in the liberty—or anarchy—which prevailed until the other day? And will India be satisfied for long with the democratic robes for which she now yearns, or will she after a brief trial passionately rend the flimsy stuff and seek shelter once again behind bureaucratic institutions such as she has known throughout the centuries? It is easier to ask such questions than to answer them, but it is perhaps well that enthusiastic reformers in both countries should realise that the questions are being asked.

The situation in Russia continues to defy analysis, even along the Black Sea littoral, where the Germans have hitherto had things so much their own way. It is reported that the Ukraine is up in arms against the Hetman, who was installed to carry out German instructions in a typical German way; but at the same time the Ukrainians have found opportunity to enter into peace negotiations at Kieff with the Bolsheviks. The one point that emerges clearly from much conflicting evidence is that the hopes based by the Central Powers on Ukrainian cereals have not been realised. In these circumstances it is possibly in Germany's interests to allow the peoples to quarrel as much as possible among themselves. Perhaps with this end in view she is supporting the demand of the Turkish Government that Mussulmans should be at the head of the Crimea administration. There are some two hundred thousand Tartars in the Crimea, but these numbers do not entitle them to control the Government. The claim put forward by the Turks, therefore, will only make for further discord in a distracted country.

A correspondent in *The Times* calls attention to the plight of British prisoners of war in Turkey and to a clause in the Berne Agreement which provides for the repatriation of all the British doctors taken prisoner at Kut, with the exception of one for every thousand British and Indian prisoners. As he rightly points out, the effect of this clause will be to deprive half the prisoners of war camps in Turkey, of which there are more than twenty, of their British doctor. The death list among our prisoners in Turkey has been long enough, as things are, and it would have been longer without the exertions of the doctors. To take away these men now to the extent of leaving a single camp unprovided with a medical officer would make the fate of the prisoners not affected by the exchange still worse. It is to be hoped, therefore, that the British Government will not take advantage of the clause in question in the Berne Agreement, except on the basis that provides for one medical officer at least to each camp.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 22.

Note on the Budget.

The Note of the Acting Financial Adviser on the 1918 Budget appears to have given general satisfaction. It is couched in temperate language and breathes throughout a hopeful spirit, though very rightly it emphasises the temporary nature of the source of the present prosperity of the country and the great need of the continuance of a cautious policy. Sir William Brunyate has struck out an entirely new line in taking up the defence of departments or elements of the Government service which have been the subject of criticism. Even though such criticism may be replied to in departmental reports, the latter do not carry the same weight, nor do they reach as wide a circle, as the annual Note signed by the highest English official in the Egyptian Government Service; and it is to be hoped that, if and when the publication of the departmental reports is resumed, the departure now inaugurated will, notwithstanding, be continued. The criticisms levelled for some time past at the Delta drainage schemes have been very fairly answered, and the more recent criticism of the agricultural policy of the Government has also received what should be an effective reply; whilst in view of the somewhat hysterical correspondence on the subject in one of the local English papers it is satisfactory that Sir William Brunyate should have taken up the cudgels on behalf of the military-age Englishmen who have been retained in Government service, and that he should have so clearly explained what the Government as a whole and the British particularly are doing towards carrying on the present war. His remarks on the situation sound a note of sane optimism, coupled with a determination not to be turned from the path of caution, which has been followed in the past, or to be hustled into insufficiently considered action as regards economic development by the present abnormally favourable conditions. Indeed, his Note gives an impression of strength and of clearness of vision in regard to the true situation, which should inspire everyone with confidence in the future.

Egyptian State Railways.

The Egyptian State Railways announce that as from July 1 next passenger and goods rates will be further raised. The increase in passenger fares will be one-third on the present tariff. When war broke out passenger fares were increased by 10 per cent., and last year a further increase of 40 per cent. was decided on. The new rates which will come into force on and after July 1 will, therefore, be exactly double pre-war fares. As regards goods rates, the increases vary from 20 per cent. over pre-war rates in the case of coal, 150 per cent. over pre-war rates in the case of unpressed cotton. Cereals are, for obvious reasons, expressly excluded from this increase.

The reason for this further raising of passenger and goods rates is, of course, the increase in the cost of coal, of stores, and of labour. According to a statement issued by the State Railways Administration, coal now costs about five times, while stores cost from two to three times, and freights from four to ten times what they did before the war; labour also has risen considerably. The increase in expenditure due to these items alone is calculated to amount to £E2,481,000 during the year, whilst the extra revenue to be obtained from the raising of the goods and passenger rates is estimated at £E2,200,000.

The object of raising the passenger fares is to reduce traffic, while that of raising the goods rates is to make the latter more in proportion to the value of the commodities carried. Both these objects are fully justifiable. The value of commodities of every description has risen so considerably since the war that the old goods rates represent in many cases a disproportionately small percentage of the value, and the increase now made to prevent the transport being effected at a loss owing to the rise in the cost of coal and materials, etc., should not weigh more heavily on the commodities in question than did the rates applied before the war.

As regards the increase in passenger rates, it remains to be seen whether the object in view—i.e., a reduction in traffic—will be attained. Indeed, it is very doubtful whether in the circumstances in which the people of this country now find themselves any rise in passenger rates will bring about a shrinkage in traffic. The bulk of passenger traffic on the State Railways is third class, the element in the community which has benefitted enormously through the war, and which, if it wishes to travel, will and can afford to do so no matter how high passenger rates are fixed.

The only means of restricting traffic would be to introduce a system of permits under which only those who had legitimate and urgent reasons for using the railway would be permitted to do so, and then only at certain intervals. The introduction and carrying out of such a scheme would, it must be admitted, involve a deal of extra work, but it is to be foreseen that, if the war continues, and maintenance work cannot be kept up, the railways will have materially to reduce trains and the number of carriages in each, and that, from the point of view of hygiene and public security alone, some more drastic means of reducing traffic than the mere raising of rates will have to be introduced.

Commerce and Industry.

The report of the Commission of Commerce and Industry constitutes a most complete and able survey of the commercial and industrial conditions existing in Egypt, and of the possibility of their development. The subject is dealt with in a masterly manner, the tone is moderate throughout, and the 200 odd pages teem with information which cannot fail to make the report a useful work of reference, though it is much to be regretted that it should have been published only in French; an English translation would have greatly enhanced its utility. One can see that the Commission has thrown itself whole-heartedly into the mission entrusted to it, and that it is thoroughly convinced of the necessity for early action. It has very wisely forborne to recommend that Egypt should be turned into an industrial country to the detriment of agriculture, and the care which it has taken to emphasise the first call of the latter rather lends force to its arguments in favour of an industrial renaissance. Incidentally, it is interesting to note that the Commission entirely endorses the arguments brought forward by Sir Murdoch Macdonald that steps should be taken without delay for the reclamation of all the available land, in order to increase the productivity of Egypt and to support the growing population of the country. There would, indeed, appear to be little doubt that when the land development projects are completed it will be necessary to look round for other means of supporting the enormous population which by then will have come into existence. Those other means are undoubtedly industrial and commercial enterprises; but it will not do to wait until the agricultural possibilities of the country are developed to their utmost to start an industrial movement. Self-supporting and successful industries are not of mushroom growth; and the authorities, even though they cannot give to the subject the attention which the Commission not unnaturally would like to see accorded to it, will doubtless see that steps are taken to ensure that the inevitable industrial movement is in the right direction. Whether the recommendations of the Commission will be adopted by the Government remains to be seen. There is, indeed, much to consider, and the question of policy will play a very great part in any decision on the subject. At any rate, the Commission may rest contented that they have done admirable spade-work, which will prove of invaluable assistance to the authorities when the time comes for them to take up the question on any extended scale.

The Czech Press Bureau states that the great manifestations held in Prague recently were attended not only by prominent Czech leaders, but also by Slovaks, Poles, Italians, and some Roumanians. As regards the Jugoslavs, the Slovenes alone sent over 100 representatives, including their most prominent deputies, while the Croats and Serbians were equally well represented.

THE NEBI MUSA PILGRIMAGE.

(From a Correspondent.)

Moslem tradition places the tomb of Moses on a prominent peak situated not far from the north-west of the Dead Sea and overlooking the valley of the Jordan: the Scriptural account records that "Moses was buried in a valley in the land of Moab over against Beth-Peor." It will be remembered that after some of our mounted troops had captured Nebi Musa (the tomb of Moses) early in the morning of February 21, Jericho was occupied with little opposition.

For centuries it has been the custom of the Moslems of Jerusalem to organize a pilgrimage which leaves the city on the Friday preceding the Orthodox Palm Sunday and returns on the day before the Orthodox Good Friday. Shortly before the appointed time a proclamation is made in Jerusalem and in the neighbouring villages, calling upon all those present to make known to all the Faithful the day of assembly of the pilgrims. The origin of the pilgrimage is found in those dark ages, long since passed away, when bitter enmity existed between the devotees of the Christian and Mohammedan religion. The incursion of many thousands of Christian pilgrims at the season of the Orthodox Easter was regarded with no small apprehension by the Moslem populace, who felt that occasion might arise when the Christians would make use of their temporary numerical superiority for sinister purposes. The only way of removing this apprehension appeared to be to ensure that an equal, if not superior, number of Mohammedans should be in reserve, so to speak; and the easiest method of accomplishing this was to institute a religious ceremony. Happily, the pilgrimage has lost all such significance, and is now regarded purely as a religious exercise. Never before was this so emphatically demonstrated as on Friday, April 26, the occasion of the first celebration since the occupation.

The following is a general description of the ceremony as carried out this year, with no essential variation.

The banners of the Prophet—two of the Haram-esh-Shereef, and two of Nebi Daoud (the tomb of David, just outside the Zion Gate), which are entrusted to the guardianship of the Kottb family—are brought to the Governor's headquarters by the head of the family (now Sheikh Zeki Effendi). There they are unfurled and fixed on poles. The Sheikh repeats a prayer, and the Governor salutes the banners and congratulates the Sheikh. Followed by the banner-bearers, the Sheikh then passes outside, where the banners are saluted by the Moslem guard, with musical honours from the military band. A procession is formed, headed by the band, followed by the gendarmerie, mounted Bedouin police, Moslem troops, and augmented by representatives of various communities ranged behind their respective standards. They pass through the Damascus Gate to a house near the T'kiyeh, called El Kibrieh, to fetch the Nebi Musa banner, which is usually carried by the head of the Klebo family. The banner, enwrapped in the Boukjeh (the covering of embroidered silk), is handed to the Mufti, who removes the covering, and, fixing the banner on its pole, recites a prayer in which all join. The procession then re-forms and slowly passes through the narrow streets of the Holy City to the Haram-esh-Shereef. The head of the Kottb family leads the procession, followed by two members of his own family carrying the two Haram-esh-Shereef banners. Next come two youths carrying those of Nebi Daoud, while behind these is a youth bearing the banner of Nebi Musa, accompanied by sheikhs and muezzins continually chanting. Others beat drums and cymbals and sing popular songs as they make their way to the Mosque el-Akhsa. After prayers the procession leaves the precincts of the mosque, outside which horses are in readiness to carry the bearers of the banners.

It is just at this point that the most spectacular part of the ceremony commences. The procession has grown enormously. It is headed by the pilgrims from Hebron, carrying their own flags; next come those of Jerusalem, carrying the youths' banner (Beyrak el Shabaáb) and pennons. Parties of Bedouin and villagers perform all manner of dances; others indulge in displays of swordsmanship, fighting mimic duels; some recite strange Eastern chants or repeat prayers, while others sing ancient pilgrim songs, strongly Western in character. All these slowly precede the main procession, which is made up of gendarmes, mounted police, town police, a military band (pipes and brass instruments), and a guard, followed by the sacred banners. As the banners are carried out of the Holy City through the Bab Sitti Miriam (St. Stephen's Gate) a salute of twenty-one guns is fired from the summit of the Mount of Olives).

The slopes of the steep hill leading from the Bab Sitti Miriam to that part of the Jericho road lying in the valley of the Kedron are lined with thousands of spectators, mainly consisting of the womenfolk and children. It is a strangely coloured throng, for though the crowd is mainly Moslem, and there is, therefore, a strong background of the black that characterises the women's outdoor garb, there is no restriction as far as the children are concerned; and on them all the colours of the East are lavishly spread.

After having waited patiently for hours, the whole assembly becomes wonderfully animated as the procession emerges from the gate. Many banners are waved among the spectators; some solemnly kiss them, while others fasten their own gay little silk tokens on the poles.

Some way along the road (Ras el Amoud), in a tent provided by the municipality, the Governor and a number of high functionaries wait to bid farewell to the pilgrims. The whole route from St. Stephen's Gate to the municipal tent is lined with dense masses of spectators; the time taken by the procession to cover the distance, the total of which is not more than a mile, is from one and a half to two hours. Near the Garden of Gethsemane a guard is placed and presents arms as the banners are borne by. Arrived at the tent, the various parties in the procession greet the Governor, while some of them repeat their performances for his benefit. On the arrival of the banners prayers are repeated, refreshments provided, and words of cheer are spoken, after which the pilgrims continue on the way to the tomb.

Although the war has naturally caused a diminution in the number of pilgrims, as in the number of spectators, this year's celebration will remain for ever memorable. It augured well for the future of Palestine when, through some happy inspiration, representatives of all religious bodies in Jerusalem were united to meet the Governor and the principal Mohammedan families on the slopes of the Mount of Olives. Not a great way off were the "tombs of the Prophets," the resting places of those followers of Moses whom Christian, Mohammedan and Jew delight to honour. And included among the prayers invoking blessing on the pilgrims were one for all the communities in Palestine and one for the prosperity of the present rulers of the country.

JAFFA GREETS THE KING.

The Grand Rabbi of Jaffa, Benjamin Cuziel, who is a man of considerable influence, and represents an important element in the community, has sent the following message through the Military Governor of Jaffa:—

"His Majesty the King of Great Britain. On this happy day, the day of your accession to the Crown of Britain, great, powerful and generous, I feel it my holy duty in the name of the faithful sons of Israel to express our utmost feelings of loyalty and deep gratitude, protected as we are by the wings of your blessed Empire, and grateful for your sympathy as expressed in the honourable declaration. At the same time raising my hands to Heaven, and with eyes full of tears of joy, I pray to God Almighty, Creator of the Universe, King of the Earth, to grant life and peace to our King and to glorify the throne of his Empire. Great will be his honour, and under God's protection it will extend from sea to sea and from the rivers to the ends of the earth. In your days shall Judæa be relieved and Israel shall dwell in safety, and your eyes shall perceive the realisation of her great and honourable aspiration—eternal peace and liberty to all nations.—Amen."

LAW REFORM IN EGYPT.

SIR MALCOLM McILWRAITH'S VIEW.

The following is the concluding passage of the Rhodes lecture on "The Law and the Law Courts of Egypt," delivered by Sir Malcolm McIlwraith, at the University of London, on May 6, under the chairmanship of the Master of the Rolls, a brief report of which appeared in our number of May 10 (p. 378):—

"In conclusion, it only remains to say a word as to the future outlook. It will, I think, be manifest to anyone who has followed this survey thus far that a system so complicated as that which I have attempted to describe, with no less than five distinct bodies of law and five separate sets of Courts—the Mixed, the Native, the Consular, the Mehkemes, and the Patriarchates—all mutually independent, often overlapping, and among which conflicts of jurisdiction constantly arise—that such a system, I say, must eventually be recast and simplified by some general scheme of fusion and amalgamation. But hitherto the path has been blocked by the impassable barrier of the Capitulations, the abolition or fundamental modification of which was a necessary preliminary to any such solution. For many years the late Lord Cromer and his assistants worked unceasingly at this great problem, and that great proconsul published an elaborate scheme for it in his official reports for 1905 and 1906. After his departure from Egypt, in 1907, the project somewhat languished, though the discussion was carried on from time to time by his successors, Sir Eldon Gorst and Lord Kitchener, in private despatches to the Foreign Office. At length the great cataclysm of 1914, in the throes of which we are still involved, seems to have opened a way to a new era. The declaration of a British Protectorate in Egypt, which was one of its earliest effects, has rendered many things possible which formerly seemed well-nigh out of reach. Recently an important Government Commission has been formed in Cairo to study the whole question afresh, and this body has doubtless prepared a new scheme. This new organisation, when we have an opportunity of studying it in detail, will doubtless prove to be rather a judicious combination of existing principles and machinery than any heroic measure of substitution on a large scale of new legal lamps for old. I observe, indeed, in this connection that my successor in Egypt, the present Judicial Adviser (Sir William Brunyate)—though a particularly convinced admirer of British institutions under almost all conditions—observes in his first report, published last year:—"One system of law may be theoretically better, or less good, than another; but no system can be a success which is not understood by the professional men, whether judges or advocates, responsible for its administration. For that reason, if for no other, I should assume that the future law of Egypt must take, as its starting point, the law at present administered by the Mixed and Native Tribunals." To some the proposition may sound self-evident; but having regard to the arguments one often hears advanced in favour of a wholesale substitution of British or Anglo-Indian law for the Franco-Egyptian system which has been in force in Egypt for forty years, this statement was desirable and is reassuring. I am well aware that this view is an unpopular one among the English lawyers practising in Egypt, as well as among many Englishmen with business interests in that country, who would prefer 'a clean sweep,' and the wholesale substitution aforesaid of British law and legal institutions. But I believe that most competent authorities are agreed that whatever view may be taken of the highly controversial question as to the relative suitability of English or French law for the cosmopolitan community of Egypt—in which it must be remembered that the British population is only one, and by no means the largest, of a number of foreign colonies—the situation cannot now be treated as *tabula rasa*. I am strongly of opinion that any such wholesale upheaval of existing principles and institutions as is advocated in some quarters would do far more harm in unsettling and perturbing the large foreign population and upsetting long-established business methods than would be at all counterbalanced by the approval of any one section of the community. The tradition of our rule of foreign dependencies has always been—and it is the highest justification of our claim to world-wide Empire—that we govern them in the interest and for the benefit of the whole community concerned, and not, even primarily, in that of Britain or the British.

Doubtless, however, English precedents will in future be followed in all matters where there are, at present, no settled principles or practice. A summary of the new organization, which has been recently given to the world in an interim report of the Commission, was published in *The Times* of March 29, and, more recently, in somewhat greater detail, by THE NEAR EAST of May 3. So far as can be gathered from these accounts, the principles now definitely approved by the Egyptian Government Commission do not materially differ from those which had been already recommended by a small, and purely English, Commission, constituted by Lord Kitchener, at the Ministry of Justice, in the winter of 1913, and which reported to him in May, 1914—notably as regards such innovations as the unification of civil and commercial law, the extension of bankruptcy to non-traders, and many other matters.

The difficulties of this task of reorganization are obviously great, but the goal to be attained is worthy of the effort involved. That goal is the removal, or at any rate the loosening, of the fetters which have held modern Egypt in bondage for so long, and which even a British military occupation of five and thirty years' duration has been powerless to strike off. Unquestionably, those fetters were necessary in former times, and constituted safeguards for foreigners which cannot, even now, be surrendered without adequate equivalents. But the presence of England in Egypt—rendered permanent by the Declaration of a Protectorate—is a sufficient guarantee to all concerned that the necessary precautions will be taken. Even when peace comes at last, however, and the new organization can be launched, there lies before the Egyptian Government and its civil servants a Herculean task in the co-ordination, working and efficient execution generally of the new reforms. It is, therefore, profoundly consolatory to reflect that the maleficent influence before alluded to, which for so many years past has lain like a black shadow over Egyptian administration and has blighted some of the best efforts of its agents, has now been happily removed. With the cordial co-operation of the enlightened Prince who has recently succeeded to the dignity of Sultan, the work will proceed under the most favourable conditions; and it may be confidently anticipated that the new British Protectorate has before it a more brilliant future than in any former epoch of its long history.

THE NEAR EAST IN ANCIENT TIMES.

On Monday, Dr. E. W. G. Masterman concluded the course of lectures describing Assyria, Babylonia, and Egypt in the days of their glory, which he has been giving at South Kensington. Of Nebuchadnezzar he said—quoting another historian—"Wise, warlike, energetic, and religious, the second Nebuchadnezzar will always live in history as the type of the religious ruler of old, who knew how to raise the nation which he governed to the highest pitch of ancient glory and honour." Great in every direction, he was greatest as a builder. The next monarch of any note was Nabonidus. He was not of Nebuchadnezzar's line, but was an interloper. He had a son, Bel-sar-user (the Belshazzar of the Bible), to whom he gave most of the power; and we now had in the tablets confirmation of the Bible story of Belshazzar dwelling in security behind the walls of the inner city, while Cyrus contrived to drain away the waters of the river, and so to lower its level that he was able to enter. Cyrus entered the city at night, and that night Belshazzar was slain. Then began the line of Persian kings.

Dr. Masterman traced out on the map the march of Xenophon and the Ten Thousand. The story, he said, explained much that happened later in the time of Alexander; for the fact that the Ten Thousand were able to march right through the middle of the Persian Empire showed that the country was but very imperfectly subdued. The authority of the Persian King was indeed chiefly along the great trade routes.

The march of Alexander was also traced out. The expedition into India, said the lecturer, seemed an unnecessary part of the campaign, but it had indirectly had great results; for it led to the unification of northern India under one monarch. That monarch's grandson was Asoka, the energetic propagandist of the Buddhist religion; and it was the unification of the country which made it possible for Buddhism to spread rapidly through the land. Of the immediate successors of Alexander, the most romantic figure, said Dr. Masterman, was Seleucus. After being for a time Regent of the Empire, he accepted the Satrapy of Babylon. Antigonus, who coveted the whole Empire, came to Babylon with fair speeches, but Seleucus saw that treachery was intended. He escaped with fifty horsemen, and sought and found refuge in Ptolemy, in Egypt. There he remained four years, performing prodigies as a very successful leader and general, until the followers of Antigonus were defeated. Then with eight hundred foot soldiers and two hundred horsemen he set off again to Babylon. He increased this small force as he went along. At Babylon he was received with acclamation, and established himself firmly on the throne. He acquired Syria and Asia Minor, and established the great dynasty, of whom we read so much in the Maccabees, for it was during the slow degeneration of the Seleucidan race that the Maccabees were able gradually to establish the freedom of Palestine.

Sukhum Kale, on the Black Sea coast, has been recaptured by the forces of the Caucasian Government. No further advance of German troops has been reported.

CORRESPONDENCE.

LAW REFORM IN EGYPT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The abolition of the Capitulations will undoubtedly entail the abolition of guarantees given to Europeans in Egypt. Those guarantees are, of course, of vital importance, inasmuch as the Capitulations reserved to fifteen capitulatory Powers the right of dealing with questions pertaining to the personal status of their own nationals and an exclusive penal jurisdiction for them.

All the reports of Lord Cromer, when Diplomatic Agent, and of his successors, have laid stress upon the impossibility of reform while the Capitulations were still in being; and it is because of their existence that Egypt is alleged to be the happy hunting-ground of every rascal who may have been chased from his own country. No doubt there is a good deal to be said for this point of view. But, on the other hand, every foreigner in Egypt—including, of course, the British—will fight to the last for the existence of the Capitulations, unless substantial guarantees can be given that the new Tribunals to be instituted will be very superior to those at present in existence, which have jurisdiction in suits between persons of different nationalities, known as the "Tribunaux de la Reforme," or the Mixed Courts, and the Native Tribunals, who are competent in all matters where native interests are concerned. Unfortunately there is no reason to believe that such guarantees, if given, will be really effective.

It is suggested that a large number of English judges should be added to the Bench, and this, no doubt, would prove advantageous.

It is probable that the first and most essential thing since the political status of the country has been changed by the declaration of the Protectorate is that English should be the language of the Courts. This change could not be effected suddenly, but as the people of the country have a singular linguistic capacity it is probable that they would not be very long in picking up sufficient of the language to make themselves understood.

Prior to the war, hardly a shop in Egypt had an employee who could speak a sentence in our language, although England had been in occupation of Egypt for a great number of years. After a few years of war, there is now no shop or business established in Egypt that has not at any rate a certain number of employees who speak English nearly as well as French.

This is hardly the place to discuss broad questions of policy, but there is little doubt that, had the Government seen fit to annex the country instead of declaring a Protectorate, reform of the legal system would have been far easier. The people of the country would have accepted the situation readily. It must be remembered that the idea underlying the creation of a Protectorate is that the Protecting Power and the Protected State are completely separate political entities, save as regards external relations. The idea is thus fostered in the minds of the Egyptians that there is no particular reason in adhering to the Protecting Power, or in learning her customs and language, or in adopting her institutions. A hostile atmosphere has been thus unnecessarily created, or at any rate perpetuated.—I am, etc.,

ANGLO-EGYPTIAN.

Cairo, April 19, 1918.

A JUGOSLAV PROTEST.

A Reuter's message states that the Czech and Jugoslav protest recently presented to the Austro-Hungarian Government says:—

We protest with indignation because the division of Bohemia into districts is merely a result of German Chauvinism. Similarly we protest against the intended separation of the Slovene nation from the body of the United Jugoslav nation of Serbs, Croats, and Slovenes, as well as against German aggression in the direction of the Adriatic. The deputies of the Czech and Jugoslav nations hereby declare that their nation will never recognise arbitrary decrees or administrative changes which may be introduced. They indignantly refuse to accept them, and decline all responsibility for future developments. They will persist in their common struggle against absolutism and racial predominance, and they will shrink from nothing in their fight for democracy, liberty, self-determination, and political independence.

It is announced in Moscow that the All-Russian Mussulman Council has been dissolved. There are growing signs of Mussulman resentment at the treatment Mohammedans are receiving at the hands of the Bolshevists.

M. Marghiloman, the Roumanian Prime Minister, in opening the election campaign at Bucharest, said the future Parliament would first have to ratify the recent Peace Treaty and then devote its energies to internal reorganisation. The Conservative Party was in favour of the expropriation of big estates.

SERBIA'S NEEDS GROW EVER GREATER

AN APPEAL TO BRITISH BENEVOLENCE.

WHEREVER there are Serbians who have survived the tragedy into which their defence of their homeland plunged them, there goes out a constant stream of help and comfort from people of this country who appreciate the extent of their sad plight.

It must not, however, be supposed that complete mitigation of the sufferings of this sorrow-laden people has been accomplished.

The response to the appeal to British sympathy on behalf of Serbia has been great and generous-hearted, but it is far outrun by the ever-growing need of the remnant of this unfortunate nation. At the present moment there is vital need for financial assistance. Money must be forthcoming to provide the old men, women, and children of Serbia and starving Prisoners of War with the bare necessities of life. Food is needed, shelter is needed, the lack of clothing must be remedied, and disease must be checked by the provision of adequate medical aid.

5/- worth of contentment

As an instance of how your donation can be translated into active help, the fact can be cited that a gift of 5/- will provide a Serbian Prisoner of War—of whom thousands are in the greatest need—with food sufficient to relieve starvation for one week. You can adopt such a Prisoner of War and earn heartfelt gratitude by a regular weekly donation of this sum. Will you not begin to-day?

If you could go to the HAVENS of refuge where representatives of the Serbian Relief Fund succour the need of this sorrow-stricken people, you would see that their gratitude for British help is indeed great. If you could but realise how badly your help is needed, and how much your donation can accomplish, you would not hesitate a moment in assisting to the extent of your power. Send a cheque to-day, and rest content that it is given in one of the greatest human causes to which you could contribute.

Hon. Treasurer:

The Rt. Hon. the EARL OF PLYMOUTH, C.B.

THE SERBIAN RELIEF FUND

5, Cromwell Road, London, S.W.7.

The Serbian Relief Fund is the only authorised Fund under British administration working exclusively for the Serbians. Its activities touch every phase of Serbia's present condition. (Registered under the War Charities Act, 1916.)

Offers of voluntary help at home or abroad should be sent to Lady Grogan; parcels of clothing for men, women and children to Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, London, S.W.7.

NEAR EAST BOOKSHELF.

THE KANGAROOS.*

This remarkable and inquiring animal from the back-water uplands of the Murrumbidgee and the Paramatta, better known to Londoners in its more disciplined condition inside the narrow pens of the Regent's Park Zoological Gardens, has many points in common with the ostrich; but, not having all the African virtues at once, may be more faithfully compared with its cousinly and eucalyptus-pecking emu. It is a very facile sprint winner, and has a cricketing mode of pedestrianism, and a fair whop with a near hind pedal is well calculated to brain any German or any Turk on any desert. The particular prize animal that is now basking indolently in front of our lethal chair has the full inquisitiveness and some of the self-satisfiedness of his species, and discovered Egypt, Syria, Gallipoli and France, and is quite modestly willing, if you will pat him gently, to tell you what he saw. He is really a changed biped, having developed two new virtues —an amazing affection for Egypt and a romantic passion for France—and confirmed one old vice, a snort at the English way of going to war and into cafés or French boudoirs. He has written a book, and when a Kangaroo does that, and a war-book, too, you may be sure it will interest an old Lion or two as well as all other Kangaroos in the family circle, especially when in conclave on the banks of the Nile. The literary qualifications of an animal that presumably never missed its *Sydney Bulletin* are naturally high, but not unblemished; for instance, "beside" has a meaning different from "besides"; also an appeal to the Horse Guards to prohibit the sergeant-majors of the United Kingdom from giving their field instructions in dialects of different hues and acerbities, shows a certain deficiency of Kangaroo humour; also the actual, the future and the "forever" inability of the French and English (not Kangaroo) peoples to understand and appreciate each other appears to at least one Englishman an assertion lacking in discrimination. A very informing book by a gallant Anzac!

BOOKS RECEIVED.

"Persecutions of the Greek Population in Turkey since the Beginning of the European War." According to official reports of Hellenic Diplomatic and Consular Agents. (London: Constable and Co., Ltd., for the Greek Ministry of Foreign Affairs. 1s. net.)

"Reports on the Economic Geology of the Porbandar State." By E. Howard Adye. (Bombay: The Times Press.)

"Ponnamal: Her Story." By Amy Wilson Carmichael. (London: Morgan and Scott. 4s. net.)

"The Devout Russian: A Book of Thoughts and Counsels gathered by the Saints and Fathers of the Eastern Church and modern Russian authors." With an Introduction and Biographical Notes. By Rosa Newmarch. (Herbert Jenkins, 5s. net.)

"The Pilgrimage of Premnath." By Edmund White. (Methuen, 6s. net.)

"The Bomber Gipsy and other Poems." By F. P. Herbert. (Methuen, 3s. 6d. net.)

INDIAN OFFICERS' PAY.

The India Office announces that it has been decided to extend to officers of the British Army borne on the Indian Establishment a grant of children's allowances similar to that which was introduced for British service officers elsewhere from October 1, 1917. This concession will have effect from the same date, and will be subject to the following modifications in the War Office scale necessitated by the generally higher rates of Indian pay:—(1) Captains who are in receipt of company command pay will receive children's allowance at the rate of £1 p.m. only, and (2) The allowances will not be admissible to majors. In accordance with War Office practice these allowances will form an addition to the officer's pay, and will therefore be issuable in India unless an officer arranges otherwise. An announcement regarding the grant of children's allowances is being made by the Government of India.

* "By-Ways of Service." By Hector Dunning. (Constable and Co. 6s.

ARABS AND ARMENIANS.

As a result of Arabian co-operation with the British Forces in Palestine, a number of Armenians—men, women and children—who had been deported by the Turks to the desert areas east of Jordan, have been rescued. On the receipt of this news, the following telegrams were addressed to the Emir Faisal:—

From Boghos Nubar Pasha and the Armenian Delegation:—

"To the noble born Emir Faisal,—We have just learned of the rescue of our unfortunate fellow-countrymen through the efforts of your gallant troops in Southern Syria. May God bless and prosper the progress of your arms. The chivalrous act of the noble Moslems who fight under your banners adds fresh lustre to the annals of the Arab race. Every Armenian throughout the world is to-day an ally of the Arab movement; the praises of your clemency and the justice of your cause shall be known wherever we can make our voices heard."

From the Lord Mayor of London on behalf of the Council of the Armenian Refugees Lord Mayor's Fund:—

"I beg to convey to the noble Emir Faisal the deepest thanks of British subscribers for the gallant rescue of the suffering Armenians by your victorious troops."

From the Friends of Armenia, London:—

"We beg to congratulate the noble Emir Faisal on his splendid rescue of suffering Armenians. The Friends of Armenia rejoice in the progress of your victorious troops."

To these the King of the Hejaz has replied:—

"Your kind message to Faisal, of which I have heard, is a proof of goodwill and affection. We pray God to make us worthy of your kind thoughts. Faisal, in assisting the oppressed, has only performed one of the first duties of our religion and of the Arabs' faith. I say with confidence and pride that the Armenian race and other races in similar plight are regarded by us as partners in our fortunes in weal and woe. We ask God before everything to give us strength to enable us to do them helpful service by which to prove to the world the true feelings of Islam, whose watchword is freedom. May God preserve you in health and bring your desires to a successful attainment by His help and favour."

ARABIC POETRY.

On May 22, at the Royal Academy, Sir Charles Lyall, who is one of the greatest authorities on ancient Arabic poetry, read a paper on a little-known Arabic anthology, drawn from his edition of the Moufaddaliyat. It proved a most interesting discourse (writes a correspondent), full of information, scholarly, and going deep into the community of thought and feeling between East and West in regard to all that matters, although the poetical imagery of the East may not be easily rendered in any European language, by reason of the greater richness of Arabic in this respect. Sir Charles gave many examples of poems, beautifully translated, as he alone of the present-day students of Arabic can render them into English, and his paper was delightful throughout.

The chairman, Lord Reay, complimented the lecturer highly, and called attention to the importance of Arabic for its literature and history. His words should be taken to heart, not only for the sake of learning, but also in the interests of commerce and politics. Various speakers expressed their appreciation of Sir Charles Lyall's paper and of his scholarship; and on the chairman's invitation, Mr. A. Séfi thanked him for so much good feeling shown and such trouble taken on behalf of the Arabic speaking peoples, whose sentiments in these days of battle and strife he expressed by means of a short quotation from Mouallakat Amr-ibn-Kalthum. This poet, said Mr. Séfi, eloquently expressed the views, and breathed the very sentiments which now guide the British nation in its war against elements subversive of all humanity and established order.

The Anglo-Jewish Press Agency announces that, following the example of the British Labour Party and the American Federation of Labour, the United Hebrew Trades of New York, with a membership of over two hundred thousand, have adopted resolutions favouring the establishment of a Jewish national homeland in Palestine, and declaring that the peace treaty should secure for the Jewish people equal rights, including national rights in all lands and freedom for colonisation in Palestine, which shall lead to an independent State.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. May. 31	1918. May 18	Friday	1336. Shaaban. 20	5678. Sivan 10
June 1	19	Saturday.....	21	21
2	20	Sunday	22	22
3	21	Monday	23	23
4	22	Tuesday	24	24
5	23	Wednesday	25	25
6	24	Thursday	26	26

M. Protitch, Serbian Minister of Finance arrived at Corfu last week.

M. Venizelos arrived in Salonika on Monday, and will make a short stay there.

Dr. Trumbitch, President of the Jugo-Slav Committee, who arrived at Corfu last week, has now returned to Salonika.

The wife of Lieut.-Colonel J. F. Elkington, D.S.O., gave birth to a son on May 22 at Adbury Holt, Newbury.

Dr. Boshko Tcholak-Antitch, the newly-appointed Serbian Minister to Stockholm, arrived in London on Monday from the Continent.

Earl Curzon arrived at Carlton House Terrace on Monday from Hackwood, Basingstoke, and was joined in the afternoon by Countess Curzon.

Sir James Meston had an audience of the King on Tuesday upon relinquishing his appointment as Lieutenant-Governor of the United Provinces of Agra and Oudh.

The General Assembly of the Church of Scotland in Edinburgh on Saturday sent in for consideration an overture proposing the erection at Jerusalem of a Scots Church.

Residents of Ceylon are sending as a birthday gift to Queen Mary 1,000 guineas as an addition to the £5,000 which they have already given to the Roehampton hospitals for limbless soldiers.

On Saturday, at Buckingham Palace, the King invested Major-General Sir Percy Cox with the insignia of a Knight Grand Commander of the Order of the Indian Empire, and of a Knight Commander of the Order of the Star of India.

An executive decree fixing the Civil List of the King of the Hellenes at £64,000 has been signed by his Majesty. It is provided that the King shall henceforth pay into the public Treasury all Customs, land, and income taxes to which he may be liable.

Considerable sums of money have been collected for the fund to provide a memorial for the late Zionist leader, Dr. Tchlenow. This memorial will take the form of a colony in Palestine, which is to be part of a more comprehensive scheme for the foundation of 30 colonies, with an agricultural population of 15,000 persons.

Lord Robert Cecil was last week elected as Chancellor of the University of Birmingham. The election was proposed by the Vice-Chancellor. In seconding, Mr. Neville Chamberlain said that Lord Robert Cecil had steadily made his way in public estimation, and his conduct of affairs as Under-Secretary to the Foreign Office and Minister of Blockade had earned him golden opinions.

A marriage has been arranged, and will shortly take place, between Major G. A. Slaughter, M.C., the Worcestershire Regiment, attached Machine Gun Corps, of Mhow, C.I., eldest son of Surgeon-General W. B. Slaughter and Mrs. Slaughter, of The Scarletts, Colchester, and Dorothy Margaret, eldest daughter of Mr. J. H. Cox, C.I.E., I.C.S., and Mrs. Cox, of Indore, C.I.

Lieut.-General the Right Hon. Sir Bryan Mahon was received in audience by the King on the 24th inst., upon relinquishing his appointment as General Officer Commanding-in-Chief the Forces in Ireland, when the King invested him with the Insignia of a Knight Commander of the Most Honourable Order of the Bath (Military Division).

Sir Thomas Holdich presided at the anniversary meeting of the Royal Geographical Society, held at Burlington Gardens on Monday. The Founder's Medal was awarded to Miss Gertrude Lowthian Bell for her explorations and travels in Asia Minor, Syria, Arabia, and on the Euphrates. In her absence, the medal was received on her behalf by her father, Sir Hugh Bell. The Cuthbert Peek grant was presented to Mr. G. F. Archer for his surveys in East Africa connecting Major Gwynn's Abyssinian triangulation with the triangulation of East Africa.

The engagement is announced between Alfred C. Matthew, of Colombo, Ceylon, second lieutenant, Hampshire Regiment, second son of the late Ven. Archdeacon W. E. Matthew, of Colombo, and Mrs. Matthew, 26, Priory Court, West Hampstead, and Ellen Marjorie, only daughter of Mr. and Mrs. H. C. Apthorpe, Trinity House, Cambridge.

The Union of East and West, in conjunction with the Indian Art and Dramatic Society, held an Empire Day gathering in the Lecture Hall at the Grafton Galleries. Addresses on "Empire" were given by Sir John McCall, Mr. Edward Lucas, and Sir Frederick Pollock, and Mr. Laurence Binyon (Assistant Keeper of Oriental Prints at the British Museum) gave an illustrated lecture on "Indian Painting."

The West London Jewish National Fund is arranging on Sunday, June 9, a Palestine Fair at the club rooms of the literary and Philharmonic Circle, 9, Langford Place, W., which have been placed at its disposal free of charge. A number of valuable articles have already been presented. In order to make the function a success further contributions in money and kind are required and will be gratefully accepted by Mrs. Barnett (hon. sec.), 49, Westbere Road, Cricklewood, N.W.2.

At the Royal Scottish Academy, on Monday, Prince George of Serbia presented to the Scottish nation a bust of the late Dr. Elsie Inglis, the work of M. Mestrovitch. The Secretary for Scotland (Mr. Munro) accepted the gift, and paid a high tribute to Dr. Inglis's work in Serbia. M. Yovanovitch, the Serbian Minister (who accompanied by Madame Yovanovitch and M. Pavlé Karovitch had travelled to Edinburgh the previous day) also paid a tribute to the Scottish Women's Hospitals.

A correspondent informs us that Prince Arfa Edowleh has recently erected in the gardens of his house, Danichgah, at Monaco, a beautiful monument to Darius. It faces another monument, to Cyrus the Great, which the Prince erected in 1912. Our correspondent sends us also a newspaper cutting which explains the *raison d'être* of the monuments. After quoting from Mr. Villiers Barnett's "Les Perses à Monaco," the writer says: "This distinguished author adds that Darius, in returning from Europe to Persia, disbanded the Phœnician fleets which were in the Bosphorus and had served as a bridge and a means of transport between Asia and Europe for the Persian armies. The King of Kings sent a part of the Phœnician ships to visit the Mediterranean colonies (which Cyrus had annexed to the Empire) and to disseminate the news of his victories. It is known that in the course of this friendly demonstration the fleets of Darius called at the Port of Monaco, among other Mediterranean havens, and there for some time anchored. This is the event which the new monument commemorates. It is an exact reproduction of the bas-relief which Darius caused to be sculptured during his lifetime in his palace at Persepolis."

APPOINTMENTS, PROMOTIONS, ETC.

Colonel T. H. Hardy, Indian Army, has been promoted Major-General.

Bimbashi J. T. Simson, Sudan Sleeping Sickness Commission, has been re-transferred to the Army.

Bimbashi E. S. Oliver, transferred to the Sudan Government, has been appointed Veterinary Inspector.

Colonel (temp. Brigadier-General) P. J. Fowler, C.B., D.S.O., Indian Army, has been promoted Major-General.

M. Marco Tsemovitch, who has been appointed Counsellor to the Serbian Legation in Madrid, left London for Spain last week.

Bimbashi R. F. B. Knox, transferred to the Sudan Government, has been appointed 2nd Inspector, Sennar Province.

Bimbashi R. H. C. N. Fearnside-Speed, transferred to the Sudan Government, has been appointed 2nd Inspector, Darfur Province.

Bimbashis W. A. Stewart and P. W. G. Diggle, transferred to the Sudan Government, have been appointed Inspectors of Agriculture, Resources Board.

Mr. Maurice Henry Weston Hayward, Indian Civil Service, has been appointed a Judge of the High Court of Judicature at Bombay, in succession to Sir Stanley Lockhart Batchelor, who has resigned.

The *Sudan Times* announces that Bimbashi J. A. Keith, District Judge, Sennar Province, has been transferred to Berber Province, El Damer; that Bimbashi L. S. Lloyd, 2nd Inspector, Bahr-el-Ghazal Province, has been transferred to Berber Province; that Bimbashi G. Donne, 2nd Inspector, Sennar Province, has been transferred to Mongalla Province; and that Bimbashi H. Genge-Andrews, 2nd Inspector, Berber Province, has been transferred to Bahr-el-Ghazal Province.

OBITUARY.

Major-General Arthur Domville Corbet, C.B., R.M.L.I., died on Sunday last, aged seventy-one. He served in Egypt in 1882.

A cable received from Madras announces that the death took place on May 5, at the age of thirty-four years, of Mr. Austin Gibbs Ronald, of the Indian P.W.D., the third son of Mr. A. W. Ronald, of Aigburth, Liverpool.

Lieut.-Colonel the Hon. Charles Rowley Hay Drummond, late Scots Fusilier Guards, and fourth son of the eleventh Earl of Kinnoull, died on May 23 at Sunningdale, Berks, in his eighty-first year. He served in the Crimea in 1855.

Mr. Gerald Robert Dampier, Indian Civil Service, Collector of Bareilly, and Acting Commissioner of Rohilkund, died on the 17th inst. at Naini Tal, India. He was the author of a monograph on the brass wares of the North-Western Provinces.

Lieutenant-Colonel F. Wyville Thomson, Indian Medical Service, died suddenly on Monday at Bonsyde, Linlithgow. He saw service with the Waziristan Expedition in 1894-5, and later in the operations on the North-West Frontier of India in 1901-2.

Mr. W. J. Dwyer Burkitt, of the Indian Civil Service, died at Naini Tal on the 19th inst. He joined the Service in 1893, serving in the United Provinces, and was promoted as joint Magistrate and Settlement Officer in 1900, and Assistant Commissioner in 1904. Subsequently he was Registrar of the High Court, a Deputy Commissioner, Magistrate, and Collector, and District and Sessions Judge.

Colonel Napier Miles, C.B., M.V.O., 1st Life Guards, died suddenly, after an operation, on Saturday at his residence, Ingelburne Manor, Malmesbury. Born in 1854, he joined the Army in 1875. He took part in the Egyptian expedition of 1882, being present at the actions of El Magfar, Mahsameh, both actions at Kassassin, the battle of Tel-el-Kebir, and the march to and occupation of Cairo. He was the recipient of the medal with clasp and the bronze star. He also served with distinction in the South African War of 1899-1900.

The Paris correspondent of the *Morning Post* reports, under date of May 26: A private telegram which has reached the Roumanian Colony here reports the death at Jassy of M. Delavrancea, the Roumanian Nationalist patriot, who was one of the principal supporters of the entry of Roumania into the war. M. Delavrancea, who was Minister of Manufactures and Trade in the last Bratiano-Take Jonescu Ministry, was a member of the Roumanian Academy and a novelist and dramatic author, as well as one of the greatest Roumanian orators.

Mr. G. T. Mackenzie, late of the Indian Civil Service, has died at his residence in Crawford Gardens, Margate, at the age of seventy. He joined the Indian Civil Service in 1869, and was appointed Acting Secretary of the Board of Revenue in 1884 and President of the Municipal Commission in 1885. He was Sub-Collector and Joint Magistrate in 1886 and District and Sessions Judge in 1888. Mr. Mackenzie was Resident in Travancore and Cochin State from 1900 till 1904 and an additional member of the Legislative Council of Madras in 1902.

Admiral Sir Gerard Uctred Noel, G.C.B., K.C.M.G., died on May 23 at his home, Fincham, Downham, Norfolk, aged 73. The second son of the late Rev. A. W. Noel, rector of Stanhoe, Norfolk, he entered the Navy in 1859. His early service was in the Far East and in Home waters, but in 1873 he was appointed to the Active, on the West Coast of Africa, where he commanded the seamen who served with the force which, under Sir Garnet Wolseley, captured Kumasi. The folowing year he was made a Commander. After service on the Royal yacht and with the training squadron, he was given command of the Téméraire, in the Mediterranean, and in 1891 he was appointed to the Nile. In 1898 he became Rear-Admiral of the Mediterranean Fleet, and when the serious disturbances in Crete broke out it was he who so well protected British interests. In describing those incidents, *The Times* says: "On September 6 the mob of Candia broke into open violence and attacked the small British force which was occupying the Custom House. It was not till after many hours' hard fighting, and the loss of nearly 60 English killed and wounded, not to dwell on the massacre of some 800 native Christians, that the Turkish Governor of the town thought it necessary to interpose. When order was restored, Noel sent to the Governor an order, in the form of an ultimatum, to hand over the ringleaders of the riot within 48 hours. There remained no doubt in the Turk's mind that the English Admiral was in grim earnest; the ringleaders were delivered up, were tried by court-martial and hanged. At the same time the Concert of the Powers had delivered an ultimatum to the Porte, which led to the withdrawal of the Turkish troops from the island. Noel's admirable conduct in very trying circumstances was rewarded with the K.C.M.G., a distinction which was commonly thought to be inadequate to the great service he had rendered the country. It was not till nearly four years later that he received the K.C.B., and the G.C.B. in 1913." Subsequently he commanded the Home Fleet, and was Admiral-Superintendent of Naval Reserves (1900-3); Commander-in-Chief on the China Station from 1904 to 1906; and at the Nore from 1907 to 1908.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C A.). ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

FRIDAY, MAY 31, 1918.

BULGARIA AND HER ALLIES.

The signs of the times in so far as they concern South-Eastern Europe are full of interest at the present moment. From the meeting at the German Headquarters, which was intended to put the seal upon Austro-Hungarian subjection to Germany and, in the words of the Vienna correspondent of the *Frankfurter Zeitung*, "to render impossible a war against the German Empire by the German-trained Austro-Hungarian army," the Emperor Karl repaired to Sofia and Constantinople. The visits in themselves were due, as an act of courtesy on the part of the new Sovereign to allied monarchs, and for this reason there would be no occasion to attempt to read into them more than the discharge of an ordinary obligation. An official Note in a German paper, however, states that the journey was of very great political importance, and it is clearly the desire of the German Government that it should be believed that the new military alliance between Germany and Austria-Hungary is to be extended to Bulgaria and Turkey, and to carry with it equally close associations in the domain of economics. Insistence upon this point at this stage justifies the inference that the negotiations are not proceeding altogether according to plan. It was, no doubt, tactful to entrust the first overtures to the Emperor Karl, on the principle that prompts the employment of tame elephants to catch the wilder species; in any case, the German Emperor was able to exhibit the complete confidence that he now felt in the author of the indiscreet letter to Prince Sixte. The success of the mission, however, could only be judged by its results. As far as Turkey was concerned, there was probably no loophole for failure. Official Turkey is so completely under the domination of Berlin that all suggestions from the German paymaster are assured of immediate acceptance. With King Ferdinand of Bulgaria the situation is different. He has never abandoned his personal independence, however much it may have suited his book to allow his Government and the country to bear the brunt of the German alliance. In the indisposition which is said to have prevented him from meeting the Emperor Karl at the station of Sofia, but which happily did not require the cancellation of the State banquet, will be recognised a very clear message in the language sometimes affected in royal diplomacy—language that no one knows how to use to better purpose than the King of Bulgaria. With this opening gambit it is not a matter for surprise that the Emperor Karl was forced to leave the game at Sofia a draw or that he made a further attempt, but without success, to secure a more satisfactory result by breaking his journey at the Bulgarian capital on his return from Constantinople.

If the Emperor Karl had been commissioned to bring Bulgaria wholly into line with the Central Powers, he was given a task beyond his ability. As King Ferdinand has contrived for three years, while accepting German help, to keep the worst features of German co-operation away from the country, it is unlikely that he would choose the eve of a battle on the Western front that may exercise a decisive effect on the course of the war as an occasion for riveting upon Bulgaria the shackles she has hitherto been at pains to avoid. A sufficient explanation of the lack of any warmth in the reception awaiting the Austrian Emperor at Sofia might be found in the new military pact with Germany, which is calculated to rouse the contempt of King Ferdinand, while possibly making it a little more difficult for Bulgaria to support the rôle of quasi-independence in the Central Alliance. There is, however, a further reason for Bulgaria's being somewhat *difficile* as an ally at this time, in the pressure that is being brought to bear upon her in regard to the Dobruja. The facts are common knowledge. By the Treaty of London Turkey was to be restricted to a frontier along the Enos-Midia line. When the Bulgarians came to grief in the second Balkan War the Turks obtained the cancellation of this arrangement, and by the treaty signed at Constantinople secured Adrianople and a strip of territory on the west of the Maritza, leaving the Bulgarian railway to Dedeagatch to run for a portion of its length on Turkish soil. This anomaly was corrected in May, 1915, as the price of Bulgaria's adherence to the Central Powers. In view of the fact that Bulgaria was to receive the Dobruja as her share of the spoliation of Roumania, the Turks lodged a claim for compensation, and demanded at first the cession of all the territory ceded to the Bulgarians by the agreement of 1915. A compromise has been suggested by Germany by which Turkey is to surrender Kara-Agatch, the station for Adrianople, while she receives the whole of the left bank of the Maritza from the railway station to Kuleli-Burgas. It has been announced that these terms have been accepted by the Bulgarian Government; but it has stipulated that Turkey shall not make any further claims to territorial compensation at Bulgaria's expense, whatever gains may be secured by the latter during or at the end of the war. Whether the Turkish Government has actually given this undertaking or not is not definitely established, but there seems little doubt that Bulgarian misgivings on the subject have not been entirely removed, and a tendency to blame the Central Powers in this connection has manifested itself in Sofia.

Unless this diagnosis of the situation in the Balkans is altogether at fault, the present moment is likely to find the Bulgarians, with King Ferdinand as well, more or less susceptible to outside influence. In the absence of a military defeat, however, the Radoslavoff Government is in a strong position, as it can point to the success of its policy in securing for Bulgaria all she wanted, and indeed more than she had ventured to expect. Any notable success for the Allies on the Macedonian front would probably suffice to convince the Bulgarians that there was also a debit side to their account. For this reason, the recrudescence of activity in this theatre is to be welcomed. Fighting began in Albania, where as the result of three days' operations French and Italian troops succeeded in advancing their line west of Lake Ochrida. Their opponents were Austrians, and consequently any punishment inflicted upon them may be lost on the Bulgarians. The Allied line, however, was in an unsatisfactory position west of Koritza, and a rectification at this point may have been indispensable to action elsewhere. What is wanted is something more than a certain liveliness to mark the full time of spring or the approach of summer. The difficulties of a Macedonian offensive are admitted; but a perfectly co-ordinated plan of campaign would allow the Allied War Council to exercise just sufficient pressure in this theatre to encourage the Bulgarian desire for peace. The resultant advantages would be practically decisive in their action on the course of the war as a whole. When it is realised with what a small expenditure of man-power Germany has brought the eastern theatre under subjection, we may be allowed to regret that the Allies should have lacked the knowledge or the vision required to make the most of their opportunities in the Balkans. Even without a preliminary Allied success the time must come when Bulgaria will seek release from a false position; and there are more ways than one of expediting this moment.

THE KING AND THE NEAR EAST

By ESTELLE BLYTH.

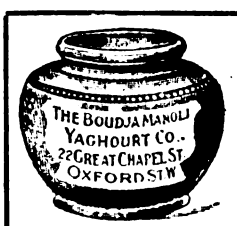
June 3 is the birthday of our King. Though no open rejoicings can mark the anniversary in wartime, most surely the heart of every subject throughout his wide dominions will turn that day with special love and trust and reverence to him who is the very bond of Empire. Love of the monarchy and honour for the Crown are deep-seated in the heart of every Briton, here and overseas; our common history has proved it time and again, though perhaps the most notable instance was in 1660, when, with real relief and happiness, the whole nation welcomed the restoration of the monarchy after dour experience of a Protectorate. "Were the King's crown hung on a bush I would fight for it!" said the stout-hearted cavalier, Sir Jacob Astley, voicing that passionate loyalty for the Crown which is the heritage of every true Briton—to which we, happy in our generation, can add a deep personal devotion to the King.

The East especially needs a personal touch—a Royal head to which it can give a personal devotion. An Eastern Republic would be a freak. No Republic of the West, however perfect, would hold the greater East for longer than a generation. This personal feeling, which is at the bottom of India's passionate loyalty to England during the war, will find an echo in Palestine, who now claims a share in that freedom and self-expression which she has so long envied in Cyprus, Egypt, and the Sudan. It will be no little thing to her, when freed, to feel herself a member of the British Empire—that grand commonwealth of nations of which our King is head; and the fact that the King has actually been to Palestine, and is still remembered there, establishes at once the personal element which is all-important in the East.

It was in 1882 that the King and his elder brother visited Palestine, but the memory of their visit is still clear in Jerusalem. The elder Prince was grave and quiet, ever courteous and considerate beyond his years. Of Prince George remains the sunny recollection of a frank English boy, whose sense of fun missed nothing, even on the most official occasions, and whose fresh enjoyment of whatever came his way enlivened everything. There is the story of how, walking staidly through the Damascus Gate of the city on his way to some site, Prince George broke up the official solemnity of the procession by suddenly charging full into a large flock of sheep, shouting "Baa! Baa!" until the whole flock was scattered and the whole street in joyous commotion. How the people love that story, and "the Prince who baa'd"! Another story tells of his escape on some expedition of his own, his joy in the unwonted freedom being quickly turned to wrath by the discovery that he was being shadowed by a young Moslem selected by the Consul for his special trustworthiness to attend the Princes everywhere. Prince George's peremptory command to go away at once met with the reply, in broken English, that "the Consul said he was to stay," and in the end the two returned to camp together, wrapped in gloom. But, just at the entry to the camp, the Prince turned with the gracious, boyish words: "I say, I spoke roughly to you, just now. I'm sorry. Of course, you couldn't help it!" followed by the offer of a cigarette, as from one gentleman to another. To this day the King is always "my Prince" to the man he scolded and forgave.

For close upon a century our country has enjoyed the blessing of a pure and upright monarchy. The high traditions of Queen Victoria's reign have been perpetuated in those of her son and grandson, and, as we may rest assured, will be equally safe in the hands of our soldier Prince of Wales. We are, indeed, so used to the goodness of our Royal House that we have come to take it as a matter of course, and perhaps never think about it at all. Moreover, the stern reserve which marks the man of English blood and descent forbids us to say much where our hearts feel deepest. Let us for once forswear reserve, and lay an open tribute of heart-whole fealty and devotion before the King as our gift. It may be that some strengthening of his hands, some lightening of his burden, will come to him in realising what he means to us.

The war has drawn very close the bonds between the King and his people. However remote from him we may be by residence and station, he is no longer to us—and he can never be again—merely the wearer of the Crown of All the Britains. He has shared every burden with the humblest of his people. He knows the strain of anxiety for young lives at the front, and the keenness of loss when trusted friends have perfected service by sacrifice. He has shared the dark days with his people, as he has gloried with them in the heroic deeds of his sailors and soldiers and airmen. We know that his heart is most with those who, by land and sea and air, are offering their lives for the welfare of the nations. We know that he would gladly lead his men and share their hardships, as England's kings have done in days of old; but another service is required of him as the ruler of this people that is so great; and so, humbly, unselfishly, and unwearyingly, he lives amongst us at home as one that serves. Yet is he in the truest sense the leader of his people. It is always he who sets the example in every call for discipline and self-denial, and if as a people we had been perfectly true to his lead in all these ways of national restraint, we might well feel that we at home were worthy of our fighting men abroad.



Every one of us has suffered through the war, and it is certain that every one of us is thankful to be allowed to take his or her share of the trouble of the nation; but on our King, as King, the burden must rest of necessity more heavily. We can only guess what it must be like to be the head of such an Empire as this—so absolutely diverse in creed and character and race, and yet so finely one at heart; few statesmen are better versed in Imperial politics and problems than the King, yet his feeling for his people is a thing he can never really express. This shyness is one of his most markedly *English* characteristics. When he says to outgoing troops: "My thoughts will be always with you," we feel that his heart has spoken through his outward shyness, and that his thoughts *are* always with his men in every peril of the war. He is the bond of the Empire, the point to which all eyes turn, and, for all his shyness and humility, he has never failed his people, nor come short of their highest expectation. We know that when there is a sacrifice to be made, an example to be set, a burden to be borne, the King quite naturally will lead the way. How much poorer our national life would have been these four years of the war without that quiet, simple, dignified figure as its centre!

True King in leadership of his people, true knight in all that is pure and straight and disciplined, true English gentleman in the fullest meaning of that high word, our well-beloved King stands to each one of us, both East and West, as the bond and centre of the Empire's unity, the symbol of its enduring greatness as the first monarchy in the world.

The King will follow Christ, and we the King,
In whom high God hath breathed a secret thing.

SUFFERINGS OF THE JEWS IN NORTHERN PALESTINE.

The reports which come through from the parts of Palestine still occupied by the Turks paint the condition of the Jews there in very gloomy colours. Some fugitives who arrived lately in Vienna stated that the mortality was terrible, not only from disease, but also from hunger and exhaustion. Food, they said, was abundant, but there was a great scarcity of money. According to the *Lemberger Tageblatt*, of 4,000 Jews at Safed, 3,000 are without bread. At the beginning of April Jemal Pasha ordered all the Jews to evacuate their colonies and all towns near the front. In spite of Talaat Pasha's utterances, Zionist organisations are still forbidden to work in Palestine.

Have you tried the World-famous

YAGHOURT

THE CURD MILK HEALTH FOOD.
A PERFECT FOOD IN ITSELF.
May be obtained at
SELFRIDGE'S, Ltd., Oxford St., W.
W. WHITELEY, Ltd., Queen's Rd., W.
Sole Make-s: MANOLI CORBETTI,
22, Great Chapel St., Oxford St.

TANGIER TO TEHERAN.

That august body, the Judicial Committee of the Privy Council, cannot, one imagines, find its work very lively, however useful it may be. It has now, however, a chance to vary the monotony of its proceedings. For I see by the *Morning Post* that one of the appeals to come before it in the course of next sittings "is connected with a claim by the chief officer of the Wallahageda Temple, Ceylon, for a declaration that he is entitled to conduct a ceremony with elephants and tom-toms through the streets." If I were a member of the J.C. of the P.C., I should stand out stoutly for the production of the elephants and the tom-toms—and for a sample ceremony, too, if that would not upset anybody's feelings. Or, no! On second thoughts I would have the elephants produced, for they are lovable beasts; but the tom-toms would have to do their part of the ceremony at a distance, and preferably with water between them and my august self. That is the way to hear them at their best, as any one who has lived in the East will surely bear me out.

***

Some time ago I had occasion to chip the Bolshevik champion, *The New Europe*, and it is only fair that I should take note of its abject confession of the error of its ways—up to a point. As far as I can make out, it is now anxious to draw a line somewhere between extreme Socialism and Bolshevism, and the latter has been jettisoned. It is done this way. After thrusting Bolshevism down the throat of its readers, week in week out, beginning with an attempt to prove that there was no German gold behind the Bolsheviks (February 14), then representing Bolshevik diplomacy as the saviour of Europe ("From this calamity"—a peace dictated by German generals—"Russian diplomacy saved Europe," February 21), and finally offering the Russians, and incidentally the Allies, no alternative between "the Bolsheviks and the Germans" (April 25), we now have a new writer who is allowed to say that "No one who prizes the principles of a new Europe can have any truck with Bolshevism." When a publication stands for the future disintegration of Austria-Hungary and champions the actual disintegration of Russia, one begins to wonder whether, when the latter cause is thrown overboard, the former is going to follow suit. It will be necessary to watch the weather—or, at least, the weathercock.

***

Apropos of the article, "Germany and the Mid-East," which appeared in last week's NEAR EAST, and the mention therein of the *Akhunds*, a reader calls my attention to some verses, entitled "The Akhoond of Swat," which were perpetrated by an American humorist, George T. Lanigan, some years ago. Beneath the title appears the legend "The Ahkoond of Swat is dead," which, we are told, is a quotation from the "London Papers of January 22, 1878." The first verse of the "pome" runs:—

"What, what, what,
What's the news from Swat?
Sad news,
Bad news,
Comes by the cable led
Through the Indian Ocean's bed,
Through the Persian Gulf, the Red
Sea and the Med-
Iterranean—he's dead;
The Ahkoond is dead!

Having got into his stride in this way, the irreverent "poet" begins his second verse thus:—

"For the Ahkoond I mourn
Who wouldn't?
He strove to disregard the message stern,
But he Ahkoodn't."

And informs the Swats:

"Your great Ahkoond is dead—
That Swats the matter."

That is pretty bad; but it is as nothing to the fourth verse:—

"And skeptics mock the lowly mound
And say, 'He's now of no Ahkoond!'
His soul is in the skies—
The azure skies that bend above his loved
Metropolis of Swat.
He sees with larger, other eyes,
Athwart all earthly mysteries;
He knows what's Swat."

I wonder how many of Mr. Lanigan's readers had ever heard of the *Akhund* before they read these light-hearted verses.

CORSAIR.

THE POLITICAL EVOLUTION OF ROUMANIA.

At King's College, London, on May 29, Mr. D. Mitrany traced the evolution of the idea of political and national independence in Roumania. He said that people had its origin in the blending of Dacians with Roman colonists on both sides of the Carpathians in the first century of our era. Afterwards the Romans withdrew in face of invaders, some of whom settled down and became the Magyars. Magyar oppression induced some of the Roumanians to cross the Carpathians and establish the States of Wallachia and Moldavia. The constitutions of these principalities were very liberal for their time; but the Roumanians fell under the Turk, and a steady decline set in which reached its worst under the Phanariote regime. At that period the peasants were the slaves of the boyars or landowners; these were the thralls of the princes, who were Greeks from Constantinople; and the princes were the abjects of the Sultan's ministers. The renaissance began about the same time; but in the province of Transylvania, which had been ceded by the Turks to Austria in 1699, the Austrian Emperor, Joseph II., set on foot a movement aiming at placing the Church of Transylvania under the supremacy of Rome. At that time the Roumanian peasantry of Transylvania, although forming a majority of the population, were living as an unrecognised semi-servile nationality, without political rights. The Roumanian clergy expressed themselves as willing to accept certain points of the Roman Catholic creed, but claimed in return not only rights for themselves, but also the full political and national emancipation of the Roumanian population of Transylvania. The movement failed because of Magyar opposition, but it had as one result that Roumanian boys were admitted to Hungarian seminaries and colleges, and some were sent to Rome. There the sight of Trajan's column and contact with a Western people had the effect of rousing the national spirit. They came back to establish schools in Transylvania, where they taught the Roumanian language and history, and this movement spread to Wallachia and Moldavia. Another influence came from France. The Phanariote princes, with a few exceptions, had previously held the position of dragomans with the Porte. Obliged to make use of the French language in their diplomatic relations with foreign Governments, they habitually employed French secretaries, as well as French tutors for their sons. The great boyars took example by their princes, and French education became a habit. Thus French authors of the eighteenth century became known, and their influence was greatly increased when a number of *emigrés* found their way into the country after the French revolution. In the nineteenth century the main channel of Western thought was through the foreign consuls—often acting against the wishes of their Governments. In 1848, when the movement for Roumanian independence had been suppressed by the action of Russian and Turkish troops, Mr. Cunningham, the British Vice-Consul at Braila, forcibly delivered some prisoners who were being taken into exile to Turkey. Among these was Alexander Cuza, who afterwards became the first prince of united Roumania. In 1866 an intrigue forced him to abdicate, and he was succeeded by Prince Carol of Hohenzollern. The close relation with Germany which this had introduced had brought great advantages to Roumania in such fields as science, music, and industry; but the political influence had been detrimental and reactionary.

NEWS IN BRIEF.

The offices of the Roumanian Government Mission have been removed to Bank Buildings, Portugal Street.

Greek recruits of the 1918 class from the third military region, comprising Patras and other centres of the Peloponnesus, have been called to the colours.

General Skoropadski, the Ukraine Dictator, according to a Moscow telegram, considers it necessary to protest against the annexation of Bessarabia by Roumania.

It is stated in Moscow that the Turkish claims in the Caucasus include Novo Rossiisk, with all warships, harbour works, and stores, for which compensation will be paid.

The lecture by Sir G. W. Forrest on "The Constitutional Development of India," before the Royal Historical Society, which was announced for May 31, is unavoidably postponed.

The Jewish National Fund Commission has received reports from Palestine intimating that the cultivation of market gardening produce is being undertaken on a much larger scale than was hitherto possible in the neighbourhood of Jerusalem.

Through Count Mirbach, German Ambassador at Moscow, the Trans-Caucasian Government has proclaimed to belligerents and neutrals the separation of the mountain tribesmen from Russia and the formation of an independent State.

At Buckingham Palace, on Saturday, the King inspected detachments from two companies of the Indian Labour Corps, under the command of Captain A. T. Williams and Second Lieutenant R. Lean, Indian Army Reserve of Officers. The men belong to the Ranchi District, in Bihar and Orissa, and are on leave from the Western front.

The National Indian Association gave an "At Home" on Wednesday at 21, Cromwell Road, to meet Mr. Bhupendranath Basu, who came from India in Mr. Montagu's party, and Sir Prabashankar Pattani, who joined the India Council earlier in the year. The large gathering included Lord Carmichael, Sir Charles Lyall, Sir Charles and Lady Bayley, Sir Murray Hammick, Sahibzada Aftab Ahmad Khan (the other Indian member of the Secretary of State's Council), and Lady Kensington.

PRESS ON THE NEAR EAST.

Italy and the Jugoslavs.

In an article entitled "Italy and the War," the *Observer* pays a well-merited tribute to the work done by Mr. Wickham Steed and Dr. Seton Watson on behalf of the oppressed races of the Central Empires. But for their labours, says the *Observer*, the recent conference at Rome might never have met. The article continues:—

Its success was assured largely by the agreement reached by the Jugoslavs themselves under the moral leadership of Dr. Trumbitch, but above all by the constructive vigour of Italian thought and statesmanship since the national awakening after the Isonzo and Piave battles.

Not only is a Jugoslav division now fighting gallantly in the Italian ranks against the common enemy. The pledge of Italy to support the cause of united Jugoslavia has given new hope and energy to the Czecho-Slovaks and the Poles. Throughout the Hapsburg Monarchy it has set up a movement as formidable to Austria within as are the Allied armies without. Let the main fact be thoroughly understood. In Austria and Hungary the German and Magyar control, and have mobilised against the Allies, nearly 30,000,000 of Slavs and others whose natural sympathies are on the side of the Allies and against the enemy. But for that one fact Germany could never have sustained the war. But for that the merciless dismemberment of Russia, the enemy's present mastery of Serbia, Roumania, Finland, the Baltic provinces, Poland, the Ukraine, would have been impossible. We can hardly pretend to-day to touch even the fringe of this vast and complex question; but what we have said for the present is enough to show why Italy's influence, her practical strength, her moral glory, stood higher upon last week's third anniversary of intervention than at any time since she spurned suggestion of the Great Refusal and embraced rather the Great Resolve.

The Rome Conference has done almost as much for the spiritual unity of the Allies as the Rapallo policy for their military unity. Of an anti-Slav Imperialism on the Adriatic nothing more is heard in Italy. Of a pro-Austrian clique nothing more is heard in this country. We are purged of the weakness and disgrace of having amongst us even a handful of ill-informed sentimentalists who would have sacrificed Italian and Slav rights to Germany and Magyar ascendancy—to the inane hope of making, with Austria, a separate peace which would be iniquitous if it were not impossible.

Greece in Spring.

A correspondent who writes in *The Times* of an excursion to Delphi gives incidentally this pleasing picture of Greece in her spring garments:—

All those who think that Greece is a worn-out arid country should see it as it really is. Its coast may be rough and rugged and without verdure, but inland every nook and corner is cultivated. The young corn is springing up on all sides, and the labourers are busy in alternating vineyards, mulberry orchards, and olive groves. The valleys and hill-slopes are glad with blossom of almond, pears, and apricot, and along the irrigation rivulets the strips of grass look like illuminated scrolls. The air is redolent of thyme. Marigolds, vetches, and hyacinths abound, and as one climbs those flowery slopes into the mountains, the eye leaps across the valleys to coloured villages, lying secluded and content far from the wrangling and unhappiness of the world.

A carriage-road climbs the ascent to Delphi, but it goes a long way round, and we left it at the half-way village of Chrisso—a place of painted houses, ancient plane trees, and fountains—and started upwards on a rough track for Kastri, or Neo-Delphi. The air was crisp, and all nature sparkled. Groups of friendly mountain folk passed us down the track—youths with classic features, blue-eyed peasant girls, black-robed *papas*, children who offered us bunches of wild-flowers. Fields of asphodel swayed in the breeze, and a tall, plume-shaped, greenish-yellow plant, which the natives called *galaxida*, showed brilliantly against the soft-toned sides of the valley. Another plant that abounded was a saxifrage with dark green border and bright green centre, covered with a sort of filmy wire. Small marigolds and marguerites were everywhere, and many other wild flowers.

The Mesopotamia Campaign.

In an article entitled "Nine Months' Work in Mesopotamia," the *Manchester Guardian* takes stock of our position in the land of the Tigris and the Euphrates. The article (which appeared on May 27) says:—

We are still some seventy miles from the point at which our right and centre would meet at Mosul, and our left, above Ana, on the Euphrates, has not reached any natural halting-place. If the campaign had to be regarded alone, the position of the three isolated horns of our invasion, operating hundreds of miles from their base on the Persian Gulf, would be precarious. Railways have followed them as fast as may be, but even so the enemy have the advantage in communications, through Aleppo and Mosul, and strong Turkish counter-attacks directed against each in turn would be hard to deal with. Our successes in Palestine have made such attacks impossible. Mr. Candler reminds us that in Marshall's swift advance through Hit and Ana a vast accumulation was found of the supplies which Falkenhayn had amassed for a Euphrates campaign last autumn, and which he had to abandon in face of our advance on Jerusalem. On the other hand, the defection of Russia has been an unexpected boon to the Turk. But for it we could have been in Mosul by now, instead of having to undertake ourselves the securing of our right flank, for which we depended on the Russians in Persia. With both hands free, the enemy, after the Russian withdrawal last winter, could doubtless have debouched through the Persian hills upon the Tigris. As it is he looks like having to let Mosul go in his attempts to save Damascus.

Austria and the Oppressed Races.

The Times published on Tuesday an article entitled "A Disordered Monarchy," by J. M. N. Jeffries. The author deals with the Southern Slav revival and its effect on the Dual Monarchy. He writes:—

The great national revival of the Southern Slavs is complicating things seriously for Austria-Hungary, or more strictly speaking for the corrupt Government of that Monarchy, for the leaders, in or out of office, for all the Tiszas and Czernins and Andrássys and Windischgrätzes who superintend the hapless young Emperor Charles. In a country which is in a state of complete disorder, which may at any moment grow to more than disorder (especially if Ludendorff's strokes in the West fail), these tributary personages look as if they might be caught in a vice. The central Germanophil block over which they preside, a block composed of Hungary and of German Austria (which it would be simple and fit to call Germaustria), is dangerously surrounded on north and east and south by its own subjects—its subjects, that is, of neither Teuton nor Magyar blood.

Examine the map, and you will see that all along the northern side of this block lie the countries of the Czecho-Slovaks, the Poles, and the Ruthenians. In the centre, roughly speaking, from above the Danube to Switzerland, Austria-Hungary makes her connection for physical and spiritual nourishment with Germany proper, snuggling up like a long, thin lamb to the breast of congenial and beery Bavaria. But south of the block again stretching from the Italian border to Serbia and Montenegro, and separating Germaustria from the Adriatic Sea, live the several kindred sections of that one and same race whom we are learning to call the Yugo (or Southern) Slavs. East of the block lies Roumania. The map shows, in fact, that Austria-Hungary is an advanced political salient of Germany. She is surrounded by other peoples, whom she might have conciliated, to whom she might have brought liberty in her own commonwealth. But she has chosen instead to maltreat them and stunt their development, and now they are rounding on her and turning their eyes to us, the Powers of the Entente.

The author sketches the history of the Jugoslavs and their fight for freedom. The South Slavs, he urges, constitute a race:—"For it is indeed a race; Serbians of Belgrade, Slovenes of Lubliana (Laibach in Germaustrian), Croats and Montenegrins and Bosnians and Herzegovinians and Dalmatian Slavs are all of the same stock; their language hardly differs. In Serbia, Montenegro, and among the Serbs of Austria-Hungary Cyrillic characters are used. The Croats and Slovenes use Latin characters, but the tongue is almost identical." Austria-Hungary is the country that has best understood the latent unity of the Southern Slavs, for obvious reasons. The article concludes:—

Figures are excessively dull things, of course, but in a few of these dull figures we can almost see why Austria-Hungary went to war. In the Empire there were between Germaustrians and Magyars 20½ millions, between oppressed and suppressed nationalities 30½ millions—20 masters in the house and 30 slaves. There can be no doubt of the servitude; some of the facts are stupendous. A Bosnian officer to whom I was talking a few days ago told me that the 2,000,000 Bosnians were only allowed four secondary schools, and in all schools German is the obligatory language. A voter in Hungary must declare his vote openly, Government officials taking due note if a Slovak votes contrary to their desires. No wonder there are only three Slovak Deputies at Budapest for three million inhabitants of that race. And these are but instances chosen among many.
