In future only general officers and colonels on the retired list and such officers of the Indian Army of those ranks as have, owing to suspension of retirements, elected to draw pay equivalent to pension, and officers of the Indian Medical Service on the retired list, of not less than twenty-five years' service, will be eligible for selection. In the case of officers of the Indian Medical Service the possession of an additional pension for administrative service under paragraphs 728 or 731, A.R.I., Vol I., or of a compensatory extra pension under paragraph 734 of the same, will disqualify for selection for a Good Service Pension.

I.C.S. CANDIDATES.

Notice is given in the *Gazette* that it is proposed by the Secretary of State for India to amend the regulations relating to the admission of candidates to the Indian Civil Service. The effect is to enable the Secretary of State in Council to exempt from certain examination requirements a selected candidate who was successful at the open competition held in August, 1914, and who, after his nomination as a selected candidate, has continuously served and is still serving in His Majesty's Forces. The Civil Service Commissioners, if satisfied as to the eligibility of the candidate in respect of health, character, an dconduct, may certify that he is entitled to be appointed to the Indian Civil Service without further examination.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

NEAR EAST BOOKSHELF.

THE COUNTRY OF EXTREMES.*

In those veracious chronicles of childhood which are common to all nations, it is not anywhere recorded, so far as memory serves, that the lamb ever formally asked the wolf to protect it. All the more curious is it, therefore, to read that the Armenians hoped, a few years before the war, to interest the Germans in their country, and actually had the idea of asking Berlin to supply them with a German prince. What is more, Germany was considering the idea favourably, for she is rather overstocked with minor royalties, and they used to make a capital kind of export in the prehistoric days before 1914; but something happened to spare Armenia. Perhaps Turkey objected; and the Armenians—what is left of them—know better now.

It happened that M. Marc Henry, who was in Berlin at the time, came across these Armenians as they were arranging to start a review, printed in German and Armenian, to forward their ideas. The conjunction of wolf and lamb seems to have struck him as odd, and, as a patriotic Frenchman, he asked them why they did not look to France instead of Germany for help. Their answer was significant. They admired the past of France, but they clearly thought she had no future, whereas Germany represented strength and power both in the present and the future. Let us hope they are more accurately informed by this time; they will hardly ask for a young Hohenzollern at Erzeroum in 1918, one imagines.

This is one of the many curious recollections in a very human book. M. Henry knows his Germany well, and he has an admirable faculty for analysing the Teutons as a people. Everybody acknowledges their discipline, their organization, their peculiar combination of arrogance and servility, their pedantry, their unattractive women; these things are the commonplace of travellers. Where M. Henry goes deeper than the ordinary traveller is in his recognition of their faculty for running into extremes. They cannot be strong without being brutal, or well-read without burying themselves under a weight of useless erudition—a German professor once contemplated an exhaustive treatise in two volumes on the unhappy colour of Bardolph's nose, but abandoned the task when he discovered that the British Museum had no information on the subject except the obviously inadequate text of Shakespeare. So he wrote a treatise on England's ignorance of her own literature instead, which no doubt made his reputation.

The author gives several examples of this faculty for running to extremes—in art, drama, even in advertisement; his own book, by the way, furnishes a rather curious example. A voluntary German exile wrote him a letter, which he reproduces in full, in which Germany is criticised with all the fury of the revolted Teuton. This gentleman will have nothing to do with Luther; he will hardly allow any good in German literature, which, although far inferior to that of France and England, has at least produced Goethe and Heine; and he is ready to jeer at German music in the person of Wagner as an "idol who is now himself overthrown." (He has apparently forgotten Strauss.) Now, this is going too far. German art, as personified in that terrible avenue of statues in the Siegesallee in Berlin, where it used to be said they dared not drive the cabs for fear even the cab-horses should get the staggers when they caught sight of the Kaiser's ancestors, is all that is terrible; but Wagner conquered the world, not because he was a German, but because he could make the fiddle say things that no piece of catgut ever said before. Possibly the new music of Strauss will be remembered when Hindenburg is forgotten. It is simply stupid for a German to decry German music because he has a quarrel with German militarism, but that is the way with that nation. Because they disliked England, they refused to admit that Shakespeare was English, and evolved the theory that he had a German soul, although he unaccountably forgot to arrange to be born in Berlin under William II.; in the same way, because a German very reasonably dislikes German politics, he includes German music in his denunciation. This people wants a little more ballast in its boat.

In spite of their proneness to extremes, M. Marc Henry believes, and we agree with him, that Germany will not indulge in a revolution. They have a love of order in their very soul, if they can still be said to have a soul; they only make revolutions on paper and by professors. To others they are very wolves, but to the constituted authorities they are lambs—lambs who are shorn.

H. W. T.

* "Beyond the Rhine: Memories of Art and Life in Germany Before the War." By Marc Henry. (Constable and Co. 6s. 6d. net.)

TOSH!*

This is a particularly foolish story about an impossible detective, who, though described as having nerve of rock-like quality, gets into a state dangerously resembling panic upon the least provocation. This egregious person has phenomenal luck in the way of overhearing conversations and in being rescued from situations into which his own incapacity leads him; and the average reader will heartily regret that such an utter idiot should triumph even over the equally fatuous "villains." The authors' use of English is unconventional.

* "The Riddle of the Purple Emperor." By T. W. and M. E. Hanshaw. Simpkin, Marshall and Co. 6s.)

PRISONERS IN TURKEY COMMITTEE.

The Executive Committee of the Prisoners in Turkey Committee has issued its first report, which constitutes an interesting record of what has been done, and is being done, by the committee. Incidentally, it shows how urgently some such body as the committee was required, and how much hard work has been necessary to get anything done in regard to the prisoners. The successful method appears to have been to get some member or members "to put a number of questions in the House of Commons."

The committee advocates "negotiations for a wide exchange of valid prisoners"; meanwhile, it considers that "although the only satisfactory solution of the whole question of prisoners in Turkey is an agreement for repatriation on broad lines, the exchange of a large proportion of the prisoners, even if promptly agreed to by the Turks, will take so long that no effort should be left untried to secure the arrival of adequate food and clothing at the camps with the least possible delay." Many people will share the Executive Committee's hope that the matter of the publication of further information regarding the siege of Kut "will again be taken up after the Parliamentary recess, if not earlier."

The committee has also issued a pamphlet, "Regulations and Notes," for the help of relatives and friends of prisoners in Turkey, which will undoubtedly prove invaluable to those for whom it is designed. A copy may be obtained free by the next-of-kin of prisoners other than officers, or for one shilling each copy by other persons, on application to the Secretary, 25, Chester Square, S.W.1. Further donations are invited, and we hope the committee will meet with the support it so well merits.

AN INSCRIPTION FROM GREECE.

By Joseph Offord.

In the *American Journal of Archæology*, Mr. L. R. Dean is publishing the Latin inscriptions found by United States explorers at Corinth during their several years' excavations there.

The first two texts are of interest to us because they allude to the worship of a deity "Victoria Britannica," some time probably subsequent to the reign of Septimus Severus. That there was such a cult in some places was surmised from an inscription of A.D. 210, found in North Africa. The war lasted from A.D. 208 to 211, the year of Severus's death. It is also referred to in the Panegyricus written about 297.

The inscriptions are in honour of a Tiberius Claudius Dinippus, who was Sacerdoti Victoriæ Britannicæ. It states he was a tribune, at one time of the VI. Spanish legion, of which only three or four inscriptions are known. Two of them in the Near East by the Danube, and two in Italy. It is evident that the victorious campaigns in Britain were the subject of laudation in the Mediterranean provinces.

AUSTRALIA'S SYRIAN RELIEF FUND.

Writing from 1040, Drummond Street, North Carlton, Melbourne, on May 22, Mr. J. M. Fawaz informs us that, after great efforts, a fund for Syrian relief has been started in the State of Victoria. "Our collections up to the present," he adds, "including a third of the proceeds of a 'button day' on behalf of Syria, Serbia, and Armenia, are about £3,400. The Australian people know very little about Syria, and consequently it is rather hard to arouse their sympathies in its favour. The daily Press gives Syrian affairs little or no space, which fact makes it hard work to reach the general public and enlighten them on the suffering and distress of Syria. But we have not given up hope, and the fact that we have collected as much as we have, with all the varied and urgent appeals that are constantly being made to the generosity of the public, speaks well for our efforts."

SUTTEE IN CEYLON.

The following message, dated June 8, from Colombo, is published in the *Pioneer*:—What is believed to be the first case of suttee in Ceylon occurred in the Jaffna district. Following the death of Mr. Kindiah Pillay, well known in the north as the manager of a newspaper, a Hindu organ, his young wife poured kerosene oil on her clothes and ignited it. The fire was quenched by neighbours, but the girl died almost immediately on reaching the hospital. The husband and wife were cremated simultaneously.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. August	1918. August		1336. Julkada	5678. Elul.
23	10	Friday	16	15
24	11	Saturday.....	17	16
25	12	Sunday	18.	17
26	13	Monday	19	18
27	14	Tuesday	20	19
28	15	Wednesday	21	20
29	16	Thursday	22	21

Lady Evelyn Cobbold and Miss Cobbold have left London for Rannoch Lodge, Perthshire.

M. Nicholas Titulesco, formerly Roumanian Minister of Finance, has left London for Aix-les-Bains.

M. Gennadius, the Greek Minister, has accepted an invitation to become a Vice-President of the Ramsay Memorial Fund.

Mme. Gennadius, wife of the Greek Minister, has been on a short visit at Teversal Manor, Mansfield, Nottinghamshire.

Mirza Abdul Ghaffar Khan, Counsellor to the Persian Legation, has left London for Eastbourne, where he expects to spend several weeks.

Mr. E. Richmond, formerly architect to the Egyptian Public Works Ministry, is at present in Palestine assisting the authorities in architectural matters.

The engagement is announced between Freeman Newton, of the Indian Police, and Winifred, second daughter of Mr. Ernest Margrave, of Mumbles, South Wales.

At the invitation of the Greek Scout authorities, Mr. Arthur Gaddum, a member of the Headquarters Council of the Boy Scouts Association, has gone to Greece to help with the organisation of the Boy Scout movement there.

The engagement is announced between Major Anthony Bovill, M.C., Lancers, son of Mr. and the Hon. Mrs. Bovill, of 60, Pont Street, and Eleanor Victoria, daughter of Mr. and Mrs. Monins, of Ringwould House, near Dover.

The *Egyptian Gazette* (of July 27) announces that a marriage has been arranged between Lieut. Devonshire, Hussars, attached R.A.F., only son of Mr. and Mrs. R. L. Devonshire, of Cairo, and Stella, only daughter of Mr. and Mrs. W. Muir Masson, of Caversham, Lahore.

The King has been pleased to grant unrestricted permission to Miss Mary Elizabeth Phillips, M.B., to wear the Insignia of the Fourth Class of the Order of St. Sava conferred upon her by the King of Serbia in recognition of her services with the Scottish Women's Hospitals in Serbia.

The engagement is announced between Ernest Llewellyn Davies, lieutenant, Indian Army (late Royal Welsh Fusiliers), son of the late Dr. and Mrs. Davies, Tanyfron Villa, Aberayron, Cardiganshire, and Joan Marjorie, second daughter of Mr. and Mrs. T. H. Ensor, Clandon, Dorchester.

Lady Maclean is organising a fête and tombola, for September 25, among the English colony in Tangier, on behalf of the British Red Cross Fund. Pictures, glass, jewellery, and any art objects which friends in England may care to contribute may be sent to Lady Maclean at Drimnin House, Tangier.

An engagement is announced between Major Christopher Alexander, M.C., Indian Infantry, second son of the late Colonel George Alexander, of the Burma Commission, and Mrs. Alexander, 2, Vyvyan Terrace, Clifton, and Diana Mary, elder daughter of Mr. and Mrs. Widnell, Royston, Wimborne.

An engagement is announced between Lieutenant Alastair S. Cumming, Royal Navy, second son of J. A. Cumming, I.C.S. (retired), and Mrs. Cumming, of Queenwood, Parkstone, Dorset, and Sylvia, only daughter of Colonel D. Paul, C.M.G., C.B.E., Army Ordnance Department, and Mrs. Paul, 41, Shaftesbury Road, Southsea.

A marriage has been arranged, and will shortly take place in Cairo, between Captain Glynn Keith Murray Mason, D.S.O., Hussars, acting lieutenant-colonel, Dorset Yeomanry, only son of Sir William Peake Mason, Bt., and Lady Mason, of Compton Castle, Somerset, and Grace Elinor Keen, second daughter of Mr. and Mrs. N. Keen.

An engagement is announced between Russell Wellesley Turner, lieutenant, Argyll and Sutherland Highlanders, son of Mr. and Mrs. John Turner, of Inveralmond, Mid Lothian (late Straits Settlements), and Marjory, younger daughter of Mr. H. A. Anderson, C.S.I., Indian Civil Service, retired, of 2, Lansdowne Crescent, Edinburgh.

A marriage has been arranged, and will shortly take place in Cairo, between Brevet Lieutenant-Colonel R. E. M. Russell, D.S.O., Royal Engineers, attached Royal Air Force, second son of Mr. and Mrs. E. M. Russell, of Milford House, Limerick, Ireland, and Dorothy Barrington, twin daughter of the late Major E. B. Crake, Rifle Brigade.

A marriage has been arranged, and will shortly take place, between Commander M. Maxwell Scott, D.S.O., R.N., third son of the Hon. J. C. and Mrs. Maxwell Scott, of Abbotsford, Melrose, Scotland, and Fearga, eldest daughter of the late Sir Nicholas O'Conor and Lady O'Conor, of Dundermott, Ballymoe, Co. Roscommon, and 29, Chester Square, S.W.

On July 10, at the Residency, Kashmir, India, the marriage took place of Captain Maurice H. Bickford, Indian Army, younger son of Admiral A. K. Bickford, C.M.G., J.P., and the late Mrs. Bickford, of the Grange, Uckfield, to Elizabeth (Elsie) Sutherland Campbell, elder daughter of Brig.-General Johnstone, Indian Army, and Mrs. Johnstone.

A marriage has been arranged, and will shortly take place, between Captain Thomas Horatio Westmacott, General List, second son of the late E. V. Westmacott, I.C.S., and of Mrs. E. V. Westmacott, of Stafford Mansions, Buckingham Gate, and Laura Evelyn Winnington Ingram, youngest daughter of the Archdeacon of Hereford, Bridstow Vicarage, Ross.

An American Medical Mission has arrived at Cairo, and is leaving immediately for Palestine.

Count Bernstorff, the German Ambassador in Constantinople, presented his credentials to the Sultan on August 20.

The Commander-in-Chief in India has warmly congratulated Sir Douglas Haig on his "most brilliant success in France."

M. Lefevre Pontalis, the new French Diplomatic Agent in Egypt, arrived at Cairo on July 22. M. Defrance, the departing Agent, left Cairo on July 24.

According to a Constantinople telegram to the Dutch Press, the Turkish *Official Gazette* announces the appointment of Rifaat Pasha as Ambassador at Berlin.

General Grammont, head of the French Mission and General Inspector of the Greek Army, has returned to Athens from a tour throughout the Peloponnesus. He expresses himself as highly satisfied with everything that he has seen. The good news from the West, he says, is everywhere having an excellent effect on the *moral* of the people.

APPOINTMENTS, PROMOTIONS, ETC.

The Bombay *Gazette* announces that the Hon. Sir Stanley L. Batchelor, I.C.S., has been permitted to retire from the Civil Service. Dated June 1.

The Bihar and Orissa *Gazette* announces:—The Hon. Mr. E. Lister, C.I.E., officiating Secretary to Government in the Revenue and Judicial Departments, is confirmed in his present appointment, with effect from May 16, 1918. Mr. W. H. Lewis, officiating Joint Magistrate and Deputy Collector, on special duty under the Revenue Department, is appointed to be Under-Secretary to Government in the Revenue and Judicial Departments.

The Secretary of State for Foreign Affairs has appointed Mr. C. J. B. Hurst, C.B., K.C., to be Legal Adviser to the Foreign Office, in succession to Sir Edward Davidson, K.C.M.G., C.B., K.C., who has retired from the public service. Mr. Hurst has been Assistant Legal Adviser to the Foreign Office since 1902. He was called to the Bar at the Middle Temple in 1893.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W. 1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

OBITUARY.

Colonel Robert Watson Sparks, J.P., who has died at Richmond, Surrey, served in the Crimea and during the Indian Mutiny. He had been chairman of the Richmond Board of Guardians and of the Management Committee of the Richmond Royal Hospital.

Lieutenant-Colonel Humfrey H. Kennedy, Seaforth Highlanders, who was killed on July 29, aged 36, saw service on the N.-W. frontier of India in 1908, from which he received the medal with clasp. He had previously served in the South African war, and in the present war he had seen service in Egypt and in France.

Indian papers received by the latest mail report the death at Simla, in June, of Colonel W. H. W. Mercer, the cause of death being pneumonia. Colonel Mercer belonged to the 86th Regiment, and was wounded in the Burmese campaign of 1885. He was due to retire from the service about the time of the outbreak of war, but stayed on, and was acting as Station Staff Officer at Simla at the time of his death.

Mr. Henry Luttrell Moysey, I.S.O., who died at Cresswell House, Bexhill-on-Sea, on August 15, was one of the older generation of Civil servants in Ceylon. He was born in 1849, and entered the Ceylon Civil Service in 1870, during the Governorship of Sir Hercules Robinson, and on his retirement in 1906 he was Postmaster-General and Director of Telegraphs. He identified himself with the welfare of the native races in many ways, such as the development of native agriculture and the increase of the island food supplies. He married a daughter of Mr. William O'Grady, J.P., of Batticaloa, Ceylon, and leaves two sons and a daughter.

Captain Eric Archibald McNair, V.C., Royal Sussex Regiment, attached General Staff, died abroad in a base hospital on August 12. He was the younger son of George B. McNair, of Calcutta, senior partner in the firm of Morgan and Co., the Calcutta solicitors. He was 24 years of age, and was educated at Branksome Hall, Godalming, and at Charterhouse, where he was a member of the O.T.C., and head of the school when he left at Midsummer, 1913, with a Demyship at Magdalen College, Oxford. He went into residence at Oxford in October, 1913, and was working for the Indian Civil Service, but on the outbreak of war he applied for and obtained a commission, being gazetted to the 10th Royal Sussex Regiment, transferring to another battalion in August, 1915, and going to the front the following month. In February, 1916, he won the V.C. In August, 1916, he was severely wounded, and it was not until early in 1917 that he was passed fit for service again, and then he was put on probation for Staff work, subsequently going through a special Staff course. After serving at home for some months he went to another front in the early part of this year, attached to the Staff, but was invalided back about six weeks ago to a base hospital, where he died.

NEWS IN BRIEF.

The Municipality of Athens has unanimously adopted a proposal to name one of the city's streets after the Marne.

All Greeks belonging to the classes 1905 to 1918 who are liable to military service, and who are resident in the British Empire, have been called up by Royal Decree.

A conference has taken place at Budapest on the Supplementary Treaty to the Bucharest Peace Treaty which has been drafted by Count Burian and has been approved by the Cabinet.

The Tokyo correspondent of *The Times* reports: Owing to the steady increase of Greek interests in Japan, it is understood that a Legation will be established here shortly. It is believed that the first Minister will be M. Verenikis.

Indian papers just received announce the conferment of a permanent nawabi upon the Nawab of Dir and his successors for the Nawab's services during the war, and also the title of Khan Bahadur upon the Nawab's heir, Shah Jehan Khan.

A "dahir" of June 12, 1918, prohibits lotteries in the French zone of Morocco. Lotteries, the exclusive object of which is to assist works of charity or encourage art, are exempted from the prohibition, if they have been authorised by arrêté of the Grand Vizier.

A telegram from Constantinople states that a deputation from Kars, Batcum and Ardahan has conveyed to the Grand Vizier the result of the recent plebiscite held there, which decided, by 85,124 votes out of a total of 87,048 votes, in favour of the union of these three districts with Turkey.

It has been decided by the Government of India to grant a reward of Rs. 5 per head to any person who apprehends, or who gives information which leads to the apprehension of, a prisoner of war who has escaped from a prisoners of war camp, or authorised place of employment, segregation or detention, in India or Burma, or who has effected his escape while travelling in India or Burma or to and from such places.

The new gold mohur now being struck in India bears upon the obverse the crowned head of George V., King-Emperor (similar in design to that upon other current Indian coins), and the inscription, "15 rupees, India, 1918" upon the reverse. In weight and fineness it is identical with the sovereign, from which it differs in that the value is shown on the coin. The sovereign is the only coin of importance in the world that lacks this qualification.

Indian papers received by the latest mail report that the death has occurred at Pegu of Mr. Joseph Shadrach, better known as Brother Joseph, who was for thirty years missionary of the Methodist Episcopal Mission. Brother Joseph was the son of a Church of England Indian preacher, and had just passed his eighty-eighth year. He served Government as a soldier during the Indian Mutiny, and for some time after that was in Government employ.

The Joint Distribution Committee of the American Fund for Jewish War Sufferers announced last month that its branch at Damascus had identified 151 American citizens who were compelled to evacuate Jerusalem with Turkish forces at the time of the occupation by the British. This information was transmitted through the Swedish Ambassador at Constantinople. The group included merchants, clerks, professors, artisans, and students of Rabbinical schools.

Speaking at the first conference of Jews of the liberated area of Palestine held at Jaffa, Major the Hon. W. Ormsby-Gore, political officer attached to the Zionist Commission in Palestine, said that if England and her Allies won this war the future Government of Palestine would not be Turkish, because in this war England and her Allies were fighting not for the extension of any empire, nor for the acquisition of future power, of future territory; they were fighting that countries should be governed in the interests and according to the wishes and aspirations of the inhabitants of those countries. He commended the splendid response of Jewish young men in Palestine who had joined their brethren from other countries in fighting for the liberation of Palestine, and urged Jews to make sure that their foundation stones were truly laid in their agricultural, cultural and educational work in free Palestine.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

FRIDAY, AUGUST 23, 1918.

THE SHORTEST WAY HOME.

There is a touch of imagination, which has been for the most part absent hitherto from the Allies' conduct of the war, in the despatch of a British force to the Caspian Sea. A visionless adherence to a maxim based on military conditions applicable to Waterloo or Marathon has been responsible for a reluctance to force the enemy to break up his concentration of strength on the Western front by using the Allied command of the sea to threaten him from as many points of the compass as possible. Late in the day it is being realised that for every brigade that the Allies may detach for service on a new front the Germans will ultimately have to weaken their armies in France and Flanders by one or more divisions. Even now it is to be feared that the great preponderance in numbers created by the arrival of American troops rather than conviction on the soundness of the policy is responsible for the tentative steps being taken in this direction. The delay is the penalty that the Allies have had to pay for the lack of unity of control, political as well as military. As soon as the revolution under M. Kerensky destroyed the discipline of the Russian Army, Russia's capitulation to Germany became inevitable, and it could only be a matter of time before Roumania was overrun and the great bulk of the German and Austro-Hungarian troops in the East would be liberated for employment in the West. Single-minded direction of the Allied forces must have prompted a series of operations, whether as feints or in strength, in various Eastern theatres, in order to delay the transfer of the enemy armies. But the Allies elected to attack on the Western front, and so accelerated the process that was to give to Germany numerical superiority over the Franco-British forces. The three German offensives of this year followed. Now that the last of these has failed, the Allies are given a second opportunity, and a vigorous following-up of their advantage must rapidly change the character of the war. Both military strategy and political obligations call for the employment of Allied forces in the East; but the period for feints has passed. The Allies need to exert every effort, and to strike with all the strength at their disposal. The image of German power in the East is tottering to its fall, just as the reality is being slowly but surely undermined in the West; but unless the *coup de grâce* is administered before winter sets in, the enemy's hold on the regions concerned may receive a fresh lease of life.

Although the presence of British forces on the Caspian sea is perhaps the most striking development of this world-war, their practical value in the rehabilitation of Russia is small. Their immediate purpose is to enable the races of the Caucasus to save themselves from the Turks and the Germans, and at the same time to check the spread of German propaganda in the Middle East. Attention has frequently been called in these columns to the Pan-Turanian movement, and to Germany's aims for extending her power in Asia by bringing under Turkish authority a broad belt of Moslem peoples on both sides of the Caspian Sea. The movement, with German support, had made sufficient headway to render it, in all probability, independent of the actual verdict of the war as far as the European battlefield was concerned; that is to say, Germany, if left to her own devices, might well contrive so to represent the course of events in Europe as to carry conviction in her invincibility among the ignorant tribesmen of Central Asia and to be in a position at the end of the war to stir up trouble along the marches of India. The only effective way to meet this danger was to afford the inhabitants of these regions evidence of British power that would be proof against German misrepresentations. With this end in view a force has been dispatched from India, across Baluchistan, and has worked its way along the Perso-Afghan frontier to Meshed. With the capital of Khorasan as its base, it is reported to have reached the Trans-Caspian Railway, the terminus of which, Krasnovodsk, on the Caspian Sea, has been occupied by another detachment of British troops sent by the force which has reached Enzeli from Baghdad. From Enzeli a further detachment has reached Baku, and is helping the Armenian and other inhabitants to hold the town against the Turks. Thus on both sides of the Caspian Sea British troops are established in such a way as to challenge the glib assurances of Turco-German agents that the Central Alliance is carrying all before it in Europe. The effect of this support on the attitude of the peoples of the Caucasus and Trans-Caucasia will be watched with interest. In common with the Ukrainians and other Russian races they were led to believe that the Germans would sympathise with their anxiety to liberate themselves from Tsarism, and were simple-minded enough to suppose that they had only to suggest a treaty of friendship with Turkey in order to be allowed to work out their own material and political salvation at peace with everybody. The action of the Turkish army quickly undeceived them on this latter point, and the next stage was an appeal to Berlin for protection against the Turks. The subsequent course of events is obscure, but it is safe to infer that, apart from those whose personal interests are linked up with the Turks or Germans, the population of South-Eastern Russia will welcome a solution that leaves it independent of foreign control.

While, then, the effect of the British expeditions to Baku and the Trans-Caspian Railway will be to compel Germany to use more troops if she still aims at consolidating her power in the Caucasus and Mid-Asia, a more direct influence on the course of the war is being exercised by the presence of Allied expeditions in North Russia and Siberia. There can only be one issue to a successful rehabilitation of Russia, and that is, that war will once more blaze out along Germany's Eastern front. To avoid this, the Germans must bolster up Bolshevism by helping it to keep the anti-Bolshevik forces as far from Western Russia as possible. Unfortunately for the Berlin Government the Bolsheviks are not only losing the power to help themselves, but are also showing unwillingness to extend their indebtedness to Germany on Germany's terms. In these circumstances any German action to be effective must be immediate and on a large scale, unless the great achievements of the German sword in the East are to be abandoned. For the moment, in spite of the British landings on the Murman coast and at Archangel, the advantage is with the Central Powers, thanks to the fighting capacity of the German and Austrian prisoners in Siberia, who are better equipped than the Czecho-Slovak forces opposed to them. The delay of the Allies to make up their minds to go to the help of the Russians in Siberia has gravely imperilled the position of the Czecho-Slovaks, and unless Japan is given an entirely free hand and is prepared to make a supreme effort, those gallant troops will be sacrificed. After what has happened to Serbia and Roumania, such a fate for the Czecho-Slovak troops in Siberia must not be contemplated. To save them Japan, in agreement with China, should advance in force by the South Manchuria Railway, as well as from Vladivostok. It is a long cry from Dairen to Moscow; but if the distance be covered by a substantial force this Eastern route to the end of the war may well prove quicker and less costly than the Western.

CONSTITUTIONS IN THE MAKING.

By COLES PASHA.

Last autumn the Editor of THE NEAR EAST was kind enough to allow me the hospitality of his columns to offer certain suggestions as to the form of Home Rule that the Government of India might adopt without endangering the safety of the Empire. Since that date Mr. L. Curtis has given the world the benefit of his advice in his "Letters to the People of India"; the Indian Congress and the Moslem League have also formulated their policy; finally H.B.M.'s Secretary of State and the Viceroy of India have presented a joint report containing their proposals relative to the revision of the constitution. With all this data to guide public opinion, any further effort on my part may be considered not only superfluous but presumptuous. Nevertheless, with the Editor's permission, I desire to offer a few observations on the proposals contained in the official Report, which has now been presented to both Houses of Parliament.

Franchise.

The political importance of education in the matter of franchise is dwelt on in the "Preliminary" (paras. 181-187) of the proposal. After admitting that after sixty years of educational effort only six per cent. of the population is literate, the Report refers to "the practical difficulties which make a very general extension of the franchise impossible" (para. 187), yet "a broad franchise" is considered essential and "the system of indirect elections should be swept away" in order that the representative may feel that he stands in "a genuine relation to the original voter" (para. 226). At the same time it is recognised that agencies, official and non-official, may play an important part, but "we have no intention that our reforms shall result merely in the transfer of powers from a Bureaucracy to an Oligarchy" (para. 262).

I fear that notwithstanding pious resolutions to the contrary, government by an Oligarchy is the only form of Home Rule that we shall be likely to get in India for years to come. How can it be otherwise under existing conditions? But I see no reason why this Oligarchy should not be as benevolent as our Bureaucracy has been; and it is our business to introduce the necessary safeguards to ensure that it is. Let us, therefore, endeavour to control this Oligarchy from above, not destroy it from below, as we certainly shall if we allow an ignorant peasantry to get an inordinate idea of their own powers.

The Indian ryot knows nothing and cares less about the State. All that he troubles about is fixity of tenure without taxation and with a free water supply! Cash down would probably induce him to sell his vote to the highest bidder. As soon, too, as we have taught him that the English official has ceased to count, and have successfully undermined the influence of his village Elder, any agitator with a programme of no taxation and a free water supply will be sure of his suffrage. The present state of Russia is an object-lesson of what India would become. In the West having created our Frankenstein monster we must put up with it, but let us pause and consider before allowing radical theorists a free hand in the East. For generations the Indian ryot has looked to his "Elders" for instruction and guidance. Let him continue to do so. Don't worry about "direct votes" or preparing electoral rolls, leave it to the village Elders to vote for District Councillors, who in turn will elect Provincial Legislators.

The authors of the Report, when discussing (para. 273) the manner of electing representatives to the Indian Council, point out how desirable it is "to deal on uniform lines with the electoral arrangements both in the Indian and Provincial Councils"; again, "they may find it wholly impracticable to arrange for direct election". . . . "we incline to think that the election by non-official (elected?) members of Provincial Councils is likely to prove far more acceptable to Indian opinion." If it is far more acceptable to allow your elected Provincial Councillors to select members for the Indian Council, surely it will be equally acceptable if the elected District Councillors select representatives for the Provincial Councils? In this way, too, "uniform lines" with the electoral arrangements for both councils are assured!

It is difficult to reconcile the sound advice given in paragraph 273 with the sweeping proposals of paragraph 226. It makes one wonder if the same author wrote both paragraphs? Anyhow, the instructions of paragraph 273 are not far removed from the suggestion I ventured to make in my article last autumn, and in my humble opinion should be adopted as a policy and not merely an expedient.

Provincial Government.

By far the most important of the series of proposals are those relating to the changes to be introduced in the Provincial Government (paras. 218 to 241). It is proposed that the future Executive in the Province or Presidency shall consist of two committees, the Governor presiding over each, or both when the committees combine. The subjects to be dealt with by each committee are shown in a schedule, and are called "reserved" and "transferred" subjects respectively. The "reserved" subjects are to be dealt with apparently on council lines (the Governor with one civilian and one native), while a Minister will administer each department of "transferred" subjects. It is contemplated that in some Provinces the transferred subjects will be more than in others (para. 222). It would thus appear that not only are we to have two committees but also two forms of Government, viz., a Governor in Council and a Minister, with certain delegated powers. There are also, of course, the questions which under Ministerial Government go to the Council of Ministers. These questions ("transferred") are apparently to be discussed by both committees; but if it comes to a vote, the member of the Civil Service and the Native of the Council of Reserved Subjects will not record their vote (para. 221). In the past, when studying Acts of the Indian Governments, I have always found that a considerable effort of memory was necessary to distinguish the powers of the several members of the Trinity (I have no wish to be profane)—viz., the Governor, the Governor in Council, and the Governor in Legislative Council. Under the proposed constitution a further concentration of thought will be required as to whether it is the Governor in Committee A or B of the Council one is dealing with!

Again, it seems rather strange that provision should be made (para. 220) for a Governor "unfamiliar with Indian conditions" to avail himself for "reserved affairs" of the services of members (of the Civil Service?) without portfolio; whereas in transferred subjects the Governor and his elected Minister or Ministers are apparently debarred from such assistance beyond discussion in General Council. The Minister, too, will deal with such important matters as local government and sanitation. Further, whereas with reserved subjects the Governor is still to give decisions in Council, for transferred subjects it is open to the Governor personally to refuse to accept the decision of the majority, though the authors of the report hope that he will not refuse his assent without strong reasons (para. 219).

In discussing another form of "Executive" (para. 216) the proposal is disposed of as likely to lead to "hopeless friction . . . . one Government being regarded as official and one as Indian." With the greatest deference to the authors of the report, I cannot see how the official proposal can escape similar criticism. Finally, the scramble for credits for the reserved and transferred services respectively (para. 256), whenever the annual Budget is under discussion, must assuredly cause a lot of heart-burning when, after providing for the requirements of the Government of India and "reserved" subjects, the *residue* is allocated to "transferred" departments.

It is not quite clear, either, by whom the Budget is to be framed. Is the Finance Minister to be an Indian in charge of a transferred portfolio, or will the work be done by the secretariat working under the Governor in Council A? I suppose someone will represent the Chancellor of the Exchequer, or whatever name he goes by? Then there is the Accountant-General's Department, formerly reserved for the Government of India. This Department will presumably be detached and be a part of the new financial section under the Governor in Council. Yet a good deal of its work will most certainly be in connection with transferred subjects such as Local Government.

Relations of Governor with Legislative Council.

The authors of the Report propose that the Governor shall continue to be President of the Legislative Council, and, although he may appoint a Vice-President, the Governor is presumably expected to take part in the debates of the Council, as there are no instructions to the contrary (para. 236).

I think that it is greatly to be regretted that the Secretary of State and the Viceroy did not see their way to recommend that in an enlarged and newly-constituted assembly consisting almost exclusively of elected members, an official other than the Governor should be appointed as Speaker; the Governor representing the Crown rather than the active head of the Executive. I am quite convinced that if the Governor's powers of veto, etc., are to be exercised—as the Report clearly contemplates they will be—then the less he interferes in actual debate in the Council the better. If a representative of the Government is necessary to shape legislation, then let some Minister or other nominated member do what is required, supposing that all elected members are in opposition, which they will not be. This view of the case appears to have been taken as regards the Viceroy and the Legislative Council of the Government of India (para. 275); yet the maintenance of order in the Provincial Council will be far more difficult, and probably the debates will be of a more acrimonious description. It may be argued that more respect will be shown for the

Digitized by Google

Chair with the Governor presiding. I doubt it, after the object lesson the Home Rulers lately gave in Bombay. In Egypt, too, if I rightly recollect, the late Sultan, then Prince Hussein, had to cease from being President of the Legislative Council because he found that his exalted rank was of little or no avail to maintain order. It will rest with the Governor also to rule out certain legislation in connection with the Government of India and reserved subjects (para. 254), and it will be as well that his decision should not be given on the spur of the moment without the assistance of his legal advisers.

My Own Solution.

In the article which appeared in THE NEAR EAST, whilst suggesting an Executive composed entirely of members of the Elected Council, I reserved for the Governor in Privy Council (you may call it State Council, if you like) ample powers for controlling legislation. In one respect this was more radical than the proposals under consideration, and in another respect less so; that is to say, nothing was left for the Governor personally; his decision was always in a council of four, with a standing British majority. It is true that I made no provision for the Governor to initiate legislation outside the Executive Council or to obtain supplies which the Elected Council refused to vote. I never contemplated that this would be necessary, unless the country was on the verge of rebellion. I provided, however, for the Governor constitutionally to carry on the Government with nominated Ministers in the event of the Council being dissolved and no other convoked, which, I take it, is much the same as certifying legislation and carrying it through—the provision made in the Report.

Apart from open rebellion and a recalcitrant Executive, who could be dismissed, I looked to the Departments and the Civil Service to initiate legislation, as my experience taught me that if Lord Cromer, backed by the Foreign Office, could obtain practically all the legislation he asked by *unofficial* pressure, the Governor-General or a Governor could do the same *officially* and *constitutionally* backed by the India Office. I also consider that the Privy Council that I suggested, consisting only of some half-a-dozen members, would have fulfilled the purpose of a Second Chamber for the time being without any of the disadvantages enumerated (para. 258) in the Report. I venture, too, to think that all the complicated and elaborate procedure which a dual Executive involves would have been avoided. Lastly, Indian Home Rulers could not have complained of invidious distinction between Indian and Colonial Home Rule, as the two would have been practically the same, provided the Indian Home Ruler was not out to wreck the Empire, when the difference would be very quickly apparent.

Of course, I write as an obscure individual whose opinions carry no weight one way or another, and my conclusions will probably be thought not worthy of powder and shot, as those of Mr. L. Curtis and other constitution-makers of repute. Possibly, if Mr. Montagu had occupied Lord Cromer's position for a number of years, he would have been less enthusiastic about ignorant peasants shaping the policy of their representative and less nervous about entrusting powers to a native Executive. If reservations had to be made to satisfy the conservative element, it should be reservation of posts for the permanent English Under-Secretaries rather than subjects which are of minor importance.

As regards the Government of India, the scheme I proposed in THE NEAR EAST last year does not differ largely from the official proposal, except that the Privy Council I proposed took the place of the State Council and was much smaller, having no elected members. But perhaps the editor will allow me to summarise my proposals both for the Government of India and Presidency. The readers of THE NEAR EAST can then compare the same with the summary of recommendations (Appendix I.) contained in the official report.

The Government of India.

(i.) A nominated Executive consisting of both British and native Ministers, who will be *ex-officio* members of the Legislative Assembly, and will take part in its debates.

(ii.) The Legislative Assembly to be elected for six years by the Provincial Legislatures. One-third to retire every two years after the manner of the American Senate, which never dies.

(iii.) Both the Executive and Legislative Assembly to have power to initiate legislation.

(iv.) The Governor-General no longer to take part in the debates of the Legislative Assembly, or to be a member of the Executive.

(v.) The Governor-General to be assisted by a Privy Council consisting of six members, three British and three natives, to be nominated by the Secretary of State.

(vi.) The Governor-General in Privy Council to have the power to veto all legislation emanating from the Executive or Legislative Assembly.

(vii.) Privy Council conflicts with the Legislative Assembly to be referred to the Secretary of State, whose decision will be final.

(viii.) Conflicts between the Executive and Legislative Assembly, failing free conference or other methods of reaching an agreement, to be referred to the Governor-General in Privy Council, whose decision will be final.

(ix.) Nine Ministers to be created, viz., Finance, Foreign Affairs, Postmaster-General, Railways, War, Interior, Public Works, Education, Justice. The first five to be held by British Ministers. The Ministers to form the Executive.

Provincial Government.

(i.) The Executive to be selected from the Legislative Council, and to consist of seven Ministers, viz., Interior, Justice, Public Works, Education, Foreign Affairs (Native States), Finance, Public Health, and Local Government.

(ii.) The Legislative Council to be an entirely elected body, to be elected by district and urban councils. Life of Council three years.

(iii.) The Governor to cease to be a member of the Executive or to take part in the debates of the Legislative Council.

(iv.) The Governor to be assisted by a Privy Council, two British and two natives, to be nominated by the Governor-General.

(v.) The Privy Council to have power to veto all legislation emanating from the Legislative Council.

(vi.) Conflicts with the Executive Council to be referred to the Governor-General for final decision, failing free conference and other methods of reaching an agreement.

(vii.) A member of the Civil Service to be appointed as a Speaker or President of the Legislative Council, with drastic powers to keep order and rule out motions and legislation reserved for the Government of India.

(viii.) The Governor in Privy Council to convene, adjourn, and dissolve the Legislative Council; also to have the power to dismiss Ministers and appoint others subject to confirmation by the Governor-General.

(ix.) In the event of a dissolution and non-appointment of Ministers from the Legislative Council, the Governor in Privy Council, with the approval of the Governor-General, to appoint Executive Ministers other than from the Legislative Council.

RELIEF WORK IN PALESTINE.

One of the workers in connection with the Syria and Palestine Relief Fund, who has just reached Jaffa, writes:—"The great problem has been to gather together our workers and set them going again. The state in which most of them are is heart-breaking. Nearly all were driven out of the town at the 'Emigration' in April, 1917, and wandered about from place to place, suffering great hardships and cruelties, of which some died. They lost all their possessions. Some eventually found their way back here, others went to towns which are now beyond the fighting line, and very many are dead of typhus, cholera, and starvation. The British occupation, of course, brought instant relief, and the Army first fed them and then started work for them, opening a laundry and a clothes' repairing shop, which give employment and rations to some. This employment will still continue, and may even be extended; still it is nothing like sufficient, and we are busy planning with S.P.R.F. and the military authorities how work may be found for all the women, as most of them have lost all their grown-up male relations. To-morrow we are to have a great gathering of our lace-workers, who have been eagerly looking out for our coming, and have been flocking to the house every day since they knew we had arrived. . . .

"Our first object is to try to restore the *moral* of the women and girls. Fear, exposure, starvation, dirt, and want of decent clothing have reduced most of them to unrecognisable ghosts of their former selves, and I think if we can provide them with a few garments and some soap (very scarce and dear), and get them to work, they will soon begin to improve.

"The S.P.R.F. is working hard and well. G.H.Q. has turned over to it the out-door relief, and, of course, you knew what the Hospital and the Orphanage were already doing. There is a local committee, of which I have been made a member. Mr. Owen, from the American College in Assiut, is the secretary, but I am sorry to say he is about to leave. He offered for three months only, and has to return to his duties even before that time, and it is a great pity, as he seems so energetic, business-like and sensible. Someone will come in his place, no doubt. He and I in the meantime are a sub-committee on out-door relief and are discussing how far distribution of food free can be restricted. He has a small number of people coming twice a week for doles of rice, maize, etc., and had hoped that before leaving he might be able to close it entirely. That will not be quite possible I think, as when all is said and done about employment, there is a multitude of folk utterly unable to work: the aged the blind and cripples, and delicate women or those with many young children.

"I do trust the supply of money and materials will be continued. The materials which were sent up from Egypt are of very good quality, better than those we were working with in London. I have no idea what prices they were. Material is coming into the market here more freely; they say especially the last fortnight there has been a great improvement, and prices are beginning to go down. Everything is *very* dear, however, still, and food is very expensive. The poor are very badly off for bedding, many having stripped off the covers of their mattresses to sell them, and we are planning to help them to make new ones, either for sale or gift as may be possible."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

One of the most important features of the arrival at Baku of a British force is its possible effect on what may be called the economic side of the war. Baku is the principal centre of the Caucasian oilfields, and success in that region would deprive the enemy of an invaluable source of petroleum. But Baku is not only important on account of the oilfields; it is one of the principal distributing centres for raw cotton, timber, silk, and other exports from Persia, and it serves as a connecting link for trade between European and Asiatic countries. For this reason the fact that Baku is in the hands of the Allies is of infinite value. Its use to the enemy will be gathered from the statement in a recent issue of the *Konfektionär* that arrangements have been made to import 390,000 poods of cotton from Tiflis, which was to be sent to Budapest viâ Baku early this month for division between Germany and her Ally.

***

Reference was made in these columns recently to a forthcoming attempt to establish the manufacture of matches in Ceylon. I now learn that a site has been selected for the factory at Bambalapitiya, where a suitable building has been acquired for the purpose. The necessary alterations are already in hand, and as the requisite material for the new industry, in the shape of labels, wrappers, chemicals, etc., has arrived from Japan, it is believed that the manufacture of matches will be in progress before the year ends. But, while Ceylon is to be congratulated on this development, it is difficult to regard with complete satisfaction an industrial undertaking so much dependent on external sources for supplies. Possibly after the war this may be rectified to some extent, and it may, at any rate, be hoped that Ceylon will then depend as much as possible on the rest of the Empire for materials which are not to be obtained in the Island.

***

I understand that Ceylon is to have another new industry shortly, as it has been decided to start rice-milling in the Island, and an extensive plant is to be installed for that purpose at Mattakuliya. It is intended to deal with imported as well as local rice, and those responsible for this enterprise will also be prepared to undertake the installing of rice mills in other parts of the island. I may add that the machinery for this new enterprise is being imported from India by special permission.

***

An interesting sidelight on Germany's difficulties in exploiting the East is provided by an official announcement in the German newspapers to the effect that no private business transactions can be made in Russia, Roumania, and the Ukraine without permits, which will only be granted for a maximum of 3,000 marks a month. This check on imports of merchandise is due, of course, to the fact that Germany cannot pay for her imports in kind, and must export money in return, and this cannot be permitted except to a limited extent, in order to prevent an undue fall of the mark in these coutnries. That Germany should have to resort to this method to support her credit in the East is extremely significant.

***

The Anglo-Persian Oil Company, Ltd., is reported to have made new proposals to the Australian Government for the erection of a refinery in that country. The previous intention was to treat Australian mineral oil, but the present object is, it is understood, to deal with crude oil from the Persian oilfields. Countries with import tariffs have nearly always taken the view that while the finished product should be heavily taxed crude petroleum should be admitted free, or at a merely nominal rate, so that the question of primary cost should be no obstacle, and it is to be hoped that the Australian Government will agree to the proposals which would mean another and a substantial addition to the country's industries.

***

Visions of a Turkish industrial reformation seem to be very widespread at the present time, though how the Turks, in view of their past history, can have the slightest faith in their capacity for developing their resources must remain a mystery. True the war has produced many curious and unexpected results in other countries, and it is possible that it has also effected the miracle of making the Turks equal to achieving industrial progress, but it is on the face of it extremely unlikely, and those who expect to find the Sublime Porte unchanged after the war will scarcely be disappointed. In the meantime the efforts of the Turkish Press to give a really convincing picture of the country's future should delight the cynical, as Turkish journalists have evidently little to learn from the "superior person" responsible for the production of the official bulletins which have done so much to give a lighter touch to the war operations.

***

The attitude of the Turkish Press on this question may be judged from the statement of an Adana correspondent of the *Tanin* that the war "has produced bright prospects for Turkey in the domains of agriculture, industry and commerce." The writer proceeds to refer to the country's rich resources (in regard to which there is, of course, no question), and states that they are to be developed "on scientific lines" after the war, adding with reference to the "millions of acres of uncultivated and virgin soil" that ample provision has been made in the Budget for opening them up. That last remark is unquestionably the most illuminating in the article, for if the Turkish public can swallow the statement that the country whose revenue is insufficient to meet the normal demands upon it, to say nothing of war expenditure, is in a position to allocate large sums for internal development their credulity must be unbounded.

***

It is conceivable that the reason why the idea of industrial progress is being so sedulously encouraged is because Turkey depends on foreign assistance after the war, and at the moment is looking to Germany to supply the required motive power in the shape of money, enterprise, and, above all, skilled labour. That, needless to say, would mean exploitation on the most approved German lines, which would give our chief enemy all the profit, and Turkey the rich reward of making a humble contribution to Germany's strength and affording that country a safe and most satisfactory way to the East. Fortunately for the Allies and for Turkey, Germany will not be in a position to render financial or other assistance after the war, and as Turkey will be dependent on foreign help, it naturally follows that it will be the Allies, and principally this country, that will have to supply it. In this connection Turkey might well reflect now on the immense debt she owes to British enterprise for her development before the war, and compare the benefits she received from this assistance with her prospects under a system of German exploitation.

***

Germany and her Ally may be able to do more or less as they like in Turkey at present, but it is clear that the position with regard to Bulgaria is very different. Thus, a few months ago Bulgaria adopted a number of economic measures, one of which prohibited the importation of fancy articles from Germany and Austria. Naturally, the Central Powers were greatly concerned at the effect of this action on their trade, and they have made the strongest representations at Sofia, with a view to the removal of this prohibition, without, I believe, having the slightest effect on Bulgaria's decision. This incident, though small in itself, throws an interesting light on the relations now existing between the enemy Powers.

***

With the issue of the March statistics of cotton spinning and weaving in Indian mills the returns are to hand for the first year in which the Customs tariff on imported cotton goods of 7½ per cent. has been in operation. India's production and export of piece goods for the year ended March 31, 1917, reached a record level, but these figures have been passed. The production of grey and bleached piece goods rose from 1,136 million yards to 1,141 million yards, while the output of coloured piece goods increased from 442 million yards to 473 million yards. On the other hand, imports of grey and bleached piece goods decreased from 1,437 million yards to 1,128 million yards, and of coloured piece goods from 455 million yards to 395 million yards. In appraising these figures the effect of war conditions on the Lancashire cotton industry has to be borne in mind, scarcity of freight and curtailment of output having had an appreciable influence on the position.

***

The Champdany Jute Company has just presented an excellent report. On this occasion the accounts cover a year instead of eleven months, and, allowing for this increased period, it will be seen that the profits have been well maintained at £134,200, against £122,600. As last year, £30,000 is written off block account, and the dividend is kept at 45 per cent., but the balance carried forward shows a substantial increase at £50,100, against £28,800. The prospects for the current year seem to be very promising, so that shareholders have every reason to be satisfied with themselves.

THE COTTON PURCHASE.

Closing of Cotton Bourse Agencies.

(From Our Correspondent.)
Cairo, July 22.

The taking over of the cotton and cotton-seed crop by his Majesty's Government has naturally led to the closing down of the cotton Bourse agencies, and thrown out of employment a large number of clerks, brokers and jobbers. The Bourse Broker's Commission therefore lately sent a delegation to Cairo to wait upon the Financial Adviser and try to enlist his and the authorities' interest in their case. The delegation was successful in obtaining a sympathetic hearing, and the Ministry of Finance appointed a Committee of experts to confer with the Bourse Commission on the question of the grant of an indemnity and its distribution among the agents, their clerks, and the brokers and jobbers. The Commission decided at its last sitting at the Bourse to appoint six members, with two representatives for each of the three categories, to confer with the Government's Committee. The expected meeting has not taken place yet, but it is reported that the President of the Government's Committee has written to the Bourse Committee expressing the opinion that allowances should be granted only to those of the brokers and clerks who, by their situation and age, cannot well earn a new living. The Bourse Committee demur to this suggestion on the ground that the Financial Adviser's first letter to the Government delegate at the Bourse made no such distinction, but meant this question of indemnities to apply to all those who have been affected by the Government measure. It is said that the Bourse Committee contemplates addressing a protest to the Financial Adviser, and the hope is expressed that the Government will deal equitably with this case.

Cotton Exports.

A notice issued under the signature of the Commander-in-Chief requires that until further order the export of extra fine Sakkelarides cotton, otherwise than to the United Kingdom, and the export of all other grades of cotton above Fully Good Fair Sakkelarides, otherwise than to the United Kingdom or some other Allied destination, are prohibited. According to the list issued by the Cotton Control Commission of types with the buying and selling prices f.o.b. of same, Upper Egypt has 23 types, Sakkelarides 28, Brown 22, and Afrita 7. The Commission has published a statement setting forth the conditions under which the sale of cotton may be conducted.

FERTILIZERS IN EGYPT.

(From Our Correspondent.)
Cairo, July 22.

The Ministry of Agriculture had not been unmindful in the past of the harm done by the adulteration of chemical fertilizers, since this affected the country in its most vital interest; but the Capitulations were a stumbling block in its path, and all it could do was to publish periodical notices to warn and enlighten the public regarding the fraudulent practices of some dealers. Now, however, that the existence of martial law does away with this obstacle, the Ministry has set to work upon the draft of a law which, when passed, will apply to natives and foreigners alike. The utmost care is said to have been taken in this connection, laws and regulations governing the sale of artificial manures in Europe and America having been minutely consulted with due regard to local conditions. The draft law is to be submitted to agricultural experts for the benefit of their advice before passing. The law provides first that the sale of chemical fertilizers can only be allowed under licence, granted under special conditions, enabling the experts of the Ministry of Agriculture to inspect the stuff wherever it may be found, and to take samples for the purpose of analysis, and determining whether the actual ingredients answer the particulars given on the guarantee which every merchant has to give, in the form of a paper stuck on each bag of manure, setting forth the composition of the fertilizer. Each bag will have to be sealed with lead. The Ministry of Agriculture will publish, with the proposed law, a list of the principal and well known fertilizers, stating the maximum proportion of fertilizing elements that each should contain. If the inspector should find any difference between the formula shown on the guarantee on the bag and that of the list published by the Ministry of Agriculture, the merchant would be considered as an offender without any need for inspection or analysis; otherwise the fertilizer would be analysed, and if the result of the analysis should not tally with the formula declared on the bag the merchant would be liable to prosecution for contravention. The penalty in this case would be seizure of the goods, and withdrawal of licence, and imprisonment not to exceed one week or the payment of a fine not exceeding £E1; or if necessary both.

LANCASHIRE COTTON.

Prices Higher.

(From Our Own Correspondent.)
Manchester, Wednesday.

Prices in the market have again advanced, and there seems to be no end to the upward movement. Most of the developments in the situation have strengthened the bullish sentiment which has been prominent for some time back. Although the operative spinners threaten to strike against the abolition of the rotation system of unemployment, nobody expects a stoppage of machinery. The census of raw cotton stocks published by the Control Board is considered unfavourable. There does not seem to be any set-back to the satisfactory outlook for the Egyptian cotton crop, but it is officially reported that the area under cultivation will again be restricted next season. Some difficulties continue to show themselves with regard to the buying and selling of Egyptian cotton under Government auspices, and spinners are feeling the loss of not being able to get the private marks of merchants. Egyptian yarns have been very strongly held, and prices have tended to go against buyers. An encouraging turnover has transpired in 60's and 80's twist. Extraordinary prices have occasionally been paid for super qualities. An increased demand has developed in piece-goods for Egypt. More sales have been about in grey shirtings. Printed and dyed goods have also moved off more freely. Cairo is now undoubtedly a very important distributing centre for the Near East. There has been a rather smaller turnover in dhooties and mulls for India, but finishing and printing cloths and also grey shirtings have been sold in fair quantities. Our total shipments of cloth are falling off, the exports for July being only 288,647,700 yards, against 363,246,500 yards in June, and 469,087,600 yards in July, 1917. Prices in American yarns have again been put up. An encouraging business has been done in coarse counts for home use and for France.

COTTON CENSUS REPORT.

The Cotton Control Board at Manchester have issued their report on the stocks of cotton at sea or in this country on July 27, which shows that, including 50,000 bales at sea, the stock of American cotton, 384,000 bales, will last about ten weeks at the present weekly rate of consumption. The Egyptian cotton stocks are distinctly better than the American, the total available supply of Egyptian being reported as 205,116 bales, and 5,000 bales are stated to be at sea, while the weekly consumption is given as 10,500 bales.

STRUMA VALLEY SCHEME.

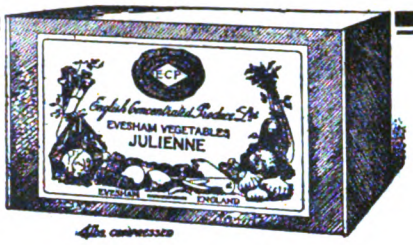
Mr. Wheatley, the representative of a British syndicate which has obtained a concession to drain the Struma Valley, after calling at Athens and conferring with M. Venizelos and Lord Granville, the British Minister, arrived at Salonika on August 14, with a staff of civil engineers. It is understood that preliminary surveys will commence immediately.

A Reuter message states that the Egyptian Government has decided that the limitation of cotton cultivation is to remain in force for 1919—namely, to one-third of the normal area.

BURMA'S RESOURCES.

Handicaps to Development.

An important article on "The Material Resources of Burma," by Sir Harvey Adamson, K.C.S.I., Lieutenant-Governor of Burma from 1910 to 1915, appears in the current issue of the *Bulletin of the Imperial Institute*. Sir Harvey's knowledge of Burmese conditions is second to none, for he has had well over thirty years' service in the province, and he writes, therefore, with authority which merits the closest attention for what he has to say. He commences by pointing out that while the province, with its fertile soil, a rainfall that has never failed, magnificent forests, and almost unexplored mineral wealth, might be expected to offer a promising field for commercial enterprise, the fact remains that except rice, teak, and mineral oil, its products have not attracted British capital to any great extent. Sir Harvey gives the reasons for this as the dearness of labour and the deficiency of means of transport. The labour difficulty is explained by the fact that while Burma has an area three times that of Bengal its population is only about a quarter of the people of that province. As to transport, Sir Harvey remarks that nature has given the province a fair complement of waterways, but outside tidal influence and the chief rivers there is little water transport. Then as regards railways Burma is very badly served, having only 1,598 miles of line. The writer continues :—



Railways, Roads & Money Needed

"There is ample room for railway expansion in Burma. The most pressing immediate needs are the extension of the Southern Shan States Railway to Yawnghwe on the Inle Lake, the construction of a railway bridge to span the Irrawaddy at Sagaing, a line from Moulmein through the Tenasserim peninsula to Tavoy and Mergui, where of late wolfram and rubber industries have assumed prominence, and a line from Pyinmana to Magwe, which would open out larger pyinkado forests. These projects have been surveyed and are ready for construction when funds are available. They are by no means exhaustive, for in both Upper and Lower Burma there are many practicable projects of remunerative railway enterprise. There is no railway connection between Burma and India. Three routes have been surveyed, of which the Pyinmana-Akyab-Chittagong project at present holds the field. But as the existing communication by sea between Calcutta and Rangoon is excellent, there can be little doubt that if financial conditions render it necessary to make a choice between Burma provincial railways and a railway connecting the capitals of Burma and Bengal it would be to the advantage of Burma that the former should obtain priority.

"Burma's deficiency in railways is totally eclipsed by its deficiency in roads. The length of metalled roads in the whole province is put down on paper as 2,100 miles. But most of these roads are not worthy of the name. Outside towns and their environs there are few roads that are fit for other than bullock-cart traffic, and very few miles where motor traffic is possible. Railways and rivers have no adequate system of feeder roads, and though in most places country carts can be bumped across paddy fields in the dry season, there are huge tracts that are closed to all traffic for the rest of the year. . . . In the Tenasserim division, which is suitable to rubber cultivation, the boom in rubber attracted few settlers owing to the absence of roads, and the inability of the Local Government to find money to construct them. Wolfram was discovered in Tavoy district, but for the same reason was extracted with great difficulty.

"The financial history of Burma since 1907 is a record of persistent applications by the Local Government for an enhanced share of the revenue for development purposes, and as persistent refusals by the Imperial Government. As the revenue of Burma is large, it might be imagined that the capital for development could be obtained by borrowing on the security of the revenue, but such loans

are contrary to the financial policy of the Government of India."

Agriculture.

Land cultivation in Burma is carried on, Sir Harvey points out, almost entirely under native ownership or direct lease by the State to the cultivator. The policy of peasant proprietorship means that there are few large estates, and a holding of over a thousand acres is very rare. Unfortunately, cultivators are faced with the handicaps of lack of money and cattle disease, which causes a heavy mortality. The cultivator obtains assistance from money lenders at rates of from 20 to 50 per cent., and attempts have been made to relieve the position by establishing co-operative societies, a movement which is making rapid progress. Space prevents us from giving Sir Harvey's remarks on the varied agricultural products of the country, but an exception must be made in the case of rice, which is cultivated on more than two-thirds of the cropped area. In his view, increased production may be achievable by more intensive cultivation, and he quotes the example of Spain, where the average yield of rice is said to be three times as high as in India. *En passant*, he remarks that the rice which is best for food is rice which has been milled and not polished. "The rice used as an article of food in England," he adds, "is white rice highly polished by machinery and coated or faced by powdered talc, colouring matter and oil, so as to impart a lustrous surface and translucent appearance. These processes rob the rice of its proteins and fat and leave it a less nutritious and more insipid food than the unpolished rice."

Minerals.

Of special interest are the writer's references to the mineral wealth of the province. So far, he remarks, efforts to extract gold have not been successful, and gold has nowhere been found near the surface in remunerative quantities. "It may some day," he says, "be mined profitably from lodes, but capital has not yet been applied to such a venture." In many parts broad tracts of ferruginous laterite exist, but imported iron is cheap, and iron ores have never had any economic importance in the province. Coal exists in Thayetmyo, Schwebo, and Mergui districts, the Shan States, and Upper Chindwin, but the Burmese use wood for fuel and have never utilised coal. Dr. Noetling twenty-five years ago estimated the Chindwin field at 105,000,000 tons; this field is, however, inaccessible. The petroleum riches of Burma need little comment, but Sir Harvey's reference to the prospecting which has been carried on to discover new fields, the most important found being the Singu field, may be noted. Tin, he remarks, exists in large quantities in Tavoy and Mergui districts, and when better means of communication have been established it may be worked as a commercial success.

The only important source of lead and silver in Burma is, he points out, the Burma Corporation's mine at Baudwin in the Northern Shan States. "The Geological Department of the Government of India considers," he says, "that the question of the ultimate treatment of the Baudwin concentrates is an important one for India, since if it were found possible to erect zinc smelteries in Burma, the resultant production of large quantities of cheap sulphuric acid should have a far-reaching effect on industrial development. . . . Development work has been carried on for some years on systematic lines, and lodes containing an immense quantity of lead, zinc, silver, and some copper have been proved. This is one of the big mining propositions of the world, and in all probability has before it a great future."

GREEK OLIVE CROP.

Reports indicate that throughout the olive-producing districts the trees have flowered heavily and that the young fruit has set well, says the United States Consul at Patras in a recent message. It is too early to make any definite estimate of the coming crop; but if the weather is even fairly favourable through the summer it is estimated that the olive crop will be considerably heavier than in 1917. There is a great scarcity of olive oil in the domestic market, despite the fair olive crop of 1917, with consequent high prices. The ordinary grade of olive oil is now 31 cents per lb. wholesale.

ENGINEERING NOTES.

The Greek Industrial Mission.

In a few weeks the Greek Industrial Mission will be in this country. We understand that all the members of the mission are business men, some of whom have been in this country before, while the others, who have not, have heard so much of Great Britain and her industries and commerce that they will feel as if they were going to visit the house of an old friend. Most of them are interested in modern machinery, both for industrial and agricultural purposes, and will be anxious to see all the latest improvements. Any new invention or mechanical contrivance, whether for big factories or household use, for great estates or small holdings, will be of much interest to them. They come to see new things, and how and where they are done; to make friends, and, in some cases, make business arrangements. Manufacturers, therefore, must be prepared for these visitors, and not expect that they will see men who come only to look at great factories and shops; but active business men interested in engineering and other industries, representatives of trade societies, chambers of commerce, and firms which do large business in machinery and metals throughout the Near East. It is an opportunity for the manufacturers which may save them from the great inconvenience and difficulty of finding and sending efficient travellers when the war is over to Greece to work up business. The representatives of the trades and industries who are coming will not be satisfied with official receptions and official visits, which, of course, will be limited; they will look round for themselves and take notes for future use. Their chief guide will undoubtedly be advertisements, and manufacturers would do well to attract their attention by that means.

Provincial Industries.

In last week's notes engineers and other manufacturers were reminded that Greece must not be considered only as a market in the light of her present territorial boundaries, but also as one of the most influential commercial and industrial centres of the Near East, considering that there are over seven million Greeks in that region besides those in Greece. We may add that Greece's industry should not be considered as of little importance. It seems that all the reports that reach the British manufacturer make him form the idea that all the industry of Greece is in the large towns of Athens, Piræus, Patras, Syra, Salonika, and two or three other secondary towns. Little is known of the interior; of the variety of existing factories in provincial towns and villages, and the great variety of agricultural and industrial machinery that is being used even in remote districts. As an example we would mention a few places about which, but for their being mentioned in travellers' or tourists' guides, very little would be known. Yet, there are spots near the sea where there is scope for engineering manufactures and British enterprise. Needless to say, these places are looked after by the Americans, and were cultivated before the war by the Germans and Austrians.

Veria.

Veria, for instance, is a small industrial town in Macedonia not far from Salonika. The town, which has 14,000 inhabitants, is near the river Bistritza, or Haliacmon, and has two or three spinning mills, twenty-six flour mills, two rice mills, three weaving factories, eleven wine and cognac factories, nine sesame-oil mills and other small power industries. Fine trees and pleasant gardens surround the town, and the district, generally speaking, is agricultural; but we are informed that there is an excellent opening there for machinery.

Openings in Vodena.

Vodena is a district which offers a very wide field for engineering as well as commercial enterprise. The town, Vodena (meaning in Slavonic "place of water"), was the original centre of the Macedonians and the residence and burial-place of the royal house. It was then called by the Greeks Edessa, and this name has been restored to it since the Greeks have taken it from the Turks at the Balkan war. The town has over 13,000 inhabitants, and possesses two spinning mills and one tannery, and produces wine, cocoons (silk), red cayenne, apples, plums, etc. Its future development as an industrial centre depends on the use of its splendid waterfalls, which at present produce the motive power for the factories. There are already several schemes and proposals for utilising the falls with modern methods and appliances, with a view to producing greater power, thus enabling the establishment of more factories and a large electric station. Foreign engineers, contractors, and enterprising financiers were, before this war, taking great interest in Vodena, where there is a great opening for agricultural machinery, motors, implements, etc.

INDIA'S NEED FOR SILVER.

Sir James Meston, Finance Member-Designate of the Viceroy's Council, speaking on Indian economics at the Overseas Press Centre, Norfolk Street, on August 22, said that India had done a great deal to provide Europe with food and leather for military requirements, but India wanted something more for its war work than mere I.O.U.s, and the actual demand for money as currency was much greater than it used to be. The banking system was in its infancy, and the credit system was poorly developed, and the people were dependent on actual metal and to some small extent on currency notes. There was practically no gold in circulation, and the value of silver was rising because of its scarcity, and attempts to reduce the pressure on India's metallic currency by increasing the note circulation were seriously checked by the fact that the people at one time imagined liabilities were being postponed and that there would be no coin for the notes when presented. The pressure became very great, and serious unrest might have ensued, but at the height of the crisis the United States saved the Indian economic situation by the Pittman Act, which was an arrangement by which the United States withdrew an enormous amount of silver dollars kept in reserve as security for a vast amount of paper issues. In response to the skilful manner in which Lord Reading placed India's necessities before them, the United States undertook to release 200 million dollars from their reserve and withdraw paper to that extent. The effect of this had been to fix the price of silver for a considerable period, and it also explained the fact that the Indian exchange was steady and not fluctuating. It had relieved the immediate anxiety about inconvertibility in India. They owed a great debt of gratitude to the United States Government for their action at one of the most critical periods in India.

MOROCCO RAILWAY SCHEMES.

The proposed railway system for Morocco at present before the French National Assembly comprises five standard gauge railways—besides the Tangiers-Fez line, already fixed—which will practically follow the track of the present narrow-gauge (60 cm.) lines. Four of these railways, making a total of 600 kilometres permanent way, are in West Morocco, and are calculated to furnish excellent connections between Rabat and Casablanca on the one hand, and between the interior and the more important towns, such as Fez and Tangiers, on the other.

The fifth line, 300 kilometres long, starts from Fez, cuts across East Morocco to the Algerian frontier, and is intended to establish a through connection between Casablanca and Tunis.

RUSTON AND HORNSBY, LTD.

At a special meeting of Ruston Proctor and Co., Ltd., on August 8, the resolution for amalgamation with Richard Hornsby and Sons was confirmed. It was decided to adopt the title of Ruston and Hornsby, Ltd., and Messrs. H. Simpson Gee, D. Roberts and A. R. Bellamy, previously on the directorate of Hornsby and Sons, were added to the Board of the new company.

INDIAN FOOD PROBLEMS.

A Reuter's message states that an important conference of the Provincial Directors of Civil Supplies with a number of high officials, under the presidency of Sir Claude Hill, was to meet at Nagpur on August 19 to consider measures for the distribution of fodder and food and the question of the shortage of rolling stock.

COMPANY MEETINGS.

Egyptian Delta Light Railways.

Improved Results.

The annual general meeting of the Egyptian Delta Light Railways, Ltd., was held on August 21, at Winchester House, Old Broad Street, E.C., Sir William Garstin, G.C.M.G., G.B.E. (chairman of the company) presiding. The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report,

The Chairman said: When I addressed you a year ago I did not feel able to hold out great hopes of material improvement in the prospects of our railways for the year under discussion, and I warned you not to expect too much. I am profoundly glad to say that my forebodings have not been justified and that the results of last year's working have been far more satisfactory than I anticipated or than I dared a year ago to hope. We are able not only to propose the payment of a dividend, but to add a substantial sum to our carry-over. Before proceeding to a review of our operations during the past year, I will refer to a change of apparent, though not of real, importance, which has been effected in the compilation of our accounts for last year. I allude to the suspense account. When describing to you—in July, 1914—the modifications in our contract which had been granted to us by the Government of Egypt, I explained our object in instituting a suspense account, for the adjustment annually of the difference between our actual operating expenses for the year and the 64 per cent. of our gross earnings which, by our modified agreement, we were and are required to take into account as the average chargeable for each year up to 1938. The institution of such an account was undoubtedly necessary, as it was a matter of the utmost importance that the principle involved should be clearly established. This having now been effected, our methods can, we feel, be safely changed, and can be continued in a less cumbrous manner. The suspense account referred to had, during the last few years, assumed, in consequence of war conditions and the attendant reduction of our earnings, greatly increased proportions. This fact has intensified the objection to it, from an accounts point of view. This objection we had always recognised. In our last balance-sheet this account appeared as an asset for no less than £57,558, and although without any present value it increased the apparent balance carried forward by a large amount, which was not immediately available for any purpose whatever. We have therefore decided upon the elimination of this account from our balance-sheet and upon the consequent reduction of the previous year's "carry forward"—as shown in last year's report—to its true dimensions. This last point is the one to which I refer as conveying an impression of importance. I hope, however, that from the explanation I have given it will be clear to you that in reality the change is merely a book transaction. The record of the necessary adjustments will, of course, continue to be made annually outside of our regular accounts, and you will have followed the method adopted from the footnote to our revenue account. I am pleased to draw your attention to the fact that the adjustment for the past year is a credit of £15,883, which, indeed, is the natural response to our increased earnings, and reduces the balance of this suspense account to £41,675.

The Year's Working.

I wish to impress upon you that we must guard against attaching exaggerated importance to the satisfactory result attained this year. It is true that our receipts of all kinds for last year established a record in the history of this company, but this fact is due entirely to abnormal conditions, and, consequently, is not comparable in its nature to the steady progress we were making before the war, nor to what we may hope for when the blessings of peace are restored to us. I do not wish in any way to detract from the satisfaction that I know you must share with us in studying last year's returns. I have every hope that those for the current year will be equally favourable. But I do ask you to recognise, as we do, that the uncertain duration of the war still renders us liable to very great dangers. So strongly do we recognise this that we feel it our duty to guard against these dangers by making the maximum provision possible to meet them consistent with the consideration that we owe to our shareholders, whose patience and whose courage have been during the last four years so severely tried. Our earnings proper for the year under discussion exceeded those of that immediately preceding by £59,594, although the previous period included a sum of over £12,500 for the hire of rolling stock, etc., by the military authorities. There is no such corresponding item in the accounts we are now considering. Our report will have shown you that, as compared with the year preceding, the numbers of passengers and tons of goods conveyed by us last year increased by 1,034,456 and 82,302 respectively. I wish, however, to point out to you that a very considerable portion of our improved financial position is due to the special increases we have been permitted by the Government of Egypt to make in our rates and fares. Compared to the preceding year, our working expenses have been decreased by £9,490. Both years have been affected by special debits in connection with the renewal of our rolling stock—a procedure from which future years will reap the benefit. I am sure that you will approve of our policy in making such provisions, whenever circumstances permit and whenever the need presents itself. I would, however, warn you against attaching undue importance to the above-mentioned reduction in our expenses. Had conditions been less opposed to it, we should most certainly have incurred increased outlay on renewals and improvements. This, however, the conditions imposed by the war have rendered impossible. Even were it possible for us to obtain the necessary material, the prices ruling are prohibitive. Making due allowance for this fact, however, the knowledge that our coaching traffic has increased by 17 per cent. in quantity and our goods traffic by 13 per cent. is a very satisfactory feature in our accounts. The present high level of our expenses is, of course, mainly due to the price of coal and other necessary supplies. It is also affected to some extent by the grant of a war bonus to our staff in Egypt to meet the greatly enhanced cost of living in that country owing to the war. These causes, although transitory, are likely, I think, to continue for some time after the termination of the war. We can, however, assert that the economies that we have effected in our train working will be lasting and important. I have already referred to the fact that, although we have duly maintained our property, we have had to postpone many works of improvement which we must make good so soon as times are propitious. The expenditure that we shall one day have to incur in this direction is a matter that we felt bound to bear in mind when considering the sum to be added to our "carry forward."

The Preference Dividend.

The result of the year's working—that is, eliminating the balance brought in from the previous year's accounts—leaves us with an amount of £72,532 for disposal, after providing for our fixed charges, for income-tax and for the participation in our profits to which the Government of Egypt is entitled. We propose for your approval the payment of a dividend of 3½ per cent. on our Preference shares, leaving £36,105 as an addition to our "carry forward." It is possible—in fact, I may say it is probable—that you may feel some natural disappointment that the dividend proposed is not a higher one. I can only tell you that we, your directors, considered this question very carefully. We came to the conclusion that, taking into account the uncertainty of the duration of the war, the anxiety regarding our fuel supply, and the certainty that heavy expenditure must be incurred upon improvements as soon as conditions become normal, we should not, acting in your own interest, be justified in reducing the sum carried forward below the figure shown in the accounts. The policy of your Board has, as you know, always been a conservative one. I venture to hope that the confidence that you have so consistently placed in us, and that we so gratefully acknowledge, has in large measure been due to your appreciation of this fact, and that you feel that in not yielding to the temptation to increase the dividend and to reduce the carry-forward we have been actuated by the desire to maintain your undertaking upon a sound basis.

Your Board has been fortunate enough to secure the valuable assistance of Mr. E. W. Foster, C.M.G., and you will be asked to confirm his appointment as a director. I might really call it his reappointment, as Mr. Foster was an original member of this company's Board and served for some years on its Egyptian section. He resigned in 1905, owing to pressure of other work, which made it impossible for him to attend the meetings held in Cairo. I with to mention that the Board has sanctioned an increase of the pay of our managing director to £800 per annum so long as the appointment is held by Major le Breton. Regarding Major le Breton's services I need say nothing. They are well known to you all. They have been invaluable, and without his continuous labour in the interests of the railway our situation would not have been nearly as favourable as it at present is.

Before concluding my remarks, you may expect me to say a few words regarding the future prospects of our railways. If prosperity reigns in the country, then, unless we deliberately throw away our chances, our railways should prosper and bring in good receipts. If, on the other hand, prosperity should be absent from Egypt, it will be difficult, if not impossible, for our enterprise to be successful. You know, gentlemen, that I have, in each year that I have addressed you, expressed my profound belief in the future of Egypt. Even during the first years of the war, when things looked blackest, I never wavered in my faith. It has been amply justified. I do not know of any country in the world where prospects appear so bright as they do at present in Egypt. Anyone who has studied, as I have done, the very interesting note presented by the Acting Financial Adviser on the Egyptian Budget for 1918, must be struck by the remarkable evidences that it gives of the prosperity of the country. Returns up to date regarding the cotton crop are highly satisfactory, the latest news being to the effect that in Lower Egypt the estimated yield is some 98 per cent. of the normal, while in Upper Egypt the percentage is 101. Other crops such as rice and sugar cane promise equally good results. Everything would seem to point to an even more prosperous year than was the last. This must affect the working of our railways. The traffic returns up to the present show satisfactory increases. The latest figures show an improvement of £25,169 over those of the corresponding period of the year under review. I think, gentlemen, we can then look forward to the future with some confidence. We cannot yet, of course, undertake the extensions of our system which have been authorised by the Government, and from which we anticipate good returns, until the war is over. The impossibility of obtaining labour and the price of all materials preclude this. We can, however, continue, as we have done, to keep down our working expenses to the lowest figure possible—consistent with efficient working—and we can also continue, as we have done, to add steadily to the sum that we are putting by for future improvements, and as a security against the unforeseen.

The adoption of the report, together with the statement of accounts and the balance-sheet, was seconded by Mr. Montagu Sharp and was carried unanimously, and after the dividend had been unanimously agreed to, and the retiring directors and auditors re-elected, the meeting concluded with a unanimous vote of thanks to the directors, the London staff office, and the operative staff in Egypt.

COMPANY NOTES & REPORTS.

Champdany Jute.

The report of the Champdany Jute Company for the year ended March 31 states that, inclusive of £28,775 carried forward, balance at credit of profit and loss is £168,736. An interim dividend of 15 per cent. was paid on December 22 and £30,000 has been applied in writing down the block account. The directors now propose to pay on 28th instant a final dividend of 30 per cent., which will leave £50,086 to be carried forward. The stock of jute has, as usual, been taken at cost price and the cloth and bags have been entered at contract rates. The short time working agreement entered into by all the Calcutta mills continued in operation until the middle of January, when con-

Digitized by Google

ditions rendered its suspension desirable and full time working was resumed.

Mortgage Company of Egypt.

The report of the Mortgage Company of Egypt states that, after providing for interest on the 4½ per cent. first charge debentures and on temporary loans, and applying a sum of £29,000 in the aggregate in writing down the value of the freehold premises of the company in Cairo, the property acquired by foreclosure and the instalments in arrear, the accounts show a profit for the year of £107,390 7s. 2d.; deducting the amount of the dividend paid and accrued on the 5 per cent. preferred shares to March 31, 1918, viz. £50,000, there remains a balance of £57,390 7s. 2d.; adding the amount brought forward from last year's account, £17,382 9s. 6d., there is available for distribution a total sum of £74,772 16s. 8d., which the directors propose to allocate as follows:—(1) to payment of a dividend of 8 per cent., being 2s. per share on the amount paid up on the ordinary shares, £20,000; (2) to general reserve, £17,500; (3) towards writing off the discount and expenses of the debenture issues, £2,800—£40,300, leaving a balance to be carried forward to the next account of £34,742 16s. 8d. The economic situation in Egypt has continued to improve, and the increased payments by the company's clients mentioned in last year's report have been maintained during the year 1917-18. The board have, however, made further provision for loss on arrears and properties acquired by foreclosure. They have applied a sum of £25,000 to writing off a portion of the instalments in arrear, and in writing down the cost price of the property acquired by foreclosure. They further propose to increase the general reserve to £170,000 by adding thereto a sum of £17,500.

Shahdara-Saharanpur Railway.

The report of the Shahdara (Delhi)-Saharanpur Light Railway Co., Ltd., for the half year ended March 31 states that the total expenditure on capital account was Rs.43,83,446 0s. 5d. The expenditure incurred during the half year on capital account, for additions to station office, etc., amounted to Rs.14,320 10s 7d. The earnings of the railway for the half year were, coaching Rs.1,85,035 5s. 3d., goods Rs.2,15,199 1s. 0d., sundries Rs.1,211 0s. 5d., making a total of Rs.4,01,445 6s. 8d., as compared with coaching Rs.1,91,226 9s. 6d., goods Rs.2,09,049 12s. 0d., sundries Rs. 1,443 6s. 6d., a total of Rs.4,01,719 12s. 0d. in the corresponding period of 1916-17. The working expenses of the line were Rs.2,09,777 5s. 3d., or 52.26 per cent. of the gross earnings. The net revenue for the half year was Rs.1,98,059 7s. 2d. which includes Rs.6,391 5s. 9d. interest accrued on the surplus funds of the company. The interest on debentures at the rate of 4½ per cent. per annum amounting to Rs.63,646 6s. 6d. and the London Agency charges Rs.2,121 8s. 9d. and income tax Rs.4,064 14s. 0d. having been provided for, the balance remaining is Rs.2,01,611 6s. 3d. The directors recommend payment of a dividend (free of income-tax) of Rs3 8s. 0d. per share, equal to 7 per cent. per annum, which will absorb Rs52,500 0s. 0d.; and that the net balance of Rs.1,49,111 6s. 3d. be carried forward, provision having been made for the Government's moiety of surplus profits and the managing agents' commission. Mr. C. W. Foley retires by rotation from the directorate but, being eligible, offers himself for re-election. The Hon. Sir Hugh Bray, Kt., having resigned his office of director due to his retirement from Calcutta, Mr. W. O. Grazebrook has been appointed in his place.

An extraordinary general meeting of the Egyptian Markets, Limited, will be held on September 4, for the purpose of voting to the chairman the sum of £1,000, the same to be paid to him by way of recognition for extra services and attention to the company's business which he has rendered and is rendering.

The Kacharigaon Tea Company in 1917 made a profit of £6,805; balance available, £8,316. Final dividend of 7½ per cent., making 15 per cent. for the year; to reserve, £1,000; forward, £747, subject to excess profits duty.

The Tara Tea Company made a profit in 1917 of £12,316, against £12,954. Further dividend of 14 per cent., less tax, making 20 per cent. for the year, and a bonus of 5 per cent., the same as for 1916: to permanent building fund, £1,500; forward, £19,769, against £17,289, subject to excess profits duty.

The profit of the Romai Tea Company in 1917 was £6,457, against £5,421. Final dividend of 17½ per cent., making 25 per cent. for the year, against 20 per cent.; to reserve, £500; forward, £5,618, against £4,048, subject to liability for excess profits duty on adjustment of 1916 crop account and also on profits of 1917.

The Dhendai Tea Company in 1917 made a profit of £5,353, against £4,071. Final dividend of 5 per cent., less tax (making 10 per cent. for the year), against the same for 1916; forward, £4,019, against £1,969, subject to excess profits duty on adjustment of 1916 crop account and crop account 1917.

The accounts of the Gingia Tea Company for 1917 show a profit of £5,125; final dividend at 5 per cent., less tax (making 10 per cent. for the year), leaving to be carried forward, subject to excess profits duty for the year 1917, £3,327, against £3,329.

The Attaree Khat Tea Company's profits for 1917 were £23,968. Transferred to general reserve, £4,000; transferred to reserve for coolie recruiting, £3,000; final dividend of 12½ per cent., less tax, making 20 per cent. for the year; carry forward, £15,021, subject to excess profits duty, against £6,792.

The profits of the British Assam Tea Company for 1917 were £4,879, making, with £7,663 brought in, and £5,007 of excess profits duty recoverable for seasons 1914-16, a total of £17,548. The directors have placed £1,000 to reserve; final dividend of 15 per cent., less tax (making 20 per cent. for the year), on the ordinary shares, leaving to be carried forward £5,977.

The Ghoir Allie Tea Company in 1917 made a profit of £3,977. Final dividend of 60 per cent., making 100 per cent. for the year; £1,380 forward, subject to excess profits duty.

The Rupajuli Tea Company in 1917 made a profit of £5,491, against £3,453. Final dividend of 12½ per cent., making 20 per cent., the same as for 1916; forward, £2,533, against £1,116, subject to excess profits duty.

Dividends, Payments, etc.

The directors of the East Indian Coal Company have declared a dividend at the rate of 9 per cent., less tax, for the half-year ended April 30, making 17 per cent. for the year, against 16 per cent.

The directors of the Igalkande Rubber and Tea Estates have declared a final dividend of 6 per cent., less income tax at 5s. in the £, payable 28th instant.

The directors of the Bogawantalawa District Tea Company recommend a final dividend of 5 per cent. on the ordinary shares, making 8 per cent. for the year ended March 31, less tax at 5s., payaole September 13.

The dividend on Egyptian Guaranteed Three per Cent. Loan, due on September 1, will be paid by Messrs. N. M. Rothschild and Sons on the following Monday.

The half-yearly general meeting of the Smyrna-Aidin Railway Company will be held at Winchester House, 50, Old Broad Street, E.C.2, on September 24, at 12 noon.

Egyptian Delta Light Railways.—Dividend No. 30, bearer warrant coupon No. 27, for a dividend of 3½ per cent., for the year ended March 31, 1918, on the preference shares, less income-tax at 5s. in the £, will be payable on and after August 26 at the National Bank of Egypt, London, Cairo, and Alexandria, at the current rate of exchange. Dividend warrants will be posted August 26.

An important agricultural conference will take place at Casablanca during the first week in October, which will be attended by representatives from all parts of Morocco. There will be a special building containing samples of Morocco wool, and also a stall for the sale of carpets.

NEWS FROM ALL SOURCES.

According to the *Vossische Zeitung*, a complete agreement has been reached between Germany and Austria-Hungary regarding the disposal of agricultural products from Eastern Europe, and especially from the Ukraine.

A conference of coffee planters was held at Mysore last month to consider among other matters the developments of the coffee market in India.

Excellent reports have been received of the prospects of tin dredging in the Katun area of the Thaton district of Burma.

The planting of coconut trees has increased considerably in Ceylon in recent years, and the trees in the Island now number well over a million. Most of the plantations are carefully cultivated and manned, planters finding that good results are obtained by systematic ploughing and disc harrowing. Crops in 1916 were well above the average owing to good rains in the previous year.

India's exports in April, including re-exports, amounted to Rs. 17,05,78,425, while the imports totalled Rs.13,71,99,834.

The production of the Sudan Gold Field in July amounted to 1,116 ozs. valued at £3,950.

Summer time was adopted in French Morocco in May, but experience showed that the alteration was unsuitable to Moroccan conditions, and an official announcement was made on July 15 terminating the innovation.

A Budapest telegram states that continuously unfavourable weather and heavy rains are greatly endangering the harvest, and that the damage already sustained where the grain is still in the fields is very considerable.

The maximum price for silver bullion in the United Kingdom has now been fixed at 49½d. per standard ounce.

An entire petroleum train exploded on August 15 at the station of Erlau, in Hungary, causing great damage to property.

The death occurred at Tarvy recently of Mr. Howard Adye, the well-known geologist and mining authority. Mr. Adye, who had been for several years Director of the Geological Survey of the State of Portsandar, was acting as consulting geologist to Tarvy Wolfram, Ltd.

A site of about 20 acres near Colombo has been selected by Messrs. Tata Bros. for the erection of oil mills.

INDIAN RAILWAY DEBENTURE TRANSFERS.

The agreements for the composition of stamp duty entered into between the Commissioners of Inland Revenue and the Great Indian Peninsula Railway Company and the Bombay Baroda Railway Company being no longer in force, transfers of the companies' 3½ per cent. debenture stocks executed on or after 1st inst. will be chargeable with stamp duty. This duty will be paid by the companies, so transfers of the stock, as far as purchasers are concerned, will, as heretofore, be free of stamp duty, in accordance with the terms of the issue.

BENGAL IRON AND STEEL FOUNDERS' SHARES.

At the meetings of the ordinary and founders' shareholders of the Bengal Iron and Steel Company, on May 28, it will be remembered that committees were appointed on behalf of each class of shareholder to consider the valuation to be placed on the founders' shares which is recommended for acceptance by the shareholders. The number of ordinary shares to be issued in exchange for each of the 150 founders' shares is increased from 199 to 249. This will involve the creation of 37,350 new ordinary shares, instead of 29,850, and will result in the ordinary capital being increased from £375,000 to £412,350, instead of to £404,850.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

After the prolonged rise and great activity there has been a lull during the past week, and a certain amount of profit-taking has been going on, and the general result is that prices are rather irregular, so that whilst here and there we still find some appreciation, most changes have been towards a slightly lower level. But in view of the excellent military news and of the satisfactory Egyptian reports, it will probably not be long before we again witness a renewal of activity and a further appreciation of prices. In Government stocks, whilst Egyptian Unifieds have relapsed ⅜ to 93¼, the 3½ per cent. Preferences are ¾ higher at 79¾.

In Bank shares Nationals are 3-16 easier at 20 15-16, but Agriculturals have been in persistent demand, and close 5-32 up at 7 5-32. There has also been a renewal of demand for Anglo-Egyptian Banks, which are ¼ up at 17½. In Railways, Delta Lights are ⅛ higher at 7 9-16, buying having been induced by the recent excellent report.

In Land descriptions Aboukirs have relapsed 9d. to 25s. 6d. and Delta Lands 6d. to 17s. Béhéras have been quietly supported all the week round the current quotation and Foreign Trusts and Gharbiehs have remained firm markets. New Egyptians are also 9d. easier at 22s. 3d. on profit-taking, whilst Sidi Salems and Union Foncières are 1-16 lower at respectively 2⅜ and 3 11-16. In United Egyptian Lands the late rise has been followed by profit-taking, with the result that the shares are 6d. down at 2s. 6d.

Amongst Miscellaneous shares Alexandria Waters are 1-16 quieter at 12⅝, a fair business has been done in Markets round 27s., while Salts and Sodas, on profit-taking, have receded 1-16 to 2¾. In Khedivial Mails, whilst the preferences are ⅛ up at 4⅛, the ordinaries have gone back 2s. to 60s.

In Greek securities quotations, where altered, have again improved in value. The 1881, 1884, and 1890 Loans are all a point up at 69, and Rentes have gained a slight fraction at 55. Monopolies have changed hands to a fair extent round 66, an advance of ½. Some business has again been done in Currant Bonds round the unchanged price of 95. A feature has been the rise in Bank of Athens shares, which are 5-16 up at 4 1-16.

Paris Bourse.

A feature of the market on August 21 was the demand for Serbian 1895's, which rose two points to 58. Other prices were:—Egyptian Unifieds 100 (against 100.50), Turkish Unifieds 64.05 (against 64.50), Bank of Athens 106 (against 100), Banque d'Orients 140 (unchanged), Credit Foncier Egyptiens 800 (against 799), and Land Banks of Egypt 215 (against 206.25). Suez Canal shares remained at 5,600 frs.

Oil Shares.

The prevailing tendency in oil shares was one of buoyancy. Anglo-Egyptians "B" improved 1-32 to 2 23-32, and Anglo-Persian Prefs. were 3d. better at 24s. Suez were 3d. weaker at 7s. 9d. Burmahs and the rest were unchanged.

The provisional forecast of this year's Tunisian cereal crop is 9,406,293 bushels for wheat against 7,106,300 bushels in 1917; 10,427,213 bushels for barley, against 7,578,400 bushels, and 3,813,713 bushels for oats, against 3,403,400 bushels.

The final revised estimate of the area under wheat in India is 35,497,000 acres, against the earlier estimate of 35,342,000 acres, and the yield at 47,478,000qr., against 47,425,000qr. in 1917, and 39,699,000qr. in 1916. The record yield was in 1915, when it amounted to 47,922,000qr.

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Birjand, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Busreh.

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - Rs.50,00,000

Head Office: MADRAS.

Branches.—Alleppey, Bangalore, Bimlipatam (*Outstation*, Vizianagram), Calicut, Cocanada (*Outstations* Narsapur and Rajahmundry), Cochin, Coimbatore (*Outstation*, Erode), Colombo, Guntur (*Outstation*, Bezwada), Madura, Mangalore, Masulipatam, Negapatam, Ootacamund, Salem, Tellicherry, Trichinopoly, Trivandrum, Tuticorin, and Bellary.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer*

BANK OF BENGAL.

Capital, Fully paid up.. .. .. .. Rs.2,00,00,000
Reserve Fund Rs.1,84,00,000
Reserve for Depreciation of Investments Rs. 67,50,000

Head Office: CALCUTTA.

Branches: Clive Street, Park Street, and Burra Bazaar, Calcutta, Agra, Akyab, Allahabad, Benares, Cawnpore, Chittagong, Dacca, Delhi, Hyderabad (Deccan), Jalpaiguri, Lahore, Lucknow, Moulmein, Nagpore, Narainguage, Patna, Rangoon, Secunderabad (Deccan), Serajgunge, Simla.

Agency in Bombay: Elphinstone Circle.

Current Accounts opened free of charge. Fixed Deposits received at interest.
Government and other Securities received for safe custody; purchases and sales effected.
Interest collected and Remittances made.
Loans and Cash Credits granted. Discount Accounts opened and approved. Mercantile Bills discounted.
Savings Banks Deposits received and interest allowed
Copies of Rules, Rates, etc., may be had on application at the Head Office and at any of the Branches.

By order of the Directors,

N. H. Y. WARREN,
Secretary and Treasurer.

NOTES OF THE WEEK.

As winning the war and making a sound peace are practically one and the same thing, for the war will not have been won by the Allies unless, after the defeat of the German military machine, the terms of peace are wisely drafted, no apology is needed for dealing with the question of peace conditions in these columns. The crux of the settlement is in the East. It is axiomatic that Belgium must be restored to complete independence and must be indemnified; further, that Alsace and Lorraine shall no longer remain German territory. But from this point very few people, however highly placed in the government of their country, would trust themselves to draft single-handed the terms that in relation to the complex details of the situation in the Near East and Asia could be relied upon to give effect to the Allied war aims without the least possibility of a loophole by which Germany may be able to trouble the world again. For this reason it is essential that there should be the widest discussion of all questions bearing on the settlement at the end of the war, in order that no point of vital concern to the future peace of the world may be overlooked.

Less prominent people than Senator Lodge, of the United States, and Lord Hugh Cecil, have urged from an early stage in this war that there must be no peace by negotiation; that the only conceivable end to the struggle is an admission of defeat by Germany, and her acceptance of the terms dictated by the Allies. But the more often the view is propounded and the more influential the spokesman the better; and as the discussion proceeds, certain facts impress themselves on a wider audience, and more terms gain currency as axiomatic. Thus, Mr. Lodge has shown that the Republican Party in the United States has evolved a peace programme which is in many respects more detailed than President Wilson's of last January. In addition to the independence of Serbia and Roumania this programme stipulates for the "safety" of Greece; the independence of Poland, and of the Slav races of Austria-Hungary; the creation out of these States of a barrier between Germany and the Near East; Constantinople to be taken from Turkey and made a free port in the hands of the Allies; Palestine to remain free and "Christian"; and Asia Minor to be "made safe."

A dictated peace, however, implies that its terms shall have been drawn up beforehand,, and it is on this point that enlightened public opinion needs official assurance. As far as can be judged from the position in regard to the Balkans, even the general outlines of a settlement have not yet been agreed upon among the Allies. It may be that it is considered sufficient to insist upon the emancipation of the Slav races from Austria-Hungary, inasmuch as the details will have to be filled in for the most part by the peoples themselves, and can be postponed until after the war. The doctrine, we believe, to be a dangerous one, in view of the intricate nature of the problem to be solved. While the war lasts there is a strong incentive to avoid unduly long deliberations, and all parties will be anxious to arrive at an understanding. When the war is over, a number of unforeseen factors may come into play, which will tend to protract the negotiations. The interests of all the countries concerned will call for the earliest possible agreement, in order that they may settle down to the arduous task of reconstruction, political, social, and economic. It is to be hoped, therefore, that the Allied Governments will not take refuge in the line of least resistance, but will boldly tackle betimes the problem of the settlement after the War. References are still to be found to a Peace Conference, as if the terms of peace were going to be settled by a round-table discussion with the enemy Powers. If peace is dictated, there will be no need for a conference. On the other hand, if the Allies will draw up among themselves, while the war is on, the terms of a lasting settlement, only a brief Congress will be required to accord formal ratification of those terms, and Europe need lose no time in setting to work on the formidable problem of reconstruction.

As signs of a growing weariness of the war and of Germany in Bulgaria multiply, the subject as to how the Allies should deal with the Bulgarians is being more eagerly discussed. It is, perhaps, inevitable that the popular view should be summed up in the simple plan, that they should take who have the power, and they should keep who can. Whether this "good old rule" will make for lasting peace in the Balkans is another matter. No one will take exception to the contention that the Allied Governments cannot betray their friends in order to pay their enemies. But what is required is an understanding of the Balkan problem, and the submission to Serbia and Greece, and, as far as possible, to Roumania as well, of the question, What solution of the problem do you propose that promises lasting peace in the Balkans and is in keeping with the Allied pledges of the principle of nationality? The answer that satisfies the Governments of Great Britain, France, the United States, and Italy, should be embodied in concrete terms, which the Allies must be pre-

pared to enforce as their settlement of the Balkan problem. If, on the other hand, the answer of Greece, Serbia, and Roumania does not satisfy the other Powers no time should be lost by the two groups in coming to an agreement among themselves.

In discussing the Bulgarian question, *The Times* writes: "If the Bulgarians wish to escape from the wrath to come, they must begin by making a clean sweep of the men and the methods they have hitherto followed, and they must give such positive proof of contrition as to place their sincerity beyond doubt. They have to atone for a very black record. Until they have purged it, they will find no hearing in any Allied camp." All this is very obvious, and much sounder sense than treating Bulgaria as the equal of Germany, who cannot be brought to book with less than the mobilisation of the whole world. When the Central Powers have been disposed of, Roumania, Serbia, and Greece, as was shown by the second Balkan War, will prove effective guardians of the peace of the Peninsula. But the Allies want to strike a higher note than the Bucharest Treaty, and to point the warring Balkan peoples to an era of friendship and mutual co-operation. In the opinion of some observers the only solution of the Balkan question that the Allies will be able to accept will be found to afford, if publicly enunciated, a very strong incentive to those elements in Bulgaria which have to be relied upon to make "a clean sweep of the men and the methods" which Bulgaria has hitherto followed.

Until some definite pronouncement has been made on the Balkan settlement, it is clear that Bulgarians with the best intentions can have no programme with which to work upon public feeling in their country. What inducement is it to Bulgaria to yield to her war-weariness and her disgust of Germany, if she believes the statement for which the Athens correspondent of *The Times* made himself responsible, that "President Wilson has declared that he would be unwilling to approve of discussion for a separate peace with Bulgaria or Turkey"? It is not very many months since President Wilson refused to declare war on Bulgaria on the ground that the United States might be useful to the Allies as an intermediary in the event of Bulgaria, as then seemed likely, wishing to free herself from the German alliance. To suggest that in no circumstances can Bulgaria and Turkey be allowed to make peace without the Central Alliance is to represent the Allies as prepared, in the event of one or both of these countries surrendering, to impose a German occupation upon them until such time as the war with Germany came to an end. Such statements as that attributed to President Wilson argue a failure to understand not only Balkan affairs, but also the real interests of the Allies. The detachment of Bulgaria and Turkey, with the judicious employment of the Allies' numerical superiority over the Central Powers would enable the war to be carried against the latter on a new, and their most vulnerable, front.

The successes of the Italian and French troops in Albania have received a definite check. Not only have the Austrians succeeded in sending a new Commander-in-Chief by aeroplane to the Albanian front, but they have given him sufficient reinforcements to enable him to turn the tables on the Allies. Their advance was at first held, and now they have been forced back along a considerable portion of the front. Berat and Fieri are again in the hands of the enemy. Not the least cause for satisfaction in the Allied advance was the evident relief that it brought to the Albanian inhabitants at being freed from Austrian domination. These unfortunate people, it is to be feared, will now be made to suffer for the demonstrations of their feelings; and it may be hoped that, if only for their sake, an attempt will be made to retrieve without delay the Allies' fortunes in Albania. One reason for the Italian and French activities in this sector of the Balkan front was that, if successful, they would enable more extensive operations to be undertaken in Macedonia itself.

A definite improvement can be reported in the position in Siberia, which is not so far removed in respect of its reaction on the Near East as mere distance would imply. With the military situation in the Amur Province is linked up the fortunes of the Czecho-Slovak troops along the whole length of the Trans-Siberian Railway and at Kazan, which a section of them has now reoccupied. It is evident not only that, as Japan realised, measures that are to be adequate to the rehabilitation of Russia must be on an extensive scale, but that the United States Government also has come into line on this point. A Japanese landing has taken place at Nikolaievsk, at the mouth of the Amur, and the line of advance will doubtless be up the river to the Amur Railway at Khabarovsk, with a view to relieving enemy pressure on Vladivostok by the Usuri Railway. Use has also been made of the South Manchuria Railway, and Manchuria (or Manchouli) station, on the Russo-Chinese frontier, has been reached. The Japanese at this point have brought timely relief to General Semenoff's troops. With an Allied force operating from Vladivostok with the intention of clearing the Chinese Eastern Railway, between Harbin and that port, of the enemy, the Japanese lines of communications will be secure, and a fairly rapid advance to Chita and Irkutsk ought to be possible. The first aim of the Allies, it will be remembered, is to bring relief to a Czecho-Slovak force at the latter town. Unfortunately, the Bolsheviks appear to have damaged the railway, with its series of tunnels, running round the southern shore of Lake Baikal, and if the Japanese are entirely dependent on this line their progress may be delayed; but shipping may still be available on the lake.

The British force at Baku was in time to defend the town against a Turkish attack on August 5, and the Turks are said to have withdrawn some distance. The position in Trans-Caucasia, however, is far from being liquidated by the successful defence of this important centre. As is recorded by a correspondent on another page, the component parts of the Transcaucasian Republic have nominally concluded peace with Germany and Turkey. Representatives of Georgia, Armenia, Azerbaijan (Aderbejan), and the Southern Caucasus met in Constantinople. The proceedings of the conference, which was attended by Turks and Germans, were private, but an announcement has been made regarding the conclusion of an agreement among the different parties. Some idea of the status of the delegates may be gathered from the fact that in the course of interviews with the Turkish press the Armenian "representative" spoke of the Armenians being anxious to hold out the hand of friendship to Turkey, and stated that they made no claim to intervene in the affairs of Turkish Armenia, which were entirely the concern of the Turkish Government.

News from Persia is tantalisingly meagre, nor has it been stated what attitude the Persians are adopting towards the help that the Allies have brought them against the overrunning of their country by Turks and Austro-German agents. Much will depend on the capacity of Great Britain's representation in Teheran. If, as report has it, this has been abundantly strengthened of late by the addition of the best political intellects from the Civil Administration of Mesopotamia, we may hope that the success of the military expeditions will not be lost on the situation in Persia as a whole.

Whatever be the form finally assumed by the Indian Constitution, there can be no doubt that the publication of the official proposals has met with immediate success, for the Government asked for discussion, and they are getting it to an extent which, considering the circumstances of the time, must be regarded as remarkable. It would be premature to attempt any summary of the results, for the situation in India is not yet entirely clear, while in this country, though much ammunition has been expended, the heavy artillery of the "quarter-lies" has still to be brought into action, but up to the present time the most striking feature is the difference in emphasis observable between English and Indian

Digitized by Google

critics, a difference so great that the ordinary reader is almost tempted to think that two sets of proposals are being discussed instead of one.

To the Indian writer everything turns on those aspects of the reforms which may be described as political in the narrowest sense of the word, and his attention is concentrated on questions of *personnel* or of the distribution of powers between various portions of the proposed organisation. Last week, for instance, a well-known Indian publicist devoted an article which purported to deal with "fundamentals" largely to the question of reforming the procedure of the India Office, and omitted to allude to the franchise or the system of representation, and this attitude is not in any way exceptional. English critics, on the other hand, pass lightly over the questions which are of most interest to Indians, and either concentrate their attention on the question of the franchise, or looking further afield, attempt to estimate the reactions of the contemplated political changes on the social and economic life of India.

As regards the franchise, we need add nothing to what we have already said, that it is the essence of the whole matter, and that the official reforms cannot be judged as a whole until we know who the voters are, and how they are to vote. As to the reactions likely to result in the social life of the country, we think those critics are right who foresee troublous times, but we cannot agree with them in attributing the trouble either to reformers or to agitators. Long as it has lasted, the Indian social system is essentially unstable; a great nation cannot be built up out of arrogance and subservience, and now that the British influence on India has given the necessary impetus, things can never again be as they have been for so long. The struggle may be waged on the political or any other field, but the battlefield is an accident and it is the battle itself which matters.

The essential fact is that already in some parts of India the lower classes are putting forward claims on their own behalf. In Mysore, for example, they have recently petitioned their Maharaja, and though they did not get what they asked for, the fact remains that they have protested openly against the system under which nearly all the good things are monopolised by a class comprising about 5 per cent. of the population of the State. Such protests are bound to be repeated with increasing force, and unless the privileged classes make a graceful surrender, it is as certain as anything can be that social strife will become steadily fiercer until the masses eventually secure equality of treatment. A liberal constitution based on a wide franchise ought to make the transition easier on the whole, but no political arrangements can prevent the struggle from being fought to a conclusion.

The importance of suitable political institutions is probably much greater in the economic sphere. Before India can become rich, Indians in the mass must learn the lesson of self-help, and for that purpose a genuine, if limited, democracy may be an excellent school, while a benevolent oligarchy could only perpetuate the existing tendency to look for assistance from above, the tendency which more than any other single cause accounts for India's poverty. Parliaments cannot indeed make poor nations rich, but habits developed in the course of working political institutions may nevertheless lead to a definite advance in purely economic matters, and it is by no means a paradox to argue that a wide democratic franchise would eventually contribute to a marked increase in the wealth of the community.

The Baroda State has established a Publicity Committee, with Mr. A. B. Clarke, Minister of Education, as chairman. The committee will carry on an educative campaign, disseminating among the people the necessary information about the military situation, rise in prices, and so forth. The Dewan has requested the British Resident to make all necessary arrangements to place the Baroda Publicity Committee *en rapport* with the Central Publicity Board of Delhi.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, July 29.

Cairo's Population.

Statistics are not always mere dry figures, especially when presented and classified as are those just published by the Survey Department for the census of 1917. Thus the population of the capital is divided according to creed, social status, education, and nationality. Of a total of 790,939, there are 405,484 men, and the remainder women. The cosmopolitan character of Cairo is shown by the following figures for each nationality:—372,450 males and 349,522 females, local subjects; 7,524 British, 8,252 French, 15,655 Italians, 12,081 Ottomans, 15,254 Greeks, 1,004 Austrians, 266 Belgians, 31 Germans, 538 Roumanians, 1,242 Russians, 627 Spanish, 280 Swiss, 173 Americans, 3,094 of other nationalities, and 2,985 of unknown nationalities. Thus the British, who are the protecting nation, are in the minority, and this is the highest testimony to the disinterested character of their rule. One wonders in what numbers the Germans would have been had such a rich and easily exploitable country been in their grasp.

In the division according to creeds, after the large majority of Moslems, set down at 631,163, the Orthodox head the list of Christians with 86,468, then the Catholics 36,133, Protestants 5,589, and, finally, 801 Christians of other Churches. The importance of the Jewish element is illustrated by the substantial number of 29,207. But perhaps the most suggestive of all the figures given in these statistics are those under the heading Education. There are 214,019 males who cannot read or write, and 274,287 females. Of those who can read, 4,429 are males and 2,417 females, while 94 males and 478 females can write only. There are 124,747 males and 42,872 females who can read and write. It is scarcely necessary to observe that among those who can read and write a large proportion consist of foreigners, and if in the capital of Egypt the number of illiterates is so large, that in the provinces must be very much larger still.

Proportion of Foreign Matter in Wheat.

An interesting point was raised recently by the Egyptian Chamber of Commerce in a letter addressed by the President of the Chamber to the President of the Supplies Control Board, asking whether it is permissible to exceed the tariff price when the proportion of foreign matter in wheat offered for sale is less than that fixed by the Board, as basis for the tariff—viz., 22½ kirat, the standard of absolute purity being 24 kirats. Several letters have been addressed to the Chamber by well-known firms, asking whether the charging of a higher price for wheat which is cleaner than that of the tariff may be considered as a contravention. They added that they are averse from initiating their employees into the habit of mixing dirt with their wheat, and yet without that they would be the losers by so much of the difference. Mr. Ross Taylor replied that the sale of any wheat, whatever its degree of purity, at a price above the tariff is considered as an offence; and that the Board cannot allow anybody to sell above the price officially fixed, in view of the abuse that such exceptions might lead to in evading the Board's orders.

New French Diplomatic Agent.

Monsieur Albert Defrance, the late French Diplomatic Agent, left Cairo on Wednesday last for Alexandria, to embark there for France, where he is to succeed M. Klobukowski at Havre as Minister at the Belgian Court. The new diplomatic agent, who arrived here on Monday last, is Monsieur Pierre Antonin Lefevre Pontalis, who had known Egypt before, having been appointed Secretary of the Agency at Cairo in 1896, and remained in that post until 1899. His experience extends to other parts of the Near East also. He has been First Secretary at Athens, and before that, Third Secretary at the Embassy at Constantinople in 1885. He started his diplomatic career in 1889 at the age of twenty-five, having been born in 1864.

THE PALESTINE FRONT.

Until the news this week it is very long since any considerable movements have been reported from the centre of the British line in Palestine. The area involved in the recent operations will be familiar to all those readers of THE NEAR EAST who have travelled through Palestine. They centre round Sinjil, a place so called after the Crusading Castle of St. Giles—named after Count Raymond of St. Giles—which once stood here. This prosperous little village also marks the northern limit of the Sanjak of el Kuds (Jerusalem), and for a long time the carriage road from Jerusalem northwards ended there. I remember on two or three occasions being met by carriage there when arriving on horseback from the north. The carriage road to-day, after passing the famous Ain el Haramiyeh (which has now been in our hands many months) runs up the picturesque valley between terraced slopes covered with beautiful olive trees. At the head of the valley it crosses a small open plain, and then commences another valley descending northwards; to the left of this lies Khurbet Amurieh, crowning a conical hilltop, where we captured fifty men and two machine-guns. Where the valley opens out lies a small olive grove to the left (west), behind which, on a high ridge, is Sinjil; while to the right there is a wide and open vale running east with—some half a mile from the road—the picturesque little village of Turmus Aya. Near this on a small hill to the south-east, called Abu el Auf, some Indian troops killed or captured twenty-six Turks.

Many tourists pass close to, if not through Turmus Aya, in order to visit Seilun—the generally-accepted site of Shiloh—one of the earliest sanctuaries of Israel in Palestine. It must now lie very near our front line. Along the main road, which runs from near Sinjil until it reaches the important zig-zag descent just above Khan Lubban, a slow and severely-contested advance has been made, as it is a very vital point for the Turks to offer resistance. To the western side of the road lies the hill-ridge of El Burj, and north of that the hill Amurieh (distinct from the Khurbet of Amurieh, further south). The description given by Mr. Massey is not quite clear, but El Burj seems to have been captured, and also a hill to the north between it and Amurieh, and our troops must be approaching the very important ridge overlooking the "Plain of Lebonah," which, once passed, should open the way to a rapid advance at least as far as Wady Yetma. It will be seen by the map that our line is advanced about two-thirds of the way from Jerusalem to Nablus and, though there are still some very difficult points, on the whole the country lying before us is better than the district already taken. It is hardly possible to imagine a more difficult country over which to advance than that all around Bethel and the Ain el Haramiyeh.

E. W. G. M.

RECRUITING IN JERUSALEM.

As a means of stimulating recruiting among the Jews of Jerusalem for service with the British Expeditionary Force, various posters were exhibited in the streets with suitable appeals. The following is a literal translation of one of these, as reproduced in the Hebrew issue of the *Palestine News*:—

"Hear, Israel! Listen! What does your heart say to you? Is not this the hour for recovering our land and for assuring our possession of it in the eyes of all the world?

"Listen! What does your reason say to you? Are the British to fight for us here before our eyes while we remain at home until they restore to us the land which they have redeemed with *their* blood?

"And listen! What does the voice of honour say to you? Can we receive from the hands of our deliverers, our true deliverers, a gift of blood, a free gift like this, if we do not also sacrifice our lives with them for it? Hear, Israel! The blood of our heroic ancestors of two thousand years ago, and the blood of the British who are fighting here for us to-day—the blood of martyrs is calling to us from this soil. Enlist! Enlist!

"Let us march to battle shoulder to shoulder with our deliverers. In God is salvation! Be strong!"

The recruiting has been successful beyond expectation. Permission to recruit was not given to the Provisional Recruiting Committee till the end of May, and before the end of July over a thousand enlistments had been secured. The greatest enthusiasm was shown not only in the colonies, but also in Jerusalem.

A Constantinople telegram says that a member of the Armenian delegation which is at present in Constantinople has learned from Erivan that the Armenian Parliament was opened on August 1 in the presence of the representatives of Turkey, Germany, Austria-Hungary, Persia, and the Ukraine.

MOROCCO NOTES.

(FROM OUR OWN CORRESPONDENT.)

TANGIER, August 15.

Morocco and the Western Front.

General Foch's brilliant success, in which Generals Gouraud, Mangin, and Moroccan troops took a distinguished part, has special associations for Moroccans. General Gouraud, who had already done great work in Morocco, returned, after holding with marked success various important commands in the war, to take the post of Resident-General while General Lyautey was absent in France, and left again in May, 1917. His work as Resident-General is understood to have been most successful, and he assuredly gained great popularity. He has left behind him, quite apart from the admiration due to his military and administrative ability, a deep impression as a man of exceptionally sincere, unassuming, and, in the best sense of the word, soldierly nature, who lost no opportunity of making it clear that he was only carrying on for a time work that was already far advanced, and was chiefly anxious that it should suffer no prejudice in his hands. It was in Morocco that the value which General Mangin had always attached to native troops, which here at first included a large number of Senegalese, was thoroughly tested and proved. In this war, as everyone knows, Moroccan troops gained their reputation very early; and every opportunity—and they have had many—of adding to it, often in the most critical and desperate fighting, has invariably been used to the full. A considerable portion of these troops are Berbers, with very little or no mixture of Arab blood; many of them come from country where inter-tribal or even inter-village fighting, in absence of anything better, is, or was, the normal condition, with quite sportingly observed truces for harvest and other unwelcome but unavoidable interruption.

The Fez Fire.

The Fez fire has proved to have had much less serious consequences than were at first expected. The area burned out, including some 700 shops, was, indeed, considerable, but the loss of property is now put down at something not very much exceeding a quarter of a million pounds. The looters seem to have made much hay while the fire burned, for, although they were given very little time before their industry was summarily stopped, they appear to have got away with a very considerable amount of property. An announcement of domiciliary visits in search of stolen goods is said to have had an excellent effect, and a certain amount of property has reappeared, in some cases in streets and open places, thrown away in the possessor's fear of being incriminated. The rabbit-hutch-like arrangement of a native bazaar has certainly some advantages over the European store. The owner can keep an eye on—he can almost put a hand on—everything in his shop without stirring from his seat, and if the shop is burnt the loss is not as a rule crushing; it can be rebuilt in a few days and its contents replaced from the warehouses elsewhere, which in this case have been untouched.

LONDON MOSLEMS.

Speaking on Sunday, August 25, at the Muslim Prayer House, 111, Campden Hill Road, W., Mr. Ehsan el Bakry said that there was a natural development upwards by which men, at first caring only for themselves, developed a regard for the family, then for the tribe, then for the nation, and, finally, for all mankind. At the time of the advent of the Prophet the Arabs had hardly reached the national stage, they could combine as a nation against non-Arabs, but at other times they were not combined. Mahomet had called upon them to go at a leap from this frame of mind to that of the cosmic spirit, and they had done so. The Moslem was called to every good cause; if he could avert a wrong by good counsel or by giving of his wealth he was bound to do so, and, if no other course was open, he must draw the sword. This was not only in defence of his own country, but in defence of any who were unjustly attacked, and he was bound to champion a just cause even against his own friends and relations. The doctrine of the Jehad was much misunderstood by non-Moslems. It was not enough for a Moslem to die for Islam; he must serve Allah while living.

At the same place, on Sunday, September 1, Kwaja Kamal ud Din will speak on the "Superiority of the teachings of the Qur-an: Ethical and Social Laws," and, on the following Saturday, there will be an "At Home," when he will give a short speech on "Unity from Diversity in Religion." The festival of Eid-udha (Qurban Bairam) will be celebrated at the Mosque, Woking, on Sunday, September 15.

The *Times* Athens correspondent states that thirty-six officers of the renegade Fourth Greek Army Corps in Germany have disavowed their allegiance to ex-King Constantine, declared their adherence to the lawful *régime* now in Greece, and, at their own request, have been interned in Westphalia.

TANGIER TO TEHERAN.

A correspondent of the *Manchester Guardian* propounds the theory that the British force which turned up recently in Baku from Baghdad was actually transported on donkeys. I do not know whether he puts the suggestion forward seriously, or merely as a joke; but he makes out quite a good case for his idea in some respects. He refers to "the prodigious number of donkeys in Baghdad and its neighbourhood"; and though the adjective is a very strong one, we need not fall out over it. But when he writes that "there are certainly more donkeys in Baghdad than there are modern vehicles of transport in all Manchester," I reserve the right to my own opinion. As to the animal's remarkable capacity for carrying loads of all kinds, and for keeping alive on the scantiest allowance of food, there can be no two opinions. The donkeys would get from Baghdad to Baku all right, but—what about the men? My own belief is that most of them would prefer to cover the distance on "Shanks's pony" rather than on the humble and shockingly uncomfortable "moke." I write with knowledge; for I once rode right across the Mesopotamian plain on a donkey, and I would rather pay a lot of money than go through such an experience again. A big, white donkey, of the Bahrein breed, used for regular riding and trained properly, is a comfortable, even sometimes a sporting, mount; but his humble brother of the usual "caravan" type is—an infliction.

***

I understand that *El Kowkab* published some little while ago some extracts from what is often spoken and written of as the oldest code of laws in the world. This is, of course, the Hammurabi Code, discovered at Susa in 1907 by (I think) M. de Morgan. The most interesting point about *El Kowkab's* publication of these very early Babylonian laws is that Hammurabi is claimed by the journal as an Arab. Personally, I should be quite prepared to accept the statement as being in all probability correct; and though I do not know whether it is capable of proof, I believe that a learned professor (Hommell) claimed to have proved the point some years ago. Hammurabi, it may be worth mentioning, is usually "dated" about 2200—2100 B.C. He was a wise, capable, and energetic ruler, as far as we can judge, and if the Arabs can make good their claim to him, so to say, they will have got hold of a good thing. It is certain that one can trace many points of strong resemblance between the ancient inhabitants of Babylonia and their modern successors.

***

In connection with the 1918 Pilgrimage the Egyptian Ministry of the Interior is taking the strictest precautions to avoid the spread of disease, and the *hajjis* will be allowed to bring back water from the holy well, Zemzem, only if the pilgrimage is declared "clean" and subject to rigid regulations. The water must be placed in a receptacle that will allow of its sterilisation, and must actually be sterilised by the quarantine authorities. Nobody who knows how easily many kinds of fatal illnesses may be, and often are, spread through contaminated water could dispute the wisdom of these regulations.

***

I have been looking up Burton's opinion of the waters of Zemzem. He says, in his matter-of-fact way: "It is apt to cause diarrhœa and boils, and I never saw a stranger drink it without a wry face. Sale is decidedly correct in his assertion: the flavour is a salt-bitter, much resembling an infusion of a teaspoonful of Epsom salts in a large tumbler of tepid water." He also says that it was a favourite amusement with him to watch Turks and other strangers whilst they drank the holy water, and to taunt their scant and irreverent potations. That is hardly calculated to make us eager to sample the fluid; but, taste or no taste, it is held in the highest esteem by the pious Moslem. To quote Burton again: "Religious men break their Lenten fast with it, apply it to their eyes to brighten vision, and imbibe a few drops at the hour of death." It would, therefore, be a very real grief to the pious *hajj* to be deprived of his supply of the wonderful water.

***

The harassed English housekeeper who grumbles at the high prices of everything to-day, and who is—very justly—indignant with the profiteers, big and little, may yet thank her lucky stars that she does not live at Damanhour. There, I learn from Egyptian papers, the water-carriers have increased the price of a *kirba* (water-skin) from five *milliemes* to ten. It is always rather galling to have to pay for water, even when it is brought to your house in pipes; but to have a hundred per cent. increase—"owing to the war," of course—in the price of skin-flavoured water would surely be a legitimate reason for "lengwidge."

CORSAIR.

The Natural Products of your Country

may be of considerable interest to us as we are purchasers of consignments of Produce from all parts of the world.

Coconut Oil, Palm Oil, Oil Seeds, Oil Nuts, Kernels, Copra, Maize, Ivory, Gums, Grain, Fibres, Rubber, Cotton. These interest us particularly.

Will you let us know what Products of your Country you can offer us?

We are prepared to finance consignments when necessary.

CORRESPONDENCE.

ALBANIA AND THE ALLIES.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The recent advance of Franco-Italian troops in South Albania has put an end to the legend of the so-called attachment of the Albanians to Austria. The newspaper correspondents are unanimous in recognising both the hostile attitude of the liberated Albanian population towards Austria, and the help that they give to the Allied troops. The legend that they were pro-Austrian cost the Albanians very dear at the Conference of London in 1913, when their fate was decided. After having reduced Albania to about half its natural size the Great Powers brutally threw the Albanians of the new state into the arms of Austria.

It is a fact that in 1916 the Albanian population protested vigorously at Vienna against the Austrian occupation of their lands, and that this protest had as its only result the forcible enlistment of a large number of Albanians, who were sent to the various battlefields. Those Albanians, on the contrary, who happened to be abroad at the time of the Austrian occupation have taken the part of the Allies since the beginning of the war, and have never ceased to do their utmost to contribute to the triumph of the cause of the Entente, a cause which they hope and believe to be that of justice and the rights of peoples, and from which they expect their independence. At the present time several thousand Albanians are fighting along with the Franco-Italian troops. The Pan-Albanian Federation of America, "Vatra," has lately offered H.M. Government an Albanian Regiment, with the certain promise that it will rapidly become a division. The news was received with the greatest enthusiasm by the Albanians of America, and they await impatiently the acceptance and organisation of their regiment. These are the true sentiments of the Albanian people.

Had the Allies utilised Albania and the Albanians from the beginning of the war, as was then suggested, the costly and, up to the present, unfruitful expedition to Salonika would have been avoided, and the situation in the Balkans would have been very different. The presence of a small English contingent would have sufficed to guarantee their independence to the Albanians, who would then have offered whole-heartedly to the Allies an army of 100,000 to 150,000 men. For it must not be forgotten that the Albanian population numbers two and a-half millions. In such case the Serbian army would not have suffered disaster, and if the Allies had not had time to send reinforcements, it would have been able to entrench itself and reorganise rapidly upon an allied territory—Albania. Albania would not then have been invaded by Austrian troops and the battlefield would have remained upon the Serbian frontier and not have involved Salonika and Macedonia. Unfortunately, political reasons (the plans of Tsarist Russia) were allowed to prevail over military strategy. That which could have been done four years ago without effort is now being attempted at the cost of great sacrifice.

Notwithstanding the great difficulties which the formation of the land presents to the Allied troops, as they advance northward, I trust that they will succeed in surmounting all obstacles. The Albanians will give them their entire help and will make any sacrifice to achieve national unity and their independence.

When one considers unfortunate Albania, invaded on all sides—worse even than Belgium—upon the morrow of that independence which had been her dream for generations, it is melancholy to find well-known papers, as a consequence of the Allied advance, at once proposing to give the Serbs "compensations" upon the Albanian coast as recompense for the Macedonian lands which it is suggested should be given to Bulgaria.

As the Allied forces advance towards the north other legends equally disadvantageous to Albania will disappear. One of these is that of the tribes. It is generally believed that the North is entirely inhabited by clans and tribes who are in the same state as were the Scotch clansmen of the seventeenth century. Nothing can be more untrue. The clans form only a small proportion of the population. They have formed in the past a bulwark against the enemy, and if their mountains and their love of liberty have prevented their coming into contact with the world and acquiring polish, we must remember that they are not numerous enough to influence the rest of the population, which has for centuries dropped the clan system. But though, under Turkish domination, Albania was not permitted to have national schools, yet the Albanians have not failed to obtain education when possible from foreign schools. And the mountain men, too, have provided Albania with some of her most cultivated leaders. Two North Albanians have for many years honourably filled the post of British Vice-Consul.

The Albanian race, both north and south, is full of vigour and intelligence, and in artistic capability is superior to most of its neighbours, as various specimens of filagree, of carved wood and silver, fine silks and beautiful embroideries bear witness.

The majority of the plans proposed with a view to establishing a balance of power in the Balkans consist of enlarging certain lands to the detriment of others. Is it necessary to point out the weakness of such projects? Balkan policy should aim at dispelling the quarrels between the different peoples and drawing them together in such a way as to enable them to become the guardians of the peace and to bar the road to conquest in the Orient.

The disappearance of these quarrels can only be effected by fulfilling the just (not the unjust) national claims of all the Balkan people as far as possible, based always upon the rights of the majority. Only by obedience to this sacred principle can equilibrium and tranquillity and peace be obtained. Only by the strict application of the rights of nationalities can respect for the doctrine, "The Balkans for the Balkan people," become possible, and with it the prevention of foreign interference in the internal affairs of the Balkans, which forms one of the objects of the Serbs (Jugoslavs), as shown by the meeting held at the Mansion House on July 25. Unfortunately, the plans which are being feverishly worked at in secret prove that the Balkan States are far from assimilating the principles of the rights of nations and accepting whole-heartedly a just solution of the Balkan question.

I am, etc.,

MEHMED KONITZA,
Representative of the Pan-Albanian Federation of America, "Vatra."

5a, Maddox Street, London, W.1., August 22, 1918.

FOR THE SETTLEMENT OF THE BALKANS

TO THE EDITOR OF THE "NEAR EAST."

Sir,—My reply to your correspondent, M. Nicholas Papanicolay, will be brief.

What I criticised in the speech of M. Gennadius at the Mansion House was the misuse of the Lord Mayor's hospitality for the purpose of ventilating Balkan animosities; the summons of "hands off" addressed to an ally of the country; the charge of perversion of the truth brought against a section of the British Press; the employment of language hitherto unheard at the Mansion House and the suppression of essential facts in connection with the excesses at Anchialos and Stenimachos, and with the German loan to Bulgaria. I never even hinted that M. Gennadius "should have refrained from pressing on his hearers the claims of Greece." To state that I have done so is unfair. There can, of course, be no objection to a foreign representative pleading the cause of his country on such an occasion with truth, tact, decorum, and the restraint imposed by precedent and the dignity of his position. I can only repeat—in this instance to M. Papanicolay—that in the opinion of most Englishmen nothing is lost by fairness to an adversary.

FIAT JUSTITIA.

In reply to a communication from the Chief Secretary to the Burma Government asking for the names and designations of members of the Rangoon town police who could be spared for commissions in the I.A.R.O., the Commissioner of Police has submitted a list of seventeen, which includes the Assistant Commissioner, Mr. D. J. Ross, inspectors, deputy inspectors and sergeants.

Throughout the war, as before the war, our King has borne himself royally. He has worked for the common cause as hard as any of his subjects—and with an insight and tact, an instinct for the right word and the right act that have not always been conspicuous in other quarters. It was a happy thought to gather together a number of pictures showing his Majesty in many varieties of "war work." This has been done by the *Illustrated London News* and *Sketch*, chiefly for our fellow-subjects in India. "The King-Emperor's Activities in War-Time" contains a well-chosen selection of such pictures, printed in photogravure, with titles and descriptions in the various scripts employed in the Indian Empire. The price of the volume is a rupee, and it is no exaggeration to say that it would be marvellous value for the money even in peace-time. We hope and believe that it will prove extremely popular, as it deserves.

A Messageries Maritimes liner Polynésien en route from Bizerta to Salonika, with Serbian troops, struck a mine and sank on August 10. Six Serbian passengers, eleven Indian firemen, and two sailors of the crew are missing.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

NEAR EAST BOOKSHELF.

SYRIA AND PALESTINE.

In the handy booklet "Syria and the Holy Land" (1) the recognised greatest living authority on the subject gives a sketch of the geography and political position of Palestine and Syria unrivalled in interest and in cheapness. The volume is furnished with two maps—each coloured to show the altitudes—either of which is in itself worth at least as much as the cost of the whole publication. For those who wish to obtain in small compass a thoroughly sound view of Palestine—its past history and present-day political problems—no better guide exists.

Syria, chiefly because she includes Phœnicea and Palestine, has been of greater significance to mankind, spiritually and materially, than any other single country in the world. . . . Nowhere else has so much history run into and through so narrow a space. The storm centre of the ancient East, the debatable ground between its rival empires in Mesopotamia and on the Nile, and between their Greek successors, the Seleucids and Ptolemies, Syria was for three thousand years the field upon which their civilisation clashed, mingled, and found a common deflection to the west by the islands of the Mediterranean.

The military history of Syria may be pictured as the procession of all the world conquerors—Thothmes, Tiglath-Pileser, Sargon, Sennacharib, and Nebuchadnezzar; Cambyses and Alexander; Pompey, Cæsar, Augustus, Titus, and Hadrian; Omar and Saladin; Tamerlane; Napoleon. And now again she is one of the points on which two ideals of civilisation and empire oppose their arms, but with issues more momentous for humanity than were ever fought out on these same fields between Semite and Greek, Rome and the East, or Frank and Saracen.

Between the sea on the west and the desert on the east four well defined areas run from north to south—the Maritime Plain (with its coast), the Western Range, the Orontes-Jordan-Arabah Valley, and the Eastern Range. Transversely, Syria is divided into three—(1) Northern Syria, between the Taurus Mountains and the Nahr el Kebir (the Eleutherus of the Greek), (2) the Lebanon with Damascus between the Nahr el Kebir and the Nahr el Kasimiyeh, or Litani, and, lastly (3) Palestine proper, between the Nahr el Kasimiyeh and Wady el Arish. All these regions are here briefly described.

Of the Turkish blight over the whole land the author speaks weighty words:—

The Turk is an alien in Syria, with no native claim to the soil, and few or no family ties to the people. In Syria Turkish colonies do not exist; the men of that race are either officials or soldiers. In short, the Turk has neither inherited nor earned any rights to Syria. . . . Save for some sporadic efforts, he has been wanting in all for which a government exists—justice and security, the development of the natural resources, the organisation of public utilities, the encouragement of industry and trade, not to speak of education.

The contrast between the direct rule of the Turk and the condition of the Lebanon is "a proof of what all Palestine may become when emancipated from Turkish rule."

On two disputed points the author gives his positive opinion:—(1) "The afforestation of Syria was probably never much more than we find it to-day," and (2) that any change of climate that may have occurred in historical times "has been so slight as to be negligible." On both these points we may remark that good authorities on physical geography hold very different views. As regards the forests, considerable tracts have been destroyed within the memory of residents in the land.

With regard to the outlook, most will agree that—

Of all the factors which demand the care of a just government none—not even the Jews—have a stronger claim than the native peasants who all through history, but most cruelly under the Turk, have borne the sorest service and suffering.

The comparative freedom and security enjoyed by the inhabitants of the Lebanon for two generations have developed a race of whom there are—according to Mr. Hogarth—"none more enterprising or of keener intellect in the Nearer East."

Their superiority is the pledge of a general rise in the moral and mental level of the Syrian peasantry as a whole, when these blessings shall have been extended to all the land by a strong and just government.

On Zionism Sir Geo. Adam Smith has many sympathetic words to say. The general idea has his ungrudging support, but he also has many needed words of warning to the over-enthusiastic, pointing out the undoubted rights of others besides Jews in the Holy Land—the Syrian Moslems and Christians, as well as the "Christian" nations of Europe.

Obviously a very great deal of difficult detail has still to be thought out by the Powers of Europe—and the democracies of Europe educated in the thinking thereof—before the future of Syria can be settled on lines of justice and security for all nations and creeds alike

After sketching the exceedingly difficult question of the future of the new State—if such there is to be—he says:—

All this is enough to make clear that the Power or Powers to whom the political future of the country falls will have problems before them far more serious than any that Britain has had to solve in Egypt, and quite as heavy as those which gather along the northern and north-western frontiers of the Indian Empire.

RECENT EVENTS IN GEORGIA.

(From a Correspondent.)

On May 26 Georgia declared herself independent as a consequence of the dissolution of the Transcaucasian Republic, from which the Tartars separated themselves, and the southern provinces, including Batum and Kars, were occupied by Turkey. The causes which led to the dissolution of the Transcaucasian Republic had been at work since the beginning of the Revolution of March, 1917, when Turkey, through her agents, penetrated into Eastern Transcaucasia and North Caucasus, using Mohammedan priests as propagandists. Turkey was afraid that the formation of the Transcaucasian Republic, including the Georgians, Tartars and Armenians, would separate from her the Mohammedan Tartars and close the doors for her penetration into Turkestan, and that in years to come the Transcaucasian Republic, with its resources and population, would become a formidable unit which could not be treated as a subservient vassal.

After capturing the Batum and Kars fortresses, Turkey occupied the strategic positions of Transcaucasia, from which she was able to proceed to the complete occupation of this region. At this stage Germany interfered, as she also had aspirations in regard to Transcaucasia, principally for railway routes to Turkestan and Persia.

Georgia, after having been deprived of her fairest provinces in the south of the Batum district and her chief port of Batum, was recognised by Germany as "independent" (comprising the provinces of Tiflis, Koutais and Soukhoum). The Armenians, who have been deprived of all their territory in Turkey, have a small strip of territory in the Province of Erivan, also as an "independent" republic, and the Tartars have the Provinces of Baku, Elizavetpol, and part of Erivan Province, which is called the Aderbejan (Azerbaijan) republic.

These three republics were invited to go to Constantinople, and after two months of blackmailing, threats, and requisitions, were forced to sign the "Peace Treaty" with Turkey, by which Georgia becomes a German Protectorate and the Armenians are placed under Turkish "protection." But before signing these "peace treaties," on June 24, the day upon which Baron von Kuhlmann made his declaration in the Reichstag about Georgia, 3,000 German troops were landed at the Georgian port of Poti, on the Black Sea, and advanced along the railway to Tiflis, the capital of Georgia. By this means Germany succeeded in obtaining control of Tiflis, which is the centre of the railway lines radiating into the principal directions towards Persia and Turkestan. From that moment competition between Germany and Turkey began in regard to the rearrangement of the territories in Transcaucasia. Turkey claimed special protection over the eastern part of Transcaucasia, populated by Mohammedan Tartars, including the classical oilfields of Baku. This gave rise to great dissension between Turkey and Germany, the more so as the oil wealth of the Caucasus represents several thousand million pounds, and it would be most advantageous for Germany to secure its control. Turkey began to mobilise the Tartar population in Transcaucasia for the purpose of capturing Baku, and the Germans began to advance from Tiflis; and, as was reported, the Armenians residing in the town, having no choice, preferred that the town should be occupied by the Germans rather than the Turks. But whilst the Turks and Germans quarrelled about the position of Baku, British troops advanced from Baghdad and entered the town of Baku, in this way cutting off Germany and Turkey from their connections in Turkestan.

The strategical importance of Baku is enormous, both for the control of the Caspian Sea and the routes leading towards Turkestan, Afghanistan, and Northern Persia. If this action had taken place in January last, both the German and Turkish penetration of the Caucasus would have been either entirely prevented by the help of the Georgians and Armenians, or very substantially diminished in its dimensions.

At a Slav congress recently held at Laibach the chairman, Count Skarbek, said that if the Pan-German programme extended to Baghdad the Slavs were within their rights in drawing up their programme from Danzig to Trieste. The Slavs, he added, were strongly opposed to the policy of "Divide and rule."

The Greek Minister left town on Saturday for the country.

Lord Ronaldshay left Calcutta on July 6 for a ten days' tour in Eastern Bengal.

Prince Serban Cantacuzene of Roumania arrived in London from Paris on Sunday.

The Earl of Mayo has joined the Countess of Mayo at Palmerstown, Co. Kildare, from London.

Mr. T. Earle Welby has taken up the position of Secretary to the European Association, Calcutta.

Mme. Misu, the wife of the Roumanian Minister, has left London for Eastbourne for the summer.

Mr. C. L. S. Russell, I.C.S., Resident in Baroda, has been confirmed as a Resident of the second class.

The Hon. William Ormsby-Gore, M.P., and Lady Beatrice Ormsby-Gore will leave 5, Mansfield Street shortly for Scotland.

Colonel A. Phrantzès, Chief of the Hellenic Military Mission, and Military Attaché to the Greek Legation, arrived in London last week.

Sir George Buchanan, member of the Indian Munitions Board, has been appointed a member of the Central Employment and Labour Board.

On the name day of King Alexander of Greece, September 12, a Te Deum will be sung at the Greek Church, Moscow Road, Bayswater.

Mr. H. S. Fremantle has been appointed a member of the United Provinces Legislative Council, vice Mr. J. M. Holms, who has resigned.

Lieutenant-Colonel Frank Wyville Thomson, I.M.S., of Bonyside, Linlithgow, only son of the late Sir Wyville Thomson, left personal estate to the value of £20,376.

M. Mihailovitch, the Serbian Minister in the United States, has resigned on account of ill-health. M. Georgevitch, Secretary to the Legation, will act as Chargé d'Affaires.

The Bishop of Colombo met with an accident early in July while inspecting the bells of the cathedral. A platform on which he was standing gave way, and he fell fifteen feet.

The *Lokalanzeiger* says it learns from well-informed quarters that the health of King Ferdinand of Bulgaria gives no cause whatever for anxiety, states a Reuter message from Amsterdam.

The Hon. Lady Cunningham, of Eaton Place, S.W., second daughter of the first Lord Lawrence, and wife of Sir Henry Cunningham, K.C.I.E., left unsettled property valued at £3,749.

M. Pashitch, the Serbian Prime Minister, who recently arrived in the Riviera, to be presnt at his daughter's marriage, will shortly proceed to Paris and London, and will then return to Corfu.

The Bombay *Gazette* announces the appointment of Lieut.-Colonel E. O'Brien to do duty as Political Agent in Kathiawar in addition to his own duties as Administrator of the Porbandar State (June 28).

Mr. J. H. Stone, Director of Public Instruction in Madras, is due to vacate his appointment this month. The senior Indian Educational Service officer in the presidency, Mr. J. H. Allen, Principal of the Presidency College, will succeed him.

In response to the Premier's appeal to India, his Highness the Maharajah of Nabha has generously offered to contribute Rs.25,000 a year towards the successful prosecution of the war during its continuance. His Highness the Maharajah Rana of Dholpur has also offered Rs.25,000 for war purposes. The offers have been gratefully accepted.

King Ferdinand of Bulgaria has telegraphed from Bad Nauheim to the Breslau City Council, expressing his gratification at the reception accorded to the Bulgarian delegates at the Breslau fair.

The engagement is announced between Mr. Frank J. L. Atterbury, of the Sudan Government Service, and Miss Barbara L. V. Streatfeild, third daughter of Canon and Mrs. Streatfeild, of the Vicarage, Eastbourne.

The marriage between Acting Staff Paymaster R. A. Hawkesworth, Royal Navy, British Naval Mission to Greece, and Miss Winifred C. Bartlett will take place at St. Paul's Church, Athens, on Saturday, September 14.

A telegram to the *Cologne Gazette* states that the Sheikh of the Senussi has arrived in Vienna with a suite of 11 tribesmen *en route* for Constantinople. It is stated that he crossed from Tripola to Pola in a German submarine.

A marriage has been arranged between Walter Stuart James Willson, of Calcutta, elder son of Mr. and Mrs. Albert Willson, 64, Waldegrave Park, and Ethel Winifred, eldest daughter of Mr. and Mrs. J. J. Morris, Twickenham.

The *Sudan Times* of July 24 publishes an Army Order, issued July 21, as follows:—The Sirdar regrets to announce to the Army the death of El Kaimakam W. McConaghy Bey, M.B., Special Service, which occurred in the Red Sea on July 4, 1918.

The Cairo correspondent of *The Times* reports (August 22):—"The High Commissioner, Sir Reginald Wingate, appeals for contributions to 'Our Day,' and hopes that last year's record of £150,000 will be surpassed. The Sultan heads the list with £1,000."

Mr. H. N. Hutchinson, I.C.S., formerly Deputy Director-General of Post Offices, Simla, has on return from leave been posted as Postmaster-General of Bombay, relieving Mr. H. Pilkington, who becomes Postmaster-General, Central Circle, Nagpur.

The *Pioneer* (July 12) states:—"When Sir William Meyer vacates the Finance Membership at the end of August he will proceed on a pleasure trip to America *viâ* Japan and San Francisco. It is his intention, we believe, to spend the winter in California."

The King has granted to Temporary Lieutenant-Colonel Albert Napoleon Tucker, Royal Engineers, authority to wear the Insignia of the Fourth Class of the Order of the Nile, conferred upon him by the Sultan of Egypt in recognition of his valuable services.

The Viceroy of India has selected Lieut.-Colonel J. C. S. Vaughan, I.M.S., Civil Surgeon of Ranchi, for the officiating appointment of Inspector-General of Civil Hospitals, Bihar and Orissa, vice Colonel G. J. H. Bell, C.I.E., I.M.S., granted combined leave for six months.

The King has been pleased to grant unrestricted permission to Miss Mary Elizabeth Phillips, M.B., to wear the Insignia of the Fourth Class of the Order of St. Sava conferred upon her by the King of Serbia in recognition of her services with the Scot the Women's Hospitals in Serbia.

Mr. A. B. Geary will shortly proceed to the Piræus to take up his post as H.B.M. Consul there, and will afterwards go on to Alexandria to take charge of the Consulate-General. Mr. Geary, many readers will be interested to learn, was married on July 2 to Mrs. Grace Summerhayes (*née* Alport).

Sir Charles Eliot, who was recently appointed British High Commissioner in Siberia, is the author of "Turkey in Europe," one of the best books on the Turk and his country that have ever been written. His diplomatic activities in the Near East included service at Tangier, Constantinople, Sofia, and Belgrade, and he has been granted special allowances for knowledge of Arabic and Turkish. He is said to speak twenty-three languages fluently, and to know twenty-seven.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

A marriage has been arranged between Brevet-Colonel H. H. Norman, R.A.M.C., only son of Thomas Norman. Indian Civil Service (retired), and Mrs. Norman, of Oakfield, Weston, Bath, and Muriel Frances, third daughter of Cyril H. Dunderdale, of Westquarter, Falkirk.

Admiral Sir Alfred Wyndham Paget, R.N., K.C.B., K.C.M.G., D.S.O., of Hans Road, Chelsea, S.W., at one time A.D.C. to King Edward VII., son of the late Lieutenant-General Lord Alfred Paget, and grandson of the first Marquess of Anglesey, left unsettled estate to the value of £24,474.

The engagement is announced of Captain Eric J. Shearer, M.C., Lancers, Indian Army, and General Staff, younger son of the late Brevet Colonel Johnston Shearer, C.B., D.S.O., I.M.S., and Mrs. Johnston Shearer, to Phyllis Muriel, elder daughter of Mr. H. C. Mules, C.S.I., M.V.O., and Mrs. Mules, of Karachi, Sind.

The marriage arranged between H. A. F. Metcalfe, I.C.S., Assistant Commissioner, Peshawar, youngest son of Captain and Mrs. Metcalfe, The Knowle, Maidenhead, and Elinor Joyce, youngest daughter of Mr. and Mrs. J. Wilson Potter, 219, Ashley Gardens, S.W., will take place in Kashmir about the middle of September.

The engagement is announced between Captain Donald G. Romanis, Royal Artillery, youngest son of the late Rev. W. F. J. Romanis, Preacher of the Charterhouse, E.C., and Mrs. Romanis, Polperro, and Wanda Mary, second daughter of the late Mr. J. D. Hilpern, Egyptian State Railways, Beni-Suef, Upper Egypt, and Mrs. Hilpern, Windsor.

On Saturday, the anniversary of the birthday of the King of Roumania, by command of King George, the Hon. Sir Arthur Walsh, Master of the Ceremonies, called on the Roumanian Chargé d'Affaires at the Legation to offer his Majesty's congratulations. Cards were left on behalf of the Prime Minister, the Secretary of State for Foreign Affairs, the Minister of Blockade, the Lord Chamberlain, and Colonel Sir Douglas Dawson, Comptroller of the Lord Chamberlain's Department.

OBITUARY.

The *Pioneer* announces (July 5) that the death is reported of Nawab Arbab Mohammad Hussain, Khan Bahadur, Chief of Mohmand in the North-West Frontier Province. He was noted for his loyalty to the Crown, and had rendered long and distinguished services to Government in various capacities. His services during the Afghan War and the Chitral and Tirah expeditions received recognition in the form of the titles of Bahadur and Nawab Sahib and the Kaisar-i- Hind Medal.

Lieut.-Colonel Alexander Henry Gouger Thomson, Indian Army, died on August 2 at Naini Tal, India, of pneumonia. He was born in 1869, entered the Norfolk Regiment in 1890, transferred to the Indian Staff Corps in 1893, and reached the rank of lieutenant-colonel in November, 1916. He saw service in Chitral, 1895 (medal with clasp), on the North-West Frontier, 1877-8 (three clasps), and in the Tirah in 1897-8 (clasp). In the present war he was mentioned in despatches and made a Companion of the D.S.O.

Lieutenant-Colonel H. W. Apperley has died at Rajghat, Bettiah, Chumparun, India, aged sixty-seven. He received his first commission in 1863, and retired after forty years' service with the Bihar Light Horse. Colonel Apperley served in the Afghan War of 1878-80, and was present with the Bazar Valley Expedition as a volunteer, and took part in the affair at Jagi Thana, near Shutargardan Pass, the Battle of Charasiab, the action at Kabul, and the march from Kabul to Kandahar. He was twice mentioned in despatches, and received the medal and clasps, as well as the bronze star and the brevet of major.

Surgeon-General Charles Planck, M.R.C.P., F.R.C.S., J.P., who died on August 23, was born in 1831, a son of George Planck, Secretary of H.M. Customs Department, London. He served for thirty-two years in the Bengal Medical Service, including the Mutiny year, and marched to the relief of Cawnpore and Lucknow with General Outram's force, being attached to the 90th Foot. He was Field Surgeon at Cawnpore, and was present at the attack by the Gwalior rebels. For his services he received the Mutiny medal. Among other important posts which he occupied after the Mutiny were those of Superintendent of the Agra Central Prison, Inspector-General of Prisons in Burma, and Sanitary Commissioner and Superintendent-General in the North-Western Provinces of Oudh. He retired in 1886 with the rank of Surgeon-General.

Lieutenant Cyril W. Pugh was killed on August 21. The second son of Mr. and Mrs. R. Pugh, of Clapham Common, he was educated at the City of London School; and from there he entered the firm of D. Sassoon and Co. When in India, for the firm, he joined the Bombay Light Horse. On the outbreak of war he returned to England and received a commission in the R.F.A. (S.R.), and after serving in France was drafted to Mesopotamia, where he took part in the relief of Kut and the capture of Baghdad. He applied for a transfer to the M.G.C., was sent to England for his training, and returned to France in June this year. In December, 1917, he married Marguerite, second daughter of Mr. and Mrs. J. C. Hurd. He was killed by bombs from enemy aircraft while on his way to the trenches with his men.

NEWS IN BRIEF.

The civil departments of the Government of India will reassemble at Delhi on November 2.

Over one thousand people were injured in street accidents in Calcutta last year and fifty-four were killed.

The death is announced of General Nikotie Stevanovitch, Commander of the Serbian troops at Corfu.

A British force from Enzeli recently arrived in Baku, where all parties have coalesced under a Nationalist Administration.

Kieff newspapers say that that Ukrainian political parties and professional organisations have been linked up in a Ukrainian National League.

Greek Reserve officers and men belonging to the classes from 1905 to 1918 who are resident in the United States have been called to the Colours.

The exchange of the instruments of ratification of the Brest-Litovsk Peace Treaty between Turkey and the Ukraine took place in Vienna on August 22.

A meeting of party leaders and ex-Deputies of Bosnia and Herzegovina, which was to have been held recently at Serajevo to discuss the future constitutional position of Bosnia and Herzegovina, has been prohibited.

A number of Serbian youths are to be trained as engineers at the Newport (Mon.) Technical Institute. Afterwards they will be given facilities to continue their training at the workshops of various firms in the district.

At a meeting in Athens of the delegates of the Labour Bureau of the Pirœus, Athens, and Salonika, it was decided to convene a national congress of workers' and professional organisations at the beginning of October, with the aim of founding a general confederation of labour in Greece.

A HOUSE DIVIDED.

It has long been known that all was not well in the Serbian political world, in spite of the fact that the tragedy which has befallen the people might have been expected to hold them together at least until such time as their country is restored to them. But it was hoped that there would be a friendly adjustment of the difficulties, and consideration for an Ally prompted the avoidance of any discussion of the subject in the British Press. The controversy, however, has now reached a stage at which one of the parties has felt constrained to make a public appeal for the intervention of Serbia's Allies. Under the heading, "Serbia's Choice," a powerful indictment of M. Pashitch, the Serbian Prime Minister, is published in last week's issue of *The New Europe*, which, in its resolve to tell the story of the political crisis, must have experienced a keen struggle between loyalty to Jugoslavia and its championship of Bolshevism, to which anything in the nature of "old Oriental tendencies" is naturally anathema. So long as Serbia was confronted with the Austrian menace party antagonism was silent; but when the worst had happened, and the Government and the politicians were exiles in Corfu or elsewhere, the old curse of politics in the Balkan countries reasserted itself. The charges brought against M. Pashitch are numerous, but a few extracts will explain their character:—"In his passion for power and his intolerance of first-rate ability in his immediate neighbourhood, unless it be entirely subservient to his will, he would fain persuade both his own people and his Allies that he is indispensable." The conspiracy trial of January, 1917, in which the tribunal "was partly composed of notorious personal enemies of the accused," and which ended in the condemnation to death of nine officers, of whom three were executed, is represented as being in the main a political move. "A severe censorship prevented the news from reaching Allied countries, and it was sought to weaken the effect of such faint rumours as none the less arrived by representing the condemned officers as Austrophiles engaged in intrigues for a separate peace"—a contention in which the writer implies that there was no foundation of truth. "Particular resentment has been caused by the partisan methods of police control adopted by the Corfu authorities towards the large Serbian colonies of Paris, Nice, and Geneva, and by the crying inequalities and favouritism in assigning pensions and salaries. There has been a series of scandals connected with contraband and with speculation in Serbian banknotes. Two of these affairs, involving nearly a million of our money, are still *sub judice*, and it would be unpardonable to express any opinion as to the justice of the charges. But in the inflamed state of public opinion the repeated delays and appointment of new commissions of inquiry to supersede the old have opened the door to spiteful comment, in view of the fact that several of M. Pashitch's special *protégés*, and at least one member of his own family circle, are implicated."

A reference at the close of the article indicates what is in the opinion of *The New Europe* the head and front of M. Pashitch's offending. "There must be an end to the foolish policy of pinpricks which Corfu has latterly adopted towards the Jugoslavs, and which has taken the form of confiscation of Jugoslav pamphlets, special censorship methods and dismissal of high officials noted for their wholehearted advocacy of Jugoslav principles. . . . Any attempt of the old guard in Serbia to revert to a more narrowly Serbian, as opposed to the widest possible Jugoslav basis, must be firmly resisted by the Allies."

It is well that the veil should be torn from the doings of the Jugoslav world; for the Allies are too closely associated with the affairs of these people to be able to countenance a perpetuation of the suicidal intrigues that so often characterised the political history of the Balkan countries. The writer of the article states the case of the Serbian Opposition, and approaches the situation with a natural anxiety for the fate of the Southern Slav State that is to be. The Allies have recently taken the step of according the fullest recognition to the Czecho-Slovak people and their National Council. They have not yet adopted the same course in regard to the Jugoslav question, and the indication of what is taking place behind the scenes in Jugoslav circles may explain the omission. The Czecho-Slovaks have won recognition by their acts and with a minimum of propaganda. The Jugoslavs, on the other hand, have spared no pains to ensure that the Allies should have a clear understanding of all that they are and want. In this they have responded to a natural instinct, but they will themselves be the first to admit that unity and single-mindedness of purpose are better qualifications than capacity for propaganda. Unlike the Czecho-Slovaks, who are united and have had no other aim than the defeat of Austria, the Jugoslavs have tried to improve their position by showing aggressiveness all round. A large amount of their propaganda has been directed against Italy; a small part has intervened in the internal affairs of Montenegro. *The New Europe* itself illustrates this failing. It is concerned with Jugoslav unity and is afraid of assisting the efforts of its enemies. "For there are many secret enemies lurking in the background. . . In the tiny clique which surrounds the exiled King of Montenegro they find an instrument ready for use in all the tortuous processes of sapping and mining." And the writer proceeds to attribute to this clique "a poisonous campaign directed almost equally against the Serbian Government, the Jugoslav Committee, and the whole idea of Jugoslav unity," while a named "individual" is held responsible for "a scurrilous campaign against the Serbian Government and dynasty."

Into such pitfalls does aggressive propaganda lead, for the truth is that the enemies of Jugoslavia, if they exist at all, are apart from the Central Powers. Those who are anxious to do all they can for the Balkan races as a whole, confident that in the promotion of the unity and material welfare of the Peninsula, the interests of the different States will best be furthered, and British interests in the Near East advanced, do not feel compelled to accept responsibility for the acts of any of the Balkan peoples. We hold no brief, for instance, for M. Pashitch or for King Nicholas's "clique," but we are inclined to think that excess of zeal has caused the writer in *The New Europe* to overstate his case in regard to the latter. In so far as the "clique" and the "individual" attack the Serbian Government, they can now claim to do so in good company. If they have attacked the Jugoslav Committee, it is presumably under the impression, no doubt quite wrongly, that the Committee is at the back of and is subsidising, that other "clique," which is trying to compel the Montenegrin dynasty to abdicate and to declare the union of Serbia and Montenegro before the Montenegrins—or for that matter the Serbians—can express any authoritative opinion on the subject. That King Nicholas or his clique is against "the whole idea of Jugoslav unity" is, we venture to believe, most unlikely, as such a statement runs counter to their words and their acts. It is true that political controversy is raging among the exiled Montenegrins in the same way as it is among the Serbians; but whereas in Serbia it has hitherto been allowed to proceed on recognised Balkan lines, in the case of the Montenegrins the scales have been weighted against the powers that be by, presumably, the Serbians, supposedly the Jugoslavs, and certainly *The New Europe*. Is it to be wondered at that the Italians, who, perhaps, know more about Balkan affairs than the other Governments of the Alliance, are anxious to postpone the details of the Balkan settlement until the end of the war? They may well argue that it is best to wait until it is seen what finally emerges from the cross-currents, the political intrigue, and the aggressive propaganda that are

Digitized by Google

proving the bane of the Jugoslavs. The remedy propounded by the writer of the article is that the Entente Powers should exercise pressure at Corfu—a somewhat drastic step—in regard to the quarrel between M. Pashitch and his Opposition. May we not rather hope, now that the searchlight of publicity is being turned on to these dark spots, that all the parties to the Jugoslav movement will see the necessity of closing up their ranks of their own accord, as they hardly fail to realise, in contrast with the case of the Czecho-Slovaks, how their quarrels, intrigues, and propaganda are damaging their cause, and delaying the settlement of the Balkans which all the Allies have at heart.

CYPRUS UNDER BRITISH RULE.*

In a volume of modest size, Captain C. W. J. Orr, who spent some strenuous years in Cyprus as Chief Secretary to Government, offers a useful and concise review of British rule during our occupation. That comparatively few persons take an interest in the island is not surprising, when one considers how profound is the ignorance regarding India and our great dominions, to which Lord Curzon and other statesmen have referred. Moreover, this indifference is not confined to the masses. "Eminent persons," says Captain Orr, "who should be well informed, have asked me questions about Cyprus which reveal quite plainly that they confuse it with Crete; others have shown complete ignorance of the most elementary facts connected with the island." The author's object is to give a connected account of our administration. Those who desire to read of the romantic charms of the island of Venus must look elsewhere. His book is no apologia for inaction or for our failure to develop island resources, for it cannot be denied that Cyprus is generally regarded as a "neglected island." He subjects the system of government to candid criticism, and herein lies the chief value of his work, which should be consulted by all who desire to examine how far England has fulfilled the expectations raised in 1878.

The value of Cyprus to the Empire has, of course, often been questioned. It was occupied under the Anglo-Turkish Convention, owing to its geographical position, in order to safeguard British interests in the Near East. It was a suitable base for naval and military operations in resisting Russian aggression. It was also to be a model for reforms in Asia Minor. When, however, we occupied Egypt in 1882 (not, as stated, in 1881), "had England cynically consulted her own interests alone," we might well have restored Cyprus to Turkey; but in the interests of the Cypriots such a proceeding would not have been justifiable.

After a brief sketch of island history to the occupation, the author passes in review the various branches of administration. The burning question of the "Tribute" is of course dealt with. Under the Convention England agreed to pay to the Porte £92,800 a year, which was supposed to represent the surplus of revenue over expenditure. This sum was computed, as Lord Eversley has said, "hastily and without due consideration, and by leaving out of account any expenditure on public works or other needs of a civilised country; the Turks having spent practically nothing on roads, harbours, agriculture, forests or education. Consequently, under British administration there was an annual deficit (on an average £30,000 for many years), which had to be met by the Imperial Government. This has been the principal cause that has retarded progress. But the Greeks, who now form four-fifths of the population, have always regarded the burden as absolutely unjust, and consider that, as the island was occupied entirely in the interests of Great Britain, the charge should have been borne by the Imperial Government. British officials have been at one with Greeks as to the unfairness of the arrangement. Captain Orr may well express his surprise that for twenty-nine years a policy so glaringly at variance with the principles of British rule in our own possessions (where revenue is used for the benefit of taxpayers) should have remained unaltered. It was not till 1907 that Parliament voted a grant-in-aid of £50,000 a year, which reduced the "Tribute" to £42,800. Had such a sum been spent annually in the island, Cyprus might have been, as the Greeks argue, in a position of which England might be proud.

In 1882 a nominated legislative body of seven members was replaced by a council of eighteen members, twelve elected by the people and six nominated; nine of the elected being Greeks, and three Turks. The Moslems expressed great dissatisfaction regarding this as "a prelude to the independence at which the Greeks aim." The non-elected members are out numbered by two to one, and the author rightly suggests that when the constitution was framed consideration was given to the fact that the three Turkish members were not likely to combine with the Greeks, but would practically add three members to the Government side; and this has proved to be the case. The High Commissioner has a casting vote. Although a good deal of useful work has been done under no little difficulty by the Council in which the Greek element is "actively and permanently hostile to the Government," its annals show that there is much to be said for Captain Orr's opinion that it would have been far better that Cyprus should have a constitution similar to that of most Crown Colonies, when the Government is in a majority and the Chamber advisory only.

The judicial system, always regarded by the inhabitants as the best feature of our administration, is not without its defects. It costs £18,000 per annum. Besides the Supreme Court of two members, there are eighteen district judges practically tied to six district towns, and this arrangement "does not bring justice within easy reach of the inhabitants," villagers being constantly obliged to travel forty or fifty miles over trivial cases. The highest posts to which natives can aspire are judgeships of £275 a year, "a salary hardly sufficient to enable them to live and bring up their families in a manner suitable to their position." That the system requires overhauling is a conclusion in which those who know Cyprus will probably agree.

The vital subject of agriculture is dealt with very briefly. For twenty-five years practically nothing was done to encourage it. In 1903 a Director of Agriculture was appointed, and in 1912 a small agricultural college was established at Nicosia, where thirty lads are trained. "Some leeway has been made up." Captain Orr repeats the acknowledged fact that little can be done till capital can be brought within reach of the impoverished small farmers, now a prey to unscrupulous usurers. A new law of 1913 for the establishment of agricultural co-operative societies may eventually help to rescue them.

As regards the very important subject of forests, a substantial sum is now granted annually for reafforestation. The revenue has increased from £17,600 in 1916 to £47,000 in 1917-18; and this year should be £60,000. The author considers that the Goat Law, which allows villagers to get rid of flocks by local option, is working satisfactorily, and may be adopted by other countries, *e.g.*, Greece.

As to the "Hellenic idea," Captain Orr touches the never-ending question whether the clamour for "union with Greece" expresses the wishes of the mass of Cypriots, or only that of a vociferous class. The peasants are little stirred by political considerations, but educated Greeks gradually influence and find support among villagers, so that the idea widens. He considers that the "real driving force" lies in the resentment that government is in the hands of Englishmen and not Cypriots. They desire an administration conducted in their own language; they also resent the aloofness of the majority of British officials. But the population is not homogeneous, a quarter (or fifth) being Turkish and Moslem. The Turks have been unflinchingly loyal, and, as Mr. Winston Churchill replied to a memorial, his Majesty's Government, while regarding with respect Greek aspirations, is equally bound to respect those of the (60,000) Moslems.

In respect of education, much remains to be done. Elementary education is in an unsatisfactory state. A report by Mr. T. Talbot and Mr. F. Capo in 1913 has prepared the way for reforms, which appear to be hung up pending the result of the war. The Greeks make progress difficult; they desire large grants from revenue, but would rather have no State aid than any control of teachers by Government. This is due, not to religious, but political, motives. School teachers are useful for Greek propaganda. The political aim is dominant in all Greek demands and movements.

Captain Orr is clearly among those who hold that we have been guilty of shortcomings, and that no time should be lost in setting the house in order. Tardiness of progress is fully admitted; grave defects and blunders, often due to

false economy, are recognised. The situation is now very different from what it was in 1878, and arrangements made soon after the occupation are not suitable after forty years. While the evolution of order out of chaos has brought many benefits to the people, the bureaucracy of the Colonial Office has tended to an ultra-cautious conservatism in matters where common sense should have been preferred to precedent, that fetish of office. "A Cyprus official on leave," we are told, "calling at the Colonial Office said to the official in charge of the Cyprus Department, 'I am afraid that Cyprus affairs have been giving you a good deal of trouble lately.' 'Not at all, not at all,' he replied, airily. 'All these things have happened before, and we have nothing to do but to look up our files of fifteen or twenty years ago, and reply accordingly.'" Those, again, who know Cyprus will fully agree that nearly the whole time of responsible officials is taken up with "trivial and petty details of routine."

Cypriots themselves must, it is rightly added, bear a large part of the blame for want of improvement; they have failed to exhibit the qualities that make for progress. There is no co-operation in trade, no Chamber of Commerce, no corporate body to which the Government can turn for advice. If the Government has failed financially in the railway, harbour, and irrigation schemes, private enterprises have shown no better results. Most of these have failed to produce dividends and ended in liquidation. This inertia may have justified the Government, to some extent, in proceeding cautiously with innovations.

Finally, the author considers that "the most pressing necessity is to bring the educated Cypriot into closer touch with the Government." Now that the island is part of the British Empire the Cypriots should be given a more direct share in the administration. They should probably not yet be appointed Commissioners, but departments such as the Post Office and Land Registry Office might be entrusted to those who have been adequately trained; and the principle could be gradually extended. This is quite in the spirit of our present imperial policy. There are many other sound suggestions, in anticipation of the period of reconstruction which should follow the war, when the Cypriot factor in the Eastern question will no doubt be carefully considered.

On the occasion of the fourth anniversary of the war, church collections throughout Egypt in aid of the British War Prisoners Fund amounted to £582.

THINK HOW THESE CHILDREN NEED CHILD WELFARE WORK.

"Why do you dress them all in flannelette?" asked an Officer. "Mercifully we had a bale of it, or there would have been no orphanages. I wish you could have seen the state most of them were in," replied the Relief Worker.

PRESS ON THE NEAR EAST.

"Allotments" in Mesopotamia.

The following note is from the *Basrah Times* (July 9), and deals with a subject not unknown to readers of THE NEAR EAST. The pamphlet to which it refers is one entitled "Summary of Notes on Vegetable Growing in Mesopotamia in 1917," and issued by the Agricultural Department, Basrah vilayet. It looks as if Lower Mesopotamia may soon have the allotment craze quite badly.

In this country of the hidden talent, during the earlier months of the British Occupation one of the greatest wants experienced by our troops was that of fresh vegetables. This they could not understand, and instead of laying the blame at the doors of the apathetic Turkish Government, whose sins of omission were great, they were wont to execrate one of the most fertile countries, under a proper scheme of irrigation, in the world. Now that we have settled down, our agricultural authorities with the Mesopotamian Expeditionary Force have amongst other branches of pioneer work instituted kitchen gardens in various parts of the country and the pamphlet issued by the Basrah Vilayet should be of the greatest interest to amateur kitchen-gardeners throughout Mesopotamia. When the British first arrived in the country a certain type of bean and that ubiquitous vegetable-fruit the tomato, were the only procurable food of the sort which Mesopotamia apparently produced. The first garden was laid out at Sheikh Saad and Lieut. Fraser with a detachment of the Madras Gardeners Corps took the work over, the supply gradually increasing from 80 lb. per day in March, 1917, until November, when over two tons a day were being produced wherewith to supply the hospitals. Reports on the progress of the crops of white cabbage, knol khole, cauliflowers, lettuce, peas, beans, spinach, potatoes, melons of many varieties, brinjals, ladies' fingers, tomatoes, pumpkins, and vegetable marrows will be instructive and interesting to all amateur gardeners, and this useful pamphlet not only is a record of good pioneer work, but a guide to any who in their spare time feel inclined to cultivate allotments.

India and German East Africa.

Sir Theodore Morison contributes to *The Times* (August 24) an article with the above title, in which he deals with the vexed question of Indian migration within the Empire. The present position is, he says, quite unsatisfactory:—

Indians, though British subjects, are not allowed to enter Australia, Canada, or the Union of South Africa; until recently Germans, Bulgars, and Polish Jews were admitted freely; but Indians, even if they had shed their blood for the Empire, were classed as prohibited aliens. If the Indian could not find in the Statute-book the grounds upon which he was classed as a prohibited alien he learned without difficulty, and with no ambiguity, from the local newspapers that the people of the Dominions looked upon him as a member of an inferior race. This is an insult to a whole people which stings the pride of every Indian to the quick; it is a humiliation which no self-respecting people can be expected to tolerate; all classes in India unite in resenting it; the feudatory Princes, the great landowners, the gallant native officers of our Indian Army feel the insult as keenly as do the educated politicians. Indeed, few Englishmen, either in this country or overseas, can be satisfied with the situation. Common decency forbids our saying to Indians, "You are welcome allies on the battlefield, but when once the war is over we cannot admit you to an equality with ourselves."

What is to be done? "Indiscriminate migration within the Empire is fundamentally wrong in principle, because the logical development of it would be a fusion of the races, which is a goal nobody wishes to reach."

We wish to avoid fusion and preserve each our own characteristics without doing injustice to India. This goal we can attain by assigning to each race certain areas in the Empire. Upon this principle each member of the Empire would have, in addition to its homeland, certain spheres of influence assigned to it in the undeveloped tracts of the Empire. It is obvious that the Southern Pacific would be allotted to Australia and New Zealand, and that South Africa up to the Zambesi would come under the hegemony of the Union.

If India is to receive equitable treatment she also must be assigned a sphere of influence of her own, and that sphere must not be unworthy of her contribution to the Empire. It is idle to suggest that India can be satisfied by the cession to her of a couple of petty islands at the other side of the world. If we are to make a settlement which India can accept with complete satisfaction we must assign to her a land not far from her own shores, of a size and of natural resources comparable to the areas assigned to other constituent parts of the Empire. The fortune of war has given us the opportunity of making such a settlement without prejudice to any existing interests which we need consider. That vast territory, which must be known as German East Africa until it is formally incorporated in the British Empire, is the country which should be assigned to India. This should be the sphere of her exclusive influence; in it her right to direct policy and control immigration should be formally recognised. I contemplate a settlement of this vexed question which should be in fact, if not in name, a treaty between India and the Dominions. India on her part would renounce all interest in the immigration policy of the Dominions, and they on their part would recognise her privileged position and special interests in (German) East Africa.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

While it has been known that the profits of the Greek shipowners during the war have been very great, there has been hitherto no means of estimating their approximate extent. Light has now been thrown on the subject by an American Consular report, which gives an estimate of these profits for the first three years of the war of £28,916,000, this sum including £7,720,000 received as the purchase price of vessels sold and as indemnities for vessels lost by various sea accidents. For 1915 the profits are estimated at £5,404.000, for 1916 at £8,492,000, and for 1917, when the Greek steamers employed by the Allies were indemnified at 30s. per month per burden ton (*i.e.*, on steamers of a capacity of about 500,000 tons monthly collections of £700,000 were made, and an annual collection of £9,000.000), the net balance is estimated at £7,540,000 after allowing for premiums on war insurance and crew expenses amounting to about £1.460,000. These figures are regarded as conservative, and local estimates place the profits for the three years at £38,600,000.

***

Whichever estimate is accepted the figures are illuminating, and prove beyond a shadow of doubt that as far as Greece is concerned purchases after the war will not be curtailed by the financial question. The position with regard to Greece is that the country has remarkable possibilities, especially from the agricultural point of view, but it is so far undeveloped, and vast schemes of railway and road communications, and the construction and improvement of ports, are necessary, while there is a widespread need for up-to-date machinery and implements of all kinds. Without taking into consideration the financial aid that will certainly be placed at Greece's disposal by Great Britain and the other Allied countries, it will be evident that the country now has large financial resources awaiting investment, a fact which will have a very considerable influence on post-war developments in that country.

***

Among the latest activities of the Deutsche Bank must be noted the founding, in conjunction with the Bavarian Lloyd Company, of the Bulgarische Lloyd A.G., with a capital of ten million leva. The new company, which is connected with the oil-importing firm Naptha, and has taken over all the Bulgarian branches of the Transport A. G. Schenker and Co., will include trade, transport, and insurance in its operations, besides shipping. It will, in other words, serve as a most useful medium for enabling the Deutsche Bank to extend its operations throughout Bulgaria, and I can only hope the Bulgarians realise exactly what it means to permit the Deutsche Bank to establish its subsidiary undertakings in their country.

***

Some little criticism has been aroused by the fact that the increased earnings of the Egyptian Delta Light Railways have not resulted in a larger distribution than 3½ per cent. on the 5½ per cent. Preference shares. The policy of the directors in this connection was dealt with at the recent general meeting by Sir William Garstin, who pointed out that the policy of the board had always been a conservative one, and that the decision had been come to that "taking into consideration the uncertainty of the duration of the war, the anxiety regarding our fuel supply, and the certainty that heavy expenditure must be incurred upon improvements as soon as conditions become normal," a reduction of the sum carried forward below that shown in the accounts would not be justified. These reasons provide ample grounds for the decision, and those shareholders who may have experienced disappointment will have the encouraging reflection that the improvement in the company's position is continuing, so that, provided Egypt's prosperity suffers no check, their position will be one to envy when normal conditions return, seeing that the Preference shares are 31¾ per cent. in arrears. The shares, nominally £10, stand at £7½, at which figure they are not the least desirable purchase among Egyptian securities.

***

Before leaving the subject I must turn for a moment to the results of the year's working. The profit of the railway was £72,532, of which only half is absorbed by the dividend, and with the £49,248 brought forward, the carry forward is £85,353, which would suffice for a dividend of over 8 per cent. on the Preference shares. The increased receipts were accompanied by decreased expenditure, the ratio of expenses to receipts being 58.57 per cent., against 77.63, and according to the terms of the company's agreement 64 per cent. of the gross receipts must be utilised in working expenses, maintenance, etc., the difference being adjusted in a "suspense account." In the present case £15,884 is credited to this account, which considerably reduces the surplus, and it must also be borne in mind that the nominal 64 per cent. would represent, in view of the rise in values, an amount considerably in excess of the ratio if the customary amount had been expended on repairs, etc. Consideration of these facts is necessary if the present position is to be properly appreciated.

***

News will be to hand shortly of the Greek currant crop. Judging from early reports there seems every probability of a heavy crop this year, as conditions were extremely favourable in the early summer, and little peronospora or odium had appeared. It is worth noting that quotations, which were as high as £15 12s. per 1,000 lb. in December and January, had declined by June to £9 12s. per 1,000 lb., this being due to the lack of tonnage for export.

***

A correspondent in an Egyptian contemporary compares the way in which the War Loan propaganda has been carried out in Egypt and India to the disadvantage of the former country. Whether there is anything in his complaint must remain an open question, but it is certain that the methods adopted in India in connection with the new War Loan leave nothing to be desired. Everything the authorities can do to make it a success is being done, and the thoroughness of their methods is simply beyond praise.

***

The net revenue of the Telephone Company of Egypt decreased during the past year from £74,636 to £54,934. The Preference and Deferred shares receive a further dividend of 6 per cent., making the usual dividend of 10 per cent. free of income-tax for the twelve months, and the carry forward is £111,577, as against £87,876.

***

Apropos of the references in these columns to Turkey's imports of agricultural machinery from Germany, it may be noted that according to the *Wirtschaftszeitung der Zentralmächte* a credit of £T400,000 was opened at Aidin for the purchase of agricultural machinery from the Central Powers, and a similar amount was placed at the disposal of the Agricultural Committee in Smyrna by the Ministry of Trade and Agriculture for the purchase of 200 threshing machines. The journal further stated that the Ministry has ordered from German and Austrian factories 3,400 ploughs, 500 seed drills, and other agricultural implements.

***

I have pointed out that the establishment of new firms during the war is one of the many ways in which the curious outburst of enthusiasm in Turkey for industrial development has shown itself. On this subject the *Wirtschaftszeintung der Zentralmächte* also gives some interesting information. It refers to the "demand in Constantinople for the development of the Turkish mercantile marine," and says that "the fact that after the war there will be a great demand for cargo space has caused the flotation of many new companies about whose activities nothing has been heard of yet." Of the new firms it mentions the Ship Construction Company for the construction of yards, ships, and docks for repairs to shipping; and the Inshaati Bahiyi Anonyme Sherketi, both of which have a capital of £T100,000, and it adds that the Machousse Company, re-named the Sejr-i-Sefain, has been affiliated to the War Ministry, and will have its fleet renewed by the purchase of steamships to the value of £T380,000. Where these steamships are to come from is not stated, but I think we may assume that they are the steamers annexed by Germany from Russia in the Black Sea.

***

An interesting light is thrown on the present state of the Russian oil industry by the report of the International Russian Oilfields, Ltd. It is stated that work has been carried on under the greatest difficulty, especially during the last few months, and that no advices have been received since March, when the Workmen's Council had taken possession of the whole of the company's plots, and were working them for their own benefit. Presiding at the meeting, the chairman, Mr. Albert Mitchell, said that "the latest news received was that chaos existed, but no one could say when order would emerge, or whether, when it did, their property would be handed back to them and recompense obtained. A decree had been passed nationalising the whole oil industry and declaring it a Government monopoly." His subsequent statement that the whole of the Kuban Province, in which the company's properties are situated, had been wrested from the Bolsheviks by the Czecho-Slovaks, gives a shade of relief to a deplorable position from the point of view of those interested in the oil industry.

EGYPTIAN CURRENCY PROBLEMS.

Silver Hoarding.

(From Our Correspondent.)

Cairo, July 29.

The question of change continues to preoccupy and irritate the public. Fortunately the recent issue by the Government of 5 piastre notes has tended to ease the situation considerably, so far, at least, as the disappearing silver coins of equal value are concerned. A bitter disillusionment awaits hoarders, who one day will discover probably less than 3s. 4d. worth of silver in their hoarded silver coins. The present abnormal rise in the price of silver, due to the unusual demand by both belligerent and neutral governments for increased minting requirements, especially in such countries as India and Egypt, cannot profit them because they cannot export the metal. That hoarding has been going on on a very large scale is undisputed, and statistical investigation may reveal sums running into several millions, for it would seem that hoarding is not confined to the ignorant and poorer classes.

It is the question of the smaller nickel coins that calls for solution now, and it is none the less deserving of prompt attention because it mostly affects the poorer sections of the population. Apart from the undesirability of using postage stamps, even as a temporary makeshift, for hygienic reasons, it is said that the ignorance of the poor has been shamefully exploited by some conscienceless persons, who palmed off on them used stamps. There would seem to be two possible ways to put an end to this crisis, either to bring martial law to bear with all its rigour on those who are mainly responsible for this state of things—and they are said to be the money-changers, for but lately small coins were plentiful—or to issue notes for the lower values in the currency scale. There is the objection to the latter course that the poorer classes will be the chief sufferers from such a measure, as with them there is more than the usual risk of loss and wear and tear of such small paper currency. It is interesting to speculate upon which course the Government will ultimately decide. In any case, official action cannot be long delayed, as the changing of a pound note has been costing lately as much as 5 piastres, and this is tantamount to a proportional depreciation of the Government notes.

COTTON BAG SUPPLIES.

(From Our Own Correspondent.)

Cairo, July 29.

A heated controversy has lately been raging in the local Press between cotton bag merchants and some agriculturists. The case seems to be resolving itself in favour of the merchants, who have undertaken to prove that the cost price of the bag delivered in Egypt is now piastres 24.23, and have stated that they will be content with the moderate profit of 10 per cent. on the actual stocks, and will order any further quantities on the same basis of profit. These merchants allege with some reason that it is idle to suggest the taking over by the Government of the stocks in the country at the prices of 15 piastres, as was suggested by those who have been voicing the demands of agriculturists, because the Government might just as well in that case apply the same measure to other imported articles, such as Manchester goods, where the rise in price, due to similar causes, has been even greater than that of cotton bags. Of course, the fact that the cotton crop has been taken over by H.M.'s Government at a fixed price imparts some plausibility to the main contention of these agriculturists—namely, that whereas belligerent and neutral Governments have been taxing war profits, merchants, banks, and other societies in Egypt who have been earning huge profits have been left untouched, and agriculturists have alone been made to contribute their share by the taking over of the cotton crop at a fixed price, and the subjecting of the other principal products of the soil to fixed prices. It is admittedly hard lines on the agriculturists to see their hands tied, and feel unable to increase the price of cotton in proportion to the rise in the price of cotton bags. It remains to be seen now what solution the Government will devise.

EGYPTIAN CROPS.

Outlook Promising.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in July :—

Cotton.—The weather has been favourable, with hot days and damp nights. The heat experienced during the major part of the month has quickened the growth of the plants and made up for the loss they had previously suffered. Water supply is abundant, and some cultivators in several provinces have availed themselves of this abundance to overwater their cotton. The cotton-worm attack continues to be light and the hatching of eggs has been on a very small scale. Egg-masses have become difficult to find, and where the eggs have hatched, practically no damage has been caused by the worms. The common and pink boll worms have appeared in most provinces, and the latter is slightly less abundant than at the same period of last year. A slight attack of aphis is reported from almost every province, and an outbreak of wilt disease is apparent in Ityâi el Bârûd. The crop, however, has considerably improved during the month and growth has made remarkably rapid progress, especially during the second and third weeks. The number of flowers is also very encouraging. Indications of a good crop are noticeable everywhere.

Rice (*Sêfi*).—The hot weather was favourable and has accelerated the growth of the plants. The high winds mentioned in last month's report have almost ceased. Water has been plentiful everywhere, except at the tails of a few canals. Besides watering, weeding and transplanting are the chief operations in progress. The rice-worm is still reported in Beheira and Gharbîya, but damage is insignificant. Sowing is already finished, and the bulk of the latest sown portion of the crop has already sprouted. It is looking exceptionally well everywhere and doing better than at the corresponding period last year. The area under crop seems also to be greater.

Rice (*Nili*).—Sowing is taking place and is about ten days earlier than usual in El Faiyûm. The small areas planted so far are coming up regularly.

Maize.—Weather seasonable and water supply ample. Cultivators, in some cases, having either ploughed their land dry, or watered their fields, immediately after the *Shitwi* crop was gathered, have not availed themselves of the opportunity of early watering. Ploughing, harrowing, and sowing are in progress. No enemies have been recorded, with the exception of the hooded crow, which appears to have developed germinivorous propensities and preys on some of the young plants in their tender stage. Manuring with *Baladi* and *Kufri* manures is being carried on very actively. The area allotted for maize seems to be above normal. The crop is going in a little earlier than last year, but not so early as was expected in view of the greater facilities for early watering. Large areas have already been sown and germination appears very satisfactory.

Millet (*Sêfi*).—Weather hot and favourable and water supply ample. Stalk borer is reported in El Minya and Asyût, but elsewhere the crop is free from pests. Flowering is now general, and the early millet is approaching maturity. The crop is generally looking well and a good average yield is expected.

Sugar Cane.—Weather quite favourable and water supply sufficient. Weeding, watering and manuring are in progress. The borer attack is very slight and the growth of cane is luxuriant. The area under crop appears to be larger than last year.

Ground Nuts.—Weather satisfactory and water supply adequate. No pests are reported. The crop is in excellent condition, and the damp heat has been of much benefit to growth.

MOROCCO TRADE NOTES.

The Tonnage Shortage.

(From Our Own Correspondent.)

Tangier, August 15.

Now that the agricultural results of the year are secure anxiety finds fresh food in the question of transport. Morocco's grain for export is all bought by the military authorities for export to France, where it is especially valuable, as it is available before crops from most other countries. In previous years, not only was it late in arriving owing to transport difficulties, but a very appreciable amount was damaged while waiting for shipment. This year special efforts are being made to secure vessels to carry it in good time, and all other claims on transport for French ports are secondary. As nearly all produce available for export is reserved for Government requirements the difficulty of tonnage for export chiefly affects the administration, though in some cases it is serious enough for merchants. The new industry of palmetto leaves, shredded and used for mattresses, packing, etc., etc., which was booming in a small way, with prices about £20 a ton at Moroccan ports, is especially affected, as exporters fear to accumulate stocks, which are apt to lose weight, on a rather problematical chance of shipment. Efforts are, however, being made which, it is hoped, will prevent a serious check to a promising innovation.

Customs Valuations.

A question of Customs, which has long been a source of difficulty, is now being debated with much vigour in the French zone. For years there has been uncertainty, often converted at the last moment into very unwelcome knowledge, as to the basis on which the value of imported goods should be estimated for Customs purposes. The proper basis should apparently be the value at the Customs warehouse at the port of landing, and before duty is paid. The difficulty arises in ascertaining that value, and it is often claimed that the Customs are apt to solve it by adopting any method which will give the highest value, even at times the price in town, which is a very different thing. An effort is now being made to assist the Customs by drawing up, from as reliable sources as possible, lists of values, which it is hoped will introduce some element of certainty into an importer's calculations, pending a possible re-examination of the whole question.

The authorities in the French zone are now taking steps to apply a law directed against usury in cases in which natives are concerned. It was a very old custom at ploughing time to advance money or money's value to native farmers for their expenses of cultivation, to be repaid, often in grain, when the crops were ripe. In the hands of straightforward merchants it was very often a most useful form of assistance, from which the profit even in a good year was by no means excessive, and one that was most popular even among quite well-to-do farmers. The lending of money to natives in this and other ways has, however, undoubtedly been abused, especially by newcomers in a hurry to make money, and natives, whether rich or poor, have been lent or induced to take money at exorbitant interest, apparently with the idea of either making a big profit or securing a hold on the borrower that might be equally useful. It is no doubt to check that sort of enterprise that action is being taken.

TRANSHIPMENT IN ITALY OF GOODS.

For some time past, says the *Board of Trade Journal*, goods the property of British firms destined for Greece, have been held up in Italy awaiting the consent of the Italian authorities to be sent forward. It is now notified that the Italian Government are prepared to give permission *for goods already in Italy* to be forwarded to Greece, and interested parties should take up the matter with their forwarding agents in Italy with a view to securing licences for this purpose from the Italian Ministry of Finance at Rome.

ENGINEERING NOTES.

The Corinth Canal.

The Corinth Canal was opened some twenty-five years ago. Nero began it, and soon left it, and a French company took it up, after eighteen centuries, and at last it was finished by a Greek company. Generally speaking, it disappointed the hopes formed of it. Though it has been traversed by large vessels, it is now only used by small steamers, and larger ships prefer the enormous détour round Capes Matapan and Malea. The canal is too narrow for safety, and there is a strong current through it. An American firm sent to Greece before the outbreak of war a representative who was received by M. Venizelos, and submitted proposals to the Greek Government to effect certain alterations, including the application of steam engines on land for towing the ships through the canal without increasing its present width. The idea was to lay on the one bank of the canal a railway line on which very powerful and heavy engines of special construction would run. The vessel on entering the canal would be attached to one of these engines, which would tow it steadily through the canal quickly, and without touching any of its banks. According to the plans submitted, ships of up to 14,000 tons would be able to pass quite safely through the whole length of the canal. M. Venizelos assured the representative of the American firm that the proposals and plans would be submitted to an expert committee, and that, if their report was satisfactory, he would gladly ask the Chamber of Deputies to pass the necessary Bill, since the scheme would solve a problem of great importance to navigation. But soon after the war broke out, and naturally nothing has been heard since of the scheme. According to reports, the American representative is going to Greece again. In view of the importance of the Corinth Canal, British firms should act at once and ask for the necessary particulars, since, as we have often pointed out, inactivity, and the "wait till the war is over" policy can effect no useful result, and if carried too far will be a positive hindrance to British business enterprise in the future.

Hydraulic Works in Greece.

Apart from the waterworks of Athens, to which reference has been made already, there are several other very important hydraulic works of public interest to be undertaken as soon as the war is over, and to which we should like to draw the special attention of British hydraulic engineers, manufacturers, and contractors. M. Venizelos was particularly interested in these works, for they concern the health of the people, and but for the war they would have been in progress now. They refer to the drainage of numerous swamps in various parts of Greece. For these works many million francs have been voted; and, at the time, French and Italian contractors visited Athens to submit tenders, and went over various parts of the country.

There are about 35 swamps and swampy lakes to be drained in different districts of Greece, and some in the Ægean and Ionian islands and in Crete. The expenditure is estimated for each swamp at from £350 to £40,000. The latter figure is for the drainage of some large swamps, such as those near Vonizza; other drainages are in Halkis, the island of Negroponte, in Eretria, in Thessaly, Attica, Laconia, Phokis, Arcadia, and Argolis, all these within the old territories of Greece. There are, however, many others in Macedonia and Epirus, the newer Greek territories, most of which are of much greater importance, and the latter are worth the attention of prominent British contractors and financiers. One scheme of particular interest, which is now receiving attention, is the drainage of Lake Yenidjeh, in connection with the regulation of the lower portion of the River Vardar.

Lake Yenidjeh.

The River Vardar, especially during the spring months, brings down so large a volume of water from the uplands that its channel, through the lower portions of the valley, is totally insufficient to carry off these waters, with the result that a very extensive area of country is constantly submerged, causing great damage and heavy loss to the proprietors and cultivators of the surrounding lands. In addition, a very large tract of country has from this cause been converted into marshland, and no crops are any longer grown on it. Another large tract of historic fame was completely submerged centuries ago, and has since developed into a lake, approximately triangular in form, with a length of about 11½ miles and a breadth of about 12 miles, known as the Lake of Yenidjeh. The story goes that in the time of Alexander the Great an immense hoard of trophies of war was buried under the land now submerged. When Macedonia was under the rule of Turkey the islets and foliage of the lake were the lairs of Romitajis and brigands, and many "battles" have taken place between them and Turkish soldiers from specially constructed boats on the lake without, of course, any result. A scheme has been proposed to prevent further floodings by the Vardar and to reclaim the marsh-lands and the land covered by the Lake Yenidjeh, on which cotton, rice, and grain could be grown on a very large scale. This could be effected by making a cutting about nine miles in length in the lower portion of the Vardar and embanking both sides of that river for about twenty-four miles. The river stream would be utilised for cutting this channel, in addition to which an outlet would be dredged for the draining of Lake Yenidjeh.

Charcoal Fuel for Motors.

The experiment has been tried in Morocco of running a motor-car on gas provided by the burning of charcoal. It was found that the car was not able to develop more than 85 per cent. of the power that it could produce with petrol, but it is claimed that this drawback is compensated for by the fact that this fuel enables cars to be used in the absence of imported fuel, while there is also the cost to be considered, the use of charcoal fuel representing a great saving at the present price of petrol.

TOBACCO CULTIVATION IN ALGERIA.

According to a French contemporary, the cultivation of tobacco in Algeria is greatly on the increase. The production in 1917 was about 16,400 tons, against 11,420 tons in 1916, and 7,730 tons in 1915. The 1917 crop supplied 15,640 tons of smoking tobacco and 460 tons of snuff. The area under cultivation has undergone a corresponding increase, namely, from 7,641 hectares in 1915 to 9,196 hectares in 1916, and to 16,973 hectares in 1917. On the other hand, the number of planters has risen to 13,863. It is interesting to note that, in ten years, from 1907 to 1917, the production of Algerian tobacco has risen from 5,056 to 16,400 tons.

The greater part of the tobacco for smoking purposes comes from the province of Algiers, which supplied, in 1917, 9,457 tons; the province of Constantine yielded the balance, or 6,484 tons. As regards the snuff, it chiefly comes from the province of Constantine. The average sale price, per 100 kilogrammes, reached about 210 francs in the province of Algiers and 190 francs in that of Constantine. These prices are more than double those obtained in 1916, which were already much above the normal. At these prices the cultivator obtained a yield per hectare of 2,200 francs in the case of smoking tobacco in the province of Algiers, and 2,100 francs in the province of Constantine. These figures show how profitable the cultivation of tobacco has become.

TURKISH SHIPPING ENTERPRISE.

The Turkish Government, which is showing considerable interest just now in maritime matters, has decided (says a French contemporary) to reserve its coasting trade for vessels flying the Turkish flag. Even before the war Turkey possessed a respectable fleet of wooden coasters, the building of wooden ships having always been very active in Turkey. To develop this industry the Government has placed at the disposal of the builders a quantity of timber from the forests of Asia Minor sufficient to turn out 130 vessels, each of 500 tons.

Egypt's sugar exports from January 1 to July 25 amounted to 43,146 sacks, compared with about 102,865 sacks in the same period last year.

INDIAN WAR LOAN.

It is officially notified by the Government of India that, after the closure of the main section of the Second Indian War Loan on September 14, they will be prepared to accept as further subscription to the loan, at a rate of exchange of 1s. 6d. per rupee, British Treasury bills tendered in England, under a discount of 3½ per cent., to an amount not exceeding the previous cash subscription of the tenderer in India, provided that the Treasury bills are accompanied by a certificate that they were the property of the actual subscriber prior to May 10, 1918. Applications for the tender of British Treasury bills in England as aforesaid will be received by the Controller of Currency at Calcutta, the Accountant-General at Bombay, and the Accountant-General at Madras, between September 16, 1918, and October 12, 1918, inclusive. The applicant should state the amount and series of War bonds purchased, the name of the Government office or bank from which they were purchased, and the numbers of the promissory notes or stock certificates issued to him in lieu. After the facts stated in the application have been verified, the Controller of Currency will inform the Secretary of State for India that Treasury bills may be received on behalf of the applicant up to a named amount, and intimation will be simultaneously sent to the applicant. The applicant should then arrange with his representative in England for the tender of the Treasury bills to the Secretary of State, along with a certificate of ownership of the bills prior to May 10, 1918. The bills should be tendered before October 31, 1918. On receipt of telegraphic intimation from the Secretary of State regarding the tender of the Treasury bills, the Controller of Currency will communicate with the applicant, informing him of the discounted value of his Treasury bills at 1s. 6d. the rupee, and of the further amount in cash payable by him to make up the exact multiple of Rs.100. On payment of this amount, which should be supported by a receipt from a Presidency bank or Government Treasury, the Controller of Currency will arrange for the issue of scrip bearing interest from March 15, 1919, advance interest from the date of tender of Treasury bills in England up to March 14, 1919, being paid at the time of issue of scrip.

COLOMBO PORT ADMINISTRATION.

It is stated in the report on the Ceylon Blue Book for 1917 that during the year the work connected with the administration of the port of Colombo has very greatly increased. The policy of retrenchment which was begun soon after the outbreak of war has been continued, and for this reason, and owing to the difficulty in obtaining materials, works of improvement at the port have necessarily been curtailed. In July the second warehouse between the canal and the Patent Slip was completed. The total warehouse area of the port is now 559,106 square feet, and the total quayage 5,828 lineal feet, an increase of 267,506 square feet and 1,183 lineal feet respectively since 1913. Further improvement in the sanitation of the port has been made. The Chalmers Granaries at the Racquet Court have now been completed; the blocks of buildings, ten in number, have been divided into 100 stores, giving accommodation for the storage of 600,000 bags of rice. The site for the oil installations depot at Kolonnawa has been definitely decided on, and a sum of Rs.850,000 for the acquisition of land, excavating and filling, and for providing railway connection has been voted by the Legislative Council. The land having been acquired, work was commenced at the site in December. A scheme for the berthing of oil steamers is now being prepared. The survey has been completed, and the detailed plans of all the bridges, etc., are nearly finished.

The Egyptian Delta Light Railways Company, Ltd., have raised the present surtax of 25 per cent. on local goods rates to one of 50 per cent. on all charges. The alteration took effect on August 1.

The court of directors of the Ionian Bank, Limited, have declared an interim dividend at the rate of 6 per cent. per annum, free of income tax, for the half year ended July 13, payable on and after September 10. Transfer books are closed from August 28 to September 10.

"THE INDIAN COTTON SEED CROP."

An Official Statement.

A summary of the article with the above title which appeared in THE NEAR EAST on May 24 was telegraphed out to India, and has been the subject of the following Press *communiqué* issued by the Government of India :—

"Some days ago Reuter's telegrams contained an extract from the journal NEAR EAST, in which it was stated that two million tons of cotton seed were produced in India annually, of which two hundred thousand tons were used for planting and four hundred thousand tons were exported. It was added that doubtless a large proportion of the remainder was fed to cattle, which was an absurdly wasteful proceeding, whilst a considerable residue must be absolutely wasted. The journal regarded it as a standing reproach to commercial and industrial enterprise in India that a natural source of enormous wealth should be practically neglected.

"This extract is calculated to give a wrong impression of the real position in regard to cotton seed, and contains numerous inaccuracies, which it is desirable to correct. Exact figures in regard to the production of cotton seed in India are not available, but an examination of the figures of outturn of cleaned cotton and of the percentage it bears to seed shows that there is reason to believe that an average annual production of 1,800,000 tons of seed is a liberal estimate. The average exports of seed during the last five years have been 151,595 tons only, the highest figure being 284,327 tons in 1913-14. Cotton seed is regarded as a valuable feeding stuff in this country, and the inquiries of the Cotton Committee have shown that none of it is wasted, but that, on the contrary, it fetches a price of at least Rs.2 to Rs.3 per maund for feeding purposes. The Punjab alone imports cotton seed to the value of nearly 50 lakhs per annum. Whilst it is possibly correct to say that it is wasteful to feed seed direct to cattle instead of in the form of cake, experience has tended to prove that the establishment of a large cotton seed oil industry in this country would not benefit the Indian agriculturist, who could not afford to pay for hydraulic pressed feeding cake the price that can be obtained by exporting it. The result of the establishment of such an industry might then be that the oil would be sold in this country and the cake exported, and that the agriculturist would be deprived of a valuable feeding stuff which, over large tracts of country, can be obtained cheaply from his own land or that of his neighbours."

The article to which reference is made was contributed by a valued correspondent, and it is regretted that it should have inadvertently contained an inaccuracy. What the brief summary of the article telegraphed by Reuter's Agency to India did not bring out was that the article was not couched in terms of destructive criticism, but was intended as a helpful illustration of one way in which it was believed that India's material development could be furthered. From the *communiqué* it appears that the writer was misinformed in regard to large quantities of cotton seed being wasted, and it is satisfactory that an occasion has been afforded for removing what might otherwise have become a general misapprehension. With regard to the other points raised, the writer of the article put the amount of cotton seed produced in India at *about* 2,000,000 tons, a qualification which may not improperly be held to cover the difference between the writer's estimate and the official figures. Then, as regards exports, the extract on which the *communiqué* is based quotes the writer as saying that 400,000 tons were exported. There were, as a matter of fact, three references to the subject, but in no case was any such definite statement made. It was stated that "it has . . . reached *about* 350,000 tons per annum," that, "according to Sir A. D. Steel-Maitland, M.P., 'the quantity of Indian cotton seed exported, chiefly to the United Kingdom, varies from 100,000 to 400,000 tons per annum, a slight increase of price being sufficient to bring forward largely increased quantities,'" and, finally, that "the quantity exported—as we have seen—*has not yet exceeded* 400,000 *tons*." The figures were in excess, but not to the extent imagined. There follows the question of waste in regard to which, as we have already pointed out, the writer's estimate was not in accordance with the facts.

Finally, with reference to the writer's argument that it is wasteful to feed seed direct to cattle, it is stated in the *communiqué* that "experience has tended to prove that the establishment of a large cotton seed oil industry in this country would not benefit the Indian agriculturist, who could not afford to pay for hydraulic pressed feeding cake the price that can be obtained by exporting it." Unfortunately it is not stated where this experience was gained; much depends on whether it was obtained on the coast or at mills in centres of cotton seed production. Suppose the milling to have been done on the coast, then the Punjab, for example, might well be unable to pay for hydraulic pressed feeding cake the price that can be obtained by exporting it, in view of the fact that it would have to bear, in addition, the cost of freight on a long railway journey.

PROSPECTING IN MOROCCO.

The Board of Trade are in receipt, through the Foreign Office, of information from His Majesty's Minister at Tangier, to the effect that, in virtue of a recent Dahir, the register, established under the Moroccan Mining Regulations of January, 1914, for applications for permits to prospect for minerals in the French Zone, which was closed in November, 1914, as a consequence of the situation created by the war, will be reopened as from September 3, except for applications relating to the districts in which the Mining Regulations were suspended by the Viziriel Decrees of May 16 and June 15, 1914. The Decrees referred to suspended the grant of prospecting permits in the territories of Western and Eastern Morocco, respectively, situated outside certain zones defined in the Decrees. Copies of these two Decrees may be consulted by persons interested on application at the Enquiry Office of the Department of Overseas Trade (Development and Intelligence), 73, Basinghall Street, E.C.2.

COMMERCE AND RECONSTRUCTION.

Position in Foreign Countries.

All firms who desire to know what their rivals are doing and planning—notably those in enemy States—and what are the economic conditions and trading prospects in foreign countries can now obtain two valuable War Office publications issued fortnightly, the Economic and the Reconstruction Supplements to the "Daily Review of the Foreign Press." The price of the Supplements will be 6d. The Economic Supplement deals with trade and commerce, railways and shipping, banking and finance, labour conditions, social and economic policy and legislation, etc.

The Reconstruction Supplement describes the measures being taken or suggested in Germany and elsewhere in connection with the return to peace conditions. Half-yearly indexes to the above, price 6d., can also be obtained. These publications will be issued by His Majesty's Stationery Office, and can be purchased through any bookseller or directly from H.M. Stationery Office at the following addresses: Imperial House, Kingsway, London, W.C.2, and 28, Abingdon Street, London, S.W.1; 37, Peter Street, Manchester; 1, St. Andrew's Crescent, Cardiff; 23, Forth Street, Edinburgh; or from E. Ponsonby, Ltd., 116, Grafton Street, Dublin.

ROUMANIA'S WAR COSTS.

A telegram received here from Bucharest via Berlin, says Reuter's Amsterdam correspondent, reports that the Roumanian Finance Minister, on August 23, introduced a Bill in the Chamber of Deputies raising the war credits of 1,700,000,000 francs by 300,000,000 francs. As the Legislative bodies are not sitting, the credit will be increased by the Cabinet, and will be sanctioned by Parliament later. All damages and expenses caused by the war will be paid from the new credit, which will be covered by Treasury bonds, internal Loan, or some other means.

According to Bucharest newspapers, the Government will appropriate 600,000,000 francs for damages caused by the war. Indemnities of from 25 to 75 per cent. will be paid for damage suffered. For damages of over 100,000 francs only 25 per cent. will be granted. District Commissions will be appointed to fix and distribute indemnities.

INDIAN CEMENTS.

The Government of India has issued a report of tests of cements carried out by Mr. Musgrave, Alipore, stating that he finds that Indian Bundi and Katni cements, as at present manufactured, are equal to the best English brands, also that the same is true of Porbandar cement, except as regards its tensile strength, which is somewhat low. All these cements are sound, reliable, and suitable for every class of work. Imported cements are not infrequently found to have deteriorated during a voyage, and Indian cements offer advantages in this respect also. When the article has to be conveyed long distances by rail from the factory to the consumer the freight charges add greatly to the cost, and for this reason it is desirable that cement factories should be distributed over the country as widely as possible.

NEWS FROM ALL SOURCES.

The report of the Indian Industries Commission was in the hands of the printer last month.

It is reported that the recent census of paper supplies in Egypt shows that there are about six months' supplies in the country.

The latest news of the Algerian harvest is very favourable. It is estimated that the grain output will amount to 23,000,000 quintals.

For the two months ended May 31 India's exports, including re-exports, amounted to Rs.36,71,72,868, while the imports amounted to Rs.23,75,05,234.

It is stated that M. Saropoulos, of the Ministry of Communications, will officially represent Greece at the forthcoming tour of the Great Industrial Mission.

Dr. Butler, of the Indian Agricultural Department, is proceeding on foreign service to the Malay States to advise the Federated States on agricultural questions.

During the absence on leave of Sir Robert Highet, C.B.E., Agent of the East Indian Railway, Mr. J. A. Marshall, Chief Auditor of the Railway, will act as Agent.

A return of the net income and expenditure of British India under certain specified heads has been issued as a Parliamentary paper. The return covers the three years 1914-17.

The yield of the cotton crop at Kassala was 24,000 kantars this year, and it is stated that this amount would have been doubled but for the damage done by the different cotton pests.

The retirement is announced of Mr. F. J. Clark, Secretary to the Agent of the G.I.P. Railway. Mr. Clark, who joined the railway in 1885, will work for the Home Board during the war.

At a general meeting of the members of the Liverpool Cotton Association a bye-law was adopted giving effect to their previous resolution not to trade with the present enemies of Great Britain for a period of ten years after the conclusion of peace.

It is reported that the wolfram output of the Tavoy district of Burma was 3,652 tons in 1917. The output of Tavoy district, which produces 80 to 90 per cent. of the wolfram produced in Burma, was 3,036 tons in 1916, and 2,115 tons in 1915.

Mr. C. D. M. Hindley, M.A. Cantab., M.I.C.E., who has been appointed to the new position of Deputy Agent in Calcutta of the East Indian Railway, joined the engineering department of that railway in 1897, and has been Secretary to the Agent for the last three and a-half years.

A notice is published in the *Journal Officiel* (Paris) to the effect that the authorities of the Spanish Zone in Morocco have decided that the exportation of any kind of merchandise from the Zone may not be effected except in virtue of a special authorisation issued by the competent authority.

The Telephone Department of Egypt has decided to raise the telephone subscriptions of cafés and other public places from £E10 to £E30 per annum. It is reported that many Alexandria cafés have decided in consequence to discontinue the telephones, while others intend to charge P.T. 1 for each call.

The Government of Bengal has appointed a committee of engineers, with Mr. F. A. A. Cowley, Chief Engineer to the Government, as president, to consider whether the Bidyadhari river is now a suitable outfall for Calcutta drainage or is likely to be so in the near future, and what works should be constructed to enable the river to scour its bed and thereby lower the existing low water level in the river.

MOROCCAN CUSTOMS DUES.

A notice, signed by the "Chef de Service des Douanes," published in the Casablanca Press, states that everything sent by post must be submitted to examination by the Customs authorities. Objects enclosed in postal packages will be charged duty if they possess a commercial value and will be retained if they are found to be in the prohibited list. The opening and charging on open parcels will be carried out by postal officials in the presence of a Customs officer who will examine them; neither consignee nor his representative need be present. In the case of everything of this kind destined for persons who have a right to exemption the addressees must not take delivery, in case Customs dues are claimed, until their position, so far as concerns the Customs, has been proved by production of the recognised "cartes de franchise" or other proof of identity. In the same way, in case of wrongful exaction of dues, the application for return of the money paid cannot be entertained unless the goods have not yet been delivered and the Customs officials can therefore make a second examination. No reduction of duty can be made after delivery of the goods, and when these are therefore no longer under the control of the Customs. In the case of letters, closed packages, ordinary or registered, containing dutiable or prohibited goods, the examination will not be made except in the presence of the consignee or of his representative, duly notified by the postal authorities of the day, hour, and place of the examination.

ANGLO-HELLENIC BANK.

The Anglo-Hellenic Banking and Commercial Company, Limited, has been formed as a private company, with a capital of £10,000, in £1 shares, to carry on the business of bankers, commission agents, brokers, export and import merchants, etc. The registered office is at Effingham House, Arundel Street, W.C.

INDIAN RAILWAY DEVELOPMENTS.

Sanction has been given by the Indian Railway Board for a detailed survey by the agency of the Bengal-Nagpur Railway for a line from Pandu to Shillong, a distance of 70 miles, on the 2 feet 6 inches gauge.

The Railway Board has also sanctioned the survey by the agency of the Bengal-Nagpur Railway for a line on the 5 feet 6 inches gauge from Sini Station, on the Bengal Railway, to Jamda, with a branch to Jaintgarh, in all a distance of roughly 80 miles, and for an alternative line between Halndpukur, on the Kalimati-Gaurmahisani branch of the railway and Chaibassa, a distance of 24 miles. There will also be a survey to determine whether an extension to Keonghur shall be made from Jaintgarh, Badampahar, or Sulapat.

BURMAH OIL BONUS.

The following particulars are published by the Burmah Oil Company with regard to the issue of bonus shares:—(1) Allotment letters bearing distinctive numbers of the shares will be despatched to ordinary shareholders on the register at July 31 early in September; (2) letters of renunciation will not be issued, as the law agents of the company advise that same are not appropriate to this issue; (3) transfers of bonus shares will not be certified and registered prior to the issue of allotment letters; and (4) it will not be possible to transfer the original shares and "rights" to the bonus shares on the same deed. Where shares were sold "cum rights" and it was impossible to get the transfers lodged for registration by July 31, the procedure should be as follows:—(a) transfers of the original shares should be completed and sent in for registration as soon as possible; (b) immediately the seller is allotted the relative bonus shares a further transfer of same in favour of the buyer should be prepared. The consideration should be the same as was stated in the original deed, with the following words added, "Previously paid as per transfer dated..... on which the ad-valorem duty was affixed."; (c) transfers should be stamped with general deed duty of 10s. Where very small numbers of shares fall to be transferred, the deeds may be stamped with the ad-valorem duty.

COMPANY NOTES & REPORTS

The profit of the Bordubi Tea Company for 1917 was £17,043. Final dividend of 12½ per cent., making 20 per cent. for the year; to reserves, £4,000; forward, £9,138, against £5,312, subject to excess profits duty.

In 1917 the Rungajaun Tea Company made a profit of £3,902, against £16,763. After paying excess profits duty for 1916, amounting to £7,500, the balance brought forward was £9,606. Dividend of 10 per cent., against 20 per cent.; forward, £9,586, subject to excess profits duty.

The report of the Jokai (Assam) Tea Company for 1917 states that profit amounted to £117,142, which with interest on investments, etc., £1,139, and £27,490 brought forward gives £145,771. Deducting income-tax, depreciation on shares, etc., £9,045, there is left £136,726. The directors recommend a final dividend of 12 per cent. (less tax at 5s.) on the ordinary shares, making 17 per cent. for the year, to transfer to staff provident fund £1,000, to reserve £ 12,500, and to carry forward £74,726, subject to excess profits duty estimated at £46,500.

The report of the Isa Bheel Tea Company for 1917 states that profit after payment of manager's commission and providing for depreciation of machinery, buildings and tramways, was £4,079. After payment of excess profits tax (£4,711), £3,545 was brought in, and deducting income tax (£2,198), the balance at credit of profit and loss is £5,521. Directors recommend a dividend of 15 per cent. on ordinary shares, less tax, payable at once, and to carry forward £2,709.

The report of the Derby Tea Company for 1917 states that gross profit (after payment of manager's commission) is £11,981, from which has to be deducted income-tax £3,807, and loss on realisation of investments, leaving £8,159. £12,557 was brought in, which, with interest on investments, gives £21,119. The directors recommend a final dividend of 25 per cent. less tax, payable at once, making 30 per cent. for the year, and to carry forward £15,942.

The profits of the Doloo Tea Company for 1917 were £11,717, against £17,740. Final dividend of 7½ per cent. less tax, making 10 per cent., against 12½ per cent.; forward (subject to excess profits duty), £5,187, against £7,650.

The Borelli Tea Company, in 1917, made a profit of £9,270, against £11,065. The final dividend is 5 per cent., making 10 per cent. for the year, against 7½ per cent., and the carry forward is £2,369, against £2,809, subject to excess profits duty.

The Bargang Tea Company, in 1917, made a profit of £9,740, against £12,643. The final dividend is 10 per cent., making 20 per cent. for the year, the same as for 1916, and the carry forward is £3,589, against £4,467, subject to excess profits duty.

The report of the Dhamai Tea Company for 1917 states that the gross profit was £9,553, which with interest and transfer fees makes £10,409. Deducting managers' and agents' commission, income-tax, and depreciation of machinery, £2,796, net profit was £7,613; £2,274 was brought in, giving £9,886. After placing to development fund £1,023, directors recommend a dividend of 10 per cent., less tax, on the deferred shares for the year and to carry forward £5,601, subject to directors' fees and excess profits duty, if any.

The report of the Igalkande Rubber and Tea Estates for 1917 states that the profit amounted to £4,915, and £1,226 was brought in, making £6,141. After placing to reserve for renewals and contingencies £400, the directors recommend a final dividend of 6 per cent. (making 10 per cent. for the year) and to carry forward (subject to excess profits duty) £1,115.

Dividends, Payments, etc.

The directors of the Southern Punjab Railway Company have declared an interim dividend on the ordinary stock in respect of the year ending September 30, 1918, of 5 per cent., together with a bonus of 1 per cent., to be paid on September 11. A year ago no bonus was paid.

The directors of the Hyderabad (Deccan) Company have declared a final dividend of 1s per share and a bonus of 8d. per share, less tax, to be paid on August 31.

ON 'CHANGE.

(From Our Correspondent.)

Throgmorton Avenue, Wednesday.

Although in the early part of the week the inactivity and dullness noted in our last week's report still continued, there has been a revival of business during the last few days on a renewal of buying orders from Egypt; where, no doubt, the very satisfactory military news is beginning again to influence the market favourably.

In Government stocks there is no change to report, except that City of Alexandria bonds are nominally one point higher at 83, but without sellers.

In Bank shares some business has been going on in Nationals round the current level, and also in Agriculturals; but the latter are 1-32 easier at 7¼. In Railways Delta Lights are about unchanged at 7⅜ xd.

In Land Shares Aboukirs, after receding to 25s., are unchanged at 25s. 6d., on some Egyptian demand. Delta Lands have become a firmer spot round 17s., and New Egyptians have been in demand for Egypt and are closing 4½d. higher at 22s. 7½d. In Sidi Salems several hundred shares have changed hands round the current price of 2⅜, and Union Foncières are 1-32 higher at 3 3-32. United Egyptian Lands have been enquired for and the price is 1d. firmer at 2s. 7d.

In Miscellaneous shares the feature has been the revival in Salts and Sodas, on buying for Egypt, and at 58s. 6d. the shares are 3s. 6d. higher than last week. Khedivial Mails have also appreciated 1s. 6d. to 61s. 6d.

Amongst Greek securities buyers continue plentiful, but sellers are very scarce; with the result that there is very little business passing. Some "Currant" bonds have changed hands round the price of 95, and in Bank shares the feature has been the rise of 7-16 in Bank of Athens to 4¼.

Oil Shares.

Prices were more or less unchanged, the only feature of interest being a slight weakness in Anglo-Egyptians (B), which declined 1-16 to 2⅞.

LANCASHIRE COTTON.

Market Dearer.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market has again been dearer, and almost from day to day spinners and manufacturers have required more money. Most traders hold bullish views and there are certainly no signs of lower values in the near future. The American Government Bureau report on the conditions of the crop will be published next Tuesday, and a low figure is already discounted. Many people believe that the yield will not be more than 12,000,000 bales. Most advices relating to the Egyptian growth are favourable. Merchants and users are making the best of Government regulations, but the conditions in many instances are disturbing. Prices in Egyptian yarns have hardened. Certain counts and qualities in the finer numbers are distinctly dearer. The requirements for aeroplane cloths are increasing and smaller supplies are available for private orders. In cloth for Egypt a fair amount of inquiry has been met with, but operations have been somewhat irregular. Dealers in Cairo are said to be clearing supplies at very profitable rates. A considerable business has been done in bleaching cloths for India. Offers in grey shirtings still lag behind. American yarns have advanced in price, and a very fair trade has been done. Some business continues to be reported in dyed yarns for India.

NOTES OF THE WEEK.

Although military operations in the Eastern theatres have not loomed large during the summer months, the different armies can have experienced little relaxation. In Mesopotamia there has been an almost complete absence of collisions with the Turks; but from the fact that General Marshall has despatched a force to the Caspian Sea, strong enough to be able to send detachments to Baku and Krasnovodsk, it may be inferred that the army as a whole has been kept fairly busy. Even if the necessity of holding the line from Baghdad by way of Kermanshah and Hamadan to Enzeli did not impose much strain on the Expeditionary Force, it is evident, from General Marshall's despatch, that he finds in the administration and development of the country enough work to occupy all ranks. His record during the last period of cool weather suggests that the Army will again be on the move as soon as climatic conditions are favourable. It remains to be seen whether the further commitments in the north-east entail an entirely new orientation of the campaign. The success attending the settlement of Mesopotamia is a strong argument for a vigorous effort to bring the war in this particular theatre to an end.

Some idea of conditions in Palestine during the summer is conveyed by a message from the official war correspondent with the Australian Force. It has been, he says, for the Australians in the Jordan valley the severest experience that they have had since they crossed the Canal. The shade temperature for months has not been below 100° F., and frequently it has been 120°. The enemy has always been aggressive, and fights frequent and sharp; but our line has been resolutely maintained, with heavy Turkish and German losses. Not the least satisfactory feature of this summer has been the highly successful campaign for the prevention of malaria, which alone made the valley habitable; and it is good news to hear that with the return of cooler weather both men and horses are in fine fighting trim. Of late military activity has been for the most part confined to the air forces, and here, as in other theatres, our airmen have established a marked superiority over the enemy.

The official explanation given of the military situation in Albania is that the Austrian reinforcements arrived before the Italians had time to reconstruct the communications and defences of the zone round Berat and Fieri. It must always be a moot point for an army whether it is better to sit down and do nothing or to attempt something in the hope of being rewarded by luck. In this instance the Italians made a successful advance, but apparently shot their bolt before they could reach any satisfactory line. In the face of the enemy's reinforcements they had to fall back immediately, with the result that they returned to the place from which they had started; and it seems to be much more favourable to them than the country that they proposed to hold, if General Pflanzer-Baltin had not appeared on the scene. The chief sufferers, it is to be feared, will be the Albanians, who may have thrown in their lot with the Allies, but have been unable to withdraw their families from the zone now again in Austrian occupation.

It is evident that King Ferdinand's health gives no cause for anxiety to his subjects or to his allies. At Bad Nauheim on August 29 he was able to meet the Emperor William at the station. A private *tête-à-tête* conversation followed, and was continued after luncheon until the two monarchs went by motor-car to Homberg-vor-der-Hoehe. The official report states that "the several hours' conversation of the two High Allies dealt with the whole of the military and political situation. The conversation was carried on with a firm decision to hold out mutually in the defensive battle of the Alliance, and in the spirit of the faithful maintenance of the tried system of the Alliance." From the fact that on his return from the drive the German Emperor presented King Ferdinand with a statuette of himself and awarded the Order of Luise to two of the King's daughters it has to be inferred that he was satisfied with the results of his visit.

In the meantime the subject of peace is being discussed with some animation in the Bulgarian Press. There is the inevitable divergence of opinion; but it is evident that even in quarters favourably disposed towards "peace by agreement" there is the fear lest any move on Bulgaria's part may expose her to the designs of "those who wish to crucify Bulgaria." It is probable that the following statement of the *Preporetz* represents the official view: "The policy and the aims of Bulgaria are clear. They fully conform to the principle of national self-determination, which has been solemnly proclaimed by our opponents. Bulgaria has accomplished her unification, and she sees in the strength of her arms, in the justice of her cause, and in allied

Digitized by Google

loyalty the only security for this unification obtaining an international sanction at the general peace conference."

Expressed in other words, this may be taken to mean: "Our heart is no longer in the war; but we are set upon national unification, which the present alliance has gained for us. We note that the Entente have proclaimed the principle of self-determination, which should mean the same thing; but we do not see any means of placing our national unification on a permanent basis apart from an international guarantee to be enforced by Germany at the general peace conference at the end of the war." If this be the Bulgarian attitude, the Allies will be able to decide whether it is worth while to attempt to enlighten these half-hearted partners of the Central Powers. In the light of recent events on the Western Front Bulgarian belief in the capacity of Germany to carry through a settlement on her own lines will have weakened, if it has not disappeared altogether. The question to be answered is whether it is likely to be of any advantage to the Allies to have the Bulgarians detached from the Central Block. If it is, then it will be worth the exercise of some diplomatic effort in this direction. After all, even Germany will be granted peace when she accepts the Allies' terms. It is well known to all but the wilfully blind that at present there is no thought on her part of accepting those terms, and for this reason overtures are useless and actual negotiations would only be used for the undoing of the Allies. Bulgarian militarism has not attained the same Machiavellian heights, and in all probability can be far more easily exorcised. In any case, the Allies need not allow the Bulgarian people to hug to themselves the illusion that Germany is the only reliable sponsor of the doctrine of national self-determination.

The Turkish Government has certainly scored a point in being able to parade the Sheikh-es-Senussi before the population of Constantinople, provided the visitor is the real holder of that title. He is said to have crossed the Mediterranean in a submarine, and it says much for the spirit of the Sheikh if he faced such an experience for the *beaux yeux* of the German Emperor or of the Committee of Union and Progress. He may have had other reasons for leaving his own country after the inglorious campaign against Egypt at an earlier period of the war. It is evident that in Turkey he is meant to be a set-off against the defection of the rest of the Arab world; and in particular of the Grand Shereef of Mecca. That he is thoroughly sound from the point of view of the Central Alliance is shown by a letter which is said to have been recently sent by him to a member of the Turkish Parliament. The opening sentence: "Owing to the lack of necessary means, I have not been able before to answer your letter," suggests that the Sheikh's existence has been of a mobile character, or that the submarine service across the Mediterranean is irregular. But he quickly warms to his subject, and asks concerning the Arabs: "What can have become of the intelligence and the wit of this race, that it acts so foolishly?" The trouble must, of course, be laid at England's door, and he exclaims piously: "May God wipe out these accursed ones," which is, no doubt, the version in vogue among the Senussi of a wish at one time expressed with equal fervour in Germany.

Words are, no doubt, used to conceal the thoughts of the speaker, and the most flagrant offenders in this respect are official utterances. On the other hand, the latter have some value when they constitute a definition of policy which can be regarded as binding on the speaker. Last week in these pages it was pointed out that the statement that King Nicholas of Montenegro was against the whole idea of Jugoslav unity ran counter to his words and his acts—a remark occasioned by certain propagandist writings in a contemporary, which has all the facts within its knowledge. It was probably in view of such attacks on his good faith that King Nicholas felt called upon to enunciate his policy afresh in a letter addressed to his Prime Minister on July 14 in connection with the honours conferred upon the latter by King George and the King of Italy. The King wrote: "May the high honour of which you and your colleagues have been the recipients at the hands of our Allies and protectors be an encouragement to continue your action in the same way as you have begun for the welfare of our martyred Montenegro and for the realisation of our ideals—deliverance and union of all the Jugoslavs—ideals which I declared to be our goal in my proclamation when, in July, 1914, I declared war on Austria-Hungary. These ideals have been for five centuries the basis of the political and national programme of Montenegro. . . . Only a union so constituted of the Jugoslavs can be a worthy member of the ideal society of free peoples." These words surely are sufficient refutation of the contention that King Nicholas is opposed to the idea of Jugoslav union.

Another landmark in the East is doomed. Steps are to be taken to eliminate beggars from Greek streets, where they have long been a pathetic and too familiar sight. Thanks to the generosity of an American philanthropist, a home has been provided for deserving cases, in which they will be looked after and encouraged to contribute towards their own livelihood by learning a trade, if physically capable. The migratory beggar is to be sent back to his place of origin. The Greek beggar had some claim to distinction in his own line of business, for he is probably the only member of the world-wide brotherhood who asks for only a halfpenny, and volunteers change in the event of a penny donation proving beyond the contemplated philanthropy of the would-be donor.

India is to have its own "Flag Day" at last. The East is proverbially slow in adopting new ideas, and in this matter India—and its well-wishers in this country—may safely claim that they have not been over-hasty or shown any spirit of greediness. That should surely prove a recommendation to consideration, and in a fortnight's time, when London will have an opportunity of marking its sense of obligation to the Indian Army and to the loyal people of India, too, we may reasonably expect that the spirit displayed will be worthy of the capital of the Empire. The appeal is for £50,000, and though that sum is a large one compared with the amounts obtained by certain other "flag days," it would certainly not be surprising if it were exceeded. The administration of the funds could not be entrusted to better hands, and the names of those who make the appeal are sufficient guarantee that all will be done as it should. It is to be hoped, therefore, that on Friday, September 20, London will mark its recognition of all that India has done, of the generosity with which she has given both men and money for the common cause, of her loyalty to the King-Emperor.

With the extension of British responsibilities in the Middle East the question of relief for the suffering populations with whom we are being brought into direct contact becomes urgent. Readers of THE NEAR EAST are already aware of the work done by the Armenian Red Cross and Refugee Fund. But the situation now threatens to go beyond the capacity of voluntary relief funds, and official help will be necessary if funds are to be adequate to cope with the distress. In addition to the state of affairs in the Caucasus, there is now the problem of the large number of Jelus, or Assyrian Christians, retreating before the Turks in Azerbaijan. It is expected that the total number of refugees at Hamadan will amount to eighty thousand. The British Government has allocated a sum of money for the purpose of relieving their distress, but in turn they appeal to the voluntary Relief Funds to help to the utmost of their power.

The statement made in these columns last week that the political position in India was not yet entirely clear remains substantially true so far as the actual results of the existing ferment are concerned. The cables continue to give us tantalising glimpses of the struggle in progress in the minds of leaders and followers, but it would require a very bold man to predict the actual position even at the end of this month, and we have no intention of treading on such dangerous ground. The case is different regarding the processes now at work. Whatever the immediate result may be, the processes are as old as politics, and we are watching the development of a drama which may fairly be called tragic in the classic sense of the term, for in essence it is the struggle of well-meaning men in the grip of inexorable destiny.

Indian politicians still cling to the ideal of unanimity, which has dominated their activities since the foundation of the National Congress. The ideal is by no means ignoble, and it appeals with peculiar force to the leaders of a rising nationality; its defect is that it is inconsistent with the facts of human nature, and hence arises the need for the strenuous efforts which have marked the last twenty years to secure outward unanimity, even at the sacrifice of realities. "Whatever we may think, let us in public all say the same thing," has been the unwritten law of Indian politics, and its enforcement has been made possible of late mainly through the defects of the existing constitution, which consolidated the "Indian Opposition," and enabled all schools of thought to unite in the facile task of destructive and irresponsible criticism.

The whole situation was changed by the call to pass from such criticism to constructive thought and work. A gallant attempt was indeed made to preserve the semblance of unanimity in the constitutional scheme prepared by the National Congress and the Moslem League, a scheme in which every real difficulty was evaded or glossed over while agreed features were elaborated in minute detail, but which ceased to count as soon as its defects had been brought clearly into the light. Now that the country has the benefit of the ruthless analysis of the position contained in the Chelmsford-Montagu Report, as well as in a mass of unofficial criticism, even the most ardent politicians are being forced to recognise that the ideal of unanimity is in accordance neither with political fact nor with psychological experience, and that a change in orientation is overdue.

If political science has one important lesson for the world, it is that which is embodied in the maxim that some people will want to go faster than others, and that people who go the same pace will ordinarily keep together. The result may be, as was until recently the case in England, the formation of two parties, Conservative and Liberal, the slow and the fast; or, as is more usual in Europe, the people may be differentiated into a larger number of groups, from the Extreme Right, which scarcely cares to move at all, to the Extreme Left which, like a familiar type of motorist, subordinates all other considerations to the exhilaration of speed. The grouping will vary with the conditions of each separate case, but some sort of grouping there must be as soon as people begin to take politics in earnest.

It is this process of differentiation which is now at work among Indian politicians, and which can be traced in the curt announcements of the cable that this Pundit adheres to the Congress, or that that Rajah is likely to break with the League. From the nature of the case it is an unpleasant process for the individuals concerned, and we can rightly sympathise with them in the dethronement of a cherished ideal, the failure of carefully constructed machinery, and—too probably—the rupture of long-standing personal associations. The change is, however, necessary, and we can only advise our friends to seek the consolations of philosophy, that nineteenth-century philosophy which still holds sway in India, and which teaches that differentiation is the essence of all progress: India is in fact growing up.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, August 5.

Secondary Schools.

The unprecedented number of failures among the candidates this year for the *Kufa's* (competence) certificate has given rise not only to complaints on the part of the unsuccessful students, their parents, the teachers, and the schools inspectors, but also to much adverse criticism on the part of the native Press; 82 per cent. of the students who sat at the third-year examination of the Secondary Schools having failed to pass. It is interesting to note the different explanations advanced to account for this extraordinary and disquieting result. According to some, the failures are attributable to mercenary motives—a sort of commercial competition between the different schools, which, in order to secure and retain the largest number of students, are said to facilitate their transfer from the primary to the secondary section without much regard for merit; others ascribe the trouble to the incompetence or inexperience of the teachers; while yet others declare the principal causes to be the large number of students in the classes and the consequent inability of the teachers to devote sufficient time and attention to each. Whatever truth there may be in any or all of these statements, one cannot help asking why these causes should have been operative to such a disastrous degree this year only. All who have the educational interest of Egypt at heart will wish that such an unusual and unsatisfactory state of things may be looked into, and the necessary remedy applied.

Egypt's Paper Supply.

Statistics collected by the Supplies Control Board show that the stock of paper, including paper for journals, is sufficient for six months of the country's requirements; and the Customs returns show that arrivals are more or less regular and double those at the same period last year. At one time unrestrained speculation, coupled with diminished imports, led to the forcing up of the price to 240 piastres per ream, when the pre-war price was only 16 piastres. Thanks in part to the vigilant attitude that the Government lately assumed, the price has fallen to 180 piastres; and so long as it is seen that dealing in this article is confined to the regular paper merchants, there should be little fear of a return to the preposterous prices of a few months ago.

Proof of the partial easing of the situation is the recent appearance of three Army magazines. The first has the suggestive title of "Kia Ora Coo-ee," while the others are "The Cacolet," journal of the Australian Camel Field Ambulance, and the "14th Company Magazine."

Royal Exchange
ASSURANCE. A.D. 1720.

Of course, these magazines are unpretentious in the matter of size; though they contain excellent matter.

H.H. the Sultan.

On Tuesday evening the Sultan gave a grand entertainment at Ras el Tin, to which 600 persons were invited. Among the guests were the Premier, the Ministers, the President of the Legislative Assembly, the members of the Diplomatic and Consular Corps, the Advisers, the Under-Secretaries of State, and other high officials, as well as foreign notables with their wives. The entertainment ended at midnight.

On Thursday His Highness visited the Alexandria Municipality. He was received at the entrance by the Governor, the President of the Municipal Council, the President of the Quarantine and Health Board, the Commandant of Police, and other high officials, including those of the Sultanian Court, and a guard of the fire brigade rendered military honours. The principal officials were presented to his Highness, who, replying to a speech of welcome by the Governor, expressed his congratulations on the Council's labours. He afterwards signed his name in the municipal register; and had tea with the members of the Council.

The Sultan recently placed £500 at the disposal of the Commander-in-Chief for distribution among the military hospitals for promoting the comforts of the soldiers. The latter had already received many tokens of his Highness's goodwill towards them, and they show a lively appreciation thereof.

The Pilgrimage to Mecca.

According to the lists received by the Ministry of the Interior from the different provinces, save that of Assiut, and containing the names of intending pilgrims to the Hejaz, the total number is 360. As the total of the belated list from Assiut is estimated at twenty, and as twenty additional applications have been received from different provinces, and will in all probability be accepted by the Ministry, the total of pilgrims this year is expected to be 400.

The presence of large bodies of troops in the country and the state of war have compelled the authorities this year to make a departure from the traditional custom of non-interference with religious habits and observances, by issuing a circular from the Ministry of the Interior to the Governors and Mudirs to the effect that the water of the Zem-Zem well, which is usually brought by pilgrims as a holy relic, must be placed in vessels which can withstand heat, and which should be produced at the quarantine station on the return of the pilgrim, to be boiled and sterilised. Vessels not accompanied by certificates will be destroyed. If such wise measures had been adopted before, the country would doubtless have been saved from many an epidemic. The light of science is dissipating the clouds of ignorance even among the masses; and what might have been deeply resented fifty years ago may now be viewed as a wise measure of self-protection.

Instruments of every kind, especially orchestral instruments (wind and string), and music also, are urgently needed by the Y.M.C.A. for soldiers at the front. Among the latest applications is one from Baghdad.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: Lt.-Col. A. GRUBB. J.P.
Vice-Chairman: Surgeon-Gen. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, Colonel (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

ROUMANIAN NOTES.

(From a Correspondent.)

The Gentle Prussian.

Prussian Junkerdom is doing its best to put its ideas regarding "world domination" into practice in unfortunate Roumania, whose people are deprived of all liberty and are plundered under an amazing variety of pretexts. The *Gazeta Bucurestilor*, a daily paper published under German auspices, and now known as the "Roumanian official organ," often contains news that shows quite clearly how the Germans are bent upon destroying the national life of the Roumanian people. More than a quarter of a million Germans, Austrians, and Magyars are to be declared Roumanian citizens in the shortest time possible, by a Parliament elected at the point of Prussian bayonets. The members of this Parliament, it may be noted, are so utterly in the hands of their taskmasters that even the right of travelling in the country is denied to them unless they receive *Auswcis* from the *Kommandatur*.

All the spies and traitors of the country—the Bolos of Roumania—are rewarded with high official posts; and with the help of these *Staatslosen*—as the Treaty of Bucharest calls them—the Junkers wish to rule the Roumanian helots and to stifle any democratic movement. Any manifestation of Roumanian intellectual life is suppressed, while legions of German propagandists exercise their utmost ingenuity in the agreeable task of defaming and belittling the Allies—hoping thus to create pro-German sentiment! The country is flooded with pamphlets, books, reviews, in which the Germans are represented as demigods and the Allies as the vilest creatures that ever defaced the earth. As an example of this propaganda we may refer to a series of books appearing under the title "Scriitorii Celebrii" (Famous Authors), which has already reached its twenty-sixth volume, the latest being "Aventurile Lady-ei Glane" (The Adventures of Lady Glane), by Otto Pietsch, published by Braunstein (Bucharest). The "famous writer," Pietsch, devotes himself to demonstrating that English life is nothing but "mud."

The Germans are also making great efforts to destroy even the religious life of the country, and the propaganda that nearly wrecked the Roumanian Church some years ago is now greatly intensified. Four bishops have been forced to resign, and are to be replaced by others more favourable to the propagandists. The German and Austro-Magyar religious communities now have unlimited rights, and a very active literary propaganda is carried on all over the country.

Fleecing the Farmer.

Latest events in the Ukraine, the Balkans, and more especially on the Western Front, have made the Germans nervous, and they are taking elaborate precautions against any movement on the part of the Roumanians. Von Mackensen gave orders, through General Alevras, Chief of the Roumanian General Staff, to mobilize the Roumanian soldiers, who were but just released from service or returned from captivity. The men are to be sent—so runs the order—to various parts of the country where their services are needed for land cultivation. In the meantime they are to be under strict military discipline and subject to the power of courts-martial. By this means Mackensen hopes to keep absolute control over the Roumanians who might revolt, and at the same time to turn their services to account for his "Fatherland"!

Agricultural products are already under strictest control. In every district there is a commission of "experts" which controls the distribution of cereals, fruit, wines and so forth. Every farmer has to declare the gross produce of his land, and the "experts" then decide what proportion is to go to Germany, what may be left for the natives. Prices are fixed by the same commission, and payments are made only after long delays and endless formalities. If a German subject raises any claim against the farmers, the money owed to the latter is held at the disposal of the German economical administration, to satisfy the claim. The farmer is bound to transport the grain and to load it into the railway trucks at his own expense. Truly the German spider is making the most of his entangled fly.

Yet, bullied by the vilest soldiery that ever disgraced civilization and chivalry, with their country dismembered, starved, decimated by spotted typhus and other diseases, subjected to terrible moral humiliations, and plundered remorselessly, the Roumanians still have unbroken faith in their Allies.

NEWS IN BRIEF.

Spotted typhus has broken out in Galicia and Bukovina.

Salonika has been suffering from great heat during the past week.

Saxony and Bavaria are to have their own diplomatic representatives at Sofia henceforth

A sergeant and five men belonging to the Greek troops interned in Germany have escaped to Holland.

All men belonging to the classes of 1902, 1901, and 1900, who are natives of Macedonia, have been called to the Greek Colours.

A big fire broke out on the morning of August 27 in the Stambul quarter of Constantinople. The fire spread and destroyed more than 1,000 houses.

Seventy-five non-commissioned officers of the active Greek Army and 430 of the reserve have been promoted officer-cadets for bravery on the battlefield.

The Chief Court at Rangoon has upheld the conviction of Anton F. Mathoe, a Dutch subject, manager of a local Dutch firm, for the concealment of enemy assets.

A meeting, attended by more than 600 Thracian refugees, which was held in Athens, decided to convene a Pan-Thracian Congress to consider the question of the future of Thrace.

The Greek authorities at Salonika have seized the baggage belonging to M. Carro, ex-director of the German School of Archæology at Athens, a well-known institution for propaganda purposes.

Survivors of the Messageries Maritimes steamship Polynesien, some 500 Serbian soldiers besides the crew, have been brought to Malta, where they are being taken care of by the military authorities.

The Simla correspondent of *The Times* telegraphed, under date of August 20 :—The anxiety which prevailed owing to the cessation of the monsoon over North-West India and parts of the peninsula has been allayed by the general rain which has now fallen.

The King has awarded the silver medal for saving the lives of British subjects to the Emir of Merderdra and to three Arabs, named Lebou Waled Abdoulha, Mohamed Waled M'Barek, and Ahmed Bin Damkea, for their services to two survivors of a shipwrecked British crew last May.

The Inspector-General of Police writes in the Ceylon administration report for 1917 that an interesting result of the issue of the new two rupee notes was the way in which persons who had previously been concerned in the forgery of Rs.100, Rs.50 and Rs.10 notes quickly took up counterfeiting the new note.

Talaat Pasha, the Turkish Grand Vizier, is expected in Berlin this week to confer with German statesmen concerning the supplementary agreement to the Brest Treaty which affects Turkish interests on the Black Sea and the Caspian. The German Ambassador to Constantinople, Count Bernstorff, is also expected.

The *Egyptian Gazette* learns that the Quarantine Board has decided to send out a delegate to the Hejaz this year to watch the sanitary condition of the Egyptian pilgrims, as was the custom prior to the war. Only two men of Alexandria have asked for permission to go on pilgrimage this year with the Holy Carpet.

The report of the Inspector-General of the Ceylon Police states that at present 31 per cent. of the force can read and write English, 43 per cent. can speak English, and 56 per cent. can read and write the vernacular language only. Only 12 per cent. of the strength is illiterate, and the greatest care is apparently taken in the recruiting.

At the Viceroy of India's Legislative Council, which met on September 4 and will sit until September 26, it is expected that the reform scheme will be discussed. A resolution will be moved asking the Imperial authorities to consider the appointment of two Indians as Agents-General in London, and to readjust the machinery of the India Office.

Commenting upon the laying of the foundation-stones of the Hebrew University in Jerusalem, the *Zionist Review*, the official organ of the English Zionist Federation, acknowledges with gratitude that this important achievement was made possible by the success of the British arms and by British understanding of political conditions.

A communication from Buenos Ayres reports a great movement among the Jews of the Argentina to join the British Army for service in Palestine. The report states that practically all the young men in the Moiseville colony have organised themselves into a Jewish unit, and are awaiting an opportunity to leave for the Palestine front as volunteers for a Jewish unit.

The Duke of Connaught, chairman of the General Council of King George's Fund for Sailors, has received £2,485 from Lord Pentland, Governor of Madras, for the fund. Lord Pentland has informed the Duke that the total is made up as follows :—From the chairman and members of the Madras Chamber of Commerce, Rs.8,750 (£583), which with a grant of Rs.9,000 (£600) from the residue of a shipwrecked mariners' fund, founded by them in 1872, made a total contribution of Rs.17,750 (£1,183). The Madras War Fund contributed Rs.15,000 (£1,000), as a mark of its special interest in the work of the mercantile marine, and in grateful recognition of its loyal and faithful services. The rest of the total was made up of private contributions received by Lord Pentland.

What are your Natural Products?

We are interested in the Natural Products of your Country and desire to negotiate with you for the purchase of large or small consignments. We are particularly interested in

COCONUT OIL
PALM OIL
IVORY
MAIZE
GUMS
OIL NUTS
GRAIN
OIL SEEDS
FIBRES
KERNELS
RUBBER
COPRA
COTTON

Will you let us know what Products you can offer?

We are prepared to finance consignments when necessary.

CORRESPONDENCE.

ARE THE ROUMANIANS ROMANS?

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I am happy to find that, after all, M. Ciotori's view of the origin of the Roman peoples is practically identical with mine. He admits that the Roumanians, as they are now called, are in fact Thraco-Illyrians, Dacians, and Gets who have been Latinized. That is precisely my opinion, and the only difference between us is that while he assigns the Latinizing process to Trajan's legionaries, I attribute it to the manifold influences which affected the native races during the period of Roman sway. M. Ciotori unconsciously supports this latter view by instancing the Anglicized British colonies, where the native races have undergone a civilizing process in which blood relationship plays a comparatively minor part. It probably played a more considerable part, but only locally, in the districts where Trajan's colonists settled and intermarried with the natives.

The admission now made by M. Ciotori relieves me of the necessity of further discussion with him. I must, however, before parting with him, deprecate the tone and language which he has employed in discussing this purely academic question. "I consider," he writes, "the efforts to revive this controversy as if one would look after dead horses to take their hoofs as very precious things." Who has revived this controversy? M. Ciotori has availed himself of a passing remark in my review of Sir E. Holdich's book—a remark with which, it now appears, he agrees—to write a letter to THE NEAR EAST accusing me of deriving my opinions from "Magyar and Bulgarian Chauvinists," and plainly hinting that my historical knowledge is limited to acquaintance with these sources. When he finds that this is not the case he excuses himself for making this wholly gratuitous accusation by explaining that the Chauvinists invoke certain historians whom I mentioned—a very different thing. Safe in the knowledge derived from my previous letter that I am for the moment far from access to books (I am, in fact, on a tour in Ireland), he scoffs at my allusion to other scientific authorities, whom he carefully refrains from mentioning himself, but who exist notwithstanding his silence, and triumphantly appeals to the testimony of "humble cottages" and "humble chroniclers," declaring that "the very existence of a people cannot be contested with dead letters taken from dubious writers."

It is difficult to treat rhodomontade of this kind seriously, or even to feel anything but amusement at M. Ciotori's effort to associate me with the German enemy by declaring that I "fire the Roumanian Question with the Big Bertha of the Chauvinists." What he means to *prove* by all this rhetoric is not very clear. He has practically given up the genealogical claim by admitting the descent of the Roumanians from Latinized provincials. The traditions and usages of the peasantry, many of which are common to the neighbouring races, prove nothing in regard to descent, but certainly attest the process of Latinization. The facial type, in some parts of the Carpathians, is a better test. Genealogists, who reject tradition, know their own business. How would the Committee of Privileges in the House of Lords treat a peerage claim based on family tradition? The name "Vlach," a Slavonic adaptation of a Teutonic word meaning "stranger," also proves nothing as regards descent; it was applied to the Latinized provincials; the "Welsh," whom the Anglo-Saxons drove into the western mountains of Britain, as the Vlachs were driven into the mountains of Macedonia, were not Romans.

M. Ciotori's insinuation that I deny the existence of Roumanian nationality is, of course, totally unfounded. The Roumanians, though a mixed race, have a right to be regarded as one of the "Neo-Latin" peoples, though scarcely in the same sense as the Spaniards, whose ancestors underwent Roman influence in a greater degree than any of the provincials outside the limits of Italy. The land now called "Roumania" and the whole Balkan Peninsula suffered much in the days of the migrations of peoples. In the case of the Roumanians the great infusion of Slavonic blood is attested, among other indications, by the very large Slavonic ingredient in the language.

I quite agree with M. Ciotori that the force of nationality cannot be produced artificially. It certainly cannot be created by an artificial pedigree beginning with Romulus and Remus. I have lived for many years in contact with the Roumanians, both north and south of the Danube, and of course recognise their distinctive racial type. I have been a personal witness to their calamities, have deeply sympathised with them in their misfortune, and look forward with hope to their national revival.—I am, etc.,

JAMES D. BOURCHIER.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

A REAL INJUSTICE TO INDIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I was interested in reading to-day in your issue of July 5, a reference to *The Times* article on the above question.

If the Allied nations really mean to carry out the noble ideals, so well put forth in some of President Wilson's recent pronouncements, they cannot, and must not, ignore the just claims of the "coloured" races when the after-war settlement comes to be made. I have recently come to the American continent via the Far East, and the contrast of populations to the square mile, with the resultant contrast between wages in different countries, could not but impress one.

India has a population of 320 millions; Australia has between four and five. I have not a map before me, but I fancy the acreage of Australia is larger than that of India. Canada has a population of 1.9 to the square mile, the U.S. 34, South America 6.4, Japan about 360, China rather more than this. Mr. Putnam Weale tells us that India has always about 60 millions on the verge of starvation, and her people have been, therefore, willing to migrate as indentured labourers to distant parts for 1s. a day, without the right to settle after the indenture is over in the country. When I passed recently through Ceylon and the Malay Straits, I found the average wage of labourers was 15 cents a day. In North America it is at the lowest 300!

Can we justify the perpetuation of such a state of things, while Great Britain controls 12 out of the 52 million square miles of land on this earth? If Germany is not to have back her colonies, can none of them be put aside for the development of the coloured man? Whether it is wise or not to exclude him from vast spaces of unoccupied land in America and Australia I do not desire to say. But I do say that if he is thus excluded (in Canada a Chinaman must pay £100 before entering the country), it is the plain duty of the white races to provide some places where such squeezed nations can find their natural development, all the more so as the white races take care to preserve rights of entry and trading for themselves in the lands of these over-populated coloured people!

We rightly speak of Germany's sin in promulgating the doctrine that "might is right," but are we to commit this sin while we condemn her for it?

You rightly say that "it is depressing that almost the first move towards new conditions connoted by the Imperial Conference "should be made in the direction of restricting rather than fostering Imperial intercourse." It is plainly the duty of the Allied nations to encourage and not restrict emigration from over-populated countries, especially ones where their Imperial rule brings corresponding Imperial obligations.—I am, etc.,

BERESFORD POTTER (Archdeacon in Cyprus).

Chateau Frontenac, Quebec, August 4, 1918.

THE USELESS TURK.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—One consequence of the German madness for war, plunder, and conquest is the encouragement of the Turks to believe in a future homogeneous Turkish Empire, independent of other elements in the East, and of Islam itself, in ignorance of the past help of Greek mercenaries and Arabian support, which enabled it to establish a claim for any government whatever.

These Turks, however, brought nothing with them but their swords when they trekked into Asia Minor; and we find them now, after four hundred years of absolute domination, as bare of material resource as of intellectual progress, notwithstanding their intercourse with the highest civilisations of old, Greek and Arabian, for all these years, and the rare opportunity they had in a tolerant and benevolent Europe to develop their faculties. The fact is, this race is as stupid as that other branch of Huns which made Prussia its home, and is beyond redemption. Moreover, they are as much strangers in Asia Minor as they are in the old capital of Constantine, and I claim on behalf of Arabs—and of the Greeks, too—that the Turks must forfeit rule in the East.

European diplomacy may not concede so much, or see as far as it might as regards the East; but I am of opinion that Persians, Arabs, and Greeks must come again into their own, and arrange their affairs jointly. Persians are the Parisians of the East, as Arabs are its British, and Greeks its Italians. Japan, China, and India will have to see to the rest of Eastern regeneration.—I am, etc.,

ANGLO-SYRIAN.

SERBIA AND MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Referring to the private letter (which has until now been ignored) from the Earl of Plymouth to Mr. Devine, published in THE NEAR EAST on the 9th inst., in which his lordship expresses his ignorance of any political intrigues and attacks by Serbians in this country against Montenegro (as they are accused of by Mr. Devine), I must say that there is nothing surprising in his lordship's ignorance of such contemptible accusations, because such do not exist. They are fiction, invented by some unscrupulous individuals, and Mr. Devine is the victim selected to circulate them.

Serbians and Montenegrins are of one origin, children of the same parents. They love and respect one another, and whoever dares to try to make bad blood between them is considered their mutual enemy. Austria-Hungary has, for many years past endeavoured by political intrigues and bribery to alienate them, but without success; so what chance can Mr. Devine have of succeeding where Austria-Hungary, with skill and money, has failed?

Mr. Devine poses as the friend of Montenegro, yet he opposes the wish of Montenegrins for the unity of all Southern Slavs, especially Montenegrins, as the members of one family. Are Montenegrins, who for five hundred years have fought and bled for this ideal, and with their old King were always, and are to-day, *the* champions for this unity, not to see it realised when the long-looked-for opportunity arrives? Their exclusion would break these heroes' hearts.

No, Mr. Devine, the man is not yet born, even with crowned head, who shall prevent the Montenegrins from seeing their wish fulfilled—a wish nearly as old as Winchester; and if you really wish to be the friend of Montenegrins, you must conform to their wishes, otherwise love's labour will be lost.

A Serbian proverb says:—

Spaci me Roze od ludog prijatelja,
Od neprijalelja cu se sam Spasti!
(God guard me from a foolish friend,
From an enemy I can protect myself!)

—I am, etc.,

D. JANITSCH.

Polperro, Lyncroft Gardens, N.W., August 26, 1918.

[Our correspondent appears to confuse the desire on the part of Montenegro, in common with Serbia, Bosnia, Herzegovina, Croatia, Slavonia, etc., for the unity of the Southern Slavs—a desire the existence of which has never been challenged—and a controversy turning on the attempt of a section of Montenegrin politicians to bring about the fusion of Montenegro with Serbia under the present Serbian dynasty, before a plebiscite of Montenegrins can be taken on the subject. As we understand the position, the Montenegrin Government insists that no decision can be reached until the independence of the country is restored and the people of Montenegro can determine their own political future.]

NEAR EAST BOOKSHELF.

PALESTINE AND JERUSALEM.
(Recent Booklets.)

"Palestine and Jerusalem: A Soldier's Handbook" [1] compresses into a small and strongly bound pocket volume of 64 pages the "salient points of geography, history, and prestn-day life in Palestine," and is furnished with two useful little maps. The greatest difficulty to a writer who knows the country so intimately as the author—who has lived and travelled as a missionary of the C.M.S. for over a quarter of a century in all parts of the land—must be in the matter of compression. This booklet is a marvel of compactness. It gives very many details necessarily omitted from the more philosophical volume by Sir George Adam Smith, and therefore is a most useful supplement to it. For the soldier who wants to find out in a few words the historical associations of the place he passes, it is just what is needed, and it includes an excellent account of Jerusalem itself. The chapters on "The Crusades," upon "Ancient and Modern Sites," and upon the "Modern Inhabitants" are admirable in their brevity and clearness.

All who know the Orient will appreciate the wise and weighty advice given in the "General Remarks." It is impossible to quote more than a paragraph, but all might well be written with letters of gold:—

Respect the native as a man with a long pedigree of history behind him. Avoid the mistake of putting him in the same category as the negro or the bushman. Never outrage his laws of life, social and religious. Forbear to ridicule his way of doing things, remembering he has not had your advantages. In some things you may find he can give you points; so wait, watch, learn. Be kind but not familiar. Be scrupulously just. Never make a promise except you mean literally to fulfil it.

The two little pamphlets on the "Historical Sites of (1) Southern Palestine" and (2) "Central Palestine" [2], by L. Trumper, of Port Said, printed in Cairo, contain a mass of useful facts regarding ancient sites in Palestine. They are, perhaps, rather too much concerned only with Biblical associations to the neglect of general history, but in the earlier volume there is an interesting summary of Napoleon's expedition to Syria in 1798.

Another booklet hailing from Egypt is "Jerusalem, the City of Many Sieges" [3] by an architect residing in Alexandria. He speaks from personal knowledge, and has illustrated his work by some excellent illustrations. The historical sketch is slight, but it is supplemented by a useful appendix of dates. The Crusades receive special attention, and, above all, the horrible "Children's Crusade"—which however, had in the outcome no influence on Jerusalem itself. As an architect Mr. Williams is critical of Russian and German buildings in the Holy City, and contrasts them unfavourably with the "quiet, one might say, homespun simplicity" of St. George's Collegiate Church.

The contrast cannot be greater between the quiet restfulness of this position, attractive to meditative minds, and the flamboyancy of the buildings and sites of the Germans and Russians, the high towers and domes of whose churches proclaim themselves afar from the highest sites obtainable.

"The return of the Jews" is referred to in a sympathetic spirit. The immediate need, in the author's opinion, is of "a besom not of destruction but of cleanliness," and he would see "finally the whole compact mass of foolish superstitions gently but completely swept away." We fear there would be little indeed of old Jerusalem by the time the "sweeps," "the architects and town planners," and the inconoclasts have had their innings! We cannot but regret the sketchiness of a work like this written by one who might have given us so much more of his professional knowledge and personal observation.

The essay on "The Latin Kingdom of Jerusalem" [4] is a bewildering collection of undigested facts, like a series of notes of points of interest made in the course of reading, and published as extracted, with no attempt at chronological or any other order. The author seems to have no topographical knowledge of the land: names occur spelt in many un-English and un-Arabic ways, and the same names are spelt quite differently in different places; and there are, too, a number of typographical errors. As supplementary notes to a condensed English history of the Latin kingdom of Jerusalem some readers may find it useful.

A MONTENEGRIN "COMMITTEE."

The *Glas Czernogortza* (or *La Voix de Montenegro*) the official journal of the Montenegrin Government, published on August 25 an important *arrête* regarding the "Comité Monténégrin pour l'Union Nationale." This states that André Radovitch and Yanko Spassoyevitch, former Ministers, and Danilo Gatalo, Yovan M. Djourachkovitch, and Milosh Ivanovitch, former officials, published on July 29, 1917, in the *Ouyédiniénié*, a "declaration" touching the sovereign rights of Montenegro; that they aimed at incorporating Montenegrin territory, or the Montenegrin State, in another State, and imposing another dynasty upon it; and that, with these aims, they formed the committee already mentioned. They have also, it is added, inserted articles in other papers in furtherance of their aims, and in these and other ways, have offended against certain articles of the penal code. Therefore they will be prosecuted before the tribunal competent to deal with the matter for infraction of these clauses, the necessary steps being taken after the restoration of Montenegro. Meanwhile they are deprived of all the privileges conferred on them as civil officials. The *arrête* is signed by M. N. Haidoucovitch, Minister for the Interior and (pro tem.) for War.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. September 6	1918. August 24	Friday	1336. Julkada 30 Julheggia.	5678. Elul. 29 Tishri.
7	25	Saturday.....	1	1
8	26	Sunday	2	2
9	27	Monday	3	3
10	28	Tuesday	4	4
11	29	Wednesday	5	5
12	30	Thursday	6	6

M. Boeresco, the Roumanian Chargé d'Affaires, has left London for Chenies.

Sir Roper and Lady Parkington have returned to Claridge's Hotel from Harrogate.

King Nicholas of Montenegro arrived in Paris last Friday evening from Bordeaux.

Mr. Alex Devine, who is known for his interest in Montenegro and its affairs, has left London for Paris and Rome.

M. Voislav Petrovitch, formerly Secretary to the Serbian Legation in London, has joined the Serbian Army at Salonika.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, had an interview with Viscount Hardinge at the Foreign Office on Saturday.

The Sultan of Egypt has conferred the Grand Cordon of the Order of the Nile on the Maharajah of Patiala and the Maharajah of Bikanir.

The marriage arranged between Mr. Arthur Philip Coote and Miss Margaretta Wright took place on September 5 at All Saints' Church, Ripley, Derbyshire.

As a result of the appeal made by Lady Wingate, wife of the High Commissioner, a very large number of valuable pearls have been received from Egypt for the Red Cross necklace.

Much sympathy will be felt with Sir Charles and Lady Marling, who have lost their little daughter, Romaine, aged three. She died at the British Legation, Teheran, on August 26, of peritonitis.

Sir Ronald Graham arrived at Windsor Castle on Saturday as the guest of the King and Queen. The Hon. Lady Graham had the honour of being invited, but was unavoidably prevented from obeying their Majesties' commands. Sir Ronald left on Monday.

The engagement is announced between Captain C. A. Langley, M.C., Royal Engineers, only son of Mr. and Mrs. John Langley, of Cairo, Egypt, and Violet, eldest daughter of the Ven. A. F. Sharp, vicar of St. Stephen's, Hampstead, and Mrs. Sharp.

Sir Prabhashankar D. Pattani (Member of the Council of the Secretary of State for India) and Colonel Ambroise Phrantzis (upon his appointment as Greek Military Attaché) had the honour of being received by the King at Buckingham Palace on Wednesday.

A marriage has been arranged, and will shortly take place, between Captain Arthur Nigel Cahusac, M.C., 24th Regiment, youngest son of Colonel W. F. Cahusac, C.M.G., and Mrs. Cahusac, and Christian, widow of Lieut.-Colonel Eustace Maxwell, Indian Cavalry.

The marriage arranged between Captain J. H. Crace, Indian Army Reserve, and Miss E. Farrar Roberts, of Plas Lodwig, Bournemouth West, will take place at Christ Church, Lancaster Gate, London, on Thursday, September 26, at 2.30. All friends will be welcomed at the church.

The King has granted unrestricted permission to Miss Jessie Anne Scott, M.D., Ch.B., D.P.H., to wear the Insignia of the Fourth Class of the Order of St. Sava, conferred upon her by his Majesty the King of Serbia, in recognition of her services as surgeon at the Scottish Women's Hospital at Ostrovo.

Colonel Sir Henry Courtauld Thomson, Chief British Red Cross Commissioner for Egypt and the Near East, arrived at Windsor Castle on August 29. He had the honour of being received by the King before dinner, when his Majesty invested him with the insignia of a Knight Commander of the Order of the British Empire.

The Countess of Minto will leave 95, Lancaster Gate, on Tuesday next for Scotland.

The Greek Minister and Madame Gennadius arrived at the Legation on Monday from the country.

We understand that M. Beza, the Chancellor of the Roumanian Legation, has written a Roumanian grammar, which will be published very shortly.

On Wednesday the King invested Sir Archdale Earle with the insignia of a K.C.S.I., and Lieut.-Colonel James Swan with the insignia of a C.I.E.

The following Indian officers had the honour of being received by the King at Buckingham Palace on Wednesday:—Subadar Ranea Rang, Jemadar Suba Singh, Jemadar Malhabir Thappa, and Jemadar Sawai Singh.

The Hon. Patrick W. M. Ramsay, who has just been gazetted a First Secretary in the diplomatic service, was from 1905 to 1908 attached to the Embassy at Constantinople, and was granted the special allowance for knowledge of Turkish.

A marriage has been arranged, and will shortly take place, between Harold B. Richards, Lieutenant R.E., son of the late Captain John Cumins Richards, R.N., and Dorothea Temple, only child of the late Colonel Henry M. Temple, Bengal Staff Corps.

The engagement is announced of Lieut. Gilbert Traill, M.C., Royal Field Artillery, of Colombo, Ceylon, eldest son of Mr. and Mrs. Gilbert F. Traill, of Broadlands, Tunbridge Wells, to Gwendoline, second daughter of Mr. and Mrs. Percy Howden, of Tunbridge Wells.

Lieutenant-General Sir Charles Fergusson, K.C.B., who was specially mentioned in Sir Douglas Haig's dispatch on Tuesday morning, served for some time with the Egyptian Army. He was present with the 10th Sudanese throughout the campaigns of '96, '97, and '98, was severely wounded at Roseires, was mentioned five times in dispatches, and was awarded the D.S.O. He later commanded the 15th Sudanese and the Omdurman District. From 1901 to 1903 he was Adjutant-General of the Egyptian Army. Afterwards he commanded the 3rd Grenadier Guards, and in 1909 he was appointed Inspector of Infantry. For his services in the present war he has been awarded the K.C.B., having been twice mentioned in dispatches. He married in 1901 Lady Alice Mary Boyle, second daughter of the seventh Earl of Glasgow.

The *Lokalanzeiger* states that the ex-Khedive of Egypt has arrived in Berlin from Munich with a large suite.

Dr. Barnardo's Homes have received a further instalment of £18 16s. 3d.—making £358 1s. 8d. in all—collected by British officers and men in Mesopotamia.

According to a Constantinople telegram to the *Fremdenblatt*, the Sultan of Turkey intends to visit the Rulers of the Central Powers after the return of the Special Mission sent to announce his accession to the Throne.

The Archbishop of Canterbury and Lord Robert Cecil, Assistant Secretary of State for Foreign Affairs, have promised to speak at the annual meeting of the Jerusalem and the East Mission, which will be held on October 30.

General Allenby telegraphed to Sir D. Haig:—"The British Army in Palestine sends heartiest congratulations to the British Army in France on its continued and ever-increasing successes." Sir Douglas Haig has warmly thanked General Allenby.

Colonel Haig, British Consul-General at Ispahan, reports that, owing to Turkish oppression, the surviving Armenians have fled from Turkey after making a brave resistance, and he adds: "We appeal for help to England and America in order to rescue the surviving heroes. Funds are urgently solicited."

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

M. Venizelos, who is touring the Macedonian front, is everywhere being acclaimed with enthusiasm both by the troops and the local population.

Mr. Harris Bigg Wither, of Gathurst, near Wigan, Lancs., for twenty-seven years a member of the International Commission of the Danube, left property valued at £6,503.

King Ferdinand of Bulgaria has arrived at Coburg, but he will, presumably, shortly return to Sofia, as it is reported that the King of Bavaria will go there next week to visit him.

The King on Wednesday inspected a detachment of the Indian Labour Corps, under the command of Capt. M. H. Beattie and Second-Lieut. M. Fakhruddin Khan (Indian Army Reserve of Officers), who are on short leave from the Western front.

Telegrams in connection with the fourth anniversary of the declaration of war replying to greetings by the Commander-in-Chief in India, General Sir Charles Munro, include messages from King George, Marshal Foch, General Pershing, General Diaz, and Sir Douglas Haig.

The King has granted to the following officers of the Egyptian Ministry of Agriculture authority to wear decorations conferred upon them by the Sultan of Egypt, in recognition of valuable services:—Second Class of the Order of the Nile, Mr. John Langley; Third Class, Mr. Ernest Shearer; Fourth Class, Mr. Frank Hughes.

Reuter's Amsterdam correspondent reports (September 2):—A telegram from Constantinople states that the Sheikh of the Senussi, who crossed from Tripoli to Pola in a German submarine, and who was accompanied from Benghazi by the Deputy Yussuf Shetvan Bey, arrived in Constantinople on August 30. They were received at the station with elaborate ceremony by the Minister for War, Enver Pasha, and representatives of the Sultan and the Grand Vizier, the Sheikh-ul-Islam, and a large and enthusiastic crowd The visitors are staying at the Old Seraglio.

The Postmaster-General announces that parcels for officer prisoners of war in Turkey will not for the present be accepted at post offices for transmission through the intermediary of the Commissioner, British Red Cross Society, Alexandria, Egypt. Until further notice, all parcels intended for transmission by post to officer prisoners of war in Turkey should be addressed care of Ottoman Red Crescent Society, Constantinople, in the manner indicated in paragraph 18 of the Post Office leaflet entitled "Communication with Prisoners of War Interned Abroad."

OBITUARY.

Judge Templer, who died suddenly last week at Stockton-on-Tees, was for some time a District Judge in Cyprus.

Major-General W. G. Birrell, A.M.S., late Southern Command, whose death was recently announced, served in Burma in 1884, and was awarded the medal and clasp, and mentioned in dispatches. In 1887-9 he received a second clasp to the Burma medal for service in the last Burmese War. In the meanwhile he had seen service with the Suakin Expedition of 1885, for which he received the Suakin Medal and clasp and the Khedive's Star. Later he went up the Nile with the Khartoum Expedition of 1898, and was present at the fall of Omdurman, for which he received the Queen's Sudan and Egyptian Service Medals. He also served many years in the Bombay and Madras Presidencies. In May of this year he retired owing to ill-health.

News has just been received in this country that Mr. Reginald Herbert Scudamore died at Broussa, Constantinople, on August 6. Mr. Scudamore was one of the oldest British consular officials in Constantinople. He was appointed clerk in the Consulate-General in 1885; ten years later he became clerk in the Consular Court; and in March, 1900, was appointed Registrar. When war broke out between Great Britain and Turkey, Mr. Scudamore remained at his post, and though he was soon afterwards interned in Stamboul he was quickly released, as nothing against him could be found. He was, however, again arrested, and was interned in Broussa, where his wife and family were also sent. His death will be much regretted, for he was highly respected by all who knew him, and had a very large circle of friends. He was born in November, 1871.

Lieutenant-Colonel Jerome Boileau Allsopp, D.S.O., South Lancashire Regiment, was killed on May 27. He served through the South African War, and afterwards went to India, where he remained till November, 1916 (as adjutant, 1912-15). For a time in 1911 he was A.D.C. to Lieutenant-General Sir A. Martin, K.C.B., and he was given his company in March, 1914, promoted major, and proceeded to the front in January, 1917, and in April, 1917, obtained command of a South Lancashire battalion, which he commanded at the battle of Messines on June 7, 1917, and the third battle of Ypres on August 1, 1917, where the battalion fought with much distinction and where he was wounded. Returning to the front again in November, he resumed command, but last February he was transferred to the command of another battalion, which he had since led with much success, and in April he was awarded the D.S.O., having previously been twice mentioned in dispatches.

Lieutenant Indra Lal Roy, R.A.F., second son of Mr. P. L. Roy, Director of Public Prosecutions, Calcutta, and of Mrs. Roy, of 67, FitzGeorge Avenue, W., was reported missing after an action on July 22, and is now known to have been killed. His elder brother had enlisted in the H.A.C. as a private within a few weeks of the outbreak of war, and as soon as he himself reached military age, in April, 1917, he left St. Paul's School and the prospect of successful competition three or four years later for the Indian Civil Service, and within a few months qualified for a commission and a pilot's certificate in the Flying Corps. He went to the front last October, and did fine work until March, when his machine was brought down, but he was rescued from capture in an injured and unconscious state. In May the doctors permitted his return to do work as equipment officer, but within a few weeks he was medically passed for flying.

Brevet Colonel and Temporary Brigadier-General John Arthur Hannyngton, C.B., C.M.G., D.S.O., Indian Army, died on August 21 in hospital in the East of empyema following pneumonia. He was son of the late J. C. Hannyngton, and was born in 1868. In 1892 he transferred from the Worcestershire Regiment to the Indian Staff Corps. He had his brevet as colonel in January, 1917, and for a little time afterwards was temporary major-general, while originally he had a brigade command in March, 1916. Colonel Hannyngton had a record of very distinguished service. He was in East Africa in 1895-6, serving against the Mazru rebels; in 1897-8 he was severely wounded in Uganda; and, later, in the campaign in Somaliland, he was in command for two long periods, and afterwards in command of the lines of communication. In addition to mention in despatches and the award of the medal with clasp, he was made a Companion of the Order of St. Michael and St. George. He had received various decorations for his other services. The present war brought to him many additional honours.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

FRIDAY, SEPTEMBER 6, 1918.

THE MESOPOTAMIA CAMPAIGN.

The Mesopotamia Expeditionary Force has not yet concluded its task, and at a time when the intense heat of summer interrupts the progress of the campaign the publication of a despatch from the Commander-in-Chief is opportune as a reminder of what his army has already accomplished and of what is still ahead of it. General Marshall's narrative can be conveniently grouped under three headings—the military operations, the consolidation of the British position, and the measures taken for the development of the country. In regard to the first, we have the story of the six months from October 1, 1917, to March 31, 1918. During this period a series of operations was carried out with the object of relieving the country immediately to the north of Baghdad of any pressure from the enemy. The British advance had stopped in the centre at the railhead at Samarrah, on the right flank before the Jebel Hamrin range, and on the left practically at a point on the Euphrates nearest to Baghdad. In September, just before the opening date of General Marshall's despatch, the latter position had been improved by the capture and occupation of Ramadieh, and for the time being there was nothing to be feared from the direction of the Euphrates. It was accordingly decided to deal with the Turks on the Jebel Hamrin, and with this end in view a preliminary attack was made on their positions on the Upper Diala River. While these operations were in progress the enemy launched a counter-attack down the Tigris, and proceeded to entrench themselves a few miles north of Samarrah. Before they could consolidate their position, however, they were attacked, routed, and pursued as far north as Tekrit, which was captured on November 5. A fortnight later occurred the tragic death of Sir Stanley Maude, and the reference affords General Marshall an opportunity to pay a splendid and touching tribute to his memory. Called upon to take up the post of Commander-in-Chief, General Marshall lost no time in launching the attack on the Jebel Hamrin, and by the end of the first week of December the southern portion of the range had been occupied by our forces. Kifri was reached, but the moment was not considered to have come for any general movement northwards, and the troops were immediately withdrawn from the forward areas. The Turks, although defeated, were by no means at the end of their tether. They were outgeneralled in the field, but under German direction their strategy was likely to be sound. Reinforcements, it was discovered shortly afterwards, were being sent down the Euphrates, and General Marshall's attention was, therefore, directed to his left flank. A very brilliant operation followed. The enemy had anticipated our attack by withdrawing his advanced posts, but a mobile force in motor-cars, together with cavalry, was sent in pursuit. The Turkish retreat by road and river was cut off, and over five thousand officers and men were taken prisoners. The despatch explains the nature of the operation, which was not made clear in the official reports at the time. It was directed against a particular Turkish force, which was to be driven as far as possible from Hit and to have all possible damage inflicted upon it. The composition of the attacking columns enabled the pursuit to be continued for seventy-three miles along the Aleppo road, until nearly the whole of the Turkish force had been accounted for. With this episode General Marshall concludes his account of the military operations, for the next forward movement, on the road to Mosul, was not begun until the latter part of last April.

The work of consolidating the British position in Mesopotamia has necessarily been of a varied character. In the first place must be enumerated the dealings with the inhabitants, especially on the borders of the country occupied. The main advance had been up the Tigris, and the Western area had only been dealt with in so far as was required to protect our flank. The occupation of Ramadieh, on the Euphrates, had brought our troops into touch with a number of tribes that could not easily adapt themselves to the new order. Raids had to be undertaken against hostile Sheikhs, and the smuggling of food to the Turks prevented. It was significant that at this time no effort had been made to establish British control along the Euphrates, and General Marshall's remarks on this subject are of special interest. He writes: "In the time of my predecessor the Civil Commissioner, Sir Percy Cox, had strongly urged that the whole of the Euphrates line from Felujah to Nasiriyeh should be brought under military and civil control, but at that time circumstances did not permit of any extension of our military responsibilities. By the middle of December, 1917, however, the military position had completely changed owing to the magnificent successes gained by General Allenby in Palestine." The whole of the lower Euphrates valley was now brought under military control by the establishment of a chain of posts from Busreh to Felujah. Special care was taken not to place troops in either of the religious centres, Kerbela and Nejef; but these precautions were, unfortunately, not proof against one or two isolated exhibitions of fanaticism. A further task imposed on the Expeditionary Force was to keep a watchful eye on conditions in Persia. In the south the River Karun had to be guarded, in order to protect the oilfields near Tembi, and to maintain order in Ahwaz, Shuster, and Dizful. A different object primarily took British troops into Persia further north. General Marshall writes: "Towards the end of the month (January) the state of famine to which the Turks had reduced Northern Persia made it incumbent on me to endeavour to open the main trade route viâ Kermanshah in order to get supplies to the poor inhabitants of the towns and villages, and to provide them with an outlet for their home manufactures. With this object in view, I increased the garrison of Kasr-i-Shirin [on the border], and pushed small posts towards Kermanshah."

No part of General Marshall's duties, it is to be inferred from the despatch, have appealed to him more than the task of redeeming Mesopotamia from the impoverishment to which Turkish misrule had reduced it. When the Expeditionary Force made its way to Baghdad the population in many parts was in sore straits, and to the work of supplying the Army was added the distribution of food to the inhabitants. To remedy such a state of affairs in a country that was at one time one of the largest granaries of the then known world was an obvious obligation imposed upon the new regime. The aim was not only to make the civil population self-supporting, but to lessen as much as possible the Army's dependence upon sea transport. Irrigation was among the first problems to call for attention, and it is noticeable that one of the objectives of the military operations on the Upper Diala was to protect the headworks of the canal system in this area. The water channels here and further south were cleared, with the result that between two and three hundred thousand additional acres were quickly brought under cultivation. Many hundred tons of seed grain have been planted, General Marshall reports, and to assist in bringing the harvest into Baghdad a branch line down to Hillah was constructed. The period under review he describes as one of constant construction work for the protection of the ever-increasing lines of communication, for irrigation purposes, and for opening up the country with railways, roads, and telegraphs. In a word, what the British force found a wilderness as a result of Turkish rule has already begun to show the aspects of a peaceful and settled country under enlightened government. In whichever direction the military operations extend the same advantages follow hard upon them. For this reason the campaign is the most satisfactory of the whole war, and the Army can only be eager to see its task completed by the final ejection of the Turks from the whole of Upper Mesopotamia.

EGRETS AND OSPREYS.

By L. J.

Everyone knows the beautiful filmy plumes, commonly called "osprey," used by milliners for the adornment of ladies' hats. But possibly everyone does not know that they come from various species of egrets, or white herons, and that they are not obtained from the osprey, which is a fish-eating hawk, quite innocent of any feathers of the kind.

It is believed that the delicate shadowy plume was originally, and not inappropriately, called *esprit* by the French, and it seems more likely that *esprit* should have been corrupted into osprey than egret. But whatever the origin may have been, the word came to be pronounced osprey, and from the fact that the osprey was the better known bird in the West, people were led to imagine that the hawk was the source of the commodity.

In the East the osprey, *Pandion haliaetus*, is also known. In India it is called in the vernacular *machlimár*, or fish-killer, and, being a bird of aquatic habits, it is to be seen widely distributed all over the country wherever there is water containing fish. But the egret, especially the cattle-egret, *Bubulous coromandus*, is a still more familiar sight. For one thing, it is a permanent resident, and not a migratory bird, a mere winter visitant, like the osprey. It is with us always and in great numbers, and a bird of the open plains, its pure white colour makes it conspicuous as it traverses the country in company with the cattle and the buffaloes for the sake of the grasshoppers and other insects dislodged by the herds from the grasses.

The sort of country is readily recalled to the mind's eye. It looks flat enough, flatness is the feature of it, and yet parts are lower in level than others, and the lower levels are indicated by the natural drainage line, by pools and shallows glittering in the strong sunlight, or by mud, or rushes and reeds and tall *sarkanda* grasses nodding their silvery top-knots to the breeze. There, in the cold weather, are the migratory ducks quack-quacking in the swamps, coots skittering over the surface, snipe lurking in many a slushy corner, and on the muddy foreshores, or wading in the puddles, are the marsh birds, the godwits, plovers, and shanks, while flocks of terns scream overhead, a welcome medley of sights and sounds to the sportsman. Overhead, too, are the pied kingfishers and the ospreys on the same errand intent. Only the neat and almost noiseless dip of the kingfishers is wholly unlike the prodigious splash of the ospreys, great birds like white-headed kites, which soar and hover over the water, and drop now and again with an amazing smack to rise again with the prey in their talons. And round and about, white specks on the landscape, are the gregarious cattle-egrets, stalking the grasses with the buffaloes, riding on their backs maybe, or reposing in fantastic attitudes, heads tucked well within their wings, looking like white Easter eggs supported by thin black legs.

But the egrets wear no dainty aigrettes at that time of year. It is when the spring begins to stir the blood to warmth, and the birds, by change of plumage or by antics or the "sweet wild twist of song," indulge in madcap masquerade, the little white herons commence to sport their love display. Birds have many strange ways of making themselves attractive in their courtship appeals, and they are fortunate if their amatory moods take the form of the ridiculous dances of the cranes or the hiccups of the water-hens. The ill-fated egrets depend on the so-called "osprey," the temporary feathering on back of head and neck, which lures them to their doom. The plumes begin to appear in May, and from June onwards is the nesting season. In May and June the drainage line wears a different aspect; the migratory aquatic birds have left for their summer homes, and the grey and silent plain is a bare expanse of sparse vegetation and sun-baked mud. But there will be pools of water in the deeper hollows here and there; always near the villages there are tanks, and wherever there are trees and water the egrets will congregate with the paddy-birds, the spoonbills, and the cormorants. They are sociable fellows, rejoicing in colonies, and in colonies they roost and nest in the trees, where at night they can easily be shot or captured, and —for the sake of their *trousseaux*—they have been slaughtered in countless numbers.

The wanton destruction of so many insectivorous birds in the breeding season is bound to have its evil effects on the balance of nature, and in course of time the egret may even be extinct. Yet—if ladies must have aigrettes—there is another way of supplying them which is not without its cruelty, but is free from the objection of wholesale massacre. Egrets are not shy and wary birds; even in the winter, when the sportsman is at work at the *jhils*, the report of the gun merely sends them flapping leisurely away to other pastures. They seem to know that they are not the object of sport, and the world is all before them where to choose. In the breeding season the sportsman's gun is silent, and the proximity of villages has no terror for them. Their trees and pool may be quite near the homestead, the cluster of flat-roofed mud huts, and there the pigs nuzzling in the middens, the pariah dogs dozing in the hot dust, the twittering squirrels, the naked urchins, and the well and the women cause them no alarm. The boys with long sticks who herd the cattle are not English boys with catapults, and they are almost as familiar with them as with the cattle. The dirty tank in the deluge of sunshine, where their friends the buffaloes wallow, and the trees supply their daily wants and form their world. In the nesting season, in the height of the hot weather, when earth and air and every living thing is panting for the relief of the monsoon, the trees see a great deal of them. There they nest and indulge in a siesta in the daytime; and all that is what the native fowlers very well know.

The method of capture is very crude and simple, but very effective. The stock-in-trade consists of a pair of nets in frames and a few decoys. The nets are placed flat in the shallows, where they are nearly or altogether submerged and hidden from sight, and they can be released, so that they spring together and enclose a captured bird. The decoys are living egrets, with their eyes sewn up in the barbarous native fashion, and in their blind helplessness they do not seek to move from wherever they may be placed. A decoy is laid on the snare, and a roosting egret, seeing a fellow bird apparently enjoying itself in the cool of the water and green weeds, flutters down for company. Instantly the nets are pulled together by means of a cord in the hands of the fowler, hidden in the grasses at a distance, and the egret is a prisoner. The newly caught bird is then divested of its marital plumes, and released to return to its spouse, and the nets are set again. It is impossible to say what conjugal trouble there may be when an egret rejoins its mate devoid of its wedding garments, and there is the cruelty to the decoys, but there is no carnage.

So, when we see the aigrettes on the fashionable hats of the day—

"Where beauty's veil doth cover every blot,
And all things turn to fair that eyes can see,"

they bring back the atmosphere of Indian plains, and reveal the blot in the background—the blot of harmless, useful birds, murdered, mutilated, and tortured in order that our women may be beautiful. And, at the thought, the sight of the plumes becomes bitter to the eye, as if their beauty had been wiped away.

SUFFERING ARMENIANS.

A telegram received in London recently by Reuter's Agency states that several thousand destitute Armenians from Van and Urumia have arrived at Hamadan, proceeding south. They are in acute distress and urgently need help. Great distress prevails in Turkish and Russian Armenia. The exertions made by the Armenians in organising the defence of the Caucasus have almost exhausted their resources, and the scarcity of food in Russia and Turkey has left the Armenian population in a hopeless condition.

Considerable progress has been made in the development of the educational system in Palestine since the Zionist Commission took the matter in hand with the concurrence of the British authorities, and the need for teachers is becoming acute. Applications are being invited by the Zionist Organisation in London from certified and experienced male teachers, possessing a thorough knowledge of English and able to teach elementary school subjects in Hebrew for service in Palestine.

TANGIER TO TEHERAN.

Evidently Talaat Pasha is quite incorrigible. He has been "assuring" representatives of Central European Jewish organizations of his "sympathy" for the creation of a Jewish religious centre in Palestine, "by means of well-organized immigration and colonization." And he added that it was his desire to place this work under the "protection" of the Turkish Government. No doubt, in the intervals of talking this kind of twaddle the Grand Vizier amuses himself by endeavouring to catch sparrows by putting salt on their tails. The Jews, whether of Central Europe or elsewhere, are not likely to be caught with chaff, as I have remarked before; but Talaat keeps smiling (to himself, no doubt) and spinning the same old story. Occasionally, however, he seems to forget what he has said in regard to this matter. Thus, in a moment of aberration, he was foolish enough to tell the representative of a German paper that "the Turkish Government did not contemplate granting privileges to Jews in Palestine." He added that "Jews in Palestine would have the same rights as the rest of Ottoman citizens." As the Armenians, for instance?

***

As a small boy I used to regard the leopard as a very inferior kind of beast. The lion, the tiger, the rhinoceros, and even the wolf, were more or less terrible, but the leopard was "just a big cat" to me, and failed entirely to earn my respect. My natural history may have been not so bad, but I have to some extent revised my estimate of the leopard's "terribleness" since those youthful days. He can, and very often does, make himself an infernal nuisance, if not worse, and if you show any sign of fear he will become very bold indeed. If you put up a fight, however, he usually shows his catty nature very quickly. And a catty nature—even in a cat—is not a thing to admire.

***

These profound reflections are the result of reading a couple of panther paragraphs in papers recently received, one from Egypt and the other from India. The first is reproduced from an official diary of the Blue Nile Province (Sudan), and is as follows:—"A leopard was reported in Wad Magdubborest, and the Inspector and Captain Mee went out to try to shoot it; but owing to the density of the forest and to the leopard continually moving from place to place, were unable to get a shot. Shortly after they had given up the attempt and returned to Medani, the leopard sprang out and mauled a boy, but was driven away by the natives before it could do him much harm. Its tracks and the statement of the natives show it to have been a large one." There you have the true "catty" character, cautious, cruel and contemptible. But the other paragraph shows these characteristics still more clearly. I came across it in the *Pioneer*, and it relates how, at a village named Thapan, in Burma, a full-grown leopard attacked an old Burman who—fortunately for himself—carried a heavy stick. The old man put up a fight: he "struck the beast across the mouth, causing it to stagger and spin round," and afterwards belaboured it so energetically that he killed it outright. For this he received the usual Government reward of twenty rupees, which he certainly deserved. But what strikes me as the strange feature of the story is that the panther should have plucked up courage for the attack. Probably it did not notice that "heavy stick."

***

If any of my readers seriously doubt that the East has a more graceful way of doing most things—even business—than the West, I would invite them to consider carefully the following notice from the *Busreh Times* of May 30:—

> We the undersigned Abdullah and Mustaffa, the sons of Haji Taha El-Salman beg to inform the public that notwithstanding the death of our beloved eldest brother Yassin whose honoured name figured in the title of our business which has hitherto been carried under the title of Yassin and Brothers, sons of Haji Taha El-Salman, the said business will continue to run its former title without any change but the persons now interested in the business are Abdullah, Mustaffa as afore mentioned and the heirs of the deceased.
>
> A. T. Salman. M. T. Salman.

If that is not better than "We, the undersigned, hereby give notice," etc., of the usual Western notice, I am no judge.

***

I hope you are not missing the series of articles ("The Kaiser and the War") which Mr. Arthur N. Davis is contributing to *The Times*. They show up the weaknesses, the vanity, and the intense egotism of the All-Highest so vividly; and, as we should expect, they contain many references to the Near East and German ambitions in that direction. One remark that Hajji Wilhelm made to Mr. Davis was very typical of his self-centred character. "The way they have treated my poor sister, the Queen of Greece, is a shame and a disgrace," he exclaimed. There you have the man! To oppose, or thwart, *his* sister was "a disgrace"—even when she and her precious spouse were doing their best to sacrifice Greece and all the Greeks on the altar of Hohenzollern ambition. And imagine an Emperor saying to anyone: "If you see my cousin the King in England, kick him on the shins for me." No amount of "fire in his eye" could make such a remark anything but utterly childish. And yet this object is a "War Lord"!

***

I am afraid I have referred more than once to the diminutive size of the average Egyptian egg—and, for that matter, of the Near Eastern egg generally; but I hope I shall be forgiven if I touch on it, very briefly, once more. My excuse for doing so is the proposal, recently put forward in this country, that eggs should be sold by weight; and in view of my old grudge against the Oriental hen, I hasten to give my blessing to whoever made this excellent suggestion. As a matter of fact, I am told by a friend, eggs *have* been sold by weight for some little time in certain parts of Hampshire; and the system is so obviously a fair one that I have hopes that it will speedily become universal. Then the Gippy and Balkanic hens may be shamed into doing better! Seriously, the egg (and poultry) industry in this country would pay for organization.

***

In the third official list of internments of enemy aliens I came across the following:—"Domreicher, Andre, Farnham, Surrey, 52; spent most of the last eight years in England, but not been continuously resident: British-born wife; two British-born children; was in the Egyptian Civil Service." This reminded me that a fortnight ago a letter appeared in the *Field* from Mr. R. Drummond Hay, who eighteen or nineteen years ago was serving in the Egyptian Coast Guard Service. The writer mentions that "the staff officer for the Upper Egypt was (Bimbashi) André von Dumreicher, a reserve officer of the 21st Uhlans," and adds: "He later married the daughter, I believe, of the French Consul in Cairo. . . Not more than ten years ago, and perhaps less, they were living at Farnham, Surrey. Incidentally Mr. Drummond Hay states that "when Brockdorff took over Upper Egypt the three European coastguard officers were Germans." It was a curious state of affairs, and well illustrates our foolishly trusting way of treating potential enemies. Personally, I admit that the fact that Domreicher chose England as his residence would have led me to think that he was probably "English" at heart.

CORSAIR.

SYRIA & PALESTINE RELIEF FUND

(Registered under the War Charities Act, 1916).

JAFFA, JULY 11, 1918.

"Our first object is to try to restore the moral of the women and girls. The state in which most of them are is heart-breaking. They are reduced to

UNRECOGNISABLE GHOSTS

of their former selves, through fear, starvation, exposure and want of decent clothing. The state of most of them is heart-breaking. Nearly all . . . driven out of the town . . . wandered about from place to place suffering

GREAT HARDSHIPS AND CRUELTIES.

They lost all their possessions. Most of them have lost all their grown-up male relations. We are busy planning with the military authorities how work may be found for all the women."

PRESS ON THE NEAR EAST.

The Montagu-Chelmsford Report.

The first of the quarterlies to deal with the Montagu-Chelmsford Report is *The Round Table*, which can be relied upon to approach the subject sympathetically, but critically. Starting from the point of view that the announcement of August 20, 1917, constitutes a sacred pledge by the British nation, it holds that that pledge must be fulfilled by a definite and generous advance along the road which demonstrably leads to the declared goal. Risks, it states, there unquestionably are; "but we must not be frightened by such anticipations into making the one mistake which cannot be remedied—the postponement of any advance at all until confidence in our intentions and in our ability to fulfil them is destroyed."

After a brief analysis of the report, the article proceeds:—

There are, however, four conditions which the scheme must obviously fulfil if it can hope for success, and by these it is reasonable that the main details of the project should be tested. *First*, the plan must contain in itself the germs of orderly and continuous development; the path must not lead to a precipice from which we shall have to recoil and start afresh. *Second*, there must be clarity of responsibility and no confusion of duties; so that the acts of Ministers may be readily judged both by the electorate and by the periodical commissions of inquiry. *Third*, there must be the most cordial co-operation possible between the old governmental agencies and the new; and to this end every point of friction must be eliminated or averted so far as ordinary prudence can foresee *Fourth*, there must be strong, prompt and effective control in the hands of those ultimately responsible for peace and order; so that mistakes may be quickly rectified, and the experiment may run its course under favourable conditions of internal quiet and contentment.

Now, with these elementary criteria, there are certain proposals in the report which can in no way be made to square. The chief offender is, unfortunately, that part of the scheme which will be most canvassed in England—the future constitution of the Government of India. The rôle of that central body is to be materially altered. Its controlling functions are to be restricted to what are frequently called the imperial interests of the country—defence, railways, Customs, the public debt, Native States, etc.—and its intervention in provincial interests will be narrowed down to a general oversight of the acts of the different Governors in their reserved duties. But the central Government cannot be divested of a wide responsibility for moulding and directing the political advance, for advising and supporting the Governors, and for upholding the probity and efficiency of the public services. It must, in words which the report treats as axiomatic, "remain wholly responsible to Parliament, and, saving such responsibility, its authority in essential matters must remain indisputable." To secure this authority and to equip the Government of India for this responsibility, what does the report propose? It enlarges the Viceroy's Executive Council; it refuses to reserve any seats (three being so reserved at present) for civil servants, and it erects a complicated bicameral system of legislature, in which the Government can never be sure of carrying a Bill except in the Upper House. Taken as a whole, these measures would make neither for strength nor for smoothness of work. The enlargement of the Executive Council, big enough already for its diminished volume of work in the future, may indeed be justified by the need for appointing more Indians to it, and must be understood as justifiable on that ground alone. The probable exclusion from the Council, however, of Englishmen with any knowledge of India, cannot be vindicated at a time when the Viceroy will require the best available experience in handling the many thorny problems of transition. Incidentally, it would be regrettable if the Public Services read this proposal as a slur upon their capacity at the instance of the Home Rulers, with whom it originated. But far more dangerous will be the weakness of the Executive in presence of its legislature. The Government will be in a permanent minority in the Legislative Assembly, and will thus be always liable to a vote of censure for any unpopular action which it may have to take or to defend in any province. It will also be unable to pass a measure which the Assembly dislikes, except by the device of a special certificate from the Governor-General, invoking the aid of the Upper House and shutting out the jurisdiction of the Lower. A sensitive horse is not to be ridden on the curb; and this exceptional procedure obviously cannot be employed with any freedom without engendering acute friction between the Popular Assembly on the one side and both the Viceroy and the Upper House on the other. The whole of this part of the scheme calls for reconsideration. The Viceroy, as the King's representative, must be kept more out of the arena of conflict. A simpler and more secure method should be devised for attaining that "indisputable authority in essentials" and that freedom from harassment which the Government of India has a right to claim so long as it remains "wholly responsible to Parliament" for the proper administration of the country.

Other details that come in for criticism are:—The Provincial Executive, consisting of two parts, the Governor and his executive councillors on the one side and the Governor with one or more visitors on the other.

Dualism, with all its want of symmetry, is inherent in these new arragements. . . . The Executive Council and the Ministers will be two separate and self-contained agencies for the conduct of their respective businesses, and not one joint agency.

The writer continues:—

When our tests are applied to its (the provincial scheme's) legislative and financial aspects, graver defects emerge.

There is the possibility of the Governor being voted down by his Grand Committee, when

Very serious mischief may be done. . . . The position is impossible, and there is no justification for it. Responsibility and power must go together. The Legislative Assembly is given wide powers in the subjects transferred to its control. The Governor-in-Council must have an equally unambiguous authority over his reserved duties.

The procedure for supply, it adds, is open to similar objections.

Let Ministers have their own sources of revenue, determined for a period of years, and so adjusted as to grow with their normal needs. Let their supply votes and those of the Governor-in-Council be kept entirely separate, and let the latter, if necessary, be dealt with by the Grand Committee.

Finally, exception is taken to the levy which the Central Government will make upon the provinces. To calculate the annual subsidies at a uniform ratio of the surplus revenues in each province, the article holds, constitutes a manifest injustice. "Madras, though its own needs are as great as Bombay's, is to pay a subsidy nearly five times as great as that province."

The writer proposes that "when the Bill and all the subsidiary regulations to be framed under it are presented, Parliament should be moved to appoint a special commission or committee, preferably of both Houses, to scrutinize the complete project, to call for any evidence it requires, to make any amendments, and to report in full to the House of Commons."

A Day in Loheia.

In *Chambers's Journal* Mr. C. Thompson Walker describes a visit to Loheia, a town on the coast of the Red Sea, about 170 miles north-west of Mocha. Shortly before his visit it had been captured from the Turks by the Idrissi, with the help of British ships of war. Of the people he writes:—

As we stepped ashore the numerous vultures, sea-eagles, and redshanks that crowd the beach flapped lazily away, and we were greeted by a heterogeneous crowd of Arabs of every shade of brown, dressed in every conceivable kind of clothing. We had brought with us a Persian interpreter who spoke eight languages fluently, and whose services proved invaluable throughout the day. The wildest figures amongst the Arab crowd were the fighting-men, whose long silky black hair, bound with one band across the head, otherwise devoid of covering, distinguished them from those occupied in peaceable trades. Men of splendid physique but of little courage, they were literally armed to the teeth. All had rifles of various makes, Turkish, German, English, and French, some of them dating back to 1860. Bandoliers of soft-nosed cartridges were hung from their shoulders, and like-furnished belts were buckled around their waists. Through the belts were thrust evil-looking daggers with highly ornate hilts of gold or silver, and at their sides hung sharp double-edged swords. Altogether they were, to outward appearance, a very formidable crowd. The civilians wear a single loose garment, not unlike a night-dress, taken in and fastened with a belt or a shawl around the waist. This is generally of some light-coloured material with a striped border. The headgear consists of either a little plant-pot-shaped or conical wicker-work cap, or a gaudy turban. I did not observe a single tarboosh or fez, although these are almost invariably worn by the Egyptians. During the whole day I saw only two or three women, and they were peasants. The better-class women hardly stir from the harem, taking their exercise on the flat-topped roof. The faces of these women, unlike those of the Egyptians, are uncovered, but on any Christian approaching they hide the lower part with a corner of their garment. In addition to the various Arab tribesmen, there are a great number of Sudanese, Somalis, and Libyan negroes in the town.

The visitors could not see the Governor, who "was away inland speechifying, in the hope of raising his men to the frenzied pitch necessary before they can be persuaded to attack." They saw the Deputy-Governor, however, who proved anxious to facilitate their sight-seeing. In leaving the house they passed through a room devoted to the wounded.

Several of the inmates were rather badly hurt, but their wounds had been dressed by the ship's doctor, and with the assistance of their splendid physique they were getting along splendidly, in spite of the crowd of flies and the general filth of their "hospital." In a room on the ground floor we saw four or five captured Turks, men of fine appearance in spite of their ragged khaki uniforms. We were highly amused at the way these prisoners are treated. They are allowed to retain both rifles and ammunition "so that they will keep in a good mood," said our guide. They walk about at perfect liberty in the streets, and I even found one of them doing sentry duty in a deserted harem.

This prisoner-sentry proved loyal enough to threaten the visitors with his rifle if they persisted in their endeavours to break open a safe that was giving trouble to its captors—and his! The article is very interesting.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I am glad to learn from an Athens telegram that it has been decided that M. Michalakopoulos, Minister of Agriculture, will accompany the party of Greek merchants and others who are to pay a visit to this country under the auspices of the Federation of British Industries. The tour should prove of practical advantage to the business communities of both countries. It will not be enough, however, merely to show our Greek visitors what we can make; we must convince them that we are interested in the potentialities of their market and are really prepared to cater for it, not only because we are on the lookout for fresh outlets for our goods, but also because we recognise that Great Britain has an obligation to the peoples of the Balkans, and that is to assist them in their work of reconstruction in such a way that they will not be driven into the arms of Germany and Austria-Hungary in order to supply their needs.

***

It is worth noting that Greek securities have been rising during the past few weeks. In that fact may be found an apt reflection of the growing prosperity of the country. The presence of the Allied troops in Macedonia has had much the same effect on the economic life of Greece as the presence of the British troops has had on conditions in Egypt. In addition, the shipping industry, as I have previously pointed out, has proved a great source of wealth to the country, and with general commercial conditions favourable, it is not surprising that Greek shares should show an upward trend. Needless to say, banking shares have participated in the revival, notably those of the Bank of Athens, which have been in considerable demand. No dividend has been paid on the shares of this bank for some years. From 1907 to 1910 9 per cent. was paid, while the distribution in 1911 was 7½ per cent., and for 1912 3½ per cent. In the following year a capital reduction scheme was carried out. It is worth mentioning that at the last meeting the chairman expressed the opinion that the "bank has entered a period of prosperity in which shareholders will reap considerable profit."

***

A recent ordinance issued by the Indian Government under the Defence of India Act has fixed the value of the sovereign at fifteen rupees. It is further enacted that speculative transactions will be illegal. An effort is now to be made apparently to check the traffic in sovereigns, which have been dealt in for the past few years at a premium ranging up to four rupees above the ordinary value of the coin, and legislation in this direction has been long overdue. The Government no doubt had this matter in mind when they caused the new gold mohur piece to be stamped with its value of fifteen rupees. The scarcity of gold has been acutely felt in India since the outbreak of the war. An immense number of sovereigns have disappeared entirely, having been used chiefly for ornaments. One authority, whose reliability has not been questioned, estimates the value melted down for this purpose at nothing less than thirty million pounds.

***

Shortly after sovereigns were introduced into India they were readily accepted all over the country, but found most favour in the North-West. During the past twelve months Government have been disbursing a fairly large amount of their holdings in the Punjab in payment of wheat, and it was hoped that they would pass into circulation, but the increasing premium obtainable neutralised the Government's intentions. In the outlying districts, where their higher value was less appreciated, money changers eagerly collected all the available sovereigns—some from private hoards—and railed them to the big centres, where the highest premium was being offered. But now that transmission of gold by rail has been prohibited—as well as of silver coin—the Government are evidently determined to penalise gambling and to put a stop to this form of profiteering.

***

The hand which the India Government have taken in the control of exports and imports has not by any means been "hidden." They have been very much alive to the necessity for financing exports of national importance and in return for pecuniary assistance in the shape of Council Bills which they distribute weekly to the exchange banks they demand a return indicating how the money has been utilised. The banks have loyally upheld this arrangement, but the import houses in India have not been burdened with any such restrictions. Hence the note which has recently been circulated to Chambers of Commerce and Trader Associations at the principal ports directing attention to the paramount necessity of effecting homeward remittances through the exchange banks, as such cover has been used much too frequently of late to finance non-essential exports.

***

I am informed that the Morocco Publishing Company, Limited, has just been formed, under the auspices of the Merchants' Morocco Association, for the purpose of issuing a journal dealing solely with the affairs of Morocco. I understand that the directors of the new company are Mr. S. H. Cotton, of Culverwell, Brooks, and Co., Limited, and Mr. W. E. Calver, of Harrisons and Crosfield, Limited, and that the secretary is Mr. P. B. Robinson.

***

It is evident from the report on the Ceylon Blue Book for 1917, which is dealt with elsewhere in this issue, that the island has been feeling the pressure of war conditions at least as keenly as any part of the Empire. As in other cases, however, the position would not have been nearly so difficult had the island been independent as regards food supplies. It is very satisfactory to learn that steps have been taken with a view to promoting the growing of foodstuffs in Ceylon, and in view of the statement that much of the food and curry stuffs imported can be grown locally, it is to be hoped that no efforts will be spared to further the process.

***

Of the many good things that come out of the East it always seems to me that the rugs and carpets are the best. I refer, of course, to the genuine Oriental specimens, and to old ones at that. For the modern rug—or carpet—frequently suffers from the introduction of Western "improvements." For the past twenty years, at any rate, certain British firms have been sending out patterns according to which carpets have been made. The product is, no doubt, excellent as regards quality, and will wear as well as many a fine old specimen; for the design, however truly European (or American!) it may be, cannot seriously affect the quality of the material used, or of the workmanship put into the making; and design is purely a matter of taste—or the lack of it. But a second innovation has seriously depreciated the value of the Eastern rug. I refer to the introduction of aniline dyes, which seem to be gradually supplanting the old pure vegetable dyes. This is, I believe, due to German chemists and German salesmen, and it means another notch in the world's account against the apostles of *Kultur*. For, while the aniline dye may or may not be beautiful, it is commonly not "fast," and the result is that a carpet or rug in which it has been used will not stand getting wet, whereas an older rug, with nothing but vegetable dyes in it, may even be scrubbed with soap and hot water without ill results. In fact, the process usually improves such rugs.

***

What has turned my thoughts to this subject is the "run" on Oriental rugs and carpets that has been, and is, in progress in London. Here is a paragraph on the subject taken from the *Daily Graphic* of Monday:—"There is a syndicate of Armenians in London buying up Oriental rugs and carpets at extravagant prices," said the chairman of a large furnishing company in Tottenham Court Road yesterday to a *Daily Graphic* representative. "I am quite unable to account for this form of speculation. Rugs fetch £40 and upwards for which I would not have paid a tenth of that sum before the war. One might almost suppose that the 'Magic' Carpet of the Arabian Nights had been disposed of in error, and that these dusky buyers who come here daily were trying to recover it."

***

The moral of this story would seem to be: Sell your rugs now if you are out for a profit. But I expect that some of us care for our specimens too much to part with them even at "war prices." Whether the "dusky buyers" are after the "Magic Carpet," or whether they are actually buying up the rugs for export to Baghdad—as I am told—I do not pretend to say. But I may say that if I were going to buy an Oriental rug or carpet in this country I should not go to any of the "dusky" gentlemen. I should go to one of the big London firms with a reputation to keep up, and I should then feel tolerably sure that though I might pay quite as much as I should to a "dusky" dealer, I should be getting something that was what it purposed to be.

***

Mr. D. T. Chadwick, the Indian Trade Commissioner, gave a most interesting address on "Industrial Development in India During the War" this week in connection with the British Products Exhibition at King's College. As space could be found for a short summary only this week, the report of the lecture is being held over until next week.

COMMENTATOR.

Ceylon in 1917.

Fair Prosperity under Difficulties.

The report on the Ceylon Blue Book for 1917, which has just been issued, covers a period which saw the increasing incidence of war effects in the Island. During the year the Colony was faced by a general rise in prices, trade depression, considerable financial stringency, exchange difficulties, and the shortage of freight. In the circumstances it can only be regarded as exceedingly satisfactory that despite the effect of these things the year was on the whole one of fair prosperity. As a matter of fact the volume of trade was larger than in any year except 1916. The problem before Ceylon, we are told, was largely one of adjustment to meet altered circumstances, and "the community as a whole has faced it with determination, and with a very fair measure of success."

The exchange question had naturally a most marked effect on conditions in the Island, and it is pointed out that while the arrangement arrived at for the relief of the exchange banks allowed the export trade to be carried on, it did not provide means for bringing to the Island money for the upkeep of estates, etc. Thus the banks permitted plumbago exporters to draw for the full value of their exports owing to the national importance of this product, but tea, rubber and coconut estates, etc., were only able to draw sufficient for their bare upkeep. It was not only in regard to exports that the exchange question caused difficulties. Ceylon imports rice and other foodstuffs on a large scale from India, and has to pay something like Rs.10 lahks weekly for their purchase. As the exchange banks had only limited funds to bring over from India to Ceylon they found themselves unable to issue drafts on their Indian branches to meet the demand for remittances on account of the payment for rice and other foodstuffs. The Government met this difficulty by the establishment of a credit in India as a temporary measure, and ultimately the problem was solved by an agreement by which the India Government arranged to place the required funds to the credit of the Ceylon Government weekly for six months for utilisation under certain conditions. By September conditions had undergone a vital alteration, considerable funds having been deposited to the credit of the Ceylon Government in India on account of the purchase of teas, and it was decided that until these credits had been exhausted the weekly credit should remain in abeyance.

Naturally this difficulty in regard to the imports of foodstuffs had the effect of drawing attention to Ceylon's dependence on India for rice and curry stuffs, the staple food of the indigenous population and of the immigrant estate labourers. It was felt that the steps taken to cope with the exchange position should be supplemented by efforts to make Ceylon as self-supporting as possible. A campaign was, therefore, launched with this end in view, and leaflets in the vernacular were circulated, and at the beginning of the North East monsoon seeds were distributed. Cultivators have been urged to cultivate as large areas of paddy as possible, and in every way encouragement has been given to steps calculated to increase the Island's food resources. The measures taken have, it is stated, led to increased interest in the cultivation of food products, while evidence has been obtained that much of the food and curry stuffs imported could be grown in the Island.

Finance and Trade.

The Island's revenue for the year ended September, 1917, amounted to Rs66,981,877, an increase of Rs968,867 over the revenue of the previous year, and of Rs4,146,177 over the estimate. Customs and railways receipts were the principal sources of the increase. The expenditure amounted to Rs64,335,670, an increase of Rs8,231,155 on the figures for 1915-16 and of Rs762,619 on the estimate. The increase is accounted for by expenditure for war purposes. Ceylon's assets, mainly consisting of advances to local bodies, amounted, on September 30, to Rs58,115,851, and the liabilities to Rs19,984,358.

Ceylon's trade, excluding specie and coal supplied to steamers, amounted to Rs488,284,443. How this compares with the figures for the previous year and for the year before the war will be seen in the following table :—

	Imports. Rs.	Exports. Rs.	Total. Rs.
1913	186,073,086	232,986,954	419,060,040
1916	211,500,753	297,505,905	509,006,658
1917	184,123,986	304,160,457	488,284,443

Of the total exports in 1917 Rs292,625,008 represent the value of Ceylon's produce and manufactures, an increase of Rs7,787,032 on the figures for the previous year. The chief exports were rubber (1,310 lakhs against 1,035 lakhs), tea (957 lakhs against 1,053 lakhs), and plumbago (218 lakhs against 225 lakhs). It may be noted that rubber takes the chief place in the exports for the first time. The list of imports shows decreases under nearly every important head. Imports of cement amounted to 244,336 cwt., against 315,598 cwt. in 1916, the decrease being due to the decline in imports from Japan from 136,623 cwt. to 67,281 cwt. On the other hand imports of manufactured and raw cotton rose to Rs15,062,024 from Rs12,958,380.

It is satisfactory to note that Ceylon's trade continues to be mainly within the Empire. Thus, Ceylon took 73.94 per cent. of her imports from India, Burma, and the United Kingdom, against 71.83 in 1916, and 69.73 in 1915. In the export list the United Kingdom is still first with 41.07 per cent., against 45.89 in 1916, and 55.05 in 1915. The United States is now, however, a close rival with 33.32 per cent., against 26.87 in 1916, and 18.39 in 1915, and owing to the increased American exports in 1917 in that year, for the first time, foreign countries have taken more exports than the United Kingdom.

Agriculture.

The report states that the year was favourable for the tea industry. There was, however some restriction of output, and many estates had to modify their manuring programme, but on the whole cultivation was maintained at a high level. Rubber continues to thrive, and in parts of the Western Province is gradually displacing cinnamon. The tendency to convert paddy lands in Kalutara District into rubber estates is also noted; while in Matara District large areas, formerly under citronella, are being planted with rubber. There has been practically no extension of cacao cultivation. Coconut and coconut products suffered severely during the year owing to the absence of freight. Expenditure on coconut estates was reduced to the minimum, and many small owners stopped all cultivation and manuring. The land under citronella continued to be reduced. On the other hand, some interest has been taken in the cultivation of vanilla, and experiments have been carried on on a small scale with growing Natal Java indigo for seed. Tobacco crops were good, and it is stated that the product is now being widely grown, and that samples of the leaf sent to England from the Government experimental station at Jaffna show a great improvement in the quality, and seem to indicate that it may be possible to grow tobacco in Ceylon for the European market.

The Plumbago Industry.

1916 was a record year for the plumbago mining industry, both as regards the value and the quantity of the plumbago obtained, the total quantity exported being 33,410 tons, valued at Rs22,494,999. The year under review started in the same way, says the report, and there was every prospect of another good year. Development did not altogether fulfil expectations, however, for while there was a great demand for plumbago at the commencement of the year, and high prices were realised, the demand almost ceased towards the end of the year. As a result several of the smaller mines ceased to work. It is pointed out that the output of plumbago entirely depends on demand and prices, and, given an improvement in these respects, it is stated that there is every possibility that Ceylon can supply 30,000 tons a year for some years. The quantity of machinery used in the mines has been steadily increasing, enabling work to be done at a greater depth, and also allowing mines formerly abandoned to be reopened.

EGYPT'S OIL TROUBLE.

(From Our Correspondent.)

Cairo, August 5.

The Supplies Control Board has been devoting special attention to the question of the oil supply for Egypt, as in all Eastern countries oil is one of the necessaries of life, and the prices have lately gone up beyond the means of even the lower middle classes. A recent order issued by Mr. Ross Taylor, on behalf of the Supplies Control Board, required every person having in his possession any stock exceeding in the aggregate about 60 kilos. of cottonseed oil, or of an edible oil, or of a mixture of such oils within the limits of the Cairo Governorate and the Zimam of Giza town to send in, to the nearest police station before 5 p.m. on August 2, written returns giving the quantity of oil in okes, place of storage, name of persons from whom acquired, and price paid. In the case of mixed oils, the percentage of cottonseed oil contained in the mixture must be stated. Such returns are required to be made on special forms, which can be obtained at the police station, where certain further details have to be filled in. Between July 29 and August 2 no person shall, without a permit from the Commandant of Police, sell or dispose of the whole or part of a stock of oil in respect of which a declaration is called for under the provisions of this order. Any stock in respect of which a return is not made, or in respect of which a false return is made, or in respect of which any other breach of this order is committed, is liable to be confiscated.

Furthermore, orders have been passed by the Governorate to the Police Stations requiring the police on patrol duty to keep a sharp lookout upon all vehicles carrying oil from one locality to another. Again, a public notice has just been published offering a reward to any person who, verbally or by writing, informs the authorities of hidden stocks of oil, such reward to amount to 5 per cent. of the value of the oil seized.

Cottonseed, sesame seed, and lettuce, from which oil is extracted, are abundantly cultivated in Egypt, and there is no reason why the country should not have an adequate supply, provided proper measures are taken to prevent "cornering" and profiteering. Fairly large arrivals of olive oil from Crete and Greece are now reported; and this should prove an additional factor in relieving the present dearth, which is more artificial than real.

EGYPT'S SHORTAGE OF COINS

(From Our Correspondent.)

Cairo. August 5.

The nickel coin crisis continues unabated, and the public is still looking for a remedy for what constitutes a state of serious inconvenience. The dearth of nickel coins is being felt especially keenly by the tramcar passengers, and the public is wondering why the Cairo Tramway Co. has not yet adopted the very sensible suggestion, so often repeated by the Press, of issuing, as does the Alexandria Tramway Co., books of tickets. As regards the solution of the problem generally one out of the numerous suggestions put forward seems to commend itself most to attention. It is that the Government shall declare all coins minted prior to the reign of the late Sultan to be illegal tender. This, it is thought, would have for immediate effect the release of all the hoarded coins of that period. Should the hoarders continue to keep the coins of the later periods out of circulation another step in the same direction should be taken by the Government. A series of such moves would probably end in the release of practically the whole of the hidden coins. It seems to be generally admitted that the exclusive use of paper, especially for the lower values in the currency scale, would prove positively detrimental to the ignorant masses, who, from one cause and another, run the risk of unusual loss and wastage of such paper currency. Their illiteracy exposes them further to serious mistakes, of which many have already been the victims, a twenty-five piastre note being sometimes taken for a fifty piastre note. It is these considerations which have probably accounted so far for the apparent apathy of the Government.

EGYPTIAN FINANCES.

Government Accounts for 1917-1918.

(From Our Own Correspondent.)

Cairo, August 2.

The State accounts for the financial year, 1917-18, have just been closed, and the figures are published in the last *Official Journal*. The final position is: Revenue, £E23,166,074; expenditure, £E22,496,948; leaving a surplus of £E669,126. The following table shows how the year compares with previous financial years:—

Year.	Revenue.	Expenditure.	Surplus.
	£E.	£E.	£E.
1913-4.	17,703,898	17,659,961	+ 43,937
1914-5.	15,389,124	16,857,783	— 1,468,659
1915-6.	17,759,418	15,324,259	+ 2,435,159
1916-7.	19,927,274	17,240,606	+ 2,686,668
1917-8.	23,166,074	22,496,948	+ 669,126
Budget			
1917-8.	19,525,000	19,525,000	—
1918-9.	22,900,000	23,250,000	— 350,000

From this we see that, compared with pre-war results, revenue has increased by £E5,462,176, or about 30 per cent., whilst it exceeds the estimates for the year by £E3,641,074, or about 20 per cent. On the other hand, expenditure has increased by £E4,836,987 on that of 1913-14, and by £E2,971,948 on the year's estimates. Actually on the preceding year there is an increase in revenue of £E3,238,800, and in expenditure of £E5,266,342. Incidentally it may be pointed out that the final figures for 1917-18 constitute a record in Egyptian finances, the previous highest realised revenue being that for 1916-17.

During the year Customs increased by £E444,654, Mixed Courts fees by £E193,256, railways receipts by £E542,765, domains receipts by £E167,260, exemption from military service by £E68,700, interest on investments by £E521,088, sale of land by £E83,186, Post Office by £E46,077, telegraphs by £E38,573, Native Courts fees by £E31,681, assay fees by £E12,014, whilst excise appears for the first time with £E361,675, and Ghaffir Cess with £E685,375. The only important decreases are recorded under tobacco dues and ports and lights, which fell off by £E314,590 and £E46,694 respectively. Tobacco dues are still, however, above what they stood at in 1913-14.

It is clear from these figures that the improvement applies to every head of revenue excepting tobacco dues and ports lights. The following table, giving the actual results under the various heads in the last normal pre-war year, the first year of the war, and the one just closed, will illustrate the remarkable improvement which the revenues of the country have undergone since the war:—

—	1913-14.	1914-15.	1917-18.
	£E.	£E.	£E.
Direct taxes	5,517,854	5,254,096	5,608,712
Customs	2,134,439	1,362,181	3,159,508
Tobacco	1,720,446	1,742,995	1,810,719
Port dues	450,819	324,707	68,383
Assay	3,622	2,085	29,664
Mixed courts	985,318	727,248	1,074,260
Native courts	490,510	405,938	444,741
Mehkemehs	81,586	61,917	98,715
Railways	3,864,035	3,176,220	5,003,662
Telegraphs	130,412	123,071	188,928
Post Office	334,759	287,686	359,758
Rent of Land	169,538	155,530	201,783
Domains	256,505	205,465	832,062
Military exemption	139,557	107,380	173,480
Investment of funds	341,470	301,027	1,170,306
Sale of land	123,017	118,943	210,449
Other heads	960,011	1,032,635	*2,730,944
Total	17,703,898	15,389,124	23,166,074

* This item includes £E361,675 for Excise Duty and £E685,375 for Ghaffir Cess, neither of which figured in previous years' revenues.

The table shows that since the war direct taxes have improved by £E90,858, Customs by £E1,025,069, tobacco dues by £E90,273, railways by £E1,139,627, domains by £E575,557, investments of funds £E728,836, telegraphs by £E58,516, post office by £E24,999, Mixed Courts £E88,942, military exemption fees by £E33,923, sale of land £E87,432, rent of land by £E32,245, and other heads, in which are included the new items of Ghaffir Cess and Excise, by £E1,770,933. The only decreases have been in receipts from the Native Courts, which have fallen off by £E45,769, and ports and lights dues, which have diminished by £E382,436. The increases in railways, telegraphs, post office and tobacco, are due to the higher tariffs introduced since the war; those in the Customs receipts to the rise in the value of all commodities and in freights, those in domains to the enhanced value of agricultural products, those in investment of funds to the expansion of the note issue, and those in other items, such as assay, military exemption fees, sale of land, etc., to the increased prosperity of the people. On the whole the revenue may be regarded as revealing a satisfactory state of affairs in the country.

Expenditure during the financial year just closed increased by £E5,256,342, as already mentioned. In reality it was less than the figure given in the final account, as that included the contribution made by the Egyptian Government to the British war expenses. The actual amount written off in this respect is £E2,967,956, by which sum the 1917-18 expenditure should be reduced and the surplus increased if it is desired to make a comparison with preceding years. The most important items of expenditure were the Sultan's civil list £E380,499, Customs £E148,391, post office £E323,672, public health £E415,085, prisons £E253,644, Mixed Courts £E277,821, Native Courts £E407,692, irrigation £E1,368,121, Cairo tanzim £E175,739, main drainage department £E133,454, agriculture £E155,830, railways £E3,209,687, telegraphs £E121,847, telephones £E559,650, ghaffirs £E739,955—the two latter shown for the first time—police £E490,841, War Office £E1,216,444, H.B.M.'s forces in Egypt £E146,250, civil pensions and indemnities £E546,934, military pensions and indemnities £E175,875, public debt £E4,596,523, and war gratuities £E327,676.

The principal items showing increase over the previous year were irrigation £E185,756, War Office £E283,004, Central Finance Administration £E76,288, and coastguards £E89,743; if one takes into account the new Frontiers Districts Administration. Railways, it is interesting to note, took £E410,899 less than in 1916-17, and the post office has again started to pay its way.

Of the surplus of £E669,126 a sum of £E389,257, representing the Government Seigniorage on the coinage is issued during the year has been taken and passed to the silver reserve fund created the previous year, and now amounting to £E1,385,257. This reserve fund is intended to meet the loss which will certainly be incurred when the extra silver put into circulation comes to be withdrawn after the war. The balance of the surplus, viz., £E279,869, is carried to the general reserve, which thereby was brought up to £E6,770,179 on the 1st of April this year, as compared with the total of £E5,103,549 at the outbreak of the war. During the year an amount of £E175,200 of public debt was redeemed by the Egyptian Government. The conclusion one may safely draw from these figures is that Egypt, as a State, is in an admirable financial position, which will enable it to meet with a certain amount of equanimity the emergencies which undoubtedly await her in the near future.

EGYPTIAN TOBACCO RETURNS.

(From Our Correspondent.)

Cairo, August 5.

The total imports of tobacco during the month of May were 552,300 kilos, valued at £E236,462. The imports of tombac during the same month were 18,778 kilos, value £E2,253, while those of cigarettes were 3,695 kilog., value £E2,333. The price of Greek tobacco is estimated at 58 to 63 piastres the kilo; that of the Chinese at 30 to 45 piastres; while the imports of Japanese tobacco were nil. The total stocks in the customs warehouses up to the end of May amount to 116,357 bales.

ALEXANDRIA'S WAREHOUSES.

Insurance Against Fire Risks.

On May 17 a letter was addressed to the president of the Board of Trade (says *The Manchester Chamber of Commerce Monthly Journal*), with regard to the difficulties met with in effecting incurances of goods in bonded warehouses at Alexandria, members having complained that the Insurance Companies were full up to the extent of their limits. Consequently, traders could not insure, and they were prevented from procuring a negotiable bill of lading. The difficulty appears to have been removed temporarily, but the Chamber have suggested that the Government War Risks Insurance Committee should stand behind the Insurance companies to prevent a recurrence of the trouble. A letter was also addressed to the Fire Offices Committee, London, regarding the insurance of goods in general warehouses in Alexandria. The insurance companies have lately been insisting on onerous conditions as to assurances from the person desiring to effect an insurance that no dangerous business was carried on—or articles of a dangerous nature stored—in the adjoining premises. The Fire Offices Committee are considering the matter.

MANUFACTURE OF CHEMICALS IN INDIA.

An important project has been launched by a French expert who is in Bombay, to manufacture on a large scale chemicals from raw materials obtained in India (says *The Board of Trade Journal*), and especially to develop in India the industry of distillation of wood and the recovery of its by-products, which in recent years has become a great industry in North America, France and Germany.

The report published by the Indian Institute of Science on the possibilities of the wood distillation industry in India strongly supports the view that the vast jungles and plantations in India present great advantages for the development of this industry.

The new company, states an Indian authority, has been permitted by the Government of India to issue its share capital up to ten lakhs during the currency of the Indian Companies Act, as the undertakings of the company are considered to be of great national importance. The company has obtained valuable concessions from the Government of Portuguese India, and has secured in the districts of Goa and Satara the exclusive rights of using fifty thousand acres of forest land for the purpose of manufacturing wood alcohol and other by-products.

The company also proposes to start factories at Vascodagama, Sanvordem, and Collem for manufacturing oil and its by-products and other chemicals. The company has already established a factory at Parel, Bombay, for the manufacture of tannin extracts and vegetable colours, for which there is a great demand in India and abroad.

INDIAN BEESWAX.

In 1915 the Imperial Institute called the attention of the Government of India to the fact that the extensive adulteration of Indian beeswax was seriously interfering with the use of the wax in Russia for the manufacture of candles. After the outbreak of war the Russian Church authorities gave permission to their English agents to supply East Indian wax, which had previously been ruled out of their contracts. Commercial samples of the wax which were examined by the agents were considered, however, to be very unsatisfactory, only four samples out of forty being passed as free from adulteration. To judge from the examination of several samples which have been supplied to the Imperial Institute from India, there would appear to be considerable uncertainty as to what really is the precise composition of genuine Indian beeswax, and the Institute is going into the whole question with the object of establishing recognised standards for the Indian product.

The general rainfall in India has been good, but on the whole is still defective in the Peninsula, though in Bombay, where there has been a marked shortage, the fall last week was fair.

ENGINEERING NOTES.

Industrial Progress in Greece.

The absence of adequate official statistics, and a peculiar aversion which, as a rule, the native Greek manufacturers and merchants have from advertising themselves and their business, are responsible, to a certain extent, for the meagre information that reaches British manufacturers regarding the marked progress that Greece has been making in industry, agriculture and commerce during the last three decades. On the basis of such inadequate information, which refers principally to trade and commerce in large towns, an erroneous opinion is apt to be formed as to the real value of Greek markets and as to the importance of the country's resources. In previous Engineering Notes we remarked that little is known of the existing industries in the interior of Greece, yet with the exception of a few mountainous or pastoral districts almost every town and rural district can boast of some kind of industry in which modern machinery and implements are being employed. And these industries, together with agricultural pursuits, are continually increasing. But these provincial industries do not figure in the information which guides the British manufacturer in his search for markets in Greece.

A report was shown to the present writer referring to the industries of the Piræus, in which only five or six factories were mentioned as representing the industry of that important Mediterranean port! Yet the Piræus, the port of Athens, is undoubtedly the industrial centre of the Near East. It is Greece's chief manufacturing town. From a little swampy village, at the time of the declaration of Greek Independence, it has attained the proportions of a large modern town, with an excellent port, dry docks, shipbuilding yards, land and marine engineering works, with large shipping accommodation in the port. There are, at the Piræus, fifteen large modern flour mills, thirteen iron works, three shipyards, one sack factory, one silkwear factory, one glass factory, one fertiliser factory, twenty-six distilleries (their products of cognac and liqueurs are exported to all parts of the Near East, to Russia, and to some extent to Western Europe), eight cotton spinning mills, seven weaving factories, ten soap and sulphur oil factories, five mosaic flag factories, five confectionery factories, four French-nail factories, five tanneries, eight macaroni factories, one brewery, three ice-factories, five wood-working factories, two paint factories, one printing-ink factory, five ammonia and naphtha factories, one potash factory, two gunpowder factories, one paper-mill, two brush factories, a shot factory, a match factory, a flannel factory, a resin-oil factory, a tile factory, large gasworks and electric works, a worsted goods factory, a pottery, three rope factories, a syrup factory, an oxygen factory, two wine factories, and a number of other small factories. All these factories, in which the five or six referred to in the report mentioned above are, we presume, included, are large concerns supplying with their products the Balkan States, South Russia, Asia Minor, Egypt, and all the Ægean Archipelago.

This category of industries in one town of Greece gives a fair idea of the potentialities of the country, and it must be borne in mind that these factories, as well as those in other towns, all require renewals of machinery, accessories, etc. The enormous amount of belting required to drive this machinery together with shafting, pulleys, machine tools, hand tools, spindles, looms, boilers, presses, distilling apparatus and accessories, lubricating oils, chemicals—in short, all the machinery and appliances required for the above factories have to be imported. And all can be supplied from the United Kingdom. The above-named factories represent the successfully developed industries in Greece generally.

Windmill Pumps.

British windmill pump manufacturers will find a good market for their mills, combined with a simple design of pump, in Greece, as well as in other parts of the Near East. There is always a good demand for such plant, for owing to climatic conditions, especially during the long dry season, cattle and sheep suffer very much. In recent years the sinking of wells has become a pronounced necessity, and boring machines have been called into use to supply cattle with the necessary quantity of water to sustain life. Before the outbreak of war, American and German firms were doing a brisk trade by offering a simple design of pumping mills to meet local requirements. Two kinds of such mills are saleable in the Near East: a light one for pumping water for cattle, and a heavy one for irrigation purposes. The main points considered in purchasing such motors are lightness, combined with great capacity, facility of removing from one place to another, and ability to be set in motion by the lightest breeze. Such mills are made in many parts of Great Britain, and manufacturers have at present an excellent opportunity to introduce their pumping windmills.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

Fresh high records have again been established in prices in the market. There seems to be no end to the upward movement, and in view of the facts before us at the moment there appears to be every probability of higher values. It is now recognised that the American crop for this season will be very small. The Government report published on Tuesday was much worse than expected, and only indicates a yield of about 11,000,000 bales. Bullish sentiment has been pronounced in all quarters. Not much change can be recorded in the outlook for the Egyptian growth. Manchester merchants are considerably harassed by the Government rules and regulations, and extreme difficulty is being experienced in purchasing in Alexandria. It is said that nothing is being done by the Control Board there for another fortnight. In the meantime, in spite of fixed prices, there are some irregularities. Egyptian yarns have again been advanced in quotation. Many producers have recently strengthened their position, and in certain counts and qualities prohibitive rates are now being put out so as to check buying. Spinners are undoubtedly making enormous profits. A large inquiry has been met with in piece goods for Egypt. In addition to printed and dyed materials moving off freely some very fair lines have been booked in sized goods. An encouraging turnover has been reported in finishing and bleaching cloths for India. The independent attitude of manufacturers is more pronounced than ever, and some firms are refusing to sell further ahead. The higher prices in American yarns have been firmly held by spinners. In view of the small output a healthy business has been done.

The American Crop.

Distinctly worse reports have come to hand this week relating to the American cotton crop for the current season. Last Tuesday the Government reported that the condition on August 25 was 55.7 per cent., against 73.6 per cent. in July and 67.8 per cent. in August last year. The statement was less favourable than anticipated, and prices since then have advanced sharply in both New York and Liverpool. According to the statistics issued, the yield is estimated at a little more than 11,000,000 bales. At the end of June there seemed to be a possibility of an output of over 15,000,000 bales. The recent deterioration has been due to lack of rains, especially in the south-west portion of the Belt. Good middling American cotton at the begining of August was quoted at 20.80d. per lb., whereas on Wednesday last the figure was 26.51d. per lb.

CYPRUS CAROBS.

(From Our Correspondent.)

As regards the strong protests raised by growers against the prices fixed by the authorities for carobs of this summer, a large Pan-Cypriot meeting has been held, under the chairmanship of the Provost-Marshal, Major Botton, at Platres, and the conclusions reached pointed to a proposal that half this year's crop should be taken by the military authorities; the price being fixed at 19s. 6d. the kantar (180 okes), or £4 6s. 6d. the ton, for beans of the lower areas, which produce the best pods, and slightly less for those of other parts. The beans are gathered towards the end of August.

COMPANY NOTES & REPORTS

The net profit of the Benares Bank, Ltd., for the half year ended June 30, amounts to Rs.57,302. Adding to it Rs.13,861 brought forward from the previous half-year's accounts the divisible balance amounts to Rs. 71,163. The directors recommend a dividend at the rate of eight per cent. per annum to the shareholders, which will absorb Rs.40,000, and the sum of Rs.12,500 to be transferred to reserve fund, increasing it to Rs.3,75,000. After providing Rs.4,732 for the contingency funds the rest will be carried forward.

The gross profits of the Indian Bank, Ltd., for the half year ended June 30, amounted to Rs.1,96,262. After allowing for expenses on account of interest allowed to depositors, establishment and other charges amounting to Rs.1,24,884 the net profit for the half-year amounts to Rs.71,378. Adding to this a balance of Rs. 14,252 from last year's balance sheet, the amount of Rs.85,630 is available for disposal.

Dividends, Payments, etc.

The transfer books of the Chartered Bank of India, Australia, and China have been closed from September 4 to September 11, both days inclusive.

The directors of the National Bank of Greece announce that the dividend on the ordinary shares for the first half of 1918, amounting to 140 drachmae per share, is now payable at the London office of the Bank of Athens, 22, Fenchurch Street, E.C.

NEWS FROM ALL SOURCES.

Mr. Frederick Schooling has been appointed a director of the Bengal-Nagpur Railway.

A branch of the Bank of British West Africa, Ltd., has been opened at Alexandria, Egypt.

Owing to the rise in the price of coal, it has been necessary to increase both rates and fares on the Sudan Government railways and steamers.

British India trade returns for July show increases in imports to the extent of £4,989,000, and of exports to the extent of £2,466,000, compared with those of last year.

A telegraphic report from India states that the September delivery of fine broach is quoted at 914 rupees the candy. Raw jute remains firm. Europe fours are quoted at 12 rupees.

A *Reuter* message states that the first series of Greek Treasury bonds having been entirely covered the Government have decided to issue a second series of 50,000,000 drachmae.

The *Sudan Times* (July 31) reports: The export of cattle and sheep from the Red Sea Province has been prohibited, as there are hardly enough cattle to meet the needs of the population of the Province.

The appointment of controllers of cotton cloth in India has been announced. The scheme comprises the manufacture and sale of standard varieties at controlled prices. Imported cloths are not affected.

The Government of Bombay is undertaking the exploitation of the bitterns from salt manufacture in the Runn of Cutch for the manufacture of magnesium chloride and bromine. The existing contract at Kharagoda (a salt factory on the Little Runn) has been cancelled.

The prospects of cotton in the United Provinces and of food crops throughout the Madras Deccan—both tracts which suffered earlier in the monsoon through lack of rain—have greatly improved. The early sowings of cotton in Bombay are, however, 20 per cent. below normal.

The Postmaster-General announces the loss at sea through enemy action of mails for Cyprus containing all classes of correspondence except parcels, which were posted in London or received in London from the Provinces for despatch from the evening of June 13 to the evening of July 2. Letters and parcels from Cyprus posted from August 2 to August 10 are also believed to have been lost.

Digitized by Google

ON 'CHANGE.

(From Our Own Correspondent.)
Throgmorton Avenue, Wednesday.

Business has not been very active this week, but the undertone has remained very firm, and here and there some special demand has been made, which has had its effect upon the prices of the securities concerned. On the other hand there has been some weakness in one or two cases, due, no doubt, to profit taking and shifting of investments.

In Government stocks, whilst Egyptian Unified have receded 1⅛ to 91½, the 3½ per cent. pref. have remained a firm spot at 79⅜, and City of Alexandria Bonds have advanced two points to 85. There has also been an appreciation of one point in Turkish 3½ per cent. Egyptian Tribute bonds to 75.

In Bank shares both Nationals and Agriculturals have been rather dull, the former closing 1-16 lower at 20⅞ and the latter being ⅛ down at 7. Anglo-Egyptian Banks are also a trifle quieter at 17 7-16. On the other hand there has been a further jump of ½ in Bank of Athens to 5, on some fair demand, due no doubt to the big rise in Athens; where the latest advices report the shares to be quoted somewhere about 5⅜.

In Railways, Delta Light, after being 3-16 up, close ⅛ higher at 7½.

In Land shares a fair amount of business has been done in Aboukirs round 25s. 6d., and Anglo-Egyptian Land Allotments have been enquired for round the current level without leading to business, as sellers are at the moment non-existent. In Beheras there have been no transactions in the ordinary shares, but some preference has been done round the current price. Delta Lands have changed hands in a small way down to as low as 16s., but the shares are again back to their last week's level at 17s. Gharbieh Land close ⅛ up at 2⅜, some small business having been done at the price. New Egyptians are 4½d. lower at 22s. 3d. on some profit taking. Sidi Salem, on the other hand, are 2s. higher at 57s., there being some local demand, and sellers being rather scarce. Union Foncière are unchanged at 3 23-32, but United Egyptian Lands are 1d. higher at 2s. 8d. There are a good many buyers about for the latter shares, but very little is offering under 3s.

In Miscellaneous shares some small business has been going on in Markets round 27s., and a fair number of transactions have taken place in Khedivial Mail shares, which have been enquired for from Egypt, and which close 1s. up at 62s. 6d. A feature has been the demand for Salt and Sodas, which are closing 6s 6d. higher at 65s.

In Greek securities a further practically all round advance has to be recorded. The 1881 and 1884 Loans are 3 points up at 72, the 1890 Loan has risen 2 points to 71 and Rentes a similar fraction to 57s. Monopoly has improved one point to 67, and Funding is 2½ points higher at 66. There is also a rise of 2 points in the 1902 Loan to 68, and of one point in the 1910 Loan to 64. The 1914 issue has recovered the whole of the dividend at 79 x.d.

SUDAN TRADE RETURNS.

The total value of merchandise imported into the Sudan during the first six months of the present year—i.e., from January 1 to June 30—amounted to £E1,916,710, which is £E561,439 above those of the corresponding period in 1917. The value of exports during the same period amounted to £E2,011,347, which also show an increase over those of the corresponding period in 1917, the increase, however, being only £E97,732.

Madras Electric Trams.—The directors of the Madras Electric Tramways (1904), Ltd., have declared an interim dividend in respect of the year ending December 31 next of 8 per cent. per annum, free of tax, on the ordinary shares, payable 30th instant.

NOTES OF THE WEEK.

For military news from the East this week, apart from Macedonia, we have to go as far afield as Eastern Siberia, where the cause of Russia and the reconstitution of the Eastern front is being fought out between the Allies on the one hand, and Bolsheviks and Austro-German prisoners on the other. The immediate object of the Allies' intervention—the relief of the Czecho-Slovak troops between Irkutsk and Vladivostok—would seem to have been achieved. The different sections of the Allied forces are in touch the whole way between these two towns; Khabarovsk has been occupied, and the Bolsheviks have withdrawn to Blagoveshtckensk, on the left bank of the Amur, where counsels as to their future course of action are said to be divided.

The situation in Siberia, however, is far from being on a satisfactory footing, so long as rival Governments claim to be the sole depositories of legitimate power. As far as can be gathered, circumstances are against General Horvath, whose devotion to the Allied cause may be above suspicion; but it is clear that he does not command the support of the bulk of Russian opinion in Eastern Siberia, and for this reason it is to be hoped that he will not retard the progress of the Allied arms by continuing to divide the anti-Bolshevik forces. Only when this question of a single Provisional Government for Siberia has been settled can the Allies undertake their next move. It is unthinkable that they should regard their work in Siberia at an end with the rescue of the Czecho-Slovaks. The position in Russia is too critical to be left to find a solution for itself.

The attempt of German propaganda to despair of King Ferdinand's life was overdone. His mission to Germany, however, must have evoked strong misgivings to cause the German authorities to call in such aid. Whatever the object of his visit, he has cut short his stay at Bad Nauheim in order to return to Sofia to welcome the King of Bavaria. Almost as much mystery or speculation surrounds this meeting as greeted King Ferdinand's sudden departure from Bulgaria a few weeks ago. It has followed the announcement that the Bavarian and Saxon Governments had decided to establish their own Legations at Sofia. The *Frankfurter Zeitung* at once pointed out, somewhat acridly, that "The German Empire, according to the Constitution, is only represented abroad through the Kaiser, and consequently to have representatives of the Federal States in addition to those of the Empire is nonsense." However that may be, the King of Bavaria has arrived in Sofia, and was more fortunate that the Emperor Karl of Austria-Hungary in that he found King Ferdinand well enough to meet him at the station. These comings and goings among the rulers of the Central Powers and their vassals form an interesting background to the frantic appeals that are being addressed to the German people not to allow themselves to be turned from their will to victory.

On the Macedonian front there has been sufficient activity to call for almost daily reports during the past week. British troops had made a successful advance west of the Vardar on September 1. The following day the Bulgarians delivered a counter-attack, "under cover of an intense bombardment," but were repulsed. At the same time they were making two unsuccessful raids in the Cerna Bend and in the region of Monastir, again with considerable artillery activity. Two days later it was reported that the artillery struggle had been brisk and reconnaissances had been active over the whole front, particularly to the west of the Vardar, where a *coup de main* was repulsed. On September 9 the new advance line occupied by the Greeks in the Struma Valley was heavily bombarded, and the enemy made several strong attacks, which were all repulsed. This recrudescence of activity on the part of the Bulgarians may have been prompted by a desire to forestall possible movements on the part of the Allies, or it may be connected with the position in Bulgaria. Less attention would probably be paid to the royal Bavarian visitor if public expectation could momentarily be aroused by military operations. There can have been no desire for a repetition of the strone-throwing at the royal train when the Emperor Karl was visiting Bulgaria.

German and Austrian references to Roumania suggest that the Central Powers still have some rod in pickle for that unhappy country. It is reported from Vienna that the tension between Roumania and her conquerors is increasing. Count Burian has stated that it was necessary for Austria to follow with the closest attention certain events in the Roumanian districts not occupied by the Central Powers, and that, if required, energetic measures would be taken to put down conspiracies. The allusions are ominous. If ever the time comes for the Russian battle line to be re-formed against Germany, the latter's hold on Roumania must become precarious. On the analogy of the Western front, we may expect the

Digitized by Google

Germans to devastate ruthlessly all the ground they are forced to evacuate. The position in Roumania may present certain differences from that of the French territory occupied, and it may be considered necessary to have excuses ready beforehand. Allegations of "conspiracy" would be all that, in German opinion, would be required to justify the laying waste of the whole of Roumania. The Germans have been allowed to work their own will in France; but the time has come when an effort should be made to check their lust for destruction. In the case of Roumania, which so far has not been exposed to excessive devastation, the Germans might be informed that for any wilful damage done from now onwards a similar fate will be imposed in due course on German towns and German property.

It is probable that enemy anxiety regarding the situation in Roumania centres in the peculiar position of General Averescu. Conceiving that he could serve his country better in the political sphere than by remaining a soldier in an army that had been rendered powerless, General Averescu resigned his commission and entered Parliament. He enjoys extraordinary popularity, and as his sole qualifications appear to be a rugged honesty of purpose and an unswerving determination to champion the interests of the people in the face of the German occupation and of the Roumanian Government's subserviency, the position will be watched with interest. Whether from choice or because it cannot help itself, the present Government is acting as the agent of German policy. It is bound, therefore, to be unpopular, and the attitude of General Averescu is hailed as offering the country its one chance of salvation.

Talaat Pasha, the Turkish Grand Vizier, has been adding his quota to the enemy peace offensive. He was on his way to Berlin, and during his stay in Vienna he informed the *Neue Freie Presse* that peace would come before the winter. This statement by itself might have aroused misgivings in German official quarters, and Talaat Pasha hastened to explain his meaning. He was satisfied that the Entente would soon be convinced that the continuation of the struggle could not bring a substantial change in their position. Everything that could be got out of the war had been got out of it, and a continuance was manifestly useless. This view will certainly commend itself to the German Military Command, which is now quite prepared to accept the principle of the drawn game. Unaccompanied by any reference to Mesopotamia and Palestine, the Grand Vizier's remarks suggest that the Turks are beginning to realise that, if they cannot cut their losses now, they are in a fair way to being still worse off as the war continues—an eventuality by no means unlikely. Turkey is showing no desire to imitate Germany in an indifference towards the number of her enemies. In reply to the United States demand for an explanation of what has taken place in Tabriz, the Porte has disclaimed any intention of affronting the United States, and orders have been sent to the Turkish Commander-in-Chief in Persia to remove the troops from the American hospital at Tabriz and to respect American interests there.

It is gratifying to learn that the efforts of the Prisoners in Turkey Committee are about to result in a consignment of clothing and blankets being sent overland to Switzerland. Thus the goods will be on the spot for further transport to Constantinople as soon as the Austro-Hungarian Government gives the necessary facilities. An official statement published elsewhere in this issue explains the delay in the sailing of the repatriation ship, and it is clear that only insistent pressure will produce any results in Turkey. Conditions for all British subjects in that country are bad, and must become worse as another winter approaches. In this connection we may call attention to the appeal now issued by Lady Lowther's Committee. The list of those who are dependent upon doles from its funds is a particularly pathetic one, as it includes names connected with every grade of British pre-war activity in Turkey, from the Embassy downwards.

Archdeacon Potter's letter in our last issue pleading for room for the expansion and development of the crowded Asiatic nations, harmonises with the more definite claims recently advanced by such authorities as the Aga Khan and Sir Theodore Morison, that the great territory known till lately as German East Africa should be handed over as a dependency to the Indian Empire. The idea is, of course, not new, for a certain school of Indians have for years past been seeking for something of the kind. At one time they were wont to cast envious eyes on the waste places of Mesopotamia, but that dream, we take it, has finally vanished, and seeing that the north of Australia is not available, the East Coast of Africa is obviously the direction in which the Indian aspiration for colonies could most conveniently be satisfied.

Whether India really needs an outlet of the kind is, of course, a question on which opinion is very far from being unanimous. Some competent authorities hold that India can, and should, find honourable and profitable employment for all her sons, and that what is wanted is not the opportunity for emigration, but rather such an increase of energy as shall lead to the redistribution of the population within the country itself. Others again insist that, if emigration is to be regarded as the remedy for all ills, the surplus population of India is so enormous that no available place of refuge could afford more than temporary relief. Ireland has made use of the Continent of America in this way for something like a century, but Ireland counts for little more than a single district of Behar, and if all the congested districts were to take example by Ireland, even East Africa might soon become inconveniently crowded.

The truth lies probably midway between the two doctrines. India needs an outlet, but an outlet for the exceptions rather than the rank and file. In all nations there are some adventurous spirits who are much the better for a complete change in environment, while one has only to glance at the statistics of the appalling wastage in every University examination in India to realise the need for a refuge where young men who have made an unlucky start could have a further chance, freed by distance from the penalties and disabilities which an initial failure inevitably brings. Change of climate in such cases is not a panacea, as Canada and Australia bear abundant testimony, but enough English failures have "made good" in other continents to justify the provision of similar opportunities for India.

An outlet is not less necessary at the other end of the social scale. As we have recently pointed out, the problem of the "depressed" classes is bound to become more and more acute, and a difficult situation would at any rate be eased if men who find their position at home intolerable could cast their eyes hopefully across the sea. At the same time a few outbursts of emigration would help towards a solution of the problem on the only possible lines, if their effect should be to open the eyes of the upper classes, and convince them that their position is no longer tenable. A community deserted suddenly by its sweepers and its washermen would find itself well on the road to the inevitable social revolution.

For such purposes as these, the large and thinly populated area of "German" East Africa should certainly be sufficient, but we are by no means convinced that it should therefore be organised as a dependency of India. People who want to change their environment are not likely to choose a country where that environment is reproduced, and neither haughty Brahmins nor scarlet-coated Chuprassies would attract the classes whose welfare we have in view. The ideal is rather a country open to, and welcoming, all men and women of Indian blood, but enjoying a social and administrative system so different from that of India as to be congenial to those whom the Indian system has cast out. The "entrance-failed" does not seek a society dominated by graduates, nor does the outcast desire to experience in his new home the prejudices and disabilities from which he has fled.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, August 12.

Mr. Ross-Taylor and the Cereal Merchants.

Since Egypt was placed effectively beyond the danger of invasion the chief concern of the population has been the question of food supplies and the high cost of living. The man of the moment, therefore, is Mr. Ross-Taylor, President of the Supplies Control Board that has been given powers to deal, under martial law, with economic abuses, and to supervise the provisioning of the country. Mr. Ross-Taylor seems to possess not only the required ability, but also that sympathy and tact that create confidence and promote good understanding between otherwise jarring elements. His experience at the Law School has given him a real understanding of the Egyptian mind, and fitted him particularly for the work he is now called to do, in which native collaboration is often necessary. This was evidenced last Friday when a reception in his honour was given by the Association of Cereal Merchants at the Continental Hotel and by his election to the presidency of the Central Syndicate of Cairo Merchants at the first meeting of the association. The public may, therefore, feel justified in being sanguine about the successful fulfilment of Mr. Taylor's task.

At the meeting referred to the draft of regulations of the Central Syndicate, drawn up by a committee *ad hoc*, was submitted for discussion, and was approved with some modifications. The membership of the Central Syndicate is to be composed of the Presidents of the Provincial Syndicates and of the President and one member of each of the Cairo and Alexandria Syndicates, so that each province and governorate will have a representative, while Cairo and Alexandria will have two; the permits (which form the underlying principle of the system) are to be of two categories, viz., general permits to be granted to big merchants, and special permits to be issued to the smaller merchants, who are to be allowed to work only within the limits of their respective districts (Markazes). The age limit for merchants was lowered from 20 to 18; merchants engaged in other trades are to be allowed to trade in cereals, and receive permits accordingly; the Provincial Syndicates are to be composed of ten members each, and sit at the capital of the province. The question of granting permits to millers was left for the Central Syndicate to decide.

The speech made by Mr. Ross-Taylor at the reception given in his honour at the Continental Hotel was reassuring. After explaining how State control of trade has become universal, although the necessity for its exercise in Egypt has come much later than in other countries, he appealed to the Association for loyal co-operation with the Board, adding that the preliminary work already done augured well for the future. From time to time, he said, a partial panic is caused by the rumour that this or that commodity is short, and this is seized on as a reason for running up the price. Speaking of wheat, he said that, although last year's crop was below the average, it was sufficient for the country's requirements, and as this year's crop is much more satisfactory, there was no room whatever for anxiety. Besides, the British Government had given its formal promise to make good any eventual deficiency. In the case of millet, the area sown is far in excess of that of any previous year. Maize also has been extensively sown; and as to rice, although the survey of the area is not yet complete, the reports already received show that a far larger area than usual has been put under this crop, thanks to exceptional irrigation facilities. The crop of beans and lentils was stated to be also satisfactory.

Apart from the above reassuring statements, account should further be taken of the fact that Palestine, thanks to the foresight and organised activity displayed by the authorities, even under the stress of war, is now in a position to supply such needs of the troops as had formerly to be supplied by Egypt. As an indication of the vastly improved situation, may be cited the recent invitation by the Supplies Control Board of tenders for about 14,500 sacks of Australian flour to be put up for public sale this month.

Dearness of Living.

The necessity of the existence of the Supplies Control Board may be demonstrated by the comparative list of prices in Cairo and Alexandria issued by the Department of Supplies for the months of June in 1916, 1917, and 1918, with the price for each commodity in July, 1914, put at 100, and taken as basis for convenience of calculation. According to this list, the prices of foodstuffs have doubled; but when it is borne in mind that the figures in the list represent the maximum tariff prices, and that in almost every case these so-called fixed prices have not been respected, because no adequate means was used for their enforcement, it is found that the actual rise is more than 100 per cent. This applies, of course, to native products. In regard to imported articles, whether of foodstuffs, clothing, furniture, or domestic utensils, the rise in general has been three to four-fold, and in certain articles, such as wood and window-glass, very much more.

The lower category of employees in the different Government departments have lately been making collective appeals for increase of pay to the authorities, who, being well aware of the altered conditions, could not ignore these appeals. Accordingly, the Ministries and all Government departments have been required to send in before the middle of this month lists of all their officials, both permanent and temporary, with the salaries now being drawn by the categories of employees mentioned in the Government list. It will be remembered that over a year ago the Government granted increases ranging up to 20 per cent. to employees drawing salaries up to £200 a year, and it may be conjectured that the further increase contemplated may embrace some higher categories of officials.

The Nile in July.

According to the report of the Physical Department, temperatures during the first, third, and fourth weeks of the month were above average. The mean temperature for July was also above the average. The mean humidity at Giza was normal, although in the early mornings it was above the average, and heavy mists prevailed for several days even in the usually dry town of Heliopolis and the surrounding desert strip. The Bahr el Jebel and the White Nile were much above the average, although the first has fallen 24 cms. during the month, and the latter has risen 16 cms. only. The Blue Nile was above the average until the 22nd at Roseires and the 28th at Khartoum. The fluctuations of the River Atbara were on the whole below the average, except on the 19th and the 25th. The main Nile at Halfa was steady during the first decade and rising afterwards.

Anniversary of the War.

In deference to the wish expressed by the King, intercession services were held at Cairo and Alexandria in the churches and the camps. At All Saints' Church in Cairo, which, in spite of many absentees on summer holidays, was full, the Rev. C. T. Horan delivered a brief address in which he set forth England's aims in the war, the justice of which, he said, was confirmed to the world by the entry of the great Western Republic on the Allies' side. At Alexandria the French Consul-General, with delicate thoughtfulness, visited the British cemetery, accompanied by many leading members of the community, laid wreaths on the graves of the British soldiers, and delivered a speech full of patriotism and fervour. Col. Payne made a fitting reply, thanking the Consul-General for his generous tribute to the gallant dead, and referring to this ceremony as a symbol of the brotherhood of the two great nations.

The Sultan and the Ouvroir Des Jeunes Filles.

The Sultan, accompanied by the Premier and the Ministers, visited on Sunday, the 4th instant, the Ouvroir des Jeunes Filles at Alexandria, which his Highness had inaugurated in November, 1916, before his accession to the throne of Egypt. He was received by the Governor of Alexandria, the lady members of the Board of Administration, a few prominent lawyers and bankers, and Monsieur Bakri, the well-known

Digitized by Google

cotton merchant and owner of the property where the Ouvroir lies. To an address of welcome presented by Mme. Sinadine, the leading patroness of the work, his Highness replied by a few words of thanks. He then visited the school, which employs at present 140 girls, of whom 100 are Egyptians, and which had turned out so far 378 girls, who have since been earning an honourable livelihood by the handiwork learned at the Ouvroir. As a token of his appreciation of the work done by the school, his Highness made a donation of £500. Monsieur Bakri, to commemorate the event, subscribed £300 in aid of the work, receiving for this generous gift the special thanks of his Highness.

The Sultan last week made another generous gift of £1,000 to the British Red Cross on the occasion of this year's appeal made by His Excellency the High Commissioner.

MAJOR ORMSBY-GORE ON PALESTINE.

Last Thursday Major the Hon. W. Ormsby-Gore, M.P., was the guest of honour of the London Zionists at a dinner at the Savoy Hotel. Speaking of the present condition of Palestine, he said it was sad to see the plains of Sharon and Philistia—which should grow corn and wine and oil, and produce all the fairest fruits of the earth—lying idle and uncultivated, covered with marshes and sand dunes. This was because for four hundred years the country had been ruled by an alien race who had no interest in its development, nor in the development of free institutions and free national ideas. Palestine to-day was an under-populated country, full of enormous possibilities, and there was work for thousands of labourers and millions of capital in order to restore it. For example, around the village of Jericho he had found a small patch of cultivation, but elsewhere the plain of Jericho was dusty and barren, and supported no settled population. Water was springing up, but ran to waste into the Dead Sea. Yet everywhere there were the remains of Roman aqueducts, and the country only needed the work of man to turn it into a miniature Delta of the Nile. To achieve such results, however, there was needed a people determined to achieve them; it was among the Zionists in Palestine that he had found that spirit. The colony of Rechoboth illustrated this point. Twenty-five years ago its site was barren sand, producing nothing; to-day it was one of the prettiest places in Palestine. There was a well-built village, surrounded by vineyards, and groves of orange, lemon, and almond trees. In Rechoboth and the other Jewish colonies the people lived a free, communal life, full of hope for the future and full of national ideals. Their children were among the happiest in the world. You saw in those colonies the rejuvenation of a people. On the other hand, in the Holy City of Jerusalem you found a pauperised population, living under intolerable physical conditions, and with very little of the new life such as he had described in the colonies.

THE INDIAN REFORM SCHEME.

Dr. Nair has received the following telegrams from India on the question of communal representation under the reform scheme:—

"Nepani, September 3.—Nepani non-Brahmins support you as All-India leader to press communal representation to success.—PRESIDENT, Public Meeting."

"Madras, September 3.—South Indian Liberal Federation, Madras Zemindars, landholders' associations, South Indian League, Madras Dravidian Association, Madras Adidravida Jana Sabha urge that Indian experience is absolutely essential in the chairman of the Reform Committee. Approve appointing Sir John Hewett."

KWAJA KAMAL UD DIN ON UNITY FROM DIVERSITY OF RELIGIONS.

Last Saturday Kwaja Kamal ud Din was "at home" at the Moslem Prayer House, Campden Hill Road, and a considerable number of London Moslems attended to pay their respects. In the course of a brief address which he delivered he said that the law of progress in the universe was that homogeneity gave birth to heterogeneity, and then this heterogeneity was brought into harmony and unity. Thus, in society, the simple family economy, where every man was his own hunter, agriculturist, weaver, tailor, etc., had given rise to a highly diversified community, where not only did different people follow different trades, but separate parts of the world were devoted to special industrial processes. This heterogeneity would be a blessing if all the various parts could be brought to work harmoniously together. The same principle applied in moral and spiritual affairs. Religion, coming from one God, had ramified into many branches; the problem was how to bring unity out of this diversity. The universal religion could not be tied to any one locality; it must be based on principles applicable to all. Islam was such a religion, for its followers accepted what had been revealed by God to His prophets, no matter at what time they had arisen or in what part of the world.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

BRITISH AND TURKISH PRISONERS OF WAR.

The following statement was issued by the Foreign Office last Saturday:—

An assurance has been received from the Austro-Hungarian Government that the vessel used for the repatriation of British and Turkish prisoners of war under the Berne Agreement will not be attacked by their naval forces; no such assurance has, however, been forthcoming from the German Government, in spite of the repeated representations which have been made both at Berlin and Constantinople.

There appears to be no doubt that the Turkish Government would be willing to execute the agreement as speedily as possible, but that the influence of the German Government is being used to obstruct it, partly from a desire to perpetuate all causes of ill-feeling between this country and Turkey, and partly out of apprehension of the effect on Turkish opinion of the reports which would be brought by repatriated Turkish prisoners of war.

UNIVERSITY OF LONDON.

KING'S COLLEGE
and
KING'S COLLEGE FOR WOMEN.

COMPLETE COURSES OF STUDY are arranged for Degrees in ARTS, LAWS, SCIENCE, PRELIMINARY and INTERMEDIATE MEDICAL STUDIES, PUBLIC HEALTH, and BACTERIOLOGY, ENGINEERING.
Women Students are now admitted to the full courses for the Preliminary and Intermediate Medical Studies.
Facilities for Research. Arrangements made for attending special or isolated courses.
EVENING CLASSES as well as Day in most Faculties.
STUDENTS' HOSTELS: The Platanes, Denmark Hill, and Vincent Square, Westminster.
KING'S COLLEGE FOR WOMEN now transferred to Strand, with full privileges.
Apply to Secretary, King's College, Strand, W.C.2.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

CORRESPONDENCE.

ARE THE ROUMANIANS ROMANS?

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Perhaps my tone and language in the discussion with Mr. Bourchier were too expressive, but his final letter seems to call for an answer. Now, though he declares himself to be "parting with me," leaving me alone on the historical ground, I feel obliged, however, to try to refute some of his affirmations:

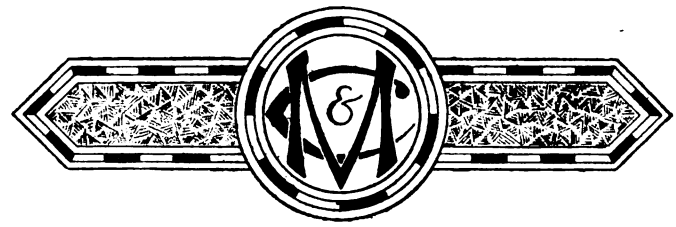
(1) It is not possible that a small number of Roman colonists—as Mr. Bourchier believes—could Latinise the whole kingdom of Dacia—the Roumanians (except the Aroumâni) inhabit just the area of the old State—in such a degree that they could survive, as a national individuality, all barbarian invasions during a period of nearly a thousand years. Lucretius affirms, as I have already quoted, that they were brought into Dacia "in infinitas copias hominum." Had they been few in number the process of Latinisation could not have been so powerful in a period relatively short (270 years between the colonisation of Dacia by Trajan and the withdrawal of the legionaries by Aurelian), and the waves of barbarians could have annihilated them completely, or, later on, the ocean of the Slavonic world could have turned them into Slavs, as was the case of the Turanian Bulgars. It is to be remembered, too, that the geographical situation of the Roman colonists in Dacia was extremely precarious owing to the great distance from the source of Roman life and civilisation, and being in the way of the Barbarians.

(2) In Europe unmixed races exist only in the very small national states of Andorra, Lichtenstein, San Marino, Monaco, Denmark, Portugal, and Holland. But there are also many powerful national states, or national individualities, though their population is mixed. The Roumanians, too, feel themselves to possess a very distinct national individuality: they feel themselves not to be Slavs nor Magyars—and we think that moral and spiritual forces of such a national individuality, intensified by an adequate culture based on traditions, are realities which count, as well as the cranial dimensions or the facial types.

(3) I never affirmed such nonsense as that the traditions could be taken as pure historical documents—as Mr. Bourchier would seem to suggest. I hold that the traditions largely determine the character of the self-assertion of a nation.

(4) The word Vlach is given by the Byzantine chroniclers, as well as by the Slavons, the Teutons, etc., only to the peoples of Latin origin, not to all who were "strangers" to their own nation. Certainly, they could not make any difference between pure Roman colonists and Latinised provincials.

(5) In the English language there is a very large French ingredient, nearly the half of its vocabulary being French, though no one would be inclined to think that the infusion of French blood into the English could be in the same proportion. The Germans, too, have in their language a great number of Latin words, but that fact cannot be a test that they have Latin blood too. Therefore, we think, this theory of Mr. Bourchier cannot be accepted. The Roumanian language, though containing a great number of Slavonic words, is still a Neo-Latin language, as the English is an Anglo-Saxon.



Vico's theory of circulation adapted by Hasden to the languages, offers in that case valuable explanations. The words which have the largest circulation maintain the character of the language. They are like a pennypiece, employed continuously, and by the great masses of the people; while, the others (the French words in the case of the English language), representing ideas not so much interwoven into the common daily life, are like gold pieces, with limited circulation.

In ending this academic discussion I feel very happy to learn that Mr. Bourchier holds no more to the theories of Sulzer and Roesler regarding the Latinity of the Roumanians. And his deep sympathies for us, and his hopes in our national revival, as expressed by one who knows our people as few Englishmen do, have great weight.—I am, etc.,

D. N. CIOTORI.

46, Stanhope Gardens, S.W.
September 8, 1918.

The arrangements for the despatch of Christmas parcels over the postal limits of weight to the Expeditionary Forces (other than France and Italy) through the Military Forwarding Officer are now announced. The latest dates on which such parcels should be despatched in order to secure delivery by Christmas are: India, September 20; Mesopotamia, October 1; Salonika, November 1; Egypt, November 1; Malta, November 1; Gibraltar, November 1. Parcels, which must not be under 11 lb. or over 56 lb. in weight, should be sent to the Military Forwarding Officer, Avonmouth Docks.

Can you offer us

consignments of the . . . .
NATURAL PRODUCTS
of your Country? . . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

Mann & Cook,

7, St. Michael's Alley,
Cornhill, London,
England.

And at Glasgow, Liverpool, Genoa, New York.

Telephone: Avenue 7125 (5 Lines).
Cables: Oiliness, London.
Codes: A.B.C. 5th Edition, Lieber's, Western Union, Bentley's, Marconi's.

TANGIER TO TEHERAN.

If the Turkish Grand Vizier keeps on talking, I may have to introduce a new feature: "Talaat, Week by Week." He gets more and more daring in his humour; and I sometimes wonder which will be worn out first—his tongue or his cheek. Now, I see, he has been interviewed by a *Neue Freie Presse* man, to whom he candidly observed that "everything that could be got out of the war had been got out of it," and that therefore "a continuance of the war was manifestly useless." Having got those points clear to his own satisfaction, he ventured to prophesy that "peace would come before the winter." That is as may be; and we may even hope that if the Germans—and other things—go as they are now doing, Talaat may, for once, prove a true prophet. But in other respects his talk to the *N.F.P.* representative is of value chiefly as shedding light on his own tricky character.

***

Consider for a moment the sublime impudence of one of the "Young Turk" gang actually talking about everything that could be got out of the war having been got out of it! Of course, we know, as all the world knows by now, that Enver, Talaat and their particular pals have got all *they* can get out of it—and a tolerably good "all" it is, if half one hears be true—but think what effrontery Talaat must possess to dare to use such an expression at all. I do not suggest for one moment that he used the words in the sense that I have just used them, but I do suspect that odd thoughts must have passed through his mind as he spoke; and it seems to me that he must be a cool customer to use any such form of words. As for Turkey, I suppose she may be said to have got something out of the war, though she is unlikely to keep it after the final adjustment of accounts. But it is quite certain that her losses, in Mesopotamia and in Palestine, far outweigh her temporary gains to the North, and for the rest her losses in men, money and prestige are simply enormous. Perhaps Talaat thought of these things when he made his statement in Sofia; for there he was evidently in more subdued mood, since he talked of Turkey and Bulgaria supporting one another, because therein lay the salvation of both countries. So, we gather, even if Talaat and Co. have got all they can out of the war, Turkey still needs "salvation."

***

There is ample justification for all that "Commentator" had to say last week, in his Notes and News, in praise of Oriental rugs and carpets. As I write I have under my feet a Persian rug that is probably very nearly a hundred years old; yet its colours are as beautiful as ever; they will stand washing with hot water and soap; and only on the edges of the rug are there signs of wear. And I have others that have stood the roughest wear—on uneven mud floors in the East—and are still good for twenty or thirty years more. Few European rugs, I fancy, would stand any chance in competition under such conditions. But—and this is really what I set out to say—if you are going to buy Eastern rugs in England it certainly will pay you to go to a firm with a reputation, as "Commentator" suggested. Not very long ago I happened to see into a certain "dusky" carpet merchant's shop, and noted a small boy busily "touching up" a rather good-looking carpet with a concoction in an old jam-jar. Somehow, however excellent the preparation in question may have been, and however great the skill of the youthful apprentice, I should not care to have that carpet. The Orient is fascinating; but the Orient with East End additions is less attractive.

***

After my attempt to make the Near Eastern Hen realise her shortcomings, it is a little trying to learn that our Government is said to be making arrangements for the importation of eggs from Egypt—among other countries. The wretched Gippy hen will be getting "swelled head" in spite of my straight talking! But let me inform her that never, willingly, will I pay 5d. or 5½d for one of her wretched little models of sparrow's eggs. It seems to me that Mr. Clynes—for whom I have a very real respect, since he has tackled an appallingly difficult job, and is doing well at it—would be much better advised to encourage the English hen, which lays EGGS, rather than import eggs from Egypt. The only thing in favour of the latter plan is that the eggs take up very little room—you could put dozens of them in a half-pint pot!—and that argument cuts both ways. England is capable of producing all the eggs we require, if only the real poultry farmer can be helped a bit, and the amateur can be induced to keep his fads to himself. I hold that many good things *do* come out of Egypt, but, most emphatically, eggs are *not* among the number.

Here are some extracts from a letter written by an officer in Palestine, and recently received by a friend:—

> "This country is slowly being improved, and it is noticeably cleaner than when we came. The system of a daily burnt offering has been revived in Jerusalem, but it is offered in incinerators by sanitary specialists and not on altars—the smoke, however, is there all right. . . . There are also quite a lot of roads in Judæa in the most unexpected places, and the whistle of the railway locomotive shatters a stillness which has already been somewhat disturbed by distant gunfire. . . .

The writer goes on to give some encouraging information about little surprises that are being prepared for the Turk. But I suppose I had better act the part of censor in regard to them. Otherwise, I myself might meet the fate of the guinea pigs in "Wonderland" and be "suppressed."

CORSAIR.

SERBIAN WORKERS IN TUNISIA.

Colonel Michel, commander of the Serbian troops in Tunisia, has, according to a French contemporary, just completed a tour amongst the principal colonists who are employing Serbian labour. His journey comprised visits to Tébourba, Pont-du-Fahs, Zaghouan and Sainte-Marie-du-Zit. The colonel was very satisfied from all points of view, both with the soldiers and the employers. The latter were loud in their praise of the discipline observed by the Serbian workers, the production and the great regularity in their work; in fact, it is recognised that they have laboured as if they were doing the tasks on their own account. The Serbians, too, are very content with their new occupations, and are eager to have their agreements renewed with the Tunisian colonists. Two hundred and fifty colonists now employ these workers, to the number of about three thousand.

LOYALTY OF INDIAN CHRISTIANS.

At an enthusiastic meeting of Indian Christians recently held in Madras, the following resolution was carried amidst cheers:—"The Indian Christian Association, Madras, begs to convey to his Excellency the Viceroy an expression of its deep devotion and loyalty to the British Throne, and its gratefulness for all that is being done by the Government to win the present war." A leading Indian Christian voiced the sense of the meeting when he expressed his confidence that "the Indian Christian community will rise to the full height of the occasion, and freely, unconditionally, and joyfully place at the disposal of our King-Emperor our money, our men, our entire resources."

BRITISH REFUGEES FROM TURKEY FUND

We have received the following moving appeal from Lady Lowther, Chairman of the British Refugees from Turkey Fund; and we trust that it will evoke a generous response, as was the case in the former appeals. Donations may be sent either to Lady Lowther, or to the Hon. Treasurer of the Fund, at Lowndes House, Lowndes Place, Belgrave Square, S.W.1:—

"After three and a half years of work the Committee of the British Refugees from Turkey Fund fear their activities may have to cease for want of money, in spite of the urgent calls for assistance they receive from British subjects, former residents in Turkey, from many parts of the world, chiefly in Great Britain. These families are now faced with ruin, the breadwinner interned, the mother and children left to fight Fate alone in strange lands. Must it be said that England's children are not England's first care? Or may our faith in England's generosity not be disappointed and help come when it is almost despaired of? We only need a few thousand pounds to keep hope alive in these sad hearts, and the smallest sum is gratefully received."

We learn also that the fund is in receipt of a sum of £746 contributed by British subjects in Cuba as an expression of their sympathy with the unfortunate people on whose behalf it was opened. Apart from the relief needed in this country, our readers will be sorry to learn that in Constantinople alone there are many whose names are well known in receipt of monthly doles from the fund. Miss Whitaker, who administers the fund in Constantinople, writing in July, says: "I am helping the old people, and more especially lonely governesses and those who have seen better days, and who are now hard hit. Prices are fabulous, and I often wonder how all these poor people manage."

The British military authorities have again presented the Egyptian Government with a camel for the purpose of carrying the Holy Carpet to Mecca.

Returned Australian soldiers are strongly desirous that British regiments which shared in the landing and fighting at Gallipoli should be included in the issue of the Gallipoli Star.

The Turkish Chamber (according to German Press information) has voted £5,000,000 (Turkish) for the reconstruction of the districts which were in Russian occupation. Fugitives will be assisted to return, and inhabitants will receive support by means of grants of plant and cattle. A committee of members of the Chamber has been nominated to carry out this work.

NEAR EAST BOOKSHELF.

THE GREEK RIDDLE.*

We have not the least hesitation in placing "Constantine, King and Traitor," in the forefront of books on the war. The title, though arresting, may not be very happy; but there can be no doubt that Mrs. Kenneth Brown (née Demetra Vaka) has produced a volume of absorbing interest and no little historical importance. Her life has been spent in the United States, and she tells us that she considered herself more American even than those who were born there. Her interest in the attitude of Greece was not different from that manifested by her American friends until the fall of M. Venizelos, in February, 1915. That incident stirred the Greek within her, and from that date all that happened in Greece seemed to concern her personally. Loyalty to the country and its sovereign convinced her that there must be some satisfactory explanation of the strange course adopted by Greece; but presently the situation defied even her capacity for finding explanations, and she resolved to go to Greece, "and there on the spot to discover the truth."

The book is the outcome of that decision. It is only fair to state that Mrs. Kenneth Brown was already a writer, and was well able to make the most of her remarkable experiences. But it is the Greek patriot who tells her story, and carries her reader along with her too absorbed in the narrative to stop to wonder how she managed to keep a record of the conversations of which the *ipsissima verba* are given in every case.

Everyone interested in Near Eastern politics, and for that matter in the politics of Europe as a whole, should make a point of reading this book, for it is by no means a record of the Greek parish pump. On the contrary, we are taken into *la haute politique*, and the author has contrived to throw light on many points that were obscure before. Mrs. Kenneth Brown, with Mr. Kenneth Brown, landed in Greece, a staunch Royalist. It was a few months after the fatal events of December 1 and 2, 1916. Her purpose or desire was to prove King Constantine in the right and to bring about a union between him and M. Venizelos. With this object in view she plunged into the Royalist *milieu* in Athens, and for a month or more spent hours with everybody who was anybody, from the King downwards, seeking elucidation of the various points in Greece's actions that were obscure. Her obvious sincerity caused the Royalists to welcome her as one who had only to be told their point of view to become a most useful champion and a complete vindicator of their policy. They spared no pains to justify their actions; they spent hours explaining everything; they answered her questions; they showed her official documents; they even forged some, *ad hoc;* and all the time Mrs. Kenneth Brown was becoming more and more a Venizelist and less and less a Royalist. The conversion was complete when she went to Salonika and saw (for the first time) M. Venizelos. Hence the title of the book.

The psychology of King Constantine is depicted in a most telling manner; and it was worth studying, for it was not without its connection with events in a wider sphere. This is what the notorious Dr. Streit told our author: "In March, 1914, the Kaiser came to Corfu. . . . He turned to me and asked: 'In case of a big European war, what would be the attitude of Greece?' I told him that Greece being a small maritime nation could not range herself against a big maritime nation like England. 'Oh,' responded the Kaiser, 'England will not take part in this war . . . she will let Germany and Russia have it out, my friend.'"

The final chapter is entitled "The Amazing Revelation," and with that title there will be no quarrel. It was only a few weeks before King Constantine was dethroned. The "Occult Government" evidently had their presentiments, and General Dousmanis decided to tell the truth to Mrs. Kenneth Brown. King Constantine and his party were firmly convinced that Germany must be victorious in the war, and that she would come out of it as the Colossus of the world, with a number of petty states existing by her suffrance and ruled for the most part by her nominees. Thus the German Empire would extend to the Greek frontier, and Greece, having earned her special gratitude, would receive her special favours and rise to greatness, territorial and material, under her ægis. Although King Constantine may have been thinking only of his own skin or his own position, some at least of his entourage had visions of the future glory of their country.

But the narrative must be read in its entirety. There are some home truths in it told for the benefit of the Entente Powers, and Italy. Very rightly, the author makes no attempt to palliate the Allies' terrible blunders. She need offer no apology for a dissertation on America's diplomatic representatives, but may be grateful for the foils to them provided by the Allies in their diplomatic services.

We trust that the book will be translated, at least into Greek and French, for it should be read certainly by every educated Greek. It will help that country by rendering it quite impossible for anyone to support the return of ex-King Constantine. In any other editions we shall hope to see the few Greek words that are interpolated into the text printed correctly. It ought to have been possible even in England to print five consecutive Greek words without having three of them hopelessly wrong, and the mistakes repeated when the sentence occurs again (pp. 118 and 124). The number also nods occasionally, with some excuse, perhaps when she speaks of General "Milner"; with none when she tells us that she spoke with the members of the Salonika Provisional Government in "the language of Jupiter and Athena." It was well for her, as she was in full view of Olympus at the time, that Zeus was on the other side of the mountain, probably with Minerva.

* "Constantine: King and Traitor." By Demetra Vaka. (London: John Lane. Price 12s. 6d.)

BOOKS RECEIVED.

"Tales of Secret Egypt." By Sax Rohmer. (London: Methuen and Co. 6s. net.)

"Où allons-nous?" By Victor Cambion. (Paris: Librairie Payot et Cie. 4 fr. 50.)

"L'Erreur Français." By "Lysis." (Paris: Librairie Payot et Cie. 4 fr. 50.)

"The Sorrows of Epirus." By René Puaux. (London: Hurst and Blackett, Limited. 3s. 6d. net.)

NEWS IN BRIEF.

On September 4 the seventh hospital in Athens, installed in the former Royal Palace, was opened by King Alexander. The hospital can accommodate 300 patients.

All the Greeks in Palestine, whether mobilised or not, have demanded to be enrolled in the Greek Army at Salonika. The first volunteers have already left for the Macedonian capital.

In a message sent off on September 9, Reuter's Paris correspondent reports:—News received here from Teheran confirms the massacre of Christians at Urumiah by bands of Kurds, who had become emboldened by the announcement of the imminent arrival of Turkish troops. Among the victims are Monsignor Sontag, a French Lazarist and Vicar Apostolic, and three priests.

A further church collection at Cairo in aid of the War Prisoners' Fund has realised £433, making a total of £1,015.

For the three months ended July the Y.M.C.A. has distributed £5,435 15s. 10d. from men in Salonika to their friends at home in sums amounting from 10s. to £40.

The climate allowance is to be paid to officers and men of the Royal Navy serving in ships on the River Nile from April 1 to September 30 of each year, and in the following localities the allowance is to be extended by commencing on April 1, instead of June 1, to September 30:—The Persian Gulf, Mesopotamian rivers, the Red Sea, and the Gulf of Aden (including Aden Wireless Station).

The Jews of Southern Palestine have taken advantage of the liberty accorded to them under the new regime to revive their "Mishpat Hashalom," or the courts of arbitration conducted on the principles of Jewish law. The central courts will be in Jaffa, with local courts in each town and settlement.

The Serbian *Official Gazette* publishes a decree conferring on the poet Gabriele d'Annunzio the Order of the Star of Kara-Georgevitch with swords.

According to the *Vossische Zeitung*, M. Bratiano's castle near Predeal was set on fire and entirely burnt down on August 27, the anniversary of Roumania's declaration of war.

According to a Kieff telegram, the Ukrainian Prime Minister, M. Lysogub, states that the object of his visit to Berlin was to ask for Germany's mediation for a speedier development of the Russo-Ukrainian peace negotiations.

At a general meeting of the Roumanian colony in Paris it was decided to request Father Lucacin, representative of Transylvania, and Dr. Jean Cantacuzene, President of the Roumanian Unionist Federation, to form a National Council to represent the national aspirations of Roumania and to enter into relations with the Allies.

The hospital authorities in Salonika have sent urgent requests to V.A.D. Headquarters in this country for a considerable number of trained laboratory assistants, and also for several dispensers holding either the Pharmaceutical certificate or the Apothecaries' Hall certificate. The rates of pay are 39s. 6d. per week and 49s. 6d. for head dispensers, with a deduction in all cases of 14s. for board and lodging. Application may be made to the V.A.D., Department 18, Devonshire House, Piccadilly, London, W.1.

A Turkish Mission, headed by the Sultan Abdul Hamid's son, Prince Abdul Rahim Effendi, arrived in Berlin on Tuesday, en route for Main Headquarters to notify the accession of the new Sultan to the Throne.

The King inspected a detachment of the Indian Labour Corps on Wednesday. The men were under the command of Captain J. E. Gilmore (Indian Army Reserve of Officers) and Lieutenant H. P. Lansdale-Ruthven (Indian Army), who are on short leave from the Western Front.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. September 13	1918. August 31	Friday	1336. Julheggia. 7	5679. Tishri. 7
14	September 1	Saturday.....	8	8
15	2	Sunday	9	9
16	3	Monday	10	10
17	4	Tuesday	11	11
18	5	Wednesday	12	12
19	6	Thursday	13	13

The Greek Minister visited the Foreign Office last Friday.

Lord Oranmore and Browne has left 12, Cavendish Place, for Castle Macgarrett, Co. Mayo.

Prince Antoine Bibesco, First Secretary to the Roumanian Legation, has left London for Paris on leave.

Sir John Hewett had the honour of being invited to lunch with the King and Queen at Windsor Castle on Monday.

On September 3, at Hill Head, Hants, a son was born to Major F. W. A. Wells (Indian Army) and Mrs. Wells.

Lieutenant-Colonel N. Arion, head of the Roumanian Government Commission, left London yesterday for France on leave.

Captain Matila Costiesco-Ghyka, Assistant Military Attaché to the Roumanian Legation in London, has been awarded the Military Cross.

Fathullah Khan Noury Monazam-es-Saltaneh, Secretary to the Persian Legation, left town last week for Eastbourne, and will be absent several weeks.

The Serbian Minister of Education, who is now in England, is visiting all the colonies of Serbian schoolboys who are under the care of the Serbian Relief Fund.

M. Milan Rakitch, Counsellor of the Serbian Legation, has returned to London from Evian-les-Bains, where he has been visiting the Serbian Prime Minister.

The marriage arranged between Lieut.-Colonel C. Fraser, M.C. (Prince of Wales's) N. Stafford Regt. (attached R.A.F.), and Mrs. Hamilton will take place in Cairo shortly.

The engagement is announced between Captain W. A. S. Grey, I.A., Burma Commission, and Kathleen Mary, youngest daughter of Dr. and Mrs. Paulson, The Wilderness, Dartmouth.

The engagement is announced between Mr. Richard Branford, of Hissar, Punjab, India, and Joyce Evelyn, second daughter of the Rev. R. R. Cobbold and Mrs. Cobbold, Hitcham Rectory, Ipswich.

The marriage of Major J. S. Oldham, Indian Cavalry, and Irene Beaumont Thomas, of 23, Parkside, Knightsbridge, S.W., will take place on Saturday, October 5, at 2.15, at St. Margaret's, Westminster. There will be no reception, but all friends will be very welcome at the church.

On September 5, at All Saints' Church, Ripley, Derby, the marriage was solemnised of Mr. Arthur Philip Coote, Sudan Civil Service, fifth son of Sir Algernon Coote, Bart., of Ballyfin, Ireland, to Miss Margaretta Wright, second daughter of Mr. C. Leslie Wright, of Butterley Hall, Derby.

The engagement is announced between Lieutenant-Commander G. E. Harden, D.S.O., R.N., second son of Lieutenant-Colonel G. Harden, Camberley, and Eanswythe, younger daughter of Sir Alexander Wood Renton, late Chief Justice of Ceylon, and Lady Wood Renton, Radlett, Herts.

The marriage between Major Herbert Fulford Bush, D.S.O., A.S.C., and Margaret Isabel Mary, only child of Mr. and Mrs. Edward D. Padwick, of Garrow, Pusellawn, Ceylon, will take place quietly, at 2.30 on September 18, at Christ Church, Lancaster Gate, W.2. All friends will be welcome at the church.

The engagement is announced between Colonel Cuthbert Ward Ritson, Rifle Brigade, attached Egyptian Army, fifth son of Mr. U. A. Ritson, and Mrs. Ritson, of Muggleswick, Consett, Co. Durham, and Jesmond Gardens, Newcastle-on-Tyne, and Ethel Gertrude, second daughter of the Rev. William Johnson and Mrs. Johnson, Wath Rectory, Ripon, Yorks.

Lieutenant James Crawfurd, who came home from Constantinople in 1914 to join the Army, has been awarded the Gelvei Cross of the Greek Order of the Redeemer and appointed Chevalier of the Order.

APPOINTMENTS, PROMOTIONS, ETC.

M. Capsambis has been appointed Greek Minister to The Hague.

Bimbashi G. O. Crosfield, 12th Sudanese, has been transferred to the 13th Sudanese.

Mr. William F. Dix has been appointed Consul-General for Montenegro at New York.

Bimbashi G. G. S. Brander, 11th Sudanese, has been struck off the strength of the Egyptian Army.

Bimbashi Sir F. C. R. Price, Bart., Camel Corps, has been transferred to the 13th Sudanese.

M. Doroschenko, who has hitherto been Acting Minister for Foreign Affairs in the Ukraine, has been formally appointed Foreign Minister.

Captain William Brewster, the new Military Aide to Mr. Gary, American Diplomatic Agent to Egypt, has arrived from New York and taken up his duties in Cairo.

General Anto Gvozdenovitch, accompanied by the members of his suite, has arrived in America, accredited as the first Montenegrin Minister to the United States at Washington.

Captain J. Going, Army Veterinary Corps, has been attached to the Egyptian Army as a Special Service Officer. He has been granted the temporary rank of Bimbashi and attached to the Veterinary Department for duty.

MARRIAGE.

The marriage of Major Rawdon James Macnabb, Indian Cavalry and Indian Political Service, third son of the late Mr. James W. Macnabb, of Arthurstone, Bracknell, Berks, and Miss Winifred Gladys Mary Railston, only daughter of Colonel H. E. Railston, late Cameronians, and Mrs. Railston, of 23, Queen's Gate, S.W., took place at Brompton Parish Church on September 7. The ceremony was performed by the Rev. J. F. Macnabb, brother of the bridegroom, assisted by the Rev. R. A. C. Bevan, Rector of Binfield, and the Rev. C. Senhouse Ryder. The bride, who was given away by her father, was attended by four bridesmaids—Miss Elsie Douglas-Hamilton, Miss Nancy Stewart Cox, Miss Leslie Wiggett, and Miss Mary MacNeile. Lieutenant-Colonel Sir Norman Leslie, Indian Cavalry, was best man. Those present at the ceremony included:—Mrs. Railston, Mrs. Macnabb and the Misses Macnabb, Mr. James Macnabb, Mr. Donald Macnabb, Miss D. Macnabb, the Countess of Kimberley, Captain and Mrs. Douglas-Hamilton, Mrs. Wiggett, Colonel Heathcote, Colonel and Mrs. Ussher, the Hon. Mrs. Lyell, Colonel and Mrs. E. D. Kennedy and Miss Kennedy, Lady Vavasour, Mrs. Cave-Browne-Cave, Mrs. Grimston, Mrs. Salisbury Jones, Mrs. Burgess-Watson, Major and Mrs. Cole, Colonel Reid, Mrs. Angel Scott, Commander and Mrs. Robinson, Major Cameron Douglas, Captain and Mrs. Seton Christopher, Captain French, Major Chivers, Colonel Nason, and Colonel Cole.

The Kaiser has conferred the Order of the Red Eagle First Class on Herr von Kuhlmann.

General Skoropadski, Hetman of the Ukraine, and his suite have gone to German Main Headquarters.

The Serbian Relief Committee appeals for knitted socks, to be sent to Serbian soldiers. The need (says the Committee) is overwhelming.

On the occasion of Korban Bairam (the great Moslem festival, celebrated in memory of the intended sacrifice of his son by Abraham) there will be prayers at the Mosque, Woking, at noon. Trains leave Waterloo at 9.35 and 11.10.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON. Claridge's Hotel, Brook Street, London, W.1.

OBITUARY.

Mr. John Isidore Maurice Ornstein, C.M.G., late Under-Secretary of State and Assistant Financial Adviser, Egypt, died in Paris last week.

A telegram received last week announced the death on September 4 of Mr. William Hart Bennett, C.M.G., Acting Governor of British Honduras. Mr. Hart Bennett, who entered the Colonial Service in 1871, was for sixteen years (1884-1900) Chief Clerk in the Chief Secretary's Office, Cyprus.

Captain Ralph Dominic Gamble, Coldstream Guards, who was killed in action on August 22, was the only son of Sir Reginald Arthur Gamble, of the Indian Civil Service, and Lady Gamble, Peking, China. He received his lieutenancy in the Coldstream Guards from the Special Reserve in July, 1917, and was promoted captain May last.

Lieutenant Edgar Brandon, R.A.F., who is reported killed on August 11, was the youngest son of the late Edgar Brandon and Mrs. Brandon, of Newlands, Clapham Road, Bedford. After an education at Bedford School he went to Tasmania, and remained there until 1913. He then went to Ceylon, where he was for some years with the Ceylon and Indian Planters' Company. On returning to England he joined the Inns of Court O.T.C. on September 27, 1917, afterwards obtaining a commission in the R.A.F. He was 29 years old.

We regret to announce the death of Lieutenant-Colonel Stanislaus Tighe, late of the 20th (Duke of Cambridge's Own) Punjabis. Colonel Tighe first saw active service in Burma in 1890-1, and was then awarded the medal with clasp. Six years later he fought on the North-West Frontier of India. He was at the engagements near Shabkadr, Mohmand (for which he received a "mention"), and Buner, taking part also in the capture of the Tanga Pass, and for these services he received the medal with clasp. In 1900 he was engaged in the operations in China, and had the medal for that campaign. The funeral took place on Tuesday at Ashford, Kent.

Lieutenant Maurice Richard Wheatley Johnson, I.A.R.O. attached R.G.A., was the only son of Brigadier-General R. F. Johnson, C.B., C.M.G., late Royal Artillery, and Mrs. Johnson. He was born in 1889, and entered the Indian Civil Service in 1912; and in November, 1913, was appointed Assistant Collector at Ahmedabad, in the Bombay Presidency. On the outbreak of war he applied to be allowed to join the I.A.R.O., but was not permitted to do so until August, 1916, by which time he had been Assistant Political Agent at Palanpur for nine months. He joined the R.G.A. at Lahore, and served with a mountain battery at Bannu, on the North-West frontier. In March, 1918, he was sent to Mesopotamia, and was attached to the battery with which he was serving at the time of his death. The Chief Secretary to the Government of Bombay writes:—"Your son was a most promising member of the Civil Service, and most readily embraced the opportunity of serving his country on the battlefield."

Major George Edmund Borlase Watson, D.S.O., M.C., R.H.A., whose death is announced this week, was the third son of the late Colonel J. W. Watson, Political Agent, Kathiawar, Bombay, and Mrs. Watson, The Cottage, Swainswick, near Bath. He was educated at Wellington College and the R.M.A., Woolwich, and received his commission in the Royal Field Artillery in 1906. He joined the 64th Battery in India, and, being selected for the Royal Horse Artillery in 1914, went with his battery to France with the First Expeditionary Force, and was present at the retreat from Mons. He then trained a battery of the R.F.A. in England and returned with it to France. Subsequently he was given command of a battery of R.H.A., and fell while leading it into action. He was mentioned in despatches and was twice wounded. His elder brother, Major F. S. Watson, D.S.O., R.G.A., died of wounds in France last May, and his younger brother, Captain C. R. Watson, Punjabis, was killed in action in Mesopotamia in April, 1916.

We regret to announce the death of Sir Ratan Tata, which occurred on the evening of September 5 at St. Ives, Cornwall, whither he had gone for his health's sake. He was the second son of the late Mr. Jamsetjee Tata, of Bombay, and he received his education at St. Xavier's College in that city. Mr. Jamsetjee Tata, who was one of the leading members of the Parsee community, was also one of the leaders of industry, and his two sons—Sir Dorab Tata and Sir Ratan Tata—followed in his footsteps. They have been responsible for several undertakings of the first importance, such as the Tata Hydro-Electric Works, which supply power to Bombay, and great steel works at Sakchi. They also put into execution a project upon which their father had been at work at the time of his death (1904): the foundation of the Institute of Research at Mysore. In all these activities Sir Ratan took a keen interest, though he had for many years spent much, if not most, of his time in England, his home in this country being York House, Twickenham. He was extremely generous, and gave liberally to charities both in India and in England; while his interest in social and political problems was demonstrated by his founding the Ratan Tata Department of Social Science and Administration in the London School of Economics, and the Ratan Tata Fund in connection with the University of London, which is for promoting the study of means of preventing and relieving poverty. Sir Ratan, who was knighted in 1916, married Miss Naja Sett, a daughter of Ardesir Merwanji Sett, hereditary head of the priestly caste of the Parsees.

We regret to learn that Captain Edward Allen Roe, M.C., Queen's (Royal West Surrey) Regiment, has been killed in action. The youngest son of Mr. Frederick Edward Roe, of West Norwood, he was born in 1896, and was educated at Merchant Taylor's School and London University. He enlisted on the outbreak of the war, and was given a commission in the East Surrey Regiment in September, 1914. In 1915 he was sent abroad and was posted to the West Surreys, with which regiment he took part in the fighting on the Suez Canal. He was present also at both battles of Gaza, and was mentioned in despatches and awarded the Military Cross. He shared in the advance on and capture of Jerusalem, and was again mentioned in despatches, and was awarded a bar to his Military Cross. He was badly wounded, and after rejoining his unit was sent to another front, where he fell in action. Much sympathy will be felt with Mr. F. E. Roe (who is a member of THE NEAR EAST staff) and Mrs. Roe.

Major Norman MacLeod Adam, R.F.A., who was killed on August 28, was the only son of Major-General F. A. Adam, C.B., and Mrs. Adam, and grandson of the late Major-General T. J. Watson, Indian Cavalry. He was born in July, 1890, and was educated at Fettes College, Edinburgh, and at Woolwich. Passing out at Christmas, 1910, he was immediately gazetted to a battery in India. In 1915 he was A.D.C. to the Inspector-General of Artillery, and in September of the same year got his "jacket" in the Horse Artillery, and served with "W" Battery at Meerut, and at Delhi as guard to the Viceroy. In Mesopotamia, from September, 1916, he acted as staff captain, and later as D.A.A.G. Having obtained command of a battery, he was wounded on November 6, 1917. On the way to another front his ship was torpedoed, and he then, it is stated, acted very gallantly in securing the safety of his men, and was the last to leave the ship. He was three times mentioned in despatches, and was twice recommended for the D.S.O. and once for the M.C.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

FRIDAY, SEPTEMBER 13, 1918.

GREECE AND GREAT BRITAIN.

Fifteen months ago Greece was figuring largely on the Allies' horizon. There could be no doubt at that time as to the general attitude of the British public towards the country. King Constantine was on the throne, and at his instigation, or with his full approval, the Greek Government had but one policy, to make itself as unpleasant as possible to the Allies so long as the opportunity failed it to take the field openly against them in company with German troops. In those days the capacity of Greece to put a spoke in the wheel of the Entente was resented. Apart from the actual menace of overt hostility in the rear of the Army in Macedonia, it was felt that Greece was occupying at a most critical period a position on the world's stage out of all proportion to her size and importance. Allied diplomacy was blamed for mishandling what was in its essence a simple problem, and there was a general desire to be rid of the Greek business in order that attention might not be distracted from intrinsically larger questions. King Constantine's compulsory abdication followed, and not a small portion of the gratification at the return to power of M. Venizelos might have been found due, if it could have been analysed, to a sense of relief experienced in the reflection that, all now being well with Greece, her affairs no longer called for unusual attention. This phase, it need hardly be said, in so far as it existed at all, was a passing one. The war has kindled in Great Britain a genuine interest in Near Eastern affairs. For the present this interest takes its place alongside a lively concern in many other parts of the world; but it is gradually becoming characterised by more knowledge. In the first place, something of the importance of the Near East to the future security and development of the British Empire has now been grasped by the man in the street. It is understood that under happier conditions than those under which the lot of this part of Europe has been cast hitherto it is capable of playing, politically and economically, a greater rôle. For this reason attention, which before might have been accorded grudgingly under a feeling of resentment towards Greece's official attitude of veiled hostility, or during the reaction that followed her formal adhesion to the Grand Alliance, is now paid readily to Greek affairs.

There could be no more striking illustration of the changed outlook upon the Near East than is provided by the arrival in England this week of a Greek Commercial Delegation. Some months ago, at the instance of the Department of Overseas Trade of the Board of Trade, a party of Serbian business men made a tour of British manufacturing centres. This time our Greek visitors come at the instance of the Federation of British Industries—a clear indication of a new spirit actuating, if not the whole of our business world, at least a section which has charged itself with the blazing of a trail—the organised quest of fresh markets—that the rest can hardly fail to follow sooner or later. The fact that the British Government is co-operating in the scheme is symptomatic of the new order, and to its inspiration and practical support will be due in no small measure the success of the visit. From the programme of the tour which the Delegates are to make in England, Scotland, and Wales it will be seen that no narrow view is taken of the extent to which Greece can be interested in British manufactures. More than twenty towns will be visited, and the industries to be inspected include munitions, steel and iron, electrical machinery, motor-cars, aeroplanes, agricultural machinery, chemicals, rubber, railway material, textiles, shipbuilding, marine engineering, spinning and weaving, boots, soap, and lace-making. This list in itself is a measure of the potentialities of the Greek market. It implies a complete repudiation of the old belief that the markets of the Balkans were hardly worth the attention of British manufacturers. There was a time, no doubt, when our manufacturing standard was apt to be beyond the bulk of the requirements of the Near East; but the progress of this market has been overlooked. Largely exploited by the Central Powers, it is no longer a negligible quantity. Moreover, this consideration must now be reinforced by the sense of obligation which, it is to be hoped, will prompt the British manufacturer to cater for the needs of the Balkan peoples, in order that they may not be left again to the mercy of German exploitation.

There may be little sentiment in business, but in the circumstances of this war it is inevitable that some manufacturers and merchants, no less than non-business men, should be influenced by their political feelings in their search for foreign markets. If Greece had preserved towards the Allies the attitude of the Constantine regime of two years ago, no invitation for a commercial mission to visit this country would have been sent. Even now there may be a feeling among some people that Greece has still a skeleton in her cupboard, which militates against a complete restoration of confidence. To those who think that they have not yet found a satisfactory explanation of the part played by Greece in this war, we would commend a book entitled "Constantine: King and Traitor." It is the work of a Greek-American profoundly stirred by events in Greece, and fired with a desire to prove both King Constantine and M. Venizelos right at heart and to promote union between them while the former was still on the throne. The writer went to Greece to learn the Royalist case, prepared to win for it the acceptance of the world at large. After listening to the Royalists alone, among them King Constantine himself and those who prompted his policy, she came to the decision which is expressed so vigorously in the title of the book. But "Demetra Vaka" is not concerned merely to denounce King Constantine. Her investigations enabled her to throw a kinder light on the actions of a large number of her Greek compatriots. The obsession of the King and of his entourage in the invincibility of Germany and the belief that the end of the war would find that Power in an unchallengeable position in Europe, able to make or mar the future of any State, are well brought out. So strong was this conviction, which was supported by the fear that France and Britain were ready to sacrifice Greece to Russia and Italy, that some Greeks, who seemed to be animated by pure patriotism, had no difficulty in satisfying themselves that the country's only hope of salvation consisted in leaving Germany no room to find fault with Greece's whole-heartedness in the German cause. In this frame of mind it was held to be justifiable to mobilise the Greek army merely for the object of political propaganda, to keep the troops aloof from "Venizelism," and to make discipline a medium for inculcating pro-German feelings among the manhood of the nation. In all the circumstances we may wonder that the majority of the Greek nation remained true to their instinctive trust in the Entente Powers, in spite of the ill-advised way in which their case was handled by the Allies.

IRRIGATION IN MESOPOTAMIA.

(From a Correspondent.)

Irrigation engineers of northern India have often cast longing eyes on the plains of Mesopotamia, and the prospects of restoring the sandy deserts and alkali swamps to the fertility and prosperity that the country at one time enjoyed. For, as engineers, they are specialists, and trained in India to work of a certain kind, they find few opportunities for exploiting their special knowledge elsewhere. It is true that the irrigation potentialities of India are by no means exhausted, but the occasions when, on the completion of great construction works, the gallery applauds and honours are perchance distributed will doubtless in the near future be increasingly few and far between. Egypt, once a valuable outlet, is now practically closed to them. They have advised in Australia and South Africa, but the conditions of these countries are not favourable for the great schemes of enterprise to which they have been accustomed. Drainage lines running like mill-streams after heavy rain and dry as a bone in times of drought present other problems than those of the perennial rivers of the alluvial plains of India.

But the conditions of Mesopotamia are what they thoroughly understand. The Tigris and Euphrates with their sources in snow-clad hills, resemble in many respects the glacier-fed streams they know. They would approach the harnessing of rivers of that kind with the confidence born of experience. There, too, though the seasons are different, the demand for water would be constant, a condition the canal officer always loves. The months from May to October are almost rainless; at other times the rainfall is low, say, nine inches, often much less, and the demand would certainly be steady. The climate holds no terrors for them, it is better than that of India. A minimum temperature of about 40° F. and a maximum of about 108° F. means a climate more resembling that of Egypt than of Punjab and Sind deserts, which in the hot weather are furnaces unspeakable. And Sir William Willcocks's enthusiastic descriptions have always been enticing. They liked to read of the old Nahrwan, the very name of which had a familiar sound. It was, apparently, a sort of main canal to feed numerous branches, a channel of 400 ft. bed width, carrying a depth of water of anything up to 30 ft., with possibly a discharging capacity twelve times that of the Thames, and larger than any irrigation canal now in existence. The very idea of such works to restore opulency to Opis and Baghdad, Ctesiphon, Seleucia, and Babylon—names to conjure with—made them anxious to share in their reconstruction in a land where the eyes of the world would be upon them, and not as in India, where the greatest successes of modern irrigation works have attracted little attention.

All that is still, however, a vision of the future: a vision which will no doubt attain reality some day, though for the present only a dream. But in the meanwhile there is work to be done, work of a humbler and less spectacular kind, but nevertheless of great importance. The catastrophe of old, when the Tigris outflanked its fetters, abandoned its old bed, and followed and swept away the line of the main canal, destroying towns and villages, cultivation, men and animals in wild disorder, does not mean that, amid the desolation, no attempt was made to cultivate to some extent, and in suitable places after that time. Sparsely populated as the tract became, the people had to live, and by crude methods, from the rivers or from the ruins of the old canals, water was lifted, and cultivation practised here and there. It was not extensive, but prior to the war it probably sufficed for the needs. The war changed the conditions, it led to a decrease in the cultivated area, and a great increase in the demand. It is this form of cultivation that it is now so important to foster and encourage, in order to meet the requirements of the Army in the field and the inhabitants, and to reduce the cost of transport.

The available establishment is comparatively small, but is steadily becoming more efficient. The local political and irrigation officers are closely in touch with the Arabs, ascertaining their wants and catering for them. It is, among other things, necessary to restore to them some form of civil administration to replace the former anarchy, to organise the labour for the clearances of old canals and to excavate a certain number of new channels, to arrange for systematic advances of cash and seed, and generally to help them to make the best use of such skill and industry as they possess. In work of that description Indian officials excel, as has been evidenced by the remarkable success which has attended the various colonisation schemes in the early days of the settlers, and it is satisfactory to learn that the Arabs and their officers have now settled down to the business, and are making excellent progress.

At the time of the occupation of Baghdad, the people in large areas around were in a state of semi-starvation, and up to the spring of this year food had to be imported for them; but with the threshing of the harvest, it is believed, the country began to be self-supporting in all respects except in the matter of wheat flour for the Forces. The Arab prefers barley to wheat, and nine-tenths of the cold-weather crop was usually under the former. One of the problems of the future is to arrange for the more extensive cultivation of wheat. It is said that, as far as could be judged in the absence of exact statistics, the last harvest was the yield of close upon one million acres, and that by the next harvest it is hoped that this area will be doubled. In addition to the cereals, water and other melons, plums, apricots, grapes, and a not unpleasant kind of crab apple have been plentiful, and tomatoes, onions, gourds of various kinds, cucumbers, spinach, and vegetables generally have been in abundance. The occupation of the Kifri district has brought more crop raising into requisition, and has added to the work of the civil officer. The people of Kurdistan were dying of famine, and relief kitchens had to be organised at the front. They were so famished that it meant weeks of feeding before they were fit to work, and the prisoners taken at Hit and Kifri were mere bags of bones. The people everywhere welcome the British, and at Sheikhs' villages the hospitality is so lavish that only the young and hefty can do justice to the Gargantuan meals provided.

This is not exactly the kind of work for which ambitious engineers have pined at a distance, but it must be admitted that it is work of a high economic and humane value. It is all a question at present of rendering the occupied tracts self-supporting in supplies, and in that aim the results achieved are not without their moral significance. The fostering of the indigenous Arab cultivator to habits of industrious husbandry by friendly encouragement and the lure of high market prices for his produce cannot fail to have its good effects in the years to come. His prejudice against settled employment is proverbial, and he must outgrow it, if he would rival the thrifty, hard-working agriculturist of the better classes of Indian cultivators. But he is on the spot; he cannot be neglected, and at the present time he is indispensable. The fact that he has been so nursed and succoured in these pioneer undertakings will tend to make of him a firm friend instead of a jealous enemy, if at any time the need arises to introduce colonists from beyond his borders to develop the vast areas commanded by a comprehensive irrigation project. The organisation of the valuable foundation work is so excellent, and the relationship between the officials and the people is so thoroughly cordial, that it augurs well for all future operations.

"Talaat Pasha and Zionism."

Under the above title, an article in *Palestine*, the organ of the British Palestine Committee, criticises the Turkish Grand Vizier's statement regarding the future of Palestine and of the Jews in that country—as he would have them. "There is," says the article, "no pretence that these proceedings have aroused any enthusiasm among the Zionists of the Central Powers, and that is not surprising when the proposals of Talaat Pasha are subjected to analysis." The substitution of strict, and effective, regulations for nominal prohibitions against Jews settling in the country "is a very grave reversing of conditions from the Jewish point of view." The writer continues:—

Zionists have from time to time considered the question of Jewish immigration into Palestine after the war, and it has been suggested that some form of regulation might be advisable in order to prevent too swift a flood before the economic conditions of the country were sufficiently developed. But in all Zionist discussions of the question it has been assumed that any control that should take place should be entirely in the hands of the Jewish authorities. Talaat Pasha proposes that such control should be in the hands of the Turkish authorities—a very different proposition indeed.

The Turkish Prime Minister speaks of Palestine becoming a religious centre for Jews. A religious centre Palestine has always been, to some extent, to Jews as to Christians and Moslems, so that Talaat Pasha's promise is significant not for what it asserts, but for what it denies by implication. It denies by implication that Palestine is to become, in the wider sense, a spiritual centre for Jewry; it denies still more emphatically that Palestine is to become a national centre for Jewry. Talaat Pasha does not recognise Zionism as a national movement, or the existence of the Jewish nation or any Jewish national claim to Palestine. It is the Young Turks' policy to make war on all national movements within the Turkish Empire, although they do, from time to time, of course, propose to use them for their own purposes. It need hardly be emphasised that Zionism insists upon the Jewish national claim in Palestine, and that any scheme or project which denies the Jewish national claim or denies Jewish nationalism is directly antagonistic to Zionism. Many things are possible in this world, but it is utterly impossible that the Commission which the Turkish Government has appointed can bridge the gulf between Zionism and a Turkish policy which is fundamentally anti-Zionist. Talaat Pasha's manœuvres are significant as the tribute which vice pays to virtue. He knows the vast political influence which Jewry is bringing to bear on behalf of the Allies as a result of the British Government's Declaration, and he hopes, quite vainly, that a few empty words and hypocritical phrases can sterilise this powerful movement. Perhaps he does not even hope so much as that, for there must be limits even to the unreality of the world in which Turkish statesmen move. Certainly the Jews of the Central Powers can be under no illusions as to what the Young Turks' intentions are.

Our Salonika Force.

In an article headed "The Macedonian Front: A Call for Fair Play," a correspondent of the *Morning Post* gives some astonishing facts regarding our Salonika force. "It is," he says, "a matter of considerable disgust and annoyance to officers and men returning from the Salonika front to find that the majority of people, both official and lay, believe that the years they have been absent fighting the Bulgarians have been years of rest, peace, and quietness—that the war in Macedonia is a glorified picnic. The Salonika Expedition may be a side-show, but it is a side-show on a very large scale, which might have been the largest and most successful side-show in the whole war. Very few people in England have any conception of the magnitude of the Allied forces in Macedonia." And he proceeds to show how hard is the lot of the British soldier on this front. The following extracts speak eloquently on the subject:—

The front held by the British is forty miles long. It is this front that people in England think a "cushy" front. But let us look at it in a proper light. The Macedonian front has all the disadvantages of the Flanders battlefield, plus a few extra—trench mud, rain, continuous bombardment, and added thereto fever, dysentery, extreme heat, etc. The opposing lines run close together, and the Bulgars, with their excellent artillery, keep things fairly lively year in and year out. In Flanders, after their turn in the trenches, the men hand over and march to comfortable billets in the rear. In Macedonia billets are unknown until men get sent down to the base.

Many men on the Dorian front have not seen a civilian, except for a stray Greek or Macedonian shepherd, for two and a-half years. . . . I know the case of one man who has a child three years old that he has never seen. And for everyone is the fear of the dreaded malaria. The Y scheme is working, and is to a certain extent responsible for the delay in leave, as Y men must return first, and transport is scarce. But surely something could be done to develop the overland route from Salonika to Vallona, which is only four hours from Brindisi.

The leave question is also apt to cause international jealousies. No Frenchman is kept in Macedonia for more than a year without leave, and on the expiration of his leave has the option of returning or being drafted to another sphere of action. Letters and newspapers take at least two weeks to arrive, more often six, and nothing for certain under two months.

Serbians in England.

The *Educational Supplement* of the *Times* contains a note by a correspondent on "Serbians at Cambridge." This gives some particulars of the Serbian boys in this country as a result of the war. The writer says:—

Before the invasion there were some 60,000 boys and students upon the books of Serbian schools and colleges. Of these some 33,000 fell into the hands of the enemy.

Of the 27,000 who escaped from the country, over 20,000 perished, largely as the result of their sufferings, the majority at Corfu, some also at Corsica. Three thousand are undertaken by the French nation; about 316 are in England.

As to Cambridge's share in the helping and educating of these guests, we read:—

Sixty boys and older students are received at Cambridge, the headquarters of the administration. Westminster College is given up to them, some residing at Cheshunt and Downing Colleges. England spends some £25,000 on her guests, expenses being defrayed partly by the efforts of local committees, helped by the generous reduction or remission of fees, partly by the Serbian Relief Fund. Education costs are naturally a heavy charge upon the resources of this voluntary fund, which gives so much assistance in many ways to the stricken country. But the work done by its Education Committee, under the management of Mrs. Carrington Wilde and of Mr. J. E. Bellows as administrator, can hardly be over-estimated, seeing that it is upon the abilities developed and characters formed by this remnant of the nation that the reconstruction of Serbia must largely depend. Our main concern in England is necessarily with the education of boys. Unfortunately, the escaping of women and girls was almost impossible. Of 1,600 on one boat 160 were women and children, and this was probably an unusually large proportion. . . . At Cambridge, Professor Popovic, of Belgrade University, delegated by the Serbian Ministry of Education, and a staff of Serbian masters, have assisted in the teaching at Westminster College. Ten are undergraduates of the university, and owe much to its generosity. The boys were already able to speak French, and quickly learnt enough English to work in that language. They have also taken kindly to games. During the present summer Westminster College has sent out its boys into two successive National Service camps in Wiltshire of fifty each. . . . One student has passed through an O.T.C., and has lately gone as commissioned officer to Salonika. Engineering in all branches has, perhaps, proved the most popular study of the young Serbians in university courses; forestry, medicine, and commerce also appeal to them strongly. At present, however, one-third of the boys are under 16, and about 175 are at secondary schools, the Perse School at Cambridge receiving seventeen. It must be long before these young guests can return to their own country, and it is to be hoped that their friends in England will be able to carry on the good work as long as shall be necessary.

Germany's Latest Barbarity.

The case of the British prisoners in Turkey cannot be too often brought before the notice of the public; we therefore welcome a note in Monday's *Daily Graphic* dealing with the subject, especially with Germany's responsibility as indicated in the Foreign Office *communiqué*. We quote a few sentences from the *Graphic* note:—

The latest barbarity of the German Government is a refusal to permit the interchange of Turkish prisoners in England against British prisoners in Turkey. The Turks have agreed to this interchange, and both the Austrians and the Turks have undertaken that the ships conveying the prisoners shall not be attacked. The Germans refuse to give this undertaking. . . . The tale of the sufferings of British prisoners in Turkey almost surpasses in horror anything that has been recorded since the war began. According to a statement made in the House of Commons in July last, no fewer than 530 British prisoners and 733 Indian prisoners had died in Turkey since January 1, 1917. These figures alone are sufficient to indicate the horrible ill-treatment and under-feeding from which the men who were captured by the Turks, mainly after the heroic defence of Kut, have been and still are suffering. Parcels, either of food or clothing, rarely reach them; only the scantiest news filters through. As far back as December last the Turks signed an agreement at Berne which would have liberated 1,000 British and Indian prisoners in exchange for 1,500 Turks. Germany still blocks the way to the execution of that agreement. Her action is a part of the deliberate policy of ruthlessness taught by her State-paid professors and practised by her rulers.

Articles to Note.

"The Old Baghdad-Kermanshah Road," by Edmund Candler, in *Blackwood's Magazine* (September).

"An Indian's View of the Indian Problem," by Dr. Nair; and "A Colony for India," by Sir Theodore Morison in the *Nineteenth Century* (September).

"Indian Reforms," by Chas. Roberts, M.P.; and "The Austrian as a Foe," by G. Ward-Price, in the *Contemporary Review* (September).

According to a message from Zurich, a very lively Note has been sent by Turkey to Berlin protesting against the conclusion of additional Brest-Litovsk treaties, which are injurious to the interests of Turkey in the Caucasus.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The subject of the Greek Commercial Mission to this country is being dealt with elsewhere in this issue, and I need hardly do more than express the profound satisfaction with which THE NEAR EAST welcomes the delegates. Their presence here is a practical application of a policy that has been consistently urged in these pages. The members will learn that British manufacturers are not only able to supply all the goods that Greece needs, but that they are now anxious to do so. Great credit is due to the Federation of British Industries for its enterprise in making itself responsible for the tour, and for the thoroughgoing way in which it has mapped out the programme.

***

The delegates are well known throughout the Near East, as keen and up-to-date business men, with wide experience in various branches of industry and commerce, and as such they are in a position to exercise considerable influence in the direction of closer commercial relations between the United Kingdom and Greece, as well as the neighbouring countries. It is satisfactory that the Mission is accompanied by Mr. Waugh, the British Commercial Attaché at Athens. Mr. Waugh has been for many years in the British Consular Service in the Near East, but particularly in Constantinople, where as Vice-Consul, Acting-Consul, and Consul, with indefatigable energy, he has done a great deal to promote British trade in the Ottoman Empire. He is thoroughly conversant with the pros and cons regarding trade in the East, and British manufacturers would do well to be guided by his advice.

***

A message to *The Times* mentions the impending establishment of great shipbuilding yards in Greece, which are likely to be the biggest enterprise yet undertaken in the country. The yards and the necessary buildings are to occupy the whole of the seashore between Megara and Eleusis—a stretch of nearly ten miles—and their construction is expected to take nearly five years. Here is an indication of what the new order may stand for in Greece, and the scheme is typical of what will take place throughout the Near East. Large profits have been made by Greek shipping during the war, but the merchant fleet has suffered considerably, and it is natural that Greece should wish to have a hand in building it up again, in case foreign yards prove too occupied with national orders to attend to others.

***

While on the subject of shipping I may mention that efforts are being made to interest the French in the Persian Gulf trade. The truth is that a number of countries are becoming alive to the potentialities of this region, and are anxious that it should not become an exclusively British preserve. A little more is known now of the efforts made by Germany to establish herself in the Gulf. Her hold on the trade has been eliminated, and America and Japan, to name no other countries, do not see why they should not have a "look in." France is not likely to be far behind. The moral is that, as the British manufacturer and merchant start with an enormous advantage, they only need intelligence and enterprise to keep their lead. Mesopotamia has a great future before it.

I would call attention to the interesting lecture delivered by Mr. D. T. Chadwick on "Industrial Development in India during the War," a report of which appears on another page. The stimulus given to Indian industries during the last few years can hardly fail to bear fruit after the war, and the findings of the Industrial Commission, which is expected to draw attention to enterprises that can well be undertaken in the country, are being awaited with interest. The possibilities of industrial development have an important bearing on the general situation, both political and economic, in India. Industries under existing conditions have an educational value. Further, any considerable expansion will show to what extent India possesses a population that it is beyond her capacity to provide for. The problem of Indian emigration is only in abeyance during the war, and will crop up again afterwards. With a view to meeting it, the proposal has been made that (German) East Africa should be assigned to India as a colony for her excess population. But if the administrative responsibilities of Indians are to be increased at home, it may well be doubted whether their supply of capable officials will be equal to the task of meeting their own needs as well as those of a large colony such as East Africa. In any case, it is certain that the question of Indian emigration will be approached in a more conciliatory spirit all round after the war than was possible before 1914.

***

According to information received from Berlin by a Swiss newspaper, both the Anatolian Railway and the Baghdad Railway Companies have applied to the Turkish Government for permission to postpone the issue of their balance-sheets, in view of the shortage of their staffs. In this announcement the *Revue de Turquie* finds confirmation of the belief, based on hints in the report recently issued by the Deutsche Bank, that the two companies are destined for reconstruction on a fresh basis. The new terms to be obtained from the Porte, it need hardly be said, will not lose sight of German interests.

***

What the position of these railways may have been as a result of the war can only be surmised. There can, however, be no doubt as to the expectations formed in Germany in regard to their potentialities after the war. The tightening of the bonds between Turkey and the Central Powers is intended to place the raw materials of the Ottoman Empire at the disposal of the latter, and it is anticipated that the railways will benefit by the increased traffic. To cope with the new situation the long-discussed subject of avoiding the break in railway communication between the Balkans and Asia Minor has been revived. Opinion has been divided between the merits of a tunnel and of a bridge, but now seems to incline towards a bridge. It is pointed out that a tunnel, to be safe, from a military point of view as well as practical from an engineering point of view, must have its openings at a considerable distance from the Bosphorus. Its length (nearly five miles) would militate against its utility for the inhabitants of Constantinople, quite apart from the possible prejudice of the Oriental mind against a long journey underground.

According to a recent report the project now favoured is to throw a bridge across the Bosphorus from the Palace of Justice, close to St. Sophia, to a point immediately opposite on the Skutari side. It is unnecessary to examine the proposal more exactly at this stage. The whole of Turkey teems with elaborate schemes of German origin for its development or exploitation. It is part of the German programme to impress the all-powerfulness of Germany upon the Turks. But there are some questions to be settled first in Western Europe, and in all probability the bridging of the Bosphorus will have to wait.

***

A question that is exercising British business communities overseas at this time concerns the agencies of British manufacturers held by local firms or individuals. Because the war has interfered with the standard output of manufacturers or with the shipment of their goods, there is said to be a tendency to adopt the attitude that agencies in the meantime can be allowed to lapse and can be resumed with a simple "as you were" when the war is over. It is difficult to believe that this can be the case; in other words, that, while manufacturers are doing remarkably well out of war work, they propose to shift the burden of war dislocation entirely on the shoulders of the overseas agents. A moment's consideration will show that the average agent cannot accept this position without making an effort to find other business. This may mean the loss to manufacturers of valuable men, and an after-war dislocation of trade.

***

A longer view of the situation must convince a firm of the wisdom of coming to some arrangement with its agents abroad, in order that its interests may be duly protected. The question is really linked up with the general attitude towards after-the-war problems. It is conceivable that a firm may say: "We have enough orders in hand to keep us going for two years, so we shall be independent of agents for some time to come." If it does, that firm's contribution to reconstruction after the war is going to be the minimum, and not its maximum. The needs of the country require that where a firm was doing x business before the war, it shall contrive to do from 3 to "umpteen" x business after the war. If its plans are not already formulated on these lines, it will have little chance of pulling its weight in the national boat.

***

The political and military importance of the dispatch of a British force to Baku has been rightly insisted upon, but there is another side—the economic—which should not be overlooked. In Russia crude oil does duty to a very large extent as a substitute for coal, which is by no means plentiful. Thus, the railways use it, even at a distance from the oilfields, and a number of industries depend upon it. Before the war the bulk of the output of the Baku Oilfields was used as fuel in Russia. As things are now, with the chief coal area in German occupation, Russia will be more than ever dependent on oil fuel, and if there is to be any early return to settled conditions, it is absolutely necessary that the output of the Baku fields should be at Russia's disposal. This end, it is to be hoped, has been entirely attained with the arrival of the British force at the Caspian port.

Industrial Development in India During the War.*

By D. T. CHADWICK.

It is a well-known truism to say that India is primarily an agricultural country. Except for the large cotton, jute and coal interests, industries in India in the early years of this century were either confined to a few factories or were still continuing on a village scale. Thus in the year before the war in the sixteen principal articles of export, of a total value of 150 millions, only two classes of manufactured goods figure, viz., cotton and jute. On the other side, except for sugar, the principal imports consisted solely of metals and manufactured goods, among which cotton and iron or steel goods took leading places. It was thus not surprising that on the outbreak of war the first economic anxiety centred round the difficulties of getting agricultural produce sold, for though most of the crops were sown, it seemed that by the time they came to harvest, markets would be either non-existent or very restricted. For some articles these forecasts proved true. Difficulties have continued and in some cases become more intensified; yet on the whole this stage soon passed as it became clear that many of India's raw products were essential for the prosecution of the war, as for instance jute, wheat, wolfram, lac, mica, castor seed, hides, etc. The first phase of the second stage supervened, viz., the need for a greater and more varied industrial output from India. The causes which called for this effort are still acting, some with increased force. They are briefly the need of supplying from India, as far as possible, many of the requirements of the armies operating in the East, and the necessity of meeting local wants for which the ordinary sources of supply were cut off either through lack of shipping or through being otherwise engaged. The industrial effort thus called for has taken three forms: (1) the establishment of new factories or the expansion of existing ones; (2) the organisation of such industrial resources as India possessed, and (3) the closer examination of local resources in the search for substitutes and new commodities, etc.

Pre-War Enterprises.

Even before the call for widespread organised industrial effort was made the larger factories in India had contributed most helpfully to Army supplies. The jute mills of Calcutta supplied necessary sandbags and yards of sacking by the million, whilst almost from the outset of war Indian cotton mills met the needs of khaki cloth, etc., for the ever-increasing armies in the East, which for khaki cloth alone now runs to over 20 million yards a year. In the first half of 1915 the railway workshops, as well as those of the principal engineering firms in Calcutta and Rangoon, undertook to supply shell cases to supplement the output in the United Kingdom. And this continued until the Ministry of Munitions in England had so developed its own organisation as to be independent of any supplies from India. It was fortunate at that time of anxiety that India could to some extent help. But it was only just possible. The steel used, which had to be according to United Kingdom specification, was all supplied by the Tata Iron and Steel Company, and was of such quality that not a single shell was rejected at gun proof for defective steel. Yet these steel works were only just erected in time. The first steel ingot at these mills was only rolled in February, 1912, and the first rails a month later—i.e., a little over two years before the outbreak of war. And some time is always needed for a steel factory to settle down to work, especially when it is the first of its kind in a country, and all labour has either to be imported or trained, and still more when, in addition, the whole site of the works, mines, etc., was tropical, and practically uninhabited jungle only four years previously. The utility of these steel works did not cease with the provision of steel for shell cases. They have been the chief source of supply of rails for Mesopotamia and Africa. Extensions of the works have been undertaken, and a rolling mill is being erected which will give steel plates of any length and up to 90 ins. in width. A supply of such plates obviously opens a large vista of future possible developments. In addition, the Bengal Iron Company has helped largely, and now another iron and steel company has been formed under strong auspices to develop other large iron deposits. Without these steel works India's contribution of finished material to the armies in many parts must have been very much less than it has been, and the burden would then have been thrown on this country.

Work of the Munitions Board.

The cases so far quoted relate to large firms in existence when war started. But as time went on more widely co-ordinated efforts were needed to supply as far as possible those essential articles required by the armies and civil population, the import of which was cut off either through inability of supply or through lack of tonnage. For this purpose the Indian Munitions Board, under the able control of Sir Thomas Holland, was started in April, 1917. It was clearly a great undertaking to attempt to organise industry in wartime in a country of a population of 315 millions, of which over 70 per cent. were normally engaged in agriculture, and in which there are at least twenty-three different languages, each of which is spoken by more than a million people. It was impossible to make India self-supporting in manufactured goods in the time, and no such visionary ideals were entertained. But very much more has been achieved alike in quantity, quality and variety than three years ago seemed possible. This result has been largely due to the wholehearted and ready co-operation and help which the business community in India of all classes and grades has given to the Munitions Board. As one instance of the speeding up which has resulted from such co-operation, it may be said that the Karachi Committee took about six weeks to convert a vacant tract of foreshore into a village with workshops, workmen's houses, etc., complete for the re-erection of sectional barges. And whilst at first nineteen days were required for the re-erection and launching of one barge, some few months later they were rarely turned out at a rate of less than four a week, and at times a speed of six a week was obtained.

Tanning and Medical Stores.

For tanning materials efforts have proceeded on three main lines:—(1) Encouraging the cultivation by special concessions of cassia auriculata, the favourite tanning reagent in Madras. (2) The preparation of tanning extracts, especially of myrabolams, for hitherto the raw fruit has been exported and not the extract. (3) The systematic inquiry and testing at the factory at Maihar of numerous other tanning reagents and combinations thereof. These form a very important line of inquiry, as India has a very large output of hides. The undue weighting of hides and damage by faulty flaying have often proved a heavy handicap to Indian kips. It cannot be pretended that these difficulties have been entirely or effectively surmounted, but all reports tend to show that a considerable improvement has occurred owing to control and the need of working to high Army specifications. Concurrently there has been a large increase in the output of leather goods of all kinds, many of which had not hitherto been made in any quantity in India, from the many articles of military equipment to leather belting and pickers for cotton mills. The Cawnpore leather factories are among the best known in India, but others are being erected with modern equipment, especially round Calcutta.

In an entirely different category come a large variety of medical stores and surgical requirements. The glass works of the North have been able to make satisfactory Petri dishes, glass tubings, and flasks, whilst attached to the medical store depot at Bombay is a private concern employing some hundred of workmen in the manufacture of artificial limbs of the approved modern type. Very similar progress has been made with drugs.

Forestry.

The realm of forestry is one which has come in for searching examination during this period. In spite of a forest area of over 250,000 square miles, imports of timber into India exceeded exports by some twenty to thirty thousand tons a year before the war, excluding firewood, railway sleepers and ornamental woods. These imports consisted largely of teak, hard woods and pine. In one instance even wood was imported from Siam, when exactly the same was available locally and at a lower price This extensive employment of imported timber has been ascribed to a general want of sufficiently precise information regarding the timber resources of India. This defect could not be remedied in a day; but the present vital need of developing local resources has drawn great attention to it. Timbers have been found locally which even meet the high specification required for aircraft, though for this use the specific gravity requirements are defined within such narrow limits as to restrict the range of choice. These have now to undergo searching practical test. Two timbers are also being tested practically, as they are expected to prove suitable for rifle manufacture, whilst in the lower categories much of the imported pine and fir could be replaced in ordinary scantling sizes by the pine and fir of the Himalayas. A substitute even for Oregon pine is available, if improved engineering facilities are afforded. Meanwhile, stocks of timber cut to sizes have been accumulated in various ports, and the Indian Munitions Board, since its inception, have sent overseas for Army purposes more than twice as much Indian timber as was ever exported in time of peace. (The Forest branch, Mr. Chadwick went on to say, also concerned itself with the preservation of bamboos and woods, and the resin, turpentine, and sandal wood industries.)

Raw Materials.

In the range of metals the importance of the Indian deposits of mica, wolfram and chrome are well known, and the workings of these have all been extended. The opening of the large Bawdwin deposits by the Burma Corporation should supply large quantities of lead, silver, zinc concentrates and copper. The output of this Burma pig lead, which is of high quality, already equals approximately India's pre-war needs. Tin deposits have very recently been reported from the Thaton district near Amherst, in Burma. With the iron and coal resources of India now being actively opened out, and with non-ferrous minerals also being commercially worked, there are better prospects than have hitherto existed of India having available those metallurgical resources which are vital to all industrial development and which hitherto she has lacked The manufacture of the alloys of iron has begun with that of ferro-manganese. A set of electric furnaces are also being erected at Sakchi, primarily for refined steel for springs, tools and other purposes, but should occasion demand these also will be devoted to making other ferro alloys—*e.g.*, ferro-chrome, ferro-tungsten, etc.

Furnaces, works and factories cannot, however, be built cheaply without local supplies of structural and refractory materials. Structural steel is now available in considerable quantity, and will be forthcoming in the future still more largely; the local production of cement of British standard quality was before the war only some 5,000 tons: the capacity of the present works is nearer 70,000 tons a year, and further developments are certain. Among refractory materials a beginning has been made with silica bricks, claimed to be equal in quality with those of England or Japan, and large quantities of these will be needed. The magnesite deposits in the Madras Presidency are of high purity. The manufacture of magnesite bricks is sure to follow. Though Indian asbestos appears totally unfit for textile purposes where flexibility is of great account, it may yet prove suitable for boiler lagging and fireproof compositions. Thus some of the first steps for developing locally the metallic resources of the country have been taken.

The Aid of Chemistry.

But this is an age not of iron alone, but of iron and chemistry. And perhaps it is in re-

*This paper was read by Mr. D. T. Chadwick, Indian Trade Commissioner, at the British Scientific Products Exhibition, King's College, London, on September 4. A few passages have been omitted owing to pressure upon our space.—ED.

Digitized by Google

gard to the supply of some of the primary chemicals and in the solving of chemical problems connected with Indian industry that some of the greatest difficulties for advancement lie. One of the first difficulties is to ensure an adequate supply of cheap sulphuric acid of which at present the local production is small, though this should become possible, if the Burma zinc concentrates are smelted in Bengal.

Another basal chemical which is not yet produced satisfactorily locally is caustic soda. Among ammonium salts sulphate of ammonia is obtained at present chiefly as a by-product from the coke ovens. When one turns to the large number of derivatives from coal tar one is met by the unfortunate fact that the yield of tar and acid constituents from Indian coal is as a rule low, only being 2.1 per cent., as compared with 4 per cent. in Great Britain. The possibility of developing local resources for aluminium and calcium carbide, cyanide, etc., turns on the supply of cheap electric power from the waterfalls of India. Electric power has already been supplied successfully to industry in India on a limited scale. The two best known cases are those of the Cauvery Falls in Mysore, chiefly to supply power to the Kolar goldfields, and the more recent Tata hydro-electric scheme for supplying Bombay. In the first of these the capacity of the power-house at present is 22,650 electric horse power, and in the second 100,000. Both are being extended. But for these basal chemical and metallurgical industries still cheaper sources of power are required, and the Tata interests have investigated a proposal for throwing a dam across the Koyna river in the Western Ghats, whence 300,000 horse power per hour will be obtainable throughout the year.

Apart, however, from these chemical industries, the inception of which depends on the existence of cheap power, there is a large number of chemical problems associated with industry in India waiting solution. One of the activities of the Munitions Board has been to "mobilise" the chemists at present in India and allocate to them specific problems for solution. After enumerating some of the items of research allotted to different chemists, Mr. Chadwick continued: The war caused a great and sudden revival of interest in indigo. This opportunity has not been treated as a mere chance for recovering some earlier losses; it has also been utilised for serious organisation and definite research work, in which the Behar planters, the Government of India, and a strong scientific and business committee in England, in which Professor Armstrong takes an active part, are all co-operating with the double object of increasing the out-turn of indigo per acre and also of putting the final product on the market in the form of standardised paste.

It may seem strange, when speaking of a land of rice and wheat, to allude to new foodstuffs. But the exigencies of war have turned attention in India, as elsewhere, to food. Samples of malted foods from Indian cereals have been prepared, and from Bombay comes the report of a purified ground-nut flour of considerable nutritive value, and not dissimilar from the cotton-seed flour, which, in this country, has been recommended as a suitable diluent for wheat. Indications seem to point to the likelihood of testing thoroughly the possibility of jam-making in certain parts of India.

In this brief summary an effort has been made to sketch some of the main outlines of the new industrial developments in India during the later years of the war. The largest contributions in material goods have naturally been made by the large and varied textile industries extending over a wide range of articles, from khaki cloth and pugarees to blankets and coir screening. And to supplement the efforts of the mills many of the hand loom weavers have been employed on tasks within their capacity. The feasibility of employing the old indigenous craftsmen of India has thus not been neglected, though obviously it is more difficult to ensure working to specification by them than by the large mills. The mere enumeration of the articles made in these various branches of textiles would exhaust all the time allotted for this lecture. So it has been deemed preferable to concentrate attention on what are, perhaps, the less widely known industrial efforts in India, and to mention some of the difficulties they have had to meet. Frequently work has had to be done with makeshift apparatus and machinery, and it must not be supposed that every effort mentioned in this lecture will ultimately blossom into a large successful industry. Some wreckage there is bound to be when the period of transition comes. In endeavouring to summarise in thirty minutes a wide field of endeavour and activity it is difficult to avoid causing perhaps a too roseate impression of progress. Anyone who knows India realises that there are difficulties ahead when full competition again becomes operative, but some solid progress has been made; and I hope that this brief sketch does show that there is a wakening spirit abroad to industrial possibilities in India, and also that there is a strong hope of effectively widening the basis of industrial employment in India.

This is not a full account of India's economic effort during the war. That obviously cannot be given yet. We do not yet know how far we may be led. In fact, cables received last week show that another phase is opening, with the orders to make standard cotton cloths at controlled prices—the counterpart to the standard suits of England. The repercussions of this war are world-wide, and the problems to which it gives rise present in most countries certain broad lines of similarity, though the conditions in which solutions for such problems have to be sought are widely different. Finally, I wish to repeat and emphasize that this lecture is merely a *summary of some of the main lines* of Indian industry during the war; it is in no sense an economic survey of India in war time. As in every other country, some have made great profits; other large classes have suffered loss. There is such widespread talk nowadays of raw materials that the impression easily grows that there must be unlimited markets for all India's raw produce. Such is not the case. Difficulties of transport and finance weigh as heavily on India as on other countries. For instance, the area under cultivation of such a war commodity as jute has decreased since peace time, whilst the markets for some other crops have greatly shrunk. As elsewhere, some in India have lost, some have gained, by the economic dislocation caused by war. How the balance will come out in the end remains for future study to disclose.

THE GREEK COMMERCIAL MISSION.

Below will be found the arrangements for the tour of the Greek Commercial Delegates, who are visiting England under the auspices of the British Federation of Industries, with the sanction of his Majesty's Government and the Greek Government. As already announced, M. Michalokopoulos, Minister of Agriculture, is at the head of the Mission. The other members are:—MM. Leonidas Empiricos, ex-Minister of Supplies and Director of the National Greek Steam Navigation Co.; A. Skintzopolos, Industrial Inspector of the Greek Ministry of National Economy; B. Zamanos, Deputy of the Greek Chamber, and Founder of the Vodena Cement Works; L. Oeconomides, Chemical Manufacturer; J. Damala, representing Finance and Banking; A. Tsitis, Cotton Spinner; C. Malikopoulos, Importer of Textiles; E. Karalopoulos, interested in Iron, Steel, Machinery and Development Schemes; M. Kazazes, Importer of Agricultural Machinery.

The following are attached to the Mission:—Mr. A. T. Waugh, H.M.'s. Commercial Attaché at Athens; Mr. Guy Locock, C.M.G., and Mr. E. C. D. Rawlins (lately H.M.'s Consul in Crete), Department of Overseas Trade; and Lieut. Lambros, R.N.V.R., attached to the Department of Overseas Trade.

The officials of the Federation of British Industries attached to the Tour are:—Vice-Admiral Sir Charles Dundas, of Dundas, K.C.M.G., Edmund L. Hill, Esq., M.I.Mech.E., M.I.E.E., and H. W. Babington-Browne, Esq.

The tour is under the patronage of His Excellency Monsieur Gennadius, the Greek Minister, and M. Caclamanos, Minister Plenipotentiary on Special Mission.

Programme.

September 13. Arrive London. Ritz Hotel.

September 16. Government Dinner, Carlton Hotel.

September 17. Lord Mayor's Luncheon at the Mansion House. Federation Dinner and Reception, Ritz Hotel.

September 18.—London. Visit to Callender's Cable and Construction Co., Ltd., Erith.

September 19.—London. To Birmingham. Dinner and Reception, Queen's Hotel.

September 20. Reception by the Lord Mayor of Birmingham. Visits to Small Arms Co., Ltd., and Austin Motor Co., Ltd. Dinner given by the Lord Mayor.

September 21.—Birmingham. Visit to Dunlop Rubber Co., Ltd., and to Kenilworth.

September 23.—Birmingham. Visit to Metropolitan Carriage, Wagon and Finance Co., Ltd. To Nottingham, Victoria Hotel.

September 24.—Nottingham. Visit to Thos. Adams, Ltd. Dinner, Victoria Hotel.

September 25.—To Lincoln. Visit to Ruston, Proctor, and Co., Ltd. Return to Nottingham.

September 26.—Nottingham to Derby. Visit to Boden and Co., Ltd., Derby. To Liverpool, Adelphi Hotel.

September 27.—Liverpool. Visit to United Alkali Co., Ltd., Widnes. Luncheon given by the Lord Mayor at the Adelphi Hotel.

September 28.—Liverpool. Visit to Lever Bros., Ltd., Port Sunlight, and Luncheon.

September 29.—Liverpool. Trip on the Mersey. Luncheon given by the Greek Colony in Liverpool. To Manchester, Midland Hotel.

September 30.—Manchester. Visit to British Westinghouse Electric and Manufacturing Co., Ltd. Luncheon given by Sir A. Herbert Dixon, Bart. Visit to Crossley Motors, Ltd., Gorton.

October 1.—Manchester. Visit to Ashton Bros. and Co., Ltd., Hyde. Midland Hotel, luncheon given by the Lord Mayor. To Sheffield, Grand Hotel.

October 2.—Sheffield. Visits to Thos. Firth and Sons, Ltd., and John Brown and Co., Ltd.

October 3.—Sheffield. Visits to Vickers, Ltd., and Hadfields, Ltd. To Bradford, Midland Hotel.

October 4.—Bradford. Visit to Sir Titus Salt, Bart., and Sons and Co., Ltd., Saltaire. To Harrogate Hotel Majestic.

October 5 and 6.—Harrogate.

October 7.—Harrogate. To Leeds. Visits to Joshua Wilson and Sons, Ltd., and John Barran and Sons, Ltd. Luncheon given by the Lord Mayor. Visits to John Fowler and Co. (Leeds), Ltd.

October 8.—Leeds. Reception, Queen's Hall. To Glasgow, North British Hotel.

October 9.—Glasgow. Visit to North British Locomotive Co., Ltd.

October 10.—Glasgow. Trip on river Clyde all day.

October 11.—Glasgow. Visit to Wm. Beardmore and Sons, Ltd., Parkhead Works, and luncheon. Visit to Stewarts and Lloyd. To Edinburgh; North British Hotel.

October 12.—Edinburgh.

October 13 and 14.—Edinburgh. Visit to Holyrood, St. Giles, Castle. To Newcastle. Reception by the Lord Mayor, and dinner given by the Lord Mayor, Station Hotel.

October 15.—Newcastle. Visit to Sir W. G. Armstrong, Whitworth and Co., Ltd., Naval Yard, and Luncheon. Visit to R. and W. Hawthorne, Leslie and Co., Marine Engineering Works.

October 16.—Newcastle to Middlesbrough. Visits to Cargo Fleet Iron Co., Ltd., Cochrane and Co., Ltd., Dorman, Long and Co., Ltd. To Saltburn-on-Sea, Zetland Hotel.

October 17.—Saltburn-on-Sea. To London, Ritz Hotel.

October 18.—London. To Swansea, Metropole Hotel. Dinner (Met. Hotel) 7.30 p.m.

October 19.—To Bristol, Royal Hotel.

October 20 and 21.—Bristol. Reception by the Lord Mayor at Council House. Visits to Derham Bros., Ltd., and R. A. Lister and Co., Ltd. Luncheon, Royal Hotel. Visit to British and Colonial Aeroplane Co., Ltd. Dinner given by the Lord Mayor at the Mansion House.

October 22.—Bristol. To Bath. Visit to Stothert and Pitt, Ltd., and Luncheon. To London.

October 23.—London.—Federation Lunch, Ritz Hotel.

EGYPTIAN STATE FINANCES DURING APRIL.

(From Our Own Correspondent.)

Cairo, August 10

The prosperous condition of the State finances revealed in the final accounts for the financial year 1917-18, recently reviewed in these columns, is continuing in the new year, if one may judge from the statement of receipts and expenditure just published for the month of April. Revenue during that month amounted to £E2,062,976, and expenditure to £E1,669,781, as compared with £E1,408,287 and £E1,585,418 a year ago. There is, therefore, an improvement of £E654,689, against an increase of only £E84,363 in expenditure; and as a result there is a surplus of revenue at the end of the month of £E393,195, compared with a deficit of £E177,131 on April 31, 1917. Hitherto the first three or four months of the financial year always have shown an excess of expenditure over revenue, owing to the fact that the heaviest collections take place in the autumn and winter, and this is the first time on record that the balance has come out the other way from the start of the financial year.

The heaviest collections were under Direct Taxes (£E359,720), which increased by £E31,788; Customs (£E465,208), which increased by £E248,906, or over 100 per cent.; Mixed Courts (£E110,068); railways (£E475,124), which increased by £E103,368; while Excise and Telephones, being new items, accounted respectively for £E56,780 and £E11,696 of the additional revenue.

Under expenditure the principal items were railways £E194,126, public debt £E562,328 (the interest on the Ottoman 3½ per Cent. Loan of 1894, amounting to £E111,997, not appearing), war gratuities £E46,306, extraordinary war expenditure £E87,094, and irrigation £E54,752. The various items remained fairly constant, the only notable increases being £E19,385 in Central Finance administration, £E32,053 in Frontiers Districts administration, £E25,365 in irrigation and of course in war gratuities and extraordinary war expenditure, which did not appear in the early part of last year, whilst the most noteworthy decrease was £E53,218 in railways.

EGYPTIAN COTTON CROP.

Under date of September 8, *Reuter's* Cairo correspondent reports:—The condition of the cotton crop in Lower Egypt is 99 per cent. and in Upper Egypt 102 per cent. of the normal. Damage from the cotton worm is practically nil, and the pink and common boll worm attack has only been a moderate one. The cotton crop is promising well, and other crops are excellent.

IMPORTATION OF DATES.

The Controller of the Department of Import Restrictions gives notice that, at the request of the Ministry of Food, the general licence for the importation of dates from France, Tunis and Algiers will be revoked as from October 1, and that after that date importations will be allowed only under special licences issued on the recommendation of the Ministry of Food.

EGYPTIAN CROPS.

(From Our Correspondent.)

Cairo, August 12,

The monthly bulletin, issued by the Ministry of Agriculture, for July contains on the whole a satisfactory account of the condition of the crops up to the end of that month. Water supply has been sufficient for all requirements except at the end of the month, when the period of stringency usually occurs, and the main canals are insufficient to carry the volume of water demanded. The non-enforcement of the Sharaki Decree this year has, however, reduced the acuteness of the demand for water. For cotton the prevalence of hot weather has accelerated the growth of the plants, and the cotton worm attack continued to be light; the position in regard to the common and pink bell worm was more satisfactory than last year. There are indications of a good crop everywhere.

As to rice, the hot weather and absence of high winds, on the one hand, and the plentiful supply of water on the other, have contributed to good results. Damage from rice worm in the two principal provinces in the Delta was insignificant, and the outlook was better than at the corresponding period last year. The report on maize was equally satisfactory, the weather having been seasonable. Large areas have been sown.

A good average yield is expected for millet. The area under sugar cane is larger than last year, and weather was favourable, and water supply abundant. Ground nuts are excellently reported upon.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market continues to present a strong appearance. Spinners and manufacturers are in a position to dictate terms of fresh contracts to their customers. Prices have rather tended to harden. It is suggested in some quarters that bullish sentiment with regard to American cotton has recently been overdone, and the large ginning figures have been rather disturbing. Steady progress continues to be made by the Egyptian growth. The weather during August has been generally favourable. Full prices have had to be paid for anything wanted in Egyptian yarns. Demand still exceeds supply. Certain counts and qualities are very scarce indeed. A considerable inquiry has again been met with in piece goods for Egypt. In view of the high prices which prevail, the way in which business continues to be done is rather astonishing. Merchants in Cairo are said to be doing very well. Miscellaneous fabrics have been in encouraging request for India, but increased difficulty has been experienced in arranging terms of fresh contracts. A few more offers have been about for China. The British and French Governments have been in the market for heavy materials. American yarns have been very stiffly held, with a steady demand. Some buying has been reported in dyed yarns for India. The threatened strike of operative spinners has had practically no effect upon the market. It is believed that the dispute will be settled by arbitration. A stoppage of machinery at the moment is quite out of the question.

ENGINEERING NOTES.

Agricultural Machinery in Thessaly.

Thessaly, from the time of her liberation from the Turks in the early eighties, has been attracting attention as an interesting wheat-field; and a number of Governments have sent special commissioners to the province to report on its possibilities as a market for machinery. France, Switzerland, Italy, Sweden, and the United States have acted in this way, and the reports of their agents are of considerable interest. The French Commissioner, for instance, states that the use of machinery for agricultural pursuits is increasing throughout Thessaly, and this he considers is of special interest, inasmuch as 60 per cent. (or about 2,500,000 hectolitres) of the cereals produced in the kingdom of Greece, the old territory, are grown in that district. He considers that this production will be doubled owing to the adoption of new scientific agricultural methods and the bringing under cultivation of large areas which have hitherto remained uncultivated. He regards it as a great opportunity for French manufacturers to obtain a footing in the Greek market, and he believes that when once the French machines are successfully introduced, there is no doubt that they will become popular, and be used as well in other districts of Greece. Among the machinery that he mentions as being in demand are threshing machines, of which 150 have been imported into Thessaly by English firms. They are 4 ft. 6 ins. wide, with engines of 30 to 35 h.p. He calculates that 300 more of such threshing sets are wanted in Thessaly, and 400 in the other districts of Greece, to meet future requirements. The machines in question, he says, are excellent, but he suggests that for the wooden parts of the machines metal should be substituted in view of the climate of Greece.

With reference to harvesting machines, the French Commissioner says that 250 reaping and binding machines were sold in Thessaly by one American firm, and that owing to the easy terms offered there was a demand for 4,000 more.

Electrical Appliances for Greece.

Electrical appliances and apparatus are finding an increased sale in Greece, as, besides the installations that are in existence, many others are projected. Numerous firms have been established in recent years for the sale of the smaller type of installation, and the material came for the most part before the war from Germany. As this source of supply is now closed, some at least of the firms, whose financial standing is of a satisfactory character, would prove good customers for British manufacturers. Large installations in the Department of Telegraphs and Telephones were projected before the war, and particulars of these should be obtained by manufacturers and contractors, as the carrying out of such projects may be decided at any time. France is among the suppliers of Greece for dynamos, motors, transformers, electrical instruments, and electrolytic copper. Switzerland is also a contributor, but more particularly of high-pressure wire and electrolytic copper. Trans-

mission lines were supplied from Belgium, electrical instruments from England, and low-pressure wire from Sweden. The market is worth special attention, as, besides Athens, several provincial towns contemplate the introduction of electric lighting, etc.

Water-Power in Macedonia.

Shortly before the outbreak of the war an American firm submitted proposals to the Balkan Governments for the erection of central electric-power stations near the Macedonian rivers and in other localities. Owing to the political uneasiness at the time little attention was given to the project. Now, however, it appears that the firm is preparing to revive its scheme, and representatives are to be sent to Macedonia to formulate new proposals. This indication of the interest that is likely to attach to the Balkans as an after-war market will not be overlooked.

A Greek National "Cement."

The use of cement for making blocks in Greece and the neighbouring territories is generally found somewhat expensive, for cement is imported in barrels or bags from France or England; but the volcanic island of Santorini, in the Ægean Sea, produces a natural cement called "Portselana," which, mixed in certain proportions with lime and sand is an excellent substitute for the best cement. Portselana has been used for many centuries, and is still being used throughout the Near East in the construction of bridges, harbour works, breakwaters, forts, lighthouses, etc., in the Mediterranean, the Black Sea, and the Adriatic. With it the Venetians constructed the great fort of Monemvasia and Nauplia, the then Gibraltar of the Eastern Mediterranean, the foundations of which are in the sea, intact and immovable up to now after many centuries. The forts of Crete and those of the Dardanelles are also built with Portselana. The improvement of this natural cement, and its utility for various other purposes, besides harbour works, quays, etc., is worth the attention of British enterprise. Small sailing ships are doing a continuous trade with loads of Portselana to all the Mediterranean and Black Sea coast.

THE OTTOMAN PUBLIC DEBT.

A notice recently appeared to the effect that the administration of the Ottoman Public Debt made it known that all the bonds of the series B. C. D. of the Convention Loan will be annulled if they are not presented before September 18, to be exchanged against 4 per Cent. Bonds of the Unified Debt. Exception will be made, however, in the case of bills of which the presentation cannot be effected owing to the state of war, especially owing to the impossibility of sending them by post. Here is the explanation of this Note, according to Paris advices:—Before 1882 the Ottoman Debt was composed of loans of various types, which, in view of their conversion, had been grouped at that date in four series, A, B, C, D, of which the conditions of redemption were different. In 1903 the "Converted" Debt was "unified," and the bonds of the seies B, C, and D were exchanged against bonds of the Unified Debt. The above notice is, therefore, only intended for capitalists who may not have yet made this exchange, if any of them still exist.

EGYPTIAN P.O. BANK.

The *Egyptian Gazette* reports that during the month of June 1,042 new Post Office Savings Bank accounts were opened, making with the 9,307 of the half-year a total of 10,349 new accounts for 1918; 107 accounts were closed during June and 1,505 during the preceding months, making 1,612 for the half-year; the total number of accounts open at the end of June was 211,997. The number of deposits during the month was 9.903, of a value of £E54,195, making with those of the preceding months of the year a total of 81,710, representing £E376,704. The withdrawals during June were 9,499, amounting to £E43,533, representing a surplus of £E10,662 of deposits over withdrawals; the withdrawals for the half-year were 35,985, representing £E258,093, a surplus of £E118,611 over the withdrawals. The cash balance at the end of June to the credit of the depositors was £E815,255.

COMPANY NOTES & REPORTS

Bogawantalawa District Tea.

The profit for the year amounted to £22,388, to which has to be added interest, £1,433; and the balance from last year, £15,379; less excess profits duty, 1916-17, £8,852. Against this there has been charged: Interest on the mortgage debentures, less tax, to March 31, £315; dividends on the preference shares, less tax, to March 31, £4,185; income tax, £5,029; interim dividend of 3 per cent., less tax, on the ordinary shares, season 1917-18, £2,250. The directors recommend a final dividend of 5 per cent., less tax, on the ordinary shares, making 8 per cent. for the year, which will require £3,750; carrying forward, subject to excess profits duty, 1917-18, the balance of £14,819.

Pelmadulla Rubber.

The profit for the year amounted to £51,300, and £6,750 was brought forward, after making the appropriations and adjustments applicable to that year. An interim dividend of 10 per cent. was paid on July 31, 1917, and a further dividend of 10 per cent. on June 26, the total distribution amounting to £17,360, and it is not proposed to pay anything further. After payment of these dividends there remains a balance of £40,691, and the directors propose to write off out of this sum for depreciation £851, to place to reserve for coast advances £1,000, to development reserve £4,000, to taxation reserve £28,000, and to carry forward £6,840.

East Indian Coal.

The report of the East Indian Coal Company for the half-year ended April 30 last states that, after making the usual allowance for the depreciation of buildings, plant and machinery, and writing £4,000 off development account, profit was £10,395; £1,145 was brought forward, giving £11,540. The directors recommend a dividend of 9 per cent. for the half-year, less tax at 3s. 9d. in the £, making 17 per cent. for the year, and carry £740 forward. Output was 385,055 tons, making 698,118 tons for the year. This is the largest output. The three motors for the South Bulliari pits are now at the colliery, and the development can now go forward without interruption. Prospects for the next two half-years are satisfactory. Block account shows total expenditure £421,223, written off £221,661, book value £199,562.

Mundakayam Valley.

The report of the Mundakayam Valley Rubber Company for 1917 states that profits amount to £4,480; £8,848 was brought forward, making £13,328; less final dividend of 15 per cent. for 1916 and depreciation of plant (£1,000), leaving £7,939. Deducting interim dividend of 5 per cent. paid December 20. 1917, placing to reserve for redemption of debentures £1,898 and to income-tax account £513, there remains £4,065 which the directors propose to carry forward. Although present conditions prevent the payment of a further dividend, the future prospects of the company are quite unimpaired. Rubber harvested on Kutikul Estate amounted to 244,323 lbs., against estimate of 293,200 lbs. Yield per acre was 214 lbs., against 207.41, and yield per tree 1.86 lbs., against 1.88. Average net price realised for Kutikul rubber after deduction of freight and all selling charges, was 1s. 9.47d. per lb., against 2s. 5.81d. On Vailamullay Estate 41,422 lbs. rubber was harvested, against 42,700 lbs. estimated and a yield of 31,541 the previous year. Yield per acre was 112.25, against 101 lbs., and yield per tree 1.25 lb. Average net price secured for Vailamullay rubber (including 15,097 lbs. unsold and value estimated), after deduction of freight and all selling charges, was 1s. 7.24d. per lb., against 2s. 5.34d. Average f.o.b. cost per lb. on both estates, including debenture interest, and London expenses, was 1s. 2.17d., against 1s. 1.98d., and "all in" 1s. 5.60d., against 1s. 4.35d.

North Anantapur Gold.

The directors of the North Anantapur Gold Mines, Limited, subject to audit, recommend a preferential dividend (less income tax at 5s. 6d. in the £) on the 25,000 preference shares for the six months to June 30 at the rate of 20 per cent. per annum, and also a dividend for 12 months to June 30 (less income tax at 5s. 3d. in the £), of 6d. per share and bonus (less income tax at 5s. 3d. in the £) of 1s. per share, on both preference and ordinary shares, payable on October 1 to the holders of such shares registered in the books on September 5.

Dividends, Payments, etc.

At a meeting of the Court of Directors of the Chartered Bank of India, Australia, and China, held on September 11, it was decided to declare an interim dividend for the half-year ended June 30 last at the rate of 14 per cent. per annum, free of income-tax, payable on and after September 18.

The directors of the Anglo-Ceylon and General Estates recommend a final dividend of 10 per cent., less income tax, making 15 per cent. for the year.

The ordinary share register of Raphael Tuck and Sons will be closed from September 11 to 24 inclusive.

An interim dividend on the ordinary stock of the Southern Punjab Railway of £5 per cent., and a bonus of 1 per cent.

The report of the Majuli Tea Company for 1917 shows a profit of £23,097; £10,403 was brought in, less excess profits duty 1916, £8,052, and after adjustment of 1916 account total is £33,680. Income-tax absorbs £3,837, reserve to building and machinery £3,000, reserve for coolie recruiting £2,000. Directors recommend a final dividend of 7½ per cent., less tax, making 15 per cent. for the year, and to carry forward £9,247, subject to excess profits duty.

The directors of the Assam Frontier Tea Company, Limited, have declared a dividend of 4 per cent. (8s. per share) on the preferred shares, making 10 per cent. for the year; 9 per cent. (18s. per share), free of income-tax, on the ordinary shares, making 15 per cent. for the year; £1,033 to provident fund; £51,284 forward, subject to excess profits duty.

The profits of the Dooloogram Tea Company for 1917 were £5,537, making, with the balance brought from season 1916, £12,680; adjustment season, 1916, £598; and excess profits duty recoverable for seasons 1914-16. £6,752—a total of £25,568; final dividend of 10 per cent. (less tax), making 12½ per cent. for the year, leaving to be carried forward £10,691.

TANNERIES IN MACEDONIA.

A report from the American Consul-General at Salonika gives the following information regarding tanneries in Macedonia: Before the war the tanneries of Salonika consumed annually about 75,000 hides and skins, of which about 45,000 were cowhides and 15,000 sheepskins. Two firms import most of their tanning extracts from France, to the amount of 300 tons yearly. The other tanneries utilise barks, mostly pine and valona from Greece and walnut from France. There is also a group of tanneries, for the most part small, at the village of Kozani, in the south-western part of Macedonia, and about 60 miles distant from the nearest railway station. The number of tanneries at this busy village is about 25, and they consume between 50,000 and 60,000 skins annually.

A telegram from Constantinople *via* Berlin states that, according to an authoritative report in the *Vakit*, the Turkish War Minister has concluded an agreement with Berlin for a loan of £T32,000,000.

A Calcutta telegram reports that the Indian Government has sanctioned the survey of a railway to Kasta Colliery, a length of 18 miles. (In the Santal Parganas, in the neighbourhood of Hazaribagh.)

According to a German publication, experiments in cotton cultivation in Albania have been successful, and large districts are now planted with cotton. The only difficulty is in the supply of sufficient seed.

The Italian Ministry of Public Works, according to the *Matin*, has approved the scheme for a trans-Balkan railway from Valona to Monastir, where it will join the existing lines to Salonika and Dedeagatch. The new railway will be 260 km. in length. There will be a service of ferry boats from Otranto to Valona, which will take four hours to cross the Channel, and it is estimated that the journey from Valona to Monastir will take five hours.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Avenue, Wednesday.

Our market has been exceedingly quiet this week, and business has been on the smallest possible scale. Telegraphic communication with Egypt has been very dilatory, and this, no doubt, has also contributed to the inactivity. In a general way prices have remained steady, and all the news from Egypt continues to be of a most satisfactory character, so that a reawakening of market interest is to be expected at any moment.

In Government stocks the reaction in Egyptian Unified has been arrested, and fresh buyers have come into the market, with the result that there is a slight improvement of ½ to 92. Egypt 3½ per cent. preference have remained firm, with buyers still about, but no sellers.

In Bank shares the reaction in Agriculturals, which carried them down to 6⅞, has ceased. All the shares offering under 7 have been taken, and the price is firm and unchanged. National Banks have continued a very quiet market, with small transactions round the current level. Land Banks have improved ¼ to 7½, but there are only buyers about.

In Railways there is no change to report in Delta Light Railway preference, where some transactions have been carried through round the current price.

Amongst Land shares, Aboukirs are 6d. lower at 25s. on some small sales. On the other hand, Behéras are ⅛ firmer at 15⅜, and Foreign Trusts have improved 4½d. to 13s. 7½d. Delta Lands are 3d. easier at 16s. 9d., and Sidi Salems 9d. lower at 56s. 3d., at which price some few hundred shares have changed hands. In New Egyptians some fair business has been going on round the current level, whilst Union Foncière, on some insignificant transactions, are 1-32 easier at 3 11-16. United Egyptian Lands keep a firm spot, with buyers about for any shares offering.

In Miscellaneous descriptions, Alexandria Water are ⅛ lower at 12½, and Salt and Sodas, after their recent smart rise, are 1-16 lower at 3 3-16. Some business has been going on in Khedivial Mail ordinary round the current level.

In Greek securities, the only changes to record are a rise of one point in Rentes to 58, and of a similar fraction in the 1914 Loan to 80. Some business has been done in "Currant" bonds round 95. There are still large buyers about of most Greek securities, and a great scarcity of sellers. Bank of Athens shares, after their recent rise, have reacted ⅛ to 4⅞.

The Indian Government is minting sovereigns at Bombay.

The sales of War Bonds in India exceed 33 crores of rupees—say, £25 million at exchange 1s. 6d.

The Simla municipality have decided to open a sugar godown with a view to controlling the price

The directors of the Anglo-Egyptian Bank (Limited) have made a donation of 100 gs. to the Great Northern Central Hospital, Holloway.

The harvests this year in Turkey in Asia, it is announced, show a distinct improvement upon those of 1917. At Eski Shekir, for instance, it is estimated that they are 25 per cent. better. The inadequacy of the transport arrangements, however, remains, and measures are being taken to cope with the difficulty.

NOTES OF THE WEEK.

Last week it was suggested in these columns that the unwonted activity of the Bulgarians along the whole Macedonian front was either prompted by a desire to forestall possible movements on the part of the Allies or was connected with the position in Bulgaria. The event has proved that the first explanation holds good, for on September 15 French and Serbian troops launched an offensive against the enemy positions east of the Cerna bend. After the initial success the breach in the Bulgarian line was widened on the second day to the extent of sixteen miles, and the Allied advance had attained a depth of over four miles. Some four thousand prisoners were taken, in addition to thirty guns.

The scene of this attack is the northerly extension of the ridge of which Kaimakchalan—the height taken two years ago with such *élan* by the Serbians—is the highest point. The occupation of Monastir followed the capture of Kaimakchalan, but the Allies were unable to continue their advance either from the town or along the mountain range. In the interval it may be supposed the deficiencies in their equipment have been made good. It would have been of considerable advantage if the western extension of the Macedonian front could have been carried farther forward in Albania. But the Italian dash, which, with French troops on the right, placed Berat and Fieri in the Allies' hands, had not the necessary staying power, and the Italians, on the appearance of Austrian reinforcements, were compelled to fall back again. The French Commander-in-Chief, however, was evidently strong enough to dispense with further assistance from this wing, and we shall hope to find that he is in a position to imitate Marshal Foch's series of alternating blows, which have been so strikingly successful in France and Flanders.

Before the Franco-Serbian attack was made, we have to infer that on another part of the line the Greeks made a successful feint. This, at least, would seem to be the explanation of a somewhat vague message from Athens dated September 16, which quotes a message from Salonika as reporting that Greek troops, on an unspecified date, effected an advance, in an unspecified locality, of from two to three miles on a front of nineteen miles. The Bulgarian line is differently constituted from the enemy front in the Western theatre. There can be no question of hurrying troops from one sector to another to meet a threatened blow. Each part will have to rely almost entirely on its own capacity for defence, with the help of such reserves as may be allotted to it in the general disposition of the armies. Thanks to the natural strength of their present positions the Bulgarians are favourably situated to repel attack, and the line might be penetrated at more than one point before a general break-through was rendered easy for the Allies. On the other hand, the enemy strength is very largely confined to this front line, and if it should be turned, there is little likelihood of the Bulgarians having many "Hindenburg Lines" or prepared positions to fall back upon. The configuration of the land lends itself to defence, but only provided the *moral* of the defending troops has not suffered.

In spite, therefore, of the galaxy of disappointment that surrounds the Macedonian campaign we may follow the present development with fresh interest; for it is certain that the Bulgarian *moral* has been weakened, and the capture of four thousand prisoners in a day and a half in this particular theatre is significant. But there can be no doubt that the task before the Allied Army is a formidable one. Bulgaria can only be attacked at present from one side. In the second Balkan War the Serbians and Greeks relied upon a simultaneous attack from the west and south. To attain this advantage even to the smallest extent the Allies must first reach Uskub. The past history of the Salonika force does not justify extravagant hopes; but to-day there are certain new features to be taken into consideration. First, we have the Serbians and Greeks with us, fighting in their own element; secondly, they have the enormous advantage of the Allies' resources in the matter of equipment, ordnance, transport, and commissariat; thirdly, they have opposed to them, by all accounts, a war-wearied, disillusioned and ill-provisioned army.

The first party of repatriated British prisoners from Bulgaria has reached Berne. According to the testimony of *The Times* correspondent, "their clothing was in a very bad condition, but as regards that and the food their impression was that the Bulgarians were no better off than themselves, and had shared things pretty justly. . . . Our men were not bullied and tortured, as in Germany, but have had a hard time, because the whole country is suffering hardships." This description, it is to be feared, will be read with mixed feelings by our Serbian Allies, who entertain no hopes of being able to pass the same verdict on the fate of any of their own

Digitized by Google

prisoners in Bulgarian hands. It is more than probable that the Bulgarians will have been prompted to treat British and French prisoners with more consideration than they would their Balkan neighbours. The temptation to settle what, rightly or wrongly, will have been regarded as old scores will have been great. We may hope, however, in the interest of the Peninsula as a whole, that the reports of Bulgarian excesses will prove to have been exaggerated, or, at least, that the latter period of the war will have shown a marked improvement in the conduct of the Bulgarians.

The Greek mission which is now on a visit to England is a commercial one, and is intended to serve a definite and practical purpose. But we may value its presence on wider grounds, inasmuch as everything that tends to promote knowledge of one another among the two peoples must be to the general interest of both countries. In the welcome that he accorded the delegates on behalf of his Majesty's Government, Mr. Balfour rightly insisted upon the fact that Britons have for Greece a friendly feeling at any time and every time. Never was this feeling displayed more markedly than at the moment when, in December, 1916, Allied bluejackets were the victims of a treacherous attack in Athens on the part of a section of the Greek Army. Public opinion in Great Britain refused to associate the Greek people as a whole with the criminality of a few. The reward is reaped to-day in the knowledge that the Greek people are heart and soul with the Allies, and the Greek Army, disciplined and reinvigorated, is fighting shoulder to shoulder with the Allied troops.

While the Greek Mission is forming some idea of the manufacturing energies of Great Britain, it will also be helping to convey to British manufacturers and merchants something of the importance, political and economic, of Greece in the general world-scheme after the war, especially as it affects the British Empire. The course of this struggle has shown that the smallest countries can play a great part. Have not a handful of Czecho-Slovak troops supplied just the momentum for the salvation of Russia that was entirely lacking in all the Allied countries combined? The part that Greece will be called upon to play in the future as a commercial unit will not be a negligible one; her political rôle as a member of a Balkan Federation holding the south-east of Europe in the cause of national freedom and progress will be one of extreme importance. She has, however, to be equipped materially first in order to fill the part, and it is hoped that Great Britain will be a prominent, if not the chief, factor in this process.

If the casual observer finds the present situation in Roumania difficult to understand, he cannot do better than fall back on the explanation given by M. Take Jonescu that Roumania is just as much a country occupied and governed by Germany as is Belgium or Serbia; but with this difference: that in the latter countries the Germans act directly; in Roumania they act through the medium of a Roumanian Government and a Roumanian Parliament. The point was well brought out by the speech of the Prime Minister before the Chamber in the debate on the Message from the Throne. M. Marghiloman showed that he recognised nothing in this war beyond an antagonism between Germany and Russia, with a desire on the part of the latter to obtain possession of Constantinople. For Roumania to take sides with Russia was merely to help the Russians to establish themselves on the Bosphorus, with the certainty that sooner or later they would demand a strip of Roumanian territory as a corridor to their new possession. In the German victory over Russia he seemed to see a manifestation of fundamental right and justice, and he could not bring himself to contemplate the Treaty of Bucharest as anything but a permanent factor in the final adjustment of European affairs. It is obvious that such a person must become more and more a pliant tool in German hands. Hence the characteristically German plan to "down and out" all political opponents by the persecution of M. Bratiano and his Cabinet, and the bitterness shown against General Avarescu, whose devotion to Roumania's interests is above challenge.

The report of Mr. Justice Rowlatt's Committee, appointed to investigate and report on the criminal conspiracies connected with the revolutionary movement in India has been issued in India, but the document has not yet arrived in this country. Summaries of the report appear in the Indian Press, and from these an idea can be formed of the somewhat sensational nature of the disclosures. Until the Report in full is available we prefer to withhold detailed comment; but attention may be drawn to the importance of the Committee's findings to a proper understanding of the issues at stake in all action taken in connection with the Montagu-Chelmsford Report. Indian extremists are making a determined effort to represent their views as the voice of India, and it may be that the revelations of the Rowlatt Report may open the eyes of some of those who are inclined to take them at their own estimation, and are not careful to consider whither their views are leading them.

To-day is "India Day," and an organised effort is being made to raise the sum of £50,000 to provide additional huts and clubs for Indian soldiers and labour battalions on all fronts. The need, it would be thought, has only to be expressed in order to assure the supply. But what is everybody's business is apt to become nobody's business, and so a "Day" is necessary. Readers of THE NEAR EAST will require no prompting in their resolve to make the day a success, as far as in them lies. Here we may say that the indicated sum of £50,000 has not to be regarded as exhausting all the possibilities of helping a body of men for whose loyalty and splendid fighting qualities the Empire has reason to be proud and grateful. Nor need the act of giving be confined to the streets of London. The Committee, it is understood, prefers cheques; is interested in receiving them from the widest possible area, and will not take it ill if they should arrive a few days after September 20.

A *communiqué* issued by the Hejaz Government Agency in Cairo on the progress of the Arab campaign against the Turks carries one back to the closing stages of the Boer War, when it was only possible to group together over a certain period a number of isolated operations. It fits in strangely with the great events in other theatres, but the usefulness and the importance of the work of our Arab Allies are not to be gauged by the number of the enemy killed or the extent of their captures. Arab forces, wherever they are fighting or assisting the British, in the Hejaz, in Palestine, or in Mesopotamia, constitute the insuperable obstacle against which all efforts of the Turkish Committee of Union and Progress to pose of the leaders of Islam have been broken. At the same time, the steady toll that the army of the King of the Hejaz is taking of the Turkish forces in Arabia must be telling on the enemy's powers of resistance in this region. General Allenby's task in Palestine would be lightened if a strong Arab force were free to protect his flank east of the Jordan.

A correspondent in this issue calls attention to a subject to which reference has frequently been made in our columns—the regrettable partisan attitude of so many of our Balkan "experts"—and it will come as no surprise that the point has not been lost on "an earnest student of Balkan questions" who, "in default of personal acquaintance with these countries, has to rely largely on the views and opinions of those who know them well." It is part of the mission that THE NEAR EAST has set itself, to preach the unity of interest of the Balkan Peninsula, and to controvert the doctrine that it is impossible to be the true friend of Greece, Serbia, Bulgaria, or Roumania without disliking the others and encouraging the one country of your affection to hate its neighbours. How necessary this stand is may be seen from week to week in our correspondence columns, this week not excepted.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, August 19.

The Nile Flood.

Never, perhaps, were the forecasts of the Public Works Ministry about the Nile Flood so wide of the actual results as this year. A high Nile was anticipated, and thousands of labourers were employed to strengthen the river embankments, while guards were stationed at danger points. But the high flood anticipated has turned out so far to be a low one, and some authorities apprehend that it may be an unusually low one. The gauge records of the Blue Nile at Roseires for August have not been published yet, but the reading at the end of July was lower than that of the same date last year by over a metre and a half, and one metre lower than that of 1916. Indeed, throughout the whole of July the level was lower than in the previous two years. Unless, therefore, the Blue Nile should rise higher than it usually does this month, a high flood may not be expected this year. What makes it still less likely that the Blue Nile flood will equal that of last year is the fact that the tributary stream Kheshm of Qerba registered no increase last month on the corresponding period of previous years. Moreover, the White Nile levels do not come up to what they did last year. At Mongalla the waters are still falling, whereas at the same period during the last two years they used to be rising steadily, and were about a metre higher than now. On the other hand, the lowest fall at Malakal occurred this year about the middle of May, and since then the river has been steadily rising until it was twelve metres at the end of July, which is about 40 per cent. above its mean gauge. If only the waters at Mongalla were more abundant, we might hope for a plentiful supply from the White Nile during the droughty period, as was the case this current year. So far the country is receiving its requirements of water, except at the tail ends of canals in certain parts, where mechanical power has to be resorted to for irrigating the land.

The Nickel Coin Shortage.

Nickel coins continue to be as scarce as ever, and innumerable are the cases in which shopkeepers have had to lose business owing to a lack of small change. It is, therefore, with real relief that the public now learns that the Ministry of Finance has ordered a large quantity of nickel coins of the value of half a piastre at the Bombay mint, and that the consignment is expected to arrive shortly. It is further learned from an authoritative source that the Treasury intends minting all worn-out silver coins received by it into two-piastre coins. This should further relieve the small change crisis.

Epidemic Fevers in Egypt.

A well-known doctor made the interesting observation that fever attacks in Egypt are at their worst in the spring, then gradually lose their strength towards the beginning of summer, when they again assume serious proportions, subsiding again by August. Actual experience, at least this year, has proved this both in Cairo and Alexandria, where typhus and typhoid spread to an alarming degree, and precisely at the periods stated by the doctor quoted. It is now reported from Alexandria that the number of typhus cases in that city and suburbs has fallen to five per day, and in Cairo cases of typhus are becoming quite rare. This observation seems to apply to other less virulent forms of fever also. At one time, a so-called "Indian fever," with misleading initial symptoms, suggesting typhoid or paratyphoid, spread with furious rapidity in Cairo, then disappeared with the end of summer. At Alexandria a less virulent kind, called "Spanish fever," akin to the influenza variety known as *dengue*, visited almost every house, but is now subsiding. It might be worth the while of the Public Health Department to review the statistics of the last three years to see how far our doctor's observation is correct. The causes of these periodical outbreaks, once traced to a scientific origin, might be better combated by preventive or curative means.

The Price of Necessities.

The Supplies Control Board has caused to be published, in the shape of a supplement to the *Official Journal*, the final list of prices for articles of prime necessity. These are the same as those published on July 16, except that a slight reduction has been effected in the prices of the various classes of rice, and a rather considerable increase in those of sugar. The Sugar Company has never been more prosperous than during these years of war, and, being practically without competitors, has been selling its sugar both in Egypt and abroad at very handsome prices. The standard of living has so risen that practically all classes of the urban population use sugar in varying quantities as an article of every-day necessity, and it can therefore hardly be considered as an article of luxury.

There are still occasional localised sugar troubles. Alexandria, which is breaking the record for impossible prices of all edibles, is bewailing a sugar shortage, while Ismailia is complaining of an actual famine not only of sugar, but also of oil and melted butter. The oil crisis is, indeed, universal, and it is said that the recent order of the Supplies Control Board, calling upon holders of a certain minimum stock to declare same, had the effect of making the soapmakers hurry to convert their supplies of oil into soap, so as to elude the authorities; which led to a further shrinkage of the meagre stocks. It is announced, however, that a liberal supply of new oil may be expected in October. Meantime, the Supplies Control Board is causing distribution of limited quantities among the oil merchants in certain native quarters, and will be extending this to other quarters so as to relieve the poor population.

The recent appointment of Mr. Dykes of the Egyptian State Railways as Assistant to the Mamur Zapt secret service, Cairo Police, on behalf of the Supplies Control Board, is expected to help in combating the evil of illicit trading, and in enforcing the traiff.

ALEXANDRIA'S POPULATION IN 1917.

(From a Correspondent.)

According to the last census, the total population of Alexandria in 1917 was 444,617, including the population of the suburban district of Ramleh, which amounted to 31,436. Of this aggregate, 226,596 are males and 218,021 are females. Divided by creeds, after deducting the overwhelming majority of 322,437 Moslems, the Greek Orthodox head the list with 54,887, followed by 34,099 Catholics, 3,004 Protestants, and 24,858 Jews. Classified by nationality, there are 304,389 Moslem Egyptians and 16,979 non-Moslem Egyptians, 4,759 Jews, 7,592 Greeks, 4,596 Turks, and 14,476 of other nationalities. Of foreign subjects there are 10,658 British, 8,556 French, 17,860 Italian, 11,383 Ottoman, 25.393 Greek, 1,254 Austrian, 2,373 Russian, and less than 2,000 subjects of other Powers.

A correspondent protested against the insertion in the official statistics of the Cairo census of the following items regarding married men, viz:—"7 having more than 4 wives." "For," said the protestant, "according to no known religious law in Egypt may a man marry more than four wives, although, according to Moslem law, he may have as many concubines as he can afford to keep." The error, it appears, arose from the fact of the census officials inserting in their returns the number of concubines in the column of wives. The distinction has more of a judicial than of a moral significance.

BRITISH ADMINISTRATION IN PALESTINE

We are indebted to "A Regular Reader" for permission to reproduce the following extracts from a letter written by a native of Jerusalem and recently received:—

"We are now under a Government whose sole aim is to provide for the population and mitigate their hard lot.

"Never was the state of public health better. Since the time of the Romans, never have there been so many roads in every direction through the country, and at no time in history have they been kept in such repair.

"As to rapid communications, more is accomplished on these lines nowadays than the changes produced formerly in a century."

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, August 11.

Wanted a Chaplain.

St. Paul's Church was last Sunday filled to overflowing with a congregation practically all British, for the Intercession Service. The Rev. C. Pilley, C.F., who officiated on Christmas Day and at Easter, again came down from Salonika to conduct this service, which was very impressive. The British Minister and the Countess Granville were present, as were all the members of the Legation Staff, and many naval and military officers stationed here, and officers and men from the warships in port.

Commenting in a local paper on the proposed union of the Orthodox and Anglican Churches, the Archimandrite Serge, the Russian Chaplain, expresses his regret that the Anglican Church is not represented here by one of its clergy. This regret is widely shared by the British colony, as the church has now been over eighteen months without a chaplain. The Sunday morning services have been kept up by several gentlemen of the colony; but except at Christmas and Easter, the community has been without a clergyman since Mr. Gardner left in December, 1916. Burial services have to be conducted by the Consul or anybody else; christenings have to await the fortuitous arrival of a parson; and the sick and dying in hospital are without any spiritual comfort or ministrations. Owing to the small stipend, it has apparently been impossible to find anyone to replace Mr. Gardner, but the colony now provides a large congregation, composed of permanent residents and numerous military and naval men stationed here or passing through Athens. Although it may be difficult at the present time to secure a permanent chaplain, it is only reasonable to suppose that it would not be difficult to spare a naval or military man to take up the chaplaincy until the end of the war, in view of the necessity for such an appointment.

The British Club.

The British Club, the inauguration of which was announced a short time ago, has proved a great success thus far. It is well patronised by naval and military men on leave or passing through Athens, as well as by residents here. It really has "supplied a long felt want," and it affords a place of meeting, and for obtaining information and news which did not exist before.

Anglo-Greek Agreements.

An agreement has just been concluded between His Majesty's Government and the Greek Government providing for reciprocal military service, the effect of which is that all British subjects in Greece between the ages of eighteen and fifty-one must either leave Greece for service in the British Army within sixty days or become liable to serve in the Greek Army.

Another agreement has been arrived at between the two Governments affecting the commerce of both countries. For nearly a year it has been practically impossible to obtain any goods from England owing to the want of tonnage. This has militated against British trade; and traders here, having had to find other markets, went to Spain. Spanish steamers were found willing to come to Greece, and a regular trade has resulted; and during the past six months Greece has drawn large supplies of various commodities from that country. By the agreement just concluded, England will provide tonnage to an eastern port to the extent of about 3,000 tons monthly, and the Greek Government will provide steamers to bring the goods from that port to Greece. This arrangement should enable merchants to reopen their connections with England and to provide Greece with many articles which are unobtainable elsewhere.

The Cost of Living.

The arrivals from Spain have contributed largely to the improvement of the economic situation here, and shopkeepers have been able to replenish their stocks, which were so depleted a year ago. Living in Athens is very expensive, but, with the exception of meat, practically all the necessaries of life can be obtained. The favourable crops and the supplies of grain rationed to Greece by the Allies provide a sufficiency of good bread. Meat is very scarce and is only obtainable by the public on Tuesdays and Saturdays. Fuel is also expensive, wood and charcoal being the only two combustibles available, and at great cost; though it is announced that the Government hope to produce gas in a short time. This would largely alleviate the fuel difficulty and the troubles of housekeepers, who are often dependent on alcohol for cooking and lighting purposes. Punctually at midnight the electric current is turned off, and all places of amusement have to close before that time; and often in the process of retiring for the night one suddenly finds oneself in darkness.

In all other respects Athens leads almost a normal life. There seems to be plenty of money in the place, and speculation on the Stock Exchange is extensively carried on.

The Aerial Mail.

Postal communication has been established by aeroplane between Salonika and Athens. At present the aerial mail is limited to official correspondence. It is proposed to establish similar communications with other towns in Greece.

THE CATHOLICOS-PATRIARCH OF GEORGIA: KYRION II.

(From a Correspondent.)

On September 10 his Holiness, Kyrion II., was murdered during the night by agents of Russian Bolsheviks and the "Black Hundred" reactionary organisation, in a monastery near Tiflis. The murderers have been arrested.

In 1811 the head of the Georgian Church, Catholicos-Patriarch, Antonius II., was invited to Petrograd and was not allowed to return to his country. The independence of the Georgian Church was abolished by the Russian Government, contrary to the treaty of 1783 between the Russian Empire and the Kingdom of Georgia, and contrary to the universal Church Councils' decision, according to which the Georgian Church had been independent since 542. The Russian Holy Synod appointed a Russian Archbishop as Exarchos of Georgia and, in this way, the Georgian Church was administered until 1917, when, on September 17, the Georgian National Congress, in Tiflis, composed of 620 delegates from all parts of Georgia, elected Archbishop Kyrion II. as Catholicos-Patriarch of Georgia. On October 19 his consecration took place at the ancient Cathedral of Msketha, near Tiflis, where about a hundred thousand Georgians of all classes assembled; there were also military and Consular representatives of Great Britain, France, Italy, America, and Belgium.

His Holiness Kyrion II. was born November 10, 1855. After completing his education at the Ecclesiastical College in Tiflis, he studied at the Theological Academy in Kieff in 1880, and was appointed Inspector of the Ecclesiastical Seminary in Odessa. In 1883 he returned to Georgia and acted as director of various Georgian ecclesiastic schools. After the death of his wife, he became a monk, and was appointed Prior of the Georgian monastery in Kvathakhevi. In 1898 he was consecrated as Bishop of the Georgian Bishopric in Alaverdi. His Holiness devoted all his time to historical studies concerning the Georgian Church, and was one of the foremost defenders of the rights of that Church. In 1901 the Russian Holy Synod inaugurated a crusade against him. He was sent to the town of Kamanets-Podolsk (Ukraine). In 1903 he was removed to the town of Kherson; in 1904 to Oriol (Central Russia). In 1906 he returned to the bishopric in Soukhoum (Georgia), but in 1907 he was removed again to Russia, to Kovno. In 1908 the Holy Synod entirely deprived him of the bishopric, and sent him to a monastery near the town of Kharkoff, where he stayed ten months, and was removed to the Sanaxar Monastery, in Tamboff. He became very ill as a result of the brutal treatment meted out to him, and, in a semi-prostrate condition, lived in the monastery up to the revolution of this year, when he was able to return to his country. In 1909 the Belgian Society for the Defence of Human Rights petitioned the President of the Russian Duma, M. Chomiakoff, and asked him to defend Bishop Kyrion, but the Holy Synod would not agree. At the same time, the greatest enemy of Georgia, Priest Vostorgoff, a great friend of Rasputin, openly declared that his intention was to destroy Kyrion and to plunge Georgia in blood.

During long years of cruel persecution his Holiness never abandoned his studies, and he published many important volumes concerning the Georgian Church.

UNIVERSITY OF LONDON.

KING'S COLLEGE and KING'S COLLEGE FOR WOMEN.

COMPLETE COURSES OF STUDY are arranged for Degrees in ARTS, LAWS, SCIENCE, PRELIMINARY and INTERMEDIATE MEDICAL STUDIES, PUBLIC HEALTH, and BACTERIOLOGY, ENGINEERING.

Women Students are now admitted to the full courses for the Preliminary and Intermediate Medical Studies.

Facilities for Research. Arrangements made for attending special or isolated courses.

EVENING CLASSES as well as Day in most Faculties.

STUDENTS' HOSTELS: The Platanes, Denmark Hill, and Vincent Square, Westminster.

KING'S COLLEGE FOR WOMEN now transferred to Strand, with full privileges.

Apply to Secretary, King's College, Strand, W.C.2.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

ROUMANIAN NOTES.

(From a Correspondent.)

The German Administration.

The head of the German Administration in Roumania, Field-Marshal von Mackensen, at first tried to make himself popular—if not by acts, at least by words. In cases of too flagrant injustice, when things were brought to his knowledge—a difficult matter—he generally tried to smooth troubles over, and always put the blame on the orders received from Berlin, saying that he did not approve such orders, but "unfortunately" was compelled to execute them.

The country was divided into two zones. One of these was immediately behind the fighting line, where the orders of the commander of the Ninth Army were executed; the rest of the country was organized into a military government under General Tülf von Tscheppe. The latter had under him two staffs: the administrative and the economic. The first was composed of members of the German aristocracy, not over-intelligent but not too hostile to the Roumanians. At first the Germans tried not to be too hard, and they were specially lenient towards the peasants. They wanted to create a movement in their favour, as well as to create an anti-dynastic feeling. Their complete failure in this direction and the gains they secured by the brutal Treaty of Bucharest made them change their attitude completely, and they have since devoted all their energy to reducing the entire population to a veritable serfdom. The results are that even the most obstinate pro-Germans among the rich Roumanians now hate the Germans.

Besides their stupid measures, the Germans are responsible for the destruction of the Roumanian population in the most criminal way. They took no sanitary measures to prevent the spread of diseases. In the winter of 1917 the German troops in Roumania suffered from spotted typhus and typhoid fever, and these terrible diseases were spread among the Roumanian population, where they are still working havoc. The German Administration took measures concerning the German Army, but left the civil population to die. All the hospitals in the country were taken by the military authorities. The situation was so terrible that in April, 1918, the Germans admitted officially that there were 2,000 fresh cases of spotted typhus weekly in Wallachia, and asked for Roumanian doctors to be sent to the occupied territory. They have taken a large part of the equipment of the hospitals, part to be sent into Bulgaria and Turkey and part into Galicia. The equipment of laboratories was also sent away from the country. Now the conquerors are trying to impose some very inferior German doctors upon the Roumanian universities as professors. Their general mismanagement and their taste for bribes as a general rule have forced even M. P. Carp to declare that "he does not recognise his Germans any more."

The Demoralisation of the Country.

The Germans appointed as adminstrative officials a legion of titled persons and generally rich men. But these officials exploited the Roumanians in every possible way, and bribery is quite the order of the day. In some cases the conduct of these gentry has become such a public scandal that the High Command has been forced to take severe measures. In one case they were compelled to send back to Germany the *Landwirth* of Elfer, a multi-millionaire baron, who tried to extort a bribe of 30,000 francs from a woman. When such cases became public, the German Command says that the Roumanians are to blame because they have corrupted the German supermen!

One more example. A German doctor, a professor at the University of Berlin, was lodged in the house of Professor Slatineanu, with whom he was personally acquainted. He stole a choice collection of Chinese and Dresden pottery, and when caught said that he required the specimens to send butter home in. *Kultur!*

NEW PALESTINE STAMPS.

Our Cairo Correspondent writes (August 19):—"Philatelists will be interested to learn that the International Postal Convention of Berne has sanctioned the use of the new Palestine stamps for correspondence with all parts of the world. Heretofore the use of these new stamps was confined to correspondence in the occupied territory of Palestine, and between that region and Egypt. These stamps were made at the Survey Department, and are of five kinds—viz., one millième stamp, dark brown; two millième, greenish blue; four millième, crimson; twenty millième, olive coloured; and a fifty-millième stamp, which is purple-coloured."

The Natural Products of your Country

may be of considerable interest to us as we are purchasers of consignments of Produce from all parts of the world.

Coconut Oil, Palm Oil, Oil Seeds, Oil Nuts, Kernels, Copra, Maize, Ivory, Gums, Grain, Fibres, Rubber, Cotton. These interest us particularly.

Will you let us know what Products of your Country you can offer us?

We are prepared to finance consignments when necessary.

Mann & Cook,

7, St. Michael's Alley, Cornhill,
LONDON, ENGLAND.

Telephone: 7125 Avenue (5 Lines).

Cables: Oilliness, London. Codes: A.B.C. Fifth Edition, Lieber's, Western Union, Bentley's, Marconi's.

And at GLASGOW, LIVERPOOL, GENOA, NEW YORK.

CORRESPONDENCE.

SERBIA AND MONTENEGRO.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—My friend Mr. Janitsch, who writes in your last issue, protests an innocence with regard to the intrigues of a certain section of Serbians against their sister country Montenegro, that is nothing less than an amazement to me! It does not suit the common policy that the fullest details of this conspiracy should be made public at this moment in all its remarkable details, but it is sufficient to say that whilst Mr. Janitsch, like myself, believes strongly in the natural fraternity that should exist between the sister nations of Montenegro and Serbia, yet there is and has been a certain section of Serbians who have taken advantage of the miserable conditions of Montenegro to prosecute their own nefarious designs for the absorption of that country, *without the slightest reference to the wishes of its King, Government, or people.* The amount of actual money that has been used for this purpose constitutes nothing less than a grave scandal.

I would point out to Mr. Janitsch, however, that he does me a grave wrong by his suggestion that either I—or, for the matter of that, any Montenegrin—oppose the unity of the Southern Slavs. It is, on the contrary, the dream we hope to see realised, and one that every earnest English student of Balkan questions must see is the great solution of more than half of all the Balkan troubles; and, further, it is a project to which King Nicolas always has been and is to-day devoted, heart and soul.

But a Jugoslav Federation does not satisfy a certain section of the Serbian intriguers. They now talk of a Jugoslav (Serbian) kingdom!—in plain English, the extinction of Montenegro and its dynasty—and a huge Serbia that it is proposed should extend from Dalmatia to Salonika, and practically dominate all the Balkans. This is a very different proposition from a Jugoslav Federation.

I would point out furthermore that Montenegro has been nobly silent under the continued and unscrupulous attacks of a certain clique. They have been perfectly aware, for example, of the scandals that even the pro-Serbian journal, the *New Europe*, has recently disclosed. They never for one moment have attempted to make political capital out of this. On the other hand, what do we find? Unsupported assertions and unproved charges of the most scandalous character, questioning the *bona-fides* and loyalty of King Nicolas and his people; and whereas the rancour of political controversy has almost been shamed into silence in our own country, these people have attempted to utilise the upheavals of the Great War by the spread of what can only be described as malicious falsehoods.

No true friend of the Balkans can do any better service than to work heart and soul for Jugoslav federation and unity, and Montenegro and its King are absolutely pledged to this.

I am an Englishman. Mr. Janitsch is a Serb. It is not for any Englishman to attempt to interfere with the domestic internal concerns of a foreign nation; but it is for all Englishmen to whom methods such as I have described are repugnant to see that the little defenceless country, in the hands of a merciless enemy, has fair play and free expression.

As for King Nicolas, the splendid promptitude of his decisive rejection of the proffered bribes of Austria, his heroic action and practical efforts in support of Serbia, and the consequent ruin of his country, nobly maintain the lofty traditions of his gallant nation, and deserve the sympathy and admiration of the whole of the civilised world.

I am, etc.,

ALEX. DEVINE.

Northwood Park, Winchester.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I, after many years' intimate association with Montenegro, confirm Mr. Janitsch's statement that the idea of the Montenegrins has always been union with the other South Slav nations and the creation of a South Slav Empire? King Nikolas's hymn, "Onward, onward, let me see Prisren," was sung throughout the land; and hundreds of times have I been assured that the creation of an Empire with Prisren as capital was the King's ambition. I shall not forget easily the enthusiasm with which a Montenegrin announced to me the assassination of King Alexander, and added in the same breath: "Now our Mirko will be King of Serbia!" The excitement in Cettinje was intense, and all appeared to believe that the first step towards the creation of Great Serbia had been accomplished. Their hopes were, however, disappointed. A second time I witnessed similar enthusiasm when in 1912 the Montenegrin army started Prisren-wards and General Yanko Vukotitch's wife begged me to follow after, in order to photograph the General's triumphant entry into Prisren, which was believed to be sure to ensue shortly. And a second time was there disappointment. That the people as a whole wish union I think is not to be doubted. The whole difficulty is a dynastic one. I once heard the subject discussed at the dinner table at the inn at Podgoritza when it was suggested by a schoolmaster that the only solution of the problem was the elimination of both dynasties; that it was not right that the development of the South Slavs as a nation should be perpetually hampered by the rival ambitions of a few families; Serbia herself had been ruined for years by the Obrenovitch-Karageorgevitch quarrel, and such a thing should not be allowed to occur a second time.

I am, etc.,

M. EDITH DURHAM.

FOR THE SETTLEMENT OF THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It appears to me that the settlement of the Balkans depends almost entirely on the objects for which the Allies are waging this war.

If we really mean that our main and unchangeable determination is to substitute justice and right for force in the New Europe, to recognise the right of free existence of small nationalities, as well as large, to adjust territorial boundaries on racial lines, according to the will of the inhabitants, instead of on the old lines of the balance of military power, then we have much to guide us in imposing a fair settlement on the Balkans. As regards Bulgaria and Serbia, we have the secret Treaty of 1912, willingly entered into by both parties with the consent of Russia. As regards Bulgaria and Roumania, we have the boundaries that existed from 1878 up to 1913, during which period the relations between these two States were most cordial and friendly. No man can fairly adjust boundaries on racial lines, with due regard to the wishes of the inhabitants, if the question of Allies or enemies is to be taken into consideration. If a nation has erred there are other ways of forcing her to make reparation than by placing a portion of her population under a foreign yoke.—I am, etc.,

O'MAHONY.

Grange Con, Co. Wicklow, September 16, 1918.

"ARE THE ROUMANIANS ROMANS?"

Our attention has been called to a printer's error which occurred in our issue of September 6, in the letter from Mr. J. D. Bourchier. In the second line of that letter the word "Roman" ("Roman peoples") should have been "Ruman." Probably most readers detected the error at once, but to those who failed to do so it must have been entirely misleading, and we much regret its occurrence.

MESOPOTAMIA.

Better quit and cut your losses, leave your men and guns and horses,
Croaked the Pacifistic Preacherhood of lies.
But the men in spine-pad armour (what a setting for a drama!)
Went on chewing bully beef and swatting flies.
Oh, its Sun, Sun, Sun,
Though the Turk is on the run,
There's the devil's furnace roaring in between.
Men who've left the ice of Flanders
Are no ruddy Salamanders—
Are you—Smith and Brown and Robinson and Green?

Gad! the 'squitoes and the sandflies—you can see the way the land lies
As soon as e'er you cross the bar at Fao.
It's the devil's psalm they sing us. *Strafe* the way they're born to sting us.
God alone knows why or when they're born or how.
Oh, it's Flies, Flies, Flies,
When the sun begins to rise.
You may sympathise with Egypt the accursed,
But it's idle to compare, O,
The breed that tickled Pharaoh
With the Nasiriyeh artist at his worst.

When your P-boat's anchored, waiting off the fringe you've started hating
The interminable river-fringe of palms,
You'll be lucky if you've shelter when the sun begins to swelter.
And the prickly heat has got you in the arms.
Oh, its Sand, Sand, Sand,
Sand and Thirst go hand-in-hand,
It's "A little drop of limejuice, if you please."
From the base to Azizieh
Not a drop of British beer,
Only bally imitation Japanese.

Oh, the place is full of stenches, of Yehoodis on the benches,
As your bellum goes a-gliding up the creek.
And in all this wretched story not a pennyworth of glory,
But a paltry extra bob or two a week.
Oh, its Hell, Hell, Hell;
'Twas the devil rang the bell
When the curtain rose upon the grisly scene.
But the men have got their ticket,
And they'll stick it, stick it, stick it—
Won't you—Smith and Brown and Robinson and Green?

A. W. B.

NEAR EAST BOOKSHELF.

A PACIFIST IN THE MIDDLE EAST.*

In November, 1914, Mr. M. Philips Price arrived at Petrograd as special correspondent of the *Manchester Guardian*. For reasons which readers of his recent book will clearly comprehend, he shook the dust of imperial Russia from his feet and hurried to the Caucasus. There he spent the latter half of 1915 and the whole of the succeeding year, making excursions from time to time into Armenia and North-Western Persia. He has now republished the dispatches sent to his newspaper under the rather misleading title "War and Revolution in Asiatic Russia," which was not included in his peregrinations. A Kinglake is born once in a century; and we must not expect the brilliance and charm of "Eothen" in a Pressman's diary. Mr. Price is destitute of the precious gift of humour; and his description of the little-known countries through which he passed is the merest journalese. Dr. Johnson opined that one can learn something from any book; and Mr. Price casts new sidelights on the tangled politics of the Middle East. Thus we learn that our Dardanelles expedition had far-reaching effects on the Eastern front. By holding up large Turkish forces, it enabled Russia to win victories in Armenia, kept the Caucasus at heel, and countered the intrigues of German agents in Persia. We hear, again, that a powerful movement to supersede Nicolas II. by the Grand Duke Nicolas Nicolaievich was defeated by the machinations of the Tsaritsa. What horrors would Russia have been spared if the helm had been grasped two years ago by his able and experienced hands!

But the chief interest of Mr. Price's lucubrations lies in his "Political" section, which proves him to have been an active propagandist of subversive ideas. At p. 203 he writes:—

> On June 26 I set out to return to Kars in a transport wagon of Russian soldiers. On the way I talked with them about the war. They were very anxious to know when it would end, and I told them, of course, that it was very uncertain what would happen. There was certainly none of that keenness to be giving their lives for Holy Russia which sentimental travellers and correspondents from England have been trying to persuade their readers is felt by the Russian soldier. There was none of that mystic patriotism which one sees in the German and French soldier, or of the jolly sporting spirit of the British Tommy.
>
> Such was the effect on untutored minds of Mr. Price's consistent pessimism! Two days later he was allowed to visit some Baptist sectarians imprisoned at Kars for refusing military service on conscientious grounds.
>
> One of them came forward. He was a pale, fair youth, dressed in the grey prison dress. In his eyes was an indescribable look of mental suffering and resignation. All around him were criminals of the worst type. Many of them had been sent there for murder, and he had been sent there precisely because he refused to murder. A curious commentary on our so-called civilisation! I asked him how he felt. He replied, "All right, thank you. I am at rest in my spirit, and that is the chief thing." I told him who I was, and he asked at once what they did with those who renounced military service in England. "They treat them better than they do here, I expect," he added. I then told him of the conscientious objectors who had been sent to France and condemned to death, and a look of surprise and pain came over his face. "I thought that England was a free country," he said. "So did I," I answered, "once upon a time."

As a conscientious objector with strong leanings towards International Socialism, Mr. Price hailed the outbreak of revolution in Petrograd with delirious joy. The repercussion on Russia's Asiatic provinces plunged them in anarchy, but, after all, "it assumed the character of a movement for the liquidation of the war by appealing to the international solidarity of the workers" (p. 284). When the Bolshevik leaven infected the Caucasus and Transcaspia, it superseded civil government by that of mixed committees ignorant of the A B C of administration. Nevertheless, "it was a remarkable example of how mankind, when left alone to themselves with none in authority over them, do not break out into anarchy, and commit unsocial acts" (p. 298). So Mr. Price follows the will-o'-the wisp lit up by J. J. Rousseau's astounding dictum: "Man is born good, but civilisation has corrupted him"—a falsehood which has inspired the doctrines of *laissez-faire* of Marxian socialism and "philosophic" anarchism. It is only fair to add that this curious passage was written during the earliest stage of the revolution which has plunged Russia into chaos. Have recent phases in that catastrophe administered a cold douche to Mr. Price's optimism, or does he still look upon the Bolshevik regime as "a star that has risen in the East" which will lead the benighted peoples of Europe, India and Persia "along the path of regeneration to a new life" (p. 296)?

VERSES FROM THE FRONT.*

Unlike the author's "Half-hours at Helles," these poems have no association with the East, Near or Far; but they make a delightful little volume, and we are indebted to them for many smiles. Several of them are old friends from *Punch*, but they bear re-reading; and we look forward to dipping into the book a good many times in the future. It is hard to say which is best among so many good things, but the one that clings most persistently in our memory is "A Lost Leader." We quote the last two verses:—

> The soldiers sing about their beer,
> The wretched road goes on and on;
> There ought to be a turning here,
> But if there was the thing has gone;
> Like some depressed automaton
> I ask at each *estaminet;*
> They say "*Tout droit,*" and I say "*Bon,*"
> *But I believe I've lost the way.*
>
> I dare not tell the trustful men;
> They think me wonderful and wise;
> But where will be the legend when
> They get a shock of such a size?
> And what about our brave Allies?
> They wanted us to fight to-day;
> We were to be a big surprise—
> *And I believe I've lost the way.*

ILL-TREATMENT OF SERBIAN PRISONERS.

The Serbian Press Bureau has forwarded the following statement for publication:—

The news of the deportations of the Serbian population to Asia Minor from the Morava and Macedonian districts reached us in 1917, after the insurrection of the Serbian population in these districts, when several thousands of people were massacred by the Bulgars.

The first public confession relating to these deportations was made in the Vienna Parliament on June 28, 1917, by Dr. Otokar Ribar, who said: "The unhappy Serbian nation is banished: from some districts the very children, women, and old men have been driven off into slavery, as in the olden times the Romans and Greeks used to carry off the population of the lands they conquered. From the neighbourhood of Nish alone the Bulgars have deported 30,000 of our people to the deserts of Asia Minor."

According to the latest information, the condition of these unhappy people is intolerable. The Bulgarians refuse to furnish any account relating to the number or the treatment of the Serbian war prisoners and the civil population interned by them. The number of Serbian war prisoners, irrespective of the interned civilian population, amounts to 140,000 in Germany, Austria-Hungary, and Bulgaria. Moreover, the number of those who died from starvation, epidemics, and cold surpasses one-third of the total number of prisoners.

The Serbian paper *La Serbie*, edited in Geneva by Dr. Lazare Markovitch, Professor at the University of Belgrade, publishes the following appeal on behalf of the Serbian war prisoners:—

"One of the most odious acts undertaken by our enemies to annihilate the vital Serbian forces is the handing over of the Serbian war prisoners to the Turks to be employed as labourers in Asia Minor. Our enemies have revived, in the midst of the twentieth century, the ancient law of slavery, treating human beings as mere objects of trade. There is no doubt that these facts, as published in the Amsterdam paper *Telegraaf* by Dr. Reiss, Professor at the University of Lausanne, were appallingly true, but to-day the Serbian Government is in possession of real proofs that not only Bulgaria, but also Austria-Hungary and Germany, have adopted the abominable practice of selling the Serbian war prisoners to the Turks."

Prince Demidoff has informed the Greek Foreign Minister that the four anti-Bolshevist Governments existing in Russia have been incorporated into one at Omsk, Siberia. He added that the new Russian Government, representing the Russian people's genuine will, had accredited him anew to Athens.

The White Nile Province steamer Sultan was caught in a violent haboob on its way to Kawa on August 15. The roof of the steamer was torn away by the force of the wind, and the steamer capsized and sank. Mr. J. E. Baskett, foreman of works, Public Works Department, Sudan Government, who was a passenger, was drowned, as were his servant and three of the crew.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. September	1918. September		1336. Julheggia.	5679. Tishri.
20	7	Friday	14	14
21	8	Saturday.....	15	15
22	9	Sunday	16	16
23	10	Monday	17	17
24	11	Tuesday	18	18
25	12	Wednesday	19	19
26	13	Thursday	20	20

Prince Cantacuzene has arrived at Bath from London.

H.E. the Hellenic Minister visited the Foreign Office on Monday.

M. Pavlé Karovitch, Secretary to the Serbian Legation, arrived in London from Paris on Sunday.

M. Pashitch, the Serbian Prime Minister, arrived in Paris on Sunday on a week's visit.

Sir H. Manning, the new Governor of Ceylon, arrived at Colombo on September 11.

Mr. and Mrs. John Ross, who have been staying at Harrogate, hope to return to Egypt very shortly.

After an absence of nearly a month, M. Venizelos has returned to Athens from the Macedonian front.

M. Stephen Miclesco, of the Roumanian Government Commission, has arrived in London from Paris.

Mr. Louis C. Crampton, a member of the United States House of Representatives, who has been on a special mission to study the situation in the Balkans, has returned from the Macedonian front.

The King of Italy has bestowed the Order of the Crown of Italy upon Heddaya Bey, Governor of the Suez Canal, with the grade of Commander in the Order.

A marriage is arranged, and will shortly take place, between Mr. Thomas Farr, Chittlehamholt Manor, North Devon, and of North Cove, Ceylon, and Alice Marjorie, daughter of Albert Butter, Duntanlich, Perth.

On Wednesday, at Buckingham Palace, the King invested Brigadier-General d'Arcy Brownlow and Lieutenant-Colonel Robert Hamilton, I.A., with the Order of the Indian Empire. the former as a Commander, the latter as a Companion.

The marriage of Major J. S. Oldham, Indian Cavalry, and Irene Beaumont Thomas, of 23, Parkside, Knightsbridge, S.W., will take place on Saturday, October 5, at 2.15, at St. Margaret's, Westminster. There will be no reception, but all friends will be very welcome at the church.

On Sunday the Greek Minister and Mme. Gennadius entertained at luncheon at the Legation M. A. Michalacopoulos, MM. L. Embiricos (Deputy), A. Skintzopoulos, L. Economides, A. Tsitsis, B. Zamanos, G. Damalas, E. Karasopoulos, C. Malicopoulos, M. Kazazis, members of the Greek Commercial Delegation, the British officials attached to the Delegation, Greek deputies in London, and members of the Greek Legation.

The King has granted unrestricted permission to the following officers to wear the decorations, as stated before their names, conferred on them by the King of the Hellenes:—Order of the Redeemer.—Commander: Maj. (temp. Lieut.-Colonel) R. Gordon, D.S.O., R.M.L.I. (now temp. colonel R.A.F.). (The appointment as Officer of this Order gazetted on June 26 has been cancelled); Officer: Capt. C. N. Tindal-Carill-Worsley, R.N.; Staff-Surgeon J. C. Bringan, R.N.

At the Greek Church in Moscow Road a special service was held on Sunday morning in celebration of the name day of the King of the Hellenes. The Great Archimandrite, the Very Rev. Dr. Pagonis, officiated, being assisted by the Archimandrite, the Rev. Agathangelos Moschovakis. Among those present were the Greek Minister, the personnel of the Legation, the Greek Commercial Delegates, the Greek Navy and Army Missions, and many members of the Greek colony.

The King and Crown Prince of Saxony arrived at Sofia on Saturday.

General Jekoff, the Bulgarian Commander-in-Chief, after undergoing an operation in Vienna for ear trouble, intends to spend a long leave in Switzerland.

In a message to General Paraskevopulos, commanding the Greek forces in the Struma sector of the Balkans, the British Commander warmly congratulates them on their successful advance.

Brigadier-General Robert Alexander Gilchrist, late Indian Army, of Bowood, Folkestone, who saw service in the Abyssinian Expedition in 1868, and died in July, aged seventy-two, left estate valued at £1,982 gross, with net personalty £1,912.

The King has been pleased to award the Edward Medal in silver to Mr. Cecil Herbert Whiffen and Sirdar Bideshi Kol, also the Edward Medal to the miners, Rupai Kol and Suku Kol, and to the timber carpenters, Jadu Kol and Bhudu Kol, for their gallantry in rescuing on March 3, 1917, two men imprisoned through an accident in the Gorangdih Colliery in India, belonging to the Burrakar Coal Company.

The Rev. Dr. Moses Gaster has resigned the position of Chief Rabbi of the Sephardic Jews. For over thirty years he has taken an active part in literary work, as well as in Jewish communal life. When he was exiled from Roumania in 1885, for agitating on behalf of persecuted Jews, he came to England. In 1886, and again in 1891, he was appointed Ilchester Lecturer at Oxford on Slavonic and Byzantine Literature, and in 1887, although not a member of that community, he was appointed Chief Rabbi of the Sephardic Jews.

APPOINTMENTS, PROMOTIONS, ETC.

Kaimakam C. S. Northcote Bey, Governor of Mongalla Province, has been granted the temporary rank of Miralai.

Bimbashi H. G. Ruddock, transferred to the Sudan Government, has been appointed Second Inspector, Mongalla Province.

Bimbashi H. E. V. Huggett, transferred to the Sudan Government, has been appointed Second Inspector, Nuba Mountain Province.

Mr. A. D. Home, Second Inspector, Kassala Province, has been appointed Assistant Director of Intelligence, Intelligence Department, Sudan Government.

El Bimbashi E. T. N. Grove has been appointed Second Inspector, Mongalla Province, and a Magistrate of the First Class under the Code of Criminal Procedure.

The King has been pleased to approve the appointment of Mr. George C. Rankin, barrister-at-law, to be a Puisne Judge of the High Court of Judicature, Calcutta.

Mr. Edward Millard Pratt, Indian Civil Service, has been appointed a Puisne Judge to the High Court of Judicature, Bombay, in succession to Sir F. C. O. Beaman, who will retire in November.

The King has been graciously pleased to approve of the appointment of General Sir Charles Carmichael Monro, G.C.M.G., K.C.B., Commander-in-Chief, East Indies, as Aide-de-Camp-General to the King.

The London *Gazette* announces that Brevet Lieutenant-Colonel R. B. Worgan, D.S.O., Indian Cavalry, relinquishes the temporary rank of brigadier-general on ceasing to command a brigade. Dated September 3, 1918.

The Acting Governor-General of the Sudan has appointed Mr. George Wilfred Bennett to be Acting Custodian of Enemy Property under the Trading with the Enemy Ordinances, 1916 and 1917, temporarily, during the absence of Mr. H. P. Hewins on leave.

The *Sudan Times* of August 17 announces:—Mr. N. G. Davidson, Advocate-General, has been appointed as Acting Judge of the High Court during the summer vacation of the Court. Mr. F. P. Osborne, Province Judge, has been appointed Judge of the High Court.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Claridge's Hotel, Brook Street, London, W.1.

OBITUARY.

Lieutenant-Colonel George Harden, late Royal Sussex Regiment, died at Camberley on September 14, aged sixty-seven. He served with the Egyptian Expedition of 1882, and with the Sudan Expedition in 1884-5, taking part in the action of Abu Klea. Later he was with the Hazara Expedition.

Second Lieutenant A. Harcourt Nelson Wright, Somerset L.I., who was killed on September 2, aged nineteen, was the eldest son of Mr. H. Nelson Wright, of the Indian Civil Service. He was educated at Heddon Court, Cockfosters, and Eton. After passing through Sandhurst, he went to the front on August 15, and was killed barely a fortnight later.

The death occurred at Weston-super-Mare on Monday of Rear-Admiral Albert H. W. Battiscombe, who, as a naval cadet, served during the operations against Bruni, Burma, in 1846. In 1858 he served as first lieutenant of the naval brigade on the Burmese frontier, and he saw service in many other parts of the world. He was eighty-seven years old at his death.

Captain Charles W. Eastgate Smith, Manchester Regiment, who was killed while leading his men in an attack on August 27, was the only son of the late William Eastgate Smith, of Bournemouth, and Mrs. C. Eastgate Smith, 11, Porchester Terrace, W. At the outbreak of the war he was on an estate in Ceylon, and immediately joined the Ceylon Planters' Rifle Corps, and went with them to Egypt, where he got his commission in the Manchester Regiment. He was in the fighting near the Suez Canal and in Gallipoli, and was sent to another front in August, 1917.

We regret to learn that Mr. Avalon Shipley, H.M. Consul at Casablanca, lately attached for special duty at H.M. Consulate-General, Salonika, died in Paris on September 11. Mr. Shipley became a Student Interpreter in the Levant in 1897. He was promoted assistant two years later, and was Pro-Consul at Salonika from 1899 to 1903. Afterwards he served in many parts of the Near East—Uskub, Diarbekr, Erzeroum, the Dardanelles, Philipoppolis, and Adana. In 1912 he was promoted to be Consul for the eastern coast of the Red Sea, with residence at Jeddah, and was transferred to Casablanca in March, 1914. He was attached to Salonika in 1916. Mr. Shipley was born in August, 1873.

Major Aylmer Louis Elliot Fleet, R.F.A., who has died in his country's service, was the only child of Vice-Admiral Henry Louis Fleet, C.B.E., and Mrs. Fleet, of Coley Avenue, Reading. He was born in 1888, and was educated at Clifton College. He passed out of the R.M.A., Woolwich, in July 1909, and joined the 131st Battery, R.F.A., at Ewshot. He went to India in 1912, and joined the 90th Battery at Nowshera. Thence he proceeded to M Battery, R.H.A., at Risalpur, and after the war broke out took part in the operations against the Mahmunds on the North-West Frontier. He then proceeded to Mesopotamia and joined S Battery, R.H.A., as captain. He took part in the capture of Baghdad and Tekrit, being mentioned in dispatches. He was promoted major (acting) in command of a battery, which he accompanied to another front early in 1918.

We regret to announce that Field-Marshal Lord Nicholson died last Friday at 51, Pont Street, in his seventy-fourth year. He was the son of William Nicholson, of Roundhay Park, Yorks, and he joined the Royal Engineers at the age of twenty. Soon afterwards he went out to India, where so much of the best work of his life was to be done. He first saw active service in the Afghan War, 1878-80, taking part in the historic march from Kabul to Kandahar. He was twice mentioned in despatches, and his services were rewarded with the war medal with three clasps and a brevet majority. His next fighting was in Egypt, where he took part in the battle of Tel-el-Kebir and won further honours—the medal, the bronze star, and the Order of the Osmanieh. Returning to India, he worked much on plans for the defence of the country. In 1886-87 he was A.A.G. at headquarters in the Burma operations. Thereafter he was employed, first as Military Secretary to the Commander-in-Chief, then at the Military Works Department, and next as Deputy Assistant-General in the Punjab. In the Tirah campaign he was Chief of Staff to Sir William Lockhart, and for his work then was made a K.C.B. and received the medal with two clasps. After a year as Adjutant-General in India, he was summoned to South Africa by Lord Roberts, with whom, after much service, he returned to England in 1900. After this he became, first, Director-General of Military Mobilisation and Military Intelligence; next, Quartermaster-General to the Forces; and, finally, Chief of the General Staff. He was for a time Military Attaché with the Japanese Army in Manchuria, and in 1912 he went to India as Chairman on Indian Army Expenditure. He had been raised to the rank of Field Marshal in 1911: had been made G.C.B. in 1908; had become A.D.C. to the King, 1910-11; was a member of the Committee of Imperial Defence; chairman of the Territorial Force Association for London since 1913; and Colonel-Commandant of the Royal Engineers since 1916. He married, in 1871, Victorie, daughter of Mr. D. Dillon. He leaves no heir.

We much regret to announce the death of Captain Leopold Victor Royle, M.C., Flight Commander, R.A.F., who was killed on August 17 while flying on a scout patrol. The elder son of Mr. Arnold Royle, C.B., and Mrs. Royle, Albany Lodge, Esher, he was educated at Wellington College, and joined the Egyptian Government service in 1900, and served continuously in the Coastguard Administration until war broke out, when he was lent to the R.F.C. He saw much service on the Canal and Sinai Peninsula as an observer with the R.F.C., and when the Turks induced the Senussi to take up arms in 1915, he was transferred to the Western Desert and served as intelligence officer to the British force operating in that area. His special knowledge of the language and character of the Western Bedouin, and especially of the Senussi—he was one of the few Englishmen who had actually met Said Ahmed, the Grand Senussi, and was on terms of friendship with Said Idris, the present head of the Senussi—rendered his services particularly valuable. He guided the Duke of Westminster's armoured cars which rescued the crew of the "Tara," and for his services on this and other occasions he was awarded the Military Cross. At the beginning of 1917 he took part as intelligence officer in the operations around the Siwa Oasis, where the Senussi were finally routed, and it was in a large measure due to his intimate knowledge of the Western Desert that these operations were successfully carried out. He was again mentioned in dispatches and awarded the Italian Medalle ad Valore and the Egyptian Order of the Nile. At the conclusion of these operations the Egyptian Government claimed Captain Royle's services, and he was appointed Governor of the Western Province, which embraced the coastal sector west of Alexandria and also the Siwa Oasis. He was also given the local rank of major. After repeated applications to the Egyptian Government for his release, he was permitted to re-join the R.F.C. at the end of 1917, and, after passing with honours all examinations, obtained his "wings," and was appointed to the command of a scout flight at the front, to which he proceeded in March, 1918, and where he served continuously until his death.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

FRIDAY, SEPTEMBER 20, 1918.

THE VICIOUS CIRCLES OF INDIAN POVERTY.

So large a share of public attention has been devoted of late to the problems presented by the Indian constitution that it may seem to savour of hardihood if we venture at this juncture to put in a claim for consideration of those less sensational questions which concern the daily life of the masses of the people. It must, however, be admitted that poverty is the greatest of all the many and complex problems to be met with in the India of to-day. We do not for a moment suggest that the country is getting poorer; on the contrary, we hold it to be absolutely certain that the last century has seen a marked recovery from the appalling poverty which characterised the period immediately antecedent to the introduction of British rule. But that recovery, though marked, is not sufficient. The people are still pitiably and dangerously poor, and considerations of statesmanship not less than of humanity require that the problem should be tackled more vigorously than has yet been done. It has not indeed been neglected, and, if wealth came by Blue-books alone, India would by this time be one of the richest countries in the world. Report, however, follows on Report, Commission succeeds to Commission, and the visible result of all this activity is as yet so small that the spectator may almost be pardoned if he condemns it summarily as so much labour thrown away. At the same time a careful study of these unfruitful records is by no means without value. The wide field of Indian economics has been explored in every corner, innumerable promising schemes have been brought forward and subjected to the closest examination, and if the results have been disappointingly small, the reason must be sought in the number and the strength of those vicious circles in which the productive energy of the country is so rigorously confined. Let us glance for a moment at some of these obstacles to progress which block the path of everyone, from the humble peasant or artisan to the Supreme Government itself.

There is, for instance, the problem of improving the quality of raw products such as cotton. Peasants cannot spend money in growing better cotton unless they are assured of a remunerative price. Spinners, on the other hand, cannot offer a remunerative price unless the quantity available is sufficient to justify the necessary changes in their manufacturing processes. The vicious circle is complete: peasants wait for the spinners, spinners wait for the peasants, the cotton is not grown, and the country is by so much the worse off. Take, again, the question of hydro-electric installations. Over large areas in India the cost of power prohibits the establishment of industries which would otherwise be full of promise. Cheap power can be furnished by suitable engineering works, provided the demand for it is sufficiently large, but again the vicious circle is complete. The installation awaits the demand: the demand cannot arise until the generators are installed; so the water runs to waste, and again the country is left unnecessarily poor. Or take the case of technical education, where the pile of Blue-books reaches perhaps its greatest height. There are no schools because there are no pupils; there are no pupils because there are no schools, and industry continues to be crippled for want of an adequate supply of skilled workers.

These examples will suffice to illustrate our proposition that the slowness of India's material progress is the result in great measure of conditions in which everybody is waiting for someone else to take the first step. Fortunately for the future of the country, the question whether these vicious circles can be broken may be answered with an unhesitating yes. No other conclusion can be drawn from the history of industrial development throughout the world, and the position in India is differentiated from that of other countries only by the fact that these vicious circles are more numerous and more persistent. The business of the pioneer is to break these circles, and the work of pioneering can be accomplished in India as elsewhere, though its accomplishment is undoubtedly hindered by exceptional difficulties. The extension of railways is a case in point. Less than eight years ago the first promoters of railway construction were held up by considerations very similar to those which now bar the way to other measures of industrial development; there was a time when it seemed as if railways must wait till passengers should come forward, and passengers must wait till railways had been made, but fortunately for India the necessary energy was forthcoming, the pioneer railways were built, and as the result India now owns what is probably the most magnificent investment in the world. Nor can this instance be set aside as exceptional. The truth is that every vicious circle can be broken, if adequate energy and adequate capital are applied, and if the point of attack is chosen with sufficient skill. India has no lack of skilled advisers, and of late years the difficulty of finding capital has become of less and less importance; it is now energy and driving power which the country most urgently needs. It would be easy to apportion the blame for this want of energy, but the immediate need is rather to recognise that it is one of the main factors in the problem, and while it is certainly true that this factor is declining in importance, the poverty of the country is such as to forbid a postponement until such time as conditions shall have improved. If the increase of India's wealth is to be accentuated, then the initial energy must be supplied from outside, or, in other words, it must be furnished largely by the State. Let the State devote energy, and, if necessary, pledge some portion of its resources towards overcoming the initial obstacles, just as Lord Dalhousie's Administration brought railways into being, and let it trust the people to do the rest; that, as it seems to us, is the main lesson to be drawn from a survey of the industrial field. We are not suggesting any indiscriminate prosecution of wild-cat schemes; we ask for more energy on the legitimate assumption that skill and judgment are available. To return to one of the examples we have already used, no sane man would urge that the State should create a volume of petty industries sufficient to justify the construction of a hydro-electric scheme. What the State can do is to supply the power on which the petty industries must depend, and wait for a few years till the rising demand makes the scheme remunerative. The period of waiting will depend on the judgment with which the scheme is selected and designed; we assume that the judgment will be sound, and we ask that the administration shall back its judgment more energetically than it has hitherto been wont to do. Nor do we suggest that the State should act so as to drive private enterprise from the field; its true function is to supplement existing sources of energy, not to compete with them and still less to strangle them. That the State can act in this way is proved by the existence of the Tata Ironworks. All India is to-day justly proud of that great enterprise, which is contributing so much to the wealth of the country and to the armed strength of the Empire, but while we recognise the energy, the courage, and the ability of its promoters, we should not forget that these qualities depended for their fruition on the timely aid afforded by the Government of India; and, if success has been attained, some part of the credit is due to the strong man who piloted the scheme through the dangerous waters of the Imperial Secretariat. The India Government is accused, not altogether unjustly, of excessive reliance on precedent; in the establishment of the Tata Ironworks it has a precedent of the utmost importance for the industrial future of the country.

PEACE FOR THE BALKANS.

(From a Correspondent.)

Why is it that so many of our Balkan "experts" are partisans? Why are the learned magazines and the newspapers, especially their correspondence columns, so full of contributions, not from men who take a wide view of Balkan necessities, but from men—and women—who would glory in being called Philhellenes, Serbophils, or, in fortunately rare instances, even Bulgarophils, and are fully equipped with a full stock of "phobias" to match? All of them are eager to press what they conceive to be the interests of their own particular favourite, and few seem to care to remember that each of the Balkan communities is merely a unit in a bigger whole, and that no member can be healthy, if the whole body is sick. In fact, it often appears as if their panacea for the cure of one of the members is the topsy-turvy method of killing off the body itself. All this is very puzzling to one who, like the present writer, is an earnest student of Balkan questions, but has, in default of personal acquaintance with these countries, to rely largely on the views and opinions of those who know them well.

The fact is, of course, that most of our experts are persons who have resided in one or other of the Balkan countries, and have imbibed the intensely nationalistic spirit so natural among young vigorous nations only just emerging from long centuries of servitude under a justly hated foreign domination, and finding plenty of material at hand, in the shape of equally vigorous young neighbours, on whom to try their newly found strength. The Turk, the Austrian, and the Russian have all known how to fan the flames of this exaggerated nationalism to their own ends, and have well known how to prevent a spirit so useful to them from dying down. The disease is a catching one, and it looks as if very few sympathetic visitors were able to escape infection, the particular infection depending on the accident of intimate acquaintance with this or that country. The result is that broad views are discouraged, and no proposal is weighed except for its immediate effect on a selected country. If it appears to be likely to benefit that country, the proposal is good. If not, it is bad. It is bad even if it does no harm to the writer's special friends, but seems likely to be of benefit to a country against which he has prejudices. The plain, simple fact that what is wanted is not the aggrandisement of one Balkan country at the expense of others, but the improvement of the Balkan situation and the consequent benefit of all the constituent States is a proposition which is not only lost sight of, but is vehemently denied.

Quite recently our good friends the Greeks sent us (*viâ The Times*) a somewhat petulant demi-semi-official intimation that it was not considered friendly that anyone in this country should venture even to hint that the final settlement in the Balkans might possibly involve some re-arrangement of Macedonian territory, to the benefit of the hated Bulgarians. Our Greek friends, no doubt, refer to territory which has become Greek in the course of recent developments. We doubt whether they would be inclined to take such severe views about the transfer of some of the newer Serbian territory. Similarly, our brave Serbian Allies would, no doubt, bitterly resent any re-adjustment at their expense, while willing to take a perfectly sane view as between Greece and Bulgaria. Each nation is, in fact, firmly determined not only to hold fast to what she has, but to try to extend her existing possessions at the expense of the traitor Bulgaria; and anyone who ventures to invite a broad review of the whole matter from the point of view of the greatest good of all the Balkan communities is looked on as a declared enemy.

Such an attitude is deplorable, and it is sad to find so many of our publicists supporting it. We do not forget that Serbia, gallant little Serbia, has felt this war as perhaps no other nation has, nor that she has never once wavered in perfect loyalty to her Allies. We do not forget the supreme qualities which she has shown, which entitle her to very special consideration when peace comes to be made. We are trying to forget how Greece deserted Serbia in her time of greatest need, and how she so long played the part of snake in the grass to the Allies. There were excuses for those dark days, and we prefer to dwell on the loyal and enthusiastic support which she is now giving us in the field. We do not forget the despicable part played by Bulgaria, though some of us are inclined to find for her to some extent the same kind of excuse which is now accepted for the earlier conduct of Greece. We desire to see Bulgaria beaten to her knees, and we rejoice to learn that she is already not too happy about her position.

But only a fool talks of a "knock-out blow," in the sense of wishing—were such a thing possible—to wipe Bulgaria off the map. The bald fact is that Serbia, Greece, and a rudely-wakened Bulgaria have to live together in future, and that it is eminently desirable that they should live together in peace—desirable for their own sakes, but absolutely necessary for Europe as a whole, which has by now learned by tragic experience what a conflagration can be raised all over the Continent by a spark in the Balkans.

No foundations of lasting peace in the Balkans can be laid without a review of the hurried territorial distribution made of recent years between the Balkan States, in such a way that each State may be as free as possible of any justifiable feeling of soreness against the others. This will be difficult, specially in Macedonia, but it cannot be believed that it is impossible. It is quite certain that, unless this is done, peace in the Balkans and consequently in Europe will hang on the slenderest of threads. Whether such necessary rectifications would or would not involve concessions to Bulgaria at the expense of one or the other of our Allies I do not pretend to be able to guess. But surely, even if this should turn out to be the case, our Allies will be best consulting their own interests and the interests of the world in general, by gladly submitting to the operation, no matter how painful it may be for the moment. And surely such a suggestion should not be branded as coming from the "hidden hand," which seeks to exalt the traitor at the expense of the loyal friend?

"DESTROYER OF TURKISH LIVES."

An interesting trophy from Mesopotamia is now to be seen on the Horse Guards Parade. This is a bronze Persian gun, weighing about five tons, which was captured from the Turks by the British forces on their entry into Baghdad under Sir Stanley Maude on March 11, 1917. The King accepted the gun from Sir Stanley and the British Force in Mesopotamia, and desired that on arrival in this country it should be placed temporarily on the Horse Guards Parade in order that it might be easily accessible and seen by all. The carriage on which it is mounted is only a makeshift, and was not captured with the gun.

The inscription on the gun is as follows:—

Succour is from God and Victory is at hand.

The Commander of Victory and Help, Shah Safi
Desiring to blot out all trace of the Turks,
Ordered Giev to make this Gun.
Wherever it goes, it burns up lives,
It spits forth flame like a Dragon,
It sets the World of the Turks on fire.

The date of its making is shown by its name:—"Rajim-I-Jan-Rumiyya" (Destroyer of Turkish lives). This is a chronogram for the year of the Hegira 954 (A.D. 1547). In that year (which was the date of the death of King Henry VIII.) the brother of the Shah Ismail II. raised a rebellion, and was assisted by Sultan Sulieman. The Shah accordingly declared war on the Sultan, and the gun was apparently made for that campaign.

The Salonika paper *Pro-Israel* reports that, through the initiative and under the presidency of Chief Rabbi Jacob Meir, a committee, comprising some of the most influential Jews of Salonika, has been formed to obtain subscriptions for the new issue of the Jewish Colonial Trust. Nearly 5,000 shares had been taken up early in August, and it was hoped that the total would be raised to 10,000.

TANGIER TO TEHERAN.

I have been mildly puzzled by a paragraph that has appeared in several London papers, to the effect that "the Emir of Mecca has been received by the Sultan" at Constantinople. Can any reader tell me what this means? Is there now any "Emir" of Mecca? I doubt it! The Grand Shereef has, we know, become King of the Hejaz; and worthily does he sustain his new title and new honours. But he is unlikely to be much beloved at Stamboul, and equally unlikely to tolerate an "Emir of Mecca" who pays homage to the German-governed Padishah there. There was, of course, a German puppet put up as rival to Sultan Hussein; but he has been in Constantinople all along, unless my memory fails me, and I can hardly imagine any English paper thinking it worth while to report his movements. No; the puzzle remains unsolved!

***

The change in the cheque tax is said to have caused very little trouble so far, but I suspect that in the long run it will mean a diminution in the number of cheques drawn for small amounts. A curious thing about cheques, it seems to me, is the comparative ease with which one can get them cashed, sometimes by entire strangers. The police court records show how frequently this is done, and I dare say that most of us have been "had" once in our lives, if not more often, by a "dud." Yet in this way the cheque seems to have a fascination that is extraordinary. I read quite recently of an Oriental who declined to look at a letter of credit that ought to have been good enough for the most suspicious mortal, yet cashed a cheque drawn by the perplexed traveller—and for a substantial amount—without turning a hair. Even the "unsophisticated" Bedouin very often seems to understand the beauties of a cheque. At any rate, Dr. Peters, in his entertaining book "Nippur," tells of a small sheikh who evinced a touching desire to know whether he (Dr. Peters) had the power to "write those little bits of paper." If so, the sheikh wished to make him his guest—permanently, one supposes!

***

Mr. Eric R. J. Hussey, of Sobat-Pibor, has had an experience that I envy him; he has seen with his own eyes something very nearly approaching a miracle—or so it seems to me. Fortunately, he gives an account of the experience in "Sudan Notes and Records," and I have read it with keen interest, for it refers to a subject that I had heard strange stories about before, and it confirms those stories most completely. Briefly, it deals with crocodile-charming by men of the Kabbi, a Hausa-speaking tribe from West Africa, whose headquarters are at Argungo, a day's journey from Sokoto. They are a race of fishermen, and they have what Mr. Hussey well describes as "a curious power over crocodiles." For they actually pull the loathsome reptile out of the water alive, it being "apparently . . subject to their influence." Mr. Hussey saw one crocodile taken out of the Dinder, and he vouches that "it was very much alive, but quite under the spell of its captors." That it was no willing accomplice of its Kabbi captors is clear from the fact that it "was afterwards cut up and eaten."

***

Mr. Hussey reports a second crocodile, "16 feet long, which happened to be caught one day when a sub-mamur was staying at the village." The method of capture *seems* to be simple enough. The fishermen stretch their fishing line across a stream and walk up and down beside it. Then, "if an inquisitive crocodile comes up to the line, one man seizes it by the jaws and another by the tail, and they drag it alive to the shore." As simple as a conjuring trick, isn't it? Yet how *is* it done? Large crocodiles, by the way, have ropes tied to their tails, and are hauled ashore by several men, but they appear to be under the "spell" of the Kabbis in the same way as the smaller fry. The "charm" is said to lie in a certain paste, which is smeared on the body and also eaten by the fishermen. It is prepared by the old men of the tribe, and the secret of its composition is jealously guarded. Mr. Hussey found it impossible to obtain a sample. I suspect that the virtue of the charm lies in the faith of the fishermen. But, however they do it, it is clear that these Kabbis can and do catch the crocodiles as reported. Mr. Hussey mentions that three or four of them in 1914 cleared the pools in a large stretch of the Dinder river.

***

Apropos of the Sudan, I noticed in last week's NEAR EAST a reference to the marriage of Mr. A. P. Coote, of the Sudan Civil Service. A few days earlier I had read a paragraph in the *Sudan Times* to the effect that Mr. Coote had been successful in ridding a town—Port Sudan, I think—of all objectionable characters. It struck me as a pleasing tribute to offer to a man on his wedding day, and I hope someone called the bridegroom's attention to it on (or before) September 5.

CORSAIR.

NEWS IN BRIEF

Contributions to the Second Indian War Loan amount to more than £20,000,000.

The Holy Carpet, accompanied by the Egyptian pilgrims, arrived at Jedda on September 8.

Two crores of rupees (about £1,333,333) was raised on the Bombay Women's War Loan Day.

The Greek Press comments with gratification on the fact that a British Police Mission is going to Athens to organise a police force.

A despath from Vienna states that a Congress of the Slav nationalities of Austria will be held at the end of September at Cracow.

The Greek Goverument has decided to postpone the calling-up of all students taking the Foreign Literature ccurse, as well as of school teachers in Macedonia.

Dr. Solf, the German Colonial Secretary, left for Sofia last week to hand over personally to the Bulgarian Red Cross several million marks collected in Germany.

According to the *Rheinische-Westfälische Zeitung*, the Crimean Cabinet, with the exception of the Prime Minister and Count Tatistcheff, who is still abroad, has resigned.

As a result of the first prosecution on the charge of failing to enlist in the Ceylon Defence Force for compulsory training, an engineer has been fined 100 rupees (£6 13s. 4d.).

The Postmaster-General announces that letters and parcels intended for delivery to the Mesopotamian Expeditionary Force by Christmas should be posted so as to reach London not later than October 5.

Italian and British naval air forces have been very active on the Adriatic and Albanian front. The following places were bombed:—Caorle (Lower Livenza), Cattaro, San Giovanni di Medua, Alessio, Durazzo, the Monastero di Kolcoldin, Ragosina.

Count Bernstorff, the German Ambassador to Constantinople, who is at present in Berlin, says that the Caucasus negotiations with Talaat Pasha, the Turkish Grand Vizier, were taking a favourable course, and that a mutually satisfactory solution would be reached.

Greeks residing in Egypt who are natives of the new Greek provinces, as well as those who have served in the National Defence Army, and those who are liable to serve in the Greek Army, will be treated as Hellenic subjects for the purposes of army recruiting.

Referring to the recent removal of the Orthodox Archbishop in Bukovina for his Russophil attitude, the Magyar Socialist organ *Nepsava* compares this light punishment with another much more severe inflicted on a Roumanian peasant woman for singing a patriotic song:—"His Grace the Archbishop goes free, while the peasant woman goes to prison."

SYRIA & PALESTINE RELIEF FUND

(Registered under the War Charities Act, 1916).

JAFFA, JULY 11, 1918.

"Our first object is to try to restore the moral of the women and girls. The state in which most of them are is heart-breaking. They are reduced to

UNRECOGNISABLE GHOSTS

of their former selves, through fear, starvation, exposure and want of decent clothing. The state of most of them is heart-breaking. Nearly all . . . driven out of the town . . . wandered about from place to place suffering

GREAT HARDSHIPS AND CRUELTIES.

They lost all their possessions. Most of them have lost all their grown-up male relations. We are busy planning with the military authorities how work may be found for all the women."

(Letter from Relief Worker.)

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The outstanding event of the week has been the arrival of the Greek Commercial Mission, whose coming has been eagerly looked forward to in business circles in this country. The tour of the delegates, which, as my readers are aware, has been arranged by the Federation of British Industries, has opened most auspiciously by a series of functions which can have left the visitors in no doubt as to the nature of the sentiments that inspire the average Englishman for Greece. We are regarded abroad as a cold race, but if the visitors came with that impression the warmth of their reception must have shown them that this view is one for which there is no real justification. There is, as a matter of fact, no nation for which this country has kindlier feelings than Greece, and it may be hoped that one of the results of this visit will be to bring even closer the relations between the two countries.

***

It is not many months since the visit of the Serbian Industrial Mission to this country—a visit which was marked by even greater success than was expected—and I shall probably not be going too far when I say that it will be a considerable advantage to the present mission that such successful efforts should have already been made to arouse an abiding interest in Balkan trade. Not that this advantage is necessary, for the delegates have the satisfaction of knowing that while British trade relations with other Balkan countries have hitherto been comparatively insignificant, Greco-British commerce, despite the inevitable commercial aggression of the Central Powers, has always been of considerable importance. That, naturally, makes the development of trade relations much easier than in the case of countries who have hitherto had comparatively little to do with one another.

***

A point which, I feel, is certain to be raised by some British manufacturers in regard to trade with Greece is that Greek imports and exports have hitherto been on a very small scale. That, of course, is true, but in this case the past is no criterion of the future. Greek development has hitherto been hampered in a variety of ways, notably by the absence of adequate capital. This will not be so after the war, when it is beyond question that very rapid progress will be made by the country. Agriculture will be further improved and organised, industrial enterprise, hitherto strictly limited, will be considerably developed, and her requirements, both for foreign manufactures and for larger markets for her produce will, consequently, increase. For development work alone the Greek demand for construction material of all kinds will be enormous. And in addition to all this, it must once more be emphasised that it is a short-sighted view which considers Greece solely from the standpoint of the Greek market. Greece has been in the past, and will be still more in the future, one of the great distributing centres of the Mediterranean, and on that account alone her importance cannot easily be overestimated.

It is obvious that a country without coal deposits cannot hope to attain more than a certain level of industrial development, and this has been one of Greece's principal handicaps in the past, since the country has been in the position of having to import fuel for other than domestic purposes. Possibly the position may be changed in this respect in the future as a result of the recent discovery of large deposits of lignite of a superior quality in Greek Macedonia. According to an American Consular report so far engineers have traced a mass of approximately 700,000 tons, and the investigations have covered only a small area. It is reported that the whole region bears promise of further large deposits. Three veins, each varying from 12 to 18 inches in thickness, have been uncovered, and mining operations have so far resulted in the production of from 20 to 25 tons per day, a rate which it is estimated can be raised to 200 tons per day given adequate transportation facilities.

***

It would only be in accord with the fitness of things if the Serbian and Greek missions were to be followed in due course by one from Roumania. No doubt that will happen when circumstances permit; and while at the present time we are not in a position directly to alleviate the unhappy fate of that country, it is very desirable that British merchants and manufacturers should devote some time to obtaining an accurate knowledge of market conditions there, so that when peace comes they will be ready to occupy the places filled by the apostles of "peaceful penetration." This country has a great rôle to play in Roumania as in other Balkan countries, and whether we rise to our opportunity or not will mainly depend on the exercise of individual enterprise. The position of Roumania is dealt with in the first of a series of articles which appears on page 771, to which I should like to call my readers' attention.

***

While on the subject of Roumania I may point out that in the Anglo-Roumanian Society—which was established here not many months ago under the most influential auspices—we have an institution which is likely to play an invaluable part in the development of Anglo-Roumanian relations, economic and otherwise. The society, whose work is deserving of every encouragement, has its offices at 5, Old Burlington Street, W.1, and the hon. sec. is Mr. A. W. A. Leeper.

***

Sir Edward Holden's speech at the meeting of the London City and Midland Bank called to approve the absorption of the London Joint Stock Bank should prove a final reply to those who proffer objections to bank amalgamations. He pointed out that the first reason for the recent fusions was that a very large sum would be required after the war for the purchase of raw materials, etc., and the second reason he gave was that amalgamation was necessary in order that London may retain its position as the financial centre of the world. In regard to the first point he mentioned that other countries had created separate institutions which would be able to create credit for their own merchants and manufacturers after the war. He mentioned the War Finance Corporation in the United States, and the Darlehnskassen in Germany, and added that Germany was organising great amalgamations of banking houses to supplement the power of this institution. I am glad that Sir Edward laid so much insistence on the importance of our being able to meet the competition of foreign banks on an equal basis. This is the point which I have constantly emphasised in my references to the subject, and so far as I can see the various objections raised against amalgamations carry no weight against it.

***

The friction between Bulgaria and her Allies is economic, as well as political. The greater part of the Bulgarian tobacco crop, which is awaiting export, is held up because Germany cannot come to terms with the exporters. Normally, the Germans are supposed to be able to consume 25,000,000 kilograms of Bulgarian tobacco, while there is a market for 10,000,000 more in the countries bordering the Central Powers. Germany is prepared to take 4,000,000 kilograms at a price at which the Bulgarians refuse to sell, and until the latter prove more amenable, no transport is to be placed at their disposal for tobacco for any destination. An interesting quarrel.

***

The Bank of Bombay, which has a long record of steady progress behind it, has made a most marked advance since 1914, thus reflecting the prosperity enjoyed by India as a whole during the war. The half-year report for the period ended June 30 shows this tendency to have continued, so that it has been possible for the bank to commemorate its jubilee by a special bonus distribution of 1 per cent. per annum in addition to the 15 per cent. dividend and the ordinary bonus of 2 per cent. This gives 18 per cent., free of income-tax for the year, against 16 per cent. to June, 1917, 15 per cent. to June, 1916, and 1915, and 14 per cent. for the two previous years.

***

The Department of Statistics in India has issued a further report on prices and wages in that country, containing figures up to the end of July, 1917, from which it appears that the average rise in the wholesale price of 74 principal articles of consumption was 12 per cent. at the end of the first year of war, 25 per cent. at the end of the second year, and 42 per cent. at the end of the third year. As regards retail prices, it is stated that the general level in Calcutta in July of last year was 16 per cent. higher than immediately before the war. Sugar and salt had risen by 81 and 50 per cent. respectively, and dairy produce by 35 per cent. The rise in tea, wheat flour, fruits, and vegetables ranged between 19 and 12 per cent., while food grains, excluding pulses, increased 10 per cent. There was a rise of 8 per cent. in the price of fish and 2 per cent. in that of fowls; but, on the other hand, there was a decrease of 11 per cent. in eggs and 4 per cent. in meat. Naturally, conditions in Calcutta cannot be taken as representative of those throughout the country, but with that reservation it is clear from the report that in many respects India has escaped fairly lightly during the first three years of the war.

ROUMANIAN COMMERCE.

Retrospect and Prospect.—I.

By A. Loveday.

Roumania has been betrayed twice, once by the Tzarist government under the guidance of M. Stuermer, once by the Bolsheviks; and Roumania has made peace. Of all the small states who have lent their support to the Allies she has perhaps suffered the most. The possibility of alleviating her distress has been almost wholly lacking. Tricked, betrayed and ultimately openly oppressed by the Russians, she has been divided into two rival camps of misery; and the plight of those who flocked to Jassy has been, perhaps, even more bitter than of those who remained behind at Bucharest. She has made peace; she has had certain conditions of sacrifice and further misery forced upon her, of which not even the Bulgarians can anticipate the permanence. When the war ends Roumania, together with Belgium, Serbia, and perhaps a new Slav state on Serbia's north and west will look to this country, to France, to the United States of America to help her in the rebuilding of her kingdom, and the reorganisation of her economic life.

If we are to be in a position to assist, if the Allies are to co-operate in peace as they have in war, and present friendships are to be more than the passing effects of temporary circumstances, it is desirable that we should study closely the economic conditions in each country and consider how far the relations which existed before the war may be strengthened or amplified.

The economic position of Roumania is of importance, moreover, partly on account of the value which that country may prove to Germany during the continuance of the war, partly because Roumania was one of the markets from which England was being steadily driven back by Germany and to a lesser extent by Austria-Hungary, and partly because Roumania is one of the stepping-stones in Germany's progress from Berlin to Baghdad.

I propose here to consider particularly the character and extent of Roumanian trade before the war, and to attempt in passing to illustrate the value which the wealth of Roumania produces may be to the Central Powers at the present day.

The wealth of Roumania is dependent primarily and essentially upon agriculture. With a total area of about 13,000,000 hectares, 9,970,000 or over 75 per cent. were productive, and on an average about 6,000,000 cultivated or lying fallow. With a population of about 7¼ millions, well over 60 per cent. were directly engaged in agricultural pursuits before the war, and some 1,200,000 families farmed their own holdings. In 1913 the land was broken up into 1,144,000 holdings of which 3,500, or a little over 3 per cent. were cultivated by large farmers of more than 100, and 1,140,500 by small farmers with less than 10 hectares. There was thus a very wide gap between the small peasant proprietor on the one hand, whose holdings did not in fact average more than 4 hectares and the large farmer on the other, often a Jew, with farms which in 1913 averaged 484 hectares. Since the revolution of 1907 there has been, moreover, a steady increase in the number of peasants' holdings, an increase largely accounted for by direct acquisition of the land farmed.

The extent to which Roumania is dependent on agriculture for her economic prosperity may perhaps best be gauged by the following table showing the quinquennial value of her total exports and her exports of cereals.

(In millions of francs).

	Total exports.	Export of cereals.	Percentage of total.
1894-8.....	280	230	82
1899-03	303	217	72
1904-8.....	428	340	79·5
1909-13	617	468	76
Average ..	407	314	77

The relatively low percentage which cereals constituted of the total exports during the five years 1899-03 was mainly due to the disastrous harvest in the first of those years. The drop in the last quinquennium was due to the extraordinary increase in the output of petrol. With practically no coal or metals it would seem inevitable that Roumania should continue indefinitely to rely on agriculture and the petroleum industry as her main sources of wealth. But it is possible, that with the popularisation of Diesel engines and the large domestic supplies of petrol the manufacture of goods not requiring bulky raw materials may be developed. Up to the outbreak of war, however, in spite of the vigorous protectionist policy which culminated in the almost prohibitive tariff of 1906 Roumania remained practically dependent on foreign countries for manufactured articles. With the exception of the soap, wood and paper industries, a few cotton mills and hosiery factories, a few boot and shoe factories and the hand work of the peasants and the village smiths, Roumanian industry was negligible.

This fact is of importance for two reasons. It means in the first place that the international economic position of Roumania, her power to purchase and her power to borrow, must depend wholly on the extent and value of her agricultural produce and her petroleum, and that in consequence the policy which is adopted by the great grain importing countries of Europe is of the utmost importance to her. It means in the second place that both the weight and the cubic capacity of her exports must greatly exceed those of her imports.

If England, France and the other grain importing countries of the world determine after the cessation of hostilities to adopt the policy of the agrarian party in Germany, and endeavour to safeguard themselves against the possibility of starvation in the event of another war by producing behind secure tariff walls their requisite supply of wheat, then Roumania will be one of the first countries to suffer. The effect of such a policy will no doubt not be felt during the first year or two of peace while tonnage is still scarce and the world's food supply inadequate. But ultimately it would necessitate a further extension of the acreage under maize and more severe competition with the Argentine, the United States of America and other maize growing countries.

The total weight of Roumania's exports in 1913 exceeded 4½ million metric tons; her imports did not amount to 1½ million. As the exports increase year by year, since the average weight of any given value of exports always exceeds the average weight of the same value of imports the difference between the export and import total weights tends to increase. The result of this difference is to give an advantage so far as the heavier articles purchased by Roumania are concerned to those countries lying along, the main shipping routes. Thus during the five years 1904-8 the United Kingdom accounted for 28.76 per cent. of the weight and only 15.35 per cent. of the value of Roumania's imports, whereas Germany, whose trade was largely over the land routes, accounted for 14.87 per cent. of the weight and 31.71 per cent. of the value. The natural advantage which this country thus possessed has, however, been more than counter-balanced by Germany's energy and determination in her struggle to capture the Roumanian market, with the result that in the last two years of peace the weight percentages were 26.64 and 19.41 for England as against Germany's 27.34 and 26.71. Germany's success is further well illustrated by the statistics showing the growth of the more important inland custom centres. About 73 per cent. of the total weight and 57 per cent. of the total value of her imports in the year 1913 reached Roumania through six towns. Of these six three were situate on her western and northern frontiers—namely, Burdejeni, lying on the main line from Lemberg to Galati; Predeal, lying on the main line from Buda-Pest to Bucharest, and Varciorova, at the mouth of the Iron Gates. Together these three accounted for 31 per cent. of the weight and 29 per cent. of the value of the total imports, an increase of nearly one hundred per cent. since 1909. Of the imports entering through these three towns by far the most important were manufactures of metal, which amounted to 68 million francs out of a total of 171 million francs. It is, perhaps, regrettable that there is no representative of the British consular service at any one of these three towns, for while the overland trade has been thus developing 51 steam vessels with a total tonnage of 137,575 tons entered the three main ports of Roumania, Braila, Constanza and Sulina, from the United Kingdom in ballast in the year 1913 against 58 with a tonnage of only 111,887 tons with cargo.

EGYPTIAN NOTES.

(From Our Correspondent.)

Cairo, August 19.

Imports of Seed Potatoes.

A large consignment of 2,000 tons of potatoes arrived recently at Alexandria, and is being distributed for seed purposes by the delegate of the military authorities and Ministry of Agriculture to agriculturists on the condition that the latter will deliver from their crop to the military authorities four cantars to each cantar of seed. Of these four cantars, three only will be paid for at the rate of 44 piastres per cantar. While protecting their interests the military authorities are at the same time serving those of the country.

Limitation of Cotton Acreage.

The Government has decided that not more than one-third of the cultivable area shall be put this year under cotton, as last year, and a Sultanian decree will shortly be promulgated to this effect. The public is warned that the Government is firmly determined this year to see that the dispositions of the new decree shall be rigidly enforced, and that any infraction shall be dealt with with the utmost severity allowed by the decree. Cultivators will be grievously disappointed if they expect the leniency shown to them last year.

It is announced that the fellah has full liberty to sell his cotton where he pleases as heretofore, and that both large and small cotton merchants will continue the same system as had been followed by them before the taking over of the cotton crop by his Majesty's Government. Of course, the small cultivators will be well-advised to sell their cotton at the halakas, where Government supervision protects them against fraudulent dealings in regard to weight, quality, etc. At the large halakas samples of the cotton to be bought by the Government will be exhibited, with the price of each quality; and every facility will be afforded the fellah for the inspection of these samples.

The Principal Cereal Merchants Association.

This association met last week under the presidency of Mr. Ross-Taylor, and after discussing and approving the various amendments in the regulations embodied in the constitution framed for the Principal and Provincial Associations (formerly called Syndicates), sanctioned the amended draft, which, after going into print, will receive the final sanction of the Supply Control Board. Having ended their labours, the members of the Principal Association, who are the presidents of the Provincial Associations, have returned to assume their duties in their respective Mudiriehs or Governorates. The principal amendments related to the following matters. The applicant for a general permit has to pay a permit fee of £E2, and another entrance fee of the same amount; while for the special permit the fee is half an Egyptian pound and the entrance fee as much. The merchant elected to the Provincial Association has to pay a subscription fee of £E3. Only holders of general permits may be candidates or electors. Holders of special permits are debarred from the right of election. The term of office of the Presidents of the Provincial Associations expires after two years; while the term for one half of the members is one year, after which, however, they are liable to re-election. Then the turn of the other half comes. Millers may be granted general permits against the payment of the prescribed fee of £E2 and £E2 entrance fee. The Provincial Associations have to contribute 20 per cent. of their revenue to the Principal Association to cover expenses incurred on their behalf. In case of dissolution the Principal Association's decision will be final as to the disposal of the assets of these provincial bodies. The Principal Association will meet once in the last week of each month, and the travelling expenses of the members will be met by their respective associations.

A Royal decree authorises an expenditure of £720,000 for beginning the construction of a railway in Italian Somaliland about 250 miles long from Port Mogadiscin, running north and west to Lugh, on the Jub river, on the confines of British East Africa.

THE GREEK COMMERCIAL MISSION.

Inauguration of Tour.

The Greek Commercial Mission, which reached this country on September 13, has spent the first few days of its tour in London, where the delegates have been entertained at a number of important functions, notably the dinner given in their honour on September 16 by the Government at the Carlton Hotel, which may be said to have marked the official opening of their tour. On the morning of that day the delegates began their inspection of British manufactures with a visit to the Osram Robertson Lamp Works carried on at Hammersmith by the General Electric Company. Luncheon at Claridge's Hotel followed, presided over by Mr. Hirst, the chairman of the company, at which M. Michalocopoulos, speaking on behalf of the visitors, said the political relations of Britain and Greece would be perceptibly strengthened by the measure and force of our commercial friendship. The following day the delegates were the guests at luncheon of the Lord Mayor at the Mansion House, and in the evening were entertained at dinner at the Ritz Hotel by the Federation of British Industries. On September 18 a visit was paid to Callender's Cable and Construction Co., Ltd., Erith, and yesterday the delegates left London for Birmingham on a tour of inspection of the leading provincial centres of manufactures, which will last until October 17, when the delegates will be in London for a few hours prior to visiting Bristol. Their final visit to London will take place about a week later.

Mr. Balfour's Welcome to Delegates.

At the dinner at the Carlton Hotel on September 16 the chair was taken by Mr. Balfour, and among the company were M. Michalocopoulos, M. Gennadius, M. Caclamanos, M. Empiricos, M. Skintzopoulos, M. Zamanos, M. Oeconomides, M. Damala, M. Tsitis, M. Malikopoulos, M. Kazazes, Colonel Phranzis, M. K. Collas, M. K. Venizelos, Sir Richard Vassar-Smith, Sir Robert Hadfield, Sir A. D. Steel-Maitland, M.P., Sir William Clark, Sir Algernon Firth, Sir Francis Barker, Vice-Admiral Sir Charles Dundas, Sir Francis Elliot, Sir A. H. Dixon, Sir William Peat, Sir Vincent Caillard, Sir E Wyldbore Smith, Mr. Ian Malcolm, M.P., Mr. A. T. Waugh, Mr. Guy Locock, Mr. E. C. D. Rawlins, Mr. E. H. Mulock, Mr. C. Tennyson, Mr. A. G. M. Dickson, Mr. Edmund Hill, Mr. H. W. Babington-Browne, Mr. R. S. Rowell, Mr. H. T. Montague Bell, Mr. Philip Lockhart, Mr. E. Fitzjohn Oldham, Mr. F. W. Gilbertson, Mr. W. Hill, and Mr. C. W. Coop.

Mr. Balfour, proposing the toast of "Our Guests," said:—I feel it a peculiar privilege to have been given the opportunity of welcoming, not merely on behalf of the Foreign Office, but on behalf of the Government, on behalf of the country, this most important deputation—this most important mission—a mission, I believe, exceeded in importance by none that has ever left the shores of Greece. Great Britain—I think I may say it will be admitted by our friends from Greece—Great Britain from the very earliest days of Greek independence has been one of the most ardent, one of the most faithful, and one of the most disinterested of Greece's friends. We have seen and rejoiced in the liberation of Greece from her Turkish oppressors. We have watched with pride the way in which Greece has worked out, and is working out, her own destiny, and taking her fitting place among the free and civilised nations of the world. We all feel a friendly feeling towards Greece at any time and every time. We feel a peculiar satisfaction at the moment when our soldiers are fighting shoulder to shoulder with your soldiers against a common foe. I have just received information that the offensive on the Greco-Bulgarian front has apparently begun, that French and Serbian troops have advanced on a front of 15 kilometres between the Vardar and the Cerna, taking the first and second line trenches, taking various hills of tactical importance, and up to date 800 prisoners and ten guns have already been captured. You have come here on a special business. You have come here to draw closer the commercial relations between Greece and Great Britain. I welcome you on this, the beginning of your tour throughout the country, in which I hope you will have an opportunity of seeing what we can manufacture. Our manufacturing skill and inventive enterprise are at this moment directed mainly, if not entirely, to the labour of producing instruments of destruction—an occupation odious, but made absolutely necessary in the interests of human liberty and human progress. Nevertheless, I hope and believe that what you see will give you some idea of the manufacturing energies of the country, even though the direction in which these energies are at this moment devoted is chiefly ships of war, and no doubt ships of commerce, aeroplanes, destructive chemicals, guns, shells, and all the other paraphernalia of modern slaughter. I sincerely believe that when the time comes you will leave this country feeling that you have left friends behind you, and not only left friends, sympathisers with Greece, lovers of your country, and admirers of her past, but those with whom it will be useful and profitable in the business sense, and as much or more in the moral and sentimental sense, to have business dealings in the future. After all, between nations like ourselves, the bonds of union are not to be merely the bonds of personal friendship, not merely the bonds of sympathy, but the day-to-day bonds of common work, common enterprise, and common energy. I am convinced that this visit will produce admirable fruit in these directions.

M. Michalocopoulos, in replying, said German intrigue and despotism had attempted, by all means possible, to prevent Greece from taking part in this war of liberation. But the efforts of Greece had been successful because of the protection given her by Great Britain and France. Barbarism was already beaten, and would be beaten still more thoroughly. He was full of confidence that commercial relations between Great Britain and Greece would be promoted, and he had the firmest faith in final victory.

M. Gennadius, the Greek Minister, in a characteristically happy speech, declared that there was no agency better suited to promote British trade in the Balkans and in Asia Minor than his own people, not only because they were good traders, but because they were wise traders, and they had never adopted the pernicious, insidious, and dishonest methods of the Germans. Without entering into the question of Free Trade or Protection, they intended to establish in Greece what he might call unfettered trade—a trade based upon the principle of live and let live.

At the Guildhall.

The Lord Mayor entertained the Greek commercial delegates at luncheon at the Mansion House on September 17, when in addition to the members of the mission those present included Sir A. Steel Maitland, M.P., and the Hon. W. Pember Reeves. Proposing the health of the delegates the Lord Mayor said they had already received a national welcome from Mr. Balfour, but the City also desired to offer a welcome on its own account. They were welcomed not only for industrial reasons but as Allies bound by the ties of a common determination to accomplish the same lofty purposes in the prosecution of the present tragic conflict. He felicitated Greece on its rescue from the degradation into which it was being led by an apostate and degenerate Monarch, and said that the two countries, hand in hand, would prosecute the struggle, not listening to overtures for a dishonourable and ignominious peace.

M. Gennadius, who replied, said this was the first commercial delegation from Greece to England in modern times. Long before the Christian era a body of Greeks, oppressed by the Persians, founded the colony of Massilia, the modern Marseilles, much in the same way as the Pilgrim Fathers went to New England. In that new home there were vague rumours about the existence of islands in the north, and Greek navigators, under the leadership of Pytheus, set out to discover them. The result was that trade was opened up with the British Isles. That, indeed, was the first, as this was the second, delegation sent by the Greeks to Britain, and he hoped the result of the latter would be no less important than that of the former.

M. Michalocopoulos, who also acknowledged the toast, spoke of the resolve of Greece to resist the insidious and pernicious penetration of Germany.

The Federation's Dinner.

The Federation of British Industries, at whose invitation the delegates have come to this country, entertained the mission at dinner at the Ritz Hotel on September 17, the chair being occupied by Sir Richard Vassar-Smith. The Chairman, in proposing the health of the delegates, said that Great Britain as a nation might pride herself upon the fact that, in extending her trade with a foreign country, she had never been guilty of ulterior motives, and had never wished to impose her domination upon any other country. In Greece this was recognised, and their guests knew that in Great Britain they would obtain co-operation on absolutely equal terms. Their guests would visit some of the largest industrial works in the world, and would see that Great Britain, even in the midst of this world war, had not lost her place amongst the industrial nations of the world. It was to Britain's interest to maintain the closest touch with Greece, because Greece, commercially speaking, was one of the strategic points of the Balkans. It was also to the advantage of Greece to maintain close relations with Britain, because the two countries could be of mutual assistance to each other. But, quite apart from the question of interest, the people of these islands had a peculiar affection for Greece. He proposed to send to M. Venizelos a telegram from the Federation welcoming the delegates, expressing thanks for the support the Greek Prime Minister had given to the tour, and promising to do its utmost to render the tour of common benefit to the two countries.

M. Caclamanos, who first replied, said Britain and Greece, though separated by a continent, were joined by a close affinity of character. Nowhere was the spirit of ancient Greece better understood than in England. Shakespeare was the complement of the great Greek tragedians, and our logicians were the complements of Aristotle. The ties of affinity had been strengthened in many ways during the last hundred years. When in Greece anybody wished to praise a given article he always said: "Oh, it must have been made in England." That opened the way to the extension of British trade in Greece.

M. Caclamanos, who first replied, said they had been called upon to make so many speeches lately that really he and his colleagues ought to strike. He therefore gave notice that this was their last appearance—in London.

M. Michalocopoulos, who also responded to the toast, said that but for the war that gathering would not have happened. Germany provoked the war. She had all the liberty for commerce, banking, export, even for the export of German Princes, that any country could desire. She ought to have been content but was not. She was jealous of British financial superiority. She wanted to dominate the world politically and enslave it. Would the free nations allow Germany to enter after the war as before? The commercial policy of the Allied nations depended entirely on that of Great Britain and America.

EGYPTIAN STATE FINANCES DURING MAY.

(From Our Own Correspondent.)

Cairo, August 20.

According to the State accounts just published revenue during May amounted to £E2,113,281, compared with £E1,866,151 in the same month last year, whilst expenditure came to £E2,589,359, as against £E2,131,129. At the end of the two months there was therefore a deficit of £E82,883, as compared with one of £E442,109 on May 31, 1917.

The chief heads of revenue during the month were direct taxes £E462,434, customs £E371,705, tobacco dues £E175,364, railways £E473,951, ghaffir cess £E139,579, mixed courts £E91,260, State domains £E62,308. On the other hand the main items of expenditure were public debt £E1,314,827, railways £E369,149, irrigation £E94,598, ghaffirs £E65,018, War Office £E64,289, war gratuities £E46,425, civil pensions, etc., £E42,356, police £E41,232, public health £E41,571.

EGYPT'S TRADE DURING FIRST HALF OF 1918.

(From Our Own Correspondent.)

Cairo, August 14.

The Egyptian Customs returns for the first half of the current year reveal an enormous expansion in the foreign trade of this country. Imports came to £E24,390,907, and exports to £E26,933,575, compared with £E14,427,173 and £E20,963,806 at the same date a year ago. Thus there is an increase of £E9,963,734, or about 70 per cent. in imports, and one of £E5,969,769, or about 30 per cent. in exports during the six months, with, incidentally, a reduction in the balance of trade in favour of the country of about four million pounds.

The principal imports during the half-year have been :—Preserved meat, £E480,366 (a reduction of £E153.372); hides, skins, and leather goods, £E211,681 (an increase of about 50 per cent.); flour, £E306,245; dried fruits, £E185,626; rice, £E30,899 (a reduction of £E214,401); sugar, £E356,900; coffee, £E364,034; tea, £E200.291 (increases of £E200,481, £E91,745, and £E29,435 respectively); wines, £E145,822 (an increase of £E56,004); spirits, £E193,416 (an increase of £E96,205); vegetable oils, £E305,989 (an increase of £E235,480); petroleum, £E25,447 (a decrease of £E288,697); paper and printed matter, £E814,218 (an increase of £E550,053); coal, £E2,900.620 (an increase of £E1,384,702 in value, and of 15,179 tons in quantity); glass and crystalware, £E175,858 (an increase of £E120,305); matches, £E282,592 (an increase of £E227,193); chemical products, £E330,198 (an increase of £E201,264); manures, £E5,183 (a decrease of £E369,468); soap, £E173,315 (an increase of £E115,517; iron and steel, £E999.701 (an increase of £E504,743); machinery, £E365,059 (an increase of £E154,800); and tobacco, £E1,401,464 (a decrease of £E188,592).

Textile Imports Doubled.

Textile imports improved from £E5,016,322 to £E11,616,834. The chief item under this category was cotton piece goods, which rose from £E3,281,090 to £E7,241,117; other important items were : Cotton thread, £E636,131 (an increase of £E342,532); woollen textiles, £E487,610 (an increase of £E229,648); raw silk and silk thread, £E266,335 (an increase of £E184,979); sacks, £E792.257 (an increase of £E554.026 in value and of 5,912 tons in quantity; ready made clothing, £E174,814 (an increase of £E135,821); ready made underclothing, £E639,485 (an increase of £E453,323); silks and ribbons, £E381,598 (an increase of £E252,714); and textiles of mixed yarns, £E261,145 (an increase of £E130,554).

Under exports, cotton constituted the largest item, and, indeed, accounted for the whole of the increase in the total. Cotton exports came to £E22.901.145, as against £E16.700,421 at the end of June, 1917, and the increase in quantity amounted to over 1,000,000 cantars. The other important items were :—Eggs, £E254.717 (a decrease of £E49,682, but the quantity fell off by 50 per cent.); hides and skins, £E288.053; rice, £E102 231; sugar, £E378.868 (a decrease of £E156.062); gum, £E223.249 (an increase of £E75.428); cotton seed, £E1.832.329 (an increase of £E609,784). No cotton cake was exported. Maize exports fell off by £E104,241 to £E13.684; onions by £E187.354 to £E84.396; cotton seed oil by £E45,613 to £E23.264; wool by £E42.483 to £E50.241. Cigarette exports increased from £E202,623 to £E260.596.

Trade within the Empire.

Turning to the share falling to each of the foreign countries trading with Egypt, we find that the British Empire accounted for 75 per cent. of the imports, and took a little under that proportion of the exports. The chief items under imports were boots and shoes, candles, rice, wheat flour, coffee, tea, beer, spirits, and soap, cotton yarn, cotton thread in spools, cotton piece goods, woollen textiles, sacks, manufactured iron and steel, and iron and steel hoops; in the latter eight categories the Empire was practically supreme. Under exports, all the eggs, cotton seed, wool, nearly 90 per cent. of the onions, 40 per cent. of the gum, and about 70 per cent. of the cotton went to the United Kingdom.

Of the other importing countries, France practically doubled her share to £E819,716, Italy increased hers to £E1,066,392, Japan hers to £E1,051,807 (from £E167,977, mainly textiles and tobacco); and Sweden and Switzerland showed moderate expansion. The United States fell off by two-thirds to £E176,726; Greece by a similar amount to £E930.385; and China doubled her sales to £E506,843. Under exports, Greece was the only other country showing any appreciable increase, her share rising from £E199,176 to £E428,457 (mostly hides and skin and cotton). The United States, France, Italy, Japan, Russia, and Switzerland all had marked decreases.

Trade between Egypt and the Sudan flourished during the half-year, the imports from the latter rising from £E150,195 to £E254.210, and the exports in the opposite direction from £E131,172 to £E207,110. Imports of live stock into Egypt increased from £E189,449 to £E433,418 (50 per cent. per head); hides and skins rose from £E29,618 to £E68,739; gum from £E46,241 to £E226.283; but maize fell off by about 50 per cent. to £E155,803 (about two-thirds less in quantity), and cotton decreased from £E210.099 to £E50,424 (the quantity was about 25 per cent. of that of the previous year). The chief exports from Egypt into the Sudan were :—Sugar, £E289.240 (against £E160,865); cotton piece goods, £E241.658 (against £E157,302); tobacco, £E29.028; and sacks, £E77.037.

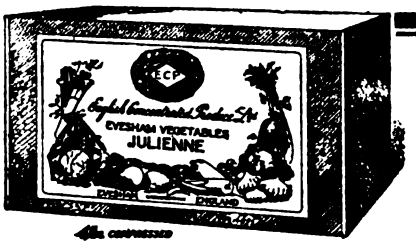
ENGINEERING NOTES.

Motor-Boats for Greece.

It has frequently been stated, even by firms which specialise in motor-boats and launches, that there is little if any opening for these goods in Greece and the Levant coast generally. As a matter of fact nothing is more erroneous, for Greece in recent years has been an importer of motor-boats on an important scale. Greece, with her numerous isles so closely spread all over the Ægean Sea on the east and the Ionian Sea on the west, is considered a veritable paradise for the motor-boat sailor. As soon as the war is over there will be a great demand for motor-boats and launches not only in Greece but all along the Levant. The British firms which are first to make a bid for this trade will acquire an enviable position, owing to the unquestionable superiority of the British article, which is fully recognised in those regions. Egypt and the Sudan also offer exceptional opportunities for the sale of motor-boats and launches. There are the Nile in Egypt, the numerous irrigation canals in the Delta, and the tributaries of the Nile in the Sudan. According to a commercially interested tourist, who has spent days in the Delta on the various canals, and has been towed in a barge from one country seat to another in a mule or donkey hauled barge, the rich fellah would take to the motor-launch as the Venetian nobleman took to the gondola, but he suggests that in order to obtain this result the market needs working. As for the Nile in Egypt it already teems with motor-boats, and their number will rapidly increase after the war. It must be mentioned that French, Italian, and American firms were very energetic before the war in this line of business throughout the Near East, and have, apparently, been satisfied with the results, for they seem already to be prepared to renew their activities after the war.

Boilers and Engines.

In a foreign consular report "the importance of the Greek market for boilers and all kinds of engine accessories" was pointed out to manufacturers and others, with the assertion that the demand for machinery will be brisk owing to the important works contemplated, and to the eventual development of certain local industries. It is natural that, in the present circumstances, and in view of the forthcoming trade-struggle, every manufacturing country should look out for markets with the best possibilities for business, and Greece as well as other Balkan States will, of course, attract the attention of these countries, allied or friendly, as good markets. With reference to boilers and engines, there is no doubt that there will be a great demand for them, but manufacturers should be reminded that a considerable part of it will be from inland or hilly districts, and firms which can supply boilers and engines that can be easily transported into these districts will have better opportunities in such cases. The want of suitable roads for vehicular traffic, and the conveyance of heavy machinery is often responsible for the backward condition of many rich and fertile agricultural districts in the Near East, and it is known that the difficulty of transport more than the want of means has been impeding the introduction of mechanical means for the development of the industrial and agricultural resources of inland or hilly districts. A machine whose heaviest part is over three or four hundredweight is beyond the available local means of transport through narrow, hilly paths, and, of course, the handling of a solid steam boiler of, say, even three or four horse-power, is out of the question. In recent years some French, Swiss, and American firms introduced certain designs of sectional boilers which facilitated the erection of such boilers of large power in districts where but a few years ago it would have been thought an impossibility. In this country, however, although machines and even engines can be procured with light detachable parts for such transport, there are only one or two types of detachable boilers which are known and have been tried in some of the hilly Near Eastern districts, but the results, it is said, have not been quite satisfactory. Since then other designs have come out, and the old have been improved, and manufacturers of these sectional boilers should give special attention to the markets in the Near East, and bring their productions to the notice of the people there, giving full particulars of the advantages offered by their goods. The results will undoubtedly be satisfactory, for any machine or mechanical appliance of British construction has always a preference there. It would be an advantage if the weight of the heaviest part of such sectional boilers were mentioned in advertisements or correspondence.



LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The strike in the spinning section of the industry has overshadowed all other matters in the market this week. Negotiations for a settlement have taken place in the Manchester Town Hall, and continued at the Board of Trade and Ministry of Labour in London, and it is expected that before the end of the week the dispute wil be over. Naturally trade has been thoroughly disorganised. Neither buyers nor sellers have been prepared to enter into transactions of importance. A slump has occurred in American cotton rates as a result of the United States Government deciding to investigate the question of fixing prices. There is no setback to the healthy outlook for the Egyptian growth. Most producers of Egyptian yarns have refused to quote. In view of the output not being equal to the requirements of users, the stoppage of the mills for a few days is a very serious matter. The execution of Government contracts is being delayed. Business in piece goods for Egypt has been somewhat interfered with by the Jewish holidays. A considerable inquiry has again been met with, and it seems almost impossible to satisfy the wants of dealers in Cairo. Only occasional bids have been mentioned in cloth for India. Trade in American yarns has been almost at a standstill. Spinners when they have sold have demanded very full prices. There has been no activity whatever in export yarns. On Wednesday the operatives on strike decided to recommend the branches to accept the Prime Minister's proposal to return to work and submit the matters in dispute to an independent tribunal. It was agreed to meet again on Friday. There is every probability of work being resumed on Monday.

COMPANY NOTES & REPORTS

Smyrna-Aidin Railway.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended June 30 states that the Ottoman Government still remains in possession of the railway and its revenues. In accordance with the scheme approved by share and debenture holders in June, 1915, debenture interest has been since met by the issue of deferred certificates. That scheme covered a priod of three years only, and it became necessary to make other arrangements to take its place in consequence of the continuance of the war. A new scheme was accordingly submitted, and was unanimously adopted. It was framed in the main on the lines of that of 1915, but its term was fixed at eighteen calendar months from the half-yearly day of payment of interest on the first and second debenture stocks which shall first occur after the termination of the present war, and it further provided that while deferred certificates shall not be issued to debenture holders during the continuance of the scheme, their claims for interest shall be satisfied on its conclusion by payment in cash or by conversion into stock with simple interest at 5 per cent. The scheme also enables the council to make use of the small remaining balance of the reserve fund for meeting the necessary expenses of the London office and the allowances to the leading members of the Smyrna staff now in this country. The council have decided to convert the deferred debenture interest certificates already issued under the 1915 scheme into 4 per cent. and 5 per cent. debenture stock, and this will be carried into effect as soon as the rate of income-tax and its method of payment have been arranged with the Inland Revenue. Meeting, Winchester, House, E.C., 24th instant, noon.

Bank of Bombay.

The net profit for the past half-year amounted to Rs16,19,841, to which has to be added the balance brought forward, Rs3,27,470. A dividend at the rate of 15 per cent. per annum, free of income tax, is recommended, and a bonus at the rate of 2 per cent. per annum, free from income tax; also a special jubilee bonus at the rate of 1 per cent. per annum, free from income tax; transferred to reserve fund, Rs5,00,000; to pension fund, Rs.50,000; carry-forward, Rs4,97,312.

Bengal Iron and Steel.

At separate general meetings of the holders of the founders' and ordinary shares of the Bengal Iron and Steel Company, and also at an extraordinary meeting on September 18 at the Cannon Street Hotel, E.C., Mr. William Turner MacLellan, C.B.E. (the chairman and managing director), presiding, the resolutions passed at meetings held on August 29 last approving (subject to the sanction of the Court) the scheme for the reorganisation of the share capital by the consolidation of the ordinary and founders' shares into one class of ordinary shares were unanimously confirmed.

Bengal United Tea.

The report of the Bengal United Tea Company states that a dividend is recommended of 10 per cent. (20s. per share), less tax, on ordinary shares for year; £4,048 forward. Last year, 20 per cent., making 25 per cent. for year; £5,000 written off Chundowa Garden; £2,000 to hail reserve fund; £11,980 forward, subject to war tax.

Barsi Light Railway.

The directors of the Barsi Light Railway Company, after transferring £1,035 to reserve account for the equalisation of dividends, etc., recommend a final dividend of 3 per cent. (6s. per share), making a total distribution of 6 per cent. for the year to March 31 last.

Dividends, Payments, etc.

Khedivial Mail Steamship.—On 30th inst. dividend at 5½ per cent. per annum on Preference shares, less tax at 5s. 6d. in the £, for six months to June 30 last, will be paid at Glyn Mills Currie and Co., London, against coupon No. 40. Transfer books will be closed from 23rd to 30th instant, inclusive.

The directors of the National Bank of India have declared an ad interim dividend for the half-year ended June 30 at the rate of 20 per cent. per annum, free of income tax.

The directors of the General Ceylon Rubber and Tea Estates have declared an interim dividend of 5 per cent. on account of 1918, payable October 15, free of tax.

The numbers are announced of Piræus, Athens and Peloponnesus Railway Four and a-Half per Cent. bonds drawn for repayment at par on October 15, at Messrs. R. Rapnael and Sons, Austin Friars House, E.C.2.

The directors of the Mysore Gold Mining Company have declared an interim dividend of 2s. 6d. per share (less tax at 5s. 9d. in £) on account of the year ending December 31 next, payable on October 12 to holders registered 18th instant.

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah.—Production for the week, 21 tons (against 21 tons). Hurghada.—Production for the week, 20,270 tons (against 2,717 tons).

British Burmah Petroleum.—Production by this company and the Rangoon Oil Company amounted to 80,589 barrels for August.

CYPRUS OIL TRUST.

The following circular has been issued to shareholders of the Cyprus Oil Trust, Ltd.:—I am pleased to inform you that arrangements have just been concluded for providing further working capital and proceeding at the earliest possible date with the work on the company's properties. Pending the acquisition of proper drilling plant, instructions have been given to our representative in Cyprus, Mr. Samuel Perkes, F.R.G.S., to recommence the sinking of the hand-dug wells, in order to prove the existence of oil in the new areas. You are probably aware that eighteen hand-dug wells have already been sunk on the properties, and limestone impregnated with petroleum of high quality has been met with. As can be seen from the following extract from the report of Dr. Arthur Wade, B.Sc., A.R.C.S., F.C.S., the existence of oil is practically certain. He describes the formation as—"A gigantic anticline, evidently parallel with the main line of structure in the neighbouring districts of Asia Minor (the mainland, distance 40 miles). The structure of the central limestone axis here is that of a huge fan-shape fold. The chief evidences of petroleum products are in the great limestone series. It is frequently a dense black crystalline limestone which smells strongly of bituminous matter when broken. Its black colour is due to the presence of hydro-carbons, which are volatilised when the limestone fragments are submitted to heat." A portion of the impregnated limestone taken from one of the hand-dug wells has been analysed by Sir Boverton Redwood, Bart., who states in his certificate that it contains petroleum of high quality. We would remind shareholders that the five properties over which the company hold licenses from the Cyprus Government to prospect for oil extend to an area of 1,260 acres.

TRADING WITH THE ENEMY.

The Foreign Trade Department has just issued a new consolidating list containing the names of over 3,500 persons and firms with whom persons in the United Kingdom are forbidden to trade under the Trading with the Enemy (Statutory List) Proclamation. Although the statutory list has now been in existence for nearly two years, cases still come to the notice of the Foreign Trade Department in which firms are corresponding with persons on the statutory list, and they not infrequently give as an excuse that they have never heard of the list. It is important that everyone engaged in foreign trade should realise that he is under an obligation to make himself familiar with the statutory list and to observe it in his dealings. Failure in this respect renders him liable to the heavy penalties provided by the Trading with the Enemy Acts, and these apply to holding any communication whatever with anybody on the statutory list and not merely to entering into an agreement or continuing to carry on business with such persons. The statutory list is published at intervals in a consolidated form and additions are made approximately at intervals of a fortnight. Copies may be obtained at a small cost from the Superintendent of Publications, His Majesty's Stationery Office, Imperial House, Kingsway, W.C.

Advices from Paris state that negotiations are taking place for the issue of a Roumanian loan of two milliards of lei.

NEWS FROM ALL SOURCES.

Contributions to the Second Indian War Loan amount to more than 30 crores of rupees.

According to information from Bâle, the new Turkish loan concluded at Berlin amounts to £T45,000,000.

A recent forecast puts the Greek currant crop at 140,000 tons. In addition 40,000 tons of last year's crop are available for export.

The charter of the Bank of Algeria will expire at the end of 1920, and a Bill has been introduced into the French Chamber for a renewal for 25 years.

The Turkish member of Parliament Nuri has been sentenced to three months' imprisonment for illegal speculations in sugar. This is the first time, it is stated, that a Turkish deputy has so been punished.

The Punjab Government have under consideration proposals for providing additional bridges on the Kangra Valley cart road and improvements to the Pathankot-Dalhousie Road in the Gurdaspur district.

The Lieutenant-Governor of Burma has rejected an appeal for clemency on behalf of A. F. Mathol, a Dutch subject, who was sentenced to three months' simple imprisonment for concealment of enemy assets.

A notification has appeared in the Ceylon *Government Gazette*, stating that the export duties on copra and coconut oil, previously suspended to June 1, have been suspended from that date for a further period of six months under the same terms and conditions.

According to the Vienna *Zeit*, the Hungarian wheat crop is very poor, probably half a million tons less than in 1917. The maize prospects are said to be very good, and the potato crop is estimated at four million tons. Peas, beans and other vegetable crops, and the fruit crops, are all extremely good.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated September 11:—

Rainfall is general. Floods are continuing in Bengal.

Fine broach September delivery quoted 922 Rs. a candy. Piece goods market steady, though certain staple styles have experienced a fall. The resolution on cloth control caused a fall in local and Japanese goods.

A bill to take powers to provide for cheap supply of cotton cloth for poorer classes was introduced into the Imperial Legislative Council on September 4. A full copy is following by post. A Bill to regulate trade in non-ferrous metals has been introduced into the Legislative Council.

The Indian Tea Association is pressing for the prohibition of import into India of Java tea.

RAILWAYS IN MOROCCO.

There is some talk, says a Paris contemporary, of establishing five principal lines in Morocco, one of which will start from Tangiers to Fez. Four other lines, forming a total of 600 kilometres, in Western Morocco, will permit of rapid connection between Rabat and Casablanca on the one hand and the important towns of the interior, such as Fez and Tangiers, on the other. The fifth line—300 kilometres long—will start from Fez, at the entrance of Eastern Morocco, as far as the Algerian frontier, where it will connect with the Algerian system, which will allow of expeditious relations beween Casablanca and Tunis.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business again this week in Egyptian shares has been exceedingly restricted. The Egyptian buyers have practically not been in evidence at all, and here there have only been a few scattered local transactions. In Government stocks there is absolutely no change to record.

Amongst Bank shares, Nationals are ⅛ down at 20¾, while Agriculturals have improved 1-16 to 7 1-16 on some local inquiry. The other bank shares have remained stationary. In Railways, Egyptian Delta Light Prefs. are 1-16 quieter at 7 7-16.

Amongst Land descriptions there have been small transactions in Aboukirs round the current level, and Delta Lands have changed hands in a small way at a decline of 3d. to 16s. 6d. For Egyptian and Foreign Trusts there has been some demand and a fair amount of business round the current price. In New Egyptians there is a fractional decline of 3d. to 22s., with a certain amount of business passing. Union Foncières are 6d. quieter at 73s. 3d., but orders to buy these shares for Egyptian account at slightly under the present price are in the market. United Egyptian Lands are slightly easier at 2s. 6¾d.

In Miscellaneous descriptions, apart from a reaction of 1s. 6d. in Khedivial Mails to 61s., there is no change to report.

In Greek securities the market has continued a buoyant one, and a fair amount of business has been transacted in the 1884, 1890, Monopoly and Rente loans, the higher prices having brought in some sellers. The 1881 and 1884 Loans close 3 points up at 75. The 1890 Loan has risen 4 points and also stands at 75. As regards Monopolies, an advance of 1½ to 68½ has to be recorded, and Rentes have risen one point to 59. A similar advance of one point has taken place in the 1902 Loans to 69. In Greek banks, Ionians are ⅛ up at 5½.

EAST INDIAN COTTON.

The following are the new regulations respecting the purchase and sale of East Indian cotton:—

Official Values and Maximum Prices.—The official values of East Indian cotton on and after August 30 will be based on the f.o.b. prices ruling in Bombay for fine M.G. Broach, fine M.G. Oomra (staple), fine M.G. Bengal, and not as heretofore on the official price of middling American. The official values of other growths and grades of East Indian cotton will be fixed on the basis of the official values quoted for the three descriptions named above, and at the differences between growths and grades, as quoted from time to time by the East Indian Quotation Committee.

The official value of fine M.G. Broach will regulate the quotations, and for valuations for Surtee, Cambodia, Tinnivelly, S.G. Dharwar, Comptah, Western, Coconada, and China. The official value of fine M.G. Bengal will regulate the quotations, and for valuations for Bengal and Scinde descriptions.

The deductions to be made to obtain the official value of c.i.f. cotton will be 25 points.

Anyone requiring official values of growths and grades of East Indian descriptions not quoted by the East Indian Quotation Committee should submit samples to the East Indian Appeal Committee of the Liverpool Cotton Association for valuation. The maximum prices allowed are 5 per cent. over the official values.

Reserve Fund - - - - Rs.56,00,000

Head Office: MADRAS.

Branches.—Alleppey, Bangalore, Bimlipatam (*Outstation*, Vizianagram), Calicut, Cocanada (*Outstations* Narsapur and Rajahmundry), Cochin, Coimbatore (*Outstation*, Erode), Colombo, Guntur (*Outstation*, Bezwada), Madura, Mangalore, Masulipatam, Negapatam, Ootacamund, Salem, Tellicherry, Trichinopoly, Trivandrum, Tuticorin, and Bellary.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer*

BANK OF BENGAL.

Capital, Fully paid up.. .. .. .. Rs.2,00,00,000
Reserve Fund Rs.1,58,50,000
Reserve for Depreciation of Investments Rs. 67,58,000

Head Office: CALCUTTA.

Branches: Clive Street, Park Street, and Burra Bazaar, Calcutta, Agra, Akyab, Allahabad, Benares, Cawnpore, Chittagong, Dacca Delhi, Hyderabad (Deccan), Jalpaiguri, Lahore Lucknow, Moulmein, Nagpore, Naraingunge Patna, Rangoon, Secunderabad (Deccan), Serajgunge, Simla.

Agency in Bombay: Elphinstone Circle.

Current Accounts opened free of charge. Fixed Deposits received at interest.
Government and other Securities received for safe custody; purchases and sales effected.
Interest collected and Remittances made.
Loans and Cash Credits granted. Discount Accounts opened and approved. Mercantile Bills discounted.
Savings Banks Deposits received and interest allowed

Copies of Rules, Rates, etc., may be had on application at the Head Office and at any of the Branches.

By order of the Directors,

N. H. Y. WARREN,
Secretary and Treasurer.

NOTES OF THE WEEK.

If Palestine calls for first mention this week, it is because General Allenby's success marks a stage virtually completed, while in Macedonia the Allies can only be said to be on the threshold of, it is hoped, important developments. The mission of liberation that has taken the British to Syria will not be finished until Aleppo has been reached, for the Lebanon, whose full tale of suffering at the hands of the Turks has yet to be learned, is situated north-west of Damascus. But if, as seems probable, practically the whole of the Turkish army in Syria has been, or is being, accounted for, there can be no very serious difficulties ahead for the Expeditionary force. Aleppo has been the German-Turkish headquarters for the operations in Palestine and Mesopotamia. A certain number of troops will have been retained in the neighbourhood, and it would be unwise to count upon the surrender of the town at the mere appearance of a British force. There is, however, no need for the experiment. The British now have the situation in Syria and Mesopotamia well in hand, and General Allenby and General Marshall have only to co-ordinate their future operations in such a way that the enemy will be unable to make a serious stand at any point south of Asia Minor.

The course of the operations that led to the capture of the bulk of the Turkish Seventh and Eighth Armies is set out elsewhere in this issue. West of the Jordan the process of rounding up enemy companies that have taken refuge in the hills is being carried out, and the tally of the prisoners already reported as having reached 40,000 is still being taken. The pursuit has been transferred to the other side of the Jordan, where the Turkish Fourth Army must be in an unenviable position. Retreat by the Hejaz Railway has been rendered impossible by the cutting of the line at Deraa Junction. The Turks may try to make good their escape in small parties across the desert, working their way northwards to the east of Deraa; but with British and Indian cavalry on their heels and Arab forces hanging on to their flanks the numbers that succeed in getting away ought to be comparatively small. Not the least noticeable feature of General Allenby's brilliant strategy was this accurately timed cutting of the Hejaz Railway at Deraa. From a French contemporary it is now learned that the Arab force to which this task was allotted, comprising Bedouin and Druses, was under the command of Colonel T. E. Lawrence, an officer whose peculiar qualifications for his present work were earlier in the war in danger of being lost sight of in Whitehall routine.

Nothing in connection with the Palestine victory is calculated to give greater satisfaction in India than the tribute paid to the splendid qualities of the Indian troops. The veteran soldiers of India, as Mr. W. T. Massey states, were expected to do well, and have lived up to their high reputation; but the new troops have also "come through the ordeal magnificently and fought like seasoned warriors." The latter are the product of India's special recruiting efforts, and when the new battalions had to be hurried to the Palestine front to take the place of British troops required in France, considerable interest naturally attached to the first test of their fighting value. Divisional commanders state that they are delighted at the Indians' valour under all conditions; they behaved superbly, it is stated, "their only fault being too great eagerness to push on."

Next Sunday is to be marked in the churches throughout the country by a thanksgiving for the deliverance of the Holy Land from the dominion of Turks. The Archbishop of Canterbury has done well to recommend that in this connection it should also be a subject of prayer "that this great victory may prove to be the inauguration of happier days for the land so sacred to us all." It is a prayer in which our Moslem fellow-subjects and our Arab Allies, both of whom have assisted in the liberation of Palestine, can join. The future government of the country will not prove an easy task, unless it can count upon the good-will and tolerance of the various religious sects. The Turk was incapable of enlightened and progressive administration; but, to give him his due, it has to be admitted that he coped not unsuccessfully with the problem presented by the intermingling of religions at a spot where a vast powder magazine of fanaticism could be fired by the smallest spark. When disturbances have taken place in Jerusalem the fault has not always been on the side of the Moslem. It will be the duty of those responsible for the future administration of Palestine to see that no cause of offence is given to any of the religions to which it is a holy land.

In Macedonia the offensive launched on September 15 has gone forward with terrific momentum. The whole front from west of Monastir to the Struma is now in motion. In the centre the Serbians are astride the Vardar at Gradsko, and have thus driven a wedge into the Bulgarian line. On the west, the Bulgarian forces based on Prilep, which is now in the hands of the French, have the option of trying to outstrip the Serbians in a dash for Uskub, or of seeking refuge in northern Albania. East of the Vardar, where it is

Digitized by Google

probable that the bulk of the enemy's troops were stationed, the Bulgarians offered resistance to the British and Greek forces as long as they dared, and possibly longer than was wise. Their sole line of retreat passes through Strumnitza, and thence on to Ishtip, both of which are threatened by the Serbians from their Vardar bridgeheads. They now run the risk of being caught between converging Allied forces, and if the bulk of them succeed in escaping, it will only be at the expense of much war material, of which the first instalment has already been captured.

The retreat of the Bulgarians in the neighbourhood of Doiran places their forces on the Struma front in an awkward position. To remain where they are will have the effect of immobilising them when the need for reinforcements in Serbia may become acute; to withdraw them up the Struma Valley opens another avenue of advance for the Allies. If disaster should overtake the Bulgarian armies on the Vardar, there can be little doubt that all the troops in occupation of the eastern portion of Greek Macedonia would find themselves urgently needed nearer Sofia. One of the chief preoccupations of the Bulgarian military command at the present moment must be to fix upon a rallying point for their shattered forces, which will at least lend colour to the claims that the withdrawal conforms to some plan. Last week it was suggested that the enemy's main strength was in their front line, and no doubt they had satisfied themselves that it was impregnable. They reckoned without the Serbians. The initial success of the Allies has been such as to justify the greatest possible effort to derive from it the fullest advantages as long as the campaigning season lasts.

The practical value of attempts to gauge the internal situation in enemy countries may be problematical, but we shall not be wrong in ranking the staying power of the Bulgarians some way below that of the Germans. In the first place, they lack the sublime confidence of the Germans in their cause. The latter required no justification for fighting; they were prepared for war and had always intended to declare war as soon as the psychological moment arrived. Only when things began to look ugly was it necessary to discover justifications. The Bulgarians, on the other hand, had to justify their action at the outset. It called for some explanation that they were allied to Turkey and were opposed to the Entente Powers. To some extent their military successes supplied the required justification; but at best these were a poor substitute for a clear-cut issue, and could by no means be guaranteed to remain proof against the assailing doubts engendered by a prolonged war.

Towards the end of August a Bulgarian newspaper urged the necessity of "safeguarding the defensive power of the armed nation." The explanation of the phrase followed: "The soldiers often turn backwards and ask: 'Will the war last long, until when, and why?'" Accordingly it was recommended that prominent public men should proceed to the front to enlighten the troops "on all questions." The system was inaugurated immediately afterwards, and for the sake of the prominent public men it is to be hoped that they were not engaged in their educational task at the moment of the Allied offensive, when the troops turned backwards once more, this time not to ask questions, but to run. The supply of food had become a serious problem, and the Bulgarian lacked the moral incentive to face it as a national duty. The country is normally self-supporting in regard to food supplies; but on August 6 a paper stated: "Many families in Sofia eat only once in twenty-four hours, for the price of foodstuffs does not permit them to make more than one meal." A week later another organ wrote: "For God's sake let eggs be sold at more reasonable prices, as the population has neither meat, nor milk, nor even abundant and cheap vegetables." It is not difficult to understand that, with troops thoroughly war-wearied—for they have been at war virtually since 1912—and with the civilian population suffering from a shortage of food, the *moral* of the country should have been undermined. For this reason the Allied offensive may yet have far-reaching results.

While the success of Allied arms in Macedonia and in Palestine, where a French detachment has co-operated with the British Expeditionary Force, has exceeded expectations, a disappointing check has been experienced in the withdrawal of the British force sent by General Marshall to Baku. Fuller information is required before all the details of the picture can be filled in. The force under General Dunsterville despatched from Enzeli to Baku was not a large one—three units are mentioned, the North Staffords, the Worcestershire Regiment, and the Royal Warwickshire Regiment. In Baku they relied upon the support of about 7,500 Armenians and 3,000 Russians. The former soon proved untrustworthy; on August 17 they refused to fight, and caused the failure of a local attack organised against a Turkish enveloping movement north of Baku. By the end of August the position had become untenable, and on September 1 definite orders were issued for the evacuation of the British troops. The promise of Russian reinforcements from the north and the refusal of the Russian fleet to countenance the British withdrawal prevented this order from being carried out, and it was not until September 15 that, after a fight lasting sixteen hours, "the brunt of which was borne by the British," our troops evacuated Baku.

The official narrative, it has to be admitted, does not afford pleasant reading. General Marshall could not expect to be perfectly informed regarding the situation in Baku. He had to take much on trust, and the principle of sending what help he could was sound. The event has shown that once more a boy was despatched on a man's errand, with the inevitable result. It would have been one of the finest episodes in the war if a British General, with a handful of British troops, had succeeded in organising the mixed population of Baku into a homogeneous army, and had gradually regained Trans-Caucasia for the inhabitants. In the place of this picture we must imagine a town all sixes and sevens, with little cohesion between the elements, whose ostensible purpose was to combine in order to defeat the common enemy. The blame is laid at the door of the Armenians. We may withhold judgment until the full story is known. If treachery there were, it will have profited the authors but little. Baku has been occupied by the Turks, and if it is not actually in flames, we may at least credit the report that represents the town as being handed over to organised pillage and outrage.

The failure at Baku means that there remains yet another portion of mighty Russia waiting to be cleaned up after the Bolshevik orgy. The position in the Caucasus has long been obscure, and the tragedy of Baku has not helped to clarify it. It is known that Trans-Caucasia tried to combine to form a Republic or Federation, and almost immediately dissolved into its component parts. Then followed feverish overtures to Germany and Turkey, with a conference in Constantinople, at which representatives claiming to be duly constituted delegates of their respective peoples foregathered from the Caucasus. The Conference does not seem to have been able to arrive at any understanding, and stood adjourned to enable individual delegates to obtain inspiration or instructions in Berlin. As there were Armenian representatives at the Conference, who made no secret of their readiness to draw up a *modus vivendi* for their own people which should be agreeable to the Turks, it will not appear so strange that Armenians in Baku were led to believe that they might with advantage come to terms with the Turks. They will by now have been undeceived.

Although we can afford to treat the Baku reverse lightly, there must be no repetition of failure further south. As the position is now understood, General Marshall's army holds a line from Baghdad to Enzeli, by way of Kermanshah and Hamadan. The object of that line was not to forward supplies to a handful of

Digitized by Google

men in Baku. It was meant as an impassable barrier to Turco-German designs on Persia and beyond, and for this reason it must be maintained until the barrier has been moved forward or all danger of enemy intrigue in this region has been eliminated. Fortunately, any encouragement that the Turks will have derived from their success on the Caspian Sea must have been damped by the course of events in Palestine and the uncertainty of the position in Macedonia. But it would be a grave misfortune if General Marshall were to feel constrained to remain on the defensive on account of this formidable increase to his lines of communication. There is no indication, as far as is known, of his adopting this attitude, but the Baku incident is a warning against the failure to see that these expeditions are supported to the extent that their commitments render necessary.

Evidently German *Kultur*, which has shown its normal attitude towards women by such actions as the sinking of the Lusitania and its treatment of Edith Cavell and others in Belgium, finds it difficult to reconcile itself to the continued presence of Queen Marie in Roumania. The intrigue against her is taking the usual form. An inspired Berlin telegram reports that an agitation is on foot in the non-occupied parts of Roumania for a renewal of the association of Roumania with the Entente and for a fresh declaration of war against the Central Powers. The soul of the movement, it is stated, is the Queen, who does not conceal her pro-Entente sympathies and feelings. Queen Marie has met this tentative offensive in characteristic fashion. To a Hungarian newspaper representative she has declared: "The accusations that I have been working against the Central Powers do not trouble me at all. I have simply done my duty in encouraging my soldiers, in cheering up a defeated army, and in distributing food and clothes to a starving people. My conscience is clear, and I defy all calumnies. No one can rob me of the love of my people. Our common sufferings have but brought us more closely together."

The formal recognition by Italy of the Jugoslav free State that is to be marks a definite stage towards the final settlement of the Near Eastern Question. It is not necessary to recapitulate the history of the controversy that lies behind the announcement now made by the Rome Government. Italy has informed her Allies that she "regards the movement of the Jugoslav peoples for the acquisition of their independence and for their constitution into a free State as being in harmony with the principles for which the Allies are fighting, as well as with the aims of a just and durable peace." This declaration would not have been made unless the certainty existed that Italy and the new Jugoslav State will be able to arrive at an amicable agreement regarding the delimitation of their joint frontier on the eastern coast of the Adriatic. It is to be hoped that it means more, namely, that a detailed agreement on this point is in course of preparation, if it has not already been drafted. Not only will such an agreement give the death-blow to Austro-Hungarian hopes of a breach in the Allies' political front, but it will also enable the Allied Governments to give their serious attention to the remainder of the Balkan settlement. With the Jugoslavs assured of their western frontiers, the question of Macedonia has now to be decided on the principle of nationality, and in such a way as to give reasonable security for the future peace of the Balkan Peninsula. Nothing is to be gained by postponing this problem.

Such news as has reached this country since we last reviewed the political situation in India indicates that the process of differentiation has made substantial progress, and the division on the motion to increase military expenditure, when eighteen "Moderates" were opposed by five "Extremists" may probably be taken as giving a just idea of the relative strength of parties among responsible people outside as well as inside the Legislative Council. Unfortunately, the irresponsible element has also to be reckoned with, for under the existing constitution noise is the most important thing, and in India, as elsewhere, noise and responsibility do not often go together. We look to the new committee—the composition of which has not yet been announced—to redress the constitutional balance in this respect, and meanwhile we must accept the fact that irresponsible opinion exists, whatever value we may choose to assign to its existence.

We are glad to see, by the way, that the "Moderates" are looking for a more suitable name. Moderation in politics is an excellent thing, but, considered as an oriflamme, the word is certainly uninspiring, and something better is wanted if the party is to take its proper place. In Bengal, at least, the Moderates are now "National Liberals," a tolerably good choice, for Liberalism is at once attractive and respectable, while a reference to nationality was inevitable in the circumstances. What to call the other party is still doubtful. They modestly disclaim all pretensions to the name of Extremists, while "Nationalist" is too remote from the facts to secure general acceptance. "Besantine" has the great merit of coming near the truth, and if the word was first used in derision it may fairly take rank with Whig and Tory, which have changed their significance more than once.

It has now become clear that woman suffrage is put forward as a definite plank in the Besantine platform, though some time must elapse before we can be sure whether business is meant, or merely window-dressing, with, perhaps, a compliment to the founder of the party. The subject has received little attention in the political writings of the past year, and we can find no reference to it in the Montagu-Chelmsford report, but it is quite certain that if the women of India ever really want votes they will give the men no peace till they get them. The United Kingdom has set a precedent which is likely to be used as a lever in more countries than India.

On the personal side, the line of cleavage between the parties appears to be very much what might have been expected. We have heard some expressions of surprise that Pundit Madan Mohan Malaviya should have been found in the Extremist lobby, but it must be remembered that the division in question related to the increase of India's contribution to the war, and the Pundit has always been known for the eccentricity of his views on economics and finance. He was almost alone in his opposition to the hundred-million contribution voted last year, and his hostility to the new proposals is not by itself sufficient to show that he has passed definitely to the Extreme Left. Apart from him, we gather that the strength of this party will be in the South and East, rather than in the North and West of the country.

We have heard no criticism in this country of the proposal which the Pundit so vigorously assailed. Were India condemned for all time to the status of a Dependency, it might be argued with some force that the extraction from her of any contribution to the expenditure of the Empire would be an unjustifiable exercise of authority, but when she can look forward to attaining the rank of a self-governing and self-respecting nation the position is entirely different, and we fancy that the great majority of the unofficial legislators who cheerfully accepted the burden will be found to have acted with true political insight. Self-respect is worth a good deal of money, and the India of the future will be grateful to the men who authorised this investment.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 26.

"Our Day."

Sir Reginald Wingate has addressed a letter to the local Press in regard to the fourth "Our Day" appeal on behalf of the funds of the British Red Cross and Order of St. John, which is to be held in Egypt and the Sudan on October 23. Sir Reginald refers to the generous response made last year, when over £E150,000 were subscribed, and expresses the hope that an even greater effort will be made by these two countries this year, in view of the continued prosperity which they are both enjoying. That the Egyptians themselves will respond liberally to this appeal there is little doubt; for in each of the three past years they have figured very prominently in the subscription lists; but what one would like to see is a more liberal and general response on the part of the local non-Egyptian element, which has made small fortunes out of war contracts, but which has in the past not shone by any extensive contributions to war charities. It certainly does not speak much for the finer feelings of its members that this element, which has been enabled to make its money solely through the protection afforded it by the British Navy and Army, should so deliberately have held off from sending contributions to such charities as the Red Cross and similar organisations, contributions which might be regarded as an expression of gratitude for the peace and prosperity that the men whom the money is intended to assist have granted it. Could this element only be brought to a sense of its obligations in this respect and give proper expression thereto, then Egypt's contribution to "Our Day" might well rank with the largest from any dependency within the Empire. But it is to be feared that it is hopeless to expect this element to have any other ideal than that of its own pocket.

His Highness the Sultan.

H.H. the Sultan has once again given a lead to his subjects by heading the list of "Our Day" with the handsome subscription of £E1,000. Taken in conjunction with his more recent monetary presents to the hospitals, this is clearly an indication that he is actuated by the same charitable and generous instincts as his illustrious brother, the late Sultan Hussein. This last week his Highness attended a display organised by the Alexandria Fire Brigade, which was given at the Kom el Dik Station, and proved most successful. He also visited the docks, where he inspected the hydroplanes of the Royal Air Force, and eventually took a flight in one of the balloons. The Sultan, who was accompanied by his Grand Chamberlain, Said Zulfikar Pasha, and a British officer, went up to the height of 500 feet, and greatly enjoyed the novel sensation.

Apropos of the Royal Air Force, the Handley-Page machine which recently flew over from England is attracting much attention. It is to be seen almost every day flying over and round Cairo, and the Prime Minister shortly after its arrival paid a visit to the aerodrome in order to inspect it and meet its crew.

The Holy Carpet.

The first of the ceremonies connected with the departure of the Holy Carpet for Mecca took place last Saturday, which, as usual, was kept as a Government holiday. The Prime Minister, Sir Hussein Rushdi Pasha, presided on behalf of the Sultan over the ceremony, which consisted in the removal of the "Kiswa," as it is called, from the Koronfish quarter, where it is made, to the Husseini Mosque, where it will remain until the time comes for the caravan to leave from Suez *en route* for Jedda and Mecca. Once again the British Army has presented the camel which is to carry the "Mahmal," a graceful attention which has made an excellent impression on the Faithful. The number of pilgrims who will accompany the caravan this year has now attained 450, and the Egyptian Government has chartered two steamers to convey them as well as the Carpet and its escort to and from Jedda.

War Gratuities to Government Officials.

The Committee appointed to investigate the question of the war gratuities to be accorded to Government officials has not yet come to any definite decision, and all rumours in this connection are consequently unfounded. It is generally conceded that something on a more extended scale than the bonuses accorded last August will have to be done, if proper relief is to be given to all the elements requiring such assistance. On that occasion war gratuities of £E1 per month were accorded to all employees drawing up to £E200 per annum, and £E327,000 was spent in the last financial year, whilst £E564,000 has been set aside in the current Budget for this purpose. The increase in the cost of living has, however, gone on by leaps and bounds, until to-day only the most highly paid are able to make both ends meet, and live in a reasonably respectable manner. Especially is the present state of affairs hard on those with families, or who, through war regulations, are being compelled to keep up two establishments, whilst the stress and the strain imposed on all and sundry through the extra work entailed by the war render it more than ever necessary that they should be able to secure proper nourishment and extra distractions, both of which are daily becoming more and more expensive and difficult to obtain. It must be granted that the Government is faced by a very difficult financial problem; but there seems little doubt that it will have to follow the example of other Governments and of all the local commercial establishments, and give its employees the relief which the situation calls for; and that it would be fully justified if it provided the wherewithal by imposing extra taxation on the agricultural element, which has derived such enormous benefits from the war.

The Y.M.C.A. in Egypt.

A further illustration of the activity of the Y.M.C.A. in this country has just been afforded by a ceremony which took place last week in the Ezbekia Gardens. Part of these gardens has since the early days of the war been turned into a club and recreation centre for the local garrisons. Considering the quarter in which it is situated, this centre has been a veritable godsend for the troops, who have fully appreciated all the trouble which has been taken by the Y.M.C.A. and Cairo residents to provide them with good food at reasonable prices and healthful distraction. The ceremony to which I refer was the inauguration of a swimming bath, which has been erected in the gardens for the use of the troops, and which will prove a positive boon to them during the summer months that still remain. The opening ceremony was performed by General H. D. Watson, the G.O.C. the Forces in Egypt, and an aquatic gymkhana, which followed, fittingly inaugurated the bath.

In connection with the Y.M.C.A. and the question of providing distraction for the troops, an interesting event took place on Saturday evening at the Gezira Sporting Club, where the various concert parties working in the Cairo district were entertained on the golf links to dinner followed by a concert. The work of providing concerts, etc., for the hospitals and depots in Cairo has been organised during the past four years by the Soldiers Entertainments Committee, a branch of the War Committee of the Y.M.C.A. so ably presided over by Mr. R. E. Monteith Smith, of the Ministry of the Interior. This committee has financed and equipped scores of parties, who have done no end of good work by providing most welcome entertainment for the men stationed in Cairo. It was a very graceful act on the part of the Entertainments Committee to bring all these parties together in this manner; and the attention, which, as Mr. Monteith Smith said, in a short speech at the close of the dinner, was intended as the committee's recognition of the efforts of the parties, was greatly appreciated by the members, of whom over seventy were present.

Bathing Fatality.

A very sad accident is reported from Brulos Beach, the new seaside resort on the Mediterranean, midway between Alexandria and Port Said, where Mrs. Blunt, the wife of Col. E. G. Blunt, Director of Supplies,

Digitized by Google

Egyptian Army, and Mr. A. H. Sharmann, Director of the Saidia Training College, Cairo, were drowned while bathing on Saturday morning. There were no eye-witnesses of the accident, which only became known when Mrs. Blunt's parasol was found on the beach, and no trace of her was forthcoming. Search was made, and at about 2.30 in the afternoon her body was found washed up on the coast further away. Mr. Sharmann's body was found next morning; and both were conveyed to Baltim, where they were buried in a little cemetery created for the burial of some sailors whose bodies were washed up at Brulos a little while back, the service being conducted by the Rev. R. Armstrong, assisted by Canon Gardner. There are always very treacherous currents along the north coast, and it is surmised that one of these must have caught and carried away the two victims, whose untimely death has cast a gloom on the Anglo-Egyptian community, of which they were well known and popular members.

GREECE AND GREAT BRITAIN.

A Parallel.

Speaking at the dinner given by the Federation of British Industries to the Greek Commercial Mission, M. Caclamanos drew a very happy comparison between the Greeks and the British. He said:—

The bonds of mutual sympathy and appreciation between Great Britain and Greece date far back into the past. As I retrace the course of history, I see our two nations divided by a whole continent, yet closely linked together by an essential affinity of character. We are both maritime peoples, rejoicing in the blue sea and full of the spirit of joyous adventure into unknown worlds. From the pure, free sea breezes we have both absorbed into our life-blood that passion for freedom which dominates our whole history, and which to-day impels us to fight side by side against the enemy of freedom masquerading in a mantle of *Kultur*. The genius of the two races has developed on parallel lines in the highest spheres of intellectual and artistic endeavour. Nowhere is the spirit of ancient Greece better understood, nowhere has it been more successfully given a modern framework and development than in England. Yesterday I was reading again the account in Thucydides of the great Funeral Speech of Pericles over the Athenians who fell in the first year of the Peloponnesian war, those Athenian young men who remind us in such a striking manner of the heroes who fell on the battlefields of Flanders, Macedonia, and Asia Minor. Again and again I came across sentences which, written over two thousand years ago, seemed to sum up with supreme felicity the spirit of your England of to-day. Here is one striking passage:—

> We differ also in the conduct of war from our enemies in this: we throw our city open to all men, nor do we ever deny to the strangers, by banishing them, the learning or seeing of any of those things which, if not hidden, the enemy might reap the advantage by; not relying on secret preparations and deceit, but on our own courage in action. And as to our methods of education, our enemies aim at attaining manliness directly from their youth up with laborious military exercises, and yet *we*, that live remissly, advance no less boldly than they, against equal dangers.

Or again, what could be more true of the British Empire than this?

> No enemy hath yet met our whole force at once, both because we apply ourselves much to navigation, and by land also we send many of our men to foreign countries. But if, when fighting with a part of our forces, our enemies chance to get the better, they boast they have beaten the whole. And yet, though we live in ease and leisure, and though our valour arises from a natural disposition rather than from laws, yet we are willing to undertake any danger; we faint not beforehand at the coming troubles, and in action we are not less confident than they that are ever toiling.

Or this again in a lighter key:—

> We have also found out many ways to give our mind recreation from labour by the institution of games and by the handsome entertainments of private men by the daily delight whereof we expel sadness.

Ties of centuries founded on striking affinities, on equal devotion to freedom and justice, have been strengthened within the last hundred years. I shall not insist on this. It is only necessary for me to pronounce the names of Byron and Shelley. It is right and fitting that they should be supplemented by links of a more material nature. Nature herself has provided for close economic relations between your country and mine. Both are essentially maritime countries. The sea-routes on which Greece lies are of vital importance to British interests. On the other hand Greece, in political and industrial development alike, looks up to England as a leader, as a master in whose footsteps she follows. Incidentally, I should like to mention to you this simple fact: that when in Greece someone, the man in the street, wishes to praise a given article, the hall-mark of his approval is to say: "Oh, it must have been made in England." It would, I think, be impossible to find a higher compliment for British industry or a more significant indication of the future which lies before it in Greece.

What are your Natural Products?

We are interested in the Natural Products of your Country and desire to negotiate with you for the purchase of large or small consignments. We are particularly interested in

COCONUT OIL
PALM OIL
MAIZE
OIL NUTS
OIL SEEDS
KERNELS
COPRA
IVORY
GUMS
GRAIN
FIBRES
RUBBER
COTTON

Will you let us know what Products you can offer?

We are prepared to finance consignments when necessary.

ROUMANIAN NOTES.

(From a Correspondent.)

Forced Labour.

The German Administration has taken strong measures to ensure that the cultivable land should be sown, and that nearly all the production should go to Germany. A system of forced labour has been introduced, and the Roumanian Government has been compelled to endorse this Draconian measure. In order to secure the production of the Roumanian soil for a long period, the Germans have arranged that the lands can be leased to German associations, German subjects, or people favourable to them. The contracts are made for a long period of years, and bind the landowners to pay heavy sums if they desire to cancel the agreement. The forced labour reminds one of the feudal system, but is far worse. All the peasants, men and women, are put at the disposal of the Labour Controller, and they may be sent any distance from their homes and villages at the will of the administration. Men between fourteen and sixty years of age and women from fourteen to fifty years are subject to compulsory labour. The peasants are given a certain number of days to work their fields, and afterwards they must work for the landowners or any person who can produce a written order issued by the Chief Administrator of the district. Most severe punishment awaits those who refuse to obey the orders, or are considered not to work diligently. The difference between this Prussian system of forced labour and the feudal system is that the Prussians of Roumania can send the land-workers as far away from home as they like, family ties not being respected; the husband can be separated from his wife, the daughter is taken to work miles away from her parents. One can easily imagine the abuses committed by an enemy who seems to glory in his immorality.

When the army was demobilised a great number of soldiers residing in Wallachia preferred to remain in Moldavia and Bessarabia rather than return to the occupied part of the country and be humiliated by the Germans. The discontent of the peasantry is so great that on many occasions the windows of trains in which members of the Government, or M. Marghiloman, the Premier, have been travelling have been smashed when the train was passing through the villages. By taking the peasants from their fields and forcing them to work for the owners of property, the Germans have succeeded in firing the hate of the great masses of the Roumanian population. The situation becomes more and more dangerous, because famine faces the peasants, their fields being badly cultivated and the production very poor; and meanwhile they have been forced to cultivate the land of the rich to secure food for the Germans. Great landowners sympathising with the Entente were not able to get a sufficient number of workers for their fields. Under the same law all agricultural implements, from a hoe to a threshing machine, are declared to be "requisitioned," and the owner is compelled to hand them over to other people wanting them.

The peasants are forced not only to work in the fields, but they are sent into the mountains to cut wood needed by the Germans. A forestry specialist has been nominated Chief of Forests. His first care during the occupation is to ask for peasants and to force them to cut down the forests and transport the wood to Germany and Austria.

A Prussian Pooh-Bah.

By a special law the Germans have a very strict control over all the imports and exports of the country, as well as over the food production. The Director-General (M. Antipa, a very strong pro-German) has been nominated to hold the office for a period of ten years. He is responsible only to the Prime Minister—which means to the German taskmasters—and can be judged only by the High Court of Justice and Cassation. He decides—without any appeal against his decisions—what is to be taken from the producers in the way of cattle, crops, manufactured goods; he fixes the prices and the conditions according to which the products are to be transported, and when they can be exported to Germany. He is, for the time being, at any rate, Food Controller also, and can impose fines and order imprisonment. Practically he is the most powerful dictator in the country, and his power constitutes a very great danger when one thinks of the unscrupulous methods of the Germans, who look to this law not only as a means to get the maximum amount of grain, oil, cattle, wines, and wood out of Roumania, and German manufactured goods into it, but also as an instrument to coerce the Roumanians who will not acquiesce in their rule.

TANGIER TO TEHERAN.

In an Indian paper to hand by a recent mail I came across the following paragraph:—"At a football match the other day a Bengali spectator raised his umbrella aloft and began to raise a breeze by rapidly opening and shutting his 'brolly,' somewhat in the manner of a bellows. This example was imitated till the crowd presented the queer spectacle of a row of fluttering umbrellas. Who says that the Bengali is not original?" Not I! The spectacle must indeed have been a "moving" one; but I have not yet grasped the motive of the ingenious gentleman. Can he have been an umbrella dealer?

***

Not very long ago Alexandria instituted a dog tax of its own, accompanying the innovation with certain regulations designed to keep the bow-wows—and their owners—on the narrow path of virtue. Now, I observe, the city is triumphantly reaping the profit of the scheme, and twenty-five persons who had contravened the regulations have had to pay double tax. As I may have mentioned before, I am a dog-lover myself; but I am in favour of a moderate tax on dogs, and I can unreservedly congratulate Alexandria on its dog tax. For though dogs of sorts are common enough there, as elsewhere in the East, *good* dogs are rare. Weird specimens faintly resembling real dogs are all too numerous everywhere; but the Levant seems to be wonderful ground for the mixing of breeds; and if Alexandria succeeds in getting rid of some of the queerest specimens it will have done a good thing for itself.

***

A month ago I referred to two stories about leopards, and indulged in some not-too-flattering reflections on that animal's courage. Unless my memory serves me false, one of the two stories I quoted concerned a leopard in the Wad Medani region. Now I have just come across another paragraph, this time in the *Sudan Times*, about another leopard—or it may have been the same—in the same part of the world. On this occasion, however, the beast showed pluck, and plenty of it, in the long run; though it opened operations on "four little boys—the oldest of whom was not over five years old," and failed to come off victor even then. Later, the boys having given the alarm, "about thirty men, armed with spears and axes, started for the leopard, which was found still in the vicinity." And then the amazing beast "attacked them, causing one of them grave injuries" before they succeeded in killing it.

***

The *Echo de Paris* has paid a handsome compliment to Colonel Lawrence, but it is not one whit too handsome. For the work done by the force of Bedouin and Druses with which he has been operating—and which, the French report says, "he had formed"—has fitted in perfectly with General Allenby's great move. Doubtless that was the intention; but intentions of the kind, however excellent they may be, do not always get fulfilled. It depends on the leader; and Colonel Lawrence has proved himself the right sort of leader. He is, in fact, a fine example of the archæologist turned soldier and making an excellent job of it. His knowledge of Turkey and of the Arabs was, I believe, acquired in the service of the British Museum, for whom he worked at Carchemish in 1911, under Mr. D. G. Hogarth. He also travelled throughout the length and breadth of Syria, and knew its people and their language remarkably well, long before the war broke out. By great good luck, the winter before the war, he and Mr. Leonard Woolley had explored the Sinai Peninsula on behalf of the Palestine Exploration Fund. At the same time Captain Newcombe was in that region connecting up the triangulation of the survey of Egypt with that of Palestine; and the three Englishmen joined forces for some time.

***

The archæological results of that winter's work are recorded in "The Wilderness of Zin," the P. E. F.'s Annual for 1914-15, which was reviewed in The Near East when it appeared. The Introduction to that volume was written by Mr. Lawrence (as he then was), his friend and companion being absent on war service. It contains a couple of sentences that give us a hint of the writer's dislike of fuss and formality, and, perhaps, of his liking for the Arab. He writes: "Near Ain Kadeis, where our riding camels strayed away, the Arabs brought them in, unasked, to the station at Kossaima. It will be obvious from this that we had no dragoman with us." There you have the view of the true lover of the desert and of the Bedawi. A dragoman would, if he could, filter the air of the desert for you—through a dirty filter, most likely—and charge you for it; and men like Mr. Lawrence and Mr. Woolley do not usually cling affectionately to him. Mr. Woolley, by the way, had the bad luck to be captured—in a very daring enterprise off the coast of Asia Minor—and is still, I fear, "a prisoner of the Turk."

CORRESPONDENCE.

PEACE FOR THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your correspondent in "Peace for the Balkans" first asks why people who write about the Balkans are all partisans and then, showering "brave" and "gallant" on Serbs and "loyal and enthusiastic" on Greeks, writes of Bulgarians as "hated," "the traitor," "the despicable part played by Bulgaria," etc. Yet we all know the character of the king forced on rather than chosen by the Bulgars, that he has often been called the astutest diplomatist in Europe—diplomacy being a talent in which the Bulgars themselves are conspicuously lacking—and that the Prussians were not likely to neglect any means for making it impossible for the Bulgars to go against him *and them* from the very start. Why, then, hurl adjectives at an unhappy people forced to fight against their friends? I fear that your correspondent, had he the "personal acquaintance with these countries" which he says he is without, would be the fiercest partisan of the lot. The Serbs have always seemed to me to be the beauties of the Balkans—although the admirers of the Montenegrins and Albanians say I should give the palm to them. The Serbs are also very poetic in their imaginings, gifted thus with all that is specially supposed to charm women. The Greeks are probably better endowed with brains, and amongst those I have known I have been struck by great nobility of character. They are also surely more civilised than the other races. The Bulgars seem to me the most hard-working, most plodding, steady-going people, in many respects recalling the Chinese, whom I know so much better, by making no attempt whatsoever to please, but simply seeking to do everything that is pleasant, and being extraordinarily grateful for the least sign of appreciation. There are amongst them, I am sure, as amongst the Chinese, dour characters with a deliberate disregard of appearances and polite phrases that is repelling. But I have not been long enough in Bulgaria to encounter them. I have been only long enough in the Balkans to notice the different merits in all the different races. They are all brave, so that it seems to me absurd to attach that epithet to any. I do not believe there is one of them that would shrink from an act of treachery (as others would call it) to save his own country.

But the question that concerns us outsiders is not which we like best, nor whether *we* like any of them, but how they can be led to like one another or to find one another even tolerable. Unless they can be led, or coaxed, or educated into even tolerating one another, they are brave, and they will fight each other to the death. There was a time when it must have seemed impossible that Englishmen and Scotsmen should ever agree. The Scottish people, as some love to call themselves, may still find it hard to tolerate the easy-going, somewhat dull-looking Englishmen. But we all live together—and, above all, work together—now, without the slightest inclination to kill each other. I do not know which of the two are the most likeable, nor does it indeed seem very clear whether any or all are likeable. But on any steamer by which I travel I am glad to notice a Scotsman in the engine-room, a Cornishman in the pilot-house. Once make the Balkan peoples tolerate each other, and things will arrange themselves so that the right people will be making attar of roses, trading in pigs, navigating vessels, carrying on business, and cultivating the fields, and neither Serb nor Montenegrin, nor Bulgarian, Albanian, nor Greek starving to death, or forcing others to starve.

But if English people will persist in out-Heroding Herod and being more pro-Serb than the Serbs, or more phil-Hellene than the Greeks, the man-butcheries will go on and the women and children starve.

I have been trying lately to think how union can be formed among those who really know something about the Balkans, but one straightway advocates a marriage for our Prince of Wales, because that way he might get a strain of pure Montenegrin blood, another not only seeks to extol another race, but to do so must blacken the poor Montenegrins till they have not a shred of character left.

Being English, I have often tried hard to find out a single thing in which English people are universally acknowledged to excel. There must surely be something. If the admirers of any race would devote themselves—say, for a month—to discovering the charm or the special qualities or most striking merit of any other race, I think gradually we might arrive at peace even in the Balkans. It rests with the onlookers to begin. For the hatreds there have been aroused and diligently fanned by those who sought to make a profit out of them. There was a time when Serbs and Bulgars called themselves cousins, sang the same songs, spoke the same speech.

Do they not even now understand one another—I mean one another's language? I have not ventured to touch upon the Roumanians. The great Danube rolls between them and the Balkans, and seems to set them apart.

Now that the Turks have been largely driven out, the one hope for those left behind is in Union, or there will be nothing but bones left, and the Jews of Salonika faring sumptuously upon the pickings.—I am, etc.,

A. E. N. LITTLE.

83, Piccadilly, W.1.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In the article published in your issue of 20th inst. your correspondent puts forward an interesting line of argument, but his sweeping classification into "phils" and "phobes" of those who interest themselves in Balkan politics is misleading. There are, of course, enthusiasts whose affection for one particular nation prompts them blindly to support the most extravagant claims of the ultra-Chauvinists. Though your correspondent seems to suggest that they are largely to be found among the friends of Serbia and Greece, the fact is, I think, that the vast majority of them are Bulgarophils. A few are Philhellenes; practically none of them are Serbophils.

But I would point out to your correspondent that there are publicists who have neither identified themselves with the extreme pretensions of our Allies nor compromised themselves by supporting the undefiled Chauvinism of our enemies. We—if I may be permitted to include myself in this group—seek to take a "wide view of Balkan necessities," which includes other necessities than the mere satisfaction of Bulgarian rapacity. We are anxious to attain a lasting settlement of the question which shall be based upon logic and justice, and take into account all claims, together with the lessons of recent history.

There are only two alternatives. The one lies in a compromise of existing claims which shall be loyally accepted as a *settlement* by all the parties concerned; the other entails the removal of the causes of Balkan unrest.

Now we are obliged to recognise that past attempts at compromise have not been happy, and it cannot be denied that Bulgaria has hitherto been the obstacle. Bulgaria was dissatisfied with the compromise at Berlin in 1878, although it removed the objections to the Treaty of San Stefano, which, to quote Lord Salisbury, would have absorbed "a considerable mass of population which is Greek in race and sympathy." Serbia compromised over Macedonia during the pourparlers of 1912 (see Gueshoff's account of his negotiations *re* the Serbo-Bulgar Treaty). Later on Serbia agreed to changes in the military convention and rendered unstipulated assistance at Adrianople. All this was compromise. Bulgaria failed to accord the support promised against Austria, and continued the war against Turkey for her own particular ends. Yet she could not agree that this necessitated any compromise, and she precipitated the disastrous war of 1913 rather than yield to Russia's entreaties. She preferred to fight rather than to compromise, though Greece, Serbia, and Roumania were ready to do so.

In August, 1914, and at several subsequent dates, Bulgaria refused to discuss Serbia's offers to compromise. Early in 1915 she "sacrificed the compensations (compromise) offered by Venizelos in Thrace" (see *Echo de Bulgarie* of January 1, 1916), and during the summer and autumn of that year she declined one Allied offer of compromise after another.

The unfortunate truth which faces us is that Bulgaria is not out for compromise. Even the *Manchester Guardian* has admitted that Bulgaria's neighbours were ready to make all the concessions which she had any right to expect. The fact is that, though numerically the smallest race in the Peninsula (they themselves admit it), the Bulgars aim at nothing less than hegemony. They want all the Dobruja, all the Maritza, all Greek Macedonia, all Central Macedonia, all Southern Serbia, all the Serbian Morava. And still they want more—the Danube, the Black Sea, the Marmora, the Ægean, the Adriatic, the "Empire of the Four Seas."

It is an elaborate programme, and the difficulty is that no concessions would be accepted as a settlement. They would be regarded simply as instalments, mediums of more power wherewith to obtain more territory. Ethnology, history, geography—all these are mere means to the desired end.

Let your correspondent be assured that nobody wants to wipe Bulgaria off the map, and that even now, when Serbia has been laid waste with a diabolical hand, when the Greeks of Eastern Macedonia have been tortured, despoiled, and exiled, when Bulgarian union with Germany has robbed us of Gallipoli, linked up the Central Empires with Turkey, and cost us rivers of blood and treasure

Digitized by Google

which would have been unnecessary, had she compromised—despite these additions to the rôle of Bulgarian infamy, many would still support the principle, were there any reason to suppose that it would achieve the object in view.

But, unhappily, there are no grounds for this assumption. We are driven to the conclusion that there is only one practical way to Balkan harmony, and that Bulgaria must be beaten to her knees and then deprived of the power to disturb the peace in future.

Some writers suggest that racial passion is confined to the Peninsula, and proceed forthwith to advocate that the League of Nations should be tried on the Balkan dog. Let us be logical. Most of us recognise that it is not sufficient to beat Germany. We opine that some means or other, from within or without, must be found to cut her militaristic claws. We know that if she gets off with part of the coveted swag and is left with sufficient power again to attack her neighbours, it will not be long before the world is once more called to arms. We desire a League of Nations to enforce peace—principally upon Germany. To that confederation we shall hope to admit a reformed Germany herself on terms—terms which imply that she must make reparation for her misdeeds, give up her dream of hegemony, accept the coming settlement as final, and decide to live at peace with her neighbours. Then, and not till then, can we think of concessions.

Similarly, in the Balkans we want a League of Nations. There is a place for a reformed Bulgaria in that League. But she, too, must make reparation for her misdeeds, give up her dream of hegemony, accept the coming settlement as final, and decide to live at peace with her neighbours. Then, and not till then, can our Allies in the Balkans think of concessions.—I am, etc.,

CRAWFURD PRICE.

10, Chester Place, Regent's Park, London, N.W.

BACK TO SERBIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Surprisingly good news from the Balkans! Several most important ridges between Monastir and Prilep have been stormed, and some others are so strongly attacked that their fall may be hourly expected. When all those ridges are taken, the Serbian troops will be able to cut the railway line running along the Vardar River, in which case all the Bulgarian positions down to Gevgheli will be in imminent danger.

Again Serbians! The immortal Serbians! Like a sphinx they are silent for a time and again they rise to give a mortal blow to their enemies. Over 4,000 prisoners! I don't know whether the people of this country realise what an enormous success it is for a small army like the Serbian. If compared, it means really at least as much as the biggest bag of prisoners that the huge army of ours and of our Allies in France have had in a span of time of twenty-four hours. If only this successful action were wisely supported by a simultaneous action on the whole Balkan front, then it might turn to a complete defeat for the rapacious enemy. It happened once that after the splendid Serbian victory at Kaimakchalan the defeated enemy was not pursued at all, so that a real victory was not crowned with the deserved and expected results. We do not know the reason of that—perhaps those who were at that time at the head of the Allied Army over there will know it better. I know only that the victorious Serbs then were awfully disappointed.

I hope this time the same mistake will not be repeated. The Serbian Army, loyal to us to the death, is very much depleted. Like children, the Serbs have confidence in the British and French. Therefore it is our moral duty to take care at the utmost that no Serbian soldier shall be lost any more without a burning need, and that no Serbian victory remain unutilised.

Therefore we rejoice from our very hearts because of the Serbian victory, but would be very sorry if this new Serbian move should not be followed by a general move on the whole Macedonian front.—I am, etc.,

CHARLES L. EGAN.

PRISONERS OF WAR IN TURKEY.

Further corroborative evidence has recently been received by his Majesty's Government that the exchange of prisoners of war under the Berne Agreement is being persistently blocked by Enver Pasha and his associates, at the instigation of the German Government.

There is also reason to believe, it is stated, that these persons are not only responsible for the obstruction of the agreement and for the general ill-treatment of British prisoners, but that they are also materially interested in the continuance of malpractices which include the interception of prisoners' supplies.

THE PLUNDERING OF SERBIA.

Information has reached London, says Reuter, that there is a constant flow of trains from Serbia to Austria, loaded with wheat, barley, and dried vegetables. All that the Serbian people receive in exchange is Austrian paper money.

The suffering population has now to face the rigours of winter, as well as the Austrian bayonets, with empty granaries.

Why Serbia Needs Your Help

The cutting from the Press reproduced above is evidence of the terrible sufferings that the Serbs are called upon to endure as the price of their stedfastness to the Allied Cause. The Serbs are suffering as no other nation has yet suffered. Their trust is in Britain—that we will "see them through." That trust must not prove misplaced. All the help we can send them—all the food, clothing, and medical aid we can give the stricken remnant of Serbia's population, all the sustenance and comforts we can send the starving Serbian prisoners-of-war are only their just due for their self-sacrifice. The splendid news of victory on the Bulgar front in which Serbian arms have played a gallant part is an earnest of the Serbians' indomitable courage and hope for the future. The direct avenue of British aid to Serbia is the Serbian Relief Fund. This Fund is the only one administered by British hands solely for the benefit of the Serbians. The Serbian Relief Fund can quickly translate your cheque into material and much-needed help. Send a donation to-day to The Hon. Treasurer, The Rt. Hon. The Earl of Plymouth, G.B.E., C.B.

SERBIAN RELIEF FUND

(Registered under War Charities Act, 1916.)

5, CROMWELL ROAD, LONDON, S.W.7.

Offers of voluntary help at home or abroad should be sent to Lady Grogan, Parcels of clothing for men, women, and children to Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, London, S.W.7.

NEAR EAST BOOKSHELF.

ANOTHER VIEW OF THE INDIAN CONSTITUTION.*

Our verdict on this substantial and well-got-up volume must be similar to those which we have passed on most books dealing with the Indian constitutional problem: it was well worth publishing, and it deserves the careful attention of the student, but it does not furnish a completely satisfactory solution. The work has been some time in the press, for the preface is dated last Christmas, and consequently the writer has had no opportunity of dealing with the official scheme of reforms, but he handles various unofficial proposals in a workmanlike style, and we may fairly say that he performs efficiently the first function of the master-builder in clearing the site of a large accumulation of rubbish. He proceeds to erect a large and ornate structure, with a wealth of elaborated detail, but unfortunately resting upon rather sketchy and inadequate foundations, and consequently not altogether suitable as a permanent residence for the Indian nation. His design has several interesting features; in particular, his insistence on the need for a visible representative of the kingship, as distinct from the head of the working administration, where he is undoubtedly expressing one of the strongest political sentiments of his nation, and his methods are on the whole fair and courteous; but he is clearly afraid of the masses of the people, and he postpones anything like direct representation to a somewhat dim future. For the time being he is content to base his elaborate structure on an "institutional" franchise, an extension of the unsatisfactory system now in vogue, and beyond this he looks to a scheme of District Assemblies, representing the landholders and income-tax payers, to provide a more permanent foundation. As so commonly happens in India, the writer is weakest in the region of economics, and his occasional remarks on such topics as railways, currency, or rural prosperity betray a thoroughly complacent ignorance; but his views on these matters are not, in fact, relevant to his main theses, for he does not appreciate the closeness of the relations between economics and politics, and in the palace of his imagination the livelihood of the inmates is taken for granted. Still, the palace is well worthy of a visit.

IN MYSTERIOUS EGYPT.†

Here we have a dozen stories, half centring round a mysterious "imam," one Abu Tabah, who appears to be a kind of Cairene Sherlock Holmes and Chief of City Police combined; the other half detached incidents. We greatly prefer the latter half of the book; though we have found Abu Tabah much more entertaining—and incomparably easier to believe in—than many of his European *confrères*. All the stories are well written, though we detect now and then a tendency to run riot in the matter of language; the author certainly seems to know Egypt well; and he makes the most of the "mystery" of the land in a very clever fashion. We like him best, however, when he is telling us a comparatively simple tale in the person of a native, as he does in the last story in the book. This—"Pomegranate Flower"—is in the style of "The Thousand Nights and a Night," and is extremely well done. We should like Sax Rohmer to give us more in the same vein.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

ROUMANIA AND THE RED CROSS.

At a meeting held on Monday evening at the Lyceum Club in connection with Red Cross work in Roumania, M. Bonescu, of the Roumanian Legation, said his countrymen would never forget what the women of Great Britain did for them in the terrible days through which their country had passed during the past four years, and Captain Ghyka, on behalf of the Roumanian Army, expressed his deep gratitude for the splendid efforts of the British Red Cross workers. Their work among the wounded, he said, would never be forgotten. A telegram from the Roumanian Chargé d'Affaires spoke of the magnificent work of the Red Cross as "one of the best and noblest links between Roumania and the mighty British Empire."

The Countess of Minto has left 18, Carlton House Terrace for Hawick.

Sir Rennell Rodd, British Ambassador to Italy, left 17, Stratford Place, last week for Rome.

The Greek Minister and Madame Gennadius spent the week-end with Mr. and Mrs. J. A. Mango at The Gables, Frinton-on-Sea, Essex.

The engagement is announced between Lieutenant Norman V. Kent, the Wiltshire Regiment, and Enid Sybil, daughter of the late Mr. W. A. Gordon and Mrs. Gordon, of Mussooree, India, and Wimbledon.

The engagement is announced between Captain Herbert Bland Stokes, Royal Inniskilling Fusiliers, son of Sir Gabriel Stokes, K.C.S.I., and Enid Madeleine, daughter of Lucas White King, C.S.I., and niece of Viscount Northcliffe.

The engagement is announced between Lieutenant Preston, R.E., son of the late Captain John Preston, Resident Magistrate of Athlone, Co. Westmeath, Ireland, and Mrs. Preston, of Aspall Hall, Suffolk, and Margaret, elder daughter of Sidney H. Wells, of Gezira, Cairo.

A memorial service for the Catholicos-Patriarch of Georgia, Kyrion II., will be held at the Greek Orthodox Church, Moscow Road, Bayswater, this (Friday) morning, at 11.30. The Great Archimandrite, the Very Rev. Dr. Constantine Pagonis, will officiate.

It is understood that Lord Southborough has accepted the chairmanship of both the committees which are to complete in India in the ensuing cold weather the work of investigating the problem of Indian constitutional reform begun by the Secretary of State and the Viceroy.

The engagement is announced of Captain Burnett S. Stone, of the Indian Army, elder son of Mr. and Mrs. E. Herbert Stone, of "The Retreat," Devizes, Wilts, and Marjorie, youngest daughter of the late Mr. Thomas Brown and Mrs. Brown, of Whitehaven, Cumberland.

Colonel Sir Courtauld Thomson, Chief Commissioner of the British Red Cross, was on Monday received in audience by the King of Italy, and had the honour of remaining to dinner with his Majesty. Sir Courtauld Thomson has recently arrived in Italy, where he is making his headquarters.

A marriage has been arranged, and will shortly take place, between Major Caryl ap Rhys Pryce, D.S.O., Royal Field Artillery, younger son of Colonel Douglas D. Pryce, Indian Army, of Penns Rocks, Withyham, Sussex, and Ellen Mary, widow of Lieutenant Ronald Falshaw Morkill, West Yorkshire Regiment (attached R.F.C.), daughter of the late Thomas Loyzleur Wilkinson and Mrs. Wilkinson, of Neasham Abbey, Neasham, Co. Durham.

Last Saturday, at St. James', Picadilly, the marriage was solemnised of Thomas Horatio Westmacott, Captain General List, formerly of Calcutta, second son of the late Edward Vesey Westmacott, I.C.S., and of Mrs. Edward Vesey Westmacott, 15, Stafford Mansions, Buckingham Gate, to Laura Evelyn, third daughter of Ven. E. H. Winnington Ingram, Archdeacon and Canon of Hereford and Vicar of Bridstow. The bride's father officiated, assisted by the Bishop of London.

At St. Peter's, Eaton Square, on September 19, the marriage took place of Colonel C. W. P. Ramsey, of Montreal, Canada, to Dorothy, youngest daughter of Sir John Jackson, M.P., and Lady Jackson, of 48, Belgrave Square. The service was conducted by the Rev. A. H. Thompson, and Sir John Jackson gave away his daughter, who was attended by two nephews, Master Hugh Sinclair and Master Jack Hamilton, as pages, and by three little nieces, Miss Salie Sinclair, Miss Barbara Hamilton, and Miss Catherine Sinclair. Major J. M. Williams, R.E., was best man.

The engagement is announced between G. T. Hamilton Harding, Indian Police, I.A.R.O., Lieutenant attached Egyptian Army, only son of Mr. and Mrs. A. Hamilton Harding, Preston, Agra Patnas, Ceylon, and Margaret, only daughter of Mr and Mrs. A. G. Seton, Kleva, Bjornlunda, Sweden.

General Jekoff, Commander-in-Chief of the Bulgarian Army, has undergone an operation on the ear in Vienna. He is making good progress.

Sir Henry Trotter, K.C.M.G., will take the chair at a meeting of the Central Asian Society, to be held on Wednesday, October 9, at 4.30 p.m., at 22, Albemarle Street. Miss Annette M. B. Meakin will read a paper, "Life in Russian Turkestan and Germany's Menace to India."

In connection with the Society of London Muslims, Kawaja Kamal-ud-Din will be At Home at the Moslem Prayer House, 111, Campden Hill Road, Notting Hill Gate, on Saturday afternoon, September 28. At 5 p.m. he will deliver an address on the Moslem conception of Heaven.

Dr. J. G. Pinches, Lecturer in Assyrian, will deliver a public lecture at University College, Gower Street, on the afternoon of October 3, on "Shinar and Asshur, Pictures of an Early Civilisation." The lecture, which will have lantern illustrations, will be open to the public without fee or ticket.

APPOINTMENTS, PROMOTIONS, ETC.

Mr. H. M. C. Trotter, Accountant-General, Punjab, has succeeded Mr. H. N. Heseltine as Accountant-General, Railways.

Bimbashi P. B. Roussel has been appointed a district traffic manager, Sudan Government Railways and Steamers Department.

Mgr. Barlassina, who was recently appointed Auxiliary to the Patriarch of Jerusalem, will leave Rome early in October to take up his post.

The Hon. Mr. J. M. Holms, Member of the Board of Revenue and Vice-President of th Legislative Council, United Provinces, has resigned from the Civil Service.

Mr. W. S. Marris, Joint Secretary to the Government of India, Home Department, now on special duty with the Secretary of State in London, is expected to return to India in October.

Lieutenant G. Milner, Royal Engineers, has been attached to the Egyptian Army as a special service officer, granted the temporary rank of Bimbashi, and attached to the Military Works Department for duty.

Sir James Melton, who has been appointed to succeed Sir William Meyer as Finance Member, will not reach India until the end of next month. Sir William Meyer has consented to remain in office until that time.

M. Saulescu, Roumanian Finance Minister, has resigned. His resignation is said to be due to a difference with the Ministry and the parliamentary majority concerning the reorganisation of the National Bank and the Land Bank.

Sir Ralph Spencer Paget, K.C.M.G., who was formerly British Minister in Serbia, and has lately been H.M. Envoy Extraordinary and Minister Plenipotentiary at Copenhagen, has been appointed Envoy Extraordinary and Ambassador Plenipotentiary at Rio de Janeiro.

The Government of India have this year sanctioned the award of State technical scholarships to the following candidates for a course of training in England in the subjects noted against each:—Mr. E. C. Barlow, leather tanning; Mr. Jitendra Mohan Das, iron smelting and the working of bye-product coke ovens; Nirendra Nath Ghosh, metallurgy of iron and steel; S. Dogar Singh, ceramic industries.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

OBITUARY.

The Rev. William Henry Hobart, Vicar of Highbridge, Somerset, died at the Vicarage on September 23, in his sixty-third year. He was from 1882 to 1892 Chaplain of Vepery, Madras.

Lieutenant John Rollo Lowis, Yeomanry, who was killed in action on September 4, was the eldest son of the late Hon. John Lowis, Government Advocate of Burma, and Mrs. J. Lowis.

Colonel Charles Darracott Scott died at Pevensey, Sussex, on September 18. He joined the Army in 1881, and took part in the Burmese Expedition of 1886 and the Hazara Expedition of 1888. He was the son of the late Major-General H. Y. D. Scott.

Mr. Charles Arthur Galton, late of the Indian Civil Service, died on Tuesday at Hove, aged seventy-seven. On leaving Exeter College, Oxford, he went to India in 1863, and served in Madras as Assistant Collector and Magistrate. In 1888 he was appointed Secretary to the Government, Revenue Department, and five years later became acting Chief Secretary and Member of the Legislative Council.

The death has occurred at The Mythe House, Tewkesbury, of Colonel Newman Burfoot Thoyts, in his eighty-eighth year, after a long illness. Colonel Thoyts was the second son of Mortimer George Thoyts, of Sulhamstead House, Berks. He served in the Bombay Staff Corps, and on retirement lived for many years in Cheltenham, where he was Mayor for three successive years. He was J.P. for the County of Gloucester.

Brevet Lieutenant-Colonel (temporary Colonel) G. D. Pike, M.C., Gurkha Rifles, is officially reported to have been accidentally killed at Vladikavkaz on August 15, during fighting between Cossacks and Bolsheviks, which he was watching from a window. Colonel Pike accompanied his battalion from India to France with the Expeditionary Force and was awarded the Military Cross in February, 1915, and given a Brevet Lieutenant-Colonelcy in February last. He had been appointed British Military Agent in the Caucasus in January.

Second Lieutenant Z. Manoukian, Lancashire Fusiliers, killed in action on September 3, aged nineteen, was the only son of the late S. Manoukian and Mrs. Manoukian, of 41, Warwick Avenue, W.9, formerly of Manchester. He was educated at Repton, and in 1916 he was elected to the first classical scholarship at Oriel College, Oxford, previous to obtaining his commission. He was sent to the front last June, and was soon promoted second in command of his company. His senior officer writes :—"I have lost my best officer, and the whole battalion will miss him, as he was universally popular. He was real grit all through, and his men would go anywhere with him."

Major-General Henry Leslie Grove, late of the Madras Staff Corps, died suddenly at his residence, 17, Lingfield Road, Wimbledon, on Monday, aged eighty-nine years. He was the son of Major Henry Jones Grove, was appointed to a cadetship in the East India Company's service in 1845, and was posted as ensign to the 45th Madras Infantry. His service was entirely in the Madras Presidency, where he ultimately held the appointment of Inspector-General of Army Schools, retiring with the rank of Major-General in 1879. General Grove's only surviving son, Mr. Henry Montgomery Grove, late of the 1st Bengal Cavalry, was British Consul at Warsaw at the time of the German invasion.

Lieut.-Colonel Lord Alfred Browne, D.S.O., R.F.A., who was killed on August 27, was the youngest son of the late Marquess of Sligo. Born at Darjeeling, India, in 1878, he was educated at Marlborough College, and passed into the Royal Military Academy in 1896, and in 1898 received his commission in the Royal Artillery. After serving at Gibraltar and in India he retired in 1908. He rejoined at the outbreak of the present war, and served at the front in 1914-15 in command of a battery, being mentioned in dispatches. In 1917 he was appointed acting lieutenant-colonel and commandant of an R.A. officers' cadet school. He returned to the front this year in command of a brigade of R.F.A., in which capacity he was serving when killed.

Major Beresford Havelock, North Staffordshire Regiment, who is reported killed in action on September 14, in his twenty-seventh year, was the only son of the late George Broadfoot Havelock, 98th Regiment and 101st Royal Bengal Fusiliers, and Mrs. Havelock (Bournemouth), and grandson of Sir Henry Havelock of Lucknow. He was at Sandhurst in 1908, and was commissioned in the 1st North Staffordshire Regiment in 1910. He was a fine rider and among the numerous races he won in India, where he joined the 2nd North Staffordshire Regiment (98th), was the Regimental Point-to-Point at Peshawur. Major Havelock was in two of the biggest frontier fights (Shobkudr) in 1915, and passed the Staff School at Mhow in 1916, when he embarked for Mesopotamia in November, 1916. He was in the triumphant march to Baghdad as staff captain to the brigade, which was the first to enter the ancient city. He was gazetted temporary major December 14, 1917. In 1916 he married Kathleen, daughter of Mr. Sydney Smith, late Inspector-General of Police, Punjab, and leaves a [illegible]

NEWS IN BRIEF

A Bucharest message says that the Amnesty Bill has passed the Roumanian Senate. The Bill had already been passed by the Chamber.

Swiss Jews belonging to the Aguduth Visroel, a body which for some time stood aloof from Zionism, have decided to establish a colony in Palestine and to transfer there the Jewish War Orphanage at present in Switzerland.

A Royal decree calls up six reserve classes of the years 1900, 1901, 1902, 1906, 1907, and 1908 from the whole of Greece, also four classes of auxiliaries and medical corps auxiliaries from 1909 to 1912. The men must report before October 18.

It has been decided to form a Charity Organisation Board for India. The Viceroy, on whose suggestion the step has been taken, has consented to become patron. The object aimed at will be to co-ordinate charitable effort, and the new body should have a great field of usefulness before it.

The Burma Government has sent a letter of thanks to all the men who offered their services for war purposes, but who have not been instructed to apply for commissions. The letter informs them that as they cannot be spared by their employers they are to remain for the present in their existing employment.

The *Egyptian Gazette* reports that recently at Cairo Assizes "a youth seventeen years old . . . was sentenced to five years' imprisonment for having murdered his step-sister, a baby of only six months old." The motive of the crime, the report continues, was jealousy, since on their father's death, the children would have to share the father's property, consisting of just over one feddan of land.

THE ALLIED VICTORIES IN THE EAST.

Within four or five days the military situation in Palestine has been completely changed by a brilliant operation which has resulted in the elimination of practically the whole Turkish force immediately opposing the British advance. On the morning of September 19 General Allenby, after a subsidiary attack the previous evening near the Jordan, launched his offensive along the whole line from the river to the coast. The enemy's front was pierced on the coastal sector, and through the gap British, Australian, and Indian cavalry streamed northwards. By the following day they had reached the Haifa-Damascus Railway and had severed the Turkish communications with the north. In the meantime the rest of General Allenby's forces were pressing on the retreating Turks, who, thrown into hopeless confusion, were trying to make their way westwards across the few available fords of the Jordan. On September 22 the last avenue of escape in this direction was closed, and General Allenby was able to report that with the capture of 25,000 prisoners the Seventh and Eighth Turkish Armies had virtually ceased to exist. The dramatic swiftness of this blow and its complete success appeal irresistibly to the imagination. For the second time at, as it were, a single stroke General Allenby has secured the liberation of a large portion of Palestine. There are still some Turks east of the Jordan; but Arab forces are co-operating on this flank; they have cut the enemy's railway communications at Deraa junction, and should prove most useful auxiliaries in rounding up the remnants of the Turkish Army south of Damascus. The total strength of this army is estimated to have been little short of 100,000, with 30,000 rifles. The German Commander-in-Chief, General Liman von Sanders, is known to have escaped, and it remains to be seen how many of his late force will have been accounted for by General Allenby. If the numbers of the enemy that have delayed the capture of Palestine seem at first sight somewhat small, it has to be remembered that the British have anticipated the opening of the campaigning season, and, doubtless, the arrival of Turkish reinforcements. During the summer months the Turks will have considered that they were not likely to be subjected to any serious attacks; and it will no doubt come as a shock to them that their period of immunity should have been closed at such an early date. The Turks have been in some anxiety with regard to Palestine, and have tried to persuade their German allies to send them reinforcements. Their own military strength has never been very great, in spite of the glib talk of an army of millions by members of the Government. The man-power may be there, but it has been impossible to arm and equip it, and, if report be true, to keep all those who have been equipped with the colours. More recently a certain fatalism may have overcome the Turkish authorities with regard to Palestine and Mesopotamia, and it may have seemed more profitable to expend their diminishing strength on schemes of easy conquest in Transcaucasia and Persia than to attempt the impossible in the southern portions of the empire.

It is too early to gauge all the consequences of General Allenby's success; but as General Marshall could testify to the effect of the earlier victories in Palestine on the situation in Mesopotamia, we may feel confident that before long this still more decisive action will be felt not only on the Tigris, but also as far as the Caucasus. Indeed, unless the situation between the Black Sea and the Caspian prevents it, we may expect to find General Marshall and General Allenby able to engage upon concerted movements which will complete the embarrassment of the Turks. For at the present moment the Constantinople authorities are by no means free to devote their undivided attention to events in Palestine and Mesopotamia. On their European flank, in addition to the disquieting evidence that their "invincible" German allies are being most thoroughly beaten, they have the Bulgarian line broken through, with the possibility of consequences almost as disastrous to themselves as the reverse in Palestine. In spite of the distance from the Vardar to the Jordan, the simultaneous successes of the Allies add materially to the advantages to be derived from the two offensives. The Bulgarians and the Turks—such is the cordiality existing between them—may be equally pleased to see the other hammered; but in this war they stand or fall together. Bulgaria might hope to survive for a season the defection or defeat of Turkey; but the position of the latter becomes at once impossible, if Bulgaria has to make peace with the Entente. In this eventuality the sense of security engendered by the interposition of the whole of Asia Minor between Constantinople and the advancing British is destroyed by the knowledge that the capital becomes vulnerable from the land side. By the time this train of thought is set in motion there can be little doubt that the glory of a fight in the last ditch will have ceased to appeal to the clique who now control the destinies of the Ottoman Empire, and that they will be more concerned with the selection of a suitable place of asylum, where they can hope to enjoy the pecuniary gains that they have derived from the war.

The Allied success in Macedonia may be for the present less complete than the Palestine *coup*, but the possibilities of the situation are even greater. In the first place it may be borne in mind that, although General Franchet d'Esperey commands a composite force of the Allies, the advance is essentially a Serbian and Greek offensive. These two armies are fighting over familiar ground, and for them the war in the Balkans cannot be over until Bulgaria acknowledges defeat, and both Serbia and Greek territory have been entirely cleared of the enemy. We may, therefore, conclude that the plan of campaign has been drawn up on a grand scale. The extent of the enemy's powers of resistance could not be accurately known; but provision will surely have been made for the development of such an initial success as has actually been achieved. At the moment of going to press the Allies are established on the Vardar and are nearing Veles. They should experience little difficulty in reaching Uskub, dealing the while with enemy forces that may have been cut off in the Prilep district. Future movements will depend largely on the rate at which the right wing of the Allied Army can advance, and above all on the capacity of the Bulgarian military authorities to rally their war-wearied and disaffected forces. The secret of General d'Esperey's plans had been well kept. There can be little doubt that the Bulgarians, who were expecting an Allied offensive, had counted on the Greeks opening the attack on the east of the line. It was the Serbians, however, who struck the main blow, while the British and Greek forces kept the bulk of the Bulgarian army occupied on the right. If the rapid advance of the Serbians compels the enemy to abandon his almost impregnable lines on the Belashitza *massif* confronting the Allied right, his demoralisation will have been complete, and the Allies will be in a position to vary the direction of their pressure in the manner that has been so successful in France. In these speculations, however, we must not forget the desperate efforts that Germany will make to galvanize the Bulgarians into a vigorous defensive, while compelling Austria to send help, whether she can spare the men or not. Whatever the issue of these operations, the Near East within a single week has come into its own, as being fraught with potentialities that, at comparatively small loss to the Allies, may exercise a tremendous influence on the course of the war.

GENERAL ALLENBY'S ADVANCE IN PALESTINE.

A wonderful and epoch-making week has just concluded in Palestine. The long-expected advance has produced dramatic results such as have but seldom occurred in the history of war. The thunderbolt character of General Allenby's offensive has not only resulted in the destruction of two Turkish armies—the soldiers killed or captured, most of the guns in our hands, and practically all the transport destroyed—but a very large district of Palestine, with cities of age-long historic interest, and often of sacred association, has been liberated without material damage. The peaceable inhabitants have been set free from the oppression and terror of centuries of misrule.

The military events have been scattered over so wide a field that it is quite impossible to construct from the official reports and Mr. Massey's graphic letters more than a tentative outline of this week of continuous battles.

Our line before the present offensive was one which we have held with but little alteration for many months. Commencing on the coast a little north of Arsuf, the opposing trenches ran some five miles eastward to a little south (apparently) of the village of Tabsor, and then another five miles to Kefr Saba, close to the railway. This latter vital point was especially heavily defended, and was further protected by the lofty and heavily fortified village of Kalkilieh. From here the lines ran south-east into the foothills of Samaria, skirting for some distance the Wady Kana on the south, and running (some eight or nine miles south-east from the railway) to Rafat, a village 1,080 feet above sea level on a strong natural position for defence, between the Wady Dumeh and the Wady el Lahham. Some six miles further east the Turks held Furkah, on a lofty summit 1,980 feet above sea level, on the northern edge of the deep Wady Ishar. On the other side of this wady we held Mezrah and Arura, also lofty points. Between these and the Jerusalem-Nablus high road our lines ran along the ridge on which stands Khurbet Ghurabeh and el Burj. Close to the road we dominated Sinjil and Turmus Aya, but in the very broken country which slopes from here eastwards our lines bent back southwards. The country consists of a tangle of deep valleys and rugged slopes, the general direction being at right angles to our advance. Near the head of the deep Wady Samureh we held the lofty Tell Ashur—a very powerful position captured from the Turks some months ago—and were possibly in place a little north. The Wady Samureh becomes further eastwards the Wady el Aujeh, which has long been in our hands, as were the hills of Abu Tellul to the north of it. From the mouth of the Aujeh our main line, with some advanced posts to the east of the river, lay along the Jordan to the Dead Sea.

In preparation for the planned great sweeping movement on the coast, General Allenby determined to secure the line of probable retreat of the forces opposed to him on the high road, and for this purpose, on the evening of the 18th, the right wing—a strong force of Irish, Welsh, and Indian infantry—was advanced, amid great difficulties, on account of the rugged nature of the country, a distance of three or four miles across the Wady Samureh to el Mugheir. This village is situated upon one of the few usable "roads" in this district. The infantry shortly afterwards advanced another one and a-half miles and captured Khurbet Jibeit, a river astride a second possible line of retreat. This manœuvre secured the shepherding of the beaten Turks towards the north and the retreat of those who escaped us down the Wady Farah.

Meanwhile, at 4.30 a.m. on Thursday, September 19, a heavy attack was commenced on the western defences along a front of sixteen miles, between Rafat and the sea. The advance was inaugurated by a simultaneous and intense bombardment along the whole line. The sudden outbreak apparently took the enemy by complete surprise. The short artillery barrage was followed by an advance all along the line, and by 8 a.m. the whole hostile defence was overrun. Near the coast itself, where the bombardment was assisted by some naval units, a wide breach was soon made in the three lines of trenches by Londoners and Indian infantry, and at 7.30 a.m. a large mass of cavalry poured through the gap. "We had the wonderful spectacle of long columns of British Yeomanry, Australian Light Horse, and picturesque, keen Indian Cavalry moving over a wide expanse of country in the coastal section to get to the enemy's rear. There has been no finer spectacle in the Palestine war than this rapid and well-ordered advance. The horsemen had to cross deep wadis and move over roads heavy with sand-dust, but all obstacles were lightly brushed aside." (Massey.)

Further inland heavy resistance was offered at et Tireh (some seven miles east from the sea), but that was captured during the morning. El Miskeh, another fortified village, held out till the afternoon; but as by then the line of retreat was seriously threatened by our cavalry, now far behind the Turkish lines, this place was hastily evacuated. The strongly fortified Kalkilieh offered some resistance, and had to be heavily assailed by artillery, but was finally captured by East Anglian troops before noon. The Turks now rapidly retreated towards the mouth of the Wady es Shair, hoping to reach the road to Nablus or the Nablus—Jenin high road. Meanwhile, in the difficult broken country further inland, our French Allies were victoriously overcoming the resistance of the enemy about Rafat. The forces on the right—Irish, Welsh, and Indian—meanwhile kept up a continuous fight, marching forward along the sides of the Nablus road and driving the Turks towards the north.

The large cavalry force which had broken through at 7.30 a.m. on this memorable morning with great dash successively crossed the Wady el Falk and the Wady Iskanderuneh, ten miles further north, fighting over the old Crusading country. By midday they had reached Liktera—better known as the site of the Jewish Colony of Khudeireh—nineteen miles from the point of departure. From here this great force of cavalry passed somewhat east of north over the hill country known as the Belad er Ruah (the breezy land), just east of the eastern end of Carmel, probably emerging (as I have done, riding this way) at Tell Keimun, on the Plain of Esdrae'on. From here at sunrise on the 20th they swept on to Nazareth. Here they met with considerable opposition—it had long been rumoured that the Turks had prepared a line of resistance along the Nazareth hills—but they promptly surrounded the town and captured it with 2,300 prisoners. General Liman von Sanders, the German Commander-in-chief, had evacuated the town only the previous evening. The capture of this historic site was important, not only because of its size or for sentimental reasons, as a large Christian town, but because it lies astride the main road from Haifa to the Lake of Tiberias. The rapidity of movement may be realised when we read that in twenty-four hours this force advanced over fifty miles, with stiff fighting in several places, before capturing Nazareth.

Meanwhile, a second section of Yeomanry and Indian Cavalry who had broken through at Tabsor advanced northwards a little to the west of the coastline, and progressed with equal impetuosity to the historical place of Megiddo, now known in part as the Wady Musmus. Along this route passed many an army in ancient history. Thothmes III. has recorded in considerable detail his advance by this way, and many centuries later another Pharaoh here led his troops towards the Euphrates

against the Assyrians. He was rashly opposed by the pious King Josiah, who perished at Megiddo. It was only consonant with history that near Lejjun below the lofty hill Tell Mutasellim, the site of Megiddo, the great fortress city which once guarded this pass, our troops should be met by opposition. The Lancers here encountered a whole Turkish battalion entrenched at the entrance to the plain. They made a resistless charge and cleared the way, killing ninety and capturing 410. From here the cavalry crossed the historic plain north-east to El Afuleh. This they speedily took with 1,500 prisoners and considerable quantities of rolling-stock and stores. This capture was of first-class importance, as El Afuleh is the junction of the Haifa-Damascus railway with the Afuleh-Gaza-Egypt line, and close here runs the Jenin-Nazareth road. Though but a poor village in itself it marks an historic event, because close by Napoleon's General Kleber obtained a striking victory—known as the "Battle of Tabor"—over a large force of irregular Arab cavalry. From here forces were rapidly pushed eastwards to Beisan, an important station in the Jordan Valley, on the Haifa-Damascus railway and the site of the ancient Bethshan, later known as Scythopolis, one of the chief cities of the Decapolis. And another force advanced still further north-east and secured the two very important bridges, road and railway, each known as Jisr el Mujamia, at the most important crossing of the Jordan south of the Lake of Galilee.

We must now return to the doings of the infantry. The forces which had so successfully overcome all resistance in the early morning of the 19th swung north-east, and, with astonishing energy, pushed ahead no less than twenty-two miles in twelve and a half hours, fighting at intervals all the way. With the assistance of some mounted men, they swung to the entrance of the Wady es Shair—the Nablus valley—captured the fortified hill of Tul Keram, and secured the whole section of the line up to Messudieh—the nearest point the railway reaches in the direction of Nablus.

By the evening of September 20 "the enemy's resistance had collapsed everywhere save on the Turkish left in the Jordan Valley." Our left wing had now swung round to a line moving almost north and south from Messudieh Junction, through Baka to Bidieh, closing all exit for the hills from the west. The cavalry at el Afuleh and Beisan closed the north. South, our forces occupied a line moving from es Sawieh south-eastwards to el Mugher. The only passage still open was that down the Wady Farah to the Jisr ed Damieh, on the Nablus-es Salt road.

Meanwhile, it should be stated, the Arab forces of the King of the Hejaz had been rendering signal service east of the Jordan. Besides inflicting a severe defeat on the Turks at et Tafileh, south-east of the Dead Sea, they had sent a strong force of mounted men, who, eluding the Turkish forces at Amman, had passed north and attacked and severely damaged the lines and bridges about the important railway junction of Deraa (the ancient Edrei), thereby cutting off the most important line of communication of the troops in Western Palestine with their base at Damascus.

By 9 p.m. on September 21 a ten mile line of our troops had been got into position, running from Bir Asur (four miles north-east of Tul Keram), through Subastiyeh (ancient Samaria) to Beit Dijan, five miles east of Nablus, shutting all retreat to the north.

The southern force meanwhile was advancing rapidly along the line of the high road, with heavy fighting all the way. On entering the plain of Mukhneh they were met by severe artillery fire from the hills behind Huwara, but by keeping in open formation towards the eastern side of the plain managed to progress. Meanwhile Yeomanry rounded off the entrenched force and captured Huwara itself with many prisoners. The sides of the trap were fast closing upon the doomed force, and a vast mass of troops, with baggage and guns, began to pour down the only road remaining open, running from the village of Ballata (where the Nablus valley—between Ebal and Yenzim—opens to the east) down the Wady Farah. This flight had been anticipated and as our infantry drove them into the narrow pass our airmen swooped down upon them with terrible effect; nearly ten tons of bombs were dropped at low altitudes and 56,000 rounds fired from machine guns. Between our artillery behind and the airmen in front, the packed column, extending over six miles, was almost entirely destroyed. Along this line the whole column became one mass of broken enemy troops. "In this area alone eighty-seven guns of various calibres, fully 1,000 horse and oxen-drawn vehicles, nearly 100 motor lorries, cars, field kitchens, water-carts, and a mass of other impedimenta were found. The road was black with the carcasses of thousands of animals and the bodies of dead Turks and Germans" (Massey).

Nablus was entered the same afternoon by Australian and French mounted troops.

In the north cavalry from Nazareth approached Kefr Kenna (the traditional site of Cana in Galilee) and Sufurieh (the ancient Sepphoris, the Roman capital, at one time of Galilee).

The next morning, Sunday, September 22, the passage of the Jordan at Jisr ed Damieh was secured, and by 1 p.m. New Zealand troops got across the river and secured the Nablus-es Salt road.

On Monday, the 23rd, the important port of Haifa—the one reasonably good harbour in Palestine—and the historic city of Akka (Acre), so famous in connection with British feats of arms, were both occupied. At Haifa our troops received a warm welcome, even from the German colonists. This gives us the whole section of the railway from Akka and Haifa to the Jordan. The possession of Haifa will enormously facilitate transport problems connected with the advance, and in securing Akka we have probably brought under our control all the maritime plain up to the famous ladder of Tyre. An important military road runs from Akka close to Safed, across the Jordan at the Jisr Benat Yacob ("the bridge of the daughters of Jacob"), and on to Damascus. No doubt the securing of this road in its entirety will be one of the next steps taken.

On the same day (23rd) we re-occupied es Salt for the third, and we hope the final, time, taking prisoners and guns. The position of the considerable Germano-Turkish force in Amman must now be most precarious, and it seems not improbable that they will try to break out to the north. Their only hope of safety lies in the direction of Damascus. The Arabs have captured Maan, upon the Hejaz railway to the south, and have broken the line at Deraa to the north. Our forces at es Salt—Australians, New Zealanders, West Indians, and Jewish troops—threaten them to the north-west, and will doubtless assist the Arabs in the demolition of the railway just north of Amman. It is difficult to see how the Turkish garrison can escape without immense loss. Meanwhile the latest news reports a total of over 40,000 Turks and Germans captured, with 265 guns and enormous military stores of all descriptions.

Never in all the long history of Palestine, with its countless wars, has the land witnessed such a crushing and lightning stroke—one which has at one blow liberated for ever this oppressed and ravaged land from the accursed rule of the Ottoman Turk

E. W. G. M.

CONGRATULATIONS TO GENERAL ALLENBY.

The King has sent the following telegram to General Sir Edmund Allenby:—

"It is with feelings of pride and admiration that we at home have received the news of the ably conceived and brilliantly carried out operations in which the British, Indian, and Allied Forces under your command, with the support of the Royal Navy, have gained a complete victory over the enemy.

"I am confident that this success, which has effected the liberation of Palestine from Turkish rule, will rank as a great exploit in the history of the British Empire, and will stand for all time as a memorable testimony to British leadership and to the fighting qualities of British and Indian troops. GEORGE R.I."

The Lord Mayor of London has conveyed to General Allenby the heartiest congratulations of the citizens of London on the recent splendid victories of the British troops in Palestine.

Sir Douglas Haig has sent the following telegram:—

All ranks join with me in sending our heartiest congratulations on your latest magnificent success to you and our comrades in Palestine.

PRESS ON THE NEAR EAST.

A Defender of the Dardanelles.

Land and Water (September 12) contains the first part of an article, "The Dardanelles Bombardment," by Mr. Henry Morgenthau, formerly American Minister in Constantinople. The account is full of interest. Here is an incident that happened when Mr. Morgenthau was being shown the Dardanos battery:—

The Turkish generals were extremely proud of the fight which this Dardanos battery had made against the British ships. They would lead me to the guns that had done particularly good service, and pat them affectionately. For my benefit, Djevad called out Lieutenant Hassan, the Turkish officer who had defended this position. He was a little fellow, with jet-black hair, black eyes, extremely modest, and almost shrinking in the presence of these great generals. Djevad patted Hassan on both cheeks, while another high Turkish officer stroked his hair; one would have thought that he was a faithful dog who had just performed some meritorious service.

"It is men like you of whom great heroes are made," said General Djevad. He asked Hassan to describe the attack and the way it had been met. The embarrassed lieutenant quietly told his story, though he was moved almost to tears by the appreciation of his exalted chiefs.

"There is a great future for you in the army," said General Djevad, as we parted from this hero.

Poor Hassan's "future" came two days afterwards, when the Allied Fleet made its greatest attack. One of the shells struck his dug-out, which caved in, killing the boy. Yet his behaviour on the day I visited his battery showed that he regarded the praise of his general as sufficient compensation for all that he had suffered or all that he might suffer.

A Two-Year Republic.

A correspondent in *The Times* recently gave the following account of the history of the Republic of Koritza:—

This State [which is officially spelt Korce in Albanian] originated in the late autumn of 1916, in the brilliant brain of a French cavalry colonel. The bulk of Albania was at that time occupied by the Austrians. In the south the Italians held Avlona, on the Adriatic, but between them and the Allied Salonika forces was a solid wedge of Austrians and King Constantine's unfriendly Greeks.

In the autumn General Sarrail pushed forward in a north-westerly direction, and occupied Koritsa and the region near Lake Malik. This was the first time that French troops from Salonika had found themselves in Albanian territory, and the colonel in command was faced with the problem of setting up a civil administration. North-east lay Serbia and south-east lay Greece, but Koritsa was neither. According to the Treaty of Bucharest, the only legal instrument recognised by the Allies, it was part of Albania. The colonel solved the difficulty by proclaiming Koritsa, and the *caza*, or administrative district of which it is the capital, to be an autonomous Albanian republic, under the protection of the Allies.

General Sarrail, confronted with a *fait accompli*, accepted the situation, and Koritsa has remained a republic. A Council of twelve Elders, mixed Mussulman and Christian, was set up as the governing body, Essad Pasha uttered a blessing in Albanian, a flag was devised, a post office system instituted, and stamps issued.

All has not gone without a hitch. The two-headed eagle, which flaunted so bravely on the flag and the first stamp issue, roused antagonism, and was said to be not the genuine Albanian bird beloved of Skanderberg and all good Shkipetari, but a monstrous Austrian Imperial creature. Yet, on the whole, Koritsa has greatly enjoyed its autonomy, even if it realises that the days are coming when it will be merged in some larger whole. Meantime, owing to various happy advances of the Allies, it has gained several extensions of territory.

As a matter of fact, before the above account was written or published the Republic had ceased to exist, if the *Balkan Herald* of Athens is well informed. Writing on August 21, it says:—

This little free State no longer flourishes; it ceased to exist many months ago. It was abolished by the French, who created it. There are matters which cannot profitably be discussed in the public Press, but there were cogent reasons for suppressing this independent republic. *Sic transit gloria Korces.*

Our Victory in Palestine.

The following are a few extracts from various articles dealing with General Allenby's great victory in Palestine:

It has been a masterly operation, brilliantly conceived and as brilliantly executed. General Allenby must have been well backed by his officers and men and by their French colleagues to achieve so complete a success. And we may say in passing that the victory will serve to remind some of our military critics that the day of cavalry—and of cavalry leaders—is not over. But there is more to consider in this matter than tactics or even strategy. Palestine is practically clear of the enemy, and we may now begin to think of Damascus, and even "the vital junction of Muslimie." We can cut off the Turk from his chief line of communications with Mesopotamia—and we might perhaps bring the Turk to terms.—*The Morning Post.*

The liberation of the Holy Land would seem to be accomplished, and that is an event which must exert far-reaching moral influence in the Christian, the Jewish, and the Moslem world. The operation to which it is due seems to have been a model of conception and of execution. It is a fine sample, on a limited scale, of real Napoleonic tactics in a stricken field. —*The Times.*

General Allenby's victory is the most complete defeat yet inflicted by the Allied arms in any theatre of war, and is likely to have consequences of high importance, both in the military and the political spheres, throughout the enemy confederation. Last night's news established the amazing fact that the Turkish army in Palestine had been wiped out of existence in a single brilliant operation, long prepared, suddenly launched, and carried through with a rapidity which might have been supposed impossible.—*The Daily Telegraph.*

The value of the triumph does not consist alone in the large captures of men and material; it will accentuate the war-weariness of Constantinople and react upon the military situation in the Balkans and Mesopotamia. Whatever prospect there may have been of the "Prussians of the Balkans" receiving assistance from the Turks has been shattered by General Allenby; and the forces in front of General Marshall in Mesopotamia will doubtless be depleted for an attempt to restore the position in Northern Palestine.—*The Daily Graphic.*

The East and the West Fronts.

In a leading article, "The Allied Victories in the East," *The Times* refers to, and disposes of, certain views put forward by extremists who can see only the Western Front.

There is no ground for the fears that one sees expressed even now that these victories in the East may lead us away from the main business of the war. Victory has to be won in the West, but the East can make that victory easier than it would otherwise be. No troops are being employed in tnese Eastern campaigns that are not strictly necessary, even if our object were that of simple defence, or that could be more profitably used elsewhere. Both the Serbian and the Palestine victories have a very strict relevance to the matter in hand. Turkey is the great buffer for Germany against our communication with Russia and against our power to interfere with Germany's ambitions there. Moreover, anything that weakens Bulgaria weakens Austria and increases still further the Bulgarian discontent at the policy of subservience to the Central Powers. And what weakens Austria not only diminishes the help that she can give on the West, but goes to defeat the great political objects that Germany had at the beginning of the war, and to which she is now reverting as the sole hope of her escape from complete and unequivocal defeat.

It is stated by the *Petit Parisien* that General Puvishitch, who had come specially from Salonika, has personally conferred on King Albert of the Belgians, on behalf of the Serbian Government, the Grand Cross of the Order of Karageorge, with swords, and the gold medal for valour. The Cross of Charity in gold was conferred on Queen Elizabeth.

Mr. N. Marias, a Greek who died recently at Mansourah, left by his will £E200 to the Greek community of Alexandria, £E300 to that of Mansourah, £E200 for the Greek Invalids Fund, £E100 for Moslem Benevolent Societies, £E500 and a house, to be used as a school, to the Greek community of the Isle of Patmos, and £3,000 to be converted to a fund, the interest of which will be yearly a dowry for two poor Patmos girls.

UNIVERSITY OF LONDON.

KING'S COLLEGE and KING'S COLLEGE FOR WOMEN.

COMPLETE COURSES OF STUDY are arranged for Degrees in ARTS, LAWS, SCIENCE, PRELIMINARY and INTERMEDIATE MEDICAL STUDIES, PUBLIC HEALTH, and BACTERIOLOGY, ENGINEERING.

Women Students are now admitted to the full courses for the Preliminary and Intermediate Medical Studies.

Facilities for Research. Arrangements made for attending special or isolated courses.

EVENING CLASSES as well as Day in most Faculties.

STUDENTS' HOSTELS: The Platanes, Denmark Hill, and Vincent Square, Westminster.

KING'S COLLEGE FOR WOMEN now transferred to Strand, with full privileges.

Apply to Secretary, King's College, Strand, W.C.2.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

FOR INSURANCES OF ALL KINDS.

F. W. CUMING & CO., LTD.,

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

My view that the profits made by Greek shipping firms and businesses during the war would place Greece in a most favourable position as regards the provision of capital for future industrial developments is fully borne out by the results of the excess profits tax which was introduced this year. The tax was estimated to produce £1,200,000, but the yield has amounted to no less than £8,000,000! This result suggests very clearly that estimates of the profits of Greek industries, and, in particular, of shipping firms, during the last couple of years have greatly erred on the side of moderation. From the revenue point of view the large surplus over the estimate is invaluable. It has been a difficult task for the administration to straighten out the tangle in which Greek finances were left on the departure of the late King, and this unexpected revenue will be of immense assistance in meeting war charges and in helping to place the State finances on a satisfactory basis.

***

Bulgaria's difficulties with regard to the export of tobacco, to which I referred last week, have been increased by this year's excellent tobacco crop. The weather this spring was unfavourable for grain crops, and the Bulgarian farmers, no doubt under the impression that the Central Powers would provide a profitable market, seized the opportunity of increasing the area under tobacco. The result has been a crop of 50,000,000 kilograms, while there are still some 30,000,000 kilograms of previous crops in stock. There is no question that Germany and her Ally need all the tobacco they can obtain, but what they can take depends entirely upon transport, and as only a small amount can be made available for tobacco imports, Germany, whose pre-war consumption of Bulgarian tobacco is said to have been 25,000,000 kilograms, has only negotiated for 4,000,000 kilograms. As transport is not to be obtained for the requirements of the Central Powers it is naturally impossible for Bulgaria to find a market in neutral countries bordering on Germany and her Ally, who formerly imported about 10,000,000 kilograms from her. If there were no other complications the position would be bad enough, but that is not the whole story.

***

The year seems to have been a good one for tobacco cultivation throughout the Near East, and the tobacco crops of Turkey and the Ukraine are also reported to have been splendid, so that the Central Powers are not in any way compelled to depend on Bulgaria for whatever quantity of tobacco they are able to import. From their point of view it is fortunate that they are not, for the Bulgarian tobacco merchants would simply have taken advatage of the position to increase still further the high prices that have obtained for Bulgarian tobacco during the last couple of years. The pre-war price was from 9 to 12 francs, and this rose to 56 francs, a price which was touched for some time last year. By August last it had fallen, however, to 36 francs, mainly, no doubt, because it is realised that Germany and Austria are not now obliged to deal with Bulgaria at all, and will only do so at a reasonable price. Even at 36 francs business seems out of the question, as it is stated that that figure is twice as high as the Central Powers are willing to pay. Meanwhile Turkey seems to have attempted to secure the market by lowering the price for her tobacco, and altogether the situation seems full of possibilities.

***

I mentioned recently that an authority estimates the value of gold coins melted down in India during the war at £30,000,000. According to a correspondent the figure may well be as much as £40,000,000. He tersely describes the position by saying that every piece of gold put out by the Government has immediately gone into the melting pots and hoards. Whether the efforts now being made to check the traffic in gold coins will be entirely successful remains to be seen; certainly a most effective step has been taken in that direction by prohibiting the transport of coin by rail.

***

Indian has hitherto been able to carry on during the war without the increases in taxation that have taken place in other countries. It seems certain, however, that this state of things will not continue, as a resolution has been passed in the Imperial Legislative Council agreeing to impose next year an excess profits tax at the rate of 50 per cent. Presumably this tax will form the main feature of the next Indian Budget, and for final details we may have to wait until that is introduced. In the meantime the imminence of the new tax is having a marked effect on Indian shares, which, as a whole, have been receiving excellent returns during the war, and are rated accordingly.

***

On previous occasions I have drawn attention to Germany's hope that she will be able to obtain a "sphere of influence" in North Persia, and so make that country serve as an instrument in the working out of her Eastern ambitions. An article in a recent issue of the *Frankfurter Handelsblatt* gives further point to what I have written on this subject. After discussing the attractive resources of North Persia, especially as regards oil and copper, the journal proceeds boldly to discuss plans for developing the country's communications. Germany, it says, would have to consider the building of canals on the Kawal River and on the Schabund, and also the construction of "a great network of railways." The latter project gives an excellent clue to the design, as we are obligingly told that German "interest in this railway scheme is scarcely less than that in the Baghdad line." In other words, the resources of Persia are a secondary consideration, Germany's idea being to make of North Persia "a road to the East" which will enable her to threaten India. I wonder what the Persians will have to say to this project.

***

Initiative of any kind is so rare in Turkey that a word is called for by the enterprise of the members of the Constantinople Press in establishing a co-operative society for their mutual benefit. The society, which has a capital of £6,000 in £6 shares, of which no member may hold more than ten, is to be administered until its first general meeting in November by a provisional council, which will be responsible for the distribution of articles of food and clothing at a reasonable price. It is surprising that it should have been left to Constantinople to give an example of the organisation of a body of professional men in order to reduce the cost of living. I must point out, however, that the journalists in question are for the most part not Turks at all, but mainly Levantines, who, as a race, are renowned throughout the Near East for their astute business qualities, which readily explains the present undertaking.

***

Commenting on the present shortage of small coins in Egypt, a native contemporary suggests that the Egyptian Mint, which, it states, has been kept safely with its machinery, should be utilised to alleviate the crisis. I have no doubt the suggestion is well meant, but, unfortunately, it is not a shortage of Mints which has to be dealt with, and it is difficult to see how the resuscitation of the Egyptian Mint would remedy matters.

***

The latest development in regard to British trade organisation is the decision to form a British Manufacturers' Corporation, which was decided upon at a representative meeting at Manchester last week. It is stated that the object of the corporation is to secure a large extension of British exports after the war, and that for this purpose it is proposed to organise agencies in foreign countries. A provisional committee, with Sir Charles Mandleberg as chairman, has been appointed to carry out the formation of the corporation, and it is understood that so far 300 firms have signified their adhesion to the scheme.

***

In the majority of cases the spread of the co-operative credit system has everything to commend it in agricultural countries, but occasionally it produces somewhat unexpected results. A case in point is afforded in the recently-issued administration report of Bengal for 1916-17. After stating that the societies formed for weavers, a "depressed" and indigent community, increased from seventeen to thirty-four, while nine were formed by fishermen, the report adds that "it is a melancholy fact, illustrating the futility of Socialistic uniformity, that some of these societies used the increased prosperity and capital which co-operative sale and the elimination of the middleman had won for them to become middlemen themselves, and in their turn to exploit the labour of their less fortunate brethren who had remained outside the co-operative pale." In one case the fishermen found that they were able to obtain Rs.14 per maund for their fish as against the Rs.5 they obtained before they formed a society, and in consequence of their unexpected prosperity they gave up their work and sublet their fishery.

***

The effect of the war has been very marked on industrial activities generally in India, and in no direction has this been more evident than in regard to the cotton

weaving industry. Throughout the war production has been greatly increased, and in 1917-18 the increase was more than 500,000,000 yards, or nearly 50 per cent., above the pre-war average. For the same period imports amounted to 1,555,000,000 yards, a decrease of roughly 41 per cent. In 1916-17 the number of looms in Indian mills rose from 88,100 to 110,800, and at the end of that year the paid-up capital stood at Rs. 15,98 lakhs, compared with Rs. 14,94 lakhs in 1913-14. In the year before the war the total dividends of thirty-six companies amounted to Rs. 60 lakhs, equivalent to 12 per cent. on their aggregate ordinary paid up capital of Rs. 5,13 lakhs. In 1917, however, the dividends of the same companies amounted to no less than Rs. 1,71 lakhs, or about 33 per cent. on a capital of roughly Rs. 5.23 lakhs. These figures show the really remarkable development of the industry.

***

The report of the Assam Oil Company for 1917 records a marked advance on the results for the previous year, the profits being £89,800, against £69,200, which, with the amount brought forward, makes £105,100, against £80,200. The ordinary shares have received an interim dividend of 8 per cent., against 6 per cent. in 1916, and this has not been increased, but the dividend on the participating preference shares is raised from 7 per cent. to 8. £25,000 is allotted to depreciation, and £5,000 to the reserve fund, the total for these purposes being £5,000 less than the previous year, but the carry-forward is higher at £38,100, against £15,300. It, however, includes provision for excess profits duty for 1916 and 1917. It only remains to add that the report states that the outturn from the wells again showed improvement, and prices were higher, while progress with the drilling was satisfactory, and the usual prospecting work was carried on as energetically as possible.

***

Attention is drawn by *The Times* to the interest now being shown in financial circles in the position of the Four per Cent. Turkish Guaranteed Loan. The market price of this security, our contemporary points out, "stood at 103 before the war, and is now about 74¾, thus yielding £5 8s. per cent., as compared with £4 5s. per cent. from Consols or £4 12s. 6d. per cent. from Irish Guaranteed stock at their present prices. The interest on this Turkish loan was guaranteed jointly and severally by Great Britain and France until the capital should be repaid. The loan is secured on the Egyptian tribute and the Customs duties of Smyrna and Syria, and since 1878 the tribute payable by Cyprus to the Turkish Government has been retained by Great Britain and applied to the service of the loan. It is pointed out that in consequence of the transfer of Egypt and Cyprus to British control, the question of the tribute is practically bound to be dealt with in the rearrangements after the war, and that it is not unlikely that the opportunity may be taken to pay off the loan or convert it, so as to relieve the British and French Governments of their responsibilities under the guarantee. Should the loan, however, remain as it is, it seems to be in the position of a perpetual British Government security, and it seems somewhat remarkable, therefore, that it should stand at its comparatively low price in the market."

***

I understand that tenders are called for for cutting, embanking, and other works on two sections (about twenty-five miles) of the Tangier—Fez Railway. Tenders must be in by November 12.

COMMENTATOR.

ROUMANIAN COMMERCE.

Retrospect and Prospect.—II.

By A. LOVEDAY.

It is necessary now to review the development of Roumania's export trade, on which her power to purchase depends. As that export trade has extended *pari passu* with the increase of agricultural production, it is to the statistics of the latter that we naturally turn. Unfortunately, no agricultural statistics were published during the period 1877-85, and any figures showing the percentage increase of crops since the latter date are liable to be misleading owing to the difficulty of finding a suitable base period. If the average production for the period 1891-5 be taken as equal to one hundred, the following figures, representing the quinquennial average increase of the two main crops, wheat and maize, are obtained :—

	Wheat.	Maize.
1891-5	100	100
1896-00	87	110
1901-05	133	106
1906-10	133	135
1910-13 (3 yrs. av.)	155	168

But the increase of the wheat crops has, in fact, been more considerable than these figures indicate, the mean for the years 1891-5 being well above the average of preceding years. Had the period 1886-90 been taken as the base instead of 1891-5, the final figures for the years 1910-13 would have been 168 for wheat and only 141 for maize. The statistics for these first five years after the unfortunate lacuna in the published records, however, are not above suspicion, and the maize crop for the first year, if correctly computed, was a record which still remains unapproached.

It was noted above that six million hectares out of a total area of about 13 million were cultivated. The following table shows the extent of the more important cultivations during the period of the cereal years 1909/10-1913/14, and the export of maize, wheat, oats, and barley :—

PERIOD 1909/10-1913/14.

Crop.	Area (000) ha.	Harvest (000) M.T.	Net Export (000) M.T.	Consumption (000) M.T.	Consumption per head, kg.
Cereals..	5,091	—	3,068 (gross) Cal. year.	—	—
Wheat ..	1,852	2,389	1,427* Cal. year.	595	83·6
Maize ..	2,084	2,730	982	1,710	240
Oats	447	421	156 Cal. year.	—	—
Barley ..	534	544	351	—	—

* Includes wheaten flour.

In comparison with these figures may be given the exports of wheat during the same period by the more important producing countries of the world :—

NET EXPORTS OF WHEAT AND FLOUR CONVERTED TO TERMS OF WHEAT 1909/10-1913/14 (000) METRIC TONS.

Country.	Net export.
European Russia ..	4,467 (excluding exports through Asiatic boundaries)
U.S.A.	4,168
Canada	2,520
Argentine	2,254
Australia	1,445
Roumania	1,427
India	1,350

As an exporter of wheat Roumania thus ranked sixth in the world and second in Europe. As a producer and exporter of maize she gave place only to the Argentine and the United States of America. Maize is essentially the crop of the small peasant proprietor, and the increase of the exportable surplus is to a certain extent a measure of the improvement in the conditions of agriculture, since the total area under maize has not greatly increased since 1886, and the amount which the peasant retains for his personal consumption does not greatly vary from year to year unless the harvest has been exceptionally bad. It will be noted that the average consumption per head of the population during the five years 1909-14 was 240 kg., while that of wheat was only 83.6 kg. These figures may be compared on the one hand with the average consumption of wheat in the United Kingdom of 162.5 kg. per head, where the domestic production during the same period was 1,623 million metric tons, and on the other to the present German bread and flour ration which, inclusive of potatoes, rye, and other ingredients, may be estimated at about 95 kg. per individual. In Germany, where rye has always been more popular than wheaten bread, the average consumption of wheat per head of the population during the quinquennium preceding the war was only 86 kg., the lowest in Europe with the exception of Sweden, Norway, and Roumania. There are, of course, no accurate figures available of the production of these cereals in Roumania since the German invasion. That that production must have shown an appreciable diminution is beyond question. But it is more open to doubt whether, if the Roumanian army is demobilised and the peasant soldier returns to his home, as assuredly he will does the German permit him, normal crops will not once more be reaped. The yield per hectare for all crops in Roumania is low; for wheat it only averaged during the period under discussion 12.9 quintals, compared with 21.2 quintals in Great Britain. There are two main reasons for this fact, primitive methods of cultivation and lack of capital. Capital Germany will no doubt be unable to supply. But it is, on the other hand, by no means improbable that she will enforce more scientific methods of agriculture, and abolish over large areas the individual tillage of minute plots in favour of the extensive cultivation of considerable districts. Before the war the production of wheat per hectare on large holdings was 20 per cent. higher than on small, and in the production of maize the difference was still more marked, although it cannot be said that the large proprietors in Roumania, for all the fortunes they made in years of abundant harvest, sank over much capital in the land.

One of the most remarkable facts with reference to the trade of Roumania has been the growth of exports to Belgium since 1886. This has been coupled with a decrease in exports to Austria-Hungary, to the United Kingdom, and in a lesser degree to Turkey. The whole of this increased export to Belgium was accounted for by commitments of grain to that country as a free mart, and some Roumanian writers have seen in this fact a proof of the growing economic independence of their country. To a certain extent, no doubt, their view is correct, and the year 1886 marks the beginning of that tariff war with Austria-Hungary which finally liberated her from the economic vassalage to which she had been forced to submit during the previous decade. But the figures published by the Roumanian Government are in some measure misleading, as an appreciable proportion of the consignments to Belgium were passed straight through to Germany, and appear correctly in the German trade returns as imports from Roumania, although no complementary exports are to be found in the Roumanian trade returns.

The actual position may be illustrated by the following table :—

EXPORTS OF WHEAT BY ROUMANIA AND IMPORTS BY GERMANY. (000) METRIC TONS.

	From Roumanian Trade Returns.			From German Trade Returns.	
Year.	Total exp'rts.	Exports to Belgium.	Exports to Germany.	German imports from Roumania.	German total net imports.
1909..	858	246	41	120	2,223
1910..	1,841	895	29	169	2,063
1911..	1,458	820	31	227	2,178
1912..	1,372	563	23	272	1,975
1913..	1,153	590	25	95	2,011
1909-1913..	1,336	623	30	176	2,090

Average.

The first and last columns, read in conjunction with the harvest figures given in a former table, afford a basis for estimating roughly the extent to which Germany might compensate herself for the loss of her overseas trade in wheat by imports from Roumania. The pre-war exports of maize by Roumania exceeded Germany's net imports, averaging in the years considered above 982,000 metric tons, compared with 817,000 metric tons.

Germany's main object, however, in wishing to force, or to induce Russia to force, Roumania to enter the war at the time she did was to obtain possession of her petroleum wells.

The petroleum industry is the example which Roumanians always quote of England's neglect of her opportunities, a neglect which Roumanians have watched for their own reasons with no small measure of regret in recent years. However this may be, it is no doubt true that the real development of this source of wealth began with the foundation of the Deutsche-Petroleum-Aktiengesellschaft

Digitized by Google

in 1903 under the auspices of the Deutsche Bank, and that since that date Germany has obtained and held the premier position in the industry. According to the latest British consular report, out of seventy-three petroleum companies, with a nominal capital of £18,500,000, in 1913 Germany held 37 per cent., the United Kingdom 30 per cent., the Netherlands 12 per cent., and France 6 per cent. of that capital.

In addition to her capital holdings, Germany also controlled a number of companies of French, Dutch, and Italian origin. The group formed by the Disconto Gesellschaft, for instance, under the title of the Allgemeine Petroleum Industrie A.G., Berlin controlled the Credit Petrolifier, the Internat. Rumeensche Petroleum Maatschappij, Amsterdam, the Telega Oil Co., and the Italo-Romano Co., amongst others, while the Dresdner Bank group was founded by a combination of Franco-German financiers.

The increasing value of this industry to Roumania is shown by the following table, giving in millions of francs the quinquennial value of exports for the twenty years preceding the war:—

EXPORTS OF PETROLEUM AND PETROLEUM PRODUCTS.

Period.	Millions of Francs.
1894-8	1
1899-03	4
1903-8	24
1909-13	62

But by giving the average for the five years immediately preceding the war the extraordinarily rapid progress achieved during that period is concealed. The actual exports in the year 1913 amounted to 131,481,000 francs in value, or 19.6 per cent. of the total value of all exports. The production of crude petroleum, in fact, doubled between the years 1906 and 1913, being 97,100 tons in the former and 1,899,000 tons in the latter year. Parallel with this increase in the output of crude petroleum, there has been an appreciable development of the refining industry in Roumania, the quantity of crude petroleum sent to the refineries having increased from 73 per cent. of the total output in 1901 to 91 per cent. in 1911, and the extracts actually obtained from 90 per cent. to 98.5 per cent. in the two years respectively.

From the figures given in the table below it will be noted that, in spite of the relative neglect of this industry by the British, the United Kingdom purchased continually increasing quantities of its production, and were far larger customers of Roumania than was Germany:—

EXPORTS OF PETROLEUM AND PETROLEUM PRODUCTS BY ROUMANIA TO VARIOUS COUNTRIES OF CONSIGNMENT IN THOUSANDS OF METRIC TONS.

Country.	1910.	1911.	1912.	1913.
United Kingdom ..	126	179	215	240
France	140	116	166	158
Germany	53	55	88	128
Italy	28	18	24	119
Egypt	73	110	137	130
Austria-Hungary ..	39	47	83	78

The markets, however, are better defined than the above table indicates. In 1913, for instance, Austria-Hungary purchased 77 per cent. of the total exports of crude petroleum, the United Kingdom about 33 per cent. of the residues, France about 33 per cent., and Germany about 27 per cent. of the benzine; while of the refined petrol England and Egypt each took over 20 per cent., whereas Austria-Hungary's imports were negligible, and Germany only accounted for 33,631 out of a total export of 428,097 metric tons.

THE WORLD'S CROPS.

According to estimates received by the Board of Agriculture from the International Agricultural Institute, wheat has been produced this year to the extent of 962,078,000 cwts. in England and Wales, Canada, India, the United States, Spain, Japan, Egypt, and Tunis, or 17.1 per cent. more than in 1917 and 7.6 per cent. above the average for the five years 1912-16. Barley is estimated to prove 5.2 per cent. greater than the yield of 1917 and 7.2 above the average for 1912-16; and oats 3.4 less than last year, but 12.3 per cent. above the average for the five years mentioned. Maize production in the United States and Canada is 15.4 per cent. less than 1917, and the potato yield in France, England and Wales, Canada, and the United States this year is reckoned to be 12.6 per cent. below that of 1917.

ENGINEERING NOTES.

Jerusalem's Water Supply.

It was well known to travellers and tourists that the pleasure of a visit to Jerusalem had to be paid for in the hard cash of inconvenience, for before the war there were few comforts there, and absolutely no amusements, shops or clubs, no music, and only one or two good hotels. Above all there was no water supply or sanitation worth mentioning, and streets and people looked inexpressibly unclean. An interesting picture of the vitally different conditions which obtain to-day has been given by a priest of the Eastern Church who recently left Jerusalem. He states that from the time of the liberation of the Holy City by the British Army, a most wonderful transformation has been in progress, which amazes the inhabitants and those who visit the city. Apart from the established order, safety and equity, of which these people have had no conception, the abundance of pure water flowing from fountains and standpipes all over the city is considered a veritable miracle. This latter transformation is due to the skill of the British engineers, who, as was reported at the time, accomplished in a little more than two months, what the Turks could not, or would not do in their rule of four hundred years.

Cisterns and Water Carriers.

Jerusalem's water supply depended upon cisterns and the picturesque, but usually unclean water-carriers. Almost every house has its underground cistern, or reservoir, which is filled during winter with rain water collected from the roofs. The quantity (as well as the cleanness) of the water is obviously uncertain. It was for such cases, and for houses that have no cisterns, that the water-carrier with his leathern water-bag was needed. To supplement the cistern supply the Mosque of Omar reservoir divided with Bethlehem the water which flowed from near Solomon's Pools down an aqueduct constructed by Roman engineers under Herod. But this was not nearly sufficient, nor was it constant in supply. The British engineers, therefore, went farther afield, and found a group of springheads in an absolutely clean gathering ground on the hills, yielding some 14,000 gallons an hour, and this water which was running to waste, is lifted to the top of a hill from which it flows by gravity through a long pipe line to Jerusalem. Supplies of this excellent water run direct to the hospitals, and from standpipes all over the city the inhabitants take as much as they desire. It is reported that the water consumption of the people has become ten times what it was last year, and this fact alone shows how the boon is appreciated. A householder has merely to apply to the Military Government for water, and a sanitary officer inspects the cistern, orders it to be cleansed and sees it is done, and then the department of public health grants a certificate that the cistern is clean, and then engineers run a pipe to it and it is filled no matter what its capacity may be.

Triumph for British Engineers.

It is admitted that the installation of the Jerusalem water supply is a triumph for the British engineers. It is asserted that a preliminary investigation and survey of the ground was made on February 14, and a scheme was submitted four days later. Owing to the shortage of transport and abnormally bad weather, work could not be commenced till April 12. Many miles of pipeline had to be laid, and a powerful pumping plant erected, but water was being delivered to the people of Jerusalem on June '18. There has not been a stoppage or a hitch. Other military works have done much for the common good in Palestine, but none of them has been of greater utility than this. Mohammedans seeing clear water flow into Jerusalem, regarded it as one of the wonders of the time; whilst, according to the priest mentioned above, many of the old Greek priests were crossing themselves for being spared to witness it, and to see the Holy City clean and beautiful.

Artesian Wells in Greece.

Artesian well engineers and contractors will find a very wide field for business enterprise in the Near East, particularly in Greece, where in many large towns and important agricultural districts the great desideratum is water. In most of these towns and districts there are convincing proofs, natural as well as practical, that artesian wells could successfully be opened, and the necessary water supply obtained. Just before the war commenced the Greek Government, it was reported, set aside an annual sum of £3,000 for five years to cover the expense of experimental borings for water in various parts of the country. The Government also announced its willingness to sign an agreement with any competent firm of engineering contractors for the carrying out of these borings, payment to be at so much a metre. The localities chosen at the time for the successive operations were in the immediate vicinity of Athens, Corinth, Patras, Volo, Larissa, Trikkala, Karditsa, Lamia, Levadea, Thebes, Missolongi, Pyrgos, Kyparissia, Calamata, Gythion, Sparta, Tripolitsa, etc. Owing most probably to the serious political events in Greece, with the subsequent withdrawal of M. Venizelos from the Government, nothing has been heard since of this proposal. But as the annual sum has, we presume, been set aside, and the present Government proposed the scheme, it will be worth the while of British firms interested in this class of work to give attention to this matter. For, apart from the experimental soundings which the Government requires, the contractors for the experimental borings, etc., will undoubtedly find lucrative employment in boring for landowners in the districts where the existence of water is proved. There are also many municipalities in the larger islands of the Ægean Sea which are very anxious to carry out similar boring experiments.

Composite Buildings for Greece.

The rebuilding of Salonika, after the great fire which recently demolished a large part of the town, is, in existing circumstances, a very serious question. Labour and materials for building will be very scarce for some time, and people are in need of houses to replace those that were burnt. It is said that French, Italian, and American firms have tried to introduce certain types of iron and composite buildings, which would be partially prepared in their respective countries and finished on the spot. But it appears that the cost of these buildings was in most cases beyond the means of the class of people who were in immediate need of a home, and in other cases the designs and construction generally were not suitable for the climate. It was not reported if any offers were made from this country, yet there are several British firms engaged in the construction of iron, wooden, or composite fixed and portable buildings, such as cottages, bungalows, schools, churches, etc., which would meet the requirements of those who are in need of temporary or permanent small houses, not only in Salonika, but in many parts of Greece. It may be of interest to such firms to know that a design which was proposed by a firm, and was apparently regarded with favour by would-be buyers at the time, was a building designed to produce the highest possible efficiency with a combination of standard component parts. It could be taken to pieces, transported and re-erected with extreme rapidity. The plates were designed so that the building could be erected on uneven ground. The erection, it was claimed, required no skilled labour. The frame of the building consisted of vertical stanchions and horizontal members of tubular steel and wrought-iron, such as are used for electric installations. Between the framework sheets of thin tinplate are inserted, forming shutters or walls, which may be painted or tarred. The floor and roof consisted of sheets of corrugated iron, but the floor could also be covered with ordinary boards. The first cost of such a building was claimed to be a fraction of that of brick or other buildings of corresponding capacity and of normal type. The weight of a cottage 22 ft. by 10 ft. was said to be 23 cwt., and the heaviest part weighed 85 lb. This was the smallest size, but much larger buildings could be made on the same principle. As a strong, easily transported, and cheap design of building it was favoured by those who required a temporary house or a bungalow.

GREEK LIGNITE INDUSTRY.

History and Prospects.

The recent discovery of large deposits of lignite in Greek Macedonia, which was referred to in these columns last week, gives special interest to a detailed survey of the Greek lignite industry by the United States Vice-Consul at Athens, Mr. Henry A. Hill, which has recently been issued. Obviously his statement of the position will be liable to modification should the new lignite field justify the hope of an output of 200 tons per day, since it would mean that its cost would probably be lower after the war, and as it is out of the question, in view of the increased cost of labour and transport and the shortage of shipping, that it will then be possible to deliver British coal in Greece at anything like the pre-war figure, lignite may enjoy a demand which it would never have had but for the war.

It is interesting to note that before the year 1915, says Mr. Hill, the demand for lignite in Greece was negligible. Since the outbreak of the war, however, the demand has increased so enormously that some 30 concerns which possessed concessions have commenced mining the product with lucrative results. Besides these firms the Mining Office of the Ministry of National Economy has issued 164 concessions to mine magnesite in accordance with a law promulgated March 31, 1916. Under this law, if the holder of a concession fails to exploit it the first informant receives that privilege on depositing a guaranty for account of the original holder of the concession of nine-tenths of the expected profit. In the case of lignite the guaranty deposited for the first concession holder is 2s. 2d. per ton.

Pre-War Position.

The small demand for lignite in pre-war years can be easily understood when it is considered that Cardiff coal delivered at the wharf at the Piræus cost 20s. 3½d. per ton, while the best lignite was delivered at the price of 13s. 8d. to 14s. 5½d. per ton. When one realises that the heating power of lignite is only half that of coal and that the use of lignite, owing to the moisture produced, damages boilers and boiler grates, it is surprising that there was any demand at all for it. However, according to a statement of a prominent shipowner, the only concerns which were authorised to use lignite in pre-war times were those whose coasting steamers ran between Athens and Salonika.

Since 1915 the situation has changed entirely; with the outbreak of the European war coal became difficult to import and later quite impossible. Fuel was urgently needed to run power plant, railways, vessels, etc., and the timber of the country was either insufficient or difficult to exploit. The unused hoards of lignite were then remembered, and the mining of this product increased rapidly. This new demand for lignite can be understood when it is stated that Greece in ordinary times imports about 500,000 tons of coal and that this amount was increasing annually with the development of her infant industries. During 1916 the import of coal decreased to 112,204 tons.

Coal Imports.

The following table shows the imports of coal into Greece for the years 1909 to 1916:—

Year.	Imports. From Great Britain.	From Germany.	From all countries.	Average price per ton.
	Tons.	Tons.	Tons.	s. d.
1909	313,715	6,471	328,202	13 4
1910	392,097	25.842	421,409	13 4
1911	489,285	18.755	532,404	16 8
1912	346,676	37,841	395,529	20 0
1913	463.554	25,535	491,710	20 0
1914	469.525	39,396	540.506	20 0
1915	154,479	—	157,008	39 7
1916	51,994	—	112,204	75 0

A special service, created some six months ago, for the control of transportation and called "La Direction Supérieure des Transports" recently estimated the monthly fuel (lignite or wood) needs of the country at 37,000 to 42,000 tons, distributed as follows: Steamship companies, 12,000 to 13,000 tons; railway companies, 7,000 to 8,000 tons; electric light company, 8,000 to 9,000 tons; other industries, 9,000 to 10,000 tons; and various consumers, 1,000 to 2,000 tons. The same service also estimated that the production of lignite for the twelve months from February, 1918, onward would be 239,000 tons, equal in heating power to 119,500 tons of coal.

To insure the proper mining of lignite the Greek Government has issued several royal decrees and promulgated the law mentioned above. When creating the Direction Supérieure des Transports the Government authorised it to "organise the exploitation of lignite mines and the distribution of this product." Later this service was instructed "to undertake the exploitation for account of the Government of lignite mines, requisitioning them, renting them, or taking over mines belonging to the country." The Direction Supérieure des Transports is working in strict unison with the Mining Office of the Ministry of National Economy.

At the present moment the owner of a lignite concession is perhaps as much envied as a shipowner, with the difference that while he is envied for the immediate profits few will buy his concession. This is not due to the enormous price asked for a lignite concession but to the fact that everyone fears that it will be valueless as soon as the war ends. Nowadays the holder of a concession usually leases it for 18 months or 2 years, 15 per cent. of the profits being paid him.

Industry's Future.

The question has recently been raised as to whether Greek lignite will sell after the war. The Mining Office of the Ministry of National Economy believes that for years to come Greek lignite will find a good local market, and that although the smaller mining companies will have to close their mines the larger ones will continue to work at the same pressure as to-day. The more pessimistic business man argues that when the Dardanelles are thrown open to merchant vessels Greece will be able to procure as much coal as she then desires from England, and there will be no demand for lignite. This will be the case should the merchant vessels going to a port in the Black Sea to load wheat bring coal to Greece in ballast at pre-war prices. It should be borne in mind in this connection that Greek lignite mines have been able to improve their plants by installing Décauville railways, building dwellings for the labourers, providing machinery, etc., during the war; perhaps therefore in peace times they may be able to supply lignite at lower prices than heretofore.

A company is now being formed for manufacturing briquets from lignite and is importing a considerable amount of machinery (coal crushers, cylindrical screens, bricked elevators, briquetting presses, blower fans, cylindrical driers, etc.) for this purpose from the United States. A member of this company states that the briquets manufactured will be of excellent quality, and that it is hoped that the gas plants in Greece will be able to use them in the manufacture of gas. The Greek Government seems interested in this company, and is assisting it.

The following figures of the selling price of a ton of lignite for the past four years are of interest: 1914, 13s. 8d; 1915, 17s. 5½d.; 1916, 35s.; and 1917, 44s. 3d. to 80s. 5d. These figures seem large, but it should be taken into consideration that the cost of mining material and labour has greatly increased during the past years.

Production of Lignite.

A good idea of the increased production of lignite during the last few years may be gained from the following figures: 1909, 3,873 tons; 1910, 1,500; 1913, 170; 1914, 20,002; 1915, 39,745; 1916, 84,466; and 1917, 153,240 tons.

Below is shown from what districts the lignite is produced and the amount taken from each during 1917. It will be seen that the largest quantity is mined at Kymi:

	Tons.
Euboea:	
Kymi	59,679
Aliveri	31,298
Psakhna	10,269
Xerochori	536
Total	101,722
Attica:	
Oropos	24,615
Megara	8,184
Arafina and Irakleion	2,747
Total	35,546
Peloponnesus:	
Messenia	3,471
Achaia and Elis	8,189
Argolis and Corinth	1,160
Arcadia	1,700
Laconia	1,182
Total	15,702
Phthiotis and Phocis	270
Grand total	153,240

The mines of Kymi, besides producing the largest quantity of lignite, also produce the best quality.

The deposits of lignite seem to be large and are not in danger of being quickly exhausted. It is difficult, however, to estimate with accuracy the quantity of lignite in Greece. It is estimated that there are deposits of 10,000,000 tons at Kymi, 2,500,000 tons at Aliveri, and some 15,000,000 tons in the remainder of Greece. At the present rate of exploitation, the deposits will last for many years to come. The capital invested in the lignite industry at the end of 1917 was estimated at 15,000,000 drachmæ (£12,062,500). Since that time the amount has increased.

Large Present Demand.

At the present moment lignite has replaced coal in practically every industry in Greece, and the demand for this product is enormous. The railways of Greece are run by lignite; the power plants, when in a position to obtain it, use lignite; the coasting vessels also use lignite. However, this fuel is spoiling grates which are unadapted for its use, and in most cases industries are looking forward to the day when they will be able to ban lignite from their establishments for ever. The amount of Greek lignite used to replace coal seems to be in the proportion of two to one. As soon as the war ends Greece will make immediate efforts to secure the large quantities of coal now so badly needed.

It should be remembered that Greece in normal times imports more than 500,000 tons of coal annually. This amount consists usually of 10 per cent. Welsh coal (best Cardiff); 25 per cent. second quality Welsh (Newport), containing 20 to 30 per cent. of small coal used for factories and steamers; 10 per cent. coal of second quality used only for obtaining gas; 35 per cent. bunkering coal (Durham, Yorkshire, and Northumberland); 10 per cent. patent briquets; and 10 per cent. German coal. As will be seen from this, England has had practically the monopoly of coal in the past. After the outbreak of the war America shipped a certain quantity of coal to Greece.

TUNISIA CORK HARVEST.

The *Tunisie Française* states that the cork harvest of the Khroumirie forest is estimated at about 60,000 quintals. The journal adds that it would be placed on sale at the end of this month, but that "it is hardly probable that this sale will have any better success than last year because of the lack of transportation, unless the French cork makers succeed in their agitation for the designation by the Government of the necessary tonnage."

A Bucharest telegram states that private goods traffic from Germany to Austria-Hungary and Roumania has been resumed.

The control of the supply of cotton cloth and piece goods throughout Bengal was notified in the *Official Gazette of India* on September 14.

Mr. T. C. Marriott, Acting Protector of Immigrants in Trinidad, states that on December 31, 1917, there were 127,420 Indians in the colony. During the year 91,044 acres were cultivated by Indians.

The Durbari *Gazette* of Bhavnagar notifies that anyone found guilty of melting silver or gold coins will be liable to punishment extending to three months' imprisonment or fine, or both.

Thirty-eight factories were started in Madras last year, 12 of them rice mills, one a weaving factory, two saw mills, three tile works, one tannery, nine ginning factories, and one engineering factory. At the beginning of 1918 Madras had 468 factories.

Reuter's Amsterdam correspondent states that according to a Vienna telegram, the Austro-Hungarian Government has announced that the Customs may be paid in bank notes (instead of, as hitherto, in gold), plus an agio of 150 per cent. The telegram explains that the new measure aims at covering the Budget deficiency and the reduction in the circulation of bank notes.

THE GREEK COMMERCIAL MISSION.

Visit to Birmingham.

The provincial tour of the members of the Greek Commercial Mission commenced with a visit to Birmingham, where they arrived on September 19. A civic reception was given to them on the following day by the Lord Mayor, Alderman Sir David Brooks, at the Council House.

Welcoming the delegates in a brief but felicitous speech, Sir David said that Greece, through the wise direction of her great statesman, M. Venizelos, and under the rule of a new King, had associated herself with the Allies, and with a reconstituted army was now fighting side by side with British troops, and he expressed the hope that the common sacrifices they were now enduring would leave behind them a feeling of cordial friendship between this country and Greece, and that in the days of peace they would be able to develop their interests and relations to the advantage of both countries. Their visit was with the object of seeing something of Birmingham manufactures and business methods. At present the city was devoting all her energies to the production of munitions of war. He thought, however, that they would be able to see from their visits to the large factories something of the way in which business was conducted, and also many interesting mechanical operations.

M. Michalocopoulos, the Greek Minister of Agriculture, who replied, said that in Greece they knew Birmingham and had heard of its famous son, Mr. Chamberlain, who had devoted his life to cementing and consolidating the great British Empire. They had seen in this cruel war how England, a peace-loving country, had had to be transformed into a great war arsenal; how in great centres like Birmingham workmen were busy breaking down the chains with which Germany had prepared to bind them. In future the relations between Greece and her Allies must be closer and more compact, both from the point of view of mutual defence and of commerce. The day of peace was coming, and he was quite sure that the British Empire, which for centuries had used its sea power only in order to protect her freedom and to put a stop to barbarism and war domination, would continue to use that power until a lasting peace was secured. It would be the business of the delegates when they returned to Greece to see how the commercial relations between the two countries could be improved.

The delegates subsequently visited the B.S.A. and the works of the Austin Motor Company, and in the evening were entertained at dinner by the Lord Mayor at the Queen's Hotel. On September 21 they visited the Dunlop Rubber Co., and on September 23 they were shown over the premises of the Metropolitan Carriage, Wagon and Finance Co., Ltd., leaving later for Nottingham.

Wreath on Byron's Tomb.

The morning of September 24 was spent by the delegates in Nottingham in an inspection of the lace works of Messrs. Thomas Adams, Ltd., where they saw curtains and other laces being made, and also industries which have been started since the outbreak of war. In the afternoon the hosiery works of Messrs. J. B. Lewis and Sons were visited, and time was found *en route* for a visit to Byron's home at Newstead Abbey. Subsequently the delegates placed a wreath of laurel, tied with a ribbon of the Greek national colours, on the poet's tomb in Hucknall Church. The wreath bore the inscription "With the eternal gratitude of the Greeks."

At the dinner in honour of the delegates at the Victoria Hotel, at which Mr. J. P. Houfton presided, the Sheriff (Mr. H. Offiler), in welcoming the representatives, said that while we regretted that Greece was unable to come into the war at the beginning, we realised the tremendous difficulties she was up against. He added that great advantages were to be obtained from the interchange of trade between the two countries.

M. Michalocopoulos, who responded, said that they welcomed the opportunity of fighting shoulder to shoulder with the British. They were grateful for their invitation to come here. M. Venizelos was of opinion that, as they were united in war, they must be united in peace. Unless they were they could not repair the ravages of war. He would like to invite representatives of British industries to visit Greece, to learn their commercial methods.

The Chairman, in proposing the health of the visitors, said that Greek and Briton were shedding their blood for the same high ideals. They were determined that there should be no bargaining with the enemy, and that they would dictate terms of peace.

On September 25 the mission visited Lincoln, where they were shown over the works of Ruston, Proctor, and Co., Ltd., and other firms. At one of the premises they inspected they were shown a machine for shelling the maize which comes from Greece. They returned later to Nottingham, and on the following day went on to Derby.

TRADE WITH GREECE.

Cargo from United Kingdom via Egypt.

In connection with the difficulties which have for some time restricted the export of goods from this country to Greece, it has now been arranged, says the *Board of Trade Journal*, that transhipment may be effected in Egypt, and, as regards the Port Said route, the Greek Government Transport Department has undertaken to provide in respect of goods urgently required in Greece a certain amount of tonnage space monthly between Port Said (see note below as regards Alexandria) and Greek ports, about one-quarter of the space being reserved for Salonika.

The following requirements and suggestions should be noted in this connection:—

(1) Applications for information as to space on vessels sailing between this country and Port Said should be addressed to the Secretary, Indian Conference Committee, 138, Leadenhall Street, London, E.C.3.

(2) For goods on the export prohibited list licences must first be obtained from the War Trade Department, 4, Central Buildings, S.W.1. In respect of goods which it is desired to export from the United Kingdom direct application must be made to that Department on the usual form. For goods brought to the United Kingdom for transhipment application should be made to the Customs Department on form S.90, copies of which can be obtained from the Custom Houses at transhipment ports. In respect of all goods, whether exported or transhipped, a recommendation from the British Minister at Athens will be required, except for goods of comparatively small value.

(3) When a licence is granted the Customs Department will on request issue the following documents which should be forwarded with the usual shipping documents to Port Said in order to facilitate clearance at that port. The documents should, in each case, be prepared by the exporter. (a) For United Kingdom exports, Form S.73; (b) For transhipments, a duplicate shipping bill.

(4) A through Bill of Lading is not issued, and it is therefore necessary to arrange for a shipping agent in Port Said to take the necessary steps in regard to the transhipment.

(5) Enquiries as to further details, or in respect of any difficulties which arise, may be addressed to the Department of Overseas Trade (Development and Intelligence).

With reference to the foregoing, a despatch from H.M. High Commissioner in Egypt, under date 28th August, observes that as the congestion at Port Said is far greater than at Alexandria, the Egyptian Authorities and the Naval Examining Officers would much prefer that the port of transhipment should be Alexandria rather than Port Said.

LANCASHIRE COTTON.

Question of Production.

(From Our Own Correspondent.)

Manchester, Wednesday.

A very strong tone has prevailed in all quarters of the market this week. There seems to be every likelihood of production being reduced to a greater extent than ever. Many spinners and manufacturers are anxious with regard to coal supplies and it is understood certain proposals are being made by the Government to lessen consumption, which if carried out will mean the stoppage of machinery and more unemployment. Fortunately the strike of the operative spinners has come to an end. The Control Board has decided to allow spinners using American cotton to run full hours for five weeks and at the same time the working of looms has been cut down from 65 per cent. to 60 per cent. Prices in Egyptian yarns have again advanced. Now and again remarkable figures have been paid for quick delivery. Demand far exceeds supply. The Egyptian cotton crop continues to do well. Business in piece goods for Egypt has been checked by the very independent attitude of sellers. Many buyers have refused to pay the advances required, but of course manufacturers are quite indifferent as to booking fresh orders. Only a small turnover has transpired for India, chiefly in light materials. There has not been quite so much practicable demand for South America. American yarns have been decidedly stiff in price. The shortage of supplies is more pronounced than ever.

INDIAN INTELLIGENCE.

Monsoon Weakening.

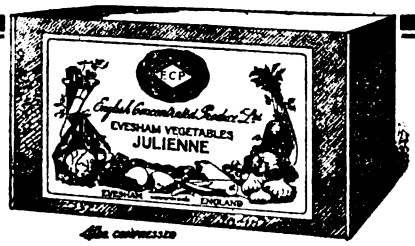
The Indian Trade Commissioner (Mr. D. T. Chadwick) has issued the following cabled news received from the Director General of Commercial Intelligence, Calcutta, dated September 18:—

The monsoon is weakening. Rain was still much needed in Bombay and crops are reported to be suffering considerably. Elsewhere conditions are generally favourable, except in parts of the United Provinces and Madras. (These "parts" are probably the Western United Provinces and the Madras Deccan.)

Raw Jute Europe Fours Rs.13 a maund (say, 26s. 6d. a cwt.) Fine Broach for September delivery Rs. 915 a candy (last week's figure was Rs. 922).

A resolution has been passed in the Imperial Legislative Council agreeing to impose next year excess profits tax at rate of 50 per cent. In consequence the Bombay Share Market is very depressed, the chief falls being in mill shares.

Hitherto the export from India of certain articles of which cotton, oilseeds, and oils, and many foodstuffs were the chief, to European Allies and Spain has been permitted. Spain has now been struck off the countries to which that list applies.



War Loan closes at nearly 47 crores of rupees, say at £35,000,000, with exchange at 1s. 6d.

"THE FINANCIER RUBBER SHARE HANDBOOK."

The appearance of the fifteenth edition of this exceedingly useful publication must be considered as highly opportune at a time when the position of the rubber industry is attracting keen attention. It gives just the information needed by rubber shareholders and others interested in this industry in regard to all important companies, and it has the added merit that its facts are presented in clear and compact form.

According to a report from Vienna, the Austrian manufacturers of agricultural machinery are devoting increasing attention, says *Motor Traction*, to the construction of motor ploughs. A large business is expected in these machines, not only in Austria and Hungary, but also in Bulgaria, in which latter country the Government has recently arranged to supply the large farmers with motor ploughs at cost price.

EAST INDIAN RAILWAY.

The question of the future administration of this great railway system, the *Pioneer* says, will have to be decided soon, as notice to terminate its contract has been given to the company by the Secretary of State, and unless a new contract is entered into the existing arrangement will come to an end next year. As the decision arrived at will probably mean the shaping of the future railway policy of the Government of India, the question at issue is a momentous one, and it is to be hoped that no extraneous considerations will be allowed to influence that decision. It has already been proved that the weight of commercial and official opinion is in favour of the continuance of the system under which most of the lines are owned by the State and managed by companies. The advocates of State management would probably decline to alter their views because the management had been transferred to an Indian undertaking. It appears, however, that some of those who opposed State management when Government first invited opinions on the subject are attracted by the suggestion of an Indian company with a board of directors in India. The question arises whether, if such a system were adopted, it would be possible to raise in this country all the railway capital required for future developments, since uncertainty exists as to the degree of support which British investors would extend to a railway having its board and headquarters in India. This is a matter which should receive the closest consideration in arriving at a decision.

NEWS FROM ALL SOURCES.

Sir Harold Stuart, K.C.S.I., K.C.V.O., has joined the board of the Vizianagram Mining Company Limited.

The Egyptian Ministry of Agriculture is preparing a decree to prohibit poppy cultivation this year in order to increase the areas planted in cereals.

The Central Telegraph Office staff at Rangoon has decided to promote a co-operative society for the Burma Telegraph Staff.

The Stock Exchange at Sofia, which was opened on January 21 with a membership of 56, had 77 members at the end of six months, including all the banks, and a number of merchants and trading companies.

Reuter's Athens correspondent states that on September 21 at a Cabinet meeting, M. Negropontis, Minister of Finance, dealt with the economic situation of the country, and explained various necessary measures calculated to improve the position.

E. M. d'Souza and Co., who are well known throughout Burma as wholesale and dispensing chemists, are stated to have gone into chemical manufacturing on an important scale. They have selected a 16 acre site in Rangoon, and have engaged a London expert with a view to making from local materials pure chemicals and drugs of B.P. standard for the local market, India and the Straits Settlements.

COMPANY NOTES & REPORTS

Assam Oil.

The report of the Assam Oil Company for 1917 states that out-turn again showed improvement and prices were higher. Refinery worked well and plant and machinery were maintained in good condition. Progress at drilling was satisfactory, and usual prospecting work was carried on as energetically as possible. Increasing difficulty was experienced in maintaining supplies of the necessary stores for working both departments. Profit was £89,791. Adding amount brought forward makes £105,052. Directors have transferred £25,000 to depreciation and £10,000 to reserve, and in July last declared an interim dividend of 8 per cent. on the ordinary shares. A further dividend of 1 per cent. on the preference shares, to make the total dividend equal to that paid on the ordinary shares, was also declared at the same time. The above payments leave £38,052. The directors do not recommend a final dividend on ordinary shares, but propose carrying forward the whole of the above sum, which includes provision for excess profits tax for 1916 and 1917. Meeting, Winchester House, E.C.2, October 2, noon.

Jetinga Valley Tea.

The report of the Jetinga Valley Tea Company for 1917 states that profit amounted to £14,455; £7,749 was brought forward, less excess profits duty, £1,236, and after adding transfer fees and dividends on investments and interest, £778, total is £21,755. The directors propose to pay a final dividend on the ordinary shares of 5 per cent., making 10 per cent. for the year (free of tax), together with a bonus of 2½ per cent. (free of tax), to place to investment depreciation fund £1,000, to reserve £3,000, and to carry forward £6,417.

Dividends, Payments, etc.

The coupons of Greek loans falling due October 1, 1918, should be presented for payment at the office of Messrs. C. J. Hambro and Son. The undermentioned loans will be paid in gold at the stated percentage of their face value in accordance with instructions received from the International Financial Commission, Athens:—Greek Four per Cent. Rentes, 32 per cent.; Greek Five per Cent. Funding Loan of 1893, 32 per cent.

The first ordinary general meeting of the British Merchants' Morocco Association will be held at the Cannon Street Hotel on October 2, at 3 p.m.

Ottoman Four per Cent. Loan, 1891.—Messrs. N. M. Rothschild and Sons announce the numbers of 256 bonds, amounting to £75,000, of the above loan (secured by Egyptian tribute) which have been drawn for redemption on 10th proximo.

Bombay Electric Supply and Tramways.—Interim dividend for half-year to June 30, 1918, on ordinary shares at rate of 14 per cent. per annum, payable 15th proximo.

The directors of the Eastern Bank have declared an interim dividend of 3s. per share, less tax, at the rate of 5s. 9d. in the £, payable October 7.

ON 'CHANGE.

THROGMORTON STREET, Wednesday.

Egyptian shares are still a very quiet market, and business for local account is on a very small scale, although during the last day or two there is some indication of a revival of demand on this side in connection with the excellent military news from Palestine and the Balkans. Private advices to hand indicate that the market in Egypt has begun to get animated again, and that we shall probably shortly see a good many buying orders coming over.

In Government stocks there is absolutely no change to record, but there are several buying orders in the market just under the quoted prices. On the other hand, sellers are inclined to stiffen, and are not at all plentiful.

In Bank shares Agriculturals at one time improved to 7 3-16, and are closing 1-16 firmer than last week at 7⅛. Anglo-Egyptian Banks are also 1-16 up at 17½.

In Railways, Delta Lights on some local liquidation have receded ¼ to 7 3-16.

Amongst Land descriptions Aboukir are 6d. quieter at 24s. 6d., and Behéras have dropped ⅛ to 15½. New Egyptians are 4½d. lower at 21s. 7½d., and United Egyptian Lands are fractionally easier at 2s. 6d. But, generally speaking, there are very few sellers about, and it would not take much demand to clear the market.

In Miscellaneous descriptions Salts and Sodas are ⅛ down at 3 1-16, and Khedivial Mails have dropped 1s. to 60s.

Amongst Greek securities there has been again a certain amount of business round current prices, which are all unchanged this week. In a general way there are still a good many more buyers than sellers.

Paris Bourse.

A brisk demand for Egyptian securities was a feature of the market. Egyptian Unifieds closed at 96.25 against 95.50, and Credit Foncier Egyptiens rose 1 to 782. Other prices were: Serbian 4 per cent. 1895's, 64.10 (unchanged); Turkish Unifieds, 64 (unchanged); Banque d'Athénes, 116 (against 115.25); Land Bank of Egypts, 210 (unchanged), and Suez Canals, 5,190 (unchanged).

Oil Shares.

There is practically no feature to record in this market. Anglo-Egyptians (B) are unchanged at 2¾, Anglo-Persian preferences are 24s., and Roumanian Consols are 10s. 9d. As might be expected, Bakus have been weak, closing at 2s. 3d.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned days:—

	1917. Francs.	1918. Francs.
September 16, 17, 18	490,000	850,000
September 19.....	176,000	530,000

NOTES OF THE WEEK.

A week ago it was evident that, although the offensive launched in Macedonia four days earlier than the attack on the Turkish position in Palestine had not attained an equally decisive military result, there were possibilities in the situation that made it even more important than General Allenby's *coup*. Only a day later the accuracy of this view was confirmed by the report that a request for an armistice for the discussion of peace terms had been made to General Franchet d'Esperey by the Bulgarians. The French Commander-in-Chief rightly refused to interrupt the operations then in progress, but offered to receive the duly accredited representatives of the Bulgarian Government, if they presented themselves at the British lines under a flag of truce. In accordance with this offer M. Niatcheff, Minister of Finance, and General Lukoff, commanding the second Bulgarian Army, were brought to Salonika, where an armistice was signed on September 30, and on the following day Bulgaria ceased to be a member of the Central Alliance.

The belief that the Bulgarians as a nation were ready to come to terms with the Allies has for some months past found expression in these columns, and the likelihood of a military defeat facilitating the process was always emphasized. The suddenness of the collapse exceeded all anticipations and can only be explained by the rapid spread of demoralization and war-weariness among all classes of the people. An unmistakable indication of the trend of events was given in May when the Radoslavoff Cabinet fell and M. Malinoff became Prime Minister. His pro-Entente views were notorious, and the Germans did not conceal their chagrin at the appointment. It was not the first rift in the lute, but the German Government had by this time accepted Bulgaria's independence of spirit as something which could not be curbed without imposing an undesirable strain on the Central Alliance. With the Allied offensive came the climax. Only immediate and effective reinforcements capable of holding the attack and intimidating the Bulgarian army would have met the situation. Germany was not in a position to give the required help, and Bulgaria made up her mind to capitulate.

Elsewhere in this issue consideration is given to the importance of the results that may accrue from Bulgaria's surrender. It should not be necessary, however, to point out that none of these results is in the nature of ripe fruit falling of its own accord into the Allies' lap. The success of the military operations in Macedonia has to be followed up by a new campaign against Austria-Hungary, which from the nature of things may well prove even more formidable than the problem before the Allies at Salonika. Those who have appreciated the situation in the East have realised the importance of detaching Bulgaria from the Central Powers as a useful short cut to ultimate victory over Germany; but at no time have they rated the support of Bulgaria to the Central Alliance so high as to imply that her defection must without more ado entail the collapse of Germany and Austria-Hungary. It so happens that the Allies are putting in some very useful work at this moment on the Western Front; but magnificently as the Balkan Allied Army has done so far—and in this connection we cannot but echo the tributes paid on all sides to the exploits of our Serbian and Greek Allies—it has even tougher work ahead of it, if it is to make the same contribution to the final defeat of Germany as the Western armies are making.

The terms of the armistice make no reference to the ultimate conditions of peace to be imposed upon Bulgaria. It will not be lost upon the latter that she has thus been afforded an opportunity of rehabilitating herself in some measure in the eyes of the Allied Powers. Among the troops that inflicted the overwhelming defeat upon the Bulgarian army none fought better than the fellow-countrymen of the Army Corps that handed over Fort Rupel to the Bulgarians and of the soldiers who shot down Allied Marines in the streets of Athens in December, 1916. Greece has nobly wiped out the disgrace that her Germanised ruler sought to fasten upon her. A graver stain is Bulgaria's; but similar steps on her part will be at least an earnest of a new mind, and must go some way towards meeting the score that Serbia and Greece have marked up against her.

It is not possible in the space at our disposal this week to do justice to the military operations in Macedonia that within a fortnight brought about the collapse of Bulgaria's powers of resistance. In their position in the van of the attack the Serbians have told the story of their own prowess by the dramatic rapidity of their advance. To the Greeks, side by side with British troops, was allotted a less spectacular part; but their task was of no meaner order, and was carried out with equal efficiency. It was the breaking of the Bulgarian line in the Doiran sector that not only enabled the Serbians to press their initial success, but also com-

Digitized by Google

pleted the rout of the Bulgarian armies and deprived them of their last chance of keeping a rallying point. At the same time the whole strategy of the offensive seems to have been brilliantly conceived.

In Palestine, General Allenby has lost no time in following up the great victory of last week. While part of his force was detached to deal with the Turkish Fourth Army between the lower Jordan and the Hejaz Railway, the advance towards Damascus was continued. By September 29 a body of ten thousand Turks, finding escape impossible, surrendered on the railway line, some seventeen miles south of Amman station. By October 1, at six o'clock in the morning, Damascus, the capital of Syria, was occupied by British troops, and 7,000 more Turks were taken prisoners. The occupation of Damascus is an event of supreme importance by reason of the effect that it will have in the Turkish world. The episode comes at the end of a series of rude awakenings, of which the captures of Baghdad and of Jerusalem were outstanding features. For this reason some of its significance will have been discounted; but the accumulative effect on the Turkish mind will be profound.

For an enemy approaching from Syria or Mesopotamia across Asia Minor Constantinople still retains a degree of security that in the absence of events elsewhere might enable the rulers of Turkey to retain their equanimity and to continue to oppose a diminishing resistance to the British advance from the south-east. It is, however, just the events elsewhere—to wit, in Bulgaria—which, coming upon their own reverses in Syria, cannot fail to make a deep impression upon Turkey. Unfortunately the situation in Constantinople differs in many marked particulars from that in Sofia. Bulgaria tolerated no interference in her private affairs by German officials. In Constantinople a German assessor sits, or until lately sat, in every Minister's room, and, we may suppose, other German officials permeated the lower strata of the Turkish civil service. German officers and troops are or were much in evidence in the capital, and certainly the *Goeben* is still able to train her guns on the city. In these circumstances, even with a desire as strong as that of the Bulgarians, the Turks will not be able to carry through the process of capitulation with the same despatch as their late allies.

An exchange of telegrams between the Jugoslav Committee and the Serbian Government has afforded the latter an opportunity of calling attention to the fact that it still "awaits the unanimous solemn recognition of our future State by our great Allies and friends in order that our agreement may become a juridical, international statute of the future kingdom of our united people." In view of the fact that the Allied Powers have formally acknowledged the status of the Czecho-Slovak National Council, it may seem invidious that they still hesitate to accord the same recognition to the Jugoslavs. A reasonable explanation was to be found in the inability of Italy to see eye to eye with the Jugoslavs regarding the western boundary of the future State. Italy, however, has now gone so far as to admit that the Jugoslav peoples have a right to their new State and that its formation will not be antagonistic to a just and durable peace. Now that Italy's misgivings have been removed, it should be possible for the Allied Powers as a whole to give the Jugoslavs the formal recognition on which they naturally set special store.

The morganatic marriage of the Crown Prince of Roumania raises questions which must be settled in Roumania itself. Perhaps the wisest course would be for neither the Court nor the Parliament to take any step in a hurry, but to allow the war to come to an end first, then to review the position, not in the light of old-time precedent but in the new spirit engendered by the war, always bearing in mind that the touchstone of the decision should be the good of the country. In the present instance this will call for a very personal examination of all the circumstances.

It is pleasant to be able to recognise that, in proportion to her actual, if not to her potential, resources, India has made a substantial contribution towards the attainment of the brighter prospect which is now dawning on the world, and there is additional ground for satisfaction in the fact that her efforts in the general cause must necessarily result in future benefits for herself. She was undoubtedly slow in starting, but under the inspiration of Lord Chelmsford she has of late worked hard to add her men, her money and her munitions to the common stock, and in doing so she has learned some lessons of the utmost value in regard to the utilisation of her resources for her own particular needs. Let us glance for a moment at some of these recent additions to the stock of her experience.

First, as to man-power, it used to be thought that the hereditary specialisation of employment was a permanent and disabling feature of Indian national life, and that, while the fighting classes could be counted on to fight, and to fight well, they must bear the burden of defence alone. We are learning now that, while this drawback operates strongly, it is not necessarily insuperable or permanent. Fighting men are being drawn from classes and districts where the taste for fighting seemed to have been lost, and, with proper training, they are showing that they can fight. That knowledge is a great asset, for, whatever may happen in Europe, there is likely to be a good deal of fighting in Asia between now and the millennium, and India's first need is to be able to defend her frontiers more successfully than she has done during the last twenty centuries.

Then, as to money. A very short time ago the market held that India was "worth" at most two or three millions yearly in the way of capital for public needs. Now we have learned that, when public needs are great, this estimate can be safely multiplied by ten, and henceforward financiers, whether public or private, will know that the money is to be had, and that India's development need no longer be crippled by fear that capital will not be forthcoming. They have learned, too, something about the best ways of bringing the money out, while the number of potential investors has increased enormously; and though it would be absurd to suggest that all difficulties have vanished from the path of progress, it is safe to say that the country has entered on a new financial era.

So as to munitions. Stern necessity has proved, what was formerly only hoped, that India can produce a great variety of manufactured goods which she was hitherto content to buy. We have still to see whether in time of peace she can continue this production on a commercial basis; but the first and most difficult step has been taken, and while this product or that may prove to be unprofitable, it is safe to say that things can never be as they were before the war. Increased production, the habit of investment, and the knowledge that fighting men can be found in case of need—these things do not suffice to make a nation, but they form a very substantial contribution to the work of nation-building to which the Empire now stands pledged.

One small step towards the fulfilment of that pledge is marked by the appointment of Lord Southborough as chairman of the twin committees which are to carry on the investigations left over by Lord Chelmsford and Mr. Montagu. Scarcely anyone knows who Lord Southborough is, but as Sir Francis Hopwood his name has been familiar for the last generation. As an eminent Civil Servant, it may be assumed that he has a full share of the tact and caution which distinguish his class in this country, while he must have obtained a deep insight into constitutional questions during his work in South Africa and more recently as Secretary of the Irish Convention. He has no special knowledge of India, but that will doubtless be contributed by the members of the Committees, and we hope, as we certainly wish, that he will be successful in his laborious and delicate undertaking.

ROUMANIAN NOTES.

(From a Correspondent.)

There are many indications of constant friction between the disarmed and half-starved Roumanian soldier-peasant and his Teuton oppressor. During the last few months the *Kommandatur* in Bucharest arrested so many people that there was no more room for them in the prisons. Even the Bishop of Rimnicu Valcea was arrested, and was detained for more than a month. Some high German officers produced letters, written to them by Roumanians, threatening that they would "die like Mirbach." The situation was so precarious that two months ago von Mackensen declined to take the responsibility for it, unless his army were increased, and four new divisions were added to the seven in Roumania. He even went to German Headquarters to discuss the inevitable collapse of the German military power in the Near East. As the result of this conference the rulers of Germany determined to change the style of the firm, so to say, and in place of the Prussian to have a "Saxon-Bavarian-Austrian Alliance," and to make the simple-minded believe that this alliance is against Prussia. It was in pursuance of this plan that Bavaria and Saxony sent ambassadors to Sofia. It is, of course, another form of German political camouflage.

A clear sign that the Prussian power is collapsing is the fact that M. Marghiloman, the Roumanian Premier, and his opportunist supporters warned their taskmasters nearly a month ago to withdraw the Army of Occupation, because the feeling of hatred against them was so powerful that they could not be responsible for the situation. The victorious offensive of the Allies encouraged the Roumanians so greatly that German officers feared to enter Moldavia and Bessarabia, and even in Bucharest they were exposed at every step to hostile demonstrations and to all kind of sarcasms. In the Roumanian mountains were bands of Austrian deserters armed with machine-guns, and even with guns, living as in the days of Robin Hood.

In addition to other calamities, the Roumanian harvest was very poor, being only one-fifth of that of the last few years. The Germans tried to cultivate all the land, and for that purpose they sent many Indians, taken prisoners on the Western Front, into Roumania, where they are still working in the fields.

In spite of the way in which events in the Near East are developing, the Germans are bent upon keeping open the road to Asia. They will hold on to Roumania, because if they leave that country their situation in Ukrainia will become untenable. As an indication that the German command intends to keep a front in Roumania, we may point to the fact that they fortified the left bank of the Danube and the Dobruja nearly three months ago. German spies and agents of all kinds were some time ago sent into Moldavia and Bessarabia to destroy the stocks of munitions and arms, and thus render impossible any eventual rising on the part of the Roumanian army. They succeeded partially in doing this, and at Socola, near Jassy, the biggest munition depot of the Roumanians was blown up, and over 500 people were killed. Even the large stocks of Roumanian munitions and armament at Odessa were partially destroyed by the German and Austrian agents.

By the kindness of a correspondent we are able to give some extracts from a letter written recently by a Roumanian gentleman after his return from a visit to his own country. If he aimed at giving an impression of his visit, the writer declares, he would say that it is harrowing to live in the poor country at the present time. Never could his imagination have pictured what he saw with his own eyes. He continues:—

We are an enslaved people, ruled by brute force and spied upon by renegades. At the frontier station, where I was accustomed to seeing the first signs that I was in my own land, I saw German police and German gendarmes, and some hundreds of Roumanian prisoners, emaciated and wretched, human wrecks, who were only kept alive by the hope of seeing their own homes again. The brightness of dawn just touched the summits of those mountains which had always been ours, and which they now wish to tear from us. Having contrived to rid myself of the company of the German officer who had been thrust upon me, I questioned the poor peasants. They were all cowed and weakened by the privations they had gone through.

My arrival at Bucharest was as painful as my journey through the country: soldiers of four nations patrolled the place, and ruled the inhabitants of our capital. They batten on the people; their requisitions on the occupied territory are literally savage. Everything is taken from us, to be sent to Germany—to say "taken" is not quite accurate, it should be "bought," but at the meanest prices, representing usually only twenty per cent. of the value of the goods or the article taken. A metre of cloth costs us 40 fr., and it takes three metres to make a shirt. You can imagine how many men will have to shiver through the coming winter. Indispensable articles of food are priceless, because everything of the kind is bought up and sent to Germany. In the villages everything is carried off, down to the solitary cow whose milk served to feed the children, or the last sack of flour that had been hidden against yet harder times than those through which poor Roumania is now passing.

The outward appearance of Bucharest is quite changed; the town is dominated by the German soldiery; the citizens dare not show themselves. Only the Jews are regarded favourably by the new masters, for they are their accomplices. What the German cannot do for fear of compromising himself the Jew does, and the spoils are shared between them. . . .

A bomb having fallen on our own house had so completely wrecked the first floor that the German officers would have nothing to do with it. But no, I was going to fall into error. One of these "gentlemen" did pass two nights there, and on the morning of his departure, after having packed such articles as took his fancy, in a bag belonging to me, he called the servant, and had the cynical effrontery to say that she would find that nothing had been taken. The bag which he had packed was on a chair ready to be carried off!

They have turned a large and beautiful house belonging to a friend into a telegraph and telephone exchange. Twenty Hungarian soldiers sleep in the salons; the house has been almost cleared of its contents; the rooms have been made filthy—I cannot tell you more on the subject.

At my own country house they have taken everything; the ties and memories that linked me with the place no longer exist. It was a poor old relative who fought single-handed to save the grain that had been got in; her courage and devotion were admirable; alone, she stood up for the rights of her son and myself. They wished to drive her away, but before her tenacity the Germans had to give way, and one of them said: "She is defending the interests of her son, who is at the front. We cannot drive her away. . . ."

"Peace" in Roumania is a mere fiction: a state of war still exists with the exception that the cannon no longer roar. . . . The Germans went to Roumania with the worst intentions; they have endeavoured to set the peasants against the property-owners, and all those intellectuals who were nationalists; and they employ Jews to collect information and as informers. If they have not succeeded in carrying out their plans, it is because the Roumanian peasant is too sensible and too patriotic to accept the theories propounded to him by the Germans, and he has placed no trust at all in the word of these self-styled agents of civilisation after seeing how they conducted their savage requisitions, how they seized even the metal baths used for washing the children in.

The sweet sound of the bells is no longer heard in Roumania, for they have all been taken away and melted down in the German munition factories. The Bulgarians robbed the sarcophagus of St. Demetrius, believing that they would find some valuable articles in it. The peasants declare that they wished to carry it off across a river not far from Bucharest, but the Saint made himself so heavy that it was impossible to lift him up! The truth is more simple, more prosaic: German gendarmes surprised their worthy allies in the perpetration of their felony, and carried the sarcophagus of the Saint back to Bucharest, and replaced it in the Metropole [cathedral].

As soon as one passes the frontier—that is to say, the ever-famous and glorious lines of Marasesti—one feels free. There, too, poverty and misery reign, but the people bear themselves proudly, their spirit is high, and not to be broken. Jassy is a little town, but over-populated; too little to hold all those who have fled there; but one feels that here is the true soul of the country; that in this sorely-tried soul there still lives the hope of a better future and the conviction that our Army was beaten not by force of arms, but by force of circumstances.

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, September 6 (delayed).

German Machinations.

There is no doubt that Germany based considerable hopes on Morocco as a means of weakening France, and as one of the many centres where she hoped to set light to Moslem fanaticism and use if for her own ends. Her plans were carefully laid, and she had admirable material to work with. Along a great part of the line of the Atlas there were already in arms many warlike tribes ready to welcome assistance from anywhere to resist the pressure of the French forces, which, they knew, without it must inevitably add their territory to the area of pacified Morocco. She had a considerable number of German subjects ready and well prepared to carry out her plans in stirring up agitation, organising supplies for the tribes in arms, and even in directing their actual fighting.

How closely these plans in this very subsidiary field of efforts were co-ordinated with her main campaign was very curiously illustrated by a statement made by General Lyautey, the French Resident-General, in the course of a speech at Casablanca. He had, he said, during this summer, while inspecting the troops on the north-eastern border of the French zone, come into possession of a letter written in Arabic but addressed by the Germans to the tribes. The letter told them that the great German offensive would open on May 28, and that they were on that day to unite in a great effort to drive the French from Morocco. The tribes opposing the French troops certainly showed great activity during that critical time, but their efforts, like their predecessors, furnished only further proof of the hopelessness of the struggle in which they are engaged.

In the South, where German emissaries and money have been employed actively, the Protectorate authorities have made very great and skilful use of the powerful chiefs whose influence extends far beyond the line of complete occupation. On several occasions these chiefs, cleverly supported, have led important combined military and diplomatic expeditions, which have nipped in the bud, or crushed, dangerous disturbances; and have enabled the South and South-east of Morocco to be firmly held without making any great call on the army of occupation.

Death of a Great Chief.

The news of the death of the greatest of these chiefs, Si Madani El Glaoui, has recently reached Tangier, and has here, as elsewhere, been received with a regret that the loss of very few native notables would have called forth. Only a few weeks ago his favourite son was wounded fighting in the Southern Atlas, and though carried in an aeroplane—a strange stretcher indeed for a Berber chief—to the nearest place where he could be treated, died on arrival. The loss was much felt by his father, who, long a sufferer from the effects of an old wound, was unable to shake off an attack of a species of influenza now very prevalent, and soon followed his son to the grave.

Si Madani was the chief of the Glawa, a tribe that gives its name to the pass by which the track from Marrakesh to Tafilet crosses the Atlas, and has played a most prominent and varied part in Moroccan history of the last twenty or thirty years. After being for many years a supporter of Mulay Abd el Aziz, for whom he carried out many vigorous campaigns, he afterwards, disgusted with his treatment, or impatient with the Sultan's weakness, took the chief part in the movement which overthrew Mulay Abd El Aziz and put Mulay Hafid in his place.

A "Coup d'Etat."

A story told by one who professed to have been a witness of the scene assigns to Si Madani a very energetic part in the first overt step taken. Mulay Hafid was still only Viceroy at Marrakesh, when one day most of the notables in the city were summoned one by one by Government messengers and told that they must go to the Viceroy's palace at once. When they arrived, they found a strong body of Glawa tribesmen, who had recently arrived from the mountains, on guard, and as the doors closed behind them felt themselves very much as prisoners. When all had assembled, Mulay El Hafid addressed them and spoke eloquently of the anarchy into which the country had fallen on account of the Sultan's feeble administration—without, no doubt, drawing his hearers' attention to the great and profitable part he had taken in causing that state of things. After his introductory speech, one of those present suggested that the only remedy was a change of Sultan, and that there was no one better fitted to take the place of Mulay Abd el Aziz than Mulay el Hafid. This was doubtless a proposal that considerably startled at least the more cautious of the assembly, and a second speaker, a man very intimately connected with Mulay el Hafid, voiced this feeling and began to point out the great danger of taking such a radical step. He had not proceeded far in his discouraging speech when Si Madani snatched a rifle from the hands of one of his men and aimed at the speaker, who rushed to Mulay el Hafid and sought and obtained his protection. After this significant hint of the treatment which the party of prudence might expect, there was no further opposition to the proposal, and, before the meeting ended, Mulay el Hafid had taken the first great step towards obtaining the Sultanate. The story, if true, admits of the very possible explanation that the whole scene had been planned before by the chief actors in order to discourage opposition.

A "Holy Man."

After Mulay el Hafid's fall the Glawa seemed certain to lose all their influence, but the adroit and most valuable part played by them at the time of the incursion of El Hiba opened the road to greater, if less independent, power than before. In 1912, El Hiba, son of the better known Ma el Ainin, who had for years, with swarms of his blue-clad and most rascally followers, made yearly visits from his home in the South to collect from the chief Moroccan towns tribute to his holiness and miraculous powers, led a band of raiders some 10,000 strong to the North and occupied Marrakesh. Several of the European residents in Marrakesh had narrow escapes, and the French Consul and some other French subjects were taken prisoners. When, very shortly afterwards, El Hiba's men, who had started to march or wander northwards, were utterly defeated by a French column and driven back on Marrakesh, it was the Glawa who very skilfully succeeded in raising the city against the invaders, secured the safety of the European prisoners, and drove El Hiba's scattered followers in full flight to the South.

From shortly after that time the Glawa, with Si Madani at their head, became most valuable and trusted instruments for the pacification of the country and the spread of the influence of the new French-supported Government. Throughout the last few critical war years, Si Madani and his, if possible, still more vigorous younger brother, Hajj Thami, have been entrusted with much of the responsibility for the tranquillity of the South, and, with the cleverly given support of the French authorities, have on the whole succeeded, and lessened very much the efforts required from the small French army of occupation.

RELIEF WORK IN PALESTINE.

General Allenby's great advance finds the Syria and Palestine Relief Fund with more than a year's experience of active work in the south behind it, and eager to extend its activities into the large new area in Central Palestine now opened up. There can be no question that in Nablous and Samaria, Haifa and Nazareth, and the hundreds of villages adjacent, great distress and starvation will be found, as was the case in the similar advance in the south ten months ago. The military authorities, who have shown such appreciation of the efforts of the Relief Fund in Jerusalem and elsewhere, will be ready to facilitate in every way the extension of its work to the north. This will only be possible, however, if the financial resources of the fund are largely increased in the immediate future.

There is to be a great meeting of thanksgiving for the liberation of Palestine at the Queen's Hall on Monday, October 28, at 5.30 p.m., when the speakers will include Viscount Bryce, Sir Henry McMahon, and the Bishop in Jerusalem, who has a thrilling story to tell of work and conditions behind the British lines in Palestine. Applications for tickets should be made to the Syria and Palestine Relief Fund, 110, Victoria Street, S.W. 1.

RECORDS OF ANCIENT PALESTINE.

By Joseph Offord.

Many readers of The Near East will be interested to learn that a further part of the marvellous collection of despatches between the Governors for the Pharaohs in Palestine and Syria, and the native rulers, chiefs and sheikhs, and the Egyptian Foreign and Colonial Offices, known as the Tel-el-Amarna Tablets, has been brought to light and secured for the Louvre Museum. The great mass of the find at Tel-el-Amarna of these tablets was distributed among the museums of Cairo, London and Berlin, but sporadic specimens from the same source have been produced at long intervals. This tended to suggest that all that had been buried at the spot had not been secured, and a few years ago the Germans re-explored Tel-el-Amarna and obtained several tablets, some of a literary character, which have been published in a work since hostilities began. The new collection at the Louvre was not obtained in this way, but its origin need not be discussed here.

No series of cuneiform writings have been found to compare in value for the information they afford of the history, religions, languages and culture of the people of pre-Mosaic Palestine with the Tel-el-Amarna records. These new specimens will, it is to be hoped, be published by the eminent Assyriologist and sincere friend of England, M. Thureau Dangin; but as he has been devoting himself to the military service of his country, and as the acquisition of the tablets (some time ago) was of such supreme interest, a preliminary account of them has been given at a meeting of the Académie des Inscriptions et Belles Letters by Père Scheil.

TANGIER TO TEHERAN.

"Lenin Longing for Order"—so runs a headline to a report from Moscow (viâ Amsterdam). With a little luck, we may get even better news, and have the heading: "Lenin's Love for the Law." But personally I should prefer: "Lenin Gone Aloft." It would be less alliterative, but much more satisfactory.

***

Canon Rawnsley has written to *The Times* to suggest that Stonehenge, recently presented to the nation by Mr. Chubb, should be converted into a memorial to those who have lost their lives in the War, and that on Midsummer Day a solemn service should be held there in memory of all the men of the British Empire who have thus died. Nothing (the Canon suggests) "would be needed but a huge stone Celtic cross in the neighbourhood of the circle," etc. He also informs us that he feels "that such a monument in the solemn propinquity of this great British shrine would be preferable to a Priapic monument of cones and Eastern Welis on a huge bare platform in Hyde Park."

***

Now, far be it from me to venture to criticise the Canon's views in the matter of selecting a site for an Imperial memorial, as contrasted with a purely Celtic one; or the desirability of placing the emblem of Christianity in (or "in the neighbourhood of") the old-time circle. Nor do I ask to be informed what particular Priapic monument in Hyde Park the eloquent Canon is having a sly dig at. But I *do* ask why he should write about "Eastern Welis" as if they were an architectural feature. Unless all my Oriental friends have been misinformed, a "weli" is a (Moslem) saint. By ignorant people the word is often used for the saint's tomb; but even so it seems strange to talk (or write to *The Times*) about "Eastern Welis on a huge bare platform in Hyde Park"—unless, of course, one has in mind a kind of Moslem preaching campaign! Perhaps we may yet see something of the kind if it should prove necessary to remind diligent letter-writers that the British Empire contains some millions who would hardly be enthusiastic about a Celtic cross at Stonehenge as an Imperial memorial.

***

The news of Bulgaria's action is excellent, but I have no intention of commenting upon it yet; for, it seems to me, the subject is a much more delicate one than is realised by a number of people who have been talking—and writing—about it very glibly. But I cannot resist the temptation to refer to a German paper's comments. The *Schwäbische Tagwacht* bewails Bulgaria's defection after "there has been a perfect deluge of princely, Ministerial, and diplomatic visitors [from Germany and Austria, of course] to Sofia." Is it not just possible that that "deluge" was the cause of the Bulgarian "wash-out"?

***

Talaat's talk to the Germano-Turkish League last week was not so amusing as some of his orations; though his references to the Kaiser's yearning for peace was not without humour. But there was one touch that seemed to me to be rather neat. The Grand Vizier referred to Count Burian's earnest wish for the end of the war, and his own "beloved Padishah's" great "longing for peace for the tormented races of mankind." Then he added: "The King of Bulgaria, too, at each of my visits, *said* he also shared such wishes." Talaat, you observe, declined to guarantee the truth of King Ferdinand's statement. I wonder what he thinks about it now!

CORSAIR.

THE LATE PATRIARCH OF GEORGIA.

A memorial service for the repose of the soul of his Holiness Catholicos-Patriarch of Georgia, Kyrion II., was held at the Greek Orthodox Church of St. Sophia on September 27. The service, which was organised by the Georgian National Committee and Anglo-Georgian Society, was attended by the Bishop of Islington, the Dean of St. Paul's (representing the Bishop of London), and many ecclesiastical dignitaries. There were also representatives of H.M. War Office and Foreign Office, the Greek Legation, the Polish National Committee, Esthonians, and the Armenian Association. A gracious message of condolence was sent by Queen Alexandra. Messages of regret were also received from the Archbishop of Canterbury, many provincial bishops, and Cabinet Ministers, the American, Japanese and French Ambassadors, and the Roumanian Chargé d'Affaires. A beautiful and impressive service was conducted by the Very Rev. the Great Archimandrite, Dr. Constantine Ragonis, assisted by the full choir.

Can you offer us

consignments of the . . . .
NATURAL PRODUCTS
of your Country? . . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

CORRESPONDENCE.

PEACE FOR THE BALKANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The correspondence which has taken place in your columns with reference to the Balkan question was based, I venture to submit, upon a false premiss. It is, therefore, not surprising that it has led to no satisfactory conclusion.

When the sentiment of nationality began to inspire the Balkan peoples, partitioning politics were still the guiding principle of European international life. There have been many schemes for dividing the heritage of the Turk, but the interests which centred round the Byzantine capital and the adjoining territories were so numerous that an agreement proved impossible, and, to avoid collusion, matters were allowed to linger on. Meanwhile, Balkan nationalism was making powerful headway, inspired by the revolutionary influence of the West, and fanned by the disruptive politics of Russia; the mutual jealousy of the Great Powers and the conservative policy of the Holy Alliance, however, concerted in barring the effective assertion of the new spirit, and the same causes, in one form or another, continued with the same effect throughout the 19th century. They found elaborate expression in the Congress of Paris, of 1856, when the peoples concerned were ignored, and in that of Berlin of 1878, when the representatives of the Balkan nations were allowed to come and plead their cause, after a series of secret arrangements had anticipated the respective decisions of the Congress. To be fair, I must mention that a European Commission was sent in 1857 to ascertain the wishes of the Roumanian *divans*, but its members were guided by the views of their respective Governments, and an agreed report was in consequence out of the question. I cannot refrain from quoting the very delightful and suggestive picture which the French representative (Talleyrand) drew of the situation in one of his despatches:—"After innumerable visits, bitter-sweet conversations, drafts mutually scrapped and amended, it became evident that we would never agree as to what we were *to say*. Then the brilliant idea came up that we should agree *not to say* anything at all, and to-morrow I shall submit the following argument for the acceptance of my colleagues. The *divan* has put forward four *political* desiderata, upon which the Commission is not entitled to make any pronouncement; its task is limited to the consideration of *internal* questions, with regard to which the *divan* has refused to give its views. Hence, work as far as we are concerned = 0. And that is what we came to do here."

The fate of the Balkan peoples was thus decided for a long period to come without their participation, and largely in opposition to their expressed will. The resulting unsettled state of affairs provided a fertile breeding-ground for the quarrels of European diplomacy, and the disappointment and resentment aroused by such attitude on the part of the Powers "created a very different atmosphere throughout the Balkans—a feeling compounded of the recognition of their own inability to resist the rulings of the Concert and the cynical but natural determination to exploit for their own ends the jealousies of the rival Powers." (Dr. R. W. Seton-Watson, "The Rise of Nationality in the Balkans," p. 144.)

The whole system of Balkan-European relations was well illustrated by the events of 1912-13. The point of view of the Great Powers was expounded with candid precision by Viscount (then Sir Edward) Grey in an interview with the Roumanian Minister, M. Misu, on March 7, 1913. He warned the latter that the Balkan peoples must avoid provoking a general conflict: "Once a European war started, involving considerable outlay and loss of life, the Powers could have consideration for nothing else save their own interests; and as, in the end, the Powers may have to conciliate their interests by reciprocal compensations and compromise, that would necessarily be done at the expense of the small States." Not heeding the threats and warnings showered upon them, the Balkan peoples marched unitedly forward and succeeded, in the first instance, in driving the Turks out of the territories to which they laid claim. There remained the certainly delicate task of dividing the booty in a friendly manner, and here was a unique opportunity for the Great Powers to gain lasting merit by restraining their own ambitions, and by contributing sympathetic and moderating counsel for the pacification of that unfortunate region. But what actually happened? Austrian diplomacy successfully mined the Balkan League at the conference held in London, and later, to make sure of her work, Austria informed the Balkan peoples met at Bucharest to settle peace among themselves that she reserved to herself the right to revise the decisions of the conference, *whatever their nature*. Though she was not allowed to carry out her subsequent intention of using force, the mischief had been done, and Austrian diplomacy openly boasted of its achievement.

It is only too evident with whom the chief guilt lay, but we must face the fact that the other European Chancelleries sanctioned, and co-operated in, the activities of the *Ballplatz*. And this brings me to the point which I desire to emphasise, as indicating, in my opinion, the only way out of the Balkan *impasse*. It has been said very truly by M. Seignobos that "the whole political history of Europe since 1871 has concentrated in the Balkan Peninsula." Which means, in other words, that the Balkan question has been and is part and parcel of the general problem to which the European international system has given rise, and that it is useless to treat a limb alone for a corruption of which the whole body suffers. The Balkan peoples deserve perhaps more credit than they generally obtain. What political advance they have made was achieved in spite of the Great Powers, for most of the progressive changes in that region were admitted by the European Concert only after they existed in fact. Moreover, the idea of a Balkan federation was an ideal much cherished by those who built up the national consciousness of those peoples, and it is significant to find that reference to it grew increasingly remote as European diplomacy became an active element in the political life of the new Balkan States.

Will you allow me to add a few words as to "phils" and "phobes"? It does not seem generally realised that the national movement in Eastern and Central Europe was and is a parallel to the struggle for popular government which the Western peoples carried on in the early part of the last century, and that its artificial repression crippled the political development of the Balkans. As a consequence, the large mass, and the best, of the Balkan peoples have no share whatsoever in the government and politics of their country. The political "profiteers" who rule those countries, on the other hand, have indulged in extravagant and violent nationalist agitation, in order to divert popular opinion from much-needed internal reforms, to prevent which in future makes the complete and just solution of the national problems imperative. In this they often were encouraged, for their own ends, by the foreign chancelleries. In fact, the kind of politics carried on by the Great Powers in the Balkans have fostered a definite type of politician, whose relations with the foreign chancelleries are of the nature of a "business proposition," thus giving rise to a species of official "phils" and "phobes."

It would have been in the power of the Press to remedy that dangerous state of affairs. But some foreign correspondents were little else than agents of their respective Governments; others were tied by the partisan policy of their paper, as expressed either in editorial instructions or undue discrimination in the printing of despatches (and I am speaking, of course, with a knowledge of facts); while yet others, who arrived out there with a free mind, were either influenced by the limited medium in which they moved, or were flattered and captured by some politician whose faithful mouthpiece they became in exchange for occasional indiscretions.

The results of such a situation I need not point out. I would have you believe me, Sir, that there are many people in the Balkans as eager for straight talk and candid counsel from their Western friends as are those for unbiassed information concerning Balkan affairs. Much good may yet result from their co-operation, and there could be no better link between them than an independent Press. Will you allow me, therefore, Sir, to express my great appreciation of the attitude taken up by your paper, and also to pay a debt of gratitude to *The New Europe* for its courageous determination to let truth be known.—I am, etc.,

D. MITRANY.

The London School of Economics and Political Science.

THE SERBIAN RELIEF FUND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The ministrations of the Serbian Relief Fund are imperatively needed in the territory recovered by the recent advance of the Allies in Serbia.

To relieve the desperate condition of the old men, women and children after their long period of privation, a much larger sum is needed than this committee has at its disposal.

Will you permit me to appeal to your readers to send contributions in this urgent need to the headquarters of the Fund at 5, Cromwell Road, S.W.7? Serbia has never failed us, we must not fail Serbia.—I am, etc.,

PLYMOUTH

(Hon. Treasurer, Serbian Relief Fund).

NEAR EAST BOOKSHELF.

THE ADANA MASSACRES.*

"The Red Rugs of Tarsus" gives, in the form of very personal letters, a vivid description of six months spent in Tarsus, the birthplace of St. Paul. The style is very American and the matter very intimate and realistic, but well qualified to impress the reader with the atrociousness of the Turks in relation to the Armenians. The chapter "Round About Tarsus" gives some graphic pictures of the life and surroundings of the little American Missionary Community before the "breaking of the storm" in 1909. The latter half gives a description, the horror of which would more deeply stir the world but for these last four years of massacre and bloodshed, of the Adana and Tarsus massacres. A bright relief is given to the picture by the heroism of the small band of missionaries who again and again risked—while some lost—their lives in endeavouring to protect the unfortunate Armenians. At Tarsus alone 5,000 were protected in the mission-school premises. While all the Armenian quarter was asleep some Turks actually pumped kerosene on to the roofs of the school buildings, which were only saved from ignition by a timely—the authoress considers a miraculous—change in the direction of the wind. It is pointed out—and should never be forgotten—that the second and greater massacre at Adana was done by troops brought from Beyrout in order to *uphold the policy of the Young Turks* after the deposition of Abdul Hamid. These fiends were landed inside a circle of European and American warships anchored outside Mersina harbour as troops unquestionably loyal to the new *régime*. "They went to Adana the same day and started that night a second massacre more terrible than the first. The Armenians had given up their arms, on the advice of the foreign naval officers, trusting to the warships at Mersina—they accepted the assurance of the Government that 'the rioting was over.'"

After such an experience anyone will forgive the authoress's words: "I see blood when I think of what is called 'European diplomacy'—for blood is there, bloodshed before your eyes."

BOOKS RECEIVED.

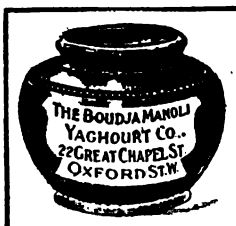
GOVERNOR OF BOMBAY.

It is announced that the King has been pleased to approve the appointment of Captain George Ambrose Lloyd, C.I.E., D.S.O., M.P., to be Governor of Bombay, in succession to Baron Willingdon of Ratton, G.C.S.I., G.C.I.E., who will vacate office in the autumn. His Majesty has also approved the appointment of Lord Willingdon to be Governor of Madras, in succession to Lord Pentland, who will vacate office in the spring.

It is also announced that Lord Willingdon's appointment to the Governorship of Madras, after a lengthy tenure of office in Bombay, is an exceptional measure, and it is a source of satisfaction to his Majesty's Government that his experience and knowledge of the country will not be lost to India on the termination of his present appointment. Before assuming charge in Madras Lord Willingdon will return to Europe for a few months.

THE KUT PRISONERS.



The Madras correspondent of *The Times* reports that a deputation of relatives of some of the Kut el Amarah prisoners now interned in camps in Asiatic Turkey recently waited on Lord Pentland to present a petition organised by the *Madras Mail* on behalf of the survivors of the garrison, asking that steps should be taken to secure their exchange. Lord Pentland expressed his entire sympathy with the object of the petition, and promised to transmit it to the Viceroy.

POLITICS IN BULGARIA.

Speaking at King's College, London, on Wednesday, of the present position in the Balkans, Dr. Seton Watson said that the blow by which Bulgaria had been knocked out was an effective answer to the break-through to the Persian Gulf which Germany had attempted. Bulgaria's collapse was not a separate peace—it was a military arrangement. Bulgaria had played for a high stake and had lost. Her first aim had been the recovery of Macedonia from Serbia and Greece, but beyond that she aimed at the hegemony of the Balkans. She hoped to stretch her frontiers until she extended to the four seas—the Black Sea, the Sea of Marmora, the Ægean and the Adriatic. Another object was a common frontier with Hungary; this could only be realised by the annexation of a large part of Old Serbia. A third object was to prevent the unity alike of the Jugoslav, the Roumanian and the Greek races, because if either of these people were united a State would be constituted larger, more powerful, and more populous than Bulgaria. A fourth aim was to prevent Russia getting Constantinople. On all these points the Germans could and did outbid us. Now that we had attained our ends without those diplomatic bribes which had been attempted with such deplorable effects there must be no promise that would alarm our three loyal Allies—Serbia, Roumania and Greece. The only pledge we should make was that the Balkan settlement would form part of the final peace settlement, and be based as far as possible on ethnographic lines.

Of King Ferdinand Dr. Watson said there was a tendency to distinguish between him and his people, and to a certain limited extent this should be done. The decay of political life in Bulgaria during the last thirty years was largely due to Ferdinand. But if he had had an immense influence, and if a great deal that was bad in Bulgaria was due to him, his success had been largely because he had been able to identify himself with Bulgarian national aims—at their lowest and not at their highest. One factor which had helped him was the abundance of financial scandals in connection with Bulgarian political life. Ferdinand kept a safe in which he kept the evidence relating to these affairs, and as occasion required would go to the safe and bring out the necessary documents. He employed the alternative methods of bringing a man to trial, suspending a trial, and never allowing it to be finished, quashing a trial, or merely holding the threat of trial over the culprit's head. Thus Radoslovoff had been driven from office twenty years ago, when Ferdinand sent to the Press a document which proved the Minister's connection with a foreign business company. We must keep these gentlemen at arm's length.

Have you tried the World-famous

YAGHOURT

THE CURD MILK HEALTH FOOD.
A PERFECT FOOD IN ITSELF.
May be obtained at

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to
F. W. T. ATTREE, COLONEL (late R.E.), Secretary.

9	25	Wednesday	3	3
10	26	Thursday	4	4

M. Také Jonescu arrived in Nice last week.

The Bishop of London is about to visit the troops on the Salonika front.

The Earl and Countess of Bessborough will return to 17, Cavendish Square, next week from Ireland.

Great regret is expressed in the Danish Press at the removal of Sir Ralph Paget from the Legation in Copenhagen.

The Greek Minister, who left 14, De Vere Gardens for Liverpool and Manchester on September 26, returned to London on Monday.

On September 29, at Stonepit House, Henfield, Sussex, a son was born to Captain A. Guillaume, of the Arab Bureau, Cairo, and Mrs. Guillaume.

The engagement is announced of Captain S. Raleigh Amesbury, D.L.I., eldest son of the late Colonel S. C. Amesbury, I.M.S., and Ethel, second daughter of Mr. and Mrs. J. Longworth, Brightness, Bolton, Lancs.

Mr. Harold Bernard has been appointed to the Belgian Legation in Tangier, to be in charge also at Casablanca (Morocco). Mr. and Mrs. Bernard have just left London.

The King has granted permission to Hon. Captain C. Gilmour, D.S.C., and Hon. Captain H. T. Mellings, D.S.C., D.F.C., to wear the Silver War Medal bestowed on them by the Hellenic Government.

The King has granted permission to Lieutenant-Colonel G. W. P. Dawes, D.S.O. (R. Berks Regt.) to wear the Cross of a Commander of the Order of the Redeemer conferred on him by the Hellenic Government.

The marriage of Major Charles Fitzroy Cahusac, D.S.O., Indian Cavalry, and Alice Marion, widow of Lieutenant-Colonel John Sherston, D.S.O., Rifle Brigade, took place quietly at Christ Church, Mayfair, on Thursday, September 12.

The Crown Prince of Serbia has conferred the silver medal for bravery on Miss Barbara Stirling, only daughter of Mr. and Mrs. Stirling, of Holme Lea, Goring-on-Thames, for her fourteen months' relief work on the Monastir front in 1916 and 1917.

Mr. Alexander Séfi will lecture at the School of Oriental Studies, on October 10, on "Arabic as a Medium of Education and Commerce," and on October 17 on "Islam in Its Relation to International Morality." Admission will be free to both lectures.

On September 14, at Srinagar, Kashmir, the marriage took place of H. A. F. Metcalfe, I.C.S., younger son of Captain and Mrs. Metcalfe, The Knowle, Maidenhead, and Elinor Joyce Potter, youngest daughter of Mr. and Mrs. J. Wilson Potter, 219, Ashley Gardens, S.W.1.

An engagement is announced between Captain B. W. Fish, M.C., late Loyal North Lancashire Regiment, son of Mr. and Mrs. W. H. Fish, of Birkdale, Lancashire, and Galway, Ireland, and Irene Violet, younger daughter of the late Evelyn Gray, Indian Civil Service, and of Mrs. Gray, 41, Queen's Gate Gardens, South Kensington.

The marriage took place on September 26, at St. Stephen's, Gloucester Road, of Mr. Hector Bruce Mackenzie, Lieutenant, N.Z.M.C., son of Sir Thomas Mackenzie, High Commissioner for New Zealand, and Lady Mackenzie, and Miss Elyn Caroline Nicholls, only daughter of Mr. George Jasper Nicholls, late Judge of the Indian Civil Service, and Mrs. Nicholls, of Bideford. The service was conducted by Canon Burton, of the N.Z.E.F. The bride was given away by Mr. L. Marshall, I.C.S., and the best man was Sub-Lieutenant Charles S. Clark, R.N.V.R., late N.Z. Field Artillery.

The Queen has sent a cheque for over £400, contributed by the Women's Canadian Club of Vancouver, for the Serbian Relief Fund, 5, Cromwell Road, S.W.7.

The engagement is announced of Colonel C.C. Melvill, late Manchester Regiment, of Wynbrook, Scalby, second son of the late General Henry Melvill, Bengal Cavalry, to Dorothy, only daughter of Horace E. Foster, solicitor, and Mrs. Foster, of Craigmere, Scalby, Scarborough.

A marriage has been arranged, and will shortly take place, between Lieutenant-Commander Frederick Colnett Corbyn, Royal Navy, son of the late Lieutenant-Colonel E. C. Corbyn, Bengal Staff Corps, and Mrs. Corbyn, of Southsea, and Agnes Anne, widow of Charles Geffard Pirouet, and daughter of the late Edward Austin.

Bishop MacInnes, the Anglican Bishop in Jerusalem, has returned to England for a few weeks on business conected with his diocese, and will speak at a meeting of the Jerusalem and the East Mission at the Church House on October 30, when the Archbishop of Canterbury and Lord Robert Cecil have also promised to speak.

The engagement is announced of Major Gerald Bassett Scott, D.S.O., Indian Army, son of the late Lieutenant-Colonel Hopton Bassett Scott and Mrs. Scott, of Locksley, Shankill, Co. Dublin, tolBanche, only daughter of G. F. le Caen, J.P., and Mrs. de Caen, of Springfield, Delgany, Co. Wicklow, late of Kircullen Park, Moycullen, Co. Galway.

On September 26, at Christ Church, Lancaster Gate, the marriage took place of Captain John Henry Crace, Indian Army Reserve, son of the late Henry Winfield Crace, of Cheshunt, and of Mrs. W. Hilton Perkin, of 33, Warwick Gardens, Kensington, to Elsie Farrar, elder daughter of Mr. and Mrs. W. Farrar Roberts, of Plas Lodwig, Bournemouth West.

The King has granted unrestricted permission to Mr. Thomas James Grieve to wear the Cross of Officer of the Order of the Redeemer conferred on him by the King of the Hellenes in recognition of his services during an outbreak of spotted typhoid in Epirus; and to Mr. Henry Arnold Ward to wear the Insignia of the Fourth Class of the Order of St. Sava conferred on him by the King of Serbia in recognition of his services under the auspices of the Serbian Relief Fund.

At the Oratory, Brompton, on September 26, the marriage took place of Commander M. Maxwell Scott, D.S.O., R.N., third son of the Hon. J. C. and Mrs. Maxwell Scott, of Abbotsford, Melrose, to Fearga, eldest daughter of the late Sir Nicholas O'Conor and Lady O'Conor, of Dundermott, Ballymoe, Co. Roscommon, and 29, Chester Square. The bride, who was given away by Mr. James Fitz-Alan Hope, M.P., and Lord Colum Crichton-Stuart was best man. Among those present at the church were: Lady O'Conor, the Hon. J. C. and Mrs. Maxwell Scott, the Duchess of Norfolk, the Dowager Marchioness of Bute, Sir Edwin Pears and Miss Pears, Captain Costiesco Ghyka, Count Ostorog, Captain Gourski, Lady Barclay, Lady Kennard and Admiral the Hon. Sir Edmund and Lady Fremantle.

Captain George Lloyd, M.P., whose appointment as Governor of Bombay, in succession to Lord Willingdon, has just been announced, has a wide knowledge of the Near and the Middle East, based largely on personal observation. He has travelled much in India, Egypt and Morocco, and has acted as Special Commissioner in British trade interests in Turkey and Persia. His knowledge has very often been turned to account in the House of Commons, where he has represented West Staffordshire for about nine years. Since the war broke out he has rendered invaluable services to his country in Egypt, at Gallipoli, in Russia, in Mesopotamia, and in Sinai and Palestine. Here his knowledge of Arabic and Turkish has stood him in good stead, and some of his adventures, notably with the Arab forces in the Akaba region, should some day make interesting reading. He is, by the way, a graceful writer, and has occasionally contributed to THE NEAR EAST. Captain Lloyd married, in 1911, the Hon. Blanche Lascelles, daughter of the Hon. Frederick Lascelles.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

The East India United Service Club, 16, St. James's Square, S.W., has recently extended its field of recruitment, and the following officers, or other gentlemen, being European British subjects, are now made eligible for election :—Civil officers of services under the British Government in the Crown Colonies, Egypt, and British Protectorates, whose rank or duties are similar to those of the officers of the Indian Civil Services formerly eligible. Officers of the Guaranteed Railways of India, who have served in India for not less than five years, and whose rank or duties correspond with those of officers on State railways. Commissioned officers of military forces serving, or who have served, under the British Government in the present war in Asia, Africa, or Europe. Members, past or present, of the Bengal Club, Calcutta, the Byculla Club, Bombay, the Madras Club, and the Pegu Club, Rangoon.

The King of Italy has congratulated the King of Serbia on the victory of the Serbs under the Crown Prince in the struggle for the reconquest of their country.

A service of Slavonic music of the Serbian Church will be sung at Southwark Cathedral by a choir of Serbian students under the direction of Mr. Kosta Manojlovic on Saturday afternoon at 3 o'clock. An address will be given by Father Nikolai Velimirovic.

OBITUARY.

Viscount Falmouth died on Tuesday after a short illness. He served in the Egyptian campaign of 1882, and was present at Tel-el-Kebir and later at Metemmeh, where he commanded the Camel Corps.

The death is announced of Lady Gorst, widow of Sir John Eldon Gorst, K.C., P.C., who died in 1916. She was a daughter of the late Edward Johnson and of Mrs. Johnson, of Fernwood Avenue, Streatham, and was married in 1914.

Captain the Rev. C. E. De La Bere, R.G.A., killed in action on or about September 12, aged 29, was the fourth son of the Rev. J. De la Bere, M.A., I.C.S., of Porturet House, Cheltenham, and rector of Woolfardisworthy East and Kennerleigh, Devon.

Sir Doyle Money Shaw, K.C.B., R.N., formerly Inspector-General of Hospitals and Fleets, died in London on Monday, aged 87. He entered the Navy in 1854, and saw service in the Crimea, in China, in the Abyssinian War, and at the bombardment of Alexandria. He retired in 1892.

Brigadier-General Arthur Richard Carlos Sanders, C.M.G., D.S.O., Royal Engineers, who was killed on September 20 by an enemy sniper, was forty-one years of age, and the only surviving son of Mrs. Sanders and the late Colonel R. C. Sanders, Indian Medical Service. He went to India in 1899, where he served with the Bengal Sappers and Miners at Chitral, Rawal Pindi, and other districts. Shortly after the outbreak of war he was drafted to France with Indian cavalry.

NEWS IN BRIEF.

M. Passaroff, the recently-appointed Bulgarian Minister in Stockholm, has declared himself unable to enter on his duties.

A military mission composed of Serbian officers, which was charged with the enlistment of Jugoslavs and Czecho-Slovaks who had emigrated to America before the war, has succeeded in enrolling a very large number of recruits.

A Hindu student named Perendu Narin Sinha has been charged in New York with sending letters to Hindus in Mexico in code, with the object of evading the United States censorship. It is said that his messages referred to some of his countrymen arrested in America and charged with conspiracy against the peace of India.

The *Pioneer* (July 26) announces: The Commissioner of Lucknow is inaugurating a scheme for the enrolment of a civil guard for watch and ward duties in the chief towns of the United Provinces in order to set free policemen for active service. It is anticipated that the police force will lose the services of three thousand of its most active men.

Last Thursday, at Bonn's Hotel, Great Prescot Street, London, E., the Russian Zionists, Messieurs Isaac Goldberg and I. Rozoff, who were passing through England on their way to Palestine, were the guests of the English Zionist Federation. Mr. Jacobus Kahn, from Holland, also arrived unexpectedly on the same mission, and was included in the reception. The Rev. J. K. Goldbloom, who was in the chair, spoke of the effect created by the British Government's declaration upon Russian Zionists.

The General view of the C.M.S. Persia Mission for 1917 says that the year was quiet and uneventful. The famine which arose in the autumn caused bread to be more than double its highest price in the days of the great famine of 1870 and brought about a heavy death rate. November 25 was observed as a day of prayer by all the Christians, Anglican, Roman, and Armenian, and on December 20 a plentiful fall of rain occurred. At the beginning of May last the famine was more severe than ever, though the prospects for the next harvest were good. During the past six months the C.M.S. staff have been doing their best to cope with the situation. Flour has been purchased and bread baked in the hospital ovens and distributed daily to some hundreds of people.

General Milne, commanding the British forces, has addressed a highly laudatory order of the day to the Greek units which took part in the battle of Doiran.

An Order in Council published in the *London Gazette* announces that an agreement has been concluded between the British Government and Greece with regard to the liability to military service of British subjects in Greece and of Greek subjects in this country. The Order directs that the Military Service (Conventions with Allied States) Act, 1917, shall have effect with respect to Greece and Greek subjects.

A Reuter's message from Amsterdam dated September 26, reports:—The Ottoman mission which is charged with notifying the King of Bulgaria of the accession of the Sultan Mahomed VI. arrived to-day at Sofia Railway Station, where the ceremony of notification took place. Among those present were the Crown Prince Boris and the Premier, M. Malinoff. In the same train as the mission was the Grand Vizier, Taalat Pasha, on his way back to Constantinople.

In a despatch from Palestine Mr. H. S. Gullett, official War Correspondent in Egypt with the Australian Forces, writes:—Ample supplies are assured to the cavalry force, making our position very secure. Owing to the Palestine harvest being in full swing the country is overflowing with horse feed and water is plentiful; and although thousands of the horses have covered fully 100 miles within two days they are still fit, and quite capable of a further big effort

A Reuter's message from Simla dated September 18, and delayed in transmission, says:—At the instance of the Commander-in-Chief, General Sir Charles Monro, a measure has been passed providing that men enrolled in the Indian Defence Force, who previously were liable for service in India only, shall in future be liable for service abroad. A further Act has been passed whereby Europeans over 50 years of age shall be eligible for voluntary enrolment in the Indian Defence Force.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

FRIDAY, OCTOBER 4, 1918.

THE CAPITULATION OF BULGARIA.

Nothing has become Bulgaria so much in connection with the war as her manner of getting out of it. She has placed herself unreservedly in the hands of the Allies, and has had the good sense not to prejudice her case by any attempt to strike a bargain. The armistice signed at Salonika on September 30 holds good until the final peace settlement. In the meantime Bulgaria passes completely under Allied control. According to the main terms of the agreement, so far as they have been made known in this country, the Bulgarian army is to be immediately demobilized, its arms, munitions, and equipment being stored at given centres and placed in Allied custody; all Greek and Serbian territory still occupied by Bulgarian forces will be at once evacuated; all Bulgarian means of transport, including the railways and Bulgarian vessels, are to be placed at the disposal of the Allies; Bulgarian territory is to be available for Allied operations against the enemy, and Bulgaria ceases henceforth to be a belligerent, save with the complete consent of the Allies. Only one clause in the armistice bears any trace of a Bulgarian stipulation, although it may well have been the spontaneous offer of the Allied Commander-in-Chief; it is provided that strategic points are to be occupied by the Allied armies, but such occupation is reserved to British, French, or Italian troops. The reservation is a wise one; but we shall hope to hear that it was made with the cordial assent of both the Serbian and Greek Governments from a desire not to compromise by the temporary emphasis of the relative positions of victors and vanquished the ultimate restoration of international good will to the Balkans. The fact that this complete capitulation was made within a fortnight of the launching of the Allies' offensive, and almost before Bulgarian territory had been reached, proves that the heart of the Bulgarian people had been out of the war for a considerable period, and it may also be inferred from the readiness with which the agreement was signed and the fate of Bulgaria left unquestioningly to the Allies that three years of close partnership with Germany have satisfied the Bulgarians that, in spite of the evil record with which they face their late enemies, they are likely to be better off in their hands than in those of Germany.

The actual situation in Bulgaria is still necessarily obscure. Some explanation must be forthcoming of the part played by the country in the war, and it is hardly to be expected that those guilty of ranging Bulgaria against the Allies will be allowed to go scatheless. From their fate it may be possible to gauge the inwardness of the people's mind. If the spirit that passed muster in international relations before this war is to prevail still, there will be no disposition to inquire too closely into Bulgaria's case. She has once more been beaten to her knees, and there is the precedent of the Treaty of Bucharest, whether of the 1913 or the 1918 variety. But we are confident that it is realised to-day that this way peace in the Balkans does not lie. The Treaty of Bucharest was an example of punishment regardless of justice and the rights of nationalities. It is an experiment that the Allies cannot afford to repeat. Let the punishment to be meted out to Bulgaria be as drastic as can be devised, provided it does not carry with it injustice and sow the seeds of fresh wars. The first concern of our Allies, the Serbians and Greeks, is that Bulgaria should cease to be a menace to them and be deprived for all time of the incentive to feel that only a little effort on her part is required to cause the hegemony of the Peninsula to fall into her lap. The ground, it is obvious, has been entirely cut away from under this fear. The Serbia of to-morrow is no longer a State smaller than Bulgaria, living under the shadow of an Austrian peril. It is the moving spirit of a great Serb or Jugoslav Federation, numbering twelve million people; the future of Greece may not have been defined with the same precision, but equally with Serbia she will be able to divest herself of the old dread of Bulgaria. There will also be Roumania, enlarged to a total population of eleven or twelve millions, standing sentinel in the north. Thus the desire to see Bulgaria rendered harmless is already gratified, and the Entente Powers, including the United States, can be relied upon to make sure that not lightly shall a just settlement resulting from this war be annulled. By the terms of the armistice the political settlement is postponed until a later date. If Bulgaria succeeds in exorcising her own evil genius and the Allies lose no time in drafting a detailed settlement that will render lasting peace in the Balkans possible, and will prepare the way for the conjoint advance of the several States along a common path of material prosperity, then, we believe, practical effect could very shortly be given to the suggestion in the Salonika agreement that Bulgaria may again become a belligerent, "with the complete assent of the Allies."

A reluctance to count too much on Fortune's favours and a widespread inability to visualise the world-war as a single undivided whole are responsible for the failure to appreciate at once the potentialities of Bulgaria's surrender. Somewhat tentatively the people of Great Britain allow themselves to believe that it has brought the end of the war nearer—a belief reluctantly shared even by those who have persistently denounced all military enterprise in the East and sought to throw ridicule on the campaigns in Macedonia, Palestine, and Mesopotamia as side shows. The first result must be the elimination of Turkey. From that follows free access to the Black Sea and South Russia for the Allies, and the ultimate rehabilitation, we may hope, of distracted Russia. Roumania can be reached across Bulgaria and by way of the Black Sea, and already the Germans claim to have detected strange movements afoot in the country that they thought they had placed for ever under their heels. More important still, Austria is again uncovered in the south, with no means of protecting herself except at the expense of the Italian or the Western fronts. For the moment, however, these are results *in posse*. To attain them it is necessary that the efforts of all the Allies that have succeeded so well in Macedonia should be transferred and, if possible, intensified against Austria. The capitulation of Bulgaria has stirred things elsewhere than in South-Eastern Europe. Of this fact Germany herself is peculiarly conscious, and the Allies have only to press home their advantage from Flanders to the Danube to realise how great a stimulus has been given by the course of events in Macedonia to their resolve to bring the war at last to its inevitable end.

THE CAPTURE OF AMMAN AND DAMASCUS.

The astonishing week in Palestine which commenced on the night of September 18 with the great battle of Samaria concluded with practically all western Palestine in British possession, and with the Turkish Seventh and Eighth Armies "wiped out."

From Es Salt, which had been captured on the 23rd by an outflanking movement over the hills—along "goat paths"—on each side of the military road, the Anzac Mounted Division, assisted by some infantry, among them a West Indian battalion and some Jewish troops, advanced towards the fortified Turkish position at Amman. In our previous advance to this place the strength of its defences had been realised, but now our return wave was irresistible. On the 24th our cavalry reached Suweileh, halfway, and by dawn the next day an investment of the town from all sides was commenced. By 3 p.m. New Zealanders had entered the Circassian settlement itself, and by nightfall the whole ancient site of Rabbath-Ammon, the lofty hill which was the acropolis when the Greek city of Philadelphia was here, was cleared of the enemy. Those readers of THE NEAR EAST who know Amman will realise how great a feat it was to capture so rapidly a stronghold so well adapted for defence. It has seen many sieges and many battles from the time of King David's general Joab (2 Sam. xii. 26-31) onwards. To-day, as the most important station on the Hejaz Railway south of the Daraà junction, its capture was an essential step in our progress.

Meanwhile, forces belonging to the King of the Hejaz, who had captured Maan (the nearest station to Petra) further south, were driving the scattered Turkish garrisons along the railway line towards our forces in Amman. By the 27th 5,700 prisoners and 28 guns had been captured in and around Amman; and on the 28th, our cavalry, moving southwards, came in contact with Turkish forces retreating northwards from the Maan district at Es Kastel, 14½ miles to the south of Amman. These apparently retreated again southward before us—they were between our Arab allies to the south and our cavalry to the north—and the next day at the station Ziza—three miles to the south of Es Kastel—a force "stated by its own commander to number 10,000 men" made their surrender.

While these highly satisfactory results were proceeding, others of our forces were making their way to the East Jordan lands further north.

One party advancing from Beisan secured the southern end of the Lake of Galilee, with the important railway station of Es Semakh, and proceeded eastwards up the hills into the Jebal Ajlun (Land of Gilead). They occupied successively Irbid, the chief town of the Ajlun district, on the afternoon of the 27th, and Er Remtheh, a town situated on an outstanding hill, and, like the last, on the high road from Beisan, over the Jisr el Mujamia to Daraà. They drove before them the demoralised Turkish forces towards Mezerib, and effected a junction with the Arabs about Daraà. These latter meanwhile had captured the railway stations north of Daraà at Ezraà and Ghazaleh; had on the 26th occupied Daraà itself, and on the 27th reached the important centre Sheikh Saad, 16½ miles to the north. Daraà is the Edrei of the Bible and occupies a site which was in ancient times of considerable natural military strength. It is noted for its extensive underground passages—a veritable underground city—in which the inhabitants were able to retire for refuge in times of danger. At the present day its importance in regard to our advance lies in its being the railway junction of the Haifa-Damascus line with the main Hejaz railway. The Arab forces rendered the British cause a signal service when they destroyed the railway in this neighbourhood at the beginning of our advance.

Sheikh Sa'ad is a place well known to Palestine archæologists, as here, within the walls of a ruined mosque, is the so-called "Stone of Job"—a great block of basalt 6 feet high, bearing the cartouche of Rameses II.—an evidence that the armies of this great conqueror also passed this way. Meanwhile this Beisan force—consisting of Yeomanry and Indian cavalry—proceeded at a rapid pace towards Damascus, leaving small bodies of Turks in their rear, to be dealt with later by the oncoming infantry. The next important capture was Sheikh Miskin, a thriving townlet the seat of the Governor of the Hauran. It lies upon the great Haj (pilgrim) road some five miles almost due east of Sheikh Sa'ad and some fifty miles south of Damascus.

While this force was thus rapidly approaching Damascus along the great southern road a third body of mounted troops was engaged in clearing the northern end of the Lake of Galilee and advancing along the Akka-Damascus road. This road crosses the Jordan, here but a narrow river, at a bridge called the Jisr Benat Yacob ("The Bridge of the Daughters of Jacob"). A brigade of Australian Light Horse, reaching this bridge on the 26th, found it destroyed and the eastern side of the river defended by a thousand men, who had come from Damascus on motor lorries with light artillery and machine-guns. The Australians, however, swam their horses across the river, some to the north and some to the south of the bridge, crossing with such speed that they captured many prisoners and guns. By 6 a.m. on the 28th they were at the little squalid village of Deir es Suras, from which they advanced rapidly to the important Circassian settlement of el Kuneitrah, the principal place and seat of government of the Jaulan—some forty miles S.W. of Damascus. It is beautifully situated, with abundant water supply, and remains of earlier occupation are plentiful. It was once a great Khan on this ancient trunk road. The two columns, one coming through the Hauran and one through the Jaulan, were thus converging upon Damascus.

No time was given for the Turks to rally. By the 30th the city was surrounded north-west and south, and actually entered by some Australian mounted troops, and at 6 a.m. on October 1 this great and ancient city, the centre of an oasis of unbounded fertility and one of the most historic cities of the Arab race, fell to General Allenby's victorious armies.

Meanwhile, though we have as yet no details, French troops are said to be advancing upon Beyrout, and doubtless we shall before long learn of other forces engaged in rapidly seizing strategic points in the van of our victorious advance.

Up to the present—by the addition of 7,000 captured at Damascus—General Allenby's total captures number 67,000 officers and men.

E. W. G. M.

THE INDIAN POLICE.

The Secretary of State for India in Council, it is announced, is prepared to consider applications for appointment to a limited number of posts in the higher branch of the Indian Police from young men between nineteen and twenty-five years of age who have served with his Majesty's Forces during the war, but whose services, owing to wounds or other causes, are not now required by the military or naval authorities. Candidates must have received a good education, such as might be expected to enable them to qualify for entrance to the Royal Military College, Sandhurst, and must be physically fit for service in India, involving constant riding. Further particulars and form of application may be obtained from the Secretary, Judicial and Public Department, India Office, London, S.W. 1.

SPECIAL NOTICE.

"White Horse Whisky" Diary for 1919.

Messrs. MACKIE & CO., Distillers, Ltd., Glasgow, London, and Island of Islay, desire to inform holders of their "White Horse" Diary for 1918 that the new Diary for 1919, shortly to be issued, will not, owing to war conditions, be supplied with the usual leather covers. The outer leather cover of the 1918 Diary should therefore be preserved for use with the issue for 1919, the latter to be inserted inside the elastic band after removing the old book.

THE INDUSTRIAL RENAISSANCE OF GREECE.

OPPORTUNITIES FOR ANGLO-HELLENIC TRADE DEVELOPMENTS.

By Thomas H. Mawson,
(Senior Member of the Commission for the Replanning of Salonika.)

Anyone acquainted with the East and its prevailing optimism and the remarkable character of M. Venizelos, the Prime Minister of Greece, is convinced that a great Hellenic revival is in process of incubation, and that its effect on the life of the people will be salutary and invigorating. After centuries of lethargy or subjection, the Hellenic people with their latent virility are coming into their own, and every Greek seems to feel the spur of a dream which at last is coming true.

The British Foreign Office with its usual perspicuity has seen the coming of the dawn, and the opportunities which it offers for strengthening those ties of mutual good will which have always been so strong between Greek and British. In the material sense our Government has realised the enormous impetus which this revival may give to trade between the two countries, and from the Government to those important federations of British industries which this war has called into existence, all seem alive to the advantages which are thus offered of closer trade relations. One proof of this is to be found in the Greek Commercial Mission now touring, at the invitation of the Federation of British Industries, the manufacturing and commercial centres in this country. What the delegation will see here cannot do otherwise than profoundly impress them, and prove beyond cavil that, a great war notwithstanding, we have not lost our genius as universal providers of the world's needs.

As senior member of the Commission for the replanning of Salonika and as town-planning expert to the Greek Government, I am curious to know whether or not our financiers, manufacturers, and merchants will rise to a just conception of the volume of trade which the renaissance of Greece implies.

Probably in the concrete sense the rebuilding of Salonika is the biggest as well as the earliest task of the post-war period. From the material point of view the rebuilding of the burnt-out portion alone constitutes a great operation, but this is as nothing compared with the construction of the greater Salonika which is to be.

This great rebuilding scheme can only be compared, from the platform of modern history with the rebuilding of Chicago and San Francisco. This will be, not merely a case of gradual creation as a city develops in a natural way, but of rapid reconstruction involving a great organisation, great energy, and great expenditure, and the Hellenic Government is shouldering this business of reconstruction with energy and foresight. To gain some little conception of what this rebuilding and extension of a great city really means, the accompanying notes may be helpful. In reading the following estimates of work (which must be carried out by someone), it is to be noted that a large and central section of the city, extending about 1½ miles east to west and over half a mile south to north, involving the dehousing of 70,000 inhabitants, was utterly destroyed in the great fire. This portion has been entirely replanned, and must be quickly rebuilt. Not only so, the new plans now include an area of about 17½ square miles, an area which will undoubtedly be occupied in the near future by a prosperous population. Some of the work necessary to this great work of reconstruction may be classified as follows:—

Streets and Boulevards.—The street and boulevard system gives the remarkable total of 176 miles of new or reformed roads, of which one hundred miles will be required within the near future. These streets will all require kerbs, channels, and side walks, along with the utilities described hereafter. The road surfaces will vary in character from wood blocks to stone sets, and from asphalt to macadam, according to locality, gradient, and prospective use, wear, and tear.

Dock, Railway, and Tram Facilities.—The preliminary plan gives some indication of the enormous extensions proposed to the docks, and also the reorganisation of the railways for merchandise and passenger traffic. This work will entail the expenditure of large sums, both in the construction of a large railway station near Port Vardar (popularly known as Piccadilly Circus) and also in the erection of large bonded and merchandise warehouses, along with the necessary offices and other buildings incidental to work of this nature. It is also proposed to erect eventually another terminus at the Kalemaria end of the city, and to construct another railway connecting Salonika with the Gulf of Orphana. Between these two stations and running through the heart of the city, it is proposed to construct an underground railway connecting these two terminii, and also to meet the needs of the inter-urban traffic of the city. It is also proposed to reconstruct entirely the tram or street car services of the city, which, in their completed state, will extend to forty miles.

Electric Light, Power, and Gas Works.—To meet the needs of a great city which is to be rebuilt on modern æsthetic and economic principles, it will be necessary to extend existing works or to erect new great power and light-producing plants, and also to lay down a large gas-producing works. The scale of these undertakings will be apparent when it is stated that power will be needed for the entire street car system, the underground railways, and for every occupation in the city which needs power. For light and cooking purposes the needs of a city—which has now a population estimated at 220,000, and which is expected to increase rapidly to 300,000—will entail the expenditure of large capital sums.

Street Utilities for Drainage, Water Supply, Gas, and Electric Light Conduits.—The main drainage system will require at least 100 miles of concrete drain pipes and extensive outfall works. Connecting drains will eventually require at least 120 miles of drain pipes of varying capacity, for water service mains the city will require at least 140 miles of piping of various bores.

Gas mains will extend approximately to sixty miles.

Electric light and power conduits will extend to approximately 110 miles.

(To be continued.)

UNIVERSITY OF LONDON.
KING'S COLLEGE
and
KING'S COLLEGE FOR WOMEN

COMPLETE COURSES OF STUDY are arranged for Degrees in ARTS, LAWS, SCIENCE, PRELIMINARY and INTERMEDIATE MEDICAL STUDIES, PUBLIC HEALTH, and BACTERIOLOGY, ENGINEERING.

PRESS ON THE NEAR EAST.

The Near Eastern Problem.

In an article, "The Future of the Near East," published in the *York Gazette*, Colonel Sir Mark Sykes, M.P., writes very bluntly of the trickery and corruption that enabled Turkey formerly to keep at least a show of independence. He declares:—

The Ottoman Empire has continued to exist for two reasons: Firstly, because the pre-war statesmen of the Great Powers preferred to see a barbarous and improgressive tyranny blasting the fairest regions of the world rather than that the redemption of these areas should add to the existing strength of a possibly hostile Power. Secondly, because the Ottoman Government has known how to avail itself of the protection of international finance.

The Ottoman Empire has for the last half century purchased its existence by playing on the fears and rivalries of the European Powers, and by pawning and mortgaging the resources of the inhabitants of its provinces to various groups of financiers. Through the medium of certain middlemen these groups forced on the Ottoman Government arms and munitions, trafficked in bogus railways, and forestalled each other in obtaining concessions. It has always been the policy of these groups to prevent any drastic action being taken to bring the Ottoman Empire under any kind of effective control, because the financiers and their middlemen knew well enough that once the Ottoman Empire was controlled, the profits of the concession hunter and the armament tout would come to an end. It has been part of the nemesis of the Allies that they countenanced and even assisted in building uneconomic railways which, though they did not develop the country, fitted in exactly with Turco-German military schemes.

As to the future, if Allied democracy is not to fail where its predecessor the Concert of Europe failed, the control of the Bosphorus and the Dardanelles must be taken out of Turkish hands. Only then will Constantinople cease to be the "hatching place of wars, the focus of intrigue, both political and financial."

The Turk holds Constantinople because no one nation dare trust another with so great a prize. But we know what Turkish guardianship of those Straits means—tyranny in Asia and dissension in Europe. The only remedy is for the Straits to be internationalised in the fullest sense of the word. Whether the Sultan resides at Constantinople or not is a matter of little consequence, but allied democracy must be entirely responsible for the fairway, and have on the spot an effective force on land, in the sea, and in the air, which will put its authority and supremacy beyond all question.

International finance before the war, as organised in Stamboul, represented nothing less than organised corruption. If the world is to envisage any prospect of peace this odious system must be abolished once and for all. Allied democracy will have to take over not only the Ottoman debt, but Ottoman finance as a whole. The question of concessions, loans, and exploitation will have to be decided in the open by a body of persons who command the respect and confidence of the world. The basic principle on which that body should act should be that the twofold purpose of economic development is to benefit the inhabitants of the country and to add to the total wealth of the peoples of the earth as a whole. Unless this is done the cesspool of Levantine roguery will continue to infect the world with fresh fevers and pestilences.

In conclusion, Sir Mark reminds his readers that they must not lose sight of the fate of the subject peoples of the Ottoman Empire. "It is unbelievable that Allied democracy can accept a continuance of Ottoman government of non-Ottoman peoples as a part of a just peace. Reforms may be dismissed as hopeless; the history of Turkey for the last hundred and twenty years has been a history of abortive reforms written in the blood of the oppressed whom the reforms were intended to free. The matter which Allied democracy has to decide is the future fate of the Greek, the Armenian, the Kurd, the Chaldean, the Syrian, the Arab, and the Jew."

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The consequences of the happy issue of the Bulgarian campaign are dealt with elsewhere in this issue, and I will merely say now that no amount of comment could express more eloquently the influence on the war situation in general and on the position in the Near East in particular of Bulgaria's unconditional surrender than the changes which immediately followed in the foreign exchange market and in the prices of Near Eastern securities. The feature of the exchange market since that development has been the recovery in sterling, the importance of which is that we shall be enabled to make our purchases in neutral countries on better financial terms. Among shares, Roumanian Consols have made a dramatic rise during the week; Roumanian 4½ per cents. have made an appreciable recovery, in company with Montenegrin bonds; while other Balkan shares have participated in the rise. The picture is completed by the growing demand for Russian oil shares, which have had an excellent market this week, and have advanced all round. These developments say all that can be said at the moment.

***

The German aspect of the situation requires, however, a little attention. Cut off from the direct railway route from Berlin to "Byzantium-Bagdad," as the Germans loved to phrase it, by the defection of Bulgaria, the Prussian authorities will be compelled to consider the alternative routes. There are two—by way of Constanza and by way of Odessa. The former would be preferable in peace time, as the railway is of the same gauge throughout, and thus only one break of bulk is involved, that at the seaport. But the German will not feel much more comfortable at the present moment in the Dobruja than he does in Belgium. The alternative route runs by way of Oderberg, where it quits Germany, through Cracow and Lemberg to the Russian frontier, where the gauge alters and a break of bulk is necessary—which is both a costly and a delaying operation—and on to Odessa. The country throughout Galicia and the Ukraine is flat and easy, and there is no reason in the nature of things why high railway speeds should not be maintained, were it not that the depreciation of a never very good rolling stock and permanent way has become a very serious factor these last four years. Odessa is, of course, a good deal further from Constantinople by sea than Constanza, but the defection of Bulgaria does not for the moment make the Euxine less of a German lake than before, Bulgaria's sea-power being negligible. But Germany will soon begin to realise that her dominance of the Black Sea is about as uncertain as the weather on those extremely fickle waters.

***

Mr. T. H. Mawson contributes a most valuable article to this issue on the replanning of Salonika and on the openings for business enterprise that will arise in connection with developments at that town. I hope the article will be read with the utmost care by British merchants and manufacturers who may be already interested in business in the Near East, or may be contemplating trade with that region after the war, for it cannot fail to give them a profound insight into the extraordinary business possibilities that will be open to them in the Near East after the war. It will then be no longer a field in which the keenest competition in the trade world has to be encountered, and where the conditions in general are adverse to British interests. Everything will then be in favour of the growth of reciprocal trade with the Near East provided British merchants show the necessary enterprise; and in the light of the experience they have gained during the war I am optimistic enough to think they will.

***

Turning to what Mr. Mawson has to say about Salonika it will be noted that it is not a question merely of rebuilding the burnt portion of the town. The replanning scheme is framed on a much more ambitious scale, and provides for the development of an area of about 17½ square miles. It is, in short, a scheme of great magnitude, which, as Mr. Mawson so aptly remarks, "can only be compared from the platform of modern history with the rebuilding of Chicago and San Francisco." Reconstruction on such a scale might be expected to be a most gradual process, but this is not Mr. Mawson's view. In his opinion it will be a question of "rapid reconstruction, involving a great organisation, great energy, and great expenditure," and, of course, that will mean that within a short space of time after the war there will be an immense demand for material of all kinds for the work he specifies. Greece is not in a position to undertake work of the nature indicated unaided; she must depend on external enterprise in the main, and it will be their fault entirely if British firms fail to play a leading rôle in the work of reconstruction.

***

Of the openings for contracts suggested by Mr. Mawson I will only mention the need for something like 100,000 new houses, industrial developments which point to the demand for more factories and workshops, and the development of the water supply and the gas and electric services. These requirements must suffice to indicate the unbounded scope for business enterprise provided by the reconstruction scheme. It only remains for me to add what I have so constantly laid stress on previously: that to obtain business at Salonika or elsewhere after the war, it is necessary for British firms to bestir themselves now, and to make known their existence by means of judicious advertising in papers that they are sure will reach the circles they wish to interest, and in other ways. To wait until the war ends before taking any definite action is the worst possible policy, and cannot fail to be detrimental to the true interests of British trade.

***

The British Trade Corporation is now in its second year, a period which has been marked by the formation of one subsidiary undertaking, the Trade Indemnity Co., Ltd., and by much patient work of preparation which will give its results when the war ends and conditions make it possible to promote the growth of British trade. It may be pointed out that it will be the business of the Corporation not so much to be the primary mover in undertakings as to assist with finance those who are launching out in directions which it can be shown are for the benefit of British commerce. I shall not be unduly optimistic, I think, if I say that in this respect it is probable that the institution will have an incalculable influence on the growth of British trade relations with the Near East. In no region has the absence of adequate financial facilities been more detrimental to our interests in the past, and in none is its provision likely to have greater or more immediate results. In Egypt, in particular, there is great scope for initiative on the part of our exporting houses if the trade which was formerly in the hands of Germany and Austria is to be captured by this country.

***

A recent debate in the French Chamber of Deputies served to explain France's policy of reserving for her own use the mineral wealth of her colonies. An oil concession to a British group was in question, and it was stated by M. Lecheur, who spoke for the Government, that the head of the British group had been informed that the charter required that two-thirds of the shares should be in French hands. In this respect we may well take a lesson from our Ally, for we have paid dearly during the war for a *laissez faire* policy which permitted other countries to utilise and even to monopolise our resources. It is one thing to welcome, as France does, the co-operation of Allied capital in the development of her wealth; it is quite another to permit the Germans (as we did before the war) to oust British capital from staple trades and industries.

***

I wonder whether it would not be possible at some future period for a British Industrial Mission to pay a visit to Morocco. Such an enterprise would, I am sure, be most acceptable to our Allies, and would form a fitting complement to the efforts now being made in this country by the British Merchants Morocco Association and in Morocco by the British Chamber of Commerce there to increase British trade with that country.

***

My attention has been drawn by a valued correspondent to a most interesting passage in Volney's *Travels* in which it is mentioned that "indigo grows without cultivating on the banks of the Jordan, in the country of Bisan, and only requires care to make it of an excellent quality." My correspondent suggests that some attempts might be made to restore this lost industry, a view which will doubtless be universally shared as the industries of the region in question are neither numerous nor valuable, and indigo cultivation would be a most important addition to their number.

***

Sir Harvey Adamson, Lieutenant-Governor of Burma from 1910 to 1915, in an article which was quoted recently in these columns, referred to the vast coal resources of Burma which have hitherto not been utilised. It appears that this neglect will shortly be remedied, as the Burma Resources Committee have asked the Government to place a geological expert on special duty for the examination of coal and lignite deposits and to defray the cost of detailed investigation. Unfortunately, the most important coal fields in Burma are inaccessible, but important deposits exist near Magwe which lend themselves readily to development.

ROUMANIAN COMMERCE.

Retrospect and Prospect.—III.

By A. Loveday.

Although the petroleum industry affords a good example of the success of Germany's efforts in developing the trade and industry of Roumania, and although Germans, and Jews with German connections, were to be found in prominent positions in almost every branch of industry in that country, still Germany's main activities were devoted to increasing the sale of her own goods. The extent to which British trade has gradually receded and German trade progressed may be gauged by the following table giving the quinquennial average gross imports of Roumania from the four most important countries of origin for a period of thirty years.

Roumanian Imports (gross) in Millions of Francs

Period.	United Kingdom.	Austria-Hungary.	France.	Germany.
1884-8	70	89·7	20·1	66·3
1889-93	98·5	74·5	36·1	117·7
1894-8	74·2	99·9	27·1	106
1899-03	49·2	76·1	18	77·9
1904-8	59	101·6	19·5	122·7
1909-13	68·8	119·5	31·6	184·9

The Roumanian balance of trade has been directly dependent on her borrowings. Roughly speaking it was generally against her up to 1900 while she was raising large foreign loans for her railways and the general economic development of the country, and was favourable since that date up to the outbreak of war, except in the two years 1904 and 1908 when she was suffering from economic crises, the first produced by harvest failure and the second the outcome of the 1907 agricultural revolution. The fall in Roumania's imports during the quinquennium 1899-1905 is concomitant with the diminution of her foreign borrowings. Germany, as the largest source of capital, was the most directly affected, and the subsequent increase of her exports to Roumania has been achieved through a vigorous exploitation of the Roumanian market. A further analysis of the figures given above will show the character of her commercial campaign, and for this purpose the last five years of the series will be taken. The year 1913, however, it should be remembered was in some ways unrepresentative owing to the mobilisation of the Roumanian army, and the large purchases of ammunition from Austria-Hungary which in part account for the increase of imports from that country during the final quinquennium. The most important groups of merchandise imported by Roumania during this period, together with proportions for which each of the more important exporting countries were responsible may be seen from the following figures:—

Commodities.	Value in Millions of Frcs.	Percentage of value from chief importing countries.				
		United Kingdom.	Germany.	Austria-Hungary.	Italy.	France.
Metals	638·4	16	50	19	—	—
Cotton & Hemp	393	33	18	21	18	—
Machinery	254·9	8·4	56·3	17·3	—	—
Wool & Woollen Goods.....	206·3	15	42·5	25	—	—
Vehicles	109·5	—	50	20	—	14

Thus, in the case of metals, machinery, and wool and woollen goods, Germany easily held the first position. Moreover, whereas the imports from England during the period did not increase in proportion to the increase in the total imports, the growth of the imports from Germany considerably exceeded the average percentage increase. The differences are so striking as to be worthy of definitive illustration.

Roumanian Imports in 1912 as Percentages of her Imports in 1909.

From	Total.	Metals.	Cotton.	Mach'y.	Wool.
All countries	165	181	166	200	173
Germany ..	193	205	146	208	189
U. Kingdom	152	154	135	207	144

Only in the single case of machinery did the United Kingdom keep pace with the general commercial growth of Roumania, and in this case never once in the whole period did her imports amount to 10 per cent. of the total imports, while in every instance Germany made the more rapid progress. Had the year 1913 been taken instead of the more normal year 1912, this country would have shown a still more striking picture of retrogression.

It is not possible within the limits of this article to investigate in detail the various articles of import. There are, however, one or two of outstanding importance which are worth special note. In 1913 the most important single article was iron tubing, the steady demand for which in recent years was considerably increased by the decision of the Roumanian Government to lay pipe lines for petrol from Baicoi to Constantza. The 37 million francs paid for these was divided almost equally between Germany and the United States. In almost all other metal manufactures, with the exception of galvanised iron, which came from the United Kingdom, Germany secured the major portion of the orders.

Coarse unbleached yarn woven in Roumania to a considerable extent by the peasants on domestic looms constituted one of the main textile imports. It was largely owing to the importance of this trade that the United Kingdom was able to maintain her leading position in cotton. Italian competition, however, was gradually driving her back, and in piece goods, more especially those which were highly coloured, England was steadily surrendering her ground to Italy, Austria-Hungary, and Germany.

A somewhat different state of affairs existed in the case of the machinery group. Here Germany and Austria-Hungary, while practically monopolising the market in machine tools and oil engines, were beginning to meet with severe competition from the United States, in what was in effect the most important item of this group, namely, agricultural implements. The restoration and salvation of Roumania after the war will, perhaps, depend more on her power to revive and develop agricultural co-operation and on her power to purchase agricultural implements cheaply and on generous terms of credit than on any other factors.

In view of the facts and figures presented above it is worth while considering what were the main causes of the decrease of British and the increase of German and Austrian trade with Roumania.

Germany and Austria, no doubt, possessed certain definite advantages. Few countries have owed more to a single man than Roumania owes to her late king, Carol I., a Hohenzollern. It was natural that he, in controlling the economic organisation of the kingdom, should have looked to Germany for such assistance as was required. But the advantage which Germany thus obtained, more especially during the period 1890-1900, decreased rather than increased during the next thirteen years, when Roumania was paying back more in interest on her debts than she was borrowing. A second advantage, in this case accruing equally to both of these two nations, was that of proximity—proximity, partly on account of shorter transit, and partly on account of the fact that the Roumanian people themselves are not a commercial nation, with the result that a very considerable proportion of their business is controlled or managed by foreigners. It required less imagination and less effort for a German or a Hungarian to take the opportunities which presented themselves than for an Englishman or a Frenchman. Moreover, owing to the non-commercial character of the Roumanians themselves, Jews succeeded in obtaining an extraordinary hold over the whole economic life of the country. Whatever may be the international characteristics of Jews in general it is certain that the Roumanian Jew was more closely allied to the German than to his kin farther west, and the higher the proportion of Jews in any town the greater the proportion of German goods to be found on sale there. But these causes, although all operative, are insufficient alone to explain the progress made by German traders.

So far as this country is concerned it would appear that British firms were content to abandon the Roumanian market without a struggle. Their failure, or relative failure, may be accounted for partly by their unwillingness to send out either travellers or catalogues published in a language or giving measures understood by the Roumanians, and partly by their unwillingness to give terms of credit similar to those extended by their competitors. These two points are closely connected, for, relying as they did on local commission agents in many cases, they suffered considerable loss from the credit they did allow. They became thus, naturally, though wrongly, as they made the initial mistake, unwilling to grant more favourable terms. As illustrative of their lack of enterprise may be quoted a remark of the Vice-Consul at Braila in the latest British Consular Report:—"I may mention that not a single British commercial traveller called at this Vice-Consulate during the year 1913."

In the opening pages of the same report we are told that "British merchants do not seem to be over eager to push their wares in the Roumanian market, and apparently find it more profitable to extend their relations elsewhere." The conclusion drawn in this sentence is obviously a legitimate one for any consul in any particular country to make; but when almost exactly similar remarks are to be found in innumerable reports from all parts of the world, the question arises whether it would not be nearer the truth merely to state that before the outbreak of war British merchants were not over eager to push their wares.

INDIAN INTELLIGENCE.

Monsoon Still Weak.

The Indian Trade Commissioner (Mr. D. T. Chadwick) has issued the following weekly cabled news from the Director-General of Commercial Intelligence, Calcutta, dated September 25:—

The monsoon continues weak, and rain is still needed generally in the North and Centre. It has been moderate in Bengal and Burma. In the Deccan (Madras and Bombay), where rain was reported short till last week, recent falls have been better.

The final jute forecast estimates a crop of seven million bales, being a decrease of 1,900,000 bales as compared with last year's forecast at corresponding date.

Cotton in the United Provinces is doing well.

Fine broach cotton September delivery. Highest quotation Rs.899 a candy; lowest Rs.722.

The War Loan subscriptions, according to revised figures, exceed 49 crores of rupees (£37,000,000 approximately at 1s. 6d. exchange).

The following railway surveys have been sanctioned:—Maungdaw to Akyab, seventy-seven miles, by the Assam Bengal Railway; Magra Hat Kakdwip, twenty-nine miles, by the Eastern Bengal Railway. The last is in the Diamond Harbour sub-division of the twenty-four Pargannas.

AMERICAN EGYPTIAN COTTON ACREAGE.

The Bureau of Crop Estimates of the United States Department of Agriculture estimates that the area planted with Egyptian cotton in 1918 is about 80,000 acres, compared with 36,000 acres in 1917. The forecast of the production is 45,000 running bales, as against 14,000 bales in 1917.

	Details by States. Acreage.		Estimated Production (Running bales.)	
	1918.	1917.	1918.	1917.
Arizona	75,000	33,000	42,000	13,000
California..	5,000	3,000	3,000	1,000

The experiment with the Egyptian cotton in the United States began in 1912, and has been greatly stimulated during the war years by the high prices prevailing for Egyptian cotton from Egypt and the scarcity of tonnage to carry it.

The *Tunisie Française* states that the last tunny fishing season resulted in a catch of 4,439 fish. In normal times a season's catch amounts to about 25,000 tunny. The price obtained for the fish this season has been high, but, it is said, does not cover the cost of production.

THE GREEK COMMERCIAL MISSION.

Liverpool and Manchester Visits.

The Greek Commercial Delegates spent part of September 26 at Derby, where they visited the premises of Messrs. Boden and Co., Ltd., afterwards going on to Liverpool. On September 27 they visited the United Alkali Co., Ltd., and were entertained at luncheon by the Lord Mayor. The following day was devoted to a visit to Lever Bros., Ltd., Port Sunlight. The Hon. W. Hulme Lever received the visitors, and presided at the luncheon given in their honour. In the course of his speech he said he was glad to learn that it was proposed to rebuild Salonika on the town-planning lines of which Port Sunlight formed an example. He subsequently read a letter from Lord Leverhulme, who wrote: "It can only be along the lines of peaceful commerce—services rendered by the citizens of one nation to the citizens of another in supplying their wants, and the fair exchange of the products of one country for the products of another—that national prosperity and well being can be built up. On these lines may there ever be a closer connection between the people of Greece and the English-speaking people—the two peoples that in the history of the world have done most for ideals and standards of liberty, freedom and democracy from the earliest dawn of civilisation."

In the evening the delegates were entertained at dinner at the Adelphi Hotel by the Hellenic community of Liverpool. At this function the guests included the Lord Mayor, Sir Alfred Booth, Mr. Max Muspratt, and Mr. Michel Ralli, and the chair was taken by M. Malandrinos. The Lord Mayor, proposing the toasts "The Anglo-Greek Alliance" and "Commerce and Industry," said that the alliance of Britain and Greece was centuries old. Any alliance, whether of peace or war, with the British Empire was a square alliance, which would be treated with the fullest respect. His Lordship added that he hoped that the Greek visitors would be impressed with the productive powers of Britain and the readiness to exchange her manufactures with other countries. Never had Britain been more entitled than during this war to be termed the "workshop of the world."

M. Gennadius, in a felicitous reply to the toast of the Alliance, said that the Lord Mayor had honoured the gathering by his presence, and cheered and guided Britons and Greeks by his wise words. Greece could not forget those who had remained true to her when she was under a cloud. The few days spent by the deputation in Liverpool would be reflected upon with gratitude and fond remembrance.

M. Embiricos, in reply to "Commerce and Industry," said Greece loved the British nation, and had looked to it as a lighthouse in times of storm. While in Liverpool he had especially before his mind the fact that to Gladstone Greece owed her possession of the Ionian Isles. By means of a growth of their credit banks, Greek traders would be aided in their desire to do their best to improve commercial relations with Britain. He advised British manufacturers to adapt, as the Germans had done, their standards and patterns to the elastic demands of all the countries with which they wished to extend their trade.

On September 29 the delegates proceeded to Manchester, and on the following day visited the British Westinghouse Electric and Manufacturing Co., Ltd., and the Crossley Motors, Ltd. In the evening a dinner was given in their honour at the Midland Hotel by the Federation of British Industries. Sir Herbert Dixon, who presided, said that he hoped that the tour would result in closer commercial relations with the Greeks, who were at the gate of the Balkans.

M. Michalocopoulos said England had given freedom of trade to all who came here—the Germans included. This freedom, instead of satisfying the commercial appetites of the Germans, had increased their desires for world dominance. Whether free trade would be the same thing after the war as before he could not say. Greece was prepared to enter into agreement with her Allies, with whom she was willing to co-operate. They hoped to realise in commerce what a distinguished English statesman said of diplomacy, that honesty was the best policy.

On October 1 the delegates visited the mills of Messrs. Ashton Bros. and Co., Ltd., and were subsequently entertained to luncheon by the Lord Mayor, Sir Alexander Porter, at the Town Hall, when the guests included Lady Porter, and Mr. Theodore Casdagli, the Greek Consul.

The Lord Mayor, proposing the toast of the visitors, said that the relations between Manchester people and the Greeks who lived in their midst had always been of a most friendly character, and they did not forget how Mr. Casdagli, resenting what he felt to be the betrayal of his country by its former Government, resigned the consular office in Manchester, to which he was now happily restored. It was a very happy occasion on which to receive Greek visitors. It would be a never-ending catalogue if he were to recite what the world owed to Greece in poetry, philosophy, art, and the science of government. That was the debt of the past. But they honoured Greece for what was going on in the present—Greek troops and English troops fighting side by side and winning the most far-reaching victory that had yet been won in this war.

M. Michalocopoulos, who replied, said that the part of Greece in the war had not been so big as they would have desired, but he wished to say that in M. Venizelos the Allies had had from the very beginning of the war a most ardent and devoted supporter of their cause. He recalled two sayings of M. Venizelos. One of them was made when the ex-King desired that they should wait and see the result of the Battle of the Marne and who won—"I cannot run to the support of the victorious"; and the other on hearing the German proposal that Greece should share in the spoils of Serbia—"Greece is too little a country for so big an infamy." The co-operation between England and Greece must continue in the future. Greece had perhaps more to do for humanity in time of peace than in time of war.

Sir Arthur Haworth subsequently received the visitors at the Royal Exchange, and later in the day they left for Sheffield.

THE BRITISH MERCHANTS' MOROCCO ASSOCIATION.

The first annual report of the council of this association states that of primary importance to the interests of members are the communications which have passed between the Foreign Office and the council respecting British capitulatory rights in the French Protectorate. Very full representations have been made by the association with a view to the due protection of British interests. The preservation of British treaty rights, in regard to Moroccan trade, has engaged the attention of the council. The Anglo-French Agreements of 1904 and 1916, together with the Act of Algeciras of 1906, still define the position of this country in regard to trade with Morocco. Important questions affecting British ownership of Habous and Makhzen property in the French Protectorate have now been settled, and definite freehold titles are being granted by the Protectorate authorities in accordance with the agreements reached. The final settlement of those questions by the French Protectorate cannot fail to strengthen the good relations already existing between British subjects in Morocco and the French authorities. Valuable co-operation and useful assistance have been rendered by his Majesty's Consuls in the negotiations, and the spirit of goodwill and conciliation displayed by the individual owners and the French Protectorate authorities in arriving at a settlement is a happy augury for the future. Cordial relations have been established between the association and the administration of the French Protectorate, and the assurances received by the association are such as to inspire confidence in the future for British trade in Morocco. During the present year the following members of council have visited Morocco:—Mr. F. C. Lamb and Mr. L. Couper, accompanied by the secretary of the association (Mr. P. B. Robinson). Important conversations took place between Mr. Couper and General Lyautey and leading officials of the French Protectorate administration regarding the future of British trade in Morocco. Correspondence has been exchanged with his Majesty's Government respecting the reappointment of a Commercial Attaché to Morocco. The position at present is that the Attaché for Spain and Portugal is also attached to Morocco, but his services have for the last few years been given chiefly to Spain. It is obviously desirable that Morocco should be dealt with separately. The new Department of Overseas Trade is fully alive to the importance, present and prospective, of British trade with Morocco, and a special commission, consisting of Mr. E. C. D. Rawlins, late his Majesty's Consul for Crete, and Mr. L. N. Barker, of the Department of Overseas Trade, is expected to be despatched from England about the end of October. Members interested in the import of Moroccan produce have been very seriously handicapped by the prohibitions placed by the Protectorate authorities on exports to the United Kingdom from Morocco, and, unfortunately, imports have been further curtailed by our own Department of Import Restrictions and by the Ministry of Shipping. Efforts have been, and are being made to obtain some mitigation of the prohibitions. The association is assured by the Protectorate authorities that the prohibitions placed by them on exports to the United Kingdom will be removed as soon as circumstances permit; that they are purely war measures; and that, in the meantime, it must be remembered that Tangier, Gibraltar, and, to some exent also, Malta, are at least receiving provisions from the Protectorate.

The first ordinary general meeting of the association was held at the Cannon Street Hotel, on October 2, Mr. R. S. Hunter, vice-president, occupying the chair. In moving the adoption of the report, the chairman gave a very interesting survey of the outlook and prospects for British trade in Morocco. He pointed to the growing prosperity of the country despite war time conditions, and said that British trade had shared in some directions in this development. As to the industrial outlook in Morocco, he emphasised the work of the French in establishing flour mills, oil pressing mills, etc., and said that they must also expect to see attempts to develop the mineral resources of the country. Mr. Randall, who seconded, laid stress on the development of co-operation in this country as the result of the war, and said that British business men were coming to conditions similar to those of the times of the Guilds and Merchant Adventurers. The growth of co-operation he regarded as cause for optimism in regard to the future. The subsequent business of the meeting consisted in confirming in their offices the Earl of Onslow, president, Mr. R. S. Hunter, vice-president, and Mr. Leslie Cooper, honorary treasurer, and in electing members of the council.

SUGAR PRODUCTION IN ALGERIA.

Algeria's sugar consumption is from 35,000 to 40,000 metric tons annually, all of which comes from abroad. The scarcity of sugar since the war, says an American Consular report, has led to consideration of the possibility of beet-sugar culture in the colony. In 1917 a number of colonists sowed sugar beets, the seeds being furnished by the Government, and an establishment was set up for the distillation of alcohol from the crop. The project, however, is still in an embryonic stage. The analyses made indicate that beets can be raised comparable in sugar content with European production. There are at present no sugar plantations or refineries in the country, and no development of appreciable importance is contemplated.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax, Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Samoht, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc., Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances, &c.

ENGINEERING NOTES.

Motors and Pumps for Syria.

British engineers should not neglect to give particular attention to the very promising markets that will exist in Syria in the near future. An immediate demand for all classes of agricultural and industrial machinery is very probable. Motive power is already much needed, and, as petroleum is more available and cheaper than any other fuel in that region, oil engines will be in great demand. Opportunities, of course, exist also for steam, gas, and electrical engines and motors, but there is no question that the field is specially favourable for oil motors. It is strongly recommended, however, that manufacturers should introduce, at first, in those markets oil engines of limited power, suitable for both agricultural and general industrial and engineering operations. Engines imported through Beyrout just before the outbreak of the war were from the United Kingdom and from Germany, and varied from 5 to 18 horse power. The chief demand is for motor engines for irrigation work, and such engines were sold at £45 for 5 h.p., £85 for 10 h.p., and £120 for 18 h.p. These engines are used either with an iron form of the native water wheel or else with pumps. The pumps were as a rule, imported from America, and were then much cheaper than British pumps. These American pumps were also very inferior articles, but cheapness is appreciated in the Eastern markets, and American manufacturers offered what was wanted.

Electrical Appliances.

With the extension of the use of electricity for lighting purposes, and the growth of industrial activity that prevailed before the war in the towns of Beyrout and Damascus, a growing demand for electrical materials had sprung up in that region, which, it is certain, will now be revived. Transmission wire which was imported in diameters of from ¼ to 4 mm., came from Germany and France. Incandescent lamps, of from 16 to 200 c.p. for 105 or 110 volts, were imported from Germany, Great Britain, and France. Electric fans, which find an increasing demand owing to the heat of the summer, were imported chiefly from Italy, which could supply a cheap article. In Beyrout ventilators for 110 volts, with a wing diameter of from 25 to 40 cm., are used. Table ventilators cost from £1 5s. to £3 10s. at the works, and ceiling ventilators from £5 to £7.

Motor Cars.

In spite of the comparatively bad state of the roads and thoroughfares in the country and towns of Syria, a number of motor-cars were imported, before the war, at Beyrout and other Syrian ports by enterprising natives. These cars, with few exceptions, were bought second-hand in Egypt. Some new motor-cars and four motor buses were, later, also imported at Beyrout—the cars for private use, and the buses for the conveyance of passengers.

In view of the developments which are sure to take place very soon, the movement in the Syrian market merits special attention on the part of British firms, for as soon as the roads are put into a good state of repair, the trade in motor-cars may develop very considerably.

Potash from Seaweed.

A great industry might be developed on the Eastern Mediterranean coast if a sound and enterprising undertaking could be established, like one that has recently been established in California for obtaining supplies of potash from seaweed. The seaweed exists in great abundance all along the Eastern Mediterranean coast. The undertaking in California is proving so successful that, according to reliable reports, one firm alone is producing three times as much potash as was previously imported from Germany. The kelp is cut by means of a kind of reaper 4 ft. below the water; and is then carried from the boat harvester by a continuous belt elevator to a crushing mill. It is stated that sufficient potash is being obtained by these means to supply not only American needs, but also those of all the Allies.

Canal Navigation.

One of the principal problems in regard to the use of canals by barges propelled by mechanical power is the damage so frequently caused to the banks by the accompanying "wash." It is claimed that this problem, and the difficulty of using an ordinary screw propeller in shallow water have been completed solved by a new invention, which has just undergone a successful trial. Instead of being fitted to the stern of the boat, the propeller is fixed inside the boat in a chamber from which the air is withdrawn. This permits the water to rush it and allows the screw to revolve where it cannot be damaged, and at the same time causes no wash. The screw is above the keel of the boat, and it will therefore revolve in whatever depth of water is necessary to float the boat. This contrivance, which, it is claimed, can be fitted to any barge within a few days, should be of considerable interest to owners of barges in the Near East, where both the difficulties specified are a source of trouble.

LANCASHIRE COTTON.

Effect of the War News.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market this week has been dominated by the striking developments in the war situation. Both buyers and sellers have been disposed to adopt a waiting policy. It is recognised that a general peace is much nearer than a few weeks ago. Much uncertainty prevails as to what will happen to prices when hostilities come to an end. Values at the moment are undoubtedly inflated, and some adjustment will be necessary. On the other hand, there is the anticipation of a tremendous demand for raw cotton, especially from European countries. Egyptian cotton merchants continue to complain about the Government's regulations and trading is very irregular. The reduction of 75 points in the official quotation does not seem to have given satisfaction to anyone. The crop news remains encouraging. Egyptian yarns remain deeply sold and producers are in a very strong position. Extraordinary figures have occasionally been paid for the quick delivery of fine numbers. A fair amount of business has been about in piece goods for Egypt. It is thought that as a result of the recent successes of the Allied troops, trade in the Near East generally will develop, rapidly. All kinds of cloth for India and China have been very slow of sale, offers being decidedly scarce. Some fair buying has been about for France. American yarns have been very stiff in quotation. The shortage of supplies of weft is very harassing. Fresh business has been rather limited. In the export yarn section the bulk of the buying has been for France. It is understood that Mr. John Taylor, one of the secretaries of the Cotton Manufacturers' Association, has resigned.

BURMA CHAMBER OF COMMERCE.

The Burma Chamber of Commerce has revised its rules, says Reuter's Rangoon correspondent. Henceforward non-British firms will only be admitted as associate members, without the right to vote or sit upon the committee. Firms electing an alien enemy as director will be removed from membership. Other rules provide against enemy influence. The five existing non-British firms retain their full membership

As a result of the events in Bulgaria it is reported that panic has prevailed on the Berlin Stock Exchange.

EGYPTIAN COTTON PRICES.

Conditions of Sale.

The Liverpool Cotton Association have received an important communication from the Commercial Relations and Treaties Department of the Board of Trade respecting the conditions of sale of Egyptian cotton, with an intimation that the letter has been addressed to the Cotton Control Board. It is also stated that the Egyptian Cotton Control Commission will not be prepared for the present to execute orders for cotton of type Nos. 30 to 38 inclusive except where the cotton is required in connection with Government work.

The letter, which is dated September 1, states that having regard to the anxiety which the Board understands to prevail in Lancashire lest the price of cotton ordered in Egypt should be raised before the orders can be executed, they are prepared to guarantee that during the present cotton season, if orders are placed by spinners with the Egyptian Cotton Control Commission or with Alexandria export houses and duly registered by the latter with the Commission, the prices at which the cotton so ordered shall be sold by the Commission (if the orders can be executed) shall be those ruling for each Government type at the time the order is registered, provided that the orders placed by or on behalf of any spinner shall not exceed an amount to be determined, as follows :—"In the case of every spinner the Cotton Control Board shall certify the total quantity of Egyptian cotton which corresponds to his reasonable requirements during the entire season. The Board of Trade will from time to time direct what proportion of this total may be on order by spinners, and no spinner shall exceed this proportion of his certified total requirements. In the first instance the amount which every spinner shall be entitled to order shall be 50 per cent. of his certified annual requirements. I am to ask that your Board will assist in the matter by furnishing the necessary certificates to the Egyptian Cotton Control Commission.

Having regard to the security in respect of price, which is thus guaranteed, the profit of 75 points hitherto allowed in calculating official values of Egyptian cotton by the instructions issued on July 29, 1918, under the Raw Cotton Prices and Returns Order, 1918, will not be allowed in future, and the Egyptian Official Values Committee are being informed of this decision. The Board have had under consideration the question of the terms to be charged by the Egyptian Cotton Control Commission in the event of orders for cotton being sent to these districts, whether by spinners or merchants in the United Kingdom, and that, having regard to all the circumstances, they are authorising a charge in such cases of a commission of 1½ per cent. on the f.o.b. prices of each type of cotton. Direct orders of this description may, if desired, be placed with the Commission through Alexandria export houses, in which event the commission will be paid over to the export house employed. Arrangements should, however, be made for the Commission to be notified at the same time. In giving direct orders through an export house, a spinner may authorise that house to substitute another type of cotton where the type ordered is not available.

COMPANY NOTES & REPORTS

Darjeeling Himalayan Railway.

The balance of net earnings, after providing for debenture interest and the estimated payment due to the Government, amounts to Rs1,94,637, which, with unclaimed dividends for the half-year to March 31, 1915, makes Rs1,94,874; Rs2,24,350 was brought forward, making a total of Rs4,19,224. The directors' recommend a dividend of Rs6 per share on the ordinary shares, and a dividend of Rs2 8a. per share on the preference shares, placing to provident fund Rs2,252, and carrying forward Rs2,02,597.

Bank of Madras.

The report of the Bank of Madras for the half-year ended June 30 shows a balance brought forward from December 31, 1917, of Rs.4,02,306. The profit for the half-year, after making provision for all bad and doubtful debts, amounted to Rs.8,82,050. The directors recommend the payment of a dividend for the half-year at the rate of 10 per cent. per annum, free of income-tax, Rs.3,75,000, bonus at the rate of 2 per cent. per annum, Rs.75,000, and a balance is carried forward of Rs.3,84,356.

Dividends, Payments, etc.

The directors of the Assam Oil Company have declared an interim dividend for the half-year ended June 30, on the seven per cent. preference shares, payable October 1, to holders registered September 25.

The directors of the Ooregum Gold Mining Company of India have declared the following dividends on account of 1918, payable 26th instant, to holders registered 1st instant —namely, Preference dividend of 1s. per share, and an interim dividend of 1s. per share on both the preference and ordinary shares, less tax at the rate of 5s. 9d. in the £.

Oil Outputs.

Anglo-Egyptian Oilfields—Gemsah : Production for week, 1,083 tons (previous week 23 tons). Hurgada : 2,456 tons, against 2,274 tons.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned days :—

	1917. Francs.	1918. Francs.
September 21, 22, 23	270,000	690,000

EGYPTIAN MARKETS.

Cattle markets	362	..	174
General markets	436	..	238
Receipts	798	..	412
Total for year	43,128	..	36,730

Twenty joint stock companies were registered in India last month with an aggregate authorised capital of about Rs.50 lakhs.

The Egyptian General Post Office has notified that the export of sesame seed from Egypt is prohibited to all destinations except under licence.

India's trade return for August shows that imports decreased by £1,401,000 and that exports increased by £4,830,000 compared with the corresponding month last year.

The business of the branch of the London County Westminster and Parr's Bank, formerly carried on by Parr's Bank at 77, Lombard Street, has been transferred to 21, Lombard Street, as from September 24.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business in Egyptian shares has remained on the least possible scale, and this inactivity has led to some small sales by holders who have become tired and are desirous of transferring into securities where the market is active and advancing. Egypt itself is doing practically nothing at the moment. Here and there, however, there are buyers ready to take stock when it can be got cheaply, so that shares, when offered, have found a home at a slightly reduced price.

In Government stocks the market has remained quite firm, and buyers are still more numerous than sellers.

In Bank shares Nationals are ⅛ lower at 20⅝, but Agriculturals are slightly firmer at 7 5-32; and there has been an exceptional local demand for Anglo-Egyptian Banks, which has carried the price up ⅛ to 18⅜.

Amongst Railways Delta Lights are 1-16 firmer at 7¼, round which level some few hundred shares have changed hands.

In Land descriptions Aboukirs are 6d. lower at 24s., Behéras have dropped ¼ to 15, Delta Lands 3d. to 16s. 3d., and New Egyptians 4½d. to 21s. 3d.; but the business transacted has been quite trifling. Egyptian and Foreign Trusts continue supported, and some transactions have taken place in Sidi Salems round the current level. Union Foncières are also in quiet demand whenever offered.

Amongst Miscellaneous shares Egyptian Markets are 6d. firmer at 27s. 6d., Salt and Sodas are ⅛ up at 3 3-16, and Khedivial Mails have recovered 1s. 6d. at 61s. 6d.

In Greek securities the only changes have been a fall in Greek Monopolies of one point to 67½, while Pirœus-Athens Three per Cent. Bonds are two points higher at 55. Rentes are quoted at about the same price as last week, viz., 58½ x.d., and some small business has taken place in "Currant" bonds round 95.

Oil Shares.

This market has been extraordinarily buoyant. Roumanian Consols closed at 16s., and the Russian oil shares generally have made a marked advance.

Paris Bourse.

Suez Canal shares have been a feature, closing at 5,400 francs. Other prices are Egyptian Unifieds 96, Serbian 4's 64.50, Turkish Unifieds 64, Banque d'Athens 115, Credit Foncier Egyptian 780, Land Banks 215.

ALGERIAN RICE IMPORTS.

There is a market in Algiers for about 20,000 bags of rice of 100 kilograms each, according to a recent American Consular report. It is stated that the chief competition in this market is Spanish rice. Under normal conditions Algeria has, at various times, drawn a portion of its supply also from the East Indies, the Far East, Italy, France, and the United States. It is believed that after the war a good part of the imports will be made in the husk, and the product finished in the country. This will be facilitated by the tariff. Rice is classified under No. 79 of the French import tariff. The duty upon rice in the husk is 3 francs per 100 kilograms (1s. 1d. per 100 lb.); broken rice, 6 francs per 100 kilograms (2s. 2½d. per 100 lb.); whole rice, meal, and grits 8 francs per 100 kilograms (2s. 11d. per 100 lb.)

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

NOTES OF THE WEEK.

The expectation that Turkey would make little attempt to continue the struggle after the capitulation of Bulgaria is in process of being realised. A report, at present unconfirmed, has been received to the effect that Talaat Pasha and Enver Pasha have resigned, and that a new Ministry is being formed. At the same time it is announced from Athens that delegates from Rahmi Bey, the Vali of Smyrna, were expected to reach Athens on October 7 with a view to entering into peace negotiations. Independent action in this direction on the part of the Vali of Smyrna would not be the same as Turkey's surrender, and it has to be seen whether Rahmi Bey's delegates have been furnished with any semblance of authority from Constantinople. In the event of a change of Ministry in the capital, the Governor of Smyrna might possibly be put forward as an intermediary. He has proved himself to be far more enlightened than the majority of Turkish administrators.

The Committee of Union and Progress, however, if it still holds the reins of power in Constantinople, will have to learn, as Germany is learning, that a mere Ministerial change or sham "democratisation" will not modify the Allies' decision as to the disposal of the territory that in 1914 formed part of the Ottoman Empire. Enver Pasha's influence has rested on the visible support of German bayonets, and his fall at this stage would be inevitable. Talaat Pasha has wielded perhaps greater authority, but it is by no means certain that the inner council of the Committee of Union and Progress has allowed him to emancipate himself entirely from its control. If the Committee's organisation has stood the strain of the last three years, it would be natural that Talaat should be sacrificed to the coming storm, and in the choice of a new Vizier due regard would be paid to the possibility of meeting the views of the Entente Powers. But in the case of Turkey the Allies are less concerned for the moment with the constitutional future of the country than with its territorial limitations. The first consideration is that the Turks should abandon the territory that they have ruled with such disastrous results or used to the prejudice of the peace of Europe. When they have withdrawn within their own national boundaries, there will be time to help them towards a better administration of their own than they have known in the past.

In the meantime the conquest of Syria proceeds. General Allenby's forces have lost no time in pushing beyond Damascus, and Rayat, the railway junction for Beyrout, thirty miles to the north, has been captured. At this point the narrow-gauge railway system of Palestine connects with the broad-gauge line from Aleppo, and thus the occupation of the town has added to the quantity of rolling stock and military stores already taken in the course of these operations. The advance along the coast has contrived to keep pace with the progress of the main army. On October 7 Saida (Sidon) was entered by British troops, and the French division attached to General Allenby's army occupied Beyrout. The possession of this port ought still further to accelerate the movements of the Expeditionary Force, as it will simplify the problem of reinforcements and supplies. Even if Turkey has not already made up her mind to capitulate there would seem to be little likelihood of serious opposition being encountered by our troops before the neighbourhood of Aleppo is reached. The breach between the Turkish and German forces in this region must by now be complete, and although the latter might wish to make a stand, their inferiority in numbers without Turkish support will make resistance almost out of the question.

In Bulgaria and Serbia events are developing almost entirely "according to plan." The terms of the Bulgarian capitulation, as far as is known, are being carried out without a hitch, and certainly with the approval of the people. It was stipulated in the Military Convention that all Bulgarian troops west of the Vardar must give themselves up as prisoners, and the surrender of 65,000 Bulgarians is reported. The Serbians are already north of Vranja, and within fifty miles of Nish, but it is anticipated that there will be heavy fighting before the second capital of Serbia can be taken. Austro-German reinforcements are said to have been despatched for the defence of the town, which the enemy would naturally wish to hold as long as he considered it necessary to keep up appearances in the Balkans. But the Germans are adepts at making reported movements of troops do duty for the actual operation. When the country was divided for purposes of administration between Austria and Bulgaria Nish must have been under the jurisdiction of the Bulgarians. It will, therefore, lie outside the sphere that the Austrians might be expected to be particularly anxious to defend; but the importance of its strategical position may prompt an attempt to delay its capture, if only to gain time for the evacuation of North-Western Serbia.

Digitized by Google

King Ferdinand of Bulgaria has elected not to face the music, and by abdicating has set an embarrassing precedent for the other rulers of the Central Alliance. The step had at least the merit of being carried out in order, if in haste. King Ferdinand appears to have met the heads of the political parties, and to have informed them of his decision; his farewell manifesto was probably already written. It may be imagined that any attempts to persuade him to change his mind were prompted by politeness rather than by conviction. In that political gathering the trout could count upon the respect of the minnows, but not upon their affection, and the politicians must have appreciated the advantage to Bulgaria of being rid of King Ferdinand's presence. The decision that his eldest son should reign in his stead was ratified, and immediately afterwards the ex-King left the country. The end was not a glorious one, and Ferdinand of Coburg ought to have heavy thoughts to keep him company in his retirement. It is more probable that he will congratulate himself on his shrewdness in evading a worse fate.

It is early days to speculate upon what King Boris will make of his task. In spite of the trying period in which he mounts the throne, he begins his reign with several valuable assets. He is personally popular; the people, war-wearied and chastened, ask for nothing better than peace and good government. Under his direction the days of adventurous policies can be closed for ever. The Turk will no longer be a neighbour, and if the Powers fix upon a just settlement of the Balkan question, neither Serbian, nor Greek, nor Bulgarian will nurse a grievance at having been left under the jurisdiction of an alien Government. The land after six or seven years of war will claim the whole attention of the industrious peasant, and the inevitable squabbles of political parties will find him indifferent for a long time to come. Those squabbles were deliberately encouraged by King Ferdinand, and the upshot was disaster for Bulgaria. If King Boris will think of his country and people first, and of himself last or not at all, he may lead Bulgaria to days of greater happiness than any she has yet known.

The collapse of the Bulgarian front in Macedonia has made all the difference to the Allied positions in Albania. Italians and French have again attacked the Austrian line, and this time there is little likelihood of a set-back. The enemy is probably unable to produce any reinforcements, and has made up his mind to retire as long as the Allies care to press him. To add to his difficulties a naval attack has been carried out against Durazzo, and he will be rendered even more dependent than before on supplies by land. In his rear is a disaffected Montenegro, with Herzegovina and Bosnia beyond, where anything may happen. Further, he cannot be altogether free from anxiety in regard to the position on the Serbo-Albanian frontier, where Allied troops pressing from the east may yet threaten his line of retreat to the north.

The veteran Prime Minister of Serbia is once more in England, and this time no small part of his attention will be devoted to matters affecting the rehabilitation of Serbia under peace conditions instead of to military requirements. His Government is reported to be already considering a removal from Corfu to Uskub. A pressing need of the country will be the distribution of relief to the people now rescued from Austro-Bulgarian domination. The strain on the Serbian Relief Fund will at once become intensified, and we hope that this organisation will receive very generous support. The aid now given to the country will not only save thousands of lives during the coming winter, but it will materially advance the day when Serbia will once more be self-supporting and able to take her rightful status in the Balkan Peninsula.

Quite apart from any question of personalities, the selection of Captain Lloyd to succeed Lord Willingdon as Governor of Bombay possesses exceptional interest at the present time as an indication of the coming order of things, when practically everyone sent out to India, from Provincial Governors down to junior assistants, will have seen service in the war. No doubt political and social "claims" will still count for much in determining the prospects of the various candidates, but, whatever appointments may be made, it is reasonably certain that the fruits of military training and experience will be brought to bear on the conduct of the civil administration to an extent which must produce substantial modifications in the working of that great organisation.

It is not difficult to foresee the view which will be taken of this process in the noisiest section of the Indian Press. We shall be told that the country is going to be "dragooned," and that the fresh "measures of repression" proposed by the Rowlatt Commission call for a ruthless agency, which will attempt to crush the growing national life by more vigorous methods than the civil administration has dared to introduce. An outcry of this sort would, of course, indicate only the success with which India has of late been sheltered from the horrors of war. Very few Indian journalists have ever been in contact with a modern army, and they can still draw in all good faith upon the traditions of the past, when commanders of the type of Sher Shah or Sivaji taught India what "dragooning" really means. The new order of things will be very different.

As India now stands, there is every reason to hope for good results from the introduction of a leaven of administrators with military experience gained in the field. The civil administration has indeed become remarkably adept of late in the difficult art of untying the knots of red tape with which it had previously circumscribed its own activities, but it is apt to spend in the process time which the country can no longer spare. As Sir Harcourt Butler pointed out in a recent speech at Allahabad, the machine was developed in an environment where time was of no account, and it cannot be expected to give the best results in days when everybody is in a violent hurry, and when the demand is for instant despatch, quick response and bold experiment.

This is where the new leaven may be expected to work. It is true that the Indian military departments were quite recently as slow as any of the rest, but that was a phenomenon of peace. In war time is everything, for a few hours may make all the difference between victory and defeat, and it is just the recognition of the value of time that India now needs, and that men of recent military experience can most effectively supply. There is not the least risk that Captain Lloyd or the men of whom he is the forerunner will make any attempt to "dragoon" the country, but there is a reasonable and hopeful prospect that they will cut the knots which would take too long to untie, and thereby help the administration to accommodate itself to the new conditions, in which swift decision and prompt execution are essential to success.

Meanwhile it is pleasant to know that Lord Willingdon will not be lost to India, for there is no question that his term of office in Bombay has been marked by the ordered progress which the country needs. It cannot be asserted that he is universally popular; politicians who have felt the weight of his hand regard him with a natural and cordial dislike, and shams and charlatans will be glad to see his back; but outside these classes his merits have gradually won general recognition, and the Presidency of Madras is to be congratulated on the prospect of being guided by his ability and experience in the momentous years which lie ahead. It cannot be repeated too often that the new India will need the very best Governors that can be found, and we trust that this appointment, while it is correctly described as an exceptional measure, may be taken as evidence that the home authorities realise the need.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 2.

The Cutting of the Khalig.

The "Cutting of the Khalig," the ceremony which traditionally marks the official recognition of the arrival of the Nile flood at the Roda Nilometer, took place last Thursday at Old Cairo. The usual official tents and booths were erected on the Nile bank, and a very large concourse of guests from the provinces and from the town attended. The ceremony was presided over, on behalf of the Sultan, by the Governor of Cairo, H.E. Abdul Rahim Pasha Sabri, who signed the customary "Hodja" testifying that the Nile had reached the height of 17 pics 2 kirats at Roda, and that it was now lawful to collect the taxes from the people. Owing to the lighting restrictions the ceremonial was restricted to the day only, the picturesque night celebrations, with firework display, being dispensed with for the first time for many years. This fact did not, however, deter the populace from participating, and enormous crowds went out to the site and patronised the fair which always takes place on this occasion.

Popularly, this ceremony is considered to mark the highest point of the Nile flood; but this is far from the case, and often there is a very considerable rise in the river levels later on in the autumn. This year, indeed, it may quite possibly happen that a further rise will occur. The levels at Roseires, which have been below normal, are now regaining some of their lost ground, and the opinion is that this year's flood, while not being up to the previous years, will be a normal though somewhat late one. As far as the cotton and contemporary crops are concerned, the situation is satisfactory, but there may be difficulties in connection with the early summer water of next year, and it may be necessary to lift water for a considerable area. Few people realise to what an extent Egypt has been saved by the good flood of the war years. Scarcely any water has had to be lifted on to the land from the Nile or the canals, which it has been possible to maintain at levels serving the areas directly. As a result, an enormous economy in fuel has been effected just at a time when the supply was becoming precarious. The importance of this factor resided in the fact that not only has a saving in money been effected by the country, but that had it not been for the favourable water conditions the difficulty in obtaining fuel might have necessitated a considerable reduction in the cultivated area, and so seriously have affected the local food situation.

The Departure of the Holy Carpet.

The final ceremony in connection with the departure of the Holy Carpet for Mecca took place on Saturday last, which was celebrated as a public holiday, thus bringing it about that Government offices were closed for three days in succession. H.E. Rushdi Pasha, the Prime Minister, presided, on behalf of the Sultan, over the customary handing over of the caravan to the Emir el Hejj, the leader of the pilgrimage. The ceremony was very picturesque, and attracted a large number of spectators, amongst whom was a goodly sprinkling of khaki.

His Highness the Sultan.

H.H. the Sultan gave a large tea party in the gardens known as the Antoniades Gardens at Alexandria. These gardens, which are very extensive and magnificently laid out, were recently given to the municipality for the benefit of the Alexandrian public by the well-known Hellenic resident, Mr. Antoniades, and the tea party given by his Highness was in the nature of a public inauguration. Over one thousand invitations were issued, and the gathering was a very representative one, and in every respect a great success. Notwithstanding statements to the contrary, the Sultan does not intend to return to Cairo until the end of October; consequently the receptions customarily held on the occasion of the Feast of Bairam, which falls at the middle of this month, and of the anniversary of his accession, which occurs on October 9, will take place in Alexandria. The Sovereign's return to the capital will thus take place at a later date than usual, and it is understood that the Ministries will not wait until the Palace returns, but that the seat of Government will be transferred back probably after the Bairam holidays.

Lord Edward Cecil.

At its last meeting the Council of Ministers approved the grant of six months' sick leave without pay to Lord Edward Cecil, the Financial Adviser. Lord Edward, it may be remembered, became very seriously ill last autumn on his return from France, where he had contracted a dangerous malady whilst serving with the Army. He fought hard against his illness, but had in the end to admit himself beaten, and had to take a complete rest. He spent some time at Helwan, and subsequently left for Switzerland, where he has been ever since. The latest reports are to the effect that his health has improved enormously, and it is hoped that this further period of sick leave now granted him will give him the opportunity of completing his recovery so as to be able to return to his post of Financial Adviser, which has been so ably filled since his departure by Sir William Brunyate, the Judicial Adviser.

The Racing Season.

The racing season has been a very short one in Alexandria this year, owing to the intervention of the Department of Supplies, which considered that if the number of meetings was curtailed it would lead to a smaller consumption of barley and other cereals required for human food, which are given in large quantities to the horses when in training. Whether this view of the situation is correct it is not possible for me to say, but there is one point on which most people are agreed, and that is that the curtailment of the Alexandria season cannot fail to be for the good of the horses in general, since it will give them a thorough rest before the Cairo season starts. Usually the latter ends just as the Alexandria one begins, and starts again but a short time after it ends, and as a result the horses are racing throughout the year.

From what one hears and reads, there appears to be much dissatisfaction with the manner in which racing is conducted in this country, especially with the Alexandria management; and it is to be hoped that, for the reputation of the clubs, some drastic change will be made, so as to introduce the more effective control which it is apparent racegoers consider does not exist at present. Also it is to be hoped that before another summer is on us the Alexandria Club will have made more adequate arrangements for the racing public than are afforded it at present. Considering the enormous profits which have been made during the past two years, it is surprising that it has not done this before.

The British Red Cross in Egypt.

Although "Our Day" has been fixed for October 23, subscriptions are flowing in from all parts, and already a substantial amount has been subscribed in this manner. Somewhat appropriately a report of the work done by the British Red Cross in Egypt and Palestine during the three months ending July 31 has been published. From this report it transpires that over 6,000 patients were admitted to Red Cross hospitals and convalescent homes, 546,707 diets were served by the invalid kitchens; about 40,000 convalescents were given outings, 4,547 cases of stores were sent out to the various hospitals, trains, etc., 1,680 wounded and missing reports were sent, over 44,000 books and magazines and over 150,000 periodicals and newspapers were distributed, and about 350,000 articles required by the hospitals were made up by the work-rooms specially created for the purpose in Cairo, Alexandria, Tanta and Ismailia. In addition, another Empire Nurses' Club has been established at Gaza; assistance is extended to survivors landed at Alexandria from submarined boats, by a special committee of Red Cross ladies; each hospital train is met at various points on its journey and on arrival by Red Cross workers, who provide special comforts, wherever possible fresh fruit; and slight dressings, etc., are done by the Red Cross V.A.D. This is only a short resumé of the activities of the Red Cross, which extends its attention and distributes the comforts, of which it disposes not only to British patients but also to Indians and Egyptians.

ROUMANIAN NOTES.

(From a Correspondent.)

The German Device: Apres nous le deluge.

Prince Max of Baden is just now prating of "the salvation of humanity"; but the news from Roumania shows that the Germans there are organising a system of plundering the country of all objects of value. The Government was forced to abolish the law regarding the stability of police officials, so that the Germans could use them as tools for their own purposes. The pillage of the houses has been organised under cover of "investigations" which are carried on especially in the houses of the Roumanians who withdrew into Moldavia or are now in the Allied countries. After these investigations it is found that pictures, carpets, art treasures, rare books and other objects of value have disappeared.

A still greater infliction than all these investigations on the rich and well-to-do population is the billeting of German officers and men; for after they leave, the houses are not only empty but in a state of utter dilapidation. The police now do little else than protect the thieving Germans against the rage of the population. The majority of the police officials preferred to resign rather than stay to protect the pillagers and devastators of their country; and they were replaced by German agents brought into Roumania long ago during the systematic "pacific penetration."

Some time ago the Germans requisitioned all copper articles, even down to door knobs. They paid for these objects at the rate of about a franc per kilogramme, but made it obligatory to replace them by iron door-handles—"made in Germany"—at a price of four francs per kilogramme!

The Hampering of Business.

But the most severe measure was that taken with regard to the administration of the property of those Roumanians who left the country before the German invasion or who were pro-Ally. All the factories belonging to these people were closed, unless they were working for the army; and their engines, motors and plant were taken away, or even destroyed, so as to compel the proprietors to buy other motors from Germany. Many factory installations were sold by the German officials to the Bulgarians. Now the whole country is deprived of all kinds of machinery, and the Germans hope that the Roumanians, when the time comes, will be compelled to buy machinery from the Fatherland! In the matter of the destruction of the factories exception was made in regard to those mills which have been placed in the hands of Germans, under compulsion. The oil industry was also placed entirely under German administration. The property of all Roumanians who accompanied the army into Moldavia, whether as officers, as soldiers, as public servants, or as refugees, was placed under forced administration (*Zwangsverwaltung*), the administrator, usually a German, receiving a commission of 8 per cent. of the revenue. The Banque Générale Roumaine, a subsidiary undertaking of the Diskonto Gesellschaft, advanced money at the rate of from 12 to 14 per cent. for administrative purposes. The income of the estate had to be deposited with the aforesaid bank, which paid no interest upon it; but even after peace was signed the Banque Générale Roumaine refused to hand over sums deposited with it, unless authorised by the German administration. This is practically a form of confiscation, or at least of keeping the money for their necessities as long as they were able.

Another Kind of Forced Labour.

The Roumanian Parliament has passed a law by which the Administration of Railways can demand any number of labourers, and the Government is bound to force the men to work for the Administration. The men's wages are fixed by the Direction of Railways. It is necessary to point out that the whole railway system of Roumania is at the disposal of the Germans, and that they require workmen in great numbers, by reason of the efforts they are making to transport food and all kinds of stuff from Roumania. Besides this necessity, the Germans want labour in order to work out an immense number of timber sleepers for building new railways on the various fronts and in Germany. For this purpose a great number of peasants have been forced to cut trees in the Carpathians, and to transport the timber to the railway stations. It is not astonishing that in this way the Germans have succeeded in destroying nearly 10 per cent. of the superb Roumanian forests. Nearly all the railways the Germans have built in the Balkans and in Turkey have been provided with sleepers taken from Roumania. The forced labour is applied also to the workmen in the sawmills as well as to those employed on road building. All these unfortunate workmen are subject to military law and to courts-martial.

DAMASCUS BEFORE ITS CAPTURE.

(From an Occasional Correspondent.)

Jerusalem, August 28.

An acquaintance who left Damascus five weeks ago, and has just arrived in Jerusalem, gives me the following information about conditions in the former city:—

The hatred between Turks and Germans is increasing daily, chiefly for the following reasons: (1) The haughty way in which the Germans treat the Turks; (2) the way in which they take the best food and the best of everything else for themselves, leaving the Turks the coarsest fare and rubbish; and (3) the spread of the opinion amongst the Turks that Germany drove their country into the European War for her own advantage, and that it will result in the destruction of the Turkish Empire. The hatred extends to all classes of both Turkish and German soldiers.

The Turks have been compelling the merchants to subscribe to the Internal Loan issued by the Government. Those who fail to subscribe the amounts demanded by the Government are dealt with by the military authorities, who sell the wretched merchants' goods and keep the profit—for the State!

The Turkish Government has not yet acknowledged that Jerusalem, Jaffa, Beersheba, and Gaza are lost to it. In order to mislead public opinion, it publishes every now and then announcements to the effect that "A—— Bey has been appointed Governor of Jerusalem"; that "B—— Bey is appointed President of the Court of First Instance at Jaffa"; or that "C— — Bey is appointed Chief of Police at Gaza."

Apparently hanging and shooting have been abandoned as weapons for dealing with those whom the Constantinople Government regards as "undesirable," and starvation has taken their place. At any rate, the recent enormous rise of prices in Syria is regarded as a step taken by the Turks towards the extermination of the Syrians. In Damascus none but the very richest can afford to buy bread, and the number of deaths resulting from hunger and starvation is rapidly rising. Turkish notes were sold for one-fifth their nominal value. Sixty per cent. of all crops are claimed by the Government. All this forces prices up, but as the whole country is starving there will be a rush to obtain the new crops, no matter at what price.

BABYLONIAN MYTHS AND LEGENDS.

At University College, London, on October 3, Dr. T. G. Pinches delivered an address contrasting the Babylonian Genesis with that of the Hebrew Scriptures. He said it was by no means certain that the Babylonians possessed the story of the Temptation, at any rate in the form we knew it in Genesis; but a tablet had been found showing two figures seated on either side of a date palm; and one of these was a female stretching forth her hand to pluck the fruit, while behind her was a serpent. The Babylonians were rich in accounts of the origin of all things, a testimony either to their inventive power or to their receptivity, for all the versions may not have existed at the same time. The oldest Babylonian story of the creation did not represent it as the work of one God, Merodach, but as due to the God of the Air, the God of the Earth, and the "Lady of the Mountain." This older group of deities was replaced by Merodach when Babylon became the chief city of the Babylonian federation, and a time came when all the gods were identified with Merodach and regarded as his manifestations—leading thus to a kind of monotheism. In Babylonian Creation stories the creation of man usually preceded that of the beasts of the field, but there was some evidence that one version was current in which the creation of the lower animals came first. According to Babylonian accounts the first created things were evil and the production of an evil power. Thus the Babylonians accounted for the self-production of evil, whilst the Hebrew Genesis represented the presence of evil in God's creation as of foreign origin. The Hebrew account was not borrowed from the Babylonian, but was written, as it were, to confute it; to emphasise that the beginning of all things was good, and that evil, when it came into the world, was an intruder with no place in the original scheme.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

GENERAL ALLENBY'S FURTHER PROGRESS.

The account of General Allenby's advance given last week concluded with the capture of Damascus. The description of "amazing welcome" given to our Army and that of our Arab Allies in the streets of this great city has since appeared. The weird night advance of the Australians from El Kuneitra, the battle of Kaukeb, the cutting off of the shattered remnants of the Turkish Fourth Army near the Jebel-el-Aswad, the headlong advance of our cavalry successfully cutting off the Turkish retreat up the Barada valley, and the blowing up of the enemy's enormous ammunition supplies at the Meidan station are all picturesque incidents of a great cavalry battle, unique in history.

On October 1 Damascus was in our hands, but no pause was allowed to the demoralised foe. On October 2 a column of 1,400 Turkish soldiers, trying to escape up the Aleppo road, was intercepted in the nick of time. "The enemy were preparing to resist, so the Light Horse drew swords, and were ordered to charge. The flashing of the swords in the bright sunlight was immediately followed by the signal for surrender." This brigade took 3,000 prisoners in two days. Another party got over the Damascus-Beyrout line, and got a whole train loaded with valuable material. Altogther by October 5, north and west of Damascus, no less than 15,000 prisoners were taken and countless material.

On October 6 the important railway junction of Rayak was captured. Here the Beyrout-Damascus one-metre-gauge mountain railway joins up with the standard gauge railway which runs through Homs and Hama to Aleppo. The same day the important Christian village of Zahleh (some 15,000 inhabitants) came into our hands. This is one of the villages of the Lebanon district, and is beautifully situated in a well-watered, sheltered valley at the eastern foot of the lofty mountain Sunnin.

With the railway junction in our hands we have before us the great level plain of El Buka'a (Cœle Syria). Some sixteen miles to the north is Baalbek—the ancient Heliopolis—with its marvellously picturesque ruins and its abundant water supply, beyond which lies Homs (the ancient Emesa), where is the junction with the Beyrout-Tripoli-Homs branch line. It should not be difficult to capture this point, with the wide plain of El Buka'n—ideal ground for cavalry and a railway in the midst for supplies—leading up to it all the way. To hold Homs secures Tripoli, a port with a great future.

On October 7 British troops entered the beautiful little city of Saida, with its wide stretching orchards and orange gardens. This is the ancient Phœnician city of Sidon, once one of the greatest cities of the East, with a history going back three millenniums. Now it has only 12,000 inhabitants, but on the whole it enjoys considerable prosperity. The neighbourhood, besides its rich fertility, has yielded most important archæological "finds," especially in connection with the necropolis. The same day the great and important city of Beyrout surrendered to a French division. The French have always had a strong interest in Beyrout since they landed soldiers there at the time of the massacres in 1860. The "diligence" road is their construction, and so is the railway. The French language is widely spoken; French fashions are widely copied. It is a very cosmopolitan city. Its situation is—from the sea—most beautiful. The red-roofed houses, half buried in trees and gardens, climb up from the shores of St. George's Bay; behind the richly cultivated lower slopes of the Lebanon are dotted with scores of picturesque villages, and over all tower the great snow-clad mountains Sunnin and Keneiseh. The city itself has fine buildings and institutions, of which latter the French (Jesuit) University and the American Syrian Protestant University, both conferring degrees recognised in other lands, are the most important. The population of Beyrout reaches near 200,000, of whom only some 20 per cent. are Moslems. Although the harbour is poor and shallow there is a very considerable trade, Beyrout being the main outlet for Damascus and the chief port

The Natural Products of your Country

may be of considerable interest to us as we are purchasers of consignments of Produce from all parts of the world.

Coconut Oil, Palm Oil, Oil Seeds, Oil Nuts, Kernels, Copra, Maize, Ivory, Gums, Grain, Fibres, Rubber, Cotton These interest us particularly.

Will you let us know what Products of your Country you can offer us?

We are prepared to finance consignments when necessary.

TANGIER TO TEHERAN.

A friend, to whom life is frequently rendered troublesome by the pressing attentions of creditors, tells me that he lately read about an American firm in India which sends out its accounts in a form that he approves of. "Mrs. So-and-so," writes the firm in question, "is requested to kindly consider herself indebted to Messrs. ——— and Co. to the extent of Rs.———," as the case may be. My friend regards that as a model of epistolary style—even ignoring the split infinitive in his enthusiasm. Certainly it is a vast improvement on the curt—brutally curt, sometimes—notes that creditors in this country feel justified in writing. But one wonders whether it is equally effective!

***

Which is the safest way to carry money? Ladies, as a rule, favour purses; men, I fancy, do not. The introduction of Treasury Notes has led to many ingenious cases being designed specially for their safe carriage; and, of course, one seldom sees a sovereign purse in these days. But if you use a purse or a note-case, which is the safest way to carry it? A little while ago garter-purses were fashionable to some extent, while the Fair Sex has always—I understand—regarded the stocking as a safe hiding place. Whether the present fashion of short skirts makes it less safe is not for a mere man to decide. But one point most of us would surely agree upon: that one's headgear—hat, bonnet, cap, or turban—hardly seems to offer much security. With the exception of the Jolly Jack Tar, who is able to rival the professional conjurer in the matter of producing all kinds of odd things from his cap, most men, at least, would hesitate to carry anything of worth in such a receptacle. Recently, however, a cotton merchant of Alexandria placed a hundred pounds in bank notes in his turban, under the impression that they would be safe there. Unfortunately for him, a native thief noticed the act, and—well, you can guess the sequel. Whether the police ever recover the notes remains to be seen.

***

Under the heading "Turkey's Turn Now," the *Daily Sketch* of October 3 printed the following paragraph:—

> Turkey has not been long in following the excellent example of Bulgaria. And no wonder. Allenby still keeps capturing chunks of the Turks' Fourth Army, east of the Jordan, and pressing northwards to "mop up" the Palestine "show" completely.

Is this intelligent anticipation of events, or—something quite different?

***

The *Egyptian Gazette* translates from a native contemporary, the *Misr*, some strong remarks on the subject of songs sung in the streets of Cairo. The *Misr* complains—and not without justice, if I may say so—that "many of the hawkers who sell sweets and refreshments in the streets . . . sing rude words and repeat wicked expressions of a nature to corrupt the character of children, who are fond of imitating what they see and repeating what they hear." Again, I read: "There are some persons who sing old songs, and a large number of children always assemble around them to hear them. Songs of this sort soon spread among the children and the lower class of people, and they repeat them openly without fear or shame."

***

Now, with us it is not the "old songs" but the *new* ones that are usually the greater offenders against good taste. But in other respects I am afraid that the *Misr's* remarks would apply to some extent to other cities than Cairo. It is no doubt very unfashionable to say so, but I fancy that "the lower class of people" in most countries like their "comic" songs to be highly spiced, and just as the hawkers of sweets and refreshments supply the want in Cairo, so do a good many so-called "humourists" in Western theatres and music-halls. Of course, in the West the "singer" calls a spade "an agricultural implement," and so forth; while in the Orient the hawker refers to a spade *as* "a spade." But that is just a matter of veneer. On the whole, I am inclined to back up the *Misr's* hope that "the authorities will give special attention to this matter connected with public morals."

***

When I read in last week's NEAR EAST the extracts from the letter written by a Roumanian gentleman about his visit to his own country, I was struck by the passage referring to the looting of the coffin of St. Demetrius by the Bulgarians. The peasants' belief that the saint had "made himself too heavy" to be carried across the river was on all fours with the cases, ancient and modern, from Egypt that I referred to recently in these notes. To have the "miracle" explained away, so to say, by the intervention of the German police is too bad. One's only consolation is that, in view of the Germans' conduct generally in Roumania, this solitary instance of decency is in itself

CORSAIR.

NOW HELP SERBIA.

The gallant Serbian Army in its splendid advance *must* be closely followed by the ministrations of the Serbian Relief Fund.

¶ The desperate condition of the old men, women, and children in the recovered territory imperatively demands immediate relief.

¶ We owe this to them not only as the privilege of our common humanity, but as our duty to as gallant and steadfast an ally as any nation has ever known.

¶ For this purpose additional funds are immediately necessary, and contributions, large and small, are earnestly asked for.

¶ The Committee, instead of being in a position to expand its work at a moment when expansion is imperatively called for, is seriously faced with difficulty in continuing regular measures of relief work not only in Serbia and Macedonia, but in the temporary havens in Corsica, Corfu, and other places in Southern Europe and North Africa where the exiled families of the fighting men are being cared for.

¶ Serbian experience of British benevolence has been such that there is not a Serb soldier or civilian who does not echo the sentiment "We trust in God and Britain," which was recently written by a Serbian prisoner of war.

¶ The Committee of the S. R. F. earnestly begs for response to this urgent appeal for funds not only for the continuance of its existing relief work, but for the succour of those released by the Serbian Army after years of the most cruel oppression in history.

¶ Send a donation to-day to the Hon. Treasurer, THE RT. HON. THE EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND,

5, CROMWELL ROAD, LONDON, S.W.7.

(*Registered under the War Charities Act, 1916.*)

Offers of voluntary help at home or abroad should be sent to Lady Grogan. Parcels of Clothing, Materials, Boots, etc., for Men, Women, and Children should be sent to Mrs. Carrington Wilde, Serbian Relief Fund, 5, Cromwell Road, London, S.W.7.

The Serbian Relief Fund is the only authorised Fund under British Administration working solely for the relief of the Serbians.

NEAR EAST BOOKSHELF.

HISTORY FROM THE "TELS."*

Professor Petrie's small book resolves itself into a strong plea for the preservation of such relics of early civilizations in the Nearer East as have been spared thus far by decay and by the unchartered digger. He wishes to see established a Department of Antiquities and Museums, which shall, so to say, see that the rich mines of information are worked scientifically and speedily—and shall in any case put an end to illicit excavating with all its acknowledged evils. The importance of all this has been urged many times during past years in THE NEAR EAST; and though the present seems a bad time to ask for funds for such purposes, we hope that Professor Petrie's pleading will not fall on deaf ears. The Professor is one of our most energetic excavators and one of our most popular Egyptologists. He is therefore sure of an audience. But his interests are not confined to the Nile valley: he has excavated in Syria and Palestine, and he has followed archæological developments in Mesopotamia also. Indeed, it is chiefly with the future of archæological research in Mesopotamia and Palestine that he is concerned in these lectures. In order to interest us in that future, he tells us much about the past of these historic lands, and, if only on this account, the book will repay reading. The uninitiated reader may think, perhaps, that the author's professional enthusiasm rather runs away with him at times; may be inclined to resent the condemnation of British inefficiency that crops up here and there. Unfortunately, however, readiness to discover—and condemn—inefficiency in others seems to be no less inseparable from the 'Ologist than from other—merely mortal—men. Nevertheless we hope that Department of Antiquities and Museums will materialise, and that it may be put under one of the British archæologists who have done such good war work since August, 1914.

A RE-INCARNATION PLAY.†

In "Karma" the authors have attempted to exploit the possibilities of this well-worn theme. Here the Karma or "deed" which holds back the soul was repeated by the wife, through selfish love, to the detriment of her husband through three successive re-incarnations—at intervals of centuries. Only when in modern times the wife sees a vision of the past does she rise to higher things. Mrs. Lattin is depicted as a selfish invalid whose exactions are about to ruin her husband's brilliant prospects as an Anglo-Egyptian official. When expecting her doctor a stranger enters, and as his words recall the past she falls into a trance and beholds again her past lives. She sees herself as an Egyptian dancing girl on the banks of the Nile, and she is reminded how then she kept her lover from the higher religious life which he would lead. As she gains her point the old Egyptian priest solemnly says: "The choice is made. The future lives will bring again, and once again, this same deep opportunity, when you again shall lead his soul higher, or delay or hinder by vain, selfish love." The scene changes, and she is Lydia, the wife of Phocion. Again she thwarts his higher call when she obtains for him high office under Alexander the Great, instead of allowing her husband to take the dangerous course of duty in an Athenian revolt against him. And yet again as Lucia, the wife of a proud and independent painter in Venice, Paulo Salviati, she succeeds in bringing to her husband riches and honour at the cost of his artistic freedom.

It is not wonderful that after such an experience Mrs. Latin is a new woman, and when her husband returns to her side, with steps already taken for giving up his post, she says:—

"I shall never delay or thwart again—Ah! so many times I have—by my selfish love. Your work is a mission always. It is your soul's career—I understand at last."

Artistically the work is marred by too great similarity in the woman's fault in each act. The husband, too, seems entirely passive, though in his failure he cannot be acquitted of responsibility; he is a mere dummy.

It is an entirely Western view of the great Hindu doctrine, and is too open to criticism on the historical side. But the play may appeal to many for whom the idea of re-incarnation—especially in its Westernized form—has an attraction, and might make a successful play for amateur theatricals—though perhaps a little over-serious for the average audience.

* "Eastern Exploration, Past and Future." Lectures at the Royal Institution. By W. M. Flinders Petrie. (Constable and Co. 2s. 6d. net.)

† "Karma: A Re-incarnation Play." By Algernon Blackwood and Violet Pearn. (London: Macmillan and Co. 6s. net.)

OUR SALONIKA FORCE.

The following telegram, dated October 7, has been sent by the War Cabinet to General G. F. Milne, Commanding the British troops at Salonika:—

"The War Cabinet wish me to convey to you, and all ranks under your command, their heartiest congratulations on the decisive success which has at last crowned the operations of the British forces in Macedonia. In common with their Allied comrades-in-arms they have for three years cheerfully sustained the burden of an arduous campaign, in an unhealthy climate, without the stimulus of great offensive operations and with few opportunities for leave. The endurance and devotion of the troops have now secured the most far-reaching results, which will probably influence the course of the war in favour of the Allied cause."

ELECTRICITY IN TURKEY.

The *Evening Standard*, in its issue of October 2, when announcing the capture of Damascus by General Allenby, remarked that it was the first city in Turkey which had been lighted by electricity and to have a service of electric trams. Apropos of this, Mr. Alfred C. Silley, formerly of Constantinople, sends us the following note:—One of the late Sultan Abdul Hamid's Chamberlains and favourites was the famous Izzet Pasha, who was a native of Damascus, where he owned a great deal of property. The Sultan, wishing to confer a boon on his favourite, granted Izzet the concession for the supply of electricity in Damascus. When I visited that city in 1907, coming from Constantinople, where nothing in the nature of electricity or dynamos was allowed, I was surprised to find that the Hotel Victoria, where I stayed, was lighted by electricity, and on inquiry I was informed that it was the property of Izzet Pasha. I may add that, although dynamos were not allowed in Constantinople for industrial purposes, the Palace of Yildiz was for years lighted by electricity.

PROGRESS IN PALESTINE.

The Bishop in Jerusalem (Dr. R. MacInnes), who left Palestine in August, addressing a meeting of farewell to Church Missionary Society missionaries at Kingsway Hall recently, referred to the victories in Palestine, and said that General Allenby's amazing advance was far beyond anything expected by the most sanguine officers when he left Palestine. Last year's advance was at the rate of 12½ miles a week; this year the advance was at the rate of 60 miles a week. The unexpected suddenness of the capture of Jerusalem had saved many of the buildings that might otherwise have been damaged, and it certainly saved many people who would have been sent into exile. There was going to be progress of an amazing character in the Holy Land after the war.

IN HONOUR OF PRINCE ALEXANDER.

In a leading article, "The Prince Regent of Serbia," *The Times* expresses the admiration which is so widely felt in this country for Prince Alexander. It says:—

Rarely has a military honour been more honestly earned. During the whole war the Prince-Regent has served in the Army, sharing its triumphs and its disasters, bearing its hardships, and helping to maintain the indomitable spirit by which it has won the admiration of the world. Among the Jugoslavs, many thousands of whom have voluntarily joined the Serbian ranks, the distinction will be especially popular, for Prince Alexander has always viewed the future of his race with clear vision and strong faith. When on a short visit to this country in the spring of 1916 he proclaimed his resolve to pursue the accomplishment of "the ideal towards the attainment of which the Southern Slav race has striven for centuries."

According to *Misr*, about twenty thousand cases of theft occurred between January and June last in the goods trains and stations of Egypt.

The Paris correspondent of the *Morning Post* reports that on October 4 M. Pichon, the French Foreign Minister, received a deputation of Roumanians, comprising representatives both of the present subjects of King Ferdinand and the Transylvanian Roumanians who hope soon to be incorporated in his kingdom. The object of the deputation was formally to acquaint M. Pichon with the fact of the constitution, under the presidency of M. Take Jonescu, of a National Council representing the whole Roumanian people, including those still under the foreign oppressor's yoke.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. October	1918. September		1337. Moharrem.	5679. Hesvan.
11	28	Friday	5	5
12	29	Saturday.....	6	6
13	30	Sunday	7	7
	October.			
14	1	Monday	8	8
15	2	Tuesday	9	9
16	3	Wednesday	10	10
17	4	Thursday	11	11

M. Take Jonescu arrived in London at the end of last week.

The Sultan of Egypt has given £1,000 to India's "Our Day."

The Earl of Bessborough has returned to Cavendish Square from Ireland.

M. Pavlé Karovitch, Secretary of the Serbian Legation, is leaving London for Serbia.

The Serbian Prime Minister visited Mr. Balfour at the Foreign Office on Wednesday.

Madame Misu, the wife of the Roumanian Minister, with the members of her family, has returned to town from Eastbourne.

The King has been pleased to promote Sir William Stevenson Meyer, K.C.S.I., K.C.I.E., to be a Knight Grand Commander of the Order of the Indian Empire.

The King has granted permission to Mr. E. G. Bonavia to wear the decoration of a Chevalier of the Order of the Redeemer bestowed on him by the Hellenic Government.

Mr. Montagu, Secretary of State for India, was taken suddenly ill at Lord Sheffield's house at Alderley on Wednesday, and has had to cancel his engagements for two or three days.

On September 4, at All Saints' Church, Cairo, the marriage took place of Dr. W. F. Hume, Director of the Geological Survey, Egypt, and Miss Gladys Williams, formerly of the C.M.S. in Palestine.

The King has granted unrestricted permission to Lieutenant Commander G. P. Lewis, R.N.R., to wear the Decoration of the Order of the Nile (3rd class) conferred on him by the Sultan of Egypt for distinguished services rendered.

Mr. E. C. Donaldson Rawlins, lately British Consul at Canea, has been granted the King's authority to wear the decoration of an Officer of the Order of the Redeemer bestowed on him by the Hellenic Government for distinguished services.

The engagement is announced between Cary Richard Hampton Weekes, son of the late Arthur Weekes, J.P., Bengal Civil Service, of Hurstpierpoint, Hassocks, and Gladys Kathleen, eldest daughter of Charles Craig, Flore House, Weedon.

King Peter of Serbia has promoted the Heir to the Throne, Prince Alexander, to the rank of general. The Serbian Government had proposed the promotion in June last, but at Prince Alexander's own desire it was postponed until victory had been achieved.

On August 31, at St. Andrew's Church, Alexandria, Egypt, the marriage took place of Lieutenant John Mackintosh Norman MacLeod, R.N.V.R., elder son of Mr. John M. MacLeod, M.P., to Isa, daughter of Mr. Francois Brusati, Egyptian Civil Service, Alexandria.

The engagement is announced of Major Gerald Bassett Scott, D.S.O., Indian Army, son of the late Lieut.-Colonel Hopton Bassett Scott and Mrs. Scott, of Locksley, Shankill, Co. Dublin, and Blanche, only daughter of G. F. de Caen, J.P., and Mrs. de Caen, of Springfield, Delgany, late of Kircullen Park, Meycullen, Co. Galway.

A marriage is arranged, to take place shortly in Vancouver, between James Dalziel Baker, naval architect, son of Robert J. Baker, of Stanley House, Exmouth, late of Lackagh, Co. Sligo, and grandson of the late Matthew Baker, Q.C., and Anna Colquhoun Colvin, younger daughter of Clement Sneyd Colvin, C.S.I., and granddaughter of the late Sir William Shelford, K.C.M.G., and Lady Shelford, of 31, Marloes Road, Kensington.

M. Michael B. Boeresco, the Roumanian Chargé d'Affaires, entertained at luncheon on Tuesday M. Take Jonescu, M. Titulesco, formerly Roumanian Minister of Finance, Sir Ronald W. Graham, M. de la Chaussée, Secretary of the French Embassy, and Lieut.-Colonel N. Arion.

The engagement is announced between Captain Adrian Gordon Paterson, D.S.O., M.C., the King's Own Scottish Borderers, eldest son of the Rev. A. G. P. and Mrs. J. M Paterson, of Srinagar, Kashmir, and Sybil Irene, eldest daughter of Mr. and Mrs. A. J. Webbe, of 35, Eaton Square, London.

On October 3, at Holy Trinity Church, Brompton, the marriage took place of Captain Steward H. Hyde-Clarke, R.G.A., S.R., son of Mr. and Mrs. Hyde-Clarke, Wrentham House, Suffolk, to Vera Muriel, youngest daughter of the late C. E. G. Harrison, of Dinapore, India, and of Mrs. Harrison, 61, Edith Road, West Kensington.

The *Egyptian Gazette* announces that a marriage has been arranged between Captain Cyril Noel Wilson, The Buffs, only son of Mr. Cyril Wilson, of 3, Morpeth Terrace, London, and Noel Rosemary, second daughter of Colonel Crole Wyndham, C.B., late 21st (E. of I.) Lancers, and Mrs. Crole Wyndham, of 51, Augusta Gardens, Folkestone. Captain Wilson, adds the *Gazette*, joined the Coastguard Administration in Egypt early in 1914, passing on subsequently to the Frontiers Districts Administration, and is at present with his regiment somewhere in France.

Indian papers to hand by the latest mail contain an account of a presentation made on August 5, at Knox Hall, Allahabad, to Sir George and Lady Knox, in celebration of the fiftieth anniversary of their wedding-day. Sir Harcourt Butler, the Lieutenant-Governor, who was paying a visit to Allahabad, presided over the ceremony, and the presentation took the form of a piece of plate. In reporting the event, the *Pioneer* says:—"The occasion of fifty years of married life in India, on the top of fifty years of public service which Sir George Knox completed in 1915, is one which is probably without parallel."

Monsieur A. M. Martineau, Governor of the French Settlements in India, has been made an Honorary K.C.I.E.

The Canadian Red Cross has sent to the Serbian Relief Fund £1,000 for immediate and pressing needs in the evacuated Serbian territory.

Mr. Séfi's lecture at the School of Oriental Studies on "Islam in its Relation to International Morality" will be given at 3 p.m. next Thursday (October 17).

A *Te Deum* will be sung on Sunday morning at the Greek Church, Bayswater, to celebrate the victory of the Hellenic Army and the Allies in Macedonia, and the liberation of Eastern Macedonia.

Among papers to be read at meetings of the ensuing 51st session of the Royal Colonial Institute are "An Indian Colony in German East Africa," by Sir Theodore Morison, on January 14, and "Egypt," by Sir Malcolm McIlwraith, on February 11.

Replying to the King-Emperor's recent message to India, Lord Chelmsford, the Viceroy, has telegraphed:—"Your Majesty's appreciation of India's share in the brilliant achievements of your armies will inspire her to still greater efforts towards the final triumph."

A Reuter's message from Amsterdam dated October 7, says:—"A report from Czernovitz to the *Neue Freie Presse*, quoted in the *Berliner Tageblatt*, states that Prince Carol of Roumania has communicated to his parents his firm resolve to renounce the throne. The journal asserts that the King and Queen have offered Mme. Zizi Labrino £800,000 in compensation for relinquishing all claims on the Crown Prince. The offer, however, was rejected."

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS

AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

Digitized by Google

Miss Hilda Spencer Swithinback has been appointed Assistant Secretary to the Financial Commissioner, Burma, in place of Mr. J. J. Anderson, I.C.S.

The following telegram of thanks, dated October 4, from Salonika, has been received by the Serbian Relief Fund from the Serbian Crown Prince:—"With all my heart I thank the Serbian Relief Fund for the congratulations on the victories won by the Serbian Army and for the interest it has always shown for my country, whose sufferings have been so largely alleviated by its great activities.—ALEXANDER."

We are glad to learn that the Lebanon Hospital (for mental diseases) is still carrying on its good work at Asfuriyeh, near Beyrout. In spite of all difficulties—and they have been many and formidable—it has "carried on" throughout the war, and Dr. Watson Smith, the Director and Medical Superintendent, has stood at his post all the time. The hospital is understood to be badly overcrowded, and funds are urgently required. The London office is at 35, Queen Victoria Street, E.C., and the General Secretary is Miss A. M. Gooch.

OBITUARY.

The death is announced, from hydrophobia, of Mr. R. D. Thomson, of the Punjab Commission. Mr. Thomson was Colonisation Officer at Montgomery.

His Highness Prince Jafar of Persia died on October 4 at Llandudno in his seventeenth year. He was the son of his Royal Highness Prince Firman Firma, who was created a G.C.M.G. in 1916.

Colonel H. W. Stockley, who died at Clifton on the 3rd inst., aged eighty-two, served with the Royal Artillery in the Persian Expedition of 1856-7, and was present at the bombardment of Mohammerah.

News has been received at the India Office that the Maharajah Sir Sumer Singh, K.B.E., Ruler of Jodhpur, died at Jodhpur on October 3, after a short illness, at the age or twenty. His Highness died without issue, but has left two brothers.

Sir David Edward Durell Barclay, twelfth Baronet of Pierston, Ayrshire, who died at The Grove, Middleham, Yorkshire, on October 2, aged 60 years, was formerly a captain in the 19th Hussars, and saw service in Egypt and the Sudan. He succeeded his father in 1896, and married, in 1889, Letitia, daughter of the Hon. Amias C. Orde-Powlett.

Second Lieutenant Robert Louis Irving Arnott, Indian Army, who was killed in action on September 19, aged 19, was the younger son of Colonel Arnott, I.M.S., of 8, Rothesay Place, Edinburgh, and Wyseby, Dumfriesshire. He was appointed to the Indian Army last February, after passing through the Military College, Wellington, India.

Colonel Geoffrey Davies Pike, M.C., Indian Army, who has been accidentally killed, was born in June, 1880, and was gazetted to the Indian Staff Corps in April, 1901, and reached major's rank in September, 1915. In November, 1917, he was appointed General Staff Officer (1st grade), and in January this year became temporary colonel. Early in the war he won the Military Cross, and had since had various mentions in despatches. Colonel Pike was qualified as a first-class interpreter of foreign languages.

Major-General Henry Wylie died on October 5 at Glenfarne, Farnham Common, Bucks, aged 74. He took part in the North-West Frontier campaign in 1863, and in the Bhootan Expedition in 1865. In 1868 he served in the Abyssinian Expedition, and in the same year saw service in the Hazara campaign. Ten years later he shared in the march to Kandahar, acting as Chief Political Officer, and was mentioned in despatches and thanked by the Government. Later he became assistant to the Resident in Mysore and secretary to the Chief Commissioner of Coorg, Political Agent in Jhallawar, 1885-1887, in Bhopal, and Resident in Nepal, 1891-1900. He was Agent to the Governor-General of India for Baluchistan for two years before his retirement in 1900.

NEWS IN BRIEF.

Greece has agreed to sign a treaty with Canada for the reciprocal enforcement of conscription upon the basis of the new military age.

According to a recent census, the Jewish population of Jerusalem now numbers only 26,605 souls, as against 50,000 in 1908, and 58,390 in 1913.

By 85 votes to one, the Roumanian Chamber has resolved to arrest of M. Alexander Constantinescu, who was Minister of Agriculture in the Bratiano Cabinet.

The King of the Hejaz has telegraphed to President Poincaré congratulating him on Bulgaria's surrender to the just cause of the Allies, and on the capture of Damascus. President Poincaré has replied, thanking the King and congratulating him on the brilliant part played by his troops in the occupation of Damascus.

The Alexandria Meglis el Hisby (the Moslem Personal Status Court) has decided to hold two sittings per week instead of one sitting, owing to pressure of work.

Madame Sachtouris, wife of the Greek Diplomatic Agent in Egypt, has sent to M. Venizelos the sum of £E4,438, the result of the subscriptions from Greeks in Egypt for the War Invalids' Fund.

A telegram of congratulation on the British victories in Palestine has been sent to General Allenby by the Polish National Committee in Paris. General Allenby has replied warmly expressing his thanks.

It was announced in the London *Gazette* that the following territory may be regarded as territory in friendly occupation: The vilayats of Busrah and Baghdad, excluding the district of Anah on the Euphrates.

A Budapest telegram says that the Brasso-Predeal railway, with all the works constructed by the Germans, has been taken over by the management of the Hungarian State Railway from the German military authorities.

A Berlin telegram states that the Russian battlship Volya and a number of units which have been completed during the war have now been manned by Germans, to reinforce the forces of the Central Powers in the Black Sea.

M. Venizelos last week visited the wounded in the Salonika hospitals, who were largely composed of refugees from Turkey. M. Venizelos congratulated them on their gallantry, which, he said, had contributed so much to Bulgaria's surrender.

According to the Bulgarian census of Seres, taken in December, 1916, four months after the Bulgars had occupied the town, the population amounted to 24,000, of which 5,000 died of hunger and 11,000 were exiled. Now the population of Seres hardly amounts to 5,000 or 6,000.

FRIDAY, OCTOBER 11, 1918.

FEELING THE WAY.

In spite of the important happenings in the East, the war-interest has swung rapidly back to the Western front as a result of the German overtures for an armistice to run concurrently with peace negotiations. There is no room for doubt that the proposal in its conception is a definite war manœuvre, from which the Central Powers would stand to gain considerably, if the Allies were to fall into the trap. On the other hand, the move has been forced upon Germany by the stern necessity of the military situation, and is not the product of spontaneous strategy. But it is probable that the German Government saw in it at first only a piece of masterly guile. By the time that the proposal has been rejected they may have appreciated some of its crudeness, as well as its boomerang effect. They have blundered over the psychology of nearly every other nation; and it may be that they have at last misjudged the psychology of their own people. So accustomed has the German Higher Command been to have the nation come to heel on order that they have overlooked the possibility of its recalcitrancy. In the formal appeal for peace negotiations, however, and, above all, in the domand for an armistice, the German people are likely to have had their hopes raised to an extent that will cause little heed to be paid to the exigencies of military subterfuges. The German fights well; but he is at his best only when he is buoyed up by a strong hope—it may be hope of the gratification of his hatred, or of loot, or merely of the end of the war. In the case of other nationalities it is as often the courage of despair that raises their fighting instinct to its highest pitch. The German nation as a whole, unless we are much mistaken, will never be with its back against the wall in this war, for all the preaching of princes or professors, *Predikanten* or the Press. It lacks single-minded confidence in its cause, and for this reason has required an incessant lashing of its passions to make it subservient to the will of its masters. The German Higher Command, therefore, have played a dangerous card in the request for an armistice, for they have taken away once and for all the hope that has hitherto buoyed up the people. They reckoned, no doubt, upon the rejection of the demand so inflaming popular opinion in Germany that the resistance of both the army and of the people at home will be immeasurably strengthened. It is not improbable that it will have precisely the opposite effect. The event will prove which estimate of German psychology is correct. In the meantime the Allied forces are doing much to queer the domestic pitch of German militarism, and it will be a tribute to the vitality of the latter and to the subserviency of the people, if Germany holds out for the full duration of another winter.

Until President Wilson's reply to their Note had been received by the German Government it was evident that the *mot d'ordre* for what is left of the Central Alliance was to mark time. Turkey is helped in rendering this last service to her ally by a variety of factors: first, that under the present regime popular feeling counts for nothing; secondly, that Constantinople is still far removed from any military menace; and, thirdly, that the inconvenient presence of German officials and German crews at the capital render communications with the Entente Powers somewhat difficult. At first sight there would seem to be no reason why the small clique that constitutes the Turkish Government should yield to any other consideration than military necessity. Its members can hardly anticipate a bright political future in their own country, even if their past record is regarded as venial; nor are the Entente Governments likely to assist them to obtain a safe asylum where German gold would pander to extravagant tastes. Their dilemma is not an enviable one, and some will be tempted to postpone a solution that is not the immediate result of *force majeure*. The knowledge that the Allies have it in their power to supply the necessary pressure may, on the other hand, prompt others to bow at once to the inevitable. In this connection the example of Bulgaria, it is to be hoped, will prove a stimulus both to the Turks and to the Allied Powers. Turkey has experienced much more in the way of military disasters than Bulgaria had when she decided that the only course consonant with her interests was to place herself unreservedly in the hands of the Allies. The latter, moreover, cannot fail to appreciate the advantage of insisting upon unconditional surrender on the part of each enemy. Their conscience on this point is clear; there are to be no terms enforced on a conquered people that will not stand the scrutiny of strict justice, but the world will be saved the compromises and makeshifts that are inevitable in a peace by negotiation and that so often contain the germs of future wars. In the case of Bulgaria pressure was applied at a spot too vital to be ignored. In the operations against Turkey British armies are still far from the capital; and if there is the least chance of the Turkish Government refusing to accept the logic of its hopeless position, no time should be lost in transferring the operations to a point nearer the nerve-centre of the empire.

With Bulgaria and Turkey passing under their control as a condition of surrender, the Allied Governments will find it impossible to keep their minds closed to the problem of the redrawing of the map of Near Eastern Europe. If they are wise, they will endeavour to make the transitional period conform, as far as can be arranged, to the final settlement. Thus it is inconceivable that Turkey should be granted an armistice without provision being made for the free passage of the Dardanelles and the Bosphorus under Allied supervision. The throwing open of this waterway will entail some measure of control in Constantinople. The Allies stand pledged to remove Turkish rule from Europe. When the undertaking was given it was supposed that Russia would take charge of Constantinople in the interests of the world's peace. During a period of transition in the history of the country a Russian Government renounced the claim formerly made on behalf of Russia, and for the time being the repudiation holds good. There is no reason, however, why this action should cancel the Allies' resolve that the Turks should no longer retain jurisdiction in Europe. It is a weak argument to urge that no other settlement of the Constantinople problem is free from grave objections. The interests of Europe require that this South-Eastern corner should cease at once and entirely to be a hotbed of intrigue and world-unrest. This aim is impossible of attainment if a weak or irresolute Government remains at Constantinople. Considerable lip-homage is paid to the theory of internationalisation, and its advocates wish to see the experiment tried in this cosmopolitan city. We are convinced that international administration will never stand the practical test, which must always break down over the question of the police force, if over no other. Constantinople may be internationalised in the sense that it is not the close preserve of any one country, or that it becomes the headquarters of the League of Nations. But its administration in the interests of peace and efficiency must be entrusted to a single Power, which will supply the police force. We are of opinion that the task should be allotted to the United States, perhaps for a specified period at first, in order that there may be an opportunity for revision in the light of possible developments that no man can foresee to-day.

THE JERUSALEM UNIVERSITY.

By BERTRAM B. BENAS.

The laying of the foundation stones of the Jewish University in Jerusalem marks an epoch in the history of mankind. It sees the beginnings of the re-emergence of an ancient people among the families of the nations in their traditional character as bearers of a civilisation. For this establishment is no ordinary foundation. Conceived in Diaspora, and brought to fruition in war, it looks to that era of world-peace which was first placed before the eyes of humanity by the prophets of a people from whom the present rebuilders of Zion are sprung. The Jerusalem University project is a national link with the ancient institutions of Jewry. The academies of Palestine and Babylon were encyclopædic academies—for the Mishna and the Talmud, the subject matter of their studies, were all-embracing in their range, as was the wont of studies in the days of antiquity, and to state the fact that they were suffused with the spirituality of the God-idea is only to assert that they were the typical fruits of the specific Hebrew genius. The subsequent history of the Jewish People, which shows a gradual compression of the ambit of their world, growingly emphasised the spiritual content of their speculations with a corresponding decrease in that hold upon life which touch with a specific national civilisation of their own could most naturally allow, and thus Jewish intellect tended to become individualised, and the steady flow of a distinctive Jewish contribution to the common stock of the civilisation of humanity was temporarily both diverted and diluted. The work of intellectual Jewry, becoming individualised, ceased to draw nutrition from the fellowship of a national group. And yet to this day the essentially Jewish nature of the genius of the scientists and scholars and authors and artists in Jewry is readily detectable, just as the American spirit is recognisable in the intellectual American, except that the American spirit is fully nourished and adequately maintained by the co-operation which a group entity in a national centre can alone endow. Although so many centuries have intervened since Jewry founded its great academies in the Near East, the wide scope of the Jewish outlook will enable the thread to be picked up; and the essentially humanist genius of Jewry will find itself in line with the conscious and articulate aspirations of a progressive humanity. For the ideals of social justice and the reign of right, the basic principles of the Mosaic Code and the Prophetic literature, form the vital current which animates the whole of Jewish thought. A new foundation, based on this old foundation, with the area of an open road for development such as the large empty spaces of Palestine afford, creates a wondrous opportunity for directed reconstruction, not merely of a despoiled nationhood, but of a polity where social life can be built up anew for the benefit of society as a whole. It is a vision of the realisation of this possibility that Dr. Gaster, the Chief Rabbi of Sephardic* Anglo-Jewry, sees when he looks to the new Jewish Commonwealth for a "practical application of the ancient laws towards the solution of many of the social problems which so much oppress and darken the life of the inhabitants of Europe and America. . . . The Jewish re-gathering is to be of great moment in the history of the emancipation and progress of mankind. Only from this point of view has Zionism a meaning and Judaism a justification."† Brave words these, but redolent of the courage and sincerity which inspire the intrepid and dauntless rebuilders of Zion.

The world gains by the enrichment of variety. For centuries it has not had at hand the registered view-point of the Jewish angle of vision in the records of the world-surveys of humanity. It has had the individual view-point of the Jew, but that has not necessarily been the Jewish view-point. The Jew has been a distinguished integer in the sum of the academic family—distinguished, often enough by eminence, more often merely negatively by sheer personal differentiation. Now once again Jewry is to be a distinctive integer in the group of academic families, distinctive, not by mere negative differentiation, but by positive contribution. And thus the Jewish University in Jerusalem marks a reunion of an ancient house with the brotherhood of centres of thought and action throughout the world. A symbol of that reunion is to be found in the presence of General Allenby and representatives of all the Palestinian Communities at the memorable ceremony in Jerusalem on July 24, when Dr. Weizmann, head of the Zionist Commission, laid the first of the twelve foundation stones of the University—twelve foundation stones, emblematical of the Twelve Tribes of Israel.

The larger visions, cherished by the promoters of the University, illumine rather than obscure the immediate practical needs of Palestine which the new establishment will directly serve. The place which a University fills in the economy of a land was never appreciated more fully than to-day. Palestine needs doctors, agronomists, engineers, biologists, botanists, chemists, electricians, teachers and lawyers. If trained skill is needed in developed states, it is unnecessary to point out *à fortiori* its instant urgency for the progress of a comparatively undeveloped country. Justly, those who have been re-endowed with national rights are ready and eager to take up national duties

Both the idealism and the practicality of the project have been anticipated, in miniature, by existing settlements in Palestine from which in one form or another the constituent elements of a University system could be successfully drawn. The Bezalel School of Arts and Crafts, the Hygienic Institute, the Agricultural Experiment Station, the Technical Schools, the Musical Academies and the National Library can be regarded not only as pledges of faith in the belief of a Jewish future in Palestine, but also as a proof of possible achievement. The revival of Hebrew as a living language linked the practical work in the old-new-land with the idealism of a renascent Jewry in the Diaspora. Thus a Neo-Hebraic poetry arose, kindled with the vision of a renewed hope, national and yet millennial, spiritual and yet humanist. Art and music were similarly inspired, and a neo-Hebraic prose began to flourish which rationalised the philosophy of Jewish history in a form joining tradition and aspiration by a devotion to the regenerating force of national renascence. The revival of the national idea among the disendowed nationhoods which the world crisis of 1914 called forth brought the most vital movement in Jewry within the aims of the world-powers of freedom and progress; and now the establishment in Palestine of a national home for the Jewish People is expressly endorsed by Great Britain, France, and Italy. These Powers, by deputy, were present at the First Jewish National Re-establishment, most typical of the Jewish Spirit, the foundation on the site of the home of an eminent Englishman, the late Sir John Gray Hill, of a Jewish Temple of Learning and Civilisation. Mr. Balfour, in his inspiring message of congratulation, said: "This school of learning should be an addition to the forces of progress throughout the world." From the historic land on the Mount of Olives, which, it was the wish of its former owner, should become the centre of Hebrew learning and the Hebrew spirit, a beacon of light, a new and yet an ancient light, will shine to illumine the path of a redeemed humanity.

FAMINE IN PERSIA.

The *Manchester Guardian* publishes the following note which it has received from Professor E. S. Browne, of Cambridge:—

Letters recently received from Ispahan, Persia, tell of a deplorable state of affairs. Owing in part to the failure of the harvest and also to the disturbed state of the country, the people are dying from starvation in large numbers. One of the missionaries, a lady doctor, writes that bodies lie about the streets until the more charitably disposed place coins on them to pay for burial. Fathers are poisoning their children rather than see them die of hunger. Children whose parents are dead, or who are unable to provide for them, are left at the C.M.S. Hospital to be fed by the missionaries or starve. The hospital wards are crowded with these unfortunate famine-stricken people, but few of them have the strength to rally. During the past six months the C.M.S. staff have been doing their best to cope with the situation. Flour has been obtained from the hill villages and sent down under armed escort; and it is baked in the hospital ovens, thus ensuring the most economical distribution; but the distress has grown worse, and local funds raised by the missionaries themselves are depleted; therefore, unless a substantial measure of help can be sent from home many thousands must perish.

Contributions should be sent to Dr. Harold T. Marrable, M.D., Glebe View, Rathdrum, county Wicklow.

SPECIAL NOTICE.

"White Horse Whisky" Diary for 1919.

Messrs. MACKIE & CO., Distillers, Ltd., Glasgow, London, and Island of Islay, desire to inform holders of their "White Horse" Diary for 1918 that the new Diary for 1919, shortly to be issued, will not, owing to war conditions, be supplied with the usual leather covers. The outer leather cover of the 1918 Diary should therefore be preserved for use with the issue for 1919, the latter to be inserted inside the elastic band after removing the old book.

THE INDUSTRIAL RENAISSANCE OF GREECE.

By Thomas H. Mawson,

(Senior Member of the Commission for the Replanning of Salonika.)

Factories and Industrial Enterprises.—There are already in Salonika several factories and innumerable workshops devoted to local industries. One cotton factory employs 600 hands, and there are also flour mills, soap works, brick works, cement works, tanneries, silk works, and carpet works, as well as a brewery, which under new conditions, and with the elimination of competition from Munich, are expected greatly to increase their capacity.

Already there is evidence of a great impetus to local industries, there being several inquiries for sites from British manufacturers, who desire to erect works in a locality which they regard as peculiarly good from a strategic point of view. There are also proposals for the erection of modern abattoirs, and cold storage, and for the erection of great works for the construction of reinforced drain pipes, patent flags, kerbs, channel, and other cement works for constructive purposes.

State, Municipal, and Semi-Public Buildings.—Amongst the more important buildings required in the near future will be the following:—New City Hall and Law Courts, Police and Fire Stations, Post Office, New Banks, Commercial Exchanges, University, Schools and Gymnasia, Theatre and Opera House, Markets, and the finest and largest Bazaars in the East.

Commercial Buildings.—Several large new hotels are projected, and many cafés, streets of shops and offices, and also cinemas and other places of entertainment.

New Housing Facilities.—Houses are immediately required for the 70,000 people whose homes were destroyed by the fire, and for at least 30,000 more who will flock to the city from other parts of Greece to take advantage of the new prosperity which will come to the city after the war. In addition to the housing of the artisan classes, an immense impetus will be given to the erection of houses for the large number of residents who have grown rich through the operations of the war. Thus the Kalemaria and Mikra areas will rapidly become high-class residential suburbs.

Parks, Gardens, Boulevards, and Forests.—No city in the East will be so well supplied with publicly owned open spaces which are to be converted into city forests, public parks, and playgrounds, the whole being connected by tree-planted boulevards. Much of this work will necessarily follow the housing of the people; but from the first there will be great business for nurserymen and landscape gardening contractors.

The foregoing remarks refer only to the opportunities opened up by the rebuilding of Salonika, but of equal importance in the near future will be the expansion of Athens and the virtual rebuilding or improvement of almost every city and village throughout Greece; it is in these activities that the Eastern mind will first express itself. Let us add, they can afford to do it, for Greece has been greatly enriched by this war, for she has been able to sell not only every article of produce at war prices, but has been able to employ her labour in the service of the Allies at rates never before obtained; and in addition to this the Allies have spent millions of pounds sterling with the population of Salonika and throughout Macedonia; and all this is stimulating the desire of the Hellenes to realise something really worthy of a great and prosperous people. But greater than this fact is the probability of the natural resources of Greece being developed, and when this takes place Greece will be a great hive of industry.

All this great work is under the able direction of M. Papanastaciou, the Minister of Communications, whose enthusiasm for the work of reconstruction is most inspiring.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

TURKEY'S PRISONERS OF WAR.

Lord Newton has made a statement to the London correspondent of the *Western Morning News* on the present prospects of relief for the British and Indian officers and men now in Turkish prison camps. He pointed out that negotiations had been going on since November last year, but although, after much delay, it had been agreed that a British ship carrying supplies for the prisoners should be sent out to fetch the invalid soldiers home in exchange for invalid Turkish prisoners, provided guarantees could be obtained from Austria and Germany that it would be immune from attack, the Germans attached to their proposal conditions to which the British Government found it impossible to agree. Finally, they decided to take some risk, and that the ship should go out whether there was a guarantee given or not. Since then the British Government had proposed that every prisoner should be exchanged, head for head, but had received no definite reply to that offer. In his opinion that exchange had been obstructed deliberately by Enver Pasha at the instigation of the Germans, who had encouraged opposition for obvious reasons and were determined to make our difficulties as great as possible. The Turks themselves had been perfectly apathetic. They have no interest whatever in any of the prisoners in our hands, except one, a prominent Young Turk, and their eagerness to secure his return to Turkey had been made manifest in many ways. But we still held him. Turkey did not want her prisoners back lest they should cause trouble at home, and nothing but defeat would make the Turkish Government amenable to reason, argument, or persuasion.

At this moment they were trying to get supplies through to the prisoners by three separate sources, and ample sums of money had been placed at the disposal of the Dutch Minister for their benefit. "I hope," Lord Newton added, "that in the event of an approach for an armistice from Turkey the first condition will be the immediate liberation of British and Indian prisoners."

PRESS ON THE NEAR EAST.

Damascus—Past and Future.

The capture of Damascus has led, as might be expected, to a veritable flood of articles about that city in all sorts and conditions of papers. In the majority of cases the writers of these articles appear to have sought their inspiration in the pages of well-known guide-books and books of travel; but a few write with first-hand knowledge of their subject, and their personal knowledge of the city makes their descriptions interesting. Thus, Sir Mark Sykes, in the *Observer*, brings out the charm that the city exercises over the traveller who approaches it from the Euphrates road, across the desert.

If you approach Damascus from the Lebanon you see at your feet a great white city set in a vast emerald park of trees, up to which the Shamiyeh plain runs from the East and the level brown or yellow tillage bends from the South. This in itself is striking, but the most wonderful impression of Damascus is gained if you come in from the Desert side, parched and weary as you needs must be if you come from Baghdad or the Hauran; for days before you reach the city your eyes have been vexed by flatness, monotony and dust. You have ridden through tracts of scrub belts, stony ground, through volcanic zones, past reeking saline swamps and barren wolds. Suddenly the desert drops from you as a mantle, and you ride through miles of wild gardens fenced with walls of mud and traversed by little swiftly running canals. You are in a land of shade and water, of singing birds and companionable men, and to one who comes from the desert's brazen sun, iron drought, and untrusting solitude, these are things to gladden the heart and broaden the breast. When our men come to write home of Damascus, it will be said by those who came in from the West that it is a fine enough place, but those who come in from the East will say whatever lies in their power to write in its praise.

Damascus must now, says Sir Mark, "be working to try and find itself as it has not done perhaps since Ibn Walid and his companions took it after that long battle on the Yermak more than 1200 years ago." It has been crushed and brought low under the rule of the Turk, but now the Turkish tyranny and blasting influence have been swept away beyond all hope of return. Sooner or later Damascus will realise what has happened, and when that occurs we shall see the beginning of a new and wonderful era in the history of the Near East.

Damascus is the true home of Arab genius and racial feeling; its people are cultured, refined and intelligent. French and American schools, contact with European thought, Lebanese emigration to the United States, and the steady growth of Arab national feeling, have all tended to prepare the Damascenes for the hour which has now struck. On the other hand, it must be remembered that for the last three years the Turks have been engaged in murdering and exiling every leader of Arab thought they could lay their hands on, and in destroying the Moslem male population of the working classes by deliberately exposing them on the front, while the Christians of the Lebanon were being reduced in numbers by the abominable expedient of artificial famine. The Turks' method in Syria has been to cow the population of the cities by public executions, decimate the rural Moslems by military service, and starve the Christians out of existence.

But those bad days, we may hope, have passed away never to return, and the future looks bright for the oldest city in the world.

Surrounded by areas of enormous potential agricultural wealth by a prolific, industrious and naturally intelligent peasantry, Damascus, with its merchants and educated upper classes, has every capacity to become the capital of an enlightened state or political unit. How matters will develop in the immediate future as the result of this sudden emancipation it is difficult to say. Certain things we may take for granted: Whenever the Turk annexes or conquers a region, decay, poverty, stagnation and decadence set in from that hour; whenever the Turk is removed from some area which he has ruled, that area begins to progress from the day of his departure; the progress is more or less marked according to the aptitude of the inhabitants, but improvement dates from the moment the tyrant departs. . . . Damascus will prove no exception to the rule, provided the Turk is not suffered to return; and, provided the people are given reasonable opportunity, within twenty years we shall see in Damascus a city of perhaps double its present population, prosperous and progressive, with colleges and universities, and great mercantile establishments and factories. This city will be connected by rail of uniform gauge with Aleppo, Baghdad and Cairo, and will undoubtedly be one of the great intellectual and business centres of the revived Arab civilisation. This future seems to the present writer the inevitable corollary of liberation.

Article to Note.

"War Experiences in Turkish Armenia," by O. A. Kerr, in the *Englishwoman* (October).

PROMINENT INDIAN INDUSTRIES.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Recent news from India indicates that the lengthy break in the monsoon, which particularly affected the Bombay Presidency, had been relieved by seasonable rains. A failure of the monsoon means a short crop or none, and the appalling consequences of a famine. It is, therefore, a matter for congratulation that more normal conditions are being established. Although a late rainfall may not enable cultivators to reap the full benefits derived from the crops in an ordinary season, the fears of a famine are now removed. Private telegraphic advices were received in the City from Bombay that beneficial rains had fallen as late as September 24, an unusual occurrence in a district where nothing falls—beyond scattered showers—after the middle of that month. Although prospects have considerably improved, more information is awaited regarding the state of the crops, but reports from the district are cheerful, and as far as cotton is concerned it is a plant for which a heavy rainfall is not required.

***

Attention is drawn by *The Times* to the fact that a new combination in the Egyptian spinning trade is foreshadowed by important transfers of cotton mills in the Bolton, Stalybridge, and Mossley districts already carried out or in course of arrangement. "Over a million spindles," our contemporary states, "are involved in the scheme. Apparently a big London financial syndicate is concerned, some wealthy men being named in connection with the transfers. So far definite agreements for the purchase of the whole of the controlling interest have only, we understand, been reached in connection with the four following firms:—Messrs. John Harwood and Sons, of Bolton, 187,000 spindles; Messrs. John Ashworth, Limited, of Bolton and Pendlebury, 137,000 spindles; Mill Hill Spinning Co., of Bolton, 82,000 spindles; and Messrs. R. H. Buckley and Sons, Mossley and Stalybridge, 261,000 spindles. The transfers do not involve any break in the continuity of the various businesses. It is understood that in the further cases where purchase is pending, the transactions are independent of those concerned with the mills already named; but there is evidently some joint action in view, although the buyers are not identical. No public offer of shares or other capital in the combination is expected to be made."

***

The effect of the capitulation of Bulgaria on the Berlin Stock Exchange is thus described in a German paper:—"The news from Bulgaria caused a marked lassitude on the Berlin Stock Exchange, which has not materially recovered to any very great extent."

***

The effect of prospective Near Eastern developments on the supply of drugs is discussed in the current issue of *The Hospital*, which points out that the collapse of Turkey would liberate large supplies of opium and several other valuable drugs. "During the past few years makers of morphine," adds our contemporary, "have been using Persian and Indian opium, and useful as these have been in an emergency, they are inferior to the Turkish variety for manufacturers' purposes. The Central Powers have, no doubt, been drawing extravagant supplies of opium from Turkey, but in spite of this she must still hold a large accumulation of stocks."

***

In regard to this I will only say that I trust *The Hospital* is not voicing the considered opinion of British manufacturers of opium products in regard to the value of Indian opium, for it has been the belief of people competent to judge that Indian opium could be adapted for the European market, and that development, it was hoped, would bring some compensation to the Indian revenue for the loss entailed in the cessation of the trade with China.

***

A very useful innovation has been introduced by the London County, Westminster, and Parr's Bank in the shape of a monthly series of reviews of the foreign exchanges. The second of the series, which has just appeared, is notable for the striking comparison made between the movements of the German mark, the Austrian crown, and the British pound sterling on the neutral Exchanges. No doubt the difference shown will have vastly increased by the following issue, when there will have been time for developments in the Near East and on the Western Front to have been properly understood in neutral countries.

***

A marked improvement has taken place in the earnings of Egyptian Hotels, Limited, for the year ended April 30, the profits, after charging all expenses in connection with the working of the hotels, being £36,161, compared with £11,598 for 1917. The net profits amounted to £33,738, to which has to be added the balance brought forward of £3,930. Allowing for debenture interest, depreciation, reserve for doubtful debts, and allocating £10,000 to writing down the debt due from the Société Suisse Egyptienne des Hotels, an available balance remains of £14,428. This is to be utilised to pay two years' dividend on the preference shares, completing the payment up to 1917, and a balance of £2,928 is carried forward. It is stated that the business of Shepheard's Hotel has been satisfactorily maintained since the close of the company's financial year, and it is to be presumed, therefore, that, provided conditions in Egypt remain as they are at present, the next report will make an even better showing.

***

I do not think that any punishment can be too severe for dishonest tradesmen in these times, and I hope that the fullest inquiry will be made into the foundation for the allegation in a Sudan contemporary that unscrupulous butchers there have not been above introducing meat into the market from non-killed or diseased animals. The difficulty in disposing of it is met, it is stated, by the sale usually taking place "after the rush of the early morning hours is over, when the eyes of the police or customers are not open to the possibility of such meat being smuggled into the market." I must add that our contemporary does not vouch for the accuracy of this report, but the fact that it has been made is the amplest justification for the promptest investigation, and should any butchers be found to have been guilty of such practices they should be severely punished.

***

Sir Charles Hanson, the retiring Lord Mayor, whose tenure of that office has brought him such deserved popularity among all circles, is a man of wide interests and is, amongst other things, chairman of the Gresham Life Assurance Society, which is, perhaps, the best-known assurance company in Egypt and the Sudan.

***

A statistical table which has just been issued showing the main features of the work of the Indian railways during each of the five years ending March 31 last throws an interesting light on the strain of the war on the Indian railways. The ordinary goods traffic rose during the quinquennium from 82½ million tons to more than 83 million tons, while other traffic rose from over 166,000 tons to 1,646,000 tons. The ton mileage of coal used rose from 4,147 millions in 1913-14 to 7,961 millions last year. Finally, the gross earnings of all railways advanced from 6,358 lakhs of rupees in the last year of peace to about 7,702 lakhs in 1917-18.

***

With reference to my suggestion last week that the visit of a British Industrial Mission would have an excellent effect on our trade relations with French Morocco, I may mention that the fact that the French mission to Australia contains commercial representatives shows that our Allies are quite in favour of the policy of industrial missions. I feel that this visit to Australia, where the visitors have been received with the greatest enthusiasm, is most happily conceived, for it cannot fail to cement still further the close relations between France and the British Empire which are so much to be desired, and I advocate a mission to Morocco because I feel that it would have a most beneficial influence in that direction.

***

During the war attempts have been made to encourage the manufacture of sugar in Turkey, and, according to reports, with some measure of success, thanks to State assistance in every direction. The Government is stated to have given encouragement to the industry by granting exemption from taxation and other privileges to sugar factories, while supplies of fertilisers and agricultural implements have been placed at the disposal of beet cultivators. This display of initiative on the part of the Ottoman Administration is not in keeping with their record, and I cannot help wondering, if it is correct, at the cause of this display of energy. As to the results of the development of sugar manufacture in Turkey we shall be able to judge after the war.

***

News regarding the Greek tobacco crop is slow in coming to hand. I understand that the crop estimate is 99,570,735 lb., and that it is thought to be of an excellent quality. There are about 33,858,000 lb. of the old stock in hand, and there must be some difficulty in disposing of this large amount of tobacco, more especially as the Egyptian markets are believed to be stocked for some months to come, and Italian purchases are on a strictly limited basis.

BEYROUT.

Chief Port of Syria.

The occupation of Beyrout by the Allies has a special interest for business circles in this country, because the city is naturally the chief port for the export of Syrian produce. It is true that its importance as a trade centre had been to some extent diminished before the war by railway developments, for the construction of the Tripolis-Homs railway and of the Hedjaz railway branch, Damascus-Haifa, took away some of the trade that previously flowed to it, but its situation, no less than its convenience as a port, not only set a limit to this tendency, but practically assured its pre-eminence as the principal outlet for Syrian trade, provided due attention was paid to its development to enable it to cope with trade requirements. It is a moot point, however, whether sufficient importance was paid to its natural advantages, for the programme of harbour and railway construction in Syria in 1914, for which France was providing the capital, included extensive harbour works at Tripolis, which would have made that centre a serious rival to Beyrout. The Tripolis project was naturally viewed with considerable dislike in Beyrout, where a section of the population put forward an alternative scheme for the construction of a line from Tripolis to Beyrout which had the merit of being much less expensive, and in view of this opposition it is not improbable that the Tripolis harbour project would have failed to materialise.

As regards the trade of Beyrout, the exports have amounted to almost a million sterling, while the imports totalled more than double that amount. Among the exports may be mentioned grain, wool, silk, dried fruit, olive oil, sesame oil, etc. The grain requirements of the town are considerable, and comparatively little grain has, therefore, been available for export. In 1913 the exports of wheat reached 1,000 tons, of barley 1,000 tons, of peas 1,000 tons, and of beans and lentils 400 tons. A fair portion of the wool clip of 1913, which amounted to 4,150 T., was exported through Beyrout, while the exports of apricot kernels in that year amounted to about 16,000 bags. The imports are mainly timber, petroleum, clothes, manufactured articles, sugar, and rice. In this connection it may be pointed out that the requirements of the Beyrout market are very different from those of the Mesopotamian market, for instance, because the population of Beyrout includes a large number of Christians, and among the women there is, therefore, a considerable opening for dainty clothing, European furniture, and ornaments of a kind which would not find a ready sale in other parts of the country. There is also a good market for books and other literature in the French language. More interesting for British manufacturers, however, will be the fact that in the future the districts served by Beyrout will offer a ready market for agricultural machinery of a type suited to the conditions, while there will also be openings in many other directions in Syria, notably for harbour and railway construction, for drainage systems, and for the supply of water, and it is surely not too much to hope that British traders will play their part in the reconstruction of a district which should be by no means the least promising trade centre of the Near East in the future.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars regarding crop conditions in August:—

Cotton.—The weather was hot in the first half of the month, but cool and windy, with damp nights, in the second half; it was, on the whole, favourable. Water supply sufficient. The cotton-worm campaign has come to its close, the pest having caused practically no damage. The pink and common boll-worm attack, and in particular the former, is generally reported as moderate. From the examination of cotton bolls made by the Entomological Section of the Ministry during August, it may be stated that, judging by the percentage of sound bolls, the attack was somewhat less during the third week of Augu[illegible] in during the corresponding period of the previous year. The comparative amount of damage will, however, depend considerably on the lateness of the harvest. Attack with aphis is reported to a small extent in some provinces. Bolls are developing rapidly and the crop is promising well. The cool weather ruling in the second half of the month has, however, checked its maturity to some extent. The first picking of early sown cotton has just started in some provinces of Upper Egypt.

Rice (*Séfi*).—Weather favourable and water supply ample. Weeding and watering are in progress. Stalk-borer has been reported in Daqahlîya, but the damage caused is insignificant. The early-sown *Yabâni* is in ear, and its harvesting will commence in some districts within a few days, and the yield per feddân is expected to be higher than last year.

Rice (*Nili*).—The crop is growing satisfactorily. Watering is carried out and the early-sown rice is well forward.

Maize.—The weather has been favourable to the growth of the crop and water supply sufficient. Watering, thinning, manuring, and hoeing are the chief operations now going on. Sowing is practically finished, and may be considered on an average as ten days earlier than last year. Early-sown fields are beginning to flower and look well. The hooded crow has caused a certain amount of damage in some parts of Daqahliya. Elsewhere, the crop is free from pests. Owing to want of artificial manures, cultivators are doing their best to manure with *Kufri*, *Tafla*, or *Baladi*.

Millet (*Séfi*).—Weather favourable and water supply adequate. The crop is slightly attacked with stalk-borer and smut. Aphis has been noticed in El Gîza Province, but the damage is negligible. Harvesting of the early-sown crop is general, and a good yield is expected everywhere, except in Girga Province, where the yield appears to be somewhat below average.

Sugar Cane.—Weather satisfactory and water supply sufficient. Watering and manuring are the chief operations going on at present. Stalk-borer attack is prevalent, but to a very slight extent, and the crop is in good condition.

EGYTIAN STATE FINANCES DURING JUNE.

(From Our Own Correspondent.)

Cairo, Sept. 9.

The financial returns just published, for June, show a very satisfactory result for the first quarter of the year. During the three months revenue amounted to £E6,459,272 and expenditure to £E5,615,088, as compared with £E5,063,868 and £E4,826,454 respectively at the end of June last year. There is, therefore, an improvement of £E1,395,404 in revenue and an expansion of £E788,634 in expenditure, with, for result, a surplus of £E844,184, as against one of only £E237,414 at the same date in 1917.

The most important items of revenue were direct taxes £E1,406,474, Customs £E1,281,335, tobacco dues £E503,232, Excise £E183,352, judicial fees £E428,419, railways £E1,415,879, domains £E170,285, ghaffir cess £E413,679; and the main increases were under Customs £E658,566, tobacco dues £E110,667, Excise £E183,352, railways, £E347,495, and ghaffir cess £E136,278. There was a decrease of £E174,943 in extraordinary receipts.

Under expenditure the following were the chief heads:—Interior £E111,156, public health £E116,195, native courts £E100,165, irrigation £E248,639, railways £E377,809, police £E122,521, ghaffirs £E187,399, War Office £E203,971, civil pension £E130,859, war gratuities £E144,865, extraordinary expenditure £E151,900, and public debt £E1,893,908. The principal increases were: railways £E181,990, and the items debited under war gratuities and war expenditure.

During the last few weeks the annual reports of the Trade Commissioners for South Africa, Canada, and Australia have been received. The reports of H.M. Trade Commissioners in the last two countries were issued respectively on September 26 and October 3.

INDIA'S CURRENCY.

The Issue of Gold Mohur Coins.

(From a Correspondent.)

In view of the strenuous efforts by all the belligerent countries to conserve their gold supplies it is not a little surprising that public comment has never been directed against the recent issue of gold Mohur coins in India. It may, of course, be argued that the measure was forced upon Government to minimise the serious currency situation created by the continued disappearance of rupees, but the attempt to popularise the use of a new gold coin in the midst of their present currency difficulties was adversely criticised recently at the annual meeting of the Bank of Madras. The president in his speech stated that the adoption of this method of meeting a crisis was regarded with amazement.

No one can have any doubt that the gold Mohur issue and the previous sales of the output of the Mysore gold mines were resorted to by Government with the intention of arresting the depletion of silver currency, and they could not foresee that hoarding would become more pronounced. It is unfortunate that these measures have had no result in alleviating the situation. Profiteering in gold coin is unabated. Sovereigns command a price as high as 19½ rupees and the new gold Mohur is only a fraction less.

Efforts have been made to estimate the total amount of sovereigns melted down in India during the war, and one of the leading firms of bullion brokers in Bombay states that the amount must be between thirty and forty million pounds, which is confirmed by the principal gold dealers. A very large quantity is required annually for making ornaments, and official figures of the imports of gold into India place the total as 253 million pounds since 1898 and 52 millions for the period of 20 years preceding 1898.

Absorption of Rupees.

Extracts have appeared in Bombay market reports from the speech of the president of the Bank of Bombay at the annual meeting from which some interesting details may be gathered concerning the disappearance of currency. In the two years preceding the war the absorption of rupees on a yearly average was 833 lakhs, while the absorption from August, 1914, to March, 1918, was on a yearly average of 2,150 lakhs. These figures supply eloquent testimony to the hoarding proclivities of the Indian community, and may also be accepted as evidence of general prosperity throughout the country.

From the weekly statements of the Department of Issue of the Paper Currency it may be noted that the Note circulation has been continually rising. At the end of last month a record was reached with a total of close upon 135 lakhs, and there does not seem to be any doubt that currency notes are likewise being locked away instead of being deposited in the banks.

Gold Mohur.

THE FUTURE OF FLIGHT.

One great advantage of the war has been the forced development of aviation, and it is certain that a product of peace will, within a short period, result in the aeroplane becoming one of the most common and ever increasing methods of long distance locomotion for passenger, postal, private and commercial purposes. Ideals—possibly fantastic to the unimaginative and unknowing—are now being prepared in readiness for a wonderful future. The Whitecraft World's Airlines to encircle the globe is a proposition taking concrete form. It is designed to establish associated aerodromes in various parts of the earth to assist greatly in linking together the world's commerce. In regard to flights to and from England and America, Mr. J. A. Whitehead, of Whitehead Aircraft, Limited, takes a daring gaze into the future by hinting at the creation of flexible floating aerostations on the Atlantic Ocean. These harbours for aircraft would be kept in position under their own power.

At Sarajevo, the capital of Bosnia, the price of an ordinary pair of boots has risen to 400 kronen (approximately £16).

THE GREEK COMMERCIAL MISSION.

Sheffield and Bradford Visits.

The visit of the Greek delegates to Sheffield lasted two days. On October 2 they inspected the works of Messrs. Thomas Firth and Sons, Ltd., Messrs. John Brown and Co., Ltd., and Messrs. J. H. Andrew and Co., Ltd., and in the evening a dinner was given in their honour by the Federation of British Industries at the Grand Hotel, when the guests included representatives of the most prominent business interests in Sheffield. Mr. Douglas Vickers, who presided, in proposing the toast of the delegates, said that it was more particularly a matter of pride that their arrival had coincided with such glorious news of the part the Greeks were playing in the war. They more particularly welcomed their Greek friends to Sheffield because they were very anxious to strengthen and cement the bonds of friendship between themselves and a nation of such noble and ancient traditions. They enjoyed, of course, the common heritage which the philosophers of ancient Greece had bequeathed to the world, but Englishmen to-day desired to find some means of consolidating the common ideals and purposes of the two nations which this war had brought into closer unity. It was felt that, whatever else followed, the bonds of commerce could be encouraged, and he personally had the greatest hopes of the outcome of the mission.

M. Michalocopoulos, in the course of his reply to the toast, said that the Greeks sincerely desired that English manufacturers should know their requirements. It was the intention of the Greek delegation to remain in London for a few weeks to take some steps towards the practical realisation of their ideals. He hoped one of the first steps would be the establishment of some English commercial schools—they had had in Greece German, Italian and Roumanian schools, but no English school. He believed that from such schools would come the best propagandists of British industries and commerce, not only for Greece itself but for the whole of the Near East, where, he could assure them, they would find large numbers of Greeks who were good traders. When he learned English he had found they had a saying that "By and by is the path that leads to never." He and his colleagues desired to avoid that danger, and they believed therefore that an extension of their visit in London, at the conclusion of their provincial tour, would lead to some really effective organisation towards a closer commercial alliance in the future. The establishment of regular sea traffic and the fixing of through freight charges, covering both sea and overland transport, so that the seller and buyer would know the exact charges to be met, was another essential. Germany had seen the necessity of this, and in the matter of credit transactions had also sought to meet the convenience of her customers. The interests of both British and Greek traders could in that respect be secured by the formation of a bank, which would be able to pay the seller while at the same time assuring itself of the stability of the buyer. It was in such details as these that trading interests between the two nations could be fostered and developed.

Sir William Ellis then proposed, "The Federation of British Industries," which, he pointed out, already represented 16,000 firms, with a total capital of 3,500 million pounds, and employing more than 3,000,000 men. It was realised that one of the fruits of the war would be a widening of their commercial interests, and the Federation had this purpose in view in inviting to this country the representatives of nations allied with them in the war. Vice-Admiral Sir Charles Dundas, K.C.M.G., who replied, indicated the early establishment of an Anglo-Greek Association.

The morning of October 3 was devoted to a visit to Messrs. Vickers, Ltd., where the delegates were shown round the works by Mr. Douglas Vickers, who presided at the luncheon in honour of the guests, at which those present included Sir Francis Barker, Mr. William Clark, Colonel J. H. Leslie, and Mr. A. M. Jack. Mr. Vickers, in extending a warm welcome to the delegates, said that he believed they desired to see not only an armaments firm, but to learn something of its capabilities for peace-time productivity. They wanted to know how best the two nations could join in a closer commercial relationship. There would be a time, and they hoped it would come soon, when they could take up the task of converting those large shops to the manufacture of peaceful materials. It would be a hard task, involving many difficulties and large expense, but they believed they could surmount the difficulties as they had done before, and that they would be able to ask their Greek friends a few years hence to view their shops devoted to peaceful operations and manufacturing the goods which they hoped to send all over the world in exchange for raw materials, food and other things which they hoped to draw from Greece and other countries.

An Anglo-Greek Association.

M. Michalocopoulos, in his reply referred to the proposal for the formation of an Anglo-Greek Association on the lines of a Chamber of Commerce for facilitating the ideals Mr. Vickers had in view. During their two days' visit to Sheffield the delegates had seen what the city could do towards winning a war for freedom, and they had no doubt that British industries would equally assist the Allies in the pursuit of their peaceful avocations.

Subsequently the delegates went on to the works of Messrs. Hadfields, Ltd., where, in the absence of Sir Robert Hadfield, the chairman, they were received by Mr. A. M. Jack, deputy-chairman, and Mr. P. B. Brown and Major Clarke, managing directors. Before the visitors left a message of welcome from Sir Robert Hadfield was read by Mr. Jack, who added a few words recalling the historic fame of Greece, and anticipating a great future for so progressive a nation. A visit to the cutlery works of Messrs. Joseph Rodgers and Sons, Ltd., and the Eclipse Roof Glazing works of Messrs. Mellowes and Co., Ltd., followed, and the delegates then left for Bradford.

At Bradford on October 4 the delegates went over the works of Sir Titus Salt, Bart., and Co., where they were presented with printed and illustrated souvenirs in commemoration of their visit. Subsequently they were entertained at luncheon by the Lord Mayor of Bradford, Mr. H. H. Tetley, and the representatives of the Textile Institute, afterwards leaving for Harrogate where the week-end was to be spent.

The delegates left Harrogate on October 7 for Leeds, where they spent the morning in visiting the works of Messrs. Joshua Wilson and Sons, Ltd., and of Messrs. John Barran and Sons, Ltd. They were the guests of the Lord Mayor at the weekly gathering of the Leeds Luncheon Club, and in the afternoon inspected the works of Messrs. John Fowler and Co., Ltd. Later the visitors attended a reception given in their honour by the Lord Mayor and Lady Mayoress at the Town Hall, and in the evening they were the guests at dinner at the Queen's Hotel of the Federation of British Industries, when those present included local members of Parliament and the Lord Mayor. The toast of "The Future Prosperity of Greece" was proposed by the Lord Mayor, who, in extending a warm welcome to the visitors on behalf of the citizens, said that it was a great satisfaction to this country that Greece was her Ally in the cause of liberty and freedom.

M. Embiricos, who replied, said that the industrial needs of their country after the war would be great, and they looked confidently to Britain to help them. No doubt, for a period after the war, the demand for industrial products would be greater than the supply, and there might be a temptation to neglect the markets of the East. He urged that it would be good business, however, even at some sacrifice of home requirements, to meet the immediate needs of Greece promptly, so that she would not require to look to other sources. They had suffered from the aggressive commercial methods of Germany in the past, and now they looked to Britain to help them in developing their country.

BRITISH PROPERTY IN TURKEY.

A recent issue of the *London Gazette* contains a Foreign Office announcement to the effect that his Majesty's Minister at The Hague has received from the Netherlands Minister at Constantinople a communication, dated August 17, notifying a decision of the Ottoman Council of Ministers, published on August 8, respecting the treatment of enemy property in Turkey. This decision was that in future the Minister of Finance must make arrangements for the management of real property belonging to absent enemies and managed by third parties. Such third parties were allowed ten days in which to give information respecting their connection with the property. After that delay the Fiscal Administration would take control of it. The Netherlands Minister at Constantinople pointed out to the Turkish Government that a simple Ministerial decision touching private rights had no legal force, and that he would protest if it were carried out. As far, he says, as could be judged from the Turkish official announcement inserted in the Constantinople newspapers in language of probably wilful obscurity, the decision in question concerned only property managed by third parties who had not obtained authority in proper form from their principals. It is desirable that this oversight should be remedied wherever possible by the supply of procurations in proper form. Such procurations must be legalised by the authorities charged with the protection of Turkish subjects in the United Kingdom. The Netherlands Legation suggests under "the usual reserve" that if necessary British subjects with real property in Turkey might nominate as manager of their property Mr. Emile Phateéa, Agence Immobilière and Commerciale, Arslan Han, Galata.

EGYPTIAN (ASSIOUT) EXPLORERS.

The following official circular has been issued:—"Since the present board have taken control they have been fortunate enough to secure from the Suez Oil Co. Prospecting License No. 53, granted by the Egyptian Government, entitling them to all oil rights on the Island of Jubal, in the Gulf of Suez, upon which already a considerable amount of boring has taken place. Several boreholes have been made on this concession, and oil and petroleum gas in quantities have been encountered. Oil was met in each bore put down, especially in boreholes No. 5 and 6, where the indications of meeting substantial oil horizons are very favourable. These two boreholes are on the north of the island and closer to the large outcrops of petroleum on the sea. Borehole No. 5 is already down 1,500 feet and No. 6 to about 200 ft., and the strata encountered in both borings gives great hopes of success. Satisfactory arrangements have been concluded for the provision of further working capital to enable this company to continue its boring operations at the earliest possible date."

ENGINEERING NOTES.

Subsoil Ploughing.

Reference has been made in these notes to the unusual demand for, and successful use of, sub-soil ploughs in the East. Oriental farmers have evidently been convinced by experience of the benefits derived from their use. Grain requires several tons of water to the acre, and in dry seasons, or in dry farming sections, the utmost care must be taken to conserve the moisture. When a sub-soil plough has been used the water is retained in the little trenches made in the sub-soil, and as the upper soil begins to dry the moisture spreads outward and upward, thus keeping the upper soil from baking or forming into what is known as hardpan. Another benefit obtained from the use of the subsoil plough is the loosening of the subsoil so that the roots of growing plants can penetrate more deeply into the soil in search of the elements needed for their growth. There are, however, many Oriental farmers and agriculturists who still adhere to the archaic native wooden plough, with its spear-shaped iron share of local construction, because modern ploughs, and especially subsoil ploughs, bring to the surface the subsoil which they think, owing to the prevailing climatic and geological conditions in the East, tend to disorganise the natural fertilising elements that exist in the top soil, and consequently, impoverish the whole soil. That this view is quite wrong we have often pointed out, but in view of the continuously increasing use of the sub-soil plough, it may interest those who still adhere to the old fashioned ploughs to know that there is a new sub-soil plough which in its operation is not open to their objection.

A New Plough.

This plough is a new invention, and its object is to break and turn over the sub-soil without bringing it to the surface, and to pulverise the top soil at the same time. The employment of this plough does not necessitate the purchase of a complete new plough, for whilst complete ploughs incorporating the invention can be furnished, the newly invented plough is designed to take the place of the ordinary ploughbody, mouldboard and ploughshare, and can be interchanged with these parts of any standard make of British steel horse plough. It is claimed that the power required is no more than is needed to work a single-furrow plough of the ordinary type, although a greater depth of from 50 to 100 per cent. is ploughed. This new plough is made in two forms, viz., the cultivating sub-soil plough, which acts as described, and the turn-furrow sub-soil plough, in which a turning-over effect is secured when it is desired to turn under surface vegetation and root growth. Either type can be employed, according to the nature of the work in hand. One frame will do for both types of shares. With the turn-furrow model the sub-soil is broken up and turned over the shoulder of the point into the furrow bed, at the same time as the breast breaks up the top soil and throws it down on the top of the broken-up and aerated sub-soil. This plough will doubtless meet with a good reception throughout the East if properly introduced.

Engineering Prospects in Syria.

It is admitted that one result of the liberation of Palestine and Syria from the Turks will be a great development of engineering work in that interesting and fertile region, for just before the commencement of the war there was unusual activity in mineral developments, harbour works, industrial and agricultural enterprises, etc., all of which had to be abandoned. For the mineral developments a small company was formed in Damascus to procure mining concessions, and had five or six projects in hand, including prospecting for petroleum, etc., in the Yarmuk Valley, at about 115 to 118 miles distance by rail from Damascus on the Haifa line, and also in the Ghor el Arbian vale, which is rather nearer, and at Kafraniye, and again for iron in the district of Salt and near that town. In the vicinity of the Dead Sea the company proposed to prospect for iodine, bromium, asphalt, and bitumen, while for the coal or lignite at Erni, on Mount Hermon, a concession for ninety-nine years had been applied for, but, we believe, was not granted. A variety of constructional works, which included new harbour works at such places as Alexandretta and Mersina, were also proposed, and plans, etc., were submitted. There are, also, several other suitable spots with deep-water approaches where harbours could be constructed; but to carry out the work would have involved an outlay of between £20,000,000 and £30,000,000, and no arrangements could be safely made with Turkish officials. But with their final expulsion the aspect will be entirely changed, and British enterprise will undoubtedly play an important part in these and similar projects.

Agricultural Machinery Required

Agricultural prospects in the newly liberated districts of Syria are very promising, while those of the regions immediately to the north are still more so. Recent developments have necessitated the use of all kinds of modern implements and machinery. The Cilician Plain, in the province of Adana, annually produces about 110,000 bales of cotton, as well as large crops of cereals. With the irrigation of this plain and the draining of many marshy districts new areas will be cultivated, and in all of these crops will increase. The farms in these districts are mostly very large, and as labour is very scarce and expensive, machinery of all kinds is employed. In the same category is the district of Aleppo. The Mersina-Adana Railway and the Baghdad Railway run across these important agricultural and commercial districts, and afford exceptional transportation facilities for the heaviest machinery. Steam ploughs, threshing machines, reapers, binders, and ploughs are the principal kinds of agricultural machinery in demand. Steam ploughs and threshers have been supplied almost exclusively from the United Kingdom, while reapers and binders have practically all come from America; but ploughs of German make were generally preferred. This preference has been more noticeable in Southern Syria, where, owing to climatic conditions and the nature of the soil, the ploughs must be fitted with special devices for the purpose of disposing of the weeds, which grow very quickly, and in great abundance, and cutting devices are necessary which can be used on level ground. In certain parts of these districts the farmers would not have any other ploughs but German, simply because the enemy took the trouble to create special designs of ploughs as above described, which proved satisfactory to the buyers, and secured the local markets in that line. Fortunately, these markets will be lost to them now. It may be added that recent changes in Syria and Palestine should give to British manufacturers of agricultural machinery a unique opportunity to capture those very desirable markets.

An Effect of War Restrictions.

Recent reports and urgent inquiries from various parts of the East indicate that there must be a serious dearth of agricultural machinery throughout the East. The native home-made archaic plough has been brought to the front again, the semicircular native hand-scythe is in great demand in the absence of mechanical harvesters, while all available horses, mules, and oxen are engaged for work on the old threshing-floor during this and probably the next season, owing to the scarcity of threshing machines. At the same time, the liberation of vast areas of fertile lands in the Near and Middle East, which are now ready for cultivation, and the great demand for all kinds of cereals and other agricultural products, have a tantalising effect on the agriculturists in those regions, who can see that unless mechanical power is employed not one-half of the available land can be cultivated. Thus, the urgent demand for agricultural machinery and implements in those regions is well justified, and it would be a boon to them if the war restrictions on the export of such machinery for those friendly countries were withdrawn or moderated.

IRRIGATION IN INDIA.

An interesting review of the progress of irrigation in British India for 1916-17 has recently been issued by the Public Works Department of the Government of India. It shows that the total area irrigated by all the productive public works amounted in the year to slightly more than seventeen million acres. Towards this total the Punjab canals contributed nearly eight million acres, Madras three and a half millions, the United Provinces two and a half millions, and Sind one and a half millions. The return on capital outlay was the highest in Madras, where, excepting two systems, the canals yielded 13.2 per cent., and in the Punjab, with a return of 12.99 per cent., while in the United Provinces and Sind percentages of 8.55 and 7.57 were obtained. The mean for the whole of India was 8.81 per cent. Protected works irrigated totalled 385,000 acres and gave a return of 1.08 per cent., while minor works of all classes irrigated altogether were about eight million acres. Among the works contemplated are the Sukkur Barrage and the Sind canal system, which is now being investigated by a special staff, the Sarda scheme in the United Provinces, and five schemes in the Punjab.

Dr J. Collis Browne's Chlorodyne

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.
Checks and arrests FEVER, CROUP, AGUE.

Market Quiet.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market has been decidedly quiet during the week. Both buyers and sellers have been inclined to mark time. The war news has had a disturbing effect upon trade. It is believed in many quarters that the end of the war is distinctly nearer as a result of the peace overtures of Germany. No one can tell what will happen to prices during the next few months, and all along the line there has been an inclination to avoid fresh commitments. The restrictions upon trading in Egyptian cotton continue very harassing. Many spinners are now refusing to entertain private orders on any terms whatever, as there is so much uncertainty as to getting hold of raw material, and sufficient work can be obtained from Government sources. Prices have been very firm in both carded and combed descriptions, but less business has been about than a few weeks ago. Favourable reports have again come through relating to the crop in Egypt. In piece goods for Egypt the demand has been slower. Although there are expectations of a broadening demand for that part of the world as a result of the success of the Allied armies, the distribution of goods is likely to be seriously hampered until the war is over. There has been no activity whatever for India and China. Some very fair orders have been booked for France. The home trade remains healthy. Rather more irregularity has been perceptible in American yarn prices, and a very limited business has been done. This week there has been an inquiry in Manchester by the tribunal appointed by the Government into the recent labour dispute. The outlook for supplies of American cotton in Lancashire is improving. In order to adjust production, however, it is being proposed that looms should be stopped for a full week to relieve the yarn scarcity.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner (Mr. D. T. Chadwick) has issued the following weekly cabled news from the Director-General of Commercial Intelligence, Calcutta, dated October 2 :—

Both monsoons weak. Rain has fallen in parts of the Deccan and Carnatic, but rain is much needed in most of the country.

Fine Broach Cotton ready for delivery quoted at Rs. 852.

Raw jute prices slightly easier. Europe Fours 13 rupees 4 annas.

Burma rice market unsettled, owing to speculation. Urgent demands from Java, Japan, Madras. Prices rising to Rs.400.

Export of rice Rangoon for Bengal prohibited.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned days :—

	1917. Francs.	1918. Francs.
September 25	200,000	50,000
September 26, 27, 28, 29..	690,000	810,000

EGYPTIAN DELTA LIGHT RAILWAYS

Traffic Return for eleven days ended August 31 :—

	1917. £E		1918. £E
Aug. 21—Aug. 31.....	6,813	....	10,890
April 1—Aug. 31	86,101	....	121,338

COMPANY NOTES & REPORTS

Barsi Light Railway.

The report of the Barsi Light Railway Company, Ltd., for the year ended March 31 states that the net earnings for the year, less Indian income tax and super tax, amounted to £26,423 14s. 3d., or, adding the exchange adjustment of £1,413 1s. 5d., £27,836 15s. 8d. After providing the interest on the debenture stock, £5,600, and the interest and sinking fund instalment, etc., on the "Latur Extension" debentures, £5,646, there is left £16.590 15s. 8d., which, with the balance of £11,447 8s. 8d. brought forward from the previous year, makes £28,038 4s. 4d. at credit of net revenue account. The directors have transferred £1,035 9s. 4d. to credit of reserve account for the equalisation of dividends, etc., which account now stands at £76,000, and have reserved £200 15s. as a provision for income tax on undistributed profits. An interim dividend of 3 per cent. (or 6s. per share) was paid on April 26 last, and the directors now recommend that a final dividend of 3 per cent. (6s. per share) be paid. This will make a total distribution of 6 per cent. for the year and leave £11,202 to be carried forward. As against the previous year there is a decrease of 252,300 passengers and Rs1,47,493 in coaching traffic and sundry receipts, and of 31,400 tons and Rs1.16,906 in goods traffic, making a total decrease of Rs 2,64,399; on the other hand working expenses show a decrease of Rs35,342, so that the decrease in net earnings as compared with last year is reduced to Rs2,29,057.

Egyptian Hotels.

The report of the Egyptian Hotels, Ltd., for the year ended April 30 last states that, after charging all expenses in connection with the working of the hotels, profits were £36,162, as compared with £11,599 for 1917, £29.001 for 1916 and £6,285 in 1915. After providing for charges payable in London and Cairo net profit was £33,739; £3,931 was brought forward, making £37,669. Deducting Debenture interest, one-fifth of debenture expenses, reducing the balance carried forward on this account to nil, depreciation of plant, fixtures and fittings at hotels £4,823, reserve for doubtful debts £4,333, reserve for writing down the debt due from the Societe Suisse Egyptienne des Hotels £10,000, there is left £14,428. The directors recommend the payment of two years' dividend of 5 per cent. per annum on the preference shares, thus completing the payment to 1917, and to carry forward £2,928. Meeting, 11, Ironmonger Lane, E.C., 14th instant, 2.30 p.m.

Dividends, Payments, etc.

The half-yearly coupons for interest of the Ottoman 4 per cent. Loan on the Egyptian Tribute, due on the 10th ult., are being paid from that date at the banking house of Messrs. Glyn, Mills, Currie and Company, 67, Lombard Street, E.C.

The directors of the Assam Company announce a final dividend of 7½ per cent. and a bonus of 10 per cent., or a total of £3 10s. per share, less tax, making 25 per cent. for the year 1917, payable 1st proxino.

British Burmah Petroleum.—Second mortgage debenture stock transfer books will be closed from 17th to 31st instant, inclusive. Interest payable November 1.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

We have had another dull and uninteresting week. Here the local business has been of quite a trivial character, and there has been a continued tendency on behalf of holders on this side to realise for investment in other more active directions, so that on the whole most changes in prices are again towards a slightly lower level. Intrinsic conditions in Egypt, however, continue to be exceedingly satisfactory, and a renewal of interest is likely to come along at any moment.

In Government stocks Egyptian Unifieds are ½ down at 91½, and the 3½ per Cent. Pref. Loans have declined ¾ to 79. A feature has been the rise in Montenegrin and Roumanian Bonds, which have both advanced several points since last week, the former to 73 and the latter to 68.

In Bank shares Nationals are ⅛ firmer at 20¾, and Agriculturals 1-32 lower at 7⅛. An outstanding feature has again been the very sharp advance in Anglo-Egyptian Banks, which have risen over three points to 21½.

In railways Delta Lights are ⅛ higher at 7⅜, the good traffic receipts and the prospects for this concern after the war attracting buyers.

In Land shares Aboukirs have receded 6d. to 23s. 6d., and Behéras are ⅛ down at 14⅞. Delta Lands, after business up to 16s. 9d., are closing 3d. easier at 16s., and New Egyptians are 9d. down at 20s. 6d. On the other hand, Egyptian and Foreign Trusts have been a very firm spot, and are 3d. higher at 13s. 10½d., whilst there has also been a demand during the past few days for Gharbieh Lands, which are ⅛ up at 2⅜, some hundreds of shares having changed hands at the latter price. Sidi Salems and Union Foncières have both slightly receded, the former 3-32, to 2 23-32, and the latter 9d. to 72s. 6d.

In Miscellaneous shares there has been a fair amount of business in both Salts and Sodas and Khedivial Mails, the former close 1-16 down at 62s. 6d., whilst the latter, on some persistent buying, have improved 2s. to 63s. 6d.

In Greek securities quotations are all unchanged, with the exception of Greek Monopolies, which are one point lower at 66½, and Rentes, which have dropped half a point to 58. Some 200 Bank of Athens shares were done in the neighbourhood of 4 15-16, round which price there are some further sellers.

Oil Shares.

A weak tone has been in evidence in this market. Roumanian Consols have fallen back to 15s., and Russians are all lower. Anglo-Egyptians (B) are 2 9-16, and Anglo-Persian preferences are 24s. 9d.

Paris Bourse.

Suez Canal shares have been the feature of the market. Their closing price, 5,650 francs, represents a decline of 50 francs on the previous day's price, but even then marks an advance of 250 francs on the week. Egyptian Unifieds are 95.95 (against 96 a week ago), and other prices are Serbian 4 per cent. 1895's 66.75 (against 64.50), Turkish Unifieds 63 (against 64), Banque d'Athens 108.50 (against 115), Credit Foncier Egyptien 800 (against 780), Land Banks 210.50 (against 215), and Ottoman Banks 465.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

NOTES OF THE WEEK.

Very little reliable information has emerged from Constantinople during the past week. The report that the Talaat-Enver Ministry had made way for a new Cabinet under Tewfik Pasha, a former Grand Vizier and Turkish Ambassador in London at the outbreak of the war, is now followed by the statement that Tewfik Pasha has been unable to form a Ministry, and that the task has been entrusted to Izzet Pasha. On the other hand from Vienna it is announced that the first step taken by the new Cabinet was to notify the Austro-Hungarian Government that, owing to the military situation, Turkey would be obliged to conclude a separate peace with the Entente. The Central Powers are said to have requested Turkey to await the result of the exchange of Notes with President Wilson. It was, indeed, generally supposed that negotiations of this nature were in progress between Turkey and her allies, for it was the natural course for the parties concerned to adopt. The prospect of obtaining peace without capitulation could not fail to appeal to the Turkish Government, and we may be sure that Germany would have held out the highest hopes of a favourable issue to her peace soundings.

If the Central States made no other reply to the Turkish communication, it is a clear indication of the way in which they read the signs of the times. The ever-dutiful German Press reflects the resigned attitude of the powers that be. The attempt to meet the Bulgarian capitulation with assurances that German troops would quickly restore the situation fell very flat, and only a few papers seem to have returned twice to the charge. For a day or two there were confident assertions that all would be well in Turkey in spite of the defection of Bulgaria, but these were quickly abandoned in favour of a tame acceptance of the new situation. It can only be supposed that Germany's own parlous condition is so well understood that the Press has no heart left for pretending that things with their allies are better than they actually are. A noticeable feature of these peace overtures is the readiness with which Germany prepares to throw over the partners in her crimes, if haply by so doing she may secure some respite for herself. The Central Alliance is indulging in *sauve qui peut* tactics, and no one country is in the least bit interested in the fate of its companions in distress. Later reports, however, represent the Germans in Constantinople as making a desperate bid for the retention of their hold on Turkey. Twenty men-of-war, commanded by German officers, are said to be off Constantinople. The intention is clearly to keep the Young Turks in power for as long as possible.

A fortnight ago the Central Powers, according to the statements of their public men and the Press, were going to reverse the situation in Bulgaria, and certainly had no intention of releasing their hold on Serbia. They did contrive to send reinforcements into Serbia, but these have imposed hardly any check on the rapid advance of the Allies. The defence of Nish appears to have been brilliantly turned by an outflanking movement which brought the Serbians to the north of the town, and the resistance of the enemy, although only broken after severe fighting, proved to be less formidable than had been anticipated. With this town in their possession the Serbians have now recovered half their country.

The naval attack on Durazzo has quickly been followed by the capture of the town by the Italians, a testimony to the effective work done by the Allied navies. Tirana, ten miles to the east, has also fallen. With General d'Esperey's left wing already in occupation of Prisrend and Mitrovitza—that is to say, established on the flank of Montenegrin territory—it is clear that the Austrians are not likely to tarry long on the order of their going from Albania. Indeed, if the Allies could advance any distance into Montenegro in time, they would probably secure the liberation of the unhappy inhabitants at a stroke, and find a useful number of them ready, provided they could be suitably armed, to cut off the retreat of the Austrians retiring before the Italian advance in Albania.

The presence in London of the Prime Ministers of Greece and Serbia and of M. Take Jonescu, who may be regarded as representative of the Roumania that is to be after the war, is more than a coincidence, and it is to be hoped that the result of their visit, which follows upon less formal discussions on the Continent, will be a final and satisfactory agreement between the Entente Powers and the three Balkan States regarding the future settlement of South-Eastern Europe. It will have been noted that the public utterances of M. Venizelos and M. Pashitch regarding the peace conditions to be imposed on Bulgaria betray a more profound grasp of the situation than the rhodomontades of some British enthusiasts. Neither of these statesmen is likely to lose sight of the fact that the future prosperity of the Balkans must be based on a recognition of the community

Digitized by Google

of interests of all the States. M. Pashitch is reported to have said that, as far as Serbia is concerned, only "a very slight rectification of the frontier to assure the safety of our railways to Roumania and Salonika" is needed. Until the nature of the rectification indicated is made known, all that can usefully be said on the subject is that in the delimitation of Balkan frontiers the most zealous care must be given to the principle of nationalities, and no group of people must be left under alien jurisdiction without the opportunity being given them of being transferred without pecuniary loss to their own country.

A more formal declaration of war aims emanates from Athens on the authority of the Greek Minister for Foreign Affairs. It opens with the statement that Greece would certainly be greatly disappointed if the coming Peace Congress did not sanction her aspirations, and if important portions of Hellas actually under foreign domination were not to be freed. She will, therefore, "ask at the Peace Congress that these mortgages be paid off in order that Epirus, Macedonia, Thrace, the islands, and the countries of Hellenic influence in Asia Minor may develop freely in full communion of thought with the mother country, securing the unity of political regime towards which for so many centuries the efforts of the unredeemed Greeks have tended." The Foreign Minister added: "I conceive Pan-Hellenism, not in the form of absolute annexations, but of intermediary solutions, such as autonomy for certain districts and a regime of guarantees for others."

Generalisations are never more dangerous than when used in connection with peace terms. It was in the hope of avoiding all vague allusions to the aspirations of this or that country that we have urged an early delimitation of frontiers according to the principles to which the Allies are pledged. There ought to be sufficient confidence among the Allies to prevent them from feeling obliged to peg out their claims in public with a view to bringing pressure on other States. We trust most sincerely that Greece will not have to bring her aspirations to the Peace Congress, to be urged on her behalf and challenged on the part of another Power. The Peace Congress, if the Allies are wise, will be called to give formal sanction to agreements already reached. Thus Greece would attend it with her aspirations already satisfied as the result of a previous exchange of views among the Allied Powers immediately concerned. Any other course must lead to misunderstanding and disappointments.

A not uninteresting feature of the situation in Bulgaria is the apparent success of King Boris's efforts to adapt himself to the times. As one speech does not necessarily make a good or even a democratic Sovereign, it will not argue an excess of scepticism, if judgment is withheld on this point for the present. But the young King's record will be followed with interest, for so much depends on his being able to act up to the promise of a favourable start. The Bulgarians, though democratically inclined, are monarchical by instinct, and the right man on the throne could lead the country to a happy and prosperous future. But unless Bulgaria can produce a second Stambuloff, it is to be feared that King Boris will have a difficult task ahead of him in eliminating the political dross which overlies certain national virtues. When normal diplomatic relations with Bulgaria are restored the Allies will find it to be to the general interest of Europe that they should be represented, for a considerable time at least, in the Bulgarian capital by some of their ablest diplomatists.

A future historian, it is to be hoped, will do justice to the political struggle of the Czecho-Slovaks and Yugoslavs of the Dual Monarchy for liberty. The story of the Czecho-Slovak troops in Russia and Siberia is a thrilling one, but it will probably be found not to surpass in real heroism the stand made by their fellow-nationals against the tyranny and the cajolery of the Austro-Hungarian Government. The movement, it has to be remembered, has been carried out almost entirely in the open. Congresses have been held, attended by delegates selected for the purpose, and the right of self-determination has been publicly insisted upon. In their feverish efforts to stave off the inevitable, the Austro-Hungarian authorities are now prepared to grant the Yugoslavs some of the autonomy that they desire, if they will stay within the Monarchy to enjoy it. But the solidarity of feeling between the two sections of the Yugoslav people—those in Austria-Hungary and those outside it—is too strong to allow the former to prejudice their case by any compromise at this stage.

In the successes that have attended British arms in Palestine and Syria the part played by the Arabs must not be overlooked. The Hejaz forces have had their work cut out for them in coping with Turkish resistance in Medina and along the Hejaz Railway; but they have stuck to it for three years, and now have had the satisfaction of playing their part in what may be regarded as the goal of the Arab revolt, the liberation of Damascus from Turkish rule. It was fitting, therefore, that the capture of this city should have been made the occasion of an exchange of congratulatory telegrams between the Hejaz and Great Britain. On the very day when the King had telegraphed to congratulate King George on the capitulation of Bulgaria the news of the entry into Damascus reached him, and necessitated a second message. King George replied with a graceful allusion to the generalship of the Emir Faisal and to the gallantry of the Arab troops, "whose effective co-operation contributed so materially to the success of the Allied operations which resulted in the liberation of Damascus and in the extension of Arab emancipation from tyranny." Another telegram was sent to King Hussein by the British Foreign Secretary. The operations which have ended so successfully began on August 31, when the Arab detachment left Akaba. Damascus was reached on October 3, after a march that tested both the power of endurance and the leadership of Emir Faisal's forces. The capture of Homs brings the British and Arab forces within ninety miles of Aleppo.

The India Office has at last issued the complete list of the two Committees whose business is to get in the foundations for the new Indian constitution. The Committees are small, as they ought to be, if business is meant; they are fairly well balanced, and most of the names command confidence. Lord Southborough, who is in general charge of both, is probably the most experienced chairman in the world, but his deputy-chairman, Sir Frank Sly, has an almost equally remarkable record in this line, and, at any rate, the business should be accomplished with despatch. It is quite possible that the "Functions" Committee may achieve something like unanimity, but it would be rash to make a similar prediction regarding its sister body, which has to work out a system of franchises and constituencies, and thus, as we indicate elsewhere, to determine the future of the Reform Scheme regarded as a whole.

The project of inviting representatives of the overseas Press to visit Great Britain during the war would not have been complete, unless the editors of Indian papers had also been the guests of the nation. Those who are now touring Great Britain are fortunate in the time of their visit. They come when interest in Indian affairs runs as high as the engrossing nature of the military situation allows, and they are welcome no less for what they can tell of India to those with whom they come in contact than for what we hope will be the nature of the message that they will carry back with them to India. Their mission will be not only to record something of what they see, but to interpret the meaning of all that they see to the people of India in the light of their own intelligence and wider experience. For Great Britain's work in India cannot be properly understood unless it is considered in relation to her work, her spirit, and her responsibilities at home. Their visit, we hope, will prove both agreeable and instructive.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 9.

His Highness the Sultan.

H.H. the Sultan gave a State banquet at Ras el Tin Palace last week in honour of Mr. H. Garry, the newly-appointed United States representative, and Mrs Garry. The other guests included the Ministers and some of the leading British and American residents. H.E. Rushdi Pasha was not able to attend, owing to an attack of Spanish influenza. One is glad to add, however, that the able Prime Minister is fast recovering from his indisposition, and will shortly resume his duties.

Last Sunday a somewhat curious misunderstanding occurred arising out of the inconsequent manner in which the European and Arabic calendars are followed in this country, and as a result of which many officials absented themselves from their offices. The misunderstanding arose in connection with the birthday of the Sultan, which is always kept as a public holiday. His Highness was born on 2nd Zul Hedja, 1284, corresponding with March 26, 1868. This year the Arabic date fell on Sunday last, and those who were taken in and snatched an illicit holiday forgot that when the Protectorate was declared it was decided that the birthday and accession day of the sovereign should be celebrated according to the Gregorian calendar, the dates in the case of Sultan Fuad being respectively March 26 and October 9.

The Cotton Sacks Question.

Previous letters have drawn attention to the various economic crises through which this country has passed and is passing. To these has now been added that of sacks. Sacks are used in very large numbers every year for the movement of the cotton crop. They consist of cotton packs for the unginned cotton and grain sacks for the cotton seed; the ginned cotton being packed in steam and hydraulically-pressed bales for which the sacking of old sacks is used. Practically all are imported from India, the Calcutta variety being the one most in use. Since the war the demand has increased considerably, owing to the requirements of the military authorities, and whereas 10,000 tons were imported in 1913, last year the figure reached 22,000 tons. An idea of the number required may be gathered from the fact that most of the sacks imported are of 3 lbs. variety.

Owing to the rise in freights and the difficulty in securing shipping, the prices of sacks, as of other important commodities, have increased during the past three years; but latterly the market has risen in an unwarrantable fashion, and cotton pack prices have now reached the preposterous level of P.T.37 apiece, although C.I.F. Suez quotations are only P.T.22. Even at these prices very few lots are offering on the local market, and a veritable sack famine has come into existence. The position has become so serious that the Supplies Control Board has had to intervene and to issue a notice pointing out that it has ascertained that adequate supplies exist ready for export in India, and will be imported to meet this year's requirements, and adding that arrangements are being made with the Indian Government for the control of the export of sacks to Egypt and of the prices at which they may be sold in this country. Action has been taken by the Government none too soon; for the movement of the cotton crop has already started. That there can really be no very great scarcity in the country is proved by the fact that the imports up to the end of July amounted to 11,000 tons as compared with 6,500 tons at the same date in 1917. Indeed, there is every reason to believe that the importers hold adequate stocks, but that, taking advantage of shipping difficulties, they have held off the market in order to force up prices. The action now taken should, however, bring these gentry to their senses and cause an unloading of present stocks on the market, with a considerable lowering of prices and a consequent settlement of the crisis.

The State Railways.

As was recorded in this correspondence at the time, the fares on the Egyptian State Railways were doubled and the train service considerably curtailed on July 1 last. The reason for this was: first, that the cost of coal, etc., has gone up enormously, and great difficulty was being experienced in repairing and replacing rolling stock, and, secondly, that it was hoped that the rise in fares would reduce the number of passengers which the railways would be called upon to carry. The high cost of coal and the other difficulties still exist, and in this respect the action of the administration has been fully justified. On the other hand, the expectations as to a decrease in passenger traffic have not been realised. On the contrary, the numbers have increased to an enormous extent, the reason being that the general public is so well off that, as in the case of ordinary commodities in daily use, a rise in prices does not deter them from indulging in their desires. Something will certainly have to be done in this connection; for at present it is almost impossible to obtain a seat, and quite half the passengers, especially those in second-class, travel in the corridors, which are in addition encumbered with small luggage, and along which there is at times no means of moving. The present state of affairs reacts somewhat unfortunately on those who have to travel in the public interest or whose journeys are a necessary part of the country's economic and commercial life, whilst, of course, the overcrowded state of the carriages might quite easily conduce to an aggravation of any accident occurring to a train. From every point of view, therefore, it is to be hoped that before long some system will be evolved whereby the passenger traffic will be controlled and kept within more reasonable limits, though it must be admitted that the problem is no easy one to solve.

The Lighting Regulations.

A modification of the lighting regulations has been introduced this week. These regulations were first enacted two years ago after the one and only air raid made on Cairo by the Turks, but to-day there is no reason beyond the necessity of economy in light why Cairo after nightfall should become a city of darkness. Henceforward, provided the illuminations are not unnecessarily brilliant, it will not be necessary to close the shutters of rooms where lights are burning, and it will be possible to sit on balconies and in gardens with shaded lamps. At a time like the present, when the summer heat is on, this relaxation of the regulations is doubly welcome, whilst the modification in regard to vehicles and the removal of the side shades from the street lamps will, it may be hoped, avoid the street accidents which of late have unfortunately been somewhat frequent.

PREHISTORIC EGYPT.

Recently, at University College, London, Professor Flinders Petrie commenced a course of lectures on prehistoric Egypt. He said that the pottery found in the graves of these very early Egyptians had now been classified into periods, and it was possible to determine the position in time of a grave, if sufficient pottery were found in it. The pots were decorated in white lines, and one of the earliest examples contained representations of the Barbary sheep and the African goat. Many African plants could be identified in the decoration. No wheel was used, but the work was done entirely by hand; aided by no tool except a piece of stick. The Kabyle pottery still found in the highlands of Algeria was a direct lineal descendant from the stock from which had sprung the white line pottery of prehistoric Egypt. Representations of the human figure were also found; these had very wide-spread ears—the ears of hunters, to whom it was necessary to catch the slightest sound brought on the breeze—and these wide-spread ears remained until the first dynasty. Carved ivory tusks were found decorated with representations of the head of a bearded race. All the evidence showed that the people of prehistoric Egypt had an extraordinary skill in many of the arts and a keen appreciation of nature. Some remains had been found of people of the Bushman type, and, from the fact that these were always women, it was to be inferred that they were female slaves. They were of an altogether lower type than the masters of the country, and were probably the remains of a Paleolithic race, of which the men had been driven out or killed, while the women remained as slaves.

We much regret that in our Letter from Cairo, published in our issue of September 27, the name of Mr. A. H. Sharman was wrongly spelt ("Sharmann").

MOROCCO NOTES.

(From Our Own Correspondent.)

Tangier, October 7.

Overseas Communications.

Owing to temporary conditions, mails from the French zone to Tangier are very much delayed, and occasionally letters take a month on the journey.

The question of shipping in general has now reached a very acute stage. For a long time past merchants in the French zone have not been allowed to export cereals, which have been bought for export to France by the military authorities. It now appears that the arrangements made for shipping have not provided sufficient tonnage to carry the available surplus of the very large crops, and a notice has been published that, owing to the congestion at the ports, the military authorities will, for the time, curtail their purchases, and will buy only wheat and barley; and even the buying of those grains will only be carried on within certain limits. As a very great deal of the grain bought by the authorities for shipment is customarily stacked in racks at the ports, with no covering but tarpaulins, it is no doubt prudent, in the absence of shipping to carry off the accumulations, to avoid adding to the quantity which, as experience in other years has shown, is thus exposed to great damage by the weather. Any cessation of buying by the authorities through whom almost the whole export trade is now carried on, has, however, such a dislocating effect on the trade of the whole country that the French Press is protesting energetically at the failure to make provision in time for the known shipping needs, or, failing that, to provide safe storage for grain awaiting shipment.

Questions of Property.

Considerable progress has now been made in settling, so far as British subjects are concerned, the difficult question of *makhzen* and *habous* properties. As the Moorish Government used to make it practically impossible for Christians to buy freehold properties, merchants were compelled to obtain houses and premises on such tenures as could be procured. In some cases land or buildings were rented from the Moorish Government (Makhzen), in others that Government built premises for merchants and charged a rent proportionate to the expense, while, in very many, rights of enjoyment of properties held or administered by the religious body known as the "habous" were bought. Since the French occupation the value of most properties has increased greatly, and the authorities have been taking steps to examine into the question of the rights that have been acquired over "makhzen" and "habous" properties.

In the case of "habous" property held by British subjects attempts have recently been made to clear up the whole question and make a friendly and definite settlement of the rights involved, and, in the majority of cases, it is understood, an arrangement, satisfactory on the whole to all interests, has been reached. Similar steps are being taken with regard to "makhzen" property questions, and it is to be hoped similar results will be obtained.

"Our Day" Fete.

At the end of last month a fête in aid of the British Red Cross "Our Day" Fund, organized by the British colony, was held in Tangier, and proved an immense success. A considerable contingent of visitors came over from Gibraltar, and an admiral arrived in his flagship and was good enough to allow his excellent band to give its assistance to the event. The whole of the fête, which had many original features, was capitally arranged, and, with the powerful help of Gibraltar visitors and the great attraction of the band, proved as financially satisfactory as it was enjoyable. It is generally held to have been the most successful event of its kind known in Tangier for many years. Almost every section of the Tangier population lent generous assistance, but perhaps the most noteworthy support received was that from the very large and important Jewish community. It has always had considerable British sympathies, but has rarely shown them so cordially and universally as on this occasion. A few weeks ago the official films of the Palestine campaign and the entry into Jerusalem were shown at the theatre here, and were followed with intense interest and approval by a crowded audience, which was very largely Jewish. There can be little doubt that the evidence furnished by these films, added to that which the course of the war has provided, of the British Empire's widespread power and the scrupulous care of the rights, interests and prejudices of small nations and communities shown in its exercise, have increased the existing respect and confidence of the Jews here. Both liking and interest make them anxious to testify their sympathy with an Empire which, they recognise, can offer enormous commercial opportunities. Altogether the fête, especially in view of the comparative smallness of the British colony, was a surprisingly successful and popular effort, and incidentally it furnished pleasing proof of the extent of the sympathy felt, in a very mixed community, towards the British Empire and the Allies' cause.

BRITISH PRISONERS IN TURKEY.

The Inter-departmental Committee on Prisoners of War announces that steps are being taken for securing the better treatment of our prisoners in Turkish hands; and instructions have been given to General Allenby that, in the event of an armistice being concluded with Turkey, the immediate and unconditional return of the British prisoners should be required.

THE VALUE OF ARABIC.

Lecturing recently at the School of Oriental Studies on "Arabic as a Medium of Education and Commerce," Mr. Alexander Séfi said that it was from the schools of Baghdad and Cordova that culture spread to the West, and the Arabs rendered notable services in those days to geography, history, philosophy, medicine, physics, astronomy, and mathematics. It was they who introduced Aristotle to European philosophers. They extended considerably the knowledge of the world's limits in Asia and Africa; and they made better known to the Europeans, Arabia, Syria, Persia, Tartary, Southern Russia, China, and Hindustan. Africa to this day seems incapable of assimilation except by the Arabs, whose frugal habits and simple religion were no drawback to their aptitude for commerce, industry, and agriculture.

The field of Arabic is, therefore, said the lecturer, very extensive and the fixing of the language by means of the Koran is a great advantage. The language itself is admittedly one of the most polished known. Some men call it the language of Angels (*lissan-ul-Malyekat*), though others say that Eve tempted Adam in Arabic, they talked love in Persian, and were ejected from Paradise in Turkish! Its literature is certainly a mental treat, but the charm of its poetry, like its music with its quarter tones, can only be faintly conveyed by translation into European languages. Arabic poetry is lyrical; and so not only measure but rhyme are necessary in its composition. Rhyme was introduced into European poetry in imitation of the Arabian poetry. Similarly with the Koran, a great deal of its beauty is lost by translation, and on that account that beauty is sometimes questioned. Hence the translation of the Koran, for ritual purposes, is forbidden.

Mr. Séfi gave examples of Arabian poetry, and a translation of a vigorous speech by Ibn-Hamza, upbraiding the Medina citizens for their treachery. It is a magnificent speech in periods, choice language, expression and sentiments, which our pacifists might learn much from. Mr. Séfi recommended to Arabic students the "Makamat" of El-Hariri, El-Hamazani, El-Yasigi, as being the Shakespeare and Tennyson of the Arabs.

The Postmaster-General announces that letters and parcels intended for delivery to the Egyptian Expeditionary Force and the Salonika Force by Christmas should be posted so as to reach London well in advance of the final dates given below:—Parcels for the Egyptian Expeditionary Force, November 5; letters, November 12. Parcels for the Salonika Force, November 21; letters, November 28. Christmas puddings should not be sent. Arrangements have been made for the supply of puddings to troops overseas in all theatres of war for the coming Christmas.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to E. DENISON ROSS, Director.

Have you tried the World-famous

YAGHOURT

THE CURD MILK HEALTH FOOD.
A PERFECT FOOD IN ITSELF.
May be obtained at
SELFRIDGE'S, Ltd., Oxford St., W.
W. WHITELEY, Ltd., Queen's Rd., W.
Sole Makers: MANOLI CORBETTI,

VELES.

By Tch. Georgevitch.

After emerging from the narrows below Zelenikova, the Vardar flows through a valley, three miles long and two miles wide, girdled in the west by a semicircle of mountains and in the other directions by rocky hills. At the exit of this valley and stretching along both banks of the river at a spot where the Vardar again enters narrows lies the town of Veles, called by the Turks Kupriulíu, on account of its situation, and of the bridge which connects both sections of the town.

Veles is a very ancient place. Polybius mentions it under the name of Bylazoraos, the chief township of Paeoniæ. It was situated on the western bank of the Vardar, ten minutes distant from the Veles of to-day, to whose early existence the ruins of two churches (according to local and perhaps exaggerated tradition, there used to be thirty-six) bear witness.

Veles has known many conquerors. In 216 B.C. King Philip of Macedon wrested it from the Dardanacee; in 168 B.C. the Romans conquered it along with the rest of Macedonia, and it remained under the rule of the Eastern Roman Empire up to the end of the ninth century. Then the Bulgars succeeded in invading Macedonia, and they were able to maintain themselves there until 969, when the Macedonian Slavs shook off the Bulgarian yoke. Within a few years, in 973, the young Slav State fell under Greek supremacy; but under the leadership of their heroic chieftain Samuils and his brother, the Macedonian Slavs emancipated Macedonia from the Greeks and re-established their Slav realm, which extended from the Adriatic to the Ægean, and within a short time included Bulgaria as well. After the fall of this Macedonian Empire (in 1018) Veles passed with it once more under Greek rule. When the Crusaders overthrew the Greek Empire in 1204 the Bulgarian Tsar Kalojan availed himself of the opportunity to seize Eastern Macedonia, and perhaps also Veles, since in 1205 Ochrida was included within his territory. After Kalojan's fall in 1207 Veles again became a Greek possession, and remained so till 1230, when the Bulgarian Tsar Jovan Asen II. reconquered the whole of Macedonia, and therefore also Veles. But only sixteen years later the Greeks seized it once more, and it remained uninterruptedly under their rule until the reign of the Serbian King Stevan Decanski (1321-1331), who united it for good with Serbia. In Dusan's reign, Veles—which Archbishop Danilo of Ochrida speaks of as the "illustrious" city—was governed by the famous Serbian despot Jovan Oliver, the father-in-law of Simeon Nemanjic, Tsar Dusan's half-brother on his father's side.

When the Turks conquered Macedonia, Veles, the site of which had now moved a little further to the north, likewise passed under their rule. In this seventh century a Serbian Episcopal See was established in the town. The Serbs took Veles from the Turks in 1912.

Veles is a notable trade centre. As it lies on the main line from Belgrade to Salonika, it is one of the principal export stations for the fertile neighbouring lowlands, especially the Ovce Polje (sheepfield). To-day the population of Veles numbers about 26,000, by far the greater part of whom are Serbs.

THE KING AND THE SALONIKA FORCE

The following telegram has been sent by the King to General Sir George Milne, commanding British Forces at Salonika:—

"I warmly congratulate you and all ranks under your command upon the brilliant success achieved in concert with our Allies, resulting in the surrender of the Bulgarian army. I fully realise the hardships and unfavourable climatic conditions which have rendered the service of the troops especially arduous, and, therefore, still more praiseworthy."

MONTENEGRO.

A striking and remarkable picture is now being exhibited in Messrs. Arthur Tooth and Sons' gallery, 155, New Bond Street. It is the work of the Montenegrin artist, M. Smodlaka, and represents Montenegro in the form of a woman seated and fettered in a gloomy cell. The red light of a lantern casts a sombre glow upon a figure that is the personification of desolation and misery. Through the bars of a window high up on the wall can be seen the moonlit Mount Lovtchen, the burial-place of the Montenegrin saint-hero, and the centre-point of all the national aspirations of the people of the Black Mountain. The moonlight forms the one bright spot in the picture, and typifies the national hope of the dawn of freedom and happiness. This picture, which should be seen by all who are interested in Balkan art, is exhibited by the kindness of Messrs. Tooth and Sons in order to arouse interest in the suffering people of Montenegro, and in the work of the Montenegrin Red Cross and Relief Fund of London.

What are your Natural Products?

We are interested in the Natural Products of your Country and desire to negotiate with you for the purchase of large or small consignments. We are particularly interested in

COCONUT OIL
PALM OIL
IVORY
MAIZE
GUMS
OIL NUTS
GRAIN
OIL SEEDS
FIBRES
KERNELS
RUBBER
COPRA
COTTON

Will you let us know what Products you can offer?

We are prepared to finance consignments when necessary.

TANGIER TO TEHERAN.

It is a pleasure to be able to congratulate the Serbians most heartily upon the recovery of Nish. As towns go in the West, it is an insignificant bit of a place, no doubt; but it is the second largest town in Serbia, and—which is more to boast of, if I may hazard an opinion—it is a splendidly picturesque place. I have never been in it, but I have passed through it in the Orient Express, with a halt long enough to impress its picture on my memory; and I felt strongly drawn to it. It looked an ideal place for Anthony Hope to select as a background for one of his "Prisoner-of-Zenda-y" stories. I only hope the Austrians and Germans have not ruined it as they have ruined so many pleasant places.

***

The *Englishman* recently referred to the hard case of a "helpless but respectable" Kap Brahmin who, finding himself "in great difficulties in getting one of his grown-up daughters married," wrote to a local paper appealing for help. The poor man appears to have been so distressed by the dulness of the marriage market that he lost his head to the extent of suggesting that the paper's "numerous readers" should go to his assistance. On this, the *Englishman*, doubtless remembering the letter-writer's respectability, comments severely: "We should have thought one would have been sufficient!" Of course, only one can *win* the prize, but the respectable Kap Brahmin probably hoped to get a large number of entries, so to say; for he stipulates that, though he does not object to a "middle-aged secondary bridegroom," he shall not be called on to keep the happy pair. To my mind, the incident opens up horrible possibilities of a "Who'll Wed My Daughter?" correspondence in our own Press.

***

Extravagance in the matter of schools seems to be rather a weakness with "the authorities" wherever Schools and Authorities are to be found. No doubt it is agreeable to spend money on children, even if those children happen to be not your own—so long as a similar condition attaches to the money spent. What the unhappy ratepayers who have to pay for the extravagance think about the subject seldom troubles the Authorities, as far as one can judge. But, even so, I should think that the record in this line must at present lie with a certain Provincial Council in Egypt which, according to a native journal, the *Watan*, runs a school that costs £E900 a year, has six teachers, and—five pupils! This should certainly render it possible for each pupil to receive that individual attention which—the private pedagogues assure us in their prospectuses—is so necessary to success. Indeed, we may surely expect Akmim, the town so favoured in this respect, to turn out paragons of learning in the near future.

***

We hear in these days a great deal of abuse of the "profiteer"; and, as far as I can judge, most of it is justified up to the hilt. But we seldom hear any praise of the tradesman, the employer, or the landlord who remembers that "there is a war on," so to say. In fact, judging by the silence on this subject, there would seem to be no decent landlords or employers, and all the virtues would appear to have been monopolised by the People. My own experience leads me to think that in this case, as in one or two others, things are not what they seem. And in case my own experience may be regarded as insufficient warrant for saying a good word for dogs with bad names, I may remind my readers that early in the war several landlords in Alexandria informed their tenants that they might pay their rent when and as might be convenient to them. Unless my memory mis-serves me, too, one of these generous property owners further announced that any tenant of his who might be out of work need not pay any rent during the period of the war. If that philanthropist had as tenants some workers (so-called) I have heard of—who do not live in Egypt—they would doubtless grumble because he had not offered to support their wives and families. This is, I fear, an ungrateful world.

***

The appointment of Tewfik Pasha as Grand Vizier, in place of Talaat, is in itself a good move on Turkey's part. In the first place, Tewfik is a gentleman, which Talaat was not—and never could have become. Then, Tewfik, whatever he may have found it necessary of late to say to the contrary, is surely an "Old" Turk; and after the world's experience of the "Young" variety, that is a very strong point in his favour. You may remember that when he left England, in November, 1914, Tewfik was genuinely moved, and—as I wrote at the time—his farewell message to Sir Edward Grey "was in every way worthy of a diplomatist and a gentleman." It seems to me, therefore, that the Allies will be able to carry on any negotiations that there may be far more pleasantly and more profitably than could have been the case had Talaat (and Enver) remained at the helm of the *very*-sinking Turkish ship of State.

***

In writing thus I would not suggest that there are likely to be protracted or difficult negotiations with Turkey. The Turks will doubtless have to accept whatever terms the Allies see fit to impose on them, and of bargaining there will be none. At least, that is what we understand, judging by the pronouncements of the Allied statesmen; and in view of Turkey's utter collapse, I do not see how anything else could be expected. Nor is there likely to be any widespread sympathy with Turkey as a country, though we may feel sincere regret that the many have had to suffer, and will have to suffer still more, for the sins of the few. Truly Enver, Talaat, and that crew have proved themselves wreckers extraordinary. It is hard luck on Tewfik Pasha and the few remaining decent Turks that theirs must be the unpleasant task of trying to save a few bits of the wreckage. We shall all hope that the "Young Turk" leaders will be held to strict account for *their* carryings on. And it will have to be the Allies who do it, if it is to be done.

CORSAIR.

RUSSIAN TURKESTAN AND THE GERMAN MENACE TO INDIA.

Speaking before the Central Asian Society at Albemarle Street, on October 9, Miss Annette M. B. Meakin said that in harmony with the action of other provinces of the Russian Empire which were asserting their right to self-determination, the Mohammedan subjects of the Emir of Bokhara were struggling to establish a constitution. As far back as 1910, this people had risen against the tyranny of their Emir, but then the rising had been quelled. As was known, an Anglo-Indian force had reached Baku from Persia in August last. It had to withdraw in September, after severe fighting, but, according to the *Kreuz Zeitung* of October 2, the whole Trans-Caspian Railway from Krasnovodsk to Tashkent was now in British hands. She hoped this might be true. The German menace to India was threefold: political, military, and economic. The Trans-Caspian Railway had been advanced until at two points the distance between the terminal points of the Russian and Indian systems was less than that between London and Edinburgh, and, if the Germans could bring Afghanistan under control, even though it were only economic control, and if they advanced the railway as far as Kabul, that would be no more than 150 miles from Peshawar. If the German road to India was assured, their economic penetration of that and the intervening countries would follow, and that would be for them a victory far greater than any that could have been won by military subjugation. The Aga Khan had urged us to meet the menace by building up a United States of India within the British Empire, and by exerting our influence to make Persia and Afghanistan independent national entities.

In another part of her lecture Miss Meakin described the life of the people of Russian Turkestan, illustrating her remarks with very interesting lantern slides, reproducing photographs which she had taken in that country. Among others was one of the tombs of the two standard bearers of Ali, the nephew of Mohammed. These tombs were much injured by vandalism, for every Turkoman visitor liked to take away two bricks as a memento. The inhabitants of Bokhara were, she said, the most strict and fanatical of Moslems, and their women were the most secluded in the world. In public they wore black horsehair veils.

Sir Thomas Holdich, who presided, said that Miss Meakin was one of the very few Englishwomen who had been to Bokhara. With regard to the gaps between the Trans-Caspian and India Railway systems, he was of opinion that the sooner the one between Herat and Quetta was filled in the better. He did not consider that the doing so would be dangerous from the military point of view, and as to the economic point of view trade followed the flag. With regard to the more northerly gap, he had conducted surveys over the Hindoo Khoosh, and, while he did not say it would be impossible to make a tunnel thirty or forty miles long through the hard limestone core of those mountains, it would be a very expensive operation. To his mind it was ridiculous to say that a way could be made there for the advance of a military force. A problem before us was that of Persia. The responsibility of safeguarding Persian interests would naturally devolve upon British shoulders now that the eastern schemes of both Russia and Germany had failed.

PRISONERS AT PHILIPPOPOLIS.

A repatriated British prisoner of war lately arrived in London from Philippopolis, Bulgaria, has described the terrible sufferings of the Serbian prisoners interned in the same camp. Men, women and children are herded together; 300 died in a fortnight last spring from starvation and malaria. There are no sanitary arrangements at all, and disease is rife; added to these miseries is the awful curse of vermin. The British suffered so much from this scourge that they found sleep impossible in the crowded huts and preferred the open air.

NEAR EAST BOOKSHELF.

WHITHER?*

Since Mr. H. G. Wells imitated Haggai at a distance, the rôle of minor prophet has become increasingly popular; but this is one of those many things which on the whole they do better in France, probably because the average Frenchman is neither an optimist nor a pessimist, but a logical person. M. Cambon is one of the best of a numerous batch. Sometimes he is frankly too severe: for instance, he cites statistics showing they have more telephones per head in Denmark, Sweden, and Norway than in France, and then asks impressively whether we can expect a France so handicapped to take its proper rank among the nations? Well, when Denmark, Sweden, and Norway equal the military, commercial, and scientific output of France we are prepared to believe that France is handicapped by the lack of the telephone bell; until then, it is a fair retort that the figures for insanity in every country except England—where everybody is proverbially more or less mad—happen to follow the figures of the telephone statistics rather closely. The lament, in fact, reminds us of the German boast of intellectual superiority on the ground that they publish more books in Germany than in England, to which the answer was made that if anybody could read German books there might be something in it; one judges not by statistics but by results, in fact. But there is a great deal of sense in many of M. Cambon's strictures, and some of his remarks might be read by English politicians with more profit than their own speeches.

HOLY RUSSIA.†

Mrs. Rosa Newmarch is well known in Western Europe as the populariser of Russian music. She has broken new ground in endeavouring to trace the influence of organised religion in that country. This vast subject is treated under three headings. First we have an Introduction which epitomizes the history of the "Orthodox" creed. There follows an anthology of quotations from Greek and Russian literature illustrating the relations between man, his Maker, and his fellow-creatures. A miniature Dictionary of Russian Authors brings Mrs. Newmarch's treatise to a fitting conclusion. Christianity in its present form dates from the fourth century of our era, so fertile in great dialecticians. SS. John Chrysostom, Basil and Gregory were protagonists in the fierce theological strife which evolved the bodies of dogma still current in Christendom. They endowed the Russian Church with its three "orthodox" liturgies, and until the recent upheaval were objects of special veneration. But five centuries of heathenism elapsed ere Christianity was introduced into Russia by two wandering monks from Constantinople. They found a powerful ally in Olga, widow of Igor I., Duke of Kiev, who embraced the new creed and made many converts. Her grandson, Vladimir the Great (980-1015), was baptised before his marriage with the sister of the Emperor Basil of Constantinople, and with a proselyte's red-hot zeal he imposed Christianity upon all his subjects. By this time the schism between the Eastern and Western Churches was complete, and Russia, which had received its creed from Constantinople, was governed in ecclesiastical affairs by the Patriarch of that city until 1575, when the usurping Tsar, Boris Gudenev, placed them under the rule of a native head. The independence of the Russian Church received a serious set-back from Peter the Great's Germanising reforms. He abolished the Moscow patriarchate and subjected religion to a Synod presided over by a layman. Russia had inherited a stringent form of monasticism from Constantinople; and all the higher Church offices are held by monks, styled the "Black" clergy to distinguish them from their "white" colleagues who serve as parish priests. During the Middle Ages Russian monasteries played the same part as our own. While the whole country lay prostrate under the Tartar yoke, they kept the lamp of learning alight, and were centres of the national life, which expanded rapidly when the "Yellow Peril" disappeared. Peter the Great, who seems to have been as ruthless an iconoclast as our Bluff King Hal, despoiled the monasteries and discouraged the spread of learning. But pilgrimages on an enormous scale brought untold wealth to the religious communities, and the war aroused them from prolonged lethargy. Some became military hospitals; others specialised in music, painting, and typography. It is quite possible that the great monasteries may once more become rallying-points for all that remains sacred in once Holy Russia. How has religion fared in the terrible cataclysm which has plunged the entire country in anarchy? Was it a mere crust of ritual and ceremony, powerless against the assaults of blatant atheism? The beautiful morality which shines in Mrs. Newmarch's excerpts from Russian literature proves the national soul to be capable of idealism in its highest form, and a note of hope is sounded by her remarks at p. 17:—

Never has any Church been more closely linked with the national life than that of Russia. It is this which endears it to all classes, even to those who have broken away from its teaching. . . . While I was in Russia in 1915 I was struck by the crowded state of the churches, and by the fact that the spirit of opposition to faith was in abeyance. And from those who have visited Russia more recently I learn that, so far, the Revolution has not kept the masses away from their religious duties. A secularised Russia offers as dreary a vision as the thought of this earth when its central fires have grown cold. Let us hope that the prospect is remote.

F. H. S.

GALLIPOLI BALLADS—AND OTHERS.*

There is a good deal of true philosophy in "The Anzac Pilgrim's Progress," and we enjoy the author's company from his first ballad, telling us how he "hears the call in Australia," to his last, wherein, after many adventures, he faces a fresh trial and comes off triumphant. "Sam" reminds us of Bret Harte's "Jim," but most of the ballads are distinctly, almost aggressively, original. For instance, here is just one verse from "The Sniper":—

But we crawled out one evenin' and *we* did a snipe,
An' he fell from his tree like a plum over-ripe;
We stalked that bush, an' to leave no doubt,
We rooted up Abdul an' bedded him out:
You cannot be hyper-
Soft with a sniper.

After that, it is hardly necessary for us to tell the reader that Lance-Corporal Cobber was at Gallipoli and saw something of the Turk. He also spent a good deal of time in Egypt, and he writes of his experiences, whether in the firing line or out of it, with humour and skill. Nor is he afraid of plain-speaking on occasion, as, for example, in "Somebody Missed the 'Bus," in which he reveals his feelings about the "queering" of the campaign. Here is the last verse:—

You can't fell an oak with an axe that's broke—
you can't do the work that's planned
If yer pard's too slow at the W.O. an' don't put
tools in yer hand:
Does his best, perhaps, but he leaves us chaps
stuck fast in the worst of hells,
To be baulked an' done, when we'd almost won,
for want o' supports an' shells.
Through a mug's mistake we are doin' a break, yet
though we must pack an' clear,
We will make good, sure, what we've lost an'
more—but it won't be now nor here.
An' nobody knows the blighter who chose
to soak us in such a mess;
We are doin' a guy, an' we don't know why, an'
can only partly guess.

BOOKS RECEIVED.

"Il y a Toujours des Pyrénées." By Jules Laborde. (Paris: Librairie Payot et Cie. 4fr. 50.)

"War Map of the Middle East, illustrating the Campaigns in Mesopotamia, Persia, and the Caucasus." Printed in colours. (London: W. and A. K. Johnston, Ltd. Unmounted sheet, 6d. net; on cloth, folded, 1s. 6d. net; on cloth, rollers, varnished, 2s. 6d. net.)

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1918. October	1918. October.		1337. Moharrem.	5679. Hesvan.
18	5	Friday	12	12
19	6	Saturday.....	13	13
20	7	Sunday	14	14
21	8	Monday	15	15
22	9	Tuesday	16	16
23	10	Wednesday	1	17
24	11	Thursday	18	18

The Countess of Bessborough has returned to town from Ireland.

Lady Howard de Walden has returned to 14, Bruton Street, for the winter.

M. M. Yovanovitch, Financial Secretary to the Serbian Legation, is seriously ill.

Admiral Lord Beresford is ill, and has cancelled all his engagements for the time being.

The Serbian Prime Minister, M. Pashitch, visited Mr. Lloyd George on Tuesday afternoon.

Mirza Abdul Ghaffar Khan, Counsellor to the Persian Legation, has arrived in London from Eastbourne.

Fathullah Khan Nourv, Secretary to the Persian Legation, has returned to London from Eastbourne.

The King of Serbia has conferred upon the Archbishop of Canterbury the highest Order of St. Sava.

The Secretary of State for Foreign Affairs has appointed Sir William Tyrrell as Assistant Under-Secretary of State for Foreign Affairs.

Mr. Srinivasa Ramanujan, B.A., research student, Indian mathematician, has been elected a Fellow of Trnity College, Cambridge.

The King has been pleased to approve the honour of a baronetcy being conferred on Sir Edward Richard Henry, G.C.V.O., K.C.B., C.S.I.

Lord Hardinge of Penshurst, who recently had the misfortune to break a leg while at Oakfords, Penshurst, is reported to be making satisfactory progress.

Mr. Lloyd George entertained at luncheon, on Tuesday, M. Venizelos, the Greek Prime Minister, and M. Stavridis, the Consul-General for Greece in London

Indian papers to hand by the last mail announce that Major Loch, political agent, Koweit, has been granted leave on medical grounds, and that Major Dickson will officiate.

A marriage has been arranged between Russell Landale, I.A.R.O., son of the late D. G. Landale and Mrs. Landale, of Limpsfield Grange, Surrey, and Gladys, daughter of the late C. N. P. Phipps and Mrs. Phipps, of Chalcot, Wilts.

M. Pashitch, the Serbian Prime Minister, entertained at dinner on Saturday evening the Archbishop of Canterbury, the Lord Chancellor, the Serbian Minister, Bishop Bury, Colonel Carnegie, Captain Yovanovitch, and several other guests.

Mr. E. S. Montagu, M.P., Secretary for India, has appointed Mr. Frederick Craufurd Goodenough, chairman of Barclay's Bank, Ltd., to be a member of the Council of India in succession to Mr. Laurence Currie, whose term of office recently expired.

A marriage has been arranged, and will shortly take place, between Lieutenant H. J. M. Ashby, R.N., younger son of Mr. and Mrs. Noël S. Ashby, of Culworth Close, Lyndhurst, Hants, and Mary, elder daughter of Mr. and Mrs. Edward Webb, of Cosham House, Hants, and Hindugalla, Peradeniya, Ceylon.

The King has granted permission to Miss Lilian Violet Cooper, M.D., and Miss Mary Josephine Bedford to wear the Insignia of the Fourth and Fifth Class respectively of the Order of St. Sava, conferred upon them by the King of Serbia in recognition of their services at the Scottish Women's Hospital at Ostrovo during the present war.

The King has been pleased to make the following promotion in the Most Eminent Order of the Indian Empire:—To be a Knight Grand Commander of the said Most Eminent Order.—Captain George Ambrose Lloyd, C.I.E., D.S.O., M.P., Governor-Designate of Bombay.

M. Venizelos, the Greek Prime Minister, arrived in London on Sunday. At the station were M. Gennadius, the Greek Minister; M. Demetrius Caclamanos, Minister specially attached to the Legation; M. Kyriakos Venizelos, M. Jean A. Caradja, and several members of the Greek Colony.

The Mesopotamia Comforts Fund for the British troops, it is hoped, will receive substantial support on Sunday afternoon, the 20th inst., when a grand matinée is to be held at the Alhambra Theatre in its aid. Prince Arthur of Connaught has given the entertainment his patronage, and Lady Alexander, with the aid of Captain Charles Hunt Helmsley, is organising the programme.

Under the auspices of London University Zionist Society, on October 19, at 7.15 p.m., at the Jew's College, Queen's Square, Guilford Street, Mr. S. Tolkowsky, of Jaffa, will lecture on "The Battles of the Bible."

Miss Annette M. B. Meakin, F.R.G.S., assisted by ladies in native dress, will give a lantern lecture on "The Closed States of Central Asia and the Women of Bokhara" at the Wigmore Hall this evening, at eight o'clock.

By invitation of the Manchester Syrian Relief Fund, Bishop McInnes will this evening address a public meeting at the Association Hall, Manchester, on Syria and Palestine. Sir Edward Tootal Broadhurst, Bart., will preside.

The following lectures have been arranged to be delivered at the School of Oriental Studies, Finsbury Circus, on the dates named, at 3 p.m. in each case:—October 23 and October 30, "Turkish Literature," by Dr. E. Edwards. M.A.: November 6, "The Popular Literature of Northern India," by Sir G. Grierson, November 27; "Turkish Literature," by Dr. E. Edwards. Admission to the lectures is free.

APPOINTMENTS, PROMOTIONS, ETC.

Dr. Svetislav Dioritch has been appointed Secretary to the Serbian Legation in London.

The Hon. Mr. H. C. Ferard has been appionted Vice-President of the United Provinces Legislative Council.

Kaimakam C. Northcote Bey, Governor of Mongalla Province, has been granted the temporary rank of Miralai.

Mr. A. H. Ley, who has been relieved by Mr. Low as Secretary to the Government of India, Commerce and Industry Department, becomes Joint Secretary to the Government of India in the same department.

The following Memorandum was published in last Friday's *London Gazette*:—Brevet Colonel (temporary Brigadier-General) W. C. Black, Indian Army, retains his temporary rank whilst employed as Commandant of a Training School in India. July 5, 1918.

M. Grouitch, who was for many years Serbian Minister to the Court of St. James's, has been appointed Envoy Extraordinary and Minister Plenipotentiary to Washington.

OBITUARY.

Captain W. St. Clair Grant, M.C., Cameron Highlanders, who was killed on September 26, was the only son of the late W. St. Clair Grant, Bhagalpur, Bengal, India.

Lieutenant-Colonel Edward Hills Nicholson, D.S.O., Royal Fusiliers, who is reported to have been killed in action, had seen service in India, and at the outbreak of the war he was Adjutant of Volunteers in India.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

Digitized by Google

Lady Macpherson died at Shiplake on October 8. She was the daughter of Colonel George Luard, of the Madras Army, and married in 1869 Sir William Macpherson, Judge of the High Court, Calcutta, who died in 1909.

Lady King, wife of Sir Henry Seymour King, K.C.I.E., died very suddenly on Saturday at Cornwall Gardens. She was Julia Mary, daughter of Dr. John Jenkins, of Montreal, and was a Lady of Grace of the Order of St. John of Jerusalem. Sir Henry and Lady King were married forty-three years ago.

Brigadier-General Stuart Campbell Taylor, D.S.O., died on October 11, of wounds received ten days earlier. He served with the Tirah Expeditionary Force ('97-'98), and received the medal with two clasps, and during the international occupation of Crete he was Staff Officer, British troops. He retired in 1911, but was re-employed on the outbreak of war.

Colonel Francis Cracroft Colomb, late of the 6th Gurkha Rifles, died on October 13 at Bath. He was the second son of the late Vice-Admiral P. H. Colomb. He served with the Burmese Expedition of 1885-9, for which he had the medal with two clasps, and accompanied the Chin-Lushai Expedition of 1889-90, for which he was awarded a clasp.

Lieutenant Douglas Woulfe Hay, M.C., Middlesex Regiment, who was killed in action on September 28, was the son of Lieutenant-Colonel H. T. H. Hay, of Stanley Lodge, Cheltenham, late Indian Army, and grandson of the late Major-General Woulfe Hay, Indian Staff Corps.

Colonel William Bell, late of the 56th Regiment and the Army Pay Department, has died at Stirling, at the age of eighty-two. He served during the Indian Mutiny with the field force in pursuit of the rebels into North Canara and the Goa Frontier, and also with the Egyptian Expedition of 1882.

Sir Charles Edmund Fox, K.C.S.I., late Chief Judge of the Chief Court, Burma, died on October 9 at Bigsweir House, St. Briavels, Gloucestershire, aged 64. He served as Government Advocate, Burma, from 1884 to 1900, and was then appointed Judge of the Chief Court. He was a son of the late John Fox, of St. John's, Newfoundland, and married Ethel, daughter of Sir Charles Hobhouse, Bt.

Lieutenant-Colonel Edward Stephen Gibbons, D.S.O., Middlesex Regiment, attached Highland L.I., who was killed on September 19, was the younger son of Sir William Gibbons, K.C.B., and Lady Gibbons, of Pine Grove House, Weybridge. He received his commission in December, 1902, and served on the North-West Frontier of India in 1908, taking part in the operations in the Mohmand country, for which he received the medal. In October, 1914, he was severely wounded, and afterwards served in a school of instruction in Egypt, becoming commandant of the school and being promoted lieutenant-colonel in May, 1917.

NEWS IN BRIEF.

A conference of ruling Princes will open at Delhi early next month.

Greek residents in Australia have telegraphed their congratulations to M. Venizelos upon the surrender of Bulgaria.

A Sofia despatch announces that General Oukoff, commanding the 2nd Bulgarian Army, has been appointed Chief of the General Staff.

The Bucharest express was derailed on Friday night near Piatra. Over a hundred passengers were killed and two hundred seriously wounded.

The establishment of a school at Lahore for maimed and disabled soldiers is under the consideration of the Punjab Government, and if the scheme be found workable it is hoped to open the school during the cold weather.

According to German newspapers the Austro-Hungarian Government has protested to the Bulgarian Government for accepting the Entente armistice conditions, whereby Austrian subjects have to leave Bulgaria within four weeks.

General Milne, Commander-in-Chief of the British Forces in Macedonia, has addressed the following message to the Greek troops which took part in the battle of Doiran:—"On the first occasion that Greek troops have fought by the side of British troops I desire to express my admiration for the manner in which they carried out the work assigned to them. You have routed the Bulgarians. I thank you for the fine spirit you have shown, which is beyond all praise."

The Government of India has decided that as a means of relieving pressure on the department the tariff for ordinary inland private telegrams should be increased to a uniform rate of one anna a word, with a minimum of twelve annas; and that the rate for express telegrams should be raised to a uniform rate of two annas a word with a minimum of one rupee and eight annas. It has also been decided to follow the example of the United Kingdom and British Dependencies and increase the Indian letter postage rate to these destinations from one anna per ounce to one and a half annas for the first ounce and one anna for each additional ounce or fraction of an ounce.

The Tangier correspondent of *The Times* reports that the Germans have lately been distributing large quantities of propaganda literature in the Spanish language in Ceuta and Tetuan. German agents appreciate that recent events in France have somewhat modified the friendly sentiments of their quondam neutral supporters, and that an effort must be made to maintain their attitude of sympathy. Notwithstanding their endeavours, the change of public opinion of the Spanish in Morocco in favour of the Allies is very marked.

The Secretary of State for India is prepared to receive applications for a limited number of appointments to the Indian Forest Service from men who served at the front and who have been discharged from the Army owing to injuries, but whose physical disabilities have not unfitted them for the work of a forest officer, and who are well educated and otherwise suitable for service as officers in the Forest Department. Evidence of education approximately up to University standard, and also as to nationality, age, and character, is required. Applications should be made on a printed form, to be obtained from the Revenue Secretary, India Office, Whitehall, London, S.W.1.

Immediately after the British occupation of Northern Palestine Dr. Eder and Cavaliere Bianchini, members of the Zionist Commission in Palestine, visited the newly freed Jewish colonies of Chedera and Zichron Jacob. They found that there is a need for funds to replace cattle which the Turks took away from the colonists, as well as to restore damaged property and renovate farms.

A party of Indian editors is now in this country on a visit that is expected to last several weeks. The members of the party are: Mr. Sandbrook, editor of the *Englishman*; Mr. Mahbub Alam, of the *Parsi Akhbar*, of Lahore; Mr. K. Iyenagar, of the *Hindu* (Madras); Mr. Hemendra Prasad Ghose, of the *Basumati* (Calcutta); and Mr. Gopal Krishna Davadhar, of the *Dnyan Prakash* (Poona).

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.). ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.
Terms from: Pension, P.T.60; Lunch, P.T.20;
Dinner, P.T.25.

HOTEL SOMERSET,
ORCHARD STREET (by Selfridge's) OXFORD STREET, W.
Most comfortable and home-like Establishment. English cooking a special feature. Eggs, Butter Poultry direct from the farm.
200 well-appointed bedrooms with fitted basins (h. & c.) 30 bath-rooms
15 private Suites. Passenger lift. Own Artesian Well.
Magnificent Georgian Dining Hall (100 tables.)
Inclusive terms from 10/- to 14/- daily; 3 to 4½ guinea- weekly.
Double room 16/- to 21/- daily; 5 to 7 guineas weekly.
Bedroom, bath, breakfast (3 courses) 7/6 daily.

INDIAN REFORMS AND ENGLISH CRITICS.

More than three months have now elapsed since the publication of the official proposals for Indian constitutional reform, and the declared object of eliciting criticism has been so thoroughly attained that the man in the street may be pardoned if, amid all the momentous events of the period, he finds himself unable to assimilate the varied assortment of rhetoric and reasoning which the discussion has brought forth. It is worth while, therefore, to restate the questions at issue, and to attempt to disentangle essential matters from the mass of accidents and trivialities by which they are obscured. To begin with, stress must be laid once again on the distinction between policy and machinery, a distinction which is perfectly clear, but which has been frequently overlooked by those critics whose hostility to the end embitters their attacks upon the means. The policy of a gradual approach to responsible government has been adopted by the British Cabinet, it has been accepted by the Empire at large, and in our view it is not open to discussion. Following on the announcement of policy, we have the official sketch of the machinery by which it is proposed to realise this ideal, and while the ideal itself is beyond question, the proposals call for clear thinking and outspoken criticism before any attempt is made to put them into practice. Now, while there has been no lack of outspoken criticism, the amount of clear thinking which has been contributed is disappointingly small, and we can therefore safely neglect much that has been written, and concentrate our attention on those critics who have manifested the qualifications indispensable for their task. Practically all the arguments which have been advanced by this select body against the official scheme may be found in the pamphlet written by Sir John Hewett and published recently by the Indo-British Association, and a more enlightening summary of the opposition view is not likely to be produced. No one can call in question the writer's claim to be heard; recognised in India as one of the outstanding administrators of the time, he can speak with authority on all administrative questions, and while we may regret that he has not seen fit to offer constructive proposals on his own behalf, we must allow that many of his criticisms are deserving of the most careful attention. In particular we would point to his remarks on the proposed financial arrangements, on the excessive burden imposed on provincial Governors, a blemish on which stress has been laid in these columns, and on the risk that the productive departments, and consequently the economic interests of the masses, may suffer from the inexperience of the Indian Ministers to whose charge they may be transferred. All these matters are of real and practical importance, and we have little doubt that the authors of the official proposals will welcome the criticisms of an expert administrator as indicating the weakest points of their ambitious scheme; but at the same time we do not consider that the objections of an administrative nature are sufficient by themselves to support a verdict of general condemnation. The scheme does not come before the public as a sacrosanct entity; some of its features are good, if others are bad, and if the latter can be corrected in the light of expert criticism, we see no reason why a workable constitution should not result.

The case is otherwise with a second class of criticisms, which strike at the very heart of the official proposals. Sir John Hewett, for instance, apprehends that the scheme "is designed to hand over the Legislative Councils bodily to the educated classes, and to place the Executive Government under the control of the Legislative Councils"; he asserts that the effect will be to transfer "every act of government to an irresponsible, and what must be an unrepresentative, body of politicians"; and he concludes with the pious aspiration, "God help a government of educated Indians, when the people come to realise that they are being badly governed by it!" Now it cannot be denied that such results as these would be fatal to the scheme regarded as a whole; the policy of introducing responsible government could not possibly be carried out by establishing a government unrepresentative of the people, and ruling them, whether well or badly, without their consent, and since the policy is settled, any machinery which will not secure its realisation stands absolutely condemned. Here, however, it seems to us that Sir John Hewett, and the other critics who take the same line, are too ready to anticipate the worst. They take it for granted that an irresponsible oligarchy is to be placed in power, and they have no difficulty in showing that of all possible events that is the very worst thing which could happen to the Indian peoples considered as a whole. But must this result be regarded as inevitable? Is there no possibility that the councils will be reconstituted on a genuinely representative basis, so that the members shall be in fact responsible to the people whose affairs they will control? The answers to these questions have to be furnished by the Franchise Committee, and seeing that the constitution of this body has only just been announced, and that there has been no opportunity for the members to indicate the spirit in which they approach their extremely difficult task, it appears to us to be scarcely fair to anticipate that their report will prove effective representation to be unattainable. The terms of reference require the Committee to advise on franchise and constituencies, "with the object of securing as broad a franchise and as representative a Council as present circumstances in each province permit"; with this object in view, attention is directed to various methods of making representation effective and full recognition is afforded to the interdependence of Franchise and Functions, so that the powers to be transferred to Indian Ministers will vary with the effectiveness of representation in each province. The task thus set is one of very great difficulty, and the possibility of failure must be faced, but until the Committee's conclusions have been formulated, we are not disposed to regard failure as the inevitable result.

Let us assume for the moment that an effective scheme of representation will be found to be possible, so that the members of the Councils shall be in fact responsible for their actions to the mass of Indian opinion, and not as at present merely to a few active individuals. In that case, it is obvious that the criticisms we are considering are beside the mark; their assumed basis will be non-existent, for if the people do not like their government, they will be in a position to replace it by another, and though there may be some awkward misapprehensions at the start, the lesson will be quickly learned. If, on the other hand, we assume that effective representation will be found to be impossible, the result will undoubtedly be fatal to the whole official scheme. The essence of that scheme is a measure of responsible government from the outset, and since responsibility depends on effective representation, the scheme will on that assumption be proved to be impossible, and even should its authors be disposed to persevere, the political sense of the Imperial Parliament would ensure the rejection of proposals directly at variance with the policy it has accepted. Thus we reach the conclusion that while the administrative details of the official constitution are in some important respects open to the criticisms which have been directed against them, the constitution as a whole cannot yet be fairly judged; it must stand or fall by the report of the Franchise Committee, and until the work of the Committee has been accomplished, the ordinary man will be justified in disregarding the prophecies alike of critics and of enthusiasts.

NOTES ON EASTERN CARPETS.

(From a Correspondent.)

Antiquity of Carpet Weaving.

While it is not possible to state when the first rug or carpet was made, there can be no doubt that it was before the Pyramids were erected or the palaces of Babylon had risen from the plains. At Beni Hassan, in Egypt, the rock-cut tombs contain scenes showing men with spindles and looms, carrying us back to 2,500 B.C., and similarly, from the ruins scattered up and down the Tigris valley there has come unmistakable evidence of the antiquity of the art. In the palaces of Nineveh there are elaborate drawings of carpets, showing that the art of weaving them had reached a high standard three thousand years ago. The borders of the robes illustrated by those old artists even exhibit some of the designs that are popular in these modern times.

During the Sassanian period—226 A.D.-632 A.D.—carpets of elaborate design and finish were produced in Mesopotamia. In 637 A.D. a colossal carpet, of 1,051 square metres, originally made for Chosroes I., was found at Ctesiphon by the Arab invaders. On these enormous carpets were represented pleasure gardens, with brooks and paths bordered by trees and flowers; but, regardless of design, the one referred to was cut up and divided as booty among the soldiers. Its value was estimated at a million dollars.

In the days of the Khalifate (632-1258 A.D.) the Moslem rulers encouraged their conquered subjects to fresh efforts in the art, especially in Syria and Egypt; and we read of a carpet, interwoven with silk, which was 300 feet long and 150 feet in width. The Egyptian palaces were carpeted with silk and satin materials, and the mosques of Spain were similarly furnished. Some specimens woven in silk and gold exhibited portraits of royal families, and must have been similar in appearance to Gobelin tapestries. Not all these carpets were made in Syria and Egypt: some were made in Armenia, Assyria, and Kurdistan; while the most elaborate and costly are said to have come from Persia, which at a very early date was celebrated for the artistic character of its work.

These carpets consisted of warp and weft only, and were doubtless produced more rapidly than modern rugs, in which knots are tied to the warp. They, however, lacked the deep, heavy pile of later carpets; but they were elaborate in gold and silver and precious stones.

The Modern Period.

No relics of these floor coverings of ancient times have come down to us. It is believed that a few examples belonging to the thirteenth or fourteenth centuries still exist, but it is difficult to make any trustworthy estimate of the age of these pieces. It is probable that the oldest remains belong to the Mongolian period, commencing with the first half of the thirteenth century. Their archaic patterns indicate a remote origin, and early Mongolian influences are suggested. Similarities of design found in early tiles, metal work, pottery, and miniatures of established age give a rough indication of the date of these carpets.

"Hunting Carpets."

When we reach about 1400 A.D., we are on less debatable ground. We can institute comparisons as to design, colour, and drawing; and hence the development from the Mongolian tradition, with the formality of its stiff, geometric patterns and harsh foliate forms, to the artistic and free-flowing lines of a more advanced art, with its rhythm of graceful Arabesque. The earliest carpets in which animals—of archaic draughtsmanship—figure in the design are believed to date to about 1300 A.D., but it is only at the beginning of the sixteenth century that we note the appearance of finer examples, displaying masterly representations of animal and floral life. The best of these "hunting carpets" date from the latter half of the sixteenth century. Persian manuscripts of the same period, with their wonderful illustrations and borders, give us an idea of what these masterpieces must have been like. In this connection it is of interest to note the resemblance between the drawings of animal subjects as found in these "hunting carpets" and those on Iranian monuments, in Persian manuscripts and in manuscripts dealing with animal life by the Mogul artists in India. Some of these pieces are excellent examples of the artistic development of the early Safavid dynasty. They were rarely woven later than the end of the sixteenth century. The highest technique of this period of the Safavid dynasty is to be seen in the great Ardebil carpet now in the South Kensington Museum,* which is dated 1539 A.D. The very finest of the Persian carpets seem to have been dedicated to the service of the mosques, and no choicer example than the Ardebil carpet is in existence. It is interesting to trace the Mongolian tradition in this advanced period of carpet weaving, as may be done in the geometric patterns of the border. The same patterns are to be seen in carpets woven in the Caucasus during the last 200 years and in those woven in Central Asia, which are the direct descendants, so to say, of the early Mongolian carpets.

"Iranian" Carpets.

Most of the antique Iranian carpets that remain in existence to-day were woven in the northern provinces, though it is well known that carpets of elaborate design and skilful workmanship were produced in South Persia. In fact, many of the pieces for the palaces and mosques of Egypt came from Fars and Kerman. The latter place has long been a centre of manufacture for the textile industry; yet there are in existence but few specimens of its art dating back three or four centuries. Mongolian tradition is rarely to be traced in these purely Iranian carpets, which represent the native art unaffected by foreign influence. It is, however, often a matter of considerable difficulty to determine in what locality an antique rug was woven.

Silk Rugs.

The silk carpets were the choicest products of weaving, and the work of the most skilled artists. That they were held in just esteem is clear from the fact that they were often sent as presents to foreign Courts. For instance, it is known that in 1566 Shah Tamasp sent a number of such carpets to the Sultan at Constantinople.

Another ruler, Shah Abbas I., is associated in history with the manufacture of the celebrated "Polish" silk carpets, and it would seem that these were made under the patronage of his Court. Authorities estimate that about 200 of these carpets are owned by collectors. They are supposed to have reached Europe between 1604 and 1650, and are regarded as examples of the highest form of Eastern art. In them can be seen designs representing the best types of the Mongolian, Sarascenic, and Iranian influence. From their designs have been evolved the conventional and less elegant designs of modern Persian pieces. It is, perhaps, worth noting that it is a common practice in Persia at the present day to call any old carpets of which the place of manufacture is not known "Shah Abbasis."

So-called "Ispahanis."

It was during the reign of this monarch and his immediate successor that most of the so-called "Ispahanis" were woven, though they appeared as early as the fifteenth and some of them as late as the seventeenth century. They are believed to have come from Herat, where magnificent carpets were woven as early as the days of Shah Ismail. In fact, Herat seems to have been as important as an art centre as Tabriz. Ispahan is credited with some of these carpets, and it is probable

*This carpet has now been taken down, and is temporarily packed away in a safe place, protected against air raids.

SPECIAL NOTICE.

"White Horse Whisky" Diary for 1919.

Messrs. MACKIE & CO., Distillers, Ltd., Glasgow, London, and Island of Islay, desire to inform holders of their "White Horse" Diary for 1918 that the new Diary for 1919, shortly to be issued, will not, owing to war conditions, be supplied with the usual leather covers. The outer leather cover of the 1918 Diary should therefore be preserved for use with the issue for 1919, the latter to be inserted inside the elastic band after removing the old book.

that the industry and the art existed in many parts of the widespread Persian empire. In almost all the "Ispahan" carpets the design includes the Palmette, Chinese cloud-bands, and the Arabesques. These, though subject to modification in size and shape, were almost constant motives.

PRESS ON THE NEAR EAST.

A Splendid Mosque.

The following interesting note upon one of the former glories of Damascus is extracted from an article, "Damascus: The Pearl of the East," which appeared in *Country Life* of October 12:—

The greatest building in Damascus, and probably the greatest Mohammedan building in the world, was the Umayyad Mosque. Originally a Christian church dedicated to St. John the Baptist, it was transformed into a mosque by Caliph Walid I. The stories of its building read like ancient fable. Eighteen shiploads of gold and silver were sent to it from Cyprus. It had 600 golden lamps hung on golden chains. So much lead was required for the roof that the very tombs had to be ravaged in order to find it. Nothing was left to tell of its Christian origin except the inscription over the door, "Thy kingdom, O Christ, is an everlasting kingdom, and Thy dominion endureth throughout all generations." But this magnificent mosque was destroyed by fire on October 14, 1893, and its antiquities to a large extent were lost; so that the glory of it departed and little was left to suggest what must have been there when the Caliph, refusing to look at the accounts brought to him on eighteen laden mules, ordered that they should be burned, and said to the inhabitants—"Men of Damascus, you possess four glories above other people; you are proud of your water, your air, your fruits, your baths; your mosque shall be your fifth glory." The architecture of the mosque was Byzantine in style, and the craftsmen who built it were brought from Constantinople, while the old columns were stolen from many of the Syrian towns.

Enver and Talaat.

In a leading article on Turkey the *Yorkshire Observer* expresses views that are probably shared by most people regarding Enver and Talaat. It says:—

It would indeed have been strange if Enver and Talaat had remained in office to negotiate with the Allies. Neither could have been trusted. They are the Turkish henchmen of Germany, imbued with German savagery. Under their régime Turkey has pillaged and massacred, prisoners in her hands have died by hundreds, and a year ago Enver and Talaat refused to ratify a Convention for the exchange of prisoners. The Allies, indeed, would have been justified in refusing to treat with them. . . . It is only a few years ago that the Young Turk movement held the interest of Europe, and that there were strong hopes of a new and vastly improved régime in Turkey. Talaat and Enver were two of the leaders of that movement. How little these hopes have been justified! Turkey, indeed, has sunk further into ill-repute, and now awaits the vengeance of the Nemesis whom her many misdeeds have offended. The lesson must be salutary. We may then be justified, perhaps, in hoping that, having learnt it, the circumscribed Turkey of the future will apply it, and earn by her changed conduct admission to the new comity of peaceable and democratic nations which it is our plan and hope to establish.

"The Peace that India Wants."

Under the above title an article by Dr. T. M. Nair appeared in the *Evening Standard*. The writer begins:—

In settling the final terms of peace, I hope that the component parts of the British Empire which have taken a hand in the game of war will be given a hearing. Indians have fought in many theatres of war side by side with soldiers from other parts of the Empire. But their services are particularly associated with the conquests of German East Africa, Mesopotamia, and Palestine. The future of all these countries is intimately connected with the security and development of India.

He then refers to the German hope of reaching India by way of Baghdad and the Persian Gulf, and, after expressing his thankfulness that the scheme miscarried, continues:—

When Russia collapsed fairly early in the present war it was the fate of India that trembled in the balance. We had a great shock in India. We don't want another. We should like to see the British Empire in our part of the world consolidated in such a manner that it would be unassailable. We need not be too proud to take a leaf out of Germany's book. There are many dirty and untouchable pages in that book, but there are a few useful ones too. The Germans wanted to spread in two directions—from Berlin to Bombay via Bagdad, and from Berlin to Lake Chad via Egypt. After all that we have paid in blood and treasure it would not be unreasonable if we attempted to consolidate the British Empire in Asia and Africa by a Calcutta-Cairo-Cape Town railway—all British.

The project, he urges, is more practicable than the German Berlin-Baghdad-Bombay scheme. German East Africa was the only obstacle to a British Cape-to-Cairo line; and that obstacle is now removed. As to Persia, Dr. Nair believes that a friendly settlement could be reached. He concludes:—

Such a consolidation of the British Empire in Asia and Africa is needed more in the interests of civilisation than of the British Empire itself. There is only one difficulty in the way, and that is the possibility of sickly sentiment getting the upper hand of common sense in this country and America. If sentiment decides to conclude a peace on the terms of "As you were," of course we will all go back to the pre-war days and conditions and may start preparations for the next war, looking upon the war that is over as only a positive check to over-population of the world.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Indian Reform. Oct. 15.

Lord SYDENHAM asked whether Mrs. Besant's statement that she was permitted to see and discuss an early draft of the report of the Viceroy and Secretary of State was correct, and, if so, to what other persons similar privileges were accorded.

Lord ISLINGTON (Under-Secretary for India) said the Secretary of State did not afford Mrs. Besant the opportunity of seeing a draft report of the proceedings as suggested in the question. The Secretary of State and the Viceroy took every opportunity to interview, informally and confidentially, all classes of the community in India, and in the course of those interviews they submitted proposals which would give effect to the announcement of August 20. That, he understood, was the entire extent to which Mrs. Besant had access in regard to what was now embodied in the important Report of the Secretary of State and Viceroy. The Secretary of State and the Viceroy had offered Mrs. Besant no privileged position beyond that which had been given to other representatives of Indian opinion.

The Rowlatt Report.

Lord SYDENHAM said the Rowlatt Report was a matter of extreme importance. The story told by the Rowlatt Committee was that of a most amazing criminal conspiracy, a conspiracy which had its ramifications extended over half the world. There seemed some reluctance, both here and in India, to publish the report, and he hoped some explanation would be made of the matter.

Lord ISLINGTON said that on July 19 instructions were given by the Secretary of State to send 20,000 copies of the report to this country as quickly as possible. Unfortunately, owing to a misunderstanding, they were not despatched until October 9, and he was afraid they would not be here for some considerable time. The Secretary of State, realising the importance of the document and the public interest in it in this country, and the fact that it had been issued for some time in India, had given instructions for it to be reprinted in this country and to speed delivery. It was hoped to lay it before Parliament in a fortnight or three weeks at the latest.

HOUSE OF COMMONS.

British Prisoners in Turkey. Oct. 15.

Sir G. CAVE, replying to a question by Mr. Joynson Hicks, said: Instructions have been given that, in the event of an armistice being concluded with Turkey, the immediate and unconditional release of British prisoners will be made a condition of it.

IN HONOUR OF SERBIA.

M. Pashitch, the Serbian Prime Minister, was the guest of the Lord Mayor at luncheon at the Mansion House on Monday. Mr. Balfour, who was to have been present, was unavoidably prevented from attending, as he had to attend a Cabinet Council. Among those present were Lord Burnham, Lord Reading, the Greek Minister, M. Take Jonescu, the Roumanian Charge d'Affaires, M. C. Miyatovich (formerly Serbian Minister), M. Milan Rakitch, Colonel Yovanovitch, Major-General Sir George Younghusband, Mr. T. P. O'Connor, M.P., Sir E. Denison Ross, Mr. Joynson-Hicks, M.P., General Sir Ian Hamilton, M. Paul Marinkovitch, M. V. Marinkovitch, Alderman and Colonel Sir Charles Wakefield, Alderman Sir Edward Cooper, Colonel G. Ostoich, Colonel Cobbett, M. Peritch, Dr. R. M. Burrows, and M. N. Voukitchevitch.

The Lord Mayor, in proposing the health of M. Pashitch, announced that he would send a congratulatory telegram to the Prince Regent of Serbia, expressing gratitude for the magnificent service which he had rendered to the Allied cause. He expressed the confident hope that Serbia, whose valiant soldiers were bearing a magnificent share in the conflict, would soon be completely restored.

M. Pashitch said that Serbia, in defending herself, had staked everything. Serbia was grateful to Great Britain and the other Allies who had helped her against the brutalities of Prussian militarism. She would never forget the help of her noble Allies, who had shed their blood for the common good of mankind. They hoped that their Allies would help them in the reconstruction of their ruined country and the unification of all Serbs, Croats, and Slovenes, in accordance with the principles laid down in the Declaration of Corfu.

Lord Reading, in proposing the health of the Lord Mayor, said that Serbia had indeed played a noble part. She had suffered as perhaps no nation had suffered. She had given a magnificent example of what could be achieved when a nation's soul stood for right and for justice.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The appointment to the Council of India of Mr. Frederick Craufurd Goodenough, chairman of Barclays Bank, is most welcome as giving the Council a representative of finance on this side. It will be remembered that the Indian Finance and Currency Committee recommended that there should be members on the Council representing Indian official finance, Indian banking and commerce, and the London money market. The new appointment completes the representation on the Council of these classes of experience.

***

The Times has published a most interesting message from its Singapore correspondent to the effect that news has been received there that the export of rubber from the Dutch Indies has been stopped. The correspondent states that the impression is prevalent in commercial circles that Holland is holding large stocks of rubber, copra, sugar, tin, and other raw materials to meet Germany's requirements at the close of the war, and adds that it is presumed that Germany has guaranteed higher prices than are available elsewhere in order to induce Holland to stock on her behalf. This would seem to indicate that Germany hopes to depend on neutrals as channels of supply of the raw materials which she formerly drew from the British Empire and our Allies. Pending further information it is not necessary to add anything on this aspect.

***

I may, however, point out that the message is also of particular interest in relation to the rubber industry, for if it is correct that Germany is endeavouring to arrange for the import of large quantities of the natural product it throws a rather significant light on the hopes entertained in that country as to the immediate future of artificial rubber. This question was discussed recently by *Vorwärts*, which cited the erection of additional rubber factories as an indication of the progress made in the manufacture of the synthetic product, but said that its successful competition with natural rubber must depend on the purpose for which the substitute is required. "Generally a doubt may be expressed," says this journal, "whether synthetic rubber can stand the test, especially in view of the present selling prices, which are many times greater than the prevailing prices on the London rubber market."

***

A certificate has been issued by the War Office declaring that the vilayets of Basrah and Baghdad, excluding the district of Anah on the Euphrates, may now be regarded as territory in friendly occupation. In virtue of this certificate firms in this country will no longer have to obtain licences under the special legislation with regard to trading with the enemy before corresponding and trading with firms in the districts mentioned. I need not add, however, that import and export licences will still have to be obtained for goods the import of which is prohibited into the United Kingdom or the export of which is prohibited from the territory in question.

The great year in the Indian coal industry was 1908, and since then, with the exception of two brief advances, there has been no continuous forward movement in the prices of coal shares. Hitherto war conditions have not had the influence that might have been expected, but the mail papers record that an increasing activity in the market set in towards the end of August, and the question was then being discussed whether another movement similar to that of 1908 was not probable in the immediate future. As to that, I prefer to express no opinion, but I may point out that the reason for this activity is the fact that the growing demand for coal in India—a demand which cannot be adequately met in existing circumstances—has at last begun to have a definite influence on the situation. The opinion is held that in the face of this demand the price of coal must rise, and, of course, if this view is justified the price of coal shares will no doubt go up.

***

The marked stimulus which the war has given to sugar cultivation in India is emphasised by the output for 1917-18, when the crop is estimated to have been about 500,000 tons larger than in the previous year, the figures being 3,229,000 tons, against 2,728,000 tons. The methods of working this crop are stated to give scope for considerable improvement, and it is believed that it would be possible very greatly to increase production by cultivation on a more scientific basis and by the free application of fertilisers. It is to be hoped that every effort will be made to improve matters in this direction, as India ought to be an exporter of sugar on a large scale, instead of depending, as she does, on Java and Mauritius to supplement her production for internal consumption. The sugar industry in India and in other parts of the Empire will never flourish, however, unless those who invest their capital in it have State support to enable them to meet the effects of foreign bounties. Is it too much to hope that this question will receive attention before the post-war competition begins?

***

I understand that the prices for Greek tobacco this year are much lower than those for 1917, and will approximate roughly to those of the previous year. It has been a good year for tobacco throughout the Near East, and it is possible that prices may touch a much lower level than at one time seemed probable. If the general war situation develops favourably Greek tobacco growers will find compensation for this feature in having much less difficulty in disposing of their produce.

***

I am indebted to a valued correspondent for some interesting particulars which he has received from a friend who recently left Constantinople regarding the economic conditions there as recently as last July. The position had by then become difficult in the extreme, and the prices that were being charged for food and clothing would of themselves suffice to explain the growing dislike of the Turks for their allies, the Germans, whom they naturally regard as the authors of their misfortunes. A few examples, typical of the changed scale of values, will serve to illustrate the increasing strain on the resources of the individual Turk. Cheese was then 400 piastres an oke, roughly 25s. 8d. per lb.; red mullet, haricot beans, and meat each cost 108 piastres an oke, or 6s. 11d. per lb.; cucumbers cost 20 piastres each, or 3s. 7½d.; fruit and vegetables cost 25 to 40 piastres an oke, or 1s. 7d.—2s. 7d. per lb.; fancy cakes, which cost 2d. before the war, were 8d.; while charcoal cost 12 piastres an oke, or 9d. per lb; and the correspondent in question says that very few people were in a position to do any cooking at all. The prices of clothing, he adds, were "simply fantastic," while a pair of child's boots cost 67s. 6d. An incident related by the correspondent throws a vivid light on the effect of these conditions and the general shortage of the necessaries of life. "It seems," he says, "that one day at Stamboul some Turkish women laid themselves down across a railway line to prevent a train leaving which was loaded with merchandise for Germany." This action of the weaker sex in Turkey speaks for itself.

***

The Treasury has now appointed a committee to inquire into the gold question, consisting of Lord Inchcape (chairman), Sir Thomas Elliott, Sir Charles Addis, and Mr. W. H. N. Goschen. The committee's terms of reference are "to consider and report upon the effect of the war upon the gold production of the British Empire, with reference more particularly to the treatment of low grade ores, and how far it may be of importance to national interests to secure the continuance of the treatment of such ores, and, generally, how to stimulate the production of gold." Three of the foremost London bankers are included on the committee, and its composition should give every satisfaction to those who have been prominent in bringing the serious position of the gold industry before the authorities.

***

Gold producers, who, naturally, have no direct representation on the committee, will be able to bring their point of view forward through the Committee of Gold Producers, which was to meet this week to decide upon the presentation of the case for the industry. It is little use discussing at this juncture the probable recommendations of the producers, or the most likely line of action to be taken by the committee, and I will merely point out that in some important quarters the view is held that the best solution is that the Government should enter into a contract with gold producers for the purchase of all gold produced at a price calculated to maintain the highest rate of production.

***

General regret will be felt at the news that Lord Shaughnessy has decided to resign the presidency of the Canadian Pacific Railway. He has held that position for twenty years, and it would not be going too far to say that many of the most valuable developments of that great undertaking during the period in question were due to his skill and guidance. His decision is due, it is stated, to the conviction that in view of the extensive programme of reconstruction after the war the best interests of the company will be served by a younger man assuming the office. He will be succeeded by Mr. E. W. Beatty, who has been vice-president of the general council and a director of the company for many years.

GREEK CURRANTS.

This Year's Crop.

The following extracts are from Messrs. Burlumi's annual report on currants, dated October 10:—

Our last report was dated September 6, 1917, and in it we estimated the crop of currants at about 130,000 tons. The shipments during the year have been few, and those were made exclusively for account of the Ministry of Food. The British Food Controller decided early in the season to send representatives out to Greece in order to make purchases for the requirements of the United Kingdom, with the good intention, no doubt, of not depriving the British public of their Christmas plum pudding. When this decision was taken early in August last year the scarcity of tonnage was less acute than was proved to be the case during the last quarter of the year, and early in December definite instructions were given by the Food Minister to his representatives to buy about 6,000 tons at 49s. f.o.b. (average price) of Vostizza, Gulf, Patras and Amalias currants for December shipment. This purchase was duly effected, and the shipment of this small quantity, although it was made in December, was deferred for want of tonnage, and was eventually completed by the middle of July! The failure of the mission was due to the abnormal circumstances under which all countries were labouring owing to the war, and the difficulty of tonnage could not have been foreseen when this anything but laudable arrangement was made by the Ministry of Food. The control of dried fruits proved to be a great blow to the trade in general and to the importers of currants in particular. More than fifty Anglo-Greek houses established in London, Liverpool and Manchester have been deprived of their business, almost of their livelihood, and all their protests for this injustice came to naught. The experiment of buying dried fruit in the countries of production having failed, the Ministry of Food made an alteration early in May this year by fixing prices ex warehouse, duty paid. Currants were released from control, and shippers could import with the understanding that all such imports would be requisitioned by the Ministry at fixed prices—viz., at 80s. for Vostizza and Gulf, 77s. for Patras and Zante, 74s. for Amalias, and 72s. for other growths.

Shipments from Greece were, as stated above, few for the United Kingdom, and also disappointing for other consuming countries. American inquiry at the beginning of the season was normal, and about 2,500 tons were shipped. Prices paid varied between 75s. and 88s. c.i.f. New York for Amalias and Patras in barrels and half cases. The high freight, 500s. per ton, and also the high rate of war and marine risk, forty guineas per cent., ruling at the time, put a stop to any further transactions with that country. Consignments have been made since of about 1,500 tons for account of the shippers, but American buyers have been pushing the Californian midget currants as a substitute, and have absolutely refused to pay the high prices asked by the consignees of Greek currants. The result was that prices fell eventually from 27 cents down to about 17 cents per pound in bond. Including shipments made to France, evidently for wine-making, which we put at about 5,000 tons, we make the total shipped during the period 1917-18 to have been 26,000 tons. To the retention stores of the Privileged Company there were delivered 8,000 tons; about 50,000 tons of fresh and dried currants were used for wine and spirit making and for other industrial purposes in Greece. There must have been a considerable quantity of currants consumed by the people as food during the year, the shops retailing this commodity as well as the wheelbarrows appearing in the streets of large towns in Greece. This quantity is estimated at more than 15,000 tons. The stock of old fruit carried over to the present season is computed at about 33,000, making a total of 132,000 tons. Deducting 15,000 of old fruit brought over from the previous season, 1916-17, we find that the crop of 1917 has given us 117,000 tons, against 88,000 tons in 1916 and 125,800 in 1915.

The 25,000 tons shipped to foreign countries were distributed as follows:—To the United Kingdom, 17,000 tons, against 45,700 in 1916-17; to the United States and Canada, 4,000 tons, against 4,600 in 1916-17; to France, 5,000 tons, against 2,700 in 1916-17—total, 26,000 tons, against 53,000 tons in 1916-17.

The Privileged Company received during the season in their warrant stores 22,000 tons, of which 13,000 tons have been withdrawn before the end of the season. No dried fruit has been offered to the company by the growers for purchase, the ruling market prices being very much higher than the convention limits. In their retention stores the company received 2,500 tons, making 8,000 tons including the certificates in circulation on August 22, 1917. The Land Tax in kind, at 10 per cent. on the exported quantities, absorbed 2,600 tons, and 5,400 tons, represented by certificates in circulation, have been carried over. The retention currants and the fresh fruit purchased by the company have been sold to the local winemakers and to the distillers. The total weight of fresh and dried currants used for industrial purposes in Greece has been in 1917-18 about 50,000 tons, against 12,500 in 1916-17, and 29,000 tons in 1915-16. The Privileged Company distributed to the ordinary shareholders for the year ended August 22, 1917, a dividend of 18.50 drachmae per share, equal to a little under 8 per cent. on the capital, and to the founders' shares 2.25 drachmae per share. It paid the State £20,000 as a share out of the profits, and carried about £16,000 to the credit of the different reserve accounts.

The new crop is estimated, according to the latest news received from Greece, at 140,000 to 145,000 tons. Fortunately, no disease of any kind has attacked the vines this year, and the ravages of the oidium have been checked by the use of newly invented chemicals in default of a sufficient supply of sulphur. The quality promised is good, and so far we have no news of any damage. No samples of new fruit have yet come to hand by post, as was the case in former years. The British Food Controller has fixed the prices for new fruit the same as last season. Old currants shipped from Greece before November 1 will be admitted at these prices, but after this date at 5s. per cwt. less. The great question is the tonnage that will be available, and that is an unknown quantity. The retention has been fixed the same as last season—viz., 10 per cent. in kind and 25 per cent. in money.

FUTURE OF BALKAN TRADE.

An Enemy View.

In THE NEAR EAST of July 26 some paragraphs were devoted in "Notes and News" to the criticism of some remarks in a contemporary respecting trade prospects in the Balkans after the war. The journal in question quoted the unfavourable verdict of an engineer who had been studying the Balkans at an unstated time "with an eye to the special interests of German trade." His view was that the markets would be inconsiderable for years to come, and that as there was neither money nor enterprise it was a "vacant room." In view of the purpose of his investigations there was nothing to quarrel with in that final and somewhat discourteous expression, for, as we appositely pointed out, "if this country, France, and the United States do their duty (by giving proper assistance to Serbia and Roumania) there will be a 'vacant room' for the Germans and their allies in the Balkans, but it will not be because 'there is neither money nor enterprise.'" Our remarks on this subject seem to have annoyed the enemy Press, for the *Deutsche Orient-Korrespondenz* has devoted a long and singularly laboured article (which has been taken over by *Das Echo* of Vienna) to supporting the opinions of the engineer in question and to explaining that our views as to the prospects of the development of British trade with the Balkans are wrong.

"This engineer's studies," says the *Deutsche Orient-Korrespondenz*, "cannot have been very far-reaching, or else they are out of date, as he does not know of the recent developments of the Balkan nations. The chances are more in favour of his having become convinced of the tremendous advantage gained by the Central Powers during a year's war occupation, an advantage which England will not be able to overtake." This extract gives a very excellent idea of the mentality of the enemy peoples. All the injuries they have perpetrated on the Balkan peoples are overlooked as immaterial, that nothing that has happened during the war will make the least difference to the smooth development of their trade projects. In justice to the journal it must be pointed out that these comments were written before recent developments in the Balkans, and it is possible that the non-official enemy Press has been kept almost as much in the dark regarding the real situation as the unfortunate people of the Central Empires. Only thus is it possible to explain this peculiar outlook. The rest of the article runs much on the same lines. "Germany," we are told, "can watch England endeavour to combat her influence in the Balkans with the greatest composure. The longer the war lasts the fewer will be the prospects for England. . . The Economic Treaty of the Peace of Bucharest has so strong a German influence that England will have the greatest difficulty in winning back her former prestige. Moreover, the wrong done to Roumania through the destruction of the petroleum works during the retreat of the Roumanian forces will not be easily forgotten. As regards Serbia, where Austro-Hungarian influence has predominated for so long, the part taken by this nation in reconstruction during the war of the nation's economic policy—which had suffered a temporary eclipse—will ensure her a privileged position against which England's position will compare most unfavourably. In this sense the pessimism of the engineer is right. England need not concern herself as to the interests of the Balkan market after the war. They have already been considered and amply provided for."

It is scarcely necessary to make any further comments, for the passage refutes itself. The idea, for instance, that the Serbians and Roumanians would even contemplate the renewal of commercial relations with the Central Powers after all that they have suffered is a typical example of the mistakes which the enemy have constantly made in regard to other countries. Germany and Austria may regain their positions in these countries and resume their work of commercial penetration, but it will only be if the Allies fail to do their duty not only in helping to reconstruct these countries but also in doing everything possible to facilitate mutual trade relations. While the chief members of the Allies will all have to play their part in this work, the principal role will devolve on Great Britain, and British merchants and manufacturers, it is to be hoped, have realised by now their immense responsibility in this connection. A Government can influence trade relations to a certain extent, but the result of official efforts depends on the attitude of the individual business man. Thanks to the commercial missions from two of our Near Eastern Allies commercial circles in this country have had every opportunity of ascertaining at first hand the nature and prospects of business openings in the Balkans in the future, and we may confidently expect in a not too distant future that these missions will be followed by a third—from Roumania, the members of which in view of the sufferings of that country in the Allied cause will be assured of the heartiest welcome that any delegation to this country has ever received.

KHARTOUM STEAMER RATES.

New rates for transport of goods and animals by craft belonging to the Sudan Government have been introduced, with effect from September 1. The new rates are based on a charge per ton per kilometre, but bulky goods will be measured and 50 cubic feet, or 1.5 cubic metres, is being taken as equivalent to one ton of 1,000 kilogrammes as at present. These rates apply to up-stream and down-stream traffic, and will be in force summer and winter.

Mr. R. L. Forbes, one of the general managers of the Royal Mail Steam Packet Company, has retired from the company's service owing to continued ill-health. Mr. P. G. M. Mitchell, head of the freight department, has been appointed an acting assistant manager of the company.

A branch of the Tata Industrial Bank has been opened at Hyderabad, Deccan, and it is understood that it is intended to open a branch at Madras.

THE GREEK COMMERCIAL MISSION.

Tour in Scotland.

The members of the Greek Commercial Mission began the Scottish portion of their tour at Glasgow on October 8, and on the following day, accompanied by Mr. Robert M'Farlan, of Messrs. Kerr, Andersons, and Macleod, the organiser for Scotland, of the Federation of British Industries, they visited the works of the North British Locomotive Company, and also those of the Carron Company. In the evening a dinner was given in their honour by the Lord Provost and Corporation of Glasgow. The function was held in the Satinwood Saloon of the City Chambers, and the guests included representatives of the university and of the chief business interests of the city.

The toast of the delegates was proposed by the Lord Provost, who said that the classical history of ancient Greece had left its impress upon the civilised world, and it was that civilisation they were now making such sacrifices to maintain. In more modern times the Greeks were still distinguished by their patriotism and love of freedom, and it was not surprising to find the Greek nation, after surmounting its political difficulties, ranged on the side of righteousness in the great struggle of right against might. Their guests had come to see something of their industrial activities with a view probably to extending the commercial intercourse between the two countries, which he was sure they were all agreed would not only draw them more closely together as comrades in the war, but would enable them to protect each other against any attempt on the part of their enemies in the near future to renew their policy of peaceful penetration.

M. Michalocopoulos, who replied, said that modern Greece and her Allies had adopted the moral principles of that ancient civilisation which recognised that morality was stronger than infamy, that right was stronger than wrong, that justice was stronger than crime, and that freedom united was stronger than tyranny united. Only the Germans were not able to share in those feelings. They had their own philosophy—they had their super-men, their super-State, their super-battles; and they would have now their super-collapse. He believed they now saw the first golden sunbeams of a victorious peace—not a peace by negotiation, but a peace by unconditional surrender. Their enemies knew very well that unconditional surrender to Great Britain and France and America and all the Allies did not mean destruction. It meant—and it must mean—justice, and justice was a just punishment for all the disasters and ravages they had perpetrated on innocent peoples. In the task of reconstruction after the war the Allies must be united, as they were united in war. The Greek nation would do all in its power in order to prevent in the future the German commercial penetration and to promote commercial relations with this country, not only for reasons of sentiment, but because they in Greece were persuaded that British commercial penetration never was accompanied by political domination.

M. Embiricos proposed the toast of the Corporation, and the Lord Provost replied.

On October 10 the delegates visited the works of Messrs. Yarrow and Co., and afterwards some of them went to Paisley, where they were able to inspect the works of Messrs. J. and P. Coats, while others visited the Art Galleries at Kelvingrove and other places of interest in the city. In the evening they were entertained at dinner by the Federation of British Industries at the North British Station Hotel. The chairman was Mr. T. Cuthbert Stewart, of Messrs. Stewarts and Lloyds, who is chairman of the Scottish Committee of the Federation, and among the guests were Sir William Beardmore, Bart., Sir John Lindsay, and Mr. R. H. Hunter.

M. Embiricos, replying to the toast of the delegates, which was proposed by the chairman, said that they in Greece desired the help of British manufacturers in carrying out their policy, which was to avoid the economic penetration of Greece by the Central Powers. It was said that trade followed the flag. He was of opinion that trade followed the means of communication more than the flag. They in Greece wanted more regular lines of steamships and more regular sailings between their country and Great Britain. The Germans had had an advantage in being more elastic in their methods than the British manufacturers. He laid particular stress on the importance of the establishment in Greece of schools in English, and asked manufacturers to influence the British Government in that direction.

Mr. J. W. Murray, president of Glasgow Chamber of Commerce, proposed the toast of "The Federation of British Industries." He explained the objects of the Federation, and pointed out that while the chambers of commerce served a commercial purpose even to a greater extent than a manufacturing one the Federation was representative of the manufacturing interests. In the great fight for the maintenance and expansion of their trade there would be ample room for both organisations.

Mr. John King, who replied, said they hoped the Federation would meet the aspirations and the needs of the manufacturers. In the past they had missed some mouthpiece by which they could speak unitedly not only to their own Government, but to foreign Governments as well.

The delegates brought their visit to Glasgow to a close on October 11 with visits to the works of Messrs. Beardmore and Co., where they were entertained to luncheon by Sir William Beardmore, and of Messrs. Stewarts and Lloyds, subsequently going on to Edinburgh, where the week-end was spent. The principal event of their stay at Edinburgh, in the course of which they visited Holyrood and the Castle, was the dinner given in their honour on October 12 at the City Chambers by the Town Council. The Lord Provost, Sir J. Lorne Macleod, presided, and the company included the Rev. Dr. Ogilvie, Moderator of the Church of Scotland, Professor Mair, Mr. Alexander Darling, Master of the Merchant Company, Sir Richard Mackie, and Mr. J. Currie.

The Lord Provost, in proposing "The Guests," said the Ancient Greeks were the educators of Europe. The glory of Greek civilisation had always inspired admiration and enthusiasm. For five centuries the Greeks suffered under the blast of Turkish tyranny, domination, and misrule. In their liberation and re-establishment as a people the Greeks had never failed to acknowledge the friendship, support, and loyalty of Great Britain. The delegation had visited the chief industrial centres of this country. Edinburgh also possessed industries of some importance; and the trading between the port of Leith and Greece, already considerable in the days before the war, was capable of much expansion. It was even ventured sometimes to call this city "Modern Athens." Their friends would judge the correctness of this description.

M. Michalocopoulos, who replied, said that Edinburgh had called up remembrances very dear to them. Their ancestors, centuries ago, cultivated philosophy, science, medicine, political economy. In Modern Athens to-day the arts and sciences were cultivated with the same spirit and ideals as by their ancestors. To learn Homer was perhaps easy; but to conceive the spirit of their Grecian literature was more important. Scotland had succeeded in this. They were the heirs of Greek traditions. It was the British Navy which had saved the freedom of the world. Their enemies were asking to have the freedom of the seas. The freedom of the seas existed before the war. Britain had controlled the seas, not to enslave the world, but to protect the world against pirates. Germany had this freedom before the war as much as Great Britain. Everywhere her ships were transporting merchandise. There was harmony before the war; peace and security to everyone to develop in conformity with his energy and ability. Germany was not satisfied. She preferred the war. Now, after all the damage she had done in Belgium, Serbia, France, Roumania, she asked to be a free member of the League of Nations without paying anything. He thought in Scotland they said if you called the tune you paid the piper. While everyone would hope to have a society of nations, just as they had a society of men, they must remember that extreme generosity was not justice. Punishment for all crimes against innocent people and every international law they owed to their civilisation and to the future generations, and as a guarantee for the freedom of the world in the future. The Greek Government had determined to remain united with the Allies in their task of reconstruction. The Greek nation and Government acknowledged that Britain had had the great part of sacrifice in the war—in life, money, industry. They had protected all the smaller nations. The really free small nations considered Great Britain their future guarantee for liberty.

The Lord Provost read a letter from the Greek Minister in London regretting his inability to accompany the delegation to the ancient capital of Scotland, known to their own great geographer, Ptolemy, as "the winged camp."

The delegates went on to Newcastle on October 14, where a reception was given in their honour by the Lord Mayor, who subsequently entertained them to dinner. On October 15 visits were made to the works of Sir W. G. Armstrong, Whitworth and Co., Ltd., and to the works of Messrs. R. and W. Hawthorne, Leslie and Co. The visit to Newcastle ended on October 16, when the delegates went on to Middlesbrough.

LANCASHIRE COTTON.

Market Restricted.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market has been lifeless throughout the week. In well-informed quarters it is asserted that business at the moment is of smaller dimensions than at any time for three or four years back. Bearish sentiment has prevailed in all directions. Owing to the small turnover, engagements of spinners and manufacturers have tended to run down, but contracts on the books are still very extensive. Favourable reports continue to be received relating to the Egyptian cotton crop. The demand from Lancashire spinners continues healthy. In Egyptian yarns rather less business has been about, but small lots for quick delivery are still sought after. Combed qualities are particularly strong. Piece goods for Egypt have attracted less attention. Distribution on the other side, however, is said to be encouraging. There has been a general absence of demand in cloth for India, and no signs of improvement for China. Very little has been done for South America, and business for France is now falling off. American yarns have been very slow of sale, with more irregularity in quotations. Ring beams have been cheaper.

Trade Problems.

Lancashire cotton spinners and manufacturers have this week supplied particulars to the Cotton Control Board of stocks and consumption of raw cotton, yarn and coal. The returns are now being tabulated, and it is expected that interesting statistics will be published in due course. The question of future production in Lancashire will largely be determined by the figures obtained. For many months the problem of raw cotton imports has been very acute, but it is feared in some quarters that the shortage of coal supplies will prevent the running of more machinery in the near future. At the moment the output of the spinning mills and weaving sheds is only about two-thirds of normal times.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner, Mr. D. T. Chadwick, has issued the following cabled news received from the Director-General of Commercial Intelligence, dated October 9:—

Rain is much needed in most provinces. In the Punjab it is required both for the standing autumn crops and for spring sowings. In Assam crops are fair to good.

Latest quotation of fine broach for ready delivery is Rs.830 a candy. Piecegoods market continues to decline.

At the request of the Board of Trade, the New British and Key Industries Exhibition will remain open until October 24, so that the members of the Greek Commercial Mission may visit it.

EGYPT'S TRADE DURING JULY.

Greatly Increased Imports.

(From Our Own Correspondent.)

Cairo, Sept. 8.

Trade improved considerably during July, especially under imports. The latter amounted to £E4,243,398 and exports to £E2,011,281, as compared with £E2,820,232 and £E1,919,567 respectively during the corresponding month last year. Both sides of the external trade account of Egypt are now about level for the year, imports totalling £E28,634,305 and exports £E28,944,856 for the seven months, the former having increased by £E11,386,900 and the latter by £E6,061,483 by comparison with the position on July 31, 1917.

The chief imports during the month were: Meat £E301,243, cereals £E66,670, mineral oils £E52,831, stationery £E173,664, coal £E343,530, textiles £E2,217,522 (cotton piece goods £E1,696,458, woollen textiles £E80,575, cotton yarn and thread £E68,959, ready-made underclothing and hosiery £E104,376), manufactured iron and steel £E146,579, and tobacco £E233,270. The increase during the month was mainly accounted for by meat £E196.003, stationery £E134,055, textiles £E1,278.522 (cotton piece goods £E1,105.596); there was a decrease of £E194,943 in petroleum, of which none was imported, and of £E223,060 in coal, of which 30.569 tons less came in.

The principal exports were hides and skins £E42.208, rice £E38,230, cotton seed £E42.508, onions £E29.945, cotton £E1.681.918, and cigarettes £E56,636. Sugar fell off by £E83,477, and there were no oil cake exports; cotton, on the other hand, increased by £E191,372 in value and 92,121 cantars in quantity.

Direction of Commerce.

The United Kingdom more than doubled its share of imports during the month, the value rising from £E1,380,576 to £E2,805,846 (practically all the mineral oils, cotton piece goods, woollen textiles and iron and steel, as well as all the coal); Australia trebled hers (all the meat); the United States fell from £E218,967 to almost nothing; France rose by £E97,351 to £E138,061; Japan from £E30,245 to £E214,047 (glass, cardboard, matches, tobacco and raw silk and silk thread); whilst Italy fell off by 33 per cent. to £E193,950, and Greece by 40 per cent. to £E153,998. For the month the United Kingdom had 66 per cent. of the total imports.

Under exports, however, there was a decrease of 33 per cent. in the share taken by the United Kingdom to £E562,776, and the United States had an enormous drop from £E553,676 to barely one-tenth of that figure, in both cases due to cotton. On the other hand, France increased her share to £E452,193 (from £E197,954), Italy hers to £E515,216 (from £E2,220), and Japan hers to £E157,543 (from £E96,728), in every case due to increased cotton exports.

Trade between the Sudan and Egypt progressed as far as exports to the former were concerned, but fell off in respect of traffic in the opposite direction. Imports from the Sudan into Egypt amounted to £E198,315, against £E213,807, and exports from Egypt to £E276,558, against £E124,422 during July, 1917. The chief imports into Egypt were:—Live stock £E86,195 (seven times the value of last July and three times the number of head), cereals £E51,086, gum £E34,077; whilst the principal exports from Egypt were:—Sugar £E77,392, cotton piece goods £E86,960, cereals £E23,999, and tobacco £E12,091.

M. Negropontis, the Greek Minister of Finance, has arrived in Paris in order to come to an understanding with the Allied Governments on financial questions relating to war expenses.

MOROCCO TRADE NOTES.

The Tunnel Project.

(From Our Own Correspondent.)

Tangier, September 6.

Fuller details have now been given of the scheme for making a tunnel under the Straits of Gibraltar, in connection with which an important French railway company is seeking to obtain a concession for a line which, it is hoped, will eventually connect Paris and Dakar. The author of the scheme has very sanguine hopes, and looks forward to the possibility, when the Channel tunnel and the Gibraltar Straits tunnel have both been completed, of eventually placing London in railway communication with the Cape.

From the sketch plan which has been published it appears that it is proposed to run a railway from the terminus at Algeciras to a point on the coast a few miles to the west, slightly to the east of Tarifa. The tunnel would be made across the Straits to reach the African shore three or four miles west of Ceuta, in the country of the Anjera, a very turbulent tribe, nominally in the Spanish zone of influence, but actually, though not very completely, in the zone of influence of Raisuli. The end of the tunnel would be joined to Tangier and the Tangier-Fez railway by a line running at a short distance from the coast. The scheme has apparently got so far that the Spanish Government have appointed a representative to examine its possibilities. The cost of the tunnel is estimated at 10,000 francs per linear metre. The execution of the whole plan, including the improvement of Dakar port, which, it is hoped, will become the great port for passengers leaving for or arriving from South America, is expected to cost 300,000,000 francs.

An announcement has just appeared of calls for tenders for cutting, embanking, etc., on two sections, about 25 miles, of the Tan-

gier-Fez railway. Seeing the comparatively small extent of the works to be tendered for, and the time (up to November 12) which is allowed within which to make the tenders, it is scarcely likely that any other than a firm already represented in Morocco will send offers.

ENGINEERING NOTES.

Electric Installations in Constantinople.

In view of the approaching "great changes" in Constantinople, a few notes on a subject in which electrical engineering is concerned will be of interest to British manufacturers, many of whom are still under the impression that electricity is disliked in Turkey, and especially in her capital. This view may be attributed, perhaps, to the fact that Ottoman statistics of imports did not give separate details of imports relating to electricity, and probably little was allowed to be mentioned in the papers. In previous engineering notes we referred to the extensive employment of electricity in Beyrout and Damascus for lighting and industrial purposes, Damascus being the first city in Turkey to be lighted by electricity and to have a service of electric trams. But, as a matter of fact, electricity has made marked progress in Turkey since 1910, and especially in Constantinople, where, before the outbreak of the war, an important network of electric tramways was to be completed. Four principal lines were already working—the tunnel to Chiehli line, the tunnel to Tatavla, Karakeui to Beshitash, and Karakeui to Emin Eunu. The public accorded an emphatic welcome to these lines, which are built of first-class material and have worked well. Most of the cars have two trailers. The electric light was to be installed in the city just before the war, the mains having been already laid; while the telephone was being placed at the disposal of the public. In regard to these developments, however, it may be mentioned that electricity was not altogether a novel institution, for electric bells were installed almost everywhere; private electric plants were furnishing electric light to a certain number of houses; State departments were connected up by telephone, which was likewise installed in many business establishments and even in private houses. But what was then only the exception was in prospect of becoming general when the war began. It was considered probable at the time that the greater number of the electric generating plants belonging to private individuals would stop working when the municipal service commenced. Electric lifts and cranes would likewise be served with current from the public supply, also the motors used in small trades, then—and possibly now—driven by petrol, etc. Needless to say, the greater part of the wires and other fittings and appliances were imported from Germany. British manufacturers may soon have an excellent opportunity to take their proper share in the further development of this work.

Agricultural Machinery in Turkey

In our notes last week reference was made to the dearth of agricultural machinery in the East. The dearth evidently prevails chiefly in countries or districts friendly to or dominated by the Allies, a fact which justifies the idea that it is, to a certain extent, the result of war restrictions on the export of such machinery from the Allied countries, and especially from this country. Turkey, apparently, is more fortunate in this respect, for, in spite of her sorry plight, the provision of modern agricultural machinery in the Turkish Empire is steadily increasing, according to recent reports. A German paper referring to this says that it was reported from Aidin that a credit for 400,000 piastres (£3,600) has been opened there, and would be devoted to the purchase of agricultural machinery in Germany and Austria-Hungary: that the exhibition of such machinery in the new museum in Constantinople would largely increase the market for it; and that the Ministry of Trade and Agriculture has granted the Agricultural Committee in Smyrna a loan of 400,000 piastres (£3,600) for the purchase of 200 threshing machines which are to be employed outside the Smyrna district. (There must be some mistake in reference to the 200 machines to be purchased with 400,000 piastres (£3,600), unless hand-power or horse-gear driven little machines are referred to, and these would be quite inadequate for this district.) The same Ministry, the paper says, has ordered from German and Austria-Hungarian factories agricultural implements, including 3,400 ploughs and 500 seed drills, to the value of 40,000,000 piastres (£360,000). The Directorate of the Balkan School has sent a large number of its pupils into the province to teach the farmers how to use reaping machines. The School for Art and Industry in Stamboul has also sent a number of its pupils into the province, together with Hungarian experts appointed to work the threshing machines. It is also stated that 1,500 young Turks are at present being trained in Germany, 800 of whom have been placed through the agency of the Germano-Turkish Association. These 800 are composed of 200 trade apprentices, 150 mining apprentices, 150 agricultural apprentices, and some 300 boys from Turkish higher schools who are being instructed in Germany, at the commercial secondary schools; in engineering works, and on large farms. The annual cost of maintenance and training for 300 boys amounts to roughly half a million marks, half of which is being borne by the Turkish parents and the other half is provided from German sources through the Germano-Turkish Association and by donations.

Agriculture in Morocco.

Emphasis has often been laid in these columns on the great prospects for trade in agricultural machinery in Morocco. A Canadian agriculturist who recently visited Morocco expressed his firm belief that the country will soon be one of the most prosperous agricultural districts in Africa. Extensive areas of land are being exploited by French and other European planters, while the Moroccan farmers very willingly adopt modern implements and methods for the cultivation of their farms. Showia, a very promising district, is reported to have made remarkable progress in agriculture recently, owing to the security now enjoyed by the native farmers and to the improved methods and implements introduced by European colonists. The latter, although often wanting in experience, have succeeded in many ways in inducing the Moorish farmers to abandon some of their primitive agricultural implements and to use ploughs, harrows, etc., of European make and design. Besides, the price of labour having been materially enhanced, the old methods are too expensive now, and many Moorish farmers avail themselves of machinery, especially motor-driven threshing machines, mowers, and other labour-saving devices which they hire from the European colonists. In this connection heavy oil motors are recommended as much more suitable in Morocco than steam generators, as water in that country is salt and rapidly corrodes the boilers; moreover, the tracks in the country districts being bad, heavy machinery is difficult to move about. Petroleum is cheaper than coal there; mechanical traction, therefore, with heavy petroleum oil motors is considered as being the most suitable.

GOLD PRODUCTION.

At the meeting of the Council of the London Chamber of Commerce on October 10, Mr. James Martin, J.P., presiding, a resolution was passed at the instance of the Financial Section affirming the opinion that the production of gold in existing circumstances was an essential war industry, and therefore should receive preferential treatment by the Government in order to preserve the supply, and it was resolved to bring the matter before the committee of inquiry on the subject and the Government by deputation or otherwise.

The Government of Madras has sanctioned the expenditure of Rs.67,770 for the improvement of cotton cultivation during 1918-19.

It is reported that Mr. C. M Pearce, General Traffic Manager of the East Indian Railways, is likely to retire from the service in February.

Among the latest wills is that of Mr. Henry Reissmann, of the firm of Messrs. Henry Reissmann and Co., East India merchants, who left estate of the gross value of £77,502.

TENDERS INVITED.

Tenders are called for by the Egyptian Postal Administration, Alexandria, for the supply of general stores and of summer and winter uniforms for the year 1919-1920, including bags, mail; boots; clocks and accessories; fuel; furniture (ready-made); furniture and equipment (to be manufactured locally at Alexandria); house and bed linen, etc., hardware articles; lamps and accessories; rolling stock and accessories; stamps and accessories. Tenders must be made out on the printed schedules, which, with copies of the specification, may be obtained on application to the Central Stores, Egyptian Postal Administration, Alexandria. All the samples of the articles required can be seen in Egypt, and some of the samples at the offices of the Egyptian Government representatives, Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.1. The tenderer should submit samples of the goods he offers, which should be addressed to the Superintendent of Stores, General Post Office, Alexandria, not later than November 10. Sealed tenders, on the proper forms, will be received by the Postmaster-General, Alexandria, up to noon on November 15. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent. of the value of the offer must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer the address in Egypt at which notices may be served upon him.

PERSIAN EXPORTS.

The principal exports from Persia for the year ended March 20, 1917, according to the Persian Customs statistics, were:—Raw cotton, £2,555,653; rice, £2,211,657; raisins, £1,627,011; opium, £1,494,014; raw wool, £598,619; almonds and pistachio nuts, £516,104; fruit, £381,426; skins, £370,857; hair, £279,843; gum, £268,025; cereals, £172,851; live stock, £170,025; silk cocoons, £122,013; vegetables, £85,726; and henna, £75,140.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned days:—September 30, 70,000 frs., against 20,000 frs.; October 1, 70,000 frs., against 60,000 frs.

COMPANY MEETINGS.

Egyptian Hotels.

The twenty-first annual general meeting of the Egyptian Hotels, Ltd., was held on October 14 at 11, Ironmonger Lane, E.C., Sir William B. Peat presiding.

Mr. J. L. Milligan, representing the secretaries (Messrs. W. B. Peat and Co.) read the notice convening the meeting and the report of the auditors.

The Chairman read a letter from Lord Claud Hamilton, M.P., expressing his regret that in consequence of a funeral service in memory of his niece, Lady Alexandra Hamilton, having been fixed for three o'clock that afternoon, he was unable to attend the meeting. In the circumstances he desired to move:—"That a vote of sincere sympathy be accorded to the Rt. Hon. Lord Claud Hamilton, M.P., in the terrible loss he has sustained through the cruel murder by the Germans on the high seas of his niece, Lady Alexandra Hamilton." This resolution was unanimously agreed to.

The Chairman went on to say that Lord Claud Hamilton had forwarded a copy of the speech which, had he been present, he would

have addressed to the shareholders. It was as follows:—"The accounts for the year ended April 30, 1918, are in your hands. It is with pleasure that I am able to point out to you that the profit of the year has been satisfactory. With regard to the accounts, I have little to add to the directors' report attached thereto. The plant, fixtures, and fittings have been consistently depreciated. The stock on hand has been valued by the hotel manager, and proper reserve has been made for any doubtful debts included in the sundry debtors. Owing to the continuance of the war and the problems arising thereout, the directors feel that a conservative policy should be followed in dealing with the profits this year, and have, after providing for the usual charges for debenture interest, depreciations, etc., created a reserve of £10,000 for writing down the asset 'shares in and advances to the Société Suisse Egyptienne des Hotels.' This leaves a balance of profit amounting to £14,428 9s. 6d., including a balance of £3,930 10s 5d. brought forward from last year, to be dealt with, and the directors recommend the payment of two years' dividend for 1916 and 1917 to the holders of the cumulative preference shares, which will absorb £11,500 and leave a balance of £2,928 9s. 6d. to be carried forward. The directors regret that they are not able to recommend any dividend on the ordinary shares In conclusion, the thanks of the board and of the shareholders are due to the members of the local board and the hotel staff for the admirable success of their management and working of the hotels during the past year, which is so well reflected in the accounts."

The report and accounts submitted were adopted, and a dividend of 5 per cent. on the preference shares for the two years ended April 30, 1916, and April 30, 1917, was declared, payable on and after November 30, 1918

The retiring director, Mr. E. A. Harrison, was re-elected, and Messrs. Turquand Youngs and Co. having been reappointed auditors, a resolution was passed recording the shareholders' appreciation of the local board's management of the hotels.

COMPANY NOTES & REPORTS

Alliance Bank of Simla.

The report of the directors for the year ended June 30, 1918, states that, including Rs.2,54,030-10-8 brought forward at June 30, 1917, the balance of profit for the year, after contributing to the staff provident fund and rebating current bills, is Rs.11,24,932-4-1. Interim dividends at the rate of 14 per cent. per annum, free of income-tax, on the ordinary shares and at the rate of 6 per cent. per annum, free of income-tax, on the preference shares, were paid for the half-year ended December 31, which absorbed Rs.3,41,000, leaving Rs.7,83,932-4-1. From this sum the directors now propose to make a further distribution on the ordinary shares for the half-year ended June 30 of a dividend at the rate of 14 per cent. per annum, free of income-tax, together with a bonus of 5 per cent., which will absorb Rs.3,50,000. To pay a dividend for the half-year at the rate of 6 per cent. per annum, free of income-tax, on the preference shares, which will absorb Rs.1,55,448-13-0, leaving balance to be carried forward, Rs.2,77,483-7-1. As sanctioned at the extraordinary general meeting held on April 20 the ordinary share capital has been increased to Rs.35,00,000 by the issue of 5,000 shares, and owing to allotments made in connection with the conversion of shares of the Delhi and London Bank, Limited, the Bank of Rangoon, Limited, and the arrangements for taking over certain offices and approved business of the Bank of Upper India, Limited, the preference capital has increased from Rs.36,61,200 to Rs.51,28,400. The premium on the issue of the above 5,000 ordinary shares, which was Rs.8,00,000 has, as foreshadowed in the chairman's speech at the extraordinary general meeting on April 20, 1917, been placed to a special reserve account against depreciation of the bank's holding of 3½ per cent. Government paper. The price at which this is now held is roughly Rs.69 per cent. To meet the shortfall on the value of debentures and stocks held by the bank due to the rise of 2d. in sterling exchange during the past twelve months and the further general fall in prices, a sum of Rs.500,000 has been transferred from the bank's reserve fund to the subsidiary reserve fund for depreciation of Government paper and other investments. Subject to their transfer, debentures and stocks held by the bank stand in the books at market rate or under and sterling investments on the basis of 1s. 6d. exchange. During the year it has been found necessary, owing to the depletion of the European staff, to close temporarily the Charing Cross Branch at Lahore. The directors anticipate that it may shortly be necessary, for the same reason, to close further branches temporarily. During the year Sir W. D. Henry and Mr. B. Bevan-Patman retired from the board, and the vacancies thus created have been filled, in accordance with the bank's articles of association, by the election of Messrs. Melville Macfadyen and W. Muir Masson. The directors who retire, at this time, by rotation are Messrs. G. A. Moncrieff, W. L. Dallas, and M. Macfadyen, all of whom are eligible for re-election.

Rubber in the Sudan.

A company was granted a concession some years ago to exploit the rubber areas of the Bahi el Ghazel, but they found the undertaking unprofitable. It is reported that the Sudan Government has now taken the matter up, and has given authority to the natives to collect and sell the rubber, as it has been decided that this is the best method as the rubber is so scattered. To encourage the natives the Government has reduced the royalty to 2½ milliemes per rottle.

New Company.

The Bank of Egypt, Limited, has been registered with a capital of £2,000, in £5 shares, to take over the business indicated by the title. The registered office is at 57½, Old Broad Street, E.C.2.

Dividends, Payments, etc.

The directors of the Burma Railways recommend a final distribution of 2½ per cent., together with a bonus of 1½ per cent., both subject to income-tax, on account of surplus profits, in addition to the guaranteed interest payable January 1, making in all 7½ per cent. for the year 1918-19.

The Barsi Light Railway Company announces that the warrants for the final dividend for the year ended March 31, 1918, on the shares Nos. 1-26,000 have been posted.

His Highness the Nizam's Guaranteed State Railways.—At the general meeting on October 22 a resolution will be proposed changing the name of the company to "His Exalted Highness the Nizam's Guaranteed State Railways Company, Ltd."

Oil Outputs.

Anglo-Egyptian Oilfields.—Gemsah: Production for week, 21 tons (last week, 1,083 tons). Hurgada: Production for week: 2,316 tons (last week, 2,456 tons).

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

During the greater part of this week our market continued in a very quiet condition, and prices had still a downward tendency; but during the last day or two there has been some indication of a renewal of demand in certain directions. Some of the decline has consequently been recovered, and the tone has become distinctly better.

In Government stocks Unifieds are ¼ higher at 91⅜, but Egypt 3½ per cent. preferences are ¾ lower at 76½ xd.

In Bank shares, Nationals are closing ⅜ lower at 20⅜, and Agriculturals are ¼ down at 7. Anglo-Egyptian Banks are unchanged at 21½, after being up to 23.

In Railways, there has been some demand for Delta Lights round the current quotation.

Among Land shares, Behéras are ¼ easier at 14⅜, round which price some business has been carried through. Delta Lands have improved 3d. to 16s. 3d., after transactions as low as 15s. 6d.; and there has been some buying of Gharbiehs round 2⅜. The much better report issued by this company would, no doubt, have caused a rise in the price under better market conditions. In New Egyptian shares, after transactions as low as 20s. 3d., there has been a big demand during the last two days, and the price closes 1s. 6d. higher on the week at 22s. Sidi Salems, Union Foncières, and United Egyptian Lands all remain steady at last week's prices, with some small transactions here and there.

In Miscellaneous shares, Khedivial Mails are slightly quieter at 63s., while Salts and Sodas have dropped ¼ to 2⅞.

Greek stocks have continued firm and in demand, with the exception of Monopolies, which are 2 points down at 64½, and the Rente Loan, which is half a point easier at 57½. Bank of Athens are also 3-16 lower at 4⅜. Piræus-Athens 4½ per cent. are quoted 69 xd.

Oil Shares.

The oil share group have been brighter this week on the improved situation. Roumanian Consols have gone ahead again and close at 17s., an advance of 2s. Anglo-Egyptians (B) are 2 11-16, or ⅛ better than last week, and Anglo-Persian Prefs. have risen and are 6d. up at 25s. Russian shares are all fairly strong. Anglo-Maikops are 7s. 9d., Bakus stand at 4s. 9d., North Caucasians are 1 5-16, Russian Generals are ⅞, and Russian Petroleums 2s. 9d.

Paris Bourse.

Turkish Unifieds and Ottoman Banks made a marked advance this week: the former are 75.25 (against 63), while the latter are 15 points up at 480. Otherwise Near Eastern shares have been somewhat weaker. Suez Canals, for instance, have lost much of their recent rise, and close at 5,450 francs, a drop of 200 francs on the week. Egyptian Unifieds are 93 (against 95.95), and other prices are: Serbian 4 per cent. 1895's 66.50 (against 66.75), Banque d'Athenes 105 (against 108.50), Credit Foncièr Egyptiens 782 (against 800), and Land Banks 210 (against 210.50).

EGYPTIAN MARKETS.

The approximate weekly returns from markets for the week ended September 26 were:—Cattle markets, £427; general markets, £441—total, £868; total for year, £37,598. The figures for the corresponding week last year, ended September 27, were.—Cattle markets, £221; general markets, £314—total £535 (the Bairam holidays fell this week)—total for year, £43,663.

NOTES OF THE WEEK.

Expectation has been running high during the last three weeks as a result of the German overtures for an armistice with a view to the discussion of peace terms. The third Note from Berlin on the subject, after a clear statement of his attitude by President Wilson, was merely mendacious without being clever, and seemed to indicate that the Prussian Pharaoh had hardened his heart and refused to let the people of Germany go the full length of their very obvious desire for peace. It remains to be seen whether on this point the last word is with the German people or with the military command. President Wilson's reply is certainly to the point, and leaves no room for doubt as to the Allies' attitude towards Germany. The German Government has shown that it has not yet accepted the logic of the military position, and the Allied armies must, accordingly, continue their efforts to make that position clear both to the German Higher Command and to the German people.

The most favourable development that the Germans seem able to count upon is that the approach of winter and the German resistance should arrest the Allied advance before it reaches German territory. But the weakness of their position is that even in these circumstances they cannot look forward to any future improvement which might hearten them to persevere. Moreover, if they could rely upon themselves, they know well that both Austria-Hungary and Turkey must drop out of the running, and there is no reason why the Allies' terms, which are based on clearly enunciated principles and lend no support to the interested misrepresentations of the military party, should undergo any modification as a result of a purposeless resistance on the part of Germany. One result of the Allies' refusal to continue the discussion on peace negotiations would probably be to compel Germany's allies to make up their minds as to their own individual positions. The course of events during the last three weeks both in Austria-Hungary and in Turkey has been obscure, but it was inevitable that the two countries should endeavour to mark time while Germany was trying the effect of her overtures to Washington.

A thoroughly robust faith in those overtures would have prompted Turkey to retain the Talaat-Enver Ministry until the negotiations for peace had definitely failed. But Talaat has been succeeded by Izzet Pasha as Grand Vizier, and the new Government has lost no time in taking a leaf out of the German book. Turkey is also going to democratise herself—according to the Prussian model. Arabia, Syria, Armenia, and the Jewish zone of Palestine are to be promised autonomy, and just as Germany seeks to save something from the wreckage of her hopes in accepting President Wilson's "Fourteen Points" as a basis for negotiations, so Turkey would offer to make Constantinople a free port and to dismantle the fortifications of the Dardanelles on condition that Constantinople should be allowed to remain the capital of the Ottoman Empire. Germany, according to the statement of her Government, has never been guilty of any outrages on land or at sea, and with equal conviction the President of the Turkish Chamber declares that: "Whatever the final result may be, Turkey by its display of self-sacrifice and patriotism has won its right to an honourable place in the family of nations."

This claim of Halil Bey's will inevitably be checked by the experience of British prisoners of war in Turkish hands. Wherever possible British soldiers have paid a tribute to the Turkish army as a "clean fighter," but the expression has never been extended to Turkish officials as a whole or to the Government of the Committee of Union and Progress. Some of the stories regarding the treatment of British and Indian prisoners in Turkish hands will not lend much countenance to the Government's claim for "an honourable place" anywhere, and in regard to "the family of nations" it may be expected that the Allied Powers will wish to keep this circle far more select than it has been hitherto.

The problem concerns Germany, Austria-Hungary, and Bulgaria no less than Turkey. All four peoples have been, without doubt, guilty of outrages and atrocities in connection with their conduct of the war. What action are the Allies to take with regard to such deeds? The answer which must be supplied by the Allied Governments will have to be based on two principles: (1) that the decision shall be capable of practical application, and (2) that it shall be applied consistently in the case of each of the four States. Already Germany and Greece, from different points of view, have urged the appointment of neutral Commissions to inquire into the allegations of excesses, the former in regard to the charge brought against the Germans themselves, the latter in regard to the charges made against the Bulgarians. If the Allies accept the Greek proposal, they cannot with any consistency reject the German suggestion. In these circumstances the whole question calls for serious consideration, and ought not to be decided impetuously without reference to the practical results that can be attained.

Digitized by Google

The report of the Carnegie Commission at the end of the Balkan Wars will be fresh in everybody's memory. After compiling evidence of Turkish, Bulgarian, Serbian, and Greek "atrocities," it left the matter exactly as it was generally supposed to have stood before the inquiry began. On this occasion there is a desire to see something more practical achieved. The statement that only 20,000 Serbians out of 50,000 have survived their rigorous treatment as prisoners of war in Bulgaria is a terrible indictment; but it is probably equalled, if not surpassed, by the tragedies of Russian and other Allied prisoners' camps in Germany. Everyone would like to see those responsible for the deaths of so many thousands of prisoners brought to justice; but how can the degree of responsibility be fixed and the penalties inflicted? The Allies have pledged themselves to exact retribution for certain crimes which can be laid at the door of individual perpetrators, and it is for the Governments to decide whether the practice can be extended to include responsibility for the wholesale maltreatment of prisoners.

The Allied forces continue to make progress in the Balkans. On Bulgarian territory French troops, having reached Vidin and Lom Palanka, have cut the enemy's communications on the Danube. In the meantime the Serbians are pressing back the Austro-German forces that still cling to Northern Serbia. Our Allies have now recaptured Parachin, in the Morava valley from which point their line bends south-west towards Montenegro. The Bor copper mines are also in their possession. Serbian and Montenegrin *komitaji* are reported to be operating, supported by French elements, in the Ipek district, where they have taken fifteen hundred prisoners.

With the Prime Ministers of Greece and Serbia, as well as a representative of Roumania, in London it was inevitable that the absence of Montenegro from any discussions on Balkan affairs that might be taking place should be a subject for comment. The Montenegrin Government has apparently not found it necessary to accredit permanently a diplomatic representative to Great Britain; but it would have been thought that the interests of the country called for the presence of the head of the Government from time to time in London. It is true that Montenegro is a small State and cannot hope to compete in the matter of diplomatic display with her larger and wealthier neighbours; but it is not good policy for a Government to remain always in the background, as it encourages the idea that the country has no particular interests of its own to support, and is content to be merged unheard and unconsidered in any general solution of the Balkan question that may be reached. This we can hardly believe is the official attitude of Montenegro, particularly in view of the fact that the Government has acknowledged the existence of critics by carrying on a press campaign in Switzerland.

It is difficult, therefore, to suppose that the Montenegrin Government has been well advised to allow itself to be so completely engrossed with its affairs in Paris or Pau that it can find no time for a visit to England. Methods of communication with the British Government exist in the French capital, but the personal equation always counts for much. The failure to pay more attention to Great Britain argues possible shortsightedness, especially at a moment when Montenegro is about to be liberated from the Austrian yoke, and will need to rely for a considerable extent on public funds for help in the revictualling of the country. Fortunately, Montenegro can count upon the services of friends, both official and unofficial. The steady efforts of the Montenegrin Red Cross Fund, under the chairmanship of Sir Roper Parkington, are now to be supplemented by the raising of a special fund in Glasgow at the instigation of the Consul for Montenegro in that city, Mr. David Mason. A Flag Day is fixed for November 30, and it is to be hoped that it will prove a great success.

Sherif Faisal, the Commander-in-Chief of the Northern Hejaz Army, had a message of sound common sense to give to the inhabitants of Damascus. The city has passed under the administration of the Arabs, and for the time being the son of King Hussein represents the paramount power. He inculcated the doctrine of respecting the rights of others, and reminded his hearers that it was the sufferings of the Syrian nation which had led to the wresting of Damascus from the hands of the Turks. Aleppo, he added, had yet to be rescued from slavery, and he trusted that the sword of the Arabs would not be sheathed until the northern lands were free. The sword of the Arabs has brought Damascus relief from the sword of Othman, and, in due course, we may expect that Arab administration will prove even more welcome in the place of the travesty of administration that went by the name of Ottoman.

The Egyptian Government has approached the question of the salaries of its civil servants in a comprehensive and generous spirit. A heavy additional charge is imposed upon the Exchequer, but it has long been recognised by all acquainted with the circumstances that the step was overdue. The Sudan Government, we are glad to note, will follow the example of Egypt. The prosperity of these two countries during the war has been an outstanding feature of their recent history; but prices have risen, and while other salaries have responded, the rank and file of those connected with the government of the country have been unfairly penalised.

It is symptomatic of M. Venizelos's statesmanship that no utterance of his ever lends support to the efforts of those who would accentuate differences or antagonisms between the Balkan peoples. He was the real author of the Balkan League, and it may be supposed that he realises that the future prosperity of the Peninsula is dependent upon the ultimate revival of the League. But he has gone further, in seeking to make the present war an occasion for the removal of all misunderstanding between Greece and Italy. At least it can be said that it will not be the fault of the Greek Prime Minister if the two countries fail to arrive at an amicable settlement of the Southern Albanian question. We could wish that the whole Near Eastern question had been settled on sound lines by now.

The full text of the lengthy manifesto published by the Moderate, or Liberal, leaders in Bengal shows that we were not mistaken in regarding its issue as a definite step towards reality in Indian politics. It is an important document, if only by reason of its conclusive exposure of the methods followed by the group of Extremists who still pose as the "National" Congress. We are told that in that organisation "it is particularly difficult for a minority to obtain a full hearing," that a "satisfactory discussion" is possible only in the Subjects Committee, that in the Congress itself "speakers who wish to amend or oppose labour under great disadvantages," and even that "exponents of the minority view may be roughly handled." That is how the Congress works since its machinery was captured by the Extremists.

It is true that substantially similar accounts of the working of the organisation have appeared in the Anglo-Indian Press, but they have been written by hostile critics who have been abundantly denounced as perverters of the truth. Now we have the unvarnished facts set forth over the signatures of men like Babu Surendranath Banerjee and Babu Ambika Charon Mozumdar, who know the internal working of the machine from prolonged and intimate experience. Their testimony cannot be set aside, and it disposes once for all the exaggerated claims which are sometimes made on behalf of the Congress in this country as well as in India: the Liberals at least recognise that a machine of this sort is unworthy of the stage which Indian politics have reached.

The authors of the manifesto do not claim to speak for India as a whole, a fact which of itself bears witness to the progress they have made. They claim rather to represent a majority of the intelligent opinion of the country, which is just the position taken up by an ordinary party, though not every party has such valid grounds for asserting that the country is at its back. We have no particular affection for the party-system

Digitized by Google

regarded as an institution, but at the same time we are bound to recognise that the world at large has hitherto been unable to do without it, and India is probably on the right track in following the universal practice. In any case a frank acceptance of the facts is very much better than insistence on a purely theoretical unanimity.

The weakness of the situation lies, of course, in the absence of any constitutional method of ascertaining whether the claim to a majority is well founded. The reticence of "intelligent opinion" in India is such that individuals can at most hazard a conjecture as to its probable direction, and while we may believe that in a fair contest the Liberals would leave the extremists far behind, we have no means of verifying our view, and for this purpose, as for so many others, must be content to wait until the Franchise Committee has completed its task. Judging, however, by the contortions of the extremist party, of which recent mails have brought a vivid picture, the claims of the Liberals have a much better foundation than those originally put forward by their opponents.

In this connection we may notice one point which, so far, seems to have attracted comparatively little attention in India. Should the cleavage of politicians into two parties become definitely established, it will considerably facilitate the task of the Governors who may have to introduce the new constitutional arrangements. The Governor of Bengal, for instance, will know that his Ministers must be either Liberals or extremists, and his field of choice will thus be narrowed at the outset by a consideration of the composition of his Legislative Council, which, though it will not at first have power to dismiss Ministers, will in practice be able to make their position intolerable. The Governor's burdens will in any case be so heavy that the lightening of even one of them may be regarded as a substantial asset.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, September 16.

His Highness the Sultan.

H.H. the Sultan received in audience this week General Sir Edmund Allenby, the C.-in-C. of the Egyptian Expeditionary Forces. His Highness took the opportunity of personally expressing to the gallant general his lively appreciation of the brilliant work done by the forces under his command and his good wishes for their further success.

War Allowances.

At its meeting on Wednesday last the Council of Ministers approved of a scheme for granting war allowances to Government personnel, which had been prepared by the special committee recently set up under Mr. E. M. Dowson, the Acting Under-Secretary of State, for the purpose of studying the question. Under this scheme an increase of 40 per cent. is granted to all employees drawing £E150 per annum and under; above that figure an allowance of £E60 per annum is granted on all salaries up to and including £E780 per annum; and those drawing more than £E780 but less than £E840 per annum will have their salary brought up to the last-named figure. These allowances are to date from April 1 this year, and will cost the Government the annual sum of £E1,846,000, included in which is the £E564,000 already accorded to the personnel drawing £E200 per annum and less.

This, it must be admitted, is a large sum to add to the salary bill of the State. There is, however, not the shadow of a doubt but that the addition is more than justified by the enormous rise in the cost of living since the war, and especially during the past year. Considerable relief will be afforded thereby to the smaller employees for whom the special allowance of £E1 per month voted in August, 1917, has proved totally insufficient; whilst the sum granted to the higher personnel will go some way towards helping them to meet the heavy extra expenditure which they are called upon to bear to-day by comparison with pre-war conditions. The war allowance previously granted to the smaller personnel is already covered by the new excise on sugar levied recently; and it is expected that some of the balance of the cost of the grant now made will be recouped out of the profit accruing to the Egyptian Treasury from the purchase and re-sale of the cotton crop under the agreement come to between the British and Egyptian Governments.

The Controller of Supplies.

Mr. J. I. Craig, who resigned the post of Controller of Supplies in March this year, has now retired from the service of the Egyptian Government, and at its last sitting the Council of Ministers agreed to the proposal to give him his salary from June 23 up to August 15, and to accord him his pension as from the latter date. Mr. Craig, who up to his appointment as Controller of Supplies last October had held the post of Controller of State Statistics, and who reverted to it on his resignation of the former, has done an enormous amount of most valuable work for this country, especially since the outbreak of war, when he became member of the Supplies Commission, which up to the inception of the Supplies Department looked after the food supplies of the country; and his retirement from the Egyptian Civil Service has been received with widespread regret by all those who are in a position to assess at their true value the services he has rendered during the past fifteen years. At the same time the news that he has been appointed to a high position under the Government at home has given much pleasure, and all who knew him wish him the best of luck in his new sphere of activity.

The Servant Question.

One of the questions which has become somewhat of a problem to Anglo-Egyptian householders of late years has been that of servants. At no time has the Berberine, who furnishes the main portion of the domestic element, been very satisfactory, but since the outbreak of war the difficulties in obtaining good servants at anything like a reasonable wage have become tremendous. This is in great part due to the demands made, more

especially recently, by the military authorities. During the early part of the war officers and mess servants were drawn from the ranks, but the demand for men in the firing line has forced the number of soldiers set aside for this purpose to be very restricted, and they have been entirely replaced by native servants. This not unnaturally has depleted the supply available for the civilian population, for, given the much easier conditions of service in a camp or mess, the Berberine shows a decided disinclination to take service with civilians. But insult was, so to speak, added to injury by the terms under which native servants engaged for military duties. A monthly wage of P.T. 280 was fixed, which was paid by the War Office, to which were added free rations and a minimum pay of P.T. 30 per month payable by the officer. Before the war it was possible to obtain a good "Suffragi" for P.T. 200 to 230 per month without food, but the action of the military has had for result that the gross wages have been increased by over 60 to 80 per cent., and only the most inferior servants are left for the civilian element. What is so surprising with regard to the inordinately high rate fixed for these servants is that the Board which settled the question included amongst its members at least one Anglo-Egyptian resident, who ought to have known better the local conditions. There would have been no difficulty in getting the servants for the Army at civilian rates, considering that the conditions of service offered them are in every case much lighter than those to which they have been accustomed in civilian employ, and the only result of this mistaken decision has been unnecessarily to augment the cost to the British taxpayer and increase the financial burden borne by Anglo-Egyptian householders, who are already suffering in every other respect somewhat considerably through the war. It is satisfactory to note that the ridiculously light labour given to these servants has attracted the attention of the responsible military authorities, and that it has been settled that one servant shall henceforward do for three officers—instead of one, as has been the case hitherto. Whilst, however, this may tend to increase the servant supply available for civilian requirements, it is to be feared that, thanks to the precedent set up, the tariff has been raised for all time against the Anglo-Egyptian residents.

Visitors from the Sudan.

Major-General Sir Lee Stack, Acting Governor-General of the Sudan, is expected next week in Cairo with his Staff. He will proceed to Alexandria for a short time, and then will be occupied in the discussion with the Anglo-Egyptian authorities of the various important questions which always arise between the two administrations. Colonel Bernard Pasha, the Financial Secretary, is already here busy with the preliminaries of the annual budget, which he will in due course discuss with his immediate chief and the Acting Financial Adviser.

For the past three months Alexandria has been full of Anglo-Sudanese residents, who are spending their leave there. In this respect the officials of the Sudan Government and their families have a distinct "pull" over the Anglo-Egyptian community. They may have to put up with a more strenuous climate south of Asswan, but at the same time, in addition to having a hill station at Erkowit, where they can repair in case of need during the summer, they can come down to Alexandria and Port Said and obtain complete change, not only of climate, but also of surroundings and interests. By contrast, the Anglo-Egyptians are very badly off. They have no hill station to go to, and when they run down to either of the ports the change is really very slight, for one can scarcely look upon either of these resorts as anything else but "a Cairo by the sea" in so far as surroundings are concerned. What is, indeed, playing havoc with the nerves of the residents, especially the fair sex, and is impairing the working capacity of the men, is the everlasting sameness of the climate and environment, from which they can never get away unless they go home to England. Since the war, and especially now, such relief has become impossible. It is no wonder, therefore, that they look with envy upon their Anglo-Sudan compatriots, who are at any rate able to get some change by coming down to Egypt.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, September 16.

The flood has reached its height, and has now begun to fall. It has been somewhat below normal, notwithstanding the unusually high level of the White Nile at the beginning of the rise. The Blue Nile did not get within a metre and a-half of its last year's level, and thus removed any danger that had been anticipated of dangerous floods.

The rains have been so far fairly satisfactory but somewhat late, and some districts still require further rain to ensure the ripening of the crops. On the whole, the prospects are good, although it is probable that some Durra will be dried up for want of the final rain.

The basins have filled up as far as the height of the Nile allowed. At Wad Hamid an accident occurred that imperilled all the upper and more fertile basin, as the bank broke just as the basin was filling up. However, after a few days it was possible to repair the break, and there is now every hope that the basin will be a success.

The Acting Governor-General and Sirdar and his staff came down from Erkowit on September 11, to be at Khartoum for the Kurban Bairam. He will proceed north on the 19th, and will be joined at Atbara by Lady Stack, who accompanies him north.

CYPRUS NOTES.

(From a Correspondent.)

The summer season on Mount Troödos has passed, and has differed but little from its war-time predecessors. The High Commissioner's receptions on the first and third Wednesdays of the month, which began early in July, have been continued.

As anticipated, Greeks in ever-increasing numbers have spent the hot season in the hills. Platras, the nearest village to the camp, is the most crowded and fashionable. Here the Public Health Board has passed some wise and necessary by-laws; and it is a very satisfactory sign of progress that several district municipalities have been similarly taking precautions against the various dangers to village sanitation, including measures against flies, for the washing of cups and glasses, etc., with running water, in cafés, and for keeping beds free from vermin! Famagusta has given a good lead in several directions.

Tenders have been invited for the lease of the fresh water lakes of Famagusta, in the east of the island. Some of the few island lagoons that exist used to be farmed out at high prices in bygone times for fishing. Thus the large salt lake in the Limassol District used to provide abundant fish. It is now an example of melancholy neglect and waste, not even being utilized for the collection of what is the best salt in the island. Offers were made in the early years of the Occupation for working the salt, which might have been profitably sold outside the Ottoman Empire (for the Convention excluded sales within it); but the opportunity was, like so many others, allowed to slip away.

THE TURKISH CABINET.

Under date of October 20, Reuter's Amsterdam correspondent reports that a Constantinople telegram, dated October 13, states that the new Turkish Cabinet has been definitely constituted as follows:—

Izzet Pasha	Grand Vizier and Minister War
Reshid Akif Pasha	President of the Council
Raouf Bey	Marine
Hulussi Effendi	Sheik-ul-Islam
Rifaat Pasha	Foreign Affairs
Fethi Bey	Interior
Djavid Bey	Finance
Djelale Mukhtar Bey	Food Controller
Hayri Effendi	Justice
Zia Pasha	Public Works
Said Bey	Education
Abdul Rahman Cherif Bey	Pious Foundations

DR. MAC INNES ON CONDITIONS IN JERUSALEM.

Dr. MacInnes (Anglican Bishop in Jerusalem), speaking at St. Margaret's Church, Lothbury, on Tuesday, said that besides military work the British in Palestine had already done a great deal for the material improvement of the people. The bringing up of the broad gauge railway to Jerusalem and the providing the city with a pure water supply were wonderful improvements. In the matter of water supply, the British had done within four months what the Turks had not done in four hundred years. Indeed, on one occasion, when an English philanthropist had offered an enormous sum of money to provide Jerusalem with a water supply, the scheme had fallen through because there was not sufficient backsheesh to be given to officials.

Of the relief work that had been done in Jerusalem, Dr. MacInnes said that when the British first occupied the Holy City one effect had been to greatly increase the distress already prevailing. This was because while the Turks were masters of the city they had held the Jordan and the grain-growing country on the east of that river had supplied the city with food. When the Turks were driven out and crossed the Jordan they stopped this supply. However, their action had been foreseen, and a supply of rice had been got to the city just in time to meet serious want. Food was still enormously expensive, but there was no fear now of any general state of starvation. In the country districts also the people probably had supplies buried in the ground sufficient to keep them alive, but he trembled to think of the possible condition of the inhabitants of Nablous, Nazareth, Haifa, Damascus, Beyrout, and other towns that had recently come under British rule in the north. It had been very hard, when administering relief in Jerusalem, to have to discriminate between cases; to have, for example, to refuse clothing to children who really needed it because the garments were required for other cases of even greater distress. In all this work the greatest care had been exercised that assistance should only be given to those in real necessity. For a very long time past there there had been in Jerusalem a state of indiscriminate charity which had demoralised the recipients. Before the war the city had had eighty thousand inhabitants; there were far more people in it than could find work there. A large number of Jews had gone there simply from a desire to end their days in the Holy City. Many of these were not fit to work, others could but would not work; and there had grown up a dreadful state of pauperisation which it was now most difficult to overcome.

MONTENEGRO.

A special appeal is to be made in Glasgow for the benefit of "Starving Montenegro." A flag day is fixed for November 30, and already donations are coming in well. The movement has the support of the Lord Provost, and behind it is the driving force of Mr. David Mason, the Consul for Montenegro in Glasgow. There will be a large meeting in St. Andrew's Hall on the day. The names of the speakers will be announced later. Contributions will be received by the secretary to the Lord Provost. With the near prospect of Montenegro's liberation from the Austrian yoke, there is an urgent need for funds to assist in the revictualling of the people and the rehabilitation of the country.

Over 700 Greeks from Eastern Macedonia, who were deported by the Bulgarians into Serbian territory and subsequently liberated by the Allied armies in the Kitchevo region, have arrived at Salonika.

The *Pioneer* reports a curious fatal accident which occurred at Hyderabad. The wife of an actor of a Gujrati theatrical company while performing there was cutting up onions with a sharp knife when she was seized with an epileptic fit and fell, cutting her throat with the knife.

A Reuter's message reports that the Commander of the First Serbian Army, General Peter Boyovitch, has been promoted to the rank of Field-Marshal in the Serbian Army for the skill and mastery he has shown in commanding the leading Serbian Army during the three weeks' march from Monastir to Nish.

The Society of Biblical Archæology, which was founded in 1870, has been amalgamated with the Royal Asiatic Society. The amalgamation will bear the name of the Royal Asiatic Society only, but the *Journal* of that body will contain a notice that the *Proceedings* of the Society of Biblical Archæology are incorporated with it.

The Bishop in Jerusalem, in the course of a sermon at Westminster Abbey on Sunday, said a new era had begun in Palestine in the dramatic way that appealed to the imagination of the East. The Turks had arranged to send 700 people away from Jerusalem on December 12, as they were suspected of sympathy with the Allies, but on the day before that General Allenby entered the city.

The Palestine Office in Jaffa has recently issued the first volume of the statistics of the Jews in Palestine, dealing with Judea only. The compilation was made by Mr. M. Wilkanski during the course of the war, and represents the first attempt to provide accurate statistical information regarding the Jews of Palestine. The present volume consists purely of tables of figures, without any attempt to draw conclusions from them or to institute comparisons. The information obtained relates to population, occupation, place of origin, language, and many other topics. The statistics with regard to Galilee are not yet quite complete, and will no doubt be issued later.

Can you offer us

consignments of the . . .
NATURAL PRODUCTS
of your Country? . . . .

COCONUT OIL
PALM OIL
OIL NUTS
OIL SEEDS
GUMS
FIBRES
COPRA

These are of great interest to us, and we should like to know what you can offer us in this way. All Natural Products interest us, and we shall be glad to negotiate for large or small shipments.

We are prepared to finance consignments when necessary.

CORRESPONDENCE.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

AN ALBANIAN PROTEST.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—The Greek Minister of Foreign Affairs made yesterday a declaration to the English Press concerning the aspirations of Greece, in which he made mention of Epirus.

As Albanian Delegate in London I wish to protest energetically in the name of the Albanian people against the pretension of the kingdom of Greece with regard to the part of Albania called Epirus.

Never at any epoch in Hellenic history has Epirus formed part of Greece; never has Epirus been conquered by the Greeks; Epirus has been inhabited from a remote antiquity by a population which is Albanian by race, by language, and by tradition, and which will not submit to any foreign domination.

The ruins of three hundred villages in Epirus burnt by the Greeks deliberately, after the Balkan Wars, are striking proof both of the Albanian character of the region and of the methods of the Greeks against a foreign population.

The Minister asserts: "We should certainly be greatly disappointed if the coming Peace Congress did not sanction the aspirations of Greece." We Albanians, however, believe that the Great Powers, who have sacrificed millions of human lives in order to destroy Prussian militarism, will not permit the erection of little Prussias in the Balkans and the enslavement of peoples.

The principle of nationality—if it be not an empty phrase—will assure to Albania all the territories torn from her in 1912-1913.—I am, etc.,

MEHMED KONITZA.

October 17, 1918.

TOBACCO CULTIVATION IN CYPRUS.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—In the good old days of Turkish rule the law affecting the cultivation of tobacco provided that any one doing so must plant a certain amount of land. Very small plots were forbidden, as the supervision of them caused much trouble to the Excise officers. This was a perfectly fair and well-understood arrangement.

The Island Government on October 11, 1917, issued an order prohibiting the cultivation of tobacco except under licence. There was no stipulation as to the size of the area proposed to be put under tobacco, and applications for many small plots were granted. On July 26, 1918, an order appeared in the Government *Gazette* prohibiting the employment in tobacco cultivation of any male between the age of 12 and 60, and of any female between the age of 12 and 50. In other words, the manipulation of tobacco which is a very delicate operation was to be handed over to children and old men. And the order came into force in four days' time—viz., August 1. A saving clause, however, was inserted which ran thus: "The Commissioner *may* grant special permission in writing if he is satisfied that such person cannot be engaged in the work of harvest."

Let me now review the course of events. The Proclamations of October, 1917, and of July, 1918, each began by stating that it was desirable in the public interest that the amount of foodstuffs grown in the island should be increased. If that were so, then why grant any licences? But another point arises: can a law be superseded by a Proclamation? Possibly martial law overrides ordinary law. To most people out here it seems that the proper course, in order to increase food production, would have been to have allowed the existing Turkish law to regulate the matter, or to have forbidden absolutely the cultivation of tobacco. Having, however, granted some thousands of licences, it was extremely unfair to the growers to tie their hands at four days' notice.

So much for the tragedy of the proceedings; now comes the comedy. Harvest in Cyprus is practically finished by the end of July; a small amount of work remains to be done on the thrashing floor, but from the labour point of view it is infinitesimal. The order holds good "until the raw tobacco is ready for transport for manufacturing purposes." That date would probably be some time in December or January. Harvest, therefore, seems to have been used as a stalking-horse; that plea will not deceive a Cypriote.

It is too early as yet to ascertain what effect it will have on the tobacco crop. Undoubtedly a large number—probably a sufficient number—of permits will be issued by Commissioners, more or less at random, for it will be impossible for them to satisfy themselves that each person "cannot be engaged in the work of harvest." In one sense, the task would be an easy one; for, as I have pointed out, there is now no harvest work to be employed on. Permits, therefore, can be granted with an easy conscience.

The drafting of the order comes under review, for the concluding sentence is certainly a harsh one, to say the least. It provides for punishment by fine or imprisonment, or both, and ends by stating that any person on whose land any person shall commit a breach of the order shall be liable to be punished as aforesaid. Much tobacco land is held under lease. A man resident in Baffo may own land at Famagusta, and lease it for tobacco, amongst other crops. If his tenant offends in some unimportant detail, the owner may be arrested, taken to Famagusta, be tried, and if found guilty, be imprisoned. I myself have land let for tobacco cultivation, with a fair crop growing on it. In self-defence I must watch all that goes on; I must ascertain whether the women working on the land are either over 50 years of age or are the possessors of a "special permit." Otherwise, I may be cast into prison. Finally, as there is no English newspaper published in the island, we have no means of making our grievances known except through the medium of THE NEAR EAST.—I am, etc.,

G. L. H.

Kyrenia, August 3, 1918.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Egyptian Capitulations. Oct. 17.

Lord R. CECIL, Assistant-Secretary for Foreign Affairs, replying to Major G. PEEL, said the Commission appointed at Cairo by the Egyptian Government in March, 1917, for the purpose of elaborating the legislative, judicial and administrative reforms which would be rendered necessary by the disappearance of the Capitulations had made progress as rapidly as circumstances admitted. It was the intention of the British and Egyptian Governments to come to an agreement with the Allied and neutral Powers who were parties to the Capitulations for the abolition of the latter as soon as sufficient progress had been made in the preparation of a new judicial system to replace that at present in existence.

Colonel YATE: Does not the fact that we are at war with Turkey *ipso facto* abolish the Capitulations?

Lord R. CECIL: I would not like to accept that without consideration.

Prisoners in Turkey.

Sir G. CAVE, replying to Sir E. HUME-WILLIAMS, who asked for information about prisoner camps in Turkey, said: Representatives of the Netherland Minister at Constantinople have visited camps and hospitals in the neighbourhood of Constantinople, and their reports have been received. A Dutch inspector proceeded on August 19 to visit the camps in the interior of Asia Minor, and it is known that he has been to Kedos, but no reports from him have yet been received. I am glad to be able to state that the accounts given in the reports above mentioned and in recent letters from prisoners show a substantial improvement in their conditions, due largely to the Turkish Red Crescent Commission, which visited the camps in anticipation of the Dutch inspection.

Indian Prisoners. Oct. 21.

Mr. J. HOPE, Lord of the Treasury, replying to two questions put by Mr. COTTON, said: I am informed by the India Office that there are two Indian officers and 513 rank and file at present prisoners of war in German hands; two officers and 13 rank and file have been exchanged; and nine officers, of whom eight have since been repatriated, and 60 rank and file, of whom two have since died and 16 have been repatriated, have been transferred to a neutral country. The great majority of these prisoners have been transferred to Roumania, the remainder being interned in various camps in Germany. On the whole their treatment appears to be satisfactory. The number of Indian officers and men prisoners of war in Turkey is 217 and 6,569 respectively, and the number who have been repatriated on grounds of health is six and 1,170 respectively. None have been transferred for internment to neutral countries, as there is no agreement in force with the Turkish Government for this purpose.

Prisoners in Turkey.

In a written reply to a question put by Lord HENRY CAVENDISH BENTINCK, Mr. HOPE states: The Turkish Government and the Governments of Germany and Austria-Hungary have been notified that a British ship will be sent to Scala Nova on a fixed date with 1,000 Turkish prisoners of war to embark a thousand British invalid prisoners of war. It is understood that the Turkish Government are collecting the latter at a point near Smyrna. The ship in question will also convey stores for the use of our prisoners in Turkey who cannot be immediately repatriated. In addition to the above steps for carrying out the Berne Agreement, his Majesty's Government have proposed to the Turkish Government the repatriation of all British, including Indian, prisoners of war in Turkey who have been over eighteen months in captivity, against that of similar numbers and ranks of similarly situated Turkish prisoners of war in British hands. To this proposal no reply has yet been received, and the Turkish Government have, therefore, been informed that his Majesty's Government must insist on an immediate answer.

NEAR EAST BOOKSHELF.

RUSSIA THAT WAS.*

It is seldom indeed that time deals quite so disastrously with a book before its birth as this. M. Vandervelde, the respected Belgian Socialist, went to Russia in the first flush of enthusiasm for the revolution, in those halcyon days when the only question in dispute was whether the Millennium was to begin the day after to-morrow or began the day before yesterday. Everybody was everybody else's brother—until they began cutting each other's throats; but the author plaintively remarks that after all they did not cut so very many at first, and those wicked journalists exaggerated the number. Perhaps the journalists expected their turn to come next, and after all it is a little difficult to report one's own execution with the proper sang-froid.

When M. Vandervelde arrived in Petrograd he found that nobody was drunk and everybody talked as much as they liked, and he saw that it was very good. But after a time the atmosphere of an interminable debating society evidently rather repelled him; the unexpected sobriety, however, was altogether excellent, and he wrote that "perhaps the leaders of the old *régime*, who have at least the merit of this radical reform, owe their lives to that fact." It is a little unfortunate that the book should not be published until a month after the Tsar was shot, and that the present reviewer should chance upon that passage on the very day when the Russian Government published the names of the ex-Ministers who had been executed. These undesigned coincidences are occasionally awkward.

The author was naturally touched by the sympathy expressed for Belgium by many of the Russians, but his cool judgment must have made him wonder whether the sympathy had any tangible meaning, and the event has shown that it had not. It was a civil speech, probably combined with a more or less magnificent gesture, of about as much value as the present Russian paper money.

The real value of this book lies less in its account of the Russian revolution—in which it is easily surpassed by M. Claude Anet's wonderful sketch—than in its discussion of the Stockholm question, which became urgent last summer. Here M. Vandervelde, who must be accepted as an authority, unravels the facts with lucidity. The origin of the thing was apparently the desire of the neutrals, Dutch and Scandinavian, to keep out of the war, and the fear that they would not be able to keep out much longer. The force of events—or, as he hints in one or two cases, their own inclinations—helped to play the German game. The Russians simply wanted peace, and advocated Stockholm from that point of view, and not, as we were told *ad nauseum* at the time, in order to encourage them to go on fighting—which was absurd. After this *exposé*, perhaps Mr. Ramsay Macdonald will apologise, and Mr. Henderson once again say that he was misrepresented, as he usually is, according to his own account. M. Vandervelde saw the way things were shaping, and evidently understood that no good could come from the conference. The best proof that he was right is Brest-Litovsk.

He admits, by the way, that M. Troelstra was pro-German, which was so furiously denied by our pacifists not long ago. We are afraid they will find this simple and honest record little to their fancy; it gives them away too completely, and will rather damage their case for reconstituting Stockholm. But it is only fair to recognise the difficulty of their position. After all, the one reason they want to go to Stockholm is that they want to talk to the Germans; and that is the one reason which puts them out of court with their countrymen.

* "Three Aspects of the Russian Revolution." By Emile Vandervelde. (G. Allen and Unwin. 5s. net.)

BOOKS RECEIVED.

"A Gallipoli Diary." By Major Graham Gillam, D.S.O. (London: George Allen and Unwin, Ltd. 12s. 6d. net.)

"Seaways of the Empire." By A. J. Sargent. (London: A. and C. Black. 7s. 6d. net.)

The October *Quarterly Statement* of the Palestine Exploration Fund contains, besides the usual "Notes and News," a further—and most interesting—instalment of Dr. Masterman's "Hygiene and Disease in Palestine in Modern and in Biblical Times." Mr. Offord contributes a paper on "Palestinian Scarabs," and another on "The Vicissitudes of the Population of Palestine as foretold in the Prophecy of Noah"; and Mr. W. T. Massey's article on "The Jerusalem Water Supply" is reprinted from the *Daily Telegraph*.

SALONIKA, 11th October, 1918.

"Have just returned from visiting reoccupied regions. There is much distress among population. Whole villages destroyed. Thousands without homes, clothes, or food, and in the greatest misery. Need for help is urgent. I am opening immediately soup kitchens and dispensaries in Ghevgheli, Doiran, and Kavadar, and hope to open others elsewhere. Principal hospital will be moved shortly to either Uskub or neighbourhood of Nish. We shall have great need of funds for development of work in new regions. In addition to money, warm clothes and boots in unlimited numbers are urgently needed. Please make immediate fresh appeals to generosity of public."—*FRANK CLEMOW.*

Dr. Clemow, who sends this cable, is in charge of the Serbian Relief Fund's advanced units in Serbia.

Send a donation to-day to the Hon. Treasurer,

29	16	Tuesday	23	23
30	17	Wednesday	24	24
31	18	Thursday	25	25

Lord Lamington has arrived in London from Scotland.

A piece of statuary is to be presented to General Milne by Salonika.

M. Také Jonescu and M. Titulesco left London for Paris last week.

The Bishop of London arrived in Salonika on October 17, and has gone to the front.

Colonel Sir John and Lady Roper Parkington arrived at the Empire Hotel, Bath, last week.

M. Pashitch, who left London for Paris last week, has been suffering from influenza since his arrival in France.

M. Venizelos had the honour of being invited to luncheon with the King and Queen on Monday at Buckingham Palace.

Lady Islington and the Hon. Joan Dickson-Poynder will return to 8, Little College Street, to-day from Glynde.

Colonel FitzPatrick, the Commissioner-General for the British Red Cross Society at Salonika, has left London for Serbia.

The King of Serbia has conferred the Order of St. Sava (3rd Class) upon Paymaster H. M. Fitch, R.N., and (5th Class) Commander Alfred Stead, R.N.V.R.

The marriage of Major G. B. Scott, D.S.O. Indian Army, and Miss Blanche de Caen will take place at Delgany Church, Co. Wicklow, on Tuesday, October 29, at 2.30.

The Imperial War Graves Commission has appointed Sir Robert Lorimer, K.C.B., F.R.I.B.A., to report on the architectural treatment of cemeteries in Egypt and Italy.

Sir Duncan Baillie, K.C.S.I., who was acting Lieutenant-Governor of the United Provinces, India, in 1913-14, has been elected chairman of the British Empire Producers' Organisation.

As a result of a matinée organised by Lady Alexander in aid of the Mesopotamia Comforts Fund for British troops, and given at the Alhambra Theatre on Sunday, a sum of £1,400 has been added to the fund.

Miss Edith Johncock, of the Edinburgh Medical Mission, in charge of the military hospitals in Nazareth, who has been a prisoner since the outbreak of the war, has been released, and is now safe in Damascus.

The Prince Regent of Serbia has requested the Lord Mayor to convey to the citizens of London his heartiest thanks for their warm congratulations on the recent Serbian victories and for their generous interest in his country.

An engagement is announced between Arthur Herbert Conway Jackson, I.C.S. (captain, I.A.R.), of Bombay, only son of Mr. and Mrs. Arthur Jackson, of Shrewsbury, and Margery Ruth, only daughter of Mr. J. R. Carless, of Shrewsbury.

A marriage is arranged, and will shortly take place in India, between Captain R. L. P. Wells, attached Indian Cavalry, youngest son of Mr. and Mrs. G. Wells, and Stella, youngest daughter of the late Mr. and Mrs. H. Simms, 6, Pelham Street, S.W.

A marriage has been arranged, and will shortly take place, between Ronald Brymer Beckett, I.C.S., elder son of Mr. and Mrs. J. R. Beckett, of 35, Hurlingham Court, S.W., and Norah, youngest daughter of Dr. and Mrs. Ford Anderson, of 41, Belsize Park, N.W.

The five Indian editors now visiting England were received by the King and Queen at Buckingham Palace on Saturday. The visitors, who later expressed keen delight in the warmth of their welcome, were received separately in the Indian Room. Sir James Dunlop-Smith was in attendance.

The Government of India have awarded a State scholarship, tenable in Europe, to Miss May Millicent Kingsley, B.A., the candidate nominated by the Government of Burma. Miss Kingsley was recently appointed to act in the Indian Educational Service as professor of English at the Government College, Rangoon.

On October 17, at St. Margaret's, Ockley, the marriage took place of Major George Denne Franklin, Indian Medical Service, eldest son of G. C. Franklin, M.B.E., F.R.C.S., of Fareham, to Ethel Janet, eldest daughter of the late Rev. H. J. Carver, for many years Rector of Melbury Abbas, Dorset, and of Mrs. Carver, Hatchlea, Ockley, Surrey.

The engagement is announced of Lieutenant-Commander Claude Preston Hermon Hodge, D.S.C., R.N., fifth son of Sir Robert Hermon Hodge, Bart., M.P., and Lady Hermon Hodge, of Wyfold Court, Oxfordshire, and Gwendoline Rose, younger daughter of Mr. J. Goulding Davis, Public Works Department, and Mrs. Davis, of Bahawalpur, India.

The engagement is announced of Major R. C. B. Williams, Indian Infantry, Brigade Major, Ferozepore, third son of Mr. and Mrs. Charles Bridgewater Williams, Richmond, Surrey, to Mary Lloyd, only daughter of the late Mr. and Mrs. John Cruickshank, Guningrah, New South Wales, Australia. The wedding will take place at Lahore early in November.

A marriage has been arranged between Reginald William Knollys, of the Sudan P.W.D., son of the late William Edward Knollys, C.B., and Mrs. Knollys, and Celia Grace, fifth daughter of Christopher George Croft, The Bailey House, Richmond, Yorkshire. The wedding will take place quietly at 11, on October 30, at St. Margaret's, Westminster.

The engagement is announced between Major-General S. D'A. Crookshank, C.B., C.I.E., D.S.O., M.V.O., Royal Engineers, second son of the late Colonel A. C. W. Crookshank, C.B., Indian Army, and Beryl Mary, younger daughter of the late Commander Willoughby Still, Royal Navy, and Mrs. Still, of Coombe Dingle, Bristol, and granddaughter of the late Colonel H. M. Nation, Indian Army.

The King has granted unrestricted permission to the following gentlemen to wear the decoration of the Order of the Nile, conferred on them by H.H. the Sultan of Egypt in recognition of services rendered under the auspices of the British Red Cross Society during the present war:—Class II., Temp. Col. Sir Courtauld Thomson, K.B.E., C.B.; and Lieut.-Col. Sir J. G. Rogers, K.C.M.G., D.S.O., M.B.; Class III., Col. C. Needham; Class IV., Capt. John Falconer; and Mr. C. H. Lyddon.

King Alexander of the Hellenes has sent a telegram to President Poincaré warmly thanking him for his message of congratulations on the capitulation of Bulgaria.

M. Radoslavoff, the Bulgarian ex-Prime Minister, has arrived in Berlin. Colonel Gantcheff, who has hitherto represented the Bulgarian Army Command at German Main Headquarters, has left this post to proceed to Coburg.

According to the *Berliner Mittagszeitung*, Prince Paul, the fourth son of the ex-King Constantine of the Hellenes, has entered the German Navy as a lieutenant, and will be attached to the Baltic station. Prince Paul is 17 years of age.

For the Chair of Medicine in the University of Belgrade, as a memorial to Dr. Elsie Inglis, over £2,500 has been promised or subscribed towards the £12,000 required. Donations may be sent to the Elsie Inglis London Memorial Fund, 66, Victoria Street, S.W.1.

Five public Rhodes lectures on Indian Institutions are to be given at University College as follows:—November 11, "Caste," by Sir James Bamfylde Fuller; November 18, "Hinduism," by Mr. William Crooke; November 25, "Islam in India," and December 2, "Ecclesiastical Institutions and Endowments in India," by Professor T. W. Arnold; December 9, "Races of Northern India," by Mr. W. Ameer Ali.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS

AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

APPOINTMENTS, PROMOTIONS, ETC.

M. Milan Gavrilovitch has left London for Athens, where he will act as Serbian Chargé d'Affaires.

Lieutenant-Colonel Mirko Popovitch has been appointed Military Attaché to the Serbian Legation at The Hague.

Lieutenant Nemanya Voukitchevitch, Secretary to the Serbian Legation in London, has been transferred to the Legation at The Hague.

On Saturday, at Buckingham Palace, the King invested Lieutenant-Colonel Arthur Rawlins, I.A., and Major Cyril Barrett, I.A., with the Insignia of Companions of the Order of the Indian Empire.

The following have been attached to the Egyptian Army as special service officers, with the temporary rank of Bimbashi, and posted as stated:—

Major Sir P. L. Brocklehurst, Bart., Derbyshire Yeomanry, to the 10th Sudanese.

Brevet-Major G. A. Campbell, D.S.O., Army Service Corps, to the Department of Supplies.

Captain G. V. Golding, Army Veterinary Corps—services placed at the disposal of the Sudan Government.

Captain J. R. Ellison, Army Veterinary Corps, to the Veterinary Department.

Captain C. P. Fisher, Army Veterinary Corps—services placed at the disposal of the Sudan Government.

Captain W. H. Heaney, Army Veterinary Corps—services placed at the disposal of the Sudan Government.

Captain J. Fairley, Royal Army Medical Corps, to the Medical Corps.

Lieut. W. Moore, Highland Light Infantry—services placed at the disposal of the Sudan Government.

Lieut. J. P. Mead, East Surrey—services placed at the disposal of the Sudan Government.

OBITUARY.

Mr. Thomas Haig Moorhouse, a pioneer among the planters of Ceylon and Malaya, has died at the age of 74.

The death is announced as having taken place at Satara, Bombay Presidency, on October 14, of influenza, of Mr. Ludovic V. M. Robertson, I.C.S., aged 37.

Lieut.-Colonel E. F. H. Dobson, Indian Medical Service (retired), was drowned through the sinking of the Japanese steamer Hirano Maru on October 5.

It is annouced that Lieutenant-Commander C. J. F. Eddis, R.N., who commanded H.M.S. Firefly in Mesopotamia, and took an important part in covering the retreat of our troops from Ctesiphon, died on October 19 of pneumonia. He was 33 years old.

Major Maxwell Montagu Carpendale, Indian Cavalry, died on October 15 of malaria, while on active service abroad, aged 35. He was the eldest son of the late Colonel M. M. Carpendale, of Shanklin House, Co. Dublin, and Mrs. Carpendale, of Bray, Ireland.

Among those who lost their lives through the torpedoing of the Leinster on October 10 was Colonel William Oliver Matless Mosse, Royal Munster Fusiliers, late Commanding 114th Mahrattas, son of the late Deputy Surgeon-General C. B. Mosse, C.B., C.M.G.

Lieutenant Gavin Ralston Mure Caldwell, Coldstream Guards, who fell on October 9, was the only child of the Rev. W. H. Caldwell, who is now serving as Chaplain to the Forces, Egyptian E.F., and Mrs. Caldwell, and a great-nephew of the late Field-Marshal Viscount Wolseley.

Lieutenant-Colonel Lionel Dudley MacKinnon, late Coldstream Guards, who died at North Berwick last week at the age of sixty-eight years, received his commission in 1871. In the Egyptian Expedition of 1882 he was present at the Battle of Tel-el-Kebir, and three years later he took part in the actions at Hasheen and Tamai in the Sudan.

Colonel E. R. Reid, C.B., D.S.O., who died at Blenheim, Blackheath, Colchester, on October 14, as the result of illness contracted during war service, was a son of the late Lestock R. Reid, I.C.S., Governor of Bombay, 1846-47. His long service with the Army included some years in India, two in Burma, and two in Ceylon, and he also saw service in the Buchuanaland campaign ('84-'85) and the South African war. He retired in 1910, but volunteered for service on the outbreak of the present war.

Mr. James Dyer Tremlett, of Dalethorpe, Dedham, Essex, formerly Judge, Chief Court, Punjab, left £28,619. He gave his collection of Indian coins to Cambridge University to be placed in the Fitzwilliam Museum, and after making some benefactions bequeathed the residue of his estate to the Church Missionary Society for the benefit of the outcast tribes of the Punjab.

SOME RECENT WILLS.

Mr. David Forbes, of Smyrna and New York, left property valued at £222,638.

Mr. Herbert Burleton Jones-Bateman, of Eyarth Hall, Llanfair, Dyffryn, Clwyd, Denbigh, for thirty years a judge in India, left property to the value of £35,166.

Surgeon-Major William Jasper Rendell, a Crimean and Indian Mutiny veteran, of Convena House, Wadebridge, Cornwall, formerly of Courtfield Road, South Kensington, left property valued at £48,404.

Sir Marc Armand Ruffer, K.C.M.G., of The Villa, Manival Bulkeley, Alexandria, Egypt, President of the Quarantine Board of Egypt, and Vice-President of the Municipality of Alexandria, who was drowned at sea when the transport "Arcadian" was torpedoed, left property valued at £21,239.

Lieutenant Edward John Woodhouse, Indian Cavalry, of Sabour, Behar, India, formerly Economic Botanist to the Government of Bengal, and afterwards Principal of the Agricultural College of Behar, who died from wounds on December 18, left property of the value of £11,163. Among his bequests are:—£100 to the Officer Commanding the Behar Light Horse for the benefit of the regiment; £20 to the Indian Officers' Club at the Sabour Agricultural College; and £20 to the Bhagalpur Club. He left legacies to his half-brothers and sisters, and the residue to his sister Alice Margaret Groves.

Cairo's Hotels de Luxe.

SERBIA AND YUGOSLAVIA.

Only matters of supreme importance, we may feel confident, would have brought the Serbian Prime Minister to London at a time when his Government is on the point of ending its long exile and the victorious Serbian Army, with the help of the Allies, has recovered the greater part of Serbia. One reason for the visit is connected with the revictualling of Serbia—a problem that has had to be taken in hand on a far larger scale within a short space of time than was anticipated by the Entente Governments or by the Serbians themselves. Another reason, without doubt, is to be found in the anxiety of the Serbian Government to secure official recognition for Yugoslavia. It would be idle to pretend that the situation in regard to the future Yugoslav State does not appear at first sight anomalous. The Allies have accorded whole-hearted and complete recognition to the Czecho-Slovaks, but have refrained from conferring a similar status upon the peoples who will form a still more formidable barrier against any future thrust of Germany to the East. The cause for this reserve on the part of the Allies is not far to seek. The future Yugoslav State will comprise Croats, Serbs, and Slovenes, and it is reasonable to suppose that the first and the last of these three units will not occupy a position in the new State permanently inferior to that of the Serbs. But under existing conditions, with the Croats and Slovenes for the most part still subject to Austro-Hungarian rule, the Serbs have been the protagonists of Yugoslavia, and have inevitably imparted an entirely Serbian character to their conception of the Yugoslav State that is to be. Their instinct may be absolutely true; the Yugoslav peoples may have no other desire than to range themselves under the Karageorgevitch dynasty and to have Belgrade as their capital. But the Allies would be showing scant courtesy to the Croats and Slovenes if, in the absence of any official intimation of their views to this effect, they took a step which might be held to stereotype the Yugoslavia of the future as pre-eminently Serbian, to the exclusion of Croat and Slovene elements. In this matter the Allies are showing no distrust of Yugoslavia or lack of appreciation of the splendid heroism of the Serbian nation; they are adopting a perfectly natural attitude, and the only one strictly in accord with the policy of self-determination to which they are pledged.

The omission on the part of the Allies of any public pronouncement regarding the administration of Yugoslavia only calls for notice in proportion to the efforts made by the Serbian Government to secure the coveted recognition; and the more importunate the Government becomes, the more likely is it to defeat its own purposes, as it is apt to lend colour to the suspicion, wholly unwarranted, no doubt, that it is seeking to register some advantage for itself before the very considerable intellectual contribution to the new State that will be made by the Croats and Slovenes is accurately appraised by the Allied Powers. In regard to the political affairs of all countries there is a time for speech and a time for silence. For those who have "inside knowledge" the sole determining factor should be the good of the State, and in the case of the Balkans the common good of all the States comprised within the Peninsula. Unfortunately this test is not always applied. There has recently been a somewhat ruthless rending of the veil in front of Serbian politics, which has been in the interest neither of Serbia nor of Yugoslavia, for the reason that it is based on partisanship. It has, however, rendered necessary some plain speaking, if the harm done is to be counteracted. THE NEAR EAST stands *inter alia* for the peace and harmony of the Balkans, both as between the different States and within the individual States. We refuse to subscribe to the theory that there must always be strife in the Balkans, or that political parties must inevitably represent so many armed camps. It is impossible to set about the work of promoting the interests of the whole Peninsula, without recognising the merits of each people and having absolute confidence in the future of each State. In many quarters unfortunately the worth of friendship is measured by the degree of undiscriminating partisanship with which a cause against another country or another political party is espoused. For refusing to lend itself to this time-honoured but thoroughly bad practice THE NEAR EAST is sometimes taken to task for an alleged unfriendliness to the very peoples the promotion of whose true interests, together with those of Great Britain, in these countries forms its *raison d'être*. But because there is a political controversy raging among the Serbians, we see no reason for adding fuel to the flames, and for prejudicing the future interests of Yugoslavia. True friendship for Serbia would suggest the discountenancing of all intrigue, the pointing of the way to the undoing of mistakes already made, and the restoration of harmony between the political antagonists. We prefer the method of the *Journal des Débats*, which urges the Serbian Government to form a common organ of administration with the Yugoslavs, to those of an English weekly, which merely indulges in vilification of M. Pashitch for the benefit of his political opponents.

The bane of Balkan politics in the past has been intrigue, and so long as this evil is perpetuated, the States concerned must be prepared for some reserve on the part of the Allies. Even apart from the natural desire to leave the recognition of Yugoslavia open, until Croats and Slovenes as well as Serbians had won their independence, the Allied Powers could not fail to take cognisance of the fact that the Serbians are still the victims of that passion for intrigue which has proved the undoing of Balkan States in the past. The circumstances are a matter of common knowledge. There are two separate intrigues in progress. One is carried on with the connivance, if not the actual approval, of M. Pashitch's Government, and the other is directed against his administration and, in particular, against his retention of the Premiership. Into the history of the latter intrigue we do not propose to enter here; but it may be pointed out that Serbia as a whole must suffer from any attempt at this juncture to justify a sweeping denunciation of the Government which has steered this heroic people through the storm and stress of the last four years to ultimate victory. For, let there be no mistake, neither Balkan politicians nor their English partisans take kindly to half-measures in indulging their controversial instincts. A political opponent is necessarily a Tsar, a Bolshevik, and a Bolo rolled into one, and if the Allied Governments took the accusations *au pied de la lettre*, they would withdraw their support from Serbia at once. Fortunately they can keep their heads where others lose all sense of proportion and of justice. The Balkan politician may be good-humouredly forgiven; but no condemnation of his English abettor can be too severe. The other intrigue is more subtle, and possibly more prejudicial to the recognition of Yugoslavia. It is the attempt of a band of Serbian politicians, aided by some Montenegrins, to bring about the complete absorption of Montenegro in Serbia before the Montenegrin people as a whole can exercise the right of self-determination in the only way that the Allied Powers understand the expression. In urging the recognition of Yugoslavia the Serbians, we are confident, have no other aim than the gratification of the natural desire to have the status of the new Balkan Power established. But it is obvious that any seemingly Imperialistic designs against Montenegro lend support to the charge that they are scheming for a Yugoslavia which shall merely be a Greater Serbia, and must hopelessly compromise them in the eyes of democratic allies. We trust that both these unworthy intrigues will be rigorously suppressed, and that the new era which is opening up for the Balkans will be clouded by none of the shortcomings and petty strife of the pre-war period.

EUPHRATES-MEDITERRANEAN RAILWAY.

BY VICTOR L. TRUMPER.

Our operations in Mesopotamia have drawn people's attention to the geography of that part of the world, and to the fact that a Levant-Busreh railway would shorten the distance between London and India by nearly a thousand miles. However, as far as the British are concerned, the main route to India will always be through the Suez Canal, as that is the one which can be most easily protected by sea-power.

The commercial possibilities of a railway from the Euphrates Valley to the Mediterranean are in a different category, and considerations which are paramount in regard to a strategic route need not be considered in a purely commercial enterprise. Before entering upon consideration of the utility of a railway from Mesopotamia to the Mediterranean, it is well to realise thoroughly the relative positions of the two places. Palestine and Syria together constitute a strip of territory, running roughly north and south, between Egypt and Asia Minor, and forming the eastern boundary of the Mediterranean. Mesopotamia, with the Euphrates and Tigris valleys, is a strip of land starting from the head of the Persian Gulf and running in a north-west direction till it meets the fertile region of Northern Syria, near the Gulf of Alexandretta. Between these two is a triangle of desert whose base runs due east from Maan, on the Hejaz railway, and whose perpendicular runs from Maan nearly due north, passing to the east of Amman, while the hypotenuse is formed by the western boundary of the Euphrates Valley. Another way of looking at it is to realise that from Maan to Busreh is about seven hundred miles, though the two places are in the same latitude; while the distance between Aleppo, the principal town in Northern Syria, and the nearest point of the Euphrates is barely fifty miles.

Bearing in mind the geographical position of this district of Northern Syria, it is easy to realise its importance in ancient times. It was the meeting-place of the empires of antiquity. Egypt might and did extend its sway over Palestine, but an attempt to advance further north ended in a decisive check at Carchemish from the Hittites, and the Pharaoh had to make peace on equal terms, however much he tried to disguise it in the official *communiqués* carved in various temples in Egypt. It was through this district that the armies of Assyria and Babylonia passed when they overwhelmed the kingdoms of Israel and Judah, and as soon as these buffer states ceased to exist Egypt was face to face with the rising power of Assyria—and Egypt went under. It was at Issus, in this region, that Alexander the Great destroyed the power of Persia, at that time the paramount Power in the East; and this victory, followed by the reduction of Tyre, practically gave him the mastery of the then known world.

If this was an important district politically, it was even more so commercially, for it was the meeting-place of the trade routes between Egypt and Babylon, and later on between Assyria and the Ægean, and indeed the whole of the Mediterranean. The Phœnicians who inhabited the coast towns were the great traders, and seem to have been welcomed wherever they went, the various rulers realising that their desire was simply to trade and that no political machination lay behind it. Solomon attempted to control some of the trade between Mesopotamia and Egypt, by building Tadmor in the Wilderness (called Palmyra in later times), which was on the route taken by caravans; for it was far enough north for the distance saved by crossing the desert to outweigh the difficulties of the journey. Much more might be quoted to show what a volume of trade formerly passed through this district.

The country, too, is rich in itself. Apart from vegetable products, there are undoubtedly antimony, manganese, and coal to be found: two hundred talents of iron were among the tribute given by a Hittite king on the capture of Carchemish. Timber, of course, has been largely exported both to Mesopotamia and to Egypt, and the valleys are extraordinarily fertile, growing all kinds of grain, fruit, cotton, and tobacco. Among the animal products may be mentioned leather, wool, and silk; which latter is a valuable and growing industry. In ancient days plenty of ivory was obtained; for we read that on one hunting expedition Thothmes secured a bag of one hundred and twenty elephants.

The Euphrates valley, we are told, is to be the granary of the world, and this makes the construction of a railway linking it with the Mediterranean an imperative necessity.

The difficulties from an engineering point of view are not great. It is hardly realised that from the coast of the Mediterranean, at the mouth of the Orontes, to the River Euphrates is only a distance of one hundred and thirty miles, of which only a distance of forty miles is over a thousand feet above sea level. Thus, there need be no tunnels and no heavy gradients, and once the Euphrates valley is reached all is comparatively easy, for the ground is as flat as the proverbial pancake. The distance saved would be immense. Take, for example, the carriage of goods between London and Mosul (Nineveh), or Baghdad. By the present route it works out as follows:—

	Miles.
London to Busreh by sea	6,700
Busreh to Baghdad by rail	300
Busreh to Mosul by rail	500

Now, assuming that there will be a railway from Antioch or Alexandretta to Mosul or Baghdad, how do the distances work out?

	Miles.
London to Alexandretta by sea	3,400
Alexandretta to Mosul by proposed rail	400
Alexandretta to Baghdad by proposed rail ...	500

It will be seen at a glance that on the rail journey there is not much to choose either way, but on the sea transport 3,300 miles would be saved, to say nothing of eliminating the cost of the Suez Canal dues.

With a convenient outlet for Syrian and Mesopotamian trade at the eastern end of the Mediterranean, the commerce of Egypt will become of increasing importance, not only for Egypt's own products, but as a transhipping and distributing centre for the whole of the Near East. It is to be hoped that political considerations after the war will not prevent the realisation of this most promising undertaking.

THE LONDON YUGOSLAVS.

The Southern Slav Committee of London has authorised its president, Dr. Trumbitch, to issue the following declaration:—

The Yugoslav Committee of London, as the representative and mandatory of seven million Serbs, Croats, and Slovenes of Austria-Hungary, and of the numerous Southern Slav communities in North and South America and the British Dominions, definitely rejects the manifesto addressed on October 16 by the Emperor Charles to "his" peoples. The committee speaks on behalf of the Southern Slavs of the Austro-Hungarian Monarchy, to whom the oppressive rule of that same Monarch denies free utterance. Our people are thoroughly determined to sever every tie with the Hapsburgs and their Monarchy. The Yugoslavs emphatically deny the right of the Hapsburgs to speak in their name.

TANGIER TO TEHERAN.

So, after all, it is not Tewfik Pasha who is Grand Vizier of Turkey, but Izzet! In the present state of confusion and contradictory rumours, one can only repeat: "Izzet?".

***

The Egyptian *Fellah* is a likable person, and when he is not flustered by strange surroundings he is by no means lacking in native shrewdness. But when he finds himself in unfamiliar surroundings he is apt to lose his head; and in that state he falls a ready victim to any plausible swindler. From Cairo comes a story illustrating this, anr calculated to turn green with envy those enterprising gentlemen in this country who live on their wits. As it seemed to me to require an Oriental manner of telling, I have persuaded an Eastern friend to write it out for me. Here it is:—

THE STORY OF THE TWO PEASANTS.

In the days of the Sultan Fuad—may his shadow never grow less!—there dwelt in a village of Egypt two poor but honest men, named Mohammed Ahmed and Abdallah Ali. And in those days the Sultan with his Allies, the Sultan of Feringhistan and the Sultan of the Far Western Lands made war upon the Pasha of Potsdam, even he who called himself Hajji Wilhelm, though he had never so much as sniffed a breeze that blew from tho Holy Cities, and though his mere presence there would have sufficed to poison the blessed and beneficial waters of the Well, Zem Zem, for all time. And because of this war many workmen were wanted in the Sultan's capital; and for this reason went Mohammed Ahmed and his friend thither. And in course of time, by hard work they earned much money, so that their hearts became enlarged within them, their bosoms expanded, and their heads swelled greatly. Then said they: "Lo, we are now men of substance. Let us, therefore, return to our homes, that our friends and neighbours of aforetime may envy us, and that their countenances may become yellow with jealousy." So they gathered together their belongings and went forthwith to the place whence start the caravans-that-go-by-steam, which the Feringhis call "stay-shun." And there, by reason of the pushing of the crowds, the shouting of small boys, and the shrieking of the *Jann* imprisoned in the *machina* that draws the carriages on the iron road, their senses left them, and they became even as men who walk in their sleep, or as amorous youths to whom a dancing-girl has given what is called The Glad Eye. (Though what that means, I swear by the Beard of the Profiteer, I know not.)

***

And while they were thus bemused there came to them a stranger who, speaking them fair, told them where to go to take their tickets, and offered to take care of their baggage while they went. "For," said he, "I perceive that you are strangers, and I would fain earn the blessing that comes to him who helps a stranger on his journey." Thereupon they thanked him and departed, leaving their goods in his care while they sought for tickets. But when they returned the stranger had disappeared, and so had their goods. Then were their hearts turned to water in them, and they reviled the city and all who dwelt therein. "Would that I could find thee, O Son of a Calamity!" cried Abdallah; and "Cursed be the Father of Dandriff-Siftings," wailed Mohammed—and much more to the same effect. But though they cursed and wept, the stranger came not; and their goods were gone.

***

Yet Fortune, it seemed, had not entirely deserted them; for as they groaned and moaned, wandering hither and thither and wringing their hands, there came to them another stranger, who asked what troubled them. They told him, and he laughed, saying: "It is even as I thought. Ye be two foolish fellows. But Allah the compassionate hath sent me to your aid, and *inshallah* I shall recover your property for you; for I am an officer of the police, and I think I know the man who has robbed you. It is an old game of his" (said the stranger), "but justice shall overtake him this time, and that right speedily. Now come ye with me to the Kadi. But first, since ye be fools and sons of fools, unfit to be trusted with valuables in this great city, give to me your money and anything else of value that you have on your persons." So Ali and his friend did as the officer told them, and they all went to go to the Kadi. But even as they went the officer turned away swiftly up a side street; and the two friends saw him no more. And if they had cursed before, they now cursed much worse. Ali cried: "Oh, Son of ——"

***

No! Emphatically no! Doubtless Ali's language was quite justified, but THE NEAR EAST is a family paper—a fact which my Oriental friend appears to have forgotten. The story, however, is true—only too true for poor Mohammed Ahmed and Abdallah Ali.

CORSAIR.

NEWS IN BRIEF.

The King on Monday received a British officer who, with seven others, recently escaped from a Turkish prison camp in the interior of Asia Minor. Reuter's Agency reports that these British officers, who were captured at Kut-el-Amara, set out across the Taurus Mountains, travelling for the most part by night. After nearly a fortnight's tramp the eight men reached the sea, where they discovered a Turkish patrol boat lying in a creek. When the crew were on shore the party took possession of the vessel, crept out under the eyes of the sentry, and made for Cyprus, steering with the help of the sun and the stars. On the verge of starvation, they reached the island, having crossed 120 miles of open sea. The officers are now in this country.

In accordance with the suggestion contained in the report of the Secretary of State and the Viceroy on Indian Constitutional Reforms, it has been decided that, as the Committees on Franchise and the Division of Functions (whose appointment was recently announced) visit each province, one civilian officer and one Indian appointed by the local government should join them with a view to ensuring that the special conditions of each province are adequately represented. A corresponding procedure will be adopted when the committees are examining questions affecting the Government of India.

The Serbian Red Cross appeals to the sympathies of the British public to supplement the generous gifts of the Australian, Canadian, Italian, Japanese and New Zealand Red Cross Societies to the Serbian Red Cross Society in Great Britain. These gifts are being forwarded to Serbia with all possible despatch, and will be distributed by the society's own officers in that country. Contributions may be sent to the Honorary Treasurer, Serbian Red Cross Society in Great Britain, 9, Ennismore Gardens, London, S.W.7.

The British Police Mission to organise the police of Athens has arrived in that city.

It is believed that the name of Sultan Fuad I. will be given to Rue Rosette, which is one of the most important streets in Alexandria.

Part 216 of "'The Times' History of the War" deals with "The Redemption of Mesopotamia." It contains a map and many interesting illustrations.

General Milne, Commander-in-Chief of the British Army in Macedonia, has sent to General Danglis a telegram, in which he declares that without the heroic assistance of the Greek Army it would have been impossible to obtain the victory of Doiran.

The Madras Government have directed that the children of men who have enlisted in the combatant branches of the Indian Army since the outbreak of war should, so long as they remain in the service, be exempt from the payment of fees in elementary schools and allowed to pay half the standard rates of fees in colleges and secondary schools.

Dr. McInnes, Bishop in Jerusalem, Lord Bryce, and Sir Henry McMahon will speak on October 28, at 5.45, at the Queen's Hall, on behalf of relief work in Palestine, which has been made possible through the British victories. Reserved tickets, 2s. 6d. and 1s., may be obtained of the Syria and Palestine Relief Fund, 110, Victoria Street, S.W.

An exhibition formed for the Serbian Relief Fund of articles made by Serbian refugees and soldiers was opened in Liverpool on October 17 by Sir Valentine Chirol. The exhibition consists of Serbian costumes, articles of dress, etc.

From an authoritative Serbian source Reuter's Agency learns that some 200 officers and 20,000 soldiers of Yugoslav nationality, who were either captured or gave themselves up to the Italians on the Piave front, have submitted a petition to be sent to the Serbian front in order that they may fight against Austria-Hungary with their Serbian brothers and for the unity of the Serbs, Croats and Slovenes.

According to the *Egyptian Gazette*, many residents of Alexandria and Ramleh state that they distinctly felt an earthquake shock shortly after 2 o'clock on the afternoon of September 29.

A survey party of five members will leave Sydney in November to travel to Port Said viâ Cape York, New Guinea, Malaysia, India, Arabia and Egypt to map a route and landing-places for a London-to-Sydney aerial mail.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Good progress is being made with the project for the formation of a British Metals Corporation owing to the widespread support given to the scheme by the trades concerned. The capital of the corporation will be £5,000,000 in ordinary shares, about £2,000,000 of which is reported to have been already subscribed. The importance of the institution will be gathered from the fact that the following gentlemen are closely associated with the enterprise:—Mr. Charles Vincent Sale, of Messrs. Sale and Co., who is deputy-governor of the Hudson's Bay Company, and who, it is believed, will be chairman of the corporation; Sir Charles Fielding, chairman of the Rio Tinto Company; Mr. Andrew Wilson Tait, chairman of the British Aluminium Company and the Otis Steel Company; Mr. Cecil Budd, of Messrs. Vivian Younger and Bond; Mr. A. Hugh Smith, managing director of Messrs. Cookson and Co.; and Mr. C. W. Tennant, of Messrs. Charles Tennant, Sons, and Co.

***

An interesting note recently appeared in the German Press to the effect that "the German Syndicate of Surveyors and Builders, which has been employed, since 1914, in working out plans for the reconstruction of Stamboul, have received orders to prepare a chart for the canalisation of that city." It was added that Brussa and other Turkish towns would probably be similarly treated. *Das Echo's* advice to the German contractors was to "get busy early," which sounds almost prophetic in view of war developments which have set a rigid limit to further economic penetration by Germany in Turkey.

***

It cannot be said that Germany has wasted the opportunity afforded her by her control of Roumania. As a matter of fact she seems to have resorted to every kind of device that would be likely to ensure her an economic monopoly of the country after the war. One of the latest examples of this policy is given by *Das Echo*, of October 3, in which it is stated that "a contract has recently been concluded through which the interests of Roumanian national shipping will remain German, even after the conclusion of peace negotiations." The journal goes on to say that "in Braila German capitalists on the Danube have already taken barns, warehouses, and cranes, and contracts for twenty years have been concluded." The result of all this will be, we are told, that we shall be "completely crowded out." Doubtless that would be the case if Germany's measures were allowed to stand, but I think we can safely leave the abolition of all these outward signs of Teutonic policy to Roumania immediately opportunity offers, and that should not be very far distant.

***

One interesting development of British trade activity has been a movement to undertake the production of a standard work of reference on all sources of the supply of goods manufactured in the United Kingdom. More than three thousand firms have given their support to this undertaking, which, it is estimated, will cost at least £300,000. The work will be called "The Standard British Exporter," and will be printed in the commercial languages of the world, and presented to British Consuls and Chambers of Commerce. The project is certainly praiseworthy, and when carried through ought to be of great assistance in the promotion of the British export trade.

***

The Assam Railways and Trading Company, Limited, had rather more favourable results for the year ended March 31 than in recent years. The receipts from the railways and collieries amounted to Rs. 14,40,900, against Rs. 14,26,500. The coal output was 289,100 tons, against 280,700, but the sales were only 267,000 tons, against 315,100. Expenses with regard to the railways were heavier than in the previous year, and as a result the net revenue from this source fell to £33,700 from £37,500. On the other hand, there was an increased surplus of £69,700, against £68,900 from the coal trading account, while the income from associated undertakings amounted to £12,200, against £11,100. The available labour is £112,400, against £111,800, which, after meeting fixed charges, allows for 5 per cent. on the B stock, £4,100 being carried forward.

***

The admirably arranged tour of the Greek Commercial Mission which ended this week has afforded our visitors an excellent opportunity of seeing the manufacturing possibilities of the United Kingdom. In about five weeks the delegates have visited most of the leading manufacturing centres of England, and have also seen something of what Scotland and Wales can do in that line. Their visit cannot fail to have left them convinced that very great scope exists for the development of trade relations between the two countries. For many years after the war Greece will be largely concerned with the task of development, with constructing ports, railways, and roads, the erection of factories and dwelling houses, the carrying out of vast drainage schemes, and with many other highly essential works such as those referred to by Mr. Mawson in his articles on the reconstruction of Salonika. It is in these directions that the co-operation of British firms can be of great assistance to Greece, and it is the duty of our firms to render whatever service they can to our Ally.

***

It is not only in this direction that the tour is likely to have been invaluable. Trade between countries to be entirely satisfactory must be on a mutual basis, and it will not be enough for British exports to Greece to increase after the war if a marked advance does not take place in our imports from that country. The tour has given our importers as well as our exporters a chance to learn from the most authoritative sources the openings that exist for trade with Greece, and I am confident that they will do everything possible to increase the consumption here of the staple products of our Ally.

***

Sir Charles Macara draws attention in the current issue of the *Textile Recorder* to the importance of the establishment of a cotton reserve. He refers to the danger through a variety of possible causes of a shortage of the cotton supply, and contends that "in establishing a reserve of cotton we shall be considering the legitimate interests of all who are connected with the industry, from the planter to the spinner and manufacturer, and from the cotton pickers in the fields to the operatives in the mills and weaving-sheds, and at the same time do much to cheat the operations of the gambler. With the cultivator of cotton the crop is, of course, a question of money. He is not growing cotton simply to please cotton-users. He must be guaranteed a reasonable price for his crop, quite regardless of whether it is a large or a small one, and a reserve of cotton will help us to bring this much-needed reform about."

***

There can, I think, be no question as to the advisability of such a reserve, and it is satisfactory to know that the American Government is taking an interest in the question. "It would be a good thing," says Sir Charles, "if the American Government were to take over the crop at a price that would encourage an adequate, but not an excessive, production. The financing of the cotton crop by the Government is another important matter at this time, because the hold of our Allies on the crop, in much the same way as the British Government hold the East Indian, Egyptian and Colonial cotton crops, will have a great bearing on the negotiations for peace. The International Federation of Cotton Spinners has for years advocated a reserve of cotton. They advocated it before the war, and since the war I have done my best to keep so important a matter before the people concerned. The International Federation has done a great work for the world's cotton industry; and if the proposal here outlined were carried out the Federation could claim to have done a great work for the Allied nations. A reserve of cotton is an urgent necessity."

THE GREEK COMMERCIAL MISSION.

End of the Tour.

The members of the Greek Commercial Mission went on to Middlesbrough from Newcastle on October 16. Their time in Middlesbrough was limited, but they were able to visit the works of the Cargo Fleet Iron Co., Cochrane and Co., Ltd., and Dormans Long and Co., Ltd. Mr. B. Talbot, managing director of the Cargo Fleet Iron Co., met the delegates at the station, and escorted them over the works. Mr. John E. Janis, director, and Mr. Gerald Cochrane, manager, received the delegates on their visit to the works of Cochrane and Co., Ltd., where they were entertained to luncheon. Later in the day the delegates left for Saltburn-on-Sea, and the following day they went on from there to London.

On October 18 the delegates left London for South Wales, on the concluding portion of their provincial tour. They visited the Port Talbot Steel Works, where they were entertained to luncheon by Colonel J. R. Wright, and afterwards were shown over the Melym Works and the works of the Neath Steel Sheet Co., arriving at Swansea late in the afternoon. They were entertained at dinner in the evening at the Hotel Metropole by the Federation of British Industries. The Chairman, Mr. F. Gilbertson, president of the Swansea Metal Exchange, proposing the toast of "Our Guests," said that the Greeks were like themselves in many respects; they were a small nation and, like Wales, they loved their country. Wales was bordered by the sea, as the Greeks were; Welshmen, like the Greeks, were great rovers and successful colonists, and the Greeks were represented all over the world, their enterprise taking them to the ends of the earth. Swansea and Wales welcomed the Greeks because they were akin to the Welsh in many ways. The Greeks were a maritime nation like the Welsh, and there was much they could do together to develop the civilisation of the world. Welsh industries were not hothouse growths, but had been built up in face of the competition of the world, fostered by hostile tariffs and commercial systems which they had not hitherto thought fit to adopt. But with a fair field they could not be beaten.

Mr. R. Beck, chairman of the Swansea Harbour Trust, in a felicitous speech of welcome, said that the Greeks had resolved to take their place as a manufacturing power in spite of the previous German interference and methods. The war had taught them a lesson to use what brains and opportunities they had to encourage new markets for our produce. The predominant power of their district had been in the manufacture of steel, and he was sure the visitors recognised the possibilities that were before them.

Mr. Tsitsis, who replied, spoke of the possibilities of developing trade relations between the two countries, and urged the desirability of sending teachers to teach their boys English—a language they all loved.

On October 19 the delegates visited the works of Messrs. Vivian and Sons, Ltd., afterwards going to Llanelly to visit the works of the Welsh Tinplate and Metal Stamping Co., Ltd. They then returned to Swansea, where they were entertained to luncheon by Mr. F. W. Gilbertson, and later in the day left for Bristol. The following day (Sunday) the delegates went to Syston Court to visit Mr. Rawlins, High Sheriff of Gloucestershire, uncle of Mr. C. E. D. Rawlins, late H.M.'s Consul for Crete, of the Department of Overseas Trade, who is attached to the Mission.

On October 19 the delegates were received at the Council House by the Lord Mayor, Alderman Sheppard, with whom were the Sheriff, Mr. Percy Steadman, and the High Sheriff of Gloucestershire, Mr. J. E. Rawlins. The Lord Mayor, in welcoming the delegates, said they would not have time to see all that Bristol had to show them, but he might point out that it was an important city, both with regard to population and commerce. Also it was one of the oldest cities in the United Kingdom, and was linked with Greece in many ways.

M. Damalas, who replied, said that when they came to England they were very pleased to find that Bristol was included in their tour, partly because of the importance of the ancient city and also by reason of its industries, in which they were greatly interested. They expected that after the war they would be able to do a large business with Bristol.

During the morning the delegates visited the works of Messrs. Denham Brothers, and also attended an exhibition of agricultural and other machinery manufactured by the well-known firm of R. A. Lister and Co., Limited, of Dursley. Returning to Bristol the visitors were entertained to luncheon at the Royal Hotel by the Sheriff, and in the afternoon other works were visited.

In the evening they were entertained to dinner at the Royal Hotel, Mr. Clare Smith, district secretary of the Federation, presiding. The Chairman, in giving the loyal toasts of the "Kings of England and Greece," said that both nations had great traditions, and one of the finest qualities of tradition consisted in the possibility of continuous progress, which was the idea they all had in mind at the present time.

The Lord Mayor, in proposing "The Imperial Forces of Great Britain and her Allies," said that they were glad, in the war, to have the help of Greece, whose early difficulties they well understood, and for that reason they rejoiced all the more that they came out on the side of right and liberty. The saving of the Balkans was largely due to the part that the Greeks had played.

Sir Percy Stothert, in proposing "Our Guests," said that Bristol, whose trade had permeated into all parts of the world, was the principal port for the importation of Greek currants, and he hoped that trade with that country would constantly increase. Greece came into the war in spite of adverse circumstances, and they admired the Greeks all the more for it. He hoped that by the exchange of visits between the two countries they might be brought into still closer commercial relationship.

M. Damalas, in reply, said that but for Great Britain the small nations must have become the slaves of Germany, and they were all glad that victory over the common enemy seemed so close at hand. The Germans offered Greece peace and security, but they decided to take the course which involved war, hardship, and honour. He spoke of the bravery and sacrifices of the Greek forces, and said they deeply appreciated the acknowledgments which the Allies had made of their services in the war. The visit of the delegates had increased their admiration for British commercial enterprise, and Greece was anxious to do more and more business with this country. They hoped British manufacturers and merchants would pay more attention to trade with the East, and they would do their best to see that England got a larger proportion of Greek trade in exports and imports.

M. Tsitsis, proposing "The Federation of British Industries," said he believed that the future of British industry would be a great one, and he expressed the greatest admiration for the progressive manner in which British trade was carried on.

The Sheriff, in reply, said the Federation had undertaken an important work, which was not only to develop the export trade but to promote commerce in the truest and deepest sense.

Formation of a Trade Committee.

The Greek Mission has now completed its official tour of provincial towns, and has returned to London. On Wednesday, at a luncheon given in honour of the delegates by the Federation of British Industries, at Prince's Restaurant, the necessary steps were taken to give permanent expression to the purpose underlying the visit, the improvement of commercial relations between Greece and Great Britain, Sir Richard Vassar-Smith, President of the Federation, presided at the luncheon, and among those present, in addition to M. Michalocopoulos, Greek Minister of Agriculture, and the other members of the Mission, were Sir Arthur Steel-Maitland, head of the Department of Overseas Trade, and Mr. A. T. Waugh, British Commercial Attaché at Athens.

The Chairman suggested the formation of a small united committee, representing the British and Greek nations, to foster and encourage trade between the two countries, and especially referred to the importance of establishing better banking facilities.

M. Michalacopoulos, on behalf of the Mission, acknowledged the kindness with which they had been received during their present visit, and said they had seen for themselves in their tour what wonderful efforts had been put forward by the manhood and womanhood of Great Britain, and especially in the industrial world, to help not only their own Armies and Navy, but the whole of the Allies, in the supply of coal, food, and munitions of war. It had enabled the Allies to teach the brutal Huns that there was something more than brute force to be reckoned with when conducting civilisation, and that above all, was the great moral force of justice, right, and freedom, for which the Allies were fighting.

Sir Arthur Steel-Maitland said that his Department would be only too pleased to do anything that they could to promote the objects of such an association or committee as had been suggested by the chairman.

Mr. A. T. Waugh, British Commercial Attaché at Athens, said that he thought that the proposed committee would supply a long-felt need in bringing the two nations together. Now that the "iron was hot" he hoped they would "strike" for the establishment of any agencies for promoting trade between the Allies. Already steps had been taken in Greece for exhibiting and making known articles of British industry and for popularising British methods and institutions.

On the suggestion of the Chairman it was agreed to form a committee, the first names to be Sir Francis Barker, Mr. Philip Lockhart (Leicester), and Mr. Edmund Hill (Secretary of the Federation), and M. Embiricos (Greek ex-Minister of Supply), M. B. Zamanos (founder of the Vodens Cement Works), and M. J. Damalas (finance and banking).

GREEK REVENUE.

According to a statement made by the Greek Minister of Finance, reported by Reuter's Agency, the revenue of Greece for the first six months of this year shows a satisfactory result. While for the first half of the three preceding years the revenue did not exceed 80,000,000 drachmæ, the first half of the present year yielded 100,520,000 drachmæ—that is, an increase of nearly 20,000,000 above the average for the last three years. These figures indicate not only the soundness of the financial policy of the State, but the economic strength of the Greek people, who have not shrunk from new taxation.

SUDAN COTTON CROP.

The Sudan cotton crop is estimated in the July report of the Sudan Government Central Economic Board at 8,300 kantars of 315 rottles, unginned, this being 5,000 kantars below the January estimate. It is stated that at least 3,300 kantars of this deficit are to be attributed to the fact that a large amount of the cotton was allowed to fall to the ground as soon as it was ripe and was rendered useless by becoming covered with dust and sand. The remainder of the deficit is accounted for by a severe outbreak of "asal" which attacked the later grown cotton. The provision of camels to carry the ginned cotton to Atbara and Suakin has caused considerable difficulty. With regard to next year's crop, cotton seed is being issued for a crop of 10,000 kantars, as this is regarded as being the maximum that can be dealt with in view of the shortage of transport.

GOLD PRODUCTION.

The Council of the London Chamber of Commerce has decided to take action in conformity with the resolutions passed at a meeting of the Chamber held on October 8, and will ask to be allowed to submit evidence before the Government Committee of Inquiry which has been appointed to consider the question of gold production. The resolutions were as follows:—(1) That the production of gold in existing circumstances is an essential war industry and should therefore receive preferential treatment by Government in order to preserve the supply. (2) That the Council of the Chamber be asked to bring this matter before the Government and the Committee of Inquiry by deputation or otherwise.

In order to increase as much as possible the cultivation of cereals, the Sultan of Egypt has prohibited the cultivation of opium throughout Egypt.

GREEK CURRANTS.

Outlook for Christmas.

A correspondent writes :—For four successive Christmases little or no interest has been taken in the provision of the traditional fare for that normally festive season, but the sudden change in the war position suggests the possibility that English housewives may this time be able to concentrate their attention on such highly material questions as the provision of the Christmas pudding. That thought put it into my mind that, in the circumstances, it might not be without interest to readers of THE NEAR EAST to know what are the prospects of an adequate supply of one of the staple ingredients for this delectable dish, namely, the modest currant, for which we are mainly dependent on Greece. Mr. G. A. Burlumi, of Messrs. Burlumi and Co., whose illuminating report on the currant trade appeared in your columns only last week, was kind enough to outline the present position for me. He was, frankly, not very encouraging on the prospects for the present year, though he held out every hope of a speedy resumption of the normal trade in this commodity after the war.

"Everything depends," he told me, "on tonnage. The Minister of Food in Greece, who is my brother, is trying to get ships to send over as large quantities of currants as possible in time for distribution for the Christmas trade. At the present time there are 4,000 tons in the warehouses of the United Kingdom which can be released for Christmas. As a rule, from the beginning of the season, commencing in August to the end of the year, the consumption of currants here amounts to about 35,000 tons. This year, unfortunately, the public may have to be content with the quantity mentioned, though it is, of course, possible that we may get one or two cargoes before Christmas. But, as I said previously, it all depends on tonnage."

Mr. Burlumi emphasised the importance of the trade in currants to Greece, and said there was no doubt that Greece would find this country her best customer for currants in the future. "Just now," he said, "if we could find tonnage for 100,000 tons of currants they could all have been disposed of at high prices."

In his view, six months or a year after the war would see the currant trade resuming its normal round, but he says that prices are not likely to be anything near as low as they were before the war. "The normal imports of this country from Greece," he pointed out, "were about 70,000 tons, and although the crop appeared to be large—ranging from 100,000 tons to 140,000 tons—it must be borne in mind that during the war there has been a steady inquiry from France for wine making, while a great quantity of currants is now being used in Greece for industrial purposes. The demand from France after the war is likely to be very considerable, and for many years after the war British consumers must not expect to buy currants at low prices." This point with regard to France is extremely interesting, for it adds yet another to the many curious and unexpected results of the war. Readers of THE NEAR EAST will not need to be reminded that the halcyon period of the Greek currant producers was during the years when France, owing to the ravages of phylloxera among the vines, became an importer of currants on a large scale for blending purposes. When the vines recovered, the demand ceased, and bad times came for the Greek currant trade. Indeed, from that day to the outbreak of war the position with regard to the trade has been an almost constant preoccupation of the authorities. Now, apparently, the problem has been solved by the action of the military party in Germany in provoking a world war, though I can scarcely think that Kaiser Wilhelm and his clique had the interests of Greek currants at heart when they decided to invade France.

SUDAN TRADE NOTES.

Openings for British Enterprise.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, September 16.

Amid the immense economic changes that are being planned in the British Empire the Sudan hopes to creep in as a minnow among the Tritons and to attract the interest of British capitalists. The difficulty of communications, the remoteness of the area where much of the profitable products are obtained, and the unsettled conditions of the country have hitherto made it hardly worth while for the important firms to interest themselves in the country. As the conditions improved (*e.g.*, in the gum trade when the railway extension reached El Obeid) some British firms began to employ special agents. At the present time there are two British firms and one Greek firm that obtain the bulk of the trade in gum. This is fairly satisfactory, but it would be still more so if the other products of the Sudan could also attract British capital. The cattle trade has been developing at a pace quite beyond expectation, and would possibly have gone faster had the steamers and railways been able to cope with more traffic, but during the war it is practically impossible to obtain material for new construction or even to replace wastage. That, however, should be set right after the war, and then it may be that the cattle trade will progress even faster than before. At present this trade is entirely in the hands of natives, Syrians and Egyptians, and there would seem to be an opening for British enterprise.

Growing Prosperity of Natives.

War conditions have profoundly altered the position of the natives of the Sudan. In the past one of the great objections that British firms had with regard to Sudan trade was that the system of long credit obtained, and that that was not worth the while of British firms. The fact was that the natives of the Sudan had to make use of this system of credit as they had no money. Since the outbreak of war they have been selling their commodities at enhanced prices and in very large quantities. Money has come into the country in a considerable stream, and the greater part has gone into the pockets of the natives. They have thus acquired a working capital which they never had before, and they can pay their way. It is said by some of the merchants who deal in cotton goods that their native clients are the most reliable that they have, that they pay up their bills with surprising punctuality, and are glad to take advantage of discount. This is a new departure for the Sudan, and is evidence that they are, and have been, reasonably honest, but that the lack of capital made it difficult for them to meet their liabilities if the smallest accident happened.

Possible Demand for Tinned Goods

In a country where so many things are obtainable only in tins, owing to the impossibility of producing them in the tropical heat, there is a considerable trade in groceries of all sorts. This trade is almost entirely for the officials of the Government, so that it is not a very large one, but as the tastes of the natives widen with experience they are likely to create a demand. As regards one commodity this is already the case, for the ubiquitous sardine is already widely known and appreciated. The trade has been so far almost entirely in the hands of the Greeks, and, though there is one famous Piccadilly firm represented, the business has not yet attracted British capital to any degree.

There have been signs of considerable activity recently in the coffee trade of Gambeila, although the harvest this year is comparatively poor, but firms are arranging for a more forward policy in the future. With the present situation in Abyssinia it might seem too speculative for British firms to concern themselves with this trade, but it is to be hoped that the troubles of Abyssinia will be settled, and then a rich field of commercial enterprise should be opened up. So far the volume of trade through Gambeila has not justified the employment of European representatives of British or other firms, and the trade has, therefore, been in the hands of Greeks and Syrians, but it is reasonable to hope that the increase in trade will interest British firms sufficiently for them to send agents to such places even at a slight loss for a year or so in order to bring into British hands a not inconsiderable amount of coffee trade, whilst there is also the trade in wax, hides, and honey to be developed.

There is little doubt that there is money to be made in the Sudan, but it is necessary to spend money in the first instance. The distances are so great, and the prices to be paid for transport accordingly high, and the time elapsing between the purchase locally and the ultimate sale in Europe so long, that an individual working on his private and small capital might easily find his activities curtailed by lack of money. An accident such as the destruction of his goods might put him permanently out of action, and his own illness be a serious hindrance to the promotion of business. With a big firm these difficulties are to a certain degree surmounted, and, though local conditions of health may temporarily dislocate things, there would be no damage that could not be repaired swiftly, so long as the business remained solvent, as it would with strong backing. But the general circumstances of the trade make it more suitable for established firms than for individual enterprise.

ENGINEERING NOTES.

Wind-mills for India.

At a recent engineering congress in India some interesting suggestions were made in regard to the use of windmills for pumping and irrigation purposes. It seems wonderful that no extensive use has been made so far in India of the windmill. In the steady monsoon winds, which prevail during most months of the year, the efficiency should be satisfactory enough to secure extraordinary economy in working. Whether by day or by night the wind would be the ruling factor, and the cultivators would not complain if they saved their crops. Such mills, besides, might be used for running other agricultural machinery. Why should not each village be self-supporting, and have its own simple mill and machinery? Windmills, it is true, have fallen into disuse in Great Britain owing to the cheapness of coal, but there are some who predict that it will not be long before they once more become a considerable source of power. The suggestion was made that windmills can and ought to be designed within the capacity of any village blacksmith and carpenter to repair, renew parts, and keep in running order, and in due course to re-erect, in accordance with certain standard designs. The suggestion, however, for the construction of rustic home-made windmills by the natives seems not very practical, inasmuch as windmills of the most modern and improved type, durable, light, and simple, are manufactured, and can be obtained in this country at prices within the means of the average Indian farmer. And such mills require neither mill-house nor skilful attendants, and can stand any storm.

Soil Treatment.

The ordinary Oriental farmer gathers, usually during the autumn, all available cut boughs, twigs, dry leaves, etc., and burns them in the middle of the field which subsequently he will plough. He has a knowledge that the fire greatly improves the soil; but in his anxiety to effect such improvement he very often lets the fire go too near bushes or under trees, which with the slightest breeze can easily take fire and soon transmit it to others. This dangerous method of improving the soil is responsible for many fires that often destroy orchards, olive groves, and forests of great value; and for this reason landowners in the East, as a rule, forbid the practice. A known process which is used by market-gardeners and nurserymen in Western Europe and America is that of blowing saturated steam at a few pounds pressure underneath suitable insulated trays laid on the surface of the soil The treatment is continued until the top layer, say nine inches or so, of soil attains a minimum temperature of about 82 deg. C. This process costs about £50 per acre of bed and is wasteful of heat; but as it leads to increased crop-production of high-priced foods it pays the growers in this and other continental countries, but, probably, not those in the East. For the latter, as well as for other agriculturists, a safe and economical method of treating the soil to improve its productivity is required; and as a newly-invented machine seems to possess these characteristics a few notes in reference to it will be of much interest to landowners and farmers in the East.

The Machine.

The machine includes a method comprising the application of a flame or radiant heat uniformly to virtually all the fragments constituting a layer of soil in that area, and the simultaneous application of a stirring action to them for a period sufficiently long in duration to ensure that the soil shall be thoroughly broken up and that the flame or radiant heat shall be virtually uniformly applied to all the fragments of the layer irrespective of their original situation. The machine is fixed on a suitable frame mounted on driving wheels and steering wheels by which the machine travels over the ground to be treated. At the lower end of the frame is fixed a non-continuous helical agitator connected by suitable gearing with an internal combustion engine or other motor, mounted on the frame. The motor is used also for the propulsion of the machine. When the machine is in operation, the agitator is arranged to enter the soil to the depth to which the heat treatment is to be applied. The compressed air and oil fuel supply are adjusted and the burners lighted so as to heat the soil to the desired temperature. The whole vehicle is then moved over the ground to be cultivated, the driver controlling it from the seat on the fore part of the machine. As the vehicle travels forward, the agitator rotates and the layer of soil is turned over and over, and virtually all the particles in the layer are heated uniformly. The temperature attained by the soil during its treatment is determined by the intensity of the flame, by the speed at which the vehicle is taken over the ground, and by the rate at which the agitator is rotated. The gearing is so arranged that these speeds may be varied relatively to one another to produce the desired effect, which is to heat a layer of the soil throughout to a temperature of between 80 and 100 degrees C. The machine can also be made not self-propelled, but adapted for animal or other traction.

CYPRUS NOTES.

(FROM A CORRESPONDENT.)

The Agricultural Department has been very fully occupied. Rules have again been put in force in the Kyrenia District to fight the serious carob disease, which the natives call *brakhi-karpia*, or "short-pod" (cecidomyia ceratoniæ). They provide for knocking off, burning, or burying in quick lime, the infected beans and flowers, within 30 days of gathering. No other means of combating the malady has yet been devised.

Steps have been taken to reduce a troublesome wheat pest (the *tinea temperatella*), which develops into a diminutive moth, after causing considerable damage to the green blades. In infected areas of 7 Limassol and 4 Famagusta Villages stubble had to be burnt, and lands ploughed to a depth of four inches. A scale attacking orange trees, so productive in Cyprus, has also given trouble. During September and October owners are required to spray the trees attacked with a lime-sulphur solution. All these operations have to be carried out to the satisfaction of the Director of Agriculture.

As regards sales of cereals, no transactions are allowed at higher prices than 9s. a bushel for wheat, 8s. 4d. for vetches, 4s. for barley, and 2s. 2½d. oats.

The orders regulating the cultivation of tobacco are being carried out as strictly as possible. In order to safeguard the work of harvest, an Order in Council issued by the High Commissioner directed that no male person over 12 or under 60, and no female over 12 or under 50 shall, without special permission engage in tobacco cultivation. The picking of all tobacco must be completed before October 31, when all waste leaves, etc., must be destroyed. Some bales of last year's tobacco, both Turkish and Latakia (Syrian), should have recently reached England, and the pronouncements to be passed on these consignments are awaited with no little interest. If the latest inland-grown samples become marketable in Great Britain there seems no reason why "Cyprus cigarettes" should not soon acquire an excellent reputation, and in time, perhaps, rival "Egyptians" in popularity; which, indeed, as far as title is concerned, would be more justly earned on their merits, since the leaf would be the *bonâ-fide* product of Cyprus, whereas of that used in "Egyptian cigarettes" not an atom is grown in Egypt.

THE GOLD MOHUR.

Messrs. Montagu notify the terms of a *communiqué* issued to the Indian Press about the end of August:—"The Government of India are issuing a rule under the Defence of India Act prohibiting dealings in any legal tender coin above its face value, the value of the sovereign being declared to be fifteen rupees. As is known, the Government of India have in recent months been issuing gold coin, namely, sovereigns, and latterly gold mohurs, for the purchase of wheat with the object of assisting the currency position and reducing the demand for rupees. This object is, however, being frustrated by the withholding from circulation of these coins in expectation of securing a speculative profit, and the intention of the present rule is to make illegal speculative transactions in the currency."

LANCASHIRE COTTON.

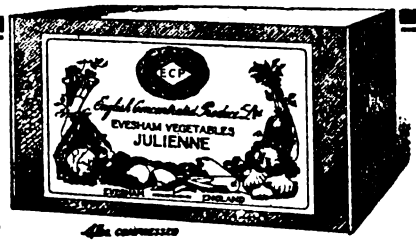
MANCHESTER, Wednesday.

The tone of the market remains very slow. No increase of business can be reported, and buyers have again adopted a waiting policy. In the meantime there are indications of prices giving way, chiefly in American yarns. The war situation continues obscure, and trade prospects are undoubtedly very unsettled. Numerous complaints continue to be heard with regard to the regulations of the Government relating to the buying and selling of Egyptian cotton. Representations have been made to the authorities, and there have been rumours of changes in the scheme, but the committees that have control are wide apart, and satisfactory arrangements seem almost impossible. The demand for Egyptian cotton continues healthy. Egyptian yarns continue rather quieter, but late rates have been very firmly held, and in certain counts and qualities record prices have been paid this week. The bulk of the trade has been in descriptions suitable for Government cloths used for military purposes. Restricted dealings have occurred in piece goods for Egypt. Favourable advices, however, continue to be received with regard to distribution in Cairo. Cloth inquiry for India has been flat, and there has been nothing doing for China. Home trade buying has been less active. Prices in American yarns have favoured buyers, especially in ring beams. There is more irregularity in quotations than for a long time back. Some inquiry has been about in special yarns for the Near Eastern outlets, but business of any importance has not matured.

ANGLO-PERSIAN OIL COMPANY.

In the House of Commons on October 21, Commander Bellairs asked the Chancellor of the Exchequer whether the Board of Admiralty was still the responsible Department in regard to the large investment which was made in the Anglo-Persian Oil Company prior to the war; and, in view of the fact that no statement had been made since 1914 as to the progress of the undertaking, whether he would cause one to be made now.

Mr. Bonar Law: The interests of the Government in the undertaking are represented by the two *ex-officio* directors nominated respectively by the Admiralty and the Treasury. Accounts of the company's progress are given in their annual reports and in the speeches of the chairman to the shareholders, which have been published from time to time in ordinary course.



Commander Bellairs: My right hon. friend refers me to the report of a private company. Will he not imitate the report of the two Suez Canal directors and call for a report from these two directors, seeing the large sum of money involved?

Mr. Bonar Law: I will consider whether it is desirable?

TRADE WITH GREECE.

Referring to the recent exhibition in Glasgow of samples of foreign-made goods obtained from Greece, the Glasgow *Chamber of Commerce Journal* comments as follows:—"The exhibition contained various samples of German enterprise. There was, amongst many other articles, a range of matting made of German paper, and of silk and cotton fabrics and goods of imitation leather. There has been a tendency to minimise the importance of the Greek and other markets in the Near East. It should be remembered, however, that Salonika is the gateway of commerce to the Balkan States. The re-planning of the city, upon which, it is expected, twenty million pounds will be spent within five years of the close of the war, will bring into existence numerous enterprises, and the industrial advantages will be obtained mainly by the nations which are alive to the possibilities. The Germans, in spite of the distractions of war, are showing themselves sensible of the potentialities of the Balkan markets, and they are taking steps to obtain some of the best warehouse sites. French and American manufacturers are also showing indications of being alive to the possibilities."

INDIAN INTELLIGENCE.

Control of Trade.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated October 18 :—

Mr. M. M. Gubbay has been appointed to control inter-provincial distribution of foodstuffs. (Mr. Gubbay was the first Wheat Commissioner in India in 1913.) The rise in prices in ordinary commodities in India has occasioned the appointment of Directors of Civil Supplies in the various provinces.

A bill to control dealings in cotton and to appoint "Contract Boards" with necessary powers has been published by the Government of Bombay.

Dated October 23 :—

Rain much needed in Punjab, United Provinces, Bihar Bombay. Light rains have fallen in Bengal and parts of Bombay. Crop prospects in Assam are fair to good (very similar to last week's report D.T.C.).

Fine broach ready delivery, Rs.800. Piece goods market depressed.

EGYPTIAN MARKETS.

The approximate weekly returns from markets for the week ended October 3 were :—Cattle markets, £482; general markets, £480; total, £962; total for year, £38,560. The figures for the corresponding week last year, ended October 4, were :—Cattle markets, £247; general markets, £379; total, £626; total for year, £44,289.

COMPANY MEETINGS.

Assam Railways and Trading Company, Ltd.

The thirty-eighth annual meeting of the Assam Railways and Trading Co., Ltd., was held on October 23 at Winchester House, Lord Ribblesdale (the chairman) presiding.

In moving the adoption of the report and accounts the Chairman said that the railway earnings showed an increase as compared with last year, but there had been the almost inevitable increase in expenditure, so that the profit earned at £32,680, against £37,528, was not so good as in the previous year. In the colliery their profit was about £1,000 better. The income was smaller, following on smaller sales, but, whereas last year they had had to write off a considerable amount for a decrease in stocks, in the year under review their stocks had become bigger again. The falling off in the sales had not been in the demand for coal, but had been more in their ability to supply. As to the condition of their properties, the directors had continued to devote as much energy as possible to the important part of the company's management which was included under the headings of maintenance and betterment, and, all things considered, he thought they had been able to do very well. With regard to the position of their present colliery, he need not do more than remind the shareholders that, in the opinion of their expert advisers, sufficient coal was in sight to continue the present output for very many years. The Government had granted leases for the new areas at Lekha-Pani, and extensions of the seams of coal had been found there which made it an even more valuable property than at first anticipated.

With regard to the various companies in which they were interested, the Assam Oil Company for 1917 had increased its distribution from 6 per cent. to 8 per cent., while the Makum Tea Company continued to do well, though he gathered that the result for 1918, owing to the action of the Government in taking over the greater part of their tea at a fixed price, would not be so good as for 1917. The Rivers Company's dividend also showed an improvement which he believed would be maintained. Last of all, there was the Namdang Tea Company, which was still in the embryotic stage. For the current year he believed the income from their crop would pay, or very nearly pay, for the whole of their expenditure. As to the immediate position in Assam, they had had to take the step at last of reducing the train service to a certain extent, but the general manager hoped largely to maintain their receipts. At the mines the figures for August and September were very low, the cause being, he believed, a most virulent epidemic of influenza. It was difficult to say whether later on they would be able to make good that shortage. The general result of the year was a balance at credit of general net revenue account of £108,954, and from the balance now available the directors proposed a final dividend of 3 per cent. on the "B" stock, leaving £4,129 to be carried forward.

Mr. Walter Butler, M.I.C.E., seconded the motion, which was carried unanimously.

The new cotton seed oil made its appearance on the market at Alexandria three or four weeks ago, and it was then expected that a few days would see the oil difficulty over there and throughout Egypt.

ON 'CHANGE.

(FROM OUR OWN CORRESPONDENT.)

THROGMORTON STREET, Wednesday.

There has not been much business doing this week. Prices have been rather irregular. In Government stocks Egyptian Unified are ¾ up at 92½ on the renewal of inquiry from Egypt.

In Bank shares Nationals are ¼ down at 20⅛, and Agriculturals have lost 1-16 at 6 15-16. On the other hand, Anglo-Egyptian Banks are ½ up at 22.

Amongst Railways Delta Lights have improved ⅛ to 7½.

In Land shares Aboukir have weakened 6d. to 23s., Behéras ¼ to 14½, Sidi Salems 1-16 to 2 21-32, and Union Foncière also 1-16 to 3 9-16. On the other hand, Delta Lands have improved 6d to 16s. 9d., and Foreign Trusts are fractionally better at 14s. There has been a good demand for United Egyptian Lands round 2s. 6d.

In Miscellaneous shares Salt and Soda are 1-16 down at 2 13-16, whilst Khedivials are 6d. higher at 63s. 6d.

In Greek securities Monopoly are again ½ lower at 64, and the 1902 and 1910 Loans have each dropped one point to 68 and 65 respectively.

COMPANY NOTES & REPORTS

The directors of the Burmah Oil Company have declared an interim dividend on the ordinary shares of 1s. per share, equivalent to 10 per cent. for the year, free of income tax, payable 8th proximo. Last year the dividend was at the rate of 15 per cent. per annum.

The directors of the Madras and Southern Mahratta Railway recommend a distribution on January 1 next of £1 5s. per cent., in addition to the guaranteed interest at the rate of 3½ per cent. per annum, making £3 per cent., less English income-tax, for the half-year. This is the same rate as paid in January last.

The directors of the South Indian Railway Company, Ltd., have decided to pay a final dividend of 2 per cent. less income-tax, from surplus profits on January 1, 1919, in addition to the guaranteed interest of 1¾ per cent. for the half-year ending December 31, 1918, making a total distribution for the half-year of 3¾ per cent., and together with the payment that was made on July 1, 1918, a total payment of 6¾ per cent. for the year, as against 5½ per cent. paid last year.

EGYPTIAN DELTA LIGHT RAILWAYS.

The traffic returns for the ten days ended September 20 amounted to £E8,108, making the total from April 1 £E138,444. The corresponding figures for 1917 were £E6,940 and £E99,430.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the undermentioned days :—October 8, 9, 10, 11, and 12, 870,000 francs, against 750,000 francs; October 13, 250,000 francs, against 250,000 francs.

In view of the reduced demand for remittances to India the sale of Council drafts announced for October 22 did not take place.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams : "Trabanque, London."

NOTES OF THE WEEK.

With the capture of Aleppo General Allenby has rounded off his conquest of Syria, and it may be expected that the enemy, if he carries on the war, will withdraw the remnant of his army north of the Cilician Gates. The present offensive began from the Jaffa-Jordan line on September 18, and thus within six weeks practically the whole of the enemy forces in this theatre of war have been put out of action. General Liman von Sanders, the German Commander-in Chief, is reported to have had twelve thousand men under him in Aleppo, but he was not prepared to offer any determined resistance to the British advance. He had saved himself by flight from General Allenby's first encircling movement; his withdrawal from Damascus anticipated by only a few hours the arrival on September 30 of the first British troops, and once more he showed little inclination to run any personal risk, by hurrying from Aleppo with the bulk of his forces two days before our cavalry and armoured cars entered the city. It is not surprising that he should have been recalled, but it will be of interest to see whether he can now reach Germany.

With a more homogeneous force a resolute and able commander might have offered considerable opposition to the British advance. But General Liman von Sanders was either not cast in an heroic mould or had decided that he was not called upon to sacrifice himself for the Turks. The latter had long since ceased to appreciate the rôle they had been forced to play of sacrificing themselves for Germany, and consequently General Allenby has encountered little resistance north of Damascus. He has now reached Muslimieh Junction on the Baghdad Railway, and the Turks confronting General Marshall in northern Mesopotamia have had their lines of communication cut. A way of retreat is open to them through Diarbekr, but no further supplies of war material can reach them.

The enemy's collapse in Syria is as complete as it was in Bulgaria, but in the latter country the Government was a free agent and could surrender of its own volition, while the Turks have been dragooned into continuing the war even when they are no longer able to offer any effective resistance. It is to Germany's advantage to have Turkey remaining in the war as long as the Germans can hold out, for she is more concerned to save as much as she can from the wreckage of her hopes in the East, by representing the Turks as faithful allies to the end, than to study Ottoman interests. Accordingly the Turkish Government at Germany's behest postpones the inevitable step, and with characteristic fatalism watches the gradual shrinkage of Turkey. Troops, it is said, are being hurried to the Chatalja Lines for the defence of Constantinople, but it is more probable that all parties in the country have their minds set upon peace rather than upon further fighting. The evacuation of Baku is a significant step. The example of Germany and Austro-Hungary has led the Turkish Government to attempt to gain an armistice through diplomatic channels; but sooner or later it will have to adopt the military methods of procedure.

In the meantime General Marshall has resumed military operations on the Tigris, and is driving the Turks northwards in the direction of Mosul. The first resistance of the enemy was, as usual, stubborn; but the British troops, moving in three columns, one on each bank of the river and the third on the Kifri-Mosul road, have pierced his defences, and the Turks are again in flight. On October 28 a counter-attack enabled the enemy to score a temporary advantage on the Tigris road, but the co-ordination of the British columns restored the situation. The village of Kalat Sherghat has been the centre of further resistance, but the last stand made by the Turks five miles to the north has now been broken. A portion of the force attempted to escape by the north-west and was cut off by General Marshall's cavalry, leaving a thousand prisoners in his hands. This success brings the British forces within fifty miles of Mosul.

With the Austro-Hungarian Government sending out "S.O.S." messages all over the world and resorting to every device before adopting the obvious one of sending a flag of truce to the Italian lines in Venezia, the details of the retreat of Austro-Hungarian troops in Serbia and Montenegro tend to lose the interest that ought otherwise to attach to them. The military operations in these countries have resolved themselves into a contest of speed, the enemy endeavouring to make good his escape regardless of his sacrifices, the Allies following as rapidly as transport allows. The Serbians, indeed, are but little hampered by such considerations, and their commissariat arrangements have been one of the features of the Allied advance. Even with the lengthening of the lines of communication there is little sign of the pursuit slowing down. The Serbians are within a score of miles of Belgrade, the Italians have reached Alessio and San Giovanni di Medua, and are advancing on Skutari. The position of the Austrian forces in Albania must be unenviable, as, even if they succeed in making their way through Montenegro, they will find themselves in Jugoslav territory, which has now to be

Digitized by Google

regarded as an Allied country. But before the critical moment comes for them, the action of the Vienna Government may have solved the difficulty.

In the liberation of Montenegro it is to be hoped that due regard will be paid from the first to the true interests of the country. Reference has been made in the reports from the seat of war to the reapparance of *komitajis*. In the circumstances it is inevitable that bands of men liberated from the Austrian yoke will be with difficulty restrained from taking up arms to assist in the expulsion of the invader, and in this connection the word is perhaps a misnomer. It is desirable that it should be made clear that in the final settlement of the Balkans there will be no room for the perpetuation of the old *komitajis*, who did such forceful work as national propagandists. Montenegro, in particular, must tread warily. Her first need will be the revictualling of the people still in the country; then will follow the repatriation of those who have been in exile. At the earliest possible moment there must be an adjustment of the political difficulties that have arisen during the war, and it is particularly desirable that in arriving at a solution the Montenegrins should be left entirely to themselves, and should not be subject to propaganda instigated from outside.

The House of Lords has decided on appeal that it is possible for a British subject to acquire a domicile in Egypt. Concurrently it has also decided that a married couple so domiciled cannot be divorced; for the marriage cannot be dissolved by the Consular Court, and the High Court in England has no jurisdiction. Both decisions are of importance, for as the judgment declared, "it has often been pointed out that there was a presumption against the acquisition by a British subject of a domicile in such countries as China and the Ottoman dominions owing to the difference of law, usages and manners." But, their lordships continued, "since special provision for the protection of foreigners in such countries had been made, the strength of the presumption against the acquisition of a domicile there was very much diminished." Clearly, the Order in Council which denies the Consular Court jurisdiction "relative to dissolution or nullity or jactitation of marriage" will have to be reviewed in the light of this judgment.

The formation of a Roumanian National Council in Paris is, we may hope, only a temporary expedient; for, even if Germany elects to continue the struggle single-handed, she will not be able to retain her army of occupation in Roumania. That sorely tried country will, therefore, once more be free, and will also be in direct communication with the Allies by way of the Balkans. The policy that the Roumanian Government felt constrained to adopt under the shadow of German bayonets can hardly be the policy that will commend itself to the nation at large when it regains its liberty. If M. Marghiloman is unable personally to adapt himself to the new conditions, he will not expect to remain at the head of the Government, and it should not be necessary for any body of men outside the country to have to form the nucleus of the régime for which Roumania is obviously longing. In the meantime, however, it will be useful for the Allies to have on the spot in Paris an organisation that can speak with authority on Roumanian affairs and aspirations. The presidency of the Council, as was to be expected, has been offered to M. Take Jonescu, and the Transylvanian poet Octavian Goga represents the Roumanes of Hungary.

Last week's Indian debate in the House of Lords served at least one useful purpose in eliciting a definite statement of the attitude of the War Cabinet to the Chelmsford-Montagu proposals. There has been no lack of ill-informed talk on this subject in this country as well as in India, and we have been assured sometimes that the Cabinet had swallowed the Report whole and sometimes that individual Ministers had determined to hang the matter up for an indefinite period. At last we have the formal declaration, which surely might have been made several weeks ago, that the Cabinet occupy the position which has been taken in these columns since the opening of the discussion: the questions of Franchise and of Functions are of the essence of the scheme, and the judgment of the Government is suspended until the Committees on these subjects have reported.

When all the data are at last available, the Cabinet will follow the regular constitutional practice, and introduce a Bill to give effect to their decision; then Parliament will be able to play its part, and, if it sees fit, will afford a hearing to all the interests concerned. It is, no doubt, a tedious process, especially as Parliament will have many other things to do, and we hope that no time will be wasted in letting India know what her future is to be; but the duty laid on Parliament is too important to be shirked, and it is better that India should have to wait for some months than that her future should be settled without due deliberation. Speed is, of course, the fashion just now, and Indian politicians are desperately in a hurry; but something more than speed is wanted for a long course over difficult country such as that which lies ahead.

The Press seems to have displayed very little interest in Lord Islington's announcement that a Committee has been appointed to consider the future organisation of the India Office, but the news will be welcome in India, where the curtailment of interference from Whitehall is a platform on which officials, politicians, and men of business can meet without reserve. We need not inquire how far their criticisms have been justified in the past, but it is obvious that on administrative grounds alone a change is overdue. The direction in which reform is possible is a more difficult question, to which we may return.

Apart from the official announcements, the most valuable feature of the debate was Lord Selborne's plea for maintaining the strength of the Government of India, which is certainly threatened by some of the official proposals, and still more by the amendments put forward by both schools of Indian politicians. The warning is timely, for a weak Government is never a wise one; and unless India has at the centre a Government strong enough to be wise, trouble is bound to follow in the Provinces, whatever form the constitution ultimately gives them. The ideal should be a central Government so conscious of its strength that it will never interfere without necessity; a Government conscious of its weakness would be interfering all the time in the hope of anticipating possible dangers, and would thereby make anything like real self-government impossible.

The rest of the debate has been unkindly described as a parade of the Old Guard, and it must be said that some of the speakers indulged in the sort of criticism which we have more than once condemned as illegitimate; they are hostile to the proposed measures because they do not accept the declared policy of a gradual approach to responsible government. Lord Lansdowne, for instance, spoke of an inclined plane leading downward to "unmitigated democracy," and he viewed the idea with "the utmost apprehension." Is it not more nearly in accordance with the facts of the situation to think of a path to be cut leading up a steep hillside, piercing thickets and, it may be, skirting precipices, but with a clear though distant view of the city by which the summit is crowned!

Messrs. W. and A. K. Johnston have made fresh additions to their war publications with maps of the Balkan States, the Dardanelles and Bosphorus, Palestine and the Middle East. The latter is a particularly comprehensive sheet, embodying Turkey in Asia, Palestine, the Caucasus, Mesopotamia, and Persia. A war map of the Dardanelles and the Bosphorus may seem somewhat belated; but unless the Turks hasten their capitulation, this map may yet prove as useful as the others. Unfortunately, the boundary assigned to Turkey is that of the Treaty of Bucharest, and does not take into account the rectification of 1915, which brought the Bulgarian frontier back to the Maritsa.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 23.

The Bairam Feast.

The Bairam Feast passed off quite uneventfully in Egypt. Government offices were closed for the week, and on the first day the Sultan held the customary reception at Ras el-Tin Palace, which was very largely attended by notables from the provinces, although it was supposed to be confined to residents of Alexandria and officials actually on duty in that city. Usually the people consume a great deal of food during the feast, especially on the first day, the day of sacrifice; and public distributions of bread and meat are made by the charitable institutions, etc.; but since the war the Ulema of Al Azhar have annually issued a *Fetwa* exhorting the people to be economical in their consumption and not to sacrifice more animals than might be absolutely necessary. It is believed that this intervention of the religious authorities has had some effect in reducing consumption, especially of meat.

Victims of Influenza.

The High Commissioner, who recently made a trip to Palestine, has been laid up since his return with an attack of Spanish influenza. He has now recovered sufficiently to be able to attend to business. The Prime Minister has also completely recovered from his attack, and has now left on a tour in Palestine, where he will be the guest of the Commander-in-Chief. His visit should be of especial interest to him, coming, as it does, at the time when the long-looked-for advance is in progress.

The Palestine Advance.

The news of the successful advance in Palestine has been received with much rejoicing in this country. From all the details which have come to hand, it appears that once again General Allenby laid his plans and made his preparations with remarkable ability and thoroughness. Indeed, by many well-informed people here this latest phase in the campaign is regarded as one of the most brilliant episodes of the present war, and it will certainly live as such, just as the Gaza-Beer-Sheba affair of last autumn will figure amongst the battles which have been won purely by tactical and strategic dispositions. It is interesting to note that nothing on the Western front has come up to the fighting in Palestine in regard to the notice which it has attracted in this part of the world; and the measure of the attention given to military activities on this front is the eagerness with which the newspaper supplements are bought up and scanned for the latest details. Indeed, the Palestine advance is the all-absorbing topic of conversation in clubs, hotels, and bazaars, and great developments are looked for as a result of this latest well-directed blow at the Turkish army in Syria.

The Mecca Pilgrimage.

Telegrams have been received by the Government reporting that the ceremonies connected with the Bairam Feast took place without untoward incident at Mecca, and that the pilgrims have returned to Jedda preparatory to leaving for their homes. One or two cases of plague have been reported amongst them, and as a precautionary measure the pilgrimage has been declared infected, and consequently all pilgrims will have to undergo quarantine. Those returning to Egypt and the north and the west will have to spend ten days at Tor before they are allowed to proceed to their destinations. The pilgrims from this country and the caravan may, therefore, be expected back at Suez about the first of the coming month.

The War Gratuities.

Payment of the war gratuities to the Government officials, of which details were given in my last letter, will start at the end of this month, when arrears from April 1 will be paid. The decision has been received with very great pleasure by all classes of officials, especially among the lower grades, who have been sorely in need of assistance for some time now. Whilst these gratuities will certainly give relief, it is to be feared that, unless some other action is taken, the relief will be but short-lived. No sooner was the news of the Government's decision confirmed, than certain of the local shops and merchants put up the prices of untariffed commodities by 20 to 25 per cent., and from what one gathers, this tendency is likely to continue. Perhaps the most serious problem is, however, that of rents, which have been raised considerably in many districts, and of which a further and general increase is now threatened.

Whatever arguments may be advanced in defence of an increase in the price of non-tariffed commodities, which, being regarded as non-essentials, may by comparison be considered as luxuries, though they certainly do not come entirely within that category, nothing can excuse the increase in rents which has taken place since the war, more especially during the past year. Cost of maintenance may have risen, but in most cases landlords restrict their activities in this respect to only the most urgent work. The rise in rents may justly be regarded as pure profiteering, since the capital invested remains the same, and the increase in rentals merely means a larger return on the investment. There is in this case every reason for State intervention, especially if the granting of gratuities to the Government staff is followed by an increase in the rents charged to the officials in question. Precedent has been afforded in the legislation introduced by the British and French Governments; and it is to be hoped that if the rapacious tendency of the landlords continues some action will be taken to prevent this further exploitation of the tenant class.

The Food Question.

The food question has again become critical, particularly in Alexandria. Arrivals from the interior have fallen off very considerably owing to the cultivators who still hold their crops declining to part with their produce at the tariff rates. They are convinced, despite the declaration to the contrary of the Supplies Control Board, that the price will be increased in the very near future, and not unnaturally they do not see why they, as the producers, should not profit by that increase. As a result of this, Alexandria was short of bread on Thursday last, and many householders were unable to get supplies, whilst the public caterers were at their wits' end to know how to provide for their clients. The Supplies Control Board has now issued orders to the provincial governors to seize all stocks of wheat at the tariff prices wherever found, and place them at the disposal of the cereal merchants, who, under the auspices of the recently formed Cereal Merchants' Association, will undertake to forward them to Alexandria. It is to be hoped that this will shortly lead to relief, but meanwhile it is interesting to note that Cairo is threatening to follow Alexandria in the matter of shortage. The only permanent solution to the problem would appear to be a general requisitioning of cereals, especially of wheat and maize, with heavy penalties for all who conceal stocks.

THE CONQUEST OF SYRIA.

The same day—October 1—which saw our occupation of Damascus, witnessed the northward advance along the coast, from Haifa, of a strong infantry force, in which was a division of Scottish, English, and Indian troops which had been the first to enter Baghdad, destined to consolidate our possession of the whole Phœnecian coastline. The first twenty miles, first to Akka (Acre) and on along the plain past Ez-Zib (the Achzib of Joshua, xix., 29, etc.), the route is easy going. The road then crosses the steep rocky promontory of Ras en Nakura close to the sea; then, four or five miles further, it reaches the Ras el Abiad, the Scala Tyrorum of Josephus, known to us as the "Ladder of Tyre." This is the climax of difficulty for wheeled traffic, and all along this long rocky path, we are told, Indian pioneers, labouring hard, had to blast the rocks, cutting away at some places and building up at others, for three days before a good enough path could be made for the field and heavy guns. Inland, over the rough roads of Upper Galilee, there was no possibility of transporting heavy artillery, but except for this place—along which the heavy guns were hauled for four hours—the route along the coast is not bad; indeed, a carriage road, of sorts, runs all the way from Tyre to Beyrout.

By October 7 armoured cars reached Sidon, followed the next day by the infantry, our men being received everywhere with rapturous greetings. On the 7th a French division reached Beyrout by sea, and on the 8th the city was occupied by our troops, 60 Turkish officers and 600 other ranks surrendering. The main Turkish force had evacuated Beyrout by order when Damascus was captured. Inland progress kept level with that on the coast.

On October 9 armoured cars advanced from Rayak in el Buka'a to Baalbek, famous for its wonderful ruins, when they found that the 500 Turkish troops there had surrendered to the local inhabitants. A fairly clear evidence of the sympathies of the people of the land.

On the 12th the Turks retired from Homs, setting it in flames. This city has always been an outpost to Aleppo. Here the Moslem Army, under Abu Obeida and Khalil, defeated the Byzantine forces under Constantine—a victory which decided the fate of all Northern Syria in the seventh century.

On October 15 Yeomanry and Indian cavalry entered Homs, while on the coast two days previously (October 13) armoured cars and Lancashire and Hertford Yeomanry had entered Tripoli unopposed. This city is connected by Beyrout by a French-owned railway, and in 1911 the line was extended—through the easiest pass from the coast to el Buka'a—to Homs. Tripoli, or Tarablus, an ancient but now much decayed port, consists of two parts—el Mina, the very poor harbour city, and the city proper, on the little river Nahr Abu Ali—the two parts are connected by a tramway. It was a very important city in the days of the Latin Kingdom of Jerusalem; the Count of Tripoli was the only great knight who escaped death or capture at the battle of Hattin. The total population to-day is not more than 30,000. A great future, however, lies before Tripoli, as this port is the natural harbour for Aleppo, and, indeed, for Mesopotamia, as well as Northern Syria. For Englishmen the place has tragic associations, as it was off Tripoli that H.M.S. "Victoria," flagship to the Mediterranean Fleet, was lost on June 22, 1893, in consequence of a collision with H.M.S. "Camperdown" during manœuvres.

Two railways for supply were now available for our advance—viz., that from Damascus through Rayak and the Beyrout-Tripoli-Homs line. Our Yeomanry and Indian cavalry advanced unopposed until close to Aleppo, where they came upon some trenches, lightly held, to the S.S.W. of the city. The Turkish Army, 12,000 strong, had sought safety in flight to Katma, a mountain town, some 30 miles north of Aleppo on the Aleppo-Alexandretta road.

On October 26, at 11 a.m., our mounted forces entered Aleppo unopposed and the Indian cavalry and armoured cars lost no time in continuing the pursuit. The Air Force materially assisted in this lightning advance.

Aleppo, the chief city of Northern Syria, with a population of about a quarter of a million, is situated amid orchards and gardens, and is a prize in itself. From the military point of view the capture means the loss to the Turks of the whole Baghdad Railway east of the junction with the Aleppo line at Muslimieh. The most important results will therefore be seen on the Mesopotamia front.

Thus in six weeks General Allenby has advanced considerably over 300 miles, has cleared all Palestine and practically all Syria of Turks, and has captured some 100,000 prisoners, with all the enemy's guns, baggage, transport, and munitions which survived destruction. Everywhere the British forces have been welcomed as "deliverers." Happily, too, the rapidity of our Army's advance, and the consequently rapid retreat of the enemy, has ensured the minimum of destruction to the towns and villages of the land.

E. W. G. M.

MALTA NOTES.

(From Our Correspondent.)

Malta, October 15.

Malta, the half-way house to the East, has perhaps suffered least of all the Colonies in the way of the actual results of any attacks by the enemy. In this it has been fortunate, for had matters taken a turn in the other direction it might have been to-day a heap of stones, and not merely a hot rock of ninety square miles.

The discomforts of the island have been merely pin-pricks; at times there has been a scarcity of matches, and cakes have had to be made without lard. The rich of the island have been badly hit financially over the Russian debâcle, but the middle classes have thriven. Thanks to an astute Food Control Board, profiteering has been reduced to a minimum, and bargaining, such a special trait in the Maltese character, has sunk several points.

In its Governor, Field Marshal Lord Methuen, Malta has been fortunate, and his enthusiasm has brought out of the inhabitants all those traits of Christian charity that their religion inculcates, with the result that the amount of money which has been raised per head has proved phenomenal.

It will have been seen from the Press telegrams that it is the wish of Lord Methuen to raise sufficient funds to erect a hospital for Malta, as a development and extension of the present Merchant Sailors' Rest. Already, in spite of all the continued calls on the private purses of the people, subscriptions of a substantial nature have come in.

The whole staff of the Dockyard, from the unskilled labourer up to the clerical staff, are loud in expressions of gratitude towards Admiral Ballard, C.B., who, with the permission of the British Commander-in-Chief, went to the Admiralty to plead for an adequate war bonus for the Maltese. He was successful in his mission, and as a result the labourers obtain sums ranging from ten shillings to fifteen shillings a week.

SYRIA AND PALESTINE RELIEF FUND.

A great public meeting of thanksgiving for the deliverance of the Holy Land was held at the Queen's Hall, London, on Monday.

Lord Bryce, who presided, said that our entry into Damascus had been welcomed not only by the Jews and Christians but by the Moslem Arabs. We had deserved and inspired their confidence; they knew what we had done in Egypt.

Sir Henry McMahon said the Fund had been started about two years ago, when reports coming from Palestine and Syria led to fears that horrors were taking place there comparable to those of Armenia. Committees had been formed in London and Cairo, money collected, and machinery set up for the administration of relief. Thanks to these timely measures the Fund's workers were ready when the moment came, and had entered Palestine with the British troops. They had been hard at work there ever since, their assistance being not only welcomed but asked for by the military authorities. The effective administration and distribution of charitable relief was a difficult problem, but in the case of this Fund the work had been done by members of the great missionary societies, who knew the people as none other could know them. The guiding principle had been to give relief to all alike according to their need and irrespective of race or creed. The area of British military occupation was daily growing, and the calls on the Fund's resources were ever increasing. The following cable had been just received from the Fund's chief representative in Palestine:—"Thankfulness and satisfaction at our arrival universal. The Government have called on us for immediate medical relief, and we have sent hospital equipment and personnel to Nablus and Nazareth, counting on Homeland's generous support. Hospitals are in good condition. Responding to a telegram from the Governor, I visited Haifa. We are opening two schools there, and investigating need. Enormous scarcity of food and clothing has led to immorality in bigger towns, where many widows and children are totally unprovided for. Consequently, there is a great demand for relief workshops. We found an ordained Syrian reduced to wearing clothes made from cover of church organ. Americans are relieving Salt and Tiberias. An arrival from Beyrout says that two out of every three civilians are beggars. Lebanon is a graveyard. Administration Committee are considering the possibilities of relief in the north, but our needs are men, transport and financial guarantees."

Dr. MacInnes (Bishop in Jerusalem) gave further particulars of work done by the Fund. He said that most of the children brought to its agents were orphans, and many were brought by our own soldiers, who had found them, and in some cases looked after them for weeks. Speaking of the difficulties, he said that among those who took advantage of the Fund's soup kitchen in Jerusalem was one lady who sent her servant for the soup. On three days a week this was much nicer, and also more nourishing than on the alternate days, and it was found that the number who came for it on those days was much greater than on the others. By striking off the list all those who only came when they thought the soup was good enough, the number of recipients had been reduced from 1,700 to 1,500.

ROUMANIAN NOTES.

(From a Correspondent.)

Anti-German Manifestations.

Since the collapse of Bulgaria and the consequent ferment in Austria-Hungary the Roumanians have been continuously in conflict with the authorities of the German occupation. The office of the German censor in Jassy has been mobbed because of the suppression of the news from Bulgaria and the Western Front. The same fate has overtaken the *Gazeta Jasilor* (the Gazette of Jassy), a newspaper edited by German agents.

Great manifestations took place not only at Jassy but in various towns in Moldavia and Bessarabia on receipt of the news that the French had occupied Lom Palanka, on the southern bank of the Danube. The few German officers in Moldavia no longer dared to walk in the streets. They had ceased to wear their uniforms long ago, fearing to be attacked by the people, and now they are withdrawing to Wallachia, where there is still a large German garrison. Even in Wallachia, despite the very severe military measures taken lately by the Germans, there were manifestations at Bucharest and in nearly all the towns on the Danube. At Turnu-Severin, when the Austrians and the Germans assembled in honour of the Emperor Charles's birthday, there were big demonstrations; so that General von Graevenitz ordered the troops to disperse the manifestants.

Great trouble occurred when the German administration began to take the wheat and the corn from the peasants, partly because the quantity left to them was too small, and partly because the price fixed by the Germans was extremely low. For a truckload of wheat the Germans paid only 2,300 lei, or about £60. The price of a truckload of corn is fixed at £45. In the meantime the Germans sell to the Roumanians a pair of boots for £30—£35, a suit for £40—£50, a pair of socks for £3! General Garlesteanu, who was the Chief Controller of agricultural products, resigned because of these difficulties, and nearly all the Roumanians working under him followed his example. The Germans, in order to maintain order, brought a great number of soldiers from Bulgaria into Wallachia.

The Movement in Transylvania.

Even the Roumanians of Transylvania, despite the most severe measures taken by the Magyars, began to manifest their desire for liberty. When the Austrian troops began to withdraw from Bulgaria and from Serbia, as they passed through the Roumanian districts the population shouted "Long live Liberty!" The Roumanian deputy Vaida Voivode, speaking in the name of the National Roumanian Party in Hungary, stated that the Roumanians claim complete liberty, and that they must be regarded as a nation that has the right to benefit by the principle of self-determination. His speech produced a wild storm among the Magyar deputies; but his declaration is of great importance, because it leaves no room for doubt that the Roumanians of Transylvania, like the other nationalities of Austria-Hungary, have no desire to accept any scheme of a federalisation in the Dual Monarchy.

The Allied Troops on the Danube.

The presence of the French troops on the Danube dealt a terrible blow to the Austro-Germans, for the Danube was the principal way to transport food, not only from Roumania, but from Ukrainia too, to starving Austria. In Braila, Galatz, Cabars, Giurgiu, Bechet, as well as in all the Danubian ports there are big quantities of cereals and of all kinds of foodstuffs waiting to be transported into Central Europe. The work was now in full swing, and the Austro-Germans were hoping to finish it before the coming of winter. By stopping the Danube traffic the Allies deprived the enemy of more than half their means of transport. The railways are in a very bad state, and there is no chance of improving them, owing to lack of raw materials. It was by way of the Danube, too, that the Black Sea Fleet was supplied with munitions and materials for repairs.

The result of the Indian Civil Service open competition held in August last has been markedly in favour of Cambridge, says the *Cambridge Review*. Nine appointments have been given. Of these, seven fall to Cambridge men, though it should be noted that two of these seven were Oxford graduates who had merely spent a year at Cambridge in special preparation for the examination. It is further of interest that the first four candidates on the list were from Cambridge. The honour of being head of the list has been obtained by Mr. C. D. Deshmukh, of Jesus College. Mr. S. G. Sengodaiyan, of Emmanuel, who passed fourth, is credited with the highest marks in mathematics. Thirty-five candidates had arranged to compete, though only twenty-eight appeared at the examination. Save for two exceptions all the candidates were Indian students. An open competition for the Civil Service of India will be held next year as usual.

The Natural Products of your Country

may be of considerable interest to us as we are purchasers of consignments of Produce from all parts of the world.

Coconut Oil, Palm Oil, Oil Seeds, Oil Nuts, Kernels, Copra, Maize, Ivory, Gums, Grain, Fibres, Rubber, . . Cotton . . These interest us . particularly. .

Will you let us know what Products of your Country you can offer us?

We are prepared to finance consignments when necessary.

THE BRITISH IN JERUSALEM.

The following are extracts from a letter sent from Jerusalem by a native of that city to a friend in this country, through whose kindness we are enabled to publish them :—

You will no doubt be wondering how things are progressing and what effect the reconstruction of the lives and fortunes of the people is having. To present a faithful picture would be a difficult matter, but to state some few facts may help you to form an idea of the transformation.

It is an absolute fact that it would have been possible on December 9, 1917, to have gathered all the foodstuffs to be found in the markets of Jerusalem into two good-sized rooms, for the population had been so reduced by typhus and starvation and so drained by the military calls, and transportation had disappeared because of all horses, camels and donkeys having been requisitioned—nominally purchased—and sacrificed in the desert adventure, that nothing could be brought into the city except on some old men's backs or on women's heads. The peasants were driven first to the outskirts of the town, where they could more easily exact the kind of money and price they chose to put upon their merchandise without fear of the oppressive measures of the police, and later one-half, one, two, three, four and five miles from the city, to which distance the inhabitants were forced to walk out and carry the cash so as to secure the vegetables, fruits, fuel, etc., without which they could not exist. Many a poor person found a means to make a trifle by buying the commodities and re-selling them to his neighbours, but woe betide that unfortunate if some policeman or unscrupulous person met him and forced him to sell his merchandise for paper money, as did sometimes happen.

The contrast between this picture and the present condition is indescribable. The markets are overburdened with vegetables and fruit; donkeys have been reappearing by the score; camels seem to filter in by fives and tens; every day sees some new carriage make its début at the Jaffa Gate, where not one was seen for months; young men who had been in hiding for six months, or for one, two or three years, suddenly appeared as if risen from the dead; the poor down-trodden peasants are realising prices that neither they nor their fathers dreamed of; and produce is flowing into the city by every available means unhindered.

When the victorious British troops solemnly passed by on December 9 the inhabitants were as eager to find employment as they were hungering for food, and thousands of old and young men, Mohammedan and every other kind, of woman and children, found ready and lucrative employment, so that never have there been fewer beggars seen in Jerusalem than to-day.

These transformations have so altered conditions that over 80 per cent. of the population find themselves in better circumstances than they or their fathers ever before enjoyed. One illustration will demonstrate this. The military authorities, out of careful solicitude for the farmers, announced that on a certain day there would be a sale of captured enemy animals, so that farm work might not be delayed. That day realised thousands of pounds for the authorities, many times more than they expected; for the people seemed at once to bid over one another, so that these puny mules and horses reached prices never heard of before, £60 and £70 a-piece, one purchaser paying over £750. When this is contrasted with the condition of things prevalent under the Turks, at which time the price agreed upon between the officers for a captured British horse was £5—the British horse being always worth three times as much as a Turkish one—one can form some idea of the present prosperity of the bulk of the population.

Liberated from a Government that gathered the staff of life from the houses of the people, we have fallen under the sway of those who take upon themselves the burden of rationing the whole population, charging themselves with transporting from abroad all that is necessary to live upon; while the former Government sometimes took the very wheat they had sold to the people! And so it happens that to-day the refugees can buy rice at a cheaper rate than they paid for it *before the war*. And that which the population must be under the most lasting obligation for, next to their deliverance, is the living water that meets the thirsty and languishing at every gate and in every section of the new town. This has never been the lot of the inhabitants since the history of Jerusalem began.

Apart from the care shown by the authorities for the health, comfort and life of the people, their solicitude for the reconstruction of their lives, fortunes and futures is beyond all praise and gratitude. Experts of all kinds are here studying how to devise means for sanitation, how to improve the streets and the city, what the needs of the future are, what technical and industrial schools are necessary for the development of the population, and to enable them to shake off the curse and incubus of ages when they depended on others, that the new era of emancipation should find them self-reliant, developing their own resources, and independent of any outside aid. Surely what kings and prophets desired to see and saw not, it has been granted to us to be eye-witnesses of, to rejoice and have our full share in!

ENVER AND THE ARMENIANS.

A writer in the *Daily Express* tells the following tale of Enver Pasha :—On one occasion I asked him why the Turks persisted in persecuting the Armenians. "Have you ever seen an Armenian?" he asked. "Have you ever had any dealings with one?" Without waiting for my reply he went on: "You are a sportsman—you exterminate rats and other vermin, do you not? Well!"

TANGIER TO TEHERAN.

Another "war prophet" has gone wrong. To be accurate, it is a prophetess this time, and she resides in Egypt, which, as we all know, has always been a land of mystery. I learn of her through a letter published in the *Egyptian Gazette*, the writer of which describes her as "a European society lady, prominently associated with Red Cross and other charitable war work and notoriously connected with spiritualism and other occult sciences in pre-war days." The writer adds that she was known as "The Lady of Alexandria"—which is certainly a prettier title than "Mother Shipton." The story goes that some two years ago, at a spiritualistic *séance*, this interesting lady learned from a spirit the date on which "the war would definitely finish," to wit, October 12. The information was imparted "only under guarantee of silence"; and until lately the "society lady" kept her word—or so the story goes! But the recent good news from the front proved too much for her. She succumbed to temptation, and imparted the spirit-given information to a friend. Thereupon—the story adds; but Allah knows the truth—she was instantly struck dumb.

***

I gather that at the time the letter was written, Cairo, and European Egypt generally, waited more or less breathlessly to see whether the "prophecy" would be fulfilled. As I have seen no cable to the effect that it has been, I conclude that the Nile valley continues to share the luck of the world at large; and it follows, therefore, that "The Lady of Alexandria" is proved a false prophetess. So, let us hope, she will soon recover her speech, if she has not already done so. Then she will be free to start afresh in the prophetic line. For nothing daunts these folk. Failure is immaterial to them; notoriety is the breath of life. If they can advertise themselves—and their books—they are prepared to "explain" anything under the sun. But I should not be surprised to hear that "The Lady of Alexandria" was related to that other Prophetess (of the 'Bus), or even to Mrs. 'Arris.

***

Between Damascus and Aleppo there can hardly be any comparison. The southern city is much the more interesting and much the more picturesque of the two, while its surroundings are incontestably more pleasing than those of Aleppo. As for historical interest, Haleb, though of no mushroom growth, cannot presume to enter into rivalry with "the oldest city in the world." Yet, in spite of all these things, and though I must admit that I like Damascus far better than Aleppo, our capture of the latter city afforded me greater pleasure than the capture of the former. The reason for this is that, whereas in Damascus I spent my time chiefly in the society of Arabs and stayed in a real khan, in Aleppo I was thrown by fate much into the company of Germans. For in Aleppo, as elsewhere in Turkey, the Teutons were doing their very best to take the place that had formerly been occupied by Englishmen, and I found there quite a strong colony of them.

***

That was just at the time when the Baghdad Railway scheme was fairly launched, and the Germans in Aleppo were—naturally enough—inclined to be jubilant and to regard themselves—again, naturally enough—as the coming power in Turkey. To me, personally, they were very friendly; they took me to their club, where we played skittles together, and showed themselves good hosts in every way. But it was impossible to remain insensible to the German atmosphere, so to say; and though I enjoyed exploring the bazaars and the famous citadel, Aleppo failed to cast a spell over me as Damascus and some other Eastern cities had done. The Baghdad Railway project was then, and has ever since remained, a kind of nightmare to me. Now, at last, it is possible to hope and believe that it never will be realized as "a German project." The Germans, as you know, claimed it as such, though in point of fact it was simply an adaptation of an English scheme, some fifty or sixty years old! That a British force should be astride the great line at Aleppo, and another in possession of the stretch of it north of Baghdad, must be a bitter reflection indeed for Berlin.

"AN ALBANIAN PROTEST."

TO THE EDITOR OF "THE NEAR EAST."

SIR,—As an Epirote who knows something about those Turco-Albanian Beys and Aghas of Epirus, I am painfully surprised to see in some English papers Mehmed Bey Konitza posing as Albanian delegate and protesting on behalf of Epirus! It was unfortunate indeed that such protest as that published in your issue of October 25 found space in THE NEAR EAST, which is believed—and rightly too—to be well informed about matters and persons in the Balkan Peninsula.

Mehmed Bey, after having abused Greek culture and civilisation, abuses now the impartiality, the hospitality, good faith and broad-mindedness of the British Press, distorting ancient and contemporary history of Epirus. The only truth in his protest is that Epirus was never conquered by Greece, because Epirus was always Hellenic and there is no need of conquest. Mehmed Bey knows very well how much Hellenic is his own country, the district of Konitza; he knows also very well what is, in conscience and feeling, the district of Chimarra, this stronghold of freedom; he knows how long and hard the Souliotes, the Albanian-speaking Epirotes, contributed to the liberation of Greece, fighting with Greeks side by side as brothers, as sons of the same mother country; he knows that before the activities of Austro-Italian propaganda all Albanians, including many true patriotic Beys of Central Albania, like the prudent and wise Nestorian Kemal Bey of Valona, always looked towards Athens.

In any case we Epirotes ask to be left free to decide our own destiny. If the Beys want union with Northern Albania they can go there, leaving to the Christian compatriots the estates they seized from them as their price for changing their religion. We ask self-determination, that is all.—I am, etc.,

COUNT TISZA.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Count Tisza, in his speech in the Lower House of the Hungarian Diet, cunningly endeavours to smooth matters by saying that Hungarian law recognises the Croatian nation as a political entity, and by excluding Croatia he declares that the Hungarian race is in the majority as regards relative numbers. He admits that a large part of the population does not speak the Hungarian tongue, yet he asserts that they are loyally devoted to the principle of Hungarian national state.

Leaving out all other Slavs who suffer under Hungarian oppression, I will refer only to the so-called Voivodina, which is composed of the counties of Banat, Batchka and Syrmia, and populated, with the exception of some Roumanians, Germans and Hungarians, entirely by Serbians, who would rather die than become loyal Hungarians. In 1877, when Serbia was at war with Turkey, the population of Kikinda, a town in Banat, revolted because they were not allowed to go to the assistance of Serbia. They destroyed everything they could find that was Hungarian, and threw down the pictures of Franz Josef from the walls of official buildings, replacing them with pictures of the then Prince Milan of Serbia.

An amusing incident occurred during my visit to Mokrin (also in Banat) six years ago as the guest of an old school friend. Being in need of some postage stamps, I sent my host's son, a boy of twelve, to purchase some. The post office was close by, but it was nearly two hours before the boy returned. He explained that he had been kept waiting for the stamps by the official, who pretended that he could not understand Serbian, as most of the officials are Hungarian. The boy said that he persisted in asking for the stamps in that language, and was at last served, whereupon he told the official, in Hungarian, to go and hang himself.

Such is the spirit pervading the Voivodina, especially at Banat, where the people are staunch Serbs, and hate everything Hungarian, even the language.

Count Tisza is one of the principal criminals guilty of provoking this most bloody war, in which millions of men have perished in their youth, and millions of old people, women and innocent children in Belgium, Serbia, Montenegro, and Poland are suffering untold misery, and Count Tisza must be held responsible for it.—I am, etc.,

NEAR EAST BOOKSHELF.

A NEW PALESTINE GUIDE.*

Lieut.-Colonel Pirie-Gordon, who edits this guide-book, tells us in the preface that it is "based upon the appropriate chapters of Baedeker's 'Palestine and Syria,' with additions drawn from the works of other writers." His modesty, we suspect, prevents his telling us how much the book owes to his own knowledge and his care in bringing it up to date. Thus, when we read that "in crusading times Bireh was known as the Grand Mahommerie," we may search Baedeker's pages in vain for this item of information; and so it is over and over again throughout the book. Then, too, one suspects that Baedeker would find it more painful to record that Ramallah "is the seat of a Deputy Military Governor" than his British editor does.

The book is produced chiefly for the benefit of members of the E.E.F., and unless they are ungrateful indeed they will give it a warm welcome. They may have had little opportunity of late to study the scenery, ruins, and so forth of the land through which they have been passing, on the heels of the enemy; but a good many of them will have time for future visits, no doubt, and others will enjoy reading the history that was made in the land before they arrived to add fresh pages to it. As to the historical portions of the work, a note in the preface shows that they have been specially selected with a view to what is most likely to interest our own fighting men; so we need not be surprised to find the deeds of "King Richard and our forefathers" bulking rather large in these pages. Occasionally Baedeker and our Guide-book seem to differ slightly in regard to facts. Thus the former, in its third edition (English), in describing "The Roman Town" at Cæsarea, says (p. 274):—

"To the S. of the town, 5 min. beyond the gate of the mediæval wall, is traceable the vast amphitheatre of Herod, turned towards the sea. It accommodated 20,000 spectators. . . . . The whole was afterwards converted into a fortress. In the middle of it are remains of a semi-circular building, probably a theatre. By means of canals it could be filled with sea-water and turned into a naumachia."

Our Guide-book says:—

"To the S. of the town, 5 min. beyond the S. gate of the mediæval wall, is traceable a semi-circular building, probably a theatre, which could be filled with sea-water by means of canals and turned into a naumachia. In the S.E. corner of the town (a little to the N.E. of the theatre) are the remains of the vast amphitheatre of Herod," etc.

We are patriotic enough to back the "all-British" version. But to one who has not visited the site the puzzle is not without fascination.

The general map is sure to prove useful to travellers for many years to come, and (like the three smaller sheets, of Nablous, Haifa and Shechem) it has been produced admirably by the Survey Department of Egypt. The print and paper are good—wonderfully good for these days—and though we have discovered a good many misprints, they are no great blemish save when they occur in the spelling of a name, as, on page 11, "Seiun" for Seilûn. "Mounts of sand" is, however, a curious slip (p. 44).

6	24	Wednesday	1	2
7	25	Thursday	2	3

Prince George of Serbia arrived in London last Friday from the Western Front.

Essad Pasha, President of the Albanian Government, arrived in Nice on October 23.

H.E. the Hellenic Minister will preside at a dinner in honour of the Greek Commercial Mission, to be given by the Greek community in London at the Savoy Hotel on November 7.

The engagement is announced of Lieutenant Harold Christopher Hodgson, Lancers, elder son of Mr. C. Hodgson, D.P.I., Travandrum, Travancore, India, and Mrs. Hodgson, and Irene Hylda, younger daughter of the Rev. Ellis C. Mackie and Mrs. Mackie, of Stockton-on-the-Forest Rectory, York.

A marriage has been arranged between Major Geoffrey G. Rawson, M.C., Royal Engineers, second son of the late Mr. Edward Creswell Rawson, Indian Civil Service, and Mrs. Edward Rawson, and Ella, elder daughter of Mr. and Mrs. Arthur Beresford Cane, of 66, Elm Park Gardens, S.W.

The engagement is announced of Lieutenant L. F. C. St. Clair, Lancers, youngest son of the Hon. Lockhart M. St. Clair, C.I.E., and Mrs. St. Clair, and Evelyn, youngest daughter of Nicholas Synnott and Mrs. Synnott, of Furness, Naas, Co. Kildare.

An engagement is announced between Captain F. W. Metcalfe, the Rifle Brigade (S.R.), son of Mr. and Mrs. W. P. Metcalfe, of Stone Hall, Oxted, formerly of Ceylon, and Helen Margaret, daughter of Mr. C. J. Goodman, of Temple House, Oxted.

An engagement is announced between Austin Hugo Lampard, R.G.A., youngest son of the late Charles Arthur Lampard, of Holme Park, Rotherfield, and Mrs. Lampard, 4, Ormé Square, W., and Edith Gertrude, youngest daughter of Robert White, of Hythe, Kent, late of Cachar, India.

The engagement is announced, and the marriage will take place in January at Lucknow, between Captain J. K. Haworth, R.A.M.C. (Reserve), only son of Canon Haworth, of Durham, and Zara, youngest daughter of the late Herbert F. Clogstoun, C.S.I., Indian Civil Service, and Mrs. Clogstoun, 41, Tedworth Square, Chelsea.

Our Malta Correspondent writes (October 15):—The many friends of Sir Vincent Frendo Azzopardi, C.M.G., will learn with regret that, owing to indisposition, he has had take sick leave.

Dr. J. Galizia, medical adviser to the Eastern Telegraph Company, passed suddenly away on September 17. He was one of Malta's ablest sons, and the extent of his kindness, both professionally and financially, can never be assessed.

The exigencies of the war have not thrown many honours our way, and consequently the whole island was gratified to learn that the Order of the British Empire had been conferred on the following prominent gentlemen:—(Commander): The Honourable Professor M. A. Refalo, LL.D. (Members): Mr. Antonio Bartolo (Editor of the *Daily Malta Chronicle*), Dr. George Borg, Mr. Antonio Cassar Torregianni.

Lieutenant A. J. Gatt, M.C., Royal Malta Artillery, with the Egyptian Force, has been granted the temporary rank of Major whilst holding the appointment of Deputy Assistant Director of Ordnance Services. Major Gatt is well known in the island, and his promotion has given great satisfaction.

The Times Cairo correspondent telegraphs:—"The provisional total of 'Our Day' in Egypt and the Sudan is £200,000, of which Egypt has subscribed £180,000. Contributions are still flowing in, but the amount even so far is the highest yet raised in this country."

The Serbian Church Students' Aid Council, of which the Archbishop of Canterbury is president, has undertaken to help a number of selected Serbian students to complete at an English university their preparation for ordination. The work has already been started successfully, and as the number of students has now increased considerably, an earnest appeal is made for contributions to the maintenance fund, an income of £10,000 a year being required to keep the scheme going. Subscriptions may be sent to Mr. E. F. Knapp Fisher, Chapter Clerk's Office, Westminster Abbey, S.W.1.

APPOINTMENTS, PROMOTIONS, ETC.

M. Milutin Yovanovitch has been appointed Serbian Minister to Berne.

M. Dragomir Stefanovitch has been appointed Serbian Envoy Extraordinary and Minister Plenipotentiary to Lisbon.

Assent has been notified by the Italian Government to the appointment of M. Leon Borski as Chargé d'Affaires of the Provisional Czecho-Slovak Government at Rome.

Captain G. E. Oxspring, Army Veterinary Corps, has been attached to the Egyptian Army as a Special Service officer, granted the temporary rank of Bimbashi, and attached to the Veterinary Department for duty.

The King has approved of the following rewards for distinguished service in connection with military operations in Egypt and the Sudan (dated June 3, 1918):—

To be Brevet Lieut.-Col. (on Ret. List, Res. of Off., S.R., New Army, or T.F., in the case of Officers belonging to these categories, as applicable):—Maj. (T./Lt.-Col.) M. H. Logan, W. York R., attd. Egyptian Army; Maj. (T./Lt.-Col.) L. K. Smith, D.S.O., R. Scots, empld. Egyptian Army; Maj. T. B. Vandeleur, D.S.O., R. Ir. R., attd. Egyptian Army; Maj. R. S. Wilson, Ret. Pay, R. of O., empld. Sudan Govt.

Distinguished Service Order.—Maj. Hon. T. P. P. Butler, R.A., empld. Egyptian Army; Maj. C. Graham, North'n. R., attd. Egyptian Army; Maj. C. C. Marshall, R. Lanc. R., empld. Egyptian Army; Maj. (T./Lt.-Col.) J. H. Pattisson, Essex R., empld. Egyptian Army; Lt. W. Stuart, Yeo. and M.G.C.

OBITUARY.

Lieutenant Oswald Fenwicke Clennell Carr-Ellison, Northumberland Fusiliers, was killed in action on October 4. He had served in France and with the Salonika Force. The Order of the White Eagle (5th Class) was conferred upon him by the King of Serbia in recognition of his gallantry in leading his company in September, 1916.

It was announced last week that Captain Sacheverel Darwin Wilmot, R.G.A., had died in hospital abroad, aged 33. He was at the capture of Baghdad, and in command of a heavy gun battery at the taking of Nadjeh. He received the Serbian Order of the White Eagle, and was mentioned in despatches. He had recently passed the course of a Staff School in India, and was on his way back to active service.

Colonel Sir Philip Durham Trotter, of Mainhouse, Kelso, late 93rd (Argyll and Sutherland) Highlanders, died on October 26. He served in the Sudan Expedition of 1884-5, during which he was commandant of Dal and of Kaibar, and was employed on the lines of communication, being mentioned in despatches and receiving the medal and the bronze star and the brevet of lieutenant-colonel. He retired from the Army in 1902.

Lieutenant-Colonel Bernard A. B. Butler, D.S.O., R.F.A., who died of wounds on October 23, served some nine or ten years in India. He was a keen traveller and sportsman, and was awarded the Royal Geographical Society's certificate for surveys undertaken during his periods of leave. He went to France in September, 1914, and served continuously there until his death, save for a short period as instructor at the Overseas Artillery School on Salisbury Plain.

Brigadier-General Edward John Granet, Military Attaché at Berne, has died there suddenly from heart failure. He entered the Royal Artillery in 1878, saw service in the Afghan War, 1879-80, and in the Sudan four years later, and in the South Africa War. He served at Rome and at Berne as Military Attaché. He was the British representative on the International Commission for the delimitation of the North and North-Eastern frontiers of Albania.

Captain Herbert Grendon Powers, M.C., who was killed in action on September 19, was the only son of Dr. and Mrs. Powers, late of Westend, Hants. He applied for a commission as soon as the war broke out, and as second lieutenant 1/5th Hampshire Regiment he went out to India with the Wessex Brigade (Territorials) in October, 1914. He afterwards joined the Indian Army Reserve of Officers, and early in 1916 went with the 1/1st Gurkha Rifles to Mesopotamia, where he took part in the retaking of Kut, and was awarded the Military Cross. A few months ago he was transferred with his regiment to another front.

The death has occurred at Middle Chinnock, Crewkerne, Somerset, of Colonel Arthur Dewar Parsons, late Madras Lancers. He served with the South Devon Militia, when it was embodied during the Crimean War, and received, through Lord Grey, one of the first Queen's cadetships to India, joining the 1st Madras Light Cavalry in 1856. Other service seen by him was in the Mutiny, in Afghanistan in 1878-80, and in the Burmah Campaign of 1885-8. He retired in 1899. Colonel Parsons was the youngest son of Lieut.-Colonel John Whitehill Parsons, C.M.G., 10th Hussars, and Resident at Zante when the Ionian Islands were under British Protection.

Digitized by Google

It is announced that Brevet Lieutenant-Colonel Sir Walter Balfour Barttelot, D.S.O., was killed on October 23 at Teheran. Born in March, 1880, at The Manor, Sidmouth, he was the elder son of the late Major Sir Walter George Barttelot, formerly of the 5th Dragoon Guards. He was gazetted to the 2nd Dorset Regiment in 1899, and served throughout the South African War. He also served in Egypt in 1906-08, and was for three years, 1911-14, in Australia as A.D.C. and Private Military Secretary to the Governor-General. In August, 1914, he went to France with a battalion of the Coldstream Guards, and was severely wounded in the battle of the Aisne. From July, 1915, to January, 1916, he was G.S.O., 3rd Grade, in Gallipoli. Later he was in Mesopotamia as Brigade Major and as G.S.O., 2nd Grade. In March of this year he became Military Attaché at Teheran, and in June he received the brevet of lieutenant-colonel in recognition of his service in Mesopotamia. He held the two medals for South Africa, one with six and the other with two clasps, the 1914 Star, and Croix de Guerre. In August, 1916, he was mentioned in despatches, and in June of the same year he was awarded the D.S.O. for services in the field. Last August he was specially mentioned for services in Mesopotamia, having been three times previously mentioned. Sir Walter Barttelot married in November, 1903, Gladys St. Aubyn, daughter of the late W. A. Angove, of 83, Onslow Gardens, and leaves two sons, the elder of whom is at Eton.

NEWS IN BRIEF.

Reuter's Simla correspondent reports that the Viceroy has announced in the *Gazette* the King's pardon to all deserters from the Army, provided they rejoin by January 1, 1919.

On September 14 the Sirdar opened new Y.M.C.A. gardens in Khartoum. The ladies of Khartoum assisted in serving tea, and there was a large gathering of European and native society.

Among the oversea contributions to "Our Day" is a first instalment of £8,000 from the Sudan. The Sirdar, Sir L. O. F. Stack, in reporting this response to the appeal in the Sudan, points out that owing to the distance of out-stations it will be some time before the final total will be definitely known.

Dr. Ronald Burrows, acting Chairman of the Anglo-Hellenic League, has received from Professor Evangelides, of Athens, President of the Central Committee of Unredeemed Hellenes, a message of thanks for his plea urging the freeing of the unredeemed Greek populations of Asia Minor, Pontus, and Thrace.

In a message to the Greek troops who took part in the offensive in September General Milne, Commander-in-Chief of the British Army in Macedonia, says:—"You were the first Greek troops to enter the enemy's territory. You have shown by your tenacity your contempt for danger and suffering, and have written a glorious page in the history of the Hellenic Army."

According to a Vienna newspaper:—"Care has been taken that the eventual evacuation of Serbian and Montenegrin territories shall be accomplished in a humane manner. We are adopting the principle of maintaining the institutions of social welfare established in the occupied lands by our army for the sake of the population, which is so poorly provided with the blessings of Kultur."

In the Prize Court, on October 26, the President (Sir W. Pickford) heard a motion on behalf of Commander Edward Courtney Boyle, V.C., and the officers and ship's company of H.M. Submarine E 14, for a declaration that they were entitled to prize bounty amounting to £31,000 for the destruction of the Turkish troop transport Gul Djeml in the Sea of Marmora on May 19, 1915. Judgment was reserved.

Immediately after the liberation of Haifa by the victorious British troops the Jewish community of the town held a public meeting in the college. Its first work was to send a resolution to Mr. Sokoloff and Dr. Weizmann expressing the deepest gratitude for the work done on behalf of the Jewish nation, and assuring them that all their resources, without reservation, are at the disposal of the leaders, in whom they have complete confidence, for the successful accomplishment of their task.

Dr. Benes, Czecho-Slovak Minister for Foreign Affairs, sent a message regretting his inability to be present at a dinner given (on October 25) by the British International Association of Journalists in honour of Lord R. Cecil. He added that the Czecho-Slovaks would never forget that their triumph was definitely secured on the day when he received from Mr. Balfour and Lord R. Cecil the Declaration of August 9. The trust their friends and Allies reposed in the Czecho-Slovaks would never be disappointed. Friendships and alliances born in such particular circumstances did not die.

A well-attended meeting convened by the West London Zionist Association was held at the West Hampstead Town Hall on Sunday, in support of the Jewish National Fund. Sir James Boyton, M.P., who presided, said the programme for the settlement of Jews upon the land was based on very advanced and democratic lines, and the sacrifices of the British and their Allies and of the Indian soldiers and also of many battalions of Jewish soldiers had brought within measurable distance the removal of the obstacles which had so long stood in the way of the fulfilment of their aspirations.

King Nicholas of Montenegro has issued a manifesto, addressed "To the Yugoslavs," in which he recalls that on the day on which he declared war on Austria he proclaimed that he "drew the sword for the union of the Yugoslavs." He expresses his thankfulness at witnessing the realisation of his ideal—the liberation of the Yugoslavs. He declares solemnly that Montenegro ought to become a constituent part of Yugoslavia, and he expresses the hope that "we may all unite and agree as brothers in a confederate Yugoslavia, in which each member will preserve its rights, institutions, religion and customs, when none will claim any supremacy, when all shall be equal."

DOMESTIC ANNOUNCEMENTS.

IN MEMORIAM.

BERNEY.—In grateful memory of Captain George Norman Berney, 1st Battalion Herefordshire Regiment, and his brother officers and comrades of that regiment and the Royal Welsh Fusiliers, who fell in action on the way to Hebron, November 6, 1917.

FRIDAY, NOVEMBER 1, 1918.

THE BREAK-UP OF AUSTRIA.

Any doubt as to whether the reply of Count Andrassy, the new Austro-Hungarian Foreign Minister, to President Wilson's Note of October 18 was intended as a prelude to the surrender of the Hapsburg Monarchy has been set at rest by a further and still more urgent appeal for an immediate truce. President Wilson had stated that, as he had recognised the Czecho-Slovaks as a separate belligerent unit and had recognised also "in the fullest manner the justice of the nationalistic aspirations of the Yugoslavs for freedom," he was no longer at liberty to accept a mere "autonomy" of these peoples as a basis of peace, but was "obliged to insist that they, and not he, shall be the judges of what action on the part of the Austro-Hungarian Government will satisfy their aspirations and their conception of their rights and destiny as members of the family of nations." Count Andrassy has now replied that the Government for which he speaks adheres to this point of view "regarding the rights of the peoples of Austria-Hungary, particularly those of the Czecho-Slovaks and the Yugoslavs," and "accepts all the conditions upon which the President makes an entry into negotiations regarding an armistice and peace dependent." Austria-Hungary is in consequence prepared, "without waiting the result of other negotiations," to enter into *pourparlers* regarding peace and regarding an immediate armistice on all her fronts. The communication to President Wilson is superfluous, as an armistice is essentially the concern of the Allied military command, and the request for one has to be addressed to the Officer Commanding the Allied forces. It may be symptomatic of the general chaos prevailing in the Dual Monarchy that the new Government felt on safer ground in trying to give effect to its decision through purely Austro-Hungarian diplomatic, rather than through Austro-German military, channels; or the quite erroneous impression gained from Germany that President Wilson in some way or another stands for milder terms may still have lingered.

Whatever the reason for the course adopted, the Austro-Hungarian Government has no alternative to surrender left to it. Its first request for the discussion of peace terms was evidently prompted by compelling circumstances, and the fact was tacitly admitted by the German authorities when they decided to take over the responsibility for the request. Since then the position in the Monarchy has gone from bad to worse. A last effort on the part of the Emperor Karl to retain his territorial inheritance was in the form of a manifesto promising a separate State to each of the Austrian races. He was taken at his word, and Provisional Governments, or their equivalents, came into existence at Prague, Agram, Cracow, and Lemberg, but with no intention of entering into any federal arrangement with the authorities of the Dual Monarchy. Worse still, Hungary, Bohemia, and the Yugoslav lands withheld their food supplies from Vienna, and one newspaper admitted that, unless speedy and thorough relief could be found, the capital was threatened with a catastrophe. The army in the field may be better off for the moment, and if the supreme command is still in German hands, an effort might conceivably be made to postpone surrender in the supposed interests of Germany, although the signal victory of the Italian and British troops on the Piave does not make this course likely. But whether the Austrian troops continue to resist or not the disintegration of Austria-Hungary may be regarded as an accomplished fact. The Emperor has left Vienna for one of his castles in Hungary, and a new Austrian Premier is said to have been appointed mainly for the purpose of arranging for the transfer of affairs from the Central Government to the National Governments. The task will probably be of more interest to the former than to the latter, as the various peoples have already made their own arrangements, and are acting as Sovereign States independent of any dispositions that the Vienna authorities may contemplate. There would seem, indeed, to be more cause for the Hapsburg Monarchy to look after itself than to profess solicitude for its unwilling subjects. Complete uncertainty must prevail as to where the process of disintegration will stop. The first instinct of the Germans in Austria has apparently been towards union with Germany; but whether the desire will be quickened or damped by constitutional developments in that country remains to be seen. Hungary claims to have made up its mind on the one point of independence of Dualism; but both the advocates of democratisation and the members of the old school alike insist upon the integrity of Hungarian territory. When the only terms on which the Allies are prepared to make peace are known there may be more inclination to coalesce on the part of the remnants of the once Dual Monarchy.

Fuit Ilium. The event that was so long anticipated has now taken place. Austria-Hungary may survive for the purposes of a military surrender, but Dualism as introduced fifty-two years ago, perpetuating the subordination of the Slavs to the German minority in one-half of the Monarchy, and to the Magyar minority in the other, is at an end. Interest for the moment centres in the Allies' plans. In the case of Bulgaria the dangerous precedent was set of drawing a distinction between an armistice and the terms of peace. The relative smallness of the country precludes the possibility of future embarrassment, and it may have seemed the simpler course to postpone a detailed settlement until the time came for a general peace. If the Allies are well advised, there should be no such distinction in the case of Austria-Hungary and Germany. The terms of surrender, unless Allied interests are to be prejudiced, should include a statement of the peace terms—at least in outline—as well as the military requirements for an armistice. Any other course must place the Allies at a disadvantage, as it exposes them to the worry, if not danger, of interminable negotiations. A conference of the Allies is now meeting at Versailles, and its deliberations are of necessity being conducted under pressure of the rapid march of events in Austria-Hungary. It is to be hoped that the whole question of the settlement after the war is not now being discussed *ab ovo usque ad malum*. If this should be the case, the arrival, under a flag of truce, of an Austrian deputation at British or Italian Headquarters on the Piave might find the Allies only ready with their terms for an armistice. The interests of the subject races of the Dual Monarchy require that a clean cut should be made at once, and that the Provisional Governments now in being at the different centres, no less than Austria and Hungary, should know without delay where they stand. There will be no justification for lengthy peace negotiations. The Hapsburg Monarchy, after the admissions already made, can offer no valid objection to the Allies' terms; its present preoccupation is far more likely to be the fate that it may expect at the hands of its own peoples. The effect of Austria-Hungary's action on Germany's waning resistance will be considerable, if not decisive, and the more rapidly the negotiations with Vienna are concluded the sooner will Germany accept the logic of her isolation. In a war that is costing the Allies fifteen million pounds a day there is no room for diplomacy that follows haltingly at a long interval after the military event.

EXORCISM IN CAIRO.

Soon after my first arrival in Cairo—many years ago—a friend of the Coptic community informed me that exorcism was still practised in some of their old churches and convents. The most powerful of the Saints whose aid is invoked is the Emir, or Mar, Tadrus (St. Theodore). Far away in the "Arab quarters" is an old Coptic convent dedicated to this warrior saint, some of whose bones are said to be preserved there. Quite recently there had been, said my friend, a striking proof of his miraculous powers. A Moslem youth, belonging to the lively fraternity of donkey boys, had fallen sick and died; preparations for burial had been made; hired female mourners were assembled, and their shrill notes of lamentation filled the air. The body was about to be laid upon the bier when a woman who had known the youth implored that the body might be taken to the shrine of the Mar Tadrus. The youth might not be dead. She knew of a case in which a person pronounced to be dead had been restored to life; and she had heard of several cases of premature burial. The proposal would no doubt have sounded strange to Moslem ears were it not that, as Lane says, "Moslems, Christians, and Jews adopt each other's superstitions, while they abhor the leading doctrines of each other's faiths." It was agreed to: the body was conveyed to the convent, prayers were made, and the boy was brought home alive. Whatever the facts may have been, the story was, I found, current at the time.

I gladly accepted the offer of my friend to guide me to the place. At nine o'clock on a Wednesday morning we started for the *Deyr*, or convent. Passing through the Esbekieh and the Muski, we reached the Ghourieh, which leads to so many quaint bazaars. At the Fountain of Toussoun Pasha we turned into the Har't er-Rûm, formerly a Frank quarter, bordering on that of the once privileged Venetians, the Moghowerîn. Winding through the narrowest and most silent of lanes, we passed by ponderous wooden doors, no longer used, which in lawless times formed the barriers of separate quarters. Finally we reached a lonely cul-de-sac, and, stopping half-way along it, my friend knocked at a low door to the left. After much creaking it was opened, admitted us, and was at once closed and locked.

A female servant informed us that the Raïssa, or Lady Superior, would shortly join us: she was attending a Lenten service in the church. She soon appeared, a lady advanced in years, wearing a gown of the ordinary blue material beneath a black silk *hábarah*. By her permission we were shown over the church, which is an interesting one. Here in the heart of a Mohammedan quarter, never penetrated by travellers, we were, as in the Coptic churches of "Old Cairo," in an atmosphere of a remote Christian period. Absolute silence reigned in the cold precincts; but it was soon to be broken by discordant howls. We then proceeded to the chamber, close by, in which the expulsion of devils took place. This was a plain, white-washed room on the ground floor. A few apertures in the walls served for windows. In one corner some ostrich eggs were suspended from light wooden frames. Behind a coloured curtain, partly drawn, was a recess in which the relics—said to be arm bones—of the wonder-working Emir are carefully preserved in a little silken bolster.

Already the room was crowded by scores of women and girls of all ages, young married women apparently predominating. Here and there were infants in arms, and a few small boys wearing bright red tarboushes. The majority were Egyptians, Copt and Moslem, while the types and complexion of others—many unveiled—showed that they came from Nubia, Abyssinia, and different parts of the Sudan. Most of them were seated; a great many were "possessed," the others being relations, friends, and attendants. The evil spirits were unmistakably at work in different modes and degrees. Some of the demoniacs were gesticulating wildly, others were swaying their bodies to and fro, others prostrate and muttering incoherently or crying out. Some were sitting quietly, as yet unmoved. The demons were presumably of the epileptic tribe.

By permission of the Raïssa, we took up our position at the door of the ill-ventilated chamber. Scarcely had we done so when two stalwart women entered, each bearing a large *tar*, or tambourine, and followed by an attendant. These were the exorcists, both Mohammedan. They were energetic-looking women, above the average height, and wore the usual blue *miláyeh*. They lost no time in getting to work. The process was extremely simple. Placing themselves opposite each sufferer in turn, they set up a loud monotonous chant, while they beat a noisy accompaniment upon their jingling instruments. The chant consisted chiefly of an invocation of various Moslem saints, the name of the Sheikh esh-Sharáwi being frequently mentioned. This saint was a much-esteemed *weli*, to whose memory a mosque is dedicated in the north of Cairo. There his tomb is much frequented by women carrying sick infants, and by others who have no infants to carry, but who desire the honour of maternity. We listened in vain for any mention of the name of St. Theodore, who appeared to be quite overlooked by the exorcists at his own shrine.

The effects produced upon the possessed were in most cases almost instantaneous. Those who were already manifesting symptoms of the malady became doubly excited. Patients seated on the floor, who had shown no signs of disorder, became violently affected. They sprang to their feet, uttering loud shrieks or groans. In a few cases we noticed that demoniacs tried to dash their heads against the wall, being prevented only by their watchful relatives or attendants. Close to us, a girl dressed in white was carrying on a frantic dance with outspread arms. As the exorcists approached she tried to stop her ears; whereupon they redoubled their efforts, thumping the *tars* with increased energy till the noise, added to the shrieks of demoniacs, and the loud buzz of voices all round, became deafening. A black, worn-looking, Sudanese woman was nervously clutching the air. She and other patients were supported on both sides by friends while the convulsions continued. One or two patients were swaying their heads from side to side, exactly in the manner of "howling dervishes." In all cases the fits lasted till exhaustion caused the demoniacs to collapse or to sink into the arms of their friends. The theory, of course, is that the devil becomes agitated on hearing invoked against it the name of the particular saint whose influence it is powerless, sooner or later, to resist. It struggles within the body of the possessed, through which it cries aloud. Finally, it is compelled to depart, though it may be only temporarily. I gathered that in many cases several visits were needed to effect a cure.

Afterwards, long before the séance ended, we spent some time with the Raïssa in an upper chamber, or reception room, from which, through a small window, we could overlook the scene below. She told us many things about the convent and the saint; and related how the Moslems had made an attempt some years ago to obtain complete possession of the shrine. Formerly, the exorcists were Copts; but the gift of casting-out devils has confessedly passed from the Coptic clergy. I also learned, in subsequent visits to the *Deyr*, various facts about some of the most noted exorcists in Cairo, whose powers and modes of procedure I was afterwards able to study.

A MESOPOTAMIA-PALESTINE ROUTE.

By Joseph Offord.

With reference to the possibility of speedy communication between the British Army advancing in Mesopotamia and General Allenby's outposts to the east of Damascus and Palestine, it is interesting to know that there is one route by which the two expeditions may be united by a series of posts that would probably not involve any action with the Turkish outposts. This route was followed by Sargon and other Assyrian monarchs when at war with the Arabians and Edomites, and inhabitants of the Hauran and other districts east of the Jordan valley.

The route referred to is one leading from the Euphrates, starting at a point close to Nejef, a little to the south of the site of old Babylon, to an important oasis of North-East Arabia known as El Jowf (or Jof). The feasibility of such a road between Mesopotamia and the Damascus-Medina railway and our Palestine Army east of the Jordan does not depend only upon the evidence of ancient cuneiform records, or the account of Salah-ed-Din's great march from Cairo, by way of Akaba, to the Euphrates, although many old inscriptions in its favour could be quoted. Quite recent confirmation is obtainable. In 1909 Captain S. S. Butler read before the Royal Geographical Society a paper entitled "Babylon to Damascus." In that address he proved that between the Euphrates and El Jowf there is a distinct line of communication, with wells. Glaser, the Austrian traveller and achæologist, who spent many years in Arabia, says that the wadi water of the Jowf drains into the Euphrates. The fact of this route and the neighbouring country to El Jowf not being wholly sterile is also vouched for by the French explorer Huber, Lady Anne Blount, and others. Moreover, in Stiehler's great atlas of Western Asia the wadi between the Jowf oasis and Euphrates is inscribed as "low ground, good pasturage." To ascertain the position of El Jowf, the best way is to draw a line from the head of the Gulf of Akaba to the mouth of the Shatt-el-Arab. It is then placed a little to the north of this line, nearer to Palestine than the Euphrates by about one-fourth. It is a strategic point, because upon the shortest way from Egypt to the Euphrates, and half-way between Damascus and Hail, in Central Arabia, and, as pointed out and stated by Wetzstein, is only four double marches south-west of Babylon. It will be clear, therefore, how easy it would be to reach Jowf from the river. There remains now the question of the route between the Jowf and Damascus, or the Hauran east of Jericho ford and bridge. This is quite easy, because the wadi connecting the Euphrates with Jowf is continued, slightly deflected in its direction, and leads to the East Palestine, or Syrian, district of the Hauran. The map directions, derived from recent travellers, indicate this valley as being well furnished with water all the way from the Hauran to within fifteen miles of Jowf. This wadi is known as the Wadi Sirhan. Its direction from the Hauran to Jowf is south-east; then you cross the oasis, and take the valley which acts as its continuation to the Euphrates, which runs east-north-east.

THE FUTURE OF PALESTINE.

Mr. Herbert Samuel, M.P., presided at a dinner given by the English Zionist Federation at the Holborn Restaurant on Monday night in honour of Dr. Weizmann and the other members of the Zionist Commission to Palestine.

Lord Robert Cecil wrote: "In Palestine the pioneer work accomplished by the Commission, under the able leadership of Dr. Weizmann, has laid the foundation upon which, I have no doubt, will be built the solid fabric of a Jewish National Home."

Mr. Samuel said it was exceedingly fortunate that the Commission found as the head of the Government in Palestine that great soldier and statesman, General Allenby, a man of wise and sound judgment, inspiring confidence in all who met him. The question of the political sovereignty of Palestine would, of course, be established at the Peace Conference. That problem was not for the Zionists. All they asked for Palestine was that it should not, in any case, be under the joint administration of several Powers. They also asked that there should be no division of Palestine, that the natural boundaries of the country should be respected. The ideas and views of the people on the spot should be treated with consideration and respect. Further, Palestine should not be subjected to the financial exploitation of outside concessionaires. Also, as a matter of course, the non-Jewish population already settled in the land should be treated with scrupulous fairness.

In a message dated October 15, and delayed in transmission, the Athens correspondent of *The Times* reports:—"Public opinion is rather excited over the fact that the Italian Censor allowed to pass an article in the *Idea Nazionale* claiming for Italy the Asia Minor vilayets of Alexandretta, Adalia, and Smyrna, with the hinterland. The newspapers assert Hellenic rights over these territories, a portion of which has already twice been offered to Greece by the Entente."

PRESS ON THE NEAR EAST

Turanianism v. Islam.

Sir Edwin Pears's article on "Turkey Islam, and Turanianism," in the *Contemporary Review*, will reassure those who are inclined to regard Turanianism with too much awe. The Turks, or certain of them, have made a proposal "to renounce the religion of Mohammed and to substitute for it that of the Turanians": a proposal which, "were it to materialise, would mean a relapse from monotheism into polytheism or a confusion of religious conceptions hardly distinguishable from fetishism." Thus does Sir Edwin Pears put the case, and he proceeds to show that, as far as Europe is concerned, the danger of Turanianism is that it may be turned to political ends by the "advanced" Turks, who aim at the Turkification of the whole Turkish Empire—and indeed of large areas outside that Empire. The strange part of the business is that while the "Turanians" would practically undo the work of Mohammed, they yet appear to regard the Moslem world as the most suitable field to work in for the furtherance of their ambitions. But the Moslem world has not accorded an enthusiastic welcome to their missionaries. The Moslem prefers his Prophet to Talaat, Enver and the rest of the atheistical gang who call themselves "Young Turks." Of the Moslems Sir Edwin writes:—

Leaving aside Asia Minor and the whole of Arabia, Syria and Egypt, the best educated group is that of India. The Indian Moslems are loyal to the King-Emperor, and are deservedly trusted. They are loyal because they have learned by experience that we do nothing to interfere with their rites or the practice of their religion. In Palestine they have been wisely placed by General Allenby in charge of the Mosque of Omar and other buildings especially dear to the Moslem soul. But while the Indian Moslems are the most important group of the followers of Mahomet, there are other groups which are attracting the attention of the Turks and Germans who favour Turanianism, and are of special interest not only to our Indian fellow-subjects but to the world. Of these Persia, Khiva, Bokhara and Afghanistan are the most important.

Of these Persia is not promising, for the Persian Shiahs and the Turkish Sunnis do not love one another. Nor is Afghanistan likely to be lured from its alliance with Britain. But the Turks consider Khiva and Bokhara more promising ground. There are, the author reminds us, other groups of Moslems in Asia, to say nothing of the Circassians, the Tartars in South Russia, and those of Kazan. A large group of the latter "are possibly the most educated Moslems in the Russian Empire. They occupy a district to the east and south-east of Moscow." The author quotes from an article in *The Round Table* of December, 1917, the opinion that "if the question of Turanianism be raised between Turkey and Kazan, it is more likely that Kazan will take the lead among the Turkish-speaking peoples than Turkey." Even among the Moslems in Turkey there are "important sects, who, while not being unfriendly to Christians, are unflinchingly loyal to Monotheism. . . . Such are the Mevlevees. . . . All the members of these sects would vie with the Ulema, and indeed with not only the devout Moslems, but with the mass of the Mohammedan community, in repudiating Turanianism."

Sir Edwin Pears next deals with the attempt to substitute Turkish for Arabic, even to the extent of translating the Koran—a step which the Arabs regarded as sacrilege. He writes:—

The worst effect of the Turkification as part of the movement towards Turanianism was seen amongst the Arabs, for while, as Dr. Doughty remarks in his "Wanderings in Arabia," Islam is a cold creed among northern peoples, "it is like a blood passion on the people of Moses and Mahomet." . . . When the doctrinaires of Turanianism proposed to abandon Islam the indignation of the Arabs became extreme. It was in vain that they claimed that the abandonment, or at least the modification, of Islam was necessary in order to obtain the domination of Moslemism over the Greeks, Armenians and other non-Turkish subjects of the Caliph. Feeling ran high on both sides. The Turanian party proclaimed that Islam was a Semitic creed, with which Turks had nothing to do. Some of them went so far as to say that as the Arabs had always for centuries been disloyal subjects, the Hadj or pilgrimage should be forbidden, and that the annual fast of Ramazan did not apply to Turkish soldiers. No branch of the Mahometan population had objected to pilgrimage. It is one of the "five pillars" always insisted upon as articles of faith or essential practices. The revolt of the Arabs in the Hedjaz followed. It was led by the Shereef of Mecca. . . . The two proclamations of the King of the Hedjaz, dated respectively June, 1916, and March, 1917, and the document supporting them signed by the leading Ulema of the sacred places, and dated November, 1916, are vivid with the spirit of Islam as a religion personally held by the writers.

Against that spirit the Turkish party of expediency is unlikely to make headway. The article concludes:—

To suppose that any Moslems among the Turanian peoples would put themselves out of the way to join the Turkish leaders who wish for the progress of Turanianism is almost unthinkable, and I therefore will waste no more space in discussing that aspect of the matter.

In conclusion, I express my opinion that the world has nothing to fear from the movement which has been proclaimed in various quarters. The small Jewish element, with Zia Bey at its head, which is supposed to harbour the belief that Turkey may form the rallying point of all the Moslem groups in Europe, Asia and Africa, will have few supporters. I doubt whether Zia Bey himself entertains any of the dreams with which his followers are accredited. Turanianism is a retrograde movement, which offends both educated Moslems and the ignorant. Ottoman statesmen already recognise that such a movement, founded on common origin, customs and language, would conflict with Pan-Islamism. Of the two forces the latter is undoubtedly the most potent, and the fiercely fanatical followers of Mahomet have already become greatly incensed against the Pan-Turanians because of their suggestion to Turkify the sacred language and to abandon the Hadj. For these reasons the best Turkish statesmen have declined to associate their names with Turanianism. Whatever, therefore, may be the result of the present war, I see no reason to believe that it will strengthen the party which favours that movement. As a political movement, also, I feel sure that it may be disregarded.

"The Moslem World."

The current number of *The Moslem World* is full of interest. Foremost place must be given to an article, "Al Riadh, the Capital of Nejd," by Dr. P. W. Harrison. Professor Weir discusses critically, but not without sympathy, the problem, "Was Mohammed Sincere?" and expresses the belief that to account for the change that came over the Prophet in the last two or three years of his life is the most difficult problem which confronts his biographer. Dr. S. M. Zwemer writes on "Animistic Elements in Moslem Prayer"; and other items of interest are "Moslems in the Caucasus During the War," by J. B. Heald, and the translation of "A Chinese Moslem Tract."

Articles to Note.

"Caste and Democracy," by Dr. T. M. Nair, in the *Edinburgh Review* (October).

"The Yugoslav as Soldier," in *The Times* (October 25).

GREECE IN THE WAR.

Speaking at King's College, London, on Tuesday, Captain Rodoconachi said that in warfare the moral factor was decisive, and it had again been the case that the Greeks had been called upon to fight for civilisation against barbarity.

Describing the operations Captain Rodoconachi said that the total force of the enemy had been 267 battalions, while the Allies had used 256 battalions, not taking into account reserves that had not been called upon. The plan had been to pin down the Bulgars to their positions on the Struma, and to break through their lines somewhere between Cerna and Doiran. To the Serbs had fallen the honours of the day; but it would be unhistorical to omit to say that the Greek Army, by adding its weight, and by its fighting qualities, especially in mountain warfare, could alone make the operation possible. The way the Greeks had fought could be judged by the fact that the Serres division had lost more than one-third of its total strength. Greece still had 150,000 men in reserve; they were training but not mobilised. To these must be added 60,000 Greeks serving with the United States, 48,000 war workers in France, and 30,000 men working in the rear of the armies in Macedonia for the Allies. All aeroplanes employed in Macedonia were adjusted and tried by Greek workmen; Greek destroyers were everywhere on convoy duty; and the Greek mercantile marine was working strenuously for the Allied cause. The grand total was 500,000 men, or 11 per cent. of the Greek population.

ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons:
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.

Office: Panton House, 25, Haymarket, S.W.1.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

A small mission is being sent to Morocco by the Department of Overseas Trade (Development and Intelligence) to investigate the trade possibilities of that country in regard to its imports and exports, natural resources, and transport and other facilities. Mr. E. H. Mulock, of H.M. Consular Service, is the head of the mission, and the second Commissioner is Mr. L. N. Barker, of the Department of Overseas Trade. All the principal towns of the French, Spanish, and International zones of Morocco, and the frontier towns of Algeria will be covered in the inquiry, and it is understood that the mission's investigations will last between three and four months.

***

The enterprise of the authorities in arranging for this mission is most commendable. As my readers are aware, I have frequently explained the reasons why such an undertaking is desirable, and I am sure that the results of the tour cannot fail to be profoundly beneficial for the future of British trade with Morocco. I should imagine that there is no question that of the districts the mission will visit French Morocco offers the best prospects for trade after the war, owing to the praiseworthy work of our Allies, which even the war has not been allowed to interrupt entirely. Morocco's development has been proceeding apace, and sufficient has already been done to make it evident that the trade possibilities of the country are very great. The dispatch of this mission is the best possible indication that France will welcome the growth of trade relations between this country and Morocco, and it will, therefore, be the fault of British merchants and manufacturers if the Anglo-French Entente is not further cemented as regards Morocco when peaces comes on an economic basis.

***

While on the subject of commercial missions I must say a word with regard to Roumania. As I have already pointed out, it is only to be expected that as soon as conditions permit we shall have the extreme pleasure of welcoming a mission from that country on the lines of the missions which have already visited us from Greece and Serbia. But I question whether that of itself will be sufficient for the speedy re-establishment and development of our trade relations with Roumania, for the position in regard to that country is altogether different from that of our other Near Eastern Allies. In no country that has had the misfortune to come under the temporary control of the enemy have the Germans been more thorough in trying to overturn the established order and to pave the way for their future commercial supremacy and economic penetration. It is only necessary in this connection to recall the provisions for the control of the Danube contained in the treaty, to which Roumania had no option but to submit, and the action of Germany with regard to the banks and the oil industry. As a matter of course it follows that reconstruction will not only be most far-reaching but also most difficult, and in view of the importance of British interests in Roumania I suggest that instead of waiting for a mission from our Allies we should prepare to send one to them as soon as possible.

***

So far as I can see there is everything to be said for this view. For many months we have been out of touch with Roumania, and while her reconstruction programme and her requirements for materials of all kinds may be similar to those of Serbia in essential outlines there is the vital difference that we have been all through in a position to learn Serbia's needs and to devise how best they can be met. A mission including among its members representatives of the leading British exporters and importers would in the circumstances be invaluable. It would give our business men an opportunity of seeing just what Roumania needs and of taking prompt steps to have these requirements satisfied. They would also, of course, be in a position to decide in what directions we can increase our imports from Roumania. I suppose it is unnecessary for me to labour the advantages of doing everything possible to further the speedy resumption of trade relations with Roumania, for it must be patent that if Great Britain and the other members of the Allies are unable to supply Roumania's requirements when the war ends Germany may find a market there for some of the goods she is said to have been storing up against the peace. The mission I advocate seems the best possible means of ensuring that this does not happen.

***

I hope also that steps will be taken in due course to send out commercial missions to Greece and Serbia. The missions of those countries to us were an unqualified success, and beyond question went far to educate the British business man as to his responsibilities in the Near East. But there is nothing like seeing things for oneself, and on that account I think the value of these missions would be greatly enhanced if a number of British business men who have met the members of these missions could go to these countries and investigate the conditions for themselves. I am sure that the result would be the furtherance of British interests in those regions.

***

Sir Arthur Steel-Maitland made it clear in a speech at the Newcastle Commercial Exchange this week that everything possible is being done by the Department of Overseas Trade to set up an efficient consular service for the purpose of helping British trade in the future. The service was being reorganized, he explained, and attached to it would be commercial counsellors, who would take a country as a whole, collect consular reports, and see the possibilities of the country. Between these two services they would get the information they wanted. A really efficient service was aimed at, and this would include first-class knowledge of foreign languages, and he added that in the past we had not encouraged our consuls enough, and we had paid them too little.

***

I am not at all sure, however, if the improvements now being made in the service will free the consuls from criticism, because many of the complaints levied against the service have been of a most unreasonable character. The consuls were expected by some business men to do all manner of things that were quite outside the scope of their work, and while many of them went out of their way to oblige, others were not so accommodating, with the result that a torrent of criticism would descend on the whole service. In making these remarks I do not wish it to be inferred that the service was equal to its rôle. On the contrary, it showed grave shortcomings, and was by no means the assistance in furthering British trade interests that it might have been, and, I trust, will be in the future. But I feel at this time of reorganization that it is due to those members of the service—and there were many of them—who conscientiously and satisfactorily carried out their duties, to point out that much of the criticism directed against the service arose from failure to comprehend its functions.

***

Imitation may not be always a satisfactory method of development, but I think that if the authorities wish to make our consular service above criticism that they cannot do better than take a leaf out of America's book. It has always seemed to me that the American business man is better served by his consuls than the citizen of any other country. Beyond question the United States consular service has reached a pitch of remarkable efficiency, and its value as a guide to traders must be enormous. The consular reports, for instance, are the completest thing of their kind that can be found. No subject seems too small to be dealt with, and the reports as a whole are models of what to mention and what to omit. I am afraid I cannot say the same for British consular reports before the war, for they were not only too infrequent, but they failed to cover the ground with the requisite thoroughness. In this respect there is wide room for improvement, and the Department of Overseas Trade will earn the gratitude of the business community if it can find a remedy.

***

In view of the continued prosperity of Egypt it was only to be expected that Anglo-Egyptian Bank shares should be a strong feature, since banking institutions generally have flourished during the war. The consequent rise in these shares is now seen to be fully justified, as the directors announce a substantial share bonus. It is proposed to distribute £100,000 to the shareholders with a view to the capitalisation of this amount, and its application in payment of £5 per share in respect of 20,000 new ordinary shares of £15 each. The creation of these shares will increase the paid-up capital of the company to £600,000. The shares will be distributed in the proportion of one for every five previously held. As the existing shares stand at £21½, it will be seen that the directors' decision means that the shareholders will benefit very considerably. For the rest, it only remains to be noted that a final dividend of 10s. per share, free of tax, is recommended, against a dividend at the same rate last year, plus a bonus of 2s. 6d. per share. £10,000 is written off premises account, the same as before, £12,000 is applied to a bonus for staff, against £9.000, and £38,000 is carried forward, against £67,000.

COMMERCIAL TRAINING AND THE NEAR EAST.

(Contributed.)

Everyone is by now agreed as to the vital importance to our Empire of commerce, both for the near future and for afterwards. We have before us a threefold task—to make up for lost ground; to insure against future isolation; and to attain a proper standard of prosperity for all, from the owner to the factory hand. For this task the two main essentials are *increased production and adequate training.*

For no part of the world is this more applicable or important than for the Near East. The briefest possible survey of the map will convince anyone of that. Let us take Palestine for the moment as a centre of vision. To the immediate south-west we see Egypt and the Sudan, rising year by year in value under the well-nigh complete freedom from retrograde and hostile control achieved by our unremitting labour and our admirable understanding with our Allies. Farther along the North African littoral, Tripoli, Morocco, Algeria are advancing, also at varying pace, along the road of prosperity. Due west, Cyprus and the Greek Islands, in their degree, have their promise of an organised future. To the south, the prospects of Eritrea, Abyssinia, and British East Africa are only beginning, and who knows what aid and increase may not come from a friendly Arabia Felix that may one day rival the wealth and tolerance of the ancient republic of which Mecca was the centre in the early Christian centuries?

Palestine itself, whose fertile lands and cities, once great, are now in a fair way to be fully freed from the Turk, and whose capital is now but a few hours distant from Cairo by rail, may be but the nucleus for a development that should penetrate beyond the southern shore of Asia Minor, and revive in her rich provinces the heritage of Ancient Rome, which was so near to being absorbed into a vast Berlin-Baghdad exploitation! To the East, moreover, and along the trade routes of old time, we can see a renovated Armenia; Persia, with her oil-fields; and, finally, the great river basin of Mesopotamia, whose possibilities (studied by one of our great engineers, to the order of the Turkish Government) may rival and surpass the productivity of the ancient Empires.

Among the many recent and present plans and schemes in connection with commercial development, one now before us would seem to present just that kind of training which should best fulfil the needs of those who must, in the future, "officer" the army of commercial conquest and consolidation. Intensive and rapid, collective and systematic, thorough and specialised, it is calculated to fit any candidate for any region of production or branch of industry; centrally organised from London, but suitably localised in its plan of branches, it would be easily available for all applicants, whether in this country or abroad. This scheme, in its general and initial conception, was the work of the late Mr. Henry Cust, editor of the *Pall Mall Gazette*, founder of the Navy League, founder and first chairman of the General Committee for National Patriotic Organisations, and a prominent member of the Empire Resources Development Committee. Its title is as follows:—The Imperial and International Institute of Commerce, Languages, and Imperial Citizenship, to consist of—I. A central institute in London; II. affiliated institutes throughout the United Kingdom and the Empire; III. co-operating institutions in each allied and friendly country.

In actual fact the project is simple. The proposed courses are as follows:—(1) Business training; (2) Trading and salesmanship; (3) Accounts, banking, and finance; (4) Commercial law; (5) Languages; (6) Production and manufacture (in their historical and geographical aspect); and (7) Technical training (in plant, engineering, mining, chemicals, etc.).

Naturally the courses are "specialised" for the region, or industry, with which the candidate is concerned. For the Near East, for example, commercial law would comprise a working knowledge of the Egyptian code and native procedure, while languages would be Arabic, French, Italian, and probably modern Greek, Turkish, etc.; production would involve knowledge of cotton, cereals, wool, petroleum, etc.; and technical knowledge would consist of mining, irrigation, agriculture, and so on.

It is probable that four or five competent instructors would deal with the whole curriculum of such a branch institute as the Near East would require, supplemented, if needed, by the special language classes involved. The chief point would be that the student could devote his whole time for a short period towards his own specific end—very much as students normally work with a "crammer" for three or six months for their Indian Civil Service examination.

But the query will at once arise: Where will the branch be founded? If in the Near East—say, at Cairo or Jerusalem—who will be the students? The answer is not so hard as would appear. There was before the war, and will be again, a fair "floating" population of young men looking for work or else already working, but on a small scale, for insurance or commercial houses. Given more special knowledge, they could claim really good positions. In the second place, there may well be scores of men now with the armies in Egypt, Palestine, Mesopotamia, Salonika, who will be attracted afterwards to the Near East.

Lastly, with the development already in hand or foreshadowed, of the many firms dealing with the Near East, it would be worth the while of a young man to go out specially for a three months' course and then step straight into the best post they could give him.

But an even simpler solution lies at home. Our great cities may be said to be already "grouped" as to their special industries and the regions with which they deal. Those who are now working on Mr. Cust's scheme are already, we understand, examining this "grouping," and will be able, before very long, to indicate just what kind of institute can be founded in what city of the United Kingdom.

The essential aim, to sum up, of the whole scheme is to provide not a mere general education of varying length and value for commerce, but a specific training towards the definite requirements of the candidate on the one hand and the merchant on the other. To revert to the simile of the system which provides for the Civil and Diplomatic Services, the scheme will provide for the commercial service of the Empire, but with even more definite promise of results in the shape of the specific posts which the great merchants of our Empire are, in the main, only too glad to offer to men who possess just what our young men of to-day do *not* possess—the requisite training for the business in which they are wanted and into which they ought to enter.

BRITISH INDUSTRIES FAIR.

The British Industries Fair, 1919, organised by the Board of Trade, will be held in London next year from February 24 to March 7, in the Pennington Street Warehouse of the London Docks, which has again been placed at the disposal of the Board by the Port of London Authority, and which is the same building in which the fair was so successfully held last spring.

In order in no way to interfere with the production of war requirements, the fair will again be confined to the same trades which have been included in the last three fairs, namely:—Glass and pottery, printing, stationery and paper, fancy goods, toys.

The right to exhibit will again be confined to British manufacturers, and only bona-fide trade buyers will be invited to visit the fair, as in former years. Over 2,000 notices regarding the fair have been forwarded to manufacturers of articles covered by the fair, and, in order to facilitate the work of organisation, it is hoped that firms will apply for space at the earliest possible moment. Any manufacturers of suitable articles who have not yet received notices regarding the fair, and are anxious to participate, should communicate at once with the Director, British Industries Fair, Board of Trade, 10, Basinghall Street, London, E.C.2.

TRADE OF BAGHDAD.

A Distributing Centre.

Regarding the commercial importance of Baghdad, the United States Consul there, Mr. Oscar S. Heizer, in a recent American Consular report, points out that the city is the terminus of the upstream navigation on the Tigris, and also the terminus of the Persian road, and all goods sent to Kermanshah, Hamadan, and other important centres are loaded at Baghdad on camels or other transport animals. It is the centre of supply for Upper and Lower Mesopotamia, and is the collecting point from which the various products of the country are exported. All local products of Mosul, Diarbekir, and Sulemaniah are usually sent down the Tigris on rafts, built upon inflated skins, to Baghdad, where the products, such as wool, gum, gall nuts, skins and hides, carpets, dates, liquorice, opium, grease, and grain, are loaded upon river steamers for shipment abroad.

The articles imported from abroad via Busreh are cotton goods, twist, sugar, coffee, gunny bags, spices, silk, silk and woollen goods, metals, indigo, dyestuffs, tea, tobacco, pumps for irrigation, agricultural machinery, and haberdashery. Many of the above-mentioned imports are for Persia, especially cotton goods, sugar, tea, and indigo. Also some of the exports of Baghdad come from Persia, especially carpets and rugs. There is no speciality in trade. Some important firms carry on business in every kind of article, but the general practice is for each category of firms to limit their business to a certain class of articles.

The main article of import is cotton goods from Manchester, where old and flourishing Baghdad firms have been established for many years. The principal articles of export are wool and liquorice, of which the most important part goes to America.

Almost all the business is financed through foreign and local banks. The collection for goods sent to Baghdad is usually effected by drawing a draft upon the merchant with shipping documents attached, to be paid upon arrival of goods at Baghdad. For the collection against goods exported it is customary to draw a draft at four months, with shipping documents attached, which can be discounted at the local banks. Sales of goods here are collected through brokers on terms varying from one to six months' time, for which bills are taken and discounted at the banks or with native money-lenders at from 7 to 12 per cent. per annum. A commercial committee has been formed in Baghdad, composed of two Mohammedans, two Jews, and one Christian, to encourage commerce and advise the military government and the newly-established civil courts in regard to commercial matters. While for the present the functions of the committee are chiefly advisory, and nearly all activities are in the hands of the military authorities, it may be said that there is some improvement in business, and limited facilities are now given to imports and dealers in foreign merchandise.

At present it is very difficult to form an estimate of the volume of the trade of Baghdad. Owing to the closing of the roads by the war, the commerce of Baghdad was for a time transferred to Busreh, where all important import and export operations were carried on, and are still carried on to a great extent. It may be said that Baghdad lost for a while its commercial importance, Persia being supplied through Ispahan from Busreh, Mohammerah, Bushire, and Ahwaz on the Persian Gulf, thus depriving Baghdad of the most important part of its trade. During this period the only business carried on at Baghdad was the import from Busreh of small light articles which were brought by Busreh firms from India and England for the most pressing needs of the place.

In view of its situation at the head of navigation on the Tigris, there can be no doubt that Baghdad will assume a more important rôle as a commercial and distributing centre than ever before. The commercial prosperity of the city will no doubt be much enhanced by the development of agriculture in this country, which the British authorities are encouraging in every way.

ENGINEERING NOTES.

Irrigation Plans for Palestine.

Dr. Rennie MacInnes, Bishop in Jerusalem, preaching at St. Margaret's, Lothbury, recently, referred to British engineering achievements in Palestine, and pointed out that British rule had accomplished in four months what Turkish rule had failed to do in 400 years. Irrigation plans, he added, had been made whereby a far greater area of land would be under cultivation than ever before in the history of the Holy Land.

India's Industries.

The question of the industrial development of India is now very much to the fore, and the agricultural resources of some of the leading provinces are receiving more attention than ever before. In Bengal, for instance, inquiries have lately been instituted regarding (a) the possibility of increasing the cultivation of rabi food crops; (b) the improvement of the organisation for the supply of manure, seed and implements; (c) the extension of cotton cultivation; and (d) the extension of the supply of new varieties of sugar-cane. Orders have been issued for the encouragement of the use of manures of proved suitability by the distribution of loans under the Agricultural Loans Act on the recommendation of officers of the Agricultural Department. The great possibilities for the increased demand and employment of machinery and implements, in consequence of this new policy, call for the immediate attention of British agricultural machinery and implement manufacturers.

New Railways in Serbia.

Shortly before the outbreak of war the Serbian Minister of Public Works submitted to the Skupschtina a Bill providing for extensive railway construction in Serbia. The programme included the building of (1) a line from Nish to Merdare, at a cost of £612,000; (2) a line from Kragujevatch to Reschka via Kraljevo, at a cost of £1,160,000; (3) a line from Krusevatz to Prokuplje via Jankova and Klysura, at a cost of £420,000; and (4) a line from Valjevo to Osecina, at a cost of £208,000. The construction of these lines was to be put out to contract with the Franco-Serbian Company for Industrial Undertakings and Public Works and an agreement was to be entered into between this company and the Serbian Government for financing the scheme. The Bill also provided for permanent-way works on the lines from Reschka to Mitrovitza, Reschka to the Bosnian frontier, and Merdare to Prishtina. Later, however, it was reported that the scheme was postponed or rearranged. The railway lines in question would be of great commercial importance, and their construction will probably be one of the first large undertakings in the Balkan States after the war that will interest the engineers and contractors in the Allied countries.

Machinery for Aleppo.

The liberation of the Aleppo district is of particular interest to engineer manufacturers. Its capital, Aleppo, stands at the meeting point of several trade routes, and up to quite recently was the chief caravan station between the Levant and the Euphrates, while before the discovery of a sea route to India it was considered one of the greatest trading cities of the world. The district like the adjacent great grain fields of Northern Mesopotamia, is very fertile, and as soon as peace is concluded there will be a great opening for all kinds of agricultural machinery. At present a very small portion of the total area of these regions has been cultivated, but it is now only a question of a short time until many millions of acres of the best soil in the world that have been lying idle for centuries will be put under a high state of cultivation. It will be evident, therefore, that an excellent opportunity for the sale of agricultural machinery will present itself in this region. Aleppo is bound to be a great centre of activity in this class of business, and this is already recognised by many Continental and American firms, who are preparing plans to approach the new market. It is noteworthy that the first steam plough, a traction motor of 30-horse-power, and a gang plough arrived at Aleppo two years before the war commenced, and after a successful demonstration by the sellers, was turned over to the purchasers. This steam ploughing set was of British manufacture, the engine burning oil as fuel.

Prospects in Mosul.

Mosul will probably prove another important machinery market. This town is on the Tigris, opposite the ruins of Nineveh. Muslin takes its name from this town, which in the Middle Ages was a considerable mart for the cotton stuffs manufactured in the neighbourhood. In this district the use of modern agricultural machinery has been increasing in recent years. Great Britain, which had a monopoly of this trade, exported to Mosul in 1912 agricultural machinery (oil engines, flour mills, reapers, etc.) to the value of £2,925, as against £625 in 1911 and nil in 1910. With the entire liberation of Mesopotamia, Mosul's position as a machinery market will be considerably enhanced.

Pumping Machines in Mesopotamia.

The attention of British manufacturers should be directed to the possibilities of Mesopotamia as a great market for pumping machinery. Within a few years, before the war, upwards of 800 irrigation plants were erected upon the banks of the Euphrates and Tigris. These plants consist of internal combustion engines with a centrifugal pump as a separate unit. The engines vary from 5 to 40 brake horse-power, but the economy and efficiency of the higher powers is now recognised, and the experimental stage having been passed, landowners do not hesitate to invest in a power which will develop the resources of their lands to the utmost. The fuel consumed in the engines is ordinary kerosene, and the importation of this article increased in consequence before the war from 3,000 cases (of kerosene oil) to about 100,000 cases per year (a case contains two tins of four gallons each).

Windmills for India.

In last week's notes on windmills for India we commented on the suggested utilisation of rustic windmills made by native craftsmen for irrigation purposes. The suggestion arose from a statement at an engineering congress that the utilisation of the oil engine for irrigation work in India has proved very successful. The suggested utilisation of windmills for pumping water for irrigation, etc., in India is well worth the attention of landowners there and of windmill designers and manufacturers in this country. Windmills will undoubtedly give more economical results if modern types of such motors are employed, but the employment of such native-made windmills as suggested, "with sails of coarse matting and arms of rough, round timber, with bamboo framing attached to spread the sails; the shaft a round polished log, to be operated by means of wooden cog-wheels and crown-wheels; the pumping apparatus to be endless ropes, with their strings of ascending and descending buckets; the tower, of pisé work, to carry a timber cap to set the sails, etc.," would prove, as a system, neither adequate nor efficient enough to conduce to a state of things when "the usual precautions taken by the Government of India to cope with famines may be found to be unnecessary, and might give way altogether to irrigation by canal and pump!" The suggestion that "in storms the sails" of such native-made windmills "might carry away, and welcome, so long as no further damage was done, since they could be replaced in twenty-four hours," is questionable, for it depends whether the storm will be satisfied to carry away only the coarse matting, bamboo framing, etc., or upset the whole structure. Experience proves that this archaic or "home-made" type of windmills is subject to the latter catastrophe. In the Near, Middle and Far East the storms are noted for their force, suddenness and damaging effect. Hence the gradual disappearance of the picturesque rustic windmills from the Oriental hillsides and plantations, and their replacement by the scientifically designed and constructed modern types of windmills. Adequately proportioned for all purposes, made of iron or steel, painted or galvanised, with modern and easily operated mechanism, the modern windmill will probably be found the most suitable and economic motive power for agricultural purposes, and especially for continuous pumping of either large or small quantities of water. The employment of small native windmills may be continued, and perhaps with pleasing results, among small native farmers in India, but as a direct or indirect system of irrigation it will be found inefficient.

LANCASHIRE COTTON.

A Waiting Market.

(From Our Own Correspondent.)

Manchester, Wednesday.

Business in the market continues to be overshadowed by peace prospects, and trading has again been of very restricted dimensions. Speculative activity at the moment is quite out of the question. Instead of fresh orders being given out, more attempts are being made to cancel contracts which have not been completed. Spinners and manufacturers are dealing with the position of affairs in a very calm manner. Apart from American yarns, which are easier, rates do not show much change. It is expected that within the next few days the official estimate of the Egyptian crop for the current season will be published, and a yield of rather more than 5,000,000 cantars is anticipated. The demand for the article remains healthy. Egyptian yarns remain quieter. Apart from Government qualities, business has been at a low ebb. According to telegrams from Cairo, cloth prices are declining, and fresh business of any importance has been absent. Shippers to India have again held aloof. Unfavourable advices have been received as to the conditions in Calcutta and Bombay. Exporters to South America have looked on. No particular alteration in cloth quotations can be recorded. Prices in American yarns have favoured buyers. Spinners tend to lose some of their margin of profit. Producers of yarns suitable for Northern Europe outlets are expecting to do a big business after the war is over.

WORLD'S CEREAL CROPS.

The Board of Agriculture has received the following information from the International Agricultural Institute:—

The total production of wheat in Spain, Great Britain, Italy, Luxembourg, Switzerland, Canada, the United States, India, Japan, Egypt, and Tunis is estimated at 1,072,738,000 cwt., or 19.1 per cent. above last year and 8.1 per cent. above the average of the five years 1912-16.

The total production of rye in Spain, Italy, Luxembourg, Switzerland, Canada, and the United States is estimated at 59,642,000 cwt., or 26.1 per cent. above last year and 50 per cent. above the average for the five years 1912-16.

The total production of barley in Spain, Great Britain, Italy, Luxembourg, Switzerland, Canada, United States, Japan, Egypt, and Tunis is estimated at 230,040,000 cwt., or 3.2 per cent. above last year's production, and 6.7 per cent. above the average for the five years 1912-16.

The total production of oats in Spain, Great Britain, Italy, Luxembourg, Switzerland, Canada, the United States, and Tunis is estimated at 642,434,000 cwt., or 0.1 per cent. lower that last year and 15.8 per cent. above the average for the five years 1912-16.

Maize in Spain, Switzerland, Canada, and the United States is estimated to produce 1,353,468,000 cwt., a diminution of 15.3 per cent. compared with last year, and of 3.4 per cent. compared with the average of the five years 1912-16.

SUEZ CANAL SHARES.

The traffic receipts of the Suez Canal were as follows on the undermentioned days:—October 17, 18, 19, 1,000,000 francs, against 320,000 francs; October 20, 21, 22, 23, 960,000 francs, against 930,000 francs; October 24, 90,000 francs, against 120,000 francs.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.

Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.

Attwater and Sons (Manufacturers of Metallic Flax, Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

SPINNING MACHINERY.

GEO. THOMAS & CO., Manchester. Tel. and Cable Address: "Samehs, Manchester." Exporters of all classes of Machinery for Spinning, Weaving, Bleaching, Printing, etc., Cotton, Wool, etc. Testing Machines for all purposes, Tachometers, Balances, &c.

TENDERS INVITED.

A call for tenders has been made by the Egyptian Ministry of the Interior (Lunacy Division), for the supply and delivery of miscellaneous supplies (including clothing, bedding, hardware, table ware, and other household necessaries) required by the Abbassia and Khanka Asylums for the period of twelve months from April 1, 1919. Copies of the specification, and form of tender, may be obtained from the Director of the Lunacy Division, Ministry of the Interior, Cairo, at which address also sealed tenders, on the proper forms, will be received up to November 15. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent. of the value of the offer, must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer an address in Egypt at which notices may be received by him. A copy of the specifications, etc., may be consulted by British manufacturers of the goods mentioned at the Enquiry Office of the Department of Overseas Trade (Development and Intelligence).

INDIGO CULTIVATION IN INDIA.

The programme of work of the various scientific departments of the Board of Scientific Advice in India for 1918-19 contains the following in regard to indigo cultivation:—Factory experiments to produce a more friable form of indigo in small flakes so as to market the indigo in a form which can b e readily bulked and standardised and at the same time is more easily dealt with in grinding and pasting. Study of variation of the indigotin content of the plant with different conditions of manuring at different times of year and at different periods of day. Study of different methods of extraction and manufacture of indigo so as to improve, if possible, existing processes. Study of the changes during the bacteriological steeping of indigo in conjunction with the Imperial Agricultural Bacteriologist, who has devised methods of isolating and using bacterial cultures in this stage of manufactures. Studies of the enzymic changes during manufacture of indigo. Study of various problems in indigo analysis. Investigation of problems of importance in connection with the manufacture of indigo. A survey of the soils of indigo factories in Bihar and manurial trials at these factories with the object of improving the growth of indigo crops and of minimising the prevalent diseases, "wilt" and "psylla."

INDIAN RAILWAY BRIDGES.

The Indian Railway Bridge Committee is meeting at Simla this month to frame rules for the design and inspection of ferro-concrete and masonry railway bridges and to discuss the existing Government rules relating to steel girder bridges, etc. The members of the committee are Mr. A. A. Riggs, Madras and Southern Mahratta Railway; Mr. J. Graham, Great Indian Peninsula Railway; M. C. W. Lloyd-Jones, the Nizam's Guaranteed State Railways; Mr. C. W. Anderson and Mr. D. D. H. Remfry, Bengal-Nagpur Railway; and Mr. W. E. Pincombe, East Indian Railway; with Mr. G. Richards as chairman and Mr. H. S. Sales as secretary.

It is reported that Messrs. Tata Sons and Co., intend to start an electric lighting station at Ernakulam, where their cocoa-nut oil factories are to be erected.

The imports of coal into Egypt during the first half of the present year amounted to 280,251 metric tons, against 265,072 such tons in the corresponding six months in 1917 and 369,683 tons in 1916.

The Madras Government will award two technical scholarships to Indians who have shown exceptional initiative in any kind of industry and who are likely to add to their usefulness by special training in Europe or America.

The Governor-General of India in Council is pleased to direct that income derived from the manufacture of tea or indigo shall be exempt from income-tax in respect of the year commencing April 1, 1918, and shall also not be taken into account in determining the total income in respect of that year.

COMPANY NOTES & REPORTS

Dooars Tea.

The report of the Dooars Tea Company for 1917 states that the net profits were £61,225; £30,818 was brought forward after adjustment of the excess profits duty and donations to war funds, making £92,043. The directors recommend a dividend for the year of 27½ per cent., of which 6¼ per cent. was paid on April 22 and 21¼ per cent. on August 19 last, and to carry forward £29,043, subject to recovery of excess profits duty for 1917.

Rani Travancore.

The directors of the Rani Travancore Rubber Company announce that in view of the difficulty that is being experienced, both in the shipping of rubber to this country and in its realisation at the port of shipment, they do not feel warranted in paying an interim dividend at present.

Assam Co.

The report of the Assam Company for 1917 shows a profit on crop of £100,615. After making provision for excess profits duty, £12,200; commission and bonus to managers and assistants, £16,746; planting and upkeep of new, and as yet unproductive, cultivation, £6,745, a balance dividend of 7½ per cent. and bonus of 10 per cent. is proposed, payable November 1, making 25 per cent., less tax, for the year, the same as for 1916, £10,000 being placed to general reserve, and £7,926 carried forward.

Bengal-Nagpur Railway.

The directors of the Bengal-Nagpur Railway recommend, in addition to the guaranteed interest for the half-year ended December 31 next at the rate of 3½ per cent. per annum, a final dividend of 15s. per cent., and a bonus of £1 15s. per cent., making a total distribution of £7 15s. (7¾ per cent.) in respect of the year ended March 31.

Anglo-Egyptian Bank.

The directors of the Anglo-Egyptian Bank recommend a dividend of 10s. per share, free of income-tax, making 15 per cent. for the year; that £5,000 be written off premises account and £12,000 be applied for 20 per cent. bonus to staff, carrying forward £38,000. Meeting, 26th proximo. At an extraordinary general meeting to be subsequently held a proposal will be submitted for the distribution of a special bonus of £100,000 with a view to the same being capitalised and applied in taking and paying up to the extent of £5 per share 20,000 new shares of the bank of £15 each to be created. The sanction of the Treasury has already been obtained.

Empire of India and Ceylon Tea.

The net profit of the Empire of India and Ceylon Tea Company for 1917 amounted to £67,124, to which must be added the balance from 1916 after payment of excess profits duty and war donations of £51,240, making £118,365. Dividend of 22½ per cent. for the year on the ordinary capital, of which 3¾ per cent. was paid on January 1 and 18¾ per cent. on August 19; £54,540 forward. The profit shows a heavy decline from that of 1916, due in great measure to the price paid by the Ministry of Food. For 1916 the profit was £139,266 and the dividend was 22½ per cent., with £99,557 forward.

Anglo-Ceylon and General.

The report of the Anglo-Ceylon and General Estates for the year ended March 31 states that net profit, with the balance brought forward, after deducting the Debenture interest, amounts to £115,510. The directors recommend a final dividend of 10 per cent., making 15 per cent. for the year, leaving £78,010 to be carried forward, subject to excess profit duty for 1917-18. The profit would, in ordinary times, have permitted of a larger distribution, but it is imperative that cash resources be conserved. In Ceylon the tea crop, which last year amounted to 3,498,444 lb. from estate and bought leaf, with an average price of 9.45d. net per lb., was in the year under review 2,749,532 lb. from estate and bought leaf, with an average price of 9.41d. net per lb. The crop of cocoa amounted to 5,230 cwt., against 4,865 cwt. in 1916-17, and the sales so far effected realised 57s. 9d. per cwt. net, as against 59s. 8d. per cwt. net in the preceding year. The rubber crop was 219,216 lb., against 192,857 lb. previously, and the average price of the rubber sold was 1s. 9d. net per lb., as against 2s. 0¾d. net in 1916-17.

Upper Assam Tea.

The report of the Upper Assam Tea Company for 1917 shows a profit from crop of £40,006. The proceeds realised from all sources (£136,377) average 10.59d. per lb., while the cost of production (£96,556) is equivalent to 7.50d. per lb. It is not possible, however, to compare the sale and cost prices with those of previous years, the conditions of bringing to market and of disposal having entirely altered. Thirty-seven per cent. has been sold in Calcutta and London on the company's account and 63 per cent. taken by the Government at an all-round price of 8.62d. per lb. f.o.b. Calcutta. The cost of production for the current season's crop of 3,000,000 lb. is estimated at 6.76d. per lb. f.o.b. Calcutta, including fixed London charges. The balance-sheet shows:—Profit and loss—Balance December 31, 1916, £58,419, less dividend of 12½ per cent. paid June 30, 1917, £6,765, and after adding excess profits duty 1916 over-estimated, £1,076, and net profit for year of £20,919, total is £73,649.

North Caucasian Oil.

The directors of the North Caucasian Oil Fields, Ltd., announce that, although the accounts for 1917 are unlikely to be received before the end of the current year, the directors deem it expedient to hold the meeting as late as possible, so that any further information received may be submitted. Information to date shows that production from Western Field amounts to 15,934,914 poods (257,015 tons), against 11,500,792 poods (185,497 tons); Eastern Field, 16,047,088 poods (258,824 tons), against 18,855,867 poods (304,127 tons); total, 31,982,002 poods (515,839 tons), against 30,356,659 poods (489,624 tons). The increase in the Western Field is due to the fact that on the new plots south-east of the old Grozny plots two wells were brought into production, which together produced 8,261,800 poods (133,255 tons), the old wells in the Grozny field generally showing a decrease in output. For the first five months of the current year the production was approximately 763,324 poods (12,312 tons). It is probable that this oil was mainly produced for fuel purposes. The majority of wells on the Eastern Field also show a reduction, but one on the Bielik and one on the Chermoieff plot having been taken to a lower oil horizon, have increased their output. The directors regret to report that following upon the downfall of the Kerensky Government troubles arose last November in Grozny between the local tribesmen, the Tchetchens and the workmen, resulting in the burning of the surface works on the Bielik and Chermoieff fields. Some of the flowing wells on these fields were also set on fire, and at the date of the last advices in June were still burning. A number of the British members of the administration have remained at Grozny to protect the company's property, and the thanks of the directors and shareholders are due to these men for their devotion to the company's interests. The bulk of cash resources is believed to be intact so far as recent advices go. The Soviet Government have nationalised the company's property and have agreed to give receipts for same. These receipts, when received, and all other necessary claims for loss and damage, will be lodged with the Foreign Office, and every step taken to protect the interests of shareholders and obtain full restitution in due course. Some 5,000,000 poods of oil are in Ambar reservoirs; for the present the oil cannot be delivered to the refineries.

Bank of Bengal.

The report by the directors of the Bank of Bengal, for the half-year ended June 30, 1918, states that although the demand for money throughout the half-year for trade purposes was only moderate, the issue of Treasury Bills by Government enabled the bank to find advantageous employment for its surplus funds, and during the period under review the bank's resources were fully invested. The rate for demand loans ranged from 6 to 5 per cent., the average rate being 5.773 per cent. The net profits at head office and branches, after providing for the payment of a bonus of one month's pay to deserving members of the bank's working staff, European and Indian, amounted to Rs. 23,55,393-3-7 which, with Rs.4,49,889113-8

brought forward from the previous half-year made a total of Rs.28,05,283-1-3. This sum the directors disposed of as follows:—In payment of a dividend at the rate of 12 per cent. per annum free of income tax, Rs.12,00,000; in payment of a bonus at the rate of 4 per cent. per annum to the shareholders free of income-tax, Rs.4,00,000; in payment of a special bonus at the rate of 1 per cent. per annum to the shareholders free of income tax, Rs.1,00,000; transferred to reserve fund, Rs.4,50,000; transferred to gratuity and pension fund, Rs.1,00,000; carried forward to profit and loss account of the current half-year, Rs.5,55,283-1-3.

Dividends, Payments, etc.

In a letter to shareholders of Whitehead Aircraft, Ltd., Mr. J. A. Whitehead, governing director, states that the preliminary figures for the year ended September 30 last (after making ample allowance for depreciation) show that the preference and ordinary dividends have been earned some three times over.

Oil Outputs.

Anglo-Egyptian—Gemsah—Production for the week, 24 tons (previous week 27 tons). Hurgada, 8,701 tons, against 12,294 tons.

BRITISH INTERESTS IN ROUMANIA.

Lord R. Cecil, replying to a question by Colonel Sir F. Hall with reference to the destruction of oil property in Roumania at the end of 1916 for the purpose of preventing its being utilised by the enemy for military purposes, said: This destruction was effected by the direction of the Roumanian Government, and was carried out under the supervision of Roumanian, French, and British officers. Any claim for compensation must therefore be in the first place one against the Roumanian Government, and no question of any payment being made by His Majesty's Government could be considered until the matter had been adjusted in consultation with the Roumanian and the other Governments concerned. He pointed out that even if the destruction had not taken place the British owners could have received no income from their properties so long as these remained in the hands of the enemy.

Replying to a further question, Lord R. Cecil said it was not accurate to say that anything was done by British officers except as the agent of the Roumanian Government.

GERMANY AND ROUMANIAN OIL.

Since February, 1917, says a Paris contemporary, the Germans have devoted all their efforts to refining the Roumanian petroleum deposits in order to remedy the shortage in the production of petroleum throughout Galicia and Hungary and the insignificant arrivals from Baku. In July, 1918, the wells restored were already giving about 75 per cent. of the pre-war production, and more than 650,000 tons of petroleum had been shipped to the Central Empires by rail or via the Danube. The Germans have diverted the Constanza canal towards the Danube, and they have in hand the project for cutting a new waterway from Ploesti to the Austrian frontier at Oderberg, for which two hundred million marks are required.

After being shut for two years the Bucharest Bourse opened on October 16. According to a telegram published in the *Frankfort Gazette*, the market was animated, and an optimistic tone prevailed. The five per cent. loan was in demand at 97½, and Steaua Romanas were dealt in at 1,170 and Astra Romanas at 2,690.

BRITISH METALS CORPORATION.

The President of the Board of Trade, replying, on October 29, to a question by Mr. Arthur Strauss as to the Government's intentions regarding the British Metals Corporation, states that the Government welcomed the formation of a strong British organisation aiming at securing for British interests the predominance in the non-ferrous metal trades of the British Empire hitherto occupied by Germany. There had been no promise, however, nor was there any intention to accord to the corporation any preferential treatment as compared with other British controlled companies having similar objects.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Business still continues rather quiet, but here and there, perhaps, a little more interest is being taken by investors on this side. As far as Egypt is concerned there is, so far, only some demand coming along at the lower level for Government stocks, and, here and there, for some out-of-the-way shares.

Egyptian Unifieds are half a point down at 92; on the other hand Egypt 3½ per cent. Preferences are 1½ up at 78.

In Bank shares Nationals are ⅛ easier at 20, and Agriculturals fractionally lower at 6 29-32. In Agricultural Preferences there is also a decline of ⅛ to 7⅝, but there are very few shares offering. Anglo-Egyptian Banks close ½ down at 21½, probably owing to some profit taking after the recent big rise, which is now explained by the Bank's announcement of one bonus share for every five old shares.

In Railways Delta Lights are again ⅛ higher at 7⅝.

Amongst Land descriptions there has been some business in Aboukirs, Delta Lands, and New Egyptians round the current level, while Foreign Trusts have improved 9d. to 14s. 9d. Union Foncières and United Egyptian Lands have both been firm spots, with buyers about for shares when offered round current prices. In Sidi Salems there has been a very fair amount of business doing, and the price is 1-32 higher to-night at 2 11-16.

Amongst Miscellaneous shares, Alexandria Waters are ⅛ lower at 12⅜, whilst Markets have improved 6d. to 28s. There has been some demand for Khedivial Mails, which are 2s. higher at 65s. 6d., with very few sellers. A feature has been the demand for Salts and Sodas, which are closing to-night at 65s. 6d., a rise of 9s. 3d. since last week. This rise has been brought about by rumours that the company is going to pay a dividend of 12s. per share.

Amongst Greek securities there is no change to record beyond a further decline of one point in Greek Monopolies to 63, and in Bank of Athens shares which have receded ¼ to 4½.

Paris Bourse.

Egyptian stocks have been a firm feature during the week. Unifieds closed at 94.50 francs, a rise of 2, and Suez Canal shares were 5,400 francs against 5,300. Other prices were Turkish Unifieds 74.55 (against 75) Banque d'Athens 100.50 (against 105), Credit Foncier Egyptiens 790 (against 795), Land Banks of Egypt 207 (against 210), Ottoman Banks 585 (against 565).

Oil Shares.

Prices have shown little movement. Anglo-Egyptians "B" and Roumanian Consols at 2 13-16 and 16s. 6d. respectively are unchanged. Russians are, however, a little stronger, Bakus being 3d. up at 4s. 9d., while North Caucasians are 1 9-32, a rise of 1-16.

The Cairo authorities are considering the inauguration of an aerial post between Alexandria, Port Said, Cairo and Khartoum.

The Buenos Aires correspondent of *The Times* suggests that shipment of textile goods to Turkish importers there should be stopped, as, owing to their having imported heavily, local supplies exceed the demand, and there is danger that the surplus will be sold cheaply to enemy firms.

BRITISH TRADE CORPORATION

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

IONIAN BANK, LIMITED.

INCORPORATED 1839.

SUBSCRIBED CAPITAL - - - £600,000
PAID-UP CAPITAL - - - - 485,580
RESERVE FUND - - - - 75,000

HEAD OFFICE—

BASILDON HOUSE, MOORGATE STREET, LONDON, E.C.2

BRANCHES—

Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, Nauplia, Salonica, Syra, Chios, and Mitylene, in Greece; and at Alexandria, Tantah, Mehalla-Kebir, Mansourah, Fayoum, Wasta, Beni-Suef, Faschen, and Minieh, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - - £850,000
RESERVE - - - - - £190,000
Reserve Liability of Shareholders - £1,000,000

London Office: 25, Abchurch Lane, E.C.4.
Chief Office in Persia: Teheran.

Branches at Anwar, Baghdad, Birjand, Bushire, Hamadan, Isfahan, Kasvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Sultanabad, Tabriz and Yezd. Agency at Bunreh

The Bank is prepared to transact Banking business of every description in and connected with Persia and Mesopotamia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia and the Near East.

TRADE AFTER THE WAR.

If you contemplate erecting a

NEW WORKS or FACTORY

in an ideal position with the advantage of

CHEAP POWER, GOOD WATER SUPPLY,
HEALTHY SURROUNDINGS,
SIDING ACCOMMODATION,
EFFICIENT TRANSPORT FACILITIES,

Write Great Central Railway Publicity Office, 216 Marylebone Road, London, N.W.1, stating your requirements.

SAM FAY, *General Manager.*

BANK OF MADRAS

Capital (Fully Paid up) - - Rs.75,00,000
Reserve Fund - - - - Rs.50,00,000

Head Office: MADRAS.

Branches.—ALLEPPEY, BANGALORE, BIMLIPATAM (*Outstation*, Vizianagram), CALICUT, COCANADA (*Outstations* Narsapur and Rajahmundry), COCHIN, COIMBATORE (*Outstation*, Erode), COLOMBO, GUNTUR (*Outstation*, Bezwada), MADURA, MANGALORE, MASULIPATAM, NEGAPATAM, OOTACAMUND, SALEM, TELLICHERRY, TRICHINOPOLY, TRIVANDRUM, TUTICORIN, and BELLARY.

Current Accounts.—Opened on terms which may be ascertained on application.

Fixed Deposits.—The Bank allows interest on Fixed Deposits and receives small sums in Savings Bank. Rules and Terms on application.

Letters of Credit and Drafts.—Issued on the principal towns in India, Burma, and Ceylon.

Government and Other Securities.—Received for safe custody, Purchases and Sales effected and Interest and Dividends Collected and Credited to Account, or Remitted, according to instructions.

Loans and Cash Credits.—Granted, approved Mercantile Bills discounted and Bills of Exchange negotiated.

By order of the Directors,

W. B. HUNTER, *Secretary and Treasurer*

BANK OF BENGAL.

Capital, Fully paid up.. .. .. .. Rs.2,00,00,000

NOTES OF THE WEEK.

With the past week a new era has dawned for the Near East. There will be strenuous and possibly anxious days ahead, but it can be said of the peoples to-day what it has never been possible to say of them before—that their future rests in their own hands. Turkey and Austria-Hungary have covenanted themselves out of the war, and, although the actual terms of peace have yet to be announced, the liberation of South-Eastern Europe may be regarded as complete. For the moment a German army of occupation is left in Roumania, but provision has been made for its complete evacuation both from that country and from Austria-Hungary within fifteen days, if it is to avoid internment. The Austro-Hungarian Empire has not waited for the terms of peace, or even for the conditions of the armistice; it has split up into component parts, and no central authority remains to thwart the different peoples in the settlement of their national constitutions. With the knowledge that Czecho-Slovaks, Yugoslavs, and Roumanians are again the arbiters of their own destinies, we can watch with a sense of detachment the efforts of the Magyars and the Germans of the Dual Monarchy to adapt themselves to the march of events and the new spirit that the victory of the Allies has brought into the dark places of Europe.

The news of the capitulation of Turkey was made public too late to allow of reference in our last issue. The armistice was signed at Mudros on October 30 and became operative at midday on October 31. It is known now that it was not of her own will that Turkey continued the struggle so long after the surrender of Bulgaria. Tentative overtures had been tried a fortnight earlier; but there was no reason why the Turkish Government should have things made easy for it. General Townshend, liberated for the purpose, was sent as envoy to inform Vice-Admiral Calthorpe that Turkey asked for the immediate opening of negotiations for an armistice. The reply returned was to the effect that, if the Turkish Government sent fully accredited plenipotentiaries, they would be informed of the conditions in which the Allies would agree to a cessation of hostilities, and that Vice-Admiral Calthorpe would be empowered to sign an armistice on these conditions on the Allies' behalf. With noticeable despatch the Turkish plenipotentiaries arrived, accepted the conditions and signed the armistice. The main features of this document are dealt with on another page. Its purpose is to provide reasonable safeguards against the possibility of a resumption of hostilities by Turkey, while enabling the Allies to reach Russia and any other country by way of Turkish territory or waters, with a view to continuing the war against Germany or for the relief of Russia from Bolshevism.

The first military concern of the Allies must be to clear up the situation in the Black Sea and in Southern Russia. The former Russian fleet in those waters was taken over almost intact by the Germans, and it remains to be seen what use they intend to make of it. In the days of Turkey's uncertainty, immediately after the Bulgarian capitulation, it was reported that twenty men-of-war, manned or officered by Germans, had appeared off Constantinople in order to support the "Goeben" in terrorising the Turkish capital. If the report was true, they have failed in their purpose, or the Germans have thought better of their proposed action. Now that Turkey has dropped out of the war, it is unlikely that the Germans will feel tempted to resort to heroic measures in risking a naval engagement on the Black Sea, unless the Allied Fleet were to invite attack by advancing with inadequate strength.

For the present we remain in the dark regarding the political situation in Turkey that lay behind its determination to ask for an armistice. In the absence of fresh developments it is reasonable to suppose that the Committee of Union and Progress, having realised that it was impossible to continue the war, decided that the Allies' susceptibilities could best be met by a change in the *personnel* of the Government. The new Grand Vizier has made a brave show of democratic intentions; but if he is the mouthpiece of the Committee, his promises will hardly succeed in deceiving the Allies. As far as the self-determination of the subject races of Turkey is concerned, the point has already been settled for them without reference to the Turkish Government. The chief preoccupation of the Turks should now be their own domestic welfare and national progress, and in regard to both the Committee stands convicted by its past record. The new Turkey will have to start from the beginning in the school of modern statecraft. The first requirement is an honest Civil Service, and it cannot acquire this under the direction of a clique that has played fast and loose with German money. If suitable officials for the higher posts cannot be found at home, they should be borrowed from abroad.

Austria-Hungary has been forced to sue for an armistice because the searching test of war has laid bare the

Digitized by Google

inherent rottenness of her political structure. An unregenerate Germany may hug to herself the belief that she has gone under because her allies failed her; but no one who belonged to the Ramshackle Empire will look for the cause of its undoing outside its own borders. The great European war has lived up to the reputation that was always anticipated for it. It has shaken the Continent to its foundations, and the map of the world will have to be redrawn. But out of the welter has come great gain, and nowhere more than in the country that provoked the struggle. The anachronism of the Dual Monarchy was apparent before 1914, and it was with the consciousness of threatened disruption that the Austro-Hungarian Government hoped to find in war a solution of its difficulties. The solution has been found, although not according to the intentions of the authorities in Vienna and Budapest.

The conditions of armistice formulated for Austria-Hungary are as thorough in their ratification of the actual military position as those which Turkey accepted four days previously. Very few additional clauses would have been required to make them include the terms of peace. For this feature the spontaneous disintegration of the Dual Monarchy is mainly responsible. As Bohemia and the districts of Yugoslavia were actually at the time under their national Governments, it was natural that it should be stipulated that the administration of the evacuated territories should be entrusted to local authorities under the control of the Allied and Associated armies of occupation. The Allies thus come at once into possession of the Trentino, and, with the right of free movement over all roads, railways, and waterways in Austro-Hungarian territory, and of the use of the necessary Austrian and Hungarian means of transportation, are in a strong position for carrying on the war against Germany on a new and vulnerable front.

The history of the now emancipated peoples of the Dual Monarchy during the past week has been too crowded to be set out in detail in a short space. In the case of the Czecho-Slovaks it is, perhaps, sufficient to say that they have shown during the early stages of this transition period the same statesmanship and consciousness of national strength as they have displayed during the subjection to Austro-Hungarian jurisdiction. At the Versailles Conference, which has been passing through the most eventful days in its existence, the Czecho-Slovaks were represented by Dr. Benes, who is stated to have recommended a definite plan for immediate Allied action in Austro-Hungarian territory. His contention was that the Czechs, from their geographical position, were masters of the situation, that Vienna was cut off from all supplies, unless these were liberated from Bohemia, and that drastic measures were required at once to prevent Vienna and Budapest from becoming the prey of Bolshevism. The Czechs were prepared to revictual Vienna, if their own supplies could be replenished in time to prevent a shortage among their own people, but Dr. Benes urged the necessity of a military occupation of the whole of Slovakia, specifying among other reasons the desirability of preventing the annexation by Germany of the German-Austrian countries.

The representations of the Czecho-Slovaks will have received the careful attention of the conference, for the terms of the Austrian armistice reveal such a masterly grasp of the position in Austro-Hungarian territories that every advantage must have been taken of the "inside" knowledge at the Conference's disposal. Whatever actual plans may be in course of adoption by the Allied Powers, the situation for the moment in both sections of what was the Dual Monarchy appears to be well in hand. The latest reports attribute "a peaceful aspect" to Vienna and "complete peace and order" to Budapest. Both cities, it is said, are expecting to be occupied by Entente troops. There can be no doubt that after the necessity of prosecuting the war at the maximum pitch until such time as Germany accepts defeat and all its consequences, one of the chief concerns of the Allies must be to see that order is maintained in the countries that have passed out of the war. In the case of the Dual Monarchy it will be noted that Hungary, under its new National Council, is inclined to acknowledge the Allied victory as a godsend with almost as much fervour as the Czecho-Slovaks and Yugoslavs.

It is clear that Bulgaria is passing through a process of political evolution, but the reports from that country are tantalizingly meagre. King Boris, after giving verbal evidence of the most orthodox views on the subject of monarchical democracy, has suddenly abdicated and left Bulgaria. A Council of Regency has taken charge of affairs at Sofia. At the same time a "peasant Government" is said to have been established at Tirnovo under the leadership of Stambulinsky, the head of the Peasants' Party. An army of 40,000 men, it is added, is behind the movement, which is characterized as revolutionary. The news comes via Berlin and Constantinople, and would seem to be based on information supplied by the Bulgarian Minister at Kieff. The Allied Governments, it would be thought, had now an interest in facilitating the despatch of accurate news through Allied channels. It is, therefore, much to be desired that intelligence regarding the course of events in the late enemy countries should be allowed to reach Great Britain direct rather than by way of Berlin.

Negotiations are in progress, according to information received from Berlin, for the evacuation of Roumania by the German Army under Field Marshal von Mackensen. The step is virtually provided for by the terms of the armistice with Austria-Hungary, and is in any case rendered inevitable by the fact that this army is now cut off from direct communication with Germany, unless the precarious link through Poland could be described by the name. This moment, it is of interest to note, has been chosen by President Wilson to remind the much-tried Roumanians that their cause is in no danger of being overlooked. His assurance to the Roumanian representative in Washington reads: "With the spirit of national unity and the aspirations of the Roumanians everywhere the Government of the United States deeply sympathises, and will not neglect at the proper time to exert its influence that the just political and territorial rights of the Roumanian people may be obtained and made secure from all foreign aggression." The Roumanians, we trust, were under no uncertainty regarding the Allies' intentions towards their national aspirations; but every reminder that the day of salvation is at hand will be welcome, and President Wilson's message is a natural corollary to the work of the Allied forces that are bringing practical relief to Roumania by way of Bulgaria and the Bosphorus.

The major honours for services in this war have yet to be awarded, and they will rightly be bestowed by His Majesty the King, the sole fount of honour in the British Empire. But we believe that it would be entirely in accordance with the popular will if General Townshend's liberation and return to this country were marked by the presentation of a sword of honour furnished by public subscription.

The capitulation of Turkey brings to a close another chapter of the record of India's effort in the war, though the record itself must remain unfinished until peace is finally established throughout the world. On the whole it is a record of which the country may be proud, and perhaps the future historian will point to the earliest chapter as the most significant of all. Now that the British Empire is mobilised in its entirety people are inclined to forget with what scanty resources it was equipped at the outset of its gigantic undertaking, and how great was the assistance furnished when four years ago India was denuded of a large part of its garrison, and its troops scattered over three continents. That was the first phase—bold and statesmanlike measures, carried out with efficiency, and welcomed eagerly by the country as a whole.

In the second phase these features seemed to disappear, and the country watched with growing perplexity the spectacle of political expedients and administrative hesitation in 1915. It is too early as yet to attempt

Digitized by Google

an analysis of the causes which led to this result, but allowance must at least be made for the anxieties regarding the internal condition of the country, anxieties which were so effectually concealed that the public is only now becoming alive to their reality. The report of the Rowlatt Commission will undoubtedly bulk largely in the historian's view of this period, and it will be recognised that the vigorous and sustained effort of the last two years became possible only when the forces of disorder had been brought under control.

At the moment it is more appropriate to turn to the third phase of renewed energy which still persists, and to recall the financial, industrial, and military enterprises by which it has been marked. The War Loans, the organisation of supplies, and the systematic recruiting campaigns, constitute a group of measures which have enabled India to play an effective part, and have at the same time brought about an enormous improvement in the outlook for her economic and political future. It is already common knowledge that Indian resources have contributed very largely to the successes gained in Palestine as well as in Mesopotamia, and it is only just that, while full credit is given to the fighting forces for their achievements in the field, the public should recognise the value of the work done by the Indian administration in making those achievements possible.

Along with the administration may be fairly classed the bulk of the "politically-minded" classes, who recognised almost from the beginning that India's fate depended on the outcome of the war, and accorded their support and co-operation to the various official measures put forward from time to time. The attitude of the majority can best be appreciated by contrast with that adopted by the small but active band of Extremists, the men and women who think of themselves as India, and who regarded the day of battle as a suitable occasion for the huckstering of the *bazar*. Their offers of "conditional" support in return for political concessions seemed at least to show them in their true colours, and we believe that India is now beginning to understand them, and to rate them at their proper worth.

The view has occasionally been put forward that India's greatest opportunity would come at the conclusion of the war, when she might hope to give material help, of course, on strictly commercial terms, in the difficult task of feeding a tired and hungry Europe, which has been forced to neglect even the primary duty of providing for its own subsistence. The latest cablegrams indicate that this hope is not destined to be realised; the partial failure of the monsoon must in any case involve a heavy draft on the existing stocks of grain, and even at the best it is not likely that any large surplus will be available next May, when the European demand will probably be at its maximum. It is unfortunate for India, and perhaps for Europe, that this should be the case, and consolation must be sought in the probability that India will at least be able to feed herself.

The summary of the Report prepared by the Indian Industries Commission bears out the anticipation which has been current for some time, that Sir Thomas Holland and his colleagues would adhere to the old ideals rather than the new. An Imperial department, a uniform programme for the whole country, an all-India Industrial Service—these are the commonplaces of bureaucratic efficiency of the "Curzonian" epoch, and it need not be said that they are admirably adapted to secure the object in view. How far they are compatible with the new political ideals is another question; already there are indications that the Provinces are getting restive under the centralising policy of the Munitions Board, and when military exigencies are less urgent we may expect that the claims to autonomy or self-development will be vigorously put forward. We must, however, await the text of the Report to learn whether the Commission has succeeded in devising means of harmonising the contending aspirations.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 30.

The exodus from the seaside to the interior has been started, and Alexandria is emptying fast. Some of the officials have already returned with their families, although officially the seat of Government will not be moved back to the capital until late in October. Owing to the fact that the anniversary of the accession of the Sultan and the Moslem New Year fall within a day of each other—it is possible that they will be followed closely by another holiday, the Return of the "Mahmal," as the Mecca Caravan has been at Tor for the past three days—the Sultan will hold only one reception, a general one, on October 9. His Highness has once again given proof of his great generosity by contributing the sum of £E1,000 to the "Our Day in India," and his Grand Chamberlain, his Excellency Said Zulfikar Pasha, was deputed to convey this amount to the High Commissioner on Friday last.

The Nile Flood.

The Minister of Public Works, Sir Ismail Sirry Pasha, has just returned from a tour of Upper Egypt, where he inspected the river banks and the preparations made to cope with the flood. A note on the river situation will shortly appear, but it is understood that in his Excellency's opinion this year's flood is below the normal, and that it has reached its maximum. As a consequence there will not be sufficient water to irrigate the islands and certain parts of the basins in Upper Egypt, and a large area, estimated at about 2 per cent. of the total area of Upper Egypt, will have to remain unirrigated. This is particularly unfortunate at the present juncture, where it is so essential that every cultivable feddan should be sown with cereals.

The Cotton Crop.

The moving of the cotton crop is in full swing now, and the first picking has been completed practically everywhere. Views differ, as they usually do, but there seems a concensus of opinion that, despite the absence of pests on any marked scale, the yield is not as good this year as last, when it was above the average. So far the ginning out-turn has proved good; but, of course, it is somewhat early to say what the general run is. There has been heavy rain in the districts during the past week, quite unprecedented for this time of year; but it is hoped that it will not spoil or interfere with the second pickings.

The Palestine Victory.

The Palestine victory is still, not unnaturally, the main topic of conversation everywhere. The importance of this success does not escape the attention of the native mind, which now realises, as it never did before, the futility of the Turkish resistance and the base manner in which the Turks have been left in the lurch by the Germans. The indigenous Press is not slow to point the moral, which is re-echoed pretty freely in native circles.

From remarks made by persons who know the country it appears that this success will have particularly happy results. The area which has been occupied by General Allenby's troops is an exceedingly fertile one, especially noted in the past for its cereal crops, and the advance has taken place at a sufficiently early date to enable the putting in of the winter cereal sowings, so that the requirements of the local population and of the Army will be assured next spring. This is an improvement on the position after the taking of Gaza and Jaffa, since the offensive then took place in October and November, just too late to allow of sowing on any adequately extensive scale. Thus economically, as well as politically and militarily, General Allenby's successful advance will have far-reaching results.

As far as present requirements are concerned there is no reason to believe that their supply will present any great difficulties; for the Turks were so taken by surprise that they had not the time to remove the very large stocks of every description which had been accumulated at divers important points; neither had they the opportunity of doing much damage to the country or to evacuate the population, such as was left there. The future development will therefore not be hindered, and

Digitized by Google

work can be started without any delay such as was necessarily encountered after the offensive of last autumn. In connection with the fighting which took place, information has reached here that the Armenian and Syrian soldiers, who formed part of the French troops on the left flank of the force under General Allenby, fought with great dash, and evoked the admiration of all who witnessed their work.

The handling of the large batch of prisoners—at the moment of writing they amount to 60,000 but their number is being added to hourly—is a very difficult problem. Vast camps have been prepared at Maadi and Heliopolis and Sidi Bishr, but these are wholly insufficient, and very much more elaborate arrangements will have to be made. The authorities never for one moment expected—nor were they entitled to expect—such an addition to the numbers entrusted to their care; but they are working hard to deal with them, and it will not be long before all our captures are safely housed behind the wire cages.

It is interesting to note that one of the factors which has struck the Palestine population more than anything else is the introduction of a water supply for Jerusalem. As one of the old residents, a Moslem, said: "The Turks had been here for four centuries, and although each succeeding Wali had promised to give the city a water supply, and had levied taxes for that purpose, it has been left to the British to do this beneficent work after only six months' occupation!" This contrast in administration and in consideration for the needs of the people has made a tremendous impression on one and all, and it will not be without its bearing on the general attitude towards the new régime, in both the new and the old occupied territory.

The Prime Minister's Visit.

The Prime Minister, to whose trip to Palestine I referred last week, has returned to Alexandria very much improved in health. His Excellency appears to have thoroughly enjoyed his visit, during which he visited the battlefields, and he is loud in his praises of the work done by the Egyptian Labour Corps and of the care which is being taken of them, both when they are well and when they are sick. Quite a number of notable residents have been up to Palestine during the past few weeks, among them the *doyen* of Egyptian jurnalism, Dr. Fares Nimr, the co-proprietor of *Al Mokattam*, the leading, most reliable, and widest read Arabic newspaper. All who have returned are unanimous in their appreciation of the great change the country has already undergone, and of the contentment of the people under the new régime.

The War Allowances.

Payment of the war allowances is in full swing both here and in the Sudan, where, however, a lower scale is being adopted owing to exigencies of the State budget. From notes and letters which have appeared in the local Press it seems that certain sections of the Government staff are afraid of being accorded different treatment to the rest, and that this is creating some little amount of dissatisfaction. No doubt this is due to some misunderstanding, and will be rectified in due course, for the high cost of living, which these allowances were intended to alleviate, weighs equally heavily on men falling between the categories fixed for the payment of these allowances, whatever their actual mode of employment may be.

THE ANGLICAN AND GREEK CHURCHES.

Reuter's Athens correspondent reports that last Saturday a high official of the Ministry of Public Worship, accompanied by the Bishop of Naupaktia, and the Archimandrite Ghermanos, called on the Bishop of London at the British Legation. The Bishop of Naupaktia, in welcoming him to Greece, spoke of the bonds that unite the Anglican Church to the Greek Church of the Orient, and expressed the hope that the near future would further strengthen these bonds. The Bishop, in returning thanks, said that on his return to London he would not fail to do his best to further the rapprochement between the Anglican and Greek Churches.

Owing to disunion between the trustees of the Aligarh College and its staff, the principal, Mr. Twole, Mr. Gaze, headmaster of the Collegiate School, Miss Beck, lady superintendent of English, and three other English professors have resigned, says the *Pioneer*.

ROUMANIAN NOTES.

(From a Correspondent.)

Land and School Reforms in Bessarabia.

After 106 years of Tsarist domination, Bessarabia returned last February to the mother country. The Bessarabian National Assembly decided by 86 votes to 3 upon union with Roumania, and a local Government, composed of Bessarabians only, was elected to act in harmony with the Roumanian Government. The Roumanian Army went into Bessarabia not as an army of occupation, but purely to protect the people and their property against the Bolsheviks, who after the disbanding of the Russian Army in Roumania spread terror and destruction everywhere. The most difficult problem the Bessarabian Government was faced with was that of land ownership; and it became far more complicated after the triumph of Bolshevism in Russia. In Bessarabia, as in Roumania, there was a great number of landowners, a kind of feudal lords, to whom the peasants were subjected in some ways. The Bessarabian peasants revolted in 1906—their revolt being connected with the movement of the Russian peasants—and Prince Urussoff, then Governor of Bessarabia, only succeeded in calming them by promising to distribute the land amongst them. The Bolshevist movement gave the peasants an opportunity to take possession of the land and share it between themselves. The situation was extremely difficult, and the Government could not allow this anarchical state of things to be continued, but, on the other hand, could not compel the peasants to give up their long-coveted booty, because they threatened the whole country with fire and pillage in that event. The Government appointed a commission, which decided that the land should be shared among the peasants in a more rational way, and that the landlords should receive their rents, which will be paid to them by the State. The latter will recover the sums paid to the landlords by raising the taxes paid by the peasants. The reform is a very important one, and will be applied throughout the kingdom when normal conditions are restored. The present Government of Roumania, although making a formal declaration that the land reform shall be brought about, has not been able to give it effect, owing to the German occupation and various internal difficulties.

The Schools.

Monitorul Oficial (the Official Gazette) publishes the decree regarding the organisation of schools in Bessarabia. The principle of free development of every nation—as a minority—is respected, and the organisation is based on solid democratic principles. At every college there are sections or classes for every nationality that is in a minority. Where other nationalities are strongly represented they will have their own colleges. The Roumanian Government has decided to create the following colleges, with parallel classes for the other nationalities: Two colleges in Chisinew (the capital of Bessarabia), one in Tighina, and in each of the following towns: Balti, Ismail, Cahul, Soroca, Orchei, Rezina, and Bolgrad. There are special secondary schools for the Ukrainians in Hotin, Tighina, Balti. The Jews have also their own colleges in Chisinew (two), in Tighina, Ackerman, Soroca. There are special schools for the Russians in Gelkin, Hotin, Bender, and Chisinew; and for the Bulgarians in Comrat, Bolgrad and Ackerman. The German population brought into Bessarabia during the Tsarist regime is also given a college, in Tarntino. The secondary schools for girls are organised on the same principle, which is also strictly respected for the schools in the villages. The Roumanian Government has entrusted Professor Stere, of Jassy University, who is a Bessarabian and suffered exile in Siberia, to control and direct the school organisation in Bessarabia, and to take the necessary measures so that the democratic principle shall be strictly respected.

The Last German Hope.

The Germans have recently sent troops to Roumania. Viewed in the light of the rapidly changing events, this measure seems rather curious. But their last hope of keeping a hold on the situation, at least for some time, was co-operation with the Magyar feudal lords, the powerful oligarchy headed by the late Count Tisza, who was the most important instrument of Prussian Junkerdom. Tisza declared recently that all the necessary measures had been taken to prevent any attack by Roumania. On the other hand, the Magyar oligarchy had begun to concentrate the Magyar troops in Hungary and Transylvania; so as to be able to keep in contact with the Germans in Roumania and to deal with the Czechs in the northern part of the Magyarland. The German Command gave orders for their troops in Ukrainia to be concentrated on the frontier of Bessarabia, so as to be able to attack the Roumanians in the rear should they decide to take up arms again. But all these plans have been turned to nought by the collapse of the Austro-Hungarian army and the rapid organisation of the Czechs in

Digitized by Google

the north and the Yugoslavs in the south. The murder of Count Tisza—a savage act deserving absolute condemnation—was the signal for action and widespread movement among the long-oppressed nationalities in Hungary, as well as among the no less unfortunate Magyar proletariat. The Magyar oligarchy loses for ever the control over the popular masses, and thus the Germans remain isolated. It is necessary to make this situation clear because it is the sole explanation why Roumania could not rise until now. After the collapse of Turkey, the proclamation of the Bulgarian Republic, the revolution in Hungary, the evacuation of Roumania by the Germans is a question of days. But still the Roumanian army could play a rôle in the East if any chance be offered to it. The German occupation strengthened the spiritual union of the Roumanian people with the Allies.

MALTA NOTES.

(From Our Own Correspondent.)

Malta, October 22.

Despite the island's isolation, we have not been immune from the Spanish influenza, and it has claimed many victims. The camps have suffered to a great extent, and several ships have been put into quarantine; but it is generally thought that the supposed number of cases has been exaggerated and that many suspected cases have only been instances of the ordinary "flu," prevalent at this time of the year. All kinds of fanciful stories have been current, relative to the origin of the disease, which is looked at so askance as to have been nominated "*pesta.*" The oil from Spain and the chocolates from Switzerland have been equally blamed—a proof that we have little faith in neutrals in Malta.

A marked earthquake shock occurred on the 11th, commencing with faint tremors at 3.27 p.m. and continuing spasmodically until 5.36 p.m. Those who know the strength of the buildings in Malta will not be surprised that no damage was done.

A pleasing ceremony—one of very many that Malta has witnessed during the war—took place on the 16th inst. when Rear-Admiral Kozo Sato, commanding the Japanese Naval Force in the Mediterranean, visited a British destroyer at Malta for the purpose of investing eight petty officers and men with the insignia of the Order of the Rising Sun, whch had been conferred on them by his Imperial master. The ceremony was attended by Rear-Admiral Ballard, C.B., Admiral Superintendent, Malta, and by the commanding officers of destroyers present in port. Rear-Admiral Sato stated that the decorations were awarded in recognition of valuable services rendered by one of his Britannic Majesty's ships in assisting a Japanese destroyer which had been damaged by an enemy torpedo. The behaviour of the British destroyer in the face of the enemy on that occasion recalled to him the highest traditions of the Service of which her officers and men formed part, and with which both he and those under his command were proud to be working side by side in the cause of justice.

The Admiral Superintendent, in thanking Admiral Sato for his kindness in presenting the decorations, expressed on behalf of the recipients their sense of the honour conferred upon them. He felt sure it was a source of equal pride to all on board to be so closely associated with the Japanese Navy in fighting for the interests of humanity.

The islanders are excited over the escape of a German prisoner from the concentration camp. The feeling against the Hun, particularly amongst the dwellers in the *Casals*, who believe that he has been responsible for the excessive price of their staple food, bread and oil, is so strong that if caught Hugo Wohlgemuth is to be pitied. That he cannot get away from the island rock goes without saying.

The best story of a capitulation in the East is that told by Major Alan Burgoyne with regard to the surrender of Jerusalem, says the *Daily News*. He says it was actually given over, not to Sir Edmund Allenby, but to a couple of regimental cooks who were out collecting salad for an officers' mess. A party of Arabs approached the cooks and pressed upon them, with many gestures and smiles, the keys of the city. The cooks were somewhat embarrassed, and one of them is reputed to have asked the Arab spokesman "wot the 'ell they were to do with the blinkin' city."

THE MAUDE MEMORIALS, MESOPOTAMIA.

(From a Baghdad Correspondent.)

Amongst the many proofs of their friendship and respect for the British given by the inhabitants of Mesopotamia, their hearty support of the project permanently to memorialize the late General Maude stands out most prominently. It is not alone that financial stability has been quickly assured, but on all hands it is felt that here is an object well calculated further to cement the bonds of friendship which have so rapidly sprung up between the people of the Irak and Great Britain.

After Sir Stanley Maude's death there was a general consensus of opinion in favour of raising a memorial fund, to be devoted in some suitable manner to perpetuate his name, and after the Army Commander's consent had been obtained meetings were held throughout the country for the purpose of collecting subscriptions. A meeting was held in Busreh on December 6 to open the subscription list of the Busreh Memorial Fund, and Rs.107,000 was collected on the spot. There was a very good attendance from all communities, and the local Christian merchants undertook to increase their donations 50 per cent. if the fund was devoted to building and maintaining a hospital. The meeting was most enthusiastic, and it was later decided to adopt the suggestion to found a hospital. H.E. Sir Khazal Khan, Sheikh of Mohammerah, on hearing of the scheme, sent a subscription of Rs.10,000 on behalf of himself and his two sons.

Meetings were also held at Kalat Saleh, Ali Gharbi, Amarah, and Baghdad, and donations were everywhere most generous.

At Kalat Saleh Rs.5,000 was subscribed, and it was proposed to form a poor relief fund which would be assisted by the Government if necessary. The Amarah donations amounted to Rs.30,000, a very generous sum considering the size of the town. The inhabitants of the small town and district of Ali Gharbi contributed the sum of Rs.15,000, and it was unanimously desired that the money should be expended in building a school in memory of the late general.

The citizens of Baghdad have taken up the movement to give permanent shape to their admiration and respect to the late General Maude with remarkable unanimity. Such enthusiasm as was evinced at the inaugural meeting will not be easily forgotten; the donations of rich and poor were given in the same spirit, and all contributed to raise a sum of money sufficient to provide for the construction of a memorial to the great soldier who carried out such a successful campaign. It has been proposed that the memorial shall take the form of a triumphal gateway, of local materials and design, at the north of the city. There will be a porch, supported by two wings, one of which will contain a library and the other a station for troops. Several skilled architects have already submitted plans for this gateway, and it is hoped that before many months are passed its erection will commence. Up to date no less a sum than Rs.105,000 has been subscribed.

CORRESPONDENCE.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

AN ALBANIAN PROTEST.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I say a few words in answer to Mr. Kessary's letter in your issue of November 1? He says he "knows something about Turco-Albanian Beys," and is "painfully surprised to see Mehmed Bey Konitza posing as Albanian delegate and protesting on behalf of Epirus." Mehmed Bey is the official representative of at least 60,000 Albanians at present refugees in America. They are well organised; publish a paper expressing their views regarding their country, and their representatives have been received by President Wilson and by Mr. Roosevelt, both of whom have promised the Albanians to support them in their claim for independence. Mehmed Bey is thus fully justified in describing himself as Albanian delegate. The Albanians he represents include Orthodox, Moslems and Catholics. The very large majority are from South Albania—called by Mr. Kessary "Epirus." That there are certain inhabitants of that district who are renegades and wish their native land handed over to alien rule is true. We, too, have our Mr. Houston Chamberlain. But the mass of the people do not. Rather more than half of the inhabitants are Moslem. None of these want Greek rule. And of the Christians the bulk are patriotically Albanian. When I travelled through the country in 1904 I was visited by deputations of people begging me to establish Albanian schools under British protection and to help the establishment of an Albanian Church. Albanian was a forbidden language under Turkish rule, and the penalties for printing and teaching it were very severe. Not once was I asked to support Greek claims. When the French arrived in Koritza, in 1916, they freed it from King Constantine's troops, who were actively in co-operation with Germany and Austria. M. Vaucher, the correspondent of *l'Illustration*, says: "The town having been occupied by our troops and the Germanophile Greeks expelled, the National Government at Salonika sent soon a Venezelist prefect. But that was not what the Albanians wanted. Mussulman and Orthodox, they often speak Greek, but are none the less Albanian." The Orthodox Albanians then came forward, and said that if "France will proclaim our independence and give us military protection she may be sure that tranquillity will rein." Having ascertained that this was the wish of the immense majority of the population, and that he would thus obtain the calm necessary for his operations, General Sarrail proclaimed the independence of the kaza." The Albanian flag was hoisted on December 10 before an enthusiastic crowd. Some fifty Albanian schools were shortly opened and at once filled with pupils.

I have also in my possession letters written to me by Koritza Christians during the Greek occupation of Koritza in 1912-13, which entirely contradict Mr. Kessary's statements. In 1913 I went to Koritza myself, and during my stay a similar mass meeting was got up, soldiers visiting all the houses and commanding the attendance of the inhabitants.

Mr. Kessary further states that Kemal Bey of Valona "always looked to Athens." On the contrary, Kemal Bey hoisted the Albanian flag at Valona and proclaimed Albania's independence.

Let the Albanians be allowed independence within their own ethnographic frontiers. Strabo in the first century tells us that the Greek frontier was at Arta and that on the north of the bay were Epirote tribes who were not Greek but spoke the same tongue as the Illyrians and Macedonians. Brerewood, in 1625, tells us that Greek is not spoken in Epirus and west Macedon; that it had spread there, but that "the natural language of the country" had driven it out again. All that Albania asks is that a census of opinion should be taken, supervised by some impartial power, such as America or England, so as to prevent fraud or terrorism. She has then no doubts as to what would be the result.—I am, etc.,

M. E. Durham.

[In a portion of his letter for which we could not find space, Mr. Kessary referred to Mehmed Konitza Bey's connection with the Albanians in the United States, but refused to recognise the Bey's "right to speak as Albanian delegate."—Ed.]

MONTENEGRIN RELIEF FUND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—You have more than once afforded us the opportunity of appealing to the public through your columns on behalf of Montenegro, the poorest and smallest of our Allies; and we are venturing again to ask your valuable assistance, as actual famine exists throughout this little country, and where disease is also rife. Now that the enemy is about to evacuate Montenegro, food, clothing, and medicaments are more than ever an urgent necessity.

Although it is too late to save thousands of the women and children, we must, in the name of humanity, do our utmost to preserve as many lives as possible. Unlike larger countries, the Montenegrins have no industries on which to fall back, which means that unless substantial help is afforded at once, they must remain in their destitute condition. Hitherto, thanks to the generosity of the public, our fund has been enabled to send parcels periodically to from eight to ten thousand prisoners in turn, in Austria-Hungary, as well as to afford relief to unfortunate refugees in France and Italy, as also in our own country.

The demands upon us now must necessarily be far larger than in the past, and it would be a source of great regret if we were not able to meet them. We therefore appeal to the public, which has always shown itself generous and sympathetic, to help us to rescue this brave and chivalrous people from starvation and restore them again to the position they have so honourably held amongst the nations of the world.

Donations will be gratefully received and acknowledged by the Honorary Treasurer, Montenegrin Consul, 21, Mincing Lane, London, E.C.4. Bankers: National Provincial and Union of London.—Yours, etc.

Violet Rutland.
Marie Louise Parkington.

Speaking at Claridge's on Tuesday at a Serbian Soldiers and Prisoners of War Comforts Fund meeting, Father Nicholas Velimirovitch said that two months ago Serbia was a small district of a few towns and villages. Now it was sixty times larger. It had been asked how Serbians could be recompensed for their sufferings. They needed no other repayment than what they now had—to see the worst elements of Europe and Asia—Austria and Turkey—at their feet.

TANGIER TO TEHERAN.

Mr. Dobson, the Petrograd correspondent of *The Times*, suggests that a new verb, "to bolshevize," should be adopted into the English language, "to signify the open, barefaced robbery which is the more distinguishing feature of the policy and practice of the Bolshevists." The suggestion seems to me an admirable one. For one thing, its adoption would serve, as Mr. Dobson says, to stigmatise Bolshevism "for all time as a system of the most impudent, wholesale robbery that the world has ever seen"; for another, it would "fill a long-felt want" by enabling the luckless Private Person to tell the Shopkeeper what he thinks of present prices. Seriously, any plan for making the average man loathe Bolshevism and the Bolsheviki should surely be encouraged, and Mr. Dobson's suggestion would undoubtedly work out that way.

***

On November 1 the *Daily Express* announced :—

"The Allied Fleet has passed up the Dardanelles."

It is, I suppose, a similar spirit of enterprise that leads the evening papers to bring out their 5.30 edition (say) at 3.15.

***

As I write these lines, General Townshend is reported to be in Paris, on his way home. That is to me—as, I am sure, it will be to a great many people in this country—one of the best bits of news possible even in these days of good tidings. Brilliant things have been done by other British Generals since the Battle of Ctesiphon and the glorious defence of Kut; but we have not seen, and are not likely to see or hear of, anything finer than the wonderful struggle against odds made by Townshend and his brave men in that shot-riddled, water-logged, well-nigh-foodless, little mud town on the Tigris. I hope we shall hear ever so much more about it in the future; and if one or two people suffer severely as a result, I, for one, shall shed no tears over them. But for the present it is sufficient to welcome home the brave General, who so splendidly upheld British honour in the East when it needed every support it could get. I hope London will be afforded an opportunity of showing what it thinks of General Townshend. It will not be backward in availing itself of such a chance.

***

Speaking at the American Officers' Club, in Chesterfield Gardens, last week, Mr. G. N. Barnes made use of some rather curious phraseology. He said, for instance: "Aleppo is the capital city of the Arabian area, and therefore we were in no hurry to get the Turks out of the war until we had taken that city. As you know, we have taken Aleppo. There are other ports and places in Arabia that are just as necessary for the Arabs to gain possession of as Aleppo . . ." and so forth. Now, in the first place, I do not think many people would agree that Aleppo is "the capital city of the Arabian area." In the second place, why did Mr. Barnes so word his remarks as to mislead any uninstructed person into believing that Aleppo is a port? Lastly, if "there are other places in Arabia just as necessary for the Arabs . . . as Aleppo," why are we not still hammering the Turk? I am afraid that part of Mr. Barnes's oration is just a wee bit like a famous remark made by the Duchess in "Alice in Wonderland."

***

In writing thus I hope I shall not be accused of criticising Mr. Barnes too severely. As a matter of fact, I have a good deal of respect for him; but one does expect rather more care in a Minister's speech, even when the Minister is speaking under the influence of such good news as that of the Turkish surrender. But in any case Mr. Barnes gave us some information—as, indeed, he has a way of doing: sometimes to his friends' sorrow—and very pleasing information it was, too. For it was to the effect that the Arab is to come into his own again; and whether his capital be planted at Aleppo or Damascus, Mecca or Baghdad, that is good hearing. The dull-witted Turk has been an Old Man of the Sea on his back far too long. But he has shown us that his spirit is not broken; and now that he is free of his burden we may confidently hope that he will take his proper place in the world once more.

***

According to a Reuter report, Przemysl has been attacked and captured by the Ruthenians. My own private opinion is that if the Ruthenians really wished the world to think kindly of them they would have "let sleeping dogs lie." To expect us to wrestle again with the pronunciation of that dreadful name is to expect too much, even in these days of rejoicing. No: I am not pleased with the Ruthenians. For all that, I decline to believe that the influenza epidemic was sent to enable us to sneeze the name correctly, as has been suggested.

CORSAIR.

SERBIA wants CLOTHES

The following communication has reached us from Serbia :—

"The fifth winter of the war will be the most terrible of all, for our clothes are worn out, and there is not a scrap or rag with which to mend them. Up to now we have used curtains, sheets, blankets, to make clothes, but these are threadbare. There is no such thing as a change of linen, but once a fortnight the children are put to bed while their miserable rags are being washed —without soap, of course. Soap is 30s. a lb. Boots and stockings are things of the past, but we should not mind so much if we at least had bits of cloth and rags to tie round our feet as we did the year before. How many of our little ones can survive the winter under these conditions? Never has our material position been more desperate!"

Parcels of Clothing should be addressed to
MRS. CARRINGTON WILDE,
SERBIAN RELIEF FUND,
5 Cromwell Road, S.W.7

Cheques and donations of money should be sent to the Hon. Treasurer,
THE RT. HON. THE EARL OF PLYMOUTH, G.B.E., C.B.

SERBIAN RELIEF FUND

5 CROMWELL ROAD, LONDON, S.W.7.

(Registered under the War Charities Act, 1916.)

12	30	Tuesday	7	8
13	31	Wednesday	8	9
14	November. 1	Thursday	9	10

Lord Inchcape left London on Wednesday night for Glasgow.

Earl Curzon has left for the Continent, and will be absent from London for a few days.

Lord and Lady Barrymore have returned to 20, Hill Street, Berkeley Square.

M. Boresco, the Roumanian Chargé d'Affaires, has been obliged to cancel his engagements owing to illness.

Lord and Lady Oranmore and Browne are now in residence at Hadley Hall, New Barnet, which they have taken for a short term.

M. N. Voukitchivitch left London on Saturday for The Hague, to take up his post as First Secretary to the Serbian Legation there.

Captain R. A. P. Grant, Indian Army, had the honour of being received by the King at Buckingham Palace on November 1.

Count Patrice de Zogheb has left 19, Bruton Street, Berkeley Square, for Egypt. His address is Palazzo Zogheb, 4, Sharia Kasr el Nil, Cairo.

Memorial services for Brevet-Colonel Sir Walter Balfour Barttelot, Bt., D.S.O., Croix de Guerre, Coldstream Guards, will be held at Stopham on Saturday, November 9, at 2, and in London at Holy Trinity, Brompton, on Monday, November 11, at 2.30.

An engagement is announced between Major C. N. Steel, Indian Infantry, son of the late Colonel Steel, XXV. Punjabis, and Mrs. Steel, and Eve, youngest daughter of the late Dr. and Mrs. C. E. Caudle, of Henfield, Sussex, and Assam.

The marriage arranged between Captain Matila Costiesco Ghyka, of the Roumanian Legation, and Miss Eileen O'Conor will take place at the Brompton Oratory on Wednesday, the 27th inst., at eleven o'clock. Friends will be welcome at the church.

On August 31, at Murree, Punjab, the marriage took place of Captain John Ord Cobbold Hasted, D.S.O., Durham Light Infantry, to Miss Phyllis Barrett, only daughter of General Sir Arthur Barrett, K.C.B., K.C.S.I. The Rev. T. H. Dixon officiated.

On October 30, at St. Margaret's, Westminster, Reginald William Knollys, of the Sudan P.W.D., son of the late W. E. Knollys, C.B., and Mrs. Knollys, was married to Celia Grace, fifth daughter of Christopher Croft, of the Bailey House, Richmond, Yorks.

Rear-Admiral G. B. Hutton, who has just been promoted to that rank, served as a cadet of H.M.S. Northumberland during the Egyptian War, 1882, and as lieutenant of H.M.S. Starling was employed with the Naval Brigade at the defeat of the Dervishes at Gemaizah, near Suakin, in December, 1888.

A marriage has been arranged, and will shortly take place, between Captain (acting Major) Eric Wells Morris, the Connaught Rangers, elder son of the late Dermot Morris, and Mrs. Morris, of Bombay, and Kathleen, younger daughter of the late James Morrison Anderson, and Mrs. Anderson, of Calcutta.

On November 3, at St. John's, Felixstowe, the marriage was solemnised of Captain Philip Ponsonby Steel, M.C., I.A.R.O., son of the late J. E. P. Steel, and Mrs. Steel, and grandson of Major-General J. A. Steel, Indian Army, to Margaret Gabrielle, only daughter of Captain and Mrs. Arthur Tighe, of Felixstowe.

The engagement is announced between Andrew Richmond Henderson, Royal Navy, only son of the late Mr. and Mrs. D. Richmond Henderson, of Naini Tal., India, and grandson of the late G. E. Ward, I.C.S., and Phyllis Agnes, eldest daughter of Dr. and Mrs. Ward, of Wokingham, Berkshire.

The engagement is announced from Egypt of Major Schreiber, of the State Telegraphs, Cairo, and Laila, daughter of Mrs. C. F. Stettengren, of Stockholm. Major Schreiber is a member of the well-known military family founded two centuries ago by a Suabian from Durlach, who settled in England.

A marriage has been arranged, and will shortly take place in India, between Captain Geoffry Allan Percival Scoones, D.S.O., M.C., Gurkhas, eldest son of Major Fitzmaurice Scoones, late Royal Fusiliers, and Angela Maud, elder daughter of the Rev. Spencer R. A. Buller, R.D., rector of Weybridge.

A marriage has been arranged, and will shortly take place, between Mr. Eric Graham Forbes Adam, of the Foreign Office, second son of Sir Frank Forbes Adam, Bt., C.I.E., and Lady Forbes Adam, and Agatha, widow of Mr. Sidney Spooner, and eldest daughter of the Master of University College, Oxford, and Mrs. Macan.

Our Malta Correspondent writes (October 22):—Dr. A. Bernard, M.D., D.P.H., Acting Chief Medical Officer and Superintendent of Public Health, has been provisionally appointed an Official Member of the Council of Government, in the place of the Hon. Dr. S. Cretien, M.A., who is temporarily absent from the island.

On October 29, at St. James's, Kidbrook, Blackheath, the marriage was solemnised of Lieut. Lionel Ernest Ballance, Royal Fusiliers, younger son of Mr. and Mrs. Edward K. Ballance, Ashfield, Lee Road, Blackheath, to Gladys Elizabeth, second daughter of the late F. W. Holl and Mrs. Holl, 60, Kidbrook Park Road, and of Poobong, Darjeeling.

On November 5, at Turnworth, the marriage took place of Captain K. M. Mylne, Worcestershire Regiment, son of Bishop L. G. Mylne, formerly of Bombay, to Miss Dorothy Parry Okeden, daughter of Colonel Parry Okeden (retired), fo Turnworth. The ceremony was performed by the Rev. C. Parry Okeden, C.F., M.C., and the Rev. A. M. Mylne, C.F.

Lieutenant-Colonel E. A. Stanton, C.M.G., who has been appointed a Military Governor in Northern Palestine, was entertained to a farewell dinner on October 31 by the chief officials of the Ministry of Pensions.

On October 30, at St. John the Baptist's Church, Great Marlborough Street, London, the marriage was solemnised of Mr. W. A. Saunders, third son of the late Major-General Edward Augustus Saunders, late Madras Staff Corps, and of the late Mrs. Saunders, to Beatrice May Pearce, only daughter of the late Mr. and Mrs. Harry Dyke Pearce, Cefn-Coed, Breconshire.

A marriage has been arranged, and will shortly take place, between Captain Mark S. Teversham, Indian Infantry, only son of Colonel R. K. Teversham, D.S.O., and Mrs. Teversham, of Lansdowne House, W.11, and Miss Evelyn Mary (Bubbles) Ross, only daughter of the late David Ross, Divisional Judge, Burma, and Mrs. Ross, of Pendennis, Camberley.

A Coptic Committee, of which Mr. H. Basta, A.R.I.B.A., is chairman, has been formed for the purpose of entertaining Mr. S. H. Leeder, whose book, "Modern Sons of the Pharaohs" was recently published. It is the wish of the Copts in England to show their appreciation of Mr. Leeder's disinterested study of their country and its people, and they will give a dinner in his honour at the Holborn Restaurant on November 28.

Captain George Lloyd was received in audience by the King at Buckingham Palace on November 3, and kissed hands upon his appointment as Governor of Bombay. His Majesty conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Grand Commander of the Most Eminent Order of the Indian Empire. Sir George and the Hon. Lady Lloyd subsequently had the honour of being invited to luncheon with the King and Queen.

TRAGEDY OF MONTENEGRO,

THE SMALLEST AND POOREST OF OUR ALLIES.

MONTENEGRIN RED CROSS AND RELIEF FUND,

11, VICTORIA STREET, LONDON, S.W.1

(Registered in City of London. Section 1. War Charities 1916)

needs £700 WEEKLY for Feeding Prisoners interned in Austria-Hungary.

Donations will be much appreciated and gratefully acknowledged by the Hon. Treasurer, LADY ROPER PARKINGTON, Montenegrin Consulate, 21, Mincing Lane, London, E.C.3.

Mr. Montagu, Secretary of State for India, has sent telegrams of congratulation to Generals Allenby and Marshall, in which he remarks upon India's "historic part" in the successes in Palestine and Mesopotamia.

Sir M. M. Bhownagree presided at a reception of the Indian Social Club on Monday, at the Holborn Restaurant, to celebrate the Divalee (Hindu New Year). The guests from India included Mr. B. G. Tilak, who arrived in London last week.

M. Pashitch, the Serbian Prime Minister, is in Geneva. The Swiss newspapers state that he will preside over the Congress at Geneva which has been called to consider the constitution of a State comprising the Serbs, Croats, and Yugoslavs.

The Indian Press delegates who are visiting this country at the invitation of the Ministry of Information were the guests of the Council of the Empire Press Union at a reception held in the hall of the Stationers' Company last Friday afternoon.

Sir Alfred Kensington, late Chief Judge, Punjab Chief Court, died on November 2 at 3, Buckingham Gate, S.W., aged 63. He entered the Indian Civil Service in 1877, and had held various appointments in the Punjab and under the Government of India. He married, in 1881, Alice, daughter of the late Major-General H. C. Johnstone, C.B.

A joint meeting of the members of the Armenian United Association of London and of the constituents of the Armenian Church Council of London, and of all other Armenians, will be held tomorrow afternoon, November 9, at the offices of the Armenian United Association, 47a, Redcliffe Square, S.W.10, for the purpose of electing an auxiliary member to represent Armenians in Great Britain on the Armenian National Delegation sitting in Paris under the presidency of His Excellency Nubar Pasha. The chair will be taken at 3.30 p.m. precisely by Mr. James A. Malcolm, president of the association.

APPOINTMENTS, PROMOTIONS, ETC.

The King has conferred the K.C.M.G. on Generals Danglis and Emmanuel Zimbrakakis, and the dignity of C.B. on Generals Spiliades, Epaminondas Zimbrakakis, and Orphanides, in recognition of their distinguished services in the recent Macedonian offensive.

Mr. Barton, Assistant Director-General of Accounts at the Ministry of Finance, Cairo, formerly Director of Accounts at the Postal Administration, Alexandria, has been appointed to succeed Goldstein Bey as General Secretary of the Egyptian Postal Administration.

The Secretary of State for the Colonies has appointed Major Sir Maurice Cameron, K.C.M.G. (Second Crown Agent), to be Senior Crown Agent for the Colonies, in succession to Sir Reginald Antrobus, K.C.M.G., C.B., who has retired. He has also appointed Sir William Mercer, K.C.M.G. (Third Crown Agent) to succeed Sir Maurice Cameron as Second Crown Agent.

Sir Milne Cheetham, K.C.M.G., has been promoted by the King to the rank of Minister Plenipotentiary in the Diplomatic Service. He first went to Cairo in January, 1910, and from July to September of the same year he acted as Chargé d'Affaires. The following summer he was promoted to be a Counsellor of Embassy, and was again left in charge of affairs, as he was also in 1912, 1913, and 1914. He was for a short time Acting High Commissioner, before Sir Henry McMahon's appointment, and his services on that occasion were rewarded with a K.C.M.G. Before he went to Egypt, Sir Milne had served in Madrid, Paris, Tokio, Rome, Bucharest, and Rio de Janeiro.

NEWS IN BRIEF.

The Greek Chamber is to meet on November 14.

Cairo is suffering from a heat wave. The temperature is over 100 degs. in the shade, thus favouring the spread of influenza, which is becoming serious.

Cerebro-spinal-meningitis has appeared at Atbara, two deaths being reported. Stringent measures are being taken by the authorities to check the progress of the disease.

In Bombay city the influenza epidemic has passed its worst stage. The mortality steadily dropped from the highest point, 768 to 489 daily in the middle of October.

The Times Cairo correspondent telegraphs that influenzza is making considerable ravages in Egypt, particularly in Alexandria. Both Europeans and natives are attacked, but so far the epidemic has been in a mild form.

A British naval officer, in a letter to a friend in Greece, relates that on the very top of the Grand Couronné on the Doiran front he saw British and Greek dead lying together surrounded by dead Bulgarians

A meeting of Greeks living in London was held on Monday at the office of Messrs. Pandelis and Co., St. Mary Axe, Dr. Procopoulos presiding, to promote the interests of unredeemed Greeks at present in foreign territories. It is proposed to hold a national meeting in Paris about November 15 to put before the representatives of the Allies suggestions for the redemption of Greeks in these territories, and delegates were appointed at Monday's meeting.

On Tuesday the Judicial Committee of the Privy Council acceded to an application made on behalf of the Indian Government for a postponement until the beginning of the January sittings of the hearing of two appeals from judgments of the High Court of Madras in the case of Mrs. Annie Besant v. the Advocate-General of Madras and another.

With reference to the general notice issued in July last regarding the Army Entrance Examination which began on November 5, the Secretary of the War Office announces that it has been decided that King's India Cadets who qualify for Prize Cadetships by their position on the list of successful competitors shall be granted the emoluments as well as the titular distinction of Prize Cadets.

Correspondence which passed in April between the King and the Nizam of Hyderabad when his Majesty conferred the special style of Exalted Highness upon the Nizam and confirmed his title of Faithful Ally of the British Government has now been published, says the Simla correspondent of *The Times*. In a letter thanking the King, the Nizam declared that the longer the war lasted the closer would be drawn the bonds uniting the Princes of India with his Majesty's Throne, person, and Government.

The Earl of Denbigh, addressing the members of the Aldgate Ward Club on Tuesday, said that we must see to it that Constantinople got into good hands. Neither England nor France wanted it, and neither Turkey nor Bulgaria could be trusted with it. He was inclined to sympathise with the proposal that the United States should hold the city in the interests of the world. He was not in favour of tearing up the Baghdad Railway. No one wished to keep back the development of Asia Minor, and the whole thing might be settled by having at Constantinople people who could be trusted.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
Full Pension, P.T.50; Room, P.T.20;
Lunch, P.T.15; Dinner, P.T.20.
For long stay, apply to the Manager.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Bathing Cabins.

GREAT BRITAIN AND TURKEY.

The conviction that Turkey could not remain long at war after the capitulation of Bulgaria, and that the defection of the two vassal States must hasten the collapse of the Central Powers, has been amply confirmed by the events of the last week. If the Turkish Government could have had its own way, an armistice would have been signed some ten days earlier, but it was held that the future interests of the countries which are to be Turkey's no longer required a more complete rounding off of the British victories. Thus Aleppo was occupied on October 26, and the Turks on the Mosul road, attacked the same day, had been forced by October 30, the day on which the armistice was signed, to surrender to the number of more than seven thousand. Turkey had deliberately made her appeal to arms, and she had been thoroughly and decisively beaten in the field. The terms of the armistice granted her do not go beyond the purely military sphere. The Dardanelles and the Bosphorus are to be opened, access is to be afforded to the Black Sea, and the forts on either side of the waterway are to be occupied by the Allies. The Turkish army is to be demobilised, and all war vessels surrendered. Strategic points may be occupied by the Allies at discretion; they are to control all railways, occupy the Taurus tunnel system, and to hold Batoum and Baku. Turkish troops are to be withdrawn from North-West Persia, and all Turkish garrisons in the Hejaz, Asir, Yemen, Syria, Mesopotamia, and Northern Africa are to surrender. One clause provides that all Allied prisoners of war and Armenian interned persons and prisoners are to be collected in Constantinople and handed over unconditionally to the Allies; and it is further stipulated that an Allied representative shall be attached to the Turkish Ministry of Supplies in order to safeguard Allied interests. As in the case of Bulgaria, the ultimate conditions of peace are left for future decision; but the terms of the armistice indicate that the Turkish Government has realised that no other course is open to it than to leave itself entirely in the hands of the Allies or of Great Britain. The omission of a demand for the occupation of Constantinople is said to have given profound satisfaction to the Turks, and it may be that they are building great hopes of further leniency on the Allies' part. To what extent this optimism will be justified the future will show. Until the Dardanelles and Bosphorus have been cleared of mines and the Allied Fleets can reach the capital, little is likely to be known of the real situation there. Nothing is to be gained by allowing the Turks to imagine that the political future of their country is a matter of indifference to the Allies. There would seem to be some ground for supposing that the Committee of Union and Progress hope that by paying homage to democratic principles they will be able to retain the supreme power in their own hands. The Allies, both in their own interests and in those of the Turkish people, must see to it that an end is put to all autocratic power, whether it resides on a throne or is domiciled in a private house.

A long chapter in British history has been brought to a close with the signature of the armistice at Mudros. It has required all the vicissitudes of the four years' war to enable Great Britain to reach the point at which she breaks irrevocably with the traditional policy of preserving the independence and territorial integrity of the Ottoman Empire. In 1914 she was prepared, in company with her Allies, to give a formal promise to respect that integrity in return for Turkish neutrality. If the offer had been accepted, the course of the war might have been different; but its purifying effects must have been arrested on the threshold of the region where they were needed every whit as much as in Central Europe. Opinions will differ as to whether Turkey could or could not have been kept out of the war. There can be no doubt, however, that in deciding to throw in its lot with Germany the Turkish Government yielded to an impulse which was working in the interests of the world at large more effectually than was appreciated at the time. The twenty-five conditions imposed at Mudros are an instrument of wider significance than the question whether Turkey should or should not continue the war. They are the stepping-stones to a new order which, it may confidently be hoped, will bring peace and well-being to a vast region that has long been a stranger to both. Great Britain has thus been called upon not only to reverse her policy, but to be the means by which the much-abused toleration by the Great Powers of Turkish rule has been brought to an end. In the course of the struggle she has experienced the humiliation of failure as well as the glory of ultimate victory. As the one compels remembrance of the diplomatic mistakes of the past, so we may hope the victory means the inauguration of a new era that will prove a blessing to the Turks no less than to the rest of the world. The instinct that prompted Great Britain to take a special interest in Turkey was sound in principle; her fault lay in not facing courageously the moral issues and realising that the Turkish domination over alien subjects was as prejudicial to the interests of Europe as it was fraught with tragedy for the peoples themselves. To-day we need not stop to measure the cumulative misery that has resulted from the bolstering up of the Constantinople regime, whether under an autocratic Sultan or the no less despotic tyranny of the Committee of Union and Progress. If responsibility is shared by the Great Powers, the way of reparation lies in so regulating the future of Turkey that henceforth the interests of the Turkish people and not those of a ruling clique are regarded as paramount.

The war with Turkey has been Great Britain's, the armistice is hers, and upon her, too, will devolve in a large measure the moral responsibility for the future welfare of the Turks. It is in the interests of the peoples inhabiting them that whole regions will be separated by the terms of peace from what was formerly the Ottoman Empire; but they will be neighbours of the Turkey that remains, and it will be equally in their interests that the Turks should share in the progress, political, moral, and economic, that will be theirs under the new order. In the planning, therefore, of the future of Mesopotamia, Syria, and Arabia it will have to be remembered that the work will have been but ill done so long as Turkey lags behind in the march of civilisation. The root of the trouble in the past, as far as the Great Powers were concerned, was an unwillingness to face facts and a weak-minded readiness to believe that evils did not exist if a blind eye could be turned to them. These faults, it is to be hoped, will not be perpetuated. Even if the Turks did not stand convicted of inability to rule other nationalities in accordance with even the most elementary rules of justice, the world has decided that no nationality shall be left against its will under foreign domination. The first fact to be faced, therefore, is that, with unimportant exceptions, the Turkish Government shall exercise jurisdiction only over Turks. A second fact is that so long as a Turkish Government is left with one foot in Europe it will be tempted to give a Western orientation to its policy, and it will be concerned as much with European politics as with the task of governing its own people well. As for Constantinople, it matters not that the problem of selecting another occupier presents difficulties. The day for makeshifts has passed. The experiment of finding the right government for the city must be made rather than that the future of Turkey and of her Asiatic neighbours should be jeopardised by the continuation of the present system. There can be no more hope for the Turks under the Committee regime than for the Germans under Prussian militarism, and if the Allies are determined to destroy the latter, they must be equally careful to eliminate the former. But,

Digitized by Google

in comparison with the settlement of Central Europe, Turkish affairs will appear remote to the majority of the Allies. For this reason, therefore, as well as upon other grounds, it will be necessary for Great Britain to shoulder her responsibility in regard to Western Asia with decision and whole-heartedly. For some time to come, when the strong hand of the Committee of Union and Progress has been removed, the Turks may be unequal to governing themselves without foreign help. If such help is needed, it should be given unsparingly and with a clear conscience. After the great upheaval of the last four years civilisation cannot allow any black spots to remain as near to Europe as Asia Minor.

NEAR EAST BOOKSHELF.

RELIGIONS OF THE PAST AND PRESENT.*

The modern method of studying religion is a happy sign of intellectual progress. Non-Christian religions are now treated on their essential merits, their highest ideals being emphasized, and they are not, as so frequently in the past, used merely as dark contrasts to Christianity, their weak points being often brought in contrast with Christianity at its highest.

This volume of lectures, delivered in 1917 at the University of Pennsylvania, affords an excellent introduction to the study of religions; each religion seems to be treated—as far as is possible by a non-adherent—with scrupulous fairness and with an honest endeavour to recognise its highest ideals.

The subject is so vast that the method of lectures, wherein consideration of time necessarily compresses the material, and where attractive presentation is a desideratum, is a good one. At the same time, these lectures have been so carefully edited that they read as a harmonious whole. The series begins with a valuable—and all too short—contribution by Dr. F. G. Speek on "Primitive Religion," which needs must be understood by all who would look below the surface in any religion. The most elementary and universal concept in primitive religious life is animism, which is here defined as "the belief in the existence of magic power in objects—animals, men, spirits and deities—which are superior to the natural qualities of men and which may influence the life of men, and which in turn may be influenced by human activity." This, with totemism, fetishism, and taboo, appears again and again in many religions.

The great ancient religions, although dealt with here by different specialists, show striking points of similarity. In all, animistic conceptions play a fundamental part; then polytheism, with a gradual tendency towards monotheism among the more thoughtful; then we find organized worship, priests, idols, temples; mystic rites and omens appear in each. The survival of the individual after death seems at first to be an unimportant, and in some religions an undesirable, thing.

Prof. Max Müller considers that the interest of Egyptian religion is not in its philosophical depth—which is not great—but "in its extremely primitive character." "It is an interesting link between the most rudimentary state of religious thought and the development reached by the natives of the ancient Western Orient." Beginning with a simple animism, there became mixed with it in very early times—probably under Babylonian influence—worship of the heavenly bodies. The Osiris cult, fully developed in Egypt before 2500 B.C., may, he thinks, originally have come from Phœnicia. The reason why the faith of the Egyptians so deeply impressed the Greeks was because the latter "concluded that such an earnest faith must have some deeper, secret reasons"—but to this theory investigation of the religion through the hieroglyphics has given no support.

Our interest in the religion of Babylonia lies not alone in its antiquity and its association with so ancient and great a civilization, but because through the Hebrews so many of its ideas have been carried into the religions of the West.

A widely diffused polytheism continues to be the striking feature of the Babylonian-Assyrian religion, despite the counter endeavours to devise theological systems that aimed to reduce the many gods to a limited number of superior powers in actual control of the universe. The aim of the cult of the gods was to secure, and happily to retain, their goodwill. To do this were many sacrifices and incantations—the examination of animal's entrails—the study of the heavens and the observation of unusual natural phenomena . . . . but on the whole the verdict must be given that the religion of the Babylonians and Assyrians, while never rising to any genuine spirituality . . . . yet acted as a spur towards unfolding the best in human nature.

Four very able lectures cover in lucid outline the main facts of the multiform religions of India. The first deals with the "Religion of the Veda," *i.e.*, "the contemporary religion which we find in the Veda itself, the religion of the composers of the Veda." This collection of religious writings, in parts of the religious hymns of the Rig Veda, dates back to 2000 B.C. In its earliest beginning this religion is concerned with charms, magic, and propitiatory sacrifices; then comes the evolution of priests as custodians of the ever-increasing ritualism of the fire cult, and of the cult of the sacred Soma drink. "The Rig Veda is, in general, a hymn-book for use at these three-fire ceremonies and the Soma sacrifices." The Upanishads, of a later period, are "the first extensive speculations in philosophy known in India," higher than the hymns because later and more advanced. They are constantly searching for new points of view, "with a restless yearning after truth which has perhaps never been surpassed and seldom equalled."

From these more primitive conceptions Buddhism arose as "a protestant faith," with its three-fold fundamental truths—(1) Pessimism—that all existence is evil; (2) Transmigration and Karma—that the state of each existence of each individual is absolutely conditioned and determined by that individual's morality and previous existence; and (3) Salvation, which is attained by "one who has reached the goal and freed himself from the last links of the chain binding him to existence." Such a one gains Nirvana—a condition very variously interpreted. This "new gospel of salvation" was first preached by Siddhartha, of the family Gautama, who flourished some century and a-half after Zoroaster, the founder of the religion of the Parsis, and nearly five centuries before the Founder of Christianity. Moderation "may almost be called the cardinal Buddhistic virtue," in contrast with Jainism, which teaches extreme asceticism and an extravagant devotion to the non-injury of living beings.

Sprung from the same Vedic stock of ideas, Brahminism and the countless sects comprehended under the heading of Hinduism have developed along less philosophic and more formalistic lines. Caste—common to nearly all—is a matter of prime importance to the former. "One may believe practically anything he pleases without losing caste standing; but one must live correctly; eat and drink correctly, go through a certain minimum of formal ritual observance, and, above all, marry correctly."

The name Hinduism includes many sects, nearly all of whom are devoted primarily to the worship of one of the two great gods, Vishnu and Shiva, or gods identified with one of them. "The spirit of sectarian Hinduism," according to Prof. Edgerton, "is essentially monotheistic, although the forms it assumes sometimes seem to us curious. Most Hindus—at least, practically all the more enlightened ones—believe that there is in reality but one God, though He is called by many names."

The worship of the Hindu deities is generally simple and innocent. Flowers, food, and other simple offerings are deposited in the shrines, before the images of the gods. Some temples and holy places which have acquired more than local celebrity are visited by pilgrims from far and wide; in some cases from all over India. Many rivers also are especially sacred, notably the Ganges, on which is located Benares, Civa's favourite home. The shrines are tended by priests, who are sometimes men of low castes. The images or idols are theoretically supposed to be actually inhabited by the presence of the god, after a fixed ceremony of consecration has been performed.

Fascinating as is the account given of Zoroastrianism, space will not here permit of any but passing mention. Of the older religions of Europe, that of Greece receives most adequate description; indeed, it is the longest lecture of the whole series and one of the most interesting. "The student of religions finds in Greek religion material which, for variety and detail, has no equal in any other religion." "The Greeks," Prof. Hyde states, "had no dogmas, no creeds, no sacred writings. Their religion had no founder and never felt the need of a reformer; it never pretended to judge the lives of men from an ethical standpoint." Beauty and joyousness were the features of Greek worship. The idea that the gods cared for men was a late conception; the priesthood was never hereditary, and the priest himself was a State official subordinate to the civil magistrate and in no sense a teacher. Religion rested lightly upon the Greek who was not oppressed by any deep sense of sin. The Orphic mysteries—introduced from outside in the 7th and 6th centuries B.C.—profoundly influenced the earlier ideas, introducing a new personal element into religion, a lofty ideal of morality, a new sense of original sin and new hopes of immortality. The still wider influence of the Eleusian mysteries gave to Greek religion an emotional atmosphere of awe, mystery and promise which was largely absent from the public cult.

It has only been possible here to refer very briefly to the "religions of the past"; but there are lectures in the

* "Religions of the Past and Present." Edited by James A. Montgomery Ph.D., Philadelphia and London (1910). (J. P. Lippincott Company. 10s. 6d. net.)

Digitized by Google

book on the religions of Rome and of the Teutons—of which we would fain learn more—on the "Hebrew Religion," on "Primitive" and "Mediæval Christianity' and on "Mohammedanism," all of which will well repay careful study. We most confidently recommend this book to our readers as one of the most up-to-date and readable works on this wide subject. It is an excellent introduction for those who pursue deeper studies upon any of the subjects with which it deals. The work is clearly printed and very reasonable in price. It is only to be regretted that the editor did not consider it desirable to add an index.

PRESS ON THE NEAR EAST.

The Turkish Surrender—

The elimination of Turkey from the list of warring nations is hailed by our Press with quiet satisfaction, and on the whole comment has been restrained in tone. Naturally, reference to the "Young Turks'" indifference to their country's true interests are frequent. Thus, *The Times* remarks:

Looking back, we doubt whether it would have been possible to avoid a rupture with Turkey. The gang of adventurers who had grasped power were determined to do Germany's bidding, and Constantinople was saturated with German influence and intrigue. We shall not discuss afresh here the question whether Great Britain and her Allies were right in attacking the Dardanelles, rather than some other point, such as Alexandretta, or than throwing their strength into Serbia early in the war. Clearly, however, they were entirely right in carrying hostilities into the East. France and Belgium have always been the principal and the decisive theatres, but the menace of Turkey could not be neglected, and had Turkey been defeated early, as she might have been, the war would probably have been greatly shortened, Russia might not have been permanently isolated, Bulgaria might not have taken the wrong turning, and Roumania might have been saved. Our broad mistake was that, having decided to attack in the East, we never did so in sufficient strength.

The *Morning Post* puts this matter more strongly, but it does not think the Turks alone to blame for the developments that led up to war:

We may hope that with the utter defeat of their armies the Turks will come to their senses and recognise the extreme folly and gratuitous wickedness of permitting themselves to be dragged into war with their traditional friends by a sinister and corrupt combination of Jewish and Turkish adventurers. In the view of the people of this country the Turk is differentiated from his late Allies. Germany, Austria, and Bulgaria have been guilty of the blackest and most inhuman crimes, for which it is intended they shall make expiation. But we are willing to believe the Turk has been misled. We know his leaders, and we do not admire them. Presumably the Turk will know how to call them to account for one of the most ghastly and bloodstained failures known even in Turkish annals. But we also remember that this country, under what is called Liberal government, deliberately threw away the opportunity of helping the Ottoman Empire to a stable and an enlightened government. In 1910 Turkey sought the assistance of Great Britain, and Viscount (then Sir Edward) Grey, a man as timorous in action as ignorant of Eastern politics, declined the request. British diplomacy, matched against German intrigue in the Near East, has been a succession of blunders, costing the lives of thousands of gallant men, and rewarded, according to the British custom, with fulsome eulogies, decorations, and peerages. Results as fatal followed the intromission of heady and cynical politicians into the domains of military and naval strategy; and the disasters of the Gallipoli campaign shadow the triumphs of to-day.

The *Daily Chronicle* directs attention to a point about the Turkish fighting which many people seem likely to lose sight of:

It should be noted that, save for Russian fighting in the Caucasus and Armenia, which ceased nearly two years ago, almost the whole of the war against Turkey has been conducted by the British Empire. It was our Dardanelles campaign which, though at heavy cost to ourselves, dealt Turkish man-power a blow from which it has never recovered. It has been the subsequent campaigns of our Armies in Palestine and Mesopotamia which, following the sounder plan of draining her resources at her extremities, have finally forced her to surrender. This immense military task, with its heavy concomitant naval burdens, has been carried through by the British Empire almost single-handed, without preventing us from undertaking at the same time for nearly two and a-half years the lion's share of the offensive operations on the Western front. We ought not to forget the very great part which India has played in the achievement; it would be hardly too much to say of the later stages that British India has conquered Turkey.

——And Some Consequences.

Of the full consequences of the surrender it is, of course, far too early to speak. But some of them are touched on in the following extracts from *The Times:*

With the retirement of Turkey from the war, one leading motive is closed. It has been said that this war will be known in history as the war of the Turkish Succession, and we may now say quite definitely that the succession will not go to Germany. Yet it might have done had Germany known how to concentrate and discipline her ambitions. Looking back on the state of the popular mind before the war began, one is amazed at the indifference of our people to the maintenance of our position in the East. How few realised that Serbia, as the bridgehead between Europe and Asia, between this "wheel-going Europe" in Kinglake's phrase and "the splendour and havoc of the East," mattered anything to this country; how many were perfectly prepared to resign all responsibility for Turkey to Germany. There was in existence at the beginning of the war a complete treaty between England and Germany, initialled, but not signed, which would in effect have converted Turkey into a German province. But Germany did not know when to leave well (from her point of view) alone; she must needs bring Turkey into the war, and by doing so force us to an entirely new orientation of our Eastern policy. Had Turkey stayed out Germany would have had the advantage of the closed Dardanelles, and that was the principal service that Turkey could render her. By bringing her in she made a bogey for India, but it was a turnip-and-candle ghost, and at the same time she dug the grave of her own Eastern ambitions. The obsequies are now being celebrated over the grave.

The future of Constantinople and the Straits is referred to in many articles. The following passage, with which Colonel Repington concludes one of his articles in the *Morning Post*, expresses a view that was put forward long ago in THE NEAR EAST, and seems to-day to be highly popular:

Many are the claimants for the future wardenship of the famous Straits, and, whatever the ultimate decision will be, somebody will be displeased. Personally, I should prefer to see the defences razed to the ground, the passage left free to all, and the Americans left in control of it. But America may restrict her interest to Palestine, and then we may have proposed an international police, always a breeding ground for jealousies and troubles. Whatever the solution—and the Russian solution has been set aside by the Revolution—our interest is that the Straits should be undefended and free. We cannot afford that they should again fall into hostile hands, and of all our military and naval interests at the peace this is one upon which no compromise is possible.

The *Westminster Gazette* gives a thought to those who have, after all, suffered most at the hands of the Turk:

The Ottoman Government found victims among its own people as well [as amongst the non-Turkish races], who have always suffered cruelly at the hands of their unprincipled rulers; ground down in peace-time, and in war sent like sheep to be slaughtered in quarrels which were not theirs. No measures aiming to solve the Eastern question can be efficacious which do not consider the welfare of the Turkish people, or out of respect for abstract Western formulas, still unknown in the East, abandon them again to their own corrupt misgovernment. The Turkish question proper has hitherto been approached from the point of view of the Dardanelles, and an internationalised Constantinople. But the matter is bigger, and human as well as political. Constantinople and Asia Minor are not mere segments to be isolated from each other by the arrangements of diplomatists, but different phases of one general condition which has to do with living men as well as with geography. And until broad measures are taken for the welfare of such human beings the rest is only tinkering.

Lord R. CECIL informed Mr. King that he was not able to give any information concerning the position and progress of Armenians who are co-operating with Russian Soviet forces in the neighbourhood of Baku.

Damascus.

Mr. THEODORE TAYLOR asked the Secretary of State for Foreign Affairs if he would say under what flag the city of Damascus now lives; whether its local government is carried on under civil or under military authority; and to which Government its local authority is amenable?

Lord R. CECIL: General Allenby was authorised on October 1 to allow the Arab flag to be hoisted at Damascus, and this has presumably been done. In accordance with the laws and usages of war the occupied territory is under military administration, The Military Governor of Damascus, Ali Pasha Ridi El Rikabi, is responsible to General Allenby.

Leave from Mesopotamia. Nov. 4.

Mr. WATT asked the Under-Secretary of State for War whether he is aware that dissatisfaction exists among the soldiers in Mesopotamia at the fact that many of them have not had any leave for two and three years, while the officers are readily given leave to India; is he aware that instances exist where private soldiers who could not get any leave in such rank immediately are granted a month's leave in India on obtaining a commission; and will he take any steps to bring about greater equality of treatment in this respect?

Mr. MACPHERSON: As I have frequently explained, leave from Mesopotamia has been limited owing to the difficulties of transport, but a proportion of all ranks have been given leave as opportunity arose. Owing to the somewhat increased facilities, it has been possible recently to increase the numbers granted leave, and I would refer to my reply on October 17 to my noble friend the member for Nottingham (South). A proportion of all ranks have also been given leave to India as transport opportunities allowed of this being done. I have no information as to preferential treatment being accorded to soldiers who obtain commissions.

Prisoners in Turkey. Nov. 5.

Lord HENRY BENTINCK asked the Home Secretary whether, in view of the public anxiety as to the destitute condition of the British and Indian prisoners of war in Turkey, he can give assurances that the promptest possible measures will be taken to afford them relief and obtain their release?

Sir G. CAVE: The Government is in constant communication with the British naval and military authorities on the spot, and immediate steps are being taken to secure the return of British and Indian prisoners as early as possible. Supplies of food and clothing which had already been arranged for are being placed at the disposal of the British Admiral in the Eastern Mediterranean for use in such manner as he thinks best.

Topics in Parliament.

The subject headings are those given in the Official Report.

Mesopotamia Force (Petrol).—October 31.
Allies and Turkey: Armistice Signed.—October 31.
Eastern Fronts (British Troops).—November 4.
Salonika.—November 4.
Mesopotamia Expeditionary Force (Pay).—November 5.
Philippopolis Camp.—November 5.
Armistice with Turkey (Return of Troops).—November 5.
Gallipoli Medal.—November 5.

KING NICHOLAS TO THE YUGOSLAVS.

Sir Roper Parkington, Consul-General for Montenegro, has forwarded for publication the following translation of the proclamation issued by King Nicholas of Montenegro to the Yugoslavs, from which we published some extracts last week. The proclamation is dated October 26, and is countersigned by the Montenegrin Ministers for Foreign Affairs (E. Popovitch), Finance (M. Vouiovitch), War (N. Haidoucovitch), and Justice (P. G. Chotch):—

To the Yugoslavs.

Brothers,—It was with great and profound joy that I learnt of the just and powerful reply addressed by the great President of the United States to our enemy Austria, a reply in which the right of the Yugoslavs to independence and unity was firmly laid down. At last justice is granted to those of our race who have suffered so much.

The day on which I declared war on Austria I affirmed that "I drew the sword for the unity of the Yugoslavs," and it is for that end I have fought to the last, so long as I could wield the sword. I thank God for having so graciously allowed me to see the realisation of my ideal—the liberation of the Yugoslav race. Already I see that race great and enlightened, developing in a democratic spirit, worthy of the admiration of civilised peoples and all free men; and as I have been hitherto, so I am to-day with you heart and soul.

A Yugoslav nation, such as we look forward to, can only be one that embraces all the Slovenes, Croats, and Serbs.

In our Montenegro, as you know, the best of the Serbs and the Yugoslavs have always been found. Their past struggles and their sufferings are known to the whole world, as they are to you. No people has endured such hard struggles for the love of liberty. Brothers, with the keenest and most joyful enthusiasm, sure of the approval of my faithful people, I declare most solemnly to-day that my dear Montenegro must become a constituent part of the Yugoslav nation, and enter into the Yugoslav Constitution, frankly and honestly, just as she has battled and suffered for it.

I desire that we should be united, and that as brothers we should join together in a Yugoslav Confederation, in which each shall preserve his right, institution, religion, and customs, whilst no one will dare to seek supremacy; where we shall all be equal in a maternal Yugoslav nation, which will give to all the same advantages, and to which we shall all owe loyal service; a Yugoslav nation in which we shall all employ our best efforts that she shall become great and prosperous amongst free and civilised peoples.

Rejoice, O Yugoslav Nation, our Mother, to have lived to see this great day. Rejoice also you peoples, who live around our proud mountains—Triglav, Velebit, Biokovo, Lovtchen, Frouchka, Gora, Avola, Roniania, and Velech. Let us rejoice at the same time at the resurrection and independence of our brothers, the Czechs, Slavs, and Poles, who have suffered so much.

May God assist Russia, whose fall has been so terrible, so that she may soon rise again. May He grant her happy days that she may see us, her younger brothers, united in the joy of our liberty at length accomplished. Let us hail the prompt return of Alsace-Lorraine to her noble and great country. May glorious Italy soon welcome her oppressed children. May the sun of liberty shine on all who have stretched out their arms towards her.

Greetings to dear brother Yugoslavs, on the part of the old and tried, but to-day the most happy of Yugoslavs, the King of Montenegro. Long live President Wilson, long live the Allies!

(Signed) NICHOLAS.

COUNTERACTING GERMAN PROPAGANDA.

We have made arrangements for forwarding free of charge to our readers pamphlets and other publications dealing with the British and Allied cause. This literature is in many European languages, and certain pamphlets and illustrated publications are also available in a number of Oriental languages. All applications should be addressed to the Editor, THE NEAR EAST, Devonshire Square, London, E.C.2. Among the most recent publications available for distribution free of charge are the following:—

"THE WELFARE OF EGYPT," by J. S. Willmore. A short summary of English administration in Egypt; alluding also to Germany's undermining influence, and the Mussulman's preference for the English rule. 36 pp. London: Hodder and Stoughton.

"TURKEY, A PAST AND A FUTURE," by A. J. Toynbee. Development of the new Turkish Nationalism and of German intrigue in Western Asia. Moslem ideas must prevail. Mesopotamia will develop its resources mainly by colonisation. 79 pp. London: Hodder and Stoughton.

"GERMANY, TURKEY, AND ARMENIA." 125 pp. J. J. Kelliher and Co., Ltd., London. Containing important statements by German missionaries, Danish nurses, German officials, and other foreigners, and extracts from foreign journals prohibited in Germany by the Censor.

"LOYAL INDIA," by Lord Hardinge of Penshurst. 15 pp. Sir J. Causton and Sons On loyalty and service in the Indian Empire.

"THE CLEAN-FIGHTING TURK." A Spurious Claim. 4 pp. Reprint from *The Times*. This article, written by one who has exceptional experience of Turkish manners and customs, shows that the Turk behaves like a gentleman only when it pays him to do so.

"HORRORS OF ALEPPO," Seen by a German Eye-Witness, by Dr. Martin Niepage. 24 pp. T. Fisher Unwin, Ltd. The author, a teacher in the German technical school at Aleppo, reproaches German diplomacy for non-interference.

"MARTYRED ARMENIA." 56 pp. C. Arthur Pearson, Ltd., London. The author, a Bedawi, has acquired from reliable sources and from his own information, a mass of information regarding the atrocities committed by the Turk against the Armenian people. This he resolved to publish to the world, "to defend the faith of Islam against the charge of fanaticism."

"TURKISH PRISONERS IN EGYPT." 64 pp. A report by the Delegates of the International Committee of the Red Cross. Extracted and translated from the Official Reports of the Red Cross Society.

It is announced from Athens that a mission composed of professors of the University will shortly leave Athens with the object of making men of letters and scientists throughout the world acquainted with the atrocities committed by the Bulgarians in Eastern Macedonia.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

On another page will be found the complete telegraphic summary of the report of the Indian Industries Commission. In the absence of the fuller information that will be furnished by the text of the report, anything approaching an attempt at detailed comment would obviously be out of place, but it may be said that *prima facie* the Commission's recommendations seem to have been very much in accordance with expectations.

***

Chief among the recommendations is the proposal for the creation of imperial and provincial departments of industries and for an imperial industrial service. The advisability of this course is not open to question, for, obviously, as much in India as in this country, it is desirable that industrial direction should be a matter for single guidance. Another interesting feature is the attention given to industries whose absence causes difficulty in times of war. With regard to agriculture, the introduction of modern methods is advocated, especially labour-saving machinery. The coal position is naturally dealt with; also the question of water-power as a source of energy, and it is suggested that a hydrographic survey should be undertaken to determine the places suitable for hydro-electric installations. The latter recommendation has already been carried out, two officers having been appointed to conduct the survey. For the rest, it may be mentioned that other questions dealt with include the adulteration of products and the shyness of Indian capital, both matters whose solution will have an immense bearing on India's industrial development.

***

I have read with considerable interest a reference in a local paper to a letter from a soldier serving in Palestine, who stated that he had bought a farm there, previously the property of a German colonist, and intended to settle on it after the war. It is only an isolated instance, it is true, but I trust that it may be taken as an indication that a fair number of our soldiers who have been so fortunate as to visit some of the most promising centres of the Near East, such as Mesopotamia and Palestine, will have been sufficiently impressed with the undoubted prospects of these countries to make them inclined to stay there for good. They might do far worse than select either of the countries I have mentioned for their life's work. In Mesopotamia there should be great scope for farming on progressive lines, while Palestine offers an opening for fruit cultivation, always an attractive occupation, and one which is made doubly desirable there by the fact that the settler would be within easy distance of the homeland. In addition, both countries are very promising for the small trader, who would be able to further British interests by importing goods to meet local requirements and by exporting products likely to find a market in this country.

***

The reference in Engineering Notes last week to the utilisation of windmills in India has brought forth an interesting criticism from a valued correspondent. His view, based on experiments conducted over a number of years, is that there are small prospects for the windmill in that country as a means of irrigation, owing to the absence of sufficient wind. The position, briefly stated, is that the wind forces over the greater part of India, including the whole of the northern part of the country, are slight and are useless for any practical purpose. It has to be admitted, however, that there are portions of India where it might be possible to make some use of windmills.

***

A correspondent urges the importance of our doing everything possible to develop commercial relations with Roumania, "a country," he remarks, "which Providence has placed in a singularly unfortunate position, with no means of communication with the West except through the Central Powers, the Balkans, or via the Black Sea and the Dardanelles." This position, he adds, provides a very good reason why British trade relations with Roumania failed to make satisfactory progress, and he expresses the view that it will be necessary, in order to remedy this state of things, to give undivided attention to the cultivation of the Roumanian market.

***

My correspondent says that he feels it essential to speak strongly on this question, because before the war the enemy Powers had so successfully penetrated Roumania that it would scarcely be going too far to say that this country was regarded as almost a negligible trade factor there. "What we have to do in the future," he says, "is to let the Roumanians know of our existence—that we are the greatest manufacturing Power in the world, that we can supply everything that anyone else can supply, and that our goods ought to receive the preference because they are lasting, and, in fact, the best that can be obtained. I see you have been advocating a commercial mission from Roumania and a reciprocal visit from this country, and that, I think, would mark a commencement on the right lines. But much more than that is necessary, and I would suggest among other measures to inform the Roumanian business community of the potentialities of British trade that an industrial exhibition representative of British manufactures should be held in Bucharest and other leading centres of the country as soon as conditions permit. If samples of the inferior enemy products could be placed side by side with the first grade goods from this country so much the better."

Among the new companies registered this week is the British-Roumanian Corporation, the object of which is the promotion of the trade interests between the two countries.

***

It is to be hoped that every effort will be made in the future to develop trade relations with Abyssinia, since that country undoubtedly has rich prospects for industrial and economic development. Indeed, it is open to doubt whether any other country in the world similarly situated offers greater trade possibilities. As yet the country is undeveloped, and, as our Khartoum Correspondent pointed out recently, the inhabitants do not appreciate foreign enterprise in furthering the development of the country. That aspect will doubtless be changed as time goes on, and in the meantime it must be noted that the trade of the country is on a fairly extensive scale, and will well repay attention on the part of British business men. One reason why I desire to lay stress on the value of Abyssinian trade is that America has already obtained a very firm hold on the market in unbleached cotton goods, a staple article of import, and if we are to play our part we must be prepared to do things, and not stand still and watch our competitors taking business which might well fall to us.

***

The half-yearly report of the National Bank of India shows that this bank has more than maintained its steady progress. For the six months ended June 30 the net profits were £177,200, against £143,800 for the corresponding period of 1917, and £141,300 for the first half of 1916. The amount brought forward was £139,329, making £317,057, and this sum has been utilised to pay an interim dividend of 20 per cent., against 16 per cent., which absorbs £100,000. and leaves a balance of £217,057, which compares with one of £164,500 at this time last year.

***

The trade of the Sudan continues to show a marked expansion. Thus, for the eight months ended August 31, the exports amounted to £E2,790,258, against £E2,584,233 for the same period in 1917, or an increase of about 8 per cent. Imports for the same months amounted to £E2,595,752, against £E1,948,857, an increase of about 33 per cent., so that the extremely favourable trade balance of 1917 has undergone a considerable decrease. Most of the trade has, of course, been with Egypt, and this factor will not improbably become even more pronounced with the passage of time. Egypt's share of the exports was £E2,072,409, while the Sudan's imports from Egypt amounted to £E1,833,721. The second place in the list of countries exporting produce from the Sudan is taken by Great Britain with £E515,188, while India and Aden are second among the countries from which the Sudan draws her supplies with £E317,144.

INDIAN INDUSTRIES.

Commission's Recommendations.

The following summary of the Report of the Indian Industries Commission has been received by telegram from India and is issued for publication :—

The administrative proposals include the creation of Imperial and Provincial Departments of Industries and of an Imperial Industrial Service. The Imperial Department would be in charge of a member of the Vicerogal Council assisted by a Board of three members entitled The Indian Industries Board, and will be responsible for the industrial policy of Government and the inauguration and carrying out of a uniform programme of industrial development throughout the country. The actual administrative (?work) would be almost entirely decentralised and would devolve on Local Government. The performance of these duties will necessitate the employment of a large staff of officers whose qualifications would primarily depend on a knowledge of mechanical engineering, and the formation of an Imperial Industrial Service is suggested in order to safeguard Government against the dangers and difficulties of casual recruiting. This service would consist mainly of mechanical engineers and engineering technologists, the majority of whom would be employed under the Local Governments. The headquarters of the Department and of the Board should be with the Government of India. Provincial Departments will be administered by Directors of Industries assisted by specialists and technical advisers who would usually be seconded from Imperial Services for work under the Local Governments. A provincial Director would thus be able to develop industries of province with help of competent engineers and scientists. He would be advised by a provincial Board of Industries composed mainly of non-officials and he should hold the post of a Secretary to Government to secure the expeditious and effective despatch of work.

Proposals are made for the better exploitation of the forests and fisheries. It is vital for Government to ensure establishment in India of those industries whose absence exposes us to grave danger in the event of war. The report advocates the introduction of modern methods of agriculture and in particular of labour saving machinery. The Commission recommends a special survey of the coal position in India. Attention should be directed to more economical method of using wood fuel, and new materials for industrial alcohol. The harnessing of water power appears to afford a reliable source of energy, especially with a view to the development of thermo electric industries, and Government should undertake hydrographic survey to determine the places which offer possibilities for the establishment of hydro electric installations. With regard to artisans, Commission recommends universal primary education, but considers that it would be unfair and unjust to impose upon employers this duty. Education of a technical kind also required, and the method of instruction to be followed will vary for workers in organised and for workers in cottage industries. For cottage industries the Commission proposes education in industrial schools being administered by headmasters with practical knowledge of the industries taught, and controlled by the departments of industries. The extension of marketing facilities must go hand in hand with the teaching of improved processes. In case of organised industries, mechanical engineering is taken as a typical instance, and the proposal includes the establishment of a system of organised apprenticeship for a period of four or five years with practical training in the workshops and theoretical instruction in attached teaching institutions. The Commission places better housing in the forefront of its recommendations to raise the standard of comfort of the Indian artisan. Subject to certain safeguards Government should use its powers under the Land Acquisition Act to acquire sites for industrial dwellings, and the land so acquired should be leased to employers on easy terms. Special remedies are proposed in the case of Bombay, where the problems of congestion are unique. General measures of welfare work among factory employees are also suggested, and special attention should be paid to the improvement of public health. Complete revolution in existing methods of training is proposed. For manipulative industries, such as mechanical engineering, an apprenticeship system similar to that suggested for artisans should be adopted. At the conclusion of this period of training they may be allowed to specialise in particular subjects. For non-manipulative or operative industries, on the other hand, the teaching institutions should be main training grounds, though practical experience is also necessary. Special proposals are made for commercial and mining education, and the future establishment of two imperial colleges is adumbrated, one for the highest grade of engineering, and the other for metallurgy. To ensure maintenance of close relations between the training institutions and the world of industry, the general control of technical education should be transferred to the Department of Industries. Re-organisation of the existing scientific services is advocated in such a way as to unite with imperial services classified according to science subjects, all the scattered workers now engaged in the provinces on isolated tasks. Rules are suggested to govern the relations of the members of these services and private industrialists seeking advice. The situation of research institutes and the conditions and terms of employment in these services are questions for the decision of which the Commission consider that the appointment of a special committee is necessary.

Useful and up-to-date information on commercial and industrial matters is essential both for Government and for private merchants and industrialists. A scheme is propounded for collecting such information and for making it available to the public through officers of the Department of Industries. The purchase of Government stores in the past has been conducted in such a way as to handicap Indian manufacturers in competing for orders, and to retard industrial development in India. The Commission propose that the Department of Industries should be in charge of this work, and that orders should not be placed with the Stores Department of the India Office until the manufacturing capabilities of India have first been exhausted. Principles enunciated in accordance with which Government might compulsorily acquire sites for industrial undertakings. The Commission consider that ordinarily Government itself should undertake manufacturing operations only of the production of lethal munitions. The administration of the Boiler Acts, the Mining Rules and the Electricity Act, the employment of Gaol Labour, the prevention of adulteration of products, and the registration of business names, of trade marks, and of partnership are matters on which specific recommendations are made. In the opinion of the Commission the compulsory registration of partnerships is practicable, and the question should be examined by Government with a view to legislation. Industrial co-operation is discussed with reference to small and cottage industries, and the question of the effects of railway rates on industries is considered. Reduced rates to and from ports have been prejudicial to industrial development, and the position requires careful examination with a view to the removal of existing anomalies. In particular it should be possible to increase the rates on raw produce for export and on imports other than machinery and stores for industrial use. The addition of a commercial member to the Railway Board and the better representation of commercial and industrial interests at the Railway Conference would help to secure a more equable system of rating. The improvement of waterways and the formation of a Waterways Trust at Calcutta are also proposed. Reference is made to the disorganisation of Indjan capital and its shyness in coming forward for industrial development, and to the necessity for the extension of banking facilities in the Mofussil. The Commission is disposed to favour the establishment of an Industrial bank or banks, but considers that the appointment of an expert Committee is necessary to deal with this subject, and that action should be taken at an early date. As an interim measure a scheme is propounded for the provision of current finance to middle-class industrialists, by which the banks would open cash credits in favour of applicants approved by the Department of Industries on the guarantee of Government. Other methods of financial assistance by Government suggested, in particular, the provision of plant for small and cottage industries on the hire-purchase system. The recurring cost of the proposals is estimated at Rs.86,00,000. They involve capital expenditure of Rs.1,50,00,000, mainly on educational institutions, and a further capital outlay of Rs.66,00,000 is anticipated for future developments. The Commission consider that this expenditure may be worked up to at the end of a period of seven years.

THE GREEK MISSION.

Interview with M. Michalocopoulos

When the Greek Commercial Mission arrived the war situation, though promising in the extreme, hardly suggested the rapid developments that have taken place while the delegates have been engaged on their tour of the industrial centres in this country. The fortunate course of events has given an added importance to the visit of the mission, for the prospect of a resumption of normal trade relations no longer lies in the distant future but in the immediate foreground. In the circumstances an expression of opinion by the head of the delegation will be of much interest to readers of THE NEAR EAST, and H.E. Monsieur Michalocopoulos, ex-Minister of War and Minister of Agriculture, has kindly favoured one of our representatives with his impressions of the tour and an outline of some of the developments that will take place in Greece which will offer scope for British engineering enterprise.

The primary object of the mission was to see the manufacturing possibilities of this country, and M. Michalocopoulos first of all referred to this aspect of the tour. "Of course, because of the war your chief industrial centres which we visited are busy," he remarked, "with the production of war munitions and with war work generally; but all the same we were able to obtain a very clear and definite idea of the industrial *energy* of your people which enabled the transformation of peace industries into war industries equal to supplying the British army, and, in addition, an important part of the Allied armies. It is really marvellous when one considers that it was accomplished in less than two years. Another thing which particularly impressed the mission was the part played by women in the war, not only in work which demands some diligence and dexterity but also in heavy work. All my colleagues as well as myself hold the firm conviction that just as British industry promptly adapted itself to war conditions so it will adapt itself to meet the needs of peace, and that the difficult economic problems that will then arise will be properly dealt with by more intense production. Obviously, greatly increased production is necessary not only to meet the financial needs of the British Empire but also to make living less dear and to enable the just aspirations of the working classes to be met."

As regards the results of the tour in paving the way for more intimate trade relations between Greece and Great Britain, M. Michalocopoulos expressed himself as being quite satisfied, and he pointed out what had already been done as an indication of future events. "We have appointed a committee of three Englishmen and three Greeks," he said, "to prepare a scheme and draw up a programme for the development of our closer commercial relationship. The most important point in the programme is to arrange for ample tonnage for the trade between the two countries on the basis of inclusive freights from the seller to the buyer, and in the facilitation of credit by the establishment of a bank in Greece which will pay cash to British manufacturers and will give credit to the customers. I am glad to say that this bank has already been established by M. Embiricos and some of his friends."

Great stress was laid by M. Michalocopoulos on the point that Greek trade covers a much wider field than Greece itself. "Greek trade, as your readers know well, exists," he said, "not only in the kingdom of Greece but all over the Near East." This warning cannot be considered other than timely for the

Digitized by Google

figures of the trade of Greece proper are not very large, and British manufacturers, if they were not correctly informed, might conclude from them that Greece's requirements are bound to be on a small scale, while as a matter of fact Greek communities are scattered throughout the Near East, and the most part of the carrying trade of that region passes through Greek hands.

Turning to post-war developments in Greece, M. Michalocopoulos pointed out that their first duty there would be to develop and improve agriculture. He then spoke of engineering schemes, immediate and prospective, in Old and New Greece, notably the construction of a great shipyard which, he stated, was to be undertaken by business firms of both countries. "British business men," he said, "should study the plans for the reconstruction of Salonika, for railways, roads, the reclamation of marshes, for hydraulic works in Macedonia and Thessaly, and for the water supply of Athens, and should place their propositions before the Greek Government." In conclusion he briefly referred to the programme of railway construction. "In Greece before the war," he said, "the Government prepared plans for the development of our railway communications, and for the construction of railway lines in the new territories liberated in the Balkan wars. All these plans will be carried out soon after peace is declared."

EGYPTIAN MARKETS.

The approximate weekly returns from markets for the week ended October 17 were:—Cattle markets £562, general markets £549, total £1,111; total for year, £40,683. The figures for the corresponding week last year ended October 18 were:—Cattle markets £360, general markets £430, total £790; total for year, £45,872.

It is reported that the Government of India are considering a long-distance telephone scheme, and also a proposal to establish an aerial postal service in India.

ENGINEERING NOTES.

"Golden Opportunities."

In an article on agricultural machinery a contemporary recently pointed out to the British manufacturers that the progress of the past should easily be eclipsed in the near future, since after the war there will certainly be an enormous demand for agricultural machinery of all kinds for use not only in Great Britain and throughout the Empire, but also in European countries, and golden opportunities will occur for British firms with enterprise to capture those markets which in pre-war days were almost entirely monopolised by German and Austrian houses. It referred, as an example, to what has often been pointed out in these notes with regard to the great possibilities that will exist, as soon as peace is restored for the sale of a certain class of agricultural machinery in the Near East, and particularly in Greece, Palestine, and parts of Asia Minor. Unfortunately, if peace is restored to-morrow British manufacturers will find themselves very much behind their Continental and American competitors in the inevitable rush to renew old and secure new customers in those desirable markets, the value of which has already been greatly increased. It is very probable that some firms are at present too busy with war-work to trouble themselves with new cares or efforts for export business; others, and these are in majority, rely on their old connections, local agents, and friends, official aid, and on the belief that in their desire to obtain British goods buyers will come to them; while others may think it is wiser to wait and see what the various trade and other committees will do or say with regard to "foreign trade after the war." Such ideas may lead to disappointment. The war has brought such great changes, especially in the Near and Middle East, that one must not be sure that trade connections will be found the same as before the war, that agents and friends will not be easily traced, that British Consuls will have a great deal more to do than to attend to private commercial interests, that buyers in their urgent need to obtain the necessary machinery and implements which they could not get during this long war, in spite of their desire to obtain British-made articles, will be forced to accept the Continental or American articles which the energetic representative on the spot or the judicious advertisement offers to them. How many thousands of such buyers would be glad at the present time to communicate with British manufacturers of agricultural and other machinery and implements and give their orders for the coming season, if they could only have their addresses? And there is no fear now, under the war conditions, for buyers to ask for credit. There is a Latin proverb saying that "opportunity has hair in front; behind she is bald. If you seize her by the forelock you may hold her, but if suffered to escape, not Jupiter himself can catch her again." And the golden opportunities which, by facts and figures, are pointed out to British manufacturers from every quarter, at the present time, should not be allowed to escape. Individual initiative and prompt energy on the part of British manufacturers is alone needed for the capture of the Eastern markets. If they cannot at present send representatives, as some of their competitors *have already done*, they must approach them by other means, preferably by judicious advertising. The results will be satisfactory, for as we often asserted in these columns, Oriental buyers have a marked preference for British goods, but the inadequate methods and apparent indifference of the manufacturers in approaching or dealing with them enabled German and other competitors to supplant them.
