## NOTES OF THE WEEK.

The Near East has claimed a large share of public attention during the past week. Mesopotamian affairs have been debated in both Houses of Parliament; the Turkish reply—or a Turkish reply—to the Peace terms has been presented by Damad Ferid Pasha, and the Greeks have begun very active operations against Kemal Pasha's forces in Asia Minor. The first of these subjects is dealt with in our leading article, and here we need only record some details of the debates. As to the second, the Peace terms, the Turks, true to their nature, appear to have been taken by surprise by the Allies' refusal to extend the period for the presentation of their reply; and the result is that at the time of writing Reshid Bey and Jemal Pasha are reported to be still on their way to Paris with a new Iradeh and the text of a reply different from that handed over by Damad Ferid in their absence. The Grand Vizier, however, declares that there can be no other reply than that which he has handed to the Conference.

The Turks' surprise is perhaps pardonable in view of the Peace Council's former record. What really matters, however, is what the reply contains; and, according to the information available at the time of writing, it is most improbable that its proposals will find acceptance by the Allies. As we anticipated, it refuses to abandon Smyrna or Thrace to the Greeks, but concedes the independence of Armenia and the Hejaz; as to the Straits, Turkey yields in principle, but asks for representation on the controlling body; and she asks also for representation on the Commissions to be appointed to delimit her new southern and eastern frontiers. In short, save as to Thrace and Smyrna, the Turkish Government are ready to give way in fact, but still hope to "save face" to a certain extent by securing representation on various commissions. On the other hand, unofficial Turkey, as represented by the Kemalists, shows no more readiness now than it has at any time of late to swallow the bitter draught.

There is nothing about all this to cause any surprise. What is surprising at the first blush is the Allies' way of meeting the difficulty that has arisen. According to a statement made by M. Venizelos, they have approved of Greece making war against "the anachronistic Ottoman Government and its corrupt, ignominious and bloody administration." The use of the expression "Ottoman Government" is rather puzzling, but, making allowances for natural emotion on the part of M. Venizelos, we may conclude that the Allies are looking to Greece to perform the greater part of the work involved in bringing the Nationalists to accept the Peace Treaty. The Greeks have accepted the task with alacrity—indeed, the proposal that it should be entrusted to them came from M. Venizelos—and have made a brilliantly successful beginning with it. M. Venizelos has informed M. Millerand that Greek military action in Asia Minor will not exceed the limits of the plans prepared at Hythe and Boulogne, and Greek military authorities declare that there is every reason to believe that the campaign will be over "in a few weeks."

The Greeks, unlike their big Allies, have acted swiftly and vigorously, and have been everywhere successful so far. Learning that Mustapha Kemal was concentrating a force between Akhissar (on the Smyrna-Panderma line) and Salikli (between Smyrna and Alashehr), they struck before his concentration was complete, and dealt him a most crushing blow, his losses in killed, wounded, and prisoners being estimated at nearly 8,000 men. So swift has been the advance of the victorious Greek forces that it would be useless to record details at this stage. The Nationalists appear to be ill-provided with guns and ammunition, and their leading thus far has proved a failure. The poor fight they have put up fully justifies our Constantinople Correspondent's estimate of their qualities, and though they may do better as the Greeks' lines of communication extend, the chance of their making any effective stand just yet seems a poor one. Reinforcements, both military and naval, are being sent out by France and Great Britain, apparently to cope with any trouble outside the zone marked out for the Greeks, and the Allies have destroyed all the fortifications on both sides of the Dardanelles. British naval forces have also occupied Mudania, on the Sea of Marmora.

The Mesopotamian debate in the House of Commons was disappointing. Mr. Asquith, in a vigorous speech, once more urged withdrawal, and expressed uneasiness regarding the number of troops required and the cost of administering the country; and Mr. Lloyd George, in a long and occasionally eloquent discourse, scored several debating points. But with all due respect to these distinguished politicians, they added very little to an understanding of the position. Indeed, the only really notable point in either speech was the Prime Minister's demonstration that our mandate was in due form, being in accordance with the article of the Peace Treaty that stipulates that the Mandatory shall be selected by the Allied Powers. Some of the later speakers, however, made some good points, perhaps the best being that of

Digitized by Google

Sir J. D. Rees, who told the House that the Arabs would detest us if we should try to impose on them anything like Western civilisation. The average member may find it hard to believe, but the average Mesopotamian has no real regard for efficiency, especially when he has to pay taxes for it, and he would certainly echo the view expressed by the member for Nottingham.

A variation of the same view found expression in the debate in the Lords, when Lord Islington, who initiated the debate in an excellent speech, declared: "We are not asked to govern peoples; we are asked to teach them to govern themselves. It is most important, too, not to attempt in any rigid form to impose Western forms on Eastern peoples." Along those lines, we believe, may come true salvation for Mesopotamia. Lord Sydenham, Lord Lamington, and Viscount Goschen all supported the view that the Arabs should be given control of their own affairs as soon as possible, and all expressed the opinion that the present elaborate administration should cease. Lord Curzon, who put the Government point of view forward with his usual ability, explained that during the past half-year a committee had been considering how the representative institutions already existing in Mesopotamia could be developed, to form the nucleus of future self-government; and he assured the House that everything possible should be done in the way of consulting representative Arab opinion. In his opinion, the most that could be said against the present administration was that it was too efficient and too perfect. Our average Mesopotamian would probably retort that that was quite sufficient. Lord Curzon concluded by reminding his hearers that a sentimental desire to do the right thing by the native populations had caused us to withdraw from the Transvaal and from the Sudan; and he added that if we withdrew now from Mesopotamia he believed we should have to go back there.

In the course of a Ministerial statement which he made in the Italian Parliament on June 24, Signor Giolitti declared explicitly that the Government was not in favour of a protectorate over Albania, but wished to see that country independent. This declaration will doubtless give intense satisfaction to Albanians; but the satisfaction will be qualified by the announcement, made subsequently, that Italy cannot entirely withdraw while other nations continue to cast covetous eyes on Albanian territory. If, however, Italy contents herself with safeguarding Albania's independence, she may yet regain the popularity that she enjoyed among the Shkipetars some little time ago; but at present fierce fighting is reported to be taking place between Albanian and Italian troops in the neighbourhood of Tirana.

In the course of an eloquent and notable speech which he delivered in the French Chamber last week, M. Briand had some pointed things to say regarding the present situation in the Near East and the 1916 Agreement dealing with that region. Although deeply interesting, his views on the latter point do not call for notice here, inasmuch as they were largely devoted to a criticism of the French conduct of the negotiations and the agreements accepted by M. Clemenceau; but it is to be noted that M. Briand declared that in his opinion the concessions to Britain of Mosul oil interests should have been made a matter of discussion—that is, of course, of better bargaining—and that in view of France's moral interests there, Palestine ought never to have been abandoned. It will be interesting to observe what effect these declarations will have upon the people in this country, who, on the ground of economy, are demanding our withdrawal from Mesopotamia and a careful limitation of our liabilities in regard to Palestine.

But, because its criticisms applied to the conduct of the Allies as a whole, more important, from our point of view, was what M. Briand had to say upon the Turkish Treaty and the delay in its presentation. As to the latter point, he emphasised the view, which has been repeatedly put forward in these columns, that the procrastination has been disastrous, and that the attitude of the Turks is a natural outcome of keeping them so long in a state of suspense. The Allies, he said, had told the Turks, "Yes, you shall live," then, "No, you shall not live," and had thereby brought about the present situation in Asia Minor, where we are confronted by so-called brigand bands. Such bands, added M. Briand, if they were acting in similar circumstances in France, would be hailed by Frenchmen as patriots—and it is not without significance that the remark was greeted with "loud cheers." In the same circumstances, in England also Mustapha Kemal and his followers would be similarly acclaimed. Nevertheless, Frenchmen and Englishmen alike must recognise that, things having been allowed to drift into their present state of muddle, our Governments cannot let any considerations of the kind influence their policy at the present critical stage of affairs.

The Joint Committee of Lords and Commons is again hard at work on the details of the new Indian Constitution. The Committee is practically identical with that which sat last year, the only noticeable alteration being the inclusion of Lord Meston in place of the Duke of Northumberland, but the work is of a very different nature, and a glance at the voluminous draft regulations is sufficient to explain the lack of public interest manifested in the proceeedings. The Committee is examining these regulations in detail to make sure that they carry out the principles already formulated, a tedious but necessary undertaking which everyone will be glad to see completed, but which furnishes no spectacular interest for the general public. Judging from the drafts which we have seen, the Government of India have followed their instructions with almost meticulous care, and we can detect no sign of any attempt to whittle down the liberal measures decided on last year; the Committee's task is consequently facilitated, and should be completed in time for the new election machinery to be in working order in the autumn.

Meanwhile we have a timely reminder that in some respects the new constitution is likely to be even more cumbrous than the old. It will be remembered that last year the Cotton Committee proposed a scheme involving heavy expenditure in order to stimulate production, and suggested that part of the cost should be provided by a small cess on each bale of cotton exported or used in Indian mills. This last recommendation secured general approval, but, after a year's consideration, the Government have rejected it as incompatible with the new constitutional arrangements. The argument is perfectly sound, seeing that a cess would be "Imperial," while the work is to be "provincial," and the separation of central and provincial finance must be strictly carried out; but the provinces concerned will scarcely be in a position to undertake the necessary expenditure for some years to come, and the conclusion seems to be that the world must postpone the renewal of its rather tattered wardrobe until the revised financial arrangements are in working order in India. We hope the world will not mind.

The official announcement of the new Indian exchange policy, which we summarised last week, furnishes a curious example of the petulance from which disappointed bureaucrats are apt to suffer, but which they are very unwise to express. The recent fall in the value of the rupee was attributed to "lack of support from the export market." Do the authorities really suppose that the market has nothing to do but support their policy, and how have they supported that policy themselves? The Currency Committee relied on "the world shortage of raw material and foodstuffs" to tide over the period of transition—that is to say, they acted on the assumption that, among other resources, India would be able to export wheat: the Government prohibited export, and large stocks of wheat are now held up, waiting for the removal of the embargo. That action may have been necessary or it may not, but our point is only that the Government cannot have it both ways: to prohibit the export of a staple product, and then blame the market for not exporting, indicates, to say the least, a lack of administrative co-ordination of a kind with which we have become painfully familiar in this country.

# THE WEEK AT HOME.

**The Way the Money Goes.**

The great campaign against Government extravagance has not achieved much except a week of rather dreary talk. Mr. Winston Churchill, it is true, has decided to keep the Army in khaki, and only the Household troops are to be re-clothed in the expensive red; on this matter Mr. Charles Palmer, who is shaping well as a parliamentarian, had the sense of the country with him on his criticism, and the Cabinet were wise in giving way.

On the expensive Ministry of Transport matters were rather different. The House of Commons dislikes Sir Eric Geddes, not so much because he knows his job, which is a venial sin even in a Cabinet Minister, but because he conveys the impression that the rest of the House are "mostly fools." It may be true, but it does not facilitate business. But Sir Eric had something to say on this occasion, and it was ridiculous for an Independent Liberal to stop him because the rule of the House forbade discussion of a matter requiring legislation in what is technically a Committee. These musty rules of procedure, which Mr. Lloyd George once compared to a dustbin, are exasperating when one wants to get business done; and although Captain Wedgwood Benn was technically right in his objection, his action has been widely resented. Captain Benn, by the way, who used to be one of the Liberal Whips before the war, is a young man with a future. He is one of the few remaining loyalists to Mr. Asquith, and his war record is admirable, and has quite wiped out the memory of the days when he used to be called "Buttons" or the "Boy Scout" because of his diminutive stature. He is personally a pleasant youth who has dabbled in journalism.

On Mesopotamia, which was the *pièce de resistance* of the Government's critics, Mr. Lloyd George had an easy case. Mr. Asquith was heavy and ineffective in his criticism, and the Cabinet made it clear that having gone there, they mean to stay there, and "hang the demnition expense," in Mr. Mantalini's words.

Meanwhile the critics of Mr. Chamberlain multiply, and the Federation of British Industries has announced that if the Chancellor of the Exchequer does not listen to reason—which is what the F.B.I. thinks—they will reserve full freedom of action; in much the same way Mr. Pickwick once took off his coat and announced that he was really about to begin.

The inevitable rumour has circulated that Mr. Chamberlain intends to resign—which one need not take very seriously as it is part of an anti-Austen Press propaganda—and some wise organs have even announced that his successor will probably be Sir Worthington Evans. Undoubtedly he would make an excellent Chancellor, for there is no more able man in a quiet way in politics at the moment than the member for Colchester; but it will not happen yet awhile.

**Labour in Conference.**

Labour has been holding a conference at Scarborough this week—the choice of locality suggesting that the wives and children of Labour members had a word in the arrangements. But while the babies were paddling in what we used to call the German Ocean, their parents swam boldly out into the treacherous sea of politics, which have also wrecked many a brave craft. There were occasional storms and squalls, and the extremists behaved like the priests of Baal, but on the whole the Conference showed admirable common-sense, and to that extent must have disappointed those who held that "Labour is unfit to govern."

A long discussion recognised that the Irish trouble was one that could not be covered by a phrase, and there seemed also some appreciation of the fact that both India and Egypt raised complex problems. But the real centre of interest was the debate on Bolshevism. Lenin's recent letter to the British workers has done more to discredit Bolshevism in this country than all the anti-Bolshevist propaganda of the Middle-Classes Union and similar bodies—this kind of spoon-fed opinion always fails of its expected effect. But what has had at least as much influence is the fact that the British Labour Delegation that went over to Russia has come back disillusioned. Even Mrs. Philip Snowden, a fluffy little lady who used to talk in the most surprisingly ferocious fashion, has had to admit that Bolshevism will not do in this country, after seeing the weed in its own soil; and it is said that the disgust of the other delegates at Bolshevism in practice is so profound that their comments have had to be sub-edited and bowdlerised before being printed (with the possibility of a printers' strike only just averted, one cannot run any risk with printers' morals in these days, and editors now keep their profanity for the domestic circle). There will be a good deal of noise about Bolshevism during the next year or two, no doubt, but its chance of conquering England, always small, has finally vanished with its rejection by Labour at Scarborough.

This moderation makes one believe that there was a good deal of truth in the remark recently made by a shrewd politician. He said: "One of these days Labour will come in and form a Government. We shall all prepare for a revolution, bank rates will go up and stocks down, old women of both sexes will double their insurances, and millionaires disguise themselves as agricultural labourers going out to the Canadian harvest. After a couple of years we shall find that Labour is respectable, and after five years we shall kick it out because it is so hopelessly conservative that only the fossils of the provinces will vote for anything so utterly old-fashioned."

We shall see. One thing is certain. The proceedings of Labour at Scarborough have undone a good deal of the ill-effect of the wild speeches earlier in the year, and it will not be surprising to find that by-elections will show an increased Labour poll during the next few months.

**The Week's Books.**

The most discussed book of the week is Mr. Conrad's "The Rescue" (Dent). Mr. Conrad now takes rank next to Hardy as the leading English novelist; his reputation has been slowly but solidly built, but his admirers are a steadily growing band. It is a pity that his books are not issued in a standard size and format for those who wish to purchase the complete set.

I well remember as a boy the first time I happened on Plato; so strange did the world he pictured seem that I wondered if I was standing on my head or my heels. But Plato is nothing to Professor Eddington's "Space, Time and Gravitation" (Cambridge University Press), which deals with the Einstein theory, the new geometry and the concept of "space-time," and concludes with a discussion, as amazing as it is brilliant, "on the nature of things." The author, who can make a joke at his own expense, rather unfairly (to himself) heads this last chapter with Hippolyta's remark, "This is the silliest stuff that ever I heard." He presumes on certain knowledge of mathematics in his readers, but otherwise there is nothing in the book that need deter "the ordinary four-dimensional man," and it will, I think, make clear to many the new concepts of science, which contain more paradoxes than any epigrammatist would dare to venture his reputation on.

Another useful book from the same publisher is Professor Sorley's "History of English Philosophy." It is a sound summary of the leading characteristics of English thinkers from Erigena to our own times, and in small compass it contains a mass of information. Most of these chapters were originally entombed in that dreary cemetery, the "Cambridge History of English Literature," and the author has done well to disinter his children from that learned necropolis.

Mention must be made of Mr. William O'Brien's "Evening Memories" (Maunsel), which is dedicated "to Ireland, old and young." Old Ireland thought Mr. O'Brien a proper revolutionary; young Ireland probably regards him as a thorough-going Conservative. However that may be, he has written an account of his life from his entry into the House of Commons in 1883. It is, of course, mainly for those with a personal interest in Irish politics during those now far-off years; it is a pity it does not tell the story of 1910-20, only hinting at secret documents and understandings

Digitized by Google

which did not come off. Surely the time to tell the full truth about that period has come; the fact that, in Mr. O'Brien's view, it reflects little credit on Mr. Asquith and less on Mr. Lloyd George should be no reason in his eyes for the unwonted discretion. But Mr. O'Brien always looked a great deal wilder than he really is.

**Wimbledon and Henley.**

The Wimbledon tennis tournament has been a great success. It has been favoured by the weather, which was perfect last week, and the play was no less good. But at the moment of writing the real excitement is still to come, and then the sporting interest will shift to Henley. It is to be hoped, however, that the caterers for the up-river crowd will not profiteer quite so outrageously as they did a year ago. One expects to be stripped, but one still dislikes being skinned.

**Peterborough Centenary.**

Hard upon the celebration of the septcentenary of Salisbury Cathedral, which has just been signalised by special services, comes the anniversary of the founding of Peterborough, which will take a good many people to that city this week. Peterborough Cathedral was founded in 1118—the anniversary was delayed owing to the war—and it is thus a century older than Salisbury. The story goes that the Abbot of Peterborough was envious of the rising fame of Ely, some twenty miles away, and decided to build a still finer church than that magnificent (and, indeed, unique) foundation. So far as the west front is concerned, they certainly succeeded—the west front at Peterborough eclipses everything but Wells Cathedral; but of the rest of the church not quite so much can be said, and it remains unfinished to this day. It certainly does not equal Ely, its neighbour in the Fens.

**Mothers and Mysticism.**

Dean Inge has made another of his startling pronouncements—before the Mothers' Union, of all unlikely places in the world, which the uninitiated had hitherto supposed to be interested in maternal rather than metaphysical problems. After remarking that "hell was ignored and heaven lightly regarded" in these days, the Dean urged people "not to confound eternal life with mere survival." Eternal life "to which we may even now have access by clear thinking and high living"—is here and now. This is, of course, the pure doctrine of mysticism through the centuries, and the Dean is now its leading exponent in England. It is well that these things should be said, and this high standard of thought should be set—but one does a little wonder what the Mothers' Union made of it.

There has, however, been a quiet revival of mystic thought in England of late, partly due to the Dean's own Bampton Lectures twenty years back, and partly to the singularly beautiful writing of Miss Evelyn Underhill whose books have now passed through several editions. This is perhaps the best reply to those foolish bishops who are for ever telling us that the present age is materially-minded. One would say that it is less materialist than a great part of the eighteenth century, and certainly less than the vaunted Victorian age.

**The Bishops and Divorce.**

While the Dean was attending to the mothers, the bishops were attending to the wives, last week: practically the whole bench voted *en masse* against the Divorce Bill. But the honours of the debate were not with them—why is it that the Lords Spiritual are always so ineffective in Parliament?—but with the Lord Chancellor, who displayed an unexpected knowledge of St. Matthew, and with Lord Halifax. Speaking against the Bill, the latter Peer broke down with his own emotion; it was an affecting scene when the aged man remarked that "this was the last time he would address their lordships, as the sands of his life were running out." Lord Halifax has been a tower of strength to the ritualists, and there is nobody quite to take his place; it was of him that King Edward remarked:—

"If I were religious, I should be of Charley Wood's religion." The late King was perhaps best described by one of his intimates as "a genial pagan."

## YUGOSLAVIA.

BELGRADE, June 20.

**Essad Pasha.**

The assassination of Essad Pasha has produced consternation in Serbia, for when he was an enemy, as a Turkish officer, he was not a treacherous foe, and in the dark days of 1915, when the Serbian Army was dragging its way through its Slough of Despond, when the Austrian-paid Albanians were harassing the tormented army and pitiful stragglers, and the wild hillsmen were sniping tottering old women to rob them of their petty belongings, Essad maintained order in his country, and his gendarmes protected the Serbs and assured them a safe conduct. All the papers unite in saying that his death throws every Serb into mourning, especially those who reached Salonika, and knew his stalwart frame, and were accustomed to see his four-coloured flag flying outside his *konak*, a small, but true ally. As a true nationalist, Essad represented, in the eyes of the Serbs, the principle of "The Balkans for the Balkan peoples," a principle which might have well avoided all wars in the Balkans of the past century, except those of liberation from the Turk; for it was the interference of non-Balkan powers, such as Russia and Austria, that created the artificial and quite unnecessary national hatred between the Bulgars and the Serbs.

**Serbia, Albania and Fiume.**

The papers also linger with satisfaction on the reports of a successful rising of the Albanians, which the Belgrade press describes as an incident in the logical sequence of Italian military history. Even the staid commercial messenger, *Trgovinski Glasnik*, says that their patience is exhausted by the long-drawn-out Adriatic Question, of which the Albanian problem is one phase, and it is quite time for it to be taken out of the hands of the Conference, which has so lamentably shown its incompetence to deal with it, and to settle the matter direct with Italy, which would not take long.

In the same connection, considerable excitement has been provoked by unofficial accounts of an Italian raid on Sushak, and rumours of fighting there. This is unconfirmed, and there is no official news. The Serbs have had enough fighting to last them a long time, but the Adriatic Question has dragged out so long, and the Italians have conducted so provocative a policy, that the patience of the Yugoslavs is nearly exhausted. They would probably not be sorry to have an appeal to arms, for they are confident that it would be short and decisive.

**Meeting at Prague.**

The forthcoming great meeting of Sokols at Prague is naturally arousing much interest in Yugoslavia. The original deputation, which was to have been a thousand strong, has been materially reduced owing to difficulties of transport, but an important official delegation is going, headed by Dr. Ninchitch, Minister of Commerce, and M. Pribitchevitch, Minister of Education.

**Russian Refugees.**

The colony of refugees from Russia in Yugoslavia is now about 30,000 strong, and includes many officers and men from General Denikin's army, a large proportion of whom are wearing British uniforms supplied by our mission. It is disconcerting to see in the streets numbers of what appear to be British troops until the Russian cap-badge and epaulettes show the difference. The colony now has its own newspaper, the *Russkaya Gazeta*, which has almost every day a leading article attacking England with a venom and vindictiveness reminding one of the days of the Hymn of Hate. We are accused roundly of having organised and supported the Russian Revolution and then Bolshevism as a commercial adventure, of sacking and laying waste their country "from Archangel to Turkestan": it is maintained that we are the real authors of the civil war now raging, but that in the breasts both of Bolshevists and anti-Bolshevists there beats always a Russian heart, which has at least one thing in common, namely, hatred of perfidious Albion. Now, too much importance must not be attached to these vapourings, nor must it be imagined that representative Russians have any other sentiments towards us than friendship mingled with a good-natured contempt for our kaleidoscopic policy towards their country, and regret at our coquetting with the Bolshevists to-day. But what is important is the evidence that these outpourings are inspired from Berlin, and that in holding up Germany as a model of civilisation and natural friend of Russia we see that the beast has not been killed, but only scotched.

## GREECE.

ATHENS, June 12.

**The Greek Parliament.**

The sittings of the Parliament have been suspended, and will only be resumed on the day of the ratification of the Peace Treaty with Turkey, which will take place immediately after the signature. M. Venizelos himself will present the Peace Treaty to the Parliament.

**Eastern Thrace.**

The Greek occupation of Western Thrace is now complete, and the men are impatiently awaiting the order to advance into Eastern Thrace, which has been assigned to Greece as a result of the Conference of St. Remo. Public opinion here is not disposed to consider the defensive preparations of Jaffar Tayar as in any way serious, and General Leonardopoulos, who is in command of the 9th Greek Division, is quite confident that within a few hours his armies would overcome any resistance which the enemy might offer. Jaffar Tayar's army of defence consists of a few thousand Turks, the majority of whom were forcibly recruited, and who are assisted by a number of Bulgarian *Komitajis*. An attempt was made by the latter to blow up the railway bridge at Batoma; it was, however, frustrated by the timely arrival of Greek troops, which dispersed the *Komitajis*.

A good many Turks have already surrendered to the Greeks, declaring that they have had enough of the war, and do not wish to participate in any more fighting. About 100 surrendered a few days ago, and on being interrogated by the Greeks, stated that they had been prisoners of the British, and only just allowed to return to their homes when they were forced to join Jaffar Tayar's forces. According to information received from Adrianople, the latter has levied an imposition of 4,000 Ltqs. on the Jewish community of that town for the needs of the army. Strange to say, the Christian population there have not been, up to the present, requested to contribute.

**A Demonstration in Piræus.**

A big demonstration took place at Piræus for the purpose of offering a vote of thanks and expressing the gratitude of the people of that town to the four Great Powers for the recognition by the latter of Greece's national rights. M. Economidis, the President of the Greek Chamber of Commerce at Piræus, delivered a short speech, after which the demonstrators proceeded, cheering, to the Allied Consulates. The crowd finally broke up at the telegraph office, where the Mayor of Piræus, M. Panayotopoulos, telegraphed the vote of thanks to Messrs. Lloyd George, Millerand, Nitti, and President Wilson.

**Amnesty.**

Amnesty has been granted by Royal Decree to all those responsible for the well-known wild scenes of Athens in November, 1916. The amnesty does not embrace those who evaded justice by not giving themselves up before April 20, 1920. It also excludes all active and retired officers who, whilst in Germany, caused proclamations to be distributed amongst the Greek Army in Macedonia inciting the officers and men to desert. Amnesty

Digitized by Google

has also been granted to all Moslems guilty of any offence committed in the region of Eastern Macedonia occupied by the Bulgarians during and after 1916.

ATHENS, May 29.

The voyage of King Alexander of Greece to Paris has given rise to a great deal of discussion and speculation both in Athenian society and in the Press; many and various are the reasons given for this journey, each individual or journal placing thereon the interpretation dictated by the interests of his particular party. Rumour was rife, and while it was originally variously stated that an important political mission was the object of this journey, and that the King was going to meet his father, the ex-King Constantine, so wild did these rumours become that M. Venizelos found it necessary to make a statement in the Chamber categorically denying the statements that King Alexander was engaged upon a political mission.

The King's departure was generally connected, in the minds of the Greek people, with the reports which have been current for some time past of his marriage to Mademoiselle Aspasia Manos, the daughter of the late General Manos, who was Master of the Horse to the deposed King Constantine, and who died some time since in Switzerland. Mlle. Manos left Athens a short time ago for Paris, accompanied by her mother. The *Eleftheros Typos*, which is the leading Liberal morning paper, created a considerable sensation by publishing in large type the following article, dated May 9-22nd:—

We are in a position to know that all the rumours current for some days past with regard to the objects and aims provoking the journey to Europe of H.M. the King, as well as those regarding his action during his stay there, lack all foundation.

His Majesty the King had for some time past expressed the wish to proceed to Europe, and more particularly to Paris, in order to meet Madame Aspasia Manos, who has been residing there for two months past, and to whom it had been indicated that she should leave Athens, after her having established herself in the Royal Palace during His Majesty's absence at Salonika and her expressed demands that she should remain at the Palace after His Majesty's return from that journey. The removal of Mlle. Manos was secured at the time through one of H.M.'s aides-de-camp, who was related to Mme. Manos.

The King's voyage to Europe is of a strictly family character, given that Mme. Aspasia Manos is the *wife* of His Majesty the King. As a matter of fact, as we are in a position to know, H.M. the King married Mlle. Aspasia Manos on the afternoon of November 5 of last year, in the house of her sister, Madame Zalacosta, the ceremony being performed by a certain priest, without, however, the license of the Metropolitan, and without the special license of the Minister of Justice, which the law demands in the case of Royal weddings. Consequently, Madame Manos is the "morganatic" wife of His Majesty the King.

With regard to the rumours regarding H.M.'s union with a Princess of one of the European reigning houses, these can be regarded as baseless for the present.

## ROUMANIA.

BUCHAREST, June 12.

### Elections.

The results of the Transylvanian elections now published show that the party of General Averescu has secured 53 seats, with a majority of 11 over all the other parties together; but there are still some 20 seats for which lots are to be drawn because of an even count. The present position is that of the 343 members elected for the whole kingdom, 212 belong to the Government party, which has a total majority of 81. Only five Socialists and two Liberals have been elected in Transylvania, so that with the seven returned for the Old Kingdom there are only nine Liberals in the Chamber, as against 101 at the last elections; and one of the strongest men of the party, M. Vintila Bratiano (brother of the late Premier, Ionel Bratiano), has lost his seat, and has not been returned to the Chamber at all. How are the mighty fallen! For many years the Liberals have held almost undisputed sway, and the country no doubt owes much of its pre-war prosperity to their efforts, but from force of habit they had apparently come to regard the country too much as their own estate, and people have grown restive under their rule. Though now less powerful in the Chamber and in the Government, they are still a strong force in the country, for they include among their ranks many of the large industrial capitalists and bankers. The Transylvanian National Party, which was recently in power under Dr. Vaida-Voevod, supported by M. Iorga and Dr. Aurel Vlad, has only secured 24 seats, but all these important members have been returned. The Transylvanian Peasants' Party is represented by four members.

In the elections for the Senate the Government appears to be even stronger than in the Chamber. The final results for both Houses should be published by the middle of next week.

### Lessons in Roumanian for Bessarabian Soldiers.

Many Bessarabians, though of Roumanian origin, have so long been Russian subjects that they have had no opportunity of learning the Roumanian tongue. This is a very serious drawback to Bessarabian soldiers, especially when stationed in the Old Kingdom and Roumanian-speaking provinces, and the first step towards helping them has apparently been taken by a group of theology students, who on their own initiative have started classes in the Roumanian language at the barracks.

The language difficulty in the annexed provinces is one of the many problems to be solved in the organisation of Greater Roumania, as is suggested by a recent order from the "Caile Ferate Romane" that all correspondence with their head office must be conducted in Roumanian. This certainly is a consummation to be aimed at, but in the meantime most of the staff of the Transylvanian railways is still Hungarian!

### End of Strikes.

Great relief is generally expressed in the Press this week because agreement has been reached between the Government and the workmen in the various State factories and workshops, who have been on strike intermittently for nearly two months. The exact terms of the agreement have not been published, but the men returned under the pre-strike conditions. Almost 30,000 workmen took up their tools again on Wednesday, including the men from the Regie tobacco factory, the Government printing works, and the railway workshops. The stoppage of the latter was a particularly serious drawback in view of the urgent need for improvement in the transport conditions in Roumania.

It is variously suggested that the workmen have been persuaded of their patriotic duty to further production and thus assist in the reconstruction of the country, and that their leaders have seen in the result of the elections, by which a large majority has been returned on the side of public order, a sign that the moment is not propitious for gaining their ends by coercion, and that in any case the men themselves are thoroughly weary of the struggle and thankful to return to their regular employment. There is probably some truth in all these suggestions, and it must be hoped that, as mixed conciliation committees have been formed to settle disputes and differences that may arise, work will now be continued without interruption. Unfortunately, some of the conditions granted by the Government gave rise to a lively protest on the part of the men belonging to the "National Syn-

dicate " who have *not* been on strike, and on the return of the strikers the former left their work in a body, and at some places the two parties came to blows. As a result of these disorders, and of the protest both of the " National Syndicate " and of the directors of several of the factories, the Government has now forbidden the formation of " Workmen's Councils " in the factories.

BUCHAREST, June 18.

**New Cabinet.**

General Averescu has now finally formed his new Cabinet as follows:—

| | |
|---|---|
| Minister for Home Affairs ..... | M. ARGETOIANO |
| Minister for Foreign Affairs..... | M. TAKE IONESCO |
| Minister for Education ..... | M. P. NEGULESCO |
| Minister for Religion and Arts... | M. OCTAVIEN GOGA |
| Minister of Ways and Communications ..... | General VALEANO |
| Minister of Public Works..... | M. DEM GERCEANO |
| Minister of Finance ..... | M. N. TITULESCO |
| Minister of Agriculture and Domains..... | M. TH. COUDALBO |
| Minister of Labour..... | M. FRANCO-IASSY |
| Minister of Justice ..... | M. MATHIEU CANTACUZENE |
| Minister of War ..... | General RASHCANO |
| Minister of Industry and Commerce ..... | M. OCTAVIEN TAZLAUANU |
| Minister without portfolio..... | M. MOSCONY |
| Minister without portfolio (Bukovina)..... | M. LE BARON STARCEA |
| Minister without portfolio (Bessarabia) ..... | M. SERGE NITZE |
| Minister President of the Agrarian Committee ..... | M. C. GAROFLID |
| Under-Secretary of State for Reconstruction and Food Supply ..... | M. M. C. ATHANASIU |

It will be seen that two new Ministries have been formed, the Ministry of Public Works having been divided into Public Works and Ways and Communications, and the Ministry of Education and Religion into Education, and Religion and the Arts. The final results of the elections for the Senate have not yet been published.

**The Chamber.**

The exact construction of the Chamber of Deputies is as follows:—People's Party: 122 Old Kingdom, 6 Bukovina, 20 Bessarabia, 66 Ardeal; total, 214. Federation: 32 Old Kingdom, 2 Bessarabia; total, 34. Socialists: 10 Old Kingdom, 4 Bukovina, 5 Ardeal; total, 19. Democrats: 11 Old Kingdom, 2 Bessarabia, 1 Bukovina; total, 14. Liberals: 7 Old Kingdom, 2 Ardeal; total, 9. Bessarabian Peasants: 25 Bessarabia; total, 25. Transyl. National: 28 Ardeal; total, 28. Saxons and Swabians: 8 Ardeal; total, 8. Independents: 2 Bessarabia, 2 Ardeal; total, 4. Nistor Party: 1 Bukovina. Hebrews: 1 Bukovina. Ukrainians: 1 Bukovina. Germans; 1 Bukovina.. Transyl. Peasants: 8 Ardeal Grand total, 365.

Four seats are still to be ballotted for. The Chamber will be formally opened on June 20.

## TURKEY.

CONSTANTINOPLE, June 3.

**The Peace Treaty.**

Eshref Pasha and Arifi Bey arrived in Constantinople on May 30 with the text of the treaty, which was at once delivered to the Grand Vizier. The impression made by the actual text is said to be worse, if anything, than that made by the rough outline given in a telegram previously received from Tewfik Pasha. As was to be expected, the Ottoman Delegation in Paris has been instructed to request an extension, until July 11, of the period allotted for the consideration of the treaty. Now that the full details are known, the question repeated on all sides is: " Who is going to enforce it?" And the opinion seems to be gaining ground that extensive modifications will have to be introduced.

There are indications that numerous intrigues are proceeding in connection with the peace treaty, and not the least interesting of these is the effort made through the intermediary of a well-known French journalist to bring about a Turko-Greek *rapprochement*. This is a consummation devoutly to be desired, but the obstacles are unhappily insurmountable at present. It is also a " secret de polichinelle " that the Turks have not lost all hope of support from certain quarters further afield in return for economic concessions.

**Thrace.**

The Greeks proceeded with the occupation of Bulgarian Thrace, and reached Karagach on Saturday without meeting with any opposition worth mentioning. This, however, seems to have been in accordance with the plan of the Thracian Nationalists, who have wisely resolved to avoid anything that may bring them into conflict with the Great Powers, and refrained from attack on account of the French flag which was hoisted along the railway. The Nationalist commander has ordered a general mobilisation in Thrace, where it looks as if the first fruits of the " peace " treaty are about to be consecrated with a blood sacrifice. It is already reported that Bulgarian bands have commenced operations, and that a considerable number of the inhabitants of a Greek village in the Karabagh district were murdered during the Whitsuntide festivities.

The French forces, with the exception of two officers who are still in Karagach, have now entirely evacuated Thrace, and the French Commander, General Charpy, has returned to Constantinople. The strength of the Greek forces is understood to be three divisions, but no attempt has yet been made to occupy Turkish Thrace. The Greek Headquarters has been established at Urli, near Adrianople.

**The Nationalists.**

The sensation of the week has been the discovery of a plot to assassinate the Grand Vizier. Two emissaries were sent to Constantinople from Angora for the purpose of eliminating Damad Ferid Pasha and the leaders of the anti-Unionist movement by means of bombs and revolvers. A large number of officers and officials have been arrested for complicity in the affair, which appears to have been planned upon ambitious lines, for an attempt was to have been made to seize the administration at the same time as the Grand Vizier was to have been assassinated. For this purpose secret committees had been organised in various parts of the city, and were ready to act at a given signal. The interception of a letter by the police revealed the plot, and it really looks as if the Police, hitherto the most trusted instrument of the Unionists after the Army, had been purged of the Committee taint. At all events, if this had not been the case to a very great extent, there is little doubt that by this time Damad Ferid Pasha would have had something besides the peace treaty to think about. The whole affair reminds one of the *coup d'état* of 1913, when Nazim Pasha was murdered in cold blood by Enver or his hired assassins. The Nationalists may protest for ever that they are in no way connected with the Committee of Union and Progress, but the fact remains that their methods are identical.

With the cessation of the active prosecution of the Government campaign against the Nationalists, there is very little news from Anatolia, but the provincial Press is full of information concerning the Bolshevists, and it would appear that the Nationalists are fully expecting help from that direction. A recent issue of the *Haléimet Millie*, of Angora, published a wireless appeal of the Soviet Government to all Moslem countries to rise against the English " robbers," and promised to assist them in the struggle. The Turks were guaranteed an " honourable " peace, and the Anglo-Russian Treaties concerning Persia and Turkey that were concluded under the Tsarist régime were said to have been annulled. So now we know where we are!

On the other hand, it appears that the Caucasian Moslems are by no means satisfied with the Bolshevist Government that has been set up in Baku, for one of the first acts of the new administration was to release the peasants from capitalist tyranny by communising agriculture, for which purpose all farm stock and implements were decreed to be State property. The peasants strongly objected, but the final result is not yet clear.

**Cilicia.**

There is also very little news from Cilicia, beyond the bare fact of an armistice between the French and

the Nationalists for a period of twenty days, and renewable at will. It is reported that Adana has been evacuated of the Armenian population; and if this is true, it is to be presumed that the Armenian question has been solved so far as Cilicia is concerned.

### Tweedledum and Tweedledee.

There has been a split in that singularly futile combination known as the Entente Libérale Party. Apparently the quarrel arose with regard to the peace treaty, Tweedledum being in favour of signing it without further palaver, while Tweedledee insisted upon the necessity of pressing for modifications. As the quarrel became acute, Tweedledee decided to form another party on his own, entitled "The Reformed Patriots' Party," and it is said that "Prince" Sabah ed Din is to be asked to become the president. But as nothing less than the Grand Vizierate would suit that exacting gentleman, it is hardly likely that he will accept—unless he has got tired of waiting for the bigger prize. It does not matter very much, in any case.

---

CONSTANTINOPLE, May 24 (Delayed).

### The Peace Treaty.

The principal topic of conversation in all circles is the Peace Treaty, details of which were published early last week. The feeling in official circles is one of complete despair, and the utmost astonishment is expressed that the Entente, which has espoused the cause of national liberty, should propose to destroy every vestige of Turkish national independence. While it is more or less freely admitted that the Entente Powers are justified in instituting some form of control which would prevent a repetition of Turkey's past actions, the introduction of Greece into Asia Minor is regarded as the first step of a deliberate policy aiming at the complete elimination of Turkey as an independent nation. In European circles there is considerable sympathy with this point of view, and even among those who are anything but pro-Turkish the opinion prevails that the Treaty provides amply for the protection of non-Moslems without the establishment of Greek administration in the Smyrna district, which will inevitably be the cause of perpetual friction. The conditions attaching to the establishment of Greek influence in Anatolia are regarded as farcical, for there is very little doubt that conditions will be so manipulated that the result of a plebiscite will be a foregone conclusion.

The Nationalists have gained many adherents since the publication of the exact terms of peace, and there can be no doubt whatever that there will be active resistance. Unless the peace conditions are modified, the Allies will presumably have to enforce them; and in Entente circles generally the prospect of Allied forces being employed to enable the Greeks to obtain territory to which they have a very poor title is regarded with the deepest repugnance. This does not apply only to pro-Turkish circles, but even to those who have hitherto warmly espoused the cause of Greece. It is pointed out that the Greeks might, with an equal absence of title, claim Alexandria; and it is generally acknowledged that, once having secured a footing in Asia Minor, the Greeks will utilise it as a base for further territorial acquisitions and for the realisation of the *megala idéa*.

Among a certain section of Ottoman Greeks also there is little enthusiasm for the attribution to Greece of Smyrna. Provided they are assured of just treatment, they would rather remain Ottoman subjects, for the simple reason that they would not be liable for military service. Moreover, they have no illusions with regard to Athenian administration, and realise that it is difficult to foresee what would happen were M. Venizelos to disappear from the scene. In this respect there is one very significant fact. Were the ex-King Constantine to return to Athens, he would, it is stated, be received with open arms. It is not easy to understand exactly why this should be so, and it has, perhaps, only an indirect bearing upon the present subject, but it is mentioned as a hint to those who believe that Greece is the appanage of the Entente, or who have forgotten the events that occurred between August, 1914, and June 12, 1917, when Constantine at last was forced by the Entente to abdicate.

Finally, there is the effect which the enforcement of such conditions is likely to have upon the Moslem world. The question arises whether it is worth while risking an aggravation of the situation for the sake of the hypothetical advantages of establishing Greek administration over mixed populations among which there is at present a majority of Moslems. Greek protagonists, of course, dissect the statistics of the Moslem populations in order to show that there is a Turkish minority. Statistics are notoriously inconclusive; but even though it could be proved that there is a majority of Moslems and non-Moslems opposed to Turkish dominion, the number of Moslems who would vote in favour of Greek administration as an alternative to the continuance of Turkish rule would be negligible. Moreover, in both Eastern and in Western Thrace a not unimportant section of the Christian population would take the same view. But the main point is that, while most Moslems would tolerate, and a considerable number might actually favour, a British or French mandate in the contested territories, Moslems in general are strongly opposed to Greek dominion. Moslem races are proud of the military history of Islam, and while they acknowledge the superior prowess of the British and French, their contempt for the Greeks has increased during the war. It must also be remembered that, rightly or wrongly, Great Britain is debited with the full responsibility for the obnoxious clauses of the treaty.

The Government's attitude and that of its supporters is that it would be impossible to sign such a treaty. It is hoped that modifications may be obtained either as a result of an eleventh-hour reconsideration of the position by the Entente, or by an aggravation of the dissensions which, it is believed, exist between the Allies in spite of their present apparent unanimity. In the meanwhile operations against the Nationalists are stationary, and the prosecution of the campaign will depend entirely upon the degree, if any, of the modifications which the Allies may be disposed to accord.

On Friday a meeting was held in Stamboul to protest against the cession to Greece of Smyrna and Thrace. It was organised by the Entente Liberale Party, which is largely Anglophile and wholly anti-Unionist. The complete failure of the proceedings was due to this circumstance more than any other. Only about two thousand persons were present, and the speeches of Dr. Riza Tewfik, Mustapha Sabri Effendi, the former Sheikh ul Islam, and others who stated that active resistance would be useless, were listened to with the utmost indifference. Long before the speeches came to an end the crowd began to dissolve and the demonstration fizzled out pathetically. It was one more proof that there is only one party in Turkey which has any wide influence, and that the opposition to it is still, as in the past, of a futile and divided nature.

### The Nationalists.

Very little news is being received from Anatolia, where the Nationalists have established a strict censorship of all communications. It would appear, however, that the principal event of recent interest has been the aggravation of the situation in the Aintab and Urfa districts, where the French have had another somewhat serious setback. A French force in Urfa is reported to have been cut up, and another force which was sent to the relief of Aintab was driven right back to its base with heavy losses.

In Eastern Anatolia Kiazim Karabekir Pasha is said to be advancing into Armenia for the purpose of effecting a junction with a Bolshevist force; and although this news may be unduly exaggerated by Nationalist enthusiasts, it would appear to be true that an extensive movement in the Caucasus has been planned by the Turks in conjunction with the Azerbaijanis. How far they will succeed depends entirely upon the assistance they may receive from Moscow. It is too early yet to be able to judge with certainty the extent of that assistance, but it probably depends to a great extent upon the position in Western Russia.

The Nationalist Press in Anatolia continues to regale its readers with accounts of "revolutions" throughout the Islamic world and with stories of British perfidy. According to an account published in an Eski Shehir paper, the British commander of the forces which were withdrawn some little time ago from that town begged the Turks to allow him to retire unmolested, and the population of Eski Shehir, although they could have destroyed the British force at any moment, "allowed them to depart, and refrained from desecrating the sacred soil of the fatherland with the vile blood of that base nation."

While, on the one hand, the Government has slackened its efforts against the Nationalists, on the other hand it is reported that negotiations are in progress with a view to an understanding in order that the nation may present a united front at this critical hour of its history. There is, however, little likelihood of these negotiations coming to a successful conclusion, for the Nationalists would be satisfied with nothing less than the complete subordination of the Government to their policy; and, further, it is probable that, in the event of the Peace Treaty not being substantially modified, the Government will resign and the Nationalists will be left in full possession of the field.

In Thrace a Defence Association has been formed upon the same lines as the Nationalist Organisation in Anatolia, with which it is undoubtedly in communication. Jaffar Tayar Bey, the former Commander of the Adrianople garrison, is the prime mover in this organisation, and is trying hard to obtain the assistance of Bulgarian bands against a Greek advance into Thrace; but, according to all reports, the strength of the resistance to an advance of the Greek army will not amount to much.

# SYRIA.

BEYROUT, June 11.

### A Franco-Arab Agreement?

A great sensation was lately produced by the publication in a Beyrout paper from its Damascus correspondent of the following terms of an agreement said to have been practically reached between General Gouraud and Emir Faisal. The author declared his information to have been obtained from an authoritative source:—(1) France acknowledges the kingship of Emir Faisal. (2) Troops are to be retained only in such numbers as shall be deemed absolutely indispensable in the circumstances. (3) The authority of Emir Faisal shall extend over both the Eastern and Western Zones, including Mount Lebanon. (4) The Lebanon shall continue to enjoy its old privileges, and will remain after the occupation as it was before the war. (5) A small strip of territory shall be annexed to it in the Western portion of the plain of the Beka'a. (6) Emir Faisal shall acknowledge the mandate of France over both the Eastern and Western Zones. (7) France will send to Syria advisers whose salaries are to be paid by the Syrian Government, but who will derive their authority directly from the French Government. These advisers may be replaced by others if this be deemed necessary by the Syrian Government, and after due agreement with the French Government. (8) A small territory of Palestine shall be ceded to Syria with the consent of Great Britain. (9) France shall have a wider control in the Lebanon than in the other zones. (10) France shall have the sole right among European Powers to develop the mineral wealth of Syria, establish factories, and exploit, in general, its economic resources.

The papers asked for an official *démenti* or confirmation of the news, and for two days, when there was no sign of the eagerly awaited communiqué, public feeling grew more tense. There was great excitement in the Lebanon, where, it is said, the Administrative Council held a special sitting and asked for explanations from the administrative Governor, who replied that he had no knowledge of the matter, but that he was communicating with the higher authorities at Beyrout. At last the tension was relieved, for the Press Bureau issued yesterday a communiqué declaring the correspondence from Damascus to be devoid of truth and a mere rumour. Wiseacres all the same still wish to see in this correspondence a sort of *ballon d'essai*.

Another interesting item of information, supplied by the same correspondent, and which, from its circumstantial character, seems to be authentic, is that the Italian Government had notified the appointment of an ambassador to the Royal Court at Damascus, and while further communications were awaited, the ambassador in question suddenly arrived, and presented his credentials to the King.

### The Question of Minorities.

The question of minorities embodied in the Constitution has been the subject of heated discussions in the Syrian Congress, and threatened at one time a rupture between the Christian and Moslem members. The Christian members showed on this occasion a solid and united front. In view of their intransigent attitude, the Congress decided at last to appoint a committee *ad hoc*. After an uninterrupted sitting of six hours, neither party could prevail upon the other, and the consequence was the withdrawal of the Syrian members from the last sitting of the Congress, as a protest against the majority's refusal to acknowledge the rights of the minority, on the plea that there is no question of majority or minority in Syria.

Finally the Christian members agreed to attend, and the Congress Hall was packed. The debate was resumed with redoubled heat. The Moslem speakers insisted on denying the discrimination between Christian or Moslem in Syria, saying that all were the children of the same fatherland, and there could, therefore, be no question of minority and majority. The Christian speakers, however, who are not ignorant of the real facts, and of the true character of the country and people, did not scruple to state plainly that there is a difference between Moslems and Christians. One of their leaders declared: "Standing before Europe, we, of course, put up a united front, and affirm that there is no question of minority and majority, and that we are all Syrian Arabs, children of one nation and one fatherland; but, among ourselves, we have to acknowledge the evident existence of a minority and majority, of a Christian and Moslem section. The Moslems expostulate that the Christians are responsible for the interference of foreigners in our affairs and in our country. The Christians, on the other hand, retort that it is the maltreatment that they have received at the hands of their Moslem neighbours which is the real cause of the interference of foreigners. This is our malady, and if we seek to cover it over, it may prove our undoing. Some of our brethren of the majority impute to us the love of functions, but if we insist on the allocation of Government posts to us, it is not for love of them, but rather for the protection of our rights, the rights of those we represent."

The Moslem majority having remained obdurate, one of the Christian members presented to the President a statement to the effect that the Christian members will withdraw from the Congress if their just claims are not granted. This produced a great commotion, and provoked the taunt that this threat was an act of betrayal. One of the Christian members then saved the situation by admitting that the statement was rather hastily presented, and by appealing to the higher sense of the majority to examine fairly and settle this question of the minorities, remarking that the eyes of all the people in Syria, and especially the Lebanon, are turned now on the Congress, and this question of minorities will be the chief test by which it shall be judged. He then tore up the minatory document as a sign of good faith on the part of the minority.

# CYPRUS.

June 5.

### The King's Birthday.

The anniversary of the birthday of His Majesty was celebrated in all the larger towns. At Nicosia a service was held in the English Church of St. Paul's, at which the Acting High Commissioner, judges, and officials were present, and services were also held in the Greek Cathedral and the Roman Catholic Church. The Exarch of the Archbishop officiated at the former, and the Mayor and Hellenic Consul were present. His Excellency inspected the police and presented decorations of the O.B.E. to Mr. E. McLaughlan, Mr. A. Merrifield, and M. G. Vasileios, late of the Forest Department, for services rendered to the military authorities. In the evening Mr. and Mrs. Stevenson gave a ball at Government House.

### Increase of Crime.

The police are having a busy time in all districts. At the Nicosia Assizes, which followed closely on the attempt to burn down the large cigarette manufactory of M. Vergopoulos, a Greek was convicted and sentenced to fifteen years with hard labour. Another was sentenced to two years' imprisonment for burglary at the house of a Government official, Mr. E. Heidenstan from which objects of antiquity valued at £200 were stolen. Burglaries and thefts of animals are frequent. At Limassol a gang of thieves has been at work.

### Education.

The need of providing for better salaries and also pensions for schoolmasters throughout Cyprus has become a pressing problem, admitting of no further delay. The Government is in consultation with leading men of the Greek and Turkish communities, and a measure is in course of preparation for the earliest possible consideration by the Council. A sum of £80,000 odd will be required to meet the estimated charges. It is proposed to raise the amount chiefly by direct taxation, through increased tithes and addition to taxes on real property, and by indirect levies on salt and tobacco.

### General News.

The month of Ramadan, the Moslem fast, began on May 19. The Armenians have been celebrating the anniversary of their Independence Day, and it is a happy circumstance that at one place, at any rate, this can be done. Island health in general is good. Medical inspection is carefully carried out on all vessels that arrive, and the precautions meet with general approval, as the *Gazette* shows that a danger zone encircles the island, since plague exists in Egypt and Asia Minor, plague and typhus in Greece, typhus in Turkey, and plague on the Syrian coast.

### Personalia.

Mr. J. R. Holmes, Puisne Judge, is granted three months' leave from May 27. He is retiring from the Bench after long service in Cyprus, having been previously in West Africa.

Mr. J. C. Macaskie is appointed to act as Puisne Judge.

Mr. B. Dickinson is gazetted to act as President of the District Court at Kyrenia.

Mr. C. Shellish is appointed an Inspector of Police on probation.

The O.B.E. has been conferred on Mr. W. J. Mackay, Chief Collector of Customs.

# CORRESPONDENCE.

## SOME FACTS ABOUT ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Having travelled in the Near East, and, therefore, having some acquaintance with the dreadful treatment the Albanian people have suffered, I have long desired to do something towards helping these unfortunate people to secure at least the independence which was required as their right and guaranteed by the great Powers in 1913. To this end I wrote to Mr. Leo Fred Williams, of Boston, U.S.A., late Minister of the United States to Greece and Montenegro. He has replied by sending me a letter in which he gives his definite conclusions with regard to the general situation in Southern Albania. What he says I feel to be of such importance that I send you the following quotation from his letter, which is dated May 4:—

A massacre of a hundred or two Mohammedan Albanians in the church of Kodra by Greek troops had been publicly stated by the Commission of International Control on the authority of the officers of the Dutch Gendarmes who had dug up bodies and reported to the Commission on the matter. These statements were denied by the Greek Ambassador to Great Britain on the authority of the King.

I spent a week with Mr. Zographos, who was President of the so-called Provisional Government of Epirus, but got no satisfactory explanation of this massacre. It was plain that the killing was done by the so-called Epirotes, who were then fighting the Albanians beyond Argyrocastro. I went across the fighting lines, and was met by the Dutch Gendarmes and proceeded to Kodra. It had been stated to me in Argyrocastro that the Albanian peasants had been shut up in the Christian Church at Kodra, and were shot when they were attempting to escape. I directed my attention to this explanation. I found the church doors riddled with bullet holes, and outside these doors was a great number of cartridge shells, such as were used by the Greek military; as the marks of these bullets striking on the opposite wall were plain it was clear to me that while shepherds were huddled in the church and had barricaded the doors they were shot through the closed doors. I found, however, more definite evidence on the roof. It was claimed in Argyrocastro that the peasants had tried to escape through the roof. I found that there were two large breaches made in the roof of the church, and the earthen tiles were piled up in an orderly way at the side of these breaches. This made it clear to me that the roof had been opened on the outside by the soldiers, as had been stated to me by friends of the peasants. I decided that if the soldiers had shot from above, some evidences would be found in the church, and I searched for bullet-holes through the woodwork. I found several which passed through the woodwork in an exact line with the holes above, showing plainly that the soldiers had stationed themselves at these holes and shot down such of the peasants as they had not reached by shooting through the doors. The number killed, however, was not as large as stated: probably about sixty if my memory serves me.

I thus satisfied myself of the deliberate and atrocious character of this massacre. The second point is this: the troops that were then fighting the Albanians and called the "Epirote" troops were largely recruited from Athens, and were regular Greek soldiers. I know this beyond a peradventure, as Greek soldiers told me how they had been sent to Athens for additional men, and had taken them from the Greek forces at Athens to Epirus as ordered. The only excuse offered was that the atrocities were committed by the "Andartes," but on asking to have these irregulars pointed out to me among the troops there were, I believe, only two shown me whose costumes were not of the regular Greek soldier. Furthermore, the two men who were under arrest by Zographos and in prison at Argyrocastro I found to be Greeks when I visited them. I suppose that it is now generally accepted that the so-called Provisional Government under Zographos was merely a Greek movement to retain possession of Epirus after a formal movement of Greek troops out of that country had been ordered by the London Conference.

Mr. Williams strongly objects to the creating of a mandate over Albania by Italy. He says that would place the country absolutely under the control of the Italian Government. He thinks that every inch of territory defined by the London Conference of 1913 should be secured to Albania, and he adds: "Of course, in justice, much more of their territory should be restored to them." It is to be hoped that this will be the case, and that the League of Nations will see to it that this ancient people does not lose its independence.—I am, etc.,

(Miss) MAUD YANDELL.
of Louisville, Kentucky.

## BULGARIAN PRISONERS IN GREECE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is most satisfactory to see that after the appeal from the Bulgarian hostages of war in Greek hands was published in the British Press the Greeks issued an official *communiqué* announcing the consent of their Government to release the (10,000) Bulgarian prisoners, with the exception of 600 of them, who are to be kept imprisoned so long as some 300 Greek "prisoners," now in Bulgaria, are not released.

It is to be hoped that the Greek Government will soon fulfil their promise, but, with regard to the 600 Bulgarians to be detained still against the 300 Greeks "in Bulgarian hands," may I be permitted to say that a great many of the latter are not military prisoners, but civilians, mainly widows or girls, who owing to the prevailing scarcity, migrated in 1917 from Kavalla, Drama, etc., into Central Bulgaria, where many of them have settled and married Bulgarians. Almost all of these now refuse to leave their homes and return to Eastern Macedonia, but prefer to stay with their Bulgarian husbands. In the number of those 300 are also many orphans who were charitably taken into Bulgarian families. Now the Greek Government insist on separating those children from the humane people who have cared so long for them.—I am, etc.,

A BULGARIAN IN ENGLAND.

# PRESS ON THE NEAR EAST.

### Thrace.

In a recent letter to the *Times* a correspondent points out that if Greece has to maintain 50,000 men in Thrace—and he thinks the estimate not excessive—it will be difficult for her to reinforce the 90,000 Greeks now in Smyrna with another division. He goes on to say:—

The difficulties Greece is already encountering in Thrace seem almost unknown to the British public, but the French Press has published many particulars which Marshal Foch and Sir Henry Wilson have, of course, already taken into consideration. It may not yet be too late to restore the international administration—mainly French—which gave so much satisfaction to the people of Western Thrace that 84 communes out of 90 sent a petition to the San Remo Conference asking for a plebiscite under its control. International control could hardly be permanent, for a final settlement of the Thracian question can only be reached by an arrangement following in the main the lines of nationality (as ultimately proposed by President Wilson) and assuring to Bulgaria territorial access to the sea. But it would give time for a more impartial consideration of all claims.

He declares that the decision of the Supreme Council to give all Thrace to Greece had a deplorable effect on the Turkish and Bulgarian populations in Thrace, and continues:—

Informed of the intention of the Supreme Council to put aside the compromise, the President [of the United States] telegraphed his second proposal suggesting a division of the province on the lines of nationality. But this was also rejected. The action of the Council could only have been justified by the existence of an overwhelming Greek majority in Thrace; in any case it was premature in view of the precarious state of affairs in the Near East.

But is there such a majority? The Greek memorandum to the Conference gives the Hellenic population as 730,822; from this figure we must deduct 74,000 Asiatic Greeks (Sanjak of Scutari), whose inclusion in the "total for Thrace" is distinctly enigmatical; 405,000 (the Greek figure) for Constantinople, Rodosto, and Gallipoli, which are not in dispute, and some 60,000 Patriarchist Bulgarians, Vlachs, and Albanians, who are euphemistically described as Greeks. The Greek total thus falls below 200,000, while there are unquestionably 400,000 Christian and Moslem Bulgarians west of the Enos-Midia line which Bulgaria claims as the frontier accorded to her by Europe. The question as regards Western Thrace has been settled by the census recently held by the French authorities, which gives the Turkish population as 74,780, the Bulgarian (Christian and Moslem) as 65,940, and the Greek as 56,114, out of a total of 204,690.

### Greece and Turkey.

The *Evening Standard* of June 24 contains an article upon the recent decision to employ the Greek Army in Asia Minor. Of the attitude of the Near East towards this decision it says:—

The idea that the British Empire should hand over its troubles for Greece to deal with will strike the Near East with amazement. The Greek populations of Constantinople, Smyrna, and elsewhere will no doubt rejoice, for there is no people more easily fired by dreams of glory. The Greeks possess abounding confidence in themselves and have a great idea of their own powers in every way—intellectually, commercially, and from a military point of view. But, however much or otherwise their own good opinion of themselves may be justified, it certainly is not shared in anything like full measure by the various races which surround them or mix with them in the Near East. The Turks in particular have a hearty contempt for the Greeks. This, of course, is mere blind prejudice, because the Greeks

in most ways—though not all—are infinitely superior to the Turks.—*Cela va sans dire.* But the fact remains: the Turk cannot take the Greek seriously. He has for too long been taught to regard him as a mere vassal.

It proceeds to comment upon the "unpopularity" of the Greek occupation of Smyrna, and concludes:—

Most people who know the Near East at all have already come to the conclusion that Greece was gathering more than she will be able to manage. M. Venizelos seems very confident about it all, but as far as one can make out Greece will soon be responsible for holding down a considerable portion of the Balkans (Thrace may be an awkward gift for the Greeks even yet) and a fair slice of Asia Minor. And if Britain feels that she is so preoccupied at the moment that she must call on Greek held to deal with an insurgent of the calibre of Mustapha Kemal Pasha—well, where shall we be if things go wrong, or even only moderately well, with Greek military plans? If the intention really is to hand over Constantinople as a reward in case of success, the Allies would be as foolish in offering it as the Greeks would be in taking it. It really seems for Britain a case of *noblesse oblige.* As the conquerors of the East it hardly seems possible for us to lean on a second-rate Power which already has its hands full. Greek dreams of Empire are very rosy just now, but they must not carry us away also.

## MUSICAL NOTES.

### BUSONI.

During the past week the greatest pianist in the world, Busoni, has been heard as conductor, composer, and pianist. At the Queen's Hall, on June 22, he appeared to conduct a suite of five pieces from his own opera, "Die Brautwahl" and Liszt's "Faust," and to play the pianoforte part of his "Indian Fantasy." In the first one was too busy trying to understand the music to notice the conducting; but from the Liszt it seemed that he was not easily able to obtain from the London Symphony Orchestra those intellectual subtleties in which he delights. However, he kept at a happy distance the Teutonic emotionalism in which Liszt's symphony is saturated. His "Bridal Quest" is to English ears extraordinary music: there is little that from the first hearing you can remember, but the general impression you can never forget. It seldom attracts the ear (the magnificent onrush of the last ("Joyous") section being the most notable exception), but it always keeps you thinking, and, moreover, pleased to think. I suppose it is Busoni's explanation of, or commentary upon, E. T. A. Hoffman's words, but as Byron said of Coleridge—"I wish to goodness he'd explain his explanations." There are so few minds in this generation able even partly to comprehend Busoni's genius, that without some better guide to the workings of his brain than the mere story of this opera most people are a little bewildered. That his is great music I cannot say. I should like to hear it many times again before giving a definite opinion. The chief impression that I received was that his opera, though packed with thought, has yet more thought behind the notes, and therefore unexpressed. I do not mean that his thoughts are incompletely expressed—if that were so his music, of course, would not be of great value—but that his intellectual so exceeds his emotional expression that (on a first hearing at any rate) the feeling that he has hidden moves, or rather that while he is making his characters act on first thoughts he himself is entertaining (but not expressing) second thoughts, never deserts one. The "Indian Fantasy," a strange and difficult work in which Mr. Julius Harrison conducted with cautious cleverness, is mainly remarkable for the orchestral effects which Busoni draws from the pianoforte. It is a demonstration of the composer's unique skill in pianoforte writing, but I am not certain that as music it ranks high. (Much credit, by-the-bye, is due to Mr. Harrison and the London Symphony Orchestra: not many of our conductors and orchestras would care to undertake this work, especially with the urgent composer at the pianoforte.)

At the Wigmore Hall, on June 26, Busoni gave a recital consisting of Bach's Chromatic Fantasia and Fugue, Chopin's Sonata in B minor, three of his own sonatinas, and the Brahms-Paganini Variations. Unquestionably he is the sovereign of pianists, and for some and the greatest composers, like Bach and Beethoven, he has now on his head a crown which no one will ever usurp. In Bach and Beethoven, indeed, that crown is rather a halo, for there is in his interpretations of these something so much above what the rest of humanity can do as to be almost unearthly. You may think you have heard the Chromatic Fantasia and Fugue played well, you may think you have heard it played perfectly (I have thought both things many times!), but until you have heard Busoni, you have never heard it played at all. The Brahms-Paganini Variations, in which his technique was simply amazing, were utterly magnificent; there are, in fact, no words fit to describe such playing as this. If Liszt were really a better player than Busoni (which I doubt), there is a good deal to be said for a musical Heaven in which some artists at least may foregather—provided, that is, that in addition to the tinkling cymbals and the rest of it, there is a pianoforte (which preferably should be an Erard). But that halo in Bach and others to which I have referred is more like two horns in his playing of Chopin. There is one thing that even Busoni will never persuade us is right, and that is to play a Chopin melody with a hard metallic touch. His exquisite colouring, largely obtained from a most wonderful use of the pedal, was a thing of which dreams are made; but there were times in the Sonata (and worse times in the eighth Nocturne, which he played as an encore) when the melody, instead of stealing like a whisper to the ear, came rending the air like a cry. If Chopin did not intend to soothe us in the middle section of the Funeral March or to ravish us in the Nocturne, then —— Busoni is right, and we are wrong. It sounds impertinence to suggest that Busoni is confusing his own intellectuality with Chopin's spirituality; but there must be some explanation to his Chopin. He might say, of course, that to talk of composers' "intentions" is mere rubbish, and that to claim for a particular piece a peculiar rendering is the narrowest form of insincerity—in which case we should bow, and, still disagreeing, go away pondering on the difference between greatness and infallibility.

---

At the Queen's Hall, on June 21, the newly-formed Jewish Folk Music Society gave its inaugural concert. The object of this society is to continue the work of collecting Jewish folk-songs and religious melodies hitherto performed by the Society of Jewish Folk-Music in Petrograd and the Jewish Ethnographical Expedition. Its musical organiser is Mr. L. Saminsky, the director of the Tiflis Conservatoire of Music, who probably knows more about Jewish folk-song than anyone living. In the Anglo-Jewish community there is plenty both of taste and talent, and, guided by such an organiser, the society should have a most useful future. As Mr Saminsky pointed out in a short but excellent lecture before the concert, it is the religious melodies of the Jews, which are by far the most original and interesting, the chants of the Synagogue being absolutely unsullied by foreign music, whereas the ordinary domestic Jewish folk-song nearly always owes something to the music of the surrounding peoples. This fact was later in the evening exemplified. The most attractive songs given were "Rabbi Levi-Isaak's Prayer," sung by Mr. A. Riabin; "Rabbi Levi-Isaak's 'Kaddish,'" sung by Mr. M. Mirsky (both these songs being from Southern Russia and arranged by L. Saminsky), a quartet, "Ani Hadal" (from the Yemen), sung by Miss Anne Thursfield, Mrs. Israel Feldman, Mr. A. Riabin, and Mr. M. Mirsky, "Song of Little Esther" (from Lithuania), and "Rachelina" (Spanish), sung by Miss Anne Thursfield (who, incidentally, was easily the best artist of the evening). There is no doubt that the cultured Jewry of the West possesses vast musical potentialities, and although up to the present not much has been done by Jewish composers in this country, it is through such an organisation as the Jewish Folk-Music Society that they will have an opportunity of developing, and hence of incorporating their own folk music into compositions of universal importance and appeal.

---

It was the fact that Mr. Eric Rice, whose efforts to make Chopin fashionable in dancing circles are well known, was assisting Miss Diana Lawrence in her first song recital, that attracted me to the Æolian Hall on June 15. Expectations were not exceeded. In three studies of Chopin Mr. Rice played many right notes, missed some, and hit a few wrong ones, but of interpretative ability there was no trace. There was a quite ingenuous mixture of Debussy and Ravel in some of his own compositions, and the voice of individuality was never heard. Of Miss Lawrence it can only be said that she has started too soon: if she will sing the "Londonderry Air"—one of the divinest tunes in the world—as if it had been conceived in a placid, sentimental suburb of London, she cannot expect unmingled praise. And whatever ability her accompanist, Mr. Michael Gilsenan, possessed was entirely overshadowed by his maddening practice of preluding a song with the most irritating and banal chords possible.

ANDANTE.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

# NEAR EAST BOOKSHELF.

I.—"MONS, ANZAC, AND KUT." By an M.P. (London: Edward Arnold, 14s. net.)

II.—"SAKUNTALA." By Kalidasa. A new version by Laurence Binyon. (London: Macmillan and Co. 7s. 6d. net).

## I.—MONS, ANZAC, AND KUT.

We cannot but think that the author of this fascinating book has quite needlessly handicapped himself by publishing it as "By an M.P." We have become somewhat too familiar with books by persons who seem to have made use of their status as representatives of the nation in order to pick up interesting staff jobs in various theatres of war. There is nothing of this kind in the book under review. Nor is this surprising when we know, as everyone now does, that our "M.P." is the representative of Yeovil, of whom so many stories, fast becoming legends, are told of his time at Oxford, whose intimate knowledge of Italy, Greece and the East (Near, Middle and Far) is well known to our readers. He was severely handicapped by a defective eyesight which would most effectually have prevented anyone less determined from taking part in the war at all. It is clear that it was none too easy for him to induce the authorities to overlook this defect or to take into account his numerous other qualifications. In fact, he whimsically tells us that the War Office, when told of his very unusual command of languages, merely said: "This must be an immoral man to know so many languages."

We first see Lieutenant Aubrey Herbert marching off to France with the Irish Guards on August 12, 1914. He is soon advancing towards Mons, and is then involved in the long retreat. "This whole retreat was curiously normal. Everybody got very sick of it, and all day long one was hearing officers and men saying how they wanted to turn and fight. I used to feel that myself, though, when one was told to do so and realised that we were unchaperoned by the French and faced by about two million Germans, it did something to cool one's pugnacity, and one received the subsequent order to retire in a temperate spirit." He had also plenty of opportunities of hearing very frankly expressed opinions about politicians. His fighting experiences on this occasion did not last long. On September 1, after a skirmish in which one of his fellow officers had been hit, he went to find him. He found him dead, but was himself wounded and taken prisoner. By the 11th the hospital where he was confined had been captured, and he was free again. On the 13th he was invalided home.

A bare month only, and yet the little picture he is able to give us, mainly from extracts from his diary, is a very vivid one, and brings out the spirit of the old Army and the mysterious unerpectedness of everything at the beginning of the campaign.

Our author was not long in getting passed fit, and we next find him in December, 1914, on his way to Egypt as an intelligence officer. His work involved much interviewing of prisoners. Some of the interned had had cruel luck. This is his story of an Albanian whose home had been in Montenegro:—"When the amiable Montengrins seized the land of the Albanians he had been beaten and cast out. Thence he had gone to Turkey, but the Albanians had been the first to attack the Turks, and were, indeed, the main cause of the ruin of the Ottoman Empire. So in Turkey he was bastinadoed and thrown into prison. Somehow he managed to escape, and arrived in Egypt. In Egypt he was arrested as a Turk, and again thrown into prison. In prison he was continually beaten by his fellow-prisoners, who were Turks, as an Albanian and an enemy of Islam." By April 25 he was landing on Gallipoli with the New Zealand troops, to which he had been attached. The following little touch brings home the terrible difficulties of that landing at Shrapnel Point. Our author remarked to a New Zealand officer: "Major, a soldier's first duty is to save his life for his country." The Major said: "I quite agree, but I don't see how it is to be done." With occasional short absences at Mudros, Tenedos, etc., and an enforced breather in Egypt, he was on Gallipoli till October, 1915. We have had many books on this campaign, and some of them have been very good. But this unpretending diary-narrative, avoiding picturesque writing, saying too little rather than too much of the horrors and incredible atmosphere of danger; deliciously human throughout, not forgetting to remind us at queer places of the natural beauty of the surroundings, seems to bring home the whole thing to one as nothing else has. His experiences, too, in the islands with their odd population of intensely doubtful neutrals, are specially interesting.

After some months of convalescence, our author was back again, this time as liaison and intelligence officer to Admiral Wemyss, Commander-in-Chief on the East Indian Station. This short spell of service took him to Mesopotamia in time to play a considerable personal part in the negotiations for the surrender of Kut, the details of which will be read with very great interest. Once more we have the vivid pictures of the country, its inhabitants, the combatants and the combat. Interspersed we find, as in the other sections of the book, illuminating little parentheses like this: "This campaign has taught me why we have been called *perfide Albion*. It's very simple. We embark upon a campaign without any forethought at all. Then, naturally, we get into extreme difficulties. After that we talk to the natives, telling them quite truthfully that we have got magnificent principles of truth, justice, tolerance, etc., that where the British Raj is all creeds are free. They like these principles so much that they forget to count our guns. Then, principles or no principles, we have got to retreat before a vastly superior force, and the people who have come in with us get strafed. Then they all say: '*Perfide Albion*,' though it's really nobody's fault—sometimes not even the fault of the Government."

We are glad to notice a hint that we may have a sequel to this delightful book in the shape of an account of Lieut.-Colonel Aubrey Herbert's experiences on the Adriatic Mission and in Italy. These should have a very special interest to readers of THE NEAR EAST, and we can only hope that they will not be too long delayed or be too discreetly edited.

C. S. W.

## II.—"IN THE REALMS OF GOLD."

This drama, written by Kalidasa in the fourth century, has been shortened and adapted for the modern stage by Mr. Kedar Nath Das Gupta. The English version, which is in blank verse, was acted in London in November of last year. There is an introductory essay by Sir Rabindranath Tagore, in which he explains the inner meaning of the lovely fairy-tale, and enlarges on Goethe's criticism—

> Would'st thou the young year's blossoms and the fruits of its decline,
> And all by which the soul is charmed, enraptured, feasted, fed,
> Would'st thou the Earth and Heaven itself in one sole name combine?
> I name thee, O Sakuntala! and all at once is said.

by showing how the first young love of Sakuntala and Dushyanta, the King of India, becomes, after misunderstanding and terrible sorrow, the complete and spiritual love of their reunion on the Golden Peak.

In a foreword, Mr. Binyon says that "fidelity to what is universal in Kalidasa has been sought for, rather than the reproduction of exotic beauties." His beautiful translation gives us the feeling that he is tiptoe-wary, holding his breath, and afraid of frightening away by even one wrong word the wonderful, elusive spirit that he holds captive just so long as the tale unfolds itself.

The actual scenes as they succeed one another are cunningly used to convey the emotions of the characters and to help in the telling of the story. The early love of Sakuntala and Dushyanta seems, for instance, actually to be expressed in terms of the trees, flowers, and wild creatures of the Forest Hermitage. It is made up of "Bird-song at morning and star-shine at night."

We feel that it is a real truth that Sakuntala utters when she speaks of the trees as "my silent leafy sisters."

Sir Rabindranath Tagore uses the comparison of Miranda with regard to Sakuntala's innocence and ignorance of life—but it was in the scene where the King, blinded by the spell cast upon him by the vengeful Durvasa, refuses to acknowledge or even recognise Sakuntala, that the thought of the women whom Shakespeare has created for us came most readily to the mind. The desperate tragedy of her feelings beneath her gentle, dignified words is so subtly and powerfully indicated.

Bound up with the drama of the development of love, which is at once simple and profound, we find two charming pictures of friendship. The close companionship of Sakuntala and the two girls, her friends, is described by the King:—

> What charm is in a friendship of one age,
> And all young; it is like a chime rung true.

The true anguish of tears of farewell sounds through their words when Sakuntala has set out for the Palace to claim her royal husband's recognition. There is also the friendship between Dushyanta and Mathavya, his companion and jester; in all their conversations we feel their very real mutual affection.

We should be deeply grateful to Mr. Binyon for having made it possible for us to encounter the deep truth of this ancient drama in a clothing of such right and exquisite words.

## CALENDAR OF THE WEEK.

**Showing Concordance of the Gregorian, Julian, Moslem, and Jewish Dates.**

| Gregorian (New Style). | Julian (Old Style). | — | Moslem. | Jewish. |
|---|---|---|---|---|
| 1920. July | 1920. June. | | 1338. Shawal. | 5680. Tamuz. |
| 1 | 18 | Thursday ..... | 14 | 15 |
| 2 | 19 | Friday ..... | 15 | 16 |
| 3 | 20 | Saturday..... | 16 | 17 |
| 4 | 21 | Sunday ..... | 17 | 18 |
| 5 | 22 | Monday ..... | 18 | 19 |
| 6 | 23 | Tuesday ..... | 19 | 20 |
| 7 | 24 | Wednesday ..... | 20 | 21 |

Princess Marie of Roumania has arrived in Paris from Vichy.

Sultan Fuad left Cairo on June 24 for Alexandria, where he will spend the summer.

Lieut.-Colonel the Hon. Edward Strachey has returned to 27, Cadogan Gardens, from India.

The Greek Minister moves to-day from 25, Knightsbridge, to the new Legation, 51, Upper Brook Street.

M. Virgil Tilea, Secretary to the Roumanian Legation, left London on June 25 for Bucharest, on leave.

Lord Allenby and staff have left Cairo for Alexandria, where they will remain for the summer season.

The King has given leave to Canon Arthur Jackson to wear the insignia of the Third Class of the Serbian Order of St. Sava.

The Dean of Rochester (Dr. John Storrs) has been delayed in his return from Jerusalem owing to inability to secure a berth.

The King of Roumania has conferred the Order of Michael the Brave (First Class) on Marshal Foch and Marshal Pétain.

Sir Stuart Fraser, upon relinquishing his appointment as Resident at Hyderabad, had the honour of being received by the King on June 25.

The King has given to Mr. Frank Hastings and to Mr. C. E. Fagan permission to wear the decorations conferred upon them by the King of Serbia.

The Rector of Sevenoaks (the Rev. John Rooker) is the new head of the London Jews' Society Mission in Jerusalem, and will leave for his new post some time in August.

Dr. Gray, formerly headmaster of Bradfield, has arrived in Bucharest, to advise the Minister of Public Instruction on the possibility of establishing English schools in Roumania.

Our Belgrade Correspondent states that Dr. R. Seton Watson ("Scotus Viator") has been splendidly received in the capital of Serbia, except by the Radical Party, which continues to attack him.

Having completed their course of anti-rabies treatment at the Pasteur Institute at Coonoor, states an Ootacamund (Madras) telegram, Sir George Lloyd, Governor of Bombay, and Lady Lloyd have left for Poona.

Sir Herbert Samuel is travelling viâ Rome, and has seen the Pope with the purpose of discussing matters connected with Palestine.

Sir Louis Bols, the head of the Military Administration in Palestine, held a farewell reception on June 22 at the Mount of Olives, when he received the heads of the Christian, Jewish, and Moslem communities. He left for England on June 29.

The Rome correspondent of the *Morning Post*, in a message dated June 24, states:—"The Count de Salis to-day conferred, in the name of the British Government, a British decoration upon Cardinal Camassei, late Patriarch of Jerusalem, for his services in the Holy Land. This is the only instance in which a British decoration has been given to a foreign Cardinal."

Authority has been granted by the King to Mr. Herbert Stanley Vaughan, Superintendent of His Majesty's Naval Victualling Yard, Malta, to wear the insignia of Chevalier of the Legion of Honour, which decoration has been conferred upon him by the President of the French Republic in recognition of valuable services rendered during the war.

On June 28, "Kossovo Day," the National Day of the Serbians, was commemorated at the Mansion House by a concert in aid of the Serbian Red Cross, under the special patronage of Queen Alexandra. It was presided over by the Lord Mayor. In the evening a "Kossovo Day" dinner was held at the Lyceum Club, presided over by Dr. Dickinson Berry.

## APPOINTMENTS, ETC.

The Governor-General in Council has sanctioned the creation of a temporary appointment of Fourth Additional Judicial Commissioner in the Central Provinces for eight months, with effect from July 1, and the appointment to that post of Mr. P. S Kotwal, barrister-at-law.

Mr. Charles Henry Harper, Chief Assistant Colonial Secretary, Gold Coast, has been appointed Chief Commissioner of Ashanti.

The appointment is also notified of Sir J. A. C. Bucknill, Chief Justice in the Straits Settlements, to be a Puisne Judge of the High Court of Judicature at Patna, in the place of Mr. Justice Atkinson (deceased).

## NEWS IN BRIEF.

A Consul, to superintend Czecho-Slovakian interests in India, has been appointed to Bombay.

The Indian Khalifate Delegation left London on June 24 for Paris, and later will proceed to Rome to place their case before the Italian Government.

Italian soldiers and civilians captured and held prisoners by rebel tribesmen in Tripoli on June 8 have been released, and have arrived safely at Azizia.

By Royal decree the Y.M.C.A. physical director in Greece has been made the head of the Department of Physical Education in the Greek Army.

Lord Robert Cecil has received from the Committee of the Albanian colony in Turkey a telegram of thanks for his efforts in the cause of Albanian unity.

Khan Khoiski, Azerbaijan Minister for Foreign Affairs in the Government which held office before the Bolshevist invasion, was murdered at Tiflis on June 24.

Sir Herbert Samuel, High Commissioner for Palestine, has contributed £100 to the Jewish war memorial fund, which has reached £138.000. It is proposed to raise £1,000,000.

The Government of India has decided to extend the Army of Occupation bonus, which ordinarily should cease in August, to British soldiers who have not elected to draw the new rupee rate of pay.

Six men found guilty of having placarded proclamations in Jerusalem have been sent by the British authorities to Malta, and forty others to Acre.

M. H. Charles Huszar, a former Hungarian Premier, has arrived in Paris, and will proceed to America in order to deal with the question of the Hungarian prisoners still in Siberia and Turkestan.

Greece has requested Bulgaria to send representatives to Salonika, to constitute a commission for the repatriation of prisoners. There are 348 Greeks still in Bulgaria and 9,548 Bulgarians in Greece.

King Ferdinand of Roumania, in opening Parliament, said its immediate task, apart from ratification of the treaties, was to pass the Budget and to establish peasant properties in the new provinces on the same basis as in the old kingdom.

The Roumanian Military Attaché has issued a summons to all Roumanian male citizens born in the year 1899, or in previous years, to report themselves to the Recruiting Committee, which will sit at his offices, 3, Marble Arch, on July 5, 7, and 9 next.

A Treaty of Peace has been signed between Georgia and Azerbaijan, whereby Georgia is to retain the Province of Tiflis and the Poly and Kram bridgeheads, and will continue to occupy the Zakatoly region, the fate of which will be decided later by a Commission composed of delegates from both Republics.

The Zionist Organisation informs us that a colony bearing the name of the veteran Zionist leader Dr. Max Nordau is to be established in Palestine. For this purpose a flag day is to be held in London on Sunday, July 4, when the streets will be paraded by an army of Jewish women in the national colours of blue and white. The flag day is under the auspices of the Jewish National Fund, established in 1901 for the purpose of acquiring land, which is to remain the inalienable property of the Jewish people. Contributions to this fund are received in the coins of all countries.

## CENTRAL ASIAN SOCIETY.

### Annual Meeting and Lecture on Arabia.

The anniversary meeting of the Central Asian Society was held last Wednesday, Lord Carnock (Chairman) presiding. The Hon. Secretary (Lieut.-Col. A. C. Yate) read a most encouraging report for the past year. The Chairman and Hon. Secretary were reappointed. The Hon. Treasurer (Brig.-General A. C. Railward) retired, and was replaced by Sir Edward Denton. General Sir Edmund Barrow and Col. Sir Francis Younghusband were added to the list of Vice-Presidents, and Mr. St. J. B. Philby, Sir Morris de Bunsen, and Sir Reginald Wingate were elected Members of Council.

The Chairman said it was due to the unbounded energy of Colonel Yate that they been able to have so many interesting and instructive lectures during the past season, and were now fully engaged arranging a programme for the next one. The Council had contemplated increasing the members' subscriptions, but it was hoped to avoid this. The best way to avoid it would be to get new members, and he appealed to his hearers to do all they possibly could in this direction.

Afterwards Mr. St. J. B. Philby read an interesting paper on the economic and social conditions of Arabia. He said that a cardinal fact to bear in mind, when considering problems arising in the Arab world, was the existence of a great highway of human migration beginning in south-west Arabia and ending in the plains of Mesopotamia. The Arabs had a proverb that Yemen was the cradle of their race and Irak was its grave, and this was true. The migrations of the Arabs began in the southern highlands, and followed the Wadi Dawasir to Kharj in Central Arabia. There the route spread out in a fan shape to Mesopotamia on the one hand and Egypt on the other, with Palestine and Syria between. These radiations, together with the roads to Mecca and Medina on the one side and to Koweit on the other, constituted the commercial highways of Arabia. An evolution of the Arab race could be traced in its migration from the Yemen to Mesopotamia. In the south-west the people were still in small primitive tribes; about Kharj they began to be combined in larger communities. Beyond Kharj the race began to be tainted by foreign influences. There was a general movement by which the nomadic and Arab groups gradually left the Yemen farther behind them, and at last settled down as cultivators in the plains of Mesopotamia. It was to Arabia we should look for a population to cultivate Mesopotamia when it was developed. Inter-tribal fighting had been greatly reduced; if it could be stopped altogether, and at the same time infant mortality brought down to a reasonable figure, Arabia would have a surplus population to be provided for.

Among many other points mentioned in the course of a very lengthy address was the existence of a negroid element in Arabia. These people are the descendants of conquerors who came over from Abyssinia in pre-Islamic days, but their status now is that of a peasantry cultivating the lands of Bedouin owners—the Arab himself regarding agriculture as a servile occupation, and preferring to occupy himself with the breeding of camels or sheep. The most striking characteristic of Arabs anywhere, said Mr. Philby, is their love of liberty and independence. He was in Baghdad when the proclamation was made that Britain intended to establish a free Arab state, and was able to note its effects. If the Arabs had a free choice now, it would be for independence as against any domination, and if they had to submit to a foreign ruler they would prefer Turkey to Great Britain.

## TOPICS IN PARLIAMENT.

*The subjoined headings are those given in the official report*:—

MESOPOTAMIA: Oil Concessions.—British Forces. PEACE TREATIES: Bulgarian Prisoners of War.—Turkey. PALESTINE: High Commissioner. ADEN PROTECTORATE. ALBANIA: British Representative.—Chimara. INDIA: Railway Officials (Pensions).—Bombay (Residential Qualification).—Bengal Presidency (Legislative Assembly).—Brigadier-General Dyer.—Caliphate Delegation (Syad Hussein). (June 21.)

PERSIA: Anglo-Persian Agreement.—Tariff. MESOPOTAMIA: Mosul, Disturbances.—Administration (Arab Notables).—Administration. JERUSALEM DISTURBANCES. INDIA: Kut Prisoners (Officers' Allowances).—Afghan War, 1919. CILICIA (ARMISTICE). MALTA: Shipping Facilities.—Mail Deliveries. (June 22.)

INDIA: Coal Mines (Accidents).—Public Works Officers (Pay).—Punjab Disturbances.—Royal Indian Marine (Officers, Leave Pay).—Chaplains (Bonus and Leave).—Army Mechanical Transport. MESOPOTAMIA: Administration.—British Policy. PEACE TREATIES: Syria (The Emir Faisal).—Montenegro. MESOPOTAMIA: Statement by Prime Minister (June 23).

EGYPT (NILE PROJECTS COMMISSION). TURKEY (BOZANTI). LEAGUE OF NATIONS. Armenia. OIL (MESOPOTAMIA). MONTENEGRO. PEACE TREATIES: International Commissions.—Turkey.—Persia (Excavations). RUSSIA: Soviet Government and Persia (Peace Negotiations). TURKEY. (June 24.)

INDIA: General Dyer. (June 25.)

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
**SMEDLEY'S HYDRO.**

**TORQUAY**
**VICTORIA & ALBERT HOTEL.**

***Cairo's Hotels de Luxe.***

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

**THE ONLY ENGLISH HOTELS IN ALEXANDRIA.**
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

**SUMMER PALACE HOTEL,**
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant.
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.

THURSDAY, JULY 1, 1920.

## THE FUTURE OF MESOPOTAMIA.

Ministers have at last been compelled, or, as Lord Curzon prefers to put it, have graciously consented to break their silence with regard to the future of Mesopotamia, as they conceive it. The mandate for both Palestine and Mesopotamia was conferred at San Remo by the unanimous vote of the Allied Powers on Great Britain, and accepted by the British Government at the same time as the mandate for Syria was conferred upon and accepted by France. The mandate for Mesopotamia, to which our remarks to-day must be chiefly confined, was then drawn up in a provisional form, and—Lord Curzon bids us observe—spontaneously submitted to the Council of the League of Nations. Article I. of the Mandate provides for the framing of an Organic Statute in consultation with the people of Mesopotamia, and to that effect a native Government, with an Arab President at its head, is to be constituted, and a popular assembly representative of, and freely elected by, the people to be called into being as soon as Sir Percy Cox, who is on his way home from Teheran, returns to Baghdad to resume charge—as none could be more fitted to do—during the period of transition. Lord Curzon had no difficulty in disposing of Mr. Asquith's suggestion that we should withdraw definitely from the greater part of Mesopotamia, and merely hold Busreh, and the valley of the Shatt-el-Arab up to the confluence of the Tigris and Euphrates at Kurna. Even if any natural frontier existed which could be drawn and held to suit Mr. Asquith's contention, this country cannot accept a mandate for Mesopotamia and then leave an embryonic native Government to shift for itself from the hour of its birth over vast territories in which we destroyed the only authority that, however evil its methods, had at least hitherto held them together until we sent the Turks packing. Not the least convincing of the arguments put forward by Ministers for the retention of Mosul was the desire unanimously expressed by the population to maintain, though in a new form, the close connection which had existed between them and Baghdad from the days at least of the Arab Khalifate. Mr. Lloyd George also whispered oil, but Lord Curzon never mentioned that inflammatory factor, and preferred to lay stress on the necessity of protecting the great plains of Mesopotamia against the incursions of such unruly neighbours as it has, unfortunately, pleased Providence to place in possession of the rugged mountains of Kurdistan. But it is useless to shirk the oil question. It is no secret that when the Sykes-Picot agreement was initiated, Mosul was assigned to the French zone, in order to avoid any ultimate contact anywhere between the spheres of British and of Russian influence as they were then respectively contemplated. With the collapse of Russia those considerations disappeared, and our French allies recognised that the frontiers which have now been drawn afford a more reasonable solution, as between us and them, of the military, political, and economic problem raised by the reorganisation of the Arab provinces released from Turkish rule. The French, however, not unnaturally, insisted that they must retain an interest in the oilfields of Mosul, which are relatively of more importance to them than to us, as France at present possesses an extremely small share of her own in the oil supplies of the world. Attempts are being made to create a prejudice amongst the masses against this part of the Anglo-French agreement by representing the exploitation of the Mesopotamian oilfields as ministering solely to capitalistic greed. But where, it may fairly be asked, would the great European industries be if opportunities were to be thrown away of opening up fresh supplies of a natural product that is growing every day more essential to the maintenance of many of our greatest industries?

With the programme unfolded by Ministers for the exercise of our mandatory powers in Mesopotamia, we are not, therefore, in the least disposed to quarrel, nor shall we stop to inquire how far the principles which inspire it can be reconciled with the policy we are pursuing in the discharge of similar mandatory powers in Palestine. We cannot, however, help regretting the tendency of Ministers to disguise the tremendous difficulties which this country must make up its mind to face in the execution of that programme for a very long time to come. The whole population of Mesopotamia falls short of three millions, and, except in the matter of language, is by no means homogeneous. It is perhaps the most backward of all the Arab populations rescued from the Turkish yoke. It is scattered over a very large and unsettled area. Revenue, though, as has already been shown, capable of considerable expansion under a vigorous and honest administration, must continue to be slender, until a large expenditure of capital and years of intelligent labour have begun to restore the land to its old fertility as one of the granaries of the world. The native elements out of which an autonomous government and an adequate civil administration are to be created are even more scanty than those out of which an indigenous force for the maintenance of public security—let alone the defence of the country against external aggression—can be raised. We do not in the least wish to see Mesopotamia "Indianised." But our difficulties will certainly not be diminished if we are precluded from drawing upon India for the assistance which an indigenous Government and administration—with or without "King" Abdullah—must need for a long period until they are able to stand on their own legs.

Similar considerations apply to the composition of the Army of Occupation. Its withdrawal cannot be at present even within distant sight, unless we are to risk not merely the total collapse of the whole structure we contemplate, but the wrecking of the very foundations on which we hope to erect it. The Army of Occupation—including a small portion still located in Persia—consists to-day of 13,500 British and 66,000 Indian troops. It is preposterous to imagine that such a force or even half that force can be maintained without drawing very largely upon India. In some quarters it is urged that aeroplanes and armed motors can supplant to a great extent the use of infantry. But armed motors would be quite useless for operations in the event of trouble with the hill people of Kurdistan, a region as rugged as the North-West frontier of India and in some respects even more difficult, and experience has already shown that the chiefly moral impression at first produced by aeroplanes over mountain fastnesses very soon wears off, whilst even in the plains of Mesopotamia the unparalleled heat that prevails there during the summer months substantially impairs their usefulness. The security of Mesopotamia and the prospect of establishing a stable order of things under an indigenous Government, and, therefore, of any material reduction of our Army of Occupation, must depend mainly on the restoration of peace throughout the whole region of the Near and Middle East, of which Mesopotamia is only one of the many component parts. Space does not allow us to pursue this point further than to state our conviction that all our most admirable plans with regard to Mesopotamia will be of no avail unless the Allies reduce Turkey to submission, and unless we can save Persia from the menace of Bolshevism which is gathering up against us there—as also in Turkey—all the fanatical elements of Pan-Islamism masquerading under the cloak of nationalism. Both the Prime Minister and the Secretary of State for Foreign Affairs—and especially the former—seem to deal with Mesopotamia as if it could be regarded as sitting in a water-tight compartment of its own. They may find it convenient to do so for Parliamentary purposes, but, unless they recognise that a Mesopotamian settlement can only be achieved if and when a settlement of the whole Middle and Near East is achieved, they and the country will have a rude awakening.

## ALBANIA AND THE POWERS.

**By Lieut.-Col. the Hon. Aubrey Herbert, M.P.**

Most Englishmen who have been much in Italy end, if they do not begin, by loving the country and its kindly people. This affection is deeper in the case of those who, like the writer of this article, have had the honour of serving with the Italian troops during the war. An Italian who had friends both in Ireland and in England would probably find it painful to express himself frankly to an Englishman on British policy in Ireland. An Englishman finds the same difficulty in speaking of the fight between Italy and Albania. But it is not the Italian people; it is a section of Italian politicians, who are carrying on the worst traditions of the old world. The heart of the Italian people is not in the present war with Albania, for this war is a contradiction of every ideal for which Italy has fought in the Risorgimento. It does not even possess the ancient title-deeds that, while they cannot make imperialistic annexations just, can sometimes give them a venerable appearance.

Between Great Britain and Italy there is an old tradition of friendship; between England and liberty there has been a yet older alliance, that has weathered all storms until the Peace of Paris. General Botha is said to have characterised the Peace Conference as a thieves' kitchen. It is certain that, while we gained materially much that we had not fought for, as, for instance, the island of Nauru, we lost or had stolen from us the justice and freedom for which the mass of our people had fought. Oil and not ideals now dominates our policy. While we grasp at the oilfields of Mesopotamia, we can hardly lecture Italian politicians on the immorality of their attempt to obtain the mines and forests of Albania.

Great Britain, in the past, might have offered her friendly offices to put an end to bloodshed. To-day this course is not even urged upon the Government by the Press. Times have changed. Byron was not the only Englishman who fought for Greece (and, incidentally, Albania). David Urquhart's Manchester Committee of working men strove unceasingly for decency in foreign politics. The very heart of England was stirred by Garibaldi, and yet, to-day there is no voice raised to support the cause of this small country.

This, surely, is a truthful picture. Albania, with numerically the smallest population of the Balkans, is surrounded from the north, the east, and the south by enemies. She is at war with her great neighbour, Italy, but Albania has neither the fleet nor the aeroplanes with which to attack her enemy. She has only that gallant spirit with which Italy fought for the freedom of her own soil, some rusty guns and a few modern weapons that the enemies of Italy have supplied.

That, then, is the picture: a small country attacked upon all sides, but where, in similar circumstances, the Belgians were heroes, the Albanians are rebels; where Belgium is to receive compensation, Albania is to be partitioned. Even so, it might have been expected that this unequal struggle should have received some attention, but clamorous appeals are reserved for the gentleman who has a balance at the bank.

The proverb says that it is darkest before dawn, and the proverb may be right. The Italian people is generous and is opposed to the bullying of small peoples. It is also extremely clever. Putting aside the question of morality, the policy of annexing a hornets' nest is not intellectually convincing, and Italy has too many difficulties to wish to add to them. A country with her history must naturally be sensitive to the weakness of her own defences. It was this knowledge that drove her to claim the present northern frontier, and it is this knowledge that has made her desire to possess the harbour of Valona, which, in enemy hands, would constitute a grave danger to her defenceless coast. This difficulty is not insuperable. The Albanians have no fleet, and would readily agree to the neutralisation of their coast. If guarantees to this effect were given, Italy would be safe and free from the obligations that will fall upon her shoulders if she steps across the Adriatic.

The Albanians themselves have shown the way out. They have asked to have their independence recognised and to be placed under a mandate of the League of Nations. This is not the place to discuss that vexed question. It is sufficient to say here that, whatever the defects of the League may be at the present moment, it, and it alone, has the potential machinery to settle the Albanian question satisfactorily. It alone can extricate all the Great Powers involved—England, France and Italy—from their various dilemmas.

In the unlikely event that Italy decided to take up the rôle of Austria in the Balkans, she would be courting disaster. It is, on the other hand, difficult for her to retire from the present position without a loss of prestige that is more apparent than real. A mandate, under the League of Nations, assuring to Albania her independence and securing to her the resources of her own soil is no defeat of Italy, but would be a victory for those moral principles of which the Supreme Council have so often spoken cordially. Indications are not wanting that, with some observations, this may well be the opinion of Signor Giolitti.

## THE CASE OF RAHMI BEY.

Our attention has been drawn once more to the strange treatment of Rahmi Bey, formerly Vali of Smyrna, who is now confined in Malta. It may be remembered that we have referred to the case of this official on more than one occasion, and that numerous correspondents have expressed surprise and indignation that the kindness he showed to our fellow-countrymen, and to British subjects generally, during the war, should be rewarded in such strange wise. We have not space to go into details of the story here, but it is a fact, established on the evidence of trustworthy witnesses, that Rahmi Bey saved the lives of most, if not all, the British in Smyrna more than once; that in direct defiance of orders received from Constantinople he refused to send them to "unhealthy" places, mistaking or ignoring his instructions, at no little risk to himself; and that he showed British and French subjects extraordinary kindness in many other ways and on many occasions. We understand that he received a special letter of thanks from H.M. Ambassador in Athens for these things, and we know that many Englishmen speak of his fine qualities in terms of the highest praise and with obvious gratitude. It would be interesting, therefore, to know why Rahmi Bey is detained in Malta, where he is known to be extremely unhappy, instead of being either set at liberty unconditionally—which would surely be no great recognition of our debt to him!—or allowed to remove either to London or to Paris on parole, which would at least afford him a welcome change. We have heard one explanation of the mystery, but we hesitate to accept it, and, in any case, it is no excuse for such shabby treatment of a generous foe. If Smyrna was a disappointment to the British, or to certain British officials, Rahmi Bey was not to blame for that. For our own credit we have now to remember only his goodness to our countrymen in their hour of need; and we hope that the British Government will see to it that he is at least removed from Malta without further delay. To allow spite, whether personal or national, to stand in the way of right can only bring discredit on us.

## CYPRUS AND RHODES.

A Cyprus correspondent writes:

The "Cyprus question" is now coupled with that of Rhodes, the Greek advocates of "union" being now fully persuaded that, as an outcome of circumstances which the influence of M. Venizelos has done so much to bring about, the fate of the one island is bound up with that of the other. Some years ago it was "sister Crete," still under Ottoman rule, that was watched in much the same way. Articles in the local Greek Press now deal with the subject from a fresh point of view. It is now argued that England, who favours the growth of a strong Greece in view of changing distributions of sea power, as possibly affecting the balance of forces in the Mediterranean, cannot but give a lead to Italy in the direction hoped for. Italy, in this matter, waits on British policy, and would at once retire from Rhodes should Britain evacuate Cyprus. M. Venizelos is said to have mentioned, for some time past, a period of five years within which the change is likely to take place. The cession would be conditional upon stipulations that would safeguard British interests.

## SOUTH-WEST ABYSSINIA.

On June 21, lecturing at the Æolian Hall before the Royal Geographical Society, Major L. F. I. Athill described a journey that he made through South-West Abyssinia and the British territory contiguous to it until he reached Mongalla, on the Nile. The occasion was to indicate to the Abyssinians where the boundary ran between their country and the British territory adjoining. Addis Abbaba, from where he started in January, he described as a fine place, founded by Menelik in 1892, and connected with the coast by a railway. The first geographical feature he encountered was the Hawash, one of several great Abyssinian rivers which never reach the sea. Where he crossed this river it runs through a rich, well-cultivated plain. It is spanned by two bridges: one of these, of iron, carries the railway previously mentioned. Leaving the Hawash and climbing up the watershed which divides it from the Omo, he found a very attractive country—a succession of parallel valleys running from north to south and separated by rounded spurs. On these spurs were the homesteads of the Gallas peasants, their huts rising through the rich cultivation. On the lower slopes were a great number of cattle with many varieties of horns. The Abyssinian herds are largely due to raiding, hence almost every kind of African cattle is represented in them. The Gallas farmers Major Athill described as very like English farmers; their chief desire is to have nothing to do with politics. The Abyssinians are only in the country as officials; they draw no pay, but work very hard, collecting dues for their overlord and intriguing to make money for themselves. One great form of intrigue is to get people involved in lawsuits, from which they can only escape by bribing the Abyssinian official.

Where Major Athill crossed the Omo he found it 300 ft. wide and 2 ft. deep, running between banks 20 ft. high, with flood marks almost to the top. He said this was one of the world's great wasted rivers. Its waters were not employed either for irrigation or for power; part of its course was still shrouded in mystery. It emptied into Lake Rudolf, and in connection with that lake made a fine artery from British East Africa to the richest part of Abyssinia.

Other places visited in the journey included Jimma, an autonomous province under a Moslem ruler. Major Athill described this as a most beautiful country, with streams full of fish, shady copses, and water meadows, so that it was hard to believe he was in Africa only a few degrees north of the Equator. The crops included maize, millet, barley, some wheat, lentils, and other legumes, and a sort of arrowroot. The country was better administered than the rest of Abyssinia.

Besides delimiting the frontier Major Athill explored part of the northern shores of Lake Rudolf; but when his task was completed the rains had fallen and made it impossible for him to return. The country to the west was the land in which the Abyssinian rivers are lost; in the wet season a swamp, in the dry season a land where water cannot be found even by digging in the beds of the rivers. But he was fortunate in being there just at the moment when the country was dry enough for travelling, while some pools of water yet remained. He set out on his journey, and travelled on until he met a small Sudanese force that had been sent to relieve him.

---

The Zionist Organisation sends us the following information:—A Zionist Conference of exceptional importance will be opened on Monday, July 5, at the Memorial Hall, Farringdon Street, E.C., and is expected to last two weeks. It will deal with practical questions relating to the revival of Palestine, and the principal subjects to be discussed will be large scale colonisation and the organisation of immigration. Some 200 delegates from all parts of the world will attend. One of the most important delegations comes from America and includes Mr. Justice Brandeis, of the United States Supreme Court, the Hon. Nathan Straus, the well-known philanthropist, who is subsequently going on to Palestine, and Mrs. Fels. Lord Rothschild is one of the English delegates.

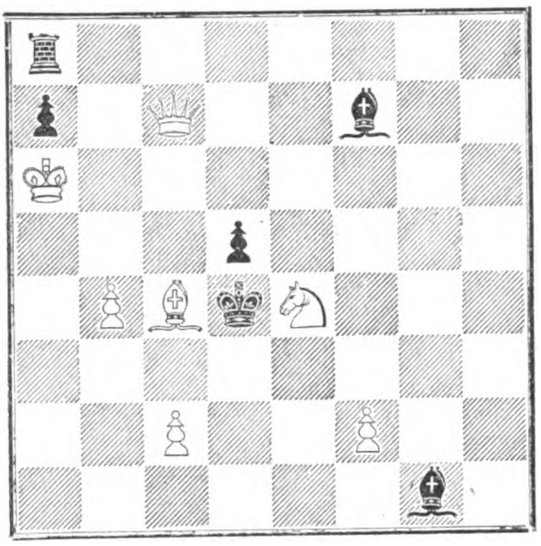
## CHESS.

PROBLEM No. 21.

Black.



White.

White to mate in two.

The above problem, by Mr. Murray Marble, was awarded one of the prizes in a competition held by *La Strategie* in 1908.

The Veles (Uskub) tournament has been postponed till next year, while the Gothenburg Chess Congress has been postponed until August 1.

Mr. F. D. Yates, who holds the British championship, is now living in London, and will presumably take part in some of the chief events next winter.

The announcement by Dr. Emanuel Lasker in the Amsterdam *Telegraaf* that he has written to Señor Capablanca resigning the title of champion in his favour has been received by the chess world with great surprise. It was understood that a match was to take place between these masters next year, and there will be considerable regret at the abandonment of this contest. Dr. Lasker's action in designating his successor to the title, which he has held for twenty-six years, creates a precedent. No one, however, will question the right of the brilliant Cuban to the championship.

CABO-KANN.

---

A huge Zionist demonstration will be held at the Albert Hall on Monday evening, July 12, when one of the speakers will be Mr. Balfour, who as the author of the famous Declaration of November 2, 1917, is sure to receive a rousing reception.

It is understood, says *The Times*, that the new postage stamps of the Kingdom of Hedjaz printed at the Sultan's own printing office at Jeddah are already in use. True to the prescripts of the Mohammedan faith their designs do not contain any imagery, but are composed, as before, of finely-wrought Arabesque ornamentations. Another notable new issue comes in the form of permanent postage stamps for Armenia, printed in Paris, with picturesque vignettes of Mount Ararat, a native ploughing, and an Armenian woman spinning.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

I learn that the Directorate of Industry and Commerce for Bessarabia desires to be placed in communication with United Kingdom manufacturers and merchants of (1) all kinds of machinery and accessories, together with the other necessary equipment for the manufacture of bricks, tiles, slates, pots, and other articles manufactured from fireclay or pottery clay; (2) machinery for making cements and super-phosphates; (3) coal-mining plant; and (4) plant for extracting salt from sea water. I trust that firms concerned will not be slow in taking advantage of this invitation, which should open up the way for permanent business. It should be noted that replies should be in French, and should be addressed to the Directoriatul de Industrii si Comertiu al Basarabiei, Chisinau.

***

From the details given by our Correspondent this week it will be seen that, as was feared, the recent rains in Greece have caused widespread damage to crops and vines in many districts. Climatic conditions in the Balkans this spring have been extremely favourable, and in Greece, as elsewhere, excellent crops were anticipated. There is now, unfortunately, no prospect of anything but an indifferent yield in the affected districts, as it is estimated that the damage to crops ranges from a loss of from 20 per cent. in Crete to one of 70 per cent. in certain districts of Aetolia and Acarnania. There will be much sympathy with Greece in this misfortune.

***

The latest statistics regarding the development of the French Protectorate of Morocco illustrate very clearly the remarkable character of the work accomplished by our ally in that country in the space of a few years. Last year the area under cultivation was about 6,000,000 acres, as against 2,500,000 acres in 1912. The growth of communications is even more striking. There were six miles of roads in 1912, but by 1919 there were 1,500 miles. Progress in railway construction has also been considerable, though naturally not in anything like the same proportion, and developments in this direction have been to a great extent postponed on account of the war. When the programme of construction has been carried out, however, Morocco will be admirably situated as regards transport facilities. The development of agriculture and the extension of communications have naturally brought a great expansion of commerce, exports rising from £2,680,000 in 1912 to £8,280,000 in 1919.

***

The position with regard to Roumania's crops is, I understand, fairly good. According to a report which has just arrived, there are only two districts in which the outlook appears to be at all unfavourable, this being due to drought, which affected the autumn sowings. Elsewhere the sowings are said to promise good crops. It is satisfactory to note a reference in the report to the great activity in the fields, indicating as it does the undertaking in earnest of the work of reconstruction. It is only by hard work that the adverse exchanges can be remedied, and the evidence to hand suggests that this lesson is now being vigorously applied.

***

I am informed that there is an apparent recrudescence in Smyrna and Constantinople of the kind of fraud associated with the exploits of the notorious "Black Band" before the war. The system is to send samples of goods to firms in this country and elsewhere, priced at most favourable rates, the terms of payment being 75 per cent. of the value against documents. Bills of lading bearing the name of a reputable shipping firm, of which they have had a number privately printed, are filled in in the ordinary way, insurances are effected, and the papers are sent to the consignee for payment of the 75 per cent. Of course, the goods are not consigned, and enquiries elicit the fact that the firm is non-existent. The obvious remedy against this kind of thing is for firms to assure themselves of the status of the firm sending samples before entering upon any transactions.

The visit to this country of representatives of the republic of Georgia for the purpose of promoting economic relations between the new State and Great Britain should afford further proof to the business community here—if such be needed—of the great scope now existing for British trade enterprise in the Near East. As in the case of so many other countries in that region, Georgia particularly desires to establish trade relations with Great Britain. Her main requirements include machinery for agriculture, tools, piece goods, and leather goods, and in return she is in a position to export great quantities of raw materials such as manganese ore, copper, iron ore, cotton, silk, and timber. The country, according to a recent report, now shows signs of progress and prosperity everywhere, and there is little question that in time it should be a most promising market.

***

The statistics of the shipping of different countries passing through the Suez Canal in 1919 make very interesting reading. The total net tonnage amounted to 16,013,000, of which the British total came to no less than 11,355,000 tons. Our nearest competitor was Japan with 1,449,000 tons, the next highest figure being 754,500 tons. In view of the fact that this was the first year after the war, the superiority of British shipping is extremely gratifying. But the fact must not be overlooked that there is still much ground to be covered before the pre-war position is regained, and that some competitors are now in a much stronger position than they were then.

***

According to information which has just reached me, Italian business men are evincing great interest in the development of Roumania's forests, and one of the leading Italian financiers is, I understand, negotiating with the Roumanian authorities for the acquisition of some of their principal forests. Whether any business is likely to result it is impossible to say, but it may be noted that our Roumanian Correspondent, in a despatch which will be found elsewhere in this issue, refers to the great reluctance of the country to grant concessions. In general, of course, that policy is sound, and the Roumanians are no doubt actuated by the fear that foreign undertakings may benefit unduly by the development of the country.

***

The report of the Egyptian Hotels, Limited, for the past year shows a considerable increase in profits at £58,736 as against £35,540 for the previous year. The available balance, after providing for the charges payable in London and Cairo, debenture interest, and depreciation, is £60,950, which it is proposed to utilise to pay a dividend of 5 per cent. on the preference shares, and one of 25 per cent. on the ordinary shares, to place to special reserve £15,000, and to carry forward £8,950.

# Commerce and Industry.

(Reports from Our Own Correspondents.)

## GREECE.

Athens, June 11.

### Damage Caused by Rains.

It is now evident that the recent rains in Greece caused enormous damage to the cereal crops and vines in many districts, and the outlook is very gloomy indeed. In the province of Achæa and Elidos the entire vintage and crops of fruit have been destroyed. In one district alone the loss amounts to many millions of drachmæ. In the province of Arcadia the vintage and cereal crops have been ruined on an area of more than 5,000 stremmas.

In certain districts in Ætolia and Acarnania 70 per cent. of the crops have been totally destroyed. Thessaly has not suffered as heavily as the other districts, though the loss in the province of Carditsa and Tricala varies between 20 per cent. and 30 per cent. Hardly any damage was done in Larissa. In Eastern Macedonia the loss amounts to about 30 per cent. of the total production. The consequences of the rain in the islands are not very grave, with the exception of Crete, where at Candia more than 20 per cent. of the crops perished.

### Rainfall in Athens.

The Observatory of Athens has just published statistics of the rain which fell in Athens during the last two months, showing that there were eight rainy days in April and twelve in May. The rain during these two months has reached a height of 88.3 millimetres, which is about 14 millimetres more than the normal height for the whole summer season.

### More Paper Money.

A new banknote of 50 lepta has been issued by the Government. The value of the paper money issued represents five million drachmæ, and the size of each note is slightly larger than that of the existing 1-drachma note. On the one side there is an impression of Minerva carrying the Victory, whilst on the reverse there are three impressions of ancient Greek figures. These new notes, which were printed at M. Aspiotis' works in Corfu, will be put into circulation very shortly.

Athens, June 19.

### Increase in Price of Bread.

The Government has increased the price of bread by 40 lepta per oka for the first and by 20 lepta for the second quality. The existing stocks of flour in Greece will suffice for the supply of bread until the end of December. In view, however, of the world crisis in the production of cereals the Government is thinking of introducing very shortly a bread made of wheat and maize.

### Production of Olive Oil in Smyrna.

An abundance of olive oil is anticipated this year in the regions of Smyrna and Aivali. Dealers in oil have requested the Minister of Supplies to allow them to export certain quantities abroad. The Minister has, however, declined to grant any such permission. The exportation of olive oil from the island of Corfu has also been prohibited, in spite of the abundant production.

## ROUMANIA.

Bucharest, June 12.

### French Service to Danube Ports.

It has lately been advertised in the *Bulletin d'Information de l'Office Commercial Français* that the Frassinet Company have organised regular sailings between France and Roumania. The present arrangement is that a boat will sail once a fortnight from Marseilles, reaching the Danube in about ten days. The time-table is as follows: Marseilles (depart) Thursday; Genoa, Monday; Dardanelles, Saturday; Constantinople, Sunday; Bourgas, Monday; Varna, Wednesday; Sulina, Thursday; Galatz, Saturday; Braila (arrive), Saturday. The return journey is Braila, Wednesday; Galatz, Wednesday; Sulina, Thursday; Varna, Friday; Bourgas, Saturday; Constantinople, Sunday; Dardanelles, Tuesday; Genoa, Sunday; Marseilles (arrive), Tuesday.

### Petrol Production in 1920.

Up to the present only 215,000 tons of petrol have been produced in Roumania this year—that is to say, 53,000 tons less than for the corresponding period of last year. Of this 166,000 tons have been produced by the Prahova district, 27,000 tons in Dambovitza, 10,500 tons in Buzeu, and 10,600 tons in Bacau. The decrease in production has been due to constant strikes among the workmen.

### Outlook Promising.

The weather for the last few weeks has proved extremely favourable for the crops, and the peasants are still busy sowing late spring maize. There is, therefore, every hope that the export trade may before long be more freed, and as a natural consequence that the national currency will tend to rise steadily. It is rumoured that the first consignment of the locomotives ordered from America are already on their way, and an improvement in transport will be the first thing to advance the business of the country.

There is a strong prejudice in Roumania against allowing foreign capital to acquire any important interests in her wealth, and many offers of help towards reconstruction in exchange for certain concessions have been refused.

### Co-Operative Congress.

An important congress of the town co-operative societies was held on June 7 at the University, at which delegates were present from the Old Kingdom, Areal (Transylvania), Bucovina, and Bessarabia. M. Tranco-Iassy, the Minister of Labour, presided, and in the course of his speech emphasised the importance of these societies as a means of assisting in the economic reconstruction of the country. He promised the full support of the Government to the co-operative movement, and said he would endeavour to obtain an advance of capital from the National Bank.

Bucharest, June 18.

### Company for Oil Distribution.

One of the chief topics of this week is the formation of a private Roumanian company called the "Industria Romana de Petrol," to which a concession has been granted for five years by the Ministry of Industry and Commerce

Digitized by Google

for the distribution of all oil products within the kingdom. This company has been formed by eight Roumanian engineers, each of whom has undertaken to contribute 12½ million lei, making a total capital of 100 million, of which 30 per cent. is to be deposited at once. This company will be under the control of the State, and a decree-law has just been published defining its rights. By this law all forms of petrol products necessary for home consumption, which have hitherto been distributed by private societies, will in future be distributed by the State by means of the above organisation under the Ministry of Industry and Commerce. All means of transport and all storage vessels —*i.e.*, conduits, cisterns, tank waggons, camions, etc., used for home distribution—are declared at the disposal of the State. Before the war the home distribution was organised by the Steaua Romana, which formed a subsidiary company called "Distributia" for this purpose. Both these companies, being run mainly on German capital, are now in liquidation, and all their distribution plant will become State property and will be put at the disposal of the new company in return for a corresponding value in shares. The difference between the old and new arrangement is that the "Distributia" was worked on co-operative lines and controlled in its working by the various companies who contributed petrol products for the home market, whereas the new company is entirely independent of the producing companies, and is in a position to make large profits at their expense.

There has been an epidemic of new companies under State control this week. Amongst others, a limited company has been formed for the organisation and financing of reconstruction work in the war-ravaged parts of the country. This ought to bring many benefits. Altogether the prospects for Roumania are looking bright at the moment. A strong, popular, and energetic Government has come into power, the weather has been most favourable for the coming grain crop, exports of grain, etc., are beginning again, though all State-controlled, and the value of the leu has risen by one-third within the last month.

## CYPRUS.

NICOSIA, June 9.

**The Weather.**

Summer has set in. There have been some more and unusually late storms. The torrents have come down in full flood. A gale uprooted olive and other trees in one locality: in another a shepherd was killed by lightning, and threshing floors were much damaged.

**Miscellaneous.**

In the hills large numbers of vines have been planted, the high prices being now realised for wines, spirits, and raisins being once more an incentive.

The sum of £1,250 has been voted from the surplus Locust Fund for the Famagusta harbour; and £1,250 for the railway.

NICOSIA, June 9.

Permission is said to have been given to applicants to export 12,000 goats. "Let them all go!" should be the wish of all friends of the forests and of arboriculture in the plains. But although an increase of the tax on these foes to vegetation is in contemplation, which may tend to reduce the numbers, it will be long before the goatherd's pipe will cease to enliven the solitudes of the hills and valleys. Indeed, at present there is a strong movement in favour of the goats by those interested in their protection. The Principal Forest Officer has been interviewed by several members of the Legislative Council, who are bearers of village petitions asking for extended grazings in the State forests. This may be partly due to the fact that villagers in various places are sensibly taking advantage of the law which enables them, by majority votes, to exclude flocks from the lands of their respective villages.

## INDIAN HIDES AND SKINS.

### Report of Imperial Institute Committee.

In 1916 the Secretary of State for India authorised the Committee for India of the Imperial Institute, of which Sir Charles McLeod is chairman, to conduct an inquiry into the possibilities of increasing the trade in Indian raw materials with the United Kingdom and elsewhere in the Empire. Special committees, including commercial experts, were formed to deal with various materials. The reports of these committees, which contain important information and recommendations regarding the extension of the industrial utilisation of Indian raw materials, are in course of publication as a series of volumes by Mr. John Murray.

The first volume, relating to Indian hides and skins, which has recently been issued, contains the reports of the Hides and Tanning Materials Committee on cowhides (kips), buffalo hides, and goat and sheep skins, and also a detailed account of the trade in Indian hides and skins. The most important of these products are kips and goat skins. Before the war the value of the annual exports of kips from India was about £4,000,000, whilst goat skins to the value of over £2,000,000 were annually exported, and in addition over £1,000,000 worth of tanned goat skins. The annual values of the buffalo hides and sheep skins exported from India before the war were about £1,500,000 and £900,000 respectively.

At one time a large proportion of the exports of raw Indian kips was tanned in this country, but subsequently both the tanning of the hides and the export trade from Calcutta gradually passed into German hands. In 1913-14 the value of the kips exported to Germany amounted to £2,000,000 and to Austria £750,000, whilst those shipped to this country had a value of only £63,000. The report deals with the measures necessary to recover this important trade and to keep it in British hands, and recommendations are made as to the necessary conditions for re-establishing the tanning of Indian kips on a large scale in this country. One of the principal recommendations was the imposition in India of an export duty on the kips, with a rebate to tanners within the British Empire, and this measure has since been adopted by the Government of India and is now in force. The committee also favour increased tannage in India.

Most of the goat skins exported from India are shipped to the United States, where they are tanned by the chrome process for the production of glacé kid, which is largely sent to this country. It is believed that a great extension of chrome tanning here and throughout the Empire is possible, as large quantities of raw goat skins are available in India and other British possessions. The fact that a preferential export duty on raw goat skins, similar to that on kips, has now been imposed by the Government of India should contribute to this end. Before the war goat skins tanned in India were largely shipped to London for disposal, but the leather was mostly utilised in foreign countries for the manufacture of fancy articles, which in turn came back to this country.

Dr J. Collis Browne's Chlorodyne

Of all Chemists, 1/3 and 3/-.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

# THE EGYPTIAN COTTON POSITION.—III.

*(continued)*

## THE PROSPECTIVE DEMAND.

**By John A. Todd, B.L.**

It remains to consider the financial factor in the problem. That again involves two questions. First, the capacity of Europe to finance their purchases from abroad, owing to the abnormal condition of the foreign exchanges; and, second, the capacity of England and America to provide the necessary internal finance to carry on the industry. On the first point recent movements have been on the whole favourable. The French exchange, though still about 100 per cent. below par, is not nearly so bad as it was a month ago, but some doubt is expressed as to whether this improvement is likely to be maintained. The German exchange also has shown an extraordinary recovery, but the permanence of the improvement is again rather questionable. On the whole, however, there seems reason to hope that we have seen the worst of the exchanges, and that although there may be a further fall in the autumn, it is not likely to reach the extraordinary figures of February last, when sterling was below $3.20.

But the new problem of internal finance has for the time being become almost the limiting factor in every industry. The financial authorities both of this country and America have apparently entered on a determined campaign to restrict credit in the hope of reducing the speculative element in the market and checking the rise of prices. The result has certainly been to reduce the upward tendency of the market in most commodities, and to produce substantial falls in the wholesale price of certain commodities, such as tin. Retail prices have also suffered a considerable check in many directions, but the principal effect of the new credit policy has been to produce a state of uncertainty and even anxiety among business men. This has given rise to the fear that we were on the verge of a big financial crisis, which would be the beginning of the great slump in all prices that everyone thought was bound to come after the war. The effect on the price of cotton has been very instructive. Egyptian has undergone a considerable decline, which, however, was overdue, for there is no doubt that the recent high prices were largely speculative. The decline, however, has been very irregular, and many people think it has not yet gone far enough, for Egyptian spot prices in Liverpool still stand at a premium of fully 140 per cent., over American, and it is noticeable that the premium in November futures is only 90 per cent. American, however, has withstood the pressure remarkably well, and it was this month actually higher than it was before the Bank rate was raised to 7 per cent. on April 15. The fact of the matter probably is that if it had not been for the financial depression American cotton would have been a great deal higher than it is to-day. That pressure, however, has shown distinct signs of modification in the last few days.

The real problem of the future price of American cotton is therefore a struggle between two forces. The actual position of supply and demand would certainly produce a much higher level of prices than the present, if it were not for the fear that financial stringency may produce a general restriction of demand in which cotton will be involved along with other commodities. It is a case of "pull devil, pull baker," and so far the results have been very evenly divided. In the writer's opinion the effect of the financial depression will only be permanent if it is so acute as to affect directly and seriously the purchasing power of the working classes of the world; and on that point it must be remembered that the purchasing power of the East depends very largely on the price of silver. The recent dramatic fall in the price of silver from 89½ in February to 44 last week, had probably as much to do with the dullness of the Manchester market as anything else. There is only one thing that will substantially and permanently bring down the price of raw cotton, and that is a change in the whole conditions of the world, which will seriously impoverish the working classes and cut down their effective consumption of cotton goods to something less than it was before the war. The alternative of an increased supply is unfortunately ruled out for some time to come by the limited supply of the raw material in prospect.

Here again, however, it must be noted that there is a long way between the price of raw cotton and the price of the finished goods which the public buy in the shops; and it is very probable that in view of the high profits which have been the rule all round the trade recently from spinning margins to retail prices, there may be room for a considerable reduction of retail prices, or of the intermediate prices of yarn and grey cloth, without seriously affecting the price of raw material. Here again, much depends on the extent to which retail prices have followed the extraordinary rise in the price of the raw material which took place during the past winter. So far as this country is concerned, it is doubtful whether the consumer has yet paid retail prices commensurate with the increased cost of the raw material at its maximum, especially in the case of Egyptian, and it may not be necessary for him to do so now.

To sum up, the position to-day is that the world's actual consumption of cotton goods is considerably in excess of the new production of raw cotton, and it can only be a question of time till the world's stocks of the raw material are so far reduced as to make the trade feel the pinch of the serious reduction of the supply throughout the war and since. On the other hand, the insistent character of the world's demand for cotton goods can only be effectively checked, either by the rise of prices to a prohibitive level, or else by a serious change in the position of the consumers of cotton throughout the world, which would in effect reduce their purchasing power within the limits of the restricted supply. In the concluding article next week the special position of the demand for Egyptian cotton will be dealt with.

## MUNICIPAL SHOPS AT CONSTANTINOPLE

A number of municipal shops have been established at Constantinople as a result of the contract arranged with a French company for the purpose of combating profiteering and high prices (says the British High Commissioner at Constantinople in a recent report). The prices at which essential foodstuffs, etc., are sold are below current market prices. It is hoped they will be further reduced when stocks can be replenished at regular intervals from France. Two shops have also been opened by the American Committee for Relief in the Near East. It was at one time hoped that their number could be increased, but it is understood that there is no possibility of this authority extending its activities further. With regard to the French enterprise mentioned above, it is understood that the promoters do not intend to advertise French produce only.

The Bank for Trade and Industry of Agram made a net profit for the past year of 1,292,935 kronen.

The Prague Company for Trade with the East intends to institute a steamship line to the Black Sea.

**AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.**

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 nnder oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 30·15 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10 % primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

# ENGINEERING.

### Aviation and Safety.

In regard to the impression which commonly obtains to the effect that aviation is still a more or less dangerous pastime it is interesting to note some facts obtainable from the latest returns. It appears that during 1919 there were established at least thirty air stations to which the public had access for flights. In the six months from May 1 to November 1 approximately 30,000 passengers were taken for joy and business rides, and during the whole of this time, and in connection with every one of these trips, not a single accident occurred. It must also be mentioned that the daily passenger-carrying service between this country and Paris has run now for over a year without the slightest hitch except such as have been due to extraordinary climatic conditions. In fact, it may be said without hesitation that so far as reliability and freedom from interruption are concerned, this service compares favourably with that of any coastal or ocean-going steamship service. I have just been informed that during the recent Peace Conference the aerial transport service, which everyone knew was running, carried no less than 700 passengers altogether without delay. In fact, the record says: "With perfect security and regularity."

When we consider that the aeroplane is capable of what can only be regarded as stupendous feats as regards output of power, reliability, and regularity of running, the prospects for civil aviation are really extraordinarily bright in spite of the clouding effect which official indifference has had. It is not in the nature of things that anything capable of carrying immense weights at immense heights at immense speeds should be relegated. Obviously a machine which can cross the Cordilleras at a height of over 20,000 ft. is rather more than a toy. Between Valparaiso and Santiago an aerial mail service has been in operation for some time, and I have yet to learn that it has suffered any interruption. American air services in particular have been marked by their regularity and reliability, and it is to be hoped that civil aviation in Great Britain is now about to receive that recognition which is its undoubted right.

### The "Glasgow" Tractor.

Some little time ago I had an opportunity of inspecting the "Glasgow" tractor and comparing it mentally with the dozens of different types of British, American, and Italian tractors it has been my fortune to inspect during the past three years. I may say at once that I have formed a very high opinion of the "Glasgow," which, by the way, is one of the many products of the British Motor Trading Corporation, Limited.

In design it is a three-wheeled vehicle which is noticeable in that it has a drive to all three wheels. This not only leads to the perfect utilisation of the power generated, but it ensures an adequate wheel-grip under all conditions. No matter whether the soil is sandy or clayey, wet or dry, the tractor may be relied upon to do its work in the best possible style. It has a four-cylinder engine of 4⅛ by 5¼ inches bore and stroke, and is rated at 25 horse-power, but it is, of course, capable of giving out a larger amount of power should it be required. The engine is fitted with a Pierce-type governor controlling the engine speed, and a combined system of forced feed and splash lubrication is adopted. The tank has a capacity of 14 gallons, and other features worthy of notice are the gilled tube radiator, the Halley carburettor, and the high-tension magneto. Two speeds and a reverse are provided, and on top gear a speed of five miles per hour is attainable. The tractor, I should judge, is particularly suited for work on bad ground and on steep hills.

## BULGARIAN CONTRACT FOR BRITISH FIRM.

Messrs. Waterlow and Sons, Ltd., of London Wall, E.C., the well-known firm of printers, engravers, stationers, etc., have recently secured, in open competition, an important contract from the Bulgarian Government for the printing of small value currency notes. This follows contracts recently received from Poland and Armenia.

For many years Messrs. Waterlow and Sons, Ltd., have been the accredited printers of bank notes to the Swiss, South American, and other foreign Governments, and are likewise the printers of British Treasury notes, Colonial bank notes, and postage stamps.

It may be recalled that an interesting amalgamation took place in October, 1919, wherein Messrs. Waterlow Brothers and Layton, Ltd., were incorporated in the above firm. This, with their own large resources, now places Messrs. Waterlow and Sons, Ltd., in the unique position of being in possession of the most complete and modern printing plant in the world, enabling them to cope more expeditiously with their rapidly-increasing business, the success of which is recognised the world over.

# INDIA'S COAL RESOURCES—I.

**By John Kirsopp, M.I.M.E., F.G.S.**

It is now nearly fifty years since the first attempt was made to estimate the coal resources of India, and while the development of the deposits is still in an early stage the available information is now considerably more precise. For commercial purposes the chief Indian fields are roughly classified into two classes; those in the second, being of inferior quality and high in percentage of ash, are at present mined only to a limited extent where the better quality is available. Mr. R. R. Simpson, Inspector of Mines in India, has recently attempted to estimate the quantity of first-class coal in the two chief fields of Bihar (Raniganj and Jharia), but a similar estimate is not available with regard to other coalfields, so although it is known that the total coal resources of the country are enormous it is impossible to form even a rough estimate as to the percentage of them which can be regarded as meeting present day requirements for a satisfactory steam coal.

Since the outbreak of the European war a great impetus has been given to the development of certain fields. Prior to 1914, of the total number of possible fields only 18 were being worked, of which three were responsible for 89 per cent. of the whole annual production.

There was a great increase in output during the war period, this being particularly marked in those fields situated in Bengal and Bihar and Orissa (where production amounts at the present time to about 95.52 per cent. of the total output). It was, however, fairly general, only five of the seventeen coalfields in British India failing to show a larger output. These were the important Raniganj (except that portion known as the Mugma area lying to the west of the Baraker river) and Giridih coalfields, the other three being small fields. The main increase was in the Jharia coalfield, and substantial increases have also taken place in the coalfields of the Central Provinces and the Bokaro-Ramgarh field.

There is an unlimited demand for the large proportion of slack made in the working of the various coalfields, and it is often sent long distances by railway and utilised for the extensive brick-burning industry. Owing, however, to economic measures in regard to fuel waste, and also to meet the large and increasing requirements for railway consumption, much attention has been devoted during the last few years to the possibilities of manufacturing coal briquettes. Briquetting processes are more or less dependent on certain binding materials, and a very great deal depends on the quality of the pitch or other admixture used, the most suitable containing about 54 per cent. of volatile, which, although perhaps more expensive in the first instance, will more than repay the first cost in the superior quality of the fuel turned out. In the manufacture of briquettes the drier the coal is the less the pitch required, and the better looking the briquette: the dirtier the coal the more pitch required to bind it. In India until the last few years, when a few installations of coke ovens and by-product plants were erected, briquette manufacturers have had to resort to some admixture other than pitch for binding purposes, as this commodity could only be obtained by importing it at considerable expense, thus making the cost prohibitive.

The cost of extraneous admixtures consequently enters largely into the question of the commercial possibility of the briquette as an economic fuel. The coal-bearing seams of India are not up to the standard of those in Great Britain, the best—those of Bengal—containing too many impurities for ordinary methods of treatment. Different seams produce varying qualities of coal with higher or lower calorific values (some of insignificant value), and if the slack production of varying qualities could be universally mixed together and a suitable volatile constituent attained for successful briquette manufacture the installation of suitable briquetting plants would not only prove a profitable colliery undertaking, but would go far to solve the fuel problem.

The whole of the output of the Khosi collieries in Baluchistan at the present time is being manufactured into briquettes, the high and costly ratio of 8 per cent. of pitch being used as a binding mixture. These briquettes are being consumed on the North Western Railway, which company operates collieries and a briquette factory at Dandot, Punjab, making satisfactory briquettes from Jammu coal with an admixture of 6 per cent. pitch.

The total production of coal for the whole of India for 1918 amounted to 19,847,039 metric tons from 719 operating mines, and the number of persons employed totalled 176,269 (109,561 underground, 66,708 above ground).

The production for 1913 amounted to 15,486,318 tons from 602 working mines, and the total number of employees both above and below ground was 133,042.

*(To be continued.)*

The directors of the Delhi Umballa Kalka Railway Company have declared an interim dividend for the half-year ended March 31 of 6 per cent. on the Ordinary stock, less tax at 4s. 9d. in the £, payable July 26.

The traffic receipts of the Smyrna-Aidin Railway for the week ended June 12 amounted to £7,295.

## SHIPPING INTELLIGENCE.

### Notes.

The trial trip took place on June 16 of the steel screw steamer Evros, built by Messrs. Craig, Taylor and Co., Limited, Stockton-on-Tees, to the order of Messrs. M. Embiricos, Limited, of London, for the National Steam Navigation Co., Limited, of Athens. The trials were entirely satisfactory. The dimensions of the vessel are 385 ft. by 51 ft. 4½ ins. by 34 ft. 9 ins., moulded to shelter deck. She is built of steel to the highest class in Lloyd's Registry, and has poop, bridge, and top-gallant forecastle; water ballast in double bottom, fore and aft, and in peaks; she is equipped with patent steam windlass, steam steering-gear, ten steam winches, electric light installations, wireless installation, and all the latest improvements. She has been built under the superintendence of Mr. L. S. Polychroniadis, consulting engineer, 88, Fenchurch Street, London, E.C.

There was launched, on June 17, by Irvine's Shipbuilding and Drydocks Co., Limited, the steel screw steamer Dromore, built for the Johnston Line (Messrs. Furness, Withy and Co., Limited, managers) for their Danube trade. The vessel has been built to British Corporation classification, the dimensions being 372 ft. in length by 52 ft. beam extreme by 20 ft. 9 ins. depth moulded, carrying about 6,150 tons d.w., having poop, bridge, forecastle, with upper deck, and a tier of beams, stringers and ties at the main deck level for special trades, six bulkheads, five hatches, grain divisions throughout, and water ballast in cellular double-bottom and fore and aft peaks. The steamer is fitted with all the latest facilities for the rapid handling of cargo, including 10 steam winches, 15 steel derricks, etc., and electric light is fitted throughout.

On June 17 there was launched at the yard of Messrs. Wm. Gray and Co. (1918), Limited, the steel screw, geared turbine steamer City of Glasgow, which has been built for the Hall Line section of the Ellerman Lines, Limited, Liverpool. Her dimensions are: length overall, 406 ft. 9 ins.; breadth extreme, 54 ft. 2¾ ins.; depth, moulded, 31 ft. 5 ins., and she will be assigned to the highest class in Lloyd's Register. She has two decks laid, long poop, bridge and forecastle combined, and cruiser stern. Part of the 'tween decks is insulated for the carriage of perishable cargoes. The ship is fitted to meet the owners' special requirements for the trade in which she is intended to run. The ceremony of naming the steamer was performed by Miss Gray, daughter of Sir William C. Gray, Bart., chairman of the company.

The Ayrshire Dockyard Co., Limited, Irvine, N.B., launched on June 17 the single-screw steamer Clan McTaggart, which has been built for the Clan Line Steamers, Limited (Messrs. Cayzer, Irvine and Co., Limited). The dimensions of the vessel are length, 450 ft. B.P.; breadth, moulded, 57 ft. 6 ins.; depth, moulded, to awning deck, 37 ft. 6 ins., while her gross tonnage is, approximately, 6,600, and she has a d.w. carrying capacity of over 10,000 tons. The vessel has been specially designed for the rapid handling of cargo for the Clan Line Indian and general trade.

The Cie Generale Transatlantique is proceeding rapidly (says a Paris contemporary) to re-equip its services from Bordeaux to Morocco, which became disorganised by the stranding of the s.s. Venezuela.

### Forthcoming Sailings.

The Cunard Line s.s. Antinoe, for Piræus, Constantinople, and Galatz, will close for cargo at Antwerp on July 7 and at London on July 14.

The Ellerman Lines s.s. Belgravian, for Gibraltar, Malta, and Alexandria, will close for cargo at Liverpool on July 10.

The Papayanni Line s.s. Austrian, for Algiers, Malta, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on July 10.

The Prince Line s.s. Algerian Prince, for Tunis, Malta, Alexandria, Syrian coast ports, and Cyprus, will close for cargo at Manchester on July 7.

The Anchor Line s.s. Castalia, for Bombay, will close for cargo at Liverpool on July 5.

The Bibby Line s.s. Gloucestershire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo on July 14.

The R.M.S.P. Co.s s.s. Straffa, for Morocco, will leave London on July 7.

The Harrison Line s.s. Astronomer, for Calcutta, will close for cargo at Liverpool on July 8.

The Ellerman Line's s.s. Bosnian, for Patras, will leave Liverpool on July 19.

## TRIPOLI TUNNY FISHING REVIVAL.

A revival of the tunny fishing industry is taking place at the present time (says H.M. Acting Consul-General at Tripoli). It began on a small scale last year, when a merchant had some fish salted for local consumption and for a small export in barrels to Italy. For the present season, which has now begun, a considerable establishment is being completed. Large nets have been put down and a considerable quantity of fish already caught. In due course there may be openings for British tins and machines, but probably not in the present season.

## LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

We have experienced another week of dragging demand, and there has not been the slightest indication of a revival of buying. In the circumstances, spinners and manufacturers have lost further ground and engagements continue to run down. At the moment it is a case of buyers not wanting to operate on any terms whatever, and if prices were broken it is doubtful whether the turnover would improve very much. It is suggested in some quarters that no real developments will take place until the holiday season of the year is over. Egyptian cotton prices have continued to fall. The Government has issued a decree providing for two contracts. It is not anticipated that this change will have any particular effect upon values. Crop advices remain healthy. There is some talk of a yield next season of 7,750,000 cantars, but it is too early for definite estimates to be put out. Egyptian yarns have continued to be purchased very sparingly. The holidays at Bolton have begun, and spinners are relieved by the stoppage of production. Shippers of piece goods to Egypt are meeting with rather better advices from the other side, it being stated clearances are improving in that there is less congestion amongst dealers. Fresh buying of importance, however, is not likely to take place just at present. India has sent forward a fair amount of inquiry, but there does not seem to have been any business of weight behind the demand. Quite early delivery can be obtained in dhooties and jaconets. China merchants still want to cancel contracts, but local manufacturers are not prepared to entertain such proposals. The business done for South America has been quite unimportant. Cloth prices continue to favour buyers, but there are no signs of any real break in rates. A very dull state of affairs has existed in home American yarns. Most producers have been easier to deal with. Export numbers have been in slack request for all outlets.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for week ended May 22:—The sales this week on our market amount to fifty-four cases at 920 to 1.075 piastres per oke, as to strength and quality, which is equal to 17s. to 20s. per lb. c.i.f. The exchange to-day is 435 piastres for cheque per £1 sterling, and $0.89 for one Turkish paper pound. The arrivals are 1,665 cases, against 662 at same date last year.

Messrs. Barker Brothers, Smyrna, report as follows for week ended June 12:—Our market was quiet this week, with sales of only four cases, viz., three current qualities, at 1,035 piastres per oke, and one Islamkeuy at 1.158 piastres. These prices are equivalent to 17s. 9d. and 21s. 6d. per lb. c.i.f. respectively. The exchange stands at 430 piastres per £1 sterling for cheque, and $0.91 for one Turkish pound. The arrivals are 1,715 cases, against 695 at same date last year.

## APPOINTMENTS REQUIRED.

APPOINTMENT required by Englishman (age 30) as MANAGER of LONDON FIRM dealing with Near East. Long business experience in the East. French, Greek, Turkish, Arabic spoken. Write "F," care African Advertising Agency, 10, Broad Street Avenue, London, E.C.2.

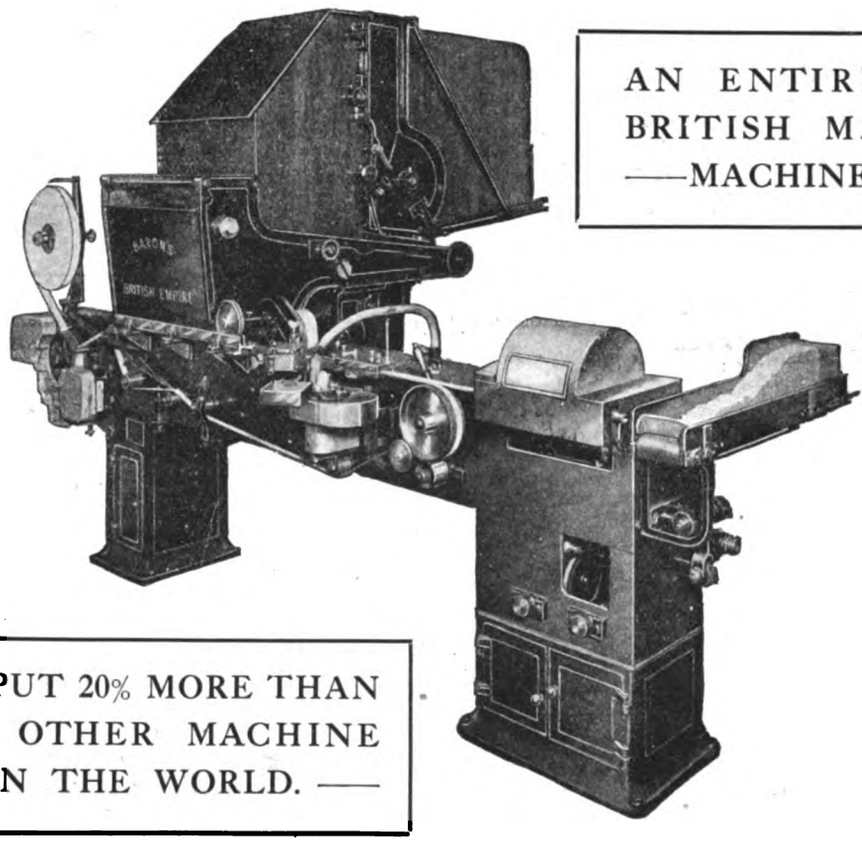
# THE BARON
# "BRITISH EMPIRE"

*THE FASTEST AND MOST UP-TO-DATE*

## CIGARETTE MACHINE

*IN THE WORLD*



AN ENTIRELY BRITISH MADE —MACHINE.—

OUTPUT 20% MORE THAN ANY OTHER MACHINE — IN THE WORLD. —

MAKES cigarettes any length, oval or round, long or short, large or small. It will print in two colours or one colour and bronze. The Machine **makes 650 cigarettes per minute.** The power required to drive it is ¾-h.p. The frame is very rigid and there are no small intricate parts. Where practicable ball bearings have been used to ensure easy running and minimum of noise. The machine is fitted with an Automatic Feeding Device specially constructed so as not to break the tobacco. A small Stripping Device is attached to the Machine for tearing up imperfect cigarettes and separating the tobacco from the paper, the tobacco can therefore be used again immediately. Any metallic substances that may find their way into the tobacco are taken out when passing through the feeder. The simplicity of working the Baron "British Empire" Machine is no less wonderful than its great speed. Consequently any man of ordinary intelligence is capable of operating it after a very short trial. To facilitate replacement, all parts of the Machine are interchangeable and numbered. The Machine can be quickly changed from one size of cigarette to another. The cigarettes made on the Baron "British Empire" Machine cannot be equalled owing to the even distribution of the tobacco, the smallness of the lap and perfection of finish. The cost of production is reduced to a minimum. The Machine will make up any kind of tobacco. Until the arrival of the Baron "British Empire," it was impossible to make on a high-speed machine a very narrow and smooth lap on a cigarette. This the Baron "British Empire" does. The Baron "British Empire" represents all the latest improvements in Cigarette Machines; it is the most perfect in construction, and in the quality and quantity of work it produces it cannot be equalled. The Machine is L shape. It is packed in two cases, the gross weight for shipment being 35 cwt.

# NEAR EAST MARKETS.

## LONDON PRODUCE REPORT.

**Dried Fruit.**

The demand for currants continues to increase, and consumption is evidently on the up grade. Fair business has been done in forward contracts for the new crop. Imports for the period January-May amounted to 12,018 tons, home consumption being 15,103 tons. Sultanas are in short supply, and are consequently very firm.

**Sugar.**

The tone of the free market has been a shade weaker in keeping with the decline in values in the American markets, but there has not been much in it, and the tendency on the whole is to firmness. West Indian crystallised is quoted 152s. to 155s., and American granulated and white Java remain at 160s. Home refined remains in good demand at the fixed rates.

**Coffee**

The spot market has been fairly steady. Costa Rica has been done at from 133s. to 165s., East Indian at 135s. to 170s., and West Indian at 127s. to 160s. Futures have been quiet, but steady. Quotations are:—September, 91s.; December, 87s. 6d.; March, 85s. 3d.

**Oilseeds.**

Indian linseed is firm at 39s. 6d., while La Plata has come to business at 36s. 6d. Rapeseed is practically unchanged, with Toria at 37s., bold Ferozepore at 36s. 6d., and brown Cawnpore at 33s. 6d. Cottonseed has been quiet, Bombay coming to business at 14s. and Egyptian at 18s. 3d.

**Oilcakes, etc.**

Supplies of cake are ample, and prices are very reasonable. Linseed oil closes strong at 79s. 6d. spot. Rape oil is weak, Egyptian crude being 67s. and deodorised 95s. Turpentine is weak, with American spot at 142s.

## SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for April:—

**Gum.**

The exports during April were as follows:—Via Port Sudan, 14,447 kilos of bleached, of the value of £E886; 1,290,594 kilos of hashab, of the value of £E65,921; and 15,489 kilos of talh, of the value of £E512; and via Halfa, 19,800 kilos of hashab, of the value of £E1,012.

Kordofan Province.—13,628 kantars were sold in El-Obeid market during April, as against 14,876 kantars during the same period last year, at an average price of £E1.615 per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 7,009 kantars, as compared with 2,667 kantars of last year. The amount sold at Um Ruaba was 1,218 kantars, as against 2,815 kantars last year, the average price being £E1.550 per kantar. At Rahad 848 kantars were sold, as against 997 kantars for April last year, at prices ranging from £E1.680 to £E1.500 per kantar.

**Cotton.**

Red Sea Province.—Tokar: The cotton sold during the month in kantars of 315 rottles (unginned) is as follows:—10,783 kantars of first-class, 4,347 kantars of second-class, and 228 kantars of third-class. The total crop will probably amount to 48,000 kantars of 315 rottles (unginned).

Nuba Mountains Province.—A growing tendency is noticeable on the part of cultivators to grow cotton.

Berber Province.—The final cotton yields for April, in kantars of 315 rottles (unginned), at Zeidab are as follows:—The company, 6,069 kantars; water tenants, 1,405 kantars; Timerab, 674 and 26 kantars from the sakias. Total, 8,174 kantars; last year, 9,043 kantars.

**Dura and Dukhn.**

Kordofan Province.—The sales in El Obeid market in ardebs of 420 rottles (189 kilos) are as follows:—98 ardebs of dura at P.T.345 per ardeb (average); 189 ardebs of dukhn at P.T.345 per ardeb (average).

Blue Nile Province.—There was very little fluctuation throughout the month, the highest price being 2,680 m/ms., and the lowest price 2,518 m/ms. per ardeb of 300 rottles (135 kilos).

White Nile Province.—Dura is stated to be scarce at Getaina, but elsewhere there is dura in the markets.

Sennar Province.—In March, 672 tons of dura were exported by rail, and 474 tons in April.

Darfur Province.—The average price of dura in March was P.T.98 per ardeb.

**Wheat and Barley.**

Berber Province.—A small quantity of wheat and barley came on the market, and prices averaged at P.T.630 per ardeb of 400 rottles (180 kilos) and P.T.240 per ardeb of 315 rottles (142 kilos) respectively.

Sennar Province.—203 tons of sesame were exported by rail in March, and 111 tons in April.

Darfur Province.—All price of wheat averaged £E1.540 m/ms. per ardeb.

Halfa Province.—All crops are in. The wheat and barley crops have been exceptionally good. In some sagias in Sukkot district a yield of 5 ardebs of barley per feddan was obtained.

**Maize.**

Berber Province.—The price of maize is reported as P.T.367 per ardeb of 380 rottles (171 kilos).

## NEW COMPANIES IN GREECE.

(From Our Own Correspondent.)

Athens, June 19.

The following new companies have been formed in Greece since the beginning of 1920 up to date:—

1. The British-Hellenic Banking and Commercial Company (Soc. Anon.), with a capital of 1,000,000 drachmæ. This company was formed with the object of importing into Greece Canadian products.
2. The Industrial Company "Virmion," Athens, with a capital of 2,000,000 drachmæ.
3. The Tobacco and Cigarette Company "Tirnac," in Kavalla, with a capital of 1,000,000 drachmæ.
4. The Macedonian Steamship Company, Salonika, with a capital of 364,000 drachmæ.
5. The Commercial Club, Volo, with a capital of 55,000 drachmæ.
6. The "Amar" Bank, Salonika, with a capital of 1,000,000 drachmæ.
7. The Olive Oil Company of St. Maura, with a capital of 1,000,000 drachmæ.
8. The Company (Soc. Anon.) of Industrial Enterprises, Athens, with a capital of 800,000 drachmæ. The object of this company is the exploitation of various mines.
9. The "Kinoniki Proodos" (Social Progress), with a capital of 100,000 drachmæ. Head office at Limni, in Euboea.

---

The directors of the Khedivial Mail Steamship and Graving Dock Co. have declared an interim dividend of 5 per cent., less tax.

The Oilfields of Egypt, Ltd., announce that the field manager with his engineering staff have arrived on the company's territories on the Gulf of Suez, and are erecting camps.

Coupons on the Six per Cent. obligations and the Six per Cent. certificates, due July 1, of the Constantinople Telephone Company, are payable at the Imperial Ottoman Bank, 26, Throgmorton Street, E.C.

This week's Indian cable states:—Rain has fallen fairly generally in Bay Islands, Assam, Lower Burma, Orissa, Chota-Nagpur, Southern India, Central India, and Rajputana. Local elsewhere. General crop conditions good, but more rain required Assam and parts Bengal, Bihar and Orissa. Bombay cotton market dull. Fully good broach, July, Rs. 449. Piece-goods market very quiet. Calcutta jute market quiet. Hessians firm. Heavy goods firmer, with fair amount of business. Bank rate: Bengal and Bombay 6 per cent., Madras 8 per cent.

Consumers of

# COMPANY MEETINGS.

## GREAT INDIAN PENINSULA RAILWAY.

### Record Gross Receipts.

The 141st half-yearly general meeting of the stockholders of the Great Indian Peninsula Railway Company was held on June 25 at the company's offices, 48, Copthall Avenue, London Wall, Sir Charles H. Armstrong (chairman of the company) presiding.

The Chairman, in moving the adoption of the report, said that they had had a good half-year, the gross receipts having been over seven crores of rupees. The increase on the corresponding half-year, due largely to a very heavy passenger traffic, was equal to 9.63 per cent. The gross expenditure had increased by 9.43 per cent. to 4¼ crores of rupees, which was equal to 59.39 per cent. of the gross earnings, as compared with 59.50 per cent. in the corresponding period of 1919. For the whole year to March 31 their gross receipts had been nearly 13¾ crores of rupees, which was a record figure, and although just at the moment they were falling behind a little, he was hoping that if the monsoon was favourable that they would have a very large traffic to handle during the coming season. In the past ten years their coaching receipts had risen by 141 per cent., their goods earnings by 60 per cent., and their gross receipts from all sources by 87 per cent.; the total passenger earnings alone had increased by no less than 128 per cent. They received less now per mile for carrying a first-class passenger than they did ten years ago, but slightly more for a second-class passenger. The amount received per mile for carrying a third-class passenger had increased during the last two or three years, the numbers travelling having grown very rapidly, which showed, he thought, that the country was prospering and that the people generally were earning higher wages. As regarded merchandise, the number of tons lifted had increased during the ten years from 6⅞ million tons to 10⅞ million tons, an increase of over 60 per cent. Those figures showed steady progress, but the increases had been much more marked in the last three or four years than in the earlier period, and, as abnormal conditions owing to the war were now passing away, they might not be able to show quite the same expansion in the years to come, although they were now equipped to handle a very much larger traffic than they used to do. He would warn them, however, that their working expenses were rapidly increasing, and that was a factor that would affect their future prosperity. The point had been under consideration by the directors, and they were ready with proposals to meet it.

Turning to the year's results, the net amount receivable from India had been brought home at 2s. 1¼d. exchange, and had realised £85,115. out of which they were paying a dividend of 3 per cent., in addition to the guaranteed interest for the half-year at the rate of 3 per cent. per annum. They were also paying a bonus of 1 per cent. from money they had to put aside to meet a possible claim for excess profits duty in this country. That question had now been settled in their favour, and they were therefore able to make the bonus distribution. The dividend was the largest they had yet paid, but it was largely due to the higher exchange at which their share of surplus profits had been remitted, as the amount they actually received in India was less by 1¾ lakhs than in the previous year. They had decided to carry out a programme for the electrification of suburban services, and the scheme, when completed, was likely to be a great success. In conclusion, the Chairman said that the favourable results he had referred to were due entirely to the abnormal conditions brought about by the war, and the future seemed extremely uncertain, in view of the expenditure with which they were faced.

The resolution was carried unanimously.

## MORTGAGE COMPANY OF EGYPT.

### Dividend Increased.

The twelfth ordinary general meeting of the Mortgage Company of Egypt, Limited, was held on June 24 at the Cannon Street Hotel, Sir Henry Babington Smith, G.B.E., K.C.B., C.S.I. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: In spite of the political troubles, the economic condition of Egypt is one of great prosperity. As you are aware, the cotton crop is all important. The crop of 1918-19 amounted to 4,821,000 cantars, and was purchased by the Government at the fixed price of 42 tallaris per cantar for the standard grade. For the crop of 1919 there was a free market. It amounted to 5,750,000 cantars, and, owing to the insistent demand both from America and Europe, accompanied by a considerable amount of speculation, the price at Alexandria rose to the unprecedented figure of 192½ tallaris in February last. During the months of February, March, and April the price remained above 135 tallaris, and it has since fallen to about 108 tallaris, and now stands between 120 and 130. This is still extremely high compared with the pre-war price, which varied between 15 and 20 tallaris per cantar. The price of other produce has also been high, and great wealth has poured into the country. The Financial Adviser in his note on the Budget of 1920-21, estimates Egypt's foreign investments, including the securities held on account of the bank note issue, during the period 1915-1919, at £E152,000,000. The deposits in the two principal banks have increased from 6½ to 35½ million pounds Egyptian, while the loans on mortgage of the four chief mortgage companies (including our own) have decreased from 40 to 28 millions. Another remarkable indication of prosperity is to be found in the trade returns. During the first quarter of the current year the imports amounted to £E20,500,000, and the exports to £E50,500,000. These figures, for one-quarter of this year, are not far short of those for the whole of last year.

Turning now to the position of the Mortgage Company of Egypt, the accounts speak for themselves, and show that the position is thoroughly satisfactory. The rise in the value of land has enabled us to sell practically the whole of the properties which we had been compelled to acquire, not only without loss, but at a considerable profit. In March, 1917, these properties stood in our balance-sheet at over £173,000—a figure large enough to cause us some anxiety. It has now been reduced to £1,219; and you will see on the other side of our balance-sheet an item of £91,756 for "profit on sales in suspense." This represents the excess of the sale price over the figure at which the properties stood in our books, but, as a part of the price is payable in instalments, and has therefore not actually been received in cash, we think it necessary to hold the profit in suspense and not to count it as realised until it is actually received. The instalments in arrear have been reduced to £111,158, as compared with £171,163 last year and £410,938 at March 31, 1916. Of these arrears, more than three-quarters fell due as recently as December, 1919, and January, 1920, and have probably already been recovered in great part.

In consequence of the agricultural prosperity of the country, the amount of our investment in mortgages has continued to decrease. A similar diminution has been experienced by the other companies doing mortgage business in Egypt, and we cannot be surprised at it. The result of this, together with the recovery of arrears and the sale of property, has been to increase largely our cash resources; and the board considered that these resources could not be better employed than in the purchase of our own debentures. Up to March 31 we had purchased debentures to a nominal value of £594,700 at a cost of £487,916. We have thus cancelled a debt that was ultimately repayable at par at a discount of £106,783. This has enabled us to write off the whole of the balance of the discount and expenses on the original issue of the debentures, amounting to £87,764, and to leave a balance of over £19,000 to the credit of the debenture redemption reserve account. The balance of the profit and loss account amounts to £117,488, as against £83,777 last year. The board are of opinion that this result justifies them proposing to pay a dividend of 12 per cent., as against 8 per cent. last year, on the amount paid up on the ordinary shares, and to place £20,000 to the general reserve. This leaves a sum of £17,489 to be added to the amount carried forward, bringing it up to £52,939. I should like to express our continued appreciation of the services rendered by the staff in Egypt. It must be a great satisfaction to them, as it is to us, to see that their efforts, combined with more favourable conditions, have brought the company into its present strong position

Brigadier General the Hon. Everard Baring, C.V.O., seconded the motion, which was carried unanimously.

# COMPANY NOTES AND REPORTS.

### Anglo-Bulgarian Oilfields.

The report of the Anglo-Bulgarian Oilfields for the period from July 1, 1918, to June 30, 1919, states that owing to the state of war existing for the past five years on the company's concession they have been unable to carry on active operations on the property. The whole of Thrace, in which the company's concession is situated, has now come under the Hellenic Government, with whom the directors are in direct communication, and they have every confidence that the titles will be confirmed. Since the Armistice a revival of interest in this district has come about, and a small portion of the company's rights has recently been sold to another company on satisfactory terms; negotiations are also being conducted to sell a further part of the area.

### Egyptian Hotels.

The report of the Egyptian Hotels, Limited, for the year ended April 30, 1920, states that after charging all expenses in connection with the working of the hotels, the profits of the hotels were £58,736 17s. 6d., as compared with £35.540 2s. 4d. for 1919. After providing for the charges payable in London and Cairo the accounts show a profit of £56,156 17s. 10d.; the balance of undivided profit brought forward from last account is £10,383 4s. 7d. —£66,540 2s. 5d. From this has to be deducted debenture interest, £2,379 10s. 11d.; depreciation of plant, fixtures, and fittings at hotels, £3,210 2s. 1d.—£5,589 13s., leaving an available balance of £60.950 9s. 5d. The directors recommend (1) the payment of a dividend of 5 per cent. per annum on the preference shares for the year to April 30, absorbing £5,750; (2) the payment of a dividend on the ordinary shares of 25 per cent. for the year, which will absorb £31,250; (3) to place to special reserve, £15,000—£52,000; leaving a balance to be carried forward of £8.950 9s. 5d. Since the close of the company's financial year the business of Shepheard's Hotel has been satisfactorily maintained. During the year the Ghezireh Palace Hotel, together with the greater part of the furniture and equipment, has been sold and the purchase money received. The transaction has been given effect to in the accounts now presented.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

**Egypt.**

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Wrapping Paper.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 750 reams thick wrapping paper. July 8.

Iron Safes.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 180 iron safes. July 12.

Rails.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of cut rails in accordance with specification and conditions available at Survey Offices, Giza. Contractors are invited to put in their offers for any quantity available for immediate delivery or for delivery during the current financial year. Tenders should show quantity, weight per yard run, rate per ton of 1,000 kilos, period required for delivery, place of delivery, and any other details necessary. March 1, 1921.

H.M. Commercial Agent for Egypt has forwarded copies of the specification, conditions of tender, and tender form in connection with a call for tenders by the Ministry of Public Works, Cairo, for the supply and delivery of eight steel house barges for the Upper White Nile Division. Sealed tenders, on the proper forms, will be received by the Director-General, Mechanical Department, Ministry of Public Works, Cairo, up to noon on July 20. A provisional deposit of 2 per cent. or a bank guarantee of 10 per cent. of the value of the offer must accompany each tender. The above-mentioned copies of the specification, etc., may be consulted by British firms interested at the enquiry office of the Department of Overseas Trade, 73, Basinghall Street, London, E.C.2 (L.).

The Egyptian War Department invites tenders for the supply and delivery of the following:—Heel-balls, jute sacks (tenders due July 5); bits and chains (tenders due July 13). Tenders will remain open seven days. (L.)

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200 metrical tons cotton waste (L).

Soap, Horse Brushes, Candlesticks, Lamps, etc.—The Egyptian War Department invites tenders for the supply of palm oil soap (tenders returnable on July 6), candlesticks, lamps, and globes, horse brushes (tenders returnable on July 12). Tenders will remain open seven days. (L.)

**Roumania.**

The Roumanian Government invite tenders for the supply of the following military equipment:—16,000 outfits, each consisting of two shirts, two pairs drawers, two hand towels, two handkerchiefs, two pairs socks, one pair woollen gloves, one clothes brush, one boot brush, one overcoat, two jackets, two pairs of trousers, one military cap, one sweater, two pairs of boots, two pairs of puttees, one hood, two blouses, one blanket, one mattress cover, two pillowslips, and two sheets. Tenders should be submitted to His Majesty's Commercial Secretary, Bucharest.

**Morocco.**

Morocco.—His Majesty's Vice-Consul at Rabat has forwarded a copy of the specification and general conditions of contract for the supply of 25,000 oak sleepers or other timber of a similar nature to the Service des Chemins de Fer of the French Protectorate. The latest date for receipt of tenders is July 1. Copy of the specification and general conditions, which are in French, may be inspected upon application at the Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1.

**Malta.**

The Council of Government invites tenders from British firms for the construction of a first-class shipbuilding and repairing yard.

## OIL OUTPUTS.

Anglo-Egyptian Oilfields, Ltd.—Hurgada production for week ended June 20, 2,781 tons; last week, 2,909 tons.

## ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Business has again been on a very restricted scale this week, and changes in prices are, generally speaking, of an unimportant character, except in Greek stocks, where there has been a persistent demand which has carried all the prices of the various loans to a higher level.

In Government stocks Egyptians have remained firm, the only alteration being a slight reduction in Unified to 69, and in the Turkish 4 per cent. 1891 and 3½ per cent. 1894 Loans to 60 and 54 respectively. In Greeks the 1881 and 1884 Loans have risen 3½ points to 58½, the Funding Loan a similar amount to 52½, and Rentes are 2 points up at 41. The 1890 Loan is 1½ points up at 53½, both the 1902 and 1910 Loans are 1 point up at 45½ and 40 respectively, and the 1914 Loan has been inquired for on a large scale and has risen 3½ points to 54½.

In Bank shares, Agricultural of Egypt show no change, but Nationals are ⅛ up at 19½. Land Banks are a trifle easier at 5½, but a feature has been the rise in Bank of Athens shares, which have advanced as much as 11-16ths to 4.

In Railways, Delta Lights are 1-16th firmer at 5 11-16ths, and Piræus Athens 3 per cent. Bonds have fallen rather smartly to 45.

In Land shares Aboukir are closing a good market to-night at 35s., a rise of 1s. Consolidated Lands are fractionally easier at 2s. 9d. Delta Lands have dropped 1s. to 13s. 6d. and Gharbiehs have gone back ¼ to 3. Sidi Salem and Union Foncière are both ⅛ lower at 2¼ and 4⅝ respectively. On the other hand, New Egyptians have improved 6d. to 33s. 6d., and Sudan Plantations are 1-16th firmer at 4 1-16th.

Amongst Miscellaneous descriptions the only change to record is a rise of 1-16th in Egyptian Salt and Soda to 2 9-16ths.

In Oil shares Anglo-Egyptian B are again lower, closing 6s. 6d. down at 2⅝, while Roumanians and Traians are both 3d. easier at 18s. 6d. and 7s. 3d. respectively.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |
| Athens | Drachmae to £ | 25·22½ | 31·00-31·25 |
| Belgrade | Dinars to £ | 25·22½ | 72·75 |
| Bombay | Sterling to Rupee | 24d. | 1·9⅜-1·9⅝ |
| Bucharest | Lei to £ | 25·22½ | 165-170 |
| Calcutta | Sterling to Rupee | 24d. | 1·9⅜-1·9⅝ |
| Constantinople | Piastres to £ | 110 | 415-430 |
| New York | Dollars to £ | 4·86⅔ | 3·96½-3 97¼ |
| Sofia | Levas to £ | 25·22 | 260-265 |
| Teheran | Krans to £ | 50 | 27½ |
| Paris | Francs to £ | 25·22½ | 47·75-48·10 |

The British Consul-General at Meshed reports that there would appear to be a good opportunity for the sale of cheap iron bedsteads, complete with strong spring mattresses, in Persia. He would be glad to receive catalogues from British manufacturers who are interested in that market.

H.M. Consul at Zagreb reports that there is at present an opportunity for British manufacturers of hotel equipment to supply the needs of that town, in which efforts are being made to meet the overcrowding by the erection of additional hotel accommodation.

## NOTES OF THE WEEK.

The two replies of Turkey to the draft of the Turkish Peace Treaty are understood to have differed very little from one another. The later one, handed in by Jemal Pasha and Reshid Bey, on June 30, asked that Lemnos, Imbros, and Tenedos, at the entrance to the Dardanelles, should be included in the zone of the Straits, instead of being handed to Greece. Constantinople, it seems, fears that Greece might make these islands over to Great Britain, or some other Power; and it desires that they should remain Ottoman territory in Allied occupation. Why any fear of the kind should exist is not quite clear. It now transpires that among the points raised by the Turkish reply is the future of Alexandretta. In the first reply, at any rate, this port was claimed by the Turks, who suggested that the southern frontier of Turkey should begin at Ras el-Baseit (just south of lat. 36 degs.), and run to Khanikin, on the Persian frontier, leaving Aleppo to Syria and Mosul to Mesopotamia, but taking in Nisibin, the present terminus of the great Baghdad line, for Turkey.

Probably there would be some justification for the boundary suggested, which would seem to make some effort to follow the existing division between Arab and Turk. Whatever may be the case to-day, or since the German development of the place affected its character, it is a fact that twenty years ago it was as difficult to find Arabic-speaking people in Alexandretta as it was to find Turkish-speaking people in, say, Hillah or Busreh. But the Turkish suggestion that "there is no ground for extending Armenian territory beyond the old Russo-Turkish frontier" is much less easy to support; and, in point of fact, it is unlikely to find any support at all outside Turkey. In connection with the question of frontiers, it is puzzling to find the Porte concerning itself with those of Kurdistan, Syria, and Mesopotamia, except in so far as its new (suggested) southern border is concerned. Turkey's interest in the Arabs of Syria and of Mesopotamia was never of a kind to lead us to suspect that she would spare much thought for them when she could no longer tax them, and her relations with the Kurds were, upon the whole, little more cordial.

The operations against the Turkish Nationalists continue to be pressed on vigorously; the Greeks have captured Panderma, and the region west of the Smyrna-Panderma line will very shortly be entirely clear of Nationalists, if it is not so already. At the end of last week it was reported that the Turks had captured Pergama and inflicted a heavy defeat on the Greeks in the neighbourhood; but the Greeks denied the report, and the capture of Kemer on July 2 indicated pretty clearly that the original report was baseless. The latest Greek *communiqués* available at the time of writing state that the advance "towards the interior of Asia Minor is still proceeding." The Turks are retiring on Brusa.

A deplorable incident is reported from Smyrna, where news was received on June 3 of a fight between Greek and Italian troops. The Greeks found that at a point between Smyrna and Aidin the Turkish Nationalists had penetrated the Italian line and were threatening the railroad. In view, therefore, of the necessity of keeping in touch with the Greek forces at Aidin the Greek General sent detachments to occupy some positions a little way inside the Italian lines. As the relations between the Greeks and Italians in this neighbourhood have for some time past been the reverse of cordial it is not surprising that rifles went off, and that several casualties on both sides are reported. At the same time it is clear that the Greek commander could not have acted otherwise; and the Allies will probably argue that if the Italians are unable to keep the Nationalists from "raids" that damage Allied property—the Smyrna-Aidin Railway is British owned—and threaten Allied troops, they had better withdraw their forces and leave the task to others.

Friends of Montenegro cannot regard the situation in that gallant little country with satisfaction, and not the least satisfactory thing about it is the difficulty of obtaining trustworthy information as to what is going on there, or the intentions of the Powers as to its future. Recently a deputation of Members of Parliament waited on the Prime Minister to ask him, in effect, to use his influence to obtain a chance for the Montenegrins to express freely their desires regarding their own future. Mr. Lloyd George received the deputation sympathetically, and promised to give their view his consideration; but he pointed out the difficulties of the case, and made it clear that a failure to see eye to eye on the part of the Allies in this matter was one of the worst hindrances to a settlement. Things were thus left very much where they were before: that is to say, in the air. They cannot, obviously, be left there indefinitely. Both parties in Montenegro—or, we ought to say, perhaps, both Montenegrin parties—would probably accept any arrangement, if they were convinced that it was in accordance with the will of the majority, freely expressed; and the Yugoslavs, also, who

Digitized by Google

have shown the world what sacrifices they themselves are ready to make for the sake of liberty, would surely accept a decision so reached as soon as they were convinced that it expressed the true wish of their Montenegrin brethren.

---

Federation appears to be inevitable sooner or later, and we suspect that if only the politicians would stand aside and leave the peoples free to exercise their own unfettered judgment, it would come sooner. The trouble is that so many people find muddy waters suit well their particular method of fishing, and the consequence is a state of affairs that is both bewildering and exasperating. We are informed, for instance, that the British Mission of Relief to Montenegro (of which the Lord Provost of Glasgow is chairman) has been unable to carry out its charitable work by reason of the action of Serbian officials. We have not space to go into the details of the case, but the bare fact is sufficiently disconcerting. The Belgrade Government may have very good reasons for acting as it is reported to have done. It may also have the authority of the Allies for so acting, and the majority of the Montenegrins may support its action. But, if so, it is a thousand pities that the situation has not been made clear to the world, which is at present utterly, and very naturally, puzzled by the whole business.

---

It is too early to expect a definite result of the Milner Mission's labours, but it is announced that the Mission has already placed in the printer's hands a statement of policy agreed to before the Mission left Egypt; and, according to *The Times*, "it may be accepted that the Mission will recommend a measure of self-government for the Egyptians." In the meantime it is gratifying to learn that Zaghloul Pasha considers it probable that the negotiations now in progress between himself and Lord Milner will have a satisfactory ending. With the spirit of goodwill that is evident on both sides, it will be strange if he does not prove a true prophet.

---

The Persian Prime Minister, Vossukh ed-Dowleh, has resigned, owing, it seems, to his inability to meet the Court's financial requirements and the difficulties of the situation in Northern Persia. His loss will be a severe one, and it is, unfortunately, impossible to escape the feeling that it might have been avoided if Great Britain had been more generous in the matter of help, if only of a financial character. The new Prime Minister is Mushir ed-Dowleh, who is forming a Cabinet which is expected to summon the Mejliss very shortly. That step will prove popular in Persia, and it is to be hoped that it will lead to an early improvement in the situation.

---

Signor Giolitti has lost no time about putting his Albanian policy into effect. Negotiations carried on by Baron Aliotti, appointed special Italian Plenipotentiary in Albania, and the Albanian leaders have resulted in agreement along the line of Italian withdrawal from the country save from the island of Sassena, where Italy will construct naval defence works and a wireless station. As Albania has no fleet, and is unlikely to have one in the near future, the agreement would seem to be quite satisfactory from her point of view, and it would not be at all surprising to find Italo-Albanian relations speedily becoming extremely friendly once more.

---

Sir Herbert Samuel landed at Jaffa on June 30, and, after an official welcome from the Jaffa municipality, proceeded to Jerusalem, where, on the Mount of Olives, Sir Louis Bols officially handed over to him as High Commissioner the government of the land. A few days ago, in the House of Lords, Earl Curzon said that there was now at the head of the Administration (in Palestine) "a judicially minded, sensible and experienced man," and that in the view of the Government "no more competent person could be found than Sir Herbert Samuel." That praise, we believe, is not at all too high for the new High Commissioner, and we sincerely hope that a gloomy prophecy quoted by Lord Curzon will prove false. It might be true, said Lord Curzon, that Sir Herbert would find himself in difficulties with regard to the Arabs, but a great authority on the country had prophesied that after he had been there six months he would be equally unpopular with the Jews. We decline to believe that there is any possibility of the Jews showing themselves such poor judges of ability and character.

---

A definite stage on the long road of Indian educational reform is marked by the appointment of Mr. P. J. Hartog, C.I.E., to be Vice-Chancellor of the new University of Dacca. This institution is designed, in great measure, to relieve the pressure on Calcutta University, the monstrous size of which makes effective administration a practical impossibility; but Dacca is to be moulded from the outset on the modern lines to which Calcutta can attain only by degrees, and will itself in due course serve as a model for other parts of India, so that its first Vice-Chancellor will bear an exceptionally heavy responsibility. Mr. Hartog knows what is wanted, for he was a member of the Commission which reported last year, while his record as Academic Registrar of the University of London justifies the expectation that he will be successful in establishing the new ideals among the alert and industrious people of Eastern Bengal. His responsibilities will, as we have said, be great, but responsibility means opportunity to the right man, and he will enter on his duties with the cordial good wishes of all friends of India.

---

It may be worth while to point out that this question of educational reform can no longer be regarded merely from an academic standpoint. The new constitution, which requires increased effort from almost all classes of Indians, makes specially heavy demands on the Universities. Hitherto they have been content to supply the country with able lawyers and astute politicians, and their output has on the whole served its purpose tolerably well: in the future they will have to provide upright administrators and sagacious statesmen, to supplement, and eventually to replace, the men from Oxford and Cambridge, whose services India has utilised for so long, and it does not require an expert to recognise that the whole machinery must be remodelled in order to meet this new demand. It is beside the argument to point to the small number of Indian statesmen who have come forward in the past; even under the old constitution there were not enough to go round, and now that every province will require a body of statesmen from among whom its Ministers and councillors may be chosen, it is obvious that the Universities must face the problem of supply and devote themselves to the task of making, not lawyers, but men.

---

In this task the Calcutta University Commission have, in our judgment, pointed out the true line of advance, and it will be the privilege of Dacca to lead the way. We confess, however, that we are a little doubtful whether Calcutta will not remain too unwieldy for real efficiency even when the reforms now recommended have been carried out. Two, or even four, Universities will be but scanty provision for a province of the size of Bengal; the attractions of the great city will always give Calcutta a certain predominance, and, within reasonable limits, the more Universities the better for all. In the United Provinces, with practically the same population but a lower standard of literacy, Sir Harcourt Butler is working for five Universities now, with more to follow, and we do not think that a provision of one centre for nine million people can be called extravagant. Scotland, the home of Empire statesmen, has nearly ten times that number, and while it will be a long time before India can aspire to equal Scotland in this matter, the true conclusion seems to be that one great remedy for inefficient Universities is a steady policy of creating new foundations.

---

Our anticipations of a rush for eastward passages next autumn are clearly going to be realised. It is now announced that the liners are already overbooked for September and October, normally the busiest months, and intending passengers have been urged to register at once for the few remaining berths in November and

Digitized by Google

December. Simultaneously comes the news that fares are being substantially raised, the highest rate by the P. and O. to Bombay being altered from £68 to £90, and the others in proportion; apparently the change is not expected to stem the tide of travellers for pleasure, and it follows that the homeward rush next spring will be worse than ever, unless the increased cost, following on the fall in exchange, should operate to deter tired officials from taking leave at a time when freshness and energy are qualities particularly required in India.

---

A new aspect of Indian politics is presented in the claim now being put forward for separate representation of the great body of religious mendicants. They have a stronger case than Western readers might suppose. In "the good old days" they were confidants and counsellors of rulers; at the present time they constitute perhaps the most powerful organ for the formulation and dissemination of the real public opinion of the country; and it is quite possible to argue that no Indian legislature can be truly representative which does not recognise the existence of this particular class. Apparently none of them will be able to vote, for persons who have no home and no worldly possessions are excluded from a franchise based on residence and property, and one cannot entirely refuse sympathy to their request for constituencies of their own. The practical difficulties in the way are, however, great, and it is not in the least likely that their claim will be granted at this stage: in the new India, as in the old, they will be a power behind the throne, and their immense popular influence will remain to perplex Indian Ministers as it has so often perplexed English administrators in the past.

---

# THE WEEK AT HOME.

**Politics and Poison.**

Far more interest has been shown in a poisoning case in a remote Welsh village this week than in any political matter, and the public has gloated over every detail of what one of the papers rather incautiously called "the greatest murder mystery for fifty years." The case is still *sub judice*, and therefore comment is forbidden. It has often struck me that if the same rule prevailed in politics, and nobody was allowed to write about "the situation" until the facts had been thoroughly enquired into, political journalism would come to an untimely end; but the revolution would hurt the politicians far more than the journalists.

At Westminster the struggle between the business men and Mr. Austen Chamberlain continues. So far, the Chancellor of the Exchequer seems to have had rather the best of the deal, and he is sticking to his guns. His opponents' strategy has been faulty, but it seems to be improving, and if they learn to make the proper use of their weapons they will be a formidable foe. Up to the present their complaint has been that they, as a class, are overtaxed, and it has been badly received—the British public is never interested in other people's troubles, and it never believes that anybody who can still afford a decent tailor, a club, and a motor-car has anything much to grumble about. The business men wasted several weeks learning this elementary lesson, and I am not quite sure that they have learned it yet. After all, it is very natural, when one's own shoe pinches, to complain about the pain in one's toe, and to forget that other people, who only feel it at second-hand, so to speak, are not so immediately interested.

This is not the Achilles' heel of Mr. Chamberlain; and another attack on him, for expenditure in Mesopotamia and elsewhere, also failed, for the simple reason that the public is not at the moment in a Little England frame of mind, and they have no particular objection to spending a few millions in making the desert blossom like the rose. It is extravagance nearer home that moves them. No human being has yet succeeded in explaining why the Ministry of Munitions continues in existence: yet it runs away with thousands of pounds a week. The Labour Exchanges are admittedly useless, and their futility has been exposed at a recent official inquiry; but they continue to occupy valuable and expensive sites in every town, and presumably their staffs draw salaries for not finding workmen work.

The Government expenditure in these things should be cut down ruthlessly, but practically nothing has been done, and Mr. Chamberlain seems unable to get anything done. If the business men would concentrate on this point, and rub it in day after day they would soon reduce expenditure; and that in the long run will prove the only effective way of reducing taxation. As the income-tax people are just sending out their demands for the second instalment of the year's taxes the subject is one that comes home with peculiar force at the present moment.

The debates in the Commons this last week have not strengthened the Government. The Ministry of Transport, another of the new Departments, has been under discussion, and Sir Eric Geddes has not been very successful in its defence. He is personally unpopular, and the railways are also unpopular, owing to high fares and slow trains, and the public is quite ready to join in any criticism of the Geddes methods. I doubt if one person in a thousand has examined the figures, or if one in ten thousand understands them when examined; but the atmosphere is unfavourable to Governmental control of railways at the moment. Sir Eric may be fully justified in his defence, for he is a very able man, but he has certainly not succeeded in convincing the world that he is right. And in politics it is even more important for people to believe you are right than to be right.

**An Asquith Story.**

There is no limit to political malice. Because Mr. Asquith recovered something of his old tone in an attack on Sir Eric Geddes during the week, it has actually been rumoured that his speech was written for him by one of his daughters. I suppose somebody says these things originally as a joke, and the Tapers and Tadpoles, who have no sense of humour, and will swallow anything that is sufficiently improbable, repeat them as authoritative truth. The amazing thing is that credulous people in the clubs believe them. But, as a matter of fact, politicians will believe anything. I remember one day late in 1914, a Liberal M.P. happened to ask me one morning if there was any information as to what Lord Kitchener intended to say that afternoon in a speech he was announced to make in the House of Lords. The idea that anybody but Lord Kitchener himself would know what he intended to say was too much for my gravity; I laughed and said, "Probably he will announce the Government's policy on Welsh Disestablishment." A Welsh member, who shall be nameless, accosted me indignantly the same evening; he said angrily that he had cut a most important committee meeting to visit the Upper House, had waited there half an hour, "and the speech contained nothing but unpronounceable Russian and Polish names, and not a single word about Disestablishment."

**Westminster Abbey.**

The appeal of the Dean of Westminster for a quarter of a million sterling to restore Westminster Abbey startled the public early in the week. It instantly evoked a sympathetic response, for if there is one spot of earth that is sacred to Englishmen it is "the Abbey," and it gave one rather a shock to discover that the dilapidation was so serious. I visited the building during the week; it was crowded with sightseers, as usual, and although undeniably exquisite, one could not help wishing all the statues away; it is so hopelessly overstocked with bad sculpture that it is difficult to perceive the real beauty of the place. The whole interior seems to require rearrangement; I fancy, too, that the music, which is extremely well rendered, would be heard to better advantage were this done. As it is, the service is perhaps less impressive than that at St. Paul's, where choir and organ alike are almost equal to York Minster, the true Mecca of Anglican church music in these islands.

**A Church Conference.**

The High Churchmen, or, as they prefer to be called, the Anglo-Catholics, have been in conference this week. They have held several impressive services, and raised

Digitized by Google

considerable sum of money for missionary and other enterprise. Their activities have been well received, and rather confirm the impression one gets from general conversation in various parts of the country that they are now definitely the leading party in the Church of England.

To all appearances the Enabling Bill which was passed last year will strengthen rather than diminish their power. It is true that it delegates a good deal of power, at least theoretically, to the laity, and the laity, on the whole, are less "High" than the clergy. But the bulk of the laity, which is moderate in its views, takes no part in Church matters, and the energetic minority, which is "High," will naturally obtain the power.

**Wimbledon and the Oval.**

Never was there seen such a string of notabilities as at Wimbledon last week for the tennis; their motor cars filled several of the usually quiet suburban streets, and a considerable number of folk blocked up a neighbouring railway pathway, where they secured something like a free view. I gather that the play was in some ways disappointing. But the boom in lawn-tennis certainly has not detracted from the following of cricket, for the whole of London appeared to turn up at Kennington Oval for Gentlemen v. Players on Saturday. The crush was so great that evening that it seemed more than probable these notes would be written from the casualty ward at a hospital.

**Seaside Sharks.**

I gather that seaside landladies, who have been opening their mouths very wide this season, are disappointed at the refusal of Londoners to sink the whole of their available capital in a month's jaunt to some local Pebblecombe. Their demands are really extortionate: a lady tells me that when hunting for rooms at a place on the East Coast, one remark that was made to her was, "Two guineas a room a week, and no cats, dogs, or babies allowed." The seaside caterers no doubt had a thin time during the war, but it is quite hopeless to recoup themselves at one fell swoop. Unless they learn wisdom, they will merely drive people to take their holidays abroad again, as before 1914. No doubt their aim is to make enough in three months to keep themselves in idleness the remaining nine. But that is an ideal impossible of achievement in these strenuous days.

**A Bank Clerks' Strike.**

A strike of bank clerks has been threatened in Scotland, and for the moment averted. Their life at the best must be intolerably monotonous; they have never been well paid, and one gathers that their war bonus has not kept pace with advancing prices. The immediate cause of the trouble has been the refusal of the bank employers to meet the clerks in a Whitley Council; precisely why this attitude has been assumed is not stated. The public sympathy seemed to be with the clerks, who have, as a matter of fact, another difficulty to contend with—the employment of women.

Women have done very well in the banks during the war, and some managers—who, perhaps, have more susceptible hearts than one usually suspects in a banker—want to keep them permanently. But the rank and file are emphatic in their opposition. Every woman in a bank means one man less, according to their argument; and in one great bank recently a large number were retrenched on account of male opposition. Of course, this has been happening, more or less, in every industry, and the prospects for women's employment for some time to come are far from bright. It is very hard on well-educated and efficient girls, but they are certainly suffering from the evil reputation acquired by the irresponsible "flapper" element during the war—young ladies who had not the least idea of the difference between a debit and a credit.

**The Week's Book.**

The only book of any interest I have chanced upon this week is "Economic Liberty" (Longmans), a series of essays which Mr. Harold Cox has reprinted from the *Edinburgh Review* and other periodicals. Reprinting one's work is always a rather severe test, for the articles of the week or month are not always those of the year, and journalists as well as ladies sometimes change their minds. But this does not apply to Mr. Cox, whose masculine clear-sightedness one may admire even when one disagrees with him. He has no belief in nationalisation, State enterprise, or Guild Socialism—I fancy he even suspects the wisdom of State education, since on a famous occasion, in evidence before a Royal Commission, he gave it as his opinion that beyond taxation and defence the State should only be allowed to look after the drains. "Under no conditions," he says here, "can State regulation ever take the place of the individual conscience: for the action of the State itself depends upon the impulses of the individuals who compose and guide it. For these reasons it is better to endure some evils that may result from the absence of regulations rather than lose the boons that liberty brings."

The whole book is well worth reading, and thoroughly justifies the high reputation held by Mr. Cox in economic and political controversy. Nobody else, in fact, holds quite the same position. Ten years ago everyone thought him rather old-fashioned, particularly the members of his own party in the House of Commons when he exposed the folly of their fads; but as the times change and Mr. Cox does not, we are beginning to think him up to date. We all steal his arguments when we want freedom for our own particular folly, and denounce him as a hopeless reactionary when we want protection for some other fad. But he is always consistent in his views; perhaps that is why the Liberal Party, to which he belongs (or belonged), has no particular use for him.

OCELLUS.

## TOPICS IN PARLIAMENT.

*The subjoined headings are those given in the official report:—*

MONTENEGRO (RELIEF MISSION). PEACE TREATIES: Chimara. ANGLO-PERSIAN AGREEMENT. ASIA MINOR. TURKEY (GREEK OPERATIONS). MESOPOTAMIA: Oil.—Civil Administration. INDIA: Amritsar Disturbances. (June 28.)

PERSIA (SOVIET CONSUL). MESOPOTAMIA: Oil. ANGLO-PERSIAN OIL COMPANY. (June 29.)

INDIA: Army, British Commissions.—Army and Marine Pensions.—Rice.—Civil Service Pensions.—Homeward Passages.—Export Duties.—Punjab Disturbances.—Disturbances, Calcutta.—General Dyer. MESOPOTAMIA: Housing and Railway Material.—Civil Expenditure and Revenue. TURKEY: Greek Operations. SYRIAN PORTS (GARRISON). INDIA: Disturbances (Inquiry and Convictions).—Prisoners of War, Germany (Army Officers).—Bengal (Canal and Harbour Scheme).—Waterways (Management and Improvement). MESOPOTAMIA. PERSIA (SOVIET TROOPS). (June 30.)

MESOPOTAMIA: Political and Trade Protection.—Oil.—Baghdad Railway. TURKEY: French and Italian Forces.—Greek Operations. CYPRUS: CEYLON (CONSTITUTIONAL REFORM). MESOPOTAMIA (CIVIL ADMINISTRATION). INDIA: Labour (Hours and Age Limit).—Flying Officers' Pay.—Coal Mines (Capital). AFGHANISTAN. TANGIER. MONTENEGRO (PASSPORTS). TURKEY: Seizure of Ships.—Poison Gas. (July 1.)

INDIA: British Troops (Pay).—Afghanistan (Bolshevist Propaganda). THRACE. (July 2.)

The Crimean Republic has issued a combined postage and revenue stamp of the value of 50 kopecs lithographed in large format, with a central device of a double eagle and shield charged with a Greek cross. This stamp is imperforate and printed in chocolate on orange tinted paper.

## EGYPT.

CAIRO, June 14.

**The Latest Bomb.**

It is a common saying here that a man is not confirmed in his position as Premier of Egypt until he has had a bomb thrown at him. Tewfik Nessim Pasha is the fourth consecutive Prime Minister who has had this attention paid him, and the seventh Egyptian Minister who has been a target for explosive. Since September 22, 1918, when Sir Mohammed Said Pasha was bombed at Alexandria, up to and including the one thrown at Tewfik Nessim Pasha two days ago, seven bombs have been thrown, and it is a curious feature that each one has been a little more deadly than the last. Though the one thrown at Wahba Pasha some months ago set the back of the car on fire, and the one at Darwish Pasha a month ago killed a student, who is believed to have been the author of the outrage, the latest outrage has been the most successful of them all—from the assailant's point of view. It is true that the Premier was unhurt, but his chauffeur was seriously injured, and to-day's news of his condition merely is "that he is doing as well as can be expected."

**The Nile Projects Commission.**

On Thursday morning last the Nile Projects Commission concluded the hearing of the evidence concerning the physical data upon which the Nile Projects are based. As I have mentioned previously, the issue at the end was whether the incorrect figures published by the Public Works Department were given to the public in good or bad faith. Sir William Willcocks and Colonel Kennedy held that these incorrect figures had been published in an attempt to deceive the public; the defence replied that no motive was given for the alleged falsifications, that no motive could be imagined, and that in the rare instances where, with the abnormally reduced staff, small miscalculations had been made, these were honest mistakes. Chief interest during the final days centred in the protracted cross-examination of Sir Murdoch MacDonald by Sir William Willcocks and Colonel Kennedy. Feeling between the examiner and the examined was often high, and the crowning point came with the last question of Colonel Kennedy's:—

"Sir Murdoch, are you directly or indirectly financially interested in the Sudan Plantations Syndicate, for whom these projects have been designed?"

Sir Murdoch MacDonald: "No, and you are a scoundrel, sir, to ask such a question."

The Public Works employees immediately started to clap, and soon the whole attendance was applauding vigorously—to the disgust of Judge Booth, who informed the gathering that "people who wish to applaud must go outside."

Mr. Maxwell, who has been acting as counsel for the Public Works Department, in his summing up, submitted that though ample evidence had been called to prove that there was no question of dishonesty, people were apt to ask why such eminent men as the plaintiffs should bring such charges when they had nothing to gain and everything to lose. He laid stress on the fact, as it appeared to him, that the plaintiffs were actuated by motives of personal bias against Sir Murdoch MacDonald. The plaintiffs, in their summing up, directed the attention of the Commissioners to the admittedly incorrect figures, and also to the fact that the correct figures for the gauge-readings and Assouan Dam discharges had been in the private records of the Public Works Department. Decision was reserved.

**Politics in Egypt.**

Perusal of the vernacular Press in Egypt, always interesting, is unusually so at the present juncture, for there one can observe the diverse views which the Egyptians themselves hold upon the question of the visit of the Nationalist Delegation to London, and its possible consequences. *Al Mokattam*, one of the two big papers in Cairo, commends the move on the grounds that it is the best thing which could be done, and that the only regret is that it was not done sooner. *Al Watan*, the Coptic organ, and frankly opposed to the Nationalist delegation, professes to be sceptical as to the possibility of any official notice being taken of Saad Zaghloul Pasha and his companions. It also infers that even the members of the delegation themselves are not unanimous in the decision to visit London, and forecasts a split in the ranks of the Zaghloulists. But since this is obviously what *Al Watan* desires it may be taken that the wish is father to the thought. The other papers suspect some catch. Some of them, inspired by the extremists, are contending that as long as the delegation adheres to the terms of its mandate it cannot effect any reconciliation in London—which is only another way of putting the extremists' argument that "We will have no truck with the British." Naturally, the Egyptians as a whole are keenly interested in the trend of events, and official British circles have informed me that there is a growing feeling in favour of a settlement, though, on the other hand, prominent and well-informed Egyptians tell me that any settlement through the medium of the Nationalist delegation would be unacceptable to a large section of the natives simply because it would be made through men who are, in some quarters, unpopular. It is the old game of "personalities, not principles." It is not that the Egyptians want to rule themselves: rather, from the native standpoint, the question is whether Egypt shall be ruled by the Hibn-el-Watani or by the Zaghloulists!

**Another Imposing Funeral.**

Last week there was a repetition in Alexandria and Cairo of a funeral procession similar to the demonstrations arranged a month ago in honour of the students who were killed in the railway accident on the Austrian frontier. The funeral this time was those of Mohammed Farid Bey, late President of the Nationalist Party, who died some months ago in Germany. The body of the deceased politician was brought over on the s.s. Helouan, and on the arrival of the steamer at Alexandria the funeral committee, accompanied by the executive committee of the Nationalist Party, went on board and received the body, which was afterwards transported through immense crowds lining the principal streets. The ceremony was repeated the next day at Cairo, and though the crowds were not as large as those which paid homage to the dead students, they were large enough to obstruct all traffic from the station to Opera Square and Ataba-el-Khadra for most of the afternoon. Good order prevailed in both cities during the passing of the *cortège*.

**Technical Education in Egypt.**

A few days ago the committee appointed to consider ways and means to extend the system of technical education in Egypt, with particular reference to more advanced instruction in irrigation engineering, held its first meeting. It is felt that the present facilities for the instruction of the Egyptian youth in this branch of technical science are woefully inadequate, and the committee is busy inquiring into the systems abroad with the intention of making a report on the best way to bring the national technical schools here into line with those in other countries. For the moment, arrangements are being made for the extension of the school at Giza, and it is not improbable that some students will be sent abroad to complete their education and then return to assist in the development of the irrigation schemes which the Government is ready to start.

CAIRO, June 21.

**The End of the Fast.**

Yesterday was the last day of the feast of Bairam, which was celebrated throughout Egypt with the usual display of rejoicing. The relief felt by the Moslem community after the period of fasting was all the greater in that this year the month of Ramadam coincided with a very trying spell of extreme heat. During the latter

Digitized by Google

part of the month some anxiety was felt as to the likelihood of a sporadic demonstration induced by the fervour prevalent during the Bairam feast. With Zaghloul concerting with Lord Milner in London and the native Press confessing itself uneasy as to the probable outcome of the negotiations, the agitators had a golden opportunity. They did manage to engineer a small demonstration at Alexandria yesterday morning, which gathered in strength as it wended its way through the main streets, but when nearing the Cairo station it was tactfully headed off by a posse of native policemen and soon dispersed for want of a definite objective. There is undoubtedly some misgiving among many Egyptians concerning the present trend of political events, in spite of the optimistic tone of the telegrams received from the Nationalist leader; but the fact that the recent critical period has passed without any untoward incidents seems to show that saner counsels are beginning to prevail.

**The Nile Projects Commission.**

For the past few days a rumour has been persistently circulated that the decision of the Nile Projects Commission had been taken and given. In fact, one well-known news agency went so far as to cable to London what purported to be a résumé of the Commission's findings. I have been in touch with members of the Commission and I am assured that no announcement will be made for at least two or three days yet. As by the time these lines appear in print the decision will have been made public, and the matter will, consequently, no longer be *sub judice*, I may be allowed here to anticipate the decision, vindicating the Department. Colonel Kennedy alienated the sympathy of the Commission, the witnesses, and the listeners by his method of conducting his case. Sir William Willcocks, on the other hand, gained wide sympathy by his obvious sincerity. Up to a certain point his contentions were right, and if he had contented himself with pointing out mistakes, and not asserting that these errors were in themselves proof positive of falsification, he would probably have succeeded. As it was, he charged Sir Murdoch MacDonald, the Adviser to the Public Works Ministry, with having falsified the records. Now, Sir Murdoch does not do the whole clerical work of his Department, and it is obvious that an extended series of falsifications would have needed the connivance of more than half of the Department's officials. And to suppose that such a state of affairs could exist would be absurd.

There has been so much public washing of dirty linen in a very much overheated atmosphere, that one would wish the announcement of the Commission's decision would put an end to what has proved to be a painful and regrettable controversy. It is anticipated, however, that echoes of the present proceedings will soon be heard in the criminal court, where an action for libel and defamation of character may be brought by Sir Murdoch MacDonald.

With regard to the projects themselves, I learn officially that work on these is to be proceeded with in the very near future, so that we may sum up the result of the recent unfortunate proceedings as an annoying delay in the execution of urgently needed public works and a lowering of British prestige in Egypt.

## GREECE.

ATHENS, June 19.

**A Demonstration in Favour of the Allies.**

An imposing demonstration took place in Athens last Sunday with a view to offering a vote of thanks to the governments and peoples of the Allied nations for the support they afforded Greece in the realization of her national aspirations. The place of rendezvous was Omonia Square, where the crowd began to concentrate at 6 p.m. Shortly after six the crowd became so dense that all traffic was temporarily suspended.

At 6.30 the demonstrators, displaying the flags of the Allied nations and accompanied by a military band playing the Allied national anthems, proceeded to the town hall, where the Mayor of Athens, M. Patsis, delivered a speech. After the conclusion of his speech the Mayor, with the organising committee, headed the demonstration and passed up Stadium Street to the British Legation, where the following vote of thanks was presented to the British Minister, Earl Granville:—

"The people of Athens, with the conviction that they are voicing the sentiments and opinion of all Greek people, have assembled to-day on the occasion of the liberation of Unredeemed Hellenism, and feel that it is their duty to express their unanimous and firm gratitude to the Allied Governments and people for the material and moral support which they so willingly afforded for the protection and realisation of the Greek rights. The people of Greece will always bear this in mind, and will remain faithful friends to those with whom they fought for humanity and civilisation.'

Earl Granville requested the Mayor to thank the people of Athens on his own behalf and that of the British Government, whereupon the demonstrators gave hearty cheers for Great Britain, whilst the band struck up "God Save the King."

Thence the crowd went first to the Legation of the United States of America and then to the French Legation, where similar votes of thanks were presented. At the latter Legation a committee representing the Greek volunteers who fought on the French front was received by the French Minister, M. de Billy. The crowd finally went on to the Italian Legation and then dispersed.

In spite of the fact that no political character whatsoever was given to the demonstration, there was a considerable amount of cheering for M. Venizelos after the Mayor's speech.

**A New Census.**

A Royal Decree has just been published in the Government *Gazette* ordering a general census of the population of Greece on December 18 and 19 (o.s.) simultaneously with that of all industrial undertakings in the country. The sum of 500,000 drs. has been voted for the expenses of this census.

The last census in Greece was taken in 1907, when the returns given were 2,631,952. In 1913, after the Balkan wars, an improvised census in the newly acquired territories was taken, this showing a population of 2,101,014. Officially the population of Greece to-day is, therefore, 4,732,966. In view of the large influx of refugees from Southern Russia and Asia Minor during the war, and the new territories assigned to Greece by the Peace terms, this new census should prove instructive and interesting, affording valuable information both from a social and political point of view.

June 26.

**Good News.**

The Athenians have been in a state of intense excitement since the beginning of the week. The splendid news that the High Council had at last decided to use the Greek Army to give the *coup de grâce* to the Sick Man of Europe, was known here long before M. Venizelos' official telegram to the Government had been received. Naturally, everybody is full of enthusiasm and quite confident that Greece will fully justify the Great Powers' faith in the capability of her army to cope with the situation, and compel the insolent, though vanquished Turk, to respect the Treaty. The two sections of the Press—Venizelist and Royalist—have, at least for the time being, ceased barking at one another, and point out that in these times the entire nation should forget its family troubles and unite against the common enemy.

At the time of writing, the news of the first successes of the advancing Hellenic troops is to hand, and, although the official *communiqués* are very terse indeed, the Athenians smile contentedly, as they know that there will very soon be none at all.

**A Council of Ministers.**

A Council of the Ministers was held on Wednesday (June 23) at the Ministry of Finance, under the presidency of M. Repoulis.

The following telegram, dispatched by M. Venizelos to General Paraskevopoulos, the Commander-in-Chief of the Greek Army, informing him of the decision of the Great Powers in connection with the proposed measures against Turkey, was read out:—

"The High Council has approved advance. . . . The successful issue of this undertaking will not only afford assistance to our Great Allies, but will, at the same time, raise our prestige and result in copious benefits by assuring the imposition of the peace terms on Turkey. I am certain that this undertaking will be carried out with the utmost dash and prudence. I wish to you and to the entire National Army the complete success which is, after all, guaranteed by the high spirits of the men and the efficiency of their leaders.—Venizelos."

Digitized by Google

After discussing the military situation, which was considered exceptionally favourable, the Council of Ministers decided upon an immediate restoration of the Press Censorship, to be applied only in the case of purely miltary and war news. No decisions were taken as to whether the calling-up of certain classes of reserves would be necessary.

**The Moratorium on House Rents.**

The Union of House Proprietors has submitted a memorandum to the Minister of Justice, requesting a revision of the moratorium in force during 1915-1916 by 100 per cent. They likewise propose that in cases where the tenant sublets the house they, and not the latter, should reap the benefit of the increased rent. Only were the tenant to sublet the house furnished should he be entitled to the extra rent for his furniture. This memorandum will be dealt with by a special commission of the Ministry of Justice. Meanwhile there will not be any modification of the moratorium before the end of July next.

**Greek Flag Hoisted at Gumuldjina.**

The Greek flag was officially hoisted at Gumuldjina on the morning of June 22. The ceremony took place in great state in the presence of the civil and military authorities and practically the whole population of the little town. Greek troops, the Boy Scouts, and the schools were lined up outside the Governor's Palace.

The Government representative, M. Vamvakas, delivered a long speech, which he subsequently repeated in Turkish. After the ceremony a deputation of Turks visited M. Vamvakas on behalf of the Turkish element of the town, and declared that they will remain faithful to the new *régime*.

## ROUMANIA.

BUCHAREST, June 23.

**Opening of Parliament.**

Parliament was opened for a short extraordinary session on Sunday, June 26, when the King read the Speech from the Throne. After expressing his conviction that the newly-elected legislative bodies would devote all their efforts to the furtherance of their country's interests, his Majesty referred with patriotic pride to the union of all Roumanians under one flag, and to the great task which lay before the new Parliament, of adapting the internal organisation of the country to its new conditions and to modern requirements. This, he said, was a task in which all Roumanians must collaborate, and which would take some time to accomplish. The chief business to be undertaken during the short coming session would include the ratification of the treaties of peace and of the decree-laws provisionally signed by him, the drawing up and balancing of the Budget, and the establishment on a systematic basis of the land distribution to the peasants in the new provinces. Until the opening of the autumn session commissions of each house would be occupied in drawing up, with the assistance of the Cabinet, such Bills as were necessary for the introduction of the far-reaching reforms required to meet the new conditions. After reading the Speech, his Majesty formally declared the Parliament open, and he and the Queen left the House.

The Opposition Press is full of adverse comment on the fact that no reference is made in the Speech to the foreign policy of the Government, especially as some apprehension is felt regarding the attitude the Government will adopt towards the suggestion of sending help to Poland in her struggle against the Bolshevists. Various contradictory reports have been published on the subject, but no official pronouncement has been made. It is stated, however, that the Polish Minister in Bucharest, in an interview with a Press representative, informed the latter that the Polish armies were not in need of help.

**A Short-lived Strike.**

Another strike, fortunately of short duration, took place last week. A Syndicalist workman at the Municipal Gas and Electricity Works struck one of the mechanics, and was in consequence suspended by the authorities till the case could be heard. The other Syndicalist workmen took the part of their comrade, and declared a strike the next morning, June 14. The President of the Council of Ministers (General Averescu) then issued the following order:—

(1) If by 5 p.m. to-day the workmen of the gas and electricity works have not returned to work a committee will be appointed to inquire into the cause of the cessation of work. (2) The committee will present its report to the Home Ministry on June 16, at 11 a.m. The strikers may be represented by a delegation of three workmen. (3) In the interval between to-day at 3 p.m. and taking of the decision on the 16th, no workmen will be admitted to the works who have not recommenced work by 5 p.m. to-day. (4) No wages will be paid on strike days on any consideration. (5) If the inquiry proves that the strike has been unjustified, and if the works have suffered any loss through the strike, this loss shall be made good by deductions from the wages of the strikers.

The works were at once put under a military guard, and 50 prisoners of war were brought in to take the place of the strikers, and at 1 p.m. all was in working order. At 5 p.m. a delegation of strikers called on the Minister of Labour, M. Trancu-Iassy, but were told that the Government could hold no negotiations with the strikers until work was resumed. At 7 p.m. the strikers returned to work. General Averescu is to be congratulated on the firm stand he took in this matter. He is evidently determined to put an end to these constant disorders.

**Miscellanea.**

Queen Mary and the Princesses Elizabeth and Ileana left Bucharest by the Simplon express on Monday morning (June 21) for Paris, where they will meet the Princess Marie.

On the same day, shortly before the Royal train started, an accident occurred at the railway station. A woman working among the sheds dropped the end of a cigarette in an underground store where some benzine was kept. An immediate explosion and fire ensued, which damaged the offices above the store and severely injured some of the clerks working there. The woman herself was killed.

A terrible explosion occurred last week at the Reshitsa coal mines (in the Banat). There are reported to be 173 dead and 30 severely wounded. A commission has left Bucharest to inquire into the cause of the disaster.

## BULGARIA.

SOFIA, June 12.

**A Frontier Incident.**

On the evening of June 3 a Greek force, consisting of four officers and 150 soldiers, attacked the Bulgarian posts south of Dara-Deré and attempted to disarm them, but without success. In the afternoon of the following day other Greek troops, with three officers and two machine guns, reinforced by *Andartis*, attempted to cross the frontier at Ortakeui, for the purpose, apparently, of carrying off sheep belonging to the frontier villages of Gaidohor and Drebishna. The Bulgarian post was attacked and driven off; but assistance soon arrived from the frontier station, and the Greeks were surrounded. No wounded are reported. The Bulgarian frontier guards are occupying their old positions.

The Bulgarian Government, informed of these incidents, addressed a note to the delegate of the Commander-in-Chief of the Allied troops in the East, protesting against these attempts at penetration into Bulgarian territory by Greek troops. The Government has asked for an inquiry.

**A Students' Demonstration.**

The students of both sexes from the Sofia Gymnasia last Sunday demonstrated before the foreign legations,

RANKEN COMPANY
CIVIL & MILITARY TAILORS,

Digitized by Google

with an appeal for the release of Bulgarian prisoners of war in Greece and Serbia. The procession lasted from 10 to 12.30, and it is estimated that 20,000 pupils took part in the demonstration. They carried black flags and placards with inscriptions in French and Bulgarian, and demonstrated in front of the Commander-in-Chief of the Allied troops and the British, Netherlands, French, Italian and American Legations. The Italian Minister received a delegation of the students, boys and girls, and replying to their representations, said that he had already taken steps, and would now take further steps for the repatriation of the Bulgarian prisoners; and he promised to do everything in his power to alleviate the sufferings of the Bulgarian children.

At the British Legation the delegation was kindly received, and a student, Petko Zlateff, made a touching appeal, speaking in English, begging the Minister to do everything possible for the liberation of their fathers and brothers, now prisoners in Greece and Serbia. Sir Herbert Dering, in replying, promised to forward the petition to the British Government, and added that the war had caused a series of misfortunes in all countries, and that he hoped for reconciliation between the nations in the near future. At the other legations the appeal was merely handed in, as the Ministers were absent.

**The Budget.**

At its sitting last Saturday, which was prolonged to midnight, the Budget project for six-twelfths was debated, and after a brilliant speech by the Finance Minister, M. Marko Turlakoff, was passed at its first reading.

**The Thracian Congress.**

Yesterday, in the Slavidinska Beseda Hall, a Congress of representatives from all parts of Thrace assembled. Over 100 delegates took part in the meeting, and the Congress elected as its President, M. Petko Tchorladjieff. Its sittings will last for three days.

**Greeks Search Bulgarian Courier.**

The Greek military authorities in Western Thrace have searched M. Fournedjieff, a Bulgarian Government official, who was on his way to Constantinople, where he has been appointed Financial Assistant of the Bulgarian representative. At the time he was provided with all the necessary documents authorising his journey. Part of the official correspondence, of which he was bearer, was retained. The Bulgarian Government is preparing a most energetic protest against this high-handed act of the Greeks.

The Bulgarian Government has addressed a Note to the representatives of the Entente Powers, urgently appealing to them to take measures to bring about a cessation of the persecution of Bulgarians in Thrace, and to put an end to frontier incidents.

**An Aeroplane Disaster.**

Yesterday morning, the members of the Cabinet and the deputies of the Agrarian groups attended some motor plough trials near Bajourishe village. An aeroplane which was flying over the district met with an accident, and crashed to the ground, killing two deputies, and mortally injuring M. Malakoff, foreign manager of the Agricultural Bank, who succumbed to his injuries shortly afterwards. The King was present at the scene of the disaster, as was also the Prime Minister, M. Stambolisky, who had a narrow escape from death, M. Liaptcheff, who was talking to him, drawing him away just in time.

## TURKEY.

CONSTANTINOPLE, June 15.

**Batoum.**

During the last few days rumour has once again been busy with stories of the impending evacuation of Batoum, and this time there is reason to believe that there is some foundation for the report. For some time past there have been exaggerated accounts of the Bolshevist forces in the Caucasus. It is possible that the British Government has been influenced by these stories on the one hand, and on the other by the readiness with which Krassin, the Bolshevist delegate in England, has agreed to almost every proposal that has been made. At this distance, it is, perhaps, impossible to obtain a correct impression of the latter circumstance, but in view of past experience of the value which the Bolshevists attach to promises in general, and in consideration of Krassin's history in particular, it is somewhat surprising that he should be received so affably.

With regard to the Bolshevist undertaking to discontinue the propaganda campaign in the Orient, it should be noted that on May 16 the Soviet Government sent a wireless telegram to the Great National Congress at Angora in which all the Moslems of the East and of Russia were called upon to unite against the British, who were described as "pillagers." The Turks were urged to resist the Peace Terms, and were promised the support of "the Soviet of the Great Russian Revolution." It is also of interest to note that the same announcement proclaimed the annulment of "the treaty concerning the forcible occupation of Constantinople, concluded by the former Tsarist Government of Russia."

The evacuation of Batoum, in any case, would mean the final abandonment of Armenia to her fate, moreover, our departure would be the signal for the commencement of a struggle between the Georgians and the Tartars for the possession of the all-important port, which would simply result in the establishment of Bolshevist dominion. The Caucasus would then become the base of operations against Persia, Mesopotamia, and perhaps Asia Minor, for Bolshevist guarantees to the contrary will not be worth the breath which will be used to express them. The cheapest and easiest way of fulfilling our obligations in regard to Persia, Mesopotamia, and Armenia, is to hold Batoum, which is not only a position that threatens an advance southwards from the Caucasus, but, so long as we hold it, would ensure the despatch of supplies to the Georgians and Armenians, both of whom are opposed to the Bolshevists.

**The Peace Negotiations.**

The hurried departure of the Grand Vizier has been construed in some quarters as an indication of the Government's resolve to sign the Treaty on the expiration of the stipulated period. But there can be no question of this; for counter proposals will certainly be submitted to the Peace Conference. In any case, whether the Grand Vizier signs or not will make very little practical difference, for his authority barely extends beyond the capital itself, and were it not for the Armies of Occupation, he could not hold power for an hour. It is useless to disguise the fact that the Nationalists are masters of the situation in Turkey so far as the government of the country is concerned; and, as I have repeatedly stated in previous letters, any peace terms that are not endorsed by the Nationalists can only be applied by force. It is for the Allies to make up their minds whether they are prepared to exert this force, but it must be remembered that Italy will not lift a finger to force Turkey to cede territory to Greece; the French have proved by their conduct of affairs in Cilicia just how far they are prepared to go; and we ourselves apparently find it difficult to hold Batoum.

The conditions with regard to the Straits Commission can only be enforced by an army strong enough to drive the Nationalists from the southern shores of the Marmora Sea, and to hold a line extending from the Ægean to the Black Sea. We are now holding the solitary port of Ismid, which is, at the present moment, being attacked by the National forces. There is nothing to prevent a raid upon Scutari, Haidar Pasha, or the Asiatic shore of the Bosphorus, if Mustapha Kemal took it into his head to make one. The details of the plot to assassinate the Grand Vizier proved that it is difficult to fix a limit to the audacity of the Nationalists; and the raid upon the aerodrome of Maltepe, within a stone's throw of Haidar Pasha, which resulted in the capture of three aeroplanes, proves that it is unwise to use the word "impossible" with regard to what may happen in this part of the world.

It is reported that negotiations have actually been commenced between the Turks and the Greeks for the purpose of discovering a *modus vivendi*. This, if the

Digitized by Google

news be true, is certainly a step in the right direction, even though there may be little hope of a successful termination to the discussions.

**Thrace.**

There has been little news from Thrace, beyond reports of odd encounters between the Greek troops and Bulgarian bands. Jafar Tayar has decreed a general mobilisation, and is said to have about 50,000 men at his disposal. They are very poorly off for artillery, but rifles and small arms ammunition are said to be plentiful. There is no doubt that the Turks are being assisted by a number of Bulgarian *Komitajis*; but the Bulgarian Government has very good reasons for not wishing to offend the Allies in any way, and it is certain that it will do its best to prevent the activity of the bands. On the other hand, it will be very difficult to prevent the activities of the numerous emigrants from Macedonia and Thrace, and of the many officers who, having lost their employment by the reduction of the Bulgarian army, are disinclined for, or unable to find, other employment, and have become soldiers of fortune.

**The Nationalists.**

News from Anatolia is scarce, but there have been reports of feverish preparations for an offensive upon the Smyrna front. Great precautions are being taken to prevent the leakage of news; and since the cessation of the Government campaign against the Nationalists, the latter have instituted a reign of terror in Anatolia. Martial law has been established, and there have been numerous hangings, one of the most pitiful being that of a Major Hairi Bey, who held a command in the Government forces, and of his fifteen-year-old son. As has already been remarked, fighting is in progress with the British force under General Montague Bates, which is occupying Ismid; and rumour has it that there has been a determined attack, but this may be exaggerated. In any case, it will have to be a very determined attack to turn us out, for all precautions were taken long ago. It is more probable that the attack has been made for the purposes of advertisement; for the Nationalists will see to it that wild accounts are circulated in the capital and elsewhere, and they probably expect the Inter-Allied censorship to act with its usual want of perspicacity, and suppress all accounts in the Press.

**Cilicia.**

The Franco-Nationalist armistice seems to be surrounded with mystery, but according to trustworthy information from persons who have returned from the region in question, the French have evacuated the hinterland with the exception of the heights around Aintab, where a small force still remains. So far as can be gathered the Armenian population has mostly been left to the tender mercy of the Turks, and one knows only too well what that means. Hajin, which has been besieged for three months is still surrounded, and its fall is said to be imminent. In this event, the extermination of the population is certain, since their obstinate resistance has infuriated the besiegers. The situation could not very well be worse.

## TRANS-CAUCASIA.

TIFLIS, June 10.

**Storms.**

It never rains but it pours, and both climatically and politically poor Georgia has been undergoing stormy times. There is a local proverb to the effect that no sooner does one get rid of one sorrow than one is faced with another—and a worse. For a long time the most serious menace to the peace and quiet of the new Republic was the volunteer army. On several occasions, only Allied intervention prevented Denikin's troops from blundering down towards the south and involving Georgia in the Russian civil war. The danger passed, but a more evil one took its place. The Bolshevists occupied Vladikavkaz and the North Caucasus, and came to the very doors of Georgia. Soviet power was established in Azerbaijan, and there was a day when things looked very black—one might almost say, very red. Then came the news that the Bolshevist government had recognised Georgia's independence unconditionally, and that a peace agreement had been signed between the two parties. One breathed again, but the Azerbaijan-cum-Bolshevist troops launched an attack on Georgia from the East, and a new war commenced. Thanks to the successful resistance of the Georgian troops, who inflicted heavy losses on the enemy, the latter demanded an armistice, and now this week a peaceful settlement of the strife has been arranged.

**The Adjarians.**

But the troubles are not yet over. For a long time Turkish propaganda has been actively carried on in Adjaria, and Turkish arms have been secretly brought into the district. Gangs of bandits, composed of Turks, Russians, Armenians, and escaped gaol-birds, have been terrorising the country-side, and now there are open hostilities between the Adjarians and the Georgian soldiers. A few days ago the former captured 490 Georgian men and eleven officers, whose arms they seized. The British authorities in Batoum immediately demanded the release of the prisoners, but, so far, the men have not been freed, and the war is likely to develop seriously. There is little doubt but that the Georgians will be able to cope successfully with the rebels, only the orders issued by the British command that no Georgian troops must enter the Batoum Province will have to be altered before the Georgians can have a chance.

**"Soviet" Azerbaijan.**

As was only to be expected, the oil of Islam and watery Bolshevism have not been mixed successfully, and the Reds in Azerbaijan will have their hands very full indeed if they wish to check the growing discontent and the signs of revolt among the Mussulmans. Already the Tartars of Elisavetopol (Gandja) have risen against the new authorities. At first the revolt was successful, but the local Armenians—who, in their own words, would ally themselves with the devil himself, as long as he was against the Mussulmans—played the rôle of traitor, and went to the Bolshevists' assistance at an opportune moment. So the rising was put down, and reports to hand state that the Tartar losses total 10,000 against Soviet losses of 3,000. The violation of over a thousand Mussulman women by the Red soldiers may well rouse the whole Moslem world against them, and it is generally considered to be a mere matter of time before a rebellion on a great scale is brought about against the Russian "liberators."

**Baku.**

Meanwhile, passengers who have arrived from Baku have a dismal story to tell. The Bolshevists have commandeered all stores and sent them off to Russia. Even furniture from the Mussulman houses has been seized and exported. There is a serious food crisis, and the

small quantities of eatables that still remain are almost prohibitively dear. Sugar, for instance—if one can find it—costs 800 roubles a pound, cheese 700 roubles, etc. Bread is sold to the workman at 5 roubles a pound, but many of the poor people, such as the street porters, who belong to no union, cannot buy at this price, and the distress and discontent are very great. Many speculators—and to a Bolshevist every *bourgeois* is a speculator—have been arrested and sent off to various parts of Russia on terms of forced labour. Perhaps the saddest news is that the British prisoners have been forced to clean the streets. . . .

**The Armenian Mandate.**

The refusal of the United States to accept the Armenian mandate and the Great Powers' perplexity regarding finding any other country sufficiently charitable and brave to take on the job, are not worrying "Independent" Armenia. *Au contraire*, the Armenian official Press seems very much relieved because a mandatory has not been found. *Nor-Ashkhatavor*, one of the Dashnaktzutun organs, writes: "The Allies, who accused their enemies of imperialism, were in need of a formula under which they could conceal their plundering-conquering aspirations. This formula has been called 'protectorate' or 'mandate.'" Then the paper goes on to say cheerfully that as the Allies have each cut off for themselves a dainty bit of Turkey, they cannot possibly digest Armenia as well. But they are anxious to give the mandate to someone in such a way that they themselves would always be assured of a pretext to get some profit. "With this object," says *Nor-Ashkhatavor*, referring to the more or less reliable telegraphic news we get from time to time, "the Entente proposes the mandate to the League of Nations, to Spain, Denmark, Sweden, and Holland—i.e., to such countries as themselves possibly need a mandatory." Finally, "If the Entente really wanted to help Armenia, it could have furnished her with munitions, clothes, and agricultural implements instead of mandatories. . . . . Under the name of 'mandate' new fetters of political and economical enslavement are being forged for the Armenian democracy, which must understand this and refuse the rulers sent to us by Europe." "Independence" in Armenia means being—well, independent."

## CYPRUS.

NICOSIA, June 5.

**Warnings to Emigrants.**

Although Egypt is now forbidden ground for destitute fortune-seekers from Cyprus, the desire to settle abroad, which has always been so strong, is still widespread. The Greek paper, *Phoné tes Kypron*, once more utters an earnest caution. It quotes from an Athens paper an account of a number of Greeks who, since the war, have hastened to America. These Argonauts found no golden fleece in the new Colchis of their dreams. After spending the savings of years, many of them have returned home, not a few having contracted fatal diseases, due to hardships and privations. The paper argues that it would be well if the Government, through the Medical Department, took the whole matter of emigration in hand.

## PALESTINE.

(FROM A CORRESPONDENT.)

**Sir H. Samuel's Appointment.**

It is natural that the news of the appointment of Sir Herbert Samuel as High Commissioner should have been received with mixed feelings, according to the varying estimates formed regarding the line he is likely to take when exercising the "mandate." There is no question as to his ability and clearness of vision, which have already been put to the test to some extent during his late mission. Many, however, cannot regard the choice as a wise one, in view of the conflict of races. There is much apprehension that serious friction will occur between Jews and Arabs. Zionist optimists, of course, hold, as Dr. Weizmann does, that one generation of mandatory control will bring about a capacity for autonomy on a democratic basis, as well as full and friendly co-operation of Jew and Arab, and toleration on the part of Moslems and all other creeds. In the still unsettled but vastly improved state of affairs, one thing is certain. It is devoutly hoped that there will be no undue or hasty interference with the machinery that is already working so well, under the able chief administrators who have held office, and which has achieved much towards reconstruction and orderly government. It has been very uphill work under extremely difficult circumstances, seeing that the Ottoman offices were swept clean of everything which the outgoing Turks could take away or destroy.

Sir Herbert Samuel is expected within the next fortnight. The departure of Sir Louis Bols will be very greatly regretted in all quarters.

**An Agricultural Show.**

An agricultural show held recently at Haifa was a success. There were many good exhibits of local products by both Jews and Arabs, and considerable interest was taken in the results. There is much room for improvement in market gardening, and this should be stimulated as the population increases and European tastes have to be satisfied.

**To Check Profiteering.**

An Ordinance to check profiteering, which has now been published, is generally welcomed. A measure to regulate prices is most necessary. A Central Food Board is constituted, which includes representatives from the Departments of Finance, of Law, and of Commerce and Industry. It is empowered to deal with all articles in common use by the public. As regards the provinces, the Military Governor in each of them, on the instruction of the Central Board, appoints a local committee, and the Governor or some officer appointed by him exercises summary jurisdiction, which is not subject to appeal. The Ordinance is to continue in force until December 31, 1920, and thereafter until the Chief Administrator shall declare that it will cease to have effect.

**Marriage Facilities.**

British subjects, and couples of whom one is British, can now be married in Jerusalem, under the Foreign Marriage Act, before the Military Governor of Jerusalem, a warrant having been granted under the hand of the Foreign Secretary. This is satisfactory, for there have been places under British administration where British subjects could not be married unless a vessel happened to arrive with a chaplain on board. In Cyprus, *e.g.*, British couples could not be married for years after the occupation for want of such warrant.

**Miscellaneous News.**

Captain Keith Roach has been appointed Public Custodian of Enemy property in Palestine.

Bedouin rovers still give trouble by small raids, as they see opportunities for plunder. Probably a system of flying patrols of mounted police may be found useful in coping with these marauders in some of the less protected parts.

It is hoped that before long archæological work on systematic lines, whether under British or American direction, may become possible. These should very soon lead to many interesting results in several areas, and replace illicit diggings.

## CORRESPONDENCE.

### JEWS AND ARABS IN PALESTINE.

TO THE EDITOR OF "THE NEAR EAST"

Sir,—May I call your attention to the letter from a Jerusalem correspondent published in THE NEAR EAST of May 27. The whole letter is imbued with a biased anti-Jewish feeling, and, to say the least, it lacks all accuracy and fairness. The following passage may be quoted to prove my argument: "The recent rising has left a nasty feeling behind it, but people are beginning to realise that it was probably through the influence of certain foreign Jews of Anarcho-Bolshevist tendencies," etc.

The whole passage is so unbased and vague that one cannot help charging the writer with partiality and bias. Who are the people who are beginning to realise? Who are the certain foreign Jews of Anarcho-Bolshevist tendencies?

I would not enter into the rather complicated problem of Jews v. Bolshevists. Let me only emphasise that no Jew is foreign or alien to this country, and that the reputation of the Jewish nation as a law-abiding nation derives its origin from the Jewish tradition in force since the very beginning of the Dispersion, which orders: "that an order of the Government is law." There are no Jews of Anarcho-Bolshevist tendencies in Palestine. If there are any Jews of free tendencies at all, they are all obedient and law-abiding. Whatever the political platform may be of the various parties and papers in Palestine, however they may dissent from each other regarding the various questions involved in Jewish colonisation, they all unite in one important point: From all pulpits they preach the cultivation of friendly relations with the Arabs.

As a native Jew who has come in official contact with many leading Arabs of Government offices, and who knows their language and mentality, let me add that Palestinean Arabs would never attempt to promote anti-Semitism in this country were it not for some ringleaders who were allowed to start a poisonous anti-Jewish campaign.—I am, etc.,

ISAAC A. ABBADY.

Doar Hayom Office,
Jerusalem, June 17.

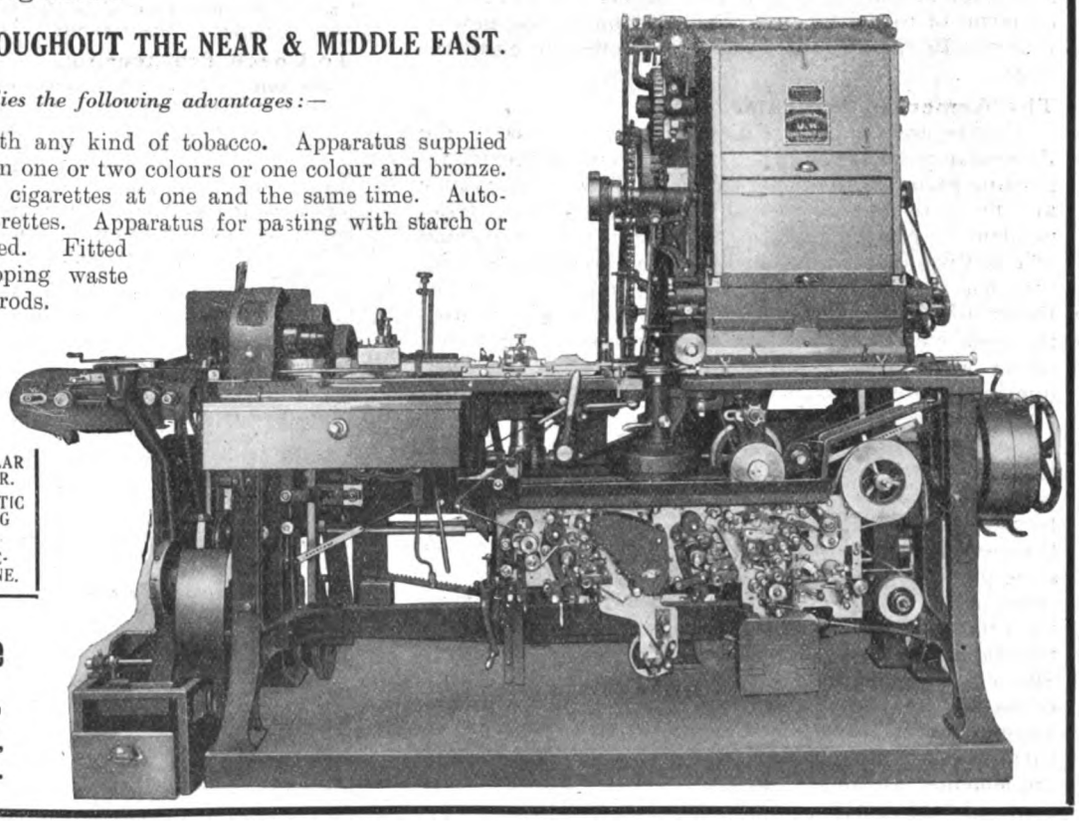
# The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

**IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.**

*Embodies the following advantages:—*

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.



*Also:—*
THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.
AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

**United Cigarette Machine Co., Inc.**
80, Coleman Street,

subject. As to the character of some of the Jewish immigrants into Palestine and the effect of their conduct upon other residents, we have the evidence of an unimpeachable witness in the Bishop in Jerusalem (as published in THE NEAR EAST of June 24), and of numerous other witnesses. The law-abiding character of the Jews and their other excellent qualities were not in any way impugned by our Correspondent.—ED.]

## UNION WITH EASTERN CHRISTENDOM.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Recent events have brought us of the Church of England into very much closer relations with the Eastern churches, and it would be, we believe, good both for us and for them, that our closer relations should be developed into mutual understanding and, if it may be, inter-communion. The Archbishop has appointed a committee of a weighty character to supervise all our relations with our Eastern fellow-Christians, and this committee, of which I have the honour to be chairman, is doing a great deal of profitable work, and has much more that it can do, especially in view of the approaching visit of an eminent Orthodox Metropolitan and other ecclesiastical persons, who have been appointed at Constantinople (at the suggestion of our Archbishop) to confer with our Lambeth Conference. Only we are held up by lack of funds.

The Church of England Central Fund is at present sadly inadequate. It cannot finance us. We are in this anomalous position—we have not only to give our services gratuitously but to find our funds. We have appointed our secretary, and we must pay him and the modest office expenses, and we must at once prepare to entertain the Eastern delegation sent at the Archbishop's request. For such purposes we need £1,000 this year: we can afterwards hope to get on barely with £700 a year. We have received from societies and a few other sources about £280 for this year only. But we feel that there is a number of people, some of whom have means, who are really deeply interested in our relations with the Eastern churches, and I am asking the hospitality of your columns at the request of our committee in order to beg of them to help us out of our difficulties by sending as much as they can spare for this object without delay, to either our treasurer, Lieut.-Colonel Sir Samuel Hoare, Bart., C.M.G., or our secretary, the Rev. H. J. Fynes-Clinton, in either case at 27, Finsbury Square, E.C.2, our present office.

I earnestly beg the friends of our cause to be generous and prompt, otherwise our situation is desperate.—I am, etc.,

CHARLES GORE.

Eastern Churches Committee,
6, Margaret Street, W.1, June 28.

## THE OCCUPATION OF THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—With reference to a certain statement which has appeared profusely in the Press, in which the British public is informed that the Bulgarians of Western Thrace swarm into their Mother country flying in terror of the Greek "invasion" and its "consequences," may I refer you to the Bulgarian journal *Zora*, of June 3, in which the following has been published:—"The Association of the Bulgarian Journalists have, along with other European pressmen in Mustapha Pasha, visited the Bulgarians who are coming back from Thrace, where they had established themselves since 1913, and which the Bulgarian Press call the refugees of Thrace. M. Nigris, the correspondent of the *Gazette de Lausanne*, was amongst the foreign pressmen."

In the *Messager d'Athènes*, of June 18, a telegram, dated the 17th, from Gumuljina, says that 200 Bulgarian families, who had left Derbent (Sutli district) for Mustapha before the Greek advance into Thrace, are now asking the Greek authorities to allow them to return. Many other Bulgarian families return to their homes (which they had left owing to the instigation of the Bulgarian comitadjis). On the other hand, I have read that the nomadic Bulgarian shepherds have assured M. Vamvakas (the Greek Governor p.i.) of their loyalty to the Greek Government.—I am, etc., THEODORE D. MOSCONAS.

32, Oxford Street, Manchester.
July 1.

The Paris correspondent of the *Morning Post* writes (July 2):—At the gala performance given at the Opéra yesterday for the production of the Queen of Roumania's fantasy, "The Lily of Life," on behalf of Roumanian charities, the Queen was present, accompanied by her daughters and Marshal Pétain. Among the audience were the British Ambassador and Lady Derby, most of the other Ambassadors and Ministers, Madame la Maréchale Foch, the Dowager Duchesse de Rohan, the Duc and Duchesse de Talleyrand, the Grand Duke Dmitri, and many other well-known people. The play consists largely of singing and dancing, and is full of fantasy and poetic charm. The story concerns a young prince who comes seeking his sweetheart, and falls ill at the moment the wedding should take place. He is apparently dying when his bride learns from a book that there exists a miraculous lily, of Life, that may save her lover. She searches the world for the wonderful flower, which she finds and carries to the prince, who recovers his health. Loïe Fuller's dancing pupils made the stage a fairyland, and music by Debussy, Moussorgsky, Rimsky-Korsakoff, Grieg, and Mendelssohn added to the charm of the piece. "The Lily of Life" is to be played throughout Europe and America for the benefit of the Roumanian and Belgian wounded.

# PRESS ON THE NEAR EAST.

### Palestine.

In *Palestine* of June 19 there is an article entitled "The New Order," which is a commentary upon the statement of policy issued by Sir Herbert Samuel, the High Commissioner for Palestine. Incidentally, it makes the following reply to those critics of Zionism who believe that Great Britain is to bear the cost of economic reconstruction of the Jewish National Home:—

In so far as improvements are carried out by the Government of Palestine they will have to be paid for out of the revenues of Palestine. In so far as they are to be carried out by private enterprise, or by the organised Jewish people, then again no charge will fall upon the British Exchequer. Indeed, it is precisely because Palestine is to become the Jewish National Home that the British Exchequer will be relieved of the cost of developing the country, since the Jewish people will supply what otherwise would have had to come from the British taxpayer. It may be objected that Great Britain will still have to pay for the garrison in Palestine. To that there are two answers. In the first place, Great Britain would have to garrison Palestine even if there were no question of Palestine becoming the Jewish National Home. It would be utterly impracticable for Great Britain to evacuate Palestine and utterly impracticable to stay there without an adequate force upon which she could rely to maintain British authority and interests. The second answer is that the Jewish National Home alone provides a guarantee that the British garrison in Palestine will be reduced to its minimum, that in the future Palestine will be able to assume responsibility for her own defence, and that if a crisis should arise a Jewish Palestine side by side with the other self-governing Dominions will take her share of the common burden. The British garrison will not be needed for the maintenance of internal order. That will be secured by a local gendarmerie, paid out of local funds and involving no charge upon the British Exchequer. As the colonisation of the frontiers develops, the colonists will increasingly provide for the defence of their own borders, and the Palestinian garrison can be correspondingly reduced. It may be convenient, in the future, as in the past, to station a portion of the Egyptian garrison in Palestine because of the healthiness of Palestine. But a clear distinction will have to be drawn between the two bodies of troops, and what stands to the credit of Egypt must not be attributed to Palestine. That will be an easy enough matter, for the Palestine High Commissioner will be Commander-in-Chief of the Palestine garrison, and what forces are under his control will be indicated.

### Syria.

In the issue for June 15 of *Correspondance d'Orient*, Dr. George-Samné writes upon "The Syrian Dilemma." He comments upon the present sufferings of Syria, and describes the origin of the trouble thus:—

It is to be found in the violence done to this country, of which a united policy was the ideal, and which unheard of intrigues, tolerated by a maladroit diplomacy, have mutilated frightfully. The separation of Palestine—a mad, arbitrary act—is one cause of the moral trouble; and the installation of a tyrannical and retrograde regime in the hinterland is at once the cause of moral trouble and material disorder. Damascus governed by Faisal is a veritable nest of disease of which the ramifications spread far, and the poison of which ravages almost throughout Asia Minor. France gravely suffers the effects of this evil which is not of her making, and in which she has done wrong only in allowing it to develop through feebleness and through her too great willingness to make concessions to her Allies.

He proceeds to an examination of the Algerian and Moroccan questions, which, he says, are not parallel with the Syrian problem. There appear to be two solutions, he states, between which France must choose:—

Either wholly to renounce the mandate which has been conferred upon her, to abandon Syria to anarchy, and to take no further interest in the future of the East; or to oblige Faisal, either by persuasion or by violence, to conduct himself as a civilized man, or to return to his true home which it were better he had never left.

The first solution Dr. Samné finds impossible: "the retreat of France would be a crime against humanity." Of the second he says:—

It is necessary, therefore, to take up a clear and definite attitude towards Faisal. It is necessary to persuade him to modify his policy, or, rather, it is necessary to persuade England, whose creature he is, to order him imperatively to show himself worthy of the throne of which he has judged himself worthy, if he does not wish to be expelled from his kingship *by Europe*.

He concludes by describing methods of taking action against the Emir Faisal.

### Articles to Note

"The Turkish Treaty," by H. Charles Woods; "Spain's Position in Morocco," by A Student of Foreign Affairs; and "The Hunter Report and Amritsar," by Stanley Rice, in the *Fortnightly Review* (July).

"Reflections on the Hunter Report," by Sir O'Moore Creagh, V.C., G.C.B., in the *Nineteenth Century* (July).

"The Indian Peril," by Major-General Sir George Younghusband, K.C.M.G., K.C.I.E., C.B., in the *New World* (July).

"The Mad Mullah from British Somaliland," by D. J. Jardine, in *Blackwood's* (July).

## MUSICAL NOTES.

Sincerity in art is perhaps an exaggerated virtue, but it has its uses, and though I would not charge Miss Dorothea Webb, who gave a vocal recital at the Æolian Hall on June 23, with it on all occasions, there was something a little heroic in the undaunted way in which she fought her way through a consistently dreary programme. Some classical songs by Beethoven, Schubert, and Schumann were given very well, with the exception of "Gretchen am Spinnrade," in which the spinning-wheel went at so slow a pace that the dear Gretchen ought to have been accused of malingering. (As a matter of fact, she was, of course, heart-sick; but that was no excuse for shirking her work.) Miss Webb was excellent in a fine song, "The Night-Piece," by Ernest Walker; but she was disappointing in Martin Shaw's "Summer," emphasising rather the hot stillness than the full-stop-less movement of Christina Rossetti's verse. The second part of her programme echoed the gloom of the first; but though the first song—an extraordinary folk-song from the Appalachians about a mother killing her children with a pen-knife—plunged us even more deeply in sorrow, we passed through the various stages of "Death" and "Sleep" to the happy and beautiful "Si Bella Mercede" of Leonardo Vinci ,and "La Belle Francoise." Miss Webb sings well: she is an artist of temperament, though that temperament as yet has not sufficient sides. Her subdued passion and sense of tragedy are beautiful things, but to complete her career she needs vim and fire, and above all the simple attribute of jollity.

An almost entire contrast to the above singer was provided by Miss Anne Thursfield, whose song recital was at the Wigmore Hall on June 24. She is an absolute mistress of the light, frolicsome touch, and her tone colour is finely developed in every direction. Her French songs are an utter joy, so pure and fresh is her diction in this language. Four songs by Arnold Bax, in which she was accompanied with rare sympathy by the composer, failed, with the exception of the "Shieling Song," to convince, because in Bax's misty imagination the vision of the song has not sufficiently crystallised, and the expression is therefore rather amorphous. In perfect songs by Rachmaninoff and Gretchaninow, which were sung in Russian, Miss Thursfield sang most finely; we have heard these songs so many times in French or in English that we knew where to look for the coloured beauties, and we found them there most surely. In all that she did Miss Thursfield showed herself to be one of the most artistic singers before the English public. It was rather unfortunate that she chose to do the fashionable thing in concluding her programme with "Madam Noy," a witchery song by Mr. Arthur Bliss, for voice, flute, clarinet, bassoon, viola, double-bass, and harp. The music was a most obvious commentary upon the plain words, and was far below the standard of what Miss Thursfield had previously sung.

---

To a singer the prospect of age must be dreadful. For, whereas those who are skilled in the use of a tangible instrument may reasonably hope to exercise their skill until they die, those who use only the vocal instrument have at the end of their life a bleak period of enforced inactivity. Now it must be very difficult for the singers to know when that bleak period should begin. In judging of those who know not when to stop, one ought to be duly forgiving; and although Madame Calvé, who gave a recital at the Queen's Hall on June 25, certainly does not come within this category, I shall always regret very much that I did not hear her when she could sing. Her personality, vivacity, technique—in fact, all the things that age cannot wither, remain to her, but the elasticity, the freshness, and the pure conviction of her voice seem gone for ever. It cannot be denied that she still has immense skill, and a kind of undiscerning sincerity — I have never heard Bizet's "Habanera" done as magnificently as she did it, nor have I heard such trashy ballads as Ralph Burnham's sung with so much apparent sincerity—but her future lies in the past. Her gestures are superb, but even they were not compensation for the lack of music in many of the songs she sang. Quite deservedly she is a favourite; but why, oh why, will "favourites" think it right to sing as encores "Quand tu chantes" and "Comin' Through the Rye"? As an offset to the record of such dismal facts as these, it must be added that at this concert Mr. Harold Samuel and M. Louis Fleury accomplished some splendid playing in Bach's sonata in B minor for flute and pianoforte. M. Fleury plays the flute as well as any one I know, and Mr. Samuel's Bach is now a matter for attention, respect, and agreement.

If Madame Calvé be near the end of her singing history, it is at the other end of the art that one must place Princess Obolensky-Yourievsky, who appeared for the first time before an English public at the Queen's Hall on June 25. It is rather difficult to know what allowance to make for her nervousness; but greater confidence will give her many things which on this occasion she did not appear to possess, and will remove (as I doubtfully hope) as many unpleasant things—general thinness of voice and *vibrato* tone, for example. Her choice of songs was wondrous, her second group, which consisted of two songs by H. Bemberg and two by Isidore de Lara, being particularly undistinguished. She was assisted by M. Montoriol Tarres and Mr. Murray Davey. M. Montoriol Tarres, who is a Spanish pianist of some fame, is a dashing, but by no means an ostentatious player; his Chopin was quite straightforward, but in a dance of Grandos he performed with an unexpected restraint that made it extremely enjoyable. Mr. Murray Davey, who is a fine, hearty bass, consterned me by behaving like a music-hall artist. In something called "Jogging Along," written by H. Samuel, he gave us the unique sight of seeing him try a gag that one had previously thought was confined to Mr. Whit Cunliffe and his compeers. But possibly his performance seemed worse than it was (or than the fashionable occasion demanded), owing to the appalling number of crashingly wrong notes that resounded from the fingers of the accompanist, Mr. Aylmer Buesst.

---

In Mlle. Odette St. Lys, who appeared at the Æolian Hall on June 30 in her Yvette Guilbert repertoire, I was extremely disappointed. There was no life in her interpretations, her gestures were mechanical, and her voice was often out of tune. Most of the French songs which she sang with string quartet accompaniment (chiefly 17th and 18th century) are very delightful compositions, but of their charm she needlessly robbed them. The situation was, however, not entirely lost, for the London String Quartet played Waldo Warner's "Fantaisie"—a consolation for which one was duly grateful.

---

On June 30 Mr. Samuel Dushkin, the young Russian violinist, who is much favoured by the discerning, gave his last recital this season at the Wigmore Hall. He commenced with César Franck's Sonata in A major. To this work, which does not quite suit his quiet, intellectual style, Mr. Dushkin brought a clean and balanced interpretation, which, however, was not shared with his accompanist, Mr. O'Connor Morris. Mr. Morris is a fast improving pianist, but he overdid his side of the Sonata, and with anyone less cool than Mr. Dushkin, might have produced a forcing of tone. As it was, the pianoforte in the climaxes generally had the first and the last word. Mr. Dushkin has a positive genius for eighteenth century music, for both the playing and the finding of it. At this concert he brought forward an unknown (to me) concerto by Benda, with string quartet accompaniment. It was played perfectly, but I did not discover many distinctive notes in it. More or less naturally, it was charming, but in the content of it there appeared to be little that could not have been turned out by any composer of the period. In a Menuet of Gaspard Friz and a Sicilienne and Ritournelle of Rebel the violinist was at his best, which indeed is perfection. It was with quite rare insight that he played a Sephardic Chant (a Hebrew Folk-song); and just to show that he can do (though he does not often choose to do) such things, he played with the utmost ease Paganini's Caprice (No 20). In Mr. Dushkin's playing there is nothing false; every note has its value, but it is always in proportion and in place. He has a refinement, a dignity, and a scholarly sense of leisure that are not common in violinists nowadays, and he is, therefore, one of the few who never fail both to please and to charm.

ANDANTE.

## THE SITUATION IN MESOPOTAMIA.

The following *communiqué* (dated July 2), regarding the situation in Mesopotamia, has been received from the India Office:—

Suitable punishment was meted out to the town of Tel Afar, the houses of those primarily responsible for the murders were destroyed, and other measures were taken with a view to preventing a repetition of similar outrages. Since the abortive attacks on our lines of communication were repulsed on June 10, only one minor attack has been made, without casualties to either side. The usual celebrations to mark the end of Ramadan passed off quietly throughout the country.

The Divisional Councils of Baghdad and Diwaniyah and other centres have passed resolutions definitely dissociating themselves from the demand and attitude of the extreme party in Baghdad. Unrest at Kerbella, where extremists have been liberally financed apparently from Turkey, reached a point at which it became necessary to arrest the ringleaders, whose aim appears to have been the creation of anarchy now and restoration of Turkish sovereignty later on. Certain arrests have also been made at Hillah. These arrests have been welcomed unanimously by the principal chiefs of the tribes and by all members of the Hillah Divisional Council.

Revenue is coming in satisfactorily, and public order is being most satisfactorily maintained. Elsewhere in Mesopotamia all is quiet.

"INDIAN NATIONALISM: ITS ORIGIN, HISTORY, AND IDEALS." By K. M. Pannikar and an Englishman. (London: The Faith Press. 2s. net.)

## I.—MESOPOTAMIA.

During the war Canon Parfit did good service by lecturing upon Mesopotamia and on German schemes in the Near East, and his lectures and pamphlets served to draw public attention to a theatre of the war that was little known in England, and apt to be neglected by the Government in spite of fine promises. In this book he covers the same ground once more, but the addition of material gathered since the Armistice brings it up to date, and though it is inclined to be scrappy, it is distinctly interesting. It does not, however, go very deep, and the author sometimes gives us the impression that he is inclined to base too wide conclusions upon insufficient evidence. Thus, in his first chapter his conclusions regarding the possibilities of Mesopotamia in the way of cotton growing are, to say the least, premature; and after having heard distinguished authorities discussing the "salting" of the plains, its causes, and the chances of curing the evil, we are not sure that the question is quite so simple as it is here represented to be.

These things, however, are by no means fatal blemishes in a book the appeal of which is obviously of the popular kind, and if any readers are induced by Canon Parfitt to make further investigations into the problems of Mesopotamia, they will owe the author a debt of gratitude. In any case, they will find much to interest them in the author's description of the land as it is to-day, of its ancient monuments, its sacred cities (past and present) and its fascinating inhabitants. The descriptions of the Battle of Shaiba and of the Siege of Kut are of some historic value. But for our part we must admit that we have found the sections dealing with the German schemings in connection with the Baghdad Railway and the Persian Gulf far the best things in the book. The record of Great Britain in the Gulf is one that we may well be proud of, and we are glad that Canon Parfit has devoted so much space to it, although it lies outside his title, strictly speaking. The German attempts to gain a footing, first at Lingah and then at Bahrein, and to get the better of Sheikh Mubarek of Koweit, are described at some length, and the contrast between British and German methods of advancing the cause of civilisation is well brought out in the process.

There are many good tales in the book. The one we like best is that of certain holy men at Bushire who were told by the British India Agent that a steamer by which they wished to travel would arrive at six o'clock the following morning. They reproved the Agent for omitting to say "Inshallah" ("Please God"), and he accepted the rebuke, but warned them none the less to be punctual. "So on the following morning they were sitting on the beach at dawn, when, sure enough, at six o'clock the mail steamer arrived four miles from the shore at its customary anchorage. "There it is," said the Agent; "I told you it would be here." "Wonderful! Wonderful!" exclaimed the holy men. "This cannot be the work of God; it is the doings of the English."

There are many good illustrations in the book, but the maps, especially that showing the overland routes through Aleppo (p. 14), are on too small a scale to be of real use.

## II.—DALMATIA.

Dalmatia is a little country, with little over half-a-million inhabitants, but its situation on the eastern shore of the Adriatic, confined between the sea and the Dinaric Alps to a narrow strip of coast and hilly land, has given it an importance quite out of proportion to its population in the history of the Near East. For centuries it has been a bridge between Europe and the Balkans and all that lies behind them, and the fact that the best Adriatic ports have been on the Eastern shore, while its numerous islands and inlets have made its coast line a constant potential danger to any Power desiring the mastery of the Adriatic Sea, has been the direct cause of numerous wars and quarrels which have continued to the present day.

There is plenty of room for a history of Dalmatia. But it is not to be found in this book. The author, a patriotic and learned Dalmatian, has clearly the knowledge and reading to enable him to have written the history which we should have liked to see. But what he has written is merely propaganda. There was good reason for the book when it originally appeared, in French and Italian, in 1917. But the whole object of the book is to prove and insist on the essential Slavism of Dalmatia. This was not clear in 1917, but is now generally recognised, even by the Italians, and to bring out a work on such a subject in 1920 resembles the flogging of a dead horse. The work is carried out in far too rhetorical, one-sided, and incoherent a manner to be of any permanent interest. The way in which the author keeps leaping from date to date and back again is merely baffling to the would-be student, and the summary of early history is almost unreadable. We can only hope that Count Louis Voinovitch will avail himself of the period of peace and quiet which we trust is in store for Dalmatia to divest himself of partisanship and rhetoric, to continue his studies, and to give us an impartial and consecutive history of his beloved and beautiful land.

A word should be said for the production of the book, which reflects the greatest credit on its publishers, though we should have liked to see this labour devoted to something of more real value.

C. S.-W.

## III.—INDIAN POLITICS.

We notice these two books together for the simple reason that we cannot recommend either of them to the student of Indian politics, the views they express having been expounded with more ability in various works published during the last year or so. The only novelty we have found is in the illustrations to Mr. Horniman's book; he has been able to reproduce photographs of the infliction of punishments under martial law, and surely no better testimony could be given to the essential mildness of that régime in the Punjab than that the use of a camera was possible.

Lord Plumer left Corfu on June 29 for Sicily and Malta.

The Greek Metropolitan of Constantinople has arrived in London.

Princess George Bibesco arrived in London on June 30 from Paris.

Sir Herbert Samuel, the new High Commissioner, arrived in Jerusalem on June 30.

His Highness Nasir-el-Mulk, late Regent of Persia, left London on July 1 for Paris.

Lord Allenby has contracted a slight chill, after bathing, and on medical advice is keeping to his bed.

M. Gennadius, the Honorary Greek Minister, and Mme. Gennadius have left town for Bournemouth.

Admiral Sir Ernest Troubridge, chairman of the International Danube Commission, left London on July 1 for Budapest.

The degree of D.D. Honoris Causa is to be conferred by the University of Cambridge upon the Bishop of Calcutta, Metropolitan of India.

Brigadier-General R. Worgan, of the 20th Deccan Horse, has been gazetted Military Secretary to the Prince of Wales during his visit to India.

Professor Nedjib Hindie, formerly Professor of Arabic at King's College, has arrived at 5, Ashburn Place, S.W., from Constantinople and Cairo.

Capt. Hamilton Fish Armstrong, lately American Military Attaché at Belgrade, Serbia, will make his home in New York at 128, East 36th Street.

On the occasion of his departure, Sir L. J. Bols, Chief Administrator of Palestine, was entertained by the American colony at Jerusalem on June 30.

A garden party was given by Lord and Lady Derby at the British Embassy in Paris on July 3 in honour of the Queen of Roumania. A large and brilliant company was present.

Professor Seton Watson, the editor of the *New Europe*, who is on a short visit to Roumania, received a warm welcome from the members of the Government at Bucharest on June 28.

Queen Marie of Roumania and her two daughters were present at Verdun on July 6, when Prince Ghika, the Roumanian Ambassador to France, decorated the city with the Roumanian Military Medal for Valour.

Our Cyprus Correspondent writes:—Mr. du Boulay, the Auditor, is proceeding on leave to England. Mr. W. Francis, Government Analyst, has accepted an appointment in British Guiana, and will leave shortly.

### SUDAN CIVIL SERVICE.

The following gentlemen have been selected as probationers for the Sudan Civil Service:—

A. J. Arkell, M.C., Major C. L. Armstrong, D.S.O., M.C., S. G. Budgett, Major C. G. Davies, M.C., Captain G. F. Ellenberger, M.C., Captain J. A. de C. Hamilton, M.C., J. M. Humphry, M.C., F. D. Kingdon, M.C., Major R. C. Mayall, D.S.O., M.C., Captain J. W. E. Miller, Major D. E. Randall, M.C., C. H. L. Skeet, Capt. R. J. P. Wyatt, M.C.

At the Conference of the British Medical Association, which met at Cambridge on July 1, Dr. J. B. Christopherson, in a demonstration before the Tropical Diseases Section, spoke of bilharzea, which has been described as the new plague of Egypt.

Lady Roper Parkington, hon. treasurer of the Montenegrin Red Cross and Relief Fund, continues seriously ill, and unable to attend to correspondence; but letters addressed to her at Claridge's Hotel, W., will be forwarded, and receive prompt attention.

Mr. L. Pilichowski, the Jewish artist, is promoting a scheme whereby Palestine may become the home of some of the best of the world's art treasures. He proposes to issue a manifesto inviting gifts of pictures, sculpture, ancient books, and relics for exhibition at Jerusalem.

The English Zionist Federation is organising a demonstration to celebrate the acceptance by Great Britain of the mandate for Palestine as the Jewish National Home. The demonstration will be held at the Royal Albert Hall, on July 12, at 7.45 p.m., and amongst those who have promised to address the meeting are Mr. Balfour, the Marquis of Crewe and Lord Robert Cecil.

The King has granted unrestricted permission to Mr. Lancelot Edward Barrington-Ward, F.R.C.S., to wear the Insignia of the Fourth Class of the Order of St. Sava, conferred upon him by the King of the Serbs, Croats, and Slovenes in recognition of the services which he rendered to the Serbian sick and wounded under the auspices of the Serbian Relief Fund during the late war.

Our Bucharest Correspondent writes (June 23):—Among the British officers who have been recently decorated by the King of Roumania are:—General Sir W. N. Congreve, Crown of Roumania, with swords; Major-General Sir G. F. Gorringe, Star of Roumania (Grand Officier); and Lieut.-Colonel Beor (Oxford School of Aviation), Star of Roumania (Officier), and several others.

The first of two open-air performances, initiated by the Union of East and West, of the Indian play "The Hero and the Nymph" was given on July 3 by the Indian Art and Dramatic Society in the garden of Lord Leverhulme's house at Hampstead. The play was written in the Fourth Century by Kalidasa, described by some as "the Shakespeare of India," and has been adapted from the original Sanskrit and translations by Mr. Kedar Nath Das Gupta, hon. organiser of the Union.

## APPOINTMENTS, ETC.

The appointment of Lord d'Abernon, G.C.M.G., to be His Majesty's Ambassador Extraordinary and Plenipotentiary at Berlin is officially confirmed. Our readers will remember that Lord d'Abernon has held the position, among others, of Financial Adviser to the Egyptian Government, and of Governor of the Imperial Ottoman Bank, Constantinople.

Mr. Philip Joseph Hartog, C.I.E., M.A., B.Sc., Academic Registrar of the University of London, has been offered, and has accepted, the appointment of Vice-Chancellor of the new University of Dacca, in Bengal. The appointment is made by the Governor-General of India in Council in accordance with the terms of the Dacca University Act recently passed in the Indian Legislative Council.

## OBITUARY.

### SIR ALEXANDER BAIRD.

(From Our Cairo Correspondent.)

The local British community has during the past week been plunged into mourning by the death of Sir Alexander Baird, Bart., which occurred at his beautiful residence at Mataria on June 20. The deceased gentleman, who counted his friends among every class, creed and nationality in Egypt, has long been looked upon as the unofficial head of the British community in this country, where for over forty years he has played a prominent part in social and public life. He first came to Egypt as a young man and an invalid, and even in those early days rendered valuable services to the country by his work for the relief of the starving peoples of Upper Egypt in the famine year of 1879. In the following year he again visited Egypt with his family, when his kindness and hospitality made him the central figure in the then small British community. It was then that Sir Alexander decided to make Egypt his home, and since that time he has grown in the

Digitized by Google

esteem and affection of his fellow-countrymen. Intimate with most of the great personalities in the political arena during the past forty years, the friend of three Khedives and two Sultans, of Nubar and Riza, of Burton, of Gordon, and of hosts of others of all nationalities and every shade of opinion, he was justly regarded as an authority on all matters Egyptian. His opinion was frequently sought by those in power, his long experience of the country and his sincere interest in its welfare rendering his advice on difficult and delicate questions invaluable. His charity was boundless, and many have reason to remember him as a generous friend in need, while to a brother Scot in want he never turned a deaf ear. He was the soul of hospitality, and made a perfect host. A brilliant raconteur with an excellent memory, he had a delightful fund of anecdotes ranging over forty years of Egyptian life and touching upon many well-known figures in the past history of the country who to-day are but names. Until the end Sir Alexander Baird retained his boundless vitality, though to those who were in close touch with him it was obvious that he had never recovered from the blow he sustained last year in the death of his daughter Miss Nina Baird, which followed closely upon a rather serious accident to himself. His death at the present juncture is a great loss not only to the British community in Egypt but to the country in general.

### MADAME ANNA RAFFI.

A correspondent writes of Madame Raffi, whose death we recently recorded:—For over a quarter of a century Madame Raffi had resided in London, and devoted all her time and energies to the publication of the works of her husband. In all twenty-four volumes, including historical novels, ethnographical stories, and poetical pieces were published. She was an ardent patriot, and followed with a deep interest the varying developments of the Armenian question. Her great learning was accompanied by a real gift of eloquence. We have vivid recollections of the great impression created by Madame Raffi when addressing large audiences on subjects connected with her country. Her house in London was for many years the Mecca of Armenians and sympathisers with Armenia, who on her death hastened to send tributes to her memory and attended the funeral in large numbers.

## NEWS IN BRIEF.

At a meeting held at the Connaught Rooms on July 3, it was decided to open a fund to erect a memorial at Amritsar.

The American cruiser Chattanooga left Malta on Saturday for Constantinople, where she will fly the flag of Rear-Admiral Bristol.

It is officially stated that the Egyptian Government has delegated three officials to attend the Allied Housing Conference in London.

When the Yugoslav Prince Regent, accompanied by M. Vesnitch (the Prime Minister), arrived at Laibach he received an enthusiastic greeting.

It is unofficially stated that the Sultan of Egypt will spend August cruising in the Mediterranean in his yacht Mahroussa, which is expected at Alexandria from Glasgow.

Owing to reports of cholera among Indian pilgrims about to leave Bombay, the Egyptian Ministry of the Interior recommends intending Egyptian pilgrims to postpone their pilgrimage till next year.

The Armenians have succeeded in recapturing the town of Kulpi, which has been in the hands of the Turks since August, 1919. Kulpi is about 50 miles south west of Erivan, and possesses large salt mines.

The Bulgarian Parliament has passed a law for Labour conscription in Bulgaria, the object being the economic reconstruction of the country. Both men and women will be compelled to work, Moslem women excepted.

Said Molah, the Turkish Under Secretary of State for Justice, has resigned, says a Constantinople telegram. It is believed that he was constrained to take this step by his colleagues for having acted in opposition to the rest of the Cabinet.

Moscow reports that Ulsh-Imirsky, a member of the Turkish Bolshevist Party, and the representative of the Anatolian Revolutionary Government, has arrived in Kazan for the celebration in honour of the establishment of the Kazan Tartar Republic.

German newspapers publish a telegram from Sofia stating that the theatre at Philippopolis has been blown up by a bomb. About 150 bodies were buried under the debris. It is presumed that the outrage was directed against M. Stamboliski, the Prime Minister.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

YOUNG Lady, wishing to go to India September or October, would give services in exchange for passage.—Box 168, THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
**SMEDLEY'S HYDRO.**

**TORQUAY**
**VICTORIA & ALBERT HOTEL.**

***Cairo's Hotels de Luxe.***

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

**THE ONLY ENGLISH HOTELS IN ALEXANDRIA.**
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

**SUMMER PALACE HOTEL,**
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant.
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
**NAJEM HOURY & SONS, Limassol, Cyprus.**
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

## "PRO AND ANTI" IN THE NEAR EAST.

In Europe it has long been a tradition that we are of all the nations the most commercially minded, and our friends are generally politely silent when we assure them that our foreign policy, far from being actuated by sordid considerations, is almost invariably inspired by lofty ideals. Since our protestations on these occasions fail to carry conviction, one sometimes questions whether it would not be better, perhaps, if we accepted the role assigned to us, and unblushingly preaching the gospel of commerce, made "Business is business" our text. In the many attempts made by the statesmen of Europe to find a working solution for the Eastern question one notices that they invariably made the meeting half-way of local prejudice in its religious, racial, and historical aspects their first care. May not this perhaps explain their many failures? For the convinced the *via media* is necessarily unattractive, and it seems futile to expect the support of people who feel strongly about anything for schemes which are based on compromise, however attractive such may be to others, whose ostensible toleration is only too often the measure of their lack of faith. Perhaps it is not even now too late to abandon our old policy of attempting to get each of the nations of the Near East either to abandon a portion of its territorial claims, to give up a little of its religious faith, or to forget a part of its national history, in order to soothe the prejudices of its neighbours. Why not instead preach the gospel of commercialism, which denies that the satisfaction of racial, religious, or national aggrandisement can ever make for the greatest happiness of the greatest number, a thing only attainable by devotion to trade, agriculture, and the arts, made manifest by individual effort in all those fields of human activity? Race has necessarily an enormous claim on the people of Eastern Europe, the memory of the sufferings of all the nations formerly enslaved by the Turks being in any case too recent to enable them to view life in its cosmopolitan aspect; neither is it desirable that they should; but when one considers how closely many of them are allied by blood and language one is apt to discover merits in pan-Slavism not discernible when it was an active force operating against our interests. Nationality is an excellent thing, no doubt, but even its protagonists in the Allied councils are beginning to realise that it can be overdone, and the disposition of sections of the public in this and other countries to throw themselves furiously into propaganda movements for popularising particular races and nations, while not wholly undesirable, is unhesitatingly to be condemned when it makes for the growth of what for want of a better name we will call the "pro and anti" spirit. When a man tells one, for instance, that he is a convinced pro-Serb one suspects he is in reality an anti-Bulgar and vice-versa. It should be made clear to him that in the new Europe the perpetuation of racial antagonisms is of all things the least to be desired. While we desire that the claims of nationality should everywhere be allowed the freest scope, we feel that the war would have been fought in vain if this should be made the excuse for perpetuating the antagonistic rivalry of neighbouring peoples to which the origin of half the international conflicts in the past can be traced. In the delimitation of international boundaries it is unavoidable that occasionally small communities should find themselves cut off from their compatriots, for where can we find a frontier that has not been traced across debatable ground? "Emigrate or make the best of it" seems the only alternative to offer these unlucky people, but the onus of convincing them that no material or spiritual sacrifice is necessarily required of them by their assignment to foreign rule rests with the Government which has accepted responsibility for their protection. A little healthy competition in the business of Government between the nations of the Near East would go far towards reconciling to their lot these separated, but not necessarily denaturalised, communities.

In Eastern Europe the final disappearance of Turkish rule has to a great extent eliminated the curse of religious antagonism from among the people. Even under Hapsburg rule the Mohammedans of Bosnia and Hertzegovina had little to complain of, and they are not likely to fare worse under the government of Yugoslavia. Indeed, in all the countries liberated from the Turkish yoke in the last fifty years the followers of the Prophet have been free to practise their religion without let or hindrance from the State or their Christian neighbours. There are still plenty of Mohammedans in South-Eastern Europe, but, none of them happening to be oppressed, half the world is unaware of their existence. Neither can the Turks themselves be charged with religious intolerance anywhere except in Armenia in recent years, and while in the past their passion for killing Christians revived with every insurrection of the oppressed against their authority, in normal times the attitude of the Sultan's Government was tolerant towards the religious beliefs of his Christian subjects. In the circumstances it is much to be regretted that attempts should have been made in certain quarters not only to give a religious character to the war, but also to introduce the religious element into the peace discussions. In Europe Christians of every known variety fought against their co-religionists, and did not disdain the help of "Jews, Turks, and infidels," to say nothing of Hindus, Buddhists, and even simple negro idolators, in their fratricidal combats, neither in the East could anything remotely suggestive of a crusade be discovered in the Allied operations against the Turks in Palestine. The mere fact that the conquered territory, the Holy Land of Christianity, should be now in process of reconstruction as a "national home" for the Jews suffices to dispose of this crusade theory, which, oddly enough, is favoured by a few misguided Christians as well as by those deluded Mohammedans who think they have discovered in the war against Turkey a subtle Christian plot for the undermining of Islam. The latter seem to have forgotten the Sultan's Christian Allies as completely as the former have overlooked the great services rendered to the Allied cause by the Mohammedans of India, Arabia, and North Africa. Anti-Semitism is still a force to be reckoned with on the Continent, and one suspects that the persistent rumours of the infection of the Zionist movement with an anti-Christian virus may possibly be traced to its underground activities, but it behoves the Zionists to realise that they are treading on very dangerous ground, and that it would be fatal to their prospects to allow their forward party to force the pace at the present juncture. Protestant thought is so largely inspired by the Old Testament that in many countries the return of the Jews to Palestine makes a great appeal to the religious imagination; but in the Catholic and Orthodox countries this is far from being the case, especially in the latter, where the unfortunate association of so many Jewish officials of the Bolshevist Government with the persecution of the Russian Church has undoubtedly tended to revive anti-Semitic feeling. Here, again, commercialism seems to offer the best means for avoiding possible trouble. If the Zionists made the development of Palestine their first care, and concentrated all their energies on the building up of its industry, commerce, and agriculture, they would go far towards removing the age-long prejudice against their venerable race.

If in the new world we are permitted to indulge in the luxury of crusades, we might do worse than start with one directed against the paralysing power of racial and religious prejudice, which still hampers the movement.

Digitized by Google

forward of the young nations. Even if we cannot expect all the people in the countries concerned to see eye to eye with us in the matter, we may at least hope to persuade some of the well-meaning enthusiasts in this country who devote their energies to partizan propagandism in the interests of particular nations and creeds that they are really doing an ill service to their friends, while at the same time hampering the work of their fellow countrymen whose efforts to make peace a reality in the Near East demand their support. The military reputation of all the nations of the Near East is established for all time. Their past achievements in war while ministering to their own self-respect have caused them to be respected all the world over. It now remains for them to prove their capacity in the peaceful walks of life, and those who claim to be their friends could not better demonstrate the reality of their friendship than by assisting them in their efforts to develop their trade and industry. In the matter of our relations with the Eastern peoples, if we took more care to bear in mind that religion constitutes in effect the dividing-line between East and West, we perhaps should be more chary of expressing opinions calculated to raise in the Mohammedan mind the suspicion that we harboured designs against the power of Islam. Our would-be crusaders should realise that even if their talk passes unnoticed in their own country, it is taken quite seriously in the East, and accounts for not a little of the troubles at present affecting it.

## THE POLITICAL SITUATION IN GREECE.

(From a Correspondent.)

The re-enforcement of martial law in Greece has served as a reminder to the outside world that that country is still far from being at peace with itself. If the two most potent factors to-day in Greek politics had to be named it would probably not be wide of the mark to select revenge and fear, and it is not easy to see how their hold on the politicians is to be relaxed. The shadow of the last months of 1916 lies heavily on the land. Each party incriminates the other in trying to exculpate itself, and the fact remains that of both Venizelists and anti-Venizelists a considerable number have experienced the bitterness of prison life. It is from their ranks that the Extremists are recruited, and these call the political tune, while the unfortunate country, whose interests are often forgotten in the personal vendetta, pays the piper. Hanging and decapitation are pleasantly threatened on all sides, while no one stops to remember—least of all to remind the protagonists—that, after all, both parties are Greeks, and have not the excuse of a difference of nationality, which makes even the infinitely worse situation in Ireland more tolerable than the rancour and blood-thirstiness that characterise Greek politics. On each side the threats of the obscurest journalist are taken *au pied de la lettre*, and are cited as embodying the considered programme of the Government or the Opposition, as the case may be. The Press can find no other subject to discuss. In the one section the changes are rung on the tyranny and oppression of the Government; on the other, the political opponents of the Prime Minister are charged with harbouring every nefarious design against the personal safety of the Government and the security of the State. Mistakes on both sides provide the basis of these incriminations, and apparently there is no one connected with the Press of either party capable of appreciating or profiting by gradual changes in public opinion. The truth is that moderation is claiming many adherents, and there can be little doubt that the chief moderate is M. Venizelos. He has, however, been away from the country for some eighteen months; he must necessarily rely upon other interpretations than his own for his reading of the political psychology or his countrymen, and it may still be some time before he can make his influence felt on the situation at home.

It is not without interest to take each party's estimate of the other, and to examine whether and to what extent it runs wide of the facts. For practical purposes we may regard Greece as divided into two camps—Government, or Liberal Party, and Opposition, the latter a coalition body united for the time being under an executive of sixteen members. Under the Opposition umbrella a variety of types has gathered. There are those to whom M. Venizelos's advent to power has meant political disappointment, if not effacement; there are those who enjoyed and hoped to enjoy the personal favour of the Court, and who attribute to the political interference of M. Venizelos what is an inevitable phase in the social evolution of modern Greece; some have been roped in by reports of the sufferings or experiences of deportees, or those kept for months or years in gaol as political offenders; others, again, have been antagonised against the present régime by the contemplation of administrative shortcomings. According to the reason for their belonging to the Opposition, the ground of attack selected by individuals varies, but the general indictment may be grouped under a few heads—that M. Venizelos's Government has remained in power without constitutional authority, prolonging by its own decisions a Parliament, already once dissolved and revived, whose constitutional existence expired some time ago; that the maintenance of martial law and its method of application are "tyrannical"; that the administrative record of the Government in M. Venizelos's absence is demoralising to the country; that the present régime has been imposed on Greece without reference to the wishes of the Greek people, and on the strength of the interference of foreign Powers.

Everyone familiar with political controversy in any country will recognise the arguments that the events of the war have given to the Greek Opposition, and will know precisely what weight attaches to them in the face of the compelling circumstances of the time. A more delicate question is the application of martial law; here, as in the matter of administrative efficiency, an English observer, even if he had the material with which to form an opinion, must necessarily be at a disadvantage, as there can be no agreement as to the standard on which the judgment is to be based. What is evident is that the Opposition will make no allowances; both in regard to the treatment of one's opponents and administrative efficiency it would seem to insist upon a certain excellence without adducing any evidence that it has itself reached that standard in the past or is capable of reaching it in the future. But the great mistake made by the Opposition is its challenge of the existing régime on the ground that it runs counter to the wishes of the Greek people. It seemed to expect that for the sake of the *beaux yeux* of his opponents M. Venizelos would commit political suicide by allowing them to weight the scales against him in any way that they might choose. They were to stump the constituencies for the return of ex-King Constantine, using whatever arguments they thought fit, regardless of past factors, international or domestic considerations and future consequences. No Government could have tolerated such a situation, and it argued a singular lack of political sagacity on the part of the Greek Opposition that it seriously imagined that it could carry out such a programme. By throwing down the Constantine gauntlet it put itself out of court, and

WHITE HORSE WHISKY.
GREAT AGE AND BOUQUET.
By Appointment to

KING OF SPAIN

Digitized by Google

gave an opening for the reimposition of martial law. It has now recognised its mistake, and there has been a slump in Constantine stock since M. Venizelos took his strong stand in the Chamber on the recognition of the *status quo*. But the Opposition has impaled itself on the horns of a dilemma as to how to abandon the Constantine question without abandoning its stand on the constitutional question, which requires the Venizelist régime to be submitted to the vote of the people.

The Government, on its side, had at first no reason to suppose that the rod in pickle which the Opposition was storing up for it would be found to produce results different in any way from the events of the first week of December, 1916. It could claim, therefore, to be fighting not only for its existence as a political entity, but for the individual heads of its members. As time passed, however, although there may have been little, if any, diminution of bitterness, the feeling has spread among all sections of the people—a few journalists excepted—that battle, murder, and sudden death are becoming out of date features of Balkan politics.

It is just at this point that a little toleration on each side might work wonders, and it was a genuine disappointment to many that, when a meeting between M. Venizelos and two representatives of the Opposition had been arranged, and the three had actually come together, they should have separated after a few minutes because neither side would accept responsibility for having been the first to propose the meeting. The ground is thus left clear again for the Press of both parties, and the Government organs seem unable or unwilling to realise that the logic of events has been too strong for the Constantinists. If a tolerably easy avenue of withdrawal offered itself many would avail themselves of it eagerly, and the result would be comparative peacefulness of mind for the country as a whole in place of the existing uneasiness and misgivings.

Without this measure of toleration what is to be the outcome of the present situation? It is not easy to see. The Government is hopeful, and as it must have fuller information at its disposal than anyone else, its view must command attention. It is not prepared to credit its opponents with any numerical strength; the opposition may include a certain number of names of note; but when the voting test is applied a signal victory is anticipated. Everything, therefore, turns on the elections, which have been postponed on the ground that Greece is still at war, in view of the military operations in Thrace and Asia Minor. If the Greek Government were to accept the rôle of the Allies' agent in dealing with Mustapha Kemal in the fastnesses of Anatolia the state of war might conceivably continue for years; but, failing that, it is supposed to be the Government's intention to hold elections in September or October, at once, as the scene is in the Balkans, the opposition question the genuineness of the elections-to-be. On this subject the foreign observer is obviously at a disadvantage. If he tries to analyse the fears or insinuations of the opposition, he will generally find that they resolve themselves into a belief based on past history, that in outlying districts electors known to be anti-Venizelist may be intimidated or forcibly prevented by gendarmes or officials from recording their votes. It is admitted that in the chief centres the opportunity for malpractices of this nature is reduced to a minimum, and that the electoral law provides satisfactory arrangements for the impartial exercise of the vote. Under such conditions any preliminary expressions of alarm are likely to be construed as an admission of a weak cause. On the other hand it is open to the Government in power, in view of the importance of these elections, to take whatever steps may seem good to it to disarm all possible criticism of the impartiality under which the poll is carried out. A Government, as sure of its position as M. Venizelos's claims to be, can afford to lay all its cards upon the table in this matter; for it is essential to the future welfare of the country that all contentions which seriously threaten to sap the vitality of the country should be laid to rest as soon as possible.

It is to be hoped, therefore, that the elections will take place not later than September, that they will be conducted in a manner that precludes any possibility of challenge, and that the result will make for the harmony of Greece and her whole-hearted concentration on the all-important work that lies to hand. So far there would seem to be little appreciation of the responsibilities and duties attaching to the large increase of territory which Greece has obtained as a result of the war. The mere administrative obligations are a severe tax on a small country, and these become infinitely greater when a large proportion of the administrative capacity of the nation is still in prison, or, at least, still *en retrait*. Belief in the genius and statesmanship of M. Venizelos is widespread, and it is significant of it that many people are prepared to see him, when he has time to resume his hold of things, cut the Gordian knot by calling on the more reasonable of his political opponents to resume their places in the Greek official world, in order that the country may make its fullest and its best effort at a critical stage in its modern history.

## CHESS.

Here is another game from this year's Murton Cup Tournament. White receives two moves:—

| White. | Black. | White. | Black. |
|---|---|---|---|
| 1 P—K4 | | 22 P—B3 | Kt—B4 |
| 2 P—Q4 | P—QB3 (1) | 23 B x Kt | P x B |
| 3 QKt—B3 | P—Q4 | 24 K—B2(6) | P—B5 |
| 4 Kt—B3 | B—Kt5 | 25 R—Q6(7) | QR—Q |
| 5 B—K2 | P—K3 | 26 R—Q3 | R x R |
| 6 0—0 | B—Kt5 | 27 R x R | R—Kt |
| 7 Kt—K5 | B x B | 28 K—K2 | R—Kt7 |
| 8 Q x B | P x P | 29 K—Q2 | R x P |
| 9 Q—Kt4 | P—KKt3 | 30 R x KP | R—R3 |
| 10 Q x P | Kt—Q2 | 31 R—B6 | R—Kt3 |
| 11 Q—B3 (2) | Q—B3 | 32 R x P | P—R4 |
| 12 Q—Kt3 (3) | Kt x Kt | 33 R—K4 | K—B2 |
| 13 Q x Kt | Q x Q | 34 R—K3 | K—K3 |
| 14 P x Q | B x Kt | 35 R—R3 | R—R3 |
| 15 P x B | Kt—K2 | 36 P—B4 | K—B4 |
| 16 R—Kt (4) | P—Kt3 | 37 K—K3 | P—R4 |
| 17 B—Kt5 | Kt—Q4 | 38 P—R3(8) | P—R5 |
| 18 P—B4 | Kt—B6 | 39 K—B3 | P—QR5 |
| 19 R—Kt3 | Kt—K5 | 40 R—Q3 | P—Kt4(9) |
| 20 B—K3 (5) | 0—0 | 41 P x P | P—R6 |
| 21 R—Q | P—B4 | 42 R—Q | R—R6 |

and wins

(1) Probably the best defence against these odds.

(2) Premature. White was not yet in a position to attack, though having slightly the stronger position. Kt—B4, threatening B—B4, followed by QR—Q, was the proper line. B—Q2 and QR—Q, or P—QR3, would also have been good enough.

(3) B—Kt5 was better than the text move; then if 12 . . . Q x Q; 13, Kt x Q with a good game.

(4) The object of this move was to block a flight square, for the Kt should he, as White anticipated, come to Q4 and B6. The manœuvre was completely successful.

(5) And now the Kt has no way of escape.

(6) P—B4 would have been much better. Black took immediate advantage of the failure to play this by occupying the square himself.

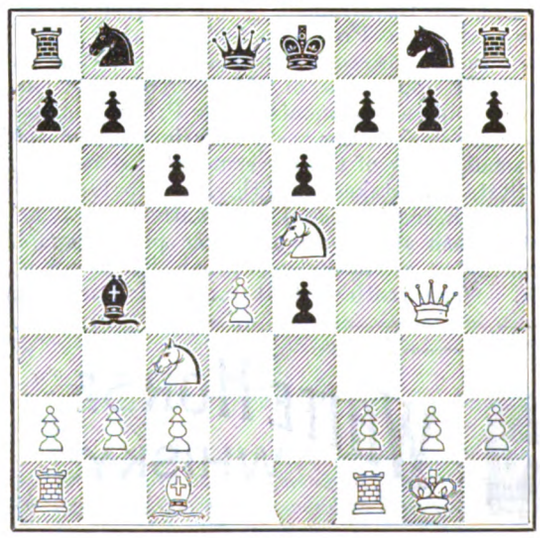
(7) K—K2 was indicated. K6 could be occupied at any time.

(8) K—B3 should have been played. Then if P—R5; 39, P—Kt4 (ch.), P x P; 40, P x P, P—Kt4; 41, R—Q3, P x P.; 42, P x P, and must win.

(9) A rejoinder entirely overlooked.

Position after White's 9th move, Q-Kt4.

Black.



White.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The rains which have so adversely affected the crop outlook in Greece seem to have been very general throughout the Balkans, and it is to be feared that in practically every region there the optimistic crop forecasts will now have to be materially revised. In Roumania the rains have been particularly severe in some districts. Our Correspondent reports that in one district whole villages have been inundated, and many acres of crops completely destroyed; and he points out that a continuance of the rains would have a very serious effect on the coming harvest. From Bulgaria also comes the report of severe storms, and our Correspondent states that considerable damage has been caused to crops and fruit trees generally.

***

The commercial event of the week has been the announcement that an influential British syndicate, consisting of representatives of leading financial and shipping companies, has completed negotiations for the acquisition of interests in the navigation companies trading in the Danube. Sir Frederick W. Lewis, chairman of Furness, Withy, and Co., Ltd., is the chairman of the syndicate, which includes Mr. H. A. Cox, a partner of Cox and Co., and a director of Cox and Co. (France), Ltd., Sir Eric Hambro, K.B.E., of C. J. Hambro and Son, Earl Grey, a director of the British Bank of Northern Commerce and of Swan, Hunter and Wigham Richardson, Ltd., and Mr. C. C. Barrie, C.B.E., M.P., of Charles Barrie and Sons, shipowners, Dundee. Messrs. Furness, Withy, and Co., Ltd., who are interested in trade with the Danube through the Johnston Line, will have the management of the undertaking.

***

It is recognised that the disorganisation of transport resulting from the war ranks second only to the lack of credits abroad among the factors which have retarded any great improvement in the economic conditions of Central Europe, and the syndicate has been formed with the object of ameliorating the position by the provision of adequate transport facilities on the great trade routes of Central Europe. Of the excellence of the project there can be no doubt, and those responsible are to be most heartily congratulated on a very notable enterprise, which, besides being calculated to further the immediate aim in the best possible way, cannot fail to have a most beneficial influence on the efforts now being made to extend the sphere of British trade endeavour in the regions served by the Danube, and in particular in the Near Eastern countries.

***

Attention is directed to the opportunities for general trade with Persia in a recent Consular report from Meshed. There appear to be possibilities, it is stated, of a large import trade at this centre, and it is suggested that a British firm of general exporters with a large capital and a strong organisation should open an import warehouse at Meshed and keep it stocked with a succession of fresh goods, which, under good management, would be cleared soon after arrival. At present the custom is to import commodities in small quantities, and the result is that each transaction involves separate arrangements for transport, and it has often happened that goods, owing to transport difficulties and delays, have arrived after the sale season for them is passed. Also many goods for which there would be an excellent demand are not imported, either because their existence is unknown or because the Persian merchants do not know how to get into touch with British manufacturers nor how to arrange shipments from United Kingdom ports.

***

The disorganisation of the world's currencies is one of the most vital effects of the war, and one for which the remedy has proved extremely difficult to find. The whole position is dealt with in "Currencies After the War," which has just been published for the League of Nations by Messrs. Harrison and Sons. It is explained in the preface to this very able work that, in view of the importance of the economic problems arising out of disorganised currencies in many of the principal countries of the world, the Economic and Financial Section of the League of Nations Secretariat thought it well to collect information on the subject in order that the Assembly of the League might have material available as a basis for discussion. The statistical information is now somewhat out of date, but that in no way detracts from the value of the work in giving a detailed impression of the enormous extent of the problem with which the world is confronted. It remains to be added that the intention of the authors "has been to present an objective statement of facts on which future policy must doubtless be based, but not in any way to criticise existing policies or to suggest the lines upon which future policies should be framed."

***

The need for the establishment of an Anglo-Bulgarian Bank is emphasised by a correspondent who points out that such an institution is an outstanding desideratum for the development of British economic relations with Bulgaria, as it would enormously facilitate trading transactions. In this, as in so many other cases, we shall be in the position of following our competitors. Italian and French banking interests in Bulgaria are at the present time being considerably extended by the acquisition of the interests of the Germans and Austrians in the banks formerly controlled by them. Italy's trade with Bulgaria has benefited very greatly, I understand, as the result of increased banking facilities, and there is no doubt that in future competition this country will suffer materially, if it is not as well situated as its rivals.

***

An interesting project is now on foot with regard to the development of British interests in the Roumanian oil industry. Elsewhere in this issue will be found details of the formation of the Phœnix Oil and Transport Company with a capital of £1,050,000. This company has been formed, it is understood, with the object of absorbing a number of important Roumanian oil undertakings, among them the Trajan-Roumanian and the Anglo-Roumanian companies. A circular issued to the shareholders of these companies will be found on another page, the gist of which is that shareholders are afforded the opportunity of exchanging their present shares for a holding in the new company on a basis of two shares for one. The Phœnix Oil and Transport Co., which has been formed under very influential auspices, is most favourably situated for commencing operations at once, and the proposed absorption is in the circumstances one which should commend itself to the shareholders of the companies mentioned.

***

The results obtained by the Assam Oil Company in 1919 were not so favourable as in the preceding year. There was a decrease in working profits of £6,600, and though this was counter balanced to some extent by an increased profit on exchange, there was a decrease in the net profits of £4,100, the figures being £81,700 as compared with £85,800 for 1918, and £89,800 for 1917, which was the company's record year. The dividends on the ordinary and participating preference shares are again 8 per cent., and £35,000 is allocated to depreciation and reserve as against £25,000, but the carry forward is considerably smaller at £17,100 as against £28,300.

# Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## EGYPT.

PORT SAID, June 16.

**Shipping News.**

During the last fortnight we have had through the Canal some very large ships, notably the "Berlin" and the "Zeppelin," which are both being used now to relieve the congestion of the passenger traffic from India. Two other still larger ships have been through—the "President Grant" and the "America"—both being run as United States Army transports, and carrying Czecho-Slovak troops from Vladivostock to Trieste.

The "America," which is 24,250 tons gross, is the largest ship that has ever been through the Canal. She was accompanied by the two powerful tugs belonging to the Canal Company, and great credit is due to all concerned that she should have made the safe and quick passage that she did.

Two wooden steamers have lately been into port. They were built in America, to the order of the Australian Government, who, as they did not want them immediately, leased them to an American firm. They have now been definitely taken over by the Commonwealth, and are now on their way out to Australia. Their performances are not such as to lead one to expect that wooden ship building, at any rate for steamers, will experience a renaissance. They are of about 2,900 gross tonnage, and carry about 3,600 tons of cargo. Their twin engines are of the ordinary steam reciprocating type. American papers to hand comment adversely on the wooden ship building that was carried on during the war. The wood used was "green," consequently they are about as tight as orange boxes, and only two or three have ever put to sea.

**Greek Banking Enterprise.**

The Bank of Athens has recently opened a branch in the town, with M. Papadakis as manager. With the increased trade between Egypt and Greece, it will no doubt meet a need of the mercantile community.

CAIRO, June 21.

**The Economic Situation.**

The local commercial community, composed of members of divers nationalities, is naturally more keenly interested in the economic situation than in political potentialities. Frequently one affects the other, but for the moment it can be assumed that both factors locally are entirely independent of one another. Business all over Egypt has quietened. The "slump," as the term is usually understood, has not arrived, but there is a feeling that it may arrive at any time. In consequence, most firms are cutting down expenses, with all that that policy implies. Many firms—chiefly Levantine—are endeavouring to repudiate obligations on the score that they are unable to pay. This is literally true in some instances, but in the vast majority of cases the merchants have ordered goods which are now lying on the docks at Alexandria, for which no immediate market is available, and for which the eventual prices will in all likelihood be less than the cost price in the country of manufacture. Hence, various devices are being resorted to in an endeavour to shirk responsibility.

**Congestion at the Docks.**

The sight of the docks at Alexandria at the present time is one that cannot easily be forgotten. I was in the commercial capital yesterday, and I took advantage of the opportunity to inspect the wharves. On what seemed interminable spaces, huge consignments of goods of every conceivable nature are awaiting transference. One could imagine that there had been a city fire, and that all the stock of the warehouses had been bundled thither. A well-known French merchant whom I met assured me that before our eyes lay £E8,000,000 worth of goods. I would not like to quote that figure authoritatively, or even half of it, but at the very least there is between two and three million pounds' worth of merchandise held up there in the sun. That glut is the reason for the caution observed in business circles. A country such as this cannot carry a deadweight like that without losing some of its buoyancy. Except for this caution the effect, so far, is not apparent. But what may not be in store for us in the near future!

## GREECE.

ATHENS, June 26.

**Commercial Outlook.**

A meeting was held at the Greek Chamber of Commerce in Athens for the purpose of discussing the commercial situation from a general point of view, and particularly the reasons which have caused the deadlock in all business transactions. The President of the Chamber of Commerce, M. Charilaos, who addressed the meeting, proposed that a congratulatory telegram should be sent by the members to M. Venizelos and to the Commander-in-Chief of the Hellenic Forces on the occasion of the excellent news which had just been received. This proposal met with great enthusiasm.

Reviewing the general situation, M. Charilaos stated that all current rumours to the effect that they were on the verge of a world financial crisis were without foundation. The deadlock in business, he observed, was due to the decrease in demand as a result of the campaign carried out by the consumers against the dearness of living.

Referring to the commercial situation in Greece, he pointed out that the recent falling off of business should be attributed to the existing shortage of money. Despite the recent issue of 300 million drachmæ, there was still a shortage of money, and no further decline in the value of the drachma was apparent. He then spoke of the merchants in the provinces, who made very few purchases from Athens, stating that consumption in the various provincial centres had decreased considerably. Finally, he drew the members' attention to the fact that the goods actually in Greece were sold at 10 per cent. less than they could be obtained from the sources of production. This fact was due to the fluctuation of the exchange and particularly to the decline of the drachma.

Digitized by Google

M. S. Loverdos, manager of the Popular Bank, referring to the complaints of the merchants resulting from the withdrawal of facilities by the banks, explained that this was necessary in view of the general deadlock in Europe. The withdrawal of facilities by the banks was a precautionary measure in case of a world crisis.

M. Inglesis, editor of the *Journal de la Bourse*, advised the merchants not to be in a hurry to sell their goods, as these would fetch much higher prices later on. He also criticised very strongly the attitude of the banks in affording no facilities whatsoever to the merchants. Although moneys deposited in the various banks to-day amounted to nearly two and a half billions, only 600 millions had been placed at the disposal of commerce.

A further meeting of the Chamber of Commerce will be held very shortly.

### Remittances Abroad.

The following figures are given by the Chamber of Commerce at Piræus with regard to remittances abroad in connection with orders placed for various goods for the Piræus market during the month of May:—

| | | | |
|---|---|---|---|
| French francs ..... | 4,468,068 | Pesetas ..... | 1,155,159 |
| Pounds sterling..... | 223,033 | Belgian francs ..... | 505,512 |
| Dollars ..... | 1,362,977 | Marks ..... | 2,189,792 |
| Swiss francs ..... | 1,595,730 | Drachmæ ..... | 32,867 |
| Florins ..... | 85,789 | Swedish coronas ... | 1,235 |
| Liras ..... | 1,229,483 | Egyptian pounds ... | 5,200 |

The total sum of moneys remitted abroad during May has reached, on an average, 28,999,159.35 drachmæ, this bing 8,910,039 drachmæ less than the amount exported during the month of April.

## ROUMANIA.

BUCHAREST, June 23.

### The I.R.D.P.

The agitation against the I.R.D.P. (Industria Romana de Petrol), the new society formed and confirmed by decree-law for the control of the home distribution of petrol, appears to have died down, perhaps because it is confidently hoped that the Parliament will modify the decree before ratifying it. I understand that part of the capital deposited by each of the engineer directors of the society has been collected by subscriptions from foremen and clerks in some of the petrol companies, and there is some talk of including also clerks in the Government offices.

### New Oil Company.

The prospectus of a new Roumanian oil company has appeared this week. It is called the "Generala Petrolifera," and has a capital of 60 million lei in shares of 500 lei each. 50,000 of these are offered for public subscription between June 21 and 30. The list of directors includes the names of Prince Barbu Stirbey and M. C. R. Manolescu-Ramniceanu, president of the board of directors of the Banque Générale du Pays Roumain (formerly the German "Banca Generala," now reconstituted with Roumanian capital).

### Concessions for Mines, etc.

Another decree-law published last week brings under the direct control of the Ministry of Industry and Commerce all concessions of rights for the exploitation of minerals, petroleum, ozocherite, asphalt, etc. It further provides that all such concessions granted in the new provinces since August 27, 1916, must now be submitted for revision to the above Ministry.

### Aid to Village Co-operatives.

In order to assist the village co-operative societies to procure the agricultural machinery and implements of which they are sorely in need, the Government has passed a decree authorising them to export 15,000 wagons of maize, millet, and oats, in exchange for which they can contract for the import of the machinery and implements they require. At the same time, the Minister of Finance has been authorised to negotiate a loan of 50,000,000 lei with the Banca Nationala, which sum is to be placed at the disposal of the head office of the co-operatives for the financing of these transactions, the loan to be covered by the sale of the imported machinery, etc.

### Crops Damaged by Storms.

During the last three weeks there have been extremely heavy rains in several districts of Roumania. For days the main railway line was so damaged by floods at the Olt River that traffic was completely stopped, and the Simplon express was obliged to take the route by Predeal. In the Campina district whole villages have been inundated, and many people and cattle drowned. The mountain streams were converted into deep torrents, which carried with them all kinds of debris and dead bodies of horses and cattle. Many acres of crops have been completely destroyed, and if these heavy rains continue it is to be feared that the effect upon the coming harvest will be very serious.

## BULGARIA.

SOFIA, June 12.

### Disastrous Rains.

During the last few days heavy rains have fallen throughout the country. In some parts the rainfall has been torrential, and has been accompanied by severe hailstorms, and considerable damage has been caused to crops and fruit trees. Some towns had rain for hours, and the rivers rose above the bridges, inundating the houses. At Provadie the floods were very bad, and some of the weaker buildings collapsed. The inhabitants took refuge on the neighbouring heights, and help was sent to them from Varna. In this district great damage was done to the crops, while all the food stores in the town were carried away by the waters.

## TRANS-CAUCASIA.

TIFLIS, June 10.

### Destruction of Georgian Crops.

The winter was one of the most severe experienced for many years. There followed the disastrous earthquake which destroyed Gori and forty-seven villages in the surrounding country; and now that the rainy season has come we have had terrific storms of rain and hail that have played havoc with the crops, especially in the Kakhetia district. In the whole of Kakhetia the hail damaged from twenty up to forty per cent. of the crops by the end of May. Enormous hailstones devastated vineyards, fields, vegetable gardens, and forests in the neighbourhood of the villages of Napareouli, Saniore, Artana, Nicolaevka, Pshaveli, and Shakriani. The crops in the three first-named districts are entirely ruined. There will be no grapes in the whole of the region. This—in one of the chief wine districts of Georgia—is nothing less than a national calamity.

# THE EGYPTIAN COTTON POSITION.—IV.

## THE DEMAND FOR EGYPTIAN.

**By John A. Todd, B.L.**

In the previous article the writer dealt with the conditions affecting the general demand for cotton, and particularly the effect of the financial uncertainty which during the last month or two has been dominating all markets. The next question is how far these conditions have affected the special market for Egyptian cotton; but before going on to deal with that question it is necessary to review briefly the conditions which gave rise to that special market, and how it has been affected by the war.

The special market for Egyptian cotton is the result of its peculiar qualities of length, fineness, and strength, and the many special uses for which these qualities make it adaptable. The first of these uses, namely sewing cotton, is still one of the most important; but the development of this trade was quickly followed by the discovery of many other uses to which fine Egyptian cotton could be put, such as aeroplane wings and motor-car tyres, and the production of goods of a quality and finish such as it had never been possible to get before out of cotton, e.g., by mercerising. At first this process was thought to be applicable only to Egyptian cotton, but the scarcity and high price of Egyptian, especially after the 1909 crop failure, compelled the spinners to try long staple American cotton, with surprising success. The result was that before the war the premium of Egyptian over American had fallen as low as 20 per cent. It remained comparatively low during the first two years of the war, but early in 1917, for some reason which the writer has never been able to get fully explained, it again rose very rapidly, and established a new record with a premium of 110 per cent. in April, as against the previous record of 102 per cent. in the same month of 1910. The premium, however, had fallen very substantially (to 37 per cent) before the Government control of the crop came on in August, 1918, and the history of the premium during that year of control has already been dealt with by the writer in these columns.* On the removal of control it soared again until, as stated in the first article of this series, it reached 219 per cent. in May of this year.

It is difficult to get complete statistics of the disposition of the Egyptian crop. For some years before the war the International Federation statistics had included fairly complete figures of the spindleage and consumption, from which could be calculated the probable total consumption of Egyptian throughout the world, and its allocation. The results of such a calculation are given in the first two columns of the following table, which gives an idea of the relative consumption in different parts of the world:—

Egyptian on the Continent. By lumping the whole of the Continental exports together this element of error is considerably reduced; but it still applies to the exports to England, a good deal of which must have been reshipped to the Continent or America.

Making allowance for this, the export figures given in the table show clearly what has happened during the war. The Continental takings have, of course, diminished very seriously owing to the blockade of the enemy countries, while those of England have barely maintained the pre-war average. In the case of the American takings it is possible to supplement the Alexandria export figures by others from American sources, which give the total imports and actual consumption of Egyptian in America for each season, and these figures are given in the last two lines of the table. It is not possible to compare these with the Alexandria figures of exports, with which (quite apart from the different bale weight) they do not tally exactly. That is not at all surprising, but what is interesting is that whichever set of statistics be taken they all show the same general result. The American consumption of Egyptian cotton, after rising sharply during the first two years of the war, declined again steadily in the last three years; but during the first nine months of the current season it has already risen to figures about 50 per cent. in excess of the highest figure touched for the whole season during the war, and about 200 per cent. in excess of the pre-war figures. It is probable that the total imports of Egyptian cotton during the current season will be close on 350,000 Egyptian bales.

The reasons for this are now well known. Quite apart from its increased use for aeroplane fabric, the use of Egyptian cotton in America for motor-car tyre fabric has developed during the war, and especially since the Armistice, to an entirely unprecedented extent. Until a few months ago there seemed to be no limit to this demand, and, as a matter of fact, the development of the motor-car industry in America was being limited by the difficulty of getting enough fabric to make the tyres.

It is here that it becomes so difficult to estimate the probable effect of the financial restriction on the demand. There is no doubt that financial conditions in America are seriously affecting the demand for new cars: but the opinion may be hazarded that the restriction will be rather in the way of stopping further expansion than of an actual reduction of the output. Many of the big tyre manufacturers had been contemplating still larger extensions, and these proposals have in most cases been suspended owing to the present financial uncertainty. But even if no more new cars were made than would take the place of the existing cars as they wear out, the number of pleasure cars alone in the States at the beginning of this year (7½ millions) would maintain a demand for tyre fabric sufficient to take up as much cotton as the States have been using during the past year. It would, therefore, not be safe to expect any reduction of the American tyre demand unless things go a great deal worse than they have done yet, or unless the high

It will be seen that the United Kingdom and the Continent were pretty nearly equal in volume of consumption; but the average quality was much lower in the case of the Confinent, because Russia and Austria used large quantities of very low grade Egyptian cotton, which they were able to import cheaply on account of the short sea passage from Egypt to Adriatic and Black Sea ports. The only other important user was the United States, whose consumption was only about half that of Great Britain or the Continent.

During the war the only figures available are the statistics of exports from Alexandria. These are, however, somewhat misleading, because they only give the first destination of the consignment, so that, for example, the statistics show no Egyptian cotton at all sent to Switzerland, which is, as a matter of fact, one of the most important consumers of

price of Egyptian forces the American tyre makers to use a smaller proportion of Egyptian in their tyres. This can be done, and the fact that the prospects of the American staple crop seem to have improved substantially within the last few weeks will certainly encourage the attempt. On the other hand, there is a possible new development of the tyre demand in the use of heavy pneumatic tyres for motor wagons. That development is hardly out of its infancy yet but if it should prove a success it will certainly produce a very serious situation.

As for the demand for tyre fabric for the rest of the world, it has certainly not reached its maximum, and although the increase may be temporarily checked, it can only be a question of time till Europe, Asia, Africa, and Australia begin once more to want cars and tyres in something like pre-war numbers.

But in the meantime, what has happened to the old uses of Egyptian cotton for purposes other than tyre fabric? As will be seen from the table, British imports for the nine months of this season are about on the same scale as in pre-war years, but as we have no figures for re-exports available, it is difficult to say how much we have actually been consuming. It seems reasonable to suppose, however, that the high prices of the past winter must have substantially restricted the use of Egyptian cotton in this country for every purpose where anything else could possibly be substituted. Unfortunately, substitution has been rendered very difficult by the fact that American staple cotton, which is the only possible substitute, has been if anything almost dearer relatively than Egyptian. Had the maximum prices been maintained long enough to necessitate their being passed on to the consumers in the retail prices of fine cotton goods, it is not easy to say what the effect on demand would have been. As it is, there seems to be a good deal of evidence that the retail consumer is protesting in the most effective way against the rise of prices by doing without to a certain extent. This tendency has no doubt assisted the speculative break in Egyptian prices, and it is very difficult to say whether that break has yet gone far enough. On this point a continuation for the month of June of the table given in the first article of this series throws some light. The premium of American over Egyptian for November futures in Liverpool fell during the last week of June as low as 79 per cent., but rose sharply again at the end of that week to 95 per cent.

To sum up, the position is that we are faced with a very short supply of American cotton, say about seventy per cent. of the pre-war supply, while the Egyptian crop is likely to be about up to pre-war figures. At the same time, while the demand for American cotton is certainly no less than it was before the war, that for Egyptian has been very largely increased by the growing demand for tyre fabric. The effect of these opposing forces on the relative prices of American and Egyptian cotton will require very close watching.

Two points of detail may be added. The new Government tax of 1¾ dol. per kantar on all cotton ginned after August 1, 1920, may have the effect of adding about a penny per lb. to the export prices if the growers succeed in passing it on to the consumer. Again, the new form of contract in Alexandria, which has just received Government sanction, will restrict deliveries under the present contract from January, 1921, onwards, to Sakel only. A new contract for Ashmouni also comes into force from October next, against which alone not only Ashmouni and Zagora, the true Upper Egyptian cotton, but also Affifi, Assili, Nubari, and Pillion, will be tenderable. This may produce some disturbance of the prices of futures, which will depend on the extent to which the acreage under Sakel in the Delta is reduced by the competition of the other shorter staple varieties.

## YUGOSLAVIA'S COAL RESOURCES

### Production in 1919.

The following interesting survey of the coal siuation in Yugoslavia, furnished by the Director of the Department of Mines, Belgrade, appeared in a recent issue of *Novi Zivot*.

It is not generally known that the country is rich in coal deposits, and has a considerable number of coal mines whose output under normal conditions would not only meet its own requirements, but would give a surplus for export to neighbouring states. Nevertheless, it must not be forgotten that the country does not produce coal suitable for the production of coke, and on that account the country is obliged to import this class of coal, and also coke to meet the needs of the metal and other industries.

In consequence of the European war, the workings as well as labour conditions in the mines have been considerably modified. On evacuating Serbia the enemy destroyed the greater part of the working plant and flooded the mines. At the outset, upon the re-occupation of the country, manual labour was unprocurable in Serbia, and much time was required to reorganise labour with demobilised men and miners from other parts of the kingdom. Great difficulty has been experienced in procuring machinery, etc., a quantity of which has been furnished by the Committee of the "War Booty Commission" from the loot which the enemy had collected for removal, but had to leave on his hurried retreat. A credit of three million dinars has been allocated to assist in the reorganisation of the mines, and in order to ensure a more intensive output, a credit of 50 million kronen has been allocated for the purchase of material required for operating the new mines at Mostar, Bukinje and Ugljevik.

Despite all the difficulties, the production during the second quarter of 1919 would have almost reached the pre-war output had the mines been able to have had adequate facilities for the transport of the coal. For example, the daily output in Bosnia-Herzegovina was 320 wagons, but the Railway Administration could only place 240 wagons per day and often less at the disposal of the mines, so that production had to be reduced, and the stocks at the pit-head awaiting transport were estimated at 3,000 wagons at a time when the country was experiencing a serious shortage of coal.

On the Senje line, transport, in the absence of engines, is very considerably reduced, notwithstanding the fact that the line serves the Senje and neighbouring mines exclusively. The owners of the Sissevats and Resava mines have each a stock of 200 wagon loads (*i.e.*, 2,000 tons) which cannot be moved for lack of transport, and they are obliged to suspend production although these mines are capable of a daily output of 20 wagons (*i.e.*, 200 tons). Even the State-owned mines of Senje are in no better position; they can produce 60 wagon loads a day, but only 10 wagons can be moved daily. Similarly for lack of transport the mines of Bogovina, on the Parachin-Zayechar line, have to restrict production. The four mines mentioned, which are capable of a daily output of 156 wagon loads of brown coal of good quality, can only transport 30 wagons daily in view of the scarcity of locomotives. It is clear, therefore, that the solution of the coal crisis is dependent on the railways being placed in a position to supply sufficient rolling stock to ensure normal coal transport.

The total production of coal in 1919 in the entire kingdom was 2,494,000 metric tons, whilst in 1913 the total output of the provinces, which to-day comprises the S.H.S. kingdom, was 3,487,432 metric tons. The 1919 production was accordingly 30 per cent. less than before the war.

The coal production in the several provinces was:—

| | 1919. In Metric Tons. | 1913. In Metric Tons. |
|---|---|---|
| Bosnia-Herzegovina | 674,930 | 800,000 |
| Serbia | 103,730 | 311,365 |
| Croatia and Slavonia | 251,293 | 205,000 |
| Slovenia | 1,153,339 | 1,471,067 |
| Baranja (Petchoui) | 310,767 | 700,000 |
| | 2,494,058 | 3,487,432 |

It is anticipated that the production for 1920 will be generally more favourable than last year, but this is conditional upon a very decided improvement being effected in transport conditions. According to the returns for January, 1920, the output in the different provinces as compared with that of January, 1919 was:—

| | January, 1919. In Metric Tons. | January, 1920. In Metric Tons. |
|---|---|---|
| Baranja (Petchoui) | 39,536 | 40,614 |
| Serbia | 5,300 | 15,497 |
| Bosnia-Herzegovina | 49,246 | 70,214 |
| Croatia and Slavonia | 20,000 | 27,840 |
| Slovenia | 96,150 | 104,860 |
| | 210,232 | 259.025 |

It will thus be seen that the coal output in January, 1920, indicates an excess of 50,000 metric tons over that of January, 1919, and a deficit of about the same amount on pre-war production. This deficit could be more than made up in the next few months provided transport is improved. The new mines of Uglyevik Mostar and Bukinje in Bosnia Herzegovina, Reichenburg (Rajhenburg), and Huda Yama in Slovenia, and Gorievnitsa in Serbia, are capable of yielding during the year a considerable quantity of coal, so that the figures of the pre-war production are likely to be increased.

The exhortation to increase production and export which is universally applicable at the present time requires in this case to be coupled with practical measures for financing and providing the supply of material urgently necessary for the re-establishment of railway communications and national industries in the Serb, Croat, Slovene State.

## ENGINEERING.

### Synthetic Cast Iron.

The process of making synthetic cast-iron from steel scrap represents a considerable advance in metallurgical science. For some time past it has been known that the recarburisation of steel scrap was possible where the electric furnace was adopted as a medium, but it does not seem that engineers generally recognised the possibilities of the process or considered it probable that it would ever be adopted on a commercial scale. The war made startling changes in methods of working, and one of the most interesting was that of the actual commercial application of the synthetic process of reducing cast-iron in order to facilitate the production of semi steel shells.

A high authority has said that the general economy of the process, combined with its simplicity, renders it highly probable that while synthetic cast-iron found a wide field of application during the war, owing to the large production of steel turnings derived from the manufacture of shells, it will find no less a field in producing material with steel-like qualities required for mechanical parts.

The inventor of the process said recently that the novelty of its manufacture consists in carburising iron and steel scrap, more particularly turnings, by melting these materials in the presence of carbon, which is introduced simultaneously with them in the electric furnace, which is plainly indicated as best fulfilling all the conditions required for the carrying out of the process. He pointed out that only a process of continuous carburisation, effected during the course of melting a mixture of steel turnings and carbon could conduce to a method which should be economical as well as efficient of producing synthetic cast-iron with a commercial future capable of development. He said that in an electric furnace charged with steel turnings mixed with carbon the carburisation is not only absolutely controlled by the known reactions of the substances present, but it should be noted as an important economic advantage that the combination of the carbon with the iron begins in the upper parts of the charge long before actual fusion. Cementation intervenes from a temperature of 650 degrees upward, and becomes more rapid in proportion as the temperature rises owing to the descent of the charge as the process continues.

It is interesting to note that carburisation of the iron takes place subsequently by the contact between the solid carbon and the partially carburised metal in the course of melting, and becomes complete on full melting, the temperature of which is determined by the nature of the iron, so that casts can readily be obtained in the electric furnace at temperatures of between 1,200 and 1,300 degrees centigrade. Mr. C. A. Keller pointed out that the mixture of steel turnings and carbon, possessing in itself very high conductivity rendered it necessary in the electric furnace to use so low a potential that higher currents than those ordinarily in use could be employed. On the other hand, he said, it would be a pity to employ electric fusion without profiting by the metallurgical advantages involved in order to effect the removal of all sulphur present. The iron obtained in the presence of a sufficiently basic slag, which combines with the small amount of silica introduced, will contain practically all the substances contained in the charge, except the sulphur. There will be no increase in the silicon, and the carbon in the charge will be used up solely in carburisation without any appreciable intervention of the silica. White cast-iron can thus readily be obtained with ordinary steel turnings. With turnings containing 0.44 per cent. of silicon, 0.55 per cent. of manganese, and 0.07 per cent. of sulphur a white cast iron of the following composition was obtained: Carbon, 3.55 per cent.; silicon, 0.52 per cent.; manganese, 0.48 per cent., and faint traces of sulphur. In his view, control of the percentages of silicon and other elements becomes easy in this process; for example, extra silicon will result from introducing more silica into the charge along with a correspondingly larger proportion of carbon for reducing purposes. The percentage of silica in the slag will vary according to the percentage of silicon in the iron. The whole subject possesses more than ordinary interest, and it would seem that here is a direction in which further research work might profitably be carried out.

### Forthcoming Exhibition.

An interesting and fairly representative exhibition of motor lorries, road rollers, concrete mills, and road making and repairing materials will be held during September at The Hague, the occasion being the meeting of the First Netherlands Congress. The offices of the exhibition will be at 18, Park Street, The Hague, and all British engineers desirous of visiting or of exhibiting some of their products should get in touch with the secretary. The object of the exhibition is to provide as complete a representation as possible of the progress made during recent years in the means of transport and in road construction and repair.

### A New Light Car.

I am informed that Messrs. Douglas Motors, Ltd., the well-known motor cycle building firm of Kingswood, near Bristol, have just completed all arrangements in connection with their purchase of the immense new works at Yate which belonged to the Government, and which were used for carrying out repairs to aircraft. Yate is only about twelve miles from Bristol, and the factory buildings are most conveniently situated in every respect for business. My information is to the effect that the firm intend to carry out the manufacture of the new Douglas 10-h.p. light car at Yate, and as there is a large aerodrome attached to the works, I presume that a private testing track will be laid down. I await full particulars of this new light car with some interest.

### The Bristol "Pullman."

I have just received some interesting details of the Bristol "Pullman" from my friend Mr. H. White Smith, of the Bristol Aeroplane Co., Ltd. During actual flight this machine has registered a speed of 134 miles per hour, and has a cruising speed of 100 miles per hour with engines at little more than half-throttle. In "taking-off," the amount of run, after the engines were opened out, was less than 180 yards, and a similar space was sufficient for the run after landing. The climbing powers of these machines are exceptionally good, and the reliability of the Pullman is beyond question. There is, further, little or no liability to break down through any conceivable engine trouble, as the machine is fitted with four engines, any two of which are sufficient to maintain flying speed.

I hear good things of the Bristol three-seater Coupé touring aeroplane, which is a machine calculated to make a very real appeal for commercial users. I know that this type is already in use by the Instone Air Line for its service between London, Paris, and other European centres, and I hear that in practice it has been found to be reliable, efficient, and economical. The fitting of the coupé to the Bristol three-seater touring plane adds greatly to the comfort of the passengers, and at the same time its stream line design is such as does not interfere in any way with the speed or the evolutions of the machine. This company, it may be added, is exhibiting at the International Aero Exhibition at Olympia, which commences this week.

### Producer-Gas Lorries.

Many attempts, some of which have proved more successful than was anticipated, have been made to place a producer-gas-driven lorry on the road. There is no doubt that from a theoretical standpoint such a vehicle should be not only economical but highly efficient, and it is to be hoped that past failures will not deter experimentalists from pursuing their efforts still further. It was pointed out recently that whereas one ton of coal burned directly in a furnace with a boiler of ordinary design would only propel a 5-ton commercial vehicle 160 miles, the same amount of fuel gasified would yield in the shape of gas and coal sufficient source of power to give a road mileage of 685, or, roughly, four times the distance.

### A New Mechanical Horn.

A new mechanical horn which is in every way a thoroughly mechanical production has just been brought to my notice. It becomes increasingly evident that in the present condition of our roads, and with the number of careless and unskilled road users one meets, perfect safety should be the first consideration of the motorist. To ensure this, it goes without saying that an adequate means of giving a warning signal is an absolute necessity on every car. The horn referred to is certainly one of the best and most effective yet brought to my notice, and so far as warning is concerned, it gives a deep, penetrating note which cannot be disregarded.

***Every description of Banking business undertaken.***

Digitized by Google

The horn is turned out with every wearing part made from specially prepared and hardened steel, guaranteed to withstand the hardest possible usage, and I see no reason why, with ordinary care, one of these instruments should not last for years. I note that particular attention has evidently been paid to the striking wheel and diaphragm, which are constructed in such a way as to give thorough and satisfactory service. In fact, as regards this, the makers consider it no exaggeration to say that the mechanical details of this horn will outlast all other parts of the car. The plunger is absolutely rust-proof, and is so constructed that it cannot rattle, no matter at how high a speed the car may be travelling. It responds with certainty to the slightest touch, and the operator is able to modulate the volume of sound to the urgency of his need. The tone is quite distinct and rises above all traffic noises, whilst the warning carries a long distance. The weight of the horn is only a fraction over 2½ lb.

**C.A.V. Magneto.**

The remarkable reliability of the C.A.V. magnetos was again demonstrated during the important motor-cycling events which took place in the Isle of Man last week. A Norton secured second place in the classic senior race, with seven others in close formation behind; whilst in the flying kilometre for machines entered in the big race, Nortons again scored, being first and third in the class, and second in the open event, a Singer, C.A.V.-equipped, being third. Messrs. C. A. Vandervell have every reason to be proud of these results in the most strenuous motor-cycling competitions of the year.

**Industrial Rubber.**

Speaking on the subject of "Rubber for Industrial Purposes" recently, Mr. C. E. Alsopp, at the Technical College, Bradford, enumerated the many uses to which rubber is put to-day in industry. From an engineering point of view rubber is one of the most useful products known, and it is certain that our automobile industry would not have developed so fast or so far had it not been for the suitability of rubber for tyres. Vulcanite is another form of rubber which is largely used by engineers. Mr. Alsopp dealt in detail with the early discovery and cultivation of the rubber plant, and said that whilst the production of wild rubber was stationary, that of plantation rubber was steadily increasing. About 90 per cent. of the world's total production of plantation rubber is handled by British companies, and about 83 per cent. is obtained from British territories.

## INDIAN INTELLIGENCE.

This week's Indian cable states:—Rainfall has been fairly general, but scanty in Sind and Western Punjab and in a belt across India, comprising Bombay Deccan, Hyderabad, and Madras, Circars. Monsoon rainfall defective nearly everywhere, but distribution satisfactory. Both monsoon currents weak at present. General crop conditions good, but more rain required in parts of North-Western India, Punjab, Mysore, Hyderabad, and Bombay Deccan. Pyinmana-Magwe railway seventeen miles by Burma Railways, and Vijapur-Ransipur extension of Kalol-Vijapur Railway fourteen miles by Baroda Darbar, sanctioned. Bombay cotton market steady. Fully good Broach July, Rs.451-8As. Piece goods market not encouraging, with desultory demand and nominal rates. Calcutta jute market quiet. Hessians firm, with good business done, but tending to become quieter. Heavy goods steady, with strong demand for cornsacks. Substantial business done in shellac during past week, with spot price of T.N. ranging to Rs.225. No change in Bank Rates.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended June 19:—The sales this week on our market amount to 17 cases selected manufacturing qualities at 19s. per lb. c.i.f. The exchange to-day is piastres 420 per pound sterling for cheque on London and 0.93 dollars for one Turkish pound. The arrivals are 1,730 cases against 695 at same date last year.

The Levant Company (Greece), Ltd., have acquired the business of Messrs. the Whittall Saltiel Company, Ltd.

A Reuter's telegram states that the Bank of Madras has declared a dividend of 12 per cent., with a special bonus of 4 per cent.

Bank of British West Africa, Ltd.—Final dividend to March 31, 6 per cent., making 10 per cent. for the year, less income-tax.

## THE MECHANICAL EQUIPMENT OF TOBACCO FACTORIES.

(From a Correspondent.)

After the introduction of tobacco to Europe by Christopher Columbus, smoking in any form remained for a long time a luxury of the rich, and it was not until the last few decades that indulgence in the habit has been within the reach of all. This revolution has been made possible by the introduction of the same factor that has been responsible for most of the developments of the nineteenth century—machinery, which has placed the tobacco industry in the leading position it now occupies. Without the use of machinery it is no exaggeration to say that four-fifths of the people addicted to the "weed" in one form or another would have to go without, as their requirements could only be satisfied by armies of workpeople.

The remarkable strides made have been entirely due to the invention and perfection of automatic machinery, which can justly be regarded as the product of marvellous mechanical ingenuity, for in spite of the varied and delicate operations necessarily involved in the making of a cigar or cigarette, the terms "intricate" or "complicated" could hardly be justifiably applied to the machine which automatically produces highly finished cigarettes from a reel of cigarette paper and bulk tobacco at a rate of 36,000 per hour, or that which turns out 480 cigars an hour from tobacco leaves.

It is generally recognised that, in view of the highly sensitive nature of the tobacco plant, the less the leaves come in contact with human hands the better, in addition to which, of course, there is the question of purity (a point to which responsible tobacco manufacturers attach the utmost importance), and it speaks volumes for the high degree of perfection attained in present-day tobacco machinery that "man-handling" is practically non-existent, and every precaution is taken to avoid every risk of tobacco being contaminated and tainted by contact with oil from bearings, etc., or other extraneous matters.

The tobacco industry has now been brought to a fine art—or perhaps it would be more appropriate to term it a science, for certainly no known scientific subject needs more consideration and care than the rearing of the tobacco plant, the lengthy preparations for its ultimate purpose and subsequent manufacture into the finished article ready for the consumer. A period of about five years elapses between the planting of the seed and the manufacture of the product into cigarettes, etc., and during all this time unremitting care is necessary to retain and improve the natural fragrance of the leaves and bring them into proper condition for smoking, this end being assisted by periodical treatment in one type of machine or another.

It is the final process, no doubt, that is of most interest to smokers—the actual production of cigarettes. The various operations are surprisingly simple. The tobacco, already "shredded," is put into a container, technically termed a "hopper," placed above the machine, whence internal rollers regulate the "feed" to a smaller "hopper" situated below, and from which the required quantity of tobacco falls upon, and is carried along by, the cigarette paper. Passing along both paper and tobacco enter the larger end of an elongated cone-shaped tube, and as it proceeds through one side of the paper is wrapped round the tobacco leaving the other edge projecting upwards for treatment by the "automatic paster," which deposits a very small quantity of special paste. Continuing further this pasted edge encounters a shaped block, which wraps it round the cigarettes. The seam is then sealed and dried by means of an electric or mechanical drying device. There is then a long paper-enveloped tobacco "rod," and the only remaining operation is the cutting off of the cigarettes to the predetermined length. This is performed by a high-speed circular knife, ground to razor-edge keenness, and operated vertically and horizontally by cams and levers in unison with the rate of egress of the "rod." The finished cigarettes are then ejected into the "catcher" at the rate of ten per second.

A highly interesting feature of a machine such as that described is the printing device which stamps the name or trade-mark (or both), invariably found on cigarettes of every type and quality, often in two colours. This forms an integral part of the machine, and consists of small dies located on rollers adjusted according to the length of the cigarette being made, and where a two-colour design is to be printed, in register one with the other. The cigarette paper strip passes under these dies in its passage from the roll to the "hopper." Another adjunct frequently encountered in this highly developed machine is an automatic device for affixing gold, cork, or paraffin tips.

A branch of the Eastern Bank was opened on July 1 at Bahrein, in the Persian Gulf.

## SHIPPING INTELLIGENCE.

There was launched at Scotstoun, on June 30, from the west yard of Messrs. Barclay, Curle and Co., Ltd., the steel twin-screw steamer Mundra, built for the British India Steam Navigation Co., Ltd. The vessel is constructed to the highest class of Lloyd's Registry, and is of the following dimensions:—Length 450 ft., breadth 58 ft., depth 35 ft. 6 ins., with a gross tonnage of 8,000, and a d.w. capacity of 11,250 tons. The vessel is fully equipped with winches, and has electric lighting and steam heating throughout; she will also possess an installation of wireless telegraphy. The machinery consists of two sets of triple-expansion engines, taking steam from four boilers of sufficient power to ensure a sea speed of 13½ knots.

The Cunard Line celebrated its eightieth anniversary on July 4. On July 4, 1840, the company owned four ships, totalling 4,616 tons; in 1920, in addition to the existing mammoth liners Aquitania, Caronia, and Carmania, and other famous ships, the company have either building or completing for service a tonnage of a quarter of a million. In 1840 there were three ports of call; to-day there are eighty.

### Forthcoming Sailings.

The Cunard Line s.s. Pavia, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Salonika, and Constantinople, will close for cargo at Glasgow on July 9, Manchester on July 17, and at Liverpool on July 22.

The Cunard Line s.s. Antinoe, for Piræus, Constantinople, and Galatz, will close for cargo in London on July 14.

The Moss Line s.s. Amasis, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo on July 30.

The Ellerman Line s.s. Belgravian, for Gibraltar, Malta, and Alexandria, will close for cargo at Liverpool on July 10.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Bosnian, for Malta and Alexandria, will close for cargo at Liverpool on July 17.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Austrian, for Algiers, Malta, Syra, Smyrna, and Constantinople, will close for cargo on July 10.

The Johnston Line s.s. Venice, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will close for cargo at Liverpool on July 9.

The Johnston Line s.s. Wingate, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will leave Liverpool on July 17.

The Anchor Line s.s. Elysia, for Bombay, will close for cargo at Glasgow on July 10, and at Liverpool on July 22.

The Bibby Line s.s. Gloucestershire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on July 14.

The Henderson Line s.s. Amarapoora, for Rangoon, will close for cargo at Glasgow on July 19, and at Birkenhead on July 28.

The Clan Line s.s. North Sands, for Bombay and Persian Gulf, will close for cargo at Birkenhead on July 13.

The Harrison Line s.s. Tactician, for Calcutta, will close for cargo at Liverpool on July 24.

In the list of "Forthcoming Sailings" inserted in THE NEAR EAST of June 24, Constantinople was given amongst the ports of call of the Johnston Line s.s. Cranmore. It should, of course, have been Constantza.

The receipts of the Egyptian Delta Light Railways for the week ended June 10 amounted to £E10,340, making the total for the year £E80,239. For the corresponding period of 1919, the receipts amounted to £E7,619, and the total to £E24,162.

The traffic receipts of the Smyrna-Aidin Railway for the week ended June 19 amounted to £6,622.

## COMPANY MEETING.

### EGYPTIAN HOTELS.

The twenty-third annual general meeting of the Egyptian Hotels, Ltd., was held on June 30 at the registered offices of the company, 11, Ironmonger Lane, E.C., the Right Hon. Lord Claud Hamilton, P.C. (the chairman) presiding.

The notice convening the meeting and the auditors' report having been read,

The Chairman said: Gentlemen,—From the accounts which the directors have put before you for the year ended April 30 last you will have seen that the results of the year's working have been satisfactory. The profits shown are the highest recorded since the formation of the company. During the past year your directors received an offer for the purchase of the Ghezireh Palace Hotel and lands not previously sold, and after considerable negotiations decided to realise the properties, together with some of the contents of the hotel. The remainder of the hotel equipment has been taken over by Shepheard's Hotel at the valuation shown in the accounts. The whole of the purchase price has been received, and effect has been given to the transactions in the accounts before you. I desire to point out to you that as a result of this realisation the whole of the debenture loan and advances, which at the close of the 1919 accounts were £55,538 17s. 2d. and £17,500 respectively, have been paid off. The item of £47,610 10s. 3d. shown under the heading of "suspense account for sums received in respect of land sold and not conveyed to the purchaser" will be liquidated by the reduction of the "freehold and leasehold land and buildings" account as and when conveyances of land are called for.

With regard to the accounts, I have little to add to the directors' report attached thereto. The plant, fixtures, and fittings have been consistently depreciated. The stock on hand has been valued by the hotel manager, and proper reserve has been made for any doubtful debts included in the sundry debtors.

The balance of profits shown by the accounts is £50,557 4s. 10d., which, with £10,383 4s. 7d. brought forward from last year, leaves a balance to be dealt with of £60,950 9s. 5d., and the directors recommend (1) the payment of a dividend of 5 per cent. for the year on the preference shares, (2) the payment of a dividend of 25 per cent. for the year on the ordinary shares, (3) the placing to a special reserve of £15,000. If these recommendations are approved, the balance to be carried forward to next year will be £8,950 9s. 5d. In conclusion, the warm thanks of the board and of the shareholders are due to the members of the local board, to the management and hotel staff, for the success which has been achieved. I now **move**: "That the directors' report and accounts for the year ended April 30, 1920 as submitted to the shareholders, be received and adopted."

Mr. Charles Baehler seconded the resolution, which was carried unanimously.

The Chairman then moved: "That a dividend of 5 per cent. on the preference shares for the year ended April 30, 1920, be and the same is hereby declared payable on and after July 15, 1920."

Mr. H. M. Snow, M.V.O., seconded the motion, which was unanimously adopted.

The Chairman next moved: "That a dividend of 25 per cent. on the ordinary shares for the year ended April 30, 1920, be and the same is hereby declared payable on and after July 15, 1920."

The motion was seconded by Mr. Baehler, and was carried unanimously.

The retiring director (Lord Claud Hamilton) and the auditors (Messrs. Turquand Youngs and Co.) were re-elected, and a vote of thanks having been accorded to the chairman, the proceedings terminated.

## NEAR EAST MARKETS.

### LONDON PRODUCE REPORT.

**Dried Fruit.**

The market for currants has continued to harden as a result of the increasing demand. Stocks of lower grade fruit are now very small. Considerable business has been done in futures at advanced rates. Sultanas have been in good demand, but supplies are lacking.

**Sugar.**

A quiet tone has characterised the free market. West Indian crystallised has been done at from 140s. to 185s., and American granulated and white Java have been steady at 160s. Home refined has continued in good demand at the controlled prices.

**Coffee.**

The market has been quiet, and prices have been lower. The futures market has been very dull. Quotations are:—July, 85s.; September, 80s.; December, 72s. 6d.; March, 69s.

**Oilseeds.**

Indian linseed is 2s. 9d. lower at 36s. 9d., while La Plata has declined to 34s. 6d. Rapeseed has been a dull feature, with Toria 3s. lower at 34s. Cottonseed has been quiet, with Bombay at 12s. and Egyptian at 18s. 6d.

**Oilcakes, etc.**

Supplies of oilcakes are ample to meet requirements, and the tone is generally easy. Oils have been rather dull. Linseed oil has come to business at 75s., while refined rape oil has been done at 85s. Turpentine has been weak, but has firmed up to 140s.

## COMPULSORY LABOUR IN BULGARIA.

The Department of Overseas Trade has issued the following communiqué:—

The Bulgarian Government seems fully alive to the necessity of devoting its chief energies to the economic restoration of the country, and with this object in view a law has been passed for the introduction of compulsory labour. By this measure the Government hopes to rely on an organised body of men, able to cope with any national emergency, and who would remain at work despite any efforts of extremists to induce them to revolt. The Bill is also calculated to assist Bulgaria in raising more rapidly the amount of the war indemnity by increasing the production and revenue of the country.

The Bill has for its aim the training of the youth of the country to fulfil their obligations as useful citizens, irrespective of their social and material position. It is intended to engender in the young that devotion to public affairs and love of physical labour which are necessary to a nation anxious to reorganise itself on a sound basis.

The objects of the Bill are, broadly speaking:—1, to prepare the young for practical life; 2, to organise and thereby increase the productive power of the State; 3, to socialise the source of wealth and human labour; 4, to assist the country to emerge from the critical state to which it has been brought by the war.

## PROPOSED ROUMANIAN OIL MERGER.

A circular issued by the directors of the Traian-Roumanian and Anglo-Roumanian Oil Companies states:—

In view of the difficulty of obtaining adequate working capital and the desirability of combining with large interests, the directors submit for approval the following proposal, which has been put before them by an influential group in London, who wish to come into Roumania with the object of developing a large oil industry under British control, and who are willing to give this company the benefit of their organisation and large working capital provided they can obtain 51 per cent. of the shares of this company.

The new company is to have a capital of not exceeding £2,050,000, divided into 2,000,000 shares of £1 each, which will be entitled to 75 per cent. of the profits, and 1,000,000 shares of 1s. each, carrying 25 per cent. of the profits. The purchasers guarantee that £500,000 shall be subscribed in cash, thus forming a substantial working capital for the enterprise. The directors have entered into an agreement with the purchasers, defining the basis on which it is proposed that the new company shall obtain control of this company's shares, as follows:—

Not less than 51 per cent. of the issued shares of the company must be deposited with an accompanying bank transfer, to be exchanged for fully paid shares in the new company in the ratio of one fully paid £1 share in the new company for two fully paid £1 shares held. The new company to appoint a board of directors to include one director of this company. The retiring directors will receive as compensation the amount of one year's salary or fees as directors, to be satisfied by the issue to them of shares. Arrangements are to be made for the settlement of the outstanding liabilities in London, which amount to about £10,000.

The company is at the present time without funds, and will be unable to repair the wells or adequately develop the property without a considerable amount of new capital. The board has endeavoured to secure further funds, but has been unable to obtain the substantial sums required on anything like reasonable terms. After careful consideration of the scheme, the directors have decided, in view of the large amount of working capital to be provided and the very powerful group who will control the new company, to accept the proposal and to recommend it for the shareholders' approval.

## NEW COMPANIES.

**Phœnix Oil and Transport.**

The Phœnix Oil and Transport Company, Ltd., has been registered with a capital of £1,050,000 in 1,000,000 shares of £1 each and 1,000,000 shares of 1s. each. Objects: To search for, win, refine, and deal in oils, shale, minerals, natural gas and minerals, and to own oil tank and other ships, etc. The subscribers are: Petroleum and Industrial Trust, 54, New Broad Street, E.C., 1,000,000 1s. shares; A. H. Farley, 127, Ferme Park Road, N.8, company director, one £1 share; A. Lidgett, Brookside, Beckenham, newspaper proprietor, one £1 share; A. M. Fletcher, 36, Warwick Gardens, W.14, chartered secretary, one £1 share; W. Masterson, Granby Court, 88, Queen's Gate, S.W.7, oil expert, one £1 share; W. H. W. Lacey, Pembroke, Epping, company director, one £1 share; A. J. Pegg, 54, New Broad Street, E.C. company secretary, one £1 share; W. H. O. Jackson, 54, New Broad Street, E.C., accountant, one £1 share. The directors are not yet appointed

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

**Egypt.**

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Iron Safes.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of 180 iron safes. July 12.

Rails.—The Surveyor-General of Egypt, Giza (Mudiriya) invites tenders for the supply of cut rails in accordance with specification and conditions available at Survey Offices, Giza. Contractors are invited to put in their offers for any quantity available for immediate delivery or for delivery during the current financial year. Tenders should show quantity, weight per yard run, rate per ton of 1,000 kilos, period required for delivery, place of delivery, and any other details necessary. March 1, 1921.

H.M. Commercial Agent for Egypt has forwarded copies of the specification, conditions of tender, and tender form in connection with a call for tenders by the Ministry of Public Works, Cairo, for the supply and delivery of eight steel house barges for the Upper White Nile Division. Sealed tenders, on the proper forms, will be received by the Director-General, Mechanical Department, Ministry of Public Works, Cairo, up to noon on July 20. A provisional deposit of 2 per cent. or a bank guarantee of 10 per cent. of the value of the offer must accompany each tender. The above-mentioned copies of the specification, etc., may be consulted by British firms interested at the enquiry office of the Department of Overseas Trade, 73, Basinghall Street, London, E.C.2 (L.).

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200 metrical tons cotton waste. August 9. (L.)

Uniforms.—The Egyptian War Department invites tenders for Bedford cord pantaloons, khaki drill infantry and artillery frocks. Tenders will be received up to first post on Monday, July 26, and will remain open for 14 days. (L.)

**Malta.**

The Council of Government invites tenders from British firms for the construction of a first-class shipbuilding and repairing yard.

**India.**

Iron Pipes.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice-valves, etc. September 8.

Steel Rails, etc.—The East Indian Railway invites tenders for the supply of steel rails, fishplates, and fishbolts. July 14.

Rails, Fishplates, etc.—The India Office invites tenders for the supply of (1) rails and fishplates, (2) dog-spikes, (3) fishbolts. July 16.

## ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

There has been very little doing this week in Egyptian securities, but Greek Government bonds have again been an active and improving market. Egyptian Unifieds are closing ¼ lower at 68¾, which is also the extent of the decline in the 3½ per cent. Prefs. Greek 1881 and 1884 Loans have recovered a great part of their dividend at 57 xd., the 1890 Loan is half a point up at 54, and Funding is a point higher at 53 xd. The 1902 Railway Loan has recovered the whole of its dividend at 45½ xd.

Bank of Athens shares have continued in strong demand round 4; Egyptian Bank shares are quite unaltered, excepting Land Banks, which are nominally ⅛ down at 5. Bank of Abyssinia have lost a similar fraction at 1⅜, and Imperial Ottoman Banks are ¼ lower at 8¾.

Among Land shares, there has been some little business in Aboukirs, Delta Lands and New Egyptians, but without altering the respective prices. Sudan Plantations close a better market and are 3-16 up at4¼, but, on the other hand, Union Foncières have dropped ⅛ to 4½.

In Miscellaneous descriptions Alexandria Waters are nominally ¼ down at 8, and Morum's have dropped 6d. to 17s. 6d.

In Oil shares the feature has been the rise of 7-16ths in Anglo-Egyptian B to 3 1-16th.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 5/16-97 7/16 |

## LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

There has not been any important change in the market since a week ago. Demand has continued very poor, and spinners and manufacturers, owing to lack of support, have lost further ground. No producer at the moment is selling the output of his machinery, and the immediate future causes some anxiety. It is believed, however, that before very long a change in the conditions will take place, as there is no appearance of the consuming outlets of the world being over-supplied in cotton goods. Egyptian cotton prices, on the whole, have been rather steadier, but the trade demand continues poor. Crop reports remain favourable There has not been any move towards increased activity in Egyptian yarns. There is a remarkable variation in prices when tested. The American cotton crop continues to improve, and the recent official reports may be described as bearish. Inquiry in piece goods for Egypt and the Near East generally has not been quite so dead as a week or two ago, but offers have been on a low basis, and in the way of fresh business nothing tangible has taken place. Advices generally from India and China have been rather better. Freer operations, however, are held back by the unfavourable exchange situation. Comparatively little has been done for South America. Some sellers have reported a fair amount of demand for West African outlets. Burnley manufacturers have welcomed the annual holiday, and many firms have extended the usual stoppage. A very slack feeling has prevailed in American yarns. Producers to sell have had to give way in price. Very few bids in export numbers have been received.

## NOTES OF THE WEEK.

The terms of the Allies' reply to the Note presented by the Turkish delegates are understood to have been decided upon at a meeting of the Conference held on Sunday, and it is anticipated that the reply will be presented on Saturday. According to all indications, any hopes of substantial modifications of the Treaty that the Turks may have entertained are doomed to disappointment, though one or two concessions on points of detail will doubtless be made. It remains to be seen whether the Turks will actually sign, and whether, if Constantinople yields to the inevitable at once, the rest of Turkey will follow suit. The fortunes of the Kemalists have not of late been of a kind to encourage them to further resistance: and though some of the more determined among them may prefer to hold out, and may even succeed in carrying on a kind of guerilla warfare for some time to come, it looks as if they have already lost the active support of very many Turks. Their opposition has, in fact, proved far less formidable than it was generally anticipated it would do, and they have received a blow from which they are not likely to recover, unless help reaches them very soon from the East.

The most important event in the Greek operations against the Nationalists has been the capture of Brusa. This was preceded by the occupation of Mudania by a British naval force, on July 6; and at the same time another British landing party occupied Ghemlik. At the latter place there was no pretence at opposition, while at Mudania the Nationalists made but a feeble show of resistance, but sniping of the landing parties necessitated a slight bombardment by our ships. As Brusa was brought within range of our naval guns by the capture of Mudania, its retention by the Nationalists would have argued more courage than sense: and they evacuated it, handing over the administration of the town to the Christian inhabitants. On June 8, the place was occupied by the Greeks, after only an hour's fighting against the Nationalists, who numbered between 3,000 and 4,000, and had taken up a position west of the town, but failed to hold their trenches.

The Greek Army is to be heartily congratulated upon its performance. The Nationalists' numbers have evidently been over-estimated, and they appear to have been very short of guns and war material generally. But even so, it was natural to expect that they would make a big effort to save Brusa, a place full of great associations for the Osmanlis. Instead of this, their opposition seems to have collapsed in the most extraordinary fashion, and though they may yet prove to the world that the old, fighting, dogged spirit of the Turk still survives in them, the possibility looks rather remote. The fact is, no doubt, that the Turkish peasant, who formerly made such a magnificent soldier when led by the right type of officer, is now heartily sick of the war, and has no faith in the "Young" Turks; while the Nationalist leaders are reported to have fallen out among themselves, and some of them are said to have been killed by the Turkish peasants whom they had sought to bend to their own purposes. If the Turks are, naturally, depressed, the Greeks are, equally naturally, exultant. As M. Venizelos remarked last week, to a special correspondent of the *Morning Post*, the Greek Army had accomplished in ten days what he had undertaken it would do in fifteen, and what some competent authorities considered it was impossible to perform at all. In the same interview, M. Venizelos stated that the Greek army had nowhere overstepped the line which the Allied command asked it to occupy, thus acting as the Allies' mandatory: and two days later (July 7) he was reported to have "informed the Allies that the Greek military operations having attained their objective had stopped" that afternoon.

During the past three or four days reports emanating from various centres have been finding their way into the Press, to the effect that Bulgaria has been secretly mobilising troops on the Greek frontier, and has been supplying war materials to Jaafar Tayar and the Turks in Eastern Thrace. Such reports can serve no good purpose, and although everyone acquainted with the facts will dismiss them as merely the products of Balkan "nerves," they may do harm in ill-informed quarters. As we have pointed out before, they reflect seriously upon the Allied representatives, military and otherwise, in the Near East, whose duty it is to see that nothing of the kind suggested in the reports referred to shall actually take place, and who, if anything of the kind should be done, would be guilty either of gross carelessness in not preventing it or of gross dishonesty in permitting it.

Any fresh disturbance in the Balkans would be a disaster not only for the Balkan countries, but for Europe and the world at large; and the authors of tendentious reports such as those referred to above are taking on themselves a very grave responsibility in setting them loose. The Bulgarian Government, through

Digitized by Google

M. Stambolisky, the Prime Minister, have declared their intention of loyally carrying out the conditions of the Treaty they have signed; and for the sake of the world's peace, if for no other reason, their assurances should be accepted, at any rate until they can be proved worthless. Of course, the Bulgarians do not attempt to disguise the fact that they regard the Treaty as harsh, and that they hope, by legitimate means, to bring about some modifications of the San Remo decisions regarding Thrace: an official *communiqué* just issued in contradiction of the false reports with which we are dealing, admits this quite frankly, and the Bulgarians point of view finds eloquent expression in an article, from the pen of one of their best friends, and one of the leading authorities on the Balkans, which we publish on another page. But to work openly for an object is one thing; to attempt to secure it by breaking one's pledges is another. Bulgaria, we believe, is determined to "play the game," and those who misrepresent her are doing a disservice to the cause of Peace.

---

The British community in Constantinople has suffered misfortune in losing part of the building of the High School for Boys, which, as described elsewhere, has been burned in one of those fires that so frequently break out, often inexplicably, in and among the older buildings of the city. The school, as we have had occasion to remark before, is one of which the British community has good reason to be proud, and we hope that the loss will very soon be made good and the destroyed building be replaced by one more modern and larger. That the school committee will do its best we feel sure, but our countrymen in Turkey have been through trying times, and they can hardly be as well placed now to make good the damage as they would have been before the war. The case would seem to be one in which the British Government might very well step in and help. In view of the strong recommendations on the subject of supporting British educational establishments abroad made recently by the Foreign Office Committee which examined the question, such assistance would surely be warranted. That it would be welcomed is not to be doubted, and if it could be given without any long delay in the giving, the good deed would be all the better.

---

The King's message to the people of Palestine should help to reassure those who fear that the rights of the non-Jewish population are imperilled by the new order of things. In it His Majesty says: "I desire to assure you of the absolute impartiality with which the duties of the Mandatory Power will be carried out and of the determination of my Government to respect the rights of every race and every creed represented among you"; and after referring to the measures to "secure the gradual establishment in Palestine of a national home for the Jewish people," the message adds that: "These measures will not in any way affect the civil or religious rights or diminish the prosperity of the general population of Palestine." Those are distinct promises, and, given by the King, they should carry peace to the doubters; and we share His Majesty's confidence, expressed in the message, that the High Commissioner will "whole-heartedly and effectively carry out these principles."

---

Fresh trouble is reported from Mesopotamia, this time south of Baghdad, in the purely Arab region. Apparently it arose in connection with the imprisonment of a minor sheikh who had been found guilty of inciting to rebellion. A band of tribesmen attacked the Government prison at Rumeita [Query: Rumetha?] and released the sheikh. Then the telegraph and railway lines were cut in several places; a train of reinforcements from Busreh reached Samawa on June 3, but a second train was attacked and had to return to Busreh; and an aeroplane reconnaissance shows that considerable damage has been done to the railway. All this is quite unpleasant, but it was exactly what had to be expected, and it certainly does not justify the sensational treatment accorded it by a section of the Press. To talk of the "isolation of the British garrison at Baghdad" while the river is open is simply foolish.

The young Egyptian who on June 12 attempted to assassinate Tewfik Nessim Pasha, the Prime Minister, has paid the full penalty for his crime, having been executed on July 8. He is the first of seven or eight would-be assassins of Ministers thus to suffer, and it is to be hoped that the substitution of strict justice for the leniency that was shown in earlier cases will put an end to these cowardly attempts. At the present time, when negotiations of the utmost importance for the future of Egypt are in progress, it would be thought that even the extremest of the Extremists would realise that such attempts could do nothing but harm to the Egyptian cause; but, unfortunately, recent events lead us to fear that Egypt is cursed with an unusually high percentage of *exaltés*, upon whose conduct it is impossible to calculate with any certainty.

---

The new Persian Cabinet—which is now complete—has troubles enough to tax its abilities fully. What is described in one Teheran correspondent's message as "a Bolshevist mob" has landed at Meshad-i-Sar, in Mazanderan, and Bolshevist forces are growing elsewhere, notably in the Sarakhs region, where the situation is said to be serious. The newcomers are meeting with stiff opposition from the Persians, and a message from Teheran states that Kutchik Khan and his Soviet friends have fallen out with one another; but on the whole the gain seems to be with the Bolshevists, and in one case, at least, an entire gendarmerie post has gone over to them. In the circumstances it is distinctly unfortunate that the British troops have had to be withdrawn from Batoum, for in this way another point, and an important one, will be found to have been given away to the "Reds."

---

Some interesting details concerning the trouble last winter in the Southern Sudan are given in a note contributed to *The Times* by a correspondent. According to him, the Aliabs particularly objected to the durra tax, chiefly because they feared that they would have to carry in the grain themselves, but also because it would necessitate their bartering their cattle to secure the requisite quantities; and the correspondent points out that their hatred of carrying is justified by their physical unfitness for the work. They are fishermen and cattle-breeders; and they have never been under effective control, for when hard pressed they have retired into the recesses of the Sudd, where no strangers could follow them. Given these facts, it is evident that the collection of an unpopular tax was likely to be no easy business. Unfortunately, matters were not improved by the absence of a white Inspector, while the black Inspector who was on the scene is described as "an unfortunate choice." He is alleged to have bullied and cheated the Aliabs, and to have offended grossly their ideas regarding women. These conditions conspired to drive the tribesmen into a state of revolt, and thus began the trouble.

---

If these things are as represented, it is impossible to avoid agreeing with the view that the rising was due to bad management. It is also stated that the disaster that overtook the Equatorial troops was due to their lack of proper arms: that their rifles were out of date, and they had no machine guns. This is unpleasant reading, but fortunately such things are in the nature of novelties as far as the Sudan is concerned, and we shall almost certainly be right in attributing them to conditions brought about by the war. The moral would seem to be—though the school of Paget, M.P., would not agree with us—to avoid placing black inspectors in positions where they can do any serious harm, and to endeavour so to adjust methods of tax-collecting that the minimum of inconvenience shall be inflicted upon the native taxpayer—who has not yet, presumably, learnt the docility of his British brother in misfortune. The Sudan Civil Service has been severely taxed by the war, and in all probability Khartoum has had to turn the blind eye to many shortcomings that would not have passed unnoticed in pre-war days. We may confidently expect that with the return of more normal conditions and the strengthening, numerically, of the Civil Service, the Sudan will very quickly recover its enviable reputation for doing things well, if not always in orthodox fashion,

# THE WEEK AT HOME.

**The Dyer Debate.**

The House of Commons is never at its best on India, for although quite a number of members know where India is, their knowledge is seldom more precise. The Dyer debate was, however, below even the usual average, with the single exception of Mr. Winston Churchill's speech, which was quite excellent. Mr. Montagu struck the wrong note throughout, and rasped everybody's nerves; even his supporters admitted that there was some justification for those who say he will have to go. But the matter of Sir Edward Carson's speech was also quite extraordinarily poor; its manner, of course, redeemed it a little. The rest of the speakers were not worth listening to, and to do the House justice it did not listen to them.

Leaving principle on one side, the debate did the Government no good, and it was the consciousness of that fact, at least as much as the excellence of their ethical standard which made the Independent Liberals so jubilant. There were some delightful comments on the differences between Coalition Liberal and Coalition Unionist, and the possibility of using Mr. Montagu as a wedge to divide the two wings of the Government, which made one wonder whether the Tapers and Tadpoles cared a jot about Amritsar or General Dyer. But the Lobby aspect of high political questions always makes one feel cynical; if the recording angel (who is not a Member of Parliament) collects evidence from the lobbies and smoking-rooms of the House, few politicians will escape damnation. Perhaps few deserve to escape.

Mr. Montagu's future is rather doubtful. Five years ago, as Mr. Asquith's favourite young politician, and a man with evident gifts of no mean order, anything seemed within his grasp. But his old Liberal colleagues have not forgiven him for deserting the Asquithian ship in 1917, and his Unionist colleagues have detested his policy and his methods ever since. He is becoming an increasingly lonely figure, and he appears to be conscious of the fact; nor is he a man, like Burke or Gladstone, who seems the greater the more solitary he is.

**The Vicious Circle Again.**

The increase of rents, and the forthcoming increase of railway rates, has again started the vicious circle of rising prices and wages. The miners, as usual, are the first in the field, with a demand for a reduction in the price of coal and another increase of wages; the return of Mr. Smillie—who has been ill for some weeks—has at once been followed by a revival of agitation, hints of direct action, and the inevitable veiled threats of revolution. On the other hand, Mr. J. H. Thomas, of the railwaymen, has made a courageous speech, in which he warns his followers, and incidentally Labour as a whole, that bad times are ahead, and that a break is bound to come. The railway position, however, is a complicated one.

**Railways and Fares.**

The annual deficit on the railways is £54,500,000 It is calculated that this will be wiped out by increasing passenger fares and foods rates 25 per cent.—an increase which Sir Eric Geddes assured the House of Commons last autumn was "unthinkable," but which now seems to be regarded as inevitable. On the present volume of traffic it is reckoned that this all-round increase would bring in £57 millions, but, allowing for a diminution of traffic from increased rates, it is assumed that the £54½ millions will be about covered by the extra 25 per cent.

I am not an authority on these matters, but, personally, I doubt it. With the abolition of all cheap tickets, and ordinary railway fares everywhere nearly doubled, railway travelling for pleasure has practically ceased; it costs too much.

The railwayman's difficulty is that it is still not a criminal offence for passengers to stop at home, and a good many people are taking that remedy. It happens that this last week I have been in a good many main-line trains in various parts of the country, and although it is nearly the height of the holiday season, most of the trains have been more than half-empty, although they were running at popular hours, and from what used to be popular seaside and country places to London.

The Londoner who used to make a day trip from London to Brighton for half-a-crown now finds that the ordinary third return costs about twelve shillings; he therefore gets on the top of the motor-bus and goes to Epsom, walks across the Downs to Leatherhead or Box Hill, and takes the motor-bus back to Clapham Common, with his half-crown. If he has more money, he buys a motor-cycle, and is entirely independent of trains.

Even business men, and particularly commercial travellers, who rarely bothered about train fare in the old days of cheap travel, now do more of their business by post, and rearrange their journeys to reduce travelling expenses as much as possible, and the additional 25 per cent. will make them still more exigent on this point. I am not a prophet, but I predict that in a year's time there will be another deficit and another crisis on the railways, simply because the public have silently revolted from the burden.

**The Empress Eugenie.**

The ex-Empress Eugenie, who survived Napoleon III. nearly half-a-century, had become almost a figure of legend in and around Farnborough, and even before the war she seemed recognisably a link with an earlier world. For years past she had hardly been seen in public, and her retired life had left her nothing more than a name—perhaps hardly even that—to the younger generation.

**"Jacky Fisher."**

If Lord Fisher had lived a few months longer he would have been eighty. But he never gave one the impression of being an old man; he seemed still to have a fair amount of physical vigour, and his mental vigour was prodigious to the last. If he did not actually love controversy for its own sake, like Mr. Lloyd George, he never disliked the idea of a fight, and he seemed sometimes to enjoy trailing his coat for others to tread on.

But he was a very great man—even to his egoism, which was enormous. He was not unique in foreseeing the war ten years before it started, for many others did that; but he had not only the courage of his convictions, but also the opportunity to carry them out, in his reorganisation of the Fleet. How the changes were hated in the Service clubs ten years ago, in the days when the Navy was divided into Fisherites and anti-Fisherites! Fisher seemed rather to enjoy his unpopularity, and I do not think he was seriously annoyed even when Mayfair drawing-rooms credited him with Cinghali ancestry and called him a "half-caste" behind his back. It was a silly and a malicious story, for his parentage was fully set out in "Who's Who," but it was extraordinary how widely it was credited.

**Dante Celebrations.**

Six centuries ago next year Dante died, and London University intends to commemorate the event by lectures and the issue of a memorial volume. The precise connection between Dante and the University has not been ascertained, but it needs no great excuse to justify a love of the Florentine, and no doubt many other people and institutions will celebrate the occasion in one way or another. If one may judge by the amount of Dante literature published before the war, the vogue of the "Divine Comedy" was still growing in this country, and one remembers that it was even filmed—at least the "Inferno" was.

The fever for celebrating centenaries seems to be breaking out pretty badly again, and we may get a renewal of pageantry in due course. The tercentenary of the "Mayflower" is being celebrated on and off all through the summer; fortunately nobody has noticed that this year is the quatercentenary of Luther's burning of the Papal Bull, which is usually accepted as the beginning of the Reformation. We may be as Protestant as ever—one sometimes doubts it—but it is only the High Churchman who emphasises the fact that the Reformation was "made in Germany."

Digitized by Google

**Cricket and the Climate.**

The British climate has been in a disgustingly bad temper this last week. It has rained horribly every day. Ladies deplore ruined costumes and men regret that it has ruined cricket. The University match at Lord's was a farce. On the first two days not a ball could be bowled; on the third day a beginning was made—the M.C.C. ground dries quickly since the new drainage scheme was completed—but although an extra day was played, the match was unfinished, and it was anybody's game at the end. Eton v. Harrow, which produced an exciting match, was a little more fortunate, but the sky was dull and threatening most of the time.

All over the country matches were unfinished and abandoned, and the usual prophets of evil have assured us that the summer is over, and we must expect three months' wet. As a matter of fact, July is often a wet month, but this year we have a deficiency of rainfall to make up from February and March, and things usually even out in the long run. But rarely have I seen London look more clean, or Londoners more depressed, than on Tuesday evening, when it had rained forty-eight hours with only a few minutes' interval.

**The Public Schools.**

It is amazing how the public schools have recovered their prestige of recent years. They have been holding their speech and prize days recently, and almost every headmaster has commented on the fact that there were more applications for admission than vacancies, that for five years or more they could take no new boys, and in one case that it would soon be necessary to enter a boy almost on the day he was born if one wants him educated at that particular foundation. Yet the fees have been put up everywhere, every middle-aged man one meets grumbles that he cannot possibly afford the expense, and the reformers rage as of old over the absurd curriculum which instructs budding accountants and solicitors in the niceties of Ovid and Juvenal, and leaves them innocent of mathematics. So great is the prosperity of the public schools at the moment that it would not be surprising if some new foundations were established.

**The Week's Books.**

"The Social and Industrial History of Scotland," by James Mackinnon (Blackie), is a useful little book as far as it goes, which is not very far. It stops in 1707, when, as every impartial Scot will admit, the real history of Scotland begins. But this book, by its sketch of social conditions in the north, will a little help to correct the very natural belief of Englishmen that prior to the Union the main industry of Scotland was the murder of its kings.

"Fundamentals in Sexual Ethics," by Dr. S. Herbert, M.D. (Black), is a survey by a thoughtful medical man of the sex question in its relation to the individual and to society. The usual fault of these books is to make one feel that the abnormal is really the normal, and that the ordinary decent man and woman does not exist; it is probably the natural consequence of doctors seeing only abnormal cases. This book, fortunately, seems to avoid the temptation, and it strikes me as very well done.

A strange chance, which tempts this weary reviewer once again to believe in the beneficence of Providence, has brought into my hands two successive novels which held me spellbound from the first page to the last. The first of these was "The Ivory Trail" (Constable), by Talbot Mundy, one of the best stories of hair-breadth escapes and palpitating adventure that has ever come my way. It has the breath of the tropics in it, and it pulses with life.

The second book is also full of adventure, but it has a deeper meaning; it is "Mare Nostrum" (Constable), by Ibañez, the great Spanish novelist, whose vogue increases every month. "Mare Nostrum" is the Mediterranean, and taking the ordinary incidents of the submarine war and a German spy woman, Señor Ibañez constructs a great and moving drama. It impresses me more than his previous work, "The Four Horsemen of the Apocalypse"; it strikes me as a book that will live.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents.)*

## EGYPT.

CAIRO, June 28.

**The Vogue of Alexandria.**

Since I wrote last, the seat of government has been transferred to Alexandria, where the Sultan, his Ministers, and the High Commissioner have established themselves in their summer quarters. Cairo, in these dog-days, is practically deserted, whilst Alexandria presents a scene of considerable animation. So many people have been prevented from leaving for Europe this year, owing to the scarcity of steamship accommodation and the exorbitant rates charged by the companies, that they have perforce to spend their holidays at Alexandria-by-the-Sea. H.H. the Sultan is expected to leave shortly on a yachting cruise in the Mediterranean, but the date has not yet been announced.

It has been stated in the local Press that Viscount Allenby will leave for Europe on July 15. This, however, I am in a position to contradict. His Excellency is proceeding shortly to Palestine in order to confer with the new High Commissioner there, and will very soon afterwards go on leave to England, whence it is not expected he will return to Egypt.

**The Latest Nile Projects Sensation.**

Though the interim report of the Nile Projects Commission has not yet been issued, the publication of the shorthand notes of the evidence has enabled most people to anticipate the inevitable verdict: that there has been no falsification of the data upon which the projects were based. If anybody had entertained any doubts as to what the decision was going to be, the announcement on Monday last that proceedings for criminal libel and the publication of seditious matter had been instituted against Sir William Willcocks and Lieut.-Col. Kennedy, wrote plainly enough for those who run to read that the legal adviser to the Government had considered that Sir Murdoch MacDonald, in particular, and the officials of the Public Works Ministry, in general, had been completely exonerated. It is expected that there will be sensational developments, but I am inclined to think that such a tendency will be entirely absent until the final stages of the case have been reached. Mr. Preston, the Crown Prosecutor, will prosecute; Mr. Perrott will defend Sir William Willcocks.

The preliminary hearing of the criminal action comes on before the British Provincial Court on July 2.

July 2.

During the last three days the Nile Projects affair has advanced another stage. Lieut.-Col. Kennedy and Sir William Willcocks were committed for trial this morning by Mr. A. B. Geary, the British Consul, who presided as magistrate over the Provincial Court. Mr. Preston, as Crown Prosecutor, had no difficulty in making out a *prima facie* case, though a rather interesting argument arose between the Crown Prosecutor and Mr. Perrott, Counsel for Sir William, as to whether the matter complained of in the charge could be regarded as "seditious matter." The charge against Sir William Willcocks is that—

On divers occasions since the month of December, 1919, he did maliciously publish a defamatory libel on Sir Murdoch MacDonald, Under Secretary of State, Public Works Department, Egyptian Government, contained in a pamphlet on the Nile Projects, and more particularly contained on page 22 of the said pamphlet, the said libel being subsequently confirmed and repeated by a further pamphlet, also published by the said William Willcocks, contrary to Section 5 of the Libel Act, 1843 (6 and 7 Vict., c. 26). Further, that he did print, publish, and offer for sale the publications above referred to containing seditious matter, contrary to Section 76 of the Ottoman Order in Council, 1910, and the Egypt Order in Council, 1915.

The charge against Lieut.-Col. Kennedy was, to all intents and purposes, the same. Section 76 of the Ottoman Order-in-Council, which has been brought into line with the political situation in Egypt, says, in effect, that any person uttering or publishing or causing to be published any statement which may create a tumult or cause excitement between H.B.M.'s Government and its subjects or between the Egyptian Government and its subjects shall be liable to a fine or imprisonment or deportation or the two former penalties. The Crown Prosecutor held that as the matter complained of reflected not only on the Adviser to the Ministry of Public Works, but on the Irrigation Department, and therefore on the Egyptian Government as a whole, it was calculated to cause excitement between the Egyptian Government and its subjects. Mr. Perrott submitted that a charge against an official of the Government could not be interpreted as "seditious matter." Eventually the magistrate decided that there was sufficient evidence before him to commit the accused for trial on this as well as on the first charge. Both accused were therefore committed. Counsel for the accused requested that a note be taken of their request for the postponement of the trial till the winter, not only because counsel were leaving in the near future for their summer holidays, but because Sir William Willcocks obviously was not well enough to stand the stress of another long case at the moment; and because witnesses were required from England and Australia. The Crown Prosecutor stated that he would not hamper the defence by insisting on an immediate hearing of the case.

**Nile Projects Commission's Report.**

The interim report of the Nile Projects Commission has just been issued. It is dated June 24, but has since been under consideration by the Council of Ministers, who have attached a note of their own. In the report, the Commission state that they are unanimously of opinion that there has been no falsification or intentional suppression of records, nor any fraudulent manipulation of data or gauges by Sir Murdoch MacDonald, or by anyone else. They add:

We have studied the projects as described in 'Nile Control' and have considered the criticisms of them which have been submitted, and we recommend that, considered from a strictly engineering point of view, the White Nile Dam, the Gezira Irrigation Scheme, and Blue Nile (Sennar) Dam, and the Nag Hamcadi Barrage should be carried out at once. In our final report we will consider at length the observations made by us in Egypt and the Sudan, the character and extent of the existing hydrographic and other engineering data relevant to the complete utilisation of the waters of the Nile, the securing of additional data for detailed planning of construction works, the criticisms received of both observed and deduced data, including an examination of the evidence given on oath, the suggestions and criticisms of an engineering character, the allocation of water, and the costs of investigation and conservation works as between Egypt and the Sudan, and the possibilities and limitations of administrative agency necessitated by the joint use of a stream by two administrative units.

It is noteworthy that the present report approves of the projects merely "from an engineering point of view." As will be seen, there are many other aspects of the case to be dealt with in the final report, which, I understand, is to be ready in London about the end of August.

The Council of Ministers, in its Note, says that it—

Decides to associate itself with the Minister of Public Works in congratulating the Adviser and the staff of the Ministry of Public Works, who have worked with him on the preparation of the Nile Projects, on the proof of the falseness of the accusations brought against them. As regards the approval of the works involved in the said projects, works which the Commission has found to be appropriate and useful and which they consider should be undertaken, the Council decides, for the moment, to open the credit necessary for the preparation and carrying out of the works on the White Nile and at Nag Hamadi for a period of three months only, pending the presentation within this period of the final report of the Commission.

**Prominent Nationalist Arrested.**

Abdul Rahman Fahmy Bey, secretary of the Cairo Committee of the Nationalist Delegation, was arrested yesterday morning and imprisoned in the Kasr-el-Nil barracks. Inquiry in official circles as to the reason elicited the cryptic reply that "this action has been taken on the grounds of public security." There is a persistent rumour here that the gentleman has been implicated in certain recent notable happenings, which have been reported in THE NEAR EAST. His arrest cannot be regarded as an indication that there is any stronger agitation locally than has hitherto been

Digitized by Google

suspected. All attention is centred on the negotiations in London. The Egyptians are becoming much more optimistic. In these pourparlers they see the official recognition of the Egyptian delegation, which to them seems to be tantamount to official recognition of the claim for independence. With that irresponsibility which may be regarded as one of their most delightful traits they have suddenly regenerated their lost faith in the justice of the British Empire, and are daily convincing themselves that such a magnanimous authority will grant their hearts' desire.

## YUGOSLAVIA.

BELGRADE, June 25.

### Visit of Crown Prince to Zagreb.

H.R.H. the Crown Prince Regent, with several Ministers, has paid a visit to Zagreb this week. The Croat crowds must have been interested to see the person of their new Sovereign, who symbolises the unity of the people and the heroism of his warrior-people, whose sufferings he shared through the horrors of Albania and the disease-ridden crags and plains of Macedonia. The papers are full of glowing accounts of an enthusiastic reception. The *Balkan* has taken the opportunity to make a suggestion which, we believe, has not before appeared in print in this country. After showing how Rome has taken the place of perfidious Vienna in their foreign political horizon, the writer points out how the outside enemy binds all branches of the people into closer unity, so that the House of Karageorgevitch, risen from the people over which it rules, now reigns from the Triglav to Guevgelije, from Rijeka almost to Vidin, where the three branches of the Yugoslav people are now free. The only parts which remain unfree are the 400,000 or thereabouts Slovenes handed over to Italy, and—the Bulgars! For, continues the writer, the Bulgars have not yet emancipated themselves from foreign influences in still having a German dynasty. Still they await the day when the Bulgars shall have expiated their crimes of 1913 and as in 1915-18, whence they too will enter the great union and form a Yugoslav Empire which shall be complete and self-supporting, free from any dream of expansion, all their brethren free and united.

### M. Krsta Tsitsvaritch.

The *Belgradski Dnevnik* is a paper of pronounced democratic and socialistic leanings. It pours forth so much vituperation upon the Radicals that the Press describe the editor as suffering from "journalistic dysentery," but the daily leading article is always interesting reading, showing that the writer is a man of culture and unusually wide reading, especially of history. In an article upon the new era which has now dawned for his people —for M. Krsta Tsitsvaritch is essentially a patriot —he writes that up to the date of the Serajevo murders, Serbia played an insignificant rôle in Europe, being entirely absorbed with its preparations for the great part which it was destined to play on the world's stage, but that Printsip's bullet opened a new vista and a new era for the whole Yugoslav people. The heroism of the people has brought untold glory to them in the field and the realisation of their dreams. Will they now be competent to play a worthy part in the history of civilisation? Tsitsvaritch, like a very good Serb, is profoundly convinced that his people will rise to the occasion, and be a great civilising power in the East of Europe, and that in civilisation and in culture in the widest and best sense of that ill-used word become a great European nation. "Till now we have struggled for our bare existence; now that existence is assured; now we can devote ourselves to ideals; the era of nationalism is finished; that of humanity now begins."

### Dr. Seton Watson.

Dr. Seton Watson, after an enthusiastic reception at Zagreb, where the Croats showed their gratitude for his championship of their cause by granting him the honorary decree of doctor of their University, and by entertaining him at a round of dinners and concerts, has been spending a week or ten days at Belgrade. For reasons of their own the Radical Press have been but frigidly polite, as we have seen in a past letter, though their facts are usually wrong. But the rest of the Press and public men generally gave "Scotus Viator" the welcome which he deserved. The Mayor and Town Council gave a dinner in his honour, at which the Prime Minister, Dr. Vesnitch, was present, as also Dr. Ninchitch, Minister of Commerce, Dr. Stoyanovitch, Minister of Finance, and many other prominent men.

### Newspapers Again.

The newspaper lock-out is over, and on Saturday the papers once more appeared separately in their old form, but with the price raised to half a dinar on account of the tremendous rise in the cost of paper. Before the war this used to cost them 40 paras a kilo, and last summer 5 dinars, but during the lock-out it has jumped to 9 and even 9½ dinars a kilo. So now if one wants a comprehensive view of the daily Press it is necessary to buy half a dozen papers or more at half a dinar, and wade through them all, while during the lock-out the combined *Belgradska Shtampa* gave everything for half a dinar, in concise form it is true, but this was hardly an evil, and it was convenient as well as amusing to read two sides of a slanging match in one and the same column.

### Danube Navigation Commission.

The Yugoslav delegate to the International Danube Navigation Commission sitting at Paris is M. Mihailo Ristitch, former Minister at Rome. Serbs are watching the proceedings very anxiously, for it is believed that the Commission will require them to hand over the enemy craft which they took as booty. The Government will certainly resist this demand with all its might. Many a time since the armistice have the Serbs been able to complain bitterly, and with justification, that what they lose is Serbian, but what they get belongs to the Allies.

## GREECE.

ATHENS, July 3.

### General Paraskevopoulos' Proclamation.

The following proclamation, written both in Greek and Turkish, was posted up outside the churches, mosques, schools, and market places of the recently-occupied regions in Asia Minor:—

"The Hellenic Army has been invited by the High Council of the Conference to advance into the interior of this country in order to disperse the National Organizations of Mustapha Kemal, to establish order, and to ensure the security of all the inhabitants without distinction of race or religion. The advance of the Greek Army does not aim at any conquest. The fate and régime of these regions will be definitely decided by the peace treaty which will be signed between the Allied Powers and the Ottoman Government. The partisans of Mustapha Kemal are not only rebels opposing the decisions of the victorious Allies, but are enemies of their own country by rebelling against their Sultan. They have unlawfully and forcibly recruited the male population, levied taxes, and terrorised the peaceful inhabitants of large and fertile provinces of Anatolia. The occupation for over a year of Smyrna and its hinterland has afforded ample

proof of the respect which the Greek authorities have shown for the rights of the population without making any racial or religious distinctions whatsoever. In spite of the difficult conditions with which the authorities were confronted, they were able to ensure order with equality and justice for everybody.

"A similar attitude will be adopted by the Hellenic Army in this case. The life, honour, and the property of all the inhabitants of whatsoever race or religion will be sacred to us. The Ottoman administrative, police, judiciary, financial and communal authorities, with the exception of the military, will remain at their posts as hitherto. Those who have in any way co-operated with Mustapha Kemal must fear nothing, provided they discontinue any future co-operation and understanding with the National Organizations and respect the orders of the Greek Army. This applies to those of the civil population who have hitherto been Mustapha Kemal's followers.

"On the other hand, I insist on entire obedience to my orders and to those of the Commanders of the Army of Occupation, and I demand that all creeds and classes live peacefully together and abstain from any unlawful act. Any infringement of this will, without distinction of race or religion, be immediately and severely dealt with in accordance with the Martial Law regulations. The clemency shown in many instances by the Greek authorities during the last year cannot continue under the present circumstances. Those, therefore, arrested on a charge of offence against the Army or Public Order will be tried by court martial and shot forthwith."

**The Calling Up of the 1905 Class.**

A Royal decree has just been published in the *Gazette*, ordering the calling up of the 1905 class which had not been called up during the last mobilisation. This was decided upon by the Government after consulting the Premier and General Paraskevopoulos, the Greek Commander-in-Chief. The 1905 class, i.e., men thirty-six years old, will not be sent to the theatre of operations, but will be employed exclusively for home service, replacing all the troops actually in Old Greece, which will proceed to the Smyrna region. The Government has likewise called up the infantry reserve officers of the 1915 class, and the artillery reserve officers of the 1914 class.

## ROUMANIA.

BUCHAREST, June 29.

**The Political Situation.**

Parliament has spent the greater part of its first week's sittings in discussing the validity of a number of the elections. From the Opposition benches many accusations were brought of irregular procedure during the polling in the country districts, and it was claimed that in some cases voters were coerced into supporting the Government. The discussions degenerated occasionally into mere personal abuse of certain deputies and ended in an uproar, the President having the greatest difficulty in restoring order. It was daily urged by several deputies on both sides of the Chamber that valuable time was being wasted over these useless personal attacks. So far practically all the objections seem to have been voted down, and it is to be hoped that the Chamber will now settle down to discuss some of the important measures awaiting its attention. It is understood that one of its first measures will be to reduce the emoluments of the Deputies—which at the present moment are on a very generous scale, far beyond what the country can afford to pay.

Meanwhile the Opposition deputies are discussing how they are to pursue their campaign against the Averescu Government; and have apparently decided to form an Opposition *bloc*. The Democratic Federation is considering the advisability of a partial fusion with the Transylvanian Nationalists and Peasants and the Bessarabian Peasants, but it seems doubtful whether the Transylvanian Nationalists at least will receive their overtures with favour. Until the question of fusion is decided, a sort of *bloc* has been formed by the above-mentioned parties, which will have a numerical strength in the Chamber of 95 members. It would appear that this *bloc* has determined upon a campaign of obstruction against the Government: and a suggestion has emanated from them that the chief of each Opposition group should make a declaration to the effect that in his opinion the present Chamber is not representative of the will of the people. This does not bode well for the usefulness or permanence of the present Parliament, but so far the Opposition has not agreed as to the course to be adopted.

Dr. Seton Watson, who is visiting Bucharest this week, was present at the meeting of the Chamber yesterday afternoon (June 28). He received a most hearty welcome, and after the President, M. Goga and M. Vaida-Voevod had spoken in terms of the warmest appreciation of his services to the Roumanian cause, the whole House stood up and gave him a long cheer.

**Date of Coronation.**

The Council of Ministers discussed last week for the first time the arrangements to be made for the Coronation of their Majesties. It was decided that the ceremony should take place next September, but the exact date was not fixed.

In the Senate, on Saturday, Archbishop Nifon voiced an appeal for the voting of Government relief to the peasants in the districts of Tulcea and Constantza, who have suffered very heavily from successive enemy occupations during the war. This suggestion was left over for consideration.

The Minister of Public Works, in reply to a question, promised that the agrarian and religious questions in the Banat should be dealt with during the present session.

**Regie Factory.**

Still no week passes without trouble among the workers. Last week a regrettable incident occurred at the Regie factory, on the outskirts of Bucharest. According to the first reports circulated—which, fortunately, were absurdly exaggerated—there was a strike of the workwomen, the soldiers were called out, and there was a large number of casualties. On the strength of this report, the more extreme Socialist workmen held a mass meeting for the purpose of advocating a general strike; the trams stopped, and the printers ceased work for some hours. In the meantime, however, an inquiry was made, and the real facts were communicated to this meeting in time to prevent the adoption of such extreme measures. A Parliamentary Committee was then appointed to inquire into the cause of the disturbance, and on June 28 it presented its report to the Chamber. The Committee established that the first report brought to the Chamber was inexact; an incident had occurred between some of the workwomen and the foreman of the factory, M. Roman Constantinescu. The factory guard was called out to restore order, but no shot was fired, and there were no wounded, though some twenty of the women bore traces of blows. The Committee recommended that the following measures should be taken:—

(1) That a Workmen's Council should be formed in accordance with the Ministerial decision.

(2) That the workmen should be formally prohibited from engaging in politics during working hours.

(3) That the foreman, M. Roman Constantinescu, should be transferred; and

(4) That an inquiry into the conduct of Capitain

Velico (of the guard) should be proceeded with (so as to establish whether it was by his order that the women were struck).

The workmen declared that they were satisfied with their conditions, but wanted a change in the administration. The leaders of the workmen gave a formal promise that the work should not be interrupted. Finally, the Committee recommended that the 70 workwomen condemned to punishment should be pardoned. After a short discussion the report was adopted and all the recommendations of the Committee accepted. Let us hope that this augurs well for the future of the Regie factory. For the last six months Bucharest has constantly been short of cigarettes owing to the repeated strikes there.

## BULGARIA.

SOFIA, June 21.

**The Housing Problem.**

With the influx of Russian refugees and the continuous streaming over the Bulgarian frontiers of the thousands of Thracian refugees, whom this country is obliged to feed and lodge, the hotels and private houses, especially here in Sofia, are overcrowded. Many newcomers have to pass two or three days at the railway stations and cafés before the Housing Committee can find them a room. The Ministry of the Interior is going to use the quarters of the Royal Guards, which is now occupied only by a squadron, as a civil dwelling, and transfer the soldiers to the barracks of the 1st Cavalry. Besides this, the barracks of the heavy artillery, behind the military school, the summer camp, and the cadets' school at Knajevo, are being repaired and converted into a habitation for the houseless people. Likewise some of the benevolent institutions, as that of orphans from the war, and that for the deaf, dumb, and blind, will be transferred into the provinces or the convents. The War Ministry will evacuate all the buildings occupied by the staffs of the various regiments, and transfer them to Orhanic, where they will occupy the capacious barracks of the 16th Infantry Regiment.

On the other hand, the committee charged with the administration of the new project for the alleviation of the housing crisis has decided to convert all the big cafés and taverns in the capital into ordinary dwelling places or Government buildings. The rents are increased by between 150 per cent. and 200 per cent. The compulsory construction of new houses is anticipated. All the banks, joint-stock companies, and rich people from the provinces wishing to live in Sofia, are obliged to build their own habitations.

**The Retained Bulgarian Locomotives.**

The Bulgarian Government has addresesd a note to the French authorities in the Orient requesting them to urge the Greek authorities in Thrace to return the Bulgarian State railway locomotives retained at Adrianople. These engines maintained the provisional service of Western Thrace during the French administration of this province.

**Parliamentary Holidays.**

Because of the approaching harvest and because many of the deputies are farmers, the Chamber, after passing the 6/12ths the Budget, and other urgent bills, will, at the beginning of July, adjourn for a month's vacation.

**The Delegation to Prague.**

Last Friday morning the Prime Minister, M. Stambolisky, sent off the Bulgarian delegation on their way to Prague in order to assist in that city's celebration of the Festival of the "Sokols." The delegation is headed by M. Tzanko Bakaloff, the Minister of Public Works, as representative of the Bulgarian Government, and the newly-appointed Bulgarian diplomatic representative, Professor Stephan Balemezoff. The Premier returned here in the evening by motor-car.

## TURKEY.

CONSTANTINOPLE, June 27.

**Greek Operations in the Smyrna Area.**

The rapid advance of the Greek army against the Nationalist forces in the Smyrna area is likely to have very far-reaching effects; for this time it is a straight fight between Turk and Greek. It is too early yet to comment upon the fighting, for the details are insufficient, but it is safe to say that the real fighting will begin when the Greeks advance beyond the area served by the railway. The wiping out of the Turkish XIII. Army Corps must have been a very severe blow for the Nationalists, and the effect upon their *moral* will be damaging. The initial success of the Greek army bears out reports to the effect that the Nationalist forces possess very few efficient officers, and that there is no real unity of command.

It is certainly surprising that after the wanton attack upon the British forces at Ismid by the Nationalists the Sublime Porte should consider itself justified in protesting to the Allies against the advance of the Greeks in the Smyrna region. It was officially announced that this advance had been sanctioned as a direct consequence of the attack upon our troops, and it must have been obvious that sooner or later British patience would be exhausted. The Ismid affair was the culmination of a long series of outrages and insults to which the British have been subjected for nearly a year, and against which there have been practically no reprisals. Even the best friends of the Turks now realise that the folly of the Nationalists has ruined their last chances of obtaining any amelioration of what practically amounts to a death sentence. One can only repeat Talaat's remark to Javid when the latter made excited comments upon the Black Sea episode that precipitated war in October, 1914: "It is Fate."

**The Peace Treaty.**

The Sublime Porte, relying perhaps upon Italian assurances, seems to have been unable to realise that the Allies meant what they said when they refused to wait any longer than June 26 for the Turkish reply. Although it takes at least six days in the ordinary way to get to Paris from Constantinople, the text of the reply was not ready until Monday or Tuesday, and Reshid Bey only left on Thursday, June 24, in a British warship. He expects to be in Paris on the 29th; and in the meanwhile the Grand Vizier, who, by the way, is not empowered to sign the treaty on his own responsibility, has been instructed to give a provisional reply, and to explain that the details will be submitted to the Conference as soon as the other delegates arrive. As a matter of fact, in view of the present state of affairs, the signature of the Treaty makes very little difference. The Sublime Porte will be powerless to carry out its terms, for the authority of the central Government extends no further than the immediate vicinity of the capital.

The text of the Turkish reply will probably be in print long before this letter, and, as will be seen, it is on the whole fairly submissive except with regard to the cession of Thrace and Smyrna to the Greeks. Since the Allies are apparently resolved not to modify the territorial clauses, the Peace Delegation will only waste time by insisting. After all, the Nationalists, who dominate the nation, have refused to listen to any other argument than that of the sword; so it is the sword that will have to decide.

**The Nationalists.**

According to the latest reports from Anatolia, the Nationalists are for the most part in a desperate mood. The Greek advance has been the signal for the wildest rumours, which have apparently been launched for the purpose of comfort, but their very nature is an indication of a feeling of hopelessness. It is said, for instance, that a large Bolshevist army has reached Trebizond!

In certain circles among the Nationalists where a little common sense still exists, it has long been felt that they are fighting a losing battle.

The Nationalist Press continues to fulminate against the British, and to hold out the most fantastic prospects of Bolshevist assistance. At the same time, however, it is not impossible that the National Forces will continue to retire to the east of Anatolia, and there make one last desperate effort to break through to Azerbaijan. Everything, of course, depends upon the extent of the Greek success. In the meantime, M. Maissa, the Italian High Commissioner, has informed the Sublime Porte that Italy, having no troops in the zone allotted to her, will not partake in the military operations. The French, however, have notified their intention of occupying Samsun, but whether this would be the base of an advance into the interior is not known.

**A British Demonstration.**

Admiral de Robeck, with a squadron of dreadnoughts, paid visits to Mudania and Ghemlik during the week. A landing was made at Mudania, and there was a brush with the Nationalists on the outskirts of the town, when four men were wounded, and a midshipman was killed. There was no landing at Ghemlik, because it would have involved the destruction of the Greek quarter by the Turks, who had previously removed their own women and children to the hills. A communication was made to the Governor of the town, however, and its terms were such that it is not likely that there will be any trouble in Ghemlik this year.

## MESOPOTAMIA.

BAGHDAD, May 30.

**The Shah's Visit.**

The visit of the Shah of Persia to Mesopotamia has just concluded, his Majesty having returned to Persia on Friday. The earlier stages of the visit were remarkably successful, but the later were unfortunately marred by the serious indisposition of his Majesty, which prevented him from carrying out the whole of his programme. He has been accustomed to the temperate climatic conditions of Teheran in the winter and the hill resorts near his capital in the summer, and it is hardly surprising that after his winter in Europe he should find the extreme heat of a Mesopotamian May very trying.

The Government of India had placed the R.I.M.S. Lawrence at the Shah's disposal for the journey from Aden, where he disembarked from the new P. and O. steamer Narkunda. The Lawrence called at Bushire and Mohammerah on the way to Busreh. At Mohammerah the Shah was lavishly entertained by the Sheikh, and among the events of his twenty-four hours' stay there was the presentation of an address from the British commercial community. At Busreh, where he disembarked on the 20th, his Majesty was welcomed by Sir Arnold Wilson (who had gone there from Baghdad by aeroplane), and General Nepean, the G.O.C., River Area. The Shatt-el-Arab at Busreh was resplendent with decorations, every one of the great number and variety of craft that congregate in that now busy port, as well as the houses on the banks, being dressed with flags and bunting. The Shah was entertained to dinner at the Makina Club, where a number of leading Arab residents of Busreh, as well as British officers, were presented to him.

The same night he left by special train for Baghdad, where he arrived at 6 p.m. the next day. There was a gathering of British officers and ladies and Baghdad notables in the station enclosure, and a big crowd of the populace outside, and his Majesty was welcomed by Sir Aylmer Haldane and Sir Arnold Wilson (the latter having returned to Baghdad by aeroplane earlier in the day). He inspected a guard of honour drawn up near the train, and then, with his suite, accompanied by the G.O.C.-in-Chief and the Civil Commissioner, drove in motor-cars to the residence prepared for him in the building until recently used as the Civil Hospital, on the right bank of the river. Lieut.-Col. Balfour, the Military Governor, and other officers riding, and a cavalry escort completed an imposing procession, which proceeded through decorated streets full of interested crowds. About an hour after his arrival, a deputation of notables of all the local communities of Baghdad waited upon him at his residence, and welcomed him cordially and respectfully to the city. There was a brilliant display of fireworks at night.

**At Kazimain,—**

The next day the Shah went on pilgrimage to Kazimain, proceeding there in the G.O.C.'s launch. The town was splendidly decorated for the occasion, a fine triumphal arch and a gorgeous display of beautiful carpets for a considerable distance in the road approaching the shrine, being particularly notable features of the decorations. After spending some time at the shrine, where he was received by the Ulema, his Majesty went to a specially prepared *Diwan Khana*, in which an address of welcome, enclosed in a golden casket—an artistic specimen of Kazimain work—was presented to him on behalf of the townspeople. On Saturday evening the Shah was present at a reception given by the Persian Consul-General, H.E. Seghat-ul-Mulk.

**—Kerbella and Nejef.**

On the Sunday, Monday, and Tuesday his Majesty was absent from Baghdad on pilgrimage to the holy cities of Kerbella and Nejef, to which he went by motor-car. At both places he was received by representatives of the Ulema, and addresses of welcome were presented by the townspeople. His Majesty also paid a visit to the shrine at Kufa. It was while motoring from Kerbella to Nejef on Monday morning that the Shah was first seriously overcome by the heat, and after his arrival at Nejef it became evident that his Majesty was suffering from a mild attack of heat stroke. It was afterwards announced that he would have to cancel the remainder of the engagements of his tour, and the next evening, instead of returning to Baghdad by motor-car viâ Kerbella, as had been planned, he motored to Hillah, whence he came on here by special train.

On various occasions his Majesty took the opportunity of expressing his high gratification at the cordiality with which he was everywhere received, and at the admirable arrangements made for his visit, and the smoothness of their working.

His Majesty and suite left by special train for Quraitu on Thursday night, and thence journeyed by motor-car to his capital.

**—A Political Faction.**

A comprehensive summary of the Peace Treaty presented to the Turkish delegates at Paris on May 10 was published here just over a week ago, cable and other delays causing its late appearance. So far as this country is concerned it contains no surprise. Its publication appears, however, to have been the signal for a vigorous renewal of the agitation on the part of the small political faction I referred to in my last letter, whose intrigues might on this occasion have led to serious trouble but for prompt and effective action on the part of the authorities. There is, inevitably, a good deal of religious exaltation here during Ramadan, as people's nerves are apt to be upset by the purely physical effect of their fasting from sunrise to sunset. These conditions the intriguers endeavoured to use for their own political ends. An official *communiqué* that was published gives the following account of what happened:—

On the evening of Monday, May 24, equal to the 6th Ramadan, slight disturbances occurred in Baghdad. It appears that one Isa, an employee of the Waqf Department, delivered an inflammatory speech at Haidar Khana Mosque on the previous evening, in consequence of which it was considered necessary in the interests of law and order to arrest him. This was accordingly done. Certain evilly disposed persons, on the pretext of securing the release of Isa, gathered in the above mosque and elsewhere, and sent messages to people at large to collect with arms with a view to causing trouble. On receipt of this information the authorities in the town took special steps for the maintenance of order, and we are glad to be able to report that these were entirely successful. An armoured car, which had accidentally damaged a wheel, was attacked in New Street, near Haidar Khana Mosque. It fired a few shots in reply. All in the street quickly ran away, and it is not known whether any casualties were caused. Several respectable Arab residents of Baghdad were also molested, and stones were thrown at passers-by.

At the same time an official warning was given in the following terms:—

The grant of the Mandate to Great Britain involves in the words of Article 22 of the League of Nations "responsibility for the well-being and development of the people of Mesopotamia," and the first duty of the administration in this connection is the maintenance of order. The Government will not fail to take necessary steps to this end, and they who think that senseless disturbances and appeals to the ignorance of the people by confusing religion and politics will deter the British Government from prosecuting the high task to which it has set its hand, are not only mistaken, but are the greatest enemies to the country to which they belong, and the people for whom they profess to speak.

It is the first incident of its kind during upwards of three years of British occupation of Baghdad. The city was disturbed only for a few hours, and rapidly assumed its normal appearance.

# CORRESPONDENCE.

## THE THANKS OF THE ALBANIANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The following telegram has lately been sent from Constantinople to Lord Robert Cecil, and he has consented to its publication:—

The Albanian colony in Turkey, composed of some hundred thousands, the majority of whom have been forced to leave their native land on account of the atrocities committed by neighbouring countries who are in occupation of their homes, emboldened by the motion which the Committee of Foreign Affairs of the House of Commons under the presidency of your Excellency voted on May 4, 1920, is encouraged to express its profound gratitude and to entreat your Excellency to continue to remember their national cause, which is the most just. The unity of Albania can only be secured by the return to the mother country of the parts occupied by the Serbs and the Greeks on the north-east and south, and by allowing no other Powers to occupy any points on the sea coast of Albania. The Albanians, who have been able to preserve their national existence for centuries by continuous war, expect from noble England a benevolent and efficacious support during the critical moments when their fate will be decided, and they assure your Excellency that the gratitude they feel towards such noble Englishmen as yourself, especially since they see the interest shown for their cause, will be unalterable and eternal.

The Committee of the Albanian Colony, Turkia.

I am, etc.,
M. E. DURHAM,
Hon. Sec. Anglo-Albanian Society.

## MORAL PORT SAID.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In the name of several of the English residents of this town. I thank you and your Port Said Correspondent for the paragraph appearing under this head in your issue of the 17th inst. The report of the Rev. J. H. Bateson is so grossly extravagant and exaggerated as to amount to an untruth, and for him to have found the element of truth on which it is based is certainly no credit to his calling; as your correspondent states, he must have spent all his time ashore in the search.

It is to be hoped that your paragraph has been copied by the papers which published the Rev. J. H. Bateson's scandalous statement, so that the relations and friends of the members of H.M. Forces which passed through Port Said may be reassured; your Correspondent could have gone further than saying that this town compares favourably with any other place in the *East*, by adding every Continental port and those of the United Kingdom of equal size!—I am, etc.,

A RESIDENT OF NEARLY 21 YEARS' STANDING.

Port Said, 30/6/1920.

## THE OCCUPATION OF THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of July 8 you publish a letter from Mr. Theodore D. Mosconas, from Manchester, in which, for the sake of giving correct information to the British public, he tries to deny the fact that many thousands of the Bulgarians living in Western Thrace previous to the recent Greek occupation fled away into Bulgaria through fear before the advancing Greek troops. In order to prove his statement this Greek gentleman gives us a quotation of the Bulgarian journal *Zora* of June 3:—

"The Association of the Bulgarian Journalists have, along with other European pressmen in Mustapha Pasha, visited the Bulgarians who are coming back from Thrace, where they had established themselves since 1913, and which the Bulgarian Press call the refugees of Thrace. . . ."

I have before me a copy of that very same *Zora* of June 3 (which I hold at the disposal of your readers), and there is no such communication whatsoever to be found in it; nor any other even slightly resembling it.

May I be allowed to express my profound indignation at this most unscrupulous way of fabricating fallacious quotations with which Mr. Theodore Mosconas aims to "enlighten" the readers of THE NEAR EAST.—I am, etc.,

A BULGARIAN IN ENGLAND.

The military hospital at Citta Vecchia, Malta, is to be reopened, and the Y.M.C.A. club in that city is making provision for the recreation of the patients. While the hospital has been closed, fortnightly expeditions to this ancient city have been arranged for convalescents from the R.N. hospital in Valetta and sailors from ships calling at the harbour.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

# PRESS ON THE NEAR EAST.

### Zionism.

The *Yale Review* for April contains an article on "The Injustice of Zionism," written by Mr. E. B. Reed. He begins by defining Zionism, or rather by "reducing it to its simplest terms": it is "an organised movement to make of Palestine (an Arab country) a Jewish state or commonwealth." He proceeds to examine the two claims, historical and biological, which are used to justify Zionism, and then dismisses both of them. The attitude of the present inhabitants of Palestine is put forward, together with a refutation of the Zionists' account of that attitude. He devotes some space to the economic side of the problem, finally calling the Zionist demand for special privilege in this respect "preposterous." But, he says, "apart from the political and economic injustice of Zionism, there is another question whose serious aspect the American cannot understand because he is tolerant both by education and conviction. In Palestine the question of religion—or what is called religion—is all-important. Rightly or wrongly, it is feared that a Jewish State, despite promises to the contrary, will eventually seek to recover its historic landmarks, the places where Jewish history was made." He then enumerates some of these places—such as Jacob's Well at Nablus, the Temple area at Jerusalem, and the cave of Machpelah at Hebron—places which, he says, "mean so much in Jewish history and tradition," and "are and will be centres of resistance to Zionism." His conclusion is:—

To sum up the whole matter, Zionism does not offer a just settlement of the Palestine question. That can never be reached by simply hearing one party, whether it be Jewish, Christian, or Moslem. The fate of this country is not a matter for Zionism to settle, for it affects the whole world. Three great historic religions turn to this small land; for, though small, it is too large for any one race or religion to lay claim to it. If the Jews once fought for it, so did crusading Christians, and the soldiers of Saladin. It must be a land whose destiny is decided and whose future is won by its own people. It must be assisted to work out its own salvation; it should not be forced to accept a society, a culture, a government thrust upon it from without. Peace and justice are the great desire of that land which itself has been the desire of all nations. Surely the world will see that peace and justice are granted her.

### Greece and Turkey.

The *Saturday Review* of June 19 contains an article upon "The Turkish Danger." After bluntly stating that the Turkish Treaty is unworkable, it says:—

No one who knows the stubborn nature of the Ottoman can believe that he will yield his "renowned home-lands" without a struggle. The struggle, indeed, has already begun, and it is likely to continue indefinitely and remain a constant menace to the peace of the world in general, and our own interest in the Near East in particular, until an arrangement can be reached with the Nationalists. The difficulties in the way of such an arrangement are, and always have been, very great. We are not inclined to condemn the San Remo Treaty in its entirety, for its framers, by keeping Constantinople for the Turks, have left some hope for the rehabilitation of that race. But, while making every allowance for the claim of the Greeks to protect their own subjects in a semi-barbarous country, it is obvious that the Treaty, stripped of diplomatic adornments, such as the Ottoman suzerainty of Smyrna, stands nakedly hostile to the Turks, and friendly to the Greeks. And the point should be noted that the Greeks who have been living in Turkey throughout the war are not, in the main, disposed to be friendly to a Hellenic régime in Asia. Not all the eloquence of M. Venizelos can disguise this fact. When Greek meets Greek in Smyrna or Constantinople, a quarrel occurs. And when Greek meets Turk, there is bloodshed. The Greeks have no business in Asia. Their military prowess is doubtful, and their financial integrity not proven. Their own co-religionists mistrust them, and the Mahomedans hate them. It was unwise, therefore, apart from all question of equity, to give Greece so large a share in the spoils of Turkey. However, having made the San Remo peace, we must ensue. Unworkable or not, we cannot alter its essential features at the present time: all we can do is to realise some of the difficulties of the situation, and hope that the unrest that will certainly arise will be localised by the gendarmerie which is shortly to be organised, probably on an international basis. Meanwhile, it must be realised that the Porte at Constantinople, even if it had the best intentions in the world, which it has not, could not under present conditions maintain order throughout the derelict country which it nominally rules. It has neither the men, nor the money, nor the organisation, to prevent massacres, or instigate them for that matter. An empty sack cannot be made to stand upright, and Turkey is an empty sack.

However, it wastes no tears upon Turkey, but proceeds to examine how the dissolution of the Turkish Empire will affect the world at large. "The real danger," it says—

is not religious, for the wide democracy of Islam has much more common-sense than is generally supposed. The peril that menaces is strictly practical and economic. The Turkish Empire is moribund, but the Turkish people are still alive, and sullen, and intractable, and bitterly hostile to the makers of the San Remo Treaty. Defeated and discouraged they may be for the moment, but a decade of continual war has inured them to hardship and accustomed them to every chance and change

Digitized by Google

of fate. They are a nation of nomads and adventurers, born in beggary and bred on bloodshed. An infinite capacity for mischief remains to them. Whether any agreement is possible with the Turks will be seen when the Grand Vizier arrives in Paris. But if there is no agreement, there will be no peace, and our military expenditure, which has already assumed staggering proportions, will have to be further increased. Further, if the moment should arrive for the Turks to settle accounts with their enemies, a German-Russian-Ottoman alliance will be a menace as serious as the world has ever seen.

### Smyrna.

In the July number of the *Fortnightly Review* Mr. H. Charles Woods writes upon "The Turkish Treaty." To some extent the article is a recapitulation of views which have been previously reproduced in this column; but what the writer says upon the question of Smyrna is of immediate interest: —

Coming to the details of the scheme, it must obviously be apparent, to all those who know the East, that the *temporary* maintenance of Turkish sovereignty is a mistake, and that this course has been adopted in the pious hope that it will minimise Ottoman opposition, and that this sovereignty will automatically and easily disappear at the end of the five years' period. If Greece was to have Smyrna at all, the suzerainty of the Sultan ought either to have been laid down as a permanent condition or it should have been done away with *now*. I say this without fear of contradiction, because I remember the difficulties created by the position which existed in Crete for years, and because, although the district is to have a local Parliament, it is certain, with Greek administration and Greek military occupation, that, as a result of methods which are common to all Near Eastern countries, no Parliament will ever be elected which is not acceptable to Greece. True as it is, too, that Smyrna is declared to be a port of "international interest," and that Turkey is to be granted a lease of an area in that port, I do not for one moment believe that this arrangement will work even as well as that which existed, prior to the war, between Serbia and Greece, in regard to Salonica. Although, therefore, the Hellenic Government, by force of arms, may be capable of maintaining its position in Asia Minor, it is safe to say that those arms will neither be able to protect the vast number of Hellenes who must continue to have their homes in Turkey, nor to bring about friendly relations between the respective countries—relations which are equally in the interests of both parties.

### America and Armenia.

In the June issue of *The New Armenia*, the Hon. Louis Bartlett writes upon "American Aid for Armenia." He evidently does not yet despair of intervention by the United States, for he says:—

What is needed in Armenia is a stable government, competent leadership, and economic assistance, until such time as the people can get on their feet and manage independently. Stable and safe government is impossible under the Turks. They have failed everywhere. Their rule has wrought misery and poverty wherever it has extended. Whether or not there be a League of Nations, the Great Powers have the ability now to establish a free and stable government for the Armenians.

Why should we not undertake the rôle of big brother in Armenia? It has worked in the Philippines and Cuba, and it will work in Armenia also. It need not be a new departure in American policy. It need bring us no entangling alliances, and in the long run will cost us little. All Allied nations, including America, are under obligations to Armenia for her military assistance during the war.

Looked at from a purely selfish point of view, America has everything to gain and nothing to lose. The Balkans brought on the last great war. We could not keep out of the world conflagration, and it is unlikely that we can again. The thing to do is to prevent it from starting, and a stable and prosperous government in Armenia, on the highway between Europe and the Orient, is a strong pledge given to the future peace of the world. Let us then unite in asking Congress to do what is not only the generous and humane thing, but also the safe thing for this nation to do—to extend its aid in the reconstitution of a united and independent Armenia, and lend it the economic help and technical leadership necessary to put that struggling nation on its feet.

## TOPICS IN PARLIAMENT

*The subjoined headings are those given in the official report:—*

TURKEY: Greek Operations.—Prisoners (Malta). PERSIA: Anglo-Persian Agreement.—The Mejliss.—Kuchik Khan. MESOPOTAMIA: Turkish Petroleum Company. INDIA: Punjab Disturbances (Correspondence). (July 5.)

EGYPT (MILNER COMMISSION). PALESTINE (MANDATE). TURKEY (RAHMI BEY). INDIA: International Trade (Exchange). (July 6.)

INDIA: Brigadier-General Dyer. Army Council's Decision. Statement by Mr. Churchill.—Officers' Pensions.—Lieutenant-Colonels (Pay).—Punjab Disturbances.—Connaught Rangers. TRANSPORT: Bakouba Camp. TURKEY: Christian Minorities, Asia Minor. MESOPOTAMIA: Anglo-French Agreement.—Oil. EGYPT (MILNER REPORT). INDIA: Army Officers' Pension. (Colonel J. P. Hennessy).—Amritsar Disturbances (Hunter Commission).—Miss Sherwood (Newspaper Interviews).—Sir Michael O'Dwyer.—H.R.H. the Prince of Wales (Visit).—Anglo-Russian Agreement, 1907 (Persia). MESOPOTAMIA: Land Revenue.—Oil (Deutsche Bank).—Sir Percy Cox. (July 7.)

## MUSICAL NOTES.

Readers of this column will have noticed that I do not often comment upon opera, the reason being that it is the form of music in which I am least interested. But the literature written upon opera is by no means uninteresting, and even those whose musical knowledge is small will find much to entertain them in the most recent book on the subject. This is "A Book of Operas," written by H. E. Krehbiel, and published by the New York Macmillan Company at $2.50. The subject is an easy one to write upon—the history of operas is mainly but a matter of facts—but in spite of the facility of his task the author has compiled a quite readable book. His aim is confessedly not a high one: it is merely to record the plots of various operas, and to give details of performances (chiefly at New York and London), and he has achieved it accurately and concisely enough. Although it is a book which will appeal most to American readers, seeing that many operas which have been performed at London and elsewhere are not touched upon in this book, it is really of general interest, because the ground covered has been trodden in nearly all other countries.

In the few opinions which Mr. Krehbiel does allow to supplement his narrative he shows a correct deference to traditional opinion, but he also does justice to such minor works as "Der Freischütz," and "Hänsel und Gretel" (to Humperdinck indeed he pays unusual homage). The most informative chapter in the whole work is one on "Biblical operas"; for here the author displays a very wide and keen knowledge, and writes with an enthusiasm that cannot well pervade the mere telling of a plot. It is full of instructive anecdotes which are related with earnest American candour and simplicity.

Up-to-date readers may be disappointed to find no descriptions of the works of such men as Bach, Borodin, or Debussy, but in a book which attempts to cover the whole area of opera, someone is bound to be disappointed, and I suppose that in this affair it is the "modern" reader who matters least. But even the whole-hearted adorer of Wagner and Verdi would welcome an index to "A Book of Operas," so that for the sake of democracy the author should see that the next edition of his work has one.

I have not yet seen the stage adaptation of Robert Hichens' story, "The Garden of Allah," which is being performed at Drury Lane, and for which Landon Ronald has written special music, but the publishers of the score, Messrs. Keith, Prowse and Co., Ltd., have sent me "In An Eastern Garden," which is the name given to the chief violin solo in the piece. It is a very capable piece of writing, and probably has already secured sufficient popularity to endure the run of the play. In the more obvious methods of suggesting atmosphere, Mr. Ronald has in previous compositions proved himself very competent, and in "In An Eastern Garden," he very accurately presents the rich languor of the East. There is a lazy sense of the exquisite in its smooth phrases, and the repeated employment of some intervals known in the oriental scale gives that monotonous delight which is intended. As pure music it, of course, does not rank high; but for its purpose it should be admirably effective. The facts that it is dedicated to Mr. Albert Sammons and was played by him at the first performance of the play are good indications of its value; and if the rest of Mr. Ronald's music is up to its standard, "The Garden of Allah" should, for those who love Eastern sights and sounds, be well worth a visit.

# NEAR EAST BOOKSHELF.

I.—"INDIA AT THE DEATH OF AKBAR—AN ECONOMIC STUDY." By W. H. Moreland, C.S.I., C.I.E., late of the Indian Civil Service. (London: Macmillan and Co. 12s.)

II.—"THE STAR OF DESTINY." By H. M. F. Campbell. (London: Odhams, Ltd. 7s. net.)

## I.—INDIAN ECONOMICS.

Mr. Moreland's contributions to Indian economic literature are always welcome, and his latest book, "India at the Death of Akbar," is certainly no exception to the rule. For several years, especially during his retirement, Mr. Moreland has devoted much—we almost wrote "all"—his time to investigating the sources of Indian economic history. His knowledge of the Ain-i Akbari by Ahil-Fazl has stood him in great stead in this important sketch of the economic life of India at the close of Akbar's reign—*i.e.*, at the end of the sixteenth century—and we have an interesting account of Indian production, consumption, and distribution. In short, we have a description of agricultural production—land tenures, the system of agriculture, the conditions of life in the villages; non-agricultural production, commerce, the administration, and a very readable account of the standard of comfort that obtained among the main occupied classes. The volume is of importance as a handbook to the student of the economic history of India of a period when the mediæval history was ending and modern history beginning. As the author says, "It is a sketch rather than a finished picture; there is room for more intensive study of some of the authorities, and there is a reasonable prospect of the discovery of additional facts among sources to which I have not at present access, such as the records of the Portuguese administration and of the Jesuit missionaries, or the vernacular literature of the East and South and West. The period thus offers opportunities for further research, much of it of a kind well suited to the schools of economics now growing up in the Indian Universities, and while there are obvious arguments for deferring publication until the sources have been more fully explored, it seems to me that the balance of advantage lies in offering the sketch for use until the schools have got to work; it will serve at the least as a framework on which additional results can be arranged, and as an index to the topics on which further information is required."

The picture which the author sees of India at the death of Akbar is one of faulty production and bad distribution of the wealth produced. The only career open to men of position was State service, and much of the service rendered was sheer waste. There was throughout the country an unnecessarily large number of officials, domestic servants, and of those engaged in religious pursuits. The cultivator of the soil was much worse off in ordinary years than at present, and he had less to spend on necessaries and luxuries. In bad years he was no better off than the village labourer. In those days there was no organised system of famine relief, a system which is a permanent wonder to many interested in labour economics, and especially in unemployment. Of landlords we do not know much. Those who became courtiers probably lived the life of ordinary officials. Many seemed to be parasites, while others assisted their tenants. Ahil-Fazl, however, reminds us that "the general custom of Indian Zamindars is to leave the path of single-mindedness, and to have an eye to every side, and to join anyone who is victorious or who is making increasing stir." In a word, if the Ain-i Akbari is to be believed, official circles did not always approve—we put it mildly—the attitude of the landlord class. We find that merchants on the coast adopted the style of the small upper class, but up-country it was dangerous to indulge in this lavish expenditure openly. Like the middle classes, up-country merchants probably lived, as at present, in a very frugal way. Mr. Moreland arrives, in regard to the purchasing power of the rupee, at the conclusion that one rupee in Akbar's time was the equivalent of six rupees in the period before the war; or, in short, that a monthly income of five rupees would provide the same quantity of necessaries as could be purchased before the war with an income of thirty rupees.

In a very interesting chapter on commerce we have the various sources examined, and the result is that we see before the arrival of the Portuguese in the Indian seas an all-supreme body of Moslem traders, able men who did business from Madagascar to the Straits of Malacca. Moslem merchants were exceptionally strong on the west coast of India, particularly at Calicut, a commercial centre (as the name "calico" reminds us) of the highest importance. Spices brought European traders to the East. The trade in spices was, so far as the Portuguese were concerned, the royal prerogative of the King himself. Mr. Moreland points out that as late as the year 1585 the contract made for the fleet sailing from Lisbon provided for the annual import of 30,000 quintals (or, say, 1,750 tons) of pepper, an enormous quantity when judged by contemporary standards of commerce. The motives which brought Portuguese traders to the East were identical with those which actuated the English and Dutch. Soon, however, the basis of trade was greatly extended in every direction. As Adam Smith points out in the "Wealth of Nations," "The trade to the East Indies, by opening a market to the commodities of Europe, or, what comes nearly to the same thing, to the gold and silver which is purchased with those commodities, must necessarily tend to increase the annual production of European commodities, and consequently the real wealth and revenue of Europe." (Book IV., Chapter I.) Trade by land was not infrequently hazardous in the extreme, as the account of the journey to Kabul from Lahore by the missionary, Benedict Goez, quoted by Mr. Moreland, undoubtedly shows. As the conditions of transport in India in the sixteenth century were such as to induce traders to send their goods by water wherever possible, the coasting trade was of great importance. At the end of the sixteenth century there was no Calcutta; and, of course, Bombay, Madras, Karachi, and Rangoon had not sprung into existence as ports. The Cambay ports, including Surat and Broach, the Bengal ports (Satgaon-Hoogly, Sripur, and Chittagong), the Malabar and Coromandel coast ports, were important in this connection.

All things considered, the author of "India at the Death of Akbar" has succeeded, and he has succeeded well. An economic study based on the materials used by Mr. Moreland was from the outset no easy matter. We should have liked more references in the text to original authorities. It is true there is a bibliography at the end of each chapter, but to the serious student of Indian economic history ample footnotes would have been of great value. At times, we venture to suggest, too much is deduced from somewhat slender data, as, for example, where the tonnage of ships in Akbar's time is compared with the pre-war figure. Two sketch maps and five appendices have been added to the text, and are a pleasing addition to a very readable book.

## II.—THE STAR OF DESTINY.

The artificially intense atmosphere in which Stella Hamilton lived, where her friends "made, for the most part, an artistically uncomfortable use of the goods of this world, and each severally aspired to obtaining an intimate private knowledge of the inner workings of the next," is delightfully and cleverly suggested in the opening chapter of "The Star of Destiny" in the description of a select party invited by one of them to meet and hang on the words of Krishna Tyer, a young Hindu student.

Stella is almost in a dream condition, feeling herself marked out for some great destiny and thoroughly thrown away on an ordinary existence in Edinburgh. The author makes it seem quite natural that she should be taken in by Krishna's words that the star of her destiny calls her to the East, which will have a very special message for her. Krishna has previously discovered that there is a possibility of her going to India to stay with her friend, Daisy Cameron, whose husband is Collector of Venkatapur, and thinks that to have a friend in this household will be a help to his seditious schemes. Stella finds him on board the same steamer as herself for the voyage to India. The rest of the book is concerned with Stella's visit to the East and her gradual awakening from her dream. Krishna himself is more or less duped by a German agent (the time is just before the war), who passes under the name of Mrs. Ferguson. It is difficult to have much patience with an English girl who distributes seditious pamphlets in the bazaar at the instigation of a fanatical Hindu, under the impression that she is helping "to uplift the degraded masses of the Hindu population and to awake them to the mystic truths contained in their religion." But, in spite of the tiresomeness of her behaviour, we are really sorry for her on the voyage home, so disillusioned and disappointed, and are very glad when she realises at last—on a grey day in Edinburgh—that her true way to happiness lies in marrying the attractive young Scottish soldier whom she had so scornfully refused in India.

The story is readable and interesting, and the fact that the author carries out his rather difficult plot successfully is largely owing to his possession of a great sense of humour.

## CALENDAR OF THE WEEK.

**Showing Concordance of the Gregorian, Julian, Moslem, and Jewish Dates.**

| Gregorian (New Style). | Julian (Old Style). | — | Moslem. | Jewish. |
|---|---|---|---|---|
| 1920. July 15 | 1920. July. 2 | Thursday ..... | 1338. Shawal. 28 | 5680. Tamuz. 29 |
| 16 | 3 | Friday ..... | 29 | Ab. 1 |
| 17 | 4 | Saturday..... | Julkada. 1 | 2 |
| 18 | 5 | Sunday ..... | 2 | 3 |
| 19 | 6 | Monday ..... | 3 | 4 |
| 20 | 7 | Tuesday ..... | 4 | 5 |
| 21 | 8 | Wednesday ..... | 5 | 6 |

The Armenian Patriarch arrived on July 10 at Spa, and was received by M. Delacroix.

M. Venizelos went to Brussels on July 9 and lunched with the King of the Belgians.

A Damascus message states that Emir Faisal intends leaving for Europe by the first steamer from Syria.

Professor Nedjib Hindie has now changed his address, the new one being 65, Kensington Gardens Square, Bayswater, W.

King Alexander has returned to Greece. His wife, Mme. Aspasie Manos, will stay at the Villa Tombazis at Poros in the Peloponnesus.

Sir Herbert Samuel called on the American Consul at Jerusalem on July 4 on the occasion of the celebration of Independence Day.

M. Boeresco, of the Roumanian Legation, is to arrive in London this week, and will act as Chargé d'Affaires, with the rank of Minister.

Prince and Princess Arthur of Connaught have honoured Mr. A. O. Lamplough by inspecting his collection of water-colour drawings of Egypt.

Prince Firouz Nosrat ed Dowleh, Minister for Foreign Affairs in the late Persian Cabinet and chief of the Peace Mission, left London on July 10 on a visit to France prior to his return to Teheran.

Mr. Frederick William Hasluck, of "The Wilderness," Blagden's Lane, Southgate, N., for many years assistant director and librarian of the British School at Athens, who left £9,242, bequeathed his collection of coins between the British Museum, the Fitzwilliam Museum, Cambridge and Leys School, Cambridge.

Mr. Athelstan Riley gave a dinner at the Athenæum on July 8 to the Metropolitan of Didymoticon and the other members of the delegation from the Patriarchate of Constantinople to the Lambeth Conference. The guests included the Greek Minister and M. Gennadius, the Archbishops of York and Melbourne, the Marquis of Salisbury, the Earl of Malmesbury, and the Bishops of Gloucester, Ely, Coventry, Moray, and Ross, and Harrisburg (U.S.A.), Colonel Benson, and the Rev. J. Fynes Clinton.

Sir Ponnambalam and Lady Arunachalam returned to Ceylon by the P. and O. "Narkunda," which sailed on July 9. He came here as the head of the Ceylon Reform Deputation which interviewed Viscount Milner, and has interested members of Parliament and others in the subject. Lord Milner's reform proposals will be placed before the House of Commons before the end of this session. Sir Ponnambalam and Lady Arunachalam had the honour of being received in private audience by their Majesties at Buckingham Palace on June 26.

Our Baghdad Correspondent writes (May 30):—There is much gratification among all communities here at the announcement that His Majesty the King has conferred the K.C.I.E. (for war services) on Lieut.-Col. A. T. Wilson, C.S.I., C.M.G., D.S.O., the Acting Civil Commissioner in Mesopotamia. The time has perhaps not yet arrived for telling in full the remarkable story of the building up of the Civil Administration during the last few most difficult years, but it is satisfactory to know that it has not passed unnoticed at home. In conveying the intimation of the honour, "the Secretary of State for India has been pleased to direct the Civil Commissioner to express to the officers of the Civil Administration his warm appreciation of their loyal devotion to work under constant strain and in face of great difficulties for the welfare of Mesopotamia."

The christening of the infant daughter of Prince Antoine Bibesco (Chargé d'Affaires of the Roumanian Legation) and Princess Bibesco took place on July 6 at the Greek Church in Moscow Road, Bayswater. The sponsors were Queen Alexandra (for whom the Duchess of Portland stood proxy), Countess Benckendorff, the Marchioness of Granby, Lord Robert Cecil, and Lord Ivor Spencer-Churchill. The names given to the child were Alexandra Priscilla Helen. The presents to the child included a diamond pendant from Queen Alexandra.

The anniversary of the birthday of King Peter, King of the Serbs, Croats, and Slovenes, who was born in 1844, was celebrated in London on July 12. A message of congratulation from King George was handed to M. Gavrilovitch (the Minister for the Serbs, Croats, and Slovenes) by Major-General Sir John Hanbury-Williams, Marshal of the Diplomatic Corps, the text of which, together with a message from the Serbian Colony, was telegraphed to King Peter in Belgrade. In the afternoon M. and Madame Gavrilovitch held a reception at the Legation in Queen's Gate, which was largely attended.

M. Misu, Roumanian Minister for Crown Lands, and formerly Minister in London, arranged to leave England yesterday for Bucharest.

## APPOINTMENTS, ETC.

Signor Mercatelli, holding the rank of Minister Plenipotentiary in the Italian Diplomatic Service, has been appointed Governor of Tripoli.

Our Cyprus Correspondent writes:—

Mr. Stanley Fisher, Chief Justice, will go on leave to England on the return of the Puisne Judge, Mr. A. L. Stuart.

Mr. E. F. Wilson is appointed to act as Assistant to the Chief Secretary.

Mr. E. Heidestan will act as Auditor.

The following appointments have already been made on the staff of Sir Herbert Samuel, High Commissioner for Palestine:—

Mr. W. H. Deedes, C.M.G., D.S.O., who held the rank of Brigadier-General during the war, was one of the heads of the Political Intelligence Staff at Lord Allenby's Headquarters during the Palestine campaign. He has since been Military Attaché at Constantinople and Director-General of Public Security in Egypt. Mr. Deedes will be Civil Secretary to the High Commissioner.

Mr. N. Bentwich, O.B.E., M.C., who was Professor at the School of Law in Cairo, was Major in the Camel Corps during the Palestine campaign, and has since been Senior Judicial Officer of the Military Administration in Palestine.

Mr. Ronald Storrs, C.M.G., C.B.E., at one time Oriental Secretary to the High Commissioner in Egypt, has been Governor of Jerusalem since a few days after the occupation.

Captain Lord Edward Hay, Grenadier Guards, served in France during the war, was attached to the Peace Conference in Paris, and subsequently to Major-General Sir Edmund Ironside, on a special mission to Hungary and Roumania, and to the Military Intelligence Department at the War Office.

Mr. J. P. K. Groves, served in the Scottish Rifles in France during the war, was afterwards attached to the Arab Bureau at Cairo, Jerusalem and Damascus.

Mr. M. Nurock, has been secretary of the Zionist Commission at Jerusalem.

## OBITUARY.

General Boya Yankovitch, the Serbian General, who during the war commanded the Army which marched through to the Adriatic and occupied Durazzo, died at Novi, in Dalmatia, on July 8, states a Reuter message from Belgrade.

We regret to announce the death, which occurred as the result of a motor accident, of Mr. Augustus van Millingen, of Alexandria. He was 52 years of age. Much sympathy will be felt for Mrs. van Milligen, who was shortly expecting him at their English home, "The Warren," Purley Downs, Surrey.

## GREAT BRITAIN AND THE MANDATE FOR PALESTINE.

A demonstration under the auspices of the English Zionist Federation took place on July 12 at the Royal Albert Hall in celebration of the acceptance by Great Britain of the Mandate for Palestine as the Jewish National Home. The chair was taken by the Rt. Hon. Lord Rothschild, F.R.S., and the following were amongst the speakers: Mr. Balfour, the Chief Rabbi, Dr. J. H. Hertz, the Marquis of Crewe, Lord Robert Cecil, M.P., Major Ormsby-Gore, M.P., Dr. Ch. Weizmann, Mr. Nahum Sokolow, Dr. Max Nordau, Mr. James de Rothschild, Colonel Wedgwood, M.P., and Mr. M. M. Usishkin. Mr. Sokolow moved the following resolution:—

"That this meeting, representing Anglo-Jewry, held at the Royal Albert Hall, on the 26th Tamuz, 5680—July 12, 1920—expresses heartfelt joy at the decision of the Supreme Council to incorporate the Balfour Declaration in the Treaty of Peace with Turkey, and at the acceptance by Great Britain of the Mandate for Palestine as the Jewish National Home; it also puts on record its high appreciation of the illustrious services rendered to the Jewish nation by the statesmen and peoples of the Allied and Associated States, particularly of Great Britain, who have collaborated in this memorable achievement, and pledges the Jews of this country to spare no effort and no sacrifice for the rebuilding of Palestine as the Jewish National Home, in collaboration with the inhabitants of the country."

The resolution was seconded by Dr. Weizmann and passed unanimously. The meeting closed with the singing of the "Hatikvah" and the National Anthem.

## NEW STAMPS.

The following are extracts from recent notes in *The Times* on new stamps:—

The Roumanian Post Office proposes to issue at an early date a set of victory commemorative stamps in the denominations of 1, 5, 10, 15, 25, 40, and 50 bani, 1 and 2 lei.

Forthcoming issues of Britsh colonial stamps include a special series for use on official correspondence in Mesopotamia, consisting of six values of the current Iraq stamps additionaly overprinted "On State Service" in a semi-circle in black.

The Serbian national stamp collection was lost during the war, and an effort is now being made to form a new one. The Director-General of Posts at Belgrade has accordingly issued through the Postal Union Bureau at Berne an appeal to all offices of the Union to supply him with three specimens of their postage stamps.

The national fêtes in Prague, attended by a Britsh delegation representative of arts and letters, were made the occasion for the introduction of a new series of postage stamps designed by Czech artists. The first type, depicting a dove descending with a letter in its beak, the work of Professor Benda, figures on the denominations five deniers dark blue, 10d. dark green, and 15d. red brown. The next three values bear an allegory of a lion breaking its fetters (by V. Brunner), 20d. dark red, 25d. dark brown, and 30d. red-violet. A Hussite chalice bearer is the subject of the design of the 80 and 90 deniers stamps, from the brush of Professor Alfonse Mucha, while the values from 100 to 40 deniers are symbolical of industry restored after war, as delineated by Jakob Otrovsky. The stamps have been surface printed by the United Czech Printing Office, and are perforated.

Nearly £1,000 has been subscribed by the inhabitants of Gibraltar to enable the local Sea Scouts and Boy Scouts to be represented at the forthcoming Grand Jamboree in London.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

BUSINESS FIRMS IN NEAR AND MIDDLE EAST.—Advertiser, 30, lately Major in Army and ex-Ordnance Officer, mentioned and decorated, desires opening. Educated Oxford and Public School. Several years' experience pre-war and war service in Near East. Some knowledge Arabic and French. Accustomed to responsible position and to handling staff. Small salary while learning, view to acting as representative of Firm in the East.—Box 169, THE NEAR EAST, Limited, 1, Devonshire Square, Bishopsgate, E.C.2.

CONSTANTINOPLE. — English High School for Girls. — Required, to sail about the middle of August:—(1) Assistant Mistress for Mathematics. Applicants must have experience in teaching this subject up to matriculation standard. (2) Two or three Assistant Mistresses for general work in Junior Forms. Preference given to candidates who can offer a little dancing as an additional subject. The posts are resident. A return first-class passage paid on a two years' agreement. Salary according to experience and qualifications. Candidates are asked to make immediate application, enclosing full particulars of qualifications and copies of testimonials, to Miss Lightfoot, B.A., 8, Holland Villas Road, London, W.14.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
**SMEDLEY'S HYDRO.**

**TORQUAY**
**VICTORIA & ALBERT HOTEL.**

*Cairo's Hotels de Luxe.*

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

**SUMMER PALACE HOTEL,**
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant.
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores: LIMASSOL.

## THE AMRITSAR DEBATE.

Last Thursday, for the first time in its history, the House of Commons had before it an estimate for expenditure on the India Office, and we question whether even the most ardent advocates of the change of procedure could have anticipated the immediate result of their persistent and eventually successful agitation. Practical politicians, at any rate, expected that, while the subjects for discussion might be novel in form, the discussions themselves would be of the type which had become so painfully familiar, a thin and listless House considering some question of merely academic significance, a few hours of the droning of notorious bores, and probably the relief of an early adjournment. On this occasion, however, the course of events was entirely different; there was a full-dress debate, with an unusual proportion of speeches by recognised leaders, the House was charged with passion, the Ministerial party was almost equally divided on a crucial question, and eventually the Government was saved from defeat by the votes of its usual opponents. The explanation of these unwonted manifestations is, of course, to be found in the nature of the subject which came up for discussion. The House had before it a grave moral issue, closely interwoven with questions regarding the conduct of individuals, brought into prominence by an exceptional combination of circumstances, and everyone who is familiar with the mentality of legislative assemblies knows that a combination of moral and personal issues can be counted on to electrify the atmosphere. The chief defect of Mr. Montagu's opening speech lay in his attempt to ignore this tendency, and divert the discussion to political lines. He asked the House to vote on the question of ascendancy *versus* partnership in our relations with India, but the House knew and felt that that issue was dead; it was really settled long ago by the inexorable logic of accomplished facts, and the unanimous acceptance by Parliament of the Government of India Act was in effect a formal recognition of the position which Great Britain and the Empire had already reached. Mr. Montagu's attempt necessarily failed, Sir Edward Carson was quick to bring the discussion back to the line in which members were really interested, and then Mr. Churchill expounded the attitude of Ministers in a matter which he rightly described as one of exceptional seriousness, delicacy, and responsibility.

Mr. Churchill's speech was worthy of the occasion. He explained the intricacies of procedure, which have proved so puzzling to some of our contemporaries; he defined clearly the respective functions of the Army Council and the Cabinet; and then, passing to the merits of the case, he laid down the principle which should govern the conduct of officers charged with the duty of repressing civil commotion. The Government stands by the rule which in popular language has been described variously as the minimum of force, or the condemnation of "frightfulness"; you may have to shoot, but you are not entitled to shoot people here in order to produce a moral effect elsewhere; and, if that principle be accepted, there is really little more to be said on the events which were under the consideration of the House. The claim put forward so insistently that the shooting at Amritsar in fact saved India may or may not be well-founded, but the Government's decision is that you are not entitled to save India in that particular way. A lawless crowd may be dispersed by force, but may not be made a scapegoat to bear away the sins of others. That, as Mr. Churchill said, is not the British way of doing things. The principle having thus been laid down in uncompromising terms, the only remaining question for the Government related to the action taken against the officer by whom that principle had been disregarded. On that question individual opinions necessarily differ, and while Sir Edward Carson had asked for censure but not punishment, Mr. Churchill expressed his personal preference for a more definite disciplinary act; but he declared that the Cabinet as a whole supported what he described as the moderate and considerate conclusion reached unanimously by the Army Council, and to that conclusion he invited general assent. Mr. Asquith, who spoke next, was prompt to accept the invitation for the party which he leads, and then the debate passed mainly into the hands of the partisans on either side. It would be tedious to refer in detail to the assertions and the invectives in which successive speakers indulged, and we think the one side may fairly be set off against the other; the speeches show the volume and depth of the feelings which have been aroused by the events under discussion, but, taken as a whole, their only positive value is to emphasise the moderation of the standpoint reached by Ministers, and explained once again in the closing remarks of the Leader of the House. Mr. Bonar Law spoke as one who stood between two fires, but his insistence on the fact that the Cabinet as a whole, and not any individual Minister, was concerned appears to us to possess more than merely tactical importance. The time when the Secretary of State for India could have a policy has, in fact, gone by; the big questions affecting India must henceforward claim the attention of the Cabinet, and a Government must be prepared to stand or fall by the decisions which it takes. In this case the Government stood firm: the division-list shows, as we have said, a transfer of votes which may possibly be significant for the future course of politics, but the immediate question has been disposed of so far as the House of Commons is concerned, and it remains only to ask how far the decision will be accepted by the country.

We believe that the decision will ultimately be concurred in, and rightly so, by the great bulk of middle and responsible opinion. As regards the moral issue we have no doubt; a policy of "frightfulness," an ugly word for an ugly thing, is repugnant to British instincts and ideals, and the emphatic declaration that no such weapon forms part of the soldier's equipment will be welcomed as a timely recognition of the position in India and elsewhere. On the personal question the scope for difference of opinion is undoubtedly greater, and we can scarcely venture to hope for an immediate cessation of controversy, but, when a merciful hoarseness shall have overtaken extreme partisans, we expect that opinion will be found to have settled down somewhat on the lines indicated in the speech which General Hunter-Weston contributed to the debate. A soldier's case has been considered by the Commander-in-Chief in India, and by the Army Council in this country; the Cabinet has concurred in the unanimous decision of the Council, and for the ordinary man that consensus should suffice. The measure of blame attaching to individuals for acts performed in distant lands and under pressure of the gravest emergency cannot be determined with precision by a public imperfectly informed as to the facts, and unable to reconstitute the circumstances in which action had to be taken; the public must be satisfied that the principle applied is sound, but if it is so satisfied, it will be wise to leave the application in the hands of those who know. The temptation to join a pack in full cry is doubtless great, but, none the less, it is a temptation to be resisted, and in the present case we can see no possible good in any attempt to prolong the discussion. Let us remember only that the events at Amritsar have left ugly wounds on both sides, wounds which time alone can heal. We cannot forget those wounds while they still hurt, but at least we can leave them to the great healer, and it is our clear duty to do nothing which may cause them to break out afresh.

# "BULGARIA'S PENANCE."

**By JAMES D. BOURCHIER.**

In describing Bulgaria as "quite a recent British discovery," the writer of THE NEAR EAST's leading article of May 13 told the simple truth. Bulgaria is still a *terra incognita* to most Englishmen. For the most part all that they know of her is that she is a little State, situated somewhere in the East, which has maliciously and treacherously joined our enemies and deserves to be punished accordingly. She must pay the full penalty of her crime, and if slices of her territory are distributed among our friends, it is thought to be quite in accordance with the fitness of things. The ignorance of the public has been increased rather than diminished by an energetic anti-Bulgarian propaganda which, under the guise of imparting information, has obscured the essential features of the Balkan problem. But *magna est veritas et praevalebit:* the effort, hitherto only too successful, to convert the Anglo-Saxon conscience into an instrument of Balkan animosities can hardly be maintained when the passions excited by the war begin to subside; the public mind becomes more cool, more discriminating, and begins to suspect that it has been misled.

The inevitable reaction has scarcely yet begun. Meantime the British soldier has met the Bulgarian on the field of battle, and, though taught to regard him as a "monster in human form," has spontaneously discovered that he is not a bad fellow after all, and has even learned to like and respect him. That is something gained. "It is only when you grapple with a man that you discover his real quality," as John Addington Symons remarks in his description of the Swiss wrestlers. The fortitude with which the Bulgarians have met the stroke of adversity has also impressed many who have never had the opportunity of making the acquaintance of this unknown people. Those who possess no first-hand knowledge of them can scarcely realise how crushing has been the blow; it is not the heavy load of the financial terms now imposed on them, nor even the loss of territory that afflicts them, but the unnatural severance from their kith and kin, now handed over to alien domination. It is very good of THE NEAR EAST correspondent, M. Cassavetes, to admit that the Bulgarians "cannot so soon renounce their dreams of conquest" and to propose that Serbia, Greece and Roumania, "the victors," should extend a friendly hand to Bulgaria. If these States are influenced by "a sincere desire for amity and neighbourly collaboration," their first step would be to desist from the process of forcible assimilation by which they are now endeavouring to compel some 1,750,000 Bulgarians to renounce, not their "dreams of conquest," but their national consciousness. Once "the victors" can induce themselves to restore to the vanquished the churches and schools they possessed under Turkish rule, their bishops, their priests, their teachers, and the right to speak their own language, some progress will have been made towards the establishment of those neighbourly relations which M. Cassavetes rightly thinks so desirable. Until this has been done, to preach amity between the spoilers and the despoiled is nothing but a cruel irony.

Bulgaria, we are told, "has been a constant thorn in the flesh to all her neighbours." If this has been the case, who was responsible? In 1878, Beaconsfield and Bismarck divided the newly enfranchised race into five parts. The Dobruja was given to Roumania, Pirot to Serbia, Macedonia and Thrace were handed back to Turkey, Eastern Roumelia received autonomy under a Turkish governor, Northern Bulgaria alone obtained complete freedom. For the irredentist movements which inevitably followed Bulgaria, in the war literature of the period, is invariably declared to be responsible, and the calumny, by dint of repetition and in the absence of refutation, has come to be more or less generally believed. In point of fact, the Bulgarian Government, in order to avoid diplomatic difficulties, or at the bidding of Russia, has frequently repressed these movements, so far as they existed within the borders of the kingdom.

The real truth is that the young state, situated in the midst of jealous rivals, whose animosity has been excited by her marvellous progress, has received innumerable thorns in her flesh, and has been made the victim of rapacious designs. It is enough to mention briefly the secret treaties made by both Serbia and Roumania with Austria-Hungary at her expense, the treacherous attack of Serbia in 1885, the Greco-Roumanian combination against her in 1900, the Greek effort to annex Macedonia in 1897, the repudiation by Serbia of the Treaty of 1912, the persecution of the Bulgarian element in Macedonia by both Greeks and Serbs in 1912-1913 (while they were still her allies), and the unprovoked invasion of her territory by Roumania in 1913.

It is necessary to read a little history in order to correct erroneous impressions derived from the propagandist literature of recent years. It is scarcely fair to state that Bulgaria has never been "a good ally," in view of the fact that she never made an alliance till 1912, and that she was not the first to break the compact then made. And if she has proved "a dangerous enemy," we British may certainly lay claim to a similar distinction, as the result of our war with Germany has demonstrated.

It is no doubt unwise on the part of some advocates of Bulgaria to lay too much stress on the exclusive culpability of King Ferdinand. The time has not come for disclosures, but, when all is known, it will be found that he had little choice left as to the course he should pursue. The blunders of Western diplomacy, the obstinacy of the Serbian *militaires*, who refused to yield an inch of Macedonia, the support which they received from the Germanophil *coterie* at Petrograd, which aimed at detaching Bulgaria from the Entente, the mischievous activity of the Russian Minister at Belgrade, the vacillation of the Tsar, the threats of the Kaiser, the absence of any prospect of support from the West—these factors combined with others to bring the Bulgarian ruler to an *impasse*. He did not make up his mind till the last week of August, 1915—the *soi-disant* secret treaty with Austria of the previous year is a fabrication. His decision was distinctly unpopular in the country—anyone who witnessed the sullen demeanour of the troops when mobilised could not fail to contrast it with their joyful alacrity when summoned to fight Turkey in 1912. They did not want, and the nation did not want, to fight Russia and Britain. Several mutinies took place, and a revolution would not improbably have followed had not M. Stambolisky, the only man who could have led it, been thrown into prison. Thus Bulgaria was deprived of its Venizelos, and it may be asserted without fear of contradiction that could the Allied fleet at that time have sailed over the Balkans to Sofia, the deposition of King Ferdinand would have been accomplished with far greater ease than the subsequent removal of King Constantine from Greece. But once the army received the order to march into Macedonia the war ceased to be unpopular, and the troops, welcomed by their Macedonian brothers, fought well, as our British officers have testified. It became a fight *pro aris et focis*.

The Treaties of Berlin and Bucharest have been the cause of all the trouble in the Balkans, and the Treaty of Neuilly, drawn up on the same lines as its predecessors, will inevitably aggravate the mischief. Its territorial arrangements are, of course, its worst feature, but its financial and economic provisions, like those of the sister Treaties of Versailles and Saint Germain, are also open to serious criticism. The "considered" verdict of the Powers needs further consideration. It is daily becoming more apparent that revenge is not the best policy, and that our own interests will not be served by exacting "the uttermost farthing" from our former adversaries. Commonsense requires that we should help the fallen foe to meet the heavy liabilities that we impose on him; it is sheer folly to kill the goose that lays the golden eggs. Fortunately, in the case of Bulgaria the Commission of Reparations is empowered to grant such alleviations as circumstances may show to be expedient; but, apart from these, it is

Digitized by Google

obviously in our interest to help her laborious population, already decimated by a series of wars, to renew their productive toil and to furnish us with the cereals of which we shall soon be badly in need. They will take in exchange our merchandise. It will therefore be desirable to facilitate and cheapen transport by leaving to Bulgaria a port of her own on the Ægean, and presently to accord her a loan, which, by helping to reduce the ruinous rate of exchange, will increase her purchasing power.

## THE HIGH SCHOOL, CONSTANTINOPLE.

A correspondent informs us that a letter received last week from Constantinople contains the bad news that the residential building of the High School for Boys in that city has been burned down. The letter was undated, but our correspondent calculates that the fire occurred in the last days of June. The school building was not burned, but apparently suffered some damage. Our correspondent adds :—"The fire occurred about 7 p.m., and broke out in a house seven buildings removed; but as there was a very high wind blowing at the time the flames made rapid progress, especially as the houses, although all detached and in gardens, were large wooden *konaks*. I understand that a few things only were saved, but have no particulars.

"This is very unfortunate, as the building, which had been occupied by the officers of the Sutherland and Argyll Highlanders, was only evacuated at the end of last December and handed back to the School Committee. It was put into good order, and the staff and boarders took up their residence last January, and the school was doing very well." Later information adds that the military (British) blew up a couple of *konaks* to stay the progress of the fire, but unhappily without success. The headmaster, who, with his wife and child, resided on the premises, lost all his personal property. His wife and child are now suffering from shock, the former having been scorched while trying to save effects.

## NEWS IN BRIEF.

Ten railway vans full of gunpowder have exploded at Bucharest.

A clearing office for dealing with enemy debts has been established at Simla in accordance with the Peace Treaty.

For the first time since the war a steamship with grain from Roumania has arrived in Holland. The Wingate reached Rotterdam on July 4 with a cargo of Roumanian wheat.

The French Minister in Belgrade has handed the Croix de Guerre to the town of Shabatz on behalf of the French Government, on account of its heroic attitude during the war.

An international conference on Armenia, attended by delegates representing Great Britain, France, Denmark, Norway, Sweden, Switzerland, and Holland, is being held in Paris.

Proposals have been made in the Indian Imperial Council for legislation to regulate the entry into and residence in India of British subjects from the self-governing Dominions and Dependencies on a basis of reciprocity.

The Egyptian Cabinet has approved the necessary credits for the continuation of the irrigation work on the Blue Nile at Sennar for three months. Within that time a general decision on the Nile irrigation projects will be reached.

## CHESS.

Below I give a further game from the Final Section of the Murton Cup Handicap :—

(Remove White's Queen's Knight.)

| White. | Black. | White. | Black. |
|---|---|---|---|
| 1 P—K4 | P—K4 | 12 B—R5 | Q—Kt3 (7) |
| 2 P—KB4 (1) | P—Q4 (2) | 13 P—K6 | P x P (8) |
| 3 Kt—B3 | B—KKt5 | 14 R x P | Kt—B3 (9 |
| 4 B—K2 | B x Kt | 15 B x Kt | P x B |
| 5 B x B | P x KP | 16 KR—K | O—O—O (10) |
| 6 O—O | P—Q5 (3) | 17 R x B | Kt—Q4 |
| 7 P—Q3 | P—QB3 | 18 R x P | P—B4 |
| 8 B x P | Kt—Q2 | 19 B—Kt3 | Q x P |
| 9 Q—Q2 (4) | Kt—K2 (5) | 20 Q—Kt5 | Q—Kt4 |
| 10 QR—K | Kt—KKt3 | 21 Q—K5 | Resigns (11) |
| 11 P—K5 | B—K2 (6) | | |

(1) The only really satisfactory opening at these odds.

(2) Without the QKt White can scarcely play P x QP, and there seems no better continuation than that adopted.

(3) B—B4 (ch.) would, of course, have been much better. As it is the P at Q5 becomes a source of strength for White.

(4) One of those positions where the best move is very hard to find. With the text move White decides on complete development before an offensive.

(5) A present of a move, as it will now take two more moves to develop the B.

(6) Kt x B would be no better.

(7) Intending to Castle on the Queen's side, but it is too late. Castles should have been played, when there would probably have followed 13 B x Kt, RP x B 14 P—K6 Kt—B3; 15 P x P (ch.) R x P; 16 R—K6, and should win.

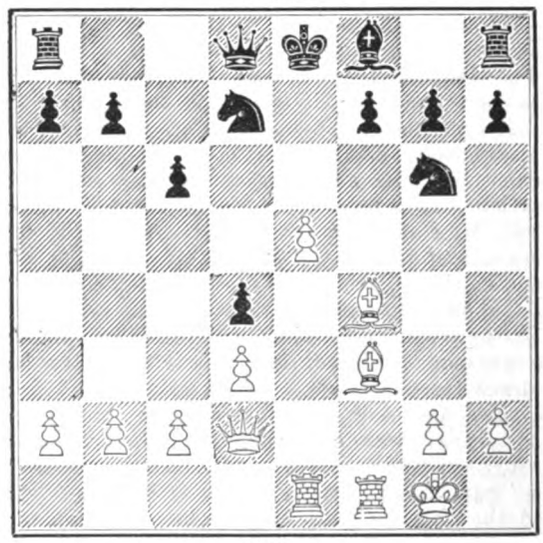
(8) If Kt—B3, 14 P x P (ch.), K x P, 15 Q—K2, KR—K, 16 Q—K6 (ch.), K—B, 17 B—Kt5 P—B4 (if 17 . . . . B—Kt5, 18 R x Kt (ch.) P x R, 19 B—R6 mate), 18 Q—B5 followed by B x Kt (B3) and P—KKt4.

(9) Losing a piece, but Black had to submit to immediate loss of some material, the only question being what. At this point Black probably had a lost game, whatever was played.

(10) If 16 . . . . Kt—Q4, 17 B—Q6 Q—Q, 18 Q—Kt5.

(11) A neat finish.

Position after White's 11th move, P-K5.
Black.



White.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The trade outlook in Egypt seems rather better. There appears to have been a very general anticipation that there would be a bad "slump" there, and in preparation traders endeavoured to reduce their commitments. The latest message from our Correspondent, however, refers to the return of a slight tendency to confidence, and states that "the bigger business men are optimistic enough to expect a big volume of general business in the late autumn or early winter." A factor in the situation that cannot fail to arouse apprehension is the extraordinary congestion of goods at the docks at Alexandria to which our Correspondent referred last week. In his opinion, there is between two and three million pounds' worth of merchandise there. Obviously, until a very considerable portion of this has been absorbed, the trade position is bound to remain somewhat obscure.

***

A much more cheerful picture can be derived from a study of the figures for Egypt's trade for the first four months of the current year which are dealt with by our Correspondent this week. For April remarkable figures were recorded, the imports amounting to £E8,446,361, and the exports to £E5,199,927, making the imports for the four months £E28,991,541, and the exports £E55,755,593, as against £E12,340,611 and £E17,451,021 for the corresponding period of last year. The balance of trade in favour of Egypt was thus at the end of April £E27,539,526, which, our Correspondent points out, "added to the total recorded for the previous four years brings the credit balance in Europe well into nine figures." In the face of these statistics there is clearly no reason for undue anxiety should the Egyptian market undergo a temporary period of depression, for the country now has adequate resources behind it to assure its rapid recovery.

***

Another possible opening for British trade in Morocco has been brought to my notice this week. A contract for the construction of two suspension bridges over the rivers Yquem and Cherrat between Casablanca and Rabat was secured by a French firm, but while the masonry work has been completed it appears that the steel structure has not yet been undertaken, because it has been impossible to secure the necessary steel cables. Obviously there is an excellent opportunity for some enterprising British firm to step in and offer to supply the required material. I should be glad to give readers of these columns further particulars on request.

***

Mr. E. C. D. Rawlins gives a most encouraging picture of the outlook for British trade with Greece in his review of the commercial and industrial position in that country during the past year, a summary of which will be found elsewhere in these columns. Conditions during the war brought the two countries closer together, and enabled the Greeks to become more closely acquainted with British goods, while last autumn the Athens Exhibition gave British manufacturers an opportunity to bring their products before Greek buyers in most favourable conditions. The Greek traders, Mr. Rawlins points out, are more than ever well-disposed towards British manufacturers "on account of the traditional reliability of their quality," and provided British traders are not lacking in enterprise, it may be anticipated that there should be a great increase in trade with Greece in the next few years.

***

If, however, this is to be the case, British trade methods will have to be modified in some respects. Mr. Rawlins states that complaints have been made by Greek merchants of the conservatism of British manufacturers. This is an old shortcoming, to which I have drawn attention time after time. Obviously, unless the requirements of any particular market are carefully studied and efforts made to meet them, permanent success cannot be looked for. One cannot dictate the tastes of another country. It is the same as regards local trade conditions, in which connection Mr. Rawlins states that British traders must learn to give facilities to their clients in the matter of quotations. To quote goods ex factory or f.o.b. conveys nothing to the Greek merchant, he points out; what is desired being the cost of the goods delivered at the Pirœus, Patras, or Salonika.

***

The question of the representation of British firms in Greece is the subject of interesting comment. The appointment of a local agent with exclusive rights over the whole of Greece or a certain portion of it is, Mr. Rawlins states, the most efficient means of representation for British firms. "There are many reliable Greek and British firms here," he remarks, "possessed of a fair capital, who are anxious to obtain British agencies. Since the war a good many British firms have opened up offices here for the purpose of representing British manufacturers. As these firms mostly possess competent native travellers, and are in close touch with the requirements of the market, this would undoubtedly appear to be the most practical means of representation for British firms in this market."

***

This year the British Industries Fair was held simultaneously in London, Birmingham, and Glasgow, an arrangement which has disadvantages as well as advantages. A joint committee of the Board of Trade and the Department of Overseas Trade, together with representatives of the Birmingham and Glasgow sections of the Fair, has been appointed to inquire whether it would be better to hold the Fair in future at one centre, and if not, what centres should be selected. Other matters to be investigated are the inclusion of additional trades, and the holding of an autumn as well as a spring Fair.

***

There is, in my opinion, no doubt that it would be much preferable to hold the Fair at one centre. But there are certain very obvious difficulties to be overcome. Where, for instance, is a building to be found to house all the exhibits? This year's exhibition at the Crystal Palace, representing for the most part small and easily handled commodities, was a gigantic affair in itself, and as I have very good reason to know, a comprehensive visit to it was no light physical undertaking. At least three times the space would be required if the Fair is to be concentrated in one place, and that would certainly entail the construction of a special building. This is scarcely the time for such an enterprise, and it seems on the whole better to follow this year's precedent and to adhere to a number of centres.

***

Despite the effects of last year's disturbances, the Egyptian Delta Light Railways is able to show fairly satisfactory results for the twelve months ended March 31. The gross receipts amounted to £406,696, as against £366,043, there being an increase of £38,250 in coaching receipts, though goods receipts showed a slight decrease. It may be noted that during the period the increases in rates authorised by Government came into force. The increase in gross receipts was, however, more than counterbalanced by the increase in working expenses which rose from £195,194 to £257,683. Including £89,127 brought forward the total available balance is £251,447. It is proposed to place £20,000 to the reserve, to pay a dividend of 5½ per cent. on the preference shares, and to carry forward £93,273.

## EGYPT.

CAIRO, June 23.

### Increasing Trade Balance.

April was another phenomenal month for the trade of Egypt, imports amounting to £E8,446,361, and exports to £E5,199,927, as against £E1,959,796 and £E1,617,164 respectively during the corresponding month of 1919. As a consequence, imports for the four months of the current year now total £E28,991,541, and exports £E55,755,593 as compared with £E12,340,611 and £E17,451,021 during the same period last year. Re-exports are slightly less, but transit trade has risen from £E2,529,711 to £E3,858,962. Thus the balance of trade in favour of Egypt goes on increasing. On the year it is so far £E27,539,526, which added to the total recorded for the previous four years, brings the credit balance in Europe well into nine figures. So soon as the political situation is cleared up and the shipping difficulties are overcome, there should therefore be a very good time for foreign and, let us hope, British manufacturers, though at the present moment there is a slump in the Egyptian market owing to the exorbitant prices charged by, and over-speculation on the part of, many importers.

The principal imports have been barley £E71,696, potatoes £E114,318, wheat flour £E414,961, oranges £E168,311, sugar £E1,185,347, coffee £E602,224, wine £E159,404, coconut oil, £E208,105, kerosine £E739,645, oil fuel £E312,167, lubricating oils £E111,663, paper and printed matter £E650,840, timber £E508,896, coal £E669,064, nitrate of soda £E628,244, household soap £E254,464, matches £E137,340, cotton yarn £E594,421, cotton piece goods £E7,618,664, cotton hosiery £E553,731, woollen and worsted cloths £E779,067, silk yarn £E284,542, silk cloths £E713,974, iron and steel bars £E162,884, iron and steel rails and fittings £E131,936, motor vehicles and chassis £E240,227, copper and brass sheets £E227,468, and tobacco £E1,009,469.

As regards exports cotton, of course, overshadows everything else. In point of fact, it accounts for over 90 per cent. of the total, i.e., £E51,591,448, out of £E55,755,593. The other principal exports during the four months have been eggs £E285,259, hides and skins £E352,131, rice £E128,667, cottonseed £E1,244,976, cotton cake £E273,007, onions £E254,389, sugar £E382,903, cigarette paper £E71,666, and cigarettes £E307,978. The main re-exports have been kerosine, coal and textiles, mostly to Palestine and Syria.

Almost every item under both imports and exports shows an increase in value, but in many cases there is a marked decline in the quantity, or a wholly disproportionate increase in volume. As examples I would quote wheat, which increased by £E51,330, or 15 per cent., but fell off by over 3,000 tons, or 30 per cent., cotton piece goods which quadrupled in value, but only increased by a little over 150 per cent. in quantity, and cotton yarn which showed a similar rise in value, but only increased by 175 per cent. in volume; while under exports, of course, we have cotton, which rose from £E14,000,000 to over £E51,000,000, but of which only 2,380,000 kantars against 1,747,000 kantars were exported.

Of the enormous increases in value the United Kingdom took its share, though the figures are more satisfactory under imports than under exports. Thus of the former, just under half went to Great Britain, as compared with 38 per cent. last year, while of the exports she only took 40 per cent., against a previous 50 per cent. The decline in the proportion of exports is due to the larger purchases of cotton made by the United States, which took over one million kantars, against but 250,000 the previous year, while Great Britain's purchase only increased a fraction, and in fact fell below that of the States, who top the list both for cotton and for total exports. It is interesting to note that the bulk of the motor vehicles and cycles come from across the Atlantic, and that Italy is steadily increasing her share of the cotton piece good trade.

Trade between Egypt and the Sudan is steadily improving. Imports into Egypt during the four months increased from £E635,107 to £E1,166,456, and exports to the Sudan from £E864,325 to £E1,320,389. The main items under imports were livestock £E372,775 (85,000 head against 52,000 head), hides and skins £E64,505, sesame £E307,943 (6,500 tons against 2,900 tons), ground nuts £E100,185, charcoal £E41,422; while those under exports were cereals £E62,065, sugar £E338,589, coffee 106,696, textiles £E402,832 and tobacco £E78,269, all of which show substantial increases over the corresponding period of 1919 and illustrate the greater purchasing power of the Sudan.

### The Outlook.

In last week's notes I mentioned that the commercial situation in Egypt was quiet—almost ominously so. During the week I have been in touch with the directors of some of the bigger firms, and I am informed that things are no worse than they were then. The decline in cotton prices seems to have stopped. Prices have reached a more stable level in the neighbourhood of 100 dollars per kantar, and the general expectation is that this may be taken as a basis for future dealing. Though this is yet by no means certain, it is regarded as extremely likely, and the last few days have seen a slight tendency towards confidence. If the Bourse stabilises, the recovery of the whole country will be speedy. Egypt is in such a position to-day that it has wonderful recuperative commercial qualities, and the present slump will have had the effect of inculcating necessary caution. The summer season here is always more or less quiet, and the bigger business men are optimistic enough to expect a big volume of general business in the late autumn or early winter. Perhaps the strongest evidence in favour of the wide confidence in commercial potentialities in Egypt is the number of new firms which are still springing up. Many of them, with headquarters in Alexandria, are backed by capital from reputable quarters at home, and are steadily forging links in that already strong commercial chain which links this country to Great Britain. The Canadian Trade Commissioner for the Near East has been touring the country, and in a recent interview he expressed satisfaction with the prospects of business between Canada and Egypt.

## ROUMANIA.

BUCHAREST, June 29.

### The Petrol Distribution Monopoly.

As reported in my last week's letter, the alarm caused by the publication of the recent Decree-Law giving a monopoly for the distribution of petrol in Roumania to a new private society has gradually subsided, and on Sunday, June 27,

# SWEDISH ORIENT LINE.

*TELEGRAPHIC ADDRESS: LEVANT.*

Digitized by Google

the *Independence Roumaine*, published an official statement on the subject by the Minister for Industry and Commerce, which runs: "In reply to the alarmist rumours that have been circulated in regard to the application of the decree-law on the home distribution of petrol, the Ministry of Industry and Commerce wishes to state that the disposition for the transference to the State of the depôts and means of transport refers only to such installations as are necessary for the distribution of petrol products within the country, of which the State's right of purchase is, for the most part, recognised by agreements with the various private societies. These dispositions, however, do not extend to means of transport which are used for petrol exploitation properly so-called, all of which remain intact as the sole property of the various petroleum refineries."

**Railway Receipts.**

Provisory figures have been published of the takings of the Roumanian State Railways during the year 1919-1920. They are as follows: For passenger traffic, 138,978,695 lei; luggage, 10,281,210 lei; goods, 128,911,444 lei; various, 13,908,571 lei; making a total of 292,080,020 lei. The following estimate has been made for the year 1920-1921: Passengers, 555,915,000; luggage, 41,125,000; goods, 515,646,000; various, 55,634,000; total 1,168,319,979 lei. Local fares are to be increased by 50 per cent. as from July 1 this year.

**Effect of Storms.**

As reported last week, extremely heavy rains have practically devastated several districts during the past month. From the Slanic Valley it is reported that the river has carried away some of the wooden houses. The bridge of Cernatesht has been destroyed, and many of the roads are impassable. It is feared that many bodies will be found when the water recedes.

**Orient Express Route.**

The Simplon still takes the route by Predeal, as the Olti Bridge is not safe. It is reported in to-day's Press that application has been made to Paris from Bucharest, Vienna, and Prague for permission to run the Orient express via Vienna, Prague, Salzburg, and Strassburg. This would be a great convenience to travellers, for the discomforts of the Trieste route are growing weekly greater.

## GREECE.

ATHENS, July 3.

**Paris-Salonika-Athens Express.**

A regular railway service three times a week has been inaugurated between Paris and Athens via Salonika. The first through train left the French capital on July 1. The duration of the journey is at present 120 hours, but it is hoped that as soon as the lines in Serbia have undergone certain necessary repairs the whole journey will be effected in about 90 hours.

## BULGARIA.

SOFIA, June 21.

**The Budget.**

The Budget estimates provide for a revenue of 1,200,000,000 levas, and an expenditure of 2,000,000,000, there being thus a deficit of 800,000,000 levas. To meet this the Government is to take drastic measures to curtail the expenditure of the various Ministries. In this way it is estimated that from two to three hundred million levas can be saved.

**Export of Cereals.**

The Consortium has concluded a contract with the representatives of the Polish Government for the sale of barley, millet, rye, and maize to the value of 14,000,000 francs.

A representative has arrived here from South Russia to purchase cereals for the Russian Volunteer Army fighting against the Bolshevists.

**Miscellaneous.**

Hitherto the Ministries of Agriculture, Commerce, Public Works, and the Interior, have dealt with water power, but henceforward the functions of these four Ministries are to be concentrated in a branch of the Ministry of Public Works.

The damage done to the crops in the neighbourhood of Provadie by the recent flood is estimated at 30 per cent. If the rains continue much longer the harvest in general will be seriously affected.

The service of trains between Belgrade and Constantinople is to begin on July 2.

## TRADE WITH ROUMANIA.

### Lord Bessborough on the Outlook.

The Earl of Bessborough, K.P., C.V.O., C.B., presiding at the recent annual meeting of the British Roumanian Chamber of Commerce, in moving the adoption of the annual report of the council for the twelve months ended May 31, 1920, said that since he had the honour of addressing the members last year the boundaries of Roumania had been definitely settled by the Peace Conference, and Greater Roumania was now one of the most important countries in Europe, comprising within its borders large areas of very fertile agricultural land and also mineral wealth which awaited further exploitation. There were, in addition, a certain number of established industries, and what was perhaps most important of all a rapidly increasing population. These factors ensured that Roumania would continue to be an importer of manufactured products with a potential purchasing capacity of increasing importance. Roumania was now one of the countries included in the Board of Trade's Export Credits Scheme, and he had no doubt that so long as the present uncertainty in the international exchange situation continued, the facilities that this scheme offered would be much more largely availed of than they were at present as they became more familiar to the trading community. When addressing the members last year he had said he believed there would be a good opportunity for British business with Roumania in the future, and he was happy to say that so far as the year under review was concerned his remarks had been justified, as the business done with this country had been considerable. There was, of course, plenty of room for further development.

He referred to the British Chamber of Commerce recently established in Bucharest, which he was informed was proceeding with the creation of a Court of Arbitration, which should be of assistance to British trade. With Chambers of Commerce open in London, and Bucharest specially dealing with Anglo-Roumanian trade, and a Court of Arbitration in being in Bucharest, the facilities afforded for trade between the two countries should be excellently cared for, and they had every reason to hope that business would continue to develop satisfactorily. While the conditions of trade in general and those of Roumania in particular had not called for any action of an exceptional kind during the past year on the part of the Chamber, he reminded the members that apart from the circulation of reports and dissemination of news of interest to them, the Chamber had from time to time considered the conditions of trade between this country and Roumania, and was ready at any time to take action should such a course be considered advantageous to the commercial relations of the two countries.

The annual report was adopted and the officers unanimously re-elected.

# BRITISH CONSULAR REPORTS.

## I.—GREECE.

The report of Mr. E. C. D. Rawlins, Commercial Secretary to H.M. Legation, Athens, on the commercial and industrial situation of Greece in 1919, which has just been issued, gives a promising account of the economic progress of the country during the period of reconstruction. Greece, it must be remembered, was handicapped by a practically continuous state of war from 1911 to 1919, and the end of the war might have been expected to leave her more exhausted than many of the other countries involved. "Contrary to this expectation, however, Greece was, at the close of the year, in the sense of the individual, fairly prosperous. Many large fortunes had been made during and subsequent to the war, in commerce and shipping, and the long period during which the French and British troops were stationed in various parts of Greece left a great deal of money in the country."

### Growth of Industry.

"Industry in Greece made very considerable progress subsequent to the signing of the Armistice, and a very considerable number of new factories were in course of erection or were projected. Amongst these were cotton spinning factories, wool manufactories, soap factories, oil mills, flour mills, etc., etc. The leading industries, however, are the tanneries and soap factories, of which there are more in Greece than of other industries, and the greater part of the raw materials necessary for the carrying on of these industries are imported from abroad."

"During the latter part of the war, and until some time after the signing of the Armistice, many important factories in Greece were unable to carry on at their regular output, or were obliged to shut down altogether owing to the shortage of fuel. A certain number managed to keep going in an unsatisfactory manner by using a mixture of wood and lignite. Amongst other results of the shortage of coal, may be mentioned the greatly reduced supply of electric power, which was cut down to an absolute minimum for lighting requirements, and current for industrial purposes was for some time only supplied by the Athens Power Station to such concerns as were absolutely necessary. Consequent upon this, a good many flour mills at the Piræus were obliged to suspend work. A further result of the coal shortage was the shortage of gas. There had been no gas available for domestic or industrial purposes since 1916, practically to date, with a consequent disappearance of coke from the market."

### Trade Expansion.

During the year Greece afforded a much larger field than before for British trade and enterprise. "The war gave the Greeks an opportunity for making the closer acquaintance of the British in general and of British goods, and the prolonged presence of the British troops in her territory and of British ships in her ports and around her coast, created a certain amount of unconscious propaganda, with the result that the Greek traders became exceptionally well-disposed towards Great Britain, and were prepared, on equal terms, to give her the preference in trade. The Exhibition of the Federation of British Industries, held in the Zappeion at Athens from October 19 until November 23, gave British manufacturers the opportunity of bringing their products to the notice of Greek buyers."

"Imports into Greece, following the relaxation of the restrictions in force during hostilities, went up by leaps and bounds. Towards the end of 1918, and early in 1919, Greece was drawing most of her supplies, outside of wheat and coal, from Spain, and very considerable quantities of textiles and comestibles were imported from that country. Large quantities of goods were stored in anticipation of increased prices, and on the signing of the armistice with Germany, rather earlier than was generally expected, and the cessation of the submarine campaign, and consequent re-opening of the European and American markets of supply, together with the depreciation of the peseta, the interested merchants were faced with a very heavy loss; but on the subsequent opening of the Dardanelles a large portion of these goods were disposed of to Roumania and Southern Russia, thus avoiding heavy losses for the commercial communities of Athens and Piræus."

"After the signing of the armistice, it has to be admitted that the United States was first in the field of the Greek market with her industrial products, as was perhaps to be expected, owing to the lesser degree in which her industries have suffered owing to the war. In the early days after the armistice, a string of American Shipping Board controlled steamers arrived in Greek ports with general cargoes for the Greek markets, principally composed of foodstuffs, textiles, small manufactured and fancy goods, boots and shoes, kitchen utensils, some agricultural machinery, and a good many motor vehicles. Owing to the inflated prices ruling on the arrival of these goods, and the ready market they found, the American exporters should have found their enterprise to be profitable. In certain parts of Greece, Italy led the field in imports, and she made strenuous efforts to retain her hold. Later on, however, British goods, as the productive power of British factories recovered from their enforced cessation of work owing to the war, again obtained the lead in the Greek market."

### Attitude towards British Goods.

"Greek traders at this time were more than ever well-disposed toward British manufacturers on account of the traditional reliability of their quality. During the war, however, and immediately following the armistice, Greek merchants complained that the quality of British goods was not what it used to be. They complained principally of lack of finish of the articles. They further complained of the conservatism of British manufacturers, who refused to go out of their way to study the requirements of foreign markets. If we are to maintain our trade supremacy, it will be necessary for British merchants to remedy their shortcomings in this respect, and to study carefully the requirements of the markets they are catering for. Quality and finish must be maintained, and consideration must be given in the manufacture to the particular requirements of the country, due to climatic conditions and custom. Further, in order to be successful, British traders must learn to facilitate their clients in the matter of quotations. It is not sufficient to quote goods at a certain price ex factory or even f.o.b. This conveys nothing to the Greek merchant. What he wants to know is what the goods will cost him, delivered at Piræus, Patras, or Salonika. Then he knows where he stands, and is free to make his calculations accordingly and go ahead with his business. Every effort should be made therefore by merchants to quote prices c.i.f. at a Greek port wherever possible.

"It may be said that the commercial and industrial potentialities of Greece are at present in the earliest stage of their development. Greece has never had an opportunity of developing Macedonia, and numerous schemes have been projected for the erection of mills, waterworks, and irrigation schemes, and the Greek Government is giving very serious attention to the development of the agricultural resources of these new provinces."

The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 31·30 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10% primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅓ of a yard, stremma = ·242 of an acre.

# THE RUPEE EXCHANGE PROBLEM.

(From a Correspondent.)

On all sides one hears adverse comments upon the apathetic attitude of the India Office towards the recent slump in exchange. Unfavourable criticism might reasonably be expected from shippers to India whose customers will suffer by the fall in the value of the rupee, but there is a much larger body of others with interests in India who view with misgivings the drop to 1s. 9d. There can be no question that the adoption of the currency commission report implied that Government committed themselves to maintain the rupee round about 2s., but so far they have been sitting on the fence.

It may be of interest to review the fluctuations which have taken place since the report was published. When it was announced last February that the rupee would be linked with gold the Indian Government offered to sell Reverse Council Bills in India at the gold equivalent, and exchange was pushed up to a new level. Reverse Councils were sold at 2s. 10⅞d. in early February, but banks' selling rates never reached the Government rate, and were generally twopence to threepence lower. Rates gradually fell, in spite of weekly offerings of Reverse Councils to the extent of £1,000,000, and the fall appears to have been arrested at about 1s. 9d.

The question which came uppermost in the mind of the commercial community was why Government persisted in selling Reverse Councils so far above the market rate when no necessity was apparent to establish such an inflated exchange. The only reason given was that the sales were meant to check any possibility of forcing rates beyond gold point, a very remote probability, which was entirely dissipated as the weekly sales progressed.

The concession was of no help to trade; tenderers only received 1 per cent. of their applications, sometimes less, and speculators in exchange were the principal people to reap any advantage. The Indian Government now appears to be under the impression that the present lower rates should stimulate an activity in exports, which would stiffen exchange and thus raise the rate to nearer 2s., but any acquaintance with existing trade conditions puts that probability out of sight for the present.

Exports of hides and skins from India have practically ceased, and the markets on this side are so glutted that Madras shippers have suspended shipments for several months. At this time of the year food grains should be on the move from India and wheat from the Punjab. Reports of the seed crops indicate a large surplus, but exports of foodstuffs are prohibited. The wheat crop is the best since 1916—according to the latest estimate, it is upwards of 10 million tons—but Government has imposed an embargo on exports until September. Even then it may be safe to assume that the restrictions will only be removed provided the local price of wheat in India falls to a level which will enable the native population to be supplied at a reasonable price.

Although it is beyond a doubt that more people in India are eating wheat in preference to the cheaper grains, it is estimated that the amount available for export may be as much as 250,000 tons, and it requires no stretch of imagination to realise what a relief this would be to the Mother Country in the present scarcity and the high price of bread.

It will thus be apparent that the rupee need not rely upon exports for support at the moment, and the demand for jute two months hence will be the first factor to influence the exchange. Much, of course, will depend on the monsoon. Should it be patchy and lead to a scarcity in exportable products, is there any reason to assume that exchange may not fall still further unless Government adopt a more strengthening policy? It has to be admitted that the trading community have little faith in the stability of the rupee. Government's sales of Reverse Councils since February amount to about £30,000,000, and have been of little benefit to trade. These drawings on London have so depleted Government reserves that should they be forced later on to sell more freely in order to maintain exchange near 2s., the provision of the necessary funds may put them to some inconvenience. The outlook is not assuring, and merchants and bankers would appreciate an indication from Government as to what policy they intend to adopt in order to stabilise the exchange.

---

The traffic receipts of the Smyrna-Aidin Railway for the week ended June 26 amounted to £8,634.

H.M. Vice-Consul at Meshed states that, if United Kingdom manufacturers interested in trade with Persia would care to forward him copies of their catalogues, he would be pleased to undertake their distribution amongst local importers. They should be addressed to H.M. Vice-Consul, British Vice-Consulate, Meshed, Persia.

# LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

The position of sellers in the market during the past week has not really improved, and although in some sections the tone has been rather better, there has not been any definite increase in the amount of business passing. The opinion is gaining ground that some of our customers will be forced to purchase more freely before very long. Owing to the trade slackness, however, prices still tend to ease, and there is always hesitation in buying in a falling market. A steadier feeling has shown itself in Egyptian cotton prices. Many people are scarcely of opinion that bottom has been reached, and it is asserted that if crop advices continue encouraging, there will be a further drop in values. The plants, however, are said to be doing remarkably well. Favourable progress is also being made in the American cotton belt, and the yield next season will probably be much larger than anticipated a couple of months ago. In Egyptian yarns demand continues very quiet, but prices are certainly on a more reasonable level than a little time ago, and there is a possibility of more buying in the near future. Numerous spinners are in urgent need of relief, and now and again prices are cut in order to sell. In piece goods for Egypt there has been no activity whatever. Large quantities of cloth have still to be shipped, and there is some hesitation in taking deliveries. The political situation in the Near East still causes some anxiety. Excellent news has been received relating to the monsoon rains in India, and a revival of demand seems inevitable in the near future as exchange is now improving steadily, but, so far, bids have not been workable. Operations for China continue very restricted. Only occasional lines have been put through for South America. Some Burnley manufacturers have sold a little more freely at low rates. American yarns have continued dull of sale, and spinners are losing their margin of profit rather rapidly. Scarcely anything at all has been done in shipping yarns.

# SHIPPING INTELLIGENCE.

## Forthcoming Sailings.

The Cunard s.s. Pavia, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Salonika, and Constantinople, will close for cargo at Manchester on July 17, and at Liverpool on July 24.

The Papayanni (Ellerman Lines, Ltd.) s.s. Bosnian, for Malta and Alexandria, will close for cargo at Liverpool on July 17.

The Bibby Line s.s. Lancashire, for Rangoon, will leave London on July 23.

The Harrison Line s.s. Tactician, for Calcutta, will close for cargo at Liverpool on July 22.

The Anchor Line s.s. Elysia, for Bombay, will close for cargo at Liverpool on July 22.

The R.M.S.P. Co. will dispatch a steamer from London to Gibraltar and Morocco on July 21.

The Johnston Line s.s. Wingate, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will close for cargo at Liverpool on July 17.

The Johnston Line s.s. Norton, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will close for cargo at Liverpool on July 27.

## ENGINEERING.

### An Improved Type of Pulley.

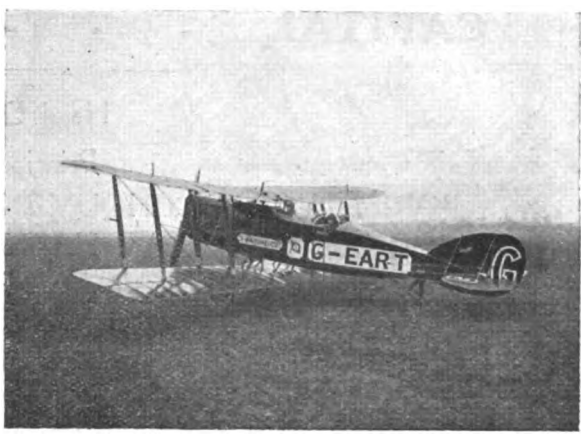
During the war there was a marked tendency on the part of engineers to operate machine tools at higher speeds than usual; and, indeed, practically all machinery was worked at a specially high speed. As a result of this it was found in many instances that the old type of cast-iron pulleys generally used would not stand up to their work so well as expected, whilst wood pulleys of the built up type frequently failed. Flaws were found to exist both in the design and material of which the pulleys were constructed, and many engineering firms gave time and attention to the subject of designing a pulley which would be able to transmit heavy powers at high speeds without trouble. A well-known engineering firm have recently placed on the market a pulley designed in accordance with modern requirements and conditions, and it may be said that pulley design has now been brought into line with the rest of the improved industrial machinery of the day. The pulley referred to has interchangeable rims and shaft bushes, and gives a positive grip on the shafting without the use of keys, and so presents the advantages of adaptability and ease and quickness of fitting.

In construction the pulley consists of three essential parts —the clip for the shaft, the rim, and the balance weight, which also adds strength to the appliance. The rim is not made of cast or wrought iron or steel; but is, on the contrary, a removable band of high-grade steel which is extremely flexible, and has a good clean surface obtained by cold rolling. The ends of this band are flanged and drilled, with bolt holes through which steel tightening bolts can be passed to clip the band tightly on the centre portion of the pulley. This tightening gives a binding action which not only adds considerable strength to the pulley, but prevents it from bursting at high speeds.

The centre portion of the pulley is made in two halves of cast-iron, for which purpose a very high grade of white cast-iron is employed. It is made with four arms in the smaller and six arms in the larger sizes, two or three to each half. These arms are cast in what is known as a stream line section, which reduces air resistance to a minimum. The hubs of this portion are accurately machined to receive the shaft bushes, and are fastened together with two bolts on each side, which can be fastened with an ordinary spanner. The two halves are accurately machined and perfectly balanced before being assembled for sending out. The balance weight referred to is a small piece of accurately shaped steel which balances the weight of the stretching bolts and flanges used for tightening up the rim.

During the machining of the cast-iron portion of the pulley two grooves are turned round the edge of the cast-iron portion, and two corresponding ridges are pressed in the inner side of the steel rim during rolling. These accurately engage each other when the pulley is assembled, and prevent any side movement of the parts. The balance weight, which is a T-shaped piece of sheet-iron, is fastened to the opposite side of the pulley to the flanges and stretching bolts, and when the whole is bolted on the shaft it runs as truly and as accurately as a bicycle wheel.

In spite of its lightness, the pulley has proved to be possessed of more than sufficient strength for even the most exacting duties. Tests carried out to destruction at the factory have shown that the pulley will transmit high power at immensely high speeds, and will, in short, stand up to loads that could not possibly be given in commercial practice. The entire absence of rivets is a further point that makes for both strength and durability. Summarised, the advantages of the pulley are its lightness (due largely to the novel form of rim adopted) and the fact that it is practically indestructible. It can be fitted in a few seconds to any shaft, the only tool required being an ordinary wrench, and a pulley of as large as 4 ft. in diameter can be fixed in less than four minutes. The absence of keys, which is an important feature of the design, does not limit the use of the pulley to the transmission of light loads, as the grip obtained by the special form of hub on the shafting is ample for all powers likely to be met with. It may be mentioned that the rims and centres of these pulleys are interchangeable, as different sizes of bushes can be provided. This feature adds greatly to the general utility of the pulley, as changes can be made without any difficulty and without any fitting or other alteration to the pulley itself.



BRISTOL 3-SEATER TOURER.

### Motor Liners.

Hitherto, although large numbers of motor ships have been constructed, none of them have been built for passenger carrying. In view, however, of the proved economy of the oil engine, the British India Steam Navigation Company has ordered three large motor ships designed each to carry 150 passengers in addition to a full consignment of cargo. These vessels will have a speed of 13 knots, and will be equipped with two large Diesel engines of a new type which are now under construction on the Clyde. The total machinery power is over 5,000 h.p., and all the auxiliary plant is electrically operated. As the cargo capacity of each vessel will be 10,000 tons, some detailed accounts of their running costs will be awaited with interest.

### The Next Motor Show.

The forthcoming Motor Show will be in two portions, one of which will be at Olympia and the other at the White City, Shepherd's Bush. I am informed that the Society of Motor Manufacturers and Traders, the governing body responsible for the various shows previously held, have arranged that their members shall have full opportunity of participating in the mammoth display which is to form the first of similar exhibitions to be held at the White City in future. This innovation does not, however, stop with the motoring industry, as the re-opening of the White City buildings will inaugurate a still further series of exhibitions, representative of the various trades and industries of the country.

In the opinion of many the White City is the only site for such an enterprise. The locality, always a unique one, is

becoming, if anything, still better year by year, the thickly populated districts around it have been steadily increasing during the recent years, and the consequent additions in the network of tubes, tramways, and omnibuses, which have hitherto radiated from the site, signify that the facilities for getting to and from it are exceptionally good. Even now, though the place is closed, electric trains and trams pass its doors every few seconds, a fact which should make it extremely useful from the commercial point of view.

One need only to call to mind the three-quarters of a million persons who have in a day been brought to its entrances in comparative ease and comfort in order to appreciate the number that can be accommodated next November, when the new Tube and omnibus services will be in operation.

**Tourists' Cars.**

I am informed that the Automobile Association has instituted arrangements, through the medium of reputable firms, for effectivelv dealing with motor vehicles imported into or exported from Great Britain. The arrangements cover the unpacking of imported motor cars and the packing of motor cars for export, Customs clearance and dues, and payment of duties. Upon arrival at a British port cars are unpacked and promptly got ready for the road under the supervision of experts.

Details of these facilities, which should be of great use to foreign motor tourists visiting this country, may be obtained from the Touring Department of the Association, at the head office, Whitcomb Street, London, W.C.2., or from any of the provincial A.A. headquarters.

**Forging Furnaces.**

Furnace development has taken place of late at a very rapid rate, due, no doubt, to the big demand for metal and the general necessity for its heat treatment during the war. I have just received drawings and particulars of the Revergen system of gas firing, which is really a regenerative system which possesses many advantages. Previously the principle was only applied to closed furnaces for such work as case-hardening and annealing, but recently it has been found possible to apply it to open-mouthed furnaces for forging work. It is certain that by its use considerable fuel economies can be effected, and the output results are such as should extend considerably the use of gas as a furnace fuel in engineering works.

The furnace consists of an outer casing of sheet steel, which is bound by steel tie rods, channels and thrust blocks, so as to be of immense strength, and the body of the furnace is built up of specially thick Scotch firebrick. In the sides of the furnace a number of openings are provided through which the metal rods, etc., to be heated may be passed. A mixture of gas and air is admitted at the top of the furnace, and the exhaust gases are led away from the bottom. Town gas mixed with air under pressure is used for fuel, but there would appear no reason why producer or coke oven gas should not also be used with modifications of the fuel feed. Both gas and air are under control by individual valves, and extremely accurate means of adjustment are provided. Double recuperators are built in underneath the actual oven itself, and these have been the subject of considerable test and calculation in order to ensure that they are of the exact capacity, so far as science can tell us, to extract the maximum amount of heat from the escaping gases. This heat is not wasted, but is used in heating the air on its way to the furnace chamber, and it is this utilisation of what would otherwise be wasted heat which adds so considerably to the economy of the furnace.

It is interesting to note that the recuperators are not continually subjected to heat extraction, but that, on the contrary, they are worked alternately, a reversal taking place automatically and periodically, according to the temperature at which the furnace is working. The heat-absorbing materials are first heated by the escaping products and then cooled by the incoming air, which takes up their heat. Thus, whilst one heat reservoir is being cooled, the other is being heated by the escaping gases. It robs these of their heat and stores it up until such time as it in turn is required to yield it up to the incoming air blast. The continuance of the inversion process results in the production of an extremely high temperature, and the efficiency of this type of furnace is consequently remarkably high. The makers, in fact, guarantee a saving of 33⅓ per cent. of fuel as compared with the usual practice, and figures have been obtained on test that show a saving of one-half when compared with the production of forgings by the use of a coal-fired furnace.

**Quick-setting Cements.**

It appears that if a small percentage of dry chloride of lime is added to cement, or if a quantity of this is dissolved in the water with which it is to be mixed, the result is that the cement sets with extreme rapidity. This was made use of in the war, when concrete heavy gun foundations were made and were ready for actual use in less than three days.

The question has been raised as to whether cement or concrete made in this way would be as durable as that which had been allowed to set at a slower rate, and quite recently the results of some tests commenced rather over a year ago have been made public.

In view of the fact that quick-setting cements of the ordinary type are not all as permanent in character as could be wished, and with a knowledge that the engineering world would want some definite information to go on, these tests were instituted almost immediately after the chloride of lime theory was carried into practice. Laboratory samples of cement and concrete of various qualities were prepared and subjected to compression and other tests periodically. The results, which are for a 4 per cent. solution of calcium chloride used as mixing water, show that the effect is actually to increase the strength at all ages up to one year—the duration to which the experiments have extended to the present.

There seems no reason to doubt the accuracy of the tests or their far-reaching nature, and consequently it would seem that contractors for road building, public works construction, and the like, can shorten the time of building considerably. Concrete road foundations, for example, would be ready for the laying of the blocks or the carpet within a comparatively few hours, and not only would the work be expedited, but the inconvenience to the public and to traffic users generally would be lessened.

At the same time it would be well were the experiments continued, and I should like to see extended and exhaustive tests made by some representative body. My reason is that I have always understood that chloride of lime had a remarkably strong affinity for water; was markedly hygroscopic in character, and unless some chemical change takes place when it is mixed with the cement it would seem probable that its use would tend to make the concrete damp. I have an idea that damp concrete would tend to disintegrate. I may be wrong, but, at any rate, I should like to know that further research work was being undertaken in this connection.

# NEAR EAST MARKETS.

## Turkish Fruit Crops.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date July 1:—Stocks of sultanas and figs of the 1919 crop are practically exhausted. We now limit ourselves to supplementing the provisional estimates contained in our preceding reports by the more complete returns available of the final results of last season.

Sultanas.—Total production for 1919 about 29,000 tons. Distribution: Shipments to the United Kingdom about 14,000 tons; to the Continent about 8,000 tons; to the United States, Canada, etc., about 3,000 tons; local consumption, about 3,500 tons; stock remaining about 500 tons; total about 29,000 tons.

Figs.—Total production about 85,000 loads. Arrivals on the market, inclusive of hordas (inferior qualities used exclusively for distillery or manufacturing purposes), about 60,000 loads, equal to about 13,000 tons. Distribution: Shipments to the United States, Canada, etc., about 6,000 tons; to the United Kingdom, about 4,000 tons; to the Continent, about 2,000 tons; local consumption, etc., about 1,000 tons; total about 13,000 tons.

Red Raisins.—Total production in the districts of Vourla, Carabournou and Chesme about 2,100 tons. The bulk of this fruit was shipped to Continental markets.

Black Raisins.—This raisin before the war was shipped mainly to France and Germany for wine making. The estimated production last season mainly in the district of Tchal is estimated to have reached up to about 7,000 tons, but as Tchal lies in the area under Turkish occupation the bulk of the crop could not reach our market. It is estimated that about 3,500 tons in all were dealt in, being partly exported or used by local distilleries.

The Outlook.—Interest now centres on the prospects for the coming season. Weather conditions have been favourable and, generally speaking, qualities of our fruits give promise of great excellence, both as regards soundness and development. Estimates are as follows: Sultanas, about 27/30,000 tons; figs, about 80,000 loads; red raisins, 1,500-1,700 tons; black raisins, about 6,000 tons.

As pointed out in our previous report, agricultural progress and results are closely connected with the political situation, but unfortunately there can be no doubt that, from the latter point of view, the outlook is far from reassuring. The districts under Greek military occupation have enjoyed complete security during the past year, and the best results are likely to be obtained in these limited areas. But the whole country is in a state of war, and with every prospect of military operations continuing to extend, it is difficult indeed to venture on a forecast of what proportion of the ripening crops will be gathered and eventually reach our market.

It is our opinion, however, that we are likely before very long to see a material improvement, if not over the whole country, at least in this important province. The Greek forces are steadily advancing and bringing a larger area under their occupation, the Nationalists suffering severe reverses and being forced to withdraw.

It is generally recognised that the attitude of the Greek military and civil authorities has been exemplary, and the confidence of the native population is thereby increased, with the result that the produce of a larger extent of country will be available for transport to Smyrna this autumn. On the whole, we are confident that the present uncertain situation is not likely to continue much longer, and so far as our province is concerned we are hopeful that the conditions which will obtain this season will be better than those of twelve months ago.

# COMPANY MEETING NOTICES.

## New Egyptian Company, Limited.

Notice is hereby given that an Extraordinary General Meeting of the New Egyptian Company, Limited, will be held at Winchester House, Old Broad Street, London, E.C.2, on Wednesday, the 28th day of July, 1920, at 12 o'clock noon, for the purpose of considering and, if thought fit, passing in manner required for passing an Extraordinary Resolution the subjoined Resolutions:—

RESOLUTION I.

(1) That on and from the 1st September, 1920, the whole of the business of the Company except such formal parts of the business as are by the Statutes for the time being applicable to this Company required to be transacted in England or at the Registered Office of the Company for the time being, shall be transacted, controlled, managed and conducted in and from Egypt as the Company may from time to time in General Meeting determine, and that for this purpose all General Meetings and Meetings of the Board of Directors except so far as otherwise required as aforesaid and all class Meetings of Shareholders shall be held in Egypt, and all references to the Board or to the Directors or to the Company in General Meeting contained in the Memorandum and Articles of Association of the Company shall as regards all matters other than those required as aforesaid to be transacted or conducted in England at the Registered Office of the Company as aforesaid be held to refer to the Company in General Meeting and to the Board or the Directors whether sitting as a Board or otherwise assembled in Egypt, and all references to the Office shall save as aforesaid be taken to be to the Head Office in Egypt instead of the registered office of the Company.

(2) From and after the said 1st day of September, 1920, the majority of the Directors of the Company shall be ordinarily resident in Egypt.

(3) For the purposes of the transaction of such formal or other business as is, by the Statutes aforesaid, required to be transacted in England or at the registered office of the Company, the Board may under the powers conferred by Articles 98, 99, 100 and 101, appoint one or more persons so as to form, if thought fit, a local Board or Agency to act in England, but so that they shall act under the general control and directions of the Board assembled in Egypt, and the Board shall also appoint a Secretary and such other officers as may be from time to time required on such terms as they may from time to time think fit for the purpose of representing the Company for all purposes required by the Statutes and making the necessary returns and keeping the necessary books and registers under the general control and direction of the Board as aforesaid.

(4) For the purposes aforesaid the Board shall be and are hereby authorised to exercise all the powers conferred by Sections 34, 35, 78, and 79 of Companies (Consolidation) Act, 1908, and to keep a branch register in Egypt and the Board shall cause the principal register of members to be from time to time duly written up so as to contain all the entries made in the register kept in Egypt.

(5) All dividends that may be declared by the Company in General Meeting shall be declared only at a General Meeting held in Egypt, and shall be paid in and from Egypt, and all Preference and Interim Dividends declared by the Directors shall be declared only at Meetings of the Board held in Egypt and shall be paid in and from Egypt, and no part of the profits of the Company shall be transmitted to the United Kingdom except in payment of dividends to members ordinarily resident there.

All the existing regulations of the Company not consistent with the provisions of this resolution shall be and are hereby overriden.

RESOLUTION II.

That the Articles of Association of the Company be altered in manner following:—

(1) By adding the following words to the end of Article 43: "Provided always that until otherwise directed all general meetings of the Company shall be held in Egypt."

(2) By inserting between the words "Directors" and "shall" in Article 69 the words "the majority of whom shall have their ordinary residence in Egypt."

(3) By deleting the words "the United Kingdom" in lines 8 and 9 of Article 87 and by substituting therefor the word "Egypt."

(4) By adding to the end of the said Article 87 the words following: "Directors' Meetings shall be held only in Egypt and not elsewhere."

(5) By deleting the word "England" in line 2 of Article 93 and by substituting therefor the word "Egypt."

(6) By adding after the word "Seal" in line 1 of sub-clause (17) of Article 97 the words "in Egypt."

(7) By deleting the word "England" in line 3 of Article 98 and by substituting therefor the word "Egypt."

(8) By deleting the word "England" in line 3 of Article 99 and by substituting therefor the word "Egypt."

(9) By deleting the words "Registered Office of the Company" in line 2 of Article 102 and by substituting therefor the words "Head Office of the Company in Egypt."

(10) By deleting the words "the United Kingdom" wherever they appear in Article 124 and by substituting therefor the word "Egypt."

(11) By deleting the words "the United Kingdom" in Article 125 and by substituting therefor the word "Egypt."

(12) By deleting the last four words of Article 127 and by substituting therefor "two daily newspapers circulating in Egypt."

RESOLUTION III.

That upon the resignation of the following directors resident in England, namely:—Mr. Arthur A. Baumann, Sir Ernest Spencer, Sir Westby Perceval, and Mr. Thomas F. Dalglish, the sum of £12,000 be paid to them out of the funds of the Company by way of compensation for their loss of their said offices of Directors, such sum to be divided amongst them in such proportions as they may agree.

Should the said resolutions be passed by the requisite majority they will be submitted for confirmation as special resolutions to a further Extraordinary General Meeting and such meeting will be held on Tuesday, the 17th day of August, 1920, at the same hour and place, for the purpose of considering and, if thought fit, confirming such Resolutions as Special Resolutions accordingly.

Dated the 12th day of July, 1920.

By order of the Board,

THOMAS DAY, London Manager and Secretary.

Pinners' Hall, Austin Friars, London, E.C.

Shareholders who hold warrants to bearer are reminded that if they wish to attend and vote at either Meeting either personally or by proxy, they must, three clear days before the day appointed for the Meeting, deposit their Warrants at the Registered Offices of the Company, Pinners' Hall, Austin Friars, London, E.C.2, or at the offices of the Company in Alexandria, or at any of the principal Banks in Alexandria, a list of which can be obtained at the offices of the Company in Alexandria. Shareholders who have deposited Warrants to Bearer in Egypt and who desire to vote by proxy must lodge their proxies with their certificate of deposit of Warrants or cards of admission at the registered office of the Company in London forty-eight (48) hours at least before the hour of the Meeting.

## NATIVE WOOLS OF BULGARIA

There are three classes of wool produced in Bulgaria, classified according to their texture. There is the "Karnobat" wool, produced in Eastern Bulgaria, which is exceptionally soft and lustrous. This is used in the manufacture of the fine carpets of Bulgaria. It is said to be superior even to the Persian wool for that purpose. Then there is a good average quality of wool produced throughout Bulgaria having no special characteristics differentiating it from other wool. There is a third very coarse variety of wool produced by the sheep of the Roumanian nomads. There are no distinguishing trade names for these wools, although they are often called by the name of a town near which they are produced (says an American consular report).

Before the war the "Karnobat" wool and wool of similar texture sold at from 3½ to 4½ leva the kilo. The ordinary Bulgarian wool sold at from 2 to 3 leva and the coarse wool at from 1.60 to 2.50 leva. At the present time the average price is about 40 leva the kilo.

The tending of the flock and shearing methods in Bulgaria are primitive. In the southern part of the country sheep are pastured during the entire winter, which is mild, and are seldom fed. In other parts of Bulgaria where the winters are more severe sheep are fed on hay, and sometimes dried leaves and bran. Almost every Bulgarian peasant is a sheep owner, and much wool is used at home for domestic purposes. No peasant's wardrobe is complete without a sheepskin coat.

## HYDROELECTRIC POSSIBILITIES IN TRANSCAUCASIA.

The next few years will witness a great development in the utilisation of potential water-power for electrical purposes in Transcaucasia (says the American Trade Commissioner at Constantinople in a recent report). The mountainous character of the country and the proved mineral wealth are the two important factors that will make these undertakings commercially profitable. The total existing hydro-electric stations yield only 6,725 horse-power, although surveys have indicated that over 350,000 horse-power is possible. A report of leading engineers (hitherto unpublished) presents specific data on the region that covers, roughly, Russian Armenia and the *de facto* republics of Azerbaijan and Georgia.

The following stations have been started during the last twenty years:—(1) In the district of Zangezur, in the Government of Elisavetpol, on the River Orkhtchi-Tchai, to transmit the power to the copper works in the Katar region. (2) In the district of Bortchalo, in the Government of Tiflis, on the River Debeda-Tchai, for the needs of the copper works of Alaverdi. (3) In the province of Batoum, on different streams, to supply the needs of the works in Kvaizkhana, Dzantsul, and Khoi.

The electric power obtained is used specifically for different enterprises, for light, cables, aerial tracks, elevators, circuits, and for obtaining chemically pure copper. The capacity of each installation is not more than 1,000 horse-power.

Other installations were set up during the same time for lighting the towns of Sukhum, Batoum, Akhaltsykh, Akhalkalaki, and Erivan; the health resorts of Cagri, Borzhom, and Deligeance; the private estates at Tchakva and Ananoff, and the colonies of Elendorf, Georguievskaya, Ekaterinenfeld, and Novi-Aphon. These private installations adapted for lighting purposes have used only a fraction of the potential energy available.

## COMPANY NOTES AND REPORTS.

### Egyptian Delta Light Railways.

The report of the Egyptian Delta Light Railways for the year ended March 31 states that an aggregate of 559.79 miles are open and working. Gross receipts from coaching traffic were £261,989, compared with £225,739 for the previous year. The gross receipts from goods traffic were £153,315, a decrease of £820. Working expenses totalled £257,683, compared with £195,193. The balance carried to net revenue account is £149,012, which, with interest and dividends earned, £13,303, and with the balance brought forward of £89,127, gives a total of £251,447. After providing for interest on debentures and for all fixed charges, placing £20,000 to general reserve and making provision for the proportion of profits due to the Egyptian Government, £32,201, a balance of £150,516 remains. The board recommend a dividend of 5½ per cent. on the preference shares for the year, leaving £93,273 to be carried forward. Meeting, Winchester House, E.C., July 28, 12.30 p.m.

### Bank of Bombay.

The directors of the Bank of Bombay announce a dividend for the past half-year at the rate of 15 per cent. per annum, together with a bonus of 5 per cent. per annum and a special bonus of 2 per cent. per annum, all free of Indian tax, transferring to reserve Rs. 6,00,000, to depreciation on securities Rs. 3,00,000, to pension fund Rs. 1,00,000; carrying forward Rs. 4,48,723.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended June 26 :—The sales this week on our market amount to 12 cases of manufacturing qualities at piastres 1,000 to piastres 1,070 per oke as to quality, which is equivalent at to-day's exchange rates to 19s. 6d. to 20s. 10d. and 3.85 to 4.12 dollars per lb. c.i.f. The exchange to-day is piastres 400 per £1 sterling for cheque and one dollar for one Turkish paper pound. The arrivals are 1,740 cases against 695 at same date last year.

## INDIAN INTELLIGENCE.

This week's Indian cable states :—Widespread rainfall except in North-West Frontier, where local. General crop conditions good, but more rain required parts Western Bengal, Bihar and Orissa, United Province of Agra and Oudh, Punjab, Central Provinces, and Mysore. Bombay cotton market irregular. Fully good broach July-August Rs. 453. Piece-goods market no improvement with slack demand. Exchange still causing anxiety. Calcutta jute market quiet. Hessians quiet with prices falling and very little business passing. Heavy goods fairly steady, but quiet. Shellac position strong. Bank rate is Bengal 5 per cent., Bombay 6 per cent., Madras 7 per cent.

Piræus-Athens-Peloponnesus Railway Four per Cent. Bonds.—The Bank of Athens announces that Coupon No. 17, due July 14, will be paid on presentation at the Offices, 22, Fenchurch Street, E.C.

## ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Business has been on a very small scale this week,, and there is a certain amount of irregularity in prices; but the movements have in a general way been of an unimportant character. Some transactions have taken place in City of Alexandria Bonds round the current price. Egyptian Unified, after having been up to 69¼, are closing ¼ down at 68½, and the 3½ per cent. Prefs., after business up to 57½, are closing at 56. The Turkish 4 per cent. 1891 and 4 per cent. Unified loans are both one point up at 61 and 35 respectively. In Greek securities the 1881 and 1884 Loans, although nominally one point down at 56, are in good demand at this price. The 1902 Railway Loan has risen half a point to 46. The 1910 Loan has risen a similar fraction to 40½, and the 1914 Loan is one point up at 55½. On the other hand, Currant Bonds have dropped one point to 90.

In Bank shares Nationals have improved ⅛ to 19⅝ and Agriculturals 1-16 to 4⅜. Agricultural Prefs. are somewhat better at 5 3-16 xd. Agricultural Bonds are 2 points down at 61 and 63 respectively. Bank of Abyssinia shares have dropped ⅛ to 1¼, but, on the other hand, there has been a further improvement in Bank of Athens shares, which are ⅛ higher at 4⅛, and sellers very scarce.

In Railways, Ottoman Ordinary are one point down at 8, and Piræus Athens 3 per cent. have declined from 45 to 44.

In Land shares Aboukirs have been in demand, and are closing 6d. higher at 35s. 6d. Egyptian Consolidateds are again somewhat weaker at 2s. 7½d. Foreign Trusts are fractionally firmer at 13s. 3d. New Egyptians have been in continuous demand, and are closing 1s. higher at 34s. 6d. Sudan Plantations have advanced 3-16 to 4 7-16, and Union Foncières are 1-16 firmer at 4 9-16.

In Miscellaneous descriptions, Salts and Sodas, after being up to 2⅝, finish 1-32 firmer at 2 19-32. Khedivial Mails are practically unchanged at 5 17-32 xd. Morums have further sagged 3d. to 17s. 3d.

In Oil shares, Anglo-Egyptian B have again dropped 1-16 to 3 after being lower.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

### Egypt.

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200 metrical tons cotton waste. August 9. (L.)

Uniforms.—The Egyptian War Department invites tenders for Bedford cord pantaloons, khaki drill infantry and artillery frocks. Tenders will be received up to first post on Monday, July 26, and will remain open for 14 days. (L.)

Extension of Electrical Station of Zagazig and Belbeis.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the extension of the electrical station of Zagazig and Belbeis. Adjudication at noon on September 1. A copy of the specification, etc. (in French) may be consulted by British firms interested at the Enquiry Office of the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

Gas Piping, etc.—The Egyptian War Department invites tenders for the following:—(1) Gas Piping and Spares. Tenders returnable by noon on July 17. (2) Puggaree Khaki (45,000 yards). (3) Huckaback Towels. Tenders returnable by noon on July 20. (4) Saddlery. Tenders returnable by noon on July 21. (5) Blue Serge and Khaki Puttees. (6) Calico. Tenders returnable by noon on July 23. (7) White Canvas Shoes (Gymnastic). Tenders returnable on July 26. (8) Lining for Tarboushes. Tenders returnable on July 27. Tenders in the case of items (1) and (4) will remain open for 14 days; in all other cases they will remain open for seven days. (L)

## NOTES OF THE WEEK.

Persia, Mesopotamia, and Syria are all suffering badly, in one form or another, from the unrest that has been prevalent throughout the world since the war. Persia's troubles are chiefly and directly traceable to Bolshevism; those in Mesopotamia and Syria are due principally to the restlessness of the Arab character and to other causes in no way connected with Bolshevism, though Bolshevist agents are doubtless doing their best to foment them. The situation in Persia and Mesopotamia forms the subject of our leading article. Here we may glance rapidly at the latest developments in the troubled regions.

The Bolshevists have landed fresh troops at Enzeli and Meshed-i-Sar, but no trustworthy statistics regarding their strength south of the Caspian are available. Here, as elsewhere, they appear to be relying largely on their propaganda, and it would seem that they have achieved some measure of success; for Persian Bolshevists are reported to be showing activity in the region between the Caspian and Teheran, and some bands were stated at the end of last week to be within two days' march of the capital. At Menjil a Jangali band has attacked a patrol of British armoured cars, and has learned that such things are awkward opponents. On the other hand, a Teheran message of July 18 reports that the Bolshevist force at Sari was defeated by Government troops and driven out of the town. But, unfortunately, the set-back was a temporary one only, and the Reds reoccupied the town later. The Persian Government, naturally uneasy, have sent the Persian Minister at Rome to Moscow as a special emissary to treat with the Bolshevists, and have simultaneously requested the British Military Mission to suspend its labours until its Report, with the Anglo-Persian Agreement, has been submitted to the Mejliss. Incidentally, it may be mentioned that a Treaty is said to have been concluded between the Soviet Government and the Armenian Republic; and that Afghanistan is considerably agitated by fear of a Bolshevist invasion—India being the ultimate goal, of course. Upon the whole, it must be admitted that Persia's desire to parley with the enemy while he is at the gate—or, rather, before he gets too far past it—is quite comprehensible.

An important thing to note regarding the situation in Mesopotamia is the way in which news is held up when it is regarded as being unsatisfactory. The news of the train outrage between Baghdad and Sherghat, which we publish on another page, is a case in point. Why it should have been kept back we are at a loss to understand; for, given the conditions now ruling in Irak el-Arabi, and especially the exacerbated state of Arab feeling regarding the Mandate, such things are bound to occur; and the Administration would be well advised to recognise the fact and not attempt to lead the world to believe that the Garden of Eden has been resuscitated—without the Serpent. In the House of Commons last Friday Mr. Churchill stated that there is no reason to suppose that, if sufficient exertion is made, order cannot be thoroughly re-established in the country. That is far better than pretending that order has never been disturbed. How best order can be re-established and the country be helped along the path of progress which everybody wishes it to follow is another question. The facts that the situation on the Euphrates is still causing anxiety, that Rumeitha has had to be provisioned by aeroplane, and that our casualties since July 1 are reported to be 400 suggest that the question will not be entirely easy to answer.

As far as this country is concerned, news from Syria is at least as perplexing and as unsatisfactory as that from Mesopotamia. That General Gouraud is advancing from Beyrout with a strong force is clear, but whether he intends to halt at Rayak, or to press on either to Damascus or (less likely) to Aleppo is unknown. Similarly, it is impossible, at the time of writing, to be sure whether the Emir Faisal has actually set out for Europe, whether he intends to do so, or whether he means to stay and oppose any further French advance. General Gouraud has certainly sent an ultimatum to the Arab Government, but whether he actually demanded a French occupation of Damascus, as Arab reports state, is not certain. Not the least interesting of the reports in connection with these Syrian developments is that which has it that several members of the Lebanon Administrative Council have been arrested by the French authorities: according to the French version, because they had accepted bribes from the Emir Faisal to support him in Europe, but, according to an Arab version, because they wished to secure recognition of the independence of the Lebanon. Another report is to the effect that the French intend to depose Faisal and to replace him by Mohammed Said, whom the British were forced to deport owing to his intrigues. This it is impossible to believe. Possibly there has been once again some confusion over names; but, more probably, the rumour is merely the outcome of too active imagination.

The Allies' reply to the Turkish Note on the draft Treaty of Peace has been delivered, and Turkey has

Digitized by Google

been given up to July 27 to sign. Should she refuse, the Allies warn her that they will take such action as they may consider necessary in the circumstances. A Crown Council is to be held in Constantinople—by the time these lines appear it will probably have met—to decide between peace and the resumption of war that a refusal to sign would amount to; but there can be very little doubt what the decision will be. Turkey is in no state to renew hostilities, and it is evident that the Sultan, his Grand Vizier, and his Ministers recognise the fact. Doubtless they recognised it long ago, and made up their minds to bow to the inevitable; and in all probability their greatest anxiety at the present time is to know how the "Nationalists," avowed and secret, will regard their acceptance. A reconstruction of the Cabinet is to be expected in order that Damad Ferid Pasha may be freed from the embarrassment of doubtful supporters before signing.

The Turks will find but cold comfort in the Allies' reply. There are a few modifications in regard to minor points, but on the crucial points the Allies are obdurate: they "can make no modification in the clauses of the Treaty which detach Thrace and Smyrna from Turkish rule, for in both areas the Turks are in a minority." The same reason applies in the case of Syria and Armenia. As to the *régime* of the Straits, the Allies decline to modify the general terms, but they are willing to grant Turkey, "as a riparian Power, and in the same manner and conditions as to Bulgaria," the right to appoint a delegate to the controlling Commission. In conclusion, the Allies deny that the Treaty has the character attributed to it by the Turkish Delegation, and suggest that there is nothing in it to prevent the Turkish people from becoming a prosperous nation, if they reform their ways; but they also give warning that if the Turkish Government refuses to sign, and "still more if it finds itself unable to re-establish its authority in Anatolia, or to give effect to the Treaty," the Turks may be ejected from Europe "once and for all."

The Allies having taken their decisions and announced them, it would be unprofitable to discuss them further at this stage. It would clearly be unprofitable also for the Turkish Government to attempt to oppose them, and in the circumstances the best advice that any friend of Turkey can offer her is to sign, and to endeavour to surprise Europe by "reforming her ways" and "becoming a prosperous nation." She has, as the Allies once more point out in their latest note to her, brought her terrible misfortunes on herself, for she had only to maintain her neutrality in order to secure the integrity of her dominions. She chose the other course, and she must pay the price. But we venture to hope that the Allies will, in respect to one point, show a more generous spirit than their reply seems to indicate. If the Turkish Government "finds itself unable to re-establish its authority in Anatolia," as it very well may do, with Bolshevist Russia backing Mustapha Kemal, and the Middle East in a ferment, we hope that help will be given it by the Allies. And for obvious reasons we hope that such help will be given by France and Great Britain. Given generously, it would go far to restore Turkey's faith in that good will for her which has found such frequent expression in Allied Notes and pronouncements, and given for a sufficient length of time, it might convert the Allied statesmen's vision of a reformed and prosperous Turkey into a reality. If it is withheld, no amount of platitudinising will afford compensation to the Turks; while offers of help from certain other quarters would be worse than useless.

The appointment of Mr. Malcolm Stevenson as High Commissioner of Cyprus is very welcome. As Chief Secretary to the Government of the island and as acting head of the Government he has gained both experience and popularity, and the islanders will have learned of the appointment with satisfaction, though, in the case of those who express a desire for union with Greece, the satisfaction will doubtless be qualified. For our part we hope that the appointment, coming at the present time, may be regarded as significant of Great Britain's intention to hold the island, at any rate while conditions in the Near East are so unsettled. A glance at the map, and a little reflection upon the present state of affairs in the Levant should explain the reasons for this view.

The Joint Committee of Parliament have now completed their revision of the rules framed for the elections to be held in India next winter The changes they have made are very few, and we think anyone who has examined the rules in detail will concur in the tribute paid to the great care and ability with which the drafts were prepared in India, as well as the remarkable expedition with which the task was achieved. The only point calling for notice here is the question of Labour representation. Last year the Joint Committee recommended that an attempt should be made to bring urban workers into the scheme. The attempt was duly made, and the result was to establish the impracticability of the idea, the only possible measures being described as indefensible in theory and probably unworkable in practice. The Committee have therefore decided, "without hesitation, though with some regret," to drop the experiment altogether, and urban Labour, like some other amorphous interests, must for the present put up with nominated representatives.

We entirely accept the decision of the Joint Committee on this point, but we venture to express a hope that the authorities in India will base their nominations on principles somewhat different from those which have been followed in the past. Hitherto nominees have usually been before all things "respectable" and "safe," but if the voice of the factory workers is to be heard effectively in Council, these criteria must be abandoned in favour of vigour, courage, and straightforwardness. Labour representatives are in any case bound to be a nuisance from the Indian and aristocratic point of view, and in the long run it will be best if the facts are faced at once. The authorities who have to nominate would do well to look up the history of the merchant shipping legislation in this country in the 'seventies: Samuel Plimsoll was undoubtedly a terrible nuisance at the time, but to-day even landsmen understand the significance of the Plimsoll mark, and if there are any men of that breed in India it is better that they should be in the Councils than outside.

The Lords have already accepted the Joint Committee's report, and doubtless an early opportunity will be found for its consideration in the Commons. Meanwhile the latter body has again been devoting some attention to Indian affairs, and there was an informal conversation last week which threw welcome light on the attitude of the authorities towards that perplexing person Mr. Gandhi. Mr. Montagu's position seems to be that, just as in England a dog is entitled to one bite, so in India a saint may act in such a way as to lead to one rebellion; but just as a second bite is dangerous to the dog, so a second rebellion would be awkward for the saint, however lofty the motives by which he may be actuated. The number of saints in India is so large just now that the application of this doctrine may not be wholly free from practical inconvenience, but at any rate it is to be left to the men on the spot, for this is one of the cases in which the Government of India are assured beforehand of Mr. Montagu's support. The assurance is timely, for the administrative problem involved is one of great difficulty, and the codes provide no machinery for perfecting a saint by purging him of overweening egotism.

The trek of Indian Moslems to Afghanistan appears to be developing, though not yet on the scale advocated by its promoters. To our mind it is a logical and legitimate idea that people who dislike a particular government should abandon it for another; in this instance we may doubt whether the emigrants will really be more comfortable in Afghanistan than they were in India; but that is their affair, not ours, and if they are disillusioned they may, perhaps, be able to return. The

Digitized by Google

curious point about the movement is that the advance parties appear to have no very prominent leaders. We should have expected to read that the way was being pioneered for these confiding people by someone who knew the road, and understood the conditions of life in the promised land; Mr. Shauqat Ali, for instance, seems clearly marked out for the part of Moses, and various other names might be suggested as suitable understudies, but perhaps these gentlemen have caught the German habit of leading from the rear.

Of the two new appointments to the Council of the Viceroy of India, that of Sir Thomas Holland only regularises the existing position, for he has been *de facto* in charge of the Department of Industries for some time past, and any other selection was entirely out of the question. Mr. Sarma, who assumes charge of the Revenue Department, has achieved a distinguished position in politics, but we believe he is new to administration, at least on the vast scale as practised in Delhi, and his department, which, among other matters, controls forest and agricultural policy, is exceptionally heavy on the administrative side; it has fallen very seriously behindhand during the last ten years, and the time has come not merely for a forward move, but for a vigorous and persistent forward policy. We have no means of judging whether Mr. Sarma possesses the qualifications required for this purpose, and we must for the present regard his appointment as something of an experiment, but we hope the experiment will be justified by success.

# THE WEEK AT HOME.

**Spa.**

The Spa Conference occupied the international stage last week. The few friends of the Germans were happy that they have at last been allowed to meet the Allies in open discussion, and they did their best not to be disgusted with Herr Stinnes, whose hectoring outburst showed that the old Prussian spirit still survives; the newspaper opponents of the Prime Minister were ready to attack his every move, but his firmness gave them little opportunity. As a matter of fact, he seems to have dominated the Conference. He insisted that the Germans have got to disarm, and to hand over the coal to France, and in the end, with many sighs and groans, they consented.

It is quite clear that Germany built great hopes on the Conference, and their newspapers are correspondingly depressed that nothing came of it. But the German is still a poor politician. In the "shining armour" days sheer bullying sometimes came off, and his lack of diplomatic finesse—which other people called lack of good manners—occasionally achieved its aim: but that particular style is now simply absurd, and fails to impress the veriest tyro. Some members of the German Government appear to have realised the changed situation, but their position at home is clearly rather weak, and they seem afraid of another internal revolt. Mr. Lloyd George, in an interview, has recognised that this is the greatest danger. As to the German capacity to carry out the terms imposed, there is no real doubt.

But it will be necessary to see that they are held strictly to their pledge to reduce their army to the required figure, for that is the keystone of the whole position. Their now-admitted failure to do so up to the present—the admission was dragged out of them—has shocked a good many people, who had hoped that the German would have learned by this time that, ethical considerations apart, it is worth while to keep treaties.

**Perambulators and Politics.**

The House of Commons, suddenly recollecting that the hand which rocks the cradle rules the world, last week turned from Imperial affairs to talk of babies, housing, and other domestic interests, with Dr. Addison—who retains the bedside manner on the Treasury Bench—as family physician-in-chief. He positively beamed over the rising birth-rate; clearly England expected, and not in vain, that every man would do his duty, for there are more babies than ever before, and the perambulator manufacturers are making their fortunes. The infant population of this realm has increased by nearly a million since the armistice; peace has her victories no less renowned than war.

The trouble is not the infants, but the houses in which to put them. Only two thousand houses have been built, which is obviously inadequate for a million babies; and although something like fifty thousand houses will be completed this year that will not be nearly enough. Dr. Addison, like the old woman who lived in a shoe, simply does not know what to do with his official children; and not only does his family increase every day by about a thousand, but the cost of building goes up every week.

But we are certainly going steadily ahead with housing. At Kingston, Epsom, and many other places I have seen for myself houses actually rising from the ground, and bricklayers actually laying bricks. It is very hopeful, until one is told that for every house there are two thousand applications, and that most of them are sold before the first sod is cut. A London house agent with whom I was discussing the position told me a few days ago that he expects to clear his books of the existing applicants in about ten years' time, and that he has almost forgotten how to let a house, as everybody has to buy in these days.

Apart from housing, politics have been dull. The Free Liberals made their usual demonstration against Imperial preference, and suffered their usual defeat; and Mr. Chamberlain has been comforting us by telling us how nobly we are paying off the capital debt of the war by income-tax and excess profits and the other ills that flesh is heir to. Never, according to the Treasury, did our reputation stand so high; it is our only consolation, for assuredly never were our pockets so empty.

**Household and Furniture Prices.**

There is no sign whatever that prices as a whole have fallen, but there are very definite indications that the public is buying less. The West End women's shops started their sales rather early this year, but the usual crush of purchasers of their incredible bargains has been less. I happened to be in one of the great emporiums in London to look at some furniture a few days ago; it gave me quite an uncanny feeling, for there was not a single purchaser in the place. No doubt that was exceptional, for it was a disgustingly wet day; but the old manager, who remembered me as a customer some years ago, was very pessimistic.

Prices were still going up, he told me, on account of labour and material advances, but buyers were getting fewer. "What else can you expect?" he said. "Before the war we sold an ordinary oak dining-room suite for a typical suburban home at £60, and we furnished an eight-roomed house at £300. The same things now cost £200 and £1,200; besides, then, young people who were getting married, who were the bulk of our customers, could rent a house, but now they have to buy it instead, and that leaves little money for the furniture, at the present inflated prices of household goods."

The really astonishing thing is that people are still getting married. I cannot believe they all have wealthy fathers or uncles, who press a cheque for five thousand pounds into the reluctant hands of the blushing bride at the wedding breakfast; and presumably they are not all content to live for ever in two rooms—although a suburban doctor in one of the best neighbourhoods of London tells me it is perfectly amazing how many of his patients, who got married during or since the war, are starting life in that cramped fashion, and making the best of it. On the other hand, a lawyer who has a good many divorces through his hands assures me that domestic difficulties and household worries are responsible for several of his cases. It is so easy to quarrel when there is only one living-room.

**The Banks and Finance.**

One or two new issues make their appearance every week, but the boom is over, and the Stock Exchange gamble has been killed by the banks, who are pursuing what is called a conservative policy, which in plain English means that they are reducing overdrafts as

Digitized by Google

much as possible. Undoubtedly they are right, for the structure of credit became rather top-heavy some months ago. The result is that stock values have shrunk steadily, and are not likely to improve for some time. Trade remains good, but business men are not so optimistic as they were; and those who know say that there are distinct signs that the public is still curtailing its expenditure, except in the great industrial towns in the north, where money is still made and spent easily. In London the shops are certainly less crowded than a year ago, and people are quite obviously more economical in the restaurants.

**The Railway Revolt.**

Curses loud and deep have resounded through England this week. It had been anticipated that railway fares would be increased, but a further 10 or 20 per cent. was the utmost expected. It has now been suddenly announced that the increase will be 50 per cent.—in other words, that the pre-war rate will be doubled. This applies to season as well as ordinary tickets, and all cheap tickets, of course, have long been abolished. The Government have timed this increase to begin on August 1, so as to get the additional revenue from holiday-makers; and with an elaborate show of making a concession, they have postponed it till August 5. At the same time, freight and all other railway rates are to be put up by 100-150 per cent.

It is amusing to notice that the Government are blamed for the increase. The real cause is Mr. Thomas and his merry men, who have doubled the railwaymen's wages, and Mr. Smillie and his still merrier men, who have doubled the cost of materials. But that is by the way. The Government will probably lose votes for the time being, but the Labour Party will almost certainly lose in the end, when the situation is realised, and it will not help their rather precarious solidarity.

But, leaving the political effects on one side for the time being, this increase marks a more important and more permanent change. It indicates very definitely the beginning of the end of railway supremacy as a means of transit. In 1850 they had run the old stage-coaches off the road, and throttled the canals. For the next fifty years their dominance was absolute; and in 1905 they still sneered at the motor-car and the motor-bus, and, of course, the aeroplane was not yet born. By 1910 the motor-car had made a difference to first-class traffic in the provinces, and the motor-bus had proved a more formidable rival than the municipal train to suburban traffic. But the touring motor-charabanc and the long-distance country motor-omnibus was still a toy.

All that, however, is now changed. In some country districts in Kent, Surrey, and Sussex the train runs only once every two hours, the motor-bus every half-hour. The train is a little quicker—not so very much over a few miles—but the bus is more convenient. And the train will now be very definitely dearer. Having lost traffic to its competitor, it is endeavouring to recoup itself by raising the fares again; but now that it has no longer a monopoly, that merely means that it will hand over more traffic to its rival. The proverbial ostrich was nothing to Sir Eric Geddes; but among the many blunders of a mis-spent life, I can at least thank Providence that I have never been tempted to put any money into "Home Rails." I doubt if that particular market, which has been depressed for some years, will ever recover this knock-down blow.

**London Theatres.**

London never was so full as at the present moment, with country cousins up on holiday, American visitors over for the Mayflower celebrations, and the usual seven millions of Cockneys. But one theatre after another is shutting down till the autumn. One American play after another has been staged, but apparently Americans do not go to their own plays, and they have failed to draw Londoners. It is not so much that they are bad—they could hardly be worse than the home-grown drama—but they are a different kind of badness. Audiences certainly seem more critical than during the war, and the theatrical managers are talking rather gloomily of a slump. Perhaps if they were to put on something worth seeing they might sing to a different tune; but that particular remedy does not seem to have occurred to them.

**The Pylon.**

A scheme is afoot for erecting a grandiose war memorial, in the shape of a pylon of Egyptian design, at Hyde Park Corner. The sketch of the memorial, which has been published in the newspapers, may be the last word in modern art, but it reminds one more than a little of an electric light works. The idea received so cool a welcome that it died almost in the hour of its birth; the horrors of war were bad enough, but there is no reason why we should perpetuate them by the worse horrors of British architecture and British sculpture—the recently erected statue of Nurse Cavell, by the way, near Charing Cross Station, strikes one as almost the heaviest and least inspired piece of work in the world.

These dreadful monuments make one wonder whether we are really an artistic nation. Seeking an answer to that question quite recently, I walked into the National Gallery. The new method of hanging the pictures was quite effective, but the gallery itself was almost deserted. There were a few uniformed attendants doing their best not to look bored, an old man furtively munching a sandwich, a young woman reading the *Daily Sketch*—in the palace of British art—and, opposite one of the wonderful women of Velasquez, a couple of lovers looking into each other's eyes; I doubt if Velasquez meant much to them. That was the entire company of spectators—less than a street accident would assemble. It made one wonder.

**Dearer Telephones.**

Telephone rates, like most other things, are to be raised shortly, to the disgust of the commercial world, which can hardly dispense with that nerve-racking instrument of torture, but which sees itself saddled with one more increase in its overhead charges. There have, however, been fewer complaints than usual lately of the inefficiency of the service, and it is an undoubted fact that the cost of maintenance has enormously increased.

**A Bowling Feat.**

The true hero of last week was Cox, of Sussex. Playing against Kent, he took seven wickets in a few overs for eight runs—a wonderful performance that will immortalise his name in Wisden. When I was a boy, the Sussex bowlers were the weakest in all county cricket, and a visit to the small Brighton ground, where runs were easily got, improved everybody's batting average. But times seem to have changed.

**The Yacht Race.**

The papers have made a great feature of the Lipton yacht race with the Americans. But the plain fact is that I have not heard it discussed, or even mentioned, in train, tram, or omnibus by a single soul during the week, and I doubt whether it has really evoked any particular interest. In this matter, a cheery taxi-driver spoke the unadulterated truth to me some time ago. "When a man follows cricket and football, boxing and racing intelligently," he said, "he hasn't much time for anything else beyond earning his living in these hard times."

**The Week's Books.**

"Spiritualism: Its Present Day Meaning" (Fisher Unwin) is a symposium of opinions collected by Mr. Huntley Carter, with contributions by such people as Mr. Bligh Bond, Dr. R. F. Horton, Sir William Barrett, and many others; with certain specimens of spirit-photographs. These latter do not impress me overmuch, and I should like to see them critically discussed by expert photographers.

"Bishop Moorhouse" (John Murray), by Miss Edith C. Rickards, is the biography of the late Bishop of Melbourne and Manchester. The book will appeal to many good Anglicans.

A wider audience probably awaits "Mercier: The Fighting Cardinal" (Appleton), by Charlotte Kellogg. It is the record of a very great figure in modern life; no history of the war would be complete without a mention of Mercier and his consistent opposition to the Germans—an opposition which they did not dare to silence.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents.)*

## EGYPT.

CAIRO, July 7.

**The Nile Projects Affair.**

This is still the chief subject of interest among all classes. Following the committal for trial of Sir William Willcocks and Colonel Kennedy, an application is to be made in open court on Tuesday next for postponement of the hearing. In ordinary circumstances such an application would have to be accompanied by some justification; the reasons in this instance will be the ill-health of Sir William and the fact that Colonel Kennedy requires witnesses from England and Australia. There has been talk of a compromise, and there is reason to believe that many prominent people would be glad to see the case end at this stage; but I have it on unimpeachable authority that Sir William Willcocks and Colonel Kennedy have decided to fight the case to a finish. From the same authority I learnt this morning that, prior to the publication of the interim report of the Nile Projects' Commission—but when it was obvious what the decision, in effect, was going to be—Sir William Willcocks, after having discussed the situation with several of his friends, wrote out a withdrawal of his charges, and was about to take steps to have it presented in the proper quarter when he received the summons to appear to answer the charges which have been preferred against him.

**Proposed Works: Native Engineers' Views.**

Several of the native Egyptian engineers are professing the strongest dissatisfaction with the interim report of the Commission. They resent the recommendation of the new big projects on engineering grounds alone. But I had better quote their own words, in the detailed criticisms of the projects which they have submitted to the Commission:—

To the very last, we unyieldingly object to the construction on the Blue Nile of any work which may tend to cut off or decrease the supply of water and silt which flows down to Egypt from that river. . . . We are perfectly convinced that Egypt has in this connection a vested right, which she possesses and has possessed for more than 6,000 years.

We also prefer that the water which is to be stored for the benefit of Egypt should, whenever possible, and at whatever cost, be kept in reservoirs within Egyptian boundaries. When this is not possible the reservoirs should be constructed on sites upon which no political difficulties are likely to arise in the near or far future.

. . . . As for Nag Hamadi barrage, we consider it a work which should have been achieved many years ago, in order to prevent the recurrence of *sharaqi* in Upper Egypt in low years . . . .

In conclusion, we beg to quote a word which was written by Sir Murdoch MacDonald in the Irrigation Report for 1912: "Egypt without irrigation would be lost from existence, and would become a part of the surrounding desert. But the Sudan is favoured with an advantage, as it lies within a rainy zone whose supply of rain water can adequately meet all its requirements if it is carefully and systematically organised."

These are arguments which, at least, deserve investigation.

**High Rents: A Protest.**

This morning the shopkeepers of Alexandria declared a cessation of business for twenty-four hours as a protest against the outrageously high rents which they have to pay for premises. The events which have led up to this "strike" form quite an interesting story. When, some months ago, the Rents Limitation Law was promulgated, property-owners were forbidden to charge more than 50 per cent. increase on the 1914 rent for residential accommodation only. The natural result was that the rent of business premises immediately rose. Further, many flats which hitherto had been described as residential flats have suddenly been given the high-sounding title of "business premises." If a family seeks a flat now, they can, in most cases, only secure it on the understanding that they are renting it as an "office." With the shortage of accommodation so acute, most families have had to do this, and the outcome has been that, instead of flats being available at lower rents, flats and offices are dearer.

**Another Bonus for Officials.**

At their meeting on Saturday last the Council of Ministers approved of the proposal to give the lower-paid Government officials another bonus of 20 per cent. on their salaries, such bonus to be paid in half-yearly instalments. The suggestion came, in the first place, from the Financial Adviser, Sir Paul Harvey—who, by the way, has resigned, but is returning to act as an expert adviser to the Government for six months—but upon the announcement of the suggestion in the Press Ismail Sidky Pasha, late Minister of Wakfs, at once addressed an open letter to the Financial Adviser, asserting that such a bonus was more likely to defeat its own object, since it would be bound to cause a complementary and higher rise in prices. That letter has since evoked "an avalanche of replies and touching protests" from the officials concerned; most of the writers, indeed, hold that the bonus is barely sufficient to enable them to meet the increased cost of living, and that, even with it, they will be, comparatively, worse off than they were in 1914. There is something to be said for both sides; but the general view among business men—who, it must be remembered, cannot be regarded as unprejudiced witnesses—is that the suggestion is an untimely one, since it cannot fail to tend to raise prices, and thus make harder the lot of the lower-paid commercial men without any hope of a relatively substantial benefit.

**Viscount Allenby Indisposed.**

Among the bathers at Alexandria last Saturday afternoon was the High Commissioner, who, according to a daily paper, "swam out to the buoys with a fine bold stroke." Subsequently, however, he caught a chill and the doctor at once directed him to stay in bed. He was confined to his room for three days, but has now recovered sufficiently to commence his journey to Palestine, whither he is proceeding in order to meet Sir Herbert Samuel.

**The Political Situation.**

All political discussion in this country at the moment apparently is confined to the native Press. Everyone is still scrutinising the cables from London daily, waiting for signs of a settlement. I have discussed the stuation with well-informed officials, who state that, beyond advice from London that "Zaghloul means business," there have been no developments, and that everything is in abeyance here pending the negotiations at home. The vernacular Press is still divided in its allegiance to the extremists and the Zaghloulists.

**A Necessary Example.**

Ibrahim Massoud, who was convicted of having thrown a bomb at Tewfik Nessim Pasha, on June 12 last, is to be hanged to-morrow morning in the Court of Appeal prison. In this case no time is being lost in meting out justice. A good deal of sympathy appears to be evinced for the man, but most reasonable people are in agreement that it was high time that an example was made.

## YUGOSLAVIA.

BELGRADE, July 6.

**H.R.H. in Zagreb and Liubliana.**

The visit of the Crown Prince Regent to Zagreb and Liubliana has been a brilliant and unqualified success. It has been far more than a mere perfunctory visit of a ruler to other parts of his domains, for it has been a triumphal progress of the symbolic leader of national unity and a victorious liberating army. It is many centuries since the Croats have had a sovereign who addressed them in their own tongue. It is true that "Karlik bez marjasha" or "Charlie Lack Ha'pence,"

Digitized by Google

as the Serbs disrespectfully refer to the ex-Emperor of Austria, is reported to have greeted his subjects in Slav, but an authentic account of the incident describes it as a bit of unintelligible gibberish which he had learnt by heart, and that badly. But the impression on the deputations of Croatian peasants when their Regent greeted them in their own tongue, and shook hands with them in a most natural and friendly way must have been profound. The "spirit of Shumadia," as the Serbs describe their own free and easy, democratic spirit, due to actual equality among these yeoman farmers, is a new phenomenon in lands which were once under the Hapsburg sceptre. The press of all parties is unanimous in giving glowing accounts of the visit.

But Zagreb is not essentially a national town; there is a large foreign element, especially of Jews; Liubliana, on the other hand, is really a thoroughly Slavonic town, and here the Prince's reception passed all anticipations. There was one pretty incident, when a little girl, armed with a bouquet, addressed the Prince on behalf of the 400,000 Slovenes who are left to pine on the far side of the Demarcation Line; this is the fly in the ointment of the Slavs released from Austrian and Hungarian misrule. The Prince, greeting the crowd from a balcony, expressed the hope that before long even those Slovenes on the wrong side of the line would have the blessings of liberty. The Prince so completely identifies the national cause that the enthusiasm of his reception must have come as a nasty shock to the Italians, who have been spending so much money to sow dissension between Croat and Serb. Now perhaps they will realise that it is unwise to force an unjust quarrel on a young, high-spirited, self-confident, proud and martial, and, above all, united people.

**"Vidov Dan."**

"Vidov Dan" is not only the anniversary of the battle of Kossovo, but of the Serajevo murders six years ago. Whatever may be the verdict of the West, the Yugoslavs know that this deed brought about the realisation of their dream, and there is a growing tendency to regard its performer as an enthusiastic martyr who gave his life knowingly to further the national cause sacred to the heart of every Serb. From this two incongruous facts arise: the first, that the public executioner, as an Austrian official, is to-day drawing a pension from the Yugoslav Government; the second, that Prinsep's body, according to the papers, is shortly to be brought solemnly from Prague to Serajevo. The odd part is that the man in charge of the operation is the former President of the Committee for raising a memorial to the Archduke and Archduchess, whose existence was a fatal obstacle to the union of the people and the incarnation of hostility to the idea of a "Greater Serbia."

The bodies of the "Heroes of Serajevo," who died as criminals at Prague, were solemnly exhumed during the Congress of Sokols; in a truck decorated with flags and flowers they were sent off from Prague by rail, amid the respectful attendance of an enormous crowd; patriotic speeches were made by the President of the Sokols and by Madame Chiljak; after a religious ceremony, the train steamed out on the way for Serajevo. All the people released from the tyranny of Austria-Hungary look upon Prinsep and his associate as martyrs to the cause of freedom, the blessings of which their action has brought to millions, and to countless millions yet unborn.

**The Ethnographic Museum.**

The Ethnographic Museum, one of the most interesting but least known institutions in Belgrade, suffered a great deal from enemy looting. The Hungarians helped themselves freely for their museum in Budapest. Fortunately, now, although a considerable amount was destroyed during the régime of Bela Kun, the greater part of the stolen objects are being returned, and will soon be once more on exhibition.

**A Soldiers' Yarn.**

An amusing incident, which we are informed is absolutely authentic, is recorded from Bakar. Some Yugoslav gendarmes were out exercising without any officer, when they inadvertently crossed the demarcation line without knowing it. A party of d'Annunzio's precious "'arditti" saw them, and came running up; the Slavs thought they were about to be attacked, and prepared for action, when the Italians threw their guns down and their hands up; the Slavs' astonishment was increased when another party of Italians, this time with a lieutenant and a machine-gun, also came running up, and they, too, surrendered! At length the Slavs succeeded in explaining that they were only innocent trespassers, and did not want to fight anybody or take anybody prisoners, and politely asked the way home. The Italians, in relief, cleared off as fast as they could, for fear the terrible Slavs would change their minds, while the latter returned to their quarters shaking with laughter, to tell the tale to their comrades. The incident recalls the jingle that was current among the Serbian troops in Macedonia :—

Perje ima—tica nije.
Pushku nosi—vojnik nije.
K'o zec bega—a zec nije.

Which might be translated :—

No soldier this, tho' bears a gun.
Nor bird, tho' plumage fine is his;
Nor yet a hare, tho' like a hare will run.

## ROUMANIA.

BUCHAREST, July 7.

**Parliament.**

The Chamber of Deputies have prepared their reply to the Speech from the Throne and have discussed it during three days' sittings. The main points mentioned as those requiring immediate attention are the ratification of recent Decree-Laws, the reorganisation of the country so as to include the new provinces, the budget, the care of crippled soldiers and war orphans, the systematic institution all over the country of communal pasture lands, the protection of the interests of workmen with a view to preventing strikes, and the very necessary measure for the unification of the currency. This is a very heavy programme, especially as only three weeks of the session remain, but the Opposition are not satisfied with it, and have suggested many interpellations so as to introduce some of the chief items on their own programme—*e.g.*, the taxation of war profits, complete freedom of commerce, and a further modification of the Agrarian Reform Laws in favour of the peasants. Of all these measures the most urgent are the unification of the currency and the ratification of the Agrarian Reform Laws. It is of the greatest importance to the country that adequate measures for carrying out Agrarian reform should be adopted at once, so that all the land may be distributed, paid for, and brought under cultivation as quickly as possible. At present large tracts of arable land are still lying fallow either because they have not been parcelled out, or because there was no one able or willing to take them over, and the Government could not decide to leave them for the time being in the hands of their former owners. This naturally represents a heavy loss to the country.

It is encouraging to see that while the Chamber spends most of its time in personal vituperations the committees are apparently getting some work done on the preparation of the bills indicated in the Government programme. The Communal Pasturage Bill has been drawn up. It provides that each village commune shall have a grazing ground of one hectare for each three or four head of cattle. In mountainous regions pasturages are also provided for sheep. In each case the necessary land is to be taken from domains which have not yet supplied the percentage provided by the Expropriation Law.

**The Dobruja.**

The appeal made by Archbishop Nifon to the Senate last week for help for the population of this devastated province will receive the sympathy of all who know how distressing are the conditions which still prevail there. Scarcely a house or hut was left standing after the war, and a great many of the wells were choked, and yet the inhabitants were loth to leave their lands. They, therefore, dug themselves caves in the ground where whole families live huddled together with no fresh air and no means of ventilation, with the result that tuberculosis has spread rapidly and taken a heavy toll of the population. A doctor, who was mayor of one of the towns, stated that twenty-seven strong men had died of rapid consumption in one commune alone. The

Digitized by Google

Government has done what it could and has distributed a small dole of money, and the American Red Cross afforded great relief in other ways, food, clothing, medicines, etc., but the important thing now is to get cottages built, and one hopes that in this country where appeals for charitable institutions are usually well responded to, something will soon be done towards providing more sanitary habitations for these poor peasants.

## GREECE.

ATHENS, July 10.

**The King's Return.**

His Majesty King Alexander, accompanied by his A.D.C.'s MM. Contarato, Gerontas, and Melas, returned to Athens on July 5 from his trip to Paris. He disembarked at 3.30 p.m., and immediately proceeded in his motor car to the Royal Palace, where the Council of Ministers and other military and civil officials had assembled to welcome his return.

The King expressed his great joy at the continuous successes of the Greek troops in Asia Minor, and informed M. Repoulis, the Vice-President of the Council, that it is his intention to visit the theatre of operations personally in the course of a few days.

Madame Aspasia Manos, King Alexander's morganatic wife, accompanied his Majesty on his return journey from Paris, and has taken up her abode at Poros, a picturesque little island about thirty-five miles from Piræus.

**In Thrace.**

With the exception of a few incidents of little or no importance on the boundary line, and the exchange of a number of rifle shots between the opposing sentries, things are very quiet on the Thracian front. There have been many rumours recently afloat to the effect that an offensive movement against the Greeks was being contemplated by Jaafar Tayar. According to the latest reports, however, this gentleman is still very busy strengthening his position at Adrianople and Ouzoun Kioprou, and there is very little possibility of his undertaking the initiative of operations in Thrace.

It is now beyond doubt that Bulgarian help—unofficial, of course—is reaching Jaafar Tayar. In addition to the large number of Bulgarian *Komitajis*, now estimated at about 5,000, who have concentrated at Kirdjiali and Mustapha Pasha, very important supplies of ammunition, rifles, guns, and even a number of anti-aircraft guns, have been sent to the Turks. The presence of these guns was ascertained during a recent aerial reconnaissance of the Turkish positions.

A few days ago proclamations giving the recent *communiqués* of the operations against Kemal Pasha in Asia Minor were dropped by Greek aeroplanes in Adrianople and other important centres in Eastern Thrace.

According to the Athenian Press, General Zymbrakakis, who is in command of the Greek forces in Thrace, has called up the 1915-1921 classes of all Greek subjects residing in Western Thrace.

**A Greco-Italian Incident.**

The following grave incident, which is now, fortunately, closed, occurred a few days ago in Asia Minor between the Greeks and the Italians.

A numerous band of Turkish irregulars crossed the River Meander, which is near the boundary line dividing the territory under Greek occupation and that occupied by the Italians and burned down a small station in the Greek zone opposite Sokia on the Smyrna-Aidin railway line. The Greeks soon disposed of the Turkish band, but, fearing a recurrence of similar raids, occupied an adjacent hill, the greater part of which is in the Italian zone of occupation. This measure was decided upon by the C.-in-C., General Paraskevopoulos, and General Nider, although the High Commissioner at Smyrna, M. Stergiadis, looked upon it with disfavour. The Italians promptly demanded the immediate evacuation of the hill. The Greeks, however, refused to comply with this request. Whereupon about 300 Italian troops attacked the hill, and when at a distance of 100 yards opened fire on the Greeks, whilst an Italian destroyer lying off New Ephesus commenced shelling the Greek positions. Before long, however, the destroyer was obliged to cease fire, as the troops on the hill had come to close quarters, a bayonet fight ensuing. The Italians finally withdrew, after having lost one officer and three men killed, and leaving five prisoners in the hands of the Greeks. There is no information to hand as to what the Greek casualties were.

**Roumanian Boy Scouts.**

Sixty-two Roumanian Boy Scouts, accompanied by their Scoutmaster, Professor Picnu, arrived in Athens on Tuesday (July 6), on their way to London, where they will participate in the International Review of Boy Scouts. They were very heartily welcomed by the forty-two Greek Boy Scouts who have been chosen to represent Greece in London, and were given an official reception on the Acropolis by the Municipal Council. Professor Sotiriadis, of Athens University, delivered a lecture on the Parthenon, after which a luncheon was given at the Zappeion by the Greek Boy Scouts to their Roumanian comrades. Following a visit to the Archæological Museum and a look round Athens our young visitors returned to their ship, which left next morning.

The Greek Boy Scouts departed for London via Marseilles on the same day by the s.s. Andros.

## BULGARIA.

SOFIA, June 28.

**Treaty Commissions and Housing.**

The Foreign Ministry has been asked by the French military authorities to prepare accommodation for the Entente Commissions for the execution of the terms of the Peace Treaty. The request is for the preparation of 139 houses for the officers of the commissions, with at least four sleeping-rooms each, or 556 rooms, and as every officer will have an orderly, 139 more rooms will be necessary; and on top of this accommodation for offices will be wanted. The Sofia housing commission has declared itself unable to supply the accommodation required, and has recommended the requisitioning of three hotels, the Bulgaria, the Panach, and the Continental; and this will be done as soon as the commissions arrive. So far, only nineteen members have arrived.

The Prime Minister has asked the Entente military missions to reduce the *personnel* of the commissions, pointing out the acuteness of the housing difficulty and the great expense of hiring houses.

**Reduction of Officials.**

With a view to reducing the expenses of the State, the Government will do everything possible to curtail the staffs of the State offices, and to simplify their conduct. A committee of deputies and high officials has been charged to draw up plans to this end. The dismissal of women from State employment is contemplated as a first step. By drastic measures the Government hopes to effect a saving of between 200 and 300 million levas per annum.

**Sentence on a General.**

The Sofia Military Court has for the past three weeks been occupied in investigating charges against General Ratcho Petroff, former Governor of Uskub. He has now been sentenced to twelve years' imprisonment, and to pay a fine of 320,000 levas to the State.

**Rapprochement with Roumania and Italy.**

Cordial telegrams have been exchanged between the Prime Minister, M. Stambolisky, and the Prime Ministers of Roumania and Italy. Bulgaria is making great

efforts to re-establish good diplomatic relations with the outside world, being very anxious to make known the true state of the country.

**Shortage of Meat Supplies.**

There is a great shortage in the country of cattle and sheep, and the price of meat is rising rapidly. After handing over to Serbia cattle and sheep in accordance with the Treaty terms, the shortage will naturally be still greater. The Government has therefore decided to impose twelve days' compulsory fasting in each month, in addition to the two days' religious fasting in each week (Wednesday and Friday). On these days the sale of meat dishes in restaurants is rigorously prohibited.

**Distinguished Russian Refugees.**

Last week General T. Dimitrievitch Gourko arrived here. He is the youngest son of the famous General who took a leading part in the liberation of Bulgaria in 1877. Another distinguished arrival is the son of Count Ignatieff, the creator of Great Bulgaria, according to the Treaty of San Stefano, 1878. The latter has asked permission to settle in Sofia.

## TURKEY.

CONSTANTINOPLE, July 4.

**The Greek Advance.**

The official announcements of the capture of Balikesr, or Karassi, and of Edremit, by the Hellenic troops have effectually disposed of the fantastic rumours that have been current during the day or two when there were no Greek *communiqués*. One of the most absurd of these rumours was a circumstantial account of the entry of the Nationalist forces into Smyrna, and of the wonderful exploits of an army of Kirghiz cavalry. For some little while the Anatolian papers have been publishing stories of mysterious armies from Central Asia arriving in Anatolia to assist the National forces in the task of driving the Greeks into the sea, and it is possible that the Anatolian peasants firmly believe the reports. To that extent perhaps there is some purpose served, but the spreading of similar reports in Constantinople is a false move on the part of Nationalist sympathisers.

The landing of Greek troops at Panderma on the same day as the capture of Balikesr, and the subsequent capture of Edremit mean the complete rounding up of the Nationalist forces in the Chanak district, and the removal of all possibility of an attempt to hold up the Straits or to molest traffic. If the Hellenic army accomplishes nothing more than that, it will deserve the gratitude of the Allies; for the clauses concerning the Straits are of vital importance to the Peace Treaty; and until the Asiatic shores of the Straits and the Marmora are cleared those clauses cannot be put into effect.

**The Peace Treaty.**

It is announced to-day that the Turkish Peace Delegates are on their way back from Paris, but no reason is assigned for their sudden return; although it is believed that it has something to do with the Greek advance in Asia Minor. Be this as it may, there seems very little probability of the Treaty being signed, for the Allies have evidently determined that it must stand practically as it is, and are leaving to Greece the most important part of the task of enforcing the conditions. In these circumstances the signature of the Turkish plenipotentiaries is more or less superfluous, and there is a clearly defined issue which really amounts to the resumption of hostilities between Turkey and the Allies represented by Great Britain, France, and Greece. For that part of Turkey which is not Nationalist does not count.

**The Nationalists.**

So far as can be ascertained, the advance of the Hellenic Army has in no way weakened the determination of Mustapha Kemal to resist the decisions of the Peace Conference. The value of Italian promises of support should by now be clear, however, and it is not surprising, therefore, to hear of the existence of a current hostile to the dictator of Anatolia. There are few details available, but the formation in Constantinople of a Moderate Nationalist Party is an indication of what is occurring in Asia Minor. The uselessness of an extreme policy should be evident to anyone with a small measure of political insight, and although the Turks have shown that they are very poorly endowed in this respect, the actual development of affairs cannot be ignored except by the most purblind fanatics. No doubt it would be possible for the Nationalists to prevent the establishment of order and security in Anatolia for an indefinite period, but to what useful end? The Moderate Nationalists have drawn up a programme, which stands at least some chance of meeting with success. The principal item of this programme is the conclusion of immediate peace on the best terms obtainable, subject to the provision that whatever may be left of Turkey shall be a completely independent state. It remains to be seen how far these counsels of wisdom will prevail.

**Bolshevism in Anatolia.**

Reports of travellers depict a rather disquieting state of affairs in Anatolia, for it would appear that Bolshevist propaganda has established a serious hold upon the poor and uneducated masses in certain districts. It is not for a moment suggested that the Nationalist authorities seriously contemplate the establishment of a Bolshevist republic in Anatolia. Their connection with Bolshevism is purely artificial, and for ulterior purposes, but it is now certain that they have allowed Bolshevist agents a free hand in the dissemination of propaganda. They have calculated that their influence over the masses will be sufficiently strong to neutralise the effects of this propaganda should it become really dangerous, but there seems to be ground for the belief that they have under-estimated the power and danger of Bolshevist propaganda among the poor masses of Anatolia, who have suffered patiently the tyranny of the most corrupt and rapacious bureaucracy in the world. To-day these unfortunate masses are being taught to believe that under Bolshevist rule the man who has not got a sheep will promptly receive one, and he who is without a horse will be given one. The appeal is irresistible, and although there is no suggestion of immediate danger, it must be admitted that if Lenin's agents are allowed to work freely a little longer, there will be a fair possibility of still further complications in the vexed Eastern Question.

It may here be remarked that the latest reports received from London, which announce the practical failure of the negotiations with the German-Bolshevist agent Krassin, have aroused the liveliest satisfaction in Entente circles here.

## MESOPOTAMIA.

BAGHDAD, June 6 (delayed).

**A Train Outrage.**

A train was wrecked and six men were murdered and seven others wounded by Arabs, led and paid by Syrian officers of the Sherifian Army, about a week ago, on the broad gauge railway which runs north from Baghdad and terminates at Shergat. The affair took place on the section of the line immediately south of Tulul Baq, which is the first station from Shergat. The Arabs, who are said to have numbered 200, having attacked and overcome the gangmen working on that section of the line, took up some of the metals and put obstructions on the track. No. 64, down train, an empty goods train, returning from Shergat to Baghdad, was wrecked by these obstructions, and the few Indian passengers, as well as the crew of the engine, were attacked, with the result already mentioned. The driver of the train, an Englishman named King, was among those murdered. The working of the railway has been resumed, but trains are now only running in daylight.

the "Cyprus question" remains unbroken. The fact that no High Commissioner is appointed buoys up the hopes of the "unionists," but it is the only fact that points that way. Greek youths and Turkish judges still go to London to study for the bar; but although the training may be valuable, there will be little call for English-speaking barristers if the island is to be handed over to Greece. It must be confessed that the absence of many high officials and the serious gaps in the judicial ranks give some ground for complaint; and if the Greek press talks, as it does, of a "parody of Government," there is really some justification for its cynical comments.

**A Cypriot on Greek Aspirations.**

Of Cypriot scholars Dr. S. Menardos is the most distinguished. Since he held the chair of Modern Greek at Oxford for several years, he has been a professor at the University of Athens. Greek papers quote from an address recently given by him at a re-union of the Philological Society of Athens, at which M. Venizelos was present. Besides being of interest from its literary and historical merits, it was characteristic of present national sentiments. The new territories which Greece has acquired are, he holds, but stepping-stones to other regions, both in Europe and Asia, which "by right of inheritance" she must yet obtain. Their leader is like Moses looking at the promised land, or rather like those soldiers in the retreat of Xenophon's "ten thousand," who, reaching the heights of Pontus, cried "the sea! the sea!" The Greek patriot will now cry "Polis! Polis!" until the *polis* of Constantine, the capital coveted by so many nations, and the goal of Hellenic aspirations, is once again her own. Modern Greece must wait patiently as Italy waited for Rome. The Cypriot press shares enthusiastically in the present exultations, and appeals for unity in all parts of the scattered kingdom. The confidence which the Allies repose in M. Venizelos is a great national asset, which must not be endangered by the differences of rival parties in Athens. Let their great leader fulfil to the end the task to which Providence has called him. Even those politicians who may regard themselves as slighted or overlooked must sink their differences, and support wholeheartedly a statesman without whom Greece could never have obtained what the English *Times* calls "the lion's share" which has been allotted to her.

**A Call for Volunteers.**

The local Greek papers urge the Cypriot youth to respond in large numbers to the summons which the Hellenic Government is issuing for volunteers to serve in Thrace, in Ionia, and in Northern Epirus. Let them take this opportunity of fulfilling the highest possible duty, and at the same time finding that employment of which so many are in search. Let those who are still bent on the mad scheme of emigration to America, where no Pactolus awaits them, abandon their unprofitable craze of adventure and go where glory and substantial pay may be earned, since the Greek Government offers 150 drachmæ a month besides the soldier's regular pay, or a total of about 240 drachmæ, in addition to other advantages.

**General News.**

Weather is oppressive. The Government offices moved up to Troodos on June 17. Summer hours have been started in all offices, and the railway services have been altered, as usual, for the season. The Greek Bishop of Papho, who acts for the Archbishop, is returning from a visit to Egypt. About 3,000 Armenian orphans are expected at any moment from Cilicia. They will probably be placed in what was for 35 years the military camp of Polemidia, near Limasol. Appreciative articles on the late Dr. Ronald Burrows, and notices from English papers, appear in the Press. The *Kourban Bairam* will be quietly celebrated by the Turkish community. M. Halid Bey, Turkish judge of Famagusta, has passed all preliminary examinations at Grays Inn. His two brothers are judges at Larnaca and Papho. Like Fuad Bey, the Turkish judge at Nicosia, he is an excellent English scholar, speaking the language perfectly. The cereal harvest has been very good both in quantity and quality. No news has yet been received from the Greek deputation in London. It is felt pretty widely that there is little justification for this mission, since it is impossible to add anything to what has been so fully represented already, and the great expense which is being again incurred might well have been saved for other purposes.

**SCHOOL OF ORIENTAL STUDIES.**
London Institution, Finsbury Circus, E.C.2.

**ORIENTAL LANGUAGES AND RELIGIONS.**

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

## THE CARAVANSERAI.

*Think, in this batter'd Caravanserai*
*Whose Doorways are alternate Night and Day,*
*How Sultán after Sultán with his Pomp*
*Abode his Hour or two, and went his way.*
—Omar Khayyam.

I see that, according to a Philadelphia report, "the oldest known written code of laws in the world" has been discovered among the clay tablets found at Nippur by the University of Pennsylvania's expedition, which left the site in 1900, and has not since done a stroke of work there. The fact that tablets of such interest have been lying by in the University's stores so long, presumably undeciphered, affords food for thought. I well remember that when the tablets were secured there was, very naturally, a great fuss about them; and then the learned 'ologists fell out about them, and nasty things were said about people wishing to keep all the good things for themselves—or words to that effect. It really does look as if there had been some truth in those accusations, doesn't it?

***

Be that as it may, the Nippur tablets have provided some very interesting material at one time and another. There have been "Flood" tablets, or fragments, and some wonderfully "modern" business documents, notably those of a firm of goldsmiths who flourished—they evidently *did* flourish—several centuries B.C. And now comes the new "oldest code of laws," which is said to have been prepared 3100 B.C., thus pre-dating the famous Hammurabi Code by nearly a thousand years. The fact that they contain clauses protecting the Tenant against the Landlord suggests that the world was much the same 5000 years ago as it is to-day.

***

It would be interesting to know whether any British "diggers," amateur or professional, tried their hands on the Nippur mounds during the war or since. The site is a great one, and would well repay further excavation, but it looks as if it would require a fairly strong guard to protect the excavators just now, for it lies in the region that has been giving trouble of late, and which at the best of times was never very law-abiding. Still, with all the troops we have in the country, it ought to be possible to make excavations safely there, and the mounds have been so far opened out that a clever excavator ought to get results early and cheaply.

***

A Reuter's message announces that "a Goanese woman at Dar-es-Salaam, East Africa, recently gave birth to seven children. . . ." Imagine the proud father's feelings when he asked the nurse: "Boy or girl?" and was told: "Six boys and one girl." It must have upset *his* little Home of Peace (Dar-es-Salaam). I am not surprised to find Reuter adding tersely: "All the children are dead." It had to be, if Dar-es-Salaam was to keep its name.

Corsair.

## PRESS ON THE NEAR EAST.

**Syria.**

In commenting upon the recent French advance into Syria, *The Times* of July 19 does not take the view, expressed in some quarters, that French policy threatens the existence of Syria as an independent Arab power. It proceeds to discuss the Arab outrages, which, however, it does not ascribe to Emir Feisal. And it concludes by finding a parallel between Syria and Mesopotamia. "The French," it says, "do not want any military adventures or fresh military responsibilities in Syria. . . . General Gouraud's objects are political rather than military, and are designed only to vindicate France's position as mandatory and as heir to a great historical tradition in Syria."

Even if France were under any temptation to exceed these limited objects, our own example in Mesopotamia would have been sufficient to deter her. We are in trouble there through this pouring of the newest political vintages of the West into bottles still accustomed only to the patriarchal feudal or theocratic distillations of Arabia. With our example before her France will, we are sure, not wish to repeat our errors. The whole of this vast country from Beirut to Baghdad, is really one, and will require to be settled on the same general principles. It may, we hope, be taken for granted that England and France are neither of them acting independently or, at any rate, without consultation with each other, for trouble anywhere within these vast regions, like ripples on water, may widen until it reaches the most distant shores. In Syria for France, as in Mesopotamia for us, there is a choice between two courses. Either we ruin our mandate and perhaps ourselves by assuming the direct administration of the country, or we confirm ourselves in the mandate by strengthening the local rulers and governing by advice to a native overlord. We wish that there were in Mesopotamia someone who was in a position to exercise so much authority as Feisal in Syria, but it may be that the Sheereefian solution may there too be the wise one, and if we can concert that solution in Mesopotamia with the French settlement of

Digitized by Google

Syria, so much the better. In the meantime, we earnestly hope that no evil adviser will seduce Feisal into extreme and violent measures, for in that case he will get no help from us and will be jeopardising more even than Syria.

On the same subject the *Manchester Guardian* of July 19 says:—

The fact is that this action of the French suddenly throws a searchlight on the whole position of the Allies in the Near East and on the magnitude and urgency of the problems involved. The position of the French in Syria differs in no respect from our own position in Mesopotamia, except in the fact that they are not already in possession and we are. It does not differ even in regard to the violence of the means employed, for there have been risings against us just as there is resistance to them, and there have been incidents in our occupation of portions of the territory we hold as painful and as little to be justified as any which are likely to arise in the French advance. Our occupation of Mesopotamia, irregular and provisional as it is, is rapidly hardening into a condition indistinguishable from actual annexation and administration on the Indian model. The French attack is openly aimed at the same end, and would probably be justified, as it has undoubtedly been encouraged, by our example. The result in both cases, if we persist in this policy of domination, is likely to be in the highest degree unsatisfactory and dangerous. It will almost certainly involve us in great and continued expense, alike in money and in men, and it will involve the whole system of mandates, and with it the League itself, in the gravest discredit. The original and most honourable conception of a mandate was that it was to be exercised over the less advanced or savage peoples, as yet unable to stand by themselves, as "a sacred trust of civilisation" for their "well-being and development." But as at present exercised, without the previous assent of the League, and without any of the safeguards for which the League should have provided, it has become a mere travesty of this ideal, and the whole system should at once either be brought back to its original conception and made to conform with the plain prescriptions of the Covenant, at present ignored or evaded, or else something better should be substituted for it. At present neither in Mesopotamia nor in Syria do the local population, in whose interest we and the French are supposed to be acting, recognise the advantage of our presence. They appear, in fact, to desire nothing so much as to be quit of us. That would be better than to continue permanently to govern them against their will for our own supposed advantage; but there is surely a third course possible. If we cannot ourselves give effect to the true conception of a mandate over a weak and undeveloped people, why should we not make the League itself the mandatory and place what force is needed at its back? It would be much cheaper, as well as more creditable, and would at least give a chance to the local populations to enjoy order free from domination and to ourselves to escape from a false and discreditable position.

### The Middle East.

A writer in the *Morning Post* of July 17 has some frank words upon the perplexing policy adopted by the Allied Governments in connection with the Middle East, and seeks a solution of the problem in the friendship of the Arabs:—

It appears to those who have watched the gradual development of the Arab national spirit, a spirit entirely independent of religion, that the two factors which may yet save bloodlessly and economically the vexed question of the Middle East have been discovered by the Arabs themselves. The Shereefian house of Mecca has proved its friendship to the Allies. In touch with Western civilisation through their European education, bound to the Allied cause by four years of the comradeship of a hard-fought war, yet claiming the allegiance of even the most fanatical tribesman by their direct descent from Islam's prophet, the two sons of the King of the Hedjaz, the Emir Feisul and the Emir Abdulla, are surely the most suitable leaders to shoulder the responsibility of forming the new States which, backed by French and British prestige, should form an efficient barrier against the southward sweep of Bolshevism. European counsellors could point out the Western way to rulers who would have the fullest support of their subjects. European Staff officers could superintend the training of an Arab army and European commissioners could protect the rights of Jewish or Maronite communities. France would win as much gratitude for this culmination of her work as she did for its inception in 1860. England would achieve the protection of important roads to India and Egypt without having recourse to the pockets of her harassed taxpayers.

In a leading article entitled the "Middle East Menace," the *Newcastle Chronicle* of July 15 takes a very serious view of events in Persia. "There is no reason to doubt," it says, "that the conditions we know to exist in Persia are extremely dangerous":—

A mischievous movement like that now progressing, if not effectively checked, may convert the country into a hotbed of anarchy and set the whole Middle East aflame. Bolshevist machinations in Afghanistan have already caused trouble there, and it is stated that the new doctrines have been adopted by powerful sections of the community. So difficult has the situation there become between the opposing factions that there have been rumours of the intended abdication of the Amir. The atmosphere in the Middle East has become explosive; a spark may cause a catastrophe. If the Bolshevist invasion is not stopped, if we retire to the old British sphere of influence, a situation may be created that will be intolerable for us. The idea of a military expedition at present is not to be thought of. The official Persian suggestion is that Persia should be supplied with arms and ammunition to equip her army of 50,000 to 70,000 men to stem the tide of the Bolshevist invasion. This is regarded by them as the only practical course, as it would enable the Persian Government to create a force sufficiently strong to deal with the invaders. But first of all we want to be sure of our Persian Government. We want to know whether it is to be Persian or Russian. The Soviet may have the grace to take action to bring to an end the mischievous operations of its supporters, nominal or actual, in Persia. Unless it does so it may not be able to carry on the negotiations for the opening of its trade about which it is apparently so solicitous. If Lenin and his gang find that they cannot get what they want from the Allies until the Middle East adventure is stopped, we may take it that they will at least make an effort to control the Reds in Persia, though we do not believe that the writ of Lenin runs very far in Asia. It is not difficult after all to set the world ablaze; the Russian incendiaries may be on the point of discovering how difficult it is to put out the fire they heedlessly lighted. But the situation has an ugly aspect. The war spirit was not extinguished by the armistice, and seems to be actually fed by Peace conferences.

## CORRESPONDENCE.

### THE OCCUPATION OF THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In reply to the letter of intemperate tone of your anonymous correspondent, which highly amused me, I should like to state that the information taken from the *Zora* was obtained from the *Messager D'Athenes*, and I heartily object to the assertion of this gentleman that I fabricate *canards* to the detriment of the "Black sheep of the Balkans."

The copy in question has been already sent to your offices some time ago, along with other copies of the *Messager D'Athenes*.

The *Messager D'Athenes* also stated, if I remember well, quoting *Zora*, of course, "that the Bulgarian pressmen had brought with them phonographs and a cinematographic apparatus on their visit to Mustapha."

I am, etc.,
THEODORE D. MOSCONAS.

32, Oxford Street, Manchester,
July 15, 1920.

[Either the copy of the *Messager D'Athenes*, to which Mr. Mosconas refers, did not reach us, or it was unfortunately overlooked; but, of course, we have no doubt that his statement regarding the appearance of the paragraph in that paper is perfectly correct.—ED.]

### THE TURKISH TREATY.

TO THE EDITOR OF "THE NEAR EAST"

Sir,—Your leading article on this is perhaps above criticism except in one sentence. I quarrel with the words "Turkey's *wanton* entry into the war." I object to the adjective. Germany's hold over the dominions of the Sultan was so strong in the autumn of 1914 that an armed occupation of Constantinople would at once have followed any refusal on the part of Turkey to do what she was bid.

Permit me to recall a piece of what is now ancient history. In 1880, soon after the Berlin Treaty was signed, measures were determined on to enforce law and order in Asia Minor. The Great Powers were to appoint Consuls and officers for this purpose. Germany, however, stood in the way, and finally, on February 10, 1881, Lord Granville wrote as follows:—"In consequence of the objections raised by the German Government, Mr. Goschen will not be instructed to put forward the Armenian question on his return to Constantinople."

Thus was the German foot firmly planted in Asia Minor, and bit by bit the Sultan was reduced to the status of the helpless vassal of Germany. Had the Berlin Treaty been carried out in its entirety, there would in all probability have been no war in the Near East. There would have been no "wanton" entry into the war.—I am, etc.,

G. L. H.

Kyrenia, Cyprus, July 6, 1920.

### ALBANIA AND ITALY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—At a meeting of the Anglo-Albanian Society held on July 15, in a Committee Room of the House of Commons, the following resolution was unanimously passed: "That this meeting of the Anglo-Albanian Society welcomes the decision of the Italian Government to recognise the Albanian Government, that it desires respectfully to congratulate the Italian Government on the victory of those liberal principles for which the Italian people fought so long and endured so much; and that it hopes, for the sake both of Italy and of Albania, such an understanding may be reached as will ensure to Albania Italy's support for complete independence within the frontiers laid down in 1913, and establish between the two nations such a friendship as will safeguard the interests of both.

"And this meeting trusts that this policy, which makes for peace and freedom, will be approved and endorsed by Great Britain and France."

I am, etc.,
M. E. DURHAM,
Hon. Sec., The Anglo-Albanian Society.

July 16.

## MUSICAL NOTES.

The concert season is very nearly at an end (it will recommence with Sir Henry Wood's "Promenades" at the Queen's Hall on August 14), and it is not easy nowadays for an artist to attract a full audience. There was, therefore, some rashness on the part of Madame Gloria Britana, described as "the British dramatic soprano," in making her début at the Queen's Hall on July 15. However, she did not appear to be depressed by the smallness of her audience, and she was not unduly nervous. Her recital was remarkable for two facts—she sang only in English, and she included in her programme some songs that really ought not to be heard outside the ordinary ballad concert. To begin and end a recital with songs bearing the name of W. H. Squire and Wilfrid Sanderson respectively is asking too much of the critic. Americans do this sort of thing, and we bewilderedly forgive them, but in our own singers we simply cannot tolerate it. For the rest, Madame Gloria has a full, rich voice, which is never unpleasing to the ear, and she sings in tune (an increasingly rare attribute in modern singers). But when she describes herself as a "dramatic soprano," it is to indicate aspiration rather than achievement; she certainly sang some dramatic songs like Bantock's "Lament of Isis" and "Elizabeth's Air" from "Tannhäuser," but it was in these that she most completely failed. Of interpretative ability she showed little trace—almost every song was approached in the same manner. To be an artist she put forth no serious claims; but I have little doubt that she will be very popular as a ballad singer. Her name will count for something, for the ordinary British audience has not yet lost its patriotism.

Although, as I have said, the present is not the time for large audiences, there was a concert at the Queen's Hall on July 14 which was so attractive that it could but be well attended. Renée Chemet, the French violinist, and Vladimir Rosing, the Russian tenor, are artists who appeal both to gallery and stalls; and to hear them both in one evening was an experience not willingly to be missed. Mlle. Chemet is a beautiful fiddler; technically she is almost irreproachable, her intonation is but very rarely at fault, and her interpretations are both dignified and finished. It is true that she did not play anything of great depth—apart from a perfectly played sonata by Tartini, the compositions chosen were mostly slight pieces of the eighteenth century—but what she did give was of utter and convincing charm. There are in her interpretation of these old pieces (which, by the way, were properly accompanied on the harpischord) a spontaneity and inevitability which make disagreement impossible.

With M. Rosing, on the other hand, one very often disagrees, even though one can never deny the intensity of his singing. In Russian songs he is supreme; indeed, he is unapproachable, for the feeling and ardour which he infuses into them are overwhelming. He is to Moussorgsky almost what Pachmann is to Chopin; and to hear him sing this composer's "Death Serenade," or "Hoi My Dniepr," is a most thrilling joy. On this occasion M. Rosing was not in good voice, but although this fact explained some deficiencies in Schumann's "Ich grolle nicht," it did not excuse his overacted singing of Purcell's "Dido's Lament." There are times when M. Rosing's stage methods illuminate, but there are also times when they obscure; and so it was that a false darkness beclouded his rendering of Purcell and Beethoven. His strong points are his weak points, his virtues his vices. It is never through the absence, but always through the presence, of certain things that he sometimes fails; but when the song demands his peculiar methods he is a very great singer.

It is very pleasing to record that the Quinlan Agency has succeeded in reorganising (under the permanent conductorship of Mr. Adrian Boult, upon whose excellence I have often remarked) the British Symphony Orchestra, a most admirable body, composed wholly of ex-Service men, which unfortunately failed last season to get sufficient public support. This orchestra is to begin a series of concerts in the Kingsway Hall in October.

ANDANTE.

## THE LEBANON HOSPITAL FOR MENTAL DISEASES.

A report lately received from the Director of the Lebanon Hospital for Mental Diseases in Syria, H. Watson Smith, M.D., Ch.B., who, by the way, has, since his return to Syria, had the O.B.E. conferred upon him by our King, states that 109 patients—68 men and 41 women—were admitted to the hospital during the year. This is the largest number admitted in the history of the hospital. Thirty-three men and twenty-eight women—that is, sixty-one patients—were present in the hospital on April 1, 1919; therefore, 170 patients—101 men and 69 women—were under care and treatment during the year. Of this number, 35 patients—16 men and 19 women—were discharged cured; 14 patients—10 men and 4 women—were discharged improved; 16 patients—10 men and 6 women—were discharged not improved; 8 patients—5 men and 3 women—were found to be not insane and were discharged; and 12 patients—9 men and 3 women—died during the year. There remained in the hospital on March 31, 1920, 85 patients—51 men and 34 women—being an increase of 24 patients over the number of last year.

Other extracts from the report are as follow:—

The French military authorities have been sending quite a number of acute cases for treatment, and the results have been decidedly gratifying. The majority of these cases (soldiers) have recovered, which has called forth a very kind letter of appreciation and thanks to the hospital from General Gouraud in the name of the French Army.

The general health in the hospital is good. The wards are clean and tidy. The patients are comfortably clothed and well supplied with food and medicines. The supply of blankets is sufficient, and, in spite of the acute and difficult nature of the patients, the nursing staff is doing its work very well at present.

The country generally is in an extremely distressed state at the present time, and mental cases seem to be on the increase, for I am having at present almost daily demands for admission. Prices of foods and, in fact, of everything are rapidly and progressively rising, and although I oblige those who can to pay to the utmost of their power, there are still a large number of absolutely urgent poor people who certainly have not the means wherewith to pay for their support and treatment, and to refuse them admission would be nothing short of a scandal. It is therefore earnestly to be hoped that the interest always shown towards this unique work—the only hospital for mental diseases between Cairo and Constantinople—will be strongly maintained, for to help the insane is to help those who are indeed helpless.

During the war the Turkish military authorities paid the hospital in wheat for poor patients sent by them for admission, and after they left the French military authorities continued to give wheat and other foodstuffs to the hospital. The price of this quantity of wheat amounts to about £120 a month, and unfortunately I have received notice that this provision may be discontinued

## TOPICS IN PARLIAMENT

*The subjoined headings are those given in the official report:—*

ALBANIA. MESOPOTAMIA: Civil Administration. INDIA: Brigadier-General Dyer. INDIA: Afghan Operations (Military Medal). MESOPOTAMIA (TURKISH PETROLEUM COMPANY) (July 8)

## I.—THE SERBS IN MACEDONIA.

Several good books have been written about the Salonika "side show," and the writers of all of them deserve the gratitude of those of us whose interests lie in the Near East for reminding the public of the enormously important part played in the great war by the only Allied Army on which the limelight was never allowed to play for a single moment during the four years it spent in Macedonia. The Press was given few opportunities by the Censor for giving any information regarding the progress of the campaign on the Salonika front, and the officers and men taking part in it not being allowed to refer to it in their letters home, it soon became firmly impressed on the public mind that nothing was doing in that quarter. Hence periodical screams for the removal to the western theatre of war of the great army which we were told was stagnating in idleness in Macedonia. Thanks to the writers of books like "With the Serbs in Macedonia," we know better now, and are able to appreciate to some extent the hardships endured, the difficulties overcome, and the splendid success achieved by the Cinderella of the Allied Armies. This particular book, however, covers new ground to some extent, for the author's unit of the R.A.S.C., a Ford M.T. Company, being attached to the Serbian Army, served from the beginning to the end of the campaign with our gallant Allies, for whom his admiration is unbounded. One doubts whether a warmer friend of Serbia than our author could be found anywhere, and he could not have thought of a better way of enlisting the sympathies of his readers for the nation he so greatly admires than by ending his book with a terse summary of the work actually done by the Serbian Army in each of the five years from 1914 to 1918. It is, indeed, an amazing record of military achievement, and it is all the more extraordinary that so little has been said about it even by the Serbs themselves. We all remember the great part played by the Serbian Army in the final struggle in Macedonia in 1918, but most of us seem to have forgotten that in the first month of the war the only enemy army subjected to a thorough thrashing was the Austrian force, which rashly attempted the invasion of Serbia. Seven days' fighting sufficed to send the invaders flying out of the country beaten and demoralised after losing nearly 150,000 men in killed, wounded and prisoners. In December, 1914, it fared no better with the second Austrian Army, doomed to repeat the enterprise, but after Rudnik's magnificent victory the luck turned, and attacked on every side by the Austrians, Germans and Bulgarians, the Serbs had to abandon their country, the campaign ending with the marvellous retreat through Albania of the remnants of their heroic army. When it reappeared, reformed and reorganised, in Macedonia, the Serbian Army was not slow in repeating its former triumphs. In the heavy fighting which resulted in the capture of Monastir, it played a leading part, as may be learnt from "With the Serbs in Macedonia"; the author was privileged to serve with it on that occasion, and he gives a most interesting account of the operations. Indeed, he gives an interesting account of everything he saw, grave and gay, during his service on the Macedonian front, not omitting the work of his own branch of the service, and one might well call this book the Mechanical Transport Epic. Lovers of Kipling, and the verses in this book leave us in no doubt as to the author being one of them, will remember how "romance brought up the 9.15." She was as much in evidence when our men drove their Ford cars through the marshes, across the sandy wastes and over the rugged mountains of Macedonia, taking up ammunition and supplies to the gallant Serbs. For the men of our R.A.S.C. it was a case of "the longest day was never too long or the hardest work too hard," for every line of this book makes one feel that they all, officers and men, put every ounce of energy they possessed into the carrying out of the difficult task assigned to them. Perhaps the genuine gratitude of the Serbs for the aid so ungrudgingly given to them in their great effort to reconquer their country had not a little to do with it. In war to feel that your work is really appreciated is as gratifying as it is novel.

Not the least of the attractions of this brilliant little book is discoverable in the excellence of its literary quality. Unlike so many of the minor works written round and about the war, this book is well written, and the good quality of the prose is well matched by the excellence of the verse interspersed through its pages. The latter could not be fairly described as poetry, and it is too reminiscent of Mr. Rudyard Kipling's South African War verses to suggest any great amount of originality; but within these limitations it is essentially "good stuff." All these verses are genuinely funny, and they are brightened occasionally by strong flashes of wit, most conspicuous in those addressed "To 'Enery" and in those inspired by "The Weather." The former should please Mr. Henry Ford, if the triumphs of the useful product of his mammoth workshops, extolled and derided in four continents, have not by this time exhausted his sense of appreciation.

It is to be hoped that this book will be as widely read as it deserves to be; for, apart from its amusing qualities, which alone should suffice to ensure its popularity, its vivid descriptions of the scenery and clever pen portraits of the people of Macedonia are well calculated to give the reader that subtle suggestion of atmosphere that can never be conveyed by the cleverest newspaper articles or the most eloquent public speeches. Reading, one lives for the time in the Near East so completely that one feels one is at last getting some grasp of the problems peculiar to a part of Europe much in our thoughts at the present time. That the author, in the midst of his technical preoccupations, has given some thought to these problems may be gathered from the following passage in his book:—"Goodness only knows who is really right or how far the present parcelling out of this much-disputed region will be altered by the Peace Conference. At present nobody is satisfied—and the difficulty in the world is that the other side has always got its own case. That is what makes life so hard for the Bernard Shaws and so comfortable for the fools and bigots. Each nation concerned can supply a shoal of facts to prove its own claims and a sheaf of evidence proving the other side's iniquity. One of the curiosities of the psychology of peoples is the different passionate conclusions at which they arrive from the same premises." When one has once grasped that what we call the national aspiration of the Serbs, Bulgars and Greeks are embodied in the territorial claims they respectively advance, and that each nation firmly believes that these claims are based on justice, one begins to see how complex is the problem the statesmen of Europe have so often attempted to solve in the past century. Whether their last attempt to settle the Eastern question will be rewarded by success time alone can show; but even the dissatisfied claimants in the great suit must by this time have appreciated the honesty of intention and freedom from prejudice of the judges on this occasion, in which case it is perhaps not too much to hope that permanent peace will be established in long-suffering Macedonia as a result of their labours.

SECOND EDITION NOW READY. 21s. net.

DIPLOMATIC REMINISCENCES.

By A. NEKLUDOFF.

*Formerly Russian Minister at Sofia and at Stockholm, and Ambassador at Madrid.*

"This former representative of a departed system sees no necessity to guard certain of those secrets which go to make up the mystery of diplomacy. He permits himself to give descriptions and make confidences not often to be found in the writings of retired ambassadors. . . . In consequence of this break with the past, which fate has forced upon him, M. Nekludoff is interesting and informative."—*The Times.*

LONDON: JOHN MURRAY.

## II.—EX-KING FERDINAND AND HIS SUBJECTS.

M. Nekludoff belongs to a small group of diplomatists who served Imperial Russia with zeal and never hesitated to tell unpalatable truths to their superiors. In January, 1911, he was appointed Minister at Sofia; he remained at that arduous post through ut the internecine struggle of 1912-13, which heralded a far greater cataclysm; and has now given the world a volume of reminiscences containing

Digitized by Google

much first-hand information regarding the events of that fateful period. His narrative is somewhat involved and broken by many irrelevant parentheses; it does not enable Western readers to unravel the tangled skein of Balkan politics or follow the military operations which they produced. Its chief value lies in the author's intimate knowledge of the Bulgarians, and of the Sovereign who misgoverned them for a quarter of a century.

Before leaving Petrograd for his new post M. Nekludoff was received in audience by the Emperor Nicholas II., who spoke in his usual urbane manner, and whilst giving instructions which were really *orders*, only appeared to be airing his opinions. Once only in the course of the interview did the Emperor assume a solemn and dictatorial manner; after an intentional pause, stepping backwards and fixing me with a penetrating stare, he said: "Listen to me, Nekludoff; do not for one instant lose sight of the fact that we cannot go to war! I do not wish for war as a rule; I will do all in my power to preserve for my subjects the benefits of peace. But at this moment of all moments, everything that might lead to war must be avoided. It would be out of the question for us to face a war for five or six years; in fact, till 1917. Though, if the most vital interests and the honour of Russia were at stake, we might, if absolutely necessary, accept a challenge in 1915—but not a moment sooner, in any circumstances or under any pretext whatever. Do you quite understand me?"

It is evident that nothing short of unprovoked aggression could have forced Russia to enter the lists in August, 1914.

M. Nekludoff was no stranger at Sofia; having spent several years there as Secretary to the Russian Legation, he had enjoyed ample opportunities for studying the people and their sinister sovereign. The Bulgarians, he writes, were "cursed in history for having brought the Turks into Europe"; but their Nemesis came in the guise of a yoke which accentuated the worst traits in their complex character. From the Finnish, or Ugro-Altaic, strain in their ancestry they inherited stubbornness allied with gross materialism; and both defects were immeasurably increased by five centuries of Turkish domination. Their native nobility and ecclesiastical organisation were destroyed; they lost every vestige of autonomy, and became more barbarous than any other race inhabiting Balkan territory. No community can long exist without religion and ideals. For Bulgarians the first was restricted to a minimum of perfunctory ritual, the second to dreams of an empire extending over the whole Near East, with Constantinople as a metropolis. In pursuit of this monstrous ambition they displayed a degree of brutal courage and submission to iron discipline which placed them in the first rank as a militant race. But their greatest qualities were neutralised by short-sighted cunning and by inborn cruelty which spared neither Turkish prisoners nor their own wounded.

In Ferdinand of Saxe-Coburg they possessed a ruler who stimulated their fanaticism for selfish ends, and who, with all his undoubted ability, never showed a trace of tact or constructive statesmanship. He shared their visions of empire; his ambition it was to revive the glories of Byzantium as Basileus of Constantinople; and he followed that will-o'-the-wisp with sleuth-hound persistence and entire lack of scruple. He seems to have resembled the ex-German Emperor in physical cowardice, a passion for theatrical display and affectation of omniscience; but William II. did occasionally employ men of sterling worth, while Ferdinand loved to surround himself with scoundrels.

He excelled in the art of keeping the fear of judgment over men who had compromised themselves by bribery and corruption; and in holding them by the dread of punishment or by the necessity of relying on his protection or forgiveness. In 1913 there was at one time in Bulgaria a Cabinet composed almost entirely of men who had either been sentenced and forgiven or who were on trial for malpractices and abuse of power.

Ferdinand's military policy was borrowed from that of Rome in decadence and Turkey at her apogee of ruthless might. He built an enormous school for officers at Sofia, where young aspirants were taught by specially-chosen professors to regard the Sovereign as the sole dispenser of their careers. On entering the army they found life made easy by good food and wines provided at very low expense, but an elaborate system of espionage taught them the virtues of discretion and unquestioning obedience. Such qualities, inculcated during the plastic stage of growth, served Ferdinand in good stead—up to a certain point. Although he made no secret of his contempt for the Bulgarians, they felt that they had in him a mighty asset making for the realisation of their dreams. In Bulgaria's darkest hour, brought on in large measure by his tortuous policy, Ferdinand never lost a certain measure of popularity.

In the interests of history it is regrettable that M. Nekludoff should have been transferred to Stockholm in 1913. We should know more of the circumstances which led Bulgaria to throw in her lot with the Central Powers had an observer of his calibre remained for two years more at Sofia. The last half of his book relates to events in Sweden, and subsequently in Spain, to which he was accredited as ambassador in June 1917. Finding it impossible to work with the Provisional Government, he resigned his functions in September, after hurling a Parthian shaft at Kerensky in the shape of a long telegram which predicted the ruin about to fall on Russia.

F. H. S.

## III.—DESTINY AND EDUCATION.

There are times, and emphatically one of these times is with us now, when many of us feel the necessity of getting down to fundamentals. What is the use of, what meaning is there in all this turmoil and confusion which we call life? This highly practical little book sets out to put some clues into our hands. Indeed, it does more, for the author writes with the conviction that he has found a veritable *solution*. What exactly this solution is, it is not at first reading easy to determine, for, in spite of admirably clear language and exposition, the book is alarmingly short and its brevity makes the argument somewhat hard to follow. A second or third reading will not, however, take up too much time, and is well worth the trouble.

The author's main purpose is summed up in the last chapter. He is endeavouring to discover and unfold as a working ideal the "common ground of all denominations, sects and creeds"; to "indicate a way or path of life which will conciliate and unite rather than antagonise and divide." What is it, he asks, that hinders this quest? The great obstacle, he insists, is to be found in "egoism." This word, occurring frequently throughout, is, as he reminds us in his excellent "correlated glossary," used in the French language as the equivalent of our more familiar word "selfishness." It is not, however, a mere word, blessed or otherwise, that is presented to us as the supreme panacea. At some length, and with much subtlety of argument the full meaning of egoism is gradually developed. He expounds with skill, and an eloquence which carries the reader with him, how egoism arises, how it manifests itself, and how we may hope finally to overcome it. Incidentally, an interesting light is thrown on what has popularly come to be known as psychical research

The subject is one of great difficulty and immense importance. Mr. Fox Pitt might well have written a treatise on it, running into several large volumes. Instead of this, he has preferred to confine himself to a short essay, in the hope that it may reach more readers, stimulate thought and lead to practical results. The book ought to be read in conjunction with the author's previous little work on "The Purpose of Education," issued by the Cambridge University Press.

Sir Frederick Pollock adds to the value of the volume by contributing an "open letter" dealing with the moral aspect of the League of Nations, while Mr. Frederick Gould contributes an appendix on the International Moral Education Congress. This appendix will be a revelation to many of this powerful movement, of which more will certainly be heard. Some of the most distinguished men and women throughout the world are actively engaged in its work, and it may well be hoped that the deliberations of the Congress will make an important contribution towards the solution of some of the most difficult problems facing the whole world, and especially the Near East.

C. S.-W.

## IV.—"FOR EVER ENGLAND."

Achilles came to Troyland
And I to Chersonese.

These two lines, written by Patrick Shaw-Stewart when he was on Gallipoli, sum up much of the substance of this book; they sum up, that is, the Eton and Balliol period of his life, when he was chiefly engaged in learning the classics, and his war period, of which the most vivid part was the experience of the Dardanelles.

Patrick Shaw-Stewart, who was one of that brilliant circle which included Charles Lister, Julian Grenfell, Ronald Knox, and, later, Rupert Brooke and Denis Browne, was true to the traditions and faithful to the conditions of his type. Into the splendour and the sacrifice which informed the actions of that type he does not let us see deep;

Digitized by Google

there is, indeed, little sentimentality in this book. But the absence of this does not conceal the tragedy of his fate, and the fate of others like him; rather, the reserve and discretion with which Father Knox has explained and has edited Shaw-Stewart's letters make us feel, more keenly than more words and zeal could, the utter loss in the European War of such young men as was the subject of this memoir.

Shaw-Stewart, who was born in 1889, and was killed in France at the end of 1917, had two full war years in the Near East; he was in the Dardanelles expedition from beginning to end, and in 1916 he was on the Macedonian front, mostly with the French armies there. His letters from Gallipoli are full of his passion for the classics. Here is an example, written on April 29, 1915, of how he enjoyed his knowledge:—

Thence we came straight to the very edge of the tyranny of Miltiades, in sight of the *notissima fama insula*, in sight of Samothrace, in imaginary sight of windy Ilios itself, and not so very far from Ægospotami.

On June 26, 1916, he wrote (in a letter to Raymond Asquith):—

I have roamed over Crestonæa and Mygdonia, set foot on the Trans-Strymonie territory of (I think) the Odomanti, encamped by the Echedorus, which Xerxes drained, ranged on the hills where lions attacked his camels, and occasionally looked in on the Thessalonians.

The judicious method by which the author has chosen to show what manner of man Shaw-Stewart was, is most effective, for it admirably brings out the character—or, at least, some strong traits—of his friend. This memoir is designed, we take it, not so much to publish the individual worth of his friend as to be an expression of Father Knox's private gratitude to him, and as such it is not for us to criticise the book or the subject of it. A book which is the product of grief and admiration—a book which nearly every Englishman (who, owing to the toll taken by the war, is an equal possessor with Father Knox of the two properties mentioned), would, if he could, have written—is not for literary, psychological, or any other kind of appreciation. But for those who yet ponder on these things, Father Knox has compiled a beautiful volume.

## V.—THE SHADOW OF THE MOSQUE.

This is Mr. McDougall's first novel, and he has chosen for its setting Mesopotamia of the present time, occupied by the British. The style of the story is businesslike—no time is lost in introducing the chief characters and making it clear what their rôles are to be. Captain Galt is shown arriving as the new political officer at El Ragi, and almost immediately catches sight of the Sheikh of El Ragi with a sinister expression on his face which he hastily changes for one of dignified and courteous friendliness when he sees Galt. Very soon Galt becomes familiar with the figures of an aged blind teacher of the Koran, and of his adopted daughter, who leads him daily to and from the Mosque. A glimpse of her face, seen when her veil is raised for an instant, shows a fair complexion, tanned by the sun, and glowing violet eyes. After this the story goes with a swing, and adventures follow one another quickly. Needless to say, Galt triumphs completely in the end over the treacherous Sheikh. Fortune certainly is with him when he is able to discover that his "Arab" love, Uyuni, is really of European birth, and when his extraordinarily silly fiancée writes from England to break off her engagement to him. Mr. McDougall has created an atmosphere full of colour and picturesque movement, and draws some vivid pictures of Mesopotamia and its inhabitants. Captain Galt and Major Falconer, the Military Governor, are more than recognisable types—they are real people. The author is to be congratulated on finding a new sphere for romantic adventure and on making such spirited use of it.

Prince George Bibesco arrived in London on July 16 from the Continent.

The address of the Georgian Legation in London is 32, Queen's Gate, S.W.7.

The Duke of the Abruzzi arrived in Port Said on July 12 on board the "Roma," and is proceeding to Naples.

Princess George of Greece, who writes under the name of Marie Bonart, is publishing a book entitled "Military Wars and Social Wars."

Issa Khan Moham-es-Saltaneh, Second Secretary to the Persian Legation in Paris, has been temporarily attached to the Legation in London.

M. Boerescu, Counsellor of the Roumanian Legation in London, has been confirmed in the rank of Minister Plenipotentiary, and is returning to London shortly to resume his duties as Chargé d'Affaires.

At the joint annual meeting in Paris on July 11 of the Asiatic Society of Paris, the Royal Asiatic Society, and the American Oriental Society, it was decided to prepare an encyclopædia of Buddhism and to collect information to that end.

In the list of pensions granted during the year ended March 31 last under the Civil List Act occurs the name of Mrs. Leonard Wm. King, who, in recognition of her husband's services to Assyrian and Babylonian study, and in consideration of her circumstances, is awarded £86.

Our Bucharest Correspondent writes (July 7):—Dr. Seton Watson was entertained at dinner by the Foreign Ministry a few days ago, General Averescu and the Presidents of the two Chambers and some of the leading members of the Government and the Opposition being present. Party strife seemed to be for the moment forgotten, and all joined in giving an extremely cordial welcome to Dr. Watson, whom all alike regard as one of Roumania's best and staunchest friends. Dr. Watson has now gone back to Belgrade.

Our Baghdad Correspondent writes:—

Some idea of the social amenities of the British community of Mosul may be gathered from the following letter from a correspondent of the *Baghdad Times*:—

"Our merrie season at Mosul ended with the races and a most enjoyable dance given by Colonel C. P. Wynter and officers of the 52nd Sikhs (F.F.) at the Club on Wednesday, the 19th inst. The club was quite transformed by shaded pink lights, and the band of the Northumberland Fusiliers played the most dance-inspiring tunes. The supper, which was most sumptuous, was laid out of doors, and everyone tucked in merrily. Our hosts spared no trouble in looking after their guests, and everyone agreed that it was one of the most pleasant dances of the season. The season was inaugurated by a dance given by two festive young staff officers, who were born hosts. This dance was followed by one given by the 44th Battery, R.F.A. Next came one given by the M.G. Company. Then the Masters and Owners of the Nineveh Tripe Hounds, not to be outdone, gave their 'Annual' Hunt Ball, which was conviviality itself. The feature of this entertainment was the band of the Northumberland Fusiliers, which was much appreciated. Most of the ladies will be off to the hills soon, but we hope next cold weather there will be the same camaraderie and pleasure."

## APPOINTMENTS, ETC.

Mr. Malcolm Stevenson, Chief Secretary to the Government of Cyprus, has been appointed High Commissioner and Commander-in-Chief, in succession to the late Sir John E. Clauson.

Digitized by Google

The King has been pleased to approve the following re-appointments and appointments to the Viceroy's Executive Council:—H.E. General Sir Charles Carmichael Monro, G.C.B., G.C.S.I., G.C.M.G., A.D.C., Commander-in-Chief in India; Sir George Rivers Lowndes, K.C.S.I., K.C.; Sir George Stapylton Barnes, K.C.B.; Sir William Henry Hoare Vincent, K.C.S.I.; Khan Bahadur Mian Muhammad Shaf, C.I.E.; Mr. William Malcolm Hailey, C.S.I., C.I.E.; Sir Thomas Henry Holland, K.C.S.I., K.C.I.E., F.R.S.; Rao Bahadur B. Narasimheswara Sarma Garu.

The King has been pleased to approve the appointment of Mr. Ernest Barker, M.A., Fellow and Tutor of New College, Oxford, to the office of Principal of King's College, London, in succession to the late Dr. R. M. Burrows. Mr. Barker, who is in his forty-sixth year, is the author of a number of publications, including "The Political Thought of Plato and Aristotle" (1906), a revised edition under the title "Greek Political Theory" (1908), and "The Future Government of India" (1919). He has also been a contributor to the Encyclopædia Britannica (11th edition) and the Cambridge Mediæval History.

## OBITUARY.

Our Belgrade Correspondent writes:—General regret was felt at the death of General Bozha Jankovitch, recently commanding the Fourth Army at Zagreb. The deceased soldier was born in 1849 and promoted general in 1902. He was buried at Belgrade on July 9, with full military honours.

## CURE FOR BILHARZIA DISEASE.

### The Intravenoue Injection of Antimony.

Dr. J. B. Christopherson, C.B.E., M.D., in a demonstration before the Tropical Disease Section of the British Medical Association, Cambridge, on July 1, stated that the schools, hospitals, and houses of Egypt were full of Bilharzia disease. The country was riddled with it, and it was:—more than anything else—accountable for the indolence of spirit, want of character, and the backward condition of development of the Egyptian fellah and, as the fellaheen formed 90 per cent. of the population, one might venture to say the Egyptian nation. Now that a cure had been found and had established itself, it behoved the Egyptian Government to apply it, and apply it nationally.

The intravenous injection of antimony, if carried out in a scientific manner by men accustomed to work with care and to be guided by the results of their work, would, if carried out through the agency of mobile laboratories, and working in co-ordination with prophylactic measures suggested by Leiper for the destruction of the "intermediate hosts"—the fresh-water snails—probably result in the annihilation of the disease in a few years.

It was impossible for English doctors to undertake the work at this present time, as the motive might be misconstrued by the fellaheen in their present condition of unrest, but there were now many Egyptian doctors who by their character and training at the Kasr-el-Aini Hospital, Cairo, and subsequently in England, were qualified to undertake this important work themselves; and it would be a proper and a graceful act of appreciation on the part of the Egyptian Government to enable them to carry out the great work of ridding their country of what Madden rightly terms "Egypt's most dangerous modern plague."

## NEWS IN BRIEF.

Ibrahim Massaud, sentenced to death for attempting to assassinate the Prime Minister, Tewfik Nessim Pasha, on June 12, at Cairo, was executed on July 8.

It is stated that the Armenian Patriarch of Constantinople, Tourian, has been at Spa in order to press the claim of Armenia to a share of the Turkish indemnity.

A start is expected to be made with the State University at Cairo next academic year. The report of the Committee is now ready, and the Cabinet will shortly discuss the project.

The Bulgarian Government, says *The Times*, has issued current Bulgarian postage stamps in ten denominations overprinted with a native inscription signifying "For Our War Prisoners," and surcharged with figures representing one-half of their normal face values only. The postal validity of these stamps is restricted to the amount of the surcharge, the balance of 50 per cent. going to the Prisoners of War Fund.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

INDIA.—Lady (young) offers services, any capacity, return for passage to Bombay. October.—ROBERTS, 2, Spencer Road, Southsea.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

## STORM CLOUDS IN THE MIDDLE EAST.

Lord Grey, of Fallodon, whose rare appearances in public life make us deplore more and more not only the grievous physical infirmity which curtails them, but also his exclusion from the inner councils of the Empire, drew special attention last week, in his speech at the Council of the League of Nations Union, to the extreme precariousness of the position into which we are drifting in Asia in consequence of the policy, or, as we should prefer to put it, the want of policy, of the British Government. In commenting just three weeks ago on the fair picture of the future of Mesopotamia, which Mr. Lloyd George and Lord Curzon had successively unfolded in the House of Commons and in the House of Lords, we ourselves ventured to point out that all the admirable plans propounded by them were bound to fail, unless we could disperse at the same time the storm clouds that threatened other parts of the Middle East, and notably Persia. The event has only too speedily confirmed our apprehensions. In Mesopotamia itself there have been unfortunate occurrences strangely at variance with ministerial forecasts. An Army of Occupation numbering 13,500 British and 66,000 Indian troops—from which only a very small deduction must be made for the few still scattered about Persia—has been unable to prevent an Arab rising, which cut the Euphrates line of railway between Busreh and Baghdad, destroyed or captured six trains, isolated a British detachment at Rumeita, inflicting heavy casualties upon it, defeated all the first attempts to relieve it, and plunged a large district into "a state of great disorder." We do not know yet what was the attitude of the local levies to which we had been told eventually to look for the maintenance of Mesopotamian peace and security, but it is clear from these deplorable happenings in the heart of Irak-el-Arabi, that the prospect of any reduction of our Army of Occupation is very much further off than Ministers would have had us to believe. Indeed, Mr. Churchill stated quite frankly that the Government of India had now been warned to hold a further force in readiness to be despatched in case of emergency. No official information is yet forthcoming as to the causes of this Arab rising. The only definite statement made is that it has not been instigated by any of the Arab chiefs to whom we have paid subsidies. That is rather cold comfort, but we must make the best of it. On the other hand, it is well known that for many months past Arab emissaries from Syria and the apostles of Turkish Pan-Islamism-cum-Bolshevism have been hard at work stirring up trouble amongst the turbulent elements of the Mesopotamian population. The recent promise of a large measure of autonomy for Mesopotamia could hardly be expected to allay the resentment provoked amongst all classes by the post-war policy of the Allies in Palestine and Syria, for they not unnaturally regard both Zionism and French domination as the negation of all the Arab aspirations towards united nationhood which we ourselves encouraged so long as we needed their co-operation against Turkey, and of the specific pledges given in the Anglo-French declaration of November 7, 1918, that the object of France and Great Britain was "the establishment of national governments and administrations deriving their authority from the initiative and free choice of the indigenous populations." We fail to see how the threatened action of France in Syria can be reconciled with those pledges. Any serious collision between Faisal and the French would, we fear, inflame the whole Arab world against the Allies, and drive it into the expectant arms of the Turkish Nationalists. Nothing could be more calculated to strengthen Mustapha Kemal's hands, or to weaken those of the Turkish Government at the very moment when the Powers have braced themselves up to deliver an ultimatum at Constantinople demanding the acceptance of their peace terms within ten days.

The situation in Persia is at least as bad, though for different reasons, as it was towards the end of 1915 when a desire to strike a resounding blow which would re-echo through the whispering galleries of the East was one of the motives that prompted the premature attempt to seize Baghdad, which ended in the Kut disaster. The Bolshevist invasion of Persia is spreading all along the southern shores of the Caspian, and whilst Persian Ministers, as helpless to-day as they were then, are clamouring for British troops to protect the capital, the British Prime Minister has stated with significant emphasis that we have no military or naval commitments in Persia. We do not quarrel with that statement, for the British people would never listen for a moment to the despatch of a British expeditionary force on any such adventure. Nor do we contend that in the present state of our national finances the British Treasury should turn a favourable ear to Persian solicitations for large pecuniary advances. But we have a right to expect that, since Mr. Lloyd George is determined to come to terms with Soviet Russia and has evidently advised Persia to do the same, he will not be content with mere vague assurances that Moscow will desist from all enterprises, either by military action or by propaganda, prejudicial to our interests in the East, but that he will insist on deeds rather than words. The Soviet Government, of course, declares that it never ordered the Bolshevist descent upon Persia. Very well. There is only the more reason then for it to order its friends out of Persia. Or is Bolshevist Russia going to take yet another bad leaf out of the book of Tsarist Russia and pretend, as the old Russian diplomacy used too often to do, that it cannot restrain its agents abroad? We did not recognise the validity of any such pleas in those days. Why should we now? If for its own reasons the Moscow dictatorship is genuinely anxious to establish normal relations with Great Britain, it will find ways and means of stopping Bolshevist aggression on a country where, if we have no naval or military or even financial commitments, we certainly have commitments of friendship and of interests. If we fail to do this much for Persia, we shall merely add another to the list of Oriental peoples that have lost their faith in us. With the fall of Vossukh-ed-Dowleh one of our best friends is already gone. He stood by us during the war, for more than anyone else he insisted on the maintenance of Persian neutrality, which was all that we asked for, and it was with him that we negotiated the Anglo-Persian agreement as soon as the war was over. If he was to be sacrificed to the Shah's desire for a change, the Mushir-ed-Dowleh was probably as good a successor as could be found for him as Prime Minister. He has had a Western education, and his intentions may be excellent. But there are other members of his Cabinet whose antecedents during the war are more questionable. In any case the convocation of the Mejliss, which cannot, and should not, be any longer delayed, will put the authority both of the new Government and of the young Shah himself to a severe constitutional test, as it is sure to contain elements not entirely proof against Bolshevist blandishments, even if and when not directly inspired from Moscow. In these circumstances it is clearly our duty to be at least quite frank with the rulers of Persia, and to let them know what we can and what we cannot do for them. One of the things we cannot do is to send armies to their rescue. One of the things we can do is not merely to say to the Soviet Government before we enter into the proposed new relationship with it: "Hands off Persia," but to see that it has actually removed its hands from her.

# BRITISH INTERESTS IN EGYPT.

(From an Occasional Correspondent.)

Cairo, June 14.

The British Premier, in a much-quoted speech, declared that the grand object of the Government's reconstruction policy is "to make Britain a land fit for heroes to live in." A friend of mine assured me recently that the British policy in Egypt, as exemplified in the proposed changes in the legal system, is a co-ordination of Egyptian with Home policy. I pointed out that the changes, far from being welcomed, were disliked and condemned by the British community. "I know," he replied; "if the satraps here impose these changes, Egypt will rapidly become, so far as the British are concerned, a country unfit for any but the most heroic to live in."

The publication of the memorandum drawn up by the "Council of the British Non-Official Community in Cairo," in justification of their unanimous demand that the changes in the legal system in Egypt at present proposed, shall not be allowed to become law, is welcome. The memorandum is a document deserving the earnest consideration of everyone interested in the future of Egypt. It sets out clearly the elements of a situation pregnant with dangerous possibilities.

An examination of the broad outlines of the situation suggests that those at the head of affairs are embarking on a course that may ultimately lead to disaster, and at the best will increase enormously the difficulties of governing Egypt. Whatever the reason, their present policy appears to ignore entirely the fact that Great Britain has assumed the task of exercising a controlling influence over the government of Egypt. A strong national spirit now exists in the country; the British establishment is comparatively a tiny body; domination by force is not dreamt of by anyone: where is Great Britain to derive the power to discharge her task? Every Briton in Egypt knows the answer, written on every page of our history. British prestige must be maintained intact: it is hardly credible that the British authorities in Egypt do not realise that its maintenance is the indispensable foundation of our hope to carry on successful government. The non-official British community in Egypt appears to have grasped far more clearly than the governing body the fact that prestige must be vouched by realities too plain to be blinked, and must be guaranteed, constantly and without hesitation, by government if it is not to melt away. It is of the very essence of prestige that it is claimed, admitted, and unassailable. A shaky prestige is a contradiction in terms. Besides the obvious demands of the situation for measures to secure the position of the British in Egypt, the fact that it is human nature to favour one's own, and that Great Britain is in a position to do practically what she chooses, will suggest to the minds of Egyptians a grave weakness in the British Administration and a contemptible capacity for betrayal, if, when the British community demand, as they do, that their position shall not be rendered less secure than in the past by any contemplated legislation, Government turns a deaf ear to the demand. The effect on our prestige of such an attitude is greatly intensified when it is known, as in the case of the new legal system which it is proposed to establish, that Government, in ignoring the wishes of the British community, definitely takes sides with a section of the population here whose hatred of everything British is in direct ratio to their lack of real usefulness to Egypt.

The explanatory memorandum issued with the draft laws containing the new legal system under which Britons in Egypt will have to live, opens with the harmless-looking statement that "The reconstitution of the mixed tribunals amounts in effect to the transfer to the mixed tribunals of the jurisdiction hitherto exercised by the Consular Courts." But it means that, if the draft laws are passed without amendment, an Englishman accused of a crime, who would formerly have been tried before a British judge, according to British law, must in future be tried by a mixed Court according to a somewhat modified form of the native code. Disputes between British subjects as to contracts or other civil matters, formerly tried in the Consular Courts according to the legal principles and methods with which the litigants were familiar, must be taken before what is virtually a foreign Court, there to be discussed in a foreign language, and settled according to a foreign law. Incidentally, the working of such a system means the extinction of the British lawyer, with a great increase in the volume of business to be discharged by the Mixed Court lawyers, scarcely any of whom are British. The only steps needed to make the system complete are to compel British residents to renounce their British citizenship, assume foreign names, and speak no English.

Once it becomes necessary to revise the criminal law and procedure, the opportunity for introducing the British system should not be lost. It is the finest system in the world. Its crowning glory is the spirit in which it is administered by British judges—a spirit which renders our criminal system one of the most solid guarantees of security for the law-abiding citizen, the spirit expressed in the principle that a man shall stand innocent in the eyes of the law until he is proved guilty. This spirit, which has moulded not only the form but the substance of much of our criminal procedure, is not to be found in foreign systems. One and all, they contain features rejected centuries ago by British law as unfair. We need have no hesitation in saying that to place the British in Egypt under any criminal codes but their own is to subject them to an indignity. A step so retrograde would not be tolerated at home for a day. What will people in England think when they hear that, in the case of a host of minor offences of common occurrence, it is proposed to make British subjects amenable to Courts in which the evidence on which the accused may be sent to gaol for two months may consist of a written statement drawn up by an Egyptian official, while no possibility of cross-examining either the official or those who supplied him with the information exists? There is something extraordinarily callous in the attitude of officials who permit the creation of a system so plainly suited for rendering the lives of British subjects intolerable in a country where such a consummation is devoutly desired by large numbers of people whose objection to the use of fraud and perjury as weapons of offence and defence, has not been noted by even the closest observer.

But, as has been indicated above, circumstances in Egypt call clearly for a more sweeping reform of the criminal system. The reputation for fairness and efficiency of British criminal courts, known through the operation of the Consular Courts here and other courts in the Levant, is well established. Others besides ourselves know, not only of the need for revision, but of the justice, simplicity, and freedom from harshness of our system. Why is the best system not adopted? If it were, the condition of the country would certainly improve. The administration of justice would rapidly acquire increased respect and confidence. No longer would it be whispered that Great Britain will give ear to any section in Egypt rather than her own subjects. No longer could she be secretly scorned for possessing so little confidence in her own criminal system that she abrogates it at the first opportunity.

It is understood that a suggestion has been made, on behalf of the Milner Mission, of Government's readiness to bring the criminal code, ultimately, into line with British ideals. The suggestion is not accompanied by anything binding the Government. If, however, the Government is ready to act as suggested, to act at once would be simpler than the course at present proposed. The official attitude about this shows up very clearly the complete disregard for British non-official interests which is characteristic of the whole scheme of the draft laws. Virtually the British are told this: "We intend to deprive you of the admirable system of criminal law under which you have lived up to now. We may—we won't bind ourselves to—change the whole criminal system in years to come. In the meantime, we have seen fit to apply the Native Code to you. Be content!"

If the British system is to be introduced, the reform of the Mixed Bench is necessary. Most of the judges are not British, are unfamiliar with English law, and long accustomed to a system radically different from ours. It is hopeless to expect them to make anything but a mess of their efforts to try cases according to English law and methods. To extract all the good the system contains, it must be worked by someone who has been trained in it and seen it applied by judges at home. So far, however, the known desire of the British community that the Mixed Bench should receive a strong leaven of English judges has been ignored; any appointments made recently have been of foreigners.

There are other reasons why the British community cannot view with equanimity the change from the judges of the Consular Courts to those of the Mixed Courts. The foreign judges are appointed by their several Governments, and have not the same training or spirit as English judges. In the United Kingdom we have grown so used to the complete independence and impartiality of judges that it is sometimes forgotten that this attitude was considered unwise in Coke's time, and became universal only when State policy was directed to securing it. That it is not universal can be proved by more than one case in which the violence of newspaper partisanship here has affected judges of the Mixed Bench. The custom of attempting intimidation by newspaper campaigns is so well known an evil here that, were there no other reason, it would be sufficient to justify the British community in saying: "We want a Bench purged of the weakness from which we know the Mixed Bench has more than once suffered. We want judges who will take dictation from nobody; for we know that in Egypt the attempt to dictate is carried to great lengths." But there is another reason which simply cannot be ignored, once the fact is grasped that pressure from outside has been applied successfully to the Mixed Bench. There are so many nationalities represented in Egypt, and so many of the Powers have interests in Africa, that cases are bound to arise frequently which involve, although it may be indirectly, questions as to which other Powers do not see eye to eye with England, and questions in which the nationality and antecedents of the litigants give ground for fear that national prejudice might easily be imported into the case. It may be argued that all these objections were applicable to the Mixed Courts formerly; but the existence of an evil is no reason for its continuance. Moreover, it is unjust that the British should be compelled to give up the Courts in which they have had confidence, and in which their experience forbids them to have confidence; and the injustice is gratuitously inflicted when, as here, the necessity for reform in the Mixed Courts exists, apart from the consideration of purely British interests, and the power to affect the needed reform is possessed by Great Britain. The draft laws confirm the impression that, without a large infusion of British blood the tone which the British are entitled to expect in a Bench holding office under British supervision will not prevail. The enforcement of discipline is vested in the judges themselves. Obviously, the only guarantee of a sound tone is to import a number of British judges sufficient to make their influence decisive in questions of judicial conduct.

We understand that the draft of the proposed laws has not been finally settled. It is imperative to make every effort to secure that the final draft shall contain radical amendments. Not only is the general scheme replete with possibilities of harm to British interests, but certain of the laws exhibit a disregard of ordinary precautions that is astounding. The whole burden of governing Egypt rests on Great Britain. The country is full of elements jealous of British prestige or hostile in sentiment. Much political agitation is promised for some time; and the course of political agitation recently throughout the world justifies the belief that methods will probably be employed which will call for the greatest vigilance on the part of the Executive and the frequent invocation of the law. The only section from which complete loyalty and disinterested help can be looked for is the British. Yet the office of Procurator-General is not reserved to a British subject. The powers vested in this officer in matters such as the conduct of public prosecutions, the institution of proceedings to protect rights the benefit of which is vested in the public, and deportation, are wide. Their due discharge calls for the utmost discretion and a zealous regard for the maintenance of a public policy that shall harmonise with our efforts to render the country prosperous and peaceful. That is, the officer must have no interest nearer at heart than the maintenance of British policy, and he must be made fully aware of those facts, views, and decisions which in England would be regarded as Cabinet secrets. Can one imagine any European Power other than Great Britain allowing the possibility of appointing to such an office any but one of its own subjects?

The authors of the draft laws speak of "the special position which Great Britain enjoys in Egypt," and of "the powers which are necessary to enable her to discharge satisfactorily the duties which that special position imposes on her both towards Egypt herself and towards foreigners in Egypt." Egypt is not the first country in which Great Britain has enjoyed the special position, with its resultant duties. Hitherto she has performed those duties admirably. Her method was the simple one of giving her sons free play to establish their laws, their business methods, and their sports, and encouraging them to hold their heads high. An Englishman could go wherever Englishmen had preceded him with the assurance that his British citizenship was a more powerful shield and a higher distinction than the "Civis Romanus sum" of the Roman. Only by the sacrifices and devotion of her sons can Great Britain hope to discharge the duties with the weight of which the framers of the draft laws are so deeply impressed. It is hopeless to expect the maintenance of British prestige among a people who whisper among themselves that Great Britain considers the interests of all others before those of the British. Our work in Egypt will get a thoroughly bad start if it is made plain to all and sundry that under the new order of things the first people to be sacrificed, when any conflict of interests arises, are the British.

If we are justified in establishing a protectorate, it follows that our policy should be to bring the country's laws and government into line with our own as rapidly as can be, and as far as circumstances permit. What Egypt needs is more, not less, of English law, and the creation of a public spirit animated by decency and a desire for the public good rather than private advantage. Put the British here in an inferior position, and you furnish a powerful, because a material, argument against British rule. The obvious policy is to level everything up to the British standard, not to level the British position down to something lower. The draft laws go a long way on the downward path. Egypt is wide awake; fully aware that the British community does not want the draft laws as they stand; and, pondering the Egyptian equivalent of "Charity begins at home," Egyptians must despise the Government that pursues the policy of being generous to the stranger before it is just to its own.

To keep silent about a danger or an evil does not remove it. Loyalty to Great Britain demands that we should state plainly what we believe to be the vital necessities of the time. To make Egypt prosperous and contented order must be maintained, and respect for, and confidence in British suzerainty established. To achieve either purpose is impossible unless the British elements in the country occupy an unassailable position, and are maintained in it by Great Britain. If the proposed changes in the legal system are effected, it will rapidly become impossible for Englishmen to maintain their position here. With the decay of British influence it will be merely a matter of time and chance till the British official position becomes untenable. To steer clear of such disaster is a plain duty. A beginning can well be made with the draft laws; they can readily be framed so as to carry out three sound features of policy which are bound to produce good. First, the almost unanimous demand of the British for a system of tribunals in which they can have confidence should be conceded. Secondly, a definite decision to introduce British criminal law and procedure should be taken. Thirdly, the Bench of the Mixed Courts should be strengthened by the appointment of a number of British judges. A strong and contented British community, a uniform and just criminal system, and a Bench with a reputation for impartiality and independence, such as the English Bench enjoys, would furnish Great Britain with far greater powers for discharging her duties in Egypt than the agreements with Foreign Powers to which the authors of the draft laws attach so much importance.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

As will be seen from the quotations given on page 143, a great improvement is taking place in certain of the Near East exchanges. The Bulgarian rate, which a few weeks ago was about 270 levas for sterling, is now 192½; that of Roumania has improved to 125 lei; while the Yugoslav exchange is 62½. I have constantly pointed out that the extremely adverse exchanges of certain of the Balkan countries gave an unreal view of their respective positions, and that as they are one and all mainly dependent on the soil for their wealth it would need at the most one or two good harvests (and in the case of Roumania also more favourable conditions for the production and export of oil) to bring about a very great change in these rates.

***

Presumably those conditions are ruling. Until the recent storms swept over the Balkan Peninsula climatic conditions in general had been all that could be desired, and excellent harvests have been forecasted in all the countries. It is as yet too early to be able to estimate with any exactness the damage caused by the late rains, but there seems ground for believing that except in Greece, which has unfortunately suffered most severely, it has not been quite so serious as at first appeared to be the case. This view is amply borne out by the movements in the exchanges, which in the circumstances may be expected to undergo a further substantial improvement.

***

In the course of his speech at the general meeting of the Anglo-Egyptian Oilfields Sir Marcus Samuel dealt with the question of the extension of the company's sphere of operations. He pointed out that they had not felt justified in acquiring further territory under the standard regulations which permitted them to acquire rights only on very small areas. Certain alterations were, however, made in the regulations, and the company agreed to explore and take up further territory, and rights were acquired over certain small areas outside the company's existing field. While they still did not regard the regulations as satisfactory, said Sir Marcus, "during the last few months they have been undergoing a process of what may be called 'progressive interpretation,' and we hope that we are now on the road towards the establishment of more satisfactory conditions in the petroleum industry in Egypt."

***

Obviously any considerable enlargement of the company's sphere of operations would entail the provision of additional capital, and with the idea of facilitating any further issue that might be necessary proposals were submitted and approved at subsequent meetings for the reorganisation of the capital. The existing capitalisation of the company was needlessly intricate and involved, consisting as it did of 6 per cent. income bonds to the amount of £225,000, £250,000 in preference shares of 6 per cent., with a right to 20 per cent. of the profits after 5 per cent. was paid on the ordinary shares, and, finally, A, B and C ordinary shares to the amount respectively of £336,000, £664,000, and £100,000. These three classes receive 5 per cent., and jointly 80 per cent. of the profits after the allocation to the preference shareholders in the proportions of 35 per cent. each to the first two classes and 10 per cent. to the third.

***

Instead of these numerous classes of shares, with their various rights, there will now be only ordinary shares and the C shares held by the Egyptian Government. To effect the alteration the capital has been increased to £1,808,000 by the creation of 458,000 new "B" shares, and the scheme of reorganisation briefly is that the "A" shareholders are to receive the same number of "B" shares as the present "B" holders; while the holders of income bonds and preference shares, amounting to £475,000, are to receive instead £380,000 of "B" shares.

***

The position in regard to the Greek markets at the moment is one which cannot fail to give rise to some anxiety. Our correspondent at Athens reports general inactivity, and states that the brisk import trade of a few months ago has dwindled to insignificant proportions. It has unfortunately to be recorded that the country is again suffering from a surplus of goods, and our correspondent says that "in the event of a continued fall in prices in the British and American markets of supply a repetition of what occurred with the Spanish goods in 1918-19 is to be feared." In the case of the former crisis a way out was found in the Roumanian market, which at the time was able to absorb all the goods available. A solution may not be so easy to find on this occasion. Our correspondent suggests that the interested banks and traders are looking to the issue of the conversations with Krassin to solve their difficulties by bringing about the resumption of trade with South Russia. Another way of relieving the congestion would be opened up if conditions in Turkey became stabilised.

***

The economic conditions and the prospects of Roumania at the close of the past year are the subject of an interesting report by Mr. Adams, Commercial Secretary to the British Legation at Bucharest, published this week as a White Paper. The war, he points out, has left Great Britain in a much stronger position as regards the import trade of the country, since Germany, whose percentage of this trade in 1912 was 37 as against 14 for Great Britain, is practically without marine transport, and transport by rail will continue for some time to encounter great difficulties. As regards the oil industry, he states that when the Germans left in December, 1918, there were 437 producing wells and 200 drilling wells, with 3,000 tons daily production as against 962 producing wells and 341 drilling wells, with 5,000 tons daily production in December, 1916, and that during 1919 the industry was entirely unsettled, but that the outlook now looks exceedingly hopeful. The position since the commencement of the year has been the subject of frequent reference by our correspondent, and it is clear that conditions have been gradually improving, and that there are sound grounds for the hope that at no very distant date Roumanian exports will once again reach their normal figures.

***

The present position of the Constantinople market is briefly dealt with in a message from our correspondent, which will be found in another column. He states that the closing of Asia Minor to commerce has brought trade to a standstill. With the outbreak of the present disturbances stagnation was, of course, inevitable, for with bands of marauders near the capital the trade routes naturally became unworkable. Until order is restored in the interior it would be futile to look for any great improvement at Constantinople.

***

In one direction considerable activity prevails in the market, this being in speculation in the exchanges. While, as our correspondent points out, fluctuations in the exchanges are inevitable, they are greatly aggravated by the speculation, the result being, he explains, that importers are still further handicapped, because if the rates go against them they lose, since buyers insist on paying at the rates obtaining when the order was given, and if, on the other hand, the alteration in the exchange is favourable, it is the buyers who gain, for they insist on having the better rate. In other words, the maxim of the buyers is, "Heads we win, tails you lose." Needless to say the effect of this state of things, as far as importers are concerned, is to make them exceedingly chary of undertaking transactions until conditions improve.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## GREECE.

ATHENS, July 4.

### Adverse Trade Conditions.

The state of inactivity and general stagnation at present prevailing in the Greek markets is such as has not been seen since the signing of the Armistice. The brisk import trade which was being done up to a couple of months ago has completely collapsed, and the quantity of merchandise at present being imported is insignificant, very few fresh orders being placed.

The factors contributing to this state of affairs are identical to those which, in a lesser degree, have affected trade with the rest of Europe: the high rates of exchange ruling for drafts on London and New York, the overload of goods with which the Greek market is at present burdened, and which were ordered when the exchange was considerably lower, and the general tightness of money.

The 300,000,000 drachmæ lottery loan recently floated by the Greek Government, and satisfactorily covered, has absorbed most of the liquid capital lying in the country, and the banks have lately refused to make advances against merchandise.

A few months ago the pound sterling was quoted here as low as 22 drachmæ to the pound. This acted as an inducement to importers to order freely from England such goods as textiles, hardware, etc., and in many cases the orders placed were disproportionate to the means of the firms ordering. These goods have now arrived—after considerable delays owing to the difficulties which many British firms have found in executing orders owing to labour troubles at home—at a moment when the drachmæ is quoted as low as 34 to the pound sterling. As in the majority of cases the business has been done on the terms of cash against documents in Greece, the importers have found that, owing to the fall in the exchange, the cost of their goods has increased by 40 or 50 per cent., and consequently they have in many cases either refused to take up the documents or have delayed taking them up, hoping for an improvement in the exchange, with the result that the merchandise remains on the hands of the banks through whom the credits have been opened.

The Customs House is full of goods of which the consignees have not taken delivery, and the above state of affairs has brought about a situation very similar to that which occurred on the signing of the Armistice with regard to merchandise of Spanish origin. In this case, as will be remembered, great difficulty had been experienced in obtaining supplies from the belligerent countries owing to the submarine blockade, and the Greek merchants had recourse to goods of Spanish origin, and huge quantities of textiles and foodstuffs were ordered from that source. A sudden advance in the value of the peseta, and the reopening of the American and European markets, caused many traders to sacrifice the advances made to the banks against credits, and to leave the documents on their hands. The banks thus became the holders of very unwieldy stocks of goods, and a catastrophe was narrowly averted by the timely opening up to trade of Roumania, which country, being completely denuded of supplies, readily absorbed the supplies then lying at the Piræus.

The present situation appears rather hazardous, as in the event of a continued fall in prices in the British and American markets of supply, a repetition of what occurred with the Spanish goods in 1918-9 is to be feared. Many merchants will be unable to take up their documents in view of the increased cost to them owing to the fall in the Greek exchange, and since for the same reason retail prices have advanced in a rather more than proportionate extent, the public is much more conservative in purchasing than is normally the case, simply buying from hand to mouth. The result will be retarded consumption, and these goods may be in the market for some time to come.

The interested banks and merchants hope that a way out of their difficulties will be provided by the successful termination of the Lloyd George-Krassin conversations, and the consequent opening to trade of a port in Southern Russia. On the other hand, should this hope not be realised, then no improvement in trade can be looked for here until surplus stocks have been absorbed.

Various American firms who had sent large consignments of goods to Greece have had rather a bitter experience, and several thousand tons of American canned goods, boots, textiles, etc., are being re-shipped to America, after incurring heavy charges, as they cannot be disposed of here except at a loss, owing to the exchange question, whilst a better market for the goods is to be found at home.

German goods are now being freely offered for sale, and agents representing German houses are offering engines, machinery, and hardware of all descriptions for immediate delivery. A certain number of firms, both here and in the other Levant markets, are very disappointed with their endeavours to reopen trade with Germany. They have invested considerable sums in purchasing marks, which they have remitted to German houses in consideration of shipments of drugs, chemicals, etc. It has come as rather a shock to them when they find that the German houses appear to be in no hurry at all to deliver their goods, and are putting the buyers off from month to month with polite letters. On the other hand, whilst the Levant merchant sees that he has a very nice profit out of his investment in Reichmarks, the German firms are distressed that they are unable to return the amounts remitted, and consequently the unhappy traders here, who were so willing to respond to the appeal which was recently widely circulated in the Levant by certain German trade organisations, viz.: "Help to set Germany on her feet again, and she will not let you down," realise that they are probably far from receiving either their goods or their marks.

### "White Coal" in Macedonia.

A report has lately been drawn up for a Greek financial syndicate, and under the auspices of the Greek Government, on the possibility of the utilisation of the existing water-power in Macedonia for industrial purposes. The study has been completed by two Swiss experts in hydraulic installation.

The report drawn up is very complete, and computes the available force from the falls of Aliakmon, Vodena, Naoussa Vladovon, and Verria at 340,000 h.p., and estimates the expenditure necessary for converting this force into energy for industrial purposes at 500 million drachmæ. For some time past the falls at Naoussa have been utilised for the

production of energy for driving mills in the neighbourhood of Salonika.

The engineers who have completed this survey have divided the execution of their projects into six periods. The first of these provides for works involving an expenditure of 100 million drachmæ, and which will render a staple energy of 45,000 h.p., to be considerably increased during the winter months. The execution of the works provided for during the first period is estimated to require a period of four years; the estimate for the works of the second period is two years, for those of the third four years, and for those of the remaining three two years each.

After the completion of the works provided for during the first period, one-seventh part of the total energy produced is to be utilised for works in the vicinity of Salonika, and the remaining six-sevenths will be conducted to Athens by means of three copper cables, supported on iron standards. It is stated that the loss on transmission of the energy to Athens will be only 15 per cent.

The price of the current, including amortisation of interest on the capital involved, will hardly reach nine and a-half lepta (about 9/10d.) per kilowatt hour, whereas the present cost of current in Athens is two drachmæ (1s. 8d. at normal rates of exchange). The energy produced will have a maximum pressure of 90 volts, and by transformation will reach 220 volts. It is obvious that the estimated price of 9½ lepta per kw. hour is based on the assumption that the consumption of the energy produced can be assured for the whole twenty-four hours of production.

The current will be available for industrial purposes along the route over which it is conducted to Athens, and consequently new industries should develop along the cable route—principally mining, agricultural, and manufacturing undertakings, and the current can be supplied to these industries at minimum rates. The report also provides for the building of two large dams, one at the Upper and one at the Lower Aliakmon.

M. Venizelos has been furnished with a copy of this report, and before taking definite decision has caused inquiries to be made as to the possibility of exploiting the hydraulic resources of the rest of Greece, more especially from a financial point of view. It is stated that the utilisation of the Macedonian water-power appears to be much more economical from every point of view.

ATHENS, July 10.

**Export of Currants and Tobacco.**

According to information supplied by the Statistics Department of the Ministry of National Economy, the following quantities of currants and tobacco were exported from Greece during 1919:—Currants: 139,144,182 kilogrammes, representing a total value of 173,936,227 drachmae. Tobacco: 22,582,782 kilogrammes, representing a total value of 218,827,157 drachmae.

**Imports of Wheat.**

The Ministry of Foodstuffs has given the following figures with regard to the quantities of wheat imported into Greece during 1919:—In January 6,775,325 okes of wheat were imported, in February 11,763,722, in March 19,059,692, in April 3,628,212, in May 13,126,207, in June 23,798,300, in July 10,724,361, in August 28,373,490, in September 17,304,932, in October 14,550,769, in November 3,996,114, and in December 21,099,878. From January to June the wheat was imported from the United States, while from July to December it came from Canada.

## ROUMANIA.

BUCHAREST, July 7.

**Banca Natziunei.**

The general meeting of this bank was held last Sunday, when a very favourable report was read. In June last the capital was increased to five million lei, the following October to 25 million, and in March, 1920, to 50 million lei, with 29 million lei reserve. This bank has founded the following societies:—

Société de Traction Automobile Roumaine, capital 10 million lei, which recently purchased for 4,200,000 lei the enamel factories formerly of Jacques Catz.

Société Roumaine du Combustible, capital five million lei, owners of the lignite mine of Valea Copcei, producing five wagons per diem.

L'Imprimerie Guttenberg, capital 10 million lei.

Société de Construction "Casele Populare," capital five million lei.

L'Industrie Chimique Roumaine, capital 10 million lei.

Gospodariile Taranesti, capital 10 million lei.

Société des Mines d'Or de Roumaine, capital five million lei, which has acquired the mines in the Valea lui Stan.

It has also contributed to the capital of many other new banks and commercial companies, including the recently founded I.R.D.P., the society which has the monopoly of the home distribution of petrol. The directors have decided to pay a dividend of 50 lei to each share of 250.

## YUGOSLAVIA.

BELGRADE, July 6.

**Credits for Reconstruction.**

The Minister of Communications has received a credit of 100 million dinars for general repairs to all railways within the old frontiers of Serbia which the enemy damaged so effectively on his retreat.

The Minister of Public Works has received a credit of 60 million dinars for the restoration of the roads of Serbia; the first to be repaired or remade will be the trunk road to Kragujevats, the Sandjak of Novi Bazar, through Montenegro to the sea.

It is reported that the Government has placed orders for 10,000 tons of iron and steel structures abroad to restore the destroyed bridges. Three new bridges are contemplated, one over the Save at Shabats, and the others over the Drina to provide a means of communication with Bosnia.

The Minister of Finance has approved the following credits for Montenegro:—First, two million dinars for the purchase of food; secondly, one and a-half million dinars for cattle for breeding and restocking; thirdly, 800,000 dinars for lorries for distributing the food in the country; and, finally, eleven millions for arrears of pay for Government officials for the time of the Austrian occupation.

**Miscellaneous.**

It may be remembered that during the days of the slump certain foreign currencies were condemned as "unsound," such as Austrian and Hungarian kronen, while others were designated as "sound," including the Italian lira. But now the dinar is better than the lira, and the Serbs are naturally delighted.

It is reported that the Serbian Government has allocated for Greece 75,000 tons of wheat, which amount will be increased if possible; in the same connection the National Bank of Greece is giving the Serbian Government a loan of 15,000,000 dinars at 6 per cent., which will be used by the Serbian Government in meeting its obligations in Greece, which consist chiefly of tobacco supplied to the army at Salonika.

It sounds strange to hear of Serbia helping France materially. It is reported that the Minister of Social Policy

will shortly send to France a number of skilled builders, masons, and similar artisans to help in restoring the devastated provinces. It appears that France has requested this assistance on account of the shortage of skilled labour at home.

## TURKEY.

CONSTANTINOPLE, July 4.

### Stagnation.

The closing of Asia Minor to commerce has resulted in bringing all business to a standstill, with the exception of that doubtful form of activity which consists of speculating in the various foreign values which fluctuate in price from day to day. There is in this connection a vicious action and reaction, for, while the fluctuations which are to a certain extent inevitable give rise to speculation, it is speculation which aggravates the fluctuations and adds still another difficulty to the already much harassed commerce of Constantinople. It is difficult for home manufacturers to realise the full effect of the varying rates of exchange out here, and there is evidence to show that in many cases there is complete ignorance of the conditions. Take, for instance, the case of an importer who has to get his goods through a bank. By the time he gets the goods the rate of exchange will almost certainly have altered. It is a fact that if the rate goes against him he loses, but if the rate alters in his favour he gains nothing, for the buyer for whom the goods have been ordered will insist upon paying at the rate paid by the agent to the bank. If, on the other hand, the rate goes against him, the buyer then pays the rate of the day, and the unfortunate agent is compelled to agree or have the goods left on his hands. True, he may seek the assistance of the High Commission, and this has been done in several instances; but that usually means the loss of a customer. Agents may get 5 per cent. commission, but the rate of exchange frequently varies as much as 40 per cent. in a few days, so that a drop means a heavy loss. Unhappily it is difficult to find a solution for this state of affairs, until the exchange becomes steadier and speculation ceases. In some cases it may be possible to send the bills of lading direct to the agent, and thus allow him to clear the goods himself at his own convenience. This would allow him to take advantage of the rate of exchange, and at all events would obviate loss, but few firms would care to take the risk, and such a course is not advisable except in a very few cases. There seems to be nothing else to do but to follow Mr. Asquith's famous words of advice, "wait and see."

### Italian Competition.

The statistics of the goods that passed through the Stamboul Customs during the month of March are interesting in many ways. Great Britain headed the list with a total of £T.2,774,211 worth of goods imported, and Italy came next with a total of £T.2,575,287. The United States was third a long way behind, with a total of £T.716,459, and France came fourth with only £T.542,990. It is interesting to note that the largest item in the list of Italian imports was for cotton muslins, which were valued at £T.1,305,912. This was also the largest item in the British list, but the value of the muslin goods from the United Kingdom was only some £T.80,000, or less than £20,000 sterling more than Italy's contribution. In cotton yarns also the Italians are running us very close, but in other departments of the Manchester trade we are well ahead.

## BULGARIA.

SOFIA, June 26.

### Export of Cereals and Tobacco

The Consortium has concluded a contract for the sale of 15,000 tons of maize to the Austrian Government.

Representatives of important foreign tobacco firms arrived here last week to open negotiations for the purchase of large quantities of tobacco. They are now visiting the warehouses in the provinces.

The Ministry of Agriculture has received a letter from a leading Swiss firm offering to supply agricultural machinery in exchange for tobacco. The proposal is under consideration.

### The Crops.

Heavy rains and hailstorms were experienced in parts of Northern Bulgaria during the past week, great damage being caused to the crops and vineyards.

The rose harvest is 50 per cent. below that of last year, but the quality is much better. Prices range from sixteen to twenty thousand levas per kilogram.

Swarms of locusts invaded the country in the spring. They have now almost completely disappeared owing to the energetic measures taken by the authorities.

### Chamber of Commerce.

To-morrow the Bulgarian Chamber of Commerce is celebrating the twenty-fifth anniversary of its foundation. The King and the members of the Cabinet will be present at the ceremony, together with representatives of the financial, commercial, and industrial interests of the country.

## OIL FROM RUBBER SEED.

The current number of the *Bulletin of the Imperial Institute* (John Murray) discusses in detail the possibility of utilising the large quantity of seed now being produced on rubber plantations. In the early stages of the rubber industry in the Middle East the seeds were mostly used for raising plants for making new plantations, but as there are now at least 1,000,000 acres under rubber trees, the quantity of seed available is much in excess of the planting requirements. It was shown many years ago by investigations made at the Imperial Institute that the kernels of Para rubber seeds yield a large amount of oil similar in properties to linseed oil, and that this oil can be used for paint-making and other purposes for which linseed oil is employed, whilst the cake which is left after the oil has been removed from the kernels is an excellent feeding-stuff for livestock. Until the last year or two the oil had only been produced on an experimental scale, but at least one oil mill is now established in Malaya for crushing rubber seeds, and small commercial consignments of the oil have been sold recently in this country and in Marseilles at good prices. Whether it will pay the planter to supply the seeds to an oil mill depends very largely on the cost of collection, a point on which experts differ. In view of the present necessity for the exercise of rigid economy on rubber estates and of the enormous demand for oils and feeding-stuffs, it is highly desirable that serious efforts should be made to organise the collection of Para rubber seed wherever it is likely to prove at all profitable, and so prevent waste of material, which is undoubtedly of considerable value.

We are informed by The American Machine and Foundry Co., Limited, of 59, Holborn Viaduct, London, E.C., the well-known firm of tobacco machinery manufacturers, that one of their engineer-representatives, Mr. A. Podmore, is at present visiting the Balkan States, his headquarters being situated at 47, Pondrossou Street, Athens. It appears that a considerable number of houses have been giving themselves out as the local representatives of the above-named company, resulting in considerable prejudice to its interests, and we are consequently asked to state that no one, other than the gentleman above named, has the slightest authority to represent himself as agent of the American Machine and Foundry Co., Limited, in any of the Balkan States.

# BRITISH CONSULAR REPORTS.

## I.—GREECE *(continued.)*.

The current of public opinion in Greece at the present time, Mr. Rawlins points out, is running very much in favour of Great Britain; and it is a very opportune moment for British manufacturers to take advantage of this in order to open up trade relations with this country.

"The system of credit in force previous to the war has of necessity been very much modified owing to the altered conditions obtaining. In the old days foreign firms were quite content to forward their goods to Greece on terms of 30, 60, or 90 days' credit, but the terms in force to-day are usually those of part cash with order, and balance payable, either against shipping documents in England, or through a bank on arrival of the goods in Greece; or, and this perhaps in the majority of cases, by confirmed letter of credit. The Germans are not yet in a position to give protracted credits, but certain American firms of general export agents have already circularised importers here broadcast, offering the old terms of 30, 60, or 90 days' credit.

"Owing to the inflated prices of certain products, notably textiles, of which a fall in price may sooner or later be expected, most firms are demanding payment of about 25 per cent. with order, before shipment of goods. This is considered advisable, as experience has proved that, in the event of a fall in price of the produce ordered, there is always a possibility of the consignee failing to take delivery of the documents on arrival of the goods, whereas, if sufficient cash is advanced with the order, the exporter is insured against this contingency. When the prices of commodities once more assume some degree of stability, these precautions will be unnecessary and the usual 'cash against documents' terms can be resumed, and, where the consignee is a reputable firm, short credits may be advantageous.

"There is no doubt that the general commercial status of the Greek trader has vastly improved of late years. The Greek business man now realises that it is to his interest to build up a steady regular trade with the houses he represents, and by regularity and reliability in his dealings with foreign houses to inspire confidence and thereby increase his trade. Chambers of Commerce have been formed within the last two years in all the principal towns of Greece, under the immediate auspices of the Ministry of Finance. The provincial Chambers work under the direction of the Athens Chamber of Commerce, which, through the laws at present in force controlling the export of currency or exchange, keeps a very close control on all firms doing business with foreign countries. When a Greek firm wishes to export bills of exchange, or open credits in payment of merchandise to be imported, application has to be made to the Chamber of Commerce at Athens, which furnishes guarantees on behalf of the importing firm to the Ministry of Finance, who, through the Exchange Control Committee, issues the necessary permit to authorise the sale of bills of exchange by the banks. Thus the Greek importer is under the direct control of the Chambers of Commerce, not only by reason of the hold which they have at present over the importers, but also by virtue of their power to refuse to furnish guarantees on behalf of firms who do not comply with their regulations. It was stated further, that the Greek Chamber of Commerce at Athens was considering the establishment of a black list of defaulting merchants, both Greek and foreign. The entry of the name of a firm on this 'black list' would involve a general boycott of the firm in Greece, and render it practically impossible for a firm so listed to do further trade in the country. This, however, would be a matter for future discussion, and cannot be entered into before consultation with foreign Chambers of Commerce.

"The most efficient means of representation for British firms is undoubtedly that of appointing a local agent, with exclusive rights of representation over the whole of Greece or a certain portion thereof. There are many reliable Greek and British firms here, disposing of a fair capital, who are anxious to obtain British agencies. Since the war a good many British firms have opened up offices here for the purpose of representing British manufacturers. As these firms mostly dispose of competent native travellers and are in close touch with the requirements of the market, this would undoubtedly appear to be the most practical means of representation for British firms in this market.

"If British firms wish to improve their business in these markets they should not lose sight of the necessity of sending out their representatives or travellers regularly, and of supplying them with a fair range of their samples and ample advertising matter, if possible, in the vernacular. Another important point, which can be once more reiterated, is the necessity for quoting prices in the metric system and using francs and kilos or metres when quoting, as the Greek merchant, with few exceptions, is befogged by quotations in £ s. d. and avoirdupois."

# RECENT MINERAL DEVELOPMENTS IN INDIA.

The general report on the operations of the Geological Survey of India for the year 1919, by Sir H. H. Hayden, which has just been received in this country, gives the latest information regarding the progress of certain important economic inquiries which are briefly mentioned below:—

The examination of all the known bauxite deposits of India has been undertaken in connection with the attention which is now being paid to the manufacture of alumina and aluminium in the country. It is hoped to complete the greater part of the field work by the end of the season 1919-20, and to publish a memoir on the subject later.

In consequence of the discovery of a new locality for chromite near Fort Sandeman in Baluchistan, it was decided to resume the survey of the area between Zhob and Hindubagh. Unfortunately the outbreak of the Afghan war interrupted the work of the officer deputed to undertake it, and only a short visit was possible. The samples collected represent second grade ores, but the occurrences are important, because they prove the presence of chrome-bearing basic rocks, similar to those of Hindubagh, and suggest the possibility of further discoveries of chromite.

An officer of the Survey has been investigating the recent discoveries of iron-ore in the southern parts of Singhbhum for the past two field seasons. The iron-ore was found to occur usually at or near the tops of hills, the most important being the range running from about three miles south-west of Gua to the Kolhan-Keonjhar boundary east of Naogaon, a distance of about ten miles. The range, which rises some 1,500 feet above the plain, is said also to continue into the Keonjhar State. It was found that good iron-ore formed the top of this range of hills almost without a break. Parallel to this range is another similar line of hills running from the Duargui stream, three miles east of Bada, to the Karo river, south-east of Ghatkuri, a distance of about seven miles. Here the iron-ore was found to occupy the top of the ridge as before, the ore in the southern part being apparently as good and continuous as in the adjoining range; towards the north, however, a considerable amount of disturbance was observed, and replacement appeared to be less complete. To the west a third range of hills runs from the Karo river, east of Salai, to the east of Chota Nagra. Here also iron-ore was found at or near the top of the range, but it appears to be confined to patches, which, however, are of considerable importance. To the west of these ranges again are more irregular patches of ore occupying the tops of the hills. The Kolhan hematites usually appear to contain about 64 per cent. of iron, with phosphorus ranging from .03 to .08, or in some cases to as high as 0.15. The sulphur content is usually below .03. Titanium is also said to be found occasionally in the ore, usually either as a trace or in very small quantities. Samples from the better parts of the ore deposits contain as much as 68 or 69 per cent. iron. The concessionaires have done comparatively little prospecting work hitherto, but enough is known to justify the belief that the quantities available will run into hundreds—possibly into thousands—of millions of tons. In most cases the chief obstacle to development is the inaccessible nature of the country.

The well-known magnetite deposits of Kanjamalai, in the Salem district of Madras, have been re-examined, and the conclusion arrived at twenty-two years ago has been confirmed, that the ore is really a low-grade quartz-magnetite schist containing about 38 per cent. of iron. Preliminary magnetic separation tests on bulk samples were not satisfactory, and the matter is under further investigation.

A well-known horizon in the Irrawaddy sandstone series of Upper Burma is known as the "white bed," and it has long been recognised to contain a considerable amount of kaolin. Extensive examination of this bed in the Pakokku and Yamethin districts have proved it to contain very large quantities of clay which appears to be eminently suitable for the manufacture of porcelain. The raw sand is said to contain about 60 per cent. of free silica, and from 25 to 30 per cent. of kaolin; it is also said to be very free from iron and alkalis. Laboratory tests indicated that the plasticity, refractoriness, and colour of the levigated material were good. The white bed is said to run for a distance of some forty miles. Its thickness is variable, and is said to range from 15 to 50 feet. The most important area is regarded as the Yenangyat and Singu oilfields, where the bed attains its maximum development.

**CENTRAL BANK OF GREECE**

**Head Office - ATHENS.**

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

## POPULAR BANK OF GREECE.

**Head Office, ATHENS. Branch, PIRÆUS.**

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

**CAPITAL - Drs. 1,500,000.**
**RESERVE FUND - Drs. 2,500,000.**
**Deposits and Credit Accounts, Drs. 100,000,000.**

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

*General Manager:* D. LOVERDO.

## TRADE WITH THE NEAR EAST

WITH its offices in all the principal towns in **Greece**, in **Egypt, Cyprus, Crete, Constantinople**, and in **Smyrna, the Bank extends exceptional Facilities for Export and Import Trade between Great Britain and the Near East generally**, and invites enquiries and correspondence relating thereto.

## BANK OF ATHENS

LONDON 22 Fenchurch Street E.C.3 MANCHESTER 57 Mosley Street

## COMMERCIAL BANK OF GREECE, LIMITED.

**CAPITAL PAID-UP - Drs. 15,000,000.**
**RESERVE FUNDS Drs. 2,845,010.45.**

**Head Office: ATHENS.**

*Branches:*—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia, Larissa.**

**AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.**

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 30·87 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10 % primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ¾ of a yard, stremma = ·242 of an acre.

# ENGINEERING.

## Machine Tools.

The production of high grade machine tools has always been a British speciality, although every engineer will admit that we have been closely run by American makers in this connection. In fact, it may be said that from a production point of view some American tools have been superior to ours, but where this has been the case they have seldom proved so well made as ours, and, consequently, what has been gained in production has been lost by enhanced depreciation allowance to some extent.

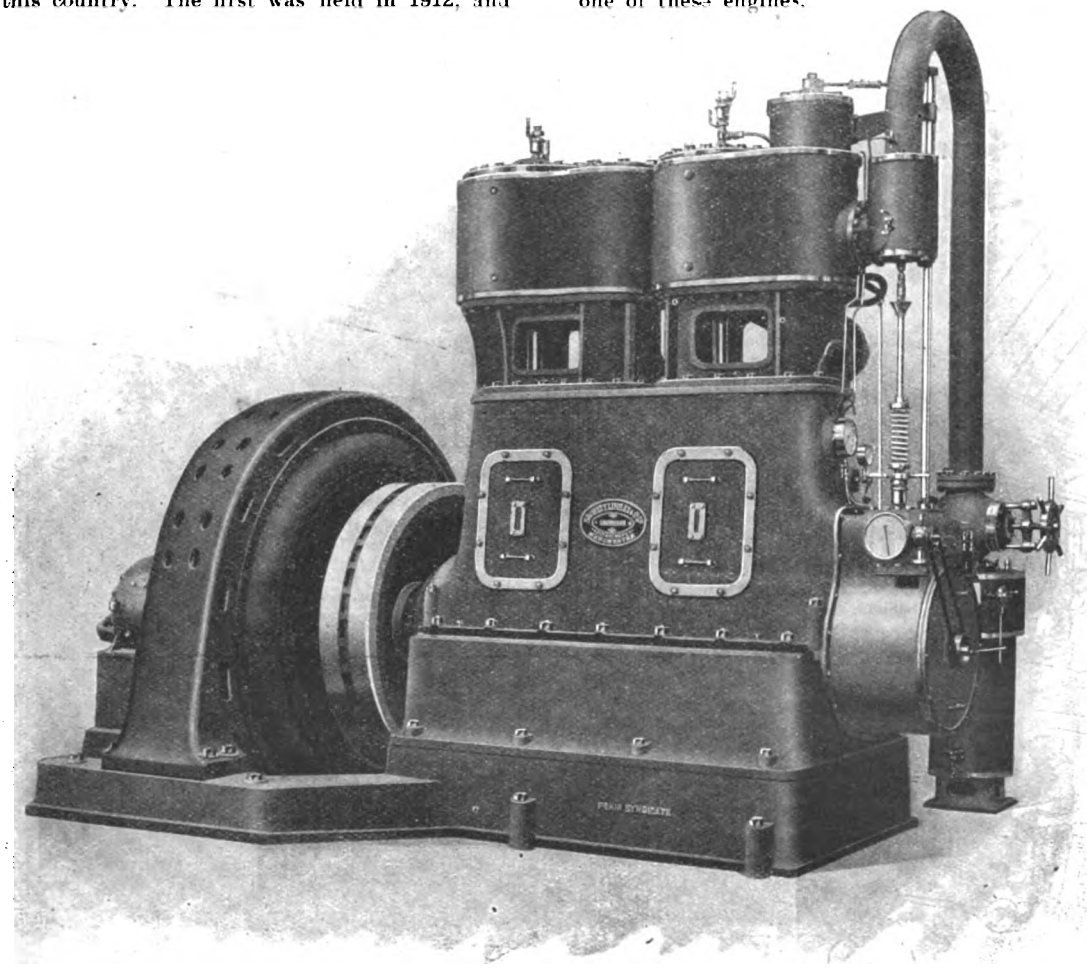
The announcement is made that during September there will be a large and representative exhibition of machine tools at Olympia, and, according to a well-informed writer in a contemporary, the whole of the available space has been booked up for some time, and the number of exhibitors will be in excess of 200. The show will evidently, therefore, be fully representative of the British industry. This exhibition, incidentally, will be the second of its kind in this country. The first was held in 1912, and the fact that eight years have elapsed since the last exhibition of machine tools in this country will mean that more new models and new types will be on view than have ever been shown at any previous exhibition.

It has been suggested that the use made of machine tools for the production of munitions educated the public in their importance, as it is now common knowledge that without their assistance it would have been impossible for us to produce anything like an adequate quantity of shells, rifles, tanks, or aeroplanes. This aspect, however, leads us to another, which is that the public may equally arrive at the conclusion that the machine tool was a munition producer only, and that now the war is over no further use can be made of them. This is by no means the case, as progress in engineering production largely depends upon the success of the machine tool-maker in improving existing machines and in inventing new ones. Under the circumstances, it is not to be wondered at that the Machine Tool Trades' Association, in advertising their exhibition, have adopted the slogan, "All increased production depends on machine tools."

No one interested in engineering can afford to miss the opportunity of visiting Olympia in September, where he will have the opportunity of seeing over 1,000 machines in actual operation. The exhibition is being organised by the Machine Tool Trades' Association, of which nearly all British machine tool manufacturers and merchants are members, and it will be held from September 4 to 25.

## Reciprocating Engines.

Quite a number of engineers appear to have formed the impression that the reciprocating engine, if not already out of date, is at any rate about to become obsolete, and need receive no consideration or attention or be regarded in any way as a competitor with other forms of prime-movers. The sole topics of their conversation are turbines of all types, internal combustion engines using volatile fuel and heavy oil engines of the Diesel type. As a matter of fact, the heavy duty, high-speed totally enclosed reciprocating engine is a highly efficient piece of mechanism, and when designed on modern lines and turned out by a firm of reputation, an engine of this kind is about as economical, powerful, handy and flexible as anything on the market. For electric lighting work in particular an engine of this kind, direct-coupled to a continuous or alternating current electric generator, possesses many good points, and it is safe to say that this type of engine will be used in electric light and power stations for many years to come. By the courtesy of Messrs. Browett, Lindley and Co., Ltd., of Patricroft, I am able to illustrate one of these engines.



**Heavy Duty Steam Engine, by Messrs. Browett, Lindley & Co., Ltd., direct-coupled to Electrical Generator.**

## Commercial Vehicles.

A particularly far-reaching scheme has just been completely worked out by which over 600 agents of the Automobile Association throughout London and the provinces will keep registers both of goods requiring transport by commercial vehicles and transport requiring loads. Already large centres, as Manchester, Liverpool, etc., have begun to link up with one another, but intermediary points and outlying districts are entirely neglected.

The Automobile Association's scheme is to put all its members and the 600 agents in touch with one another. A map has been prepared, showing every town and village where registers are kept, and a special list has been completed giving the address and the telephone number of every registration agent. Handy forms are issued showing the information required, and giving spaces for replies. Co-operation with existing transport clearing organisations has been welcomed, and the scheme, I understand from Mr. Stenson Cooke, has been well received. The map and list will be ready for members and agents by the end of the month. It may be made clear that the Automobile Association has no financial interest in the scheme whatever, and no registers are kept at any of the A.A. offices, the scheme being entirely carried out in its details by the registration agents.

### An Oil Substitute.

In view of the increasing price of natural oil and the growing fears of a coming shortage, it is not to be wondered at that engineers have been devoting time and attention for some time past to the question of finding a substitute which shall be obtainable in adequate quantities, be comparatively low in price, and which shall have approximately the same heating value. The first really promising result of their work has been the production of the new liquid fuel, which has been given the name of Colloil.

Scientific research has demonstrated the possibility of resolving most substances to a colloidal state, in which the particles are so finely divided that they are formless and to some extent resemble a fairly stiff liquid glue. It has been found that coal washings which have hitherto been dumped at the pit-head, the refuse from saw pits and paper mills, and the sludge from commercial coal cleaners can be brought to this condition and intimately mixed with oil residues and fuel oils. In this connection the oil obtained from low-grade coals, peat, and lignite by the low temperature process of distillation is particularly suitable.

This mixture may be burned in the same way as any other liquid fuel, and can be used with most existing types of burners, and thus, in addition to becoming a competitor with and a substitute for oil, it also competes with the comparatively newly adopted system of burning powdered coal driven by air or steam pressure through a jet into the furnace. It would seem that this new method would provide a means whereby good use could be made of the quantities of anthracite dust which have accumulated, and which it is difficult to use in any other known way. The percentages of oil and dust in the new fuel are about equal, and it is said that the cost of production should not exceed the price at present paid for coal which would have, weight for weight, a far lower calorific value. The new fuel, so far as the latter point is concerned, and when anthracite dust is used, would compare more than favourably with oil, and should be obtainable at about half the price of fuel oil as soon as working is commenced on a commercial scale. The essential claim for the new fuel, however, is that fuel dusts, which are difficult or impossible to use in any other way, can be utilised to advantage and satisfactorily burned in an ordinary furnace.

### Cleaning Ships Electrically.

Reference was made some time ago to the introduction of an electric motor of the submersible type, and it was mentioned that probably its greatest utility would be in connection with work under water in dockyard, pier, and breakwater construction.

Quite recently a scheme has been worked out by which the hulls of vessels could be cleaned by electric power from the growth of weeds and barnacles, which take so much off their steaming powers, and which accumulate so quickly. In this proposal a single screw driven barge carries a petrol engine coupled to an electric dynamo generating about 20 horse-power. This current is passed to a switchboard, and from thence to three electric motors. One of these drives the single screw propellor, whilst the other two are directly concerned with the cleaning plant, one controlling the raising and lowering of the cleaning arm, whilst the other drives the actual cleaner. This is a brush about 12 ins. in diameter by 5 ft. in length, which is mounted in bearings at the end of a boom, and which is driven at a fairly high speed by an electric motor of the submersible type mentioned above. In addition to driving the actual brush this motor drives, through gearing, a small propellor, which projects out at right angles behind the rotary brush.

By means of the boom, which is jointed, and which can be moved in any position by the electric motor controls, the brush can be passed against the hull of a vessel and caused to move along and about it, whilst the brush mentioned, which is made of stout coir or even steel wire, is rapidly revolved by its own motor. The small propellor referred to is also revolving, and tends to hold the brush closely to the hull of the vessel, whilst the disturbance of the water caused by its action also helps to remove the weedy growth. The weight of the boom and brush gear is counterbalanced by water tanks and air tanks ingeniously arranged, and by their aid it is possible to submerge the revolving brush to a depth of nearly 40 ft. The apparatus has been tested exhaustively and shown to be extremely successful in operation; in fact, a vessel of three thousand tons burthen and with a six months' accumulation was thoroughly cleaned in rather under six hours. The weight of the entire equipment, including the barge, is only eleven tons.

---

The receipts of the Egyptian Delta Light Railways, Limited, for the week ended June 20, amounted to £E10,262, making the total for the year £E90,501. The figures for the corresponding period of 1919 were £E6,884 and £E31,046.

The receipts of the Smyrna-Aidin railway for the week ended July 3, amounted to £7,886.

## LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

The market during the past week has presented a more cheerful appearance than for a long time back. Demand has been on a larger scale and buyers have shown more disposition to place orders with spinners and manufacturers. The belief has gained ground that values have touched the bottom, and owing to supplies in most of our outlets abroad not being heavy there has been increased inclination on the part of merchants to replenish stocks. A stronger upward movement has occurred in American qualities, and rates for Egyptian have been firmer. Reports relating to the Egyptian crop continue favourable, but it is recognised that values are now on a more reasonable level, and some users have been prepared to purchase a little more freely. Egyptian yarns have also attracted increased attention, although sales of weight have been quite isolated, and there continues much irregularity in quotations. Improved advices have been received from the Near Eastern markets with regard to the distribution of piece goods. Exporters who for some little time have asked makers to defer deliveries are now willing to receive supplies. The political situation abroad, however, causes anxiety. It is hoped that the congestion at Constantinople will be relieved by the opening out of trade in Russia. In cloths suitable for India there has been a distinctly larger inquiry, and more buying has taken place, especially in dhooties and printing materials. Not much has been heard of business for China. Shippers to South America have given rather better support. Manufacturers are now presenting a somewhat firmer front to buyers, but comparatively cheap sellers can still be found. Freer operations have been reported in American yarns for home consumption. So far not much has been put through in shipping bundles, but an increased inquiry has been met with for India and in coarse counts for the Levant.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Cunard s.s. Sea Glory, for Piræus, Constantinople, and Galatz, will close for cargo at Antwerp on July 24, and in London on July 31.

The Moss Line s.s. Amasis, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo on July 30.

The Cunard Line s.s. Pavia, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Salonika, and Constantinople, will close for cargo at Liverpool on July 24.

The Prince Line s.s. Scottish Prince, for Tunis, Malta, Alexandria, Syrian Coast ports, and Cyprus, will close for cargo at Manchester on August 7.

The Ellerman Lines s.s. Terbino, for Gibraltar, Malta, and Alexandria, will close for cargo at Liverpool on July 31.

The Moss Line s.s. Assiout, for Gibraltar, Algiers, Malta, Alexandria, Syrian Coast, and Cyprus, will close for cargo at Liverpool on July 31.

The Moss Line s.s. Aberlour, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo on July 30.

The Anchor Line s.s. Elysia, for Bombay, will close for cargo at Liverpool on July 23.

The Henderson Line s.s. Amarapoora, for Port Said and Rangoon, will close for cargo at Birkenhead on July 28.

The Johnston Line s.s. Norton, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will close for cargo at Liverpool on July 27.

# NEAR EAST MARKETS.

## Smyrna Olive Oil.

The following is a further extract from the report of Messrs. C. J. Giraud and Co., Smyrna, from which we quoted last week.—

Olive Oil Yield.—The yield of oil in the past winter has proved the smallest ever recorded, the quantity available having proved inadequate for even a reduced local consumption.

Prospects for the coming winter are, however, exceptionally favourable. The fruit has set well and the trees are in healthy condition. The last good average pre-war yield in 1913-4 gave the following results:—Aidin district, 300,000 kintals; Odemish and Baindir, 90,000 kintals; Smyrna and environs, 50,000 kintals; Kiuluk, 80,000 kintals; Aivaly, 120,000 kintals; Adramyt, 280,000 kintals; say, 920,000 kintals or 50,000 tons.

It is now estimated that the trees are bearing sufficient fruit to assure a yield of about 35-40,000 tons. It must however, be borne in mind that many of the mills have been destroyed, that transport and labour conditions are very difficult, and that with the insecurity existing in many parts of the country it is doubtful if the entire housing and milling of the olives will be possible. Export is prohibited, and it is not likely that the prohibition will be raised until the result of the coming winter's yield is assured.

## Egyptian Crops.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in June:—

Cotton.—The weather was favourable and water supply was generally sufficient except in some localities at the tail ends of canals. Hoeing, watering, and manuring are in progress. "Wilt" has been reported from several districts in Beheira, Daqahliya, and Gharbiya, and aphis has been observed in most provinces, but no damage of any importance has been reported in either case. The cotton worm attack has spread to a limited extent in the provinces of Lower Egypt and in Giza and Minya, and is being promptly dealt with. Hatching on a very small scale occurred in some localities of Daqahliya and Gharbiya. Flowering is general, and bolls have been formed in Middle and Upper Egypt. The crop, generally speaking, has made up to some extent for its past lateness and is looking healthy, particularly in Middle and Upper Egypt.

Rice.—The weather was favourable and the water supply was, on the whole, sufficient. The recent extension of the rice area has involved the continuation of sowing throughout the month, and this operation is still in progress. Early sown fields are looking well.

Sugar Cane.—The weather was favourable everywhere, and the water supply was adequate. Hoeing, manuring, and watering are in progress. The crop is growing satisfactorily.

Wheat.—Reports received confirm last month's estimation of the yield per feddan with a very slight increase for Lower Egypt. These figures show a great improvement on those of last year, and it is hoped that the rise in the yield may compensate to a large extent for the decrease in the area.

Bersim (Seed).—Threshing, winnowing, and storing of the crop left for seed are in progress. Reports to hand confirm last month's statement as regards the shortage of seed.

## Special Reports.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

PANDERMA, June 8.

Business during the past month has not been more important than in the previous period. Forecasts of the approaching crop, which will commence in July, are for the moment encouraging, conditions being most propitious. If there is no change, a satisfactory yield of cereals is to be anticipated.

ADANA (undated).

The cotton crop of 1919-20, although much below that of the years before the war, being about 25,000 bales against 80,000 bales, has been very profitable for exporters, who, notwithstanding the great difficulties of the financial and political situation and the fluctuations in the course of the exchanges, have realised profits surpassing their expectations.

Forecasts of the crop of 1920-21 are very favourable. The area of land sown is much greater than that of the previous year, and the climatic conditions having been favourable up to the present time a yield of double that of 1918 is to be anticipated—that is to say, 50 to 55,000 bales.

# NEW COMPANIES.

## Byzantine Adventurers.

Byzantine Adventurers has been registered as a private company with a capital of £2.000 in £1 shares. Objects: To carry on in the United Kingdom, Near East, or elsewhere, the business of wholesale and retail merchants, etc.

## Hamilton's Oil.

Hamilton's Oil Concessions (Roumania) was registered as a private company on June 18, with a capital of £500,000 in 2s. shares. Objects: To acquire, own and work oil, bitumen, maltha, or other deposits, etc. First directors: J. Brailsford, Crayfield, Chislehurst, Kent; R. R. Tweed, 13, Third Avenue, Hove, Sussex.

## Roumanian Deep Oil.

The Roumanian Moreni Deep Oil Company was registered on June 18 as a private company, with a capital of £40,000 in £1 shares. Objects: To take over lands in any part of the world suitable for the exploitation of minerals, oils, petroleum, ozokerite, and bituminous substances, etc. First directors: H. R. Clarke, A. de Vargas, J. Kentish, W. J. Williams, C. J. Gilbert, P. H. Simpson, and P. C. Millard. Registered office: 71a, Queen Victoria Street, E.C.

## George Gordon and Co. (Burma).

George Gordon and Co. (Burma) has been registered as a private company with a capital of £25,000 in £1 shares. Objects: To take over the business carried on in Rangoon, Burma, by G. Gordon, and to carry on the business of general merchants, etc. The first directors are R. McCracken, Hyde Park Hotel, W. (director of Steel Bros. and Co., Ltd.); J. Duncan, Carlton Hotel, S.W. (director of Steel Bros. and Co., Ltd., British and Foreign Marine Insurance Company, Ltd., and Royal Insurance Company, Ltd.); B. T. Petley, 16, South Eden Park, Beckenham (director of Steel Bros. and Co., Ltd., and the Attock Oil Co., Ltd.); G. O. Stiven, "Barfield," St. George's Hill, Weybridge, merchant, 6, Fenchurch Street, E.C.

# COMPANY NOTES AND REPORTS.

## Assam Oil.

The report of the Assam Oil Company for the year ended 1919 states that, prices in the various markets being well maintained, the value of paraffin wax advanced, and the accounts also benefit by the rise in the exchange value of the rupee. The directors also arranged for an expert inspection of the refinery, and have received a valuable report, from which they expect to obtain considerable benefit. The profit earned was £81,697. Including £28,322 brought forward, the credit balance is £110,019. The directors have transferred £25,000 to depreciation account, and propose a dividend of 8 per cent. on the ordinary and a further 1 per cent. on the preference shares, in order to make their total dividend equal to that paid on the ordinary, both dividends less tax; to transfer £10,000 to reserve, and to carry forward £17,101, out of which the excess profits duty in respect of 1919 will be paid.

## Bank of British West Africa.

The report of the Bank of British West Africa for the year ended March 31, states that after providing for current charges, rebate on bills, depreciation of investments and for bad and doubtful debts there remains a net profit of £125,147, which with £22,680 brought forward makes a total of £147,827. The directors recommend a final dividend of 6 per cent., making for the year 10 per cent., less tax. £15,000 has been applied to writing down premises and furniture account, £5,000 added to staff fund, £5,000 to bank's insurance fund and £21,250 to reserve, bringing the reserve fund up to £400,000. The balance of £30,377 is carried forward. There were issued during the year 55,000 new shares, the premium received thereon having been added to the reserve fund. A resolution will be proposed to increase the authorised capital of the bank to £4,000,000.

# OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended July 3:—The sales this week on our market amount to 35 cases (of 160 lb. per case), as follows:—Ten cases current qualities of 9½ per cent. average at 850 piastres to 1,025 piastres per oke, equal to $3 to $3.50 and 17s. 6d. and 19s. per lb., c.i.f.; 25 cases selected manufacturing of 11½ per cent. average at 1,050 piastres to 1,075 piastres, equal to $4 to $4.10 and 19s. 6d. to 20s. 3d. per lb., c.i.f. The exchange to-day is 410 piastres per pound sterling for cheque, and $0.98 for one Turkish paper pound. The arrivals (this week we commence the new crop) are 20 cases against six at same date last year.

The ordinary general meeting of the Jokai (Assam) Tea Co. will be held at 50, Old Broad Street, E.C., July 23, 3 p.m.

OAKEY'S WELLINGTON KNIFE POLISH.
The Original Preparation for polishing Cutlery.

# COMPANY MEETING.

## ANGLO-EGYPTIAN OILFIELDS.

The ninth ordinary general meeting of the Anglo-Egyptian Oilfields, Limited, was held on July 14 at Winchester House, Old Broad Street, E.C., Sir Marcus Samuel, Bt. (the chairman), presiding.

The Secretary (Mr. J. Y. Kennedy) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, before submitting to you the directors' report for the year ended December 31, 1919, I would call your attention to the general meeting of the holders of the "B" shares, which is to follow this meeting. In accordance with the plan invariably adopted by the "Shell" group, the interests of the shareholders in outside companies receives our greatest consideration, and it is in pursuance of this policy that the holders of the preferential capital in this company have offered to surrender their prior rights and to share in all the risks of the company with the ordinary shareholders. The advantages of the scheme are quite obvious, for so long as these preferential rights existed they would be a bar to raising fresh capital if and when this becomes necessary. I will briefly call your attention to the salient features in the report for the past year issued to you. We have to deplore a reduction in the quantity of crude oil produced in the year under review, which amounted to only 231,180 tons, as compared with 277,300 tons in 1918, and I regret to say that this unsatisfactory feature of our business still continues, the production for the first six months of this year having been only 64,088 tons. Under these circumstances it is satisfactory that we are able to recommend a payment of the dividend equal to 20 per cent. of the "B" share capital. The cash position was not unsatisfactory, since we held in investments £639,232 at the end of 1919. You will gather from a perusal of the profit and loss account how much we have benefited from the refining of imported oil, thus reducing the cost of treating our own to £34,786, and it is obvious that without this extraneous revenue the erratic production derived from our own territories would have been extremely costly had it borne the entire cost of the refinery working. I will not weary you with many of the difficulties which confront us owing to these circumstances. Not the least is that of transport, and were it not again for our good friends, the Asiatic Petroleum Company, Limited, who constantly come to our aid in this connection, we could scarcely conduct the business.

We have frequently dwelt upon the necessity for further productive territory if this company is to be as successful as we should wish, and these views have been repeatedly pressed upon the Egyptian Government. When the directors submitted their report a year ago we were still engaged in discussing with the Government the terms under which the concession was to be granted to the company. The Government expressed themselves as willing and, indeed, desirous that the company should take up new territory, but they were not prepared to grant such territory on any terms but those embodied in their standard regulations. Under these we could only acquire rights on very small areas—so small that we did not feel justified in committing our shareholders to heavy capital expenditure without any guarantee that they, and not others, would chiefly benefit from the discovery of new fields. We therefore pressed the Egyptian Government to grant us further territory under the same conditions as were embodied in the agreement of 1913. Last September, however, as a result of further conferences with the Government, we agreed to modify our attitude in view of alterations which had been made in the standard regulations, removing some of their more objectionable features. We agreed to explore and take up further territory under those regulations, and we have actually acquired the rights over certain small plots of territory outside our present field. We still do not regard these regulations as satisfactory, but during the last few months they have been undergoing a process of what may be called "progressive interpretation," and we hope that we are now on the road towards the establishment of more satisfactory conditions in the petroleum industry in Egypt.

The fuel shortage in Egypt has been a great preoccupation for many months past. One of our directors has visited Egypt twice and the question of supplies has been the main subject of discussion with the Government. Fortunately our friends, the Asiatic Petroleum Company, Limited, have been able to come to the rescue with large supplies of imported fuel and kerosene, thus staving off what might otherwise have been a very serious economic crisis. The question of supplies is involved with that of price, and on this point the Government have been most anxious to keep prices down to the lowest possible figure. We have felt it our duty, so far as possible, to comply with their strongly expressed desires on this point.

This company stands in a very peculiar position. The Government participates in our profits, and for many years we, in conjunction with our friends, the Asiatic Petroleum Company, Limited, have been in practice solely responsible for the maintenance of supplies on which Egypt is dependent for the first necessaries of life. We are basing our policy on the belief that the relation of such a company with the Government should be one of complete mutual confidence and cordial co-operation. In pursuance of this policy we are giving the Government full opportunities of examining all phases of our work, including the work of our refinery, and we wish to express our appreciation of the full information which the Department of Mines and other Government departments have at various times placed at our disposal. We hope that in the future such co-operation will result in the building up of a lasting national industry in Egypt, from which the Egyptian people, the owners of the undeveloped natural resources of their country, will derive great benefit—greater, perhaps, than strict justice would allow to them, having regard to the heavy responsibility and grave risks which are borne by those who undertake the development and bring these resources from their natural valueless condition into the position of productive national assets. I now move the formal adoption of the report.

Sir A. Henry McMahon, G.C.M.G., seconded the resolution.

The resolution was carried unanimously.

---

A separate general meeting of the holders of the "B" shares was then held, at which the proposed agreement with reference to the rearrangement of the capital was passed by the requisite majority.

---

An extra-ordinary general meeting of the company was afterwards held, at which resolutions were passed increasing the capital of the company to £1,808,000 by the creation of 458,000 new "B" shares of £1 each, ranking pari passu with the other "B" shares in the capital of the company, and adopting new articles of association.

In acknowledging a vote of thanks, the Chairman said that this was the only company outside the Shell group with which he had been personally associated. The time had come when he felt he must take things a little more easily, and if he had to resign the chairmanship it would be with regret, but he should not resign unless he felt that it was really necessary for his health.

The proceedings then terminated.

---

## TURKEY'S FISHING INDUSTRY POSSIBILITIES.

Notwithstanding the large expanse of coast line of the Ottoman Empire, its fishing industry is of little importance compared with that of European countries (says the Commercial Secretary to H.M. High Commissioner, Constantinople). Maritime fishing is carried on only within some ten miles of the coast, and boats rarely or never go further from land. This fishing is done with nets, either floating, drawn, or fixed. The system of laying down nets parallel to the coast to keep the fish in during low tide is unknown in Turkey.

Turkey in Europe and in Asia Minor has a number of lakes, rivers and waterways which abound in fish to such an extent that their yield alone would suffice not only for local consumption, but could be developed into an important export trade if salted and smoked. The exploiting of these waterways has been carried on in general, although advantageously, in such a primitive and irregular way that the yield could be greatly increased without difficulty by the adoption of modern methods. It is reported that a European financial group has lately sent out a mission to prospect and report on the advantages to be gained in obtaining concessions, leases, etc., in connection with the lakes of Sabandja, near the Sea of Marmora, Bek-Chehir, and Ak-Chehir, in the district of Konia.

The fish which could be used for salting and drying, and which are to a certain extent exported, are anchovies, mackerel, sardines, short-finned tunny, eels, etc. Unfortunately, no statistics have ever been kept of this small trade, but from the Constantinople district the following figures were registered before the war:—Tunny, 200,000 kilos, of which 50,000 kilos were preserved in brine, and some exported to Italy and Mount Athos; mackerel, salted, 400,000 kilos; skate, from the vicinity of the islands of the Marmora, 50,000 kilos; sardines, 30,000 to 35,000 kilos; anchovies, 100,000 kilos; herrings, 50,000 kilos; and short-finned tunny, 700,000 to 800,000 pair. In addition, 4,700,000 smoked mackerel were similarly registered in 1914, 25,000,000 in 1915, and 54,000,000 in 1916. The mackerel eggs are not used to any purpose, as in France.

### Sources of Supply.

The Black Sea furnishes large numbers of anchovies, grey mullet, turbot, red herrings, short-finned tunny, sturgeon, whiting, roach, etc. In the Sea of Marmora, the Bosphorus, the Golden Horn, and the Ægean Sea, are to be found, besides those mentioned above, red mullet, sword-fish, tunny, sardines, skate, and sea bream, and also the following molluscs and crustaceans:—Oysters, mussels, lobsters, prawns, etc.

The inland waterways abound in carp, catfish, perch, pike, mullet, grey mullet, eels, gudgeon, rudd, bream, tench, etc. Waterfowl found on the shore of Lakes Kutchuk-Tchekmedjé and Buyak-Tchekmedjé include herons, cormorants, duck and wild geese.

The total catch for the Administrative District of Constantinople for the year 1915 was 9,592,200 kilos, with a total value of £T.195,650; that of the Adrianople Administration in the same year 598,000 kilos, valued at £T.2,500. In other administrative districts the total catch of Sivas in 1913 amounted to 10,350 kilos, in 1917 to 2,900 kilos, and in 1918 to 1,070 kilos; and that of Trebizond in 1913 to 2,171,200 kilos, and in 1917 to 1,483,000 kilos. In the Administration of Broussa 180,000 kilos of the catch are salted each year.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

### Egypt.

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200 metrical tons cotton waste. August 9. (L.)

Uniforms.—The Egyptian War Department invites tenders for Bedford cord pantaloons, khaki drill infantry and artillery frocks. Tenders will be received up to first post on Monday, July 26, and will remain open for 14 days. (L.)

Extension of Electrical Station of Zagazig and Belbeis.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the extension of the electrical station of Zagazig and Belbeis. Adjudication at noon on September 1. A copy of the specification, etc. (in French) may be consulted by British firms interested at the Enquiry Office of the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

Gas Piping, etc.—The Egyptian War Department invites tenders for the following:—Blue Serge and Khaki Puttees. Calico. Tenders returnable by noon on July 23. White Canvas Shoes (Gymnastic). Tenders returnable on July 26. Lining for Tarboushes. Tenders returnable on July 27. Tenders will remain open for seven days. (L)

Electric Lift.—Tenders are invited for the supply and installation of an electric lift in the Kasr-el-Aini Hospital, Cairo. Tenders close on August 15. The lift is required to carry a cage 2 metres by 1.50 metres in area, with a fully loaded weight of 300 kilos, through a height of 9.40 metres with three stops (with a possible future extension to 15 metres with four stops), at a speed of 25 centimetres per second. A copy of the specification (in French) may be inspected at the Department of Overseas Trade (Room 50), 35, Old Queen Street, Westminster, S.W.1.

Engineers' Tools, etc.—The Egyptian War Department invites tenders for engineers' tools, files, portable forges, spanners, bolts and nuts, etc. Tenders will be received up to noon on July 24. (L.)

### India.

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

### Turkey.

Telephones and Accessories.—The Commercial Secretary to the British High Commission at Constantinople has received an inquiry for the name of a United Kingdom manufacturer of telephones with magnetos, all telephone accessories, telephone wires, and a central of 500/600 lines; also electric bells, wires, batteries, etc. Correspondence and catalogues should be addressed to the British High Commissioner's representative at Samsoun, under cover to the Commercial Secretary at Constantinople.

### Roumania.

The Roumanian Government invite tenders for the supply of the following military equipment:—16,000 outfits, each consisting of two shirts, two pairs drawers, two hand towels, two handkerchiefs, two pairs socks, one pair woollen gloves, one clothes brush, one boot brush, one overcoat, two jackets, two pairs of trousers, one military cap, one sweater, two pairs of boots, two pairs of puttees, one hood, two blouses, one blanket, one mattress cover, two pillowslips, and two sheets. Tenders should be submitted to His Majesty's Commercial Secretary, Bucharest.

## ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Although business still continues on a somewhat restricted scale, there is a better tendency generally for all Egyptian securities; and but for there being so very few sellers on this side a good deal more business would have been put through, as Egypt has been during the last few days sending over a good many buying orders.

In Government stocks some business has been done in Egyptian Unifieds round the current level, and the 3½ per cent. Prefs. have advanced a point to 57, owing to the shortage of stock and in spite of the fact that this is above the level at which Egypt is prepared to buy. In Greek loans there has been a fairly large business done, and, as a result, the 1881 and 1884 Loans are a point down at 55. The 1890 Loan has lost a similar amount at 53, and the Rente Loan has dropped half a point to 40½. On the other hand, the 1902 Loan is in demand at the current quotation, but there are no sellers, and both the 1910 and 1914 Loans are half a point up at 41 and 56 respectively. Turkish Fours of 1891 have put on ½ at 61½, and the 3½ per cent. 1894 Loan has advanced one point to 55.

In Bank shares Agriculturals have improved 3-32 to 4 15-32, and National Banks have risen ⅛ to 19¾. Ottoman Banks have been a strong spot and are closing ½ up at 9¼.

In Railways, Delta Lights are ⅛ up at 5⅞, while Piræus-Athens 4½ per cent. bonds are 2½ points down at 57½, but the quotation is rather nominal.

In Land shares there has been a general hardening of prices. Egyptian Consolidated Lands have jumped 4½d. to 3s., Delta Lands are 6d. higher at 14s., Gharbieh Lands have improved ¼ at 3¼, and New Egyptians are closing at 35s., an advance of 6d. A further rise of ⅛ has taken place in Union Foncières to 4 11-16, but, on the other hand, Sudan Plantations have dropped 1-16 to 4⅜.

In Miscellaneous descriptions Alexandria Waters are ⅛ down at 7⅞, at which price some business has been done, and Morums Stores are again 3d. lower at 17s.

In Oil shares Anglo-Egyptian B have dropped 3-32 to 2 31-32, while Roumanians, on the other hand, have advanced 6d. to 18s. 9d.

## INDIAN INTELLIGENCE.

This week's Indian cable states:—Rainfall has been fairly general throughout India. General crop conditions good, but more rain required in some parts. First preliminary forecast, acreage 2,501,636, or decrease of 11.9 per cent. on final figures of last year. Crop prospects not so good as last year owing to excessive rainfall followed by drought. Bombay cotton market weak. Fully good broach July-August Rs. 442 8 Annas. Piecegoods market improving, with better inquiry and fair turnover. Calcutta jute market quiet, with some business done in new crop. Hessians quiet. Heavy goods steady, with small business. Cornsacks easier. No change in Bank rate.

## NOTES OF THE WEEK.

As was to be anticipated, the Turkish Government last week decided to sign the Treaty, recognising that the Allies at last meant business. The Turkish Cabinet reached this decision on July 21, and it was confirmed the following day by a Crown Council, over which the Sultan presided in person. According to the *Morning Post's* Constantinople correspondent, the threatened loss of their capital was the determining factor in bringing the Turks to swallow the pill, and there can be little doubt that he is right. Still less can there be any doubt that Damad Ferid Pasha and his colleagues have acted in their country's best interests, and though they can hardly expect the thanks of their countrymen for what they have done, they certainly deserve them. Turkey has suffered grievous losses and bitter humiliations, but they are due, not to the Grand Vizier and his Ministry, but chiefly to the group of adventurers, headed by Enver and Talaat, who plunged the country into war so wantonly, and, to a less extent, to the misguided "Nationalists," whose folly has overtaxed the patience of the Allies. Hadi Pasha, Dr. Riza Tewfik, and Halid Bey have been appointed delegates to sign the Treaty, and they will probably have carried out their painful duty before these notes appear.

Greek military operations in Thrace are reported to have progressed with the same rapidity and success as marked those just completed in the Smyrna-Panderma region. From the latter point, on the night of July 20, a force, commanded by General Mazarakis, was transported to the European shore of the Sea of Marmora, the operation being conducted under the escort of a mixed British and Greek squadron. Landings took place at Eregli, Rodosto, and Sultankeui. Only at Rodosto was any resistance offered, and there, according to the special correspondent of *The Times*, the Turks had only three small field-guns, with which they fired only five shots. In the circumstances, it is not surprising to learn that the landing was a "bloodless little operation"; but that it was well and smartly carried out is evident from the fact that it drew the warmest congratulations of the Admiral commanding the British squadron. King Alexander, who witnessed the proceedings at Rodosto from the cruiser Averoff, landed in the afternoon, and received a great welcome, in which Turkish citizens took part.

The Greeks followed up their advantage swiftly. On the 21st a force was astride the railway at Muradli, and at the same time the Turkish positions at Kuleli Burgas were bombarded. On the 22nd the bombardment was continued during the day, and was followed up by a Greek advance to the bridgehead in the evening, and Athens messages of July 25 announced the fall of Adrianople and the disorderly retreat of Jaafer Tayar's forces. According to one report, he is, at the time of writing, falling back upon Kirk Kilisse, where, it is pointed out, he is within easy reach of the Bulgarian frontier. It is to be hoped that the hint thus conveyed will not be lost on the Allied military authorities. Obviously, if Jaafer Tayar's forces seek safety in withdrawal across the frontier, they will not only impose a heavy strain on Bulgaria, who must intern them, but their presence will be a sore temptation to the Greeks, flushed with victory. The Greek Military Mission in Sofia very recently protested to the Allied control against what it described as Bulgarian military movements in favour of Jaafer Tayar. We want no further frontier incidents.

The fears of another Cabinet crisis that had been rife in Yugoslavia for a fortnight or more were justified on July 20. On that day M. Vesnitch's Government failed to secure a vote of confidence, though only by the narrow majority of four votes, the figures being 68 to 64; and the Prime Minister at once handed the resignation of the Cabinet to the Prince Regent. The latter entrusted M. Vesnitch with the task of forming a new Ministry; and as the old one is to remain in office until its successor is formed, it is probable that the new will bear a strong likeness to the old. Whether it will meet the same fate time alone can show, but it is evident that with parties so nicely balanced as they now are the position of any Ministry is bound to be insecure. Such a state of affairs at the present time is much to be regretted; but though it may hinder the country's getting to work, it is very unlikely to lead to developments of the sort that are doubtless hoped for by Yugoslavia's enemies. The recent visit of the Regent to Zagreb and Liubliana served, as our Belgrade Correspondent pointed out, to show how closely united in essentials are the peoples of the pre-war Serbia and the Yugoslavia of victory.

Some particulars of the demands made upon the Damascus Government by General Gouraud are now available. Besides insisting upon recognition of the French mandate over Syria, they stipulated for liberty to use the Rayak-Aleppo railway line and to occupy the stations, for the reduction of the Sherifian army to its effectives of December 1, 1919, for the abolition of forced recruiting, and for free circulation for the French Syrian currency. The Emir Faisal, it was at first reported, accepted these terms, but it now seems to be uncertain whether the report was true. Probably the

Digitized by Google

Emir himself wished to accept them, and gave orders accordingly, but his servants failed to carry out his instructions because they did not agree with them. In any case, General Gouraud deemed it necessary to advance on Damascus. On July 22 the advance was suspended at the request of the Emir, who protested that his reply to the ultimatum had been despatched. But a small French force between Homs and Tripolis was attacked by Arab regulars, and thereupon the French moved forward again. At one point, at least, their advance was opposed by the Arabs, and a stiff fight ensued. The French losses are put by the *Temps* at 150, the Arabs' are not stated; but they are said to have abandoned nine guns and twenty-five machine guns, and the Emir's Minister of War is reported to have been killed.

---

What followed is not yet quite clear. Apparently the Damascus authorities sent representatives to the French commander, promising that no further resistance should be offered, and that they would victual the French force until railway traffic could be resumed. The city has been occupied by the French (so Paris reports indicate), and apparently Aleppo is to be similarly treated. The situation is admittedly very grave, and it is bound to react unfavourably on our position in Mesopotamia. While the Emir Faisal is understood to have appealed to the League of Nations, his father, King Hussein, has addressed himself direct to the British Government asking for British intervention, and declaring that he is unable to help Faisal's brothers from going to his assistance. For the moment we must content ourselves by stating the facts. But it is clear that Great Britain will have to take action of some kind, and it would seem that her best course would be to acknowledge that she has got herself into difficulties, and to ask her two Allies to discuss the whole subject with her in a friendly spirit. The first thing to decide—and to make quite clear to the world—is what agreements we entered into with the Arabs and with the French—and on what dates.

---

The Lords' debate on Amritsar served chiefly to emphasise the competence of the Upper House in discussing questions of high Imperial concern. The matter of the speeches, like the atmosphere of the House, was indeed far superior to the standard attained in the Commons, but there was at the same time a certain unreality in the proceedings, arising from the constitutional position which we have reached in this country. The Commons could have turned out the Government: the Lords could at most record a pious opinion, and to our mind it is much to be regretted that the opinion could not be recorded first. The results of the division can easily be discounted by convinced opponents of the hereditary principle, but it is worth noting that the lead in the discussion was taken by men who owe their position to their own merits, and the difference in the views expressed by men like Lord Finlay and Lord Sumner, Lord Milner and Lord Meston, brings out the difficulty underlying the whole subject.

---

We hope the announcement of definite dates for the Prince of Wales's visit to India, taken with Mr. Montagu's recent remarks on the nature and volume of the "opposition," may be read as a dignified reply to the weak spirits who have been suggesting that the visit should be abandoned or postponed. India in the mass loves and reverences the Royal House, and, in view of recent events, it is perhaps justifiable to add that she knows how to treat Princes when they come: there will be fewer hands to shake, and there will, we hope, be greater opportunities of informal recreation, with plenty of birds and beasts to shoot, in the intervals of those stately ceremonials in which the country delights. A few saints and politicians will probably sulk, but we do not think they will be missed.

---

Meanwhile, we may note that a necessary condition precedent to the Prince's visit has been secured by the final approval of Parliament to the rules for the election of the legislatures which he will open. The discussion in the Commons last Friday was marked chiefly by Colonel Wedgwood's gallant attempts to introduce a long list of amendments, but the only change sanctioned was the extension of the franchise to pensioned and discharged soldiers, a change which will be welcomed in the fighting tracts, but will have little effect in the large areas whence few recruits have recently been drawn. Advanced politicians in India might profit by a study of Colonel Wedgwood's remarks after all his amendments had been rejected; the arrangements now sanctioned are a temporary makeshift, designed to pave the way for larger freedom, and while they may be open to all sorts of objections, it is only by working them that India can hope to advance constitutionally to better things.

---

The need for goodwill becomes indeed more and more apparent as time goes on. India is waking up to the situation, and politicians are finding that they will have to reckon seriously with classes and with questions which hitherto they have endeavoured to ignore. To take one instance, we notice that "orthodox," or, shall we say, conservative, Hinduism, is coming forward, and various societies are now urging the electors to enact pledges from candidates regarding the maintenance of the marriage system and other thorny topics. That means that the "drum ecclesiastic" will be heard. India being what it is, no one could expect the electors to put aside that department of life in which their interest is deepest, but much depends on the way the subject is approached. There is plenty of bigotry on both sides, and if it sets to work to inflame popular passion, the country will go back instead of forward: the question is whether the leaders have the will and the power to keep such influences in check, and much mischief may be done before an answer to that question can be formulated.

---

Again, it is becoming clear that the leaders of the backward classes, who ought to know, are very much alarmed about the danger of undue influence at the elections. A recent conference in Calcutta took the line that in such matters prevention is better than cure, and suggested seriously that an executive committee should be set up to which electors might appeal against threats or the offer of bribes, so that the matter might be dealt with before the election actually takes place. The practical working of such a provision would obviously be difficult, but the important point is that a demand for it exists. The backward classes, with an experience running far down the centuries, distrust their "natural leaders," and ask for a committee of impartial civil servants, the only body in all India whom they are willing to trust. Can the leaders prove this distrust to be groundless by insisting on a proper standard of conduct on the part of candidates and agents? If they cannot, it will in the long run be the worse for them, though for the moment it may be the inexperienced electors who will suffer.

---

General Sir John Maxwell, President of the Egyptian Exploration Fund, has issued an appeal for financial support for the work of excavating the site of Tel-el-Amarna, which, taken from the German diggers, is henceforth to be carried on by the E.E.F. The site is an important one, and although very valuable results have already been secured, its further excavation on scientific lines is greatly to be desired. Unless we are much mistaken, it is something of a rarity among Egyptian sites, inasmuch as all its ruins belong to one period, and that a brief one in the long history of Ancient Egypt. Its buildings are those of the old city of Ekhaton, or Akhetaton, the city founded by Amenophis IV., better known as Akhenaten, who is rightly described by Sir John Maxwell as an "extraordinary genius." To do them justice, the German archæologists did good work at Tel-el-Amarna, and it behoves us to see what we do after them does not compare unfavourably with what they accomplished. Professor Eric Peet, who will be in charge of the excavations, may be trusted to do his part worthily: it remains for the British public to supply the necessary funds.

# THE WEEK AT HOME.

**Confused Politics.**

Politically, the week has been one of confused political issues and no solutions. The Spa Conference has receded into the background, and everybody is satisfied with the treatment of Germany except Mr. H. J. Massingham and Mr. A. G. Gardiner, whose mournful jeremiads have covered columns of the *Nation* and the *Daily News*. But the Prime Minister's account rendered in the matter of Germany was followed by his serious speech on the Russo-Polish situation, and England discovered to her amazement that she might yet be involved in another European war if the Bolshevists invaded Poland. The *Daily Herald*, the organ of the pro-Bolshevists in this country, has done its best to damn the Poles, but the return of the British Labour deputation from Moscow has certainly lessened whatever sympathetic feeling there was among our professional rebels for Lenin and Trotsky. But for all that, we would rather not have another war just yet, although we have discovered—and are rather disconcerted by the discovery—that peace is more costly to wage than war and far less exciting.

From Poland the scene shifted to Ireland, where more murders have been committed, while Belfast has been rioting, and a large toll of killed and injured is reported. This system of organised outrage has proved impossible to suppress, and there has been some rumour that the Government have lost faith in the Home Rule Bill. It would, indeed, be wonderful if it were not so, for nobody else has the slightest belief in it. The whole thing is postponed until the autumn, when gossip has it that a plan of Dominion Home Rule is to be substituted. The basis of this belief is the fact that Mr. Lloyd George and the Cabinet discussed Irish politics for eight hours on Friday, and the quidnuncs derive great significance from the fact that when the Cabinet broke up Mr. Winston Churchill walked across from Downing Street looking more determined than ever, while Lord Birkenhead strolled across to the House of Lords to dine with the King looking younger and more rosy-cheeked even than usual. I confess I see nothing in these slender indications, and I do not believe the Cabinet have made up their minds.

After Poland and Ireland and the troubles of a few other disturbed countries, the grievances of that insignificant spot of earth called England seem hardly to be mentioned without apology. But the fierce discussion on railway fares continues. Lord Montagu points out that the railways are bankrupt; one of the heads of Lipton's has proved that it is cheaper to send goods by road than rail; one or two foolish people, who think that the poor are too rich, have written to *The Times* advocating the higher fares: Mr. Bonar Law continues enigmatic, and wears his usual air of being puzzled to know what all the fuss is about; and Sir Eric Geddes is the best-hated man in the country.

But it is accepted that fares cannot now be increased before September, and Lord Northcliffe and the Cadbury papers—strange comrades—assure us that if we all shout loud enough we may put off the evil day until October or even Christmas. There have, in fact, been perceptible signs of wavering on the part of the Government and of doubt on the part of the railway companies; and as questions of railway management as well as finance are now coming before the shareholders, we are evidently in for a long period of railway politics. Lord Montagu, as the spokesman of the motor-car, assures us that the end of it will be that the railways will have to admit they are out-of-date except for the carriage of long-distance heavy goods, and will have to cut expenses drastically and wipe out a good deal of their capital as lost. The prediction appears to be quite reasonable.

**The Autumn Session.**

It is finally decided that we are to have an autumn session in October. Mr. Lloyd George goes to Lucerne for a rest, which he badly needs; and Mr. Asquith will retire to the Upper Thames, where he will sigh over the indiscretions of his wife's biography—now appearing in the *Sunday Times*, to the terror of her contemporaries, who are afraid they will be mentioned, and still more afraid they will be omitted—and prepare for an autumn campaign which is to revive the flagging spirit of Independent Liberalism. The Speaker has again postponed his retirement, and his expectant successors are again disappointed; his health is apparently better than it was. The present House of Commons is, in fact, very easy to manage, and it is understood that his one trouble in life is not the lamb-like members, but the chimes of Big Ben, which he is compelled to hear day and night several months in the year.

**Women Justices.**

Shakespeare created Portia, but we still wait for the female advocate. But even Shakespeare did not foresee the woman J.P., and there is no female Shallow in the comedies. However, we have changed all that in these revolutionary days, and a long list of women whose appointment as justices has been approved by the Lord Chancellor has just been published. Most of the names are those of ladies who are already well known, such as Dr. Mary Scharlieb, Miss Balfour, and so on. There has been very little editorial comment on the list in the newspapers and not a single protesting "Letter to the Editor" in the London dailies.

**City Rents.**

Indignation at the increased rents demanded of business men for City offices culminated last week in a meeting of protest at Cannon Street. City men do not mind paying a reasonable increase—say of 50 per cent.—but when their rents are raised at one bound from £300 to £1,500 a year, and they are given no more than a day or so to make up their minds, it is little wonder that they should protest. The City Corporation, which is one of the large landowners in the City, has been moderate and equitable in its rent revisions; but some of the private landowners have proved veritable sharks.

**Rowdy Sunday Trippers.**

There has been a good deal of complaint of late from what used to be quiet country villages in Sussex and Essex that the peace of Sunday has been ruined by trippers passing through, morning and evening, on their way to and from the seaside. The Sabbath was made for man, but not particularly for the charabanc; and the nuisance has become so serious that action is to be taken by the proprietors of those great touring cars to restrain their passengers, for instance, from hooting and bellowing when passing village churches, and otherwise making nuisances of themselves. Most of it, no doubt, is sheer high spirits, but there appears to be real ground for the objections which have filled the papers of late.

**Cricket of the Week.**

The more sensible people of England, after going to church on Sunday morning, lit the dining-room fire in the afternoon of the last Sunday of July, and wondered what was going to happen to cricket if this November-like weather continued. But, despite the gloom of the alleged summer, some interesting games have been played this week, although Gentlemen v. Players, at Lord's, was disappointing, the Gentlemen putting up a poor fight. Surrey, however, provided the finish of the season against Lancashire on Friday. The Northerners were all out for 160 in their second innings, and Surrey had to make 91 runs in eighty minutes to win, against two of the best bowlers in England. Hobbs opened the first over of the last innings with a four, off the third ball he hit a two, and it was seen that a desperate effort was to be made to score the runs. Mr. Howell was unluckily caught when he had scored one; but, after that, Hobbs and Peach stayed together, and the winning hit was actually made with thirty-five minutes to spare. It was a very brilliant performance, with rain—which had stopped play several times earlier during the day—threatening every minute. Surrey are now at the head of the county championship, with Yorkshire, Kent, and Lancashire close at their heels.

**The New Medicine.**

A great deal has been written about the new medicine of late, and a new book, which has come into my hands, "The Shibboleths of Tuberculosis," by Marcus Paterson, M.D., gives some indication of the change

Digitized by Google

that is coming over medical methods. Dr. Paterson is the resident medical officer at the Brompton Hospital, and probably the greatest practical authority of the day on this disease. Among the shibboleths he discusses are the ideas that consumption is a wasting disease—it is a disease of the blood; that it is hereditary; that the seaside and sea voyages furnish the proper curative treatment, and that it is not any use to sterilise milk for children when we do not boil their butter and their cheese, both of which are equally capable of conveying the bacillus. It used to be thought—perhaps it still is—that Bournemouth air was good for consumptives; Dr. Paterson points out that the mortality from tuberculosis is greater in Bournemouth than in Blackburn or Dudley, neither of which are precisely notorious as health resorts, and he ridicules the idea that the disease is susceptible of climatic treatment. He has no particular belief in cod-liver-oil or all those horrible fattening diets which the past generation of medicoes insisted on pouring down the throats of their unhappy patients.

As a mere layman who cannot even claim to have the disease, it would be impertinent in me to do anything but summarise some of his statements without commenting on, far less criticising them. But from this book, and from conversations with personal friends among the family who specialise in other diseases, it is clear that the new medicine will be radically different from the old.

So, no doubt, with the medical statistics of mortality, which I have personally some reason to distrust. A few years ago, when I was seriously ill, an ignorant country practitioner shook his head over me and assured me I was suffering from tuberculosis. I did not believe him, and when I recovered, a thorough overhauling and testing by a more competent man contradicted the diagnosis absolutely. But if I had died under the first medico—as anybody with a spark of decent feeling would no doubt have done—it would have been certified as one more death from tubercule. An experience of this kind teaches one to be a little sceptical of the value of statistics.

**The Week's Books.**

It sounds rather nonsensical to head the list of the week's new books with the "Agamemnon of Æschylus" (George Allen); but the fact that the translation is by Professor Gilbert Murray fully entitles it to mention. One enthusiastic reviewer suggests that it is the best translation ever made; it will have to be very good indeed to supersede the quite excellent version by Professor Blackie several years ago.

Professor Saintsbury, who is a devotee of wine no less than of literature, has deserted prosody and criticism for the grape in his latest book, "Notes on a Cellar-Book" (Macmillan). The Professor's knowledge of wine is that of the older generation of exquisite palates, which smoking has ruined for the present age; but, unluckily, Mr. Saintsbury informs us that he has abandoned his intention of writing a history of wine. Such a work, as he truly remarks, would have required "infinite research; also I should have had to drink more wine than would now be good for my pocket, or perhaps even my health, and more bad than I could contemplate without dismay in my advancing years." One sympathises with Mr. Saintsbury, now living in happy retirement at Bath; but it may be suggested that it is still his duty, as one of the authorities on the subject, to write that history. Nobody else is capable of the task, and the incidental martyrdom of drinking a certain amount of bad wine would be worth while for the sake of a good book.

"An English Wife in Berlin" (Constable), by Evelyn Countess Blücher, is a most interesting work, recording the life of an Englishwoman in Berlin during the war. It is her opinion that the Kaiser was an extremely weak person, entirely under the control of the General Staff; Bethmann-Hollweg was little better. Both, and also Solf and Helfferich, were against the unrestricted submarine war, but they were overruled by the military, o the eventual disaster of Germany.

*(From Our Own Correspondents.)*

## EGYPT.

CAIRO, July 13.

**High Commissioner Indisposed.**

Viscount Allenby was obliged, at the last moment, to cancel his trip to Palestine, as he has not yet recovered from the chill he caught while bathing ten days ago, and his medical advisers have directed him to remain quiet for a few days longer. He is therefore staying quietly at the Residency in Ramleh. He will also be unable to attend the French national fête, which is to be held in the Esbekia Gardens to-morrow evening, but he will be represented by General Sir Walter Congreve and the Hon. Ernest Stowell Scott, Counsellor to the Residency. It has been rumoured during the past few days in certain circles that General Allenby would leave Egypt shortly in order to take over supreme command of the Allied forces operating against the Turkish Nationalists, but nothing is known here officially of the alleged appointment.

**Willcocks-Kennedy Case Postponed.**

Before Judge Thorpe, in the Consular Court at Alexandria this morning, Mr. Perrott made an application on behalf of Sir William Willcocks for postponement on medical grounds of the trial of the latter till January 2 next. Dr. Garry, Sir William's medical adviser, deposed that his patient was suffering from extreme physical fatigue, and apart from a weak heart —Sir William is 70 years of age—his physical condition was such that only an absolute rest out of Egypt would enable him to recuperate. Judge Thorpe eventually made an order that the case should not come on before November 1, 1920, subject to Sir William Willcocks' giving an undertaking that he would not repeat or publish any libellous statements concerning Sir Murdoch MacDonald or the Egyptian Public Works in any part of the world. He would allow Sir William to leave Egypt upon that undertaking, but bail would be increased to £1,000, self and one surety. No further application for an adjournment would be considered unless the defendant's plea in answer to the charges was put in at the same time.

Mr. Alexander, on behalf of Colonel Kennedy, then made an application for an order that the latter's case should not be taken until subsequent to the hearing of the charges against Sir William Willcocks. The order was made, bail not being increased, as Colonel Kennedy does not intend to leave the jurisdiction of the Court.

**The Price of the Riots.**

Gradually the annual reports for 1919 of different branches of the Government Service are coming to light, and each one tells of the heavy loss incurred through the disorders in the spring of last year. Among the latest is a summary of the year's work of the Egyptian Postal Administration, which closed with a deficit of £E51,111, of which £E13,465 went to repair the physical damage caused by the disruption; but beyond this must be taken into account the forced suspension of the service in many places, with consequent loss of revenue, and often increased overhead expenses. Another factor which has ensured the deficit has been the higher wages paid to the staff. Salaries had been increased by 45 per cent. since the war and before 1919, but last year the officials were granted another 20 per cent. on their salaries, plus 60 per cent. on their increased pay. They are, however, far from content with this, and are periodically bombarding the Director-General's office and the Press with appeals for a living wage. How far these appeals are likely to be successful can be interpreted from a sentence in the report, which states: "There are already signs that the conditions of the staff may have to be revised again." During 1919 the budgetary receipts of the Postal Service amounted to £E415,222, and credits by other administrations to £E75,000, making a total of £E490,222, whilst expenditure reached £E507,333, which, with £E34,000 for services rendered by other State Departments, totals £E541,333, leaving a deficit of £E51,111. Commenting on this the report states that it is evident that the postal charges will shortly have to be increased. In view of the fact that the charges are now the same as in the halcyon days of yore, there can be no strenuous opposition to the increase. That it has not been applied before might really be used in evidence against the Administration to show that it is far behind the times.

**A Natural Generator.**

From the Public Works Department I learn that consideration is again being given to the proposal to utilise the falling water at Aswan and at the Illahun bridges in the Fayoum for the generation of electricity. I understand that the proposal has been finally sanctioned, and plans are being prepared to enable the work to be commenced in the near future. Kamal Ghalib Bey, who is on the eve of returning from Europe, whither he has been to study the subject, is to have charge of the project. The power which will be generated at Aswan is to be used to pump water to the higher lands in Upper Egypt; that secured in the Fayoum is to be used, in the first place, to drain the swampy regions in the Minia and the Beni Suef provinces. During such time as the power may not be required for these purposes it is proposed to utilise it for the manufacture of chemical manure.

**Turkish Prisoners Arrive.**

On Saturday last the vanguard of the 40,000 Turkish prisoners from Irak and India arrived, and were transported to the prisoners of war camp at Belbeis. The prisoners are mostly Syrians, and include about 5,000 officers. Over a thousand of them arrived to-day.

**A Generous Gift.**

Messrs. Thos. Cook and Son have presented their hospital at Luxor to the Egyptian Government. The gift has been gratefully accepted, and the Council of Ministers has already sanctioned a credit of over £E2,000 to have the building renovated.

## YUGOSLAVIA.

BELGRADE, July 12.

**More Political Clouds.**

M. Vesnitch is having some difficulty in driving his heterogeneous team. Last week there was nearly a rupture owing to a decision by the Minister of Justice that the Ban of Croatia had exceeded his powers; the Narodny Club left the House, but calm counsels prevailed, and the storm was averted.

Still, there is trouble brewing, because the two chief groups, Radicals and Democrats, are diametrically opposed on the burning question of agrarian reform. Unless the Premier succeeds in finding a solution, it is considered that a new crisis is inevitable on Wednesday next. These two parties are equally divided on the question of exports and the Central Association, and the Croat and Slovene parties are in arms on the question of the organisation of the provincial governments. The only solution appears to be the postponement by mutual agreement of the most thorny problems till after the general elections and meeting of the new Constituent Assembly.

**Pinpricks?**

The authorities have thought it worth while to issue an official denial to the ridiculous lies spread from Rome describing some imaginary fighting between Montenegrins and Serbs on Kossovo Plain, of all places. Another, similar, lie is that the railway from Bitolj (Monastir) to Skoplje has been destroyed, presumably by Montenegrins. As a matter of fact, this line was constructed by the enemy for military purposes and destroyed by them on their retreat nearly two years ago. A fortnight ago the restoration of the line was completed, and it is now open to traffic.

Digitized by Google

Dr. Ante Trumbitch, Minister of Foreign Affairs, is returning to Belgrade. Serbia will be represented at Spa and in other conferences by M. Mata Boshkovitch, First Delegate of the Reparation Committee.

**Shabats Decorated.**

Before the war Shabats, the pretty capital of the Podrinski Province, was the most prosperous and the merriest town in Serbia. Situate near the point where the Drina enters the Save, it was the scene of terrific fighting, and all the savagery of the enemy invasions from the very outbreak of war to the end of 1915. Some citizens claim that Shabats saw the first and the last shot fired in the war, and this is very nearly the truth. Now, shorn of its glories, it lies in ruins, a mere shadow of its former self. It has been selected by the French as a symbol of Serbian martial prowess, and the French Minister recently decorated the town with the Croix de Guerre, with appropriate ceremony, and so Shabats proudly associates itself with its sister-sufferers, Verdun, Lille, Rheims, and Louvain.

**Miscellaneous News.**

A number of chemists have been recently appointed to the Chemical Laboratory in Belgrade, but, unfortunately, the enemy looted it so thoroughly that it has not yet been possible to reopen it, and there is a great scarcity of apparatus.

The Serbs, like most Slavs, are a musical and music-loving people. The Belgrade Branch of the Yugoslav Association of Musicians has petitioned the Ministry of Education to open a Conservatorium in the capital.

On Thursday, 8th, at 10 p.m., a fire broke out in the garage of the Old Palace, now the temporary Parliament. There was a tremendous blaze, as several hundred tins of petrol were consumed. The consternation of the public was increased by the firing by the soldiers to call for help. Fortunately, the fire brigade appeared promptly, and the conflagration was localised.

---

BELGRADE, July 17.

**An Incident at Spalato.**

The Yugoslavs' patience is almost exhausted by the wilful provocation of the Italians, which, during the past few days, has exceeded all bounds. There has been a substantial invasion of Serbian territory near Prizren by powerful bands of Arnaouts, who are reported to be armed by Italians and to be in possession of Italian guns. Then there was the affair at Split (Spalato) on the day before King Peter's birthday, when the town was decorated with the Yugoslav tricolour. Now, Spalato is one of the headquarters of Southern Slav patriotism, yet for some extraordinary reason there is an Italian warship there, an antiquated survival of the Armistice. On the evening before Petrov Dan, it appears that a couple of Italian sailors who were ashore stole two Yugoslav flags and took them off to the gunboat; the populace were irritated and crowded on to the quays, where there were many gendarmes to keep order. Presently a launch left the boat and steered towards the shore, carrying the Italian captain, with a machine-gun and rifles. He demanded the "liberation" of two Italian officers who were ashore; the Prefect explained that owing to the angry temper of the crowd, due to the stealing of the flags, it would be unwise for the officers to appear in public, that they were under his personal protection, and that he was answerable for their safety. This seemed to annoy the Italian captain, who unexpectedly opened fire with rifles and a machine-gun, killing a man who was standing by the Prefect's side and several others, and wounding a good many. At this the gendarmes could not be restrained, and retaliated with rifle fire upon the boat, which quickly retired to the ship. It is reported that the Italian captain was wounded, and died in a few hours. The Italians naturally will attempt to throw the blame upon the Slavs, but the report of the American Admiral should settle the matter beyond any doubt.

But this very unpleasant incident has aroused the unruly Italian elements in Trieste and Fiume. It is generally forgotten that a good half of the population of Trieste is Slavonic, and here the mob attacked the old Slavonic buildings, burning and looting, destroying furniture and archives. At Fiume, d'Annunzio is reported to be deporting the Slavs from the town—a very good way, incidentally, to make the Italian majority a matter beyond dispute. The crowd burned four boats, the property of Slavs. Besides all this, newspapers report that Italian regular troops have occupied Bakar, the Yugoslav frontier town on the Ogulin line beyond Fiume, and that they are massing troops and guns near the frontier, quite close to Longatico, where the Simplon express enters Yugoslav territory. A few days ago an Italian aeroplane was compelled to land near Liubliana, and now it is reported that another aeroplane has flown over the town and proceeded on its way to Zagreb. In the face of this prolonged provocation, the attitude of the Slavs remains correct and dignified, but they cannot be expected to sit still for ever.

**The Cabinet.**

For a week or more there have been rumours of dissensions in the heterogenous cabinet of M. Vesnitch, but it is hoped that a compromise will be reached on all points at issue. The question of exports, which is so sharply dividing the Radicals and Democrats, should not be allowed to bring about a crisis; the question of agrarian reform is, of course, a burning one, but should be solved by the Constituent Assembly, which should be summoned as early as possible in everybody's interest. There remains the question of the provincial governments, which is still causing some heartburnings; but it is hoped that even on this a compromise will soon be reached, thanks to the Italian menace.

**Albania.**

The Albanian question is complex, as there appears to be something like civil war in that unhappy country. A Press telegram from Prizren describes how the Tirana Government, headed by Bairam Tsur, is preparing for an attack in force on the Serbian frontier. Bairam Tsur seems to be all-powerful, and is supported by the Italians, but he is opposed by Akif Pasha and his followers, who wish friendship with Serbia, and by Osman Balya, who is now leading Essad's followers. The Serbian attitude is quite clear. They will defend their territory, but in general ask for friendly relations with their neighbours, and in particular for the elimination of the Italians' intrigues from Albania, on the principle of "The Balkans for the Balkan peoples"

**King Peter's Birthday.**

Petrov Dan, King Peter's birthday was quietly celebrated in Belgrade. The aged monarch himself did not appear, but the Regent attended a service in the cathedral in the company of his suite and officers and the *corps diplomatique*; after the service, the troops that had been lining the streets paraded before the Prince. They made an excellent impression on everybody who saw them. The guards were in their new parade uni-

forms, as on all ceremonial occasions. Great enthusiasm was expressed at the very smart appearance of the young cadets, uniting for the first time the youth of the Serbs, Croats, and Slovenes in one corps. The infantry recruits included strapping lads from all parts of Yugoslavia, Mohammedan Albanians from Macedonia, and Central European Slovenes together, all sturdy and workmanlike. Perhaps the warmest welcome was reserved for the marine contingent, who looked, in the words of a Belgrade paper, as though they had stepped straight off the deck of a British battleship.

After the parade the Prince rode to the sanatorium at Vrachar, where on his sick-bed there lay the man who twice drove the enemy out of Serbia. The gallant old Voivoda Mishitch is very ill indeed, and it is feared that he will not be spared for long; the old warrior tried to stand up to salute his Prince, but the Regent gave him the same salute with drawn sword that he had just taken from his officers, and then dismounted and stood by the Voivoda, while the troops marched past their venerated commander-in-chief.

## ROUMANIA.

BUCHAREST, July 15.

**Parliament.**

Another week has been practically lost in the Chamber in useless discussions, the chief bone of contention having been a proposal introduced by the Government to modify the regulations of the Chamber with a view to preventing persistent obstruction and disorder. The Opposition objected to the proposal, and such a storm of confused discussion arose that the President was finally obliged to close the sitting. For three days afterwards all discussion of this or any other business was blocked by the Opposition, who stamped and shouted down every speaker, claiming that the modifications had not been regularly introduced. On one occasion the turmoil became so great that soldiers were brought in and ordered to load their rifles. This was the last straw, and roused the greatest indignation among all the Opposition parties, and, I believe, also among many adherents of the Government. It certainly does seem a step which it would be difficult to justify in the light of present-day public opinion. The Opposition have now made it clear that they intend to continue their policy of obstruction until they have obtained satisfaction on this point and on that of the regulations, which have, however, been passed by the majority of the House.

The only important measure introduced last week was a Bill brought in by M. Trancu-Jassy, Minister of Labour, for the settlement of Labour conflicts, which he read in spite of noisy interruptions from the other side of the House. In pointing out the urgent need for such a Bill M. Trancu-Jassy stated that while the total number of workmen employed in the various industries in Old Roumania was about 405,000, there have been 130 strikes and 18 lockouts in the course of three months this year, 36 having been in Bucharest. At the present time 28 strikes and 18 lockouts are still in progress. Most of them, he said, had arisen over questions of salary or of workmen's councils. At that rate the annual number of strikes would be 592, which is far too high a figure, in relation to the number of workmen employed, as compared with that for more industrial countries. In drawing up the present Bill, the Minister of Labour said cognisance had been taken of the most successful recent legislation on the subject in other countries, and a sincere attempt had been made to observe the strictest fairness towards both employers and employed. It has been drafted under three main headings: (i.) freedom to work; (ii.) strikes; (iii.) sabotage.

Articles 1 to 3 guarantee to the worker the right to work, and place under a heavy penalty anyone interfering with this right (on the occasion of strikes, etc.) either by threats or violence. The second section of the Bill deals with collective stoppage of work, *i.e* strikes. A strike, it provides, shall be considered to have taken place when at least half of the workers cease work in a factory employing not less than 220, or in a commercial establishment having at least 10 employees. A strike may not take place before an attempt has been made at conciliation, this principle being obligatory, as in the French law of 1920. Where conciliation has failed the parties to the dispute must refer their case to arbitration.

Strikes are, however, categorically forbidden in all State institutions and enterprises, as well as in private businesses which come under the following headings:— Transport companies (by land or water), petroleum and natural gas companies, gas and electricity factories, motor power stations, mills and bakeries, hospitals, funeral undertakers, road-making and cleaning services, and the service of Public Health.

The decisions of the Arbitration Committee are to be considered as final. There has been no discussion of this Bill as yet, and it will be interesting to learn how it is proposed to enforce its provisions.

**Socialists and Bolshevists.**

A very significant discovery was made this week by the police at the Socialist Club in Bucharest. Some suspicion having been aroused that the Socialists were in direct touch with the Bolshevist headquarters, the police were ordered to make an examination of their premises, and they found in the safe an uncut roll of new paper money in notes of 2 lei each to the value, it is said, of some two million lei. The cashier, who is now in prison, states that he received the money from a delegate of Rakowski, who is the head of the Bolshevist propaganda department for Roumania and the Ukraine. According to the statement of the National Bank, this must be part of the money deposited by the Roumanian State, on the advance of the German armies into Roumania, for safe keeping with the Russian State Savings Bank; it is not, therefore, part of the treasure sent by the Roumanian State to Moscow at the same time. It has transpired that part of the roll of notes has already been spent by Messrs. Elie Moskovitch and Cristescu, now Socialist deputies in the Chamber, for the propaganda of the Roumanian Socialist party; and it is further stated that Bujor (who was Rakowski's right-hand man) before his recent imprisonment threatened to shoot Moskowitch unless he paid back this money which Bujor claimed was intended exclusively for Bolshevist propaganda. The Committee of Inquiry has made application to the President of the Chamber that the privileges of these two deputies should be disallowed, in order that proceedings may be taken against them in the ordinary course of the law.

Other evidence of Bolshevist activity in propaganda has just been found at Constantza, a Roumanian patrol having caught a motor-boat off the coast in which were two Bulgarian Communist Deputies, a deserter from the Roumanian Army, and several other men. They had in the boat large quantities of Bolshevist propagandist leaflets, apparently intended for Roumania. The men have all been imprisoned pending an inquiry. They state that they were bound for Moscow from Varna via Odessa.

Taken in conjunction with the rapid advance of the Bolshevist army in Poland, these discoveries are causing a good deal of anxiety to the Roumanians, and it is to be regretted that while so many serious questions await their decisions the members of the Legislative Body still waste their time in futile personal quarrels. Great things had been hoped from this Government: one wonders when it will begin to justify those hopes.

## BULGARIA.

SOFIA, July 5.

**Bulgarian Foreign Policy.**

At a recent sitting the Cabinet had under consideration the foreign policy of Bulgaria, and determined that it should aim at establishing and maintaining frank and friendly relations with foreign States, great and small; that it should make every effort to improve the financial position of the country, and that it should follow a purely Bulgarian policy. A declaration to this

effect will shortly be made to the foreign representatives here.

The Prime Minister, M. Stambolisky, in an interview accorded to a representative of the *Zemledeltchesko Zname*, has declared that the relations of Bulgaria with the Great Powers are excellent, that he hopes to be able ere long to disperse the unfavourable atmosphere that has been created about the Bulgarian nation, and that conditions will be created favourable to the revision of the onerous peace terms imposed upon Bulgaria. This country wishes to live on the best possible terms with her neighbours, and it is a pity that Greek statesmen did not show truer foresight, and made such efforts to obtain Thrace; until the Ægean question is settled in a form acceptable by Bulgaria, friendship between Bulgaria and Greece cannot exist. M. Stambolisky is very optimistic, holding that statesmen at Athens will presently come round to this point of view. As to relations with Yugoslavia and Roumania, they are developing in the friendliest way, especially with the latter country, and the understanding will soon be so complete as to restore the traditional Bulgaro-Roumanian friendship.

**The Chamber and the Budget.**

The Finance Minister, M. Marko Turlakoff, in a brilliant speech, presented the Budget, and gave some interesting figures. The estimated receipts are: from direct taxes, 237,500,000 levas; indirect taxes, 832,150,000 levas; State monopolies 88,000,000 levas; import dues, 84,500,000 levas; railways and telegraphs, 264,000,000 levas; State properties, etc., 298,000,000 levas. Total, 1,802,150,000 levas. The expenditure on the regular Budget is in round numbers 1,400,000,000 levas, and on the extraordinary Budget about 1,445,000,000 levas; so that there will be a deficit of more than a milliard levas. But by the utmost economy the Government will endeavour to reduce this figure as low as possible. After hearing the Minister, the Chamber adopted the six-twelfths of the Budget for 1920-1921.

## TRANS-CAUCASIA.

TIFLIS, June 24.

**The Bolshevist Mission.**

A Peace Treaty having been signed between Georgia and the Soviet Government, it was inevitable that the latter should send its "Ambassador" to Tiflis. On Sunday last, the 20th, this emissary, Sergei Mironovitch Kiroff, arrived by motor-car from Vladikavkaz. He was met at the Cross near the Bozarjian works by M. Kartsivadze, the assistant Minister for Foreign Affairs, and several other officials of the town, and escorted by a special guard of honour to his quarters on the Veliaminovskaya, where he received the greetings of the local Communist Party, who came boldly out of their holes for the first time in two years. A fairly large crowd of idlers and curious spectators had assembled in front of the building, and from a balcony Kiroff addressed them, thanking them for their warm reception—of which he must have had an eloquent testimony in their stony silence. He then went on to allude scornfully to the *bourgeoisie* of Europe who now, he said, in the person of Lloyd George, could not find pleasant enough words in the English dictionary with which to conduct the negotiations now proceeding with the representative of Russia—Krassin. "We are here," he said, "as the representatives of the workers and peasants of Russia, of that Russia about which the wildest and most absurd tidings are being spread abroad. As you see, we are ordinary people." The speech, of course, cut no ice: the Georgian people know very well the truth about Russia to-day, and they know very well how much confidence can be placed on the cut-throat Soviet rulers.

Kiroff's staff, of about sixty persons, arrived a few days earlier in Tiflis. I hear that included in this staff are several scholars of Oriental languages and conditions who are all aflame for the Bolshevist salvation of Persia, Afghanistan, and India, what time they will not scorn, forsooth, any proselytes of a minor order who may fall into the toils of their Communist net.

Perhaps the most interesting fact of all in connection with the Bolshevist mission—and it is a typical instance of Soviet cunning and duplicity—is that during the past day or two the Georgian authorities have arrested many members of the numerous Soviet staff, who were caught in the act of distributing Bolshevist propaganda literature. It is understood that the Government's intention is to send these agitators out of the country.

**The Peace Treaty.**

Meanwhile, although there is naturally a certain amount of satisfaction felt regarding the signing of an agreement with the Soviet Government, the Georgian Press and the Georgian people are by no means satisfied regarding the terms. One clause, for instance, is to the effect that no ratification of the treaty is necessary; and there is another which states that Georgia must bind herself "to take measures for the withdrawal from the territory of Georgia . . . of troops of any kind and military detachments which are not included in the Government troops of Georgia." As still another clause states that Batoum and the Batoum province are henceforth to be included in the Georgian Republic, and as the Entente still occupies Batoum, Georgia is practically asked to drive the Allies out. *Kilde*, a Georgian newspaper, says that the treaty thus places Georgia in conditions hostile to the Entente, and may provoke discord and difficulties. "Europe must always be for us the defender against Russia," says *Kilde;* "and now Europe is England."

**Assassination of Khan Khoisky.**

The assassination of Fatali Khan Khoisky, the first President of the Azerbaijan Republic and the Foreign Minister of the recent Azerbaijan Government, has produced much sorrow and indignation in the town. Accompanied by Khalil Bey Khasmamedoff, the assistant Minister of Justice of the former Azerbaijan, Khan Khoisky, visited an open-air cinema theatre in the Rustavili (Golovinskaia) Prospect a few nights ago. A suspicious-looking man had been noticed in the cinema: several people saw how he scrutinised every man who entered or who passed out. When the show was over this man passed out in front of the crowd. Suddenly six shots rang out. The crowd immediately dispersed in all directions. When the firing ceased it was found that Khan Khoisky had been mortally wounded, having received one shot in the back, one near the right temple, and one wound in the neck. His companion, Khasmamedoff, was wounded in the leg. No arrests have been made, but it is generally considered that the outrage was a Bolshevist one.

Khan Khoisky has played a big part in Trans-Caucasian politics since the Russian Revolution. For a time he acted as Commissioner of Justice in the Trans-Caucasian Committee and when Trans-Caucasia had resolved itself into three Republics—Georgia, Azerbaijan, and

Armenia—Khan Khoisky was elected the President of the first Azerbaijan Government formed in Gandja (Elisavetopol), which later was transferred to Baku, where he took over the portfolio of the Ministry for Foreign Affairs as well. Khan Khoisky was Foreign Minister in Ussubekov's Cabinet, and fled to Tiflis after the recent Bolshevist revolution. A charming, handsome Mussulman gentleman, Khan Khoisky was very popular in the Caucasus, especially with the British and other Allied officers and staff. His murder is simply additional fuel for the fires of revolution that are being kindled by the Mussulmans against the Bolshevists.

**An Italian Minister.**

An event of minor importance, but one which presents a certain interest was the departure on the 18th inst. of Colonel Gabba, chief of the Italian Military Mission, which has been operating latterly as the Royal Italian Political Agency, his work now being continued by a duly accredited Italian Minister, Cavalier Mercantelli, Extraordinary Envoy and Minister Plenipotentiary, who arrived from Batoum on the 20th inst. Gabba was very popular, and was given a great send-off at the station, where he was presented by the Georgian Army with a Caucasian sword. In his farewell speech Gabba declared that he was leaving Tiflis with sadness in his heart, which is really what everyone who leaves Tiflis does. Than this, nothing better can be said for the hospitality and the charm of the Georgians.

Writing of Colonel Gabba reminds me of the second anniversary of the establishment of the Georgian Republic. It was a very hot breathless day, and a sports meeting held a few versts outside Tiflis was part of the official celebrations. Thousands of people went out on foot along the dusty road to witness the sports. Seeing the happy crowd sweltering along in the heat a British officer turned to Gabba, and said: "If only some ice-cream men were here they would make their fortune." Then he became confused. After all, it was not particularly tactful!

**Soviet Baku.**

News from Baku is plentiful but not all reliable. There is as yet no definite news regarding the European prisoners. Commander Luke, D.S.O., the acting British Chief Commissioner in Trans-Caucasia, has asked Alshibaia, the Georgian Diplomatic representative in Baku, to look after the British interests. Incidentally, Kiroff has received a telegram from the Azerbaijan Bolshevik Government, asking him to protect the Azerbaijan subjects in Georgia—a ridiculous request, as the Georgians have throughout molested these subjects in no way, treating them, moreover, with every consideration.

Some statistics of Soviet expenses published in an official Bolshevist gazette are interesting. The revolutionary committee of Lenkoran demanded for the month of May 53,800,000 roubles for current expenses. Curious are such details as:—For the maintenance of the officials of civil institutions, 5,000,000 roubles; for militia, 2,000,000: for agitation, 500,000; for the organisation of schools for grown-ups, 1,000,000; for the maintenance of workmen on fishing grounds, 15,000,000; and, finally, for the maintenance of prisoners, 100,000 roubles.

Figures, you see, speak very much louder than words.

## CYPRUS.

NICOSIA, July 3.

**Volunteers for Greece.**

The Greek element is all astir under an impulse of patriotic zeal. The Acting Consul-General for Greece at Nicosia, M. A. Artemis, with approval from Athens, having publicly notified Greek Cypriots that volunteers of from twenty to forty years, whether Hellenic subjects or not, may be enlisted to serve in Thrace and Ionia, there has been a prompt response. Large numbers have come forward in all parts of the island "with indescribable enthusiasm." Up to July 2 over 4,500 had been enrolled, and the number now exceeds 6,000, and is daily increasing in all the six districts, the greatest number being from that of Nicosia, the largest division. Among those who are offering their services in the cause are the Bishops of Kitium and Kyrenia; while many medical practitioners are coming forward, eager to take their share. Enthusiasts anticipate that over 8,000 applicants will seek enlistment.

The Hellenic Government is not only inviting volunteers for military service, but is offering appointments in the Law Courts and in the civil administration of all the new territories. A number of those who have studied law in Europe have offered their services, and four appointments have been already made. The judicial salaries offered are 1,500 and 750 drachmæ (£60 and £30) a month respectively for magistrates of higher and lower grades. Mr. N. B. Themistocles, a Larnaca lawyer practising in Smyrna, has been appointed Governor of Kydonia, at 1,000 drachmæ (£40) a month. Needless to say, the Greek community is agog with excitement over the situation and the openings in new Greece. The papers are full of patriotic articles, of exultation over Greek victories in Asia Minor, and of thanks and encouragement to volunteers, who are flocking to the Motherland. A steamer is expected from the Pirræus for their transport. The situation is a strange one in this island of humdrum monotony. No one could imagine a year or two ago that Greek-speaking Cypriots, British subjects since 1914, who had thirty-six years previously been down-trodden Ottoman *rayhas*, would in 1920 be rushing with military ardour to occupy lands which the Peace Conference has assigned to Greece.

**Pensions for Retired Officials.**

For retired officials nothing is done. These ex-officials, some of long service, who are in receipt of the exceedingly small pensions which hard-and-fast pre-war regulations allow, are, according to present treatment by both the local Council and the Home Government, accorded a paltry "temporary bonus," totally out of proportion to the increases voted for present officials, although the former are probably more in need of help than those whose augmented salaries will bring proportionately increased pensions in the future.

## GREAT BRITAIN AND JERUSALEM.

We are indebted to a correspondent for the following extract from a letter from Jerusalem, dated July 4, received July 20:—"This has been a very eventful week here. Sir Herbert Samuel arrived on Wednesday, June 30, and as he entered Government House (as headquarters is now called) *the flag was hoisted for the first time*, the band of the Yorkshires playing 'God Save the King.' The whole place was swarming with troops, infantry and cavalry going up to act as guard of honour; the High Commissioner was brought from the station with an escort of three armoured cars—also an ambulance wagon! Anyhow, everything passed off well. Sir Herbert inspected the guard first, and was met by General Bols, who presented the heads of departments. It was all a fine sight, but the chief thing to see was the flag being flown for the first time in history over Jerusalem. It was a sight I would not have missed for the world to see the flag go up in all its greatness. This or the other man comes and goes, but *that* is England, and one can never believe that in this country alone she will go back on all her traditions of fairplay and justice. For the moment it is very hard to understand her policy. The people say openly we have betrayed them, and out here you feel acutely the indifference, or even enmity, to the flag being flown where even a few months ago it would have been a day of such rejoicing. General Bols left at four the same day. . . . He is a man who makes himself loved, and he and Sir Arthur Money have left a high tradition of honour and perfect straightness behind."

## GENERAL DYER.

TO THE EDITOR OF "THE NEAR EAST"

Sir,—Will you allow me to say that even your leader of the 15th inst. fails to remove the impression that gross injustice has been meted out to a general who simply, honestly and bravely did his duty?

Against him there is urged the old-time argument by fallacy involved in "frightfulness." This word, associated with German brutalities in an unscrupulous invasion, has no application, and ought to have been carefully avoided in treating of the well-intentioned, even if mistaken, effort to maintain the King's authority over would-be rebels.

The other, but less important plea, is the somewhat quibbling one, that the General had no right to think of the wider effects if he let the miscreants before [him] go unpunished: that is, that, in these days of telegraphs his thoughts were not to wander beyond the ground he stood on!

India is not now in closed compartments, and the officer was bound to think of the general effect of any weakness on his part. If he had not done so, his opponents anyhow, far and near, were watching the issue of that crucial moment. Had the trial of the General been for hesitation and remissness in his duty, his accusers of to-day would have had no scruple about invoking the "distant effect" argument against him.

In conclusion, and with all respect, mere soothing syrup, the argument from *fait accompli* and a hushing-up committee will not acquit the Government of sacrificing a valuable servant of the Crown to their political interests of the moment.—I am, etc.,

CONSTANT AND INTERESTED READER.

Grisons, Switzerland.
July 18, 1920.

[We used the word "frightfulness," not because we liked it, but because it had been used in the debate with which we were dealing to signify the methods which might be described more scientifically as moral action at a distance. To the condemnation of these methods we adhere: we think it probable that some of the Jallianwallah mob may fairly be described as miscreants, but even though it had consisted exclusively of miscreants, we should still hold that the action directed against it was in excess of the requirements of the situation. Our correspondent's further argument really takes us back to Aristotle: there may be errors of excess as well as of defect, and it is unfortunately true that partisans will seize on one as quickly as the other, so that an officer who should hit on the happy mean is likely to be attacked by extremists on both sides. Our own position is that on this occasion the happy mean was missed, not, as one side says, through any moral obliquity, but through an error of judgment which can readily be understood, and for which men of experience will make very great allowances. The precise evaluation of that error is, however, a matter which we are content to leave in the hands of the Army Council.—Ed.]

## THE EGYPTIAN NATIONALISTS' PRAYER

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The paragraph in your issue of June 24 on the Egyptian Nationalists' Day of Prayer will be read by many with deepest interest.

The supplication in itself may be considered as evidence of the one great need of all nations, or another expression of the inevitable conviction that the present social problem is beyond politics, beyond economics, beyond even ethics, and that the only solution is to be found in the recognition of the Almighty as the only omnipotent Sovereign of the universe, to whom the nations can appeal for the fullest satisfaction of their urgent present needs.

The Invocation may be further taken as evidence also of what Carlyle wrote: "Prayer is, and remains, the nature and deepest impulse of the soul of man."

God forbid that we should adversely criticise any form of sincere petition; on the contrary, we are conscious of the stupendous power of effectual prayer, but even a casual reading of the form adopted by the National movement at once suggests the doubt of its true significance, and even creates a suspicion of political taint. Is there not in this Invocation the very common misconception of prayer, namely, the idea of trying to get God to do our will? Contrary to the very essence of true prayer: "*Thy* will be done on earth as in Heaven."

Throughout the whole of the petition portion following that of the adoration the dominant desire is for absolute self-control of affairs, requesting the Almighty to come in as a powerful ally—a demand upon Him that He will do what they want, rather than that *His* will and direction should be accomplished through them. There is no surrender of self or subordination of human judgment to His omniscient ruling.

We are also faced with one of the most flagrant omissions essential to efficacious prayer—that of confession; there is not a word of humility or confession of evil. We are not without guidance in the matter of national prayers. Our Scriptures contain many, one, for example, is recorded in the Book of Daniel, chapter 9, which shows the right approach which a nation may take to expect rich results.—I am, etc.,

W. R. G.

Parkfield Road, Liverpool.

## THE OCCUPATION OF THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your Greek correspondent, M. Theodore Mosconas, is evidently a follower of the Greek philosopher Democritus, who smiled at everything. He is "amused" at the complete exposure by "A Bulgarian in England" of his pretended quotation from the Bulgarian journal *Zora*, and so no doubt are many of your British readers. He now tells us that this quotation, which was given in inverted commas, thus conveying the impression that it was textual, was from the *Messager D'Athenes*, a Greek journal published in French at Athens for the edification of the foreign world. It remains to be explained why M. Mosconas suppressed all mention of the Greek journal, which was evidently before him, as he quotes from it textually in the sequel of his letter.

It is now becoming dangerous to employ the methods of controversy habitually resorted to during the war. Protection against criticism and rebuke is no longer afforded by the sheltering wing of "Dora," and however amusing it may be to be found out, such methods can hardly be pursued in future without the risk of awkward disclosures.

To those who adopt them we may say in kindness "a chiels among ye taking notes." In some café in South-Eastern Europe one may see the smart little waiter, Pericles or Epaminandas, restoring the missing change to a customer with a smile of amusement before the latter has had time to state the amount. But in the case of that customer, at least, the joke will not be repeated for some little time.—I am, etc.,

"A BRITISH READER OF 'THE NEAR EAST.'"

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is clear that M. Theodore Mosconas has either not read carefully my letter while being "amused" by its "intemperate tone" of disclosure, or now he tries to shift away the main fact which I stated in my letter—that he used fabricated "fallacious quotations" alleged by him to have been published in the Bulgarian journal *Zora* of June 3.

Now, too late, the Greek gentleman finds himself compelled to admit that he obtained those quotations from *Messager d'Athenes*, while failing to point out the number or date of the copy.

The fact, as I stated in my previous letter, is that there is no such statement as the one quoted textually by M. Mosconas to be found in *Zora* of June 3.

In these circumstances it is immaterial who is responsible for falsification, M. Mosconas, or *Messager d'Athenes;* in either case it is Greek. But for the sake of establishing the truth I propose an inquiry to be made on this question, and request that M. Mosconas should supply the copy of the newspaper he quotes, while I on my part send you the copy of *Zora* of June 3.—I am, etc.,

## MUSICAL NOTES.

When I left the Mortimer Hall, on July 23, I was prepared to say that Miss Ursula Greville, who had just given a recital there, had accompanied very efficiently Mr. F. B. Kiddle, who was at the pianoforte for her; but I reflected that Mr. Kiddle might be just as ignorant of the science of acoustics as I am, and how far the sad predominance of the pianoforte over the voice was due to the peculiar properties of the hall I did not know. Some foreseeing person had provided him with an upright instrument, but he did not appear to relish the imposition, and in the first group of songs he was so merciless as almost to extinguish the singer's voice. (The fact that even in these first awful minutes Miss Greville never forced her tone is a tribute to her sense.) It is true that he improved as the evening went on, but he did not at any time play with that refinement which so delicate an art as Miss Greville's demands. To mention but one example of this unfitness—he added to such fragile things as old French folk-songs a string of vulgar and unnecessary notes that might have been in place in the second part of a "promenade" concert, but which were a most destructive impertinence in a recital by so sincere and faithful an artist as Miss Greville.

However. though labouring under this deafening disadvantage, Miss Greville sang very charmingly. Her temperament is many-sided, though I have before in this column said where I think her strongest qualities lie. Of the new songs which she introduced, Geoffrey Gwyther's setting of de la Mare's "Song of Shadows," and Percival Garratt's "Roses" (verse by Agnes Hanrahan) were the best, though in this last song those words which the accompanist allowed me to hear seemed to be doubtful poetry. Four operatic airs were included in her programme — the "Berceuse" from Rimsky-Korsakoff's "Maid of Pskov," the "Chant Hindou," from his "Sadko," the "Hymn to the Sun," from his "Coq d'Or," and "Ah lo so," from Mozart's "Magic Flute." The first two, though beautifully sung, were scarcely a test of ability to sing opera, but from the last two it appeared probable that, if determination will do anything, it will turn Miss Greville's aspirations towards operatic singing into achievements. Her rendering of the grand "Hymn to the Sun" was intense, and the Mozart was exquisitely phrased. It really seems that the better the music of the opera, the better Miss Greville sings it. Certainly in stuff of the class of Delibes, de Lara, or Meyerbeer, which I heard her give at previous recitals, she did not succeed half as well. Where she is most artistic, however, is still in songs of dramatic import, like Bantock's "Lament of Isis," which she sings with hardly a false quality, in nursery songs, which she sings with great pluck and in great numbers, and in direct lyrics. Further to explain my opinion of Miss Greville's singing is unnecessary—it is, as my readers will remember, high—but I would like here to praise her unfashionable perseverance in the singing of British song, for she is one of those young artists through whose enthusiasm and skill the salvation of British song may ultimately come. In this connection it may be mentioned, for the sake of those fortunate readers who do not live in London, that Miss Greville, under the direction of Messrs. Elkin and Curwen, the music publishers, is undertaking next November a recital tour in the provinces, with the object of making known, and thus of making popular, songs by British composers.

---

The history and the state of English hymnody are not brilliant, and it is, I imagine, with the double object of giving information and so of improving this condition of affairs, that the Faith Press are issuing their series of Church Music Monographs. The first volume (price 4s. 6d.) of this series is called "The Chorales," written by A. W. Wilson, the organist of Manchester Cathedral, and if succeeding volumes maintain its very high level, these monographs will prove extremely valuable works. With the religious and moral significance of the chorales—which, of course, were hymns sung by the congregation—this is not the place to deal; but, as Dr. Wilson points out, they are tremendously important to the musician, because of their influence upon the musical technique of the seventeenth century. Without an understanding of the chorale the genius of J. S. Bach cannot be apprehended; and it can be said that without understanding J. S. Bach the genius of music itself cannot be apprehended. It is, therefore, very important to get the chorale in correct perspective. Hitherto historians have unfortunately allowed religious bias to interfere with their history of the chorales—Catholic and Protestant alike claiming the origin of a melody as their peculiar property. It is with a quite open mind that Dr. Wilson approaches his sources of information—which are chiefly German—and the result is a fine, impartial work, replete with sound scholarship and a nice judicious sense. An instance of this judicious sense is to be found in the chapter on "Luther and Walther," in which the debt owed by the theologian and poet to Walther is made admirably clear.

There is a certain amount of inevitable repetition of fact in this book, but it contains so much original matter—at any rate, matter that is new to English readers—that we can but be very grateful to Dr. Wilson for his research. Added to which is the fact that the book is well bound and printed—in these times a rare joy.

ANDANTE.

## PRESS ON THE NEAR EAST.

### Palestine and Mesopotamia.

The July *Adriatic Review* gives first place to an article on "Britain's new Responsibilities in the Near and Middle East," by the Hon. W. G. A. Ormsby-Gore, M.P., who urges again, as he has urged in THE NEAR EAST, that a new department should be set up to deal with Mesopotamia, Palestine, and the Near East. Colonel C. E. Yate, M.P., writes interestingly on "Unrest in India: The Question of the Khalifate," and Mr. E. A. Brayley Hodgetts contributes a paper on "The Strategic Position of Armenia." We take the following paragraphs from Mr. Ormsby-Gore's interesting article:—

It must not be thought that the creation of this Jewish national home in Palestine under the auspices and guidance of the British Administration will be easy. It is a policy which has opponents both in Palestine and outside, and it undoubtedly implies the gradual transformation of the character and atmosphere of the social and political conditions in the country, which will not be always acceptable to those who were contented with the *status quo ante bellum;* and, further, as in Palestine questions of religion crop up incessantly at every turn, the British servants who will be charged with the delicate task of control and administration will require a special degree of knowledge, sympathy and tact, greater probably than in any other country where Britain has hitherto endeavoured to undertake the task of government. A mere holding of the balance and the scales of justice between rival races and creeds is not sufficient, because the Jews and the Christians in Palestine and the leading Mahommedan families are all highly educated, civilised people, and the relation between the British administrators and the people cannot be the relation of that of a superior with a subject race or races.

Similarly in Mesopotamia, our object must be the training and guidance of the native inhabitants in self-government from the outset. We must be prepared to sacrifice, if necessary, the ideal of efficiency for the sake of getting a more important political asset at the earliest possible moment. Any attempt to push the economic development of Mesopotamia too quickly, or to introduce numbers of emigrants of non-Arab race, would merely bring a host of troubles on to our shoulders. Above all it is essential that the necessary British and Indian garrisons should be reduced to a minimum at the outset, and that steps should be taken forthwith to create a locally recruited force as the main support of the Government.

### Armenia.

The most interesting parts of Mr. Brayley Hodgett's article on Armenia are those in which he deals with the Armenian character. He says:—

Very independent in character, even somewhat truculent, conservative in their habits and customs, they were proud of their ancient traditions, of their somewhat primitive but genuine culture, of their language, their literature, their achievements and their faith. They refused to relinquish any one of their national characteristics, and resisted assimilation whether by the Turks or the Russians. To do them justice, the Turks never showed much fanaticism in this direction; they were in the main content to live on the fruits of the labour of subject races, until their slow-working and not over-imaginative brains were worked upon by other external influences to suspect the loyalty of the conquered. Their vengeful suspicions once aroused, they proceeded in their clumsy way to crush out the spirit of rebellion and to massacre the native population. It was by these Oriental methods that the Turks lost their European provinces one by one throughout the nineteenth century. But the Armenians were less subtle and less fortunate than the Greeks and the Slavs or even the Egyptian fellaheen.

The Armenians had no friends, but they had many enemies, and so they were continually massacred in the hope that they might be completely exterminated. But their vitality is such that they are able to form an independent State to-day, and would, if but intelligently supported, constitute an ideal bulwark of liberty in the Near East. Their cause has not always been pleaded in the happiest manner. Too often have they been represented as poor, mean-spirited, defenceless sheep, when they have, as a matter of fact, fought like lions. Nor have they been overscrupulous in their methods of reprisal. Not always have they gently waited to be massacred; more often they have even anticipated the attack, and in some cases, instead of being the massacred, it is they who have fallen upon and slaughtered those whom they had reason to regard as their enemies.

# NEAR EAST BOOKSHELF.

I.—"THROUGH DESERTS AND OASES OF CENTRAL ASIA." By Miss Ella Sykes, F.R.G.S., and Brig.-Gen. Sir Percy Sykes, K.C.I.E. C.B., C.M.G. (London: Macmillan and Co., Ltd. 21s.)

II—"HELLENISM." By Norman Bentwich. (Philadelphia: The Jewish Publication Society of America. $2.)

III.—"INDIA IN CONFLICT." By P. N. F. Young and Agnes Ferrers. (London: S.P.C.K. 3s. 6d. net.)

## I.—"THROUGH DESERTS AND OASES OF CENTRAL ASIA."

Many years have passed since Russia completed the conquest of the Central Asian Khanates and carried her frontier to the Pamirs, and since then the travels of Sir Aurel Stein have robbed Chinese Turkestan of much of its former mystery, but, nevertheless, these remote lands have more than succeeded in retaining their hold on the popular imagination, and books about them can always count on a cordial welcome from every good arm-chair explorer. Books of travel, we all know, appeal to two distinct classes of reader, the first composed of people who take a general interest in geography and like to hear of other people's adventures in distant lands, the second whose interest in the particular country described is more personal. Where books about Central Asia are concerned this latter class has gained many recruits in the last two years, the Russian upheaval having brought that region of the earth into unpleasant prominence as a potential storm centre, and to-day knowledge of the conditions of life holding good in Russian and Chinese Turkestan is eagerly sought after by many who were hardly aware of the existence of these countries a few years ago. The appearance of "Through Deserts and Oases of Central Asia" could not, therefore, have been more happily timed. This joint effort of Sir Percy Sykes and his gifted sister, Miss Ella Sykes, is not merely a model of everything a book of travel should be, but it gives us an enormous amount of information about a country much in our thoughts to-day, and so merits a place in our libraries as a work of reference, indispensable to all who wish to keep their knowledge of Central Asia up to date. It is very necessary that we should do so—even at the present moment our "far flung battle line" is not so very far distant from the territories Sir Percy and Miss Sykes travelled over in 1915, and a campaign on the Pamirs is one of the many unpleasant possibilities demanding the attention of the general staff in India.

The first part of "Through Deserts and Oases of Central Asia," written by Miss Ella Sykes, gives a very vivid account of a journey from Bergen to Kashgar in 1915, in which we get some interesting glimpses of Russia in war time under the old regime, introductory to her account of her life in Kashgar and journeys in the Pamirs and Turkestan in company with her brother, Sir Percy Sykes, who contributes the second part of the book. This, composed of more solid fare than the first, is none the less palatable; the historical chapters being of quite extraordinary interest—this was, of course, to be expected from the author of "A History of Persia," but it is not every historian who is a master of the art of condensation, and the compression of the events of centuries into paragraphs only too often has no better result than the creation of confusion in the reader's mind. In this case, the author achieves his difficult task with complete success, and his happy knack of compelling the reader's attention to the historical landmarks his practised eye has been able to discern through the tumult of the ages, enables one to see the events of this chapter in the history of mankind in their right proportion. Dean Inge has lately questioned the reality of human progress, and one feels he would secure many converts to his views if the history of the race in Chinese Turkestan could be taken as typical, marked as it is by bursts of furious energy, followed by successful achievement, quiescence, torpor, and decline, until another movement brings down the tottering structure in ruin, and the chain of events is once more repeated. If this is progress, it is at best but progress within a vicious circle, bearing no resemblance to the slow ripening of the fruits of experience which marks the advance of the Western world. When one reflects that it was in these Central Asia oases that the Mohammedan movement eastward and the Chinese movement westwards each reached the limit of its force, and that it is only a short distance away that "three Empires meet," one has a feeling that the *true* hub of the universe cannot be very far off.

How many times Kashgar has been taken and retaken in the age-long conflict between the Mohammedans and the Chinese it is almost impossible to remember even with this book before us, but there is something very impressive in the unshaken purpose of Celestial policy which, disregarding the interruption of centuries, pursues its course with a patient persistence for which no parallel can be found in Western history. Time after time the onrush of the Moslem hordes sent the Chinese flying out of the country, but they always came back, and one feels that now they are likely to remain there for all time. China in 1877 was regarded in Europe as far advanced in her decline, and if anyone at the time had suggested that she still possessed considerable military power, he would have been scoffed at all round. Yet it was in 1877 that a Chinese army, after traversing more than half of Asia, marching thousands of miles over some of the most difficult country in the world, achieved the final conquest of the Kashgar oasis, and, smashing the mushroom empire of Yakub Beg, consolidated the Celestial power in Eastern Turkestan—no mean military achievement, and suggesting more than ordinary organising power on the part of some Chinese staff genius.

Miss Ella Sykes gives us a very vivid picture of the life of a great Eastern city untouched by Western civilisation in her Kashgar chapters, which awake in the reader a hundred memories of the Arabian Nights, Hajji Baba, Lalla Rookh, and all the books one can think of which deal with the unspoilt East, for this ancient centre of human life in Central Asia has so far escaped the process of vulgarisation which in the jargon of our times is called "opening up." It is, of course, horribly insanitary, and the manners and customs of the inhabitants leave much to be desired as judged by our Western standards. Neither could the most enthusiastic pro-Mongol maintain that the level of efficiency reached by the Chinese local administration is other than of the lowest, but this ancient system works, and its working engenders little friction between the rulers and the ruled. It is something in these days for a Government to be able to point to an area of the earth's surface, and a subject province at that, free from anything remotely suggestive of "unrest," and it sets one thinking hard when that Government happens to be Chinese. One can only explain the phenomenon by the enormous accumulation of administrative experience China can command in the field of Imperial Government. She must have forgotten more than we have ever learnt of this business of the management of subject races long before Mr. Lloyd George's ancestors were subject to the Romans.

Not the least interesting chapters in this most fascinating book are those in which Miss Ella Sykes tells us of her journey to the Pamirs, whither she accompanied her brother in search of the Ovis Poli. In spite of her enthusiastic descriptions of some of the finest scenery in the world and her lively accounts of her life in camp and on the march, one feels that this journey put a very severe test on the physical endurance of the travellers; but when one reads the final chapter, devoted by the brother of this intrepid lady to the great sheep of Marco Polo, one feels that for so great a trophy of the chase too high a price could never be paid. Sir Percy Sykes evidently thinks so, judging from his concluding rhapsody, and most of us will agree with him.

E. H. B.

## II.—JUDAISM AND HELLENISM.

The inditer of history has a hard task in these days of searching criticism; but his troubles are not confined to the marshalling of facts. He must select a title which will arrest attention and give some indication of his theme. Mr. Bentwich has not been happy in his choice. He set out to describe the interaction of the rigid Judaism of Moses and the culture of Greece in decadence; whereas "Hellenism" connotes the brilliant civilisation evolved by the City States of Greece during the fifth century B.C., in which the Judaism of that era had neither part nor lot. It took shape a thousand years earlier under the guiding hand of a man of genius who welded a group of Semitic tribes into an organism which has resisted the most powerful disintegrating influences for three milleniums. Moses inculcated belief in a personal God, who had chosen the Jews as his instruments; the study of his laws, and the observance of a complicated ritual. A creed such as this gives immense aggressive power to those who possess it, but raises up against them a host of enemies. In 721 B.C. ten of the twelve Hebrew tribes established in Palestine were carried into captivity by the King of Assyria, and never returned to their fatherland. One hundred and thirty-four years later Nebuchadnezzar subjugated the remnant, and transported survivors to Babylon; but their descendants were repatriated by Cyrus in 536 B.C. The process of restoring Jewry to the ancient splendour was accomplished by Ezra during the century which witnessed the rise and fall of the Athenian Republic. Building on foundations laid by Moses, that man of genius gave his compatriots a system of polity which has endured to the present day.

Digitized by Google

During the Great Dispersion colonies of Jews took root throughout the East. Their rallying-point was the synagogue, wherein elders met for the study of God's Law, and each grouping kept in close touch with a central governing body termed the "Sanhedrim" at Jerusalem. Their isolation came to an end when Alexander linked Europe with Asia by founding the city which bears his name. It became the centre of a new civilisation, which profoundly modified the growth of Judaism without in anyway affecting its basic doctrines. Of its essential features Mr. Bentwich writes:—

Had the Jews met Hellenism on its own soil and in its prime a true harmony between the two might possibly have resulted and produced a civilisation more splendid and more complete than the world has yet known. But Providence did not work in that way, and, in fact, the Jews encountered a Hellenism debased by transplantation to a strange soil. The Greek culture with which they came in contact in Palestine was contaminated by Hellenized Syrians with their crude materialism and mysticism. Judaism, on the other hand, was in the stage of vigorous development and strongly entrenched in its national life, which gave it a mould of resistance to foreign ideas.

The persistence of this "national life" is a misfortune and a danger for the world. It renders Jews a race apart, firmly knit together by ideals and interests which do not always coincide with those of the community which shelters them. It cannot be said that Mr. Bentwich is fully alive to the evils inherent in separatism, but the effect of intensive culture in early youth can never be eradicated. No orthodox Jew can be trusted to follow the fortunes of his race with the detachment of a scientific historian. We have all seen the consequences of a presumptuous belief that the community to which one belongs has a Divine Mission to govern the world. History may well repeat itself on a vaster scale, unless enlightened Jews combine to demolish the watertight compartment in which their ancestors have lived for three millenniums. F. H. S.

## III.—INDIA IN CONFLICT.

This book describes very briefly the conditions of missionary work in the new India, which is rising so rapidly from the ruins of the old; it should prove most valuable for the recruits for whom it is, we gather, primarily intended; but it deserves a wider audience, and may be read with advantage by everyone who is interested in Indian problems. The authors have divided the ground between them, Miss Ferrers dealing with the women, and Mr. Young with the men. Miss Ferrers's contribution is about the best thing we have read on the subject; she knows and feels the horror and squalor of woman's life in the North, but she has not failed to realise its peculiar charm, and she has set out the conditions of her work with great skill. Mr. Young is on more familiar ground in dealing with the education of Indian youths, particularly of the middle classes, and the most striking part of his share of the volume is the discussion of the relation between Christianity and the national movement, a topic which has come so rapidly into prominence during the last few years. All that he says on education and organisation deserves a careful hearing; but he is less successful in his generalisations on economic topics, and if he were to study the available data he would probably be shocked at the hardihood of his assertion that in India poverty is almost certainly increasing. Such blemishes are, however, incidental, and, taken as a whole, the book is one to be read and pondered.

## TOPICS IN PARLIAMENT

*The subjoined headings are those given in the official report:*—

COTTON GROWING (SUDAN). TURKEY (GREEK OPERATIONS). SYRIA: French Ultimatum. MESOPOTAMIA (REBELLION, RUMEITHA). ALBANIA. TURKEY. SYRIA. (July 19.)

PERSIA (POLITICAL SITUATION). MESOPOTAMIA (BRITISH REINFORCEMENTS). CEYLON (CONSTITUTIONAL REFORM). EGYPT (MILNER REPORT). SYRIA (REPATRIATED PRISONERS OF WAR). INDIA: Cotton Mills (Labour). ARMENIAN REFUGEES (CYPRUS). (July 20.)

INDIA: Kut Prisoners (Regimental Allowances).—Immigration (British Subjects).—Afghanistan.—H.R.H. The Prince of Wales (Visit).—Emir Ibn Saud (Subsidy).—Railways (Committee of Inquiry).—Elections (Wage Earners).—New Councils (Convicted Persons).—Political Agitators (Removal of Restrictions). MESOPOTAMIA: Native Chiefs (Subsidies).—Civil Administration (Estimates).—Military Situation. EGYPT (MILNER COMMISSION). INDIA: Amritsar Disturbances (General Dyer).—Railway Administration (Committee of Inquiry).—15th Lancers.—38th Dogras (Shelum).—Non-co-operation.—Civil Service (Pensions).—British Women (Protection). (July 21.)

PEACE TREATIES: Roumanian Oilfields.—Armenia (Frontier Delimitations). MESOPOTAMIA: Oil.—Arab Attacks.—British Occupation.—Military Situation. SYRIA. PASSPORTS (PALESTINE). PERSIA (BRITISH MILITARY MISSION). ARMENIA: BRITISH ARMY: Palestine (Recruiting). INDIA: Government Officers (Pensions).—Maharaja of Mysore (War Contribution).—Public Works Department (Pay). MONTENEGRO. (July 22.)

# PERSONAL AND GENERAL.

## CALENDAR OF THE WEEK.

| 2 | 20 | Monday ..... | 17 | 18 |
| 3 | 21 | Tuesday ..... | 18 | 19 |
| 4 | 22 | Wednesday ..... | 19 | 20 |

Princess Cantacuzene has left London for Roumania.

M. F. Nano, Secretary to the Roumanian Legation, left London on July 20 for Switzerland, on leave.

Judge Cator and Mrs. Cator arrived in England from Alexandria on July 13, on leave until September.

Colonel and Mrs. Cochrane have returned from Egypt and Roumania to their house, 39, Egerton Terrace, S.W.3.

At the annual meeting of the British Academy on July 22, Mr. D. G. Hogarth was elected a Corresponding Fellow.

The Aga Khan is staying at the Hotel de Normandie, Deauville, where the summer season officially opened last week.

Dr. Trumbitch, the Minister for Foreign Affairs in Yugoslavia, and head of the Peace Mission, arrived in London from Paris on July 24.

The King has granted to Lady Maude, widow of Major-General Sir Frederick Stanley Maude (who commanded the British Forces in Mesopotamia) the use of the suite of apartments in Hampton Court Palace formerly occupied by the late Viscountess Wolseley.

The King has granted unrestricted permission to Miss Edith Mackenzie to wear the Insignia of the Fifth Class of the Order of St. Sava, conferred upon her by the King of the Serbs, Croats, and Slovenes in recognition of her services to the Serbian sick and wounded under the auspices of the Wounded Allies' Relief Committee.

We have received from the Lord Mayor of London an appeal for the Imperial War Relief Fund. Among the countries in which this Fund is operating are the Ukraine, Roumania, Serbia, Montenegro, Albania, Armenia, and Asia Minor. For this very deserving purpose cheques should be addressed to the Hon. Cecil Baring, Hon. Treasurer, Imperial War Relief Fund, City of London Committee, Fishmongers' Hall, London Bridge, E.C.4.

### THE EGYPTIAN ARMY DINNER.

The Egyptian Army Dinner took place at Claridge's Hotel on July 20. There were present: Lieutenant-General Sir J. J. Asser, K.C.M.G., K.C.V.O., C.B., Lieutenant-Colonel Lord J. H. G. M. Athlumney, Lieutenant-Colonel C. A. Barker, O.B.E., Major F. A. T. Bayly, D.S.O., Captain J. C. Brand, D.S.O., M.C., Lieutenant-Colonel E. N. Broadbent, C.B., C.M.G., D.S.O., Captain F. Burges, Mr. C. H. Buxton, Lieutenant-Colonel W. Byam, O.B.E., Lieutenant-Colonel F. F. Carroll, D.S.O., M.C., Major Clive Cassidy, Captain P. K. Campbell, Lieutenant-Colonel D. P. ## APPOINTMENTS, ETC.

The Persian Government has appointed Muzaffar-al-Mamalek Ambassador in Moscow.

Ghaffar Khan Emad-ol-Molk, Persian Chargé d'Affaires in London, has been raised to the rank of Minister Resident in the Persian Diplomatic Service.

M. Paul Karovitch has been appointed First Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes. M. Karovitch was formerly a member of the Yugoslav Peace Delegation.

## OBITUARY.

Sir Henry Clark King, solicitor and notary public, and Commissioner of the High Court, Madras, has died at Hove, in his sixty-fourth year. He went to India in 1880 and became senior partner in the firm of Messrs. King and Josselyn, Madras. He was one of the secretaries appointed by the Madras Presidency in connection with the reception of the King and Queen, who, as Prince and Princess of Wales, visited Madras in 1906.

## NEWS IN BRIEF.

On July 22 the Ottoman Peace Delegation embarked at Constantinople on board a French destroyer for Constanza en route for Paris.

Addressing the representatives of the Palestinian Press, Sir Herbert Samuel promised that the censorship in Palestine should be abolished.

The new stamps which have been issued in Palestine bear the inscription "Erez Israel" (Land of Israel) in Hebrew, Arabic, and English.

Mr. Sastri, says a Simla message, has notified his intention of raising a debate on the Hunter Report at the forthcoming meeting of the Imperial Legislative Council.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

TO Lady of good social standing visiting the East CHAPERON offers Services and berth, sailing September; interview London.—Write Box 170, The NEAR EAST, 1, Devonshire Sq, E.C.2.

DEMOBILISED OFFICER, 32, present earning £600, would like change where his 12 years' business experience in Near East would be of use. Reads writes French, Greek, Turkish. Thoroughly conversant with Near Eastern markets. Willing go abroad or manage Near Eastern Department in U.K. Write Box 171, NEAR EAST, 1, Devonshire Square, E.C.1.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added),"**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

## INDIA AND THE TURKISH TREATY.

In former years the Indian Budget used always to provide an opportunity for a general discussion of the state of India, when the Secretary of State, or, if he happened to be a member of the House of Lords, the Parliamentary Under-Secretary laid before the House a comprehensive statement which travelled over all the most important measures of Indian Administration and policy. This year, by a strange irony, when for the first time the new Government of India Act made special provision for such a discussion, there has been none. Mr. Montagu is as secretive as most of his colleagues in the present Government, and displays the same reluctance to giving straightforward answers to Parliamentary questions, and he succeeded by his passionate opening in concentrating the attention of the House, during the only Indian debate of the Session, on the one question of General Dyer's action at Amritsar to the exclusion of all other factors in the present condition of India. We do not in the least underrate the gravity of that question, or the importance of securing the approval of Parliament for the verdict which the Imperial Government had felt constrained to pass on that gallant officer's deplorable error of judgment. But though it may have suited Mr. Montagu's convenience to side-track all other issues, we cannot but regret his success in evading the discharge of an equally important part of his duty, namely, to place Parliament in possession of the actual situation in India and of the policy by which it is proposed to deal with the menacing conditions arising out of it.

All the news that reaches this country, in spite of the Secretary of State's systematic reticence, goes unfortunately to show that the rulers of India are again confronted with an agitation as bitter and as widespread as that which ultimately led last year to such tragic results in the Punjab. It is no longer directed merely to matters of Indian internal policy, such as the Rowlatt Acts, for dealing with the more violent aspects of sedition, but to far more complex issues affecting the whole foreign policy of the Empire. The Hindu Extremists have unfortunately at last been able to capture not only the advanced Mohammedan politicians, who were already inclined to co-operate with them on the common platform of Indian Home Rule, but also a large section of the Mohammedan masses, whose confidence in British rule had been hitherto proof against their blandishments. Not for the first time have Hindu seditionists sought to wean the Mohammedans from their habitual loyalty to the British *raj*. It was chiefly Hindu brains that engineered the Indian Mutiny of 1857, though on the surface it wore the aspect of a mainly military and Mohammedan revolt. Again, in 1905, when Mr. Tilak embarked on his second great campaign of anti-British propaganda in the Deccan, he angled, quite unsuccessfully, for Mohammedan support by distorting the purpose of the Anglo-French Agreement with regard to Egypt and Morocco into a sinister bargain between the two Western Powers for the destruction of Islam. The downfall of Turkey has afforded the Hindu Extremists a fresh opportunity which the weakness of the Government of India and perhaps also the curious sympathy of the Secretary of State and of many of his co-religionists for the Turks have allowed them to exploit with great audacity and impunity. Abdul Hamid's Pan-Islamic propaganda bore at first but scanty fruits in India, and one of the greatest of Indian Mohammedan teachers of our time, Sir Seyyid Hussein of Aligarh, openly traversed the Sultan's claim to speak with the spiritual authority of a Khalif. But the seed did not fall entirely on barren soil, and though during the great war the loyalty of Indian Mohammedans never faltered any more than the gallantry of the Indian Mohammedan troops when they were fighting against the Turks, the extremists have worked up during the last eighteen months a very strong feeling against the exaction from Turkey of the penalties which her unprovoked entry into the war and the incorrigible perversity of her rulers have deservedly brought upon her. They appealed in the first instance to the sentiment of religious reverence which the Pan-Islamic propaganda had fostered amongst Indian Mohammedans for the Sultan of Turkey as the Khalif and spiritual head of at least the Sunni Mohammedans, and upon it they proceeded to graft the new and dangerous doctrine that any surrender of his temporal authority constitutes a sacrilegious attack upon his spiritual authority.

A protest addressed to the Viceroy by the Mohammedan leaders of the Khalifate agitation, backed up by a letter from Mr. Ghandi, the Hindu leader who devised the fatal Satyagraha movement last year, shows only too plainly the dangerous lengths to which this agitation has been carried. The signatories state in so many words that "Islam enjoins upon every Mohammedan to consider those who wantonly injure the states of the Khalif to be enemies of Islam and to resist them with arms if necessary." They regard apparently any curtailment of the Sultan's territorial sovereignty as imposing this duty upon all Indian Mohammedans, and though they are good enough to assure the Viceroy that "even if they had the power" they "must not resort to arms so long as any other means are available," they feel that "the least a Mohammedan can do is not to assist those who are guilty of trying to reduce the Khalifate practically to nothingness." So they proceed to deliver to the King-Emperor's representative a formal ultimatum to the effect that, if, within one month from July 1, the British Government fail to revise the Turkish peace terms in accordance with their demands, the Mohammedans of India will be obliged to withdraw co-operation from the Government and to ask their Hindu brethren to do likewise. Mr Ghandi, who roundly declares that Hindus and Mohammedans alike have lost faith in British justice and honour, admits that "non-co-operation practised by the mass of the people must be attended by grave risks," but maintains that the risks must be taken in a crisis such as has overtaken the Mohammedans. The risks are, of course, the same as those which attended his campaign of passive resistance last year and were promptly followed by the terrible outbreaks of violence and crime that in their turn provoked grievous measures of repression. Since this ultimatum was delivered, it appears that one of the forms which, in Mr. Ghandi's opinion, "non-co-operation" will have to assume is a boycott of the Prince of Wales' visit to India next winter. No more insolent demonstration of disloyalty to the British Crown itself, which the Extremists have hitherto always professed to dissociate from their attacks on the Anglo-Indian bureaucracy, can well be imagined, and we are glad to note that Mr. Montagu has been moved by it to repudiate the friendship and admiration for Mr. Ghandi in which he gloried not so long ago. But something more than that repudiation is needed, and if, as we have now, every reason to hope, the Sultan of Turkey ratifies with his signature the Treaty of Peace drafted by the Allies, and thereby finally cuts the ground from beneath the feet of Mohammedan as well as Hindu mischief-mongers, we trust that the Secretary of State will allow the Government of India to deal drastically with the promoters of a sinister agitation for which the last pretext will then have gone. We should be reluctant to believe with some of Mr. Montagu's critics that his chief interest in the impending visit of the Prince of Wales to India arises from the hope that it will create a more tranquil atmosphere for the inauguration of the new Reforms scheme, but the success of the visit itself, and perhaps even its feasibility, must depend upon a halt being definitely called to defiant threats of open hostility.

# SOME PICTURES OF THE E.E.F.

**By Martin S. Briggs.**

*(Photographs by the Author)*

## I.—EL-ARISH.

The photograph shows a scene very familiar to all those who served with the E.E.F.—a convoy of camels carrying "fanatis" or "fantasses" filled with water. The Camel Transport Corps was a very popular and efficient arm of the Service, and at one time had over 35,000 camels. The native drivers in their blue gallabiyehs marched beside their animals, and displayed great pluck on many occasions. Camel transport was the means of enabling the lightly-equipped "Desert Column" to perform its famous *trek* from Ismailia and Kantara on the Suez Canal to Deir-el-Belah in Palestine, during the winter of 1916-17. In the subsequent operations on the Gaza front, and, indeed, up to the capture of Jerusalem at Christmas, 1917, much of the success of the military operations depended on camels and their Egyptian drivers, though when the front moved into the wild mountain-country north of Jerusalem they were not so useful, and motor transport had also improved. So also in the campaign against the Senussi, and in the outposts maintained along the Libyan coast and in the Western Oases during 1916-18, large companies of the Camel Transport Corps were employed. Apart from their function of carrying equipment, rations, and even munitions abreast of advancing troops in the march across Sinai, the Army depended on them for months for its daily rations and water supply. The latter was brought from wells in little groves of palm trees, as at Rómani and El-Arish, or from springs, as in the Wadi at Gaza, and was carried in fantasses made of galvanised iron or copper, each of a capacity of 10 to 15 gallons, two of these being a camel's proper burden. The water was treated with chloride of lime by the sanitary sections before being used by the troops.

**At El Arish.**

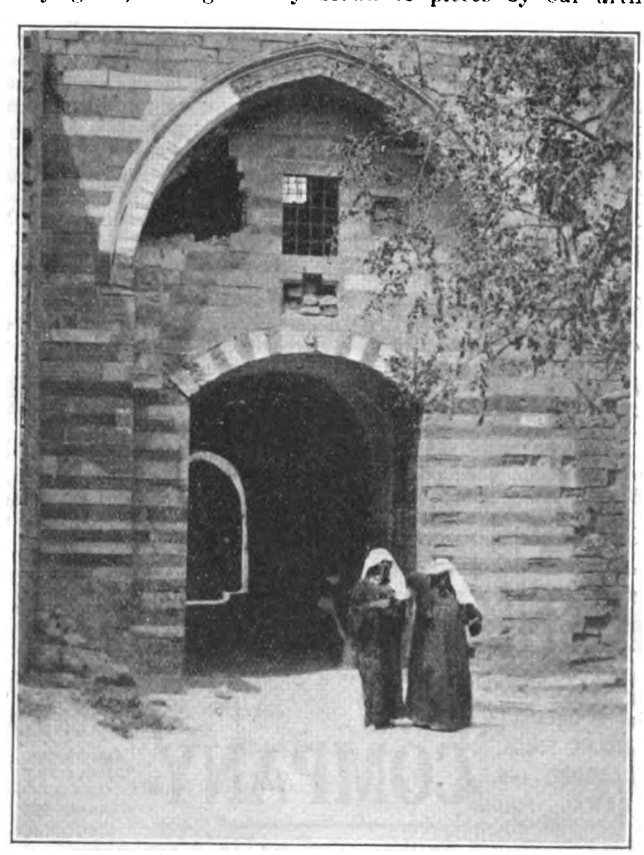
At El-Arish at Christmas, 1916, the camel convoys passed slowly along the beach every day from the great groups of wells at the mouth of the Wadi (the "River of Egypt" of the Bible), or from the other wells further west, or the wells in the "hods" among the sand dunes, to the camps dotted all round the town. El-Arish was perhaps the most interesting place that we passed through on our long journey, for though it consisted of no more than a small town with huge palm groves by the seashore, it was the only place in our long march from Kantara to Khan Yunus, a distance of 130 miles or so, where even such a limited example of civilisation met our eyes. Everywhere else was empty desert, without a sign of human life, for even the roving Bedouin had disappeared with their black tents and their goats as the great host advanced. El-Arish has a long history, going back to the most distant past, and was moreover the scene of a battle between Napoleon and the Turks in his famous expedition into Syria.* And to those of us who knew it at Christmas, 1916, and in the following months, when we set out for Gaza, it will remain in memory as the pleasantest halt in our crossing of Sinai.

*For a further description of El-Arish, its historical associations, and the "Oldest Road in the World," with maps and illustrations, see the author's "Through Egypt in War Time." (T. Fisher Unwin, 1919.)

## II.—GAZA.

To tens of thousands of workaday Englishmen the name of this old Philistine stronghold will always have a very real and sinister significance. The huge cemetery, with its nearly three thousand graves laid out in ordered squares, beyond the railway station, testifies to the part that it played in the story of the "E.E.F." For six months an army was entrenched on the bare hills surrounding the city, and its fall meant far more to the rank and file than did the entry into Jerusalem shortly afterwards, or the even more dramatic campaign culminating in the final defeat of the Turks.

We saw it first at the end of March, 1917, a line of red-tiled roofs surrounded by orchards and cactus-hedges, with the prominent minaret of the Great Mosque rising high above the city. From the great camps round Deir el-Belah it was always visible, and our doings must have been equally open to observation by the Turks. From Belah to the Wadi in those days there stretched green fields of barley, with richly-scented wild flowers and humming bees and butterflies. A few weeks later all this fair green country, so refreshing to eyes tired by a year of the Sinai desert, was trampled by horses and scorched by the Eastern sun till it became a dusty waste. The beautiul and storied hill of Ali el Muntar, whence Samson bore the city gates, was gradually blown to pieces by our artil-



**Gaza: The Bab es-Sheria.**

Digitized by Google

lery, till at last the sheikh's tomb that crowned its summit was destroyed, and even the Austrian gunner officers who directed their fire from a dug-out near this spot must have found life very trying there. Meanwhile Gaza itself, cleared of civilians, was being bombarded from sea, land and air, and when at last it fell in the autumn of 1917 it resembled—more, perhaps, than any city outside Western Europe—the battered old towns of Flanders and Champagne. The main street was a heap of ruins, the Great Mosque itself—used as an ammunition dump by the Turks—though still retaining evidences of its splendour in

**A SARACENIC ARCH AT GAZA.**

**This beautiful arch, characteristic of the architecture of Gaza, is one of the few buildings that have survived the 8 months' siege and bombardment of the city in 1917.**

Crusading days, severely damaged. Yet even in Gaza, which before the war was one of the largest towns in Palestine, one may still find relics of Arab architecture, such as the examples illustrated here, in good preservation. There is much work to be done by archæologists in this neighbourhood, which has been of military importance since the very dawn of history. The same long slope from the Wadi up to Gaza, that cost the lives of so many British soldiers, has seen many fights in the past; and here great generals—from Napoleon to Saladin, from Saladin to Alexander, from Alexander to the Pharaohs—have found the gates of "The Oldest Road in the World."

A wireless service has been instituted between Prague and Belgrade, and an air postal service between Prague and Paris.

A deputation of East African merchants has arrived at Simla to make representations to the Viceroy on Indian questions.

Lord Braye's small collection of Egyptian mummies, coffins, and Greek vases formed part of Messrs. Sotheby's sale on July 22. The mummy of a man enclosed in a wooden coffin with polychrome decorations on a yellow ground, XXII. Dynasty, brought £20; and the mummy of a priestess, also enclosed in a wooden coffin with polychrome decoration on a yellow ground, £19—both were purchased by Mr. Andrade. A Babylonian cylindrical seal, hæmatite, very finely cut with figures of a man and his wife in the presence of a god, realised £35 (Bois).

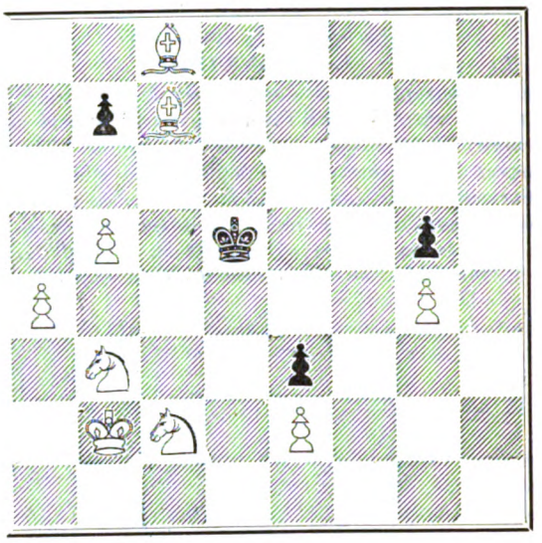
## CHESS.

PROBLEM 22.

Black.



White.

White to mate in two moves.

Solution to Problem No. 22.—1. P—B4. If 1. Q x P(ch.); 2. P x Q mate. If 1. Q—Kt5(ch.); 2. P x Q mate. If 1. K—Q5; 2 Q—B4 mate.

The City of London Chess Club's Murton Cup Handicap has been won by Mr. H. Jacobs.

The list of entries for the British Championship at Edinburgh is now available. Sir G. A. Thomas is making his first appearance in this event, and another most welcome entry is that of Mr. H. E. Atkins, who won the title seven times in succession, but who has now for several years been an absentee from this competition. I regard the championship this time as a duel between these two players. Mr. Atkins labours under the disadvantage of having been out of serious chess since he last held the title, but as he has shown so often before, he needs little practice to regain his form, and I shall expect him to credit Cambridge with an eighth victory.

CARO-KANN.

On July 20 the Orient Express service from Paris to Constantinople and Salonika, via Bucharest and Nish, was suspended owing to the beginning of Greek operations in Thrace.

Bombs and rifles were found last week by the police in the Gujranwala district, one of the most affected areas during the Amritsar disturbances. Suspicion is directed towards certain frontier Hindu tribesmen.

It is reported by the Georgian representative at Baku that the British Vice-Consul, Hewelcke, is about to be tried on a charge of speculating on the Exchange, and that the Bolshevists at Baku, led by Pankratov, are pressing for his execution. The Georgian representative has undertaken to do all he can to ensure his safety.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The memorandum embodying the results of the negotiations in regard to oil supplies in Mesopotamia and elsewhere, entered into between France and Great Britain shortly after the Armistice, will be found elsewhere in these columns. It is, all things considered, a satisfactory document, and, apart from its immediate purpose, will afford yet one more proof to the world—and to the Near East in particular—of the community of Anglo-French interests. Among its many other results, the war made evident beyond the possibility of doubt that the oil age had dawned, and that adequate oil supplies would henceforth be a matter of vital importance. Hence, the initiation of the negotiations between the two countries resulting in the present agreement, brought about by Sir John Cadman, director-in-charge of His Majesty's Petroleum Department, and M. Philippe Berthelot, Director of Political and Commercial Affairs at the French Foreign Office.

***

As to the substance of the document, the agreement deals with the interests of the two countries in Roumania, Asia Minor, the territories of the old Russian Empire, Galicia, the French Colonies, and the British Crown Colonies. With regard to Roumania, provision is made for the co-operation of their respective nationals and for equal participation in any concessions that may be obtained as the result of negotiations with the Roumanian Government. The position in Russia can interest no one at the present time, though if and when reason returns to that unfortunate country, the co-operation thus arranged for should greatly facilitate endeavours to restore that country's oil industry, in which both signatories are to no small extent interested. Of much greater immediate importance is the arrangement for reciprocity as regards the development of oilfields in the French Colonies and in the British Crown Colonies. This is from some points of view the most pregnant point of the understanding. France undertakes to permit the participation of British groups in the development of oilfields in North Africa and elsewhere, and similar facilities will be given to French subjects in the Crown Colonies.

***

But the most important part of the agreement is that which concerns Mesopotamia. Provision is therein made for the participation by "the Native Government or other native interest" to the extent of 20 per cent. of the capital of a private company formed to develop the oilfields, the shares of Great Britain and France being respectively 62 and 18 per cent. It is further provided that the said petroleum company shall be under permanent British control, and special clauses deal with the construction of pipelines for the conveyance of the oil to a port or ports in the Eastern Mediterranean. An important feature is the arrangement that no duties, wayleaves, or dues may be levied on the oil in transit or on the material necessary for the construction of the pipe-lines, railways, refineries, or other equipment required for its transport, which, of course, should mean a considerable reduction in its cost. The workable nature of this arrangement must naturally depend on the course of events in Syria and Mesopotamia.

***

The report on Roumania by Mr. Adams, Commercial Secretary to H.M. Legation, Bucharest, to which I briefly referred last week, and extracts from which will be found in another column, draws special attention to the great openings for British trade enterprise in that market. Before the war the Central Powers were first and the rest nowhere as regards Roumania's import trade, one principal reason for this being the geographical position of Germany and Austria, which placed them in a position of unique advantage. The conditions brought about by the war have altered the situation very vitally, and, as Mr. Adams points out, the greater facility of access has now passed to the British exporter, for Germany not only lacks means of transport, but must henceforward export her goods to Roumania through a ring of Slav countries. In other words, British traders will no longer labour under a handicap in this market, and it only remains for them to take adequate advantage of their opportunity to build up an enduring trade.

As regards the present position in Roumania, I understand that there is no reason to fear that the crops have suffered from the recent rains, but that, on the contrary, they have probably had a very beneficial effect. The country is still suffering, however, from the lack of transport, and until this is remedied it is useless to look for any great development of the export trade. On the whole, while the outlook is not unsatisfactory, it would appear that progress in reconstruction has not been as rapid as it might have been. Still, the signs are that matters are undoubtedly moving, and once the transport difficulty is solved progress will doubtless be greatly accelerated.

***

A few weeks ago I had occasion to warn my readers against what appeared to be a recrudescence of the "Black Band" type of fraud in Smyrna and Constantinople. In the current issue of the *Journal* of the British Chamber of Commerce of Turkey and the Balkan States, which has just reached me, it is stated that at least one important coup has been brought off in Constantinople from a P.O. box address. The supposed consignment was sold to a firm, and the documents were passed through a bank with draft attached. It was only some time after the payment of the draft that the fact was established that no such goods had been shipped.

***

A paragraph in the same journal brings me back to a subject which I have dealt with time and again—the irregularities in the postal service to the Near East. The note in question gives the text of a letter from a correspondent of the Chamber, quoting a letter from a newspaper firm to the effect that complaints have been received from the Near East respecting the late arrivals of English newspapers served by the British Post Office, and that arrangements have now been made "through our Paris house to have same posted in Paris and despatched by the French postal officials." The correspondent caustically concludes that "things must have reached a scandalous condition when a well-known British company has to make arrangements with the French postal authorities for the despatch of its Constantinople mail." With which, I imagine, there will be general agreement.

***

From the particulars given by our Tiflis correspondent this week, it is evident that British, American, and Italian exporters (especially the Italians) have for the most part been sending to Georgia precisely the class of goods which that region could do without at the present time. Like every other similarly situated region, Georgia requires all kinds of manufactured articles of the first necessity. Toilet soaps, buttons, sweets, perfumes, and face powders (an extraordinary amount of the last two of which have been sent from Italy), however useful, can hardly be held to compensate for the absence of other commodities of which the country is in the greatest need.

## EGYPT.

CAIRO, July 13.

**The Present Position.**

Of the cotton situation there is nothing new to be reported. The latest advices from England are of a very conservative character, and the market has been summarised in the cables from Home as a "professional one without any decided tendency." Actual crop news from America discounts the early presage of disaster and shortage, and on balance the latest information can be compared with the harvest reports: of a hopeful nature for an average crop. This does away with the fear of a shortage, but naturally militates against any early rising movement in cotton prices. The effect of this tendency on the market in Egypt merely shows how the era of wonderful prosperity has blunted the commercial section's sense of proportion. During this time last year cotton was bringing 50 talaris per kantar, and hope and joy were unrestrained. To-day it is bringing 80, but because it is not bringing twice that amount, as it was a few months ago, market operators are wrapped in apparently impenetrable gloom. The cotton, cotton seed, and share markets are stagnant, and any little dealing is purely professional. Public interest is depressed; but, momentarily, this is for the best. Later in the year, when the new crop starts to come in, there will be considerably increased general activity. Most of the falls recorded have been due solely to technical conditions, and experienced hands are still buying quietly, knowing that when the land again starts to obtain its wealth the Bourse will be inflated.

As always, the cotton market is the barometer which records the condition of general business. At the moment it is dull; but as it recuperates other lines will join in the forward movement. Meanwhile there is a slight reduction in prices.

I have already mentioned that there is a tremendous glut in the Bonded Stores and on the quays at Alexandria. I understand that the Government is now considering the question of offering all undelivered stores upon the quays and in the Bonded Stores at auction. This must further depress prices, but most of those who will be likely to suffer on this transaction have already covered their losses, and most of the owners would be glad to have the ready money in place of their goods, notwithstanding that they may have to make a small sacrifice.

## ROUMANIA.

BUCHAREST, July 15.

**Trade and the Exchange.**

Business is still in a state of stagnation. Importers have ceased to buy goods abroad, and the public have ceased to buy. The latter are probably hoping that as the leu goes up in value prices will fall, while the former are doubtless calculating that by reducing the demand for foreign currency they will help to raise the value of the leu and enable themselves to pay their foreign bills at a more reasonable rate. The exchange rate to-day is 130.5 to the £, as against 280-300 two months ago. There is still no sign, however, of prices falling to any great extent, and there seems little chance of their doing so until most of the goods purchased at the higher rate have been sold. The reports of the harvest prospects from most parts of the country are good, so that a fair surplus for export may be hoped for, and this again will have a favourable influence on the value of the currency.

**Lack of Transport.**

Many of the petrol companies are beginning to increase their boring operations, but the refineries are still badly handicapped from lack of sulphuric acid. This is mainly due to the shortage of means of transport, which makes it impossible to have the necessary quantities of pyrites, etc., delivered to them. This brings us back to the most serious impediment to Roumania's industrial progress at the present time—lack of transport; but there is hope that transport conditions will shortly be improved, as the first instalment of the locomotives ordered in America—fifty in number—are to be delivered before the end of August. Unfortunately, it can hardly be hoped, however, that this improvement will greatly affect the comfort of travellers, as there is still no rumour of any new or repaired carriages coming into use, and those now attached to local trains are in a most dilapidated condition. On some lines the first-class carriages in the ordinary passenger trains have neither window-panes nor in many cases a complete set of seats, and they are usually so crowded that it is the fate of the less "pushing" to stand in the corridor throughout the journey. The express trains are rather better equipped, but even more crowded.

**Foreign Enterprise Not Wanted.**

Foreign enterprise is not receiving any encouragement, and no mineral concessions of any kind are being granted to purely foreign companies, all such concessions having been placed by a recent decree-law under the direct control of the Ministry for Industry and Commerce.

## BULGARIA.

June 25.

**High Prices.**

The director of the Prevoyance Social has issued a report on prices of articles of the first necessity during the last twenty years. It shows that while in 1902 100 kgs. of wheat cost 12 levas, this had increased to 25 levas in 1912, and to 300 levas at the present time. 100 eggs now cost 50 to 60 levas, as against 5.20 levas; while butter, which was 4 to 5 levas the kilogramme, has risen to from 44 to 60 levas. Finally, cheese, which cost one leva the kilogramme before the war has risen to 22 levas.

## TRANS-CAUCASIA.

TIFLIS, June 24.

**Georgian Imports.**

For some time past imports from abroad have been steadily reaching Georgia. British, American, and Italian trading companies have been bringing various goods into the country, but the news regarding the possible early evacuation by the Allies of Batoum is having a disturbing effect on trade. Everyone here—and by everyone I

mean foreigners as well as Georgians—is convinced that Batoum and the Batoum region must eventually be handed over to Georgia, and everyone feels that the presence of Allied forces in Batoum is absolutely necessary at the present critical moment. With the Bolsheviks in Azerbaijan and in the North Caucasus, and with the Turkish Nationalists in Asia Minor, Georgia would be placed in a very difficult position were the Allies to leave Batoum at the present time. For, in spite of the recently concluded peace treaty with the Soviet Government, there is no reliance to be placed on Soviet words.

Georgia is in need of practically every kind of manufactured article, but so far the imports have hardly dealt with what I can only refer to as "serious" goods. The British imports are for the most part such small articles as toilet soaps, washing blues, buttons, and a certain amount of cloth. The Americans have brought in boots and shoes, certain enamelled utensils, sweets of various kinds, socks, etc. And the Italians have brought in all sorts of shirts and other underwear for men, cheap (and nasty) boots, and an extraordinary amount of perfumes, face powders, soaps, etc., etc.

Such imports as machinery, which are badly needed, have so far not arrived. One can understand this very well: the market for machinery is naturally a limited one, and few people care to risk their capital on machinery at the present time. Things will settle, however, and then there can be no question but that the British manufacturers will be able to do big business.

**Rates of Exchange.**

The rates of exchange present a certain difficulty. With the franc at 23 roubles, the Italian lira at 18, and the British pound sterling at anything between 1,300 and 1,500 Georgian roubles, big articles necessarily run into five and six figures, but the difficulty can easily be overcome by a system of exchange in place of cash payments. In this, the British trader gains both ways. He buys in England, a comparatively cheap market, and sells in Georgia, where the goods are dear; then he gets Georgian articles in a cheap market and sells them in Europe—the dearest selling market. Small goods can be taken to Georgia to-day and sold at 100 per cent. profit: there is no reason why bigger articles should not fetch the same profit, and a system of exchange would make the profit on the double dealing at least 150 per cent. Georgia to-day has wine, wool, cotton, tobacco, leather, silk, etc., available for export. I understand that the manganese exports have already been secured by a British company.

British traders have so far been somewhat backward—the Italians have been most prominent; but it will not be hard to compete against the latter. Their goods are very trumpery, and there is a strong suspicion that many of them are "Made in Germany."

## CYPRUS.

NICOSIA, July 3.

**The Outlook.**

The season is a dull one for the business community. The want of money is much felt, and may well be attributed in large measure to the present adverse relations between exports and imports. Returns now available for the quarter ended March 31 show that imports amounted to £564,670 in value, as against £337,186 for the corresponding period of last year (an excess of £227,484), while exports reached only £262,570, as against £337,930 (a falling off of £75,360).

The patriarchal system of taking tithe on all cereal produce being still in force, one result is that while the Government, on the one hand, endeavours to reduce the cost of tithing, the peasant, on the other hand, sometimes has just occasion to complain that the staff is unduly curtailed. According to a recent order of the High Commissioner, any person who winnows his threshing-floor (generally a circle of stone-paving in the fields) without permission of the *mazir* (tithe superintendent) or his assistant *mamour*, is liable to a fine of £100 and confiscation of his produce; provided, however, that no offence is committed if the party has given three days' notice that his produce was ready to be threshed, with full particulars.

The prices of almost all produce have fallen. The price of carobs (locust beans), which were lately sold at £2 the kantar (£8 7s. 9d. the ton) is now 25s. Wine fetches £2 the load (of 128 okes) instead of £4; and spirit (*raki*), lately 20 piastres (2s. 3½d.) the oke, is now 8 piastres (11d.). It is the critical period for the carob crop, as an excess of hot winds may dry the pods and largely affect the yield, which promises to be fairly good.

**Transport for Produce.**

If farmers are proverbially grumblers, they have at times their real grievances, which are apt to be overlooked. At present, arrangements on the island's only railway, which serves the wide central plains and which should certainly aim at furthering agriculture, are causing trouble to peasants in the Western districts, who are unable to send much of their summer produce to Nicosia. One truck only is allowed for fruit transport a day. Large quantities of fruit, especially melons and the *batikh* (water melons), so largely consumed, cannot be conveyed to the capital, where the poor depend so largely on vegetable food; while the country growers are said to be losing thousands of pounds. The obstacle is that the line is required for transport of timber and fuel to Famagusta for military needs in various places outside Cyprus. Why, it is asked, cannot more trucks be supplied, or why cannot fuel be shipped at other and nearer ports, such as Karavostasi, on the northern coast, whence carobs and other produce are exported? It is certainly hard that provision cannot be made for island needs by rail, the expediency of laying which originally was so much in doubt owing to the question whether local traffic could justify the venture. It is regrettable that the needs of the peasantry cannot be met in this matter, since everything possible should be done to stimulate market-gardening and every branch of husbandry in the island.

## ROUMANIAN AGREEMENT WITH CZECHO-SLOVAKIA.

It is reported that an agreement has been made between the Roumanian and Czecho-Slovak Railway authorities with the object of facilitating transport between these two countries (says the Commercial Secretary to H.M. Legation, Bucharest).

The Czecho-Slovak Railway authorities have undertaken to put at the disposal of the Caile Ferate Romane five locomotives, together with the necessary coal and staff to carry oil from Campina and Ploesti to Giurgiu on the Danube for shipment in tank barges to Czecho-Slovakia. These locomotives may also be used for other traffic between Ploesti, Campina and Brashov.

The Czecho-Slovak Railway authorities have also put at the disposal of the Caile Ferate Romane the necessary locomotives, together with coal and staff, for running three weekly return trains from Oradia-Mare to Beregszasz. It is part of the agreement that these trains from Czecho-Slovakia to Roumania must contain at least 40 per cent. of goods destined for the Roumanian market. The connecting trains between Oradia-Mare and Brashov will be run by Roumanian locomotives and staff.

It has been decided to run a daily direct train on the Karlsbad-Prague Bucharest route, but the Caile Ferate Romane have not accepted the offer of the Czecho-Slovak authorities to attach a direct sleeping car to this train.

# BRITISH CONSULAR REPORTS.

## II.—ROUMANIA.

Mr. Alexander Adams, Commercial Secretary to H.M. Legation, Bucharest, in his report on the economic conditions and prospects of Roumania at the close of the past year, draws attention to the great possibilities of this country as a market for British manufactured goods. He points out that one of the principal reasons why Germany and Austria occupied such a prominent place in Roumania's import trade before the war would appear to have been their geographical position. Conditions are now, however, very different. Germany lacks marine transport, and transport by rail will continue for some time to encounter great difficulties. Moreover, German goods must pass through a ring of Slav countries to reach Roumania, and this ring "may retard that free passage of goods between Germany and Roumania which obtained in the past, and this will probably remain true, notwithstanding the administration of the navigation of the Danube by the International Commission, for here again the material difficulties of providing a sufficiency of barges and tugs may militate against the German exporter possibly for some years to come." The British exporter, on the other hand, is able to ship his goods to Roumania without any passage through other national customs houses or boundaries.

The greater facility of access thus passes to the British exporter. The implication of this is not, however, generally grasped by interested traders in the United Kingdom. "Every year British steamers arrive at the ports of Roumania for the purpose of loading grain, most of which is shipped to home ports. These steamers bring goods to the eastern Mediterranean and the east coast of Italy; indeed, the surplus of the clearances from the United Kingdom to Italy is over three million tons, of which 1.8 million tons are under the British flag. Altogether, including the surplus empty tonnage available from Malta, Port Said, and Alexandria, there is a total of three million tons of British shipping available for return cargoes in the eastern waters of the Mediterranean. Of this about one million tons goes in ballast through the Suez Canal, and something over two million tons enters the Black Sea, of which about seven hundred thousand tons, or some five hundred odd steamers, enter Roumanian ports in ballast for the purpose of loading grain.

"Since the times of the Byzantine Empire, and throughout the period of Turkish suzerainty, the trade of Roumania has been sea-borne traffic from and to the Lower Danube. Both north and south, and save where his frontier runs conterminously with that of the Magyar, the Roumanian is faced by Slav races, except on the eastern frontier, the Danube mouths, the channel through which political and economic forces will surge to and from Western Europe. It is not possible to overrate the importance of this from the point of view of the British exporter. It places him in a position of superiority, as far as regards facility of access to Roumania, over his German competitor. With a knowledge of the above facts, and a clear realisation of the unique opportunity offered to him, the British manufacturer and exporter should take full advantage of the occasion to obtain a firm foothold for his wares in the Roumanian market."

### The Financial Position.

The revenue of old Roumania for the first eight months of 1919-20 amounted to 540,600,000 lei, while the authorised expenditure, including sums expended for the new territories, amounted to 2,600,000,000 lei Thus, there was a deficit for this period of over two milliards of lei. The difficulty of compressing expenditures within safe limits is obvious, but the demobilisation, which was expected to have been completed by June, will bring about an appreciable reduction. A strict revision of salaries and posts in Government service is also promised.

"The prospect is not at all so depressing as at first sight it may seem. The 'normal' revenue of 645 million for Old Roumania, with her population of 7,600,000, shows a pre-war *per capita* revenue of 85 lei. This same basis of taxation extended to Greater Roumania would, therefore, yield a revenue of 1,487 million upon an estimated population of 17,500,000. There are factors at play which tend to increase this total rather than lessen it, and one of them is the greater material well-being of the town populations in Transylvania. It may thus be calculated that the future revenues of Greater Roumania would be 1,400 to 1,500 million lei on the pre-war basis of taxation. The Minister of Finance confirmed this sum in a recent statement that the revenues amounted to between 700 and 800 million for the Old Kingdom of Roumania alone, and he calculated the yield of present taxes when extended to the new provinces to be double this sum—or, say, 1,500 millions yearly. The Budget to be submitted for next year will contain proposals for increases of existing taxes, and it is intended by this means to bring revenues up to approximately three milliards of lei.

As regards the inflated currency, it is pointed out that the estimated net total of the currency is about 8,500,000,000 lei, and that it is proposed to reduce this by the conversion of 50 per cent. into funded debt. "This very radical measure calls for commendation, although it must be hoped the conversion will be carried out by means which do not involve too great a disturbance of the money market. Thus the resulting amount of currency left in circulation will shortly amount to four and a-quarter milliards of lei, or 242 lei *per capita*, a sum to be viewed with satisfaction in these post-war days. (In 1915 the currency in circulation in Old Roumania was 750 million, the equivalent of 100 lei *per capita*.) This is a much smaller sum than the French issue, totalling over 38 milliards, or about 800 francs *per capita*, but in any consideration of these figures it must be borne in mind that in neither Roumania nor France is the use of cheques so widely extended as in Britain. In nearly all those cases where payments would be made by cheque at home, the Roumanian or the Frenchman customarily employs currency; thus even in normal times one might expect to find, other things being equal, a larger *per capita* issue of currency in these countries than in Britain.

"The security for the enemy issued currency must be considered as non-existent. It appears to have consisted merely of deposits of marks or kronen at a conventional rate of exchange in the German Reichsbank, and this paper money to-day is of no more value than the Roumanian lei.

"The total metallic cover consists of the amounts shown in the Bank return. It must be remembered that the gold stock of 493 odd millions was deposited abroad as follows:—315,179,980 lei was deposited at Moscow, 80,469,650 lei was deposited at the Imperial Bank, Berlin, 98,105,800 lei was deposited at the Bank of England. It is therefore not available at the moment, except in theory, as a metal reserve for currency. The provision of a proper gold basis for the currency remaining in circulation presents difficulties until such time as an excess of exports calls for an inflow of the precious metal. With the unification of the currency and a reduction in its total amount the way will be clear for the resumption of more or less normal trade relations between Roumania and the United Kingdom, modified as these must be for some time by the condition of internal transport in Roumania."

# ANGLO-FRENCH OIL AGREEMENT

## POSITION IN MESOPOTAMIA.

A White Paper (Cd. 675) has just been issued giving the text of the agreement between France and Great Britain regarding oil supplies in Mesopotamia and other regions:—

The following is the text of the Memorandum of Agreement between M. Philippe Berthelot, Directeur des Affaires politiques et commerciales au Ministère des Affaires Etrangères, and Professor Sir John Cadman, K.C.M.G., Director in Charge of His Majesty's Petroleum Department:—

By order of the two Governments of France and Great Britain, the undersigned representatives have resumed, by mutual consent, the consideration of an agreement regarding petroleum.

2. This agreement is based on the principles of cordial co-operation and reciprocity in those countries where the oil interests of the two nations can be usefully united. This memorandum relates to the following states or countries: Roumania, Asia Minor, territories of the old Russian Empire, Galicia, French Colonies, and British Crown Colonies.

3. The agreement may be extended to other countries by mutual consent.

4. Roumania.—The British and French Governments shall support their respective nationals in any common negotiations to be entered into with the Government of Roumania for—(*a.*)

The acquisition of oil concessions, shares or other interests belonging to former enemy subjects or bodies in Roumania which have been sequestrated, *e.g.*, the Steaua Romana, Concordia, Vega, etc., which constituted in that country the oil groups of the Deutsche Bank, and of the Disconto Gesellschaft, together with any other interests that may be obtainable. (*b.*) Concessions over oil lands belonging to the Roumanian State.

5. All shares belonging to former enemy concessions which can be secured and all other advantages derived from these negotiations shall be divided 50 per cent. to British interests and 50 per cent. to French interests. It is understood that in the company or companies to be formed to undertake the management and the exploitation of the said shares, concessions, and other advantages, the two countries shall have the same proportion of 50 per cent. in all capital subscribed, as well as in representatives on the board, and voting power.

6. Territories of the late Russian Empire.—In the territories which belonged to the late Russian Empire, the two Governments will give their joint support to their respective nationals in their joint efforts to obtain petroleum concessions and facilities to export, and to arrange delivery of petroleum supplies.

7. Mesopotamia.—The British Government undertake to grant to the French Government or its nominee 25 per cent. of the net output of crude oil at current market rates which His Majesty's Government may secure from the Mesopotamian oilfields, in the event of their being developed by Government action; or in the event of a private petroleum company being used to develop the Mesopotamian oilfields, the British Government will place at the disposal of the French Government a share of 25 per cent. in such company. The price to be paid for such participation to be no more than that paid by any other participants to the said petroleum company. It is also understood that the said petroleum company shall be under permanent British control.

8. It is agreed that, should the private petroleum company be constituted as aforesaid, the native Government or other native interests shall be allowed, if they so desire, to participate up to a maximum of 20 per cent. of the share capital of the said company. The French shall contribute one-half of the first 10 per cent. of such native participation, and the additional participation shall be provided by each participant in proportion to his holdings.

9. The British Government agree to support arrangements by which the French Government may procure from the Anglo-Persian Company supplies of oil, which may be piped from Persia to the Mediterranean through any pipe-line which may have been constructed within the French mandated territory, and in regard to which France has given special facilities, up to the extent of 25 per cent. of the oil so piped, on such terms and conditions as may be mutually agreed between the French Government and the Anglo-Persian Company.

10. In consideration of the above-mentioned arrangements, the French Government shall agree, if it is desired and as soon as application is made, to the construction of two separate pipelines and railways necessary for their construction and maintenance and for the transport of oil from Mesopotamia and Persia through French spheres of influence to a port or ports on the Eastern Mediterranean. The port or ports shall be chosen in agreement between the two Governments.

11. Should such pipe-line and railways cross territory within a French sphere of influence, France undertakes to give every facility for the rights of crossing without any royalty or wayleaves on the oil transported. Nevertheless, compensation shall be payable to the landowners for the surface occupied.

12. In the same way France will give facilities at the terminal port for the acquisition of the land necessary for the erection of depots, railways, refineries, loading wharfs, etc. Oil thus exported shall be exempt from export and transit dues. The material necessary for the construction of the pipe-lines, railways, refineries, and other equipment shall also be free from import duties and wayleaves.

13. Should the said petroleum company desire to lay a pipeline and a railway to the Persian Gulf, the British Government will use its good offices to secure similar facilities for that purpose.

14. North Africa and other Colonies.—The French Government will give facilities to any Franco-British group or groups of good standing, which furnish the necessary guarantees and comply with French laws, for the acquisition of oil concessions in the French colonies, protectorates and zones of influence, including Algeria, Tunis, and Morocco. It should be noted that the French Parliament has resolved that groups so formed must contain at least 67 per cent. French interests.

15. The French Government will facilitate the granting of any concessions in Algeria which are now under consideration as soon as the applicants have complied with all the requirements of the French laws.

16. British Crown Colonies.—In so far as existing regulations allow, the British Government will give to French subjects who may wish to prospect and exploit petroliferous lands in the Crown Colonies similar advantages to those which France is granting to British subjects in the French colonies.

17. Nothing in this agreement shall apply to concessions which may be the subject of negotiations initiated by French or British interests.

18. This agreement had to-day been initialled by M. Philippe Berthelot and Professor Sir John Cadman, subject to confirmation by the French and British Prime Ministers respectively.

J. CADMAN.
P. BERTHELOT.

## SHIPPING INTELLIGENCE.

The launch took place on July 22, from the Jarrow shipyard of Palmer's Shipbuilding and Iron Co., Ltd., of the geared turbine steamer City of Pekin, built to the order of the Ellerman Lines, Ltd. The dimensions of the vessel are as follows:—Length between perpendiculars, 442 ft. 6 in.; breadth (moulded), 58 ft. 6 in.; depth (moulded) to upper deck, 34 ft. 3 in. She is of the two-deck type, with poop and combined bridge and forecastle, having cruiser stern and straight stem, and will be classed 100 A1 at Lloyd's. The 'tween decks are insulated for the carriage of meat cargoes, and the double bottom is fitted for carrying oil fuel. The vessel will have an approximate deadweight capacity of about 11,000 tons, and it is to have Parsons' single-screw double-geared turbines of the impulse reaction type, supplied and fitted by Palmer's Shipbuilding and Iron Co., Ltd., at Jarrow, there being three single-ended boilers, 230 lb. working pressure, and Howden's forced draught.

The new passenger and cargo steamer Egyptian, which has just been completed by Messrs. W. Harkess and Son, Ltd., shipbuilders, Middlesbrough, recently underwent her trials satisfactorily. Built to the order of the Ellerman Lines, Ltd., her dimensions are as follows: — Length, 316 ft.; breadth, 44 ft.; depth, 26 ft. 3 in.; with a displacement of 7,050 tons and a speed of 11¾ knots. The vessel is intended for the Mediterranean service of the Ellerman Lines, Ltd. This is the seventh steamer which Messrs. Harkess have completed for Sir John Ellerman, Bart.

The new twin-screw steamer Mashobra, built to the order of the British India Steam Navigation Co., Ltd., was successfully launched on July 14, at the Clydeholm Yard of Messrs. Barclay Curle and Co., Ltd. Her dimensions are: Length, 464 ft.; breadth, 58 ft.; and depth, 36 ft. Her gross tonnage is 8,500 and 11,000 tons d.w. carrying capacity. Accommodation is provided amidships for about 100 first-class and 50 second-class passengers.

### Forthcoming Sailings.

The Anchor Line s.s. Circassia, for Bombay, will close for cargo at Glasgow on August 13, and at Liverpool on August 23.

The Bibby Line s.s. Lancashire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on August 7.

The Harrison Line s.s. Candidate, for Calcutta, will close for cargo at Liverpool on August 5.

The Johnston Line s.s. Norton, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, will close for cargo at Liverpool on August 4.

The Cunard Line s.s. Sea Glory for Piræus, Constantinople, and Galatz, will close for cargo in London on July 31.

The Ellerman Lines s.s. Serbino, for Gibraltar, Malta, and Alexandria, will close for cargo at Liverpool on July 31.

The Moss Line s.s. Amasis, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on August 20.

The Prince Line s.s. Scottish Prince, for Tunis, Malta, Alexandria, Syrian Coast Ports, and Cyprus, will close for cargo at Manchester on August 7.

The Bibby Line s.s. Lancashire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on August 7.

The Clan Line s.s. Sultania, for Bombay and Persian Gulf, will close for cargo at Birkenhead on July 31.

The Henderson Line s.s. Burma, for Port Said and Rangoon, will close for cargo at Birkenhead on August 18.

## GENERAL BANK OF GREECE.

*Paid-up Capital, Drs. 3,000,000.*

**Head Office - ATHENS.**

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

## POPULAR BANK OF GREECE.

**Head Office, ATHENS. Branch, PIRÆUS.**

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

**CAPITAL - Drs. 1,500,000.**
**RESERVE FUND - Drs. 2,500,000.**
**Deposits and Credit Accounts, Drs. 100,000,000.**

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

*General Manager:* D. LOVERDO.

## TRADE WITH THE NEAR EAST

WITH its offices in all the principal towns in **Greece**, in **Egypt, Cyprus, Crete, Constantinople**, and in **Smyrna**, **the Bank extends exceptional Facilities for Export and Import Trade between Great Britain and the Near East generally**, and invites enquiries and correspondence relating thereto.

## BANK OF ATHENS

HEAD OFFICE: ATHENS.

LONDON: 22, Fenchurch Street E.C.3. MANCHESTER: 57, Mosley Street

## COMMERCIAL BANK OF GREECE, LIMITED.

**CAPITAL PAID-UP - Drs. 15,000,000.**
**RESERVE FUNDS Drs. 2,845,010.45.**

**Head Office: ATHENS.**

*Branches:*—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia, Larissa.**

**AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.**

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 30·87 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10 % primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

*Branches:*

PIRÆUS, SYRA. PATRAS.

**Capital Paid Up - Drs. 10,000,000.**

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

*President.* L. EMBIRICOS. *Manager.* D. MIAOULIS.

## THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE.)

**Head Office - PIRÆUS.**

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

**REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.**

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

*Cable Address—Navigation Palios.*

*Codes used—Scott's (1905) 10th Edition; A.B.C. (1901) 5th Edition.*

## MARITIME BANK of GREECE

**AUTHORISED CAPITAL FULLY PAID DR.10,000,000.**

# ENGINEERING.

## Electric Tools.

Electric power has long been recognised as being particularly suitable for driving portable tools, so many of which are used in modern engineering appliances. The range of these is very wide, including as it does high-speed drilling machines and grinders, as well as light, medium, and heavy rivetters. For several years British-made electric tools have been recognised as superior to those of German and American manufacture, and a number of exhaustive tests have shown that so far as efficiency is concerned, the electrically driven tool is superior to the competitive range of air-operated or pneumatic tools. As regards length of life, there is little to choose between the two types, and first cost is also practically even. The balance of superiority is thus with the electric models, and that is in itself sufficient to explain their rapid growth in public favour.

In fact, the opinion is expressed that any shop which delays installing the newer and more economical equipment is not only retarding progress, but is actually throwing away profit. The more truly economical is the equipment, the greater will be the amount of time saved in production.

One of the most generally useful electric tools is the two-wheeled grinder, fitted with a 2, 3, or 5 h.p. electric motor, and running throughout on ring-oiled or ball bearings. A coarse and a fine wheel are provided, and only those engineers who have tried these machines know how generally useful they are and how wide is their range of work. Larger electric grinders, with motors of 7½ or 10 h.p. capacity, will carry wheels up to 24 ins. in diameter by 4 ins. in thickness. Small grinders for sharpening twist-drills and for tool-room work are also obtainable in a wide range of sizes. These twist-drill grinders are so set that a boy can make a better job with one of these machines than an expert tool-maker could by essaying to grind a drill by hand.

A geared electric drilling machine of the portable type is from 10 to 12 ins. in length, and will weigh between 4 and 5 lbs. only. A drill of that size will cut holes up to one

**Small Electric Hand Drill for Repair Work.**

¼ in. dia. in steel, iron, aluminium, or brass, and is a most useful tool for repair-shop work. It usually has an aluminium handle, and is sold complete with length of flexible cord, plug, switch, and chuck.

A larger size drill of the bench pattern is also illustrated. This is of the sensitive type, and will drill holes up to ½ in. or even ⅝ in. in diameter through any metal. The travel of the drill is generally about 4 ins., and the feed is by means of the usual rack and pinion. The motor is sometimes mounted as shown, or almost directly over the spindle, which in that event is usually slightly offset to the extent of about ¾ in. The table of these drills is, of course, adjustable, and here again the drill is usually supplied complete with chuck, plug, switch, and suitable length of flexible cord.

## A New Speedometer.

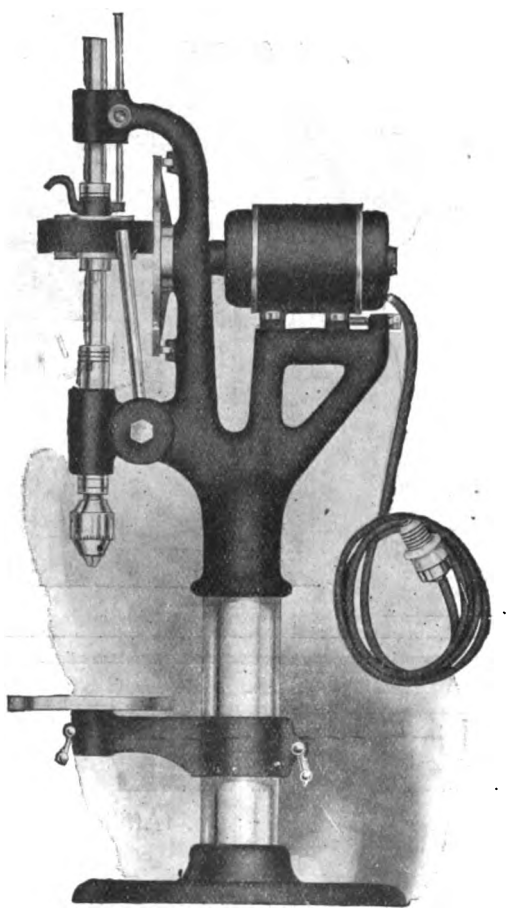
A new type of speedometer was recently brought to my notice, but, in accordance with my custom, I was unable to say anything as to its good points until I had submitted it to a lengthy test. I have now had one of these on trial for rather over 2,000 miles, during which time it has been checked at frequent intervals against an instrument which was recently calibrated with great exactitude, and which cost nearly three times as much as the instrument referred to. The result of the test is that the "Rock" speedometer, which is British made in an East London works, has not only stood up to its duties, but has never varied either as regards total mileage or miles per hour from the readings of the standard instrument. I consider it to be a remarkable instrument for its price, and it is certainly one that I can confidently recommend.

## Roadside Engineers.

For some time past the Automobile Association has provided "first aid" motor cycle combinations equipped with tools and spares with which the drivers—who are expert mechanics—assist members whose cars and motor cycles have broken down on the road through minor mechanical troubles. This unique roadside service has been of great service to many hundreds of members. The association has now issued tool kits to the road patrols in charge of the A.A. roadside telephone boxes for the use of passing members lacking tools for roadside adjustments.

## Fixing Machine Tools.

Although practically every engineer is a user of machine tools, it is safe to say that comparatively few realise the importance of erecting them properly and in situations where foundations are rigid and there is a good natural light. Many a man will pay fifty or a hundred pounds for a tool and then calmly proceed to fix it in some place where vibration will take off 20 per cent. of its life; and where the



**Electric Bench Drill with Adjustable Table.**

inconvenience of the situation or the bad lighting will take off another 50 per cent. off its efficiency.

One of the most important points, and one which is most frequently overlooked, is the correct levelling of the bed and the fixing of the legs or base so that this correct level shall be retained unimpaired during the life of the tool. There is no doubt that many engineers also feel that this work is really not necessary, being led by the apparent solidity of the tool to feel that it is sufficiently rigid in itself to withstand any strain brought upon it. This is not the case, and an accurate test for rigidity will reveal the fact that every tool vibrates and moves in accordance with the work its cutting part is called upon to do.

It would seem almost unnecessary to say that every machine tool should be bolted down to either a wood or a concrete floor were it not for the fact that a visit to many engineering establishments revealed the fact that in several cases tools were merely placed in position and held down and against the belt by their own weight. Where fixed on a wooden foundation care should be taken to see that the foundation itself is solid and sound, and if there is any doubt as to this, stout wooden battens should be used on which to fix the machine. The tool should be bolted down to these, and they in turn should be clamped down as solidly as possible. But whether the machine is fixed on a wooden floor or a concrete foundation, it should be levelled up and packed under the feet or bed to a dead level in every direction before there is any attempt to screw down the fixing bolts. When level, these should be gradually tightened up, trying the surface with the spirit-level at frequent intervals. It will probably be found that the screwing down will throw the tool out of truth, in which event more packing must be

# THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

**IN DAILY USE THROUGHOUT THE NEAR AND MIDDLE EAST.**

*Embodies the following advantages:—*

Works satisfactorily with any kind of tobacco Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

fixed or superfluous packing taken out, so that the tool is absolutely true when screwed rigidly in place. In the majority of cases machine tools consist of two or more parts bolted to a common bedplate, and it is possibly this which has given rise to the idea that a great deal of care and attention need not be given to getting the latter truly on its foundations.

An instance was given recently of a case where a large radial drilling machine was fixed by a millwright, and as it was intended to carry out extremely accurate work on it more attention was given than usual to seeing whether it was doing its work within a sufficiently fine limit. Tests were made to see whether the spindle was square with the table, whether the arm worked perfectly parallel with the table, and whether the carriage travelled along the arm in a path perfectly parallel to the table. To the surprise of everyone, the machine, which was made by one of the foremost British makers, appeared to be inaccurate in every respect. The spindle test showed an error of 0.015 in. per ft., the arm was 0.034 in. out of parallel, and the carriage was out in its travel by 0.005 in. per ft. The maker was informed of this, and a representative was sent down, who merely confirmed the calculation of error, and then turned his attention to the levelling of the bed of the machine. The user's millwrights considered that this was wasting time, but they changed their opinion when they heard that there was an error in the setting which was throwing every other part out of line. The table was levelled up by a few pieces of thin steel, and the tests were again applied. To the surprise of the men who had fixed the machine in the first place the errors had been reduced to a maximum of 0.002 in. per ft., which was quite within the desired range of accuracy.

### A Useful Lorry.

I have recently had an opportunity of inspecting the body on the Napier 25-30 cwt. lorry. In many respects it is novel, and should prove useful to all business firms. It is built so that the sides are removable, thus enabling the body to be used as an ordinary platform type to take large cases or bulky goods, or else with the sides fitted to take smaller boxes or loose articles. This type of body, I understand, was devised after consultation with a number of owners with a view to arriving at an agreement as to the most suitable all-round body, and has now been standardised by the Napier Company.

The body is well framed up in hard wood, and mounted on stout bolsters, the edges protected with sill sides, and furnished with half-round metal-wearing plates. The rear sill hinges to facilitate loading. It is 10 ft. 6 ins. long by 6 ft. wide. Wind doors are fitted to the driver's seat, seat, shaped to meet the dash and to present a symmetrical appearance. The offside door is fixed, and the nearside arranged to hinge and fitted with a good slam lock.

The chassis is constructed to carry two tons, exclusive of the weight of the body. With the full load there is an ample margin in reserve, both in the strength of the chassis and in the power required to drive it. It will ascend without difficulty a hill of one in seven, and maintain a speed of 18 m.p.h. on the level. Every part is made standard, and has to pass a very minute examination with extremely accurate gauges before being assembled. This ensures that any spare part required will be inter-changeable with those previously supplied.

The engine is of four cylinders, cast in pairs, and is fitted with a governor of the centrifugal type, enclosed in the oil-tight engine casing. It is thus running in an oil-bath, and protected from injudicious adjustments by unauthorised hands, the owner or responsible manager deciding the maximum speed of the vehicle. The rear axle is worthy of special notice, as it is a great advance on the cast axle case method of construction, inasmuch as there is no casting to crystallise by fatigue, no bolts to stretch or shake loose, and no necessity for a tie-rod. An excellent feature of the design is that the whole of the worm gearing and differential gear is made as a unit, and can be lifted out for examination without even jacking up the car or disturbing any portion of it, except withdrawing the axle shafts.

### The Coal Repor

The second report of the British Association Committee, which is really of an interim nature, deals with the reduction of output in Great Britain since 1913 and the remarkable increase in price, and contrasts these with the average figures for the United States for the same years. It also deals with the chemistry of coal and the progress of the research work carried out, and perhaps from an engineering point of view it is of most interest where dealing with the extraction of coal with pyradine, which is not merely a process of solution, but affects the coal substances as a whole.

It appears that the action is retarded by the presence of water and of oxygen, and a method has been devised by Mr. W. A. Bone, the eminent author of "Coal and Its Scientific Uses," and his co-workers, by which the pure resinic constituents of coal can be extracted. The Committee generally is in agreement with the new method of charging for illuminating and power gas on a standard heat unit basis rather than on the number of actual cubic feet supplied, and the subject of fuel economy in blast furnaces, cupola practice, and steelworks is dealt with. In spite of the shortage of motor spirit, the Committee feels that gas undertakings should not be compelled to strip their gas of benzole unless they can obtain an adequate profit from so doing.

### A New Hoist.

Both engineers and shippers find at times that the handling of boxed machinery, especially when of an unusual size and shape, is not altogether an easy matter. In some instances it is inviting damage to attempt to lift by the ordinary means, and more or less elaborate slings and rope cradles have to be devised. The use of slings, further, is not altogether satisfactory unless handled by expert operators, as they have a tendency to slip towards the centre of the case.

One of the largest engineering firms in the world has devised a method of hoisting which is simple in the extreme, and which does away entirely with the use of slings under a case. It consists of a looped wire rope, on which are slung two substantial steel arms, fitted at the rope end with steel pulleys, so that they can slide freely. The other end of each arm has a hole, to which is hinged a bell-crank arm of stout steel, fitted at its extremity with a broad steel plate, of large size, which is corrugated or slightly toothed on its inner surface.

When the case is in position for lifting, the wire loop is lowered down from the elevator and the arms are placed one on either side of the case, with the steel plate resting against the timbers. The act of hoisting first lifts the arms, and then brings the bell-crank leverage into play. The corrugated plates then grip the case sides with considerable force, which increases as the lifting pressure increases, and the case is raised from the ground without any possibility of its slipping out of position. It is, of course, necessary for the case to be strongly constructed to prevent it from being crushed when lifted in this way, but there is usually no danger of this, as the clamping plates can be fixed against the bottom of the case if considered advisable.

H.M. Commercial Agent for Egypt reports that certain United Kingdom senders of cash on delivery parcels to clients in Egypt insist on full payment in advance on all cash on delivery orders under £1 value, and a 50 per cent. cash deposit on all such orders exceeding that value. He wishes, therefore, to draw the attention of firms and persons interested to the fact that such restrictive measures are not only unnecessary and unjustifiable in view of the insignificant proportion of British cash on delivery parcels returned by addressees in Egypt, but also cannot fail to have an adverse effect on the trade of the senders.

# NEAR EAST MARKETS.

## Sudan Produce.

The following extracts are taken from the C.E.B. report for May:—

**Gum.**

The exports during May were as follows:—Via Port Sudan, 198,095 kilos of hashab of the value of £E10,797, and 20,277 kilos of talh of the value of £E671, and via Halfa, 117,388 kilos of hashab, of the value of £E6,445.

Kordofan Province.—11,589 kantars were sold in El Obeid market during May, as against 9,247 kantars during the same month last year, at an average price of £E1.478 per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 4,417 kantars, as against 1,918 kantars during May last year. The amount sold at Um Ruaba was 609 kantars, as against 1,517 last year. The average price being £E1.490 per kantar. At Rahad 194 kantars were sold, as against 160 kantars last year, at prices varying from £E1.200 to £E1.300 per kantar.

**Cotton.**

Red Sea Province.—Tokar. The cotton, in kantars of 315 rottles (unginned), bought during the month of May was as follows:—First-class, 5,412; second-class, 5,970; third-class, 1,083; fourth-class, 63; total, 12,528. The exact quantity of cotton bought during April was 15,259 kantars. The quantity bought up to the end of April was 33,090 kantars of 315 rottles (unginned).

Kassala Province.—The transport of cotton seed to Sasareib on the Atbara has commenced. It is being carried out by camels from Butana district. From Sasareib the seed will be transported by steamer to Atbara.

**Dura and Dukhn.**

Blue Nile Province.—There was a distinct drop in the price of dura, highest price being 2,568 m/ms., and lowest 2,035 per ardeb of 300 rottles (135 kilos).

Berber Province.—Dura has drooped slightly in price, and averaged about P.T.390 per ardeb of 380 rottles (171 kilos).

Darfur Province.—April. The average price of dura in Fasher market during the month was £E1.200 per ardeb.

White Nile Province.—At El Dueim the average price of dura was £E2.900 m/ms. per ardeb of 384 rottles (173 kilos).

## NEW COMPANIES.

**British Levant Ships Stores.**

British Levant Ships Stores has been registered as a private company with a capital of £5,000 in £1 shares. Objects: To acquire under a licence from the Board of Trade part of the undertaking of J. W. Whittall and Co., Gilchrist Walker and Co., Walter Seager and Co. and Foscolo Mango and Co. First directors:—C. Doros, R. La Fontaine Whittall, W. C. Seager, J. E. La Fontaine, E. V. Rizzio, C. Blair and D. A. Mango, all of Constantinople. Registered office, 8, Serjeants' Inn, E.C.4.

**Near East Traffic.**

The Near East Traffic Co. was registered as a private company on July 13 with a capital of £15,000 in £1 shares. Objects: To carry on at Constantinople and elsewhere the business of bonded and other warehousemen, etc. 8, Serjeants' Inn, Fleet Street, E.C.4

**Merchants Discount Bank.**

The Merchants Discount Bank (Constantinople) has been registered as a private company with a capital of £50,000 in £1 shares. Subscribers (each with one share): G. Luoff, 86, Addison Road, Kensington, W., banker; G. Zamanski, 38, Lime Street, E.C.3, banker.

The general meeting of the Smyrna-Aidin Railway Company will be held on September 28 at Winchester House, E.C.2.

# COMPANY MEETINGS.

## ALEXANDRIA WATER.

The forty-second annual general meeting of the Alexandria Water Company, Ltd., was held at Alexandria on June 1.

The following is the directors' report to the shareholders:—The directors have the honour to submit to the shareholders their report and statement of accounts for the past financial year ending March 31, 1920. Far from enjoying the improved conditions which it was hoped would result from the return to peace conditions, the company has had to face a continuance of high working expenses. Fuel and practically all stores have either remained at the same high level or again increased in price, whilst the continued rise in the cost of living has necessitated further increase of salaries and wages. The cost of alum on the other hand has decreased. The industrial troubles which affected so many companies in Egypt during the past twelve months reacted upon this company, but whilst there was some unrest among the company's workmen during the early part of this year, the directors are glad to record that the men, many of whom are old and valued servants, refrained from extreme measures. The existing war bonuses to workmen have been consolidated in the wages, and a further increase in wages sanctioned, whilst improvements in the conditions of employment have been introduced. These include the adoption of an eight-hour day. The Board has also authorised, as from April 1, an increase in the salaries of employees and the consolidation of part of their existing war bonuses. The full effect of the increases in wages and salaries will be felt in the coming year.

The total quantity of water pumped amounted to 23,741,843 cubic metres, the decrease of 161,912 cubic metres from the previous year being more than accounted for by the reduced demands of the British Army. The number of consumers shows the satisfactory increase of 1854, or 4.5 per cent., compared with the previous year. The revenue from the port supply has decreased by £4,665, but is still considerably above that received in pre-war years. The total receipts amount to £190,781, as compared with £189,622 realised last year, showing an increase of £1,159. The working expenses for the reasons stated above show an increase of £6,074. Whilst the revenue is swelled to a certain extent by the continued increase in the number of new consumers and by the rise in the value of rents, these increases are not at present sufficient to meet the constantly growing expenses. Increases in the charges to certain categories of consumers of unfiltered water and to consumers of high pressure water, have recently been put into force, but the full benefit of these increases will not be felt until the financial year of 1921—1922. In the profit and loss account a sum of £13,703 has been written off as depreciation of machinery and other wasting assets in accordance with the rates fixed by the board. The securities, which stood in our books at the market price of March 31, 1914, have been written down to the market value of March 31, 1920. This has absorbed the "provision for the depreciation of securities," amounting to £20,536, which thus ceases to figure in the balance-sheet, and in addition, it has been necessary to debit the profit and loss account with the sum of £6,558 to cover the depreciation.

The balance of the profit and loss account after making the above depreciations and usual allowances, and after deducting the interim dividend of 4 per cent. paid on December 15, 1919, is £45,000, from which should be deducted 6 per cent. on the capital, £36,000, leaving a balance of £9,000, of which one-half is due to the municipality according to our convention, £4,500, and the other half to our shareholders, £4,500, which represents ninepence per share, and this added to the 6 per cent. above mentioned makes a total of six shillings and ninepence per share for the dividend of June 15, 1920. The directors therefore recommend the shareholders to fix the dividend payable on June 15, 1920, at six shillings and ninepence per share.

Dr J. Collis Browne's Chlorodyne

Of all Chemists, 1/3 and 3/-.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.
A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

which with the interim dividend of four shillings paid on December 15, 1919, makes a total dividend of ten shillings and ninepence for the year.

A sum of £22,761 has been spent on new works during the year, including: Machinery and filters £14,484, buildings £4,915, water mains £2,495, water meters £319. Of the extensions of machinery and filters referred to in the last report, the new pump at the Ramleh Works and the four new 21 ft. Jewell filters have been put into service with satisfactory results. The new workshop has been completed, and certain additional tools installed. Fair progress has been made with the new engine-house, but labour troubles in England have caused serious delay to the completion of the two large sets of Diesel engines and pumps, which have not yet been delivered by the makers. The following additional machinery has been ordered: Two 21 ft. Jewell filters, which will complete the installation in No. 2 filter house, an oil-driven electric-lighting set for the Rond Point Works, and a new Diesel engine for the Farkha pumping station, the board continuing their policy of replacing steam-driven sets wherever this is possible. The extension to mains has been somewhat larger than during the three previous years, amounting to 5,764 metres of low pressure mains, and 973 metres of high pressure fire mains. Further extension will be necessary in the near future for the provision of increased filtered water storage capacity and for the normal extension of mains. Should the new Diesel engines and pumps prove to be the success that is confidently expected, it is the intention of the board to instal further sets to replace the existing steam-driven pumps.

The additions to machinery which it has been necessary to make during the past few years in order to cope with the increased demands of the town, have absorbed all the available capital, and for the last three years the necessary funds have been borrowed from the reserve. The amount thus borrowed for capital expenditure to March 21 last was £15,246. The extensions which it is hoped to complete during the current year will absorb a further amount estimated at £60,000, whilst, as already stated, further extensions will be required in the immediate future to meet the normal development of the town. The directors have therefore, as announced in the notice convening this general meeting, decided to ask the shareholders to authorise the increase of the capital of the company from £600,000 to £700,000 by the creation of 20,000 shares of £5 each, to be offered at par to the shareholders and issued by the directors at such time or times as the money is required.

The directors greatly regret to report that Mr. H. R. C. Blagden has found it necessary, owing to private reasons, to resign his position as managing-director of the company. Mr. Blagden has been connected with the company for a period of 19 years, successively as engineer, manager and managing-director, and has been largely instrumental in developing the operations of the company and in improving the efficiency of its plant. The directors wish to take this opportunity of placing on record their great appreciation of his services and their sincere regret at his departure. The board has appointed Mr. K. B. Woodd Smith as manager in Mr. Blagden's place. To fill the vacancy on the board caused by Mr. Blagden's resignation the directors have elected as director Mr. J. G. Jacot-Descombes, till recently general manager of the Alexandria and Ramleh Railway Company, Limited. The general meeting will be asked to confirm his nomination. Under Article 84 of the articles of association, Messrs. H. E. Barker and R. C. Abdy are the two directors who retire by rotation, and being eligible, they offer themselves for re-election.

## BANK OF BRITISH WEST AFRICA.

The twenty-sixth annual general meeting of the Bank of British West Africa, Ltd., was held on July 21 at Cannon Street Hotel, E.C., the Right Hon. the Earl of Selborne, K.G., G.C.M.G. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, first dealt with the figures appearing in the balance-sheet, and pointed out that the paid-up capital was now £800,000, as compared with £580,000 in the previous year, and that the reserve was now half the amount of the paid-up capital—namely, £400,000, as compared with £250,000. Current accounts and deposits amounted to nearly £12,000,000, as compared with £6,500,000. The profit and loss account showed that the net profit was £125,147, as against £83,767 in the previous year. Those figures certainly indicated a very remarkable increase of business, but they were greatly affected by the inflation of values which had been current throughout the period covered by the accounts. The directors had had to improve the position of the staff at all offices in view of the cost of living, which during the year under review had still further increased. It had been decided to bring into operation the staff profit-sharing scheme to which he referred two years ago.

During the period under review West Africa generally enjoyed considerable prosperity. Values all round were high, and sellers of produce obtained higher prices than probably they ever before received; their power to purchase imports was correspondingly great, thus benefiting the British exporter. This condition of affairs was not so apparent in recent months; produce had fallen in value all round, and imports must reflect that movement. West Africa, however, was fundamentally sound and prosperous, and when the new basis of values was established there would surely be a revival of trade, and statistics should disclose an increasing turnover, not based upon artificial values, but upon quantities. This fundamental soundness of trade in West Africa justified the programme of railway and harbour construction which Sir Hugh Clifford and General Guggisberg had so much at heart in Nigeria and the Gold Coast. Trade with many, and, indeed, most overseas countries involved questions of exchange, and those who were engaged in West African business hardly realised, perhaps, the advantage afforded them by the application of the British system of currency to our West African colonies. But even with this system of currency West Africa had had to put up with great inconvenience during the past year by reason of the large proportion of paper currency issued. Silver coin has been sent out in larger quantities than ever before, but it had immediately disappeared, and a high cost of living and, he feared, some discontent had resulted. When addressing the shareholders a year ago he suggested that a new coinage, other than of silver, might have to be considered, and it was satisfactory to know that a new coinage of mixed metal was now being struck for British West Africa, and supplies would be available in considerable quantities in the final quarter of the present calendar year.

An extra-ordinary general meeting would follow this one for the purpose of increasing the authorised capital of the bank. It had been their custom to issue new shares at frequent intervals, and this policy they proposed to continue, keeping pace with the bank's needs. The reduction in prices, to which he had referred, might mean that the calls upon the bank by their customers would be less in the immediate future, but the directors' confidence in the steady expansion of the business led them to ask the shareholders for authority to increase the capital. They proposed, therefore, that they should have powers to issue, as and when the board might elect, and upon such terms and to such allottees as the board might, in what they believed to be in the best interests of the bank, decide, 200,000 new shares of £10 each, £4 paid, thus doubling the existing capital of the bank. These were not times when new capital was easily obtained, and they had no intention of offering the shares at any very low price. If they had an opportunity to place a number of new shares at something like the present market value they might do so, but the claims of existing shareholders would not be overlooked if it was thought desirable to issue new shares at a price substantially less than the current market value.

Mr. Geo. W. Neville seconded the motion, which was carried unanimously.

At an extra-ordinary general meeting the proposal to increase the capital of the company was unanimously agreed to.

## YUGOSLAVIA'S EXPORT TRADE.

The local Belgrade Press announces that in consequence of the energetic opposition from all classes, the Minister of Commerce has intimated that the proposed restriction of exports from the country will not be put into operation, and that the formation of the "Zadruga Centrale"—a semi-State export company—will be definitely abandoned, says the "Board of Trade Journal." During the period of suppression of exports it is stated that considerable harm has been suffered by the country, and the efforts made by the "Zadruga Centrale" have apparently led to much opposition and consequent disorganisation of trade. The Ministerial Council recently decided to export surplus stocks of last year's harvest within defined limits. In the absence of the "Zadruga Centrale," which was intended to deal with these exports the Department for Foreign Trade will exercise control. It has been decided that the profits accruing from this export of grain will be placed at the disposal of the Minister of Supplies with a view to affecting a reduction in the high cost of living. Similar arrangements are contemplated in regard to the ensuing harvest provided that the "Zadruga Centrale" for the monopolisation of exports is definitely and finally rejected.

## TRADE MARKS, ETC., IN THE REPUBLIC OF GEORGIA.

Trade marks and manufacturers' designs and models are protected in the republic of Georgia by the legislation of the former Russian Empire, supplemented by two announcements since issued by the Department of Trade and Industry of the Georgian Republic. Translations of these latter may be consulted on application to the Inquiry Room, Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1.

The Commercial Adviser to H.M. Chief Commissioner for Transcaucasia, in his communication on the subject, adds that on and after April 2, 1920, it became necessary that the main inscription on all trade-marks, manufacturers' designs and models submitted for sanction should be in the Georgian language. Inscriptions in any foreign language may follow the main inscription, if desired.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

### Egypt.

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200 metrical tons cotton waste. August 9. (L.)

Extension of Electrical Station of Zagazig and Belbeis.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the extension of the electrical station of Zagazig and Belbeis. Adjudication at noon on September 1. A copy of the specification, etc. (in French) may be consulted by British firms interested at the Enquiry Office of the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

Electric Lift.—Tenders are invited for the supply and installation of an electric lift in the Kasr-el-Aini Hospital, Cairo. Tenders close on August 15. The lift is required to carry a cage 2 metres by 1.50 metres in area, with a fully loaded weight of 300 kilos, through a height of 9.40 metres with three stops (with a possible future extension to 15 metres with four stops), at a speed of 25 centimetres per second. A copy of the specification (in French) may be inspected at the Department of Overseas Trade (Room 50), 35, Old Queen Street, Westminster, S.W.1.

Blankets.—The Egyptian War Department invites tenders for fine white blankets. August 9. (L.)

### India.

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

Wicks, Lubricating Pads, etc.—The Great Indian Peninsula Railway Co. invite tenders for the supply of the following stores:—Wicks, lubricating pads, etc., paints, drysalteries, etc., platelayers' tools, lamps and fittings, acid open hearth steel boiler plates. (Spec. 10s. for the first three, 7s. 6d. for the fourth, and 5s. for the fifth, office of the company, 48, Copthall Avenue, E.C.2.) August 10.

Bridgework.—The Burma Railways Co. invites tenders for the supply of bridgework (3 100-ft. spans). (Spec. 20s., office of the company, 199, Gresham House, Old Broad Street, E.C.2.) August 13.

### Turkey.

Telephones and Accessories.—The Commercial Secretary to the British High Commission at Constantinople has received an inquiry for the name of a United Kingdom manufacturer of telephones with magnetos, all telephone accessories, telephone wires, and a central of 500/600 lines; also electric bells, wires, batteries, etc. Correspondence and catalogues should be addressed to the British High Commissioner's representative at Samsoun, under cover to the Commercial Secretary at Constantinople.

## OIL OUTPUTS.

Anglo-Egyptian Oilfields.—Gemsah production week ended July 11, nil tons (previous total, 595 tons); Hurgada production week ended July 11, 2,291 tons (2,327 tons).

Roumanian Consolidated Oilfields.—Production for June 2,418 tons. Electric power was stopped several days during the month owing to heavy storm.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 30 amounted to £E12,843, making the total for the year £E103,344. For the corresponding periods of the previous year the figures were £E7,331 and £E38,377.

## LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Monday.

The better feeling in the market has continued, but demand has not developed to any important extent, and in certain departments business seems to be a little quieter than a week ago. Numerous buyers cannot make up their minds that the time is ripe for free operations, and the easier tendency in raw cotton rates has somewhat disorganised trade in yarn and cloth. A larger business has been done in Egyptian cotton than for some time back. Plenty of demand has been about in Liverpool and Alexandria from both British and American spinners. The reaction in prices, however, during the last day or two has rather upset matters. Advices from the American belt have been very mixed, but according to some authorities there is a possibility of a yield of 13,000,000 bales. In yarns made from Egyptian cotton, there has been an improved inquiry, and more trade has been done, but quotations of spinners remain irregular. Some sellers, however, are wanting distinctly more money than a week or two ago. There has not been much activity in piece goods for the Near East. Deliveries, however, are being taken on a freer scale, but the political situation abroad still causes anxiety. For India a substantial turnover has occurred in printing cloths and fancies, but practically nothing has been done in grey staples. Only isolated sales have been mentioned in dhooties and jaconets. Operations for China have been at a low ebb. An encouraging business has been done for South America. Many manufacturers have obtained some relief, but weak sellers can still be found. The larger demand in home American yarns has been maintained, and spinners are now firmer in quotation.

## FOREIGN EXCHANGES.

## NOTES OF THE WEEK.

The Turkish delegates arrived in Paris on July 30, the delay being attributed officially to the fighting in Thrace, though another account attributes it to a railway strike in Roumania. Whatever may have caused it, the delay was not unwelcome, as it has afforded an opportunity to adjust another difficulty that had arisen, rather unexpectedly, at the last moment. The fresh trouble was brought about by Greece's intimation that she would not sign until her possession of the Dodecanese is assured. Italy, who is understood to have agreed to hand over the islands in return for the abandonment of certain Greek claims in regard to Albania and for some territorial arrangements on the Turkish coast, finds the bargain a poor one, in view of developments in Albania; and consequently demands that Rhodes shall become hers definitely, instead of conditionally. The other islands, it seems, she is still prepared to hand over, as originally arranged, on the signing of the Treaty. At the time of writing, it is uncertain whether either party will give way, and until the difference is smoothed over the signing of the Treaty is indefinitely hung up, though optimistic reports speak of Thursday as the probable date.

---

The news of the Greek occupation of Adrianople was confirmed immediately after we went to press last week, and the five days' campaign was thus brought to a brilliant close. The finishing touch was not given, however, until July 28, when Jaafer Tayar, the Turkish leader, was captured while endeavouring to make his way into Bulgaria. Both in Thrace and in the Smyrna-Panderma region the Greeks have acquitted themselves most creditably. It is true that their opponents were poorly organized and but indifferently armed upon the whole; but it must be remembered that the Allied military authorities, who were presumably well informed on the subject, evidently regarded the task set them as no light one. Yet they accomplished it, quickly and—as far as can be judged—thoroughly, and they deserve credit accordingly. It is to be hoped that their success in administering their new territories will be as great as that attending their military operations, and that those people of other nationalities who have joined in welcoming their advance will never have any cause to change their opinions.

Jaafer Tayar Pasha, after his capture, admitted that he had always known that his adventure was a forlorn hope, and it is beginning to look as if Mustapha Kemal, in his heart of hearts, regards his own resistance in the same way. Indeed, unless he receives very substantial help from his Bolshevist friends, and very quickly, it is clear that his cause is hopeless. It is very easy to blame both Jaafer and Kemal for plunging their country into further difficulties—as it is not to be denied they have done—but we must in fairness acknowledge that they may both have acted from patriotic motives, and that in any case it must be difficult for their own countrymen to regard them altogether unfavourably even now. Nevertheless, the Central Government has, it is reported, determined to undertake serious operations against the Kemalists in order to repress the movement altogether, and the Allies will, it appears, give them an opportunity to make the attempt. The Cabinet has been reformed, three Ministers suspected of Nationalist sympathies being got rid of in the process; and the Sultan is reported to be at once with Damad Ferid Pasha regarding the necessity of putting an end to the existing state of affairs in Asia Minor. The report that the Government has been negotiating with certain powerful Kurdish leaders may indicate that practical measures towards securing that end are under consideration.

---

It is very unfortunate for Greece that in the hour of her triumph she should be troubled anew by rumours concerning a restoration of ex-King Constantine. If she is to do herself justice, she should now be free from all such distractions, in order to concentrate upon the task of consolidating her new territories and adjusting herself in all ways to fulfil worthily her new responsibilities; and rumours of the kind referred to can only have a harmful influence. Unfortunately, there is no room to doubt that intrigue is still rife, and that the ex-King is far from accepting the present situation. His entourage in Switzerland and his adherents in Greece maintain that he is still *de jure* King of Greece, insomuch as he signed no formal document of abdication when removed from the country. They look, or profess to look, upon the present ruler merely as his "regent," and await the moment when he will be "recalled by the voice of the people," and they will once more enjoy the sweets of office. Such, at least, is the picture drawn quite recently by a brother of the ex-King. The hopes expressed are little likely to be realised, but their existence is unsettling to some Greeks. If ex-King Constantine's professions of affection for Greece had any backing of truth, he could now do the country a real service

Digitized by Google

by making a clear declaration that he would never return to it again.

---

The situation in Syria is little, if any, clearer than it was a week ago. Up to the present, reports that have reached us have come from the one side only; and obviously the picture must be incomplete until reports from the other side are received and examined. Meanwhile we have to record that the French troops entered Damascus on July 25, that the Emir Faisal left the town on July 28 and is reported to be coming to England, and that a new Syrian Cabinet has been formed—apparently on July 25. According to one correspondent there was a meeting on July 29 between the Emir, Lord Allenby, Sir Herbert Samuel, and General Gouraud, at Haifa; and the same report announced that a British force was advancing beyond Dera'a. A statement made by Mr. Bonar Law a few days ago will be found on another page, but it does not throw much light on the situation.

---

That situation appears to be regarded with satisfaction in France, where the Emir Faisal is accused of plotting, intriguing, and generally of perfidy. In this country the satisfaction is by no means generally shared. It is not only that there is a very natural fear that the French action may react dangerously in Mesopotamia, and, indeed, throughout the Near East; but also that Englishmen have an uneasy feeling that, somehow or other, the Emir has not had fair play, and that they themselves are being kept in the dark by their own Government. They do not understand why news of what has been going on has taken so long in becoming known; and there are a good many questions to which they would like to have definite answers given. Why, for instance, was it only when General Gouraud's ultimatum had expired, or was on the point of expiring, that news of it was allowed to leak out? When was the mandate for Syria actually given to France, and is it a fact that the League of Nations has no information as yet that the mandate has been granted? How was it that nothing was made known regarding the appeals, said to be three in number, addressed to our Government, through Cairo, by the Emir? It would not be difficult to extend the list, but for the moment these examples of the questions that are being asked will suffice.

---

Two very interesting points were brought out in the course of some questioning by Mr. Lambert and some answering by Mr. Lloyd George in the House of Commons last week. The Prime Minister stated that he did not know the reason of the recent attacks by Arabs on British troops in Mesopotamia; and he attributed the great delay in setting up an Arab State to the fact that the Turkish Treaty had not yet been signed. He agreed that it seemed absurd that British troops were being attacked and killed for the purpose of supporting the Government in establishing an Arab State. Possibly some people will be inclined to wonder whether the word "absurd" quite fits the case. Others may be tempted to think that it is strange that, with all the money we are spending in Mesopotamia we are unable to ascertain why the Arabs are attacking our troops. And in view of the Premier's statement, all Englishmen will surely demand that no more time should be lost about signing the Treaty. In the meantime, little disturbances continue to break out here and there in Mesopotamia.

---

We publish on another page an article on Baku, in which it is described as "an amazing city." The adjective is undoubtedly well deserved, but at the present time it would seem that there can be nothing more amazing about the place than the mystery surrounding the fate of the fifty British prisoners there. Rather more than half that number are members of a Naval Mission which was passing through the city on its way to Northern Persia, and was caught in the flood of the Bolshevist outbreak at the end of April; the other unfortunates are understood to be civilians. Reports regarding their fate are contradictory. M. Litvinoff has informed our Government that the Baku authorities claim to be treating these prisoners most humanely; but other reports from various sources present a very different picture. The state of the prisoners is said to be deplorable; they are reported to be all confined in a single room, suffering acutely from heat and vermin; and one of them, M. Hewelcke, our Vice-Consul, has been condemned to death, though there are good grounds for hoping that the sentence is not likely to be carried out.

---

Twice last week the fate of these prisoners engaged the attention of the House of Commons, first Mr. Bonar Law and then Mr. Lloyd George being closely questioned on the subject. The result cannot be regarded as satisfactory. Both the Leader of the House and the Prime Minister made it clear that the Government felt they had done all they could to secure the prisoners' release, or at least their better treatment; but they both appeared to be far more conscious of the difficulties in the way than of any method of surmounting them otherwise than by working through Moscow. Moscow, on its part, declines responsibility, though it is "prepared to use its influence" with the Azerbaijan Republic. For the time being it seems impossible to do any more, but it is obvious that a British Naval Mission and a British Vice-Consul cannot with impunity be kept in any "Black Hole of Baku," to quote Mr. Ronald McNeill's alliterative phrase, by any trumpery mushroom Republic of the Caucasus. It may be done, but it must be paid for sooner or later. On that point British Labour will surely see eye to eye with the most old-fashioned Tory.

---

When he reported the arrest of Abdul Rahman Fahmy, secretary of the Cairo Committee of the Nationalist Delegation, our Cairo Correspondent hinted that sensational developments might be expected. The arrest was followed by that of Kyriakos Mikhail, a Copt, who was until lately well known in London, and of many others; and all these people are now on trial for being concerned in the direction of what is described as an "assassins' club," or "a society of vengeance." We need not here go into details of the trial which, as far as permissible, will be reported in our correspondent's letters. But we may note that it has incidentally led already to one person being convicted on a charge of intimidating witnesses, and sentenced to five years' imprisonment; and that it has produced a crop of most scurrilous attacks on all kinds of highly-placed people. These things are regrettable, but they were only what might be anticipated in the circumstances; and if, as is expected, the trial sheds light on the way in which the spirit of lawlessness has been fostered, and disturbances have been brought about in Egypt of late, it should prove a very great benefit to the country.

---

Since we last glanced at Persia affairs in that country appear to have taken a turn for the better, and Bolshevism and brigandage have suffered several checks. Thus, at Bunder Gez, a mixed force of Jingalis and Bolshevists from Enzeli was forced to take to its boats and retire. Sari and Barfrush have been retaken, and the Gendarmerie and Cossacks appear to have completely cleared Mazanderan of Bolshevists; while in the south, at Borasjun, the South Persian Rifles have inflicted a crushing defeat on a band of brigands, whose leaders have been killed. Unfortunately, against these successes, we have to note that trouble has broken out in Persian Kurdistan, where the Jaff tribe has inflicted a reverse on the Government forces, and on the Khovassan frontier, where a brigand chief, under Bolshevist patronage, has been giving considerable trouble. This gentleman has had the worst of a brush with British and Persian detachments, but it is reported that Bolshevist troops to the number of 2,000 have moved up to his assistance, and that others are concentrating on the Persian frontier. Information has been received at the War Office that martial law has been proclaimed at Teheran, and there is no word yet of any summoning of the Mejliss in the near future.

In the present tangled state of the world's politics it is a comfort to know that even a small kink shows signs of straightening out, and some such comfort may be derived from the cable announcing that the conversations with Afghanistan have been brought to a satisfactory conclusion. We are not, of course, at the end of the negotiations, which have ranged over a wide field, from the Khalifate to the frontier tribes, and from the international status to questions of commercial development; but we may fairly conclude that each party is now in possession of the views of the other side, and that is usually a long step in the direction of final agreement. The British position is plain enough. We want a good neighbour, strong enough to resist the pressure on the North and West, and ready to do business on fair and profitable lines. Afghanistan's true interests lie in the same direction, and it is permissible to hope that the Ameer will realise the fact, but there are many cross-currents to be allowed for, and it may be some time yet before what the cable speaks of as the final treaty of friendship is actually ratified.

---

It is pleasant to look a little further eastwards and congratulate our very good neighbour, the independent State of Nepal, on the news which it has recently allowed to be given to the world. The birth of an heir to the throne, an occasion which still counts for something even in the West, is a very great event in Katmandu, and even at this distance it is possible to realise something of the delight and expectation of the Gurkha nation. That Nepal is moving with the times is shown by the decision to prohibit the time-honoured practice of *sati*, or widow sacrifice, a practice which is almost incomprehensible to Europe, but in the Indian area has for a long period been accepted as both natural and praiseworthy. The Gurkha authorities are usually careful not to move too far in advance of public opinion, and if they have now penalised the old practice, it means that the mass of the people are, at any rate, prepared to acquiesce in the change.

---

We wish it were possible to conclude that they are prepared to take a step further and make the widow's life worth living. India as a whole has not yet taken this step, though it is nearly a century since *sati* was forbidden by the Indian law. Indian widows still occasionally sacrifice themselves, and we have even heard it argued that they are wise to do so rather than face the life of contempt and drudgery which lies before them. The hard truth is that legislators can accomplish little in the way of social reform; the real work must be done by preachers and leaders of the people, and while it is only just to recognise that many Indians have made earnest efforts in this direction, the results of their efforts are still small, and the widow remains the most pathetic figure in a land where pathos is seldom far to seek. Nipal may move faster than India in this matter. Until it moves the beneficent legislation of the Maharaja will not have produced its full effect.

---

The judicious student of Indian official literature knows that, whatever may be skipped, the publications of the Bureau of Education will repay perusal, and the note on the results of last year's work is no exception to the rule. Unfortunately, it is not very cheering. Expenditure seems to increase faster than the number of pupils, but quality of education lags still further behind quantity. Colleges, we are told, show a decline in the average of intellectual capacity, while the reports on secondary education produce a feeling of pessimism, and, though there is a brighter side, the prospect as a whole is not alluring. Worst of all, there is a significant silence regarding any improvement in the quality of primary education, the foundation of the whole structure, and apparently we are justified in concluding that nothing has been accomplished to remove the defects recognised in previous years. The last quinquennial report condemned the ordinary rural school as at the best a *crèche*. Is the Administration content that this reproach shall continue to apply?

# THE WEEK AT HOME.

**Ireland.**

The talk of conciliation in Ireland, and of negotiations with the Sinn Feiners, which seemed rather hopeful last week, has come to an abrupt and lamentable conclusion. The rioting has continued, and the rather childish exploits of the insurgents have gone on as usual—that was perhaps to be expected—but public opinion has been horrified by another brutal murder in cold blood. Mr. Frank Brooke, one of the chief citizens of Dublin, a director of the Dublin and South-Eastern Railway, member of the Irish Privy Council, and a Deputy-Lieutenant, was shot in the offices of the railway company at Westland Row Station. Several men were engaged in the murder, and eight or ten shots were fired.

Mr. Brooke's name was mentioned threateningly in a speech some time back by Mr. Barton, Sinn Fein Member of Parliament for Wicklow, and the latter is now in prison for his speech.

The position appears quite hopeless at present. The Sinn Fein leaders either cannot, or will not, repudiate these methods, and apparently they definitely rely on terrorism to enforce their demands for a Republic. The Roman Catholic Church, which has long tolerated, and in many cases been in open sympathy with Sinn Fein, has repudiated murder as a political instrument, but Sinn Fein appears more likely to disregard the thunders of the Church than to discard its methods.

The situation is likely to be still further complicated in a few days. Archbishop Mannix, a Roman prelate of Australia, and an Irish politician, has sailed from America for Ireland. He has a long record of anti-English propaganda in the Antipodes, and was particularly in evidence during the war as an opponent of conscription in Australia; he is the typical Irish firebrand in priest's clothing. The Government are not decided how to deal with him. At first they decided not to let him land at all, but legally a British subject cannot be prevented from landing in the British Isles; then it was proposed to allow him to land in one island, but not the other—a quite impossible compromise, typical of a Cabinet which is utterly distracted on this question. Probably it would be wise to allow him to land without any difficulty. His extreme opinions are not as a whole echoed by his Church, and English Roman Catholics appear to be rather restive under his propaganda.

The position of English Catholics in England seems rather difficult at the moment. The attitude of the Vatican during the war inspired a good deal of resentment, which fanned the smouldering Protestantism of Britain into a temporary flame, and the old suspicion of the Papacy appears to be rather strongly in evidence at the moment. One would imagine that Romanism has gone back in England since 1914, and episodes like these of Archbishop Mannix do not help it forward. The attitude is not very logical, for the Archbishop clearly puts his country before his Church; whereas most Irish priests, according to a dictum of Parnell's recently quoted by Mr. William O'Brien, take precisely the opposite course in the long run, but anybody who expects logic in the present position of the Irish question looks for the impossible.

**Railway Fares and Coal.**

The Government's decision as to the increased railway fares bears all the marks of compromise. It is true that the shoutings of many newspapers and the curses of every father of a large family whose holidays have been taxed have not availed to postpone the date of increase for more than a day, from the fifth to the sixth of August. But the increase is less than had been threatened. First we were told that all fares were to be double the pre-war rate; in fact, they are only to be one and three-quarters. (Probably Sir Eric Geddes, like Clive, is astonished at his own moderation.) The season ticket holder escapes more lightly still—a mere 50 per cent. increase is the toll taken from him. This means practically that everybody who travels over the same stretch of rail more than once a week will find it pays

Digitized by Google

him to take out a season in the case of short distances; in that of long journeys, where season ticket rates are proportionately lower and the increase on the ordinary ticket mounts up substantially, a season will pay if used once a fortnight.

Even as it is, these increases will kill a certain amount of traffic, just as the trams, by raising their rates in London, found that a good many people preferred to walk. Nobody, of course, seriously believes the theory that excursion tickets and week-end fares and similar travel luxuries are to be restored; they tell us these things, as mothers give their babies a comforter, to keep us quiet. But the potential increase of revenue will not make up for the existing increased cost of operating the railways, and within a year the whole question will come up again.

Meanwhile, the miners are again threatening a strike. (It is quite six weeks since the last threat.) They want the price of coal reduced and their wages raised, and if either or both are not done they will never do another stroke of work. They argue that the Government gets some sixty millions a year out of the coal industry in the shape of excess profits—this is true, apparently, in the form of export coal, and that only—and they hold that this should be divided in the ratio of £36,000,000 to the public in reduced prices and £27,000,000 to themselves in increased wages. What they do not see—or perhaps they do see it—is that the public would have to make good the whole sixty odd millions in the shape of taxation, while they would still get the odd £27,000,000. There is a rude phase about selling a pup, which seems appropriate at this stage of the argument; but it is probable that the reduction of price is only put in as a piece of window-dressing, and that the real demand is for more wages again.

**"When Labour Rules."**

Mr. J. H. Thomas has written an article in *Pearson's Magazine*, telling us what England will be like under a Labour Government. We are to have co-partnership; mines, railways, canals, harbours, shipping lines, means of production, and roads will be nationalised; drink will be under national control—no "Pussyfoot" or Prohibition for him—the hours of labour will be shorter than ever; capital will get less interest, and the "idle rich" will be extinct; there will be work for everybody, and an old-age pension for all at sixty; motherhood will be endowed, the unfit will be cared for, and there will be work for all. Splendid!

**The America Cup.**

The final defeat of *Shamrock* for the America Cup caused no more excitement than her preliminary victory. There was little public interest in the proceedings throughout, and the newspapers recognised the fact suitably by summarising the whole thing on a back-page. Even had the result been different, it would hardly have evoked much more response.

**The Skies and Cricket.**

The weather has forgotten even the elements of decency; the sun, like the working-man, has gone on strike, and it has poured for hours and days. For all that, cricketers—who must surely be able to swim—have persisted in playing, and in the match, Essex v. Middlesex, there was a finish that one would have gone miles to see. Middlesex led by eighty runs on the first innings, but in the second Essex scored well, and beat their opponents by four runs within five minutes of stumps being drawn.

Surrey, which played a glorious game a week ago, sank into utter despair against Kent at Blackheath—they always do badly on this ground—and were beaten soundly by an innings; the fact is, that a team which is Hobbs and ten ciphers is capable of anything when Hobbs gets going, but when he fails, the rest crumple up.

The choice of the M.C.C. team for Australia seems to have given general satisfaction. Sixteen men being chosen, there was less room for grumbling than in the old days, when thirteen or fourteen was the usual number; and also, after the five years' interregnum of war, the men are more of an unknown quantity, and their backers proportionately less vocal.

**The British Shipping Recovery.**

Much gratification has been expressed at the publication of the latest shipbuilding figures. During the war America embarked on the industry, and we were told, in the flamboyant language which is popular in the other side if the Atlantic, that the United States would soon wrest the palm of the mercantile marine out of our effete hands. But acts speak louder than words. The tonnage of vessels now being built under Lloyd's register show 2,797,000 tons building in the United Kingdom, and only 2,133,000 tons building abroad. During the last quarter work was started in Great Britain on 200 vessels, of 584,000 tons; sixty-three vessels of 10,000 tons and upwards are now being built in our yards. The number of vessels launched from British yards during the same period was 154, with a total of 518,000 tons, an increase of 70,000 tons on the previous quarter.

On the other hand, the amount of tonnage under construction in the United States has fallen by 467,000 tons in comparison with the previous quarter. American tonnage building has fallen by half, British tonnage building by nearly 60 per cent. Apparently, therefore, it will only be a short time before we recover our pre-war position in most seas of the world.

**The Week's Books.**

Undoubtedly the book of the week for most readers is Lord Jellicoe's "The Crisis of the Naval War" (Cassell). His first volume dealt mainly with the Grand Fleet; this is concerned with the campaign against the submarines. Lord Jellicoe points out that a large number of destroyers were required for the anti-U-boat measures, but the quantity available was quite inadequate, and even those we had were drawn upon for convoy work. Another defensive measure was the laying of mines, but "unfortunately in January, 1917, we did not possess a mine that was satisfactory against submarines. Our deficiency in this respect was clearly shown in the course of some trials which I ordered, when one of our submarines was run against a number of our mines, with the result that only 33 per cent. of them exploded. They were fitted, of course, with only small charges. The Germans were well aware that our mines were not very effective against submarines." Of the 186 submarines lost by the Germans, Lord Jellicoe reckons that British submarines destroyed 19, destroyers and patrol craft sank at least 20 by gunfire or ramming, and four or five more by towed sweeps. Decoy ships sank about 12, men-of-war rammed 4, merchant ships 4, and 10 were destroyed by our nets. At least 7 were destroyed by aerial attack, 6 were interned; the remaining 30 cannot be definitely accounted for. Lord Jellicoe pays tribute to the work of both Sir E. Carson and Sir E. Geddes at the Admiralty. The book will become one of the classic authorities on the war, and it is not likely to give rise to such controversy as the chapters in his previous work on the battle of Jutland.

Serious scientific readers will do well to purchase "The Concept of Nature" (Cambridge University Press), by Professor A. N. Whitehead, who "professes" Applied Mathematics in the Imperial College of Science and Technology. The book, which prints for the first time the author's Tarner Lectures, can easily be followed by non-mathematical readers with a fair knowledge of philosophy. He accepts most of Einstein's work, but not the theory of non-uniform space or his assumption as to the peculiar fundamental character of light-signals; but Mr. Whitehead thinks that Professor Einstein "has cramped the development of his beautiful mathematical method in the narrow bounds of a very doubtful philosophy."

The Faith Press has published two very interesting little booklets, the one on "Assyrian Church Customs," by Surma d'Bait Mar Shimun, with a preface by the Archbishop of Canterbury; the other on "The Church and Faith of Armenia," by Dr. Abel Abrahamian, Supreme Varthapet of Armenians in England, with a preface by the Bishop of Gloucester. The Anglican Church has taken considerable interest in the Assyrian Christians since the time of, I believe, Archbishop Benson, and this account of their beliefs and discipline will probably find many readers.

OCELLUS.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents.)*

## EGYPT.

CAIRO, July 22.

**Making History.**

Never knowing what the day may bring forth, we are living in a time when history is being made. Though we know not what they will be, we realise that we are on the threshold of political developments the effect of which is bound to be widespread. We see before us, dim, it is true, as in a shady pool, another Constitution; the reconstitution of the Judicature in Egypt as it applies to foreign subjects; the passing away of the Capitulations, with their safeguards and their encumbrances; an era of economic development of which the foundation has been laid, and the extension of which will depend upon the development of the cotton industry, which again is dependent upon the water supply. Mention of the cotton industry induces a reference to the scheme for the maintenance and improvement of the quality of Egyptian cotton and the increase of its yield, which I have referred to elsewhere; mention of the water supply brings to mind the Nile projects and the scheme for extracting power from the Assouan Dam. Any one of these matters is in itself of very great importance to the country; together they promise to have an effect which will change the whole political structure and enlarge the economic and commercial activity of Egypt to a degree as yet only to be seen faintly.

It is only natural that with such epoch-making proposals in the air Egyptians are slightly bewildered. There is none among them who can take a bird's-eye view of the general situation. Most of them are centred in the political issues, and their interest has been but deepened by the sensational trial which opened on Tuesday last in Cairo of twenty-eight Egyptians of various positions in life, charged with having conspired to harm various exalted personages. Though the mental outlook of the masses was broadened considerably during the war, they find the trend of recent events too much for them to comprehend. They are seeking enlightenment, but momentarily they are lost in the maze of developments. The result is that, though we have furious discussions in the native Press, the various arguments follow a vicious circle, to end where they began. There is no campaign of education, no publicity bureau to distribute even partisan explanations. To attempt to portray, therefore, the views of the Egyptians in the main on the big topical questions of the day can result only in the daubing of a few disconnected strokes upon a canvas to represent obscurity.

**The Trial of the "Vengeance" Gang.**

Our latest sensation is the current trial of a body of Egyptians who are believed to have been members of an apparently bloodthirsty association known as the "Vengeance Society." Since they are charged with having conspired to cause grievous harm to the Sultan and the Ministers, and against two of them is a further charge of having incited to murder, it is patent that if the evidence which is to be produced for the prosecution be trustworthy, this body of Egyptian Nihilists will explain much that has puzzled us during the last few months. I do not say that the men who are to-day standing their trial had any hand in this anarchistic business. That remains to be seen.

Admission to court has been by ticket only. The court is not a small room, but it has been crowded to suffocation daily. There are twenty-four barristers, foreign and native, appearing for the twenty-eight accused. One hears all sorts of accents, and one hears different interpretations of points of law which could only be possible among a cosmopolitan group such as this assemblage. Judge Linton Thorpe, who is Judge Advocate, has made a very favourable impression in every way. He is sympathetic and courteous, and he has remarkably wide knowledge of the law. Prosecuting is Mr. Maxwell, who made a wide name for himself by his clever handling of the technical issues in the recent case before the Nile Projects Commission. He holds the bridge against his twenty-four brethren, and so far the honours are with him.

The case began on Tuesday morning. That is, the formalities commenced. The case proper has not commenced yet. After the formal opening Mr. Maxwell requested the court first to hear the charge of intimidation of one of the witnesses for the prosecution against a youth, who is a clerk in one of the Native Courts. The evidence for the prosecution was, that the accused, in company with a number of others, had gone to the house of this particular witness for the prosecution and threatened him that if he did not refrain from giving evidence against Abdel Rahman Bey Fahmy he would be killed and his family's house burnt down. The defence sought to establish an *alibi*, and to do so brought in the sister of the accused, a girl hardly out of her teens, who appeared in the conventional black robe and white veil of the Moslem lady. Her appearance is considered unique in the history of cases before military courts in this country. The case was concluded yesterday, after Mr. Maxwell had shown that there was a strong organisation endeavouring to intimidate the witnesses for the prosecution. The decision, however, has not yet been promulgated by the Commander-in-Chief.

All to-day has been occupied in hearing a unanimous application from the whole of the counsel for the defence, for an adjournment. The court, after hearing the reply of counsel for the prosecution, refused the application. The court is to sit morning and afternoon—a decision which is bound to react upon those who have to engage in it, for the heat at the present time is more than usually trying.

**Egyptian Athletes Leave for Antwerp.**

Yesterday afternoon the party of Egyptian athletes who are going to Antwerp to represent Egypt in the Olympic games left Cairo station. The party includes a football team (Association), gymnasts, runners, a wrestler, and a weight-lifter. There has been much sorrow and heart-burning over the selection of the representatives, echoes of which still resound in the daily papers; but it is agreed that the men who left in yesterday's party comprise the flower of the athletic community of Egyptians. Sports such as those they will have to contest in are as yet but in their infancy in this country. There are no traditions, no records, no ancient champions. Some of the party, indeed, have won their Blues at the Home 'Varsities, but since their return to Egypt they have been engaged in games in which the standard of skill has been infinitely lower than at college. And so the team goes forth thus handicapped, bearing bright hopes from enthusiastic—but much younger—comrades and good wishes from every section of sportsmen in Egypt.

**Daring Theft from the Museum.**

The Cairo police are searching for two very valuable exhibits recently stolen from the Cairo Museum. The theft must have been an impudent one, since the exhibits naturally are well guarded. All that the authorities know is that one day an ancient dagger and a knife, with flint blades and gold handles, relics of the glorious past, were in their cases and the next day they were not. There is a theory that the theft is the work of some over-enthusiastic connoisseur; and in the absence of any known attempt to barter the articles the theory has not been disproved. Numbers of likely repositories of the stolen goods have been searched but without result.

## GREECE.

ATHENS, July 17.

**The King's Departure.**

King Alexander, accompanied by his A.D.C.s, left Athens on July 15 for Dedeagatch, Gumuldjina, and other important towns in Western Thrace. His original plan to proceed to the theatre of operations in Asia Minor will not be carried out, in view of the con-

Digitized by Google

clusion of that campaign. The cruiser Averoff, with his Majesty aboard, weighed anchor at 10 p.m. The King will probably return to Athens in about ten days.

Madame Aspasia Manos, his Majesty's morganatic wife, has gone to Smyrna for the purpose of offering her services as a Red Cross nurse.

**In Asia Minor.**

The operations in Asia Minor have come to an end, and the triumphant Greek Army is now enjoying a well-earned rest. The newly occupied regions hitherto terrorised by Mustapha Kemal's hordes have found peace once again, and the population, both Christian and Mohammedan, has resumed its work free from the horrible nightmare of the past. It is rumoured here that some of the Greek regiments in Asia Minor have already been dispatched to Thrace to be held in readiness for any eventualities, and particularly to watch Bulgaria and frustrate any interference on her part in the forthcoming advance into Eastern Thrace.

General Paraskevopoulos, the Greek Commander-in-Chief, has sent the following telegram to General Milne, the Commander-in-Chief of the British Forces in Constantinople: "The Greek Army and myself wish to express our warmest thanks for the precious assistance which the British Fleet rendered to the Greek troops during the recent operations. The Greeks will never forget this fresh proof of sympathy afforded by the sons of our big British ally, for which eternal gratitude will remain in the depths of our hearts."

**The 14th of July.**

The anniversary of the fall of the Bastille was celebrated as usual in Athens and Piræus. A reception yas held at the French Legation by the Ambassador, M. de Billy, and a number of appropriate speeches were delivered. The Greek Government was represented by MM. Repoulis, the Vice-President of the Council; Politis, Minister for Foreign Affairs; and M. Negrepontis, Minister of Finance. All the public buildings, banks, etc., were beflagged, and the main thoroughfares of the town were illuminated at night. A gala performance was held at the Dionysia Theatre, in the presence of the French Ambassador; General Gramat, the Chief of the French Military Mission in Greece; and many other French officers and leading members of the French colony in Athens. Two of the Greek Ministers, MM. Tsirimokos and Simos, were also present.

**The Goerlitz Officers.**

The trial of the Goerlitz officers, which lasted for nearly two months, has at last come to a close. Of the accused, Colonel Carakalos, Lieutenant-Colonel Valettas, and Second-Lieutenant Agapitos were condemned to death, whilst Majors Vlassis and Christo were acquitted.

The above officers were serving in Macedonia with the 4th Greek Army Corps, which, after handing over to the Bulgarians the town of Kavalla (September 6, 1916), itself surrendered, and was dispatched to Goerlitz, in Germany, abandoning all its guns, ammunition, and the unfortunate Greek population of Eastern Macedonia to the mercy of the invader.

Whilst in Germany, the officers in question caused proclamations to be distributed amongst the Greek troops then fighting by the side of the Allies on the Macedonian front, inciting them to desert.

**Ottoman Subjects in Macedonia.**

In accordance with a law passed some time ago, all Moslems in Macedonia had to choose between the Greek and the Ottoman nationality. Those choosing the former would be allowed to stay in Greece, but any Turks preferring to retain their own nationality would have to leave this country. The last delay granted by the Government expired on the 14th of this month. But as those who have elected to retain the Ottoman nationality, and who are, in consequence, obliged to emigrate, are unable to do so at present, owing to the unsettled situation in Turkey, the Greek Government has given them permission to remain in Greece pending the signature of peace with Turkey.

Of the many thousands of Turks residing in Macedonia, only fifty families have chosen to retain their Ottoman nationality.

## ROUMANIA.

BUCHAREST, July 20.

**The Government and Strikes.**

There has still been no work accomplished in the Parliament, and the deputies continue to indulge in the most puerile and undignified personal recriminations, descending even to vulgar personalities; so that if a man rejoices in a bald head, he may expect to have it made a subject of reproach by an excited opponent. In the meantime, the employees of the Post, Telegraph, and Telephone services, and of the tramways, have all been on strike for a week. The business of the city, and, indeed, of the whole country, is becoming more and more disorganised, and the methods of the Government in dealing with the situation have so far been too autocratic and uncompromising to lead to anything but further trouble. A more conciliatory attitude was happily adopted by M. Trancu-Jassy (Minister of Labour) when he received a delegation from the Post Office employees two days ago; and it is to be hoped that some agreement may result. For the time being a few letters are being delivered by soldiers, and a number of society ladies have been serving as volunteers in the General Post Office to sort the letters and preserve some semblance of order.

The tramway conductors and drivers have come out in sympathy with the clerks who struck some time ago for better wages. And all this in spite of the recent decree-law—of which particulars were given in my last week's letter, categorically forbidding all strikes by Government employees.

It is stated that the reason for the Post Office strike is the Government's failure to fulfil promises made to the employees before the elections. If so, it is a pity the Government has so compromised itself; but, however that may be, it is a fact that the workers' unions in this country have no leaders of sufficient education or general knowledge to grasp the real significance of the political and economic situation of the country, and none, therefore, who can lead them intelligently on a reasonable course. They are still very young and irresponsible organisations, and need careful handling if they are not to be driven to wild extremes.

**Bolshevist Advance in Poland.**

The severe attitude of the Government was probably partly dictated by the old fear of Bolshevism which has been revived by the recent advances of the Russian armies in Poland. Anxious whispers that a mobilisation order had gone out have been heard on all hands this week; but the fact appears to be that troops have been concentrated along the border purely for defensive purposes, and the Bolshevist armies are stated to have orders not to go within a fifteen mile limit of the Roumanian frontier. It would indeed be hard to believe that the Bolshevists, who are so anxious for peace (even if only for the purpose of extending their insidious propaganda), should embark anew upon war with this country, and the Government would get little support from the country itself if they proposed to send Roumanian troops to the aid of the Poles. A Crown Council was held on Sunday to discuss this and other pressing questions regarding the general economic situation, including that of the unification of the currency. The main discussion appears to have been upon the latter subject, but it was agreed that Roumania would stand by her Allies in whatever course they decided to adopt towards the Bolshevists. The Council probably felt pretty safe in the assumption that no military measures would be taken.

**A Strange Balloon Accident.**

A sad accident happened last week at the practising ground of the balloon service. For some weeks an observation balloon has been noticed almost daily in the same place. Last Monday two young observers were sent up in it. While they were taking their observations a heavy thunderstorm came on, but for reasons which have not yet transpired, the balloon was not pulled down at once. It was struck by lightning and took fire, and the two men were precipitated to the ground. Their funeral took place the following day, when a large and

Digitized by Google

sympathetic crowd followed the *cortège* to the burial ground.

**Limited Water Supply.**

It is a curious fact that during the whole of the month of June, though the weather in the morning seemed clear and cool, a thunderstorm came up almost every day between 1 and 2 o'clock. It is now much better—up to 90 degs. in the shade—but would be unbearable but for an almost constant slight breeze. One of the greatest trials of the townspeople is that, owing apparently to lack of fuel for pumping purposes, the water is turned off all over the town during at least half of each day. The Athenee Palace Hotel has some contrivance by which it has a constant supply of water, but the rest of the town has to make provision in the early morning for the first half of the day, and in most houses it is impossible to have a bath at night because the water is turned off.

## BULGARIA.

SOFIA, July 10.

**M. Stambolisky on Internal Reforms.**

Public opinion abroad is very badly informed regarding internal conditions in Bulgaria, and for this reason M. Stambolisky has considered it advisable to give explanations on the subject:—(1) The public labour service, which replaces military service, will pass through the school of labour all the youth of Bulgaria, and will at the same time make it possible for the Government to carry out their building programme, including the construction of public buildings, roads, etc. (2) The restriction of the quantity of land held by the producer (or cultivator) to 30 hectares, and the taking over—subject to compensation—of the land from those who do not cultivate it enables land thus set free to be distributed among the refugees from Bulgarian territories annexed to other countries, and to people who were landless. Thus, by creating a spirit of proprietorship and fostering the love of work on the soil, it is hoped to counteract Bolshevistic tendencies among the poorer classes. (3) By dispensing with the intervention of the speculator, through the organisation of producing and consuming co-operative institutions, it is intended to transfer a large part of the country's commerce into the control of public organisations. (4) High taxation of unproductive capital is dictated by purely fiscal considerations and the desire to secure the employment of available capital in productive enterprises of infant Bulgarian industry.

As to foreign capital, M. Stambolisky's Government aims at enlisting its support in the development of Bulgarian industries, and with that object will accord it every facility, by exempting it from certain taxation. Similar encouragement will be given in the case of Bulgarian capital employed in production.

Such measures, it is anticipated, will introduce a new era in the economic life of the country, and, in a purely evolutionary way, without disturbance or upheaval, will open up a new and wider horizon to the country. The labour training, the agrarian reform, the improved export, and the organised distribution, through co-operative societies and under the control of the State—all these things, it is anticipated, will improve the material condition of the villages and ensure the towns becoming producers. Thus Bulgaria will be enabled to fulfil her pledges to the victorious Powers, and to hold out the hand of friendship to those of her neighbours who are willing to take it.

**Socialist Congress.**

The Congress of the Broad Socialists was opened last Sunday, about 300 delegates being present. Two currents are observable in this party—one revolutionary, the other opportunist, and at this Congress it was the latter that preponderated. From this fact it appears to be deducible that the Broad Socialists aspire to taking part in the Government.

**The Orient Express.**

After six years' suspension direct and rapid communication between Paris and Constantinople has been restored. The first train of the resumed Orient express service passed through Sofia last Sunday morning at half-past eleven. Among those who were at the station at the time were the King and the Director of Railways, M. Karacacheff.

## CYPRUS.

NICOSIA, July 6.

**Triumphant Hellenism.**

Close upon a century ago bishops and leading men were being hanged at Nicosia on charges of assisting in the "rebellion" of Greece against Turkey. Some of their young children were sent to England and France to be brought up, and their sons and grandsons are among the island citizens. No wonder that the spirit of revenge should still survive among the classes to which they belonged and returned. There is but little going on, and the papers are chiefly filled with the prospects, politics, and preparations of Greece. Nor is it surprising that the logic of Greek ambition should be somewhat hasty, and the tone of the Press incline to be bombastic. They now argue that it is not owing to the sympathetic pity or favour of the Allies, and of the Peace Conference, and not solely to the personality and influence of M. Venizelos, that Greece is acquiring her new territories. It is because she has won them by her own valour, and by the unaided power of her own sword. Greece is the chosen instrument for carrying out the decisions of the Turkish Treaty, and so for confirming and establishing the peace of the whole world. It is, then, the Greek Army that will henceforth win back all the regions to which she is by historic right entitled. These will include all the islands of the Eastern Mediterranean, not only the Dodecanese, and will include Constantinople itself. "Forward, then, youths of Cyprus, and take part in the glories that await us!" Recruiting continues, and many who are over forty years present themselves in hope of being passed; returning to their villages, if rejected, "with tears in their eyes, and in those of their families."

**Settlement of Refugees.**

A step forward is being made by the poor refugees who, in their thousands, have found a temporary, and for many, it may probably be, a permanent home in the island. Armenians and Russians may leave lasting traces in Cyprus, as others before them have done at various epochs in the past, as proved by distinct ethnological types, and in the names of various villages. The Armenians, who have escaped from the savagery of Kemalist bands of ruffians have been, for sanitary and other reasons, located near Limassol; and have now been allowed to quit what was the military camp of Polemidia. They are settling down in various villages in its vicinity. Their support has been due to charitable aid from England through the kind relief of the Lord Mayor of London's Fund. They are chiefly from Mersina, Adana, Tarsus, and other places in Cilicia, as well as from the Smyrna district, and they have many tales of brutality and of narrow escapes to tell. They will proceed to establish chapels, schools, and other institutions of their own. The Russian refugees are in the east of the island, in the Famagusta district. They include many skilled mechanics, and artisans of many trades, such as house-building, chemistry, electricity, surveying, and agricultural work. They, too, should be able to impart a good deal of technical knowledge to the natives, who have much indeed to learn. They have formed a society at Famagusta under the name of "Orit," which is prepared to undertake work and contracts of many kinds. The new comers of

**ROYAL SCHOOL**
FOR
**Daughters of Officers of the Army.**

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.

both nationalities, besides adding usefully to the population, should be able to contribute much to local handicrafts and industries, as Syrian refugees did during the war in leading the way to a new start in tobacco cultivation.

## ALBANIA.

ALBANIA, July 18.

**Italo-Albanian Relations.**

It was hoped that Signor Giolitti desired to put an end to the Italo-Albanian conflict, for he had declared himself a supporter of an independent Albania; and it was understood that Baron Aliotti had explicit instructions. Unluckily, the choice of a plenipotentiary was not quite happy, for Baron Aliotti, who was Italian Minister here in 1914, had left a not entirely satisfactory memory, by reason of his relations with Essad Pasha.

The Italian Government, while expressing benevolent sentiments towards Albania, wishes to retain control over Valona. Just now it is ready to disclaim pretensions to the town itself, but it demands the land of Sasseno and two points on the mainland—Linguetta (Cape Karaburun) and Trepanti, north of Valona. Thus, by means of fortifications which are proposed, Italy wishes to control the port, and even the town of Valona.

The Government and the people of Albania are opposed to any concession of the kind; for, while they recognise that good relations with Italy are very necessary, they strenuously object to any infringement upon Albanian territory. In their view, if Signor Giolitti seriously renounces the imperialism of his predecessors, he should abandon all thought of dominating Valona in any way. In these circumstances, negotiations have been broken off since the day before yesterday. Baron Aliotti exerted himself to the utmost, but the Albanians stood firm. The situation at Valona is favourable to them: volunteers are flocking in from all parts, well armed; their *moral* is excellent, and they are prepared for all eventualities. The Italian garrison, on the other hand, is suffering much from malaria.

The reports regarding the bad treatment of the Italian prisoners by the Albanians are utterly false, and such ill-treatment exists only in the too active imagination of the Rome telegraph agencies.

**The Internal Situation.**

The Government's position appears to be steadily growing stronger. Its policy in regard to Valona, which conforms to the wishes of the nation, has gained general approval; and malcontents become rarer every day.

Four days before the assassination of Essad Pasha, the Government arrested some of his partisans, Omer Bey Shiaku, Veli Bey Kraya, Hamid Bey Toptani, Fuad Bey Toptani, and a score of others, whose houses were burned, in accordance with the ancient law of Dukaghin. Osman Bali, the famous agitator was not arrested, but his house was burned. He is now on the Serbian frontier, and, it is unfortunately necessary to add, the Serbian authorities are reported to be lending him help. The prisoners have been sent to Argyrokastro, where they are in prison, awaiting their trial. Bairam Tsour, the famous chieftain of Hassi (Jakova), who has returned to Albania, and to whom the Gendarmeri has been handed over, is giving proof of great energy.

## MARTIAL LAW AT TEHERAN.

Information has been received at the War Office that martial law has been proclaimed at Teheran and three small newspapers suppressed for revealing movements of troops. The situation on the Khorassan border is somewhat disturbed. The brigand Khuddu (or Khudaverdi), whose headquarters are near Shirwan, has been lavishly distributing rifles and collecting supplies, and has now proceeded to Firuzeh, on the Persian frontier, south-west of Askabad. On the 11th and 12th British and Persian detachments had a brush with some of this man's followers north-west of Bajgiran (120 miles north-west of Meshed). Both sides suffered loss, but Khuddu's men were much disheartened and departed from the area. A body of 2,000 Red Moslem troops moved forward from Askabad to Firuzeh to support Khuddu, who is making preparations for an early incursion into Khorassan. Other Red troops are being concentrated on the Persian frontier.

## CORRESPONDENCE.

### ITALY AND YUGOSLAVIA.

TO THE EDITOR OF "THE NEAR EAST"

SIR,—As one who has lived for the last four years in the Balkans, in close contact with the Serbian and Italian Armies, I cannot refrain from protesting against the anti-Italian animus displayed by the writer of the article published in THE NEAR EAST of July 22 under the heading of "Yugoslavia." One feels so intensely that in the present state of international unrest nothing but harm can come out of such an attitude.

The first difficulty for all those who wish to mediate between contending nations is to realise distinctly their differences in national character. The Italians, as an old race, are pacific, liberal, very highly civilised, while the Serbs have all the impulsiveness of their hot national youth. Nothing could bring out this contrast more clearly than the attitude of the two armies towards one another in Macedonia. When they first came into contact there was considerable distrust on the part of the Serbs of the Italian troops, who afterwards fought shoulder-to-shoulder with them for over two years. The gratitude, however, for the salvation of the remnant of the Serbian Army by the Italian Navy at the end of 1915 somewhat mitigated the prejudice of centuries in the Serbian mind. Contact and personal acquaintance in a few months completely wiped it out. To say that the relations between the Serbs and the Italians on the Macedonian front were cordial would be to understate the actual situation. Officers of the two armies were continually giving hospitality to one another, and at every mess the eternal friendship of the two sister nations was enthusiastically toasted. During a conflict in the streets of Salonika between French and Italians, Serbian elements passing by rushed in to aid the latter, crying, "Buoni Italiani!" So high an opinion had the Serbian Crown Prince of the military qualities of the Italian force that he personally urged upon the French Command that provision should be made in order that the Italians might advance side by side with his own men to the liberation of his country and his triumphant entry into Belgrade. Had his desire been carried out, how much subsequent misunderstanding might have been avoided! All this is forgotten by the Serbs to-day.

According to your correspondent, Croats and Serbs are now uniting in holding up to contempt Italian military valour, to which the former owe the defeat which brought forth their liberation at Vittoria Veneto and the latter their victory, which could not possibly have been so complete had not the Austrian Army been pinned down to the Alps, awaiting its débâcle.

It is a pity indeed that these two contending nations should be incited one against the other by correspondents who lay far too great reliance upon reports supplied to them. By publishing such utterly untrustworthy information, by resurrecting old slanders and legends derogatory to the Italians, and exploded time after time by serious historians of the war, they are inciting Yugoslavs to fight against a race their equal in valour, though not in aggression, and their superior in all other points of civilisation. Moreover, they are alienating from Britain the sympathies of our oldest friends in Europe.—I am, etc.,

HAROLD E. GOAD
(on behalf of the British-Italian League).

74, Grosvenor Street, W.1, July 28.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Though I am not in the habit of answering letters which are both undated and unsigned, I accept the challenge of your Bulgarian correspondent who is apparently afraid to sign his name. I have to-day written to the *Messager d'Athenes* for the copy in question and I will hold him responsible for all consequences.—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester,
July 29, 1920.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—I have followed with keen interest the little dispute between your Bulgarian correspondent and M. T. Mosconas with reference to an alleged quotation from the Bulgarian journal *Zora*, and I have a few remarks to make on this point.

In all fairness to M. Mosconas, I must say that I myself have seen a copy of the *Messager d'Athenes*, giving information of a like nature as that cited in M. Mosconas' letter, and stated to be a quotation from the *Zora*. Unfortunately I cannot give the date of the copy in question, as, knowing the methods by which Bulgaria seeks publicity, I looked upon the information in question as nothing out of the ordinary, and I consequently destroyed the copy.

Anybody with the slightest knowledge of the Balkans would know full well that no Bulgarian Government could overlook so

fine an opportunity of showing themselves to be the injured party, as the return to Bulgaria of a few thousand ex-Komitaji, who, having settled themselves on appropriated Greek farms, found at the time of the Greek advance that as their spiritual home was Bulgaria it behoved the material man to remove there also. So far as I can remember, the article in the Greek paper was headed "Les Bulgares contradictent eux-memes," and I have no doubt that, with the assistance of the editress of the *Messager d'Athenes*, the matter can be satisfactorily settled. The chances of a misprint, the writing of a wrong date for the particular copy of the *Zora*, are so great that they do not warrant the use of the terms employed by your correspondents. It looks as if the Bulgarians, having unusually little to grumble about, have found a weak spot in their opponents' armour, and are trying to extract every advantage from it without using reason.

Your correspondent who anonymously signs himself "Britisher" —["A British Reader of THE NEAR EAST."—ED.]—grows sarcastic on what he terms the smiling Greek. And why should not the Greeks smile? The smile has changed faces now. The Bulgars know who it was that brought about the downfall of their "Empire" in the Great War; the Bolshevists know who it was that saved the French Army in South Russia from annihilation. When a great Power like France is compelled to sue for an armistice with a band of Anatolian brigands, which, in company with the "European" residents of Turkey, she has for so long both petted and robbed, and the much-despised "Levantine" Greek, in spite of the prophecies of Western Europe's foremost military experts, Marshals Foch and Wilson, rounds up the much-vaunted Turkish rebels in fifteen days, the Greek may well smile at the now harmless abuse of his defeated enemies and their sympathisers.—I am, etc.,

ALEXANDER T. CALLINICOS.

July 30, 1920.

## PRESS ON THE NEAR EAST.

### The Arab Problem.

The *Manchester Guardian* of July 24 puts forward the two policies which are advocated in this country for dealing with Arabs. It says:—

Our policy in the Middle East, as elsewhere, has reflected the contrary influences of two schools. One school believed that the Arabs, rescued from Turkish rule, might look for a self-respecting future; the other held that they were politically incapable, bound to be under one master or another, pawns in the rivalries of the Great Powers. One school welcomed the prospect of the setting up of a series of Arab States with the promise one day of a federation of Arab communities; the other regarded the Arabs as so much raw material for the administrative industry and talent of the British race. One school held that we might play a noble and disinterested part in aiding their liberation and development; the other that it was our right to make the most of the oil and resources of Mesopotamia for our own aggrandisement, while keeping peace and order among troublesome tribes. One school inspired the famous proclamation issued by Sir Stanley Maude to the people of Bagdad: "Our armies do not come into your cities and lands as conquerors or enemies, but as liberators. . . . You people of Bagdad, whose commercial prosperity and whose safety from invasion and oppression must ever be a matter of the closest concern to the British Government, are not to understand it is the wish of the British Government to impose upon you alien institutions. It is the hope of the British Government that the aspirations of your philosophers and writers shall be realised, and that once again the people of Bagdad shall flourish, enjoying their wealth and substance under institutions which are in consonance with their sacred laws and their racial ideas." The proclamation ended by hoping that the Arabs of the vilayet of Bagdad might be united with their kinsmen in north, south, east, and west in realising the aspirations of their race. The other school has set up this purely British administration in Mesopotamia and taught the Arabs that they have merely changed their masters.

After supporting the recent suggestion of Col. T. E. Lawrence of reducing our part in the government of the Arabs to the part we play in Canada and South Africa, it states:—

We stand at a crisis in the relations of East and West. Either Europe will come to terms with this new Arab movement, a movement that we encouraged when it served our purpose, or Europe will be involved in a new and most perilous conflict. It would be the part of a statesman to use this opportunity for putting the relations of the chief Powers with the weaker races, or those less developed and less experienced in a political sense, on a new footing. He would recognise that the old method, which meant the imposition of European institutions or of European rule on foreign peoples, is suited neither to the character of the problem in the Middle East nor to the stage that we have reached in political development. What we have to find is a method of helping the Arab populations from our resources of experience without weakening their self-respect, or deflecting the course of their natural development, or taking advantage of their difficulties. Any other course will result in a perpetual conflict, which will be kept alive by the most bitter impulses of race and religion, threatening the peace of the world in other continents as well and giving endless opportunities for intrigue to discontented and disappointed peoples. No Power has so much reason to dread that calamity as ourselves. No Power has such an obligation to prevent it. It can only be prevented by giving to these Arab States real independence, and by making their European helpers advisers in status and fact. We want above all things to avoid the blunders and crimes that have disfigured the dealings of Europeans with the races of other continents in the past, and for this purpose we must keep clear of the false position that arises when European Powers undertake the management and exploitation of other peoples, under whatever disguise that relationship is veiled. For ourselves we doubt whether this can be done without putting the League of Nations itself, instead of the mandatory Powers, behind the new States.

### The Middle East.

In the *Pall Mall Gazette* of July 26, Lord Lamington, writing upon "The Syrian Crisis," urges withdrawal on the part of both Great Britain and France. He says:—

The situation is one of extraordinary complexity owing to the circumstances of the past war and the undertakings we then made to the Arabs, the French, and the Jews, undertakings which it is almost impossible to reconcile between the different parties. The problem is, in fact, so intricate that perhaps one must now admit the necessity of accepting a mandate over Palestine as well as France over Syria; but in my opinion it is a big sacrifice on our part, as I should like to see this country without any entanglements in either Palestine or Syria, as there is no material benefit which will accrue to us.

He comments upon our undertakings to the Jews and to the Arabs, and says:—

The only chance I can see of a peaceful settlement both for ourselves and others is to come to a distinct agreement with France to set up really independent States in Syria and in Mesopotamia—that is to say, we will retire from Mesopotamia and the French from Syria, but give the right to the native administration to appeal to either country for officials to help them in their work of self-government. I feel strongly, also, that some decision ought to be come to with regard to the working of the Baghdad railway, and I think it ought to be possible for ourselves and the French to have some joint arrangement for the control of this railway or of any other railway development in North Syria which would bring the Mediterranean into direct communication with Baghdad and the Persian Gulf.

# MUSICAL NOTES.

## YUGOSLAV POPULAR SONGS.

Yugoslav songs are not well known in this country. But the publication of a fine book, "Jugoslovenske Narodne Pesme" (London: C. P. Manojlovitch, 10s. 6d. net), should cause this ignorance to disappear, and we may not unreasonably hope that English singers will soon be including some folk-songs of Yugoslavia in their programmes.

Many judges assert that the Yugoslavs have in their folk-music some of the best tunes in existence. I myself cannot take that view, though freely admitting that my knowledge of them is by no means as extensive as it should be, being derived, like most Englishmen's, from the "Album of 138 Srpskikh Narodnikh Pesama" published by Mite Stajica at Belgrade, 1905, and the group of twenty-four songs edited by I. Bajitch and issued by the same publisher (to the first of which, incidentally, Mr. Manojlovitch's volume is considerably indebted). There is in these songs a monotony of rhythm, of interval, and of treatment, which rather palls on the Western ear—due, I suppose, to the sad fate of the Yugoslavs which has kept them in bondage for so many years, and which inevitably is reflected in their songs. This sadness seems in no way to have sapped their vitality—some of their warlike songs, for instance are extremely stirring—but it does seem to have diminished their variety of outlook. Given the knowledge of the devices of the Yugoslav folk-song, the flattened seventh, the augmented second, the sudden changes of and reversions to time, and so on, and given the subject matter of the song, you could almost guess the lines of the music. Other nations which have had no less mournful a history—the Irish (whose folk-songs are the loveliest in the world), or the Armenians, for example, which have had no more varied a fate—the Basques of the Pyrenees, or the people of the Hebrides, for instance—do not in their songs give one this sense of sameness and expectedness. It is, I daresay, a deficiency in the Western ear not to be able to let this kind of monotony penetrate one's being as it penetrates the Eastern mind. But it is probably something more than monotony, something much more subtle than I can analyse, which makes the Yugoslav folk-songs seem inferior, say, to the Russians'. One thing I am sure does not cause the difficulty, and that is the Turkish element in these songs, for, curiously enough, the monotony of Mussulman melodies does not oppress one. However, the true appreciation of folk tunes is a matter for life study, and, far from questioning the genius of Yugoslav folk music, I am quite content to stand shyly behind the opinion of most good judges, who, as I have said, appraise it highly.

To all those interested in this affair this book is certainly indispensable. Mr. K. P. Manojlovitch, who has compiled this edition, and has harmonised the melodies, has done his work far better than most previous Serbian editors. His harmonisations are ornate, but they are never out of keeping with the text: often, indeed, they increase the understanding of the tune. All his metronomic markings, his directions of *tempo*, his accents and expression marks, are most carefully done, and he has obviously done his faithfullest to demonstrate the genius of his people to Western culture. The translation into English is done by Mrs. Newmarch, whose services in the popularisation of Slav literature, art. and music are truly stupendous. Some of her verses are rather unsingable, but that appears to be scarcely her fault. There is also a translation by Austin de Croze into French, a language that takes more kindly than ours to the interpretation of Slav thought. Altogether it is a very admirable volume, being, moreover, well and clearly printed.

The songs that are most attractive in this volume are "Tsar Lazar and Tsaritsa Militsa," a Serbian lyric song; "Costly Red Roses," a marriage song; "Spare a Penny," a very beautiful tune, belonging to the group of the child bards; "Let Me Go, Mother," most melodious, with a very appealing change from $\frac{3}{8}$ to $\frac{5}{8}$ time; "What News in the Town?" "Kalopero, Pero," and "Miryana," which everyone knows; "Ah, Sorrow, Sorrow," of which each note is instinct with tristfulness; and "I'll Not Grieve," a very typical Macedonian tune. Some of the songs, especially those of the heroic type, only a Slav could sing effectively; they seem to demand that realistic method which Mr. Vladimir Rosing, for example, uses in his Russian songs; that wild frenzy of singing and acting in which the Western soul cannot without artificiality indulge. But there are a few which anyone could sing, and I hope very much that English singers, who are accustomed to seize upon new sources of folk-song with jealous avidity (it is much more than fashion to include folk-songs in one's programme nowadays), will not overlook this book.

ANDANTE.

FOR maintaining the balance of health under trying conditions, Eno has been acknowledged indispensable for the last half century in all parts of the world. By perfectly natural means the early morning glass of Eno purifies and invigorates the entire system and imparts that state of good health which is essential to success and the true enjoyment of life.

## I.—"THAT KING BUSINESS" IN GREECE.

When Mr. Wilson turned in bewilderment to his representative in Berlin for an explanation of the European imbroglio, "Mr. President," was the Ambassador's reply, "it's all owing to that King business." The world-war originated in the megalomania of hereditary rulers, and during its course every neutral country had a "Court party," whose sympathy lay wholly with the aggressors. Greece afforded a conspicuous instance of treachery and purblind folly in high places. She owed to Great Britain her liberation from the Turkish yoke; and her geographical position placed her at the mercy of a maritime Power. Gratitude, self-interest, and common-sense should have ranged her on the Entente side. Mr. Vincent Seligman has unravelled the sinister intrigues which kept Greece in the enemy's camp for three crucial years and brought her to the verge of ruin. He paints the protagonists in the struggle for right with impartiality and inside knowledge. King Constantine is credited with many seductive qualities, but it is beyond question that all were neutralised by his ingrained prejudices and fundamental weakness of character. A fatal aberration had led King George to send his heir-apparent to Berlin for military training. In that chauvinistic environment he formed a fixed idea that Germany was destined to rule the world. Coming under the Kaiser's spell, he shared the latter's notions on Divine Right, and after espousing his mentor's sister, developed into a convinced partisan of Germany. M. Venizelos stands forth in Mr. Seligman's narration as an epitome of the opposite qualities and the leading diplomat of our troublous age. He offers the extremely rare combination of an idealist who is also a man of the world. His magnetic personality and unselfish patriotism were sources of inspiration for three-fourths of his fellow-countrymen. Had this great statesman received the support which his character and service merited, he might well have been the Cavour of twentieth-century Greece. But he had ranged in opposition his fickle master, governed by Queen Sophie, who treated Greece as a pawn in the Hohenzollern game. Against him schemed the host of enemies which transcendent merit brings into the field. Some of them were heart-whole supporters of the Central Powers; others joined in the fray owing to jealousy, and others, again, from wounded self-esteem. Under the prompting of these evil counsellors, King Constantine habitually agreed to a course of action suggested by Venizelos, and straightway manœuvred to render it nugatory. Solemn engagements were treated as so many scraps of paper, huge slices of territory and important strategic points were basely surrendered to the foe; the Entente counsels were flaunted, and its forces treacherously massacred. It is unfair to judge diplomatic action by the light of after events; but with every allowance for the enormous difficulties encountered by our representative at Athens, it cannot be gainsaid that his policy was a thing of patchwork and makeshifts. Our Foreign Office persisted in negotiating with Bulgaria long after it was clear that she would join the Central Powers. We hampered Venizelos on every side, and gave far too much rope to his faithless master. British diplomacy, in fact, was tainted throughout by the opportunism and lack of imagination which are conspicuous results of party government. But if the mills of the gods grind slowly, they grind exceeding small. After three years of parleying and vacillation, the Entente removed King Constantine from the throne. The victory of Venizelos was complete, and his influence is now profoundly felt in the progress of affairs throughout the Near East. No one who realises that men are governed by emotions rather than common-sense can be surprised by the news that a movement is on foot to restore the ex-King. Personal charm is a mighty asset, especially when it is wielded by an hereditary ruler. A perusal of Mr. Seligman's impartial narrative will convince anyone who is capable of forming a just judgment that Constantine's return to power would be a calamity for Greece and for Europe. F. H. S.

## II.—THE PERFECT TOURIST.

Although these letters are divided into three parts, with many years between each group, they arrange themselves more naturally into two parts—the first two, which are about Canada, an interval of fifteen years between them—and the third which is about Egypt. The earlier letters from Canada are less concerned with politics than the second collection: not so filled with warnings to the Mother Country and anger at the littleness and shortsightedness of her notions and dealings. Their value chiefly consists in a wonderful description of the Northern winter, written in words that actually make one feel the bitter cold as well as see the white splendour of it, and for the account of an excursion to Japan, with descriptions full of delicate colour and charm—an amazing demonstration of how the obvious may be firmly grasped and made into something new and living. Also, there is one article on the failure of a bank which shows that it is, after all, the human element, the behaviour of men and women "in the fell clutch of circumstance" that really interests Mr. Kipling most, and which is pleasantly reminiscent of his early Indian stories. In the 1907 letters Mr. Kipling still urges the same message that he sent fifteen years before. It is the song of the Empire that he sings—of its greatness in size and in spirit—and there can be no doubt that it is stirring and inspiring "the fine song for singing, the rare song to hear." Although he is writing of the Elder Sister, the thought of the other colonies is never out of his mind. There are some splendidly vivid chapters on the romance of the swift springing into being of new cities and of the railways following up fresh trails. He is thrilled and warmed to the heart by the thought of the Empire's tremendous possibilities for adventure; he wants to make the people who are "too near things and a great deal too well fed" realise that "Cortes is not dead, nor Drake, and Sir Philip Sidney dies every few months if you know where to look." He turns to that other great lover of romance, writing them in Samoa, "he, crowned with roses and laurels, strings together the pearls of those parts. When he has done with this down there, perhaps he will turn to the Smoky Seas. . . . Then there will be a tale to listen to."

Again and again all through this book the way in which Mr. Kipling describes what he wants his readers to picture, leaves one with the breathless excited feeling produced by the sight of a great piece of craftsmanship. It is like some heavy piece of wood delicately carved—so solid and yet so clear cut in the details. Then there are, of course, those sentences which one finds oneself expecting in any work of his—words that shine out suddenly with a bright flash of illumination, and there are those other sentences, which unfortunately are not less typical of some of his work: aggravating mannerisms, as in the use of italics for an "and" or a "but" at the beginning of a sentence, and a certain cheapness and flippancy of expression, as if he found it almost too easy to convey his meaning. In the Canadian letters Mr. Kipling writes with bitter mockery of American Democracy. In the Egyptian letters of 1913 he again writes of the ideas and customs of his fellow-tourists from the States, but his attitude is rather more tolerant. It is in these letters from Egypt that one sees most clearly what is very noticeable throughout the book, that he has the true secret of how to be a really successful sightseer. He travels in just the right spirit—not in open-mouthed, ignorant amazement, and yet with absolute readiness to observe and to learn from the least little thing; in no spirit of preconceived prejudice and superiority, and yet with a calm sense of his ability to gain an impression and form his own opinion. Above all, he realises fully that "break into any new Hell or Heaven, and you will be met at its well-worn threshold by the bored experts in attendance," and he is not abashed nor damped, nor any less filled with joy at the romance of far lands, diverse peoples, and the eternal adventure of travel.

## III.—KITCHENER.

Sir George Arthur was charged with a very difficult task in writing the "Life of Kitchener." It is never an easy matter to get the right proportion between history and biography in this kind of work; either there is a tendency to let the history drown the biography, or to picture the hero as the very centre of the universe. Sir George Arthur on the whole avoids both these pitfalls. His book will be indispensable to the historian, not only for the unpublished documents he quotes and the new light he throws on many episodes, particularly in the South African War—in dealing with the late war he is somewhat too discreet and reticent—but it will also be essential for the comprehension of Kitchener himself.

It would be absurd to pretend that it is, in the true sense of the word, a "great" biography. It cannot rival Morley's "Gladstone" nor Boswell's "Johnson," nor is it as a piece of literature to be compared with Southey's "Nelson." But it is good sound work, written in a plain,

Digitized by Google

straightforward fashion with no particular pretension; on the only occasion on which Sir George Arthur is betrayed into rhetoric—when he introduces "the voice of the Eternal" at the death of Kitchener, the result is so lamentable that one can only be grateful that his natural good taste has restrained his eloquence elsewhere. His account of the loss of the "Hampshire," by the way, is quite remarkably confused; and we may also add that his description of Kitchener's appointment to the War Office in 1914 is incomplete. Both these matters, however, can easily be rectified in a subsequent edition.

These things, however, are small points. He does on the whole succeed in putting before us a recognisably true Kitchener, and he makes it clear that the extraordinary position which Kitchener held in the esteem of his countrymen, and not of his countrymen only, was due essentially to his character, and not to any particular mental gifts. He had what Huxley attributed to Darwin, "a marvellous dumb sagacity" which ripened slowly, which hardly ever misled his judgment, and which a psychologist would at once attribute to intuition and not to intellect. It was the continuous exercise of that sagacity on a great stage that made men regard him as infallible—which he was not—and that led to the establishment of the "Kitchener legend"—almost the only legend of modern times.

It is given to few men, save those who found religions and dynasties, to become legends after their death; still fewer become legends in their lifetime. To that small company, which includes Saleh-ed-Din and Clive and Warren Hastings, Kitchener undoubtedly belonged, and the last proof of many was forthcoming at his death. Large sections of the public refused to admit that he was dead, and stubbornly expected his return. It was fundamentally the same belief as that which followed Arthur and Barbarossa to the grave. Yet nothing of the kind occurred when other great soldiers died. No human being expected Marlborough or Wellington or Cromwell to appear again; and history will ask what quality there was in Kitchener which linked him with Arthur and Barbarossa in the public estimation, rather than with Marlborough and Wellington.

It is easy to reply that perilous times are credulous times, and that the manner of Kitchener's death was sufficient warrant for the belief. But Nelson also lived in perilous times, and also died at sea; yet no similar legend grew up after Trafalgar. There was, then, something unique in Kitchener—or at least in the public mind concerning Kitchener—that led to this belief. It may be that history will say that the legend was unjustified, as it will assuredly say that the belief in his return was unjustified; but it will have to admit that it existed.

The Kitchener legend, like all legends, was partly true and partly false. The image of a cold, calculating, and efficient military machine was created by the brilliant letters of G. W. Steevens from Khartoum to the *Daily Mail* in 1898. Seventeen years later the *Daily Mail* tried to destroy its creation, but the public worshipped the image and destroyed the *Daily Mail* instead. But the image, however true it was of the victor of Omdurman, was in fact no longer true; it was hardly even a passable portrait. Kitchener had outgrown his likeness. To the public he was still a soldier, but to the soldier he was now an organiser. To the statesman he was now a statesman.

Something of this gradual change was indeed realised by the general public. Had the Great War broken out in 1905 there would have been a general demand for Kitchener to lead the British Armies as Commander-in-Chief in France. Nine years later no such demand was made by any section of opinion. Had Kitchener chosen to take the chief command in person, people would, it is true, have been content with his decision, because they trusted him to do the right thing. When he did not, they were content with his recognition that his proper place was at the War Office, raising and equipping the new armies.

It was not that Kitchener's age was popularly considered any objection to his employment on active service; he was not older than many of the leading commanders on both sides. The accident in India to his leg, which was a more real barrier, was forgotten by all save his friends and colleagues; the British public, which does not follow the personalia of official Indian history very closely, could hardly be expected to recollect a mishap at Simla, or to know that it detracted to some extent from his physical activity and began to weigh increasingly upon his constitution. It was not these considerations which made the public realise that he was in the right place at the War Office in 1914 when they would have expected him to take chief command in person ten years before. It was the fact that they had come to recognise slowly, and almost unconsciously, that the man who had smashed the Mahdi was something more than a professional soldier, which reconciled them to his presence in Whitehall instead of with the Expeditionary Force. Even after the retreat from Mons, when all England was nervous as to the fate of its army, there was no real call such as had come instantly after the Black Week of December, 1899, for him to go to the front. He was trusted then and subsequently by the public with the most absolute trust, to do the right thing in his own discretion and in his own manner.

This absolute trust reposed in him by a race which is more inclined to complain that it no longer breeds great men than to indulge in hero-worship, is the fundamental fact in Kitchener's public career; it was a plant of slow growth, like Kitchener's own character, and it was the direct outcome of his character. He did his work thoroughly, but he never promised more than he could perform. He never prophesied smooth things. He neither asked nor gave flattery. He kept his own counsel when it was wise, but spoke frankly when it was necessary. As a consequence, the public were ready to follow his lead without question asked or reason given.

Of no other man in England could that have been said in 1914. Kitchener was unique, and he remained unique until his death. It is probable that he never knew the extent of his own power. He cared little for popularity, and was genuinely surprised that people should wait about the streets to see him pass from the War Office to Downing Street. If this gradual growth of public confidence was the fundamental fact of Kitchener's career in its external aspect, the gradual growth and widening of the scope of his activities was the fundamental fact of his personal character. Fashoda revealed the victor of Omdurman as a diplomatist. Vereeniging revealed him as a statesman. Simla revealed him as a military reformer; Cairo as a social reformer. And London in 1914 revealed him finally as a symbol—the symbol of the man to whom England pinned her faith. It is conceivable that other men would have been as good or even better Secretaries of State for War, but the country would not have been satisfied that any other man was as good. No other man would have given England the confidence in herself that she felt from the mere fact that she had confidence in Kitchener. However great the services he rendered to the nation at the War Office, incomparably his greatest service was the fact that he was there at all.

History will recognise this, and, recognising it, will seek to analyse the reasons for it. A devil's advocate would indeed claim that Kitchener was fortunate in the circumstances of his life, and not less *felix opportunitate mortis*. The objection could, it is true, be applied to almost any man who has played a great part in history. Without the stamp tax George Washington would have been known as a respectable farmer in Virginia; without the French Revolution even Napoleon would never have been First Consul. But the objection is irrelevant, for circumstances break as well as make men, and Kitchener proved adequate for each occasion as it arose. It is fair to say that in any age he would have been a great man, although only his own age could have given him the last colossal stage in which to play his part. The secret must be sought in the man, not in his circumstances.

It was said of a certain Prime Minister that no contemporary of his at Balliol could well fail to reach the episcopal or judicial bench. Kitchener found no such easy road to eminence, nor did he make his own appointments in that light and friendly fashion. He began life with no particular social advantage; intellectually he was considered rather below the average; soundness rather than brilliance was the keynote of his character throughout. On the whole he matured slowly. He was nearly fifty before his name was known as a soldier outside his own profession. He was sixty before his capacity for statecraft was recognised outside a narrow circle.

Kitchener's position was frankly not due to any extraordinary mental endowments. His intellectual range was not conspicuously wider than the average of able men. His interest in art developed late in life, and was that of the collector rather than the connoisseur. Of the drama he knew little, of music nothing. In literature he had studied the classics of his own profession, and he had an average knowledge of history, with, of course, a close acquaintance with the historical antiquities of the Levant; but as a

general reader his tastes lay mainly in the direction of the detective story and the ordinary novel of commerce, and his books were obviously the recreation of an idle hour. Of the deeper tendencies of modern thought he knew next to nothing.

As a writer he said what he had to say, without undue abbreviation or obscurity, but most certainly without adornment. His phrases are like his actual script—plain, bold, and clear Not a sentence is capable of a double meaning; there is nothing that can be explained away. He wrote English, in short, like a soldier, not a politician. Kitchener's later record as a statesman inevitably raises the question whether he would have gone as far had he chosen a political instead of a military career. The answer must be in the negative. He could persuade men, and he could rule men, but he had none of the suppleness of the politician, and he could never have moved men in a democratic age by an appeal to the emotions. As a great soldier he was listened to with respect because he stood above or outside of politics, and took care to emphasise his aloofness from the parties of the day; as a budding Member of Parliament thirty years before his talents would have been wasted. Early in 1915 one of his colleagues in the Asquith Government remarked that Kitchener did not understand English politics. The fact was natural in a man who had spent the greater part of his life out of England; few men who have lived long away from home possess the intimate personal knowledge and the *flair* that is indispensable for success at Westminster. But it is doubtful whether he was constitutionally fitted for the Parliamentary stage. He was as innocent of obscurity as of fine writing, and his appeal was always to the judgment, never to the feelings. Even in the famous message to the first Expeditionary Force of 1914 the stress is laid entirely on duty, not on the emotions.

His speeches have the same quality of clearness and brevity. In the last two years of his life, when he spoke from time to time at Westminster, no man had ever a more attentive audience; the House of Commons was always deserted during the half-hour or so that Kitchener was "up" across the corridor. But he had none of the arts of the orator; he coined none of those effective phrases that achieve a brief reputation in a headline; and those who only heard the carefully composed and typewritten statements which he read in the House of Lords did not consider his elocution particularly good. "What did I think of Kitchener?" said a sardonic listener after one of these speeches. "Why, when I shut my eyes it was unimpressive enough for one of the new bishops."

The inevitable surfeit of debate at Westminster is said to ruin the taste for political oratory, for the same reason that prolonged residence at Rome is proverbially dangerous to religion; but if Parliamentarians admitted that dozens of private members and even backwoodsmen spoke better than Kitchener, nobody's speeches were so carefully read or so closely discussed by London that evening or by the whole country the next morning. Every phrase was carefully scanned, and the mere fact that an obvious reference was omitted, either intentionally or purely through inadvertence, was discovered to have some mysterious significance in the clubs and tramcars and bar-parlours.

Kitchener was a loyal servant of the Crown and of the Government, but in no sense of the word was he either a courtier at Buckingham Palace or an intriguer in Downing Street. He was no politician, but if any political label were affixed to him he would be best described as a constitutionalist. He had a profound and almost instinctive respect for Parliament and the political institutions of the United Kingdom and the British Empire; the picture that was drawn of him in some quarters as a political dictator and a modern Cromwell capable of shutting up the House of Commons was not merely grotesquely absurd, but the very opposite of the truth, and it is one of the outstanding merits of Sir George Arthur's work that he brings this fact out so clearly.

Even in small details and during the turmoil of the war he was careful to indicate his respect for Parliament. As Secretary of State for War, he always wore uniform in Whitehall; the only occasion on which he changed into mufti was when he went to Westminster, and on those afternoons he donned the frock-coat, which is, or rather was, the conventional dress of Parliament. Although an extremely busy man, he always took his seat some time before the sitting actually opened, and remained some minutes after his statement was completed, in order to avoid the least appearance of haste or discourtesy to the House, a formal tribute more honoured in the breach than the observance by many other Ministers, with whom familiarity has perhaps bred contempt for the customs of a more leisured age.

Yet with these apparently ordinary endowments Kitchener was an extraordinary man, for he possessed a quality which defies analysis—a massive fund of commonsense and an absolute soundness of judgment. In his earlier life, when planning his campaign in Egypt, no detail escaped him; in later years he had necessarily to delegate much detail to others, and his work must be judged by his choice of men rather than by the scrupulous attendance to minutiæ which was no longer his business. By either test he was adequate to his work. The mathematical exactness of the Sudan advance became proverbial. The accuracy of his reading of character was less well known, but it was not less striking. It would probably be untrue to say that he never made a mistake in the choice of a subordinate. But it is the fact that those who knew him intimately cannot point to any such mistakes. The men he chose may sometimes have failed to come up to his expectations; if that were so, they were not employed again. But most of those whom he chose went far in the public service. Kitchener possessed the rare gift of picking precisely those men out of the crowd who were worth picking, at the time of their life when there was nothing particular to show they were worth picking

It is natural to attempt a comparison between Kitchener and the two greatest soldiers in modern English history, Marlborough and Wellington. But the comparison is unreal. If Kitchener's campaigns show no such splendid military genius as that of Malplaquet and Blenheim, his record is wide as the poles apart from the baseness, almost amounting to treachery, which stains indelibly the other side of Marlborough's public life. And with Wellington the contrast is equally artificial, but for a different reason. The Duke, great soldier though he was, was a statesman only by force of circumstances, and his measures were modelled on the simple but scarcely sufficient axiom that the King's Government must be carried on. If the Duke's early career in India a little resembles Kitchener's early career in the Sudan, and the doggedness with which he fought the Peninsular War reminds us of the doggedness with which Kitchener fought South Africa, it can hardly be claimed that the Duke's later record in politics shows anything of the tact and foresight of Kitchener at Vereeniging, or the combination of political firmness and interest in social welfare which Kitchener showed at Cairo.

There have been many greater soldiers in history, and it is hardly with the Marlboroughs and the Wellingtons that Kitchener can be compared. There have been many greater statesmen, and it is hardly with the Pitts and the Richelieus that he can be contrasted. But there have been relatively few men who have successfully combined the soldier with the statesman, and it is in this far rarer company, rather than with the soldier or the statesman *per se*, that Kitchener must be finally placed.

It remains to be said that the book contains several good photographs, including one taken of Kitchener on the day before his death, and that its usefulness for purposes of reference is materially augmented by an admirable index.

The Gaekwar of Baroda left London on July 31 for Paris.

M. Constantin Constaninesco, Secretary to the Roumanian Legation, has arrived in London from Italy.

On July 26 the Crown Prince of Roumania left Tokyo for America.

M. Misu, the Roumanian Minister for Crown Lands, has arrived at Bucharest with his family from London.

The Madrid Press announces that King Alfonso will visit Tangier at the end of September. The news has not yet been officially confirmed.

Sir M. and Lady Afsur-ul-Mulk, who were received on July 23 by the King, have left London for Brighton, and will shortly return to India.

Mr. Mohammed Ali, Head of the Indian Caliphate Delegation, and Mr. Hayat, the Secretary, have had an audience of His Holiness the Pope.

Mr. Thomas Henry Stillingfleet Biddulph, C.I.E., of 8, Wynnstay Gardens, Kensington, W., formerly of 7, Nicholas Lane, E.C., left estate valued at £7,489.

M. Michel B. Boeresco, Minister Plenipotentiary of the King of Roumania, returned to London on July 31 from Bucharest and resumed his duties as Chargé d'Affaires at the Legation.

The Cairo correspondent of the *Times* reports that the American Presbyterian Board has decided to establish a university at Cairo, and has already secured a fine site for the building.

The Court of Appeal last Friday reversed the decision confiscating the English fortune of the ex-Tsar of Bulgaria. It was now held that this was his private property, and not property by reason of his sovereignty over Bulgaria.

Our Sofia Correspondent writes that M. Starcheff, the Director-General of Bulgarian Posts and Telegraphs, left Sofia on July 1 for Paris, to take part, as Bulgarian delegate, in the International Telegraphic and Postal Conference.

Prince Nicolas of Roumania, attended by an aide-de-camp, left London on July 28 for Paris on his way to Bucharest. Prince Bibesco, the Roumanian Chargé d'Affaires, and representatives from the Foreign Office were at Victoria Station to take leave.

A marriage has been arranged, and will take place shortly, between Commander Sidney Beckwith Mainguy, M.V.O., Royal Navy, second son of the late Major-General F. B. Mainguy, Royal Engineers, and Mrs. Mainguy, of Les Roquettes, Guernsey, and Violet Kathleen Sybella, younger daughter of Major-General Edward Mockler, Indian Army (retired), and Mrs. Mockler, Rochford, Guernsey. Major-General Mockler was Consul-General at Baghdad from 1892 to 1897, and had held several political appointments before going there.

Our Sofia Correspondent writes (July 12).—"General Beard, the former chief of the British Military Mission in Bulgaria, has arrived from Italy, and has interviewed the War Minister, M. Stambolisky. He is now on his way to Egypt."

Prince Antoine Bibesco, the newly-appointed Roumanian Minister to Washington, and Princess Bibesco left London on July 31 for Lampston House, Winchester. It is understood that Prince Bibesco will go to Bucharest before proceeding to Washington.

The Rev. Charles Kent, the rector of Merton Rectory, Thetford, where Fitzgerald wrote much of his adaptation of Omar Khayyam's "Rubaiyat," has made a dramatised version of this poem, and it is to be performed in the rectory grounds on September 9. The part of the Poet-Astronomer will be taken by the Rev. Dr. Kirkby, of New College, Oxford, and H. H. Prince Duleep Singh will sing his part from Liza Lehmann's "In a Persian Garden."

On July 28, at the Wigmore Hall, under the auspices of the Union of East and West, the Indian Art and Dramatic Society presented five of Rabindranath Tagore's dramatic lyrics, "The Farewell Curse," "The Deserted Mother," "The Sinner," "Suttee," and "Mother's Prayer." The author himself began the entertainment by reciting a poem in the original Bengali, an invocation to the divine "Dispenser of India's destiny." Miss Alice Poomara also sang some songs.

The current *Quarterly Statement* of the Palestine Exploration Fund contains, in addition to the report of the annual general meeting of the society, an article by Dr. Frederick Bliss on "The Hopes for Palestine Exploration" and one on "The Jewish Inscription from 'Ain Duk," by Rabbi Marmorstein. The concluding portion of Miss Estelle Blyth's paper, "The Greek Easter at Jerusalem," is also given, and the "Notes and News" are varied and interesting. The society hopes to begin excavations at Ashkelon in the early autumn, and results of very great interest are expected.

A special service was held at the Greek Church of St. Sophia, Moscow Road, Bayswater, on Sunday morning, in celebration of the liberation of Adrianople and Thrace by the Greek Army. The Great Archimandrite, who officiated, was assisted by the Metropolitan of Demotika. At the conclusion of the Liturgy of St. John Chrysostom, a Te Deum was sung by the Greek choir. Prayers were offered for the King and Queen of England and the King of the Hellenes. The congregation included M. Demetrius Caclamanos, the Greek Minister; M. Spyridon Polychroniadis, First Secretary; Major Ambrosius Phrantzès, Military Attaché, Head of the Greek Military Mission, and Mme. Phrantzès; the *personnel* of the Legation, the staff of the Consulate, M. Calvoioressis, M. Agelasto, M. Psimenos, Dr. Lewis F. Mizzi, member of the Supreme Consular Court in Constantinople; Mme. P. Mavrogordato, Mme. Metaxas, and Mr. G. Hagopian, Chairman of the Armenian Patriotic Association.

## APPOINTMENTS, ETC.

Lieut.-General Sir C. W. Jacob has been appointed Chief of the Indian Army General Staff, in place of Lieut.-General Sir G. M. Kirkpatrick.

Sir Herbert Dering, K.C.M.G., M.V.O., British High Commissioner in Bulgaria, has been appointed His Majesty's Minister to Roumania. Sir Herbert Dering was only appointed to Sofia this year, and has had to wait for the ratification of the Bulgarian Treaty before being able to present his credentials as Minister Plenipotentiary. His early transfer will cause keen disappointment in Sofia, where both he and Lady Dering have already thrown themselves whole-heartedly into the life of the capital.

## OBITUARY.

### M. JEAN GHICA.

Our Bucharest Correspondent writes (July 20):—The death is announced of M. Jean Ghica, a prominent and much-respected member of the National-Liberal Party. M. Ghica was still in the prime of life, for he was not yet fifty years of age, and his loss will be much felt by his colleagues, as he was an extremely keen and energetic patriot. He is the author of a number of articles and pamphlets on the subject of the Roumanians of Transylvania, and for twenty-five years has been one of the most active members of his political party, and has held several important offices for them, including that of prefect of the district of Vlashca and deputy in the Chamber for that district.

A Reuter's message from Bermuda, dated July 30, reports:—"Vice-Admiral Sir Trevelyan D. W. Napier, K.C.B., Commander-in-Chief of the North America and West Indies stations, died at Admiralty House this morning of typhoid fever after a short illness." Admiral Napier, who was born in 1867, and entered the Navy in 1880, served in the Egyptian War of '82 on board the Minotaur. In the late war he took part in the Battle of Jutland, was in command of light cruiser squadrons from 1914 to 1917, and later was Vice-Admiral of the Light Cruiser Force.

## TOPICS IN PARLIAMENT.

*The subjoined headings are those given in the official report:—*

ROUMANIA (BRITISH RAILWAY MISSION). RUSSIA; Trade Union Leaders (Batoum).—Caucasus (Armenians).—British Prisoners (Baku). TURKEY: Greek Operations. MESOPOTAMIA: Arab Tribes. Revenue. INDIA: Newspapers, Burma (Government Support). (July 26.)

SYRIA: Frontiers.—Tyre (Customs).—Emir Feisul. LEAGUE OF NATIONS: Armenia. RUSSIA: British Prisoners (Baku). MESOPOTAMIA: British Troops (Health).—Military Operations.—Civil and Military Expenditure.—Persia (British Force).—INDIA: Central Labour Board, Madras. EASTERN PERSIA (British Forces). ADANA, CILICIA (SIEGE). GREEK ARMY (CYPRIOTE VOLUNTEERS). PEACE TREATIES: Akaba. PALESTINE: Nationalist Turks (Damascus).—Ottoman-born subjects (Nationality).—Arab Army (Recruiting).—Government of Damascus. INDIA: Punjab Disturbances (Firing). (July 27.)

MESOPOTAMIA: Occupation (Charges).—Oil. INDIA: Disturbances (Convictions).—Strikes (Military and Police Services).—Amritsar Disturbances.—Khalifate Agitation.—Auxiliary Force Bill.—Manual of Martial Law.—Indian Representation (African Colonies).—TURKEY: Greek Operations (British Naval Assistance). SYRIA: Southern Boundary.—Emir Faisal and Mustapha Kemal.—Damascus. PALESTINE. CEYLON (CONSTITUTIONAL REFORMS). TRADE AND COMMERCE: Commercial Secretaries, Constantinople.—Roumania. INDIA: Punjab Disturbances (Inquiry). CHIMARRA. (July 28.)

## MONTENEGRO.

The Montenegrin Press Bureau in Rome has issued a report to the following effect:—

On July 18 an attempt to escape was made by some 250 Montenegrins imprisoned in Cettigne by the Serbian authorities. The prisoners overpowered their guards, but on troops being summoned to deal with the *émente*, ninety-seven were killed; the remainder escaped, and are said to have joined other insurgents in the mountains.

According to the *Mesaggero*, of Rome, the prison at Podgoritza was attacked by Montenegrins on July 24, and all the political prisoners were liberated. The tobacco factory used as the prison was set on fire.

## AFFAIRS IN SYRIA.

In a written answer to a question put by Mr. Ormsby Gore in regard to affairs in Syria, Mr. Bonar Law says:—

The Emil Faisal is reported to have left Damascus and proceeded to Deraa; it is understood that a new Syrian Ministry has been formed in Damascus. The French Government can in no case be responsible for these portions of Moab, Gilead, and the Hauran which lie south of the line separating the British from the French sphere in those regions. What will be the future relations between those districts and the Syrian Government at Damascus is a question on which I am not in a position to make a statement at present. The only representative of His Majesty's Government in occupied enemy territory since the withdrawal of British troops from that area has been the British *liaison* officer at Damascus, who was in that town at the time of the French occupation, and who is still there, and communicates freely with His Majesty's Government.

## THE GALLIPOLI MEMORIAL.

The Parliamentary correspondent of *The Times* writes:—Sir Ian Hamilton presided over a meeting of the Gallipoli War Memorial Committee at the House of Commons on July 28. Lord Wemyss, representing the Navy, and Sir Aylmer Hunter-Weston were also present. A sub-committee, after considering various possible sites, and keeping in view the fact that local memorials were contemplated at Anzac and Constantinople, reported that the most appropriate site was Cape Tekke Burnu, on the south-western point of the peninsula. The advantage of this site, which is strongly recommended by the Hydrographer-General to the Admiralty, is that the memorial will stand on high ground, and will be visible to ships entering the Straits. The meeting expressed approval of a design by Captain Douglas, R.N., who served in the Gallipoli Expedition, for a white marble obelisk, 67 ft. high, to be erected on Cape Tekke Burnu, but deferred coming to a final decision until the general policy of the Government with regard to the erection of war memorials at State expense has been announced.

## NEWS IN BRIEF.

The town of Bucharest was mentioned in an Order of the Day which was issued by the Army authorities of July 28 for valour displayed by its inhabitants during the great war.

It is stated that the American cruiser St. Louis and six destroyers will be sent in a fortnight's time to reinforce the U.S. vessels now in Turkish waters.

The operations of the Salvation Army have recently been extended to the new Republic of Czecho-Slovakia, to Serbia, and East and West Africa.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added),"**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
**SMEDLEY'S HYDRO.**

**TORQUAY**
**VICTORIA & ALBERT HOTEL.**

***Cairo's Hotels de Luxe.***

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

**THE ONLY ENGLISH HOTELS IN ALEXANDRIA.**
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

**SUMMER PALACE HOTEL,**
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant,
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores: LIMASSOL.

## THE LAST OF THE TREATIES.

The Turkish Delegates have arrived at Versailles to sign the last of the Peace Treaties bringing the great war to a formal close almost exactly twenty-one months after the Mudros Armistice. It is useless now to inquire into the causes of the long delay which has allowed time for the forces of lawless resistance to recover from the first stunning effects of defeat, and organise and spread fresh havoc over large areas of the old Ottoman Empire. The Allied Powers have not, at any rate, allowed themselves to be deflected from their purpose. The retribution which has finally overtaken Turkey is undeniably stern. We set forth a few weeks ago the terms laid down by the Allies, and we need only recall them now quite briefly. With one reasonable modification, they have been rigidly maintained. Of the European Empire which fifty years ago extended to the Danube and the Adriatic, only Constantinople, with a few square miles of land behind it up to the Chatalja lines, is left to Turkey, and even within those narrow limits, the Sultan's authority is carefully circumbscribed by a variety of provisions. Over a special zone covering the waterways of the Dardanelles and the Bosphorus and the Sea of Marmora and a considerable belt of land along their shores in Asia as well as in Europe, full control is to be exercised by an International Commission with its own flag, its own budget, and its own separate organisation. The original peace terms excluded Turkey from all participation in that Commission, but the final treaty has accorded to her the same representation on it as to other Balkan States directly interested in the navigation of those waterways. In Asia, Turkey not only surrenders all her Arab provinces, but specifically recognises the Hejaz as a free and independent State, though one of the Sultan's chief titles to the Khalifate is based upon his possession of Mecca and Medina, the two great shrines of Islam. In Asia Minor itself, Turkey agrees to the constitution of a free and independent State of Armenia, within boundaries to be determined by the President of the United States as arbiter, and of an autonomous Kurdish State, to the south of Armenia and east of the Euphrates, with eventual rights to complete independence. She also transfers to Greece the exercise of her rights of sovereignty over Smyrna and an important *hinterland*, and undertakes in advance to accept their ultimate incorporation in the Hellenic Kingdom, should the local Parliament, to be forthwith established, petition the League of Nations to that effect after a period of five years, and a plebiscite of the population endorse such petition. Even within the territories assigned to the new Turkish state, an elaborate system of financial and economic control to be exercised by the Powers and special safeguards for the civil and political rights of minorities as well as for religious equality provide against the revival of the accustomed forms of Turkish misrule, whilst the reduction of the Turkish army and the prohibition of any Turkish navy or air force in future are designed to eliminate all danger of Turkey again jeopardising the peace of the world.

To these terms the Sultan and his Ministers have now agreed. Any inclination there may still have been in some quarters to procrastinate very soon gave way to a reminder from the Powers that the preservation of the Sultan's authority in Constantinople itself was a concession which might be easily forfeited by recalcitrancy, whilst the rapid advance of the Greek Army, with the full sanction and authority of the Allies, first in Asia Minor and then in Eastern Thrace, showed how shallow were the forces of resistance that had responded to the rebellious call of Mustapha Kemal and his "Nationalist" followers. It is difficult to understand the scepticism which obtained even in some quarters in this country with regard to the ability of the Greek army to fulfil the task with which it was entrusted; for both in the Balkan wars, and in the last stages of the Salonika campaign during the great war the Greek troops had already abundantly shown their mettle, and M. Venizelos, whose commanding personality had stood out as conspicuously at the Paris Peace Conference as in the stormy days when he dragged his country out of the toils of Germany, would never have undertaken the task of enforcing the peace terms within the disputed areas, had he not been convinced that the Greek Army was fully equal to it. He was indeed better than his word. Within ten days of the commencement of operations the "Nationalist" bubble was pricked in the Smyrna area, and within five days in Eastern Thrace, where the Greeks were hailed as liberators from the oppression of Jaafer Tayar and the Greek flag was hoisted triumphantly at Adrianople, the first capital of the Ottoman Sultans in Europe before they conquered Constantinople. It is no doubt too much to hope that Turkish "Nationalism" will collapse at once in the more remote parts of Asia Minor, where it is in close touch with the kindred forces of Bolshevism, and it may yet, we fear, perpetrate many horrors before it is finally rooted out. But now that the Sultan has sanctioned the signature of peace, it assumes a form of open rebellion against his authority which must speedily alienate the lingering sympathy, if it has ever possessed it, of the Mohammedan populations.

The old Ottoman Empire has ceased to exist. From the Sultan and his Ministers, who have bowed to the inevitable with resignation and dignity, no one can withhold a tribute of respect and to some extent even of sympathy. For the Envers and the Talaats and most of the adventurers of the Committee of Union and Progress who staked the existence of their country on an utterly unprovoked war fled before the Armistice, and the miserable Sultan, who was but a half-witted puppet in their hands, passed away in the summer of 1918, when it was doubtless far too late for his brother and successor, the present Sultan, who reigns under the title of Mahomed VI., to arrest the impending catastrophe, even if, as there is some reason to believe, he had already realised the hopelessness and the folly of the struggle to which he found himself committed. Few if any of the present rulers of Turkey can be held to have been themselves responsible for the wanton adventure of which he has now had to pay the penalty. Yet the penalty is none the less deserved. For the Ottomans won their empire by the sword and the sword alone, and it is meet and fitting that they should have lost it by the sword. This is no figure of speech. If we look back upon the history of the Ottoman Empire, we see that its growth took place within roughly three centuries from the accession of Othman, the founder of the dynasty, to the death of Suleiman the Magnificent, and that during the whole of that period the wars of conquest on which the great Sultans were almost constantly engaged were with barely a single exception invariably victorious wars. The decline of the Ottoman Empire covers another three and a-half centuries, during which, under a succession of more or less degenerate Sultans, the Turks have almost as invariably suffered disastrous defeat, except on rare occasions when foreign powers intervened to help or to save them. Increasing inefficiency, corruption and oppression have no doubt contributed to the blunting of their sword, but, as they never sought any other sanction for their domination than that of the sword, it was doomed to perish when their sword failed them. That the Turkish race on the whole retained to the last much of its original fighting qualities was repeatedly shown during the great war, at Gallipoli, in Mesopotamia, and on many battlefields in Asia Minor. But in the hands of such men as Enver the Turkish sword was bound to fail. No one who reads, for instance, the dispassionate account which General Liman von Sanders has published of his five years in Turkey, from 1913 to the end of the war, can have any illusion as to the type of men who actually wielded the Ottoman sword during those years of destiny. In no period of Ottoman history can misrule

Digitized by Google

have reached such a pitch of iniquity as during the war-time supremacy of the sinister junta of "Union and Progress" with Enver at its head. The American Relief Committees who have been at work all over Turkey since the Armistice believe that over a quarter of the whole population perished from war casualties, sickness, starvation and massacres. Can any sane person regret that the Turkish Treaty has wiped out an Empire which had sunk to such depths and has rendered any future attempt to revive it materially as well as morally inconceivable?

## BAKU: AN AMAZING CITY.

### By ERNEST BETTS.

Baku is a place where life is so constantly unsafe that people regard barbarism and bloodshed as part of the ordinary routine of existence. The present reign of terror instituted by the Bolshevists is not in the least a novelty, and can scarcely be disturbing to the heavy equanimity of this astonishing city. Revolution has permanent residence in Baku, whose history is one long story of confusion and feud. You have only to live there a month or two to discover that its prevailing elements are vodka and violence, conspiracy and incendiarism, racial hatred, and perpetual conflict. Under these conditions organised government is an impossibility. The only control that is understood is the control of industry, and as the passion for money-making is the dominant feature of life in Baku, it is only to this aspect of municipal activity that the inhabitants pay any real attention. Oil, and the profits to be derived from it, are the only things that matter, for it is common knowledge that Baku exists now, as it always has done, for the accumulation of enormous fortunes in the briefest possible time. This, indeed, is literally true. The working of the oil-fields, which began in 1871, and is mainly in the hands of Tartars, Swedes, and Armenians, represented in 1916 a capital investment of £30,000,000 to £40,000,000. In the town itself, however, oil is not to be seen, though the bulk of the working people are dependent on it for their maintenance.

The working people are as picturesque and villainous a set of ruffians as ever made up a mob. They are turbulent, primitive, vicious, and impulsive, and their leaders have the Oriental capacity for interminable controversy. The strain of depravity in this section of the community is, however, easily accounted for. Nobody could live long in the pernicious atmosphere of the Eastern Caucasus without becoming animal, rather than human, in character.

In December, 1918, during the British occupation, the intensest passions were aroused over conflicts between the operatives on the oilfields and the military. The workers were out to strike and destroy. We forbade it —with machine-guns. The Tartars were infuriated at a policy which did not include massacre as part of its programme; similar disgust animated the Armenians at our appropriation of the Baku-Batoum pipe-line; the Persians, Georgians, and Russians, though less hostile, were deeply suspicious of all our movements; and the English civil colony, small and powerless, but with a deep sense of its own superiority, deplored the good old days of prosperity and revelry, and predicted unparalleled calamity—unless "something happened." Something did happen. We disappeared.

But let us leave the inhabitants, and glance at the city itself. Baku lies under the heavy disadvantage of having become "civilised" too quickly. In rough outline it is quite shapeless, though this is due in great measure to the peculiar formation of the Apsheron peninsula on which it lies. Everywhere houses are packed together in squalor and deformity. With the exception of the Nikolaevskaya, with its magnificent golden-spired cathedral and quite respectable town hall, few of the streets are worthy of the name. Along this main thoroughfare there are mansions looking down on the sea which were once splendidly furnished, but have since had every room plundered and ruined by Turks or Bolshevists. Along the promenade are gardens and pavilions and avenues of electric light typical of our South Coast resorts of fashion. There is at least one first-class hotel—the Metropole—and several unutterable ones.

The general impression is one of steadily decaying magnificence, of wealth put to thoughtless purposes, of costly enterprise foolishly embarked upon—of a city without plan or purpose. And behind all this meaningless extravagance, like an approaching storm, is the blind wrath of conspiracy—of hate and high passion and vengeance constantly forcing an outlet. You cannot escape that sinister aspect of the city. Co-operative effort amid so much scheming, deception, and thorough depravity is not to be looked for.

At nightfall, however, Baku forgets the serious business of throat-cutting, to indulge in more artistic pleasures: the mantle of intrigue is thrown off; the Cossack with jewelled dagger and heavy, belted coat joins the fashionable Georgian in reckless carousal; revolver shots beat the rhythm to their songs, and the city has little sleep during these festivities. After all, vodka is cheap, and a bottle of wine but 300 roubles. In the restaurants the pallid, weary, humourless orchestras fiddle villainously till three in the morning. A vast crowd of over-jubilant officers and marvellously arrayed women assembles at the Casino for supper and the appalling variety entertainment which accompanies it. Supper is a feast of Elizabethan conviviality, for the Russian and his friends have thoroughly mastered the elaborate art of eating and drinking, and are never reluctant to show the unversed foreigner "how it is done."

From the upper windows of the big private houses in the residential quarter (an area it would be hard to define) come desolatingly sad Armenian songs, and the mad jingle of cymbals. Livelier entertainment is offered at the Mailoff Theatre, situated in a peculiarly forlorn part of the town, where Russian opera plays to a huge house every night. The performances are backed by "Society," but side by side with the perfume and jewels of aristocracy are lusty sailors of the Caspian "navy," unkempt clerks, poor cadets, porters in dusty attire, rough-coated labourers, sallow-faced Persians, and an indescribable rabble of others. During the intervals all mingle together in the *foyer*, and distinctions are swept aside in the hilarious amity that prevails. You pay about 4s. in the stalls and about 6d. in the gallery; and although I should not care to be rude to Covent Garden, the performance of "Tosca" which I saw in that Caucasian city put the London production entirely in the shade.

Now that Baku is out of British hands the Bolshevist capacity for terrorism has naturally widened its scope tenfold. A year ago life in the city was only tolerable because British authority promptly and impartially handcuffed the agents of revolution. Even then shooting and espionage were incessant. To-day the latest reports from the Caspian are woeful in the extreme; but whatever happens no spectacle can be too much for the inhabitant of Baku. He escapes or he meets death, and that is all. His is the charmed life of a city that has never known the meaning of peace, and by every portent will never be united enough to command it.

## CHESS.

Solution to Problem 23.—1. P—Kt6; if 1 K—B3, 2 Kt—Kt4, mate; if 1 . . . K—B5, 2 B—K6, mate; if K—K5, 2 B x P, mate.

We are just coming to the end of the first period of inactivity in the chess year, and interest is now concentrating on the coming Congress at Edinburgh. The view widely taken seems to be that, while the entry for the championship does not reach the same general level of strength as in pre-war years, there should be an exceptionally fine contest for the title, given that Mr. H. E. Atkins and Sir G. A. Thomas both do justice to their reputations. Unfortunately, in a competition where there is some disparity in strength, as would appear to be the case in the present contest, the result may be of an unsatisfactory nature, as one mistake may be decisive.

As I said last week, I shall look to Mr. Atkins to regain his title, the reason why I think he will being that he is essentially a player who is capable of rising to the occasion, and he knows how to win his games. Sir George Thomas's strength lies in the inherent soundness of his play; but while he is almost unbeatable, it is not a supremely difficult matter to draw against him. That, I think, may prove the decisive factor.

Next week or the week after I shall be giving the first of a series of games played in this year's championship. In the meantime. I will add one more to the games at odds that have appeared in these columns by reproducing one of Morphy's from his match with "Alter," with a view to enabling those of my readers who take part in handicaps to see how the greatest chess player of all time faced the problem of giving the pawn and move.

Remove Black's KBP.

| White. "Alter." | Black. Morphy. | White. "Alter." | Black. Morphy. |
|---|---|---|---|
| 1 P—K4 | P—K3 | 25 R x R | Q x R |
| 2 P—Q4 | P—Q4 | 26 Q x B | P x P |
| 3 P—K5 | P—QB4 | 27 Q—B3 | R—K |
| 4 P—QB3 | Kt—QB3 | 28 Q x P | K—Kt2 |
| 5 Kt—B3 | Q—Kt3 | 29 Kt—B2 | Q—KKt4 |
| 6 B—Q3 | P—Kt3 | 30 R—Q (5) | R—K5 |
| 7 0—0 | B—Q2 | 31 Q—B3 | Q—B3 |
| 8 P—QR4 | P—QR4 | 32 Q - Q2 | Q—Q3 |
| 9 Kt—R3 | P—B5 (1) | 33 P—Kt3 | P—R4 |
| 10 B—B2 | Kt—R3 | 34 P—B3 | R—K2 |
| 11 Kt—QKt5 | Kt—B2 | 35 Q—KKt5 | Kt—K4 |
| 12 P—QKt3 (2) | P x P | 36 K—B2 | Kt x P (6) |
| 13 B x P | B—K2 | 37 K x Kt | Q—QB3 (ch) |
| 14 R—K (3) | 0—0 | 38 P—Q5 | R—B2 (ch) |
| 15 B x P | P x B | 39 K—Kt2 (7) | Q x Kt (ch) |
| 16 P—K6 | B—K | 40 R—Q2 | Q—K5 (ch) |
| 17 P x Kt (ch) | R x P | 41 K—R3 | Q—K8 |
| 18 B—Kt5 | B—Q2 | 42 P—Q6 | Q—B8 (ch) |
| 19 R—QKt | Q—Q | 43 K—KKt2 | R—Q2 |
| 20 B x B | R x B | 44 Q—K5 (ch) | Q—B3 |
| 21 Q—Kt3 | B—B4 | 45 Q—Kt2 | R x P (8) |
| 22 QR—B | B—Q6 | 46 Q x P (ch) | K—R3 |
| 23 Kt—R3 | B—K7 (4) | 47 Q—Kt5 | P—Kt4 |
| 24 P—B4 | B x Kt | | and wins. |

1. This move is not to be commended, for usually in these games Black's only opportunity of attack is though the open Q B file. P x P, and if 10 Kt x P, Kt x Kt, followed by R—B, is the proper mode of procedure. Still, Morphy was a law unto himself.

2. Kt—Kt5 would also be good.

3. P—QB4 should have been played. Then, after, P x P; 15 B x P with a strong game.

4. Giving White no rest.

5. Better would have been Kt—Kt3, effectually blocking the rook, and, at the same time, preparing the way for the advance of the pawn.

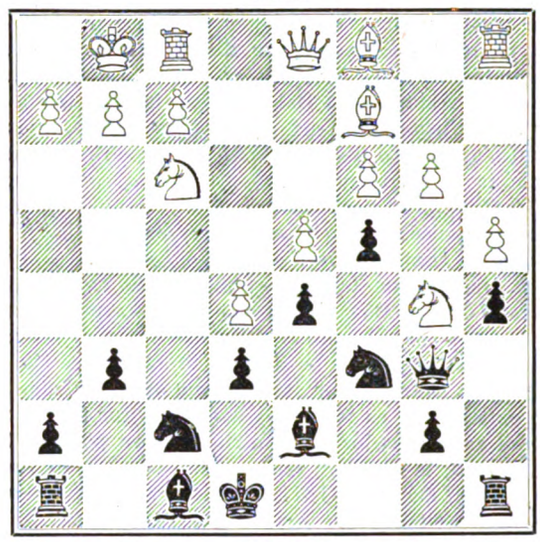
6. A very fine sacrifice.

7. K—K3 would have been no better. Black would still have taken the Kt, and then the rook would have had to be defended.

8. Obviously, if Q x Q, White would have had the superiority, for if, after 46 R x Q, R x P, then 47 R x P (ch), K—B3, and 48 R—Kt5, leaving Black with nothing better than R—R3.

Position after White's 12th move, P—QKt 3.

White.



Black.

According to a contemporary, Señor Capablanca hopes to bring about a match with Dr. Lasker for the world's championship, and is now on his way to Europe with that object in view.

Everyone would, of course, prefer to see the destination of the title settled over the board instead of by bequest, as it were, and it may be hoped that the Cuban's negotiations will be successful.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Elsewhere in these columns will be found some further extracts from the report on conditions in Roumania of Mr. Adams dealing with the opportunities for the extension of British trade with that country. Attention is drawn to the scope that exists in taking over the trade that formerly fell to Germany and Austria, in which connection it is pointed out that one of the reasons for the development of the trade of these countries with Roumania was the willingness of German and Austrian houses to do business in small parcels. This class of trade is of considerable importance in Roumania, and it may be hoped, therefore, that British exporters will make an effort to cater for this market's requirements. "As a rule," says Mr. Adams, "British exporters doing a good business are slightly contemptuous of small parcels, and will not be bothered with them. In Roumania this point of view evinces a certain want of foresight and a lack of knowledge of the market's capabilities of expansion."

***

Another important point raised by Mr. Adams is the question of quality. As he truly says, the word quality to the British mind usually connotes durability and reliability. Given quality in this sense, the average British manufacturer will be satisfied, overlooking the fact that the appearance of the goods is a matter of the first importance in persuading customers as to their quality. That is a matter to which our competitors have paid very close attention, and in so doing have undoubtedly gained at the expense of the British manufacturer. The Roumanian market, Mr. Adams points out, is one of those in which appearance matters, and it is from that point of view that the appeal must be made to the customer. "This means," he adds, "that of two articles in general use, the first being of superior quality according to the British idea and having a durability of, say, ten years, and the second having a superior appearance with a 'use lifetime' of, say, two years, the second article may meet with larger sales than the first."

***

I wish to draw the attention of British manufacturers of agricultural machinery to the reference in the report on the economic and financial situation of Egypt in 1919 by Mr. E. H. Mulock, H.M. Commercial Agent at Cairo, to the opening for tractors in that country. Mr. Mulock states that motor tractors and tractor ploughs are badly needed owing to the scarcity and high prices of cattle, but he points out that "the policy adopted by the local agents or representatives of British manufacturers of holding sporadic demonstrations in the country districts is not conducive to bringing the machines in question to the notice of all the many farmers who are anxious to purchase." It is suggested that the tractors, etc., imported into Egypt should be tested and shown at work simultaneously on different soils in some central locality, in order that intending purchasers may be able to judge for themselves as to the capabilities of the rival machines on the market.

***

The progress made towards reconstruction in Roumania was emphasised by Lord Bessborough in his speech at the meeting of the Bank of Roumania. During the past year Roumania, he said, had passed through a difficult period, but very great progress was made despite the problem of higher prices, and the acute scarcity of labour. "In the reconstruction," he added, "the new provinces of Bessarabia, Transylvania, and the Bukovina each have taken their respective parts, Transylvania in particular, with her industries, contributing to an appreciable extent." Owing to local conditions, the development of the oil industry has not been as anticipated, and for the moment, Lord Bessborough pointed out, the production of cereals constitutes the country's chief resource.

***

The movements of the Roumanian exchange in recent weeks have been rather striking. At one time the leu rose to about 120, but a retrograde process followed, and it is now back again in the region of 145. The exchange position is discussed this week by our Bucharest Correspondent, who states that the suggestion has been made that one main cause of the rise has been the development of a demand for Roumanian currency in France. A more important factor has unquestionably been the growing certainty that there will be an excellent harvest, while the restriction of imports has also assisted in this direction. The subsequent fall of the leu is to be attributed to increased activity on the part of importers. From what our correspondent says, it is evident that the new fall will not have created any surprise. The future course of the exchange is very uncertain. It is, however, clear that any great improvement in transport in the next few months would have a marked effect on the leu, for at present exports are curtailed by this factor.

***

One of the problems with which the traveller in the Balkans is confronted is the amount of currency, precious metals, etc., that may be carried over the various frontiers. It may, therefore, be useful to indicate the present position. As regards Bulgaria, the traveller is permitted to take across the frontier any amount in bank notes other than Bulgarian, the export of which is restricted to the value of 500 levas. There is no prohibition as regards personal ornaments; but, apart from these, gold and silver articles may not be exported. In the case of Roumania, travellers leaving the country may take with them one or other of the following:—1,000 lei, 1,000 francs, 1,000 lira, 1,000 marks, 1,000 drachmæ, 1,000 Polish marks 100 dollars, 100 Turkish liras, or £20 in sterling. Application for permission to export larger amounts has to be made to the Council on Exchange at Bucharest, whose decision, it is understood, will be given within five days.

***

The regulations in force in Yugoslavia are on much the same lines as those in Roumania. Travellers may take out of the country 1,000 francs, £30 in sterling, 100 dollars, 600 Swiss francs, 700 drachmæ, or 1,200 lira. In the event of a traveller being in possession of several currencies, the amount exported must not exceed 1,000 French francs. The export of gold, notes of the National Bank of Serbia, notes of the Austro-Hungarian bank bearing the Government stamp, and silver currency (beyond five dinars) is totally prohibited, while import restrictions are placed upon Austro-Hungarian and Bulgarian notes

***

A recent report gives a very unfavourable picture of the agricultural position in Algeria. In the spring adequate rain fell in that region, and there were hopes of an excellent harvest. Unfortunately, a prolonged period of drought ensued, with the result that crops were seriously affected, the wheat crop, in particular, suffering severely. Last year Algeria was able to export 650,000 tons of wheat, but it has now become necessary to import it. The vineyards at the date of the report were promising, but in their case also there was reason to fear the effects of the prolonged drought.

COMMENTATOR.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## EGYPT.

CAIRO, July 22.

### Economic Prosperity.

Much has been said and written regarding Egypt's economic prosperity. Now, figures talk; and the figures of the foreign trade of this country for May last speak most eloquently. The total imports for the month are estimated at £E7,700,904, and the exports at £E5,224,294. At first glance this may infer an unfavourable balance of trade, and if these figures conveyed the respective annual averages there would be an unfavourable balance of trade. But it must be remembered that there is now but little cotton, if any, being exported. Furthermore, when we take the figures for January to May, inclusive, we get a totally different result. These figures are:—Imports for the first five months of the year, £E36,692,445; exports, £E60,979,887. Both of these sets of figures make most interesting comparisons with those of similar periods of last year. For May last year imports were valued at £E3,924,993, and exports at £E3,470,320. For the first five months of last year imports were estimated to be worth £E16,265,604, and exports were valued at £E20,921,340. In other words, the value of imports into Egypt for the first five months of this year has increased by 125 per cent. over those of last year, while the respective estimates of the two total values of exports for the same comparative periods show that exports this year were more than 200 per cent. in excess of last year. True it is that goods brought in were dearer in some cases this year than last. But they were not 200 per cent. dearer, or anything like it. The figures are proof positive, if figures can prove anything, that this country's economic prosperity has an increasingly solid basis.

For the first five months of this year Egypt imported goods worth £E3,931,444 from Great Britain, against £E1,773,205 in 1919. This indicates the continued and increasing demand for British goods in this country.

## GREECE.

ATHENS, July 17.

### Trade in 1919.

According to statistics of the Ministry of National Economy the total foreign trade of Greece during the first six months of 1919 amounted to 953,966,635 drachmæ, the imports representing 645,902,773 drachmæ, and the exports 308,063,762 drachmæ. These amounts were distributed as follows:—

Imports:—Great Britain 160,599,924 drs., United States 145,096,219 drs., Italy 70,870,159 drs., France 52,642,390 drs., Spain 46,740,385 drs., Egypt 43,187,465 drs., Turkey 19,586,812 drs., Sweden 6,010,599 drs., Yugoslavia 5,610,596 drs., Switzerland 5,184,725 drs., Holland 2,337,648 drs., Russia 734,946 drs., Bulgaria 672,120 drs., and Roumania 523,908 drs. The balance, representing about 90,000,000 drs., was distributed amongst various other countries.

Exports:—Great Britain 79,940,672 drs., United States 40,944,667 drs., Turkey 39,569,449 drs., Roumania 39,314,443 drs., Yugoslavia 29,190,423 drs., France 18,344,491 drs., Holland 17,140,940 drs., Egypt 13,531,418 drs., Russia 8,094,581 drs., Sweden 2,565,823 drs., Bulgaria 2,119,005 drs., Norway 821,536 drs., etc.

The total foreign trade with each of the principal countries has, therefore, been as follows: Great Britain 240,540,596 drs., United States 186,040,886 drs., Italy 81,662,749 drs., France 70,986,883 drs., Turkey 59,156,261 drs. Egypt 56,718,983 drs., Roumania 39,838,351 drs., and Yugoslavia 34,801,019 drs.

### Customs Receipts.

The receipts of the Piræus Customs during the month of June amounted to 5,396,798.90 drs. in paper and 238,949.40 drs. in gold, as against 5,000,098.55 paper drs. and 256,161.05 drs. in gold, which were the receipts for June, 1919. There is, therefore, an increase this year of 396,700.35 paper drs. and a decrease of 17,211.65 drs. in gold.

The total receipts during the first six months of 1920 amounted to 33,477,823.50 paper drs. and 2,582,881.70 drs. in gold, as against 22,770,515.60 paper drs. and 2,150,759.65 drs. in gold collected during the first six months of 1919. There is an increase, therefore, during this year of 10,707,307.90 paper drs. and 432,122.05 drs. in gold.

### Shipping at the Piræus.

There were 418 arrivals of various steamers in the port of Piræus during June, of the following nationalities:—Greek 338, British 21, Italian 21, Inter-Allied 13, French six, American five, Roumanian four, Swedish three, Russian three, Japanese one, Dutch one, German one, Norwegian one. The number of sailing vessels of various nationalities which entered the port during June was 732.

## ROUMANIA.

BUCHAREST, July 20.

### The Exchange.

It is difficult to account for the sudden rise in the value of the leu, which is still round 130 to the £1. In November last year it stood at 98, and fell rapidly for the next four months far beyond the expectations even of the most pessimistic. Many people, including bankers and experienced business men, bought lei at 120, thinking it had then reached its limit, but it continued to fall down to 300 at the end of March. In April it went up again to 260/280, and in May and June it rose rapidly and reached the present figure this month.

It is suggested that one main cause lay in the fact that a number of Roumanian banks largely increased their capital in the first quarter of the year, most of this increase being subscribed from France in lei, thus creating a demand for the Roumanian currency on the Paris market. Besides this, great hopes were entertained of the favourable conditions that would be introduced by a new and stable Government, the reports of the coming harvest have been excellent, so that some export of last year's cereal crops has begun to be allowed by the Committee for the Control of Export, while, on the other hand, nothing has lately been imported, so that there has been no demand for foreign currency. It is now suggested that, as the country certainly cannot re-establish her industries without importing machinery and other requisites, the national currency may soon fall again, to some extent, though not so far as before, and may then remain more or less stabilised for some time. But who can tell what influences may affect it in the future? At all events it is the case that several merchants are taking advantage of the present low rate, and are now making purchases abroad.

Particulars of the export of petroleum and petroleum products for the first five months of this year have now been published. The following is a short *résumé*, the figures representing tons:—

| | Benzine. Light. | Benzine. Heavy. | Lamp Oil. | Gas Oil. | Residues |
|---|---|---|---|---|---|
| January... | 75 | — | 7,159 | 500 | 3,500 |
| February. | 1,572 | 804 | 13,438 | 610 | 250 |
| March..... | 250 | 700 | 3,448 | 880 | — |
| April ..... | 4,060 | 1,050 | 5,867 | 1,961 | 150 |
| May ..... | 1,908 | — | 3,467 | 500 | — |
| Total ..... | 7,865 | 2,554 | 33,379 | 4,451 | 3,900 |

A large proportion of the lamp-oil has gone to Egypt from Constantza, but most of the other deliveries have been made by way of the Danube or overland to Czecho-Slovakia, Yugoslavia, Austria, and Bulgaria, while 3,500 tons of residues went to Fiume from Giurgevo in January, doubtless in fulfilment of the Government contract to supply an Italian factory there.

## BULGARIA.

SOFIA, July 5.

### The Chambers of Commerce.

On June 27 the Chambers of Commerce in Bulgaria celebrated the twenty-fifth anniversary of their establishment. The commemoration opened with a service, at which the "Te Deum" was sung, after which M. Karadjoff, the president of the Sofia Chamber of Commerce, gave a detailed survey of the development and activities of the Chambers. He called attention to the great work of the Chambers at the present time, and pointed out that it was a pledge for the part which these institutions would play in the future in the economic life of the country. The Minister for Commerce, Industry, and Labour, Dr. Raiko Daskaloff, then addressed the gathering, pointing out how indispensable the profession of commerce was in this era, and emphasising the service it rendered to the State by finding markets and thus stimulating production. Other speakers included the president of the Economic Society. The celebrations were concluded by a banquet at the Grand Hotel de Bulgarie.

## CYPRUS.

NICOSIA, July 6.

**Exports of Fruit.**

There have already been some good shipments of fruit to Egypt, and these should be largely exceeded in the coming months. Cyprus cherries are of good quality, and these are succeeded by other kinds of fruits, including apricots and *kaishas* (which suggest a cross between apricot and nectarine) and plums—all of which find a ready sale at Port Said and Alexandria.

**Vine Cultivation.**

Peasants are now enjoying an annual season of comparative ease, enlivened by many summer fairs, which it is hoped no fresh epidemic will interfere with this year, as it did last. The next large operation is the gathering of carobs in the latter part of August, and good hopes are entertained regarding it. This is succeeded by the vintage (not to mention the olive crop), which means so much for hill villages.

The great fall in wine prices, which has disappointed villagers, might have been anticipated. But although the diminished consumption in Europe and America may adversely affect many markets, it is hoped that prices will rise again in the principal Levantine countries, especially Egypt, and a considerable extension of vine cultivation marks the confidence of the village manufacturers. The demand for Cyprus raisins should be maintained, if not increased. It is a very great pity that there should be so many wasted opportunities in the island. An improvement in the preparation of raisins would now assuredly bring about good sales in the United Kingdom. But the fact remains that while the Government cannot, or will not, take the lead, the nature of our tenure still prevents private enterprise from outside, which could do so much for all products of the vine. Knowledge and capital only are needed, and Cypriots have not sufficient of either the one or the other, while enterprise is still sadly lacking.

## EGYPTIAN COTTON.

### REPORT ON ITS YIELD AND QUALITY.—I.

(FROM OUR CAIRO CORRESPONDENT.)

Before the Cotton Research Board embarked upon the extended programme of botanical work for which provision has been made by the Egyptian Government it was deemed desirable to have the whole situation reviewed by an expert on cotton from the botanical side, and the services of Mr. Martin H. Leake (lately Economic Botanist and now Director of Agriculture in the United Provinces of India), who has had a long experience in the breeding of cotton, and who is recognised as one of the foremost authorities on the subject, were secured for the task. Mr. Leake has now published a report, based on an able and exhaustive study of the cotton of all grades in Egypt.

Referring to the botanical side of the question, Mr. Leake says that selection requires to be conducted on two independent lines, and work along both of these should be conducted simultaneously. In the first place—and this forms the most important need—selection should be directed to isolating and maintaining the purity of races yielding the standard classes of the present day. Such selection forms the basis of any scheme which aims at eliminating degeneration, which, in its ultimate form, is interpreted as due to an inherent plant character giving to the type a limited span of life. Secondly, selection must be directed to the discovery and isolation of new and hitherto unrecognised types, particularly for such varieties as develop improved lint, a higher ginning percentage, and a vigorous habit accompanied by high yield or early maturation. Such investigation, of course, comes within the jurisdiction of the Cotton Research Board.

Mr. Leake sketches eight lines upon which the Cotton Research Board should work. He suggests trial grounds for the working-up of a pure seed supply, cultural and manurial experiments, and experiments on the water requirements of the field crop; a commercial organisation to control the seed and to prevent admixture after the seed passes beyond Ministerial control; mycological investigation, contending there is a large scope for it; bacteriological investigation, as little work has been done on bacterial action on the soils in Egypt, and as the field is large, important, and practically unexplored, such investigation must be of considerable magnitude, and, if controlled, capable of exerting considerable influence on crop development; physical research, as, concerning as it does the relation between the level of the sub-soil water (water table) and the rise of the Nile, it is closely connected with the irrigation system, and, by controlling the tension flow through cultural means, irrigation could be much reduced in tracts in which the presence of salts is not marked.

Mr. Leake holds that these lines of research, based upon the commonly accepted divisions of science, cover the field presented by the cotton problem in Egypt. He emphasises that the close interrelation between them necessitates care for preserving full continuity from one stage to the next, and he lays stress on the importance of the Cotton Research Board paying strict attention to this.

The work of the botanical section will be, primarily, the isolation of the different kinds of cotton in a condition of purity. Subsequently small cultures should be grown comparatively under differing environmental conditions—for obvious reasons of research. Cultural experiments in the fields should only include those varieties which have proved satisfactory in the foregoing experiment. When the results of these experiments have yielded the most suitable varieties, arrangements should be made to secure the bulk development of a pure seed supply, and eventually the organisation of a seed supply sufficient to meet the full needs of the tract. For the purposes of these experiments a research farm will be necessary.

So far Mr. Leake has only outlined the experimental stage. Thence he proceeds to the practical issues. The agricultural section should also be provided with a farm, to be called the experimental farm. The agricultural section, having become familiar with the results of the botanical section, will make further experiments, and finally ultimate selection as to which varieties, or races, as Mr. Leake prefers to call them, are to be continued and those which are to be disregarded will rest jointly with the botanical and agricultural officers.

The seed farms, he continues, cannot be so readily allocated. Their primary function is to work up a stock of pure seed, and for this purpose botanical control and examination are desirable. But the difficulty of centralising these areas here arises; and Mr. Leake suggests that the seed farm nearest to headquarters should be under the botanical section and the rest under the respective district agricultural officers.

From the seed farm the seed should be issued to the cultivator, using that term in its widest sense. This is the first place where the public comes into actual contact with the scheme. But Mr. Leake emphasises that only those cultivators who take a personal interest in their estates should receive the seed. It would be futile to go to all this trouble only to issue the seed to a cultivator who, either through ignorance or carelessness, would allow the seed to become mixed with others the impurity of which was the very disadvantage which the experimental work had been intended to eliminate.

Mr. Leake, in the latter part of his booklet, propounds a scheme for the control of the seed subsequent to its issue to the public. It is a comprehensive scheme, worthy of study in itself. I therefore propose to discontinue the summary of his booklet at this stage, and in my next article to review the method which he proposes to ensure the further control and multiplication of that seed.

The receipts of the Smyrna-Aidin Railway for the week ended July 17 amounted to £7,399.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £E12,793, making the total for the year £E116,137. The figures for the corresponding periods of 1919 were £E9,474 and £E47,851.

**BANQUE D'EXPORTATION PRIV. DU ROYAUME DE SERBIE.**

(Royal priv. Serbian Bank for Exportation.)

**BELGRADE, SERBIA.**

**Capital, Paid-up, 5,000,000 Dinars**

**Reserve - - 1,200,000 Dinars**

The Bank transacts all Banking Operations, undertakes all manner of financial, commercial and industrial enterprises and effects Money-Transfers to and from Foreign Countries.
*The Commercial Department* of the Bank deals mainly in the Export of Native Products on its own account and on commission basis.

## GENERAL BANK OF GREECE.

*Paid-up Capital, Drs. 3,000,000.*

**Head Office - ATHENS.**

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

## POPULAR BANK OF GREECE.

**Head Office, ATHENS. Branch, PIRÆUS.**

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

**CAPITAL - Drs. 1,500,000.**
**RESERVE FUND - Drs. 2,500,000.**
**Deposits and Credit Accounts, Drs. 100,000,000.**

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

*General Manager:* D. LOVERDO.

## TRADE WITH THE NEAR EAST

WITH its offices in all the principal towns in **Greece, in Egypt, Cyprus, Crete, Constantinople,** and in **Smyrna, the Bank extends exceptional Facilities for Export and Import Trade between Great Britain and the Near East generally,** and invites enquiries and correspondence relating thereto.

## BANK OF ATHENS

HEAD OFFICE: ATHENS.

LONDON 22, Fenchurch Street E.C.3. MANCHESTER 57, Mosley Street

## COMMERCIAL BANK OF GREECE, LIMITED.

**CAPITAL PAID-UP - Drs. 15,000,000.**
**RESERVE FUNDS Drs. 2,845,010.45.**

**Head Office: ATHENS.**

*Branches:*—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostitza (Ægion), Nauplia. Larissa.**

**AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.**

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 30·87 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10 % primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

# BRITISH CONSULAR REPORTS.

## II.—ROUMANIA (*Continued*).

The point is emphasised by Mr. Adams that in nearly every branch of business with Roumania there are opportunities for the extension of British trade. These opportunities, he remarks, are not necessarily dependent on an increase of total trade in any one line, but exist in the possible taking over of German and Austrian trade by British exporters. One reason for the predominance of German and Austrian houses before the war was their willingness to do business in smaller parcels than British exporters as a rule care to handle.

"This point is of great importance in trade with a country in the economic and social state of Roumania at the present day. As a rule, British exporters doing a good business are slightly contemptuous of small parcels and will not be bothered with them. In Roumania this point of view shows a certain want of foresight and a lack of knowledge of the market's capabilities of expansion.

"The total import trade of Roumania in 1912 was about 25½ millions sterling, and it may be expected that with the accession of the new Provinces this amount will be increased to double or more than double. British houses possessing an organisation in this country will benefit greatly thereby, and others should think seriously of entering the Roumanian market now during the period before the reconstruction of the industrial parts of Germany and Austria shall have progressed to such an extent as to make them once more possible competitors for a portion of Roumania's import trade. Firms establishing themselves now will grow with the market as well as aiding in the capture of that portion of the trade formerly held by Germany. British exporters should devote a certain amount of consideration even to small parcels, having in mind that they are but the precursors of the larger business which will follow in their train relatively with the economic growth of the country and its future greater social diversity. That this is true is shown by the figures of the import trade for the ten to fifteen years before the War, which show an increasing and progressive vitality each year.

"The fact is appreciated that small business means more work for the head of the firm, or his chiefs in the organisation, and this appears to be the real objection to its cultivation; but in the case of Roumania the future rewards are so great that the objection should not be allowed to exercise the weight it does. A good deal of the attention necessary to small business may be put on to the shoulders of a resident agent, or effected by an adequate territorial organisation in methods of trading.

"In cases where the amount of business done warrants the overhead expenditure, it is preferable that British exporting firms open a branch house in Roumania, the organisation of which could proceed either along the lines of the ordinary branch abroad, or could consist of a separate joint stock company formed under Roumanian law and figuring legally *vis-à-vis* the owning and controlling parent company as an independent concern. This course would avoid the requirements of the Roumanian law regarding the registration for business in this country of branches of British firms or joint stock companies, and proper safeguards for the conduct of the business in Roumania are available in the nomination of the directors of the local company. British commercial reputation stands high in Roumania, and business houses will find it to their advantage to have their own establishments in Roumania run by an Englishman, even in cases where the manager has had no previous experience of this country."

Mr. Adams proceeds to draw attention to two further points in regard to the marketing of British goods—(1) Consistent and continuous calling on the trade, and (2) the question of quality. As to the former, he says:—

"In cases where a national territorial organisation is adopted for conducting sales in this market, it is presumed that this organisation would have its own travellers, who would do their work thoroughly and efficiently from this end, but should the organisation take the form of a resident agent, it is advisable to supplement his efforts with those of special representatives of the firm sent from England at the selling seasons of the year. These men would not only encourage the agent in his activities, but, where necessary, could check his sales and his methods of giving credit to suit the plans and ideas of their chiefs."

In the era of great expansion of British foreign trade the reputation of the goods supplied, he points out, was built up on the British idea of quality. "This idea, however, overlooked full appreciation of the power of *appearance* of the goods in *influencing the purchaser's opinion* as to the quality of the goods. The idea of quality in the British mind often seems to be confined to durability and reliability in use. Our international competitors diagnosed this as one of the most vulnerable points of attack for competitive purposes, and in certain branches of trade have almost confined their efforts to pleasing the eye of the purchaser in the appearance of the finished goods, or, in the case of food products, in the appearance of the package, or packing of the goods. This question of the appearance of the finished article, arising in the foreign trade of all countries, has been frequently dealt with in official reports, and experience in selling goods proves the importance of this factor. British firms wishing to sell goods in Roumania must appeal to the consumer from the point of view of appearance. This means that of two articles in general use, the first being of superior quality according to the British idea, and having a durability of, say, ten years, and the second having a superior appearance with a "use lifetime" of, say, two years, the second article may meet with larger sales than the first."

## TANGIER—TETUAN ROUTE.

Direct communication between Tangier and Tetuan was finally established on July 1, when the Compania Espanola de Colonizacion, the concessionnaires for the service, despatched the first motor-car over their newly-constructed track. Thus the double crossing of the Straits of Gibraltar via Algeciras and Ceuta, a roundabout route which has been necessary since 1913, is at last obviated. A daily road service will be maintained for the present by four-seater motor-cars, the single journey costing fifty pesetas Spanish, but it is hoped to replace these by twelve-seater motor buses and reduce the fare to twenty-five pesetas. It was necessary to build several wooden bridges in the making of the track, which runs through some thirty miles of wild open country.

## INDIAN INTELLIGENCE.

This week's Indian cable states:—Rain has fallen fairly generally throughout except in North-Western India, Assam, and east coast of Madras, where fall was local. Crop conditions generally good, but more rain required in some parts. Bombay cotton market weak. Fully good broach, July-August, Rs. 421. Piece-goods market steady owing to good retail inquiry. Enormous loss caused by fire on July 22 in Mulji Jetha piece-goods market, Bombay. Must affect trade. Calcutta jute market steady, with little doing. Heavy goods quiet. Hessians very quiet, with slight decline in price. No change in bank rates.

# ENGINEERING.

### New Gas-filled Lamps.

It will be remembered that the first commercially usable Mazda gas-filled electric lamps were produced in 1914, after many years of costly research and experiment. The development of the lamp, though not speedy, was thorough, and the lamps were at once a striking success. From that day onward the engineers and chemists engaged in incandescent lamp research work have continued their labours with redoubled energy, realising that the discovery of the gas-filled principle was merely the starting point of a new line of development, the end of which was not in sight but which would have a great and far-reaching effect on the electrical industry of the country.

### Lighting Economy.

From every point of view the new gas-filled lamps are strikingly efficient and economical, and it may be said at once that there is no other known illuminant which can compare with them in certain most important respects. From a hygienic point of view alone it would seem evident that an artificial light which is produced in a sealed glass vessel from which no products of combustion can escape into the atmosphere must be more health preserving than one which gives off vitiated gases, partially consumed hydrocarbons, and which uses up the oxygen in the air. The cleanliness of a light which gives off no semi-burned particles of carbon to cause dust and dirt is so obvious as hardly to need mention, and further advantages of electricity as an illuminant are the ease with which it can be controlled, the simplicity with which it can be installed in any position and room, and the fact that electric lamps practically do away with every risk of fire.

### Small Lamps Obtainable.

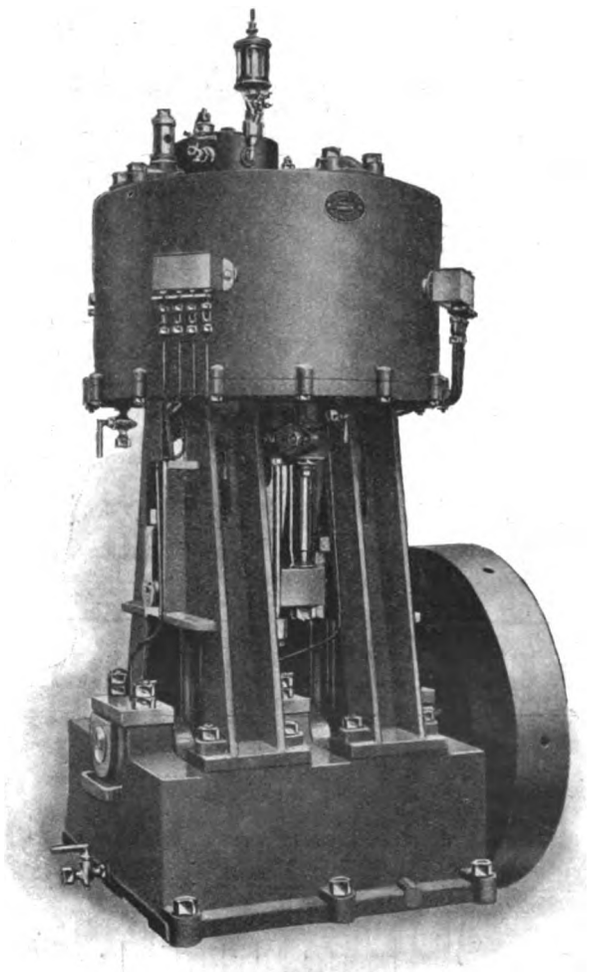
At the commencement gas-filled lamps for 100 and 200-volt circuits could only be manufactured in comparatively large sizes, consuming 500 watts and upwards. These powerful and highly efficient light-giving units represented a very great advance, it is true, but obviously they were more suited to business premises than for domestic use. Shopkeepers could use them to great advantage, and for the lighting of retail stores these lamps rapidly came into favour. In large offices, public halls, for street lighting, and for places of worship, and for the lighting of large open spaces, these lamps, almost at once, began to displace the ordinary lamp, but householders, tenants of small offices, and occupiers of small premises derived no benefit from their introduction, in that the only available sizes of lamp were too large and powerful for their requirements.

With the subsequent development of the 100-watt lamp for use on 200-volt circuits, and of the 200-watt lamp for use on circuits of 100 volts, an enormous impetus was given to the new form of electric lighting. These new lamps could be used in shops of any size and kind and in the larger rooms of private houses. Still, however, there remained many conditions in which gas-filled lamps could not be suitably employed. The successful productions, announced a few weeks ago, of a 40-watt lamp for use on 100-130-volt circuits and of a 60-watt lamp for use on circuits of from 200 to 220, or even 250 volts, has already resulted in extraordinarily heavy sales amongst householders, and now innumerable people who have not hitherto been able to take full advantage of the extremely high efficiency of the gas-filled lamp can use them in places where they have hitherto been obliged to use electric lamps of a less economical type. Apart from cellars, passages, and other places where a strictly dim or local illumination only is desirable, there seems now to be no single domestic, public, commercial, or industrial condition to which the gas-filled lamp cannot be both appropriately and conveniently applied, with striking results from the point of view of economy.

The new Mazda lamps have filaments of the ring-type, and can be used in any position, and an added convenience is that they are fitted with caps which enable them to be used in any existing lampholder. The approximate overall dimensions of the 40-watt, 100-volt lamp are: Diameter $2\frac{3}{8}$ ins., length $4\frac{3}{4}$ ins. The 60-watt, 200-220-volt type are $2\frac{3}{4}$ ins. in diameter and have an overall length of $5\frac{3}{8}$ ins.

### High-Pressure Compressing.

One of the directions in which remarkable development has been made of late is in connection with the production of high pressures which may be applied to liquids in a gaseous form. It goes without saying that the manufacture of high-pressure compressors for air and gas of various descriptions is one that cannot be brought to a successful issue without a wide knowledge of the conditions to be met and a long experience in the difficulties to be overcome.



**Open-Type High-Pressure Compressor, by Peter Brotherhood, Ltd.**

The high-pressure compressor, which has now reached so high a stage of efficiency, was called into request mainly by the introduction of the automobile torpedo some forty or fifty years ago. It may be mentioned here that by the term "high pressure" is meant a working pressure of about 1,000 lb. per square inch or more, and, as will readily be realised, the construction of machines to compress up to such enormous pressures differs very greatly from that of machines for what may be termed ordinary compressed air pressure of up to 200 lb. per square inch. In the first place, as Messrs. Peter Brotherhood, Ltd., pointed out recently to the writer, compression in a number of stages is a necessity both from the point of view of economy and of safety, and in standard type of that firm's machines up to six stages are employed according to the working pressure.

By multiplication of the stages of compression and complete inter-cooling of the air between each stage, the highest possible economy is reached, and all danger of ignition of

any of the oil used is avoided. Further, the number of joints exposed to the air pressure is small, and where joints are unavoidable a perfectly clean metal to metal surface is made, and no jointing material is used. The whole of the pump itself is of bronze, which is of great strength and non-corrodable, except for use with acetylene and other gases which would attack copper and its alloys. In a further note on this subject I hope to be able to deal more fully with high-pressure compressors of this type in view of the important part they are now playing, and are likely to continue to play in modern engineering and industrial practice.

**The Ljungstrom Turbine.**

It is claimed that the Ljungstrom turbine, which is now being manufactured in this country, represents in its improved form the most important advance in the direction of improved efficiency that has been made in connection with prime movers since the introduction of the turbine. The Brush Electrical Engineering Co., Ltd., who are now engaged in producing these turbines at their works at Loughborough, commenced production during 1913, and during the war a number of orders were given for sets by various Government departments. These appear to have been even more successful than the majority of engineers anticipated, and the proof of their growing popularity is shown by the fact that the total capacity of plants of this type at present in service or on order is close upon 600,000 horse-power. These orders include a number of repeat orders from municipal power-stations and private concerns where this type of turbine has been employed for some little time in driving both continuous and alternating current generators producing electrical energy for lighting, power, and traction purposes.

The Brush-Ljungstrom turbo-generators are standardised at 1,000, 1,500, 3,000, and 5,000 kilowatts and a 7,000 kilowatt size is at present in operation in a large and important undertaking. I understand that two larger sets, rated at 14,000 and 35,000 kilowatts respectively, are under construction, and in regard to this I may add that I believe the latter size is, or is close to, the recognised economic limit for this class of prime mover.

**Some Details.**

Designers of turbines of the steam type were hampered for some time by the fact that the centrifugal force generated by the moving parts was so high as to render it impossible to permit of the turbine blades revolving at the speed which it would have been sound engineering practice, otherwise, to have reached. The Ljungstrom principle was recognised as a practical way out of the difficulty, and by its adoption it was possible to double the speed of the blades in relation to each other without actually increasing the running speed of the parts. The ordinary turbine was fitted, as every engineer knows, with one set of moving and one set of fixed blades. In the new turbine the fixed blades are replaced by blades which rotate in an opposite direction to the outer set of moving blades, and it is possible, accordingly, to secure the efficiency and economy of 6,000 revolutions at an actual running speed of half that number. Further, the new turbine is much lighter than the ordinary type, power capacity being equal, and it is possible as a result to mount it directly on top of the steam condenser which rests on a comparatively light and simple foundation. In this way a considerable saving in floor space is obtained, and it is obvious that this is in itself a particularly valuable feature.

The proposals made for the generation of electric power in bulk, and the suggestions that wherever possible cheap and abundant supplies of electrical energy should be produced for use in industry, should increase the demand for electrical equipment generally. Not only will turbines be required, but as most, if not all, of the big power supply stations will be turning out alternating current at high pressures, transformers of many kinds will be in demand. I hear that the works of the Brush Co. are being extended in order to cope with increasing business in transformers and motors, as well as to enable extensions to be made in the present big business of building railway and tramway rolling-stock and bodies for motor-omnibuses.

**The Uniflow Engine.**

This engine certainly represents the latest development in high-class practice, and has given some remarkable results on test. The advantage of an engine of this type, as com-

pared with those built according to the usual methods, is that the clearance spaces in the cylinders are not reduced in temperature, because the steam is compelled to flow in one direction only. This means considerable economy in working, and the efficiency of a single cylinder engine of this type is quite equal to that of an ordinary engine of the triple-expansion type.

## NEAR EAST MARKETS.

### Sudan Produce.

Some further extracts from the C.E.B. report for May are given below :—

**Wheat.**

Dongola Province.—The Inspector of Agriculture of Nuri and Gureir pumping sites reports that the yield of wheat crops has proved to be rather better than anticipated (5 ardebs the feddan), and that several plots have yielded up to 6½ ardebs the feddan.

Darfur Province.—April. The average price of wheat in Fasher market during the month was £E1,800 per ardeb.

**Sesame.**

Kordofan Province.—208 ardebs of sesame were sold in El Obeid market at an average price of £E5,200 per ardeb of 330 rottles (148 kilos).

Kassala Province.—Market prices per ardeb of 300 rottles (135 kilos) Gedaref £E4,500, Mafaza £E3,960.

Nuba Mountains Province.—April. The Kadugli merchants have been exporting a fair quantity of sesame from the Krongo hills, etc., during the month on camel. Camel rates of hire have been high. Merchants have likewise been exporting from the Kowahila country both dura and sesame, via Kaka and Rahad.

**Ground Nuts and Tobacco.**

Kordofan Province.—117 ardebs of ground nuts were sold in El Obeid market at an average price of £E2,800 per ardeb of 280 rottles (126 kilos).

Darfur Province.—April. 353 kantars of tobacco were sold in Fasher market during the month.

**Livestock.**

Red Sea Province.—64 cattle and 54 sheep were exported during the month.

Berber Province.—2,495 sheep and 172 cattle were exported from Damer during the month.

70, VICTORIA STREET, LONDON, S.W.1,
will have much pleasure in sending a free ticket admitting to the Exhibition every day to any Engineer in the Near East who would care to apply for one.

## LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Thursday.

No particular development can be recorded in trade in the market, and the tone continues quieter. Undoubtedly quite a change has come over buyers since a fortnight ago, and there is again distrust of current rates. Private and public telegrams relating to the Egyptian cotton crop are very satisfactory. Lancashire spinners, however, are rather concerned at the probable smaller supply of Sakellaridis, and some firms are wondering how they will go on in the future. In yarns made from Egyptian cotton buying has been very patchy, and now and again fair orders have been booked, but there has not been any general flow of business. In most counts and qualities, to buy raw cotton to-day and produce yarn is a very lean affair. The demand in piece goods for the Near East has not improved, and shippers are still adopting a waiting policy. The political outlook abroad causes nervousness, and there is a disposition to limit commitments. A considerable inquiry has been met with in piece goods for India, and a fair turnover has taken place in bleaching and printing descriptions, but grey staples are still neglected, although makers are prepared to accept less money. Useful support has been given in a variety of goods by buyers for South America. The home trade has been quiet. Cloth quotations continue to show wide variation. A distinct falling off has occurred in the turnover in home American yarns. Export bundles have been in fair request for India, and a little more business has been about for France.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Cunard Line s.s. Sea Victory, for Pirœus, Salonika, Constantinople and Galatz, will close for cargo at Antwerp on August 18, and in London on August 25.

# COMPANY MEETINGS.

## BANK OF ROUMANIA.

### Increased Scope for Development.

The ordinary annual general meeting of the Bank of Roumania, Limited, was held on July 28 at Winchester House, Old Broad Street, the Earl of Bessborough, K.P., C.V.O., C.B., presiding.

The Secretary ((Mr. H. Locke) having read the notice convening the meeting and the certificate of the auditors,

The Chairman said :—Gentlemen, I assume that, as usual, you will take the directors' report and the balance-sheet as read. In moving the adoption of the report and accounts up to the end of December last, I would draw your attention to the considerable growth of the figures in the balance-sheet as compared with those in our previous one. The principal increase, as you will notice, is in the cash in hand. This is due, in a large measure, to the heavy deposits in Roumanian currency which have been made in Bucharest on behalf of exporters to Roumania, either in payment of goods awaiting a more favourable rate of exchange before being remitted abroad, or in the shape of deposits by the importers as security for payments in foreign currencies to be effected at some future date. As mentioned at the foot of the balance-sheet, these deposits in lei, and also their counterpart, including cash in hand in Roumania, have been calculated at the rate of 25 lei to the pound.

As you will see by the report, the trading accounts for the year, after making provision for bad debts, etc., writing down investments in British Government securities to market value, placing £2,000 to pension fund, and valuing the lei profits at the rate ruling on December 31 last, show, after payment of income-tax, a credit balance of £2,673 5s. 3d. This sum has been carried to a special reserve account. The abnormal rate of exchange has, of course, adversely affected the result of the year's working.

Since the date of our last meeting the boundaries of Greater Roumania have been fixed by the Peace Conference, and the Kingdom of Roumania is now a country of approximately 100,000 square miles, with a population of about 15,000,000. This extension, when conditions more nearly approach the normal, will, no doubt, afford us plenty of scope for development. During the past year Roumania has, in common with other countries, passed through a difficult period of economic, financial, and commercial reconstruction, and I am pleased to say that very great progress has been made during the year, in spite of the fact that the country has been faced with the problem of higher prices and scarcity of labour in an acute degree. As an instance of the progress that has taken place, I may say that the improvement in the organisation of the Roumanian State Railways has been most marked. In the reconstruction the new provinces of Bessarabia, Transylvania, and the Bucovina have each taken their respective parts, Transylvania in particular, with her industries, contributing to an appreciable extent. The oil industry, owing to local conditions, has not so far developed to the extent that was anticipated.

For the moment the principal resource of the country is the production of cereals. With regard to the prospects for this year's crop, I may say that the full area is not under cultivation, but that the latest advices as to the prospects of the harvest are excellent. Possibly the favourable expectations of this may be responsible for the recent improvement in the rate of exchange. I am pleased to inform you that this bank has been appointed an agent for the Board of Trade in connection with their export credits scheme, and I hope the facilities offered by the Board of Trade will play an important part in the rehabilitation of the economic life of Roumania. I am asked to mention that the Ministry of Labour has requested me to refer to the question of the employment of ex-Service men. We have done all we could in that direction, and have a number of them in our employ; and I venture to hope that other employers will follow our example. In conclusion, I would like to acknowledge, with thanks, the admirable manner in which the managers and staff have conducted the business of the bank, both at home and abroad, under very trying circumstances.

Viscount Goschen seconded the resolution, which was carried unanimously.

Viscount Goschen moved the re-election of the retiring director, Lord Bessborough.

General the Hon. Sir H. A. Lawrence, K.C.B., seconded the resolution, which was unanimously agreed to.

On the motion of Mr. A. Hood, seconded by Mr. J. W. Hoskins, Messrs. Jackson, Pixley, Browning, Husey, and Co. were re-appointed auditors to the company.

Mr. J. Rosselli moved a vote of thanks to the chairman, the directors, and the management and staff for their services during the past year.

Mr. E. C. Barter seconded the resolution, which was carried unanimously, and the chairman having briefly responded, the proceedings terminated.

## NEW EGYPTIAN.

### Transfer of Control to Egypt.

An extraordinary general meeting of the New Egyptian Company, Limited, was held on July 28 at Winchester House, Old Broad Street, to consider resolutions to transfer the control of the company to Egypt, and to make the necessary alterations in the articles of association. Mr. Arthur A. Baumann, chairman of the company, presided.

The London Manager and Secretary (Mr. Thomas Day) having read the notice convening the meeting,

The Chairman said :—Gentlemen, at the last general meeting of the shareholders, in June, I told you that we had received a requisition from the Egyptian shareholders for the transfer of the control of the company to Egypt. It is only natural that people resident in Egypt should object to paying income-tax, excess profits duty, and corporation tax in this country, and that they should seek to alter that by transferring the control to their own country. According to the decision in the Egyptian Hotels Company, I think it can now be taken as settled law—if there be such a thing—that if the control and management is wholly outside the kingdom, then the company is not liable to be taxed either for income-tax or excess profits duty. Of course, the shareholders resident in England will have to pay their income-tax when their dividends are remitted from Egypt, but the shareholders in Egypt will get off the domestic English taxation altogether. With regard to the English shareholders, who are certainly half, if not more than half, of the total number, they will have the advantage of getting off the excess profits duty, and that is a very considerable advantage, and ought to increase their dividends and the value of their shares.

The result of the resolutions which the Secretary has just read out to you will be to give effect to the request of the Egyptian shareholders. The London board will cease to exist, and the Egyptian directors remaining will then become the sole board, and presumably they will elect some more directors—let us hope not too many—to manage the company's affairs in Egypt. We used to have a board of seven, but that was necessary because there were two boards, one in Alexandria and one in London, but now there is only going to be one board in Egypt. We may hope, and, I think, trust, to the discretion of the remaining directors that they will not in future exceed the number of five, because in my opinion a board of five directors is quite sufficient to manage any company.

I think, also, it is quite certain that the Egyptian directors, when they get back to Egypt, will consider the question of appointing a London committee to watch over the interests of the large English shareholders. I do not think there is anything else that I need say; therefore, I beg to move Resolution No. 1, which you have heard read. I will ask Mr. Barker, one of the Egyptian directors, and one of the remaining directors, to second it.

Mr. H. E. Barker: I beg to second the resolution.

The resolution was then put to the meeting, and was carried unanimously.

The Chairman then proposed Resolution No. 2, making various alterations in the articles of association.

Sir Westby B. Perceval, K.C.M.G., seconded the resolution, and it was unanimously carried.

The Chairman then moved the third resolution, dealing with the compensation of the English directors for their loss of office.

The resolution was seconded by Mr. E. Nathan, and was unanimously agreed to.

Mr. Hacking: I have very great pleasure in rising to propose that the best thanks of this meeting be given to the Chairman and the board for the most zealous manner in which they have presided over the destinies of the New Egyptian Company. It is a very great change, but we who live in England can only be guided by the great judgment the board have shown in administering the affairs of the company in being satisfied with their decision to remove the management of the business from London to Egypt. May I say, at the same time, that I think that before August 31 the board might take into consideration the payment to the shareholders, as far as they can, of the money that has been earned by the present board of directors? With these few remarks, I am sure I am voicing the sentiments of everyone in this room when I say that the board have our entire confidence, and have worked well for the company. I have great pleasure in proposing a vote of thanks to them.

Mr. Hunt seconded the resolution, and it was carried unanimously.

The Chairman: On behalf of my colleagues and myself, I beg to thank you for this expression of your gratitude for our past services. I did not quite gather what Mr. Hacking meant, but I am sure the shareholders will be glad to learn that the latest figures from the other side show a very large increase in the sale of land, even since the last meeting in June.

Mr. E. Nathan: As one of the remaining directors of the board,

and on behalf of my colleagues in Egypt, I should like to say how sorry we are to part company with our Chairman, Mr. Baumann, and the other directors. I only wish that this collaboration could have gone on indefinitely.

Mr. H. E. Barker: I should like to associate myself very strongly with the remarks made by Mr. Nathan. I am sure Mr. Suares, the other remaining director in Egypt, would be equally emphatic on that point.

Mr. Hacking: I should like to say that I cordially agree with the appointment of a London committee, and I hope our Chairman will be one of them.

The proceedings then terminated.

## EGYPTIAN DELTA LIGHT RAILWAYS.

### A Difficult Period.

The twenty-third ordinary general meeting of the Egyptian Delta Light Railways, Limited, was held on July 28 at Winchester House, E.C., Sir William E. Garstin, G.C.M.G., G.B.E. (chairman of the company), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen, when addressing you last year I felt bound to warn you that the prospects of our enterprise in Egypt for the year now under review gave cause for much thought and for considerable anxiety. This warning has been fully justified. Although the rioting and damage to property, which so unfavourably distinguished the first quarter of 1919, did not again occur, the effects of these disturbances remained, and affected the working of our railway system to a considerable degree. Unrest and general discontent prevailed among the workmen in Egypt, and on more than one occasion strikes were threatened by our staff.

Again, the political horizon in Egypt was far from clear, and the delay in settling the Peace terms with Turkey greatly aggravated the difficulties with which the Egyptian Government had to contend.

In addition to the foregoing, we were constantly faced by the very grave situation due to the high price of fuel and the difficulty of obtaining the supplies requisite for the working of our lines. Lastly, owing to the impossibility of obtaining transport, we were unable throughout the years of war to replenish our stock of railway material to anything like the necessary extent.

I now come to the question which is most vital to the future of our railways, and which has caused our chief anxiety—I mean that of our fuel supply. This question is now more serious than ever. In 1914—before the war—our coal used to cost us some £1 12s. per ton. During the war the average price we paid was £5 5s. per ton.

This last rate would have been much higher had it not been that the Admiralty throughout the war were good enough to allow us to draw upon them for coal to the extent of 1,000 tons a month at the rate which it had cost them. This privilege was withdrawn in August, 1919, and we have had since then to make the best arrangements we could. The British Government having prohibited the export of coal to Egypt, except in the shape of "bunker" coal, for the needs of the Admiralty and shipping, we have been unable to send out fuel from this country. For some time we were able to obtain briquettes of coal-dust, and with these we managed to carry on our service. That supply is, however, no longer available, and we are obliged to obtain coal wherever we can.

Owing to the cessation of the Admiralty supply, the average cost of our coal in the year 1919-20 rose to £6 7s. per ton. Even this rate has been now exceeded, it being impossible at present to obtain coal anywhere at such a rate.

We are making experiments with our locomotives to see whether oil fuel cannot be advantageously substituted for coal; but here, again, we are met by the difficulty of obtaining oil in Egypt in sufficient quantity for our requirements and by the high cost of this commodity.

Dealing with the labour position, Sir William said:—I told you last year that we had very carefully considered the demands of the workmen's committee and had come to the conclusion that, considering the changed conditions existing in Egypt, the greater portion of these demands were not unreasonable, and ought to be granted, and that only those which would in any way tend to lessen the standard of discipline ought to be rejected. The board has devoted much time and consideration to the demands of the men's committee, and has decided that it would not only be unwise, but unfair, to refuse those demands which were reasonable and similar to those granted by the Government, under like conditions, to its employees.

I now come to a matter of the greatest importance to the future of our railways—namely, the renewals and repairs that we shall have to undertake in order to bring our lines up to a standard of perfect efficiency. The time has now come for making a commencement with this work. Unfortunately it is not a favourable moment for any such undertaking. The cost of labour is double what it was previous to the war, while the price of materials is so high as to make their purchase almost prohibitive. In some cases these prices are three and even four times as high as they were before the war. Moreover, the demand for railway material throughout the world is so great that I fear we cannot expect any material fall for some years to come. In spite of these adverse conditions the work cannot be any further delayed and a commencement must be made with it. We propose, during the coming year, to spend a sum of £125,000 upon the new programme of expenditure.

You have all seen the directors' report and the accounts for the year under review. They are, I think, clear and easy to be understood. I will only, then, say here that, after paying all fixed charges and after providing for the extra retiring gratuities to our staff, as well as the Government share of profits, we are in a position to pay the full dividend of 5½ per cent. on our shares, at the same time placing £20,000 to the general reserve and carrying forward a sum of £4,146 5s. 11d.

That such a result has been possible is due in very great measure to the efficiency of our staff in Egypt. I have nothing but praise to give to the manner in which Mr. Smith—our agent and general manager—has controlled the railways and looked after our interests. He has shown himself resourceful, tactful, and strong, where strength was necessary, and he has had to pass through exceptionally trying times. In all his work he has been ably assisted by Colonel Marryat, the deputy manager. I consider that we are very fortunate in having two such men in charge of our undertaking. I would ask that your thanks should be conveyed to them and to all the members of our staff in Egypt, who have carried out their work under conditions of exceptional difficulty.

I have only one point more to mention. You will have observed in the notice calling the general meeting that a resolution will be submitted to you proposing that the directors' fees shall be paid to them in the future free of income-tax. I have not much to say on this point, as it must necessarily be one for the appreciation of the shareholders themselves. A similar privilege is being very generally granted in other companies. I leave the matter in your hands.

The Chairman then moved the adoption of the report and accounts. The resolution was seconded by Mr. Montagu Sharpe, K.C., and was carried unanimously.

The Chairman then moved the declaration of a dividend of 5½ per cent. on the preference shares. The Hon. W. B. L. Barrington seconded the resolution, which was carried unanimously.

The retiring directors were re-elected, the auditors were reappointed, it was resolved that the directors' fees should be paid to them in the future free of income-tax, and, after a vote of thanks to the Chairman and his colleagues, and to the general manager and the staff in Egypt, the proceedings terminated.

## MARKET FOR CANNED SALMON IN GREECE.

The war has been indirectly responsible for the consumption of canned salmon in Greece. Previous to the war it was practically unknown (says an American Consular report), but during the war it was made an army ration. As a result the Greeks became familiar with this commodity, and due to the scarcity of meat at that time this article became very much in demand. To-day all grocers carry it, and all classes of people appear to purchase canned salmon. Under class 12 of the Greek tariff, the import duty on canned fish is 72.50 per 100 okes, or about 13.99 dols. per 282.15 lbs. All foods before clearing customs in Greece are examined by a Government board, but there are no published standards of purity, weight, packing, etc. Consumption has not so far been affected by high prices. However, it is said that the market is overstocked at present.

## THE METRIC SYSTEM IN TURKEY.

In 1915 the Turkish Government adopted the international metric system of weights and measures as the official standard, and since then all official statistics have been based on this system. It appears to be the object of the Government (says an American Consular report) to make this the exclusive system of weights and measures, but so far, outside of official circles, the metric unit is little used. In fact, in the interior, the system is practically unknown, and it is doubtful if it will be popularly accepted for many years to come, if at all. The people find the new system very much simpler from a mathematical point of view, but its units are meaningless to them until converted into the units of the old system, for the decimal system as applied to potatoes or sugar cannot be kept constantly before the mind as can the decimal system as applied to money. It is therefore infinitely more difficult to learn, and the attempt to introduce it has been productive of no little confusion.

## TRADE OF SALONIKA.

The first German steamer to touch Salonika since the war recently arrived from Hamburg, states the Commercial Secretary to H.M. Legation at Athens. The vessel had on board for Salonika some 220 tons of goods, which consisted chiefly of paper, porcelain, ironware, and cutlery (scissors, etc.), weighing scales, etc.

The Commercial Secretary, in the course of his tour of the district, gathered that the principal traders in pre-war days had imported goods mainly from the countries from which they could get them cheapest. Since the Greek occupation, however, more Greek traders have settled in Salonika, and these have raised the standard of living, bringing better class as well as cheap goods.

The peasants, too, are beginning to desire European clothing, appliances, etc., so that the market should be regarded as a growing one. Spain is still doing well in the import trade, though not so well as during the war. France appears to be less actively engaged. British goods are always admired, and, as the standard of living rises, and Greeks from Athens, etc., open up business locally, so trade with the United Kingdom should increase. At present, however, stocks seem to be sufficient, and exchange fluctuations keep merchants from placing orders.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

**Egypt.**

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200 metrical tons cotton waste. August 9. (L.)

Extension of Electrical Station of Zagazig and Belbeis.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the extension of the electrical station of Zagazig and Belbeis. Adjudication at noon on September 1. A copy of the specification, etc. (in French) may be consulted by British firms interested at the Enquiry Office of the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

Electric Lift.—Tenders are invited for the supply and installation of an electric lift in the Kasr-el-Aini Hospital, Cairo. Tenders close on August 15. The lift is required to carry a cage 2 metres by 1.50 metres in area, with a fully loaded weight of 300 kilos, through a height of 9.40 metres with three stops (with a possible future extension to 15 metres with four stops), at a speed of 25 centimetres per second. A copy of the specification (in French) may be inspected at the Department of Overseas Trade (Room 50), 35, Old Queen Street, Westminster, S.W.1.

Blankets.—The Egyptian War Department invites tenders for fine white blankets. August 9. (L.)

Braces (Web), etc.—The Egyptian Government invite tenders for the supply of: (1) Braces (Web). Tenders returnable by noon on August 16. (2) White Drill Clothing. Tenders returnable by August 25. Tenders will remain open for 14 days. (L.)

**India.**

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

Wicks, Lubricating Pads, etc.—The Great Indian Peninsula Railway Co. invite tenders for the supply of the following stores :—Wicks, lubricating pads, etc., paints, drysalteries, etc., platelayers' tools, lamps and fittings, acid open hearth steel boiler plates. (Spec. 10s. for the first three, 7s. 6d. for the fourth, and 5s. for the fifth, office of the company, 48, Copthall Avenue, E.C.2.) August 10.

Bridgework.—The Burma Railways Co. invites tenders for the supply of bridgework (3 100-ft. spans). (Spec. 20s., office of the company, 199, Gresham House, Old Broad Street, E.C.2.) August 13.

**Turkey.**

Telephones and Accessories.—The Commercial Secretary to the British High Commission at Constantinople has received an inquiry for the name of a United Kingdom manufacturer of telephones with magnetos, all telephone accessories, telephone wires, and a central of 500/600 lines; also electric bells, wires, batteries, etc. Correspondence and catalogues should be addressed to the British High Commissioner's representative at Samsoun, under cover to the Commercial Secretary at Constantinople.

---

Egyptian Delta Light Railways.—Dividend No. 32, bearer warrant coupon No. 29, for a dividend of 5½ per cent. for the year ended March 31, 1920, on the preference shares, less tax at 6s. in the £, will be payable on and after July 29, at the National Bank of Egypt, London, Cairo and Alexandria, at the current rate of exchange. Dividend warrants will be posted on July 29.

## GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to May 31, 1920 (new style January 14 to June 13, 1920).

| | | Monopolies, tobacco, stamps, stamped paper & Naxos emery. | Piræus Customs. |
|---|---|---|---|
| | | Drachmae. | Drachmae. |
| Gross receipts, May, | 1920 | 5,416,104 | 4,619,240 |
| Do. do. | 1919 | 4,488,610 | 4,694,156 |
| Estimated receipts for 5 months (Law of Control) | | 12,041,666 | 4,458,333 |
| Actual do. do. | 1920 | 25,762,452 | 25,797,202 |
| Do. do. do. | 1919 | 18,792,867 | 17,959,384 |
| Difference between estimated and actual receipts for 5 months | 1920 | + 13,720,785 | + 21,338,869 |
| | 1919 | + 6,751,201 | + 13,501,051 |

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmae at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at the average rate.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |
| Athens | Drachmae to £ | 25·22½ | 30·70-31·00 |
| Belgrade | Dinars to £ | 25·22½ | 61 |
| Bombay | Sterling to Rupee | 24d. | 1/11⅛-1/11⅝ |
| Bucharest | Lei to £ | 25·22½ | 144-148 |
| Calcutta | Sterling to Rupee | 24d. | 1/11⅛-1/11⅝ |
| Constantinople | Piastres to £ | 110 | 405-425 |
| New York | Dollars to £ | 4·86⅔ | 3·71-3·74 |
| Paris | Francs to £ | 25·22½ | 48·60-48·90 |

Aden is not an important market for shoes and shoe accessories (says an American Consular report). The European population is small and the natives do not generally wear shoes. There is no rain and the climate is hot throughout the year. During the fiscal year ended March 31, 1919, Aden imported 8,729 pairs of leather shoes or sandals valued at 8,971 dols

## NOTES OF THE WEEK.

Mesopotamia has provided some unpleasant surprises for the British public during the past week. The War Office has received information that our casualties in an engagement near Hilla on July 24 amounted to very nearly 400; the garrison at Diwanieh has been withdrawn to Ibn Ali; and the garrison at Kufa is, or has been, closely invested. Bad in themselves, these things are not improved by the semi-official manner of referring to them. It is satisfactory to learn that "the invested Kufa garrison is still holding out," that a fire in that small town has been extinguished, and that "prisoners taken in Mesopotamia in the attack on the British column near Hilla are receiving good treatment." But it would be much more satisfactory to be informed how and why the Kufa garrison came to be invested, how Hilla itself is threatened, and how such a large number of British prisoners fell into the hands of the Arabs. The last-mentioned point is indeed almost inexplicable. Colonel Wedgwood asked in the House of Commons whether it might be ascribed to an ambush. We make bold to say that a successful ambush on any scale in the vicinity of Hilla would—or ought to—be practically impossible.

On another page an attempt is made to shed some light on the causes that have led up to the present deplorable situation in Mesopotamia, and we need not go further into the matter here and now. It is impossible, however, to avoid reference to a rumour that the British Government may invite the Emir Abdullah to assume the sovereignty of the Mesopotamian State, due regard being paid to our position as Mandatory. Such a step would solve more difficulties than one, and would undoubtedly be welcomed by a very large section of Mesopotamian opinion; and it is understood it would be taken with the approval of the Emir's brother, Abdullah, who was invited a little while ago by a deputation of notables to assume the kingship. It is less certain that opinion in the Nejd and El Hasa would approve; but recent events should serve to show the Arabs the necessity of standing shoulder to shoulder, and a good understanding between the principal rulers should not be impossible of attainment. The fact that the Emir was received with honour on his arrival in the British zone lends some colour to the rumour referred to; and in point of fact such an arrangement as that suggested would have much to recommend it.

It is satisfactory to note that our Government has invited the Emir to come to England, since this implies that, whatever may be the case elsewhere, in this country his services to the Allies at a critical time are not forgotten. In this connection it may be observed that his Highness has expressed the opinion that "the Zionistic policy of England was responsible for the defeat of his government in Damascus." That may be an overstatement of the case, but it cannot be denied that the Emir's loyalty to the Allied cause did create a great deal of trouble for him with the hotheads, and that but for his restraining influence an anti-French outbreak would have taken place long ago—before France had sent General Gouraud the reinforcements that enabled him to occupy Damascus.

No news of a solution of the Ministerial crisis in Yugoslavia has yet reached this country. M. Vesnitch wished to resign his mandate, but has been charged by the Prince Regent to continue his efforts to form a Cabinet. The chief trouble, it is understood, is over the policy to be adopted regarding exports, one school of thought favouring a large measure of free export, while the other looks to the export trade under Government control proving a useful source of revenue for the Exchequer. Although both parties would probably admit that the chief thing is for Yugoslavia to sell her products as quickly as possible, in order that she may obtain in exchange or by subsequent purchase the goods she needs from abroad, neither of these equal forces can bring itself to compromise on the relatively unimportant question of the amount to be obtained by the Government from the sale of the products. Meanwhile the country suffers from these chronic ministerial crises; public works and legislation that are urgently required are indefinitely postponed, and there is a danger that foreign trade with Yugoslavia will be permanently affected. By an extremely fortunate arrangement, Dr. Trumbitch remains in charge of Yugoslavia's foreign policy, which has been characterised by such phenomenal tact and patience during recent months. Most of his time has to be spent between Paris and London, with a view to taking the earliest advantage of any symptoms of a more accommodating spirit that may be shown by Italy.

The Greco-Italian dispute regarding the Dodecanese delayed the signing of the Turkish Treaty longer than the optimists expected, but at the time of writing it appears to be safe to conclude that it really will have been signed ere these lines are in print. An Italo-Greek Convention, to be signed at the same time as the Turkish

Digitized by Google

Treaty, provides for the immediate transfer of the smaller islands to Greece; while if Cyprus is ever given to Greece the inhabitants of Rhodes are, within fifteen years from its cession, to have the opportunity of deciding by means of a plebiscite whether they wish to be under Italy or Greece. The Italian Archæological School at Athens is also to have exceptional privileges in the way of excavations at the island of Cos. Thus ends an incident that threatened at one time to postpone indefinitely the signing of the Turkish Treaty; for, according to Paris reports, Italy, shifting her ground once more, made an attempt to secure certain privileges in the Smyrna region as "compensation" for her disappointments elsewhere, thus opening up all manner of unpleasing possibilities. Greece, feeling that Italy's misfortunes were to be attributed to Albanian activities rather than her own, still showed a commendable desire to find a way out of the difficulty; and fortunately goodwill carried the day. There is all the more reason to be thankful that such is the case, since in some quarters a disposition was becoming manifest to demand for France and Great Britain commercial and other rights equal to any that might be granted to Italy at Smyrna. The conclusion of the agreement will, it is to be hoped, put an end to such a despicable spirit of petty bargaining.

---

Italians, it must be acknowledged, have some reason to feel disappointed, or at any rate, a little sore just now; though the disappointment must be laid at the door of certain of their own statesmen, who have misled them in regard to both Albania and the Dodecanese. The Italian claim to the islands never rested on any good foundation, and has always been opposed by the whole of the islanders. Similarly it is impossible to justify any attempt on the part of Italy to rule in Albania, though something may be said for her very natural desire to ward off possible danger to herself from the growth of any naval Power across the Adriatic. Moderate Albanian opinion recognises the latter fact, but Albanians strongly resented the attempt to turn their country into a jumping-off ground for any adventures in the Balkan peninsula, however splendid that idea may have looked to some Italian statesmen.

---

Having regard to all the circumstances, Italy is to be sincerely congratulated upon having had the courage to abandon vague pretensions and to come to an agreement with Albania. This consummation was achieved on August 2. Baron Aliotti, the Italian representative, had been recalled because, it is said, he exceeded his instructions in abandoning all claims on Valona itself—which confirms what our Albanian Correspondent wrote on July 18 regarding the Baron's eagerness to reach an understanding. He was replaced by Count Manzoni, who succeeded in concluding the negotiations with the Tirana Government, by which Italy abandons Valona, but retains the island of Sasseno, and is granted the right to fortify Cape Linguetta and Cape Trepanti. The arrangement appears to be as satisfactory as any that could have been expected in the given circumstances and if, as is to be hoped and expected, it makes for the establishment of really good relations between Italy and Albania in the near future, it will surely prove more advantageous to the former country than any occupation of Albania could possibly be.

---

It is not easy to comment on the news of Mr. Tilak's death without transgressing the canons of reticence imposed by a kindly tradition. A man of outstanding ability, and commanding large resources, he might have led India a long distance on the road to freedom and self-respect: he chose otherwise, and history will know him as in essence a reactionary, who devoted his means and energies to the task of restoring the old régime, spiritual ascendancy of a privileged class, and social and economic servitude of the masses of the people. His persistent antipathy to the English was thus inevitable, for our administration has been one long struggle against the strongholds of privilege, which are destined eventually to fall before the principles we have introduced. The struggle is by no means over. It is true that the new constitution gives an opening for the people to exercise power such as they have never possessed in the whole history of the country, but we have still to see how they will use the opportunity, and the chief interest of the next few years will lie in the indications they furnish of the attitude of India as a whole towards the parasitic growths which she has endured so long.

---

Mr. Tilak's death leaves Mr. Gandhi as the most prominent champion of the principle of spiritual ascendancy, and people who are interested in Indian progress have been watching the cables of the last few days in order to learn how far he has succeeded in putting back the clock by the campaign of "non-co-operation" which he started on Sunday week. So far the news is satisfactory. There has been little or no disorder, and while we must be prepared for outbreaks among the dangerous classes in the towns, it is something to the good that the first anxious day is safely over. More important in the long run is the obvious alarm aroused among men of substance and position, and the increased outspokenness of the Indian Press. Mr. Gandhi has so far definitely failed to stampede the educated classes, while he appears to have offended the religious susceptibilities of many thinking men, both Hindus and Moslems. He may still find powerful allies among the criminal sections of the community, but it does not appear at present that he will secure much support in more reputable quarters.

---

Possibly the recognition of this fact accounts for the change in emphasis observable in Mr. Gandhi's latest allocations. At the outset, non-co-operation was contemplated as a protest against the Turkish Treaty, designed to bring pressure to bear on England and, through England, on the Allies. Now the Khalifate question is little more than a makeweight; the appeal is made to everyone who is discontented or bitter of heart, and the road to the cave of Adullam is clearly pointed out. This may possibly be the beginning of the end, for there is a very large volume of quiet satisfaction in India just now, but it would be rash to prophesy while the Punjab sore is not yet healed, and the amount of discontent in existence is sufficiently great to make active incitement a very real danger. The clouds still threaten, and it is rather too early to decide whether they will shortly lift, but there are grounds for hope.

---

Western readers may perhaps think that we lay too much stress on the forces of spiritual ascendancy in India. If so, we may refer them to the provisions of the Indian Elections Offences Bill, which has now been published, and which includes among the acts punishable by imprisonment any inducement to a person to "believe that he will be rendered the object of Divine displeasure or of spiritual censure." Threats of excommunication, or even of hell-fire, are happily now obsolete weapons in English party warfare, but the possibility of their employment is one of the gravest dangers to the success of the new constitutional experiment. It is almost certain that Hindu ascetics and Moslem fanatics will be exceedingly busy in the elections to be held this winter, and it is well that illegitimate activities on their part should be heavily penalised if—a big if—evidence sufficient to secure a conviction should be forthcoming.

---

Apart from this provision, the new Bill runs on familiar lines, and appears to be on the whole adequate. The offences of bribery, undue influence (including all kinds of threats), personation, and false statements of fact regarding candidates, are clearly defined and heavily penalised; the Election Commissioners are granted very wide powers; and we welcome in particular the provision giving them authority to charge the costs of inquiries, which are likely to be heavy, in accordance with their absolute discretion. The practical working of the measure cannot, of course, be forecasted; inquiries under it will be of the kind in which Indian lawyers revel, and might easily be protracted for indefinite periods, and we must await the result of the first batch of petitions before we can conclude whether the machinery provided is adequate to protect individual electors, but so far as can be judged at present the draughtsmen have done their work well.

# THE WEEK AT HOME.

**Peace or War?**

The past week has been a repetition *in petto* of the same week of the year in 1914. The same papers have urged war; the same papers have urged peace; the *Westminster Gazette*, now as then, has explored both sides, and gravely advocated impotence as the best of all possible solutions. But the difference in temper has been marked throughout. Once the country was convinced that it was its duty to fight Germany six years ago it went into the war with eagerness; but there has been no sign that a war with Russia on behalf of Poland would be anything but extraordinarily unpopular, and that for several reasons.

Labour is rather disillusioned about Lenin and Bolshevism, but it still preserves its sentimental feeling in favour of Soviet Russia; it has no feeling whatever for Poland, which put itself in the wrong by its aggressive policy in overrunning the Ukraine three months ago, and is now paying the penalty. After all, those who challenge their neighbours to fight cannot complain very much if they get their heads punched. It was that feeling which defeated the peace-by-negotiation people in 1914-18, and the same feeling naturally is ranged against Poland to-day. Further, there is an overwhelming conviction—it is in the air rather than openly expressed—that not only has this generation had enough of war on the grand scale, but that for some years to come the only real chance for civilisation to recover is for peace to be maintained. England is ready to defend her own possessions if need be, but she does not feel called upon to undertake further Continental adventures.

**The Mannix Mystery.**

Archbishop Mannix, forbidden to land in Ireland or at Liverpool, was taken off the Baltic in mid-Channel, put ashore at Penzance, and permitted to come to London. A great deal too much publicity has been given to the doings and sayings of this excitable ecclesiastic, who is more politician than priest, and the Government's action has not been generally approved by their supporters. The sequel—for there is bound to be a sequel—is awaited with some curiosity.

**The County Championship.**

August Bank Holiday distinguished itself by a downpour of rain, and the wise sat over the fire; the bulk of the population appear to have postponed their celebrations to the remainder of the week, when the weather was slightly less deplorable, although still in an evil mood. But cricketers made the best of the few fine hours, and the Canterbury week was fairly successful. Kent, who are shaping well for the championship, after leading by five runs against Middlesex in the first innings, lost the match finally by five runs. The finish was a most exciting one, and leaves the championship still open between Kent, Yorkshire and Surrey, with Lancashire close on their heels; Derbyshire steadily remaining at the bottom, with a consistent record of twelve matches lost out of twelve played.

There was a curious game at Leicester, where the home team made 202, and Yorkshire scored 201 for nine wickets. Owing to a defect in the percentage system of scoring for the championship, if Yorkshire had scored two more runs, and so beaten Leicester on the first and only innings played, they would only have received two points in the championship reckoning, and so have weakened their general average; as it is, the match was inconclusive, and so does not count at all. Yorkshire therefore did better by not beating Leicester on the first innings than if they had done so. This peculiar result has given rise to a good deal of discussion, but it is impossible to reduce cricket to exact mathematics.

The match between Sussex and Essex at Leyton was signalised by the return of Ranjitsinjhi, whom London steadily refuses to call the Maharajah of Nawanagar. "Ranji" is a little stouter and not quite so fleet between the wickets as of old; but his gracefulness remains. With excessive modesty, he exercised the captain's right, and put himself in seventh wicket down. He scored sixteen, but had no chance of a second innings, for the Sussex bowling and fielding was altogether too much for Essex, who were beaten by an innings and forty runs.

**Oxford Circus.**

If one had discovered the house-breakers demolishing St. Paul's Cathedral one would hardly have been more astonished than I was when I found some of the great buildings in Oxford Circus being pulled down last week. Peter Robinson's is, it is understood, one of the patron saints of womankind, only rivalled by Dickins and Jones, the Castor and Pollox of the feminine world; and both are being razed to the ground. But they will only "reculer pour mieux sauter"; new buildings will arise, more magnificent than ever, from the ruins. It is the beginning of the rebuilding of London—which badly needs it—and the new shops and blocks of offices will be higher than the old. Further east, in the City by Monument Station, a new bank has already been built, and although it does not rival the New York skyscraper, it has got nearer heaven than any joint-stock bank has ever got before.

These things are signs and portents. In looking through an old illustrated account of London the other day, which was dated 1900, I realised how much the streets had changed since I first knew the capital as a boy; but another ten years will see a revolution in the buildings of London itself. The main streets will come more and more to resemble Kingsway, which is the new model; the buildings will be higher and more convenient, most of them will have lifts—one will have less cause to repeat Dante's lament about the bitterness of climbing another man's stairs—and the streets will be rather less sunless. But this dismal summer one does not mention the sun; like the domestic servant, it seems to be becoming extinct.

**Rubber Roads.**

The increase of motor traffic, to say nothing of the increased prices of materials, is making the problem of road repair a serious one. In order to carry the heavy goods lorries it is necessary to lay the foundations of the roads much deeper than in the old days of horse-drawn vehicles; and an interesting experiment is being tried in London to reduce vibration and, it is hoped, wear and tear. One half of the main roads is to be paved with wood blocks, after the old fashion; the other half with rubber. This material has previously only been used for the roadway under hotels and hospitals and in places where quiet is essential. If it should prove to be practicable to repave the whole of London with rubber, it would be a most excellent reform. It is much to be hoped that the experiment will prove successful.

**A City Statue.**

One of the best-known landmarks in the City, the statue to William IV. at the bottom of King William Street, is to be removed by the City Corporation on account of the congestion of traffic. There has been

no outcry, and nobody has yet whispered "Vandalism"; the statues of London are indeed beyond defence, or even ridicule. But they are often being added to—it is the triumph of hope over experience—and I notice near Westminster a new statue to Abraham Lincoln. What it is doing in the neighbourhood of the Caxton Hall passes the imagination.

On the other hand, that absurd statue of James II., which looks like a Roman Emperor in a Scotch kilt, has now been removed from its old home at Gwydyr House to the St. James's Park, where the exiled monarch is in a position to catch a distant view of Buckingham Palace—as tactless a site to choose as that one of Mr. Gladstone in the Strand, where the statesman is made to turn his back to the church and his face to the Gaiety Theatre. It is a pity we cannot nationalise Madame Tussauds and put all these things in an enlarged Chamber of Horrors.

**The Week's Books.**

The old tradition that the publishing trade was dead in August seems, like so many old traditions, to have died itself. It used to be understood that August publishers retired to their country mansions to count their gains, and authors to their country cottages to meditate fresh masterpieces; but in these days both gains and masterpieces are more problematic. But, at least, books come out in August.

A translation has been published by the Hogarth Press of Maxim Gorki's "Reminiscences of Tolstoi." It adds a great deal to our knowledge of that extraordinary man, giving us a glimpse of a hitherto unsuspected coarseness of speech in conversation—"from the ordinary point of view, what he said was a string of indecent words"—and of the vagueness of that new gospel which he thought out at Yasnaya Polyana. The more he thought, the more passive did his thought become, and in Gorki's view, more sentimental. He thought Christ was too positive in his teaching; he was afraid that if Christ appeared in a Russian village, the girls would laugh at him. (But that might be true, not only of a Russian village.) And beneath all his renunciation of the privileges and position of the aristocrat, he still remained the aristocrat at heart. "Peasant to him," says Gorki, "means merely—bad smell; he always feels it, and involuntarily has to talk of it. Suddenly, under his peasant's beard, under his democratic, crumpled blouse, there would rise the old Russian *barin*."

A very valuable book, which I am reading rather slowly, but with great interest, is "A History of the English Agricultural Labourer, 1870-1920" (P. S. King), by F. E. Green. It gives an admirable conspectus of the low economic position of the peasant in the latter half of the nineteenth century, and the struggle to improve his lot; from another point of view, it fully explains the reason for the exodus into the towns and the emigration from the villages to the Dominions.

In "A History of Modern Colloquial English" (T. Fisher Unwin), by Professor H. Cecil Wyld, the difficult task is attempted of explaining the growth of English as she is spoke. It is a book of considerable learning and ingenuity of argument.

One of the books which one supposes everybody ought to read, but which nothing short of physical constraint and penal servitude would make me read, is "A Constitution for the Socialist Commonwealth of Great Britain, by Beatrice and Sidney Webb (Longmans). It is, no doubt, a very admirable summary of the Webb political point of view.

Perhaps the most disconcerting book I have ever come across is "Who Was Who?" (Black). It is a reprint of the biographies of the dead men in past issues of "Who's Who?" a mausoleum of past notabilities. Its very title contains the materials for a sermon of the "All flesh is grass" type, but it is, in fact, a very useful book of reference.

*(From Our Own Correspondents.)*

## EGYPT.

CAIRO, July 30.

**"Sinn Fein" in Egypt.**

In my last letter I mentioned that the trial of the 28 Egyptians accused of having conspired to overthrow the Government and kill the Sultan, the Cabinet Ministers, and other persons had begun. The case is being heard before a military court, of which Brigadier-General Lawson is president, and Judge Linton Thorpe is Judge Advocate. There are now 26 barristers defending the accused, and two more—Mr. Mitchell Innes, K.C., and Major Hedley, of the English Bar—are expected to arrive on Wednesday next to defend Abdel Rahman Bey Fahmy, who, together with another accused, is also charged with having incited to murder.

The proceedings opened ten days ago with a unanimous application from the defending counsel for a postponement of the trial. Mr. Devonshire was selected to make the application, and in a very able submission he directed the attention of the Court to the fact that the accused had not had sufficient time to prepare their defence. He mentioned that he had never ceased to be surprised at the fact that a Military Court was guided by no set procedure. If the accused were enemy prisoners of war they would be tried in a certain way; or, if they were Egyptian subjects being tried by a court-martial there would also be a certain procedure adopted; or if, as Egyptian subjects, they were to be tried before the Native Courts of their country, there would again be a definite form of trial. He suggested to the Court that the procedure should be not less favourable to the accused than if they were being tried as enemy prisoners of war or as Egyptian subjects before a court-martial. Furthermore, Abdel Rahman Bey Fahmy had had eminent counsel engaged in England, who were now on their way to Egypt to conduct his defence. Some of the accused, even up to that very day, had not been supplied with their charge-sheets, and consequently did not know what they were being charged with. It had invariably been the practice before courts in this country for a summary of evidence for the prosecution to be taken, so that the accused should be aware of the case against them, and thus be in a position to meet the charges. Arrangements had been made for the holding of a preliminary inquiry, but as counsel for the accused had considered that the procedure at that inquiry was illegal they had submitted a protest and retired.

The argument occupied six hours, and at the conclusion the Court adjourned for a few minutes to consider its decision. On the resumption, the Judge Advocate stated that the accused had had time to prepare their defence, but some of them had not even attempted to employ legal assistance till fourteen days after they were arrested. Referring to the action of counsel for the defence in withdrawing from the preliminary inquiry, the Judge Advocate expressed his surprise and disapprobation in caustic terms. The withdrawal of counsel, because they considered that the proceedings were illegal, that is at the very time when their clients were most in need of their assistance, was, in his experience, unique. The convenience of counsel for the defence had never been considered a valid reason for adjournment. Furthermore, after having heard the remarks of counsel for the prosecution with reference to the policy of intimidation which was being actively carried on against the witnesses for the prosecution, it was obviously undesirable to have any unnecessary delay. Upon these grounds the Court had decided that there would be no adjournment.

**"Intimidation."**

The first case which came up for consideration before the Court was that of an Egyptian who had intimidated one of the witnesses for the prosecution by threatening him that if he gave evidence against the "patriotic accused," he would be killed, and his father's house burned. The intimidator was found guilty, and sentenced to five years' penal servitude. In opening his case, counsel for the prosecution (Mr. F. M. Maxwell) stated that on the night of the attempt on Darwish Pasha, in May, the police had been called to the house of a student who died during the night. A search of his house was made, and certain papers issued by the "Society of Vengeance" were seized. Armed with these clues, the secret police had made further investigations, with the result that the accused, who were then in the dock, had been arrested. A student at Al Azhar, whose name was upon the papers as a member of the Society, had turned "King's evidence," and would tell the Court that a few days subsequent to the return of the Milner Commission from Alexandria, four men had held a meeting at an hotel in Cairo, and there had decided to form the "Society of Vengeance," the objects of which were to work for the country by any means, to overthrow the Government, to threaten traitors, to dethrone the Sultan, to foster love of the ex-Khedive, and to propagate sedition. Gradually, the Society had grown. It was later divided into three parts. The first was for the dissemination of seditious literature, the second was for procuring and distributing arms, and the third part had charge of such "direct action" as the Society might decide upon. Mr. Maxwell read to the Court numerous circulars published by the Society, in which were the most venomous and disgusting accusations against the King of England, the Sultan of Egypt, the Egyptian Cabinet, Lord Milner, the High Commissioner, and many other prominent persons. Apparently, all the members of the Society have not been arrested as the Judge Advocate, the Members of the Military Court, and the counsel for the prosecution, are receiving letters threatening them with the direst consequences should the accused be convicted.

---

PORT SAID, July 17.

**Unpopular Bahais.**

There has been a good deal of unrest in the place recently owing to the activities, real or suspected, of the Bahais. These Persian mystics, whose doctrines appear to be more ethical than religious, are looked upon by the Moslems as a heretical sect of Islam, and consequently they have roused the ire of those in this place who are not usually very keen on the strict tenets of Islam, but who are always glad of an excuse for "a row," and if a few opportunities for looting come along—well! The native recognises four religions—Mohammedans, Christians, Jews, and Heathens, but the Bahais are known as "Numero Khamsah" (No. 5). It seems that on several occasions, the place where the Bahais hold their meetings has been besieged by a mob, and had its windows broken, and on at least one occasion shops kept by Bahais have been looted. Also, two mission schools have been the subject of demonstrations by the mob, and windows have been smashed. The gist of the matter is that the native considers any religious service not held in a recognised building, such as a church or mosque, is suspect, and consequently, as he cannot understand it, it ought to be destroyed. These ebullitions of feeling, whether against Bahais or Christians, are a significant commentary on the declarations of the Egyptian Delegation in London regarding liberty, equality, and fraternity for non-Moslems if the Egyptians got Home Rule, or perhaps it would be more correct to say if the Nationalist party got the reins of government, which is a different thing altogether.

**July 14.**

On July 14 the usual French fête to celebrate the founding of the Republic was held here with its wonted gaiety. The streets and most of the big places of business, as well as the French Consulate, were decorated with flags and designs, and at night the illuminations with coloured lights gave a most pleasing effect. The shooting galleries, Aunt Sallys, swings, round-abouts, and a greasy pole, which were erected on the beach opposite the Casino Palace Hotel, were the centre of attraction during the day, and the happy, good-humoured crowd made the roads almost impassable. In the evening there was the customary procession of illumin-

Digitized by Google

ated boats in the harbour, organised by the Canal Company, which showed to great advantage owing to the blackness of the night, there being no moon. However, the grand climax was the firework display from lighters moored in the harbour. This is always looked forward to, and certainly this year there was no excuse for disappointment, for during the exhibitions ships at sea could easily have found Port Said without the aid of the lighthouse.

## YUGOSLAVIA.

BELGRADE, August 2.

**The Cabinet.**

The first phase of the Cabinet crisis is over, and M. Vesnitch has returned to the Regent the mandate entrusted to him to form a Coalition Government. It will be remembered that the immediate occasion of the crisis was what seems a trifling affair: a snap division on a minor point of internal organisation, to wit, whether or no schoolmasters should have the "passive right of voting" as they call it here, that is, the right of being elected as members of the Skupshtina, and yet retain their functions as teachers, i.e., civil servants. On this snap division, without a quorum present, the Government was defeated by four votes. M. Vesnitch at once declared that he interpreted this as a vote of want of confidence, and handed in the resignation of the Cabinet.

What the inner history was is not definitely known; it is imagined that there must have been serious divergencies in the heterogeneous team; one very persistent rumour in well-informed circles found its way into the Press, that M. Vesnitch returned to Serbia from Paris with the definite object of forming a Yugoslav-Roumanian-Hungarian-Polish alliance against the Bolshevists. Such a scheme was foredoomed to failure. The people here have had enough fighting to last them a long time; they have no ambition to take the field alongside the Roumanians; an alliance with the detested Magyars is unthinkable, and finally, nothing would induce them to take arms against Russia, whether pro or anti-Bolshevist. The suggestion is that, having done his best in this respect, M. Vesnitch will return to his post in Paris.

For ten days the representatives of the leading parties have been holding conferences. Everybody seemed anxious to make terms, and in this somewhat unusual atmosphere of sweet reasonableness, everybody was confident, asserting that the crisis would be over in a day, and only formalities remained. But on Friday M. Stoyan Protitch refused to yield on the burning question of Agrarian Reform. A dozen thorny points had been compromised, but on this he would not budge, for he cannot afford to lose the support of the conservative land-owning *begs* of Bosnia. The Democrats and Socialists could not sacrifice their fundamental principles, and so on the eleventh day the negotiations broke down, and M. Protitch added one more to the list of Cabinets which he has pulled down since the union.

The Regent will consult the leaders of the various parties, and Dr. Trumbitch and M. Pashitch have been wired for. Probably one or other party will govern without Parliament, by decree, until the elections can be held, and so invoke a flood of rhetoric from its opponents. Fortunately, the new electoral law has passed the first reading.

**Albania.**

Some of the warring factions in Albania have invaded Yugoslav territory on the flat lands near Podgoritsa and Plavnitsa on the north side of the Lake of Skadar. The attack seems to have been organised at Tirana, and it is stated that Italian uniforms were seen among the invaders. The weak frontier guards were driven back, and the invaders looted freely till reinforcements sent them about their business.

**Col. Dimitrievitch.**

It is reported that the famous Treason Trial of Salonika is to be re-opened, and there is a proposal to erect a statue to Col. Dimitrievitch, nicknamed "Apis." According to the *Belgradski Drevnik*, this is at the desire of the Crown Prince himself, who wishes to see this unhappy chapter in the country's history finally closed before the meeting of the Constituent Assembly.

## ROUMANIA.

BUCHAREST, July 29.

**The Budget.**

At last one all-important measure has been laid before the Chamber. M. Take Jonescu, interim Minister of Finance, in the absence of M. Titulescu at the Spa Conference, introduced the Budget Bill on July 19. It runs to the enormous figure of 8 milliards, 100 millions on the revenue side, and six milliards, 600 millions on the expenses side. The Minister hastened to explain that it had been thought wiser to underestimate rather than overestimate the revenues, so that the rather staggering deficit of half a milliard may ultimately be reduced. He also explained that it had not been possible to prepare a complete budget in the short time available, and the present measure must be regarded as provisory and subject to modification. The revenues from the different provinces have been calculated as follows:—Old Kingdom, 4 milliard 470 million; Transylvania, 1 milliard 250 million; Bessarabia, 270 million; Bukovina, 90 million. The principal sources of income are estimated thus:—Direct taxes, 460 million; indirect taxes, 1 milliard 900 million; public services, 1 milliard 650 million; railways, 1 milliard 400 million.

This Budget provides for the upkeep of the Army on a peace footing only; whereas comparatively few soldiers have as yet been demobilised. Moreover, it does not take into consideration the sum required for paying interest on the Treasury Bonds already issued; this it is doubtless hoped to raise by a foreign loan. Again, the introduction of a graduated income tax has been postponed, but possibly it may be included among the subsequent modifications.

The enormous sum budgeted for, and the incompleteness of the whole project, have raised a storm of criticism in the Liberal and other Opposition Press, but considering the unsettled conditions which have obtained in the Government Departments for the last six months (the Ministers have changed three times within that period) it would have been little short of a miracle if a complete and homogeneous Budget had been produced. Those responsible for its preparation have certainly not been inspired mainly by ideas of economy, which, we are told, ought to form the ruling principle in the lives both of men and nations in these times. It is certain that in Roumania it was expected that important economies would be arranged for; but, on the contrary, the expenses have been largely increased.

**Co-operation with Transylvanians.**

There have been rumours for some time of an attempt on the part of the Government to conciliate the leaders of the Transylvanian parties with a view to obtaining

their support, and this is indeed "a consummation devoutly to be wished." It is a thousand pities that the representatives of Transylvania should have no place in a Cabinet Council, one of the first duties of which is to arrange for the systematic incorporation of that province into the Roumanian State. It may safely be said that one of the greatest weaknesses of this Government lies in the fact that M. Vaida-Voevod and M. Julius Maniu and their followers are so bitterly opposed to it, because there is the danger that, unless the Transylvanians receive proper consideration, they will remain dissatisfied with their union to the Mother Country. As matters stand at present, Dr. Vaida has announced that, having in view the arbitrary methods adopted by General Averescu's Government in regard to the solution of economic problems, there can be no question of any amalgamation between his own party and that of the General.

**Roumania and the Soviet Government.**

In a very able and moderately expressed speech through which, however, some bitterness could be felt, Dr. Vaida-Voevod told the Chamber this week that he considered it vital to the present interests of Roumania to make peace immediately with all her neighbours; and he expressed the keenest regret that the Cabinets which had succeeded his had not deemed it expedient to continue the negotiations which he had begun with the Russian Soviet Government. He hoped the mistake would be retrieved now that a fresh incentive had been given by the prospective pourparlers with Poland.

## GREECE.

ATHENS, July 23.

**The King's Tour.**

The King has been very busy these last few days visiting his new subjects in some of the recently liberated towns. His Majesty left Phaleron on July 15, on board the Averoff, and arrived at Smyrna on the following morning. But the Smyrniotes, who had from early morning taken up positions along the quay in order to see their Sovereign, were doomed to disappointment, as his Majesty did not go ashore, and the Averoff weighed anchor two hours after her arrival. On Saturday morning (July 17), the cruiser passed through the Dardanelles, and in the afternoon of the same day appeared before Panderma. The people of Panderma had never before seen a Greek king, and I do not think his Majesty will ever forget the enthusiastic reception which he was given when, on the following day, he went ashore. He lunched with the Commander-in-Chief, General Paraskevopoulos, and in the afternoon received Greek and Turkish deputations, which conveyed to him the gratitude of the population for the liberation of the town from Moustapha Kemal's hordes.

On Monday afternoon, Vice-Admiral Freemantle visited the King on board the Averoff, his Majesty returning the visit shortly afterwards on H.M.S. Revenge.

On Tuesday morning (July 20) the Averoff appeared before Rodosto. During the naval bombardment of the Turkish positions, which preceded the occupation of the town by the Greek landing parties, the King remained on the bridge, telescope in hand, and paying no attention to the repeated warnings of his A.D.C.'s and the captain of the ship. His Majesty visited the town during the afternoon, and the reception he was given surpassed in enthusiasm even that of Panderma. The whole operation of occupying the place was so unexpected, and so quickly accomplished, that the people of Rodosto, who were, but a few hours ago, under the yoke of Jaafer Tayar's cruel partisans, could hardly realise that they were at last free, and that their King was in their midst. The Averoff, with King Alexander aboard, left Rodosto on the following morning for Dedeagatch.

**More Officers Called Up.**

The Minister of War has issued an order calling up all the Sanitary Reserve Officers of the 1908 class. All Infantry Reserve Officers and Warrant Officers of the 1914 class have also been called up. These will report on July 31.

The Greek Government has received information from Cyprus to the effect that 8,000 Greek volunteers are ready there to proceed to Smyrna for the purpose of joining the Hellenic forces, but their departure had been postponed pending the granting of the necessary permission by the British Government.

**Roumanian Students.**

A party of 155 Roumanian students, including 25 ladies, from the Jassy and Bucharest Universities, arrived here from Roumania on July 21, accompanied by their professors. They were received by a number of professors and students of the University of Athens who conducted them to the Acropolis, the museums and other places of interest in the town. In the evening a dinner was given in honour of the visitors at the "Luna Park" in Old Phaleron. An official reception, which was to have been held at the University here, was postponed, as the Roumanian students left Piræus on the following day for Italy on their way to Grenoble, where they will stay for about two months.

**A Greek University in Smyrna.**

A Royal decree has just been published in the *Government Gazette* authorising the creation of a University in Smyrna. A Greek patriot, M. S. Palantzis, has presented the Government with the substantial sum of two million drachmæ for the construction of this University, and a further sum of 250,000 dr. towards the upkeep of the establishment.

The Athens Press, commenting on the above, points out that it is the Government's duty to establish both commercial and agricultural colleges in the capital of Ionia.

## BULGARIA.

SOFIA, July 12.

**New Taxes.**

A great many of the Agrarian Parliamentary group consider that the new taxation thus far imposed will be insufficient in proportion to the expenditure under this year's budget. The question has been raised also getary deficit will be very largely diminished in the Ministry of Finance with the appointment of a Commission for the preparation of law projects for the new taxes, which will be submitted to the Cabinet. The new taxes will be for the greater part of an indirect character, and it is hoped that through them the budgetary deficit will be very largely diminished in the next three or four years, or even wiped out. In comparison with the budgets of neighbouring States, even the present budget of Bulgaria closes with the smallest deficit.

**Parliamentary Vacation.**

Last Friday the Chamber held its last sitting of the session. The following measures passed their third reading without debate:—Law for itinerant peace law courts, the restriction of robbery, pillage, and incendiarism; law legalising the payment in bank notes of taxes on registration, renewal and transfer of commercial and industrial marks; a law in connection with taxes and fees collected by the Ministry for Foreign Affairs and Public Worship and by Bulgarian legations and consulates abroad. Afterwards, the decision taken by the Radoslavoff Government to hand over the

land near the National Assembly to Germany, for the erection of a legation, was brought up for consideration, and was quashed; the land being required for the formation of a park in which to place monuments to the champions of Bulgarian regeneration. Then, on the proposals of M. Stambolisky, the Chamber adjourned until September 1.

M. Stambolisky is leaving to-day for Varna, for a fortnight's rest. During his absence the Minister of the Interior, M. Dimitroff, is in charge of the Ministry of War and the Ministry for Foreign Affairs.

---

SOFIA, July 25.

**Bulgarian Prisoners From Greece.**

Following upon the representations made by the British and French representatives at Athens, the Greek Government has begun to repatriate the Bulgarian prisoners of war. Seven hundred of them have already returned, and the remainder are to follow in parties of about two hundred daily.

**Dr. Daneff and the Chamber.**

The Bulgarian Government has asked the French Government to agree to the appointment of Dr. Christo Montafoff, a leading member of the Progressist Party, as Bulgarian Minister Plenipotentiary at Paris. This will allow Dr. Daneff to re-enter the Chamber as Deputy of the Sofia district, for which he was elected, but for which he gave up the seat to Dr. Montafeff.

**The Mobilization Rumours.**

The Director of the Bulgarian Press Bureau has been authorised to announce that the Commander-in-Chief of the Allied troops in Bulgaria has declared in conversation with the correspondent of the *Temps* that the rumour about a mobilization in Bulgaria is baseless. Bulgaria, it is added, is, on the contrary, applying herself sincerely to carrying out the Treaty of Peace, and demobilizing in the prescribed manner.

**The Thracian Situation.**

The *Zemledeltchesko Znamé*, the organ of the Agrarian League, commenting on the latest phases of the Thracian question, writes:—

It may be said that Bulgaria has survived the critical period, and that Bulgaria, broken by two wars, nevertheless quickly regained conciousness and got rid of those parties which, since she began to live a free and independent life, had been preparing her for bloodshed. First of all the nations, hard-working Bulgaria was able to get rid of her oppressors and to take the task of government into her own hands. Unlike all other parties, the national Bulgarian Agrarian League has carried on an obstinate combat against bloody national engagements; it has always been the most resolute foe to war, and it remains so to-day. Now when fresh conflagrations are beginning to blaze up, Bulgaria will remain uninfluenced by them, because at the head of the Government stands the Agrarian League, which will not, under any circumstances, allow a repetition of past follies. The Bulgarian Imperialists are smashed; the nation has secured its rights, that it alone shall be master of its destinies. Henceforth Bulgaria will march on and concentrate on peaceful economic developments. It is desirable that the industrious Bulgarian people should rally round their Government and let it feel sure that nobody will trouble its tranquillity.

---

## TURKEY.

CONSTANTINOPLE, July 20.

**The Peace Treaty.**

One of the most remarkable factors in Near Eastern politics is the somewhat puerile nature of public opinion, which is as changeable as the wind. Scarcely a month ago, the voice of those who were in favour of the signing of the Peace Treaty more or less as it stood were drowned by cries of "Traitors and cowards!" It then looked as if it were impossible to find any Turkish statesman willing to put his signature to what was universally described as Turkey's death sentence. A fortnight ago there was a slight revulsion of feeling, and this has now developed to such a degree that it seems quite certain that the Turkish Government will sign without further ado. There is very little doubt that there have been two principal reasons for the change. The weightiest of these was the complete collapse of the Nationalist Forces on the Smyrna Front. Had they put up a fairly stiff fight, things might have been different, but when it was realised that the advance of the Greeks had been in the nature of a walk-over, it became clear enough that all hope of a readjustment by force was vain. The second reason for the change of opinion was no less important; for the uncompromising nature of the reply to the Turkish demand for even a few days' further delay, and the general attitude towards Turkey proved the utter futility of relying upon differences among the Allies themselves to bring about a change in the conditions of the Treaty. It is impossible to say exactly how much this idea has been encouraged among the Turks by certain persons with axes to grind, but the final result has not been to enhance the prestige of their governments. The utter futility of further resistance was made plain to the Sublime Porte as soon as Damad Ferid Pasha returned, and it has been decided to assemble a "Diwan" or Council of Notables to take the final decision. This Council will, in all probability, include only those who are opposed to the Nationalists, and the result will therefore be a foregone conclusion. In fact, the principal object of holding the Council will be to distribute the responsibility for the acceptance of the Allies' terms as much as possible. It is also very probable that there will be some changes in the Cabinet; but unless Damad Ferid Pasha breaks down at the last moment, he is likely to remain at the head of the administration.

**The Nationalists.**

The advance of the Greek Army has certainly shaken the prestige of Mustapha Kemal, but apparently has not weakened the determination of the Nationalist leaders to push matters to the end of the path which they have marked out. There have been revolts in certain parts of Anatolia, notably in the Yozgat region, but it appears that they have been stifled, for the time being, at all events. The Nationalists, apart from their losses in men, must have been embarrassed by their losses in material, and now, more than ever, resistance in the field must be out of the question. Still, it is a far cry from Brusa, the most easterly point of the Greek advance, to Angora, and there is still plenty of country behind Angora. In Nationalist circles it is said that Nationalist tactics will in future be confined to guerilla warfare, carried on by bands which will seek to harry Greek communications and thus hamper any advance. At the same time, Mustapha Kemal has been publishing appeals to "Our Communist and Moslem Brethren," which can only be described as hysterical, and it would appear that the Nationalist leaders, in the gambling spirit of true adventurers, are placing all their hopes upon Bolshevist help. The Soviet Government would probably like nothing better than to undertake the "liberation" of the "proletariat" of Anatolia, but it's a long way from Baku to Angora. Once again the command of the sea has saved the situation for the Allies; for otherwise there would be no obstacle to supplying the Nationalists with all the arms and munitions they require.

**Thrace.**

It is reported that the Greeks are about to proceed to occupy Eastern Thrace, and it will then be seen whether Jaafar Tayar's "army" will make a better stand than that of Mustapha Kemal. In this respect there have been some curious rumours in circulation. In the first place, it is said that the Bulgarians have been making preparations to assist the Turks to resist the Greeks, and that the Roumanians intimated at Sofia that any such action on the part of Bulgaria would not, in diplomatic jargon, leave Roumania indifferent. Fast upon the heels of this story came a report that the Bolshevists had made a military demonstration upon the frontier of Bessarabia, and had intimated to Roumania that any action on her part against Bulgaria would not leave the Soviet Government indifferent. All that is now required to clear the ring is for Rome to have a heart-to-heart talk on the same lines with Belgrade!

## TRANS-CAUCASIA.

TIFLIS, July 10.

**Batoum, Georgia.**

The outstanding event during the past fortnight was the signing on June 28 of the agreement whereby the province and town of Batoum are handed over to Georgia. So that at long last, after very much anti-Georgian propaganda, Georgia comes into her own. Certainly the Georgians are very satisfied, but at the same time they are not a little concerned at the departure of the Allied troops in consequence of the transfer. This concern is due to their fear of possible aggression on the part of the Adjarians and the Turks, whose agents and propagandists have been displaying considerable activity of late, and with this fear is coupled distrust of the "Soviet Republic of Azerbaijan." Of course, everyone realises that Baku to-day is simply a part of Soviet Russia, but the Moscow leaders are cunning enough to refer to Azerbaijan as a separate "republic," so that they can at any time continue their underhand schemes in Trans-Caucasia and at the same time deny all responsibility.

Georgian troops entered Batoum town on July 5 without any noteworthy incident. The Adjarians had been warned by the British Military authorities that the transfer of the town and province was decided by the Supreme Council, and that any opposition would be considered as an act hostile to the Allies. It is expected that wise counsels will prevail and that the Adjarians will work in with the Georgians, who, while proclaiming that the Adjarians will be treated on an equal footing with the Christian Georgians, have issued a warning that any act of disloyalty will be ruthlessly suppressed and punished by death and confiscation of goods.

The Mayor of Tiflis, B. Tchkhikvishvili, has been appointed Governor of Batoum Province, and Mr. A. I. Kandelaki has been appointed to co-ordinate the local administrations in Batoum with the central ministerial departments in Tiflis. The formal ceremony of handing over took place in Batoum on the 8th inst., in the presence of the Georgian Ministers and the foreign diplomatic representatives.

**Bolshevist Propaganda.**

Bolshevist propaganda has been spreading considerably in Georgia during the past month, especially since the arrival of Kiroff, the Soviet "ambassador," and his numerous staff. Every day Bolshevist agents are arrested with printed pamphlets and huge sums of paper money, mostly Romanovsky, in their possession, and are deported to Vladikavkaz. The consensus of opinion in Government circles is that the present state of things must end in the expulsion of Kiroff and his mission, members of which figure amongst the arrested persons. Should the position ease in South Russia and on the Polish and Ukrainian fronts, the Georgians will take heart of grace and turn out all the known Bolshevist adherents in the country. Meantime, the Georgians are using considerable tact and working energetically and watchfully to preserve their existence as an independent state.

Any tendency there may have been amongst the Georgian population to welcome the Bolshevists has now departed owing to the circumstantial reports brought in by refugees from Baku and Elisavetopol. Wholesale executions are still being carried out by the Bolshevists in both towns, while confirmation is to hand of the seizure and exportation from Baku of enormous quantities of oil, rice, cotton, manufactured goods, cattle, nuts, etc., which are shipped to Astrakhan and Krasnavodsk. On the other hand, the Bolshevists have brought down flour in small quantities from the North Caucasus, mostly for their own use, but it is sold to their "friends" at very high prices. Since the rising in Azerbaijan everyone living in the larger towns has to be in doors by 8 p.m., at which hour all windows and doors giving out on to the street must be closed.

**"United Russia."**

The Bolshevists openly avow their intention to restore to Soviet Russia the old Russian frontiers, and to take Georgia, including Batoum, and also Armenia. They are further busily preparing in Baku an army recruited amongst the Persian and Tartar workmen for operations in Persia, believing that Moslem soldiers will easily achieve the end they have in view.

**Georgia's Thorny Path.**

It must be conceded that Georgia has to tread a thorny path in organising a government and in establishing a workable economic system on top of the chaotic conditions left by the collapse of the old Russian Empire, what time she has to guard against the perpetual disaster threatened by the spread of the Bolshevist incubus. Surrounded by peoples who bear her little good will, and who will simultaneously prove a drain on her resources as they grow, only supreme wisdom, boundless energy and an iron will to make good will enable Georgia to accomplish her task. That Georgia is to-day the best conducted of all the former states of the old Russia says very much for her legislators and for the common-sense of the people. Should Georgia now rise prudently to the occasion and refrain from legislation that may scare away foreign capital and assistance, she will find in Great Britain all the help and resources she needs in order to increase her own wealth and welfare, and she will find that the British will not turn an unsympathetic ear to her nor misunderstand the real difficulties that Georgia herself has to overcome.

## ASIA MINOR.

SMYRNA, July 26.

The Hellenic Government have enrolled all Smyrna Hellenic subjects up to the age of thirty-six, a measure which has considerably perturbed business in this province. The strenuous efforts made by the European Consuls to obtain exemption for a few principal employees of their respective subjects have so far been abortive. British subjects especially feel that they have been harshly treated, hence bitter criticism prevails.

The Greek advance along the British railway has once more lapsed into the "wait and see" phase. When the Greeks cleared the Kemalists out of their trenches around Omurlu (near Aidin) it was expected that they would keep them on the run to the end of the line Egedir. But the Greeks appear to have been enjoined by the Allies not to advance beyond Nazli; which measure has given ample time to the Kemalists to destroy towns and villages between Nazli and Dineir—their present headquarters—besides damaging the main bridges so that the Greeks cannot very easily advance, even if they get permission to do so. To the man on the spot it is impossible to appreciate the policy of allowing the Greeks to advance along the British railway just far enough to irritate the Kemalists into ill-treating (if not massacring) all the Christians living along the 150 miles of railway still in the Kemalists' hands. If the Greeks had been left untrammelled to give the Kemalists a "knock-out" blow and clear the British railway, as they have cleared the French railway from Smyrna to Panderma, it would have re-established commerce in this province and saved the lives of the unfortunate Christian population at the mercy of Kemal and his brigands. At least one Briton is known to be among the prisoners at Dineir.

The Dutch Consul has at last relinquished his charge of French interests in Smyrna, a duty he has fulfilled since August, 1914. Henceforth French interests will devolve upon the French High Commissioner's delegate. British interests still remain in the hands of the Dutch Consul, but should peace with Turkey be signed in the near future, the newly appointed British Consul-General, Sir Henry Lamb, will presumably take charge of British interests in Smyrna.

## CYPRUS.

NICOSIA, July 5.

**Activity of the Deputation.**

Letters from members of the mission to London describe their visit to Mr. Asquith at his home. The leader of the Liberals, they state, expressed "with enthusiasm" the favourable view he takes of the Cyprus questions, and his confidence that the British Government would deal sympathetically with Greek aspirations. They also report another interview with M. Venizelos, prior to the Hythe meeting, in which the Greek Premier appears to have repeated his assurance that all will go well, and that patience is necessary. The deputation urge that efforts should no

Digitized by Google

be for a moment relaxed in the island, or in any quarter where the cause can be in any way promoted.

**More Volunteers for Greece.**

The enrolment of Cypriots continues, more than 8,000 having offered themselves up to July 10. The number includes over fifty women who wish to serve in hospitals and camps. This total will be considerably increased. The Bishop of Kitium has issued a circular, and he is aided by some of the leading men in all the six districts, who are visiting every village in which Greeks are found. The acting Hellenic consul, M. Artémis, is very busy, and frequent telegrams are being exchanged with the authorities in Athens. In a telegram from Smyrna, the High Commissioner, M. Stergiades, asked for information respecting the number of Cypriots who were engaged as muleteers and connected service by the British Military forces operating in Macedonia in the late war. The Government has replied that this information could not be given unless applied for through the British Minister in Athens. The consul, therefore, after consulting the last edition of the "Cyprus Handbook," in which details are published, has replied that the number was about 10,000.

**General News.**

There are many arrivals from Egypt, especially of families who come to spend the summer in the hills. All hotels and resorts are now well filled on Mount Troodos, and in many villages. Some residents, as well as officials, are getting to Europe as they can. They include Fuad Bey, the Turkish judge at Nicosia, and some leading Greeks.

More Armenian refugees continue to arrive: 1,000 more are expected shortly, most of whom will be placed in vacated War Office buildings and stores, outside Limassol, in what was the Royal Engineer and Ordnance Depot, which is still called the "Commissariat." Among late arrivals are various fever cases, which are being strictly watched and isolated. All the refugees are promptly vaccinated. A large quantity of personal property belonging to the Russian refugees is being offered for sale at Famagusta.

Indignant denials are being given to the statements made in a Greek paper, published in Alexandria, to the effect that a strong anti-Venizelist feeling exists among some island Greeks (various persons being named). These persons not only repudiate the charge in the *Voice of Cyprus*, but have sent telegrams to Greek papers in Egypt, denouncing the malicious fabrications. The Greek Cypriot community very thoroughly and ardently supports the Greek Premier.

## TROUBLED CILICIA.

A correspondent in Alexandria sends us some extracts from a letter written by an Armenian correspondent in Adana, and dated July 5. The writer refers first to the Mersina-Tarsus-Adana railway, which, he declares, has passed to the Kemalists, thanks to the French. There is no hope of its recovery, he thinks; and he and his countrymen are expecting a second "horrible Marash." After animadverting strongly upon the "Turcophil policy" of the French, and their "double-faced politics towards us," he goes on to say:—

"The political situation of the country is becoming worse and worse every day. The French have allowed the Kemalists to approach within gunshot of the town, and attempts on our side to drive them off are not favoured, or, rather, are not allowed. The number of arms given to the Christians does not exceed 150, and those the oldest model, single-shot, 1875 rifles. The Armenians are only permitted to form militias to protect their houses, no ammunition being given to them. The assurances given to England by the French, that they would restore order and protect the Armenians are disregarded, as mere words. Communication between the different towns of Cilicia is impossible; telegraph and telephone lines, like the railway, are broken; and the only means of communication is the aerial service three times a week. As a result of the declaration of independence in the Amanus zone the inhabitants enjoy partial liberty. We thought that our only enemy was the Turk, but we have learned most regretfully that our friends act towards us in no Christian manner."

Our Cyprus Correspondent writes:—M. Artémis has received, for transmission to M. Venizelos, a long telegram from Armenians and Maronite Catholic Christians in Cilicia. They describe the slaughter, burning, and outraging of 10,000 Christians, who were surrounded by Turkish bands, the desperate plight of many places (the names of which are enumerated) in Cilicia. In Mersina, Tarsus, and Adana, 150,000 are cut off under a reign of terror and of food shortage. Hitherto hopes of aid from the Entente have buoyed up these people; but they now see with pain and sorrow that the Allied Powers have decided, in spite of Armenia's right and historical claims, to subject the most important part of Cilicia to a continuance of Turkish rule. They would prefer death to this red tyranny. In this critical moment, should France abandon the country, they will shed their last drop of blood with a view to establishing an administration of which the programme of the Allies held out definite hopes. They pray that M. Venizelos will furnish the means which will enable them to safeguard their rights and prevent further hecatombs, which have already so terribly reduced the unfortunate Christians. The telegram, dated July 5, is signed by Nasri Zabet, President of the Mazonite Catholic Community, and M. Zelebian, President of the Armenian Union.

# THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

## The Allies and the Arabs.

The *New Statesman* of July 24 has an interesting article on "Mandates *à la Mode*." It points out the tremendous responsibility in this matter of Great Britain and France, and illustrates its case by Syria. Commenting upon this, and upon General Gouraud's recent action in particular, it says:—

Is the French action so utterly outrageous? They have a case. The Arabs have murdered large numbers of French soldiers. Feisul has steadily refused the use of the railway, which is vitally necessary for the French troops operating against Mustapha Kemal in Cilicia. And, obviously, if the mandate was rightly conferred, the French are entitled to claim that it shall be recognised, especially when they have stated categorically that it "will respect the independence of Syria and will remain wholly compatible with the principle of government by Syrian authorities properly invested with powers by the popular will; it will only entail on the part of the mandatory Power co-operation in the form of collaboration and assistance, and will not assume the colonial form of annexation or direct administration."

But there is also a Syrian case. The vast majority of the Syrian people, so far as can be ascertained, do not want to be under French tutelage, any more than the Arabs of Mesopotamia want to be under ours. They desire neither the collaboration nor the assistance of France. It is no secret that French administration is disliked in Syria. The French themselves are perfectly well aware of this, and it is vain to pretend, as it has been the fashion of a section of the Parisian Press to pretend, that British intrigue has deliberately destroyed the amicable feelings of the Syrians for France. The unpopularity of the French is a fact which was patent in Syria immediately after the Armistice, and this country has no responsibility for it whatever. It is a fact which we sincerely regret. But we do not see what service we can do to France by concealing from ourselves and from Europe at large a motive which is all powerful in Syria. There have been many insinuations in France that we desired a mandate for Syria ourselves. There is no shadow of foundation for such an idea. Nor do the Syrian people, we believe, want us. Rightly or wrongly, they want independence, and rightly or wrongly they have derived enormous encouragement from the undertakings we gave to the Hedjaz Arabs in the first year of the war. It is argued that these undertakings do not conflict with the recognition, to which we pledged ourselves at the same time, of French rights over Arab territories and populations. Maybe they do not, on paper. But no amount of argument, we fear, will remove the unfortunate impression produced on the Arab mind by this glimpse of European diplomacy, or persuade the Nationalists of Damascust that an "independent Arab State" is only possible under a French mandate "for the whole of Syria."

It proceeds to state that, however the Syrian matter be settled, "the opposition to the French will remain, and there is no way out of the difficulty by pretending that this opposition is merely the work of agitators, and that the Syrian Nationalists, who have crowned Faisal king, are a group of Sinn Feiners whose prompt suppression will be acclaimed with joy by the vast mass of well-effected Arabs. The lesson of Ireland, if not of Egypt, ought to be a warning against comfortable illusions of that sort."

The article ends with a logical paragraph:—

What, then, is to be done? We believe that nothing useful will be done until Europe—which means, at this moment and for all practical purposes, ourselves and France—makes up its mind to a definite policy in the East. The Supreme Council, our Foreign Offices and General Staffs, the Government of India and various business interests, all have their own axes to grind. We are experimenting on every people from the Black Sea to the Persian Gulf, and neither we, nor any of them, are satisfied. There are really only two practical alternatives. The one is to rule by the sword—to apply Dyerism in India or Egypt or any other country inhabited by "niggers." The other is to dominate by moral force. The attempt to mix the two systems will breed nothing but unrest and disaster. And we put it to the French that it is precisely that which they are attempting now in Syria, just as we are attempting it in Mesopotamia. But what, it will be asked, does using moral force mean? It means what those who drafted the Covenant of the League of Nations meant—or perhaps we should say, what those who believe in the League of Nations mean. It implies at the outset that, if a European Power is going to exercise a mandate over Arabs, the European Power must be honest and the Arabs must be willing. Is it not a *reductio ad absurdum* of the mandate to impose it with tanks and bombs? . . . If it is oil and moral and economic interests that require our presence in Asia, well and good. Only let us then have done with humbug; do not let us call an army a mandate, or a machine-gun battalion "administrative advice." If, on the other hand, there is any sincerity in our professions, we are surely bound to remind ourselves of the words of the Covenant, that "the wishes of these communities (*i.e.*, communities formerly belonging to the Turkish Empire) must be a principal consideration in the selection of the mandatory." Should the Arabs insist on their absolute independence, there are, it seems to us, only two alternatives. Either they must have it or an attempt must be made to conciliate them by doing what the Supreme Council suggested in the case of Armenia—that is to say, by making the League of Nations itself the mandatory, and equipping it, of course (as the Supreme Council did not suggest in the Armenian case), with the necessary resources. Neither of these alternatives, we suppose, will strike the French Government or our own as particularly agreeable. But either of them is preferable to the moral and material damage that the present conception of mandates promises to the French and British peoples.

## France and Syria.

The *Birmingham Post* of July 21 shows much sympathy with the Allies, particularly with France, in their troubles in the East. On the matter of France and Syria it says:—

France, apparently, has no disposition to claim either sovereignty or administrative authority. The aim of the French Government in Syria, like that of the British Government in Mesopotamia, is to set up an independent and stable Arab State capable of taking its established place among the civilised and progressive communities of the East. But Syria under the Emir Feisul is clearly incapable of standing thus alone without tutelage: and if the Emir and his friends could but see it, they would be best serving the interests of their country by consenting to co-operate with the mandatory of the League of Nations until the Near East generally is quieter and their own social development a little further advanced. We can only regret their blunders, the first result of which is that a state of war now exists between the Arab King of Syria and the French Republic. But we are bound to say that this open breach, deplorable as it is, cannot be reckoned unexpected; and we must reckon with the fact that Great Britain has taken a certain part in the events leading up to the quarrel which cannot now be viewed with an altogether easy mind. When General Allenby was fighting in Palestine he was glad enough of Arab assistance. Great Britain was then regarded as the liberator of Syria from Turkish overlordship; and the British Government explicitly approved of the idea of the creation of an independent Arab State, including within its boundaries the four cities of Damascus, Homs, Hamah, and Aleppo. It is true that this approval was without prejudice to French claims, and it is true that the Peace Conference recognised these claims, and gave to France a mandate over Syria as a whole. But the fact remains that the Arabs, or a great many of them, expected something more. Ambitious for immediate and unconditional independence, they feel that they have but exchanged one overlordship for another; and they would be more than human if they did not feel aggrieved over the failure, as it must seem to them, of British promises and assurances, accompanied by conditions on which perhaps too little stress was laid.

## MUSICAL NOTES.

Messrs. Keith, Prowse and Co. have sent me a further selection from Landon Ronald's music to the play "The Garden of Allah." It is a pianoforte suite, consisting of five pieces—Prelude, Incidental Music to Act 1, Kyrie Eleison, Dance of the Ouled Nail and Music to Sand Storm. The promise that the previous piece sent to me ("In an Eastern Garden") showed is not borne out in this longer selection. Mr. Ronald has not made the Eastern idiom his own, and the devices that he uses to infuse local colour are there because they ought to be, no because they must be. In a word, it is clever artificiality and not spontaneous originality upon which Mr. Ronald must congratulate himself.

In these stifling days of exoticism, when the spectacle-loving public prefers any music to its own, nearly every popular English composer has dabbled in Eastern music. (Apropos of this, it will be interesting to see whether the run of "The Beggar's Opera" equals that of "Chu Chin Chow." If it does, what follows must, of course, be taken as rubbish.) If the music is strange and not too incomprehensible, and if, moreover, is provided with it an orgy of wild colour and dancing, the simple English public is overwhelmed, and night after night will revel in scenes by which the true Oriental is bewildered and bored. The number of English composers who have really done something with Eastern methods are extremely few—Granville Bantock, of course, is the best exponent, with Cyril Scott perhaps a tired second—and certainly Mr. Ronald does not add to that number.

His chief trick is naturally the repetition of the lower chord, but he works it far beyond the merciful stage of death. It is legitimate in a thing like the "Dance of the Ouled Nail," but in the "Music to Sandstorm," ought the scurrying of the tempest really to remain on the same note all the way through? The method is pseudo-realistic, and is not true. However, I have not read Mr. Hichens' book, nor have I seen the Drury Lane production of "The Garden of Allah," but I should imagine that Mr. Ronald's music is at least worthy of them. Occasional music judged absolutely is not often good, and though this music belongs to the majority of such pieces, it undoubtedly should help to give to the uncritical the illusion that they are witnessing something really oriental, something really different from anything else.

---

Last week I noticed the collection, by Mr. Manilovitch, of the better known Yugoslav folk songs. Now the distinction that a small volume published by Messrs. Cary and Co., at 4s. net., and compiled by Mr. R. J. C. Chanter, bears is that all the songs in it have hitherto been unpublished. Its title is "Serbian and Macedonian Folk-Songs," but it should be explained for the benefit of those who, like myself, do not know to whom Macedonia should rightly belong that in this volume and in succeeding ones are to be found melodies which Mr. Chanter heard from the lips not only of Serbians, but of Bulgarians and Turks as well.

Mr. Chanter's work is most interesting, and, being done in the English fashion, it is the more easily appreciated. His harmonisations are extremely simple and neat, and, unlike Serbian editors, he finishes his songs on the common chord of the tonic and does not leave them unresolved on the dominant chord. There are twelve songs in this book, and all are certainly worth putting down. Each one has a different attraction, but the most appealing are "A Mother's Song," in which an inextricable mingling of joy and sorrow is beautifully brought out by a skilful accompaniment; "A Song of the Flower," a joyous, unexpected melody; "I Love a Maiden," an artless little tune in $\frac{5}{8}$ time; and "A Lament," given to the compiler by a Bulgar-Turk whose home was in Bosnia, in which one supposes that a good deal is lost through the translation of the words.

Mr. Chanter says that he found difficulty in getting the words translated, but his own efforts are not the least creditable. To most of the songs he himself has supplied words, but one bears the name of W. G. Winget, and two the name of E. M. Burr (Mr. Burr, incidentally, appears to have made a spirited translation of "By Ochrida's Stream," a very pleasing little song in waltz time). Naturally, Mr. Chanter wants as good words as possible to his settings, but if he gives some more tunes equal to these we can forgive the words, however poor. It is a very valuable work that he is doing in publishing these unknown songs (unknown, that is, outside the countries of their origin), and one looks forward eagerly to volume two of his collection.

## CORRESPONDENCE.

### THE OCCUPATION OF THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mr. Mosconas is welcome to sing the praises of Greece, but he is not entitled to point to Bulgaria as condoning Greece's action over the question of Thrace. Mr. Mosconas has not been fortunate in the choice of the attitudes he has assumed. He began by being "amused," and in his letter of July 29 becomes positively threatening. This is not an encouraging method of conducting a serious controversy, least of all, when Mr. Mosconas has not proved his case.

May I be permitted to put the whole question in its proper light?

In his first letter, Mr. Mosconas tried to score off his own bat by quoting right away, as it appeared on his own authority, from the Bulgarian paper *Zora*. When he was pulled up by "A Bulgarian," with the identical copy of the *Zora* in hand, he turned round and admitted that he had borrowed the quotation from the *Messager d'Athènes*. As he had been challenged on a question of fact, one would have thought he would have withdrawn from the controversy with as little clamour as possible. Instead, he now informs your readers that he is writing to Athens for a copy of the *Messager d'Athènes*, upon which he has relied for his information.

The saying goes, "two blacks don't make a white," Mr. Mosconas having quoted the *Messager d'Athènes*, and the latter publication having misquoted the *Zora* will not alter the question of fact, namely, that no such statement as quoted by Mr. Mosconas, appeared in the *Zora*, a copy of which, as "A Bulgarian," has informed us, is in his possession. More conclusive evidence than this, surely, cannot exist.—I am, etc.,

V. V. CHRISTOFF.

London, August 6, 1920.

---

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It pleases me very much that your Greek correspondent, M. Theodore Mosconas, has accepted "the challenge" for an inquiry about his "textual quotation" from the Bulgarian journal *Zora* of June 3.

At this moment I have seen in *Zora* of July 31 a formal *démenti*, on the part of that newspaper, of M. Mosconas' alleged quotation in THE NEAR EAST from *Zora* of June 3. On this occasion *Zora* of July 31 writes:—

". . . . . From where the compatriot of M. Venizelos has obtained the quotation, with which he aims at deceiving English public opinion, we do not know. However, the fact that he makes use of a fallacious quotation, alleged to have been published by us, is indisputable."

As for holding the [me?] "responsible for all consequences," it is an excellent suggestion on the part of M. Mosconas, and I only hope that it will not take him long time to procure his copy of the *Messager d'Athènes*, when we shall be able to see who is "responsible" for falsification.—I am, etc.,

A BULGARIAN IN ENGLAND.

### THE UNKNOWN NEAR EAST.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Why are we never given any film pictures of the Near East? Popular ideas of the Balkan States in this country are so fearful and wonderful that it is really surprising that any section of the public is able to take an intelligent interest in the politics of South-Eastern Europe, and one cannot help thinking that if the cinema was intelligently utilised as a means for getting the people in touch with realities in this instance much good would result to the nations with whose aspirations we so cordially sympathise, but with whose actual life we are so profoundly ignorant. I hope the day is not far distant when we will have a Near East exhibition at the White City; but while we are waiting for it to arrive we might well be given some good film pictures of the scenery, the cities, and the industrial and social life of Greece, Roumania, Yugoslavia, and Bulgaria. The legend that the Near East is relatively uncivilised persists in this country, even among people who esteem themselves educated, and the efforts of your excellent paper to dispel it might well be supplemented by that best of popular educators, the cinema.—I am, etc.,

PRO-BALKAN.

I.—"A HISTORY OF PERSIAN LITERATURE UNDER TARTAR DOMINION." By Prof. E. G. Browne, M.A., M.B., F.B.A., etc. (Cambridge University Press. 35s. net.)

II.—"THE LIFE OF LIEUT.-GENERAL SIR STANLEY MAUDE." By Major-General Sir C. E. Callwell, K.C.B. (London: Constable. 21s. net.)

III.—FOUR BLIND MICE." By C. C. Lowis. (London: John Lane. 7s net.)

## I.—PERSIAN LITERATURE UNDER THE TARTARS.

After prolonged unavoidable delay the Sir Thomas Adams Professor of Arabic at Cambridge has published the continuation of his classic history of Persian literature. The present volume covers the period of the dominion of the "Tatars," whom popular etymology connected with the infernal regions of Tartarus. It extends from the height of the Mongol ascendancy to the ebb of the tide of Turanian invasion inaugurated by the infamous Tamerlane or Timur-i-Lang, "limping Timur"—he is said to have been wounded while stealing sheep! The period (A.D. 1265-1502) follows upon that of the invasion of the Arabs (seventh century); but while the foe from the south-west replaced the civilisation they destroyed by a new one, and their Spanish opponents admitted them to be "knights . . . and gentlemen, albeit Moors," the hordes from the north-east devastated far and wide and left an undying memory of their massacres. And if the Arabs were inspired by a fiery religious enthusiasm, it is difficult to see that the Tartars were moved by more than lust of conquest, although Timur himself was reputed to be religious and pious (p.182). The face of history was changed by these hordes, not unhelped by intrigues between Christians, Mohammedans, and Mongols, and the judgment of historians is influenced either by the ferocity of the invaders or by the contrast between the new age that arose after them, and the dying age to which they gave the death-blow. Thus Sir Henry Howorth ("History of the Mongols," 1876-1888) regarded the Tartars as a terrible though necessary scourge, and a painful cure for a hollow and demoralised civilisation.

If it is instructive to notice how time will mellow one's view of past cataclysms and to compare our own attitude to the present threatening unrest in the East, Prof. Browne's admirable volume enables one to understand something of the inner history of the age in question. Timur, like the notorious Chingiz Khan, left a son as engaging as the father was ferocious, and the conditions under the Timurid princes repeat that strange mingling of artistic and literary taste, of murder, drunkenness, and decadence, which recurs from Oriental despotisms in the East to the dying Paladins and other degenerate scions of heroic ages in the West (pp. 394, 501). The Tartars encouraged medical and other knowledge; competent historians were occupied in describing their deeds, and discreet poets flourished at the numerous little courts. There has never been a dearth of poets and poetasters in Persia, and even the worst years of anarchy produced a galaxy of poets of whom Hafiz was "merely the brightest of many brilliant stars" (p. 207). But although Hafiz witnessed what would have stirred the most ordinary moralist, there is scarcely an echo of current events in his poems (p. 292); and if his own character is hardly less paradoxical than Timur's (p.182), we are not to be surprised, since in Persia "it is common enough to meet with persons who in the course of a single day will alternately present themselves as pious Muslims, heedless libertines, confirmed sceptics, and mystical pantheists, or even incarnations of the Deity" (p. 299).

After all, "it is to Metaphysics and Mysticism, rather than to Ethics, that the Persian genius turns" (p. 443); and if men were driven to wine, wit, wisdom and women for solace in that trying period, an ethical teacher like Ubayd-i-Zakani found that to be successful it was necessary to pose as anything but that. An excellent account is given of this remarkable parodist and satirist, whose "Ethics of the Aristocracy" contrasts the old "obsolete"—as we should say, "Victorian"—views of the virtues with the "adopted view," and under the form of ribaldry sought to awaken people to the state of affairs.

Prof. Browne gives numerous selections from the literature. Hafiz himself warned men that there is no musician to whose music both the drunk and the sober can dance; and there is much that is merely florid and artificial, and to Western readers tasteless and offensive (pp. 497, 499). It is interesting to note, in passing, that less attention is paid to diversity of ideas than to the diversity of form in which the same idea is expressed by different poets (p. 298). It is little wonder, then, to find Katibi denouncing the plagiarist who so admired his poems as to publish them under his own name: "he ate the salt and stole the salt-cellar" (p. 493). Space forbids further quotation. It must suffice to refer to Amir's fine lament (p. 110), the poems on evolution (p. 217 *seq.*), and the prayer of Jami, whom Prof. Browne considers one of the greatest of Persian writers (p. 448). Mention must also be made of Jami's elegant poem on the humiliation of the poet, whose brilliant verse was insulted by being rewarded with the applause only of a lewd ignoramus (p. 520). Nor can we pass over the charming poem of the little-known Imami, the opening couplet of which rounds off Prof. Browne's dedication of the volume to his wife (p. 117).

Prof. Browne's concluding volume on the Persian literature of the last four hundred years will be keenly awaited. Meanwhile, one welcomes this book, scholarly and delightful as is the author's wont, not only for its detail and wealth of illustrative material, but also for its contribution to a closer study of some of the characteristics of Oriental mentality and of some aspects of a fateful age.

S. A. C.

## II.—THE SOUL OF THE GUARDS.

In February, 1915, General Maude noted in his diary:—"Thirty-one years' service, but don't feel like it. What an eventful life to look back upon, and how interesting." This entry occurs nearly half-way through this book, when the reader is wondering when the interest is to begin, and is feeling that, so far, a less eventful life it has never been his fate to study. The fact is that, in being asked to write this book as a "Life" of the regulation pattern, General Sir Charles Callwell has been set a task which is beyond even his very capable pen. Apart from his profession, Sir Stanley Maude's life included little that the public had any right to have laid before it, and little that would have been of interest to anyone outside the small circle of his most intimate friends. The author has thus found himself unable to do little more than give an account of his subject's professional career, most of which was, until near the end, of very little general interest.

We cannot but wish that this difficulty had been more squarely faced. A brilliant chance seems to us to have been lost, which no one was better fitted than General Callwell to carry through. The accounts of Maude's doings with the Coldstreams at home and in the Sudan, as Brigade-Major of the Guards Brigade in the South African war, as Military Secretary to Lord Minto in Canada and in various important War Office appointments at home, might well have been told very much more briefly. Nor need much space have been given to his exploits, fine as they were, in France and the Dardanelles. Instead of this—if the truth be told, somewhat dry matter—we should have been grateful if the author had set out deliberately and clearly to trace the growth of the splendid spirit which animated the man, and to show how his soul gradually became more and more at one with the soul of the Guards, so that a man who began as an ardent "Parade soldier" grew to become an accomplished strategist, a real leader of men, and a great general whose name will never be forgotten.

For this seems to us to be the root of the matter. A keen soldier, a zealous military student, almost meticulously interested in detail, a stickler for "correctness" even to the extent of wearing the full regulation uniform in his tent with the thermometer at 126° in the shade; a very strict but just disciplinarian, with no thought but for the "Service," and none for himself except to keep himself constantly in the best possible physical and mental condition in order that the "Service" might benefit; a man of simple and sincere piety and of the most scrupulous honour, self-suppressing and unselfish, always intent on the welfare of his men, always eager to give his subordinate officers and men the fullest possible credit for their share in his successes, filled with an overwhelming sense of duty and yet willing to take risks for great ends, he possessed a combination of military and personal qualities typical of the best Guards officer and represented that type at its best.

We cannot, therefore, but regret that our author has felt

Digitized by Google

it his duty to devote over 180 pages of his book to a vain attempt to write a pre-Mesopotamian biography of his hero on the nearest approach possible to orthodox lines. For the last 150 pages we have nothing but the highest praise. The whole of Maude's share in the Mesopotamian campaign, from the time of his arrival as a Divisional General, is related with a perspicacity and fairness which might well serve as a model to others. No attempt is made to minimise in any way the very great advantages which Maude enjoyed over his predecessors, or to conceal the grave military defect in his character of insisting on doing his staff work himself. At the same time, it is made abundantly clear that his brilliant successes were due not to luck but to sheer ability, while his military qualities easily outshone his one great military defect. A short extract will perhaps best show General Callwell's grasp of his subject in summarising Maude's achievements:—

In the estimation of posterity, Maude will inevitably be judged by the campaign which virtually gave him Mesopotamia. That campaign was a masterpiece. . . . Recognising from the outset how neither skill nor valour in the absence of effective organisation will command success, the Army Commander invariably made strategy and administration move hand in hand throughout its progress. The plan was bold; some of its details—the crossing of the Tigris at Shumran, for instance—might be characterised as audacious. But it was as comprehensive as it was bold, and its designer ever had the destruction of the foe for objective rather than mere winning of territory or the achieving of some local triumph. Victory, until hostile resistance had been beaten down, was not victory to him. The Turks were appalled by the relentless energy of this formidable antagonist, who was as vehement in treading a fugitive enemy underfoot as he had been calculating in his preparations for putting the antagonist to flight. Maude was as thorough as a conqueror as he had been thorough in elaborating his scheme for making himself master in the theatre of war, and this, more perhaps than anything else, singles him out as one of the foremost soldiers of his time.

Incidentally, we would point out that the official account of Maude's death differs considerably from the picturesque legend which has already attached itself to that tragic and dramatic event, to which Claverhouse's famous words in "Old Mortality" are so apt:—"When I think of death as a thing worth thinking of, it is in the hope of passing one day some well-fought and hard-won field of battle, and dying with the shout of victory in my ear—*that* would be worth dying for; and more, it would be worth having lived for."

### III.—A STORY OF RANGOON.

The reader of "Four Blind Mice" will have no doubt whatever that Mr. Lowis knows Burma thoroughly, both from the point of view of the European and of the native. He will be convinced of this on the very first page in the description of Mrs. Selbridge in Rangoon trying to get through an afternoon in the rains, equally oppressed by the moist, enervating heat and the persistent mosquitoes. Later, the author seems equally sure of his ground in the home of So Min and his family. But it is with his Eurasians that he is most successful of all; "Malaber" boarding-house, with its proprietress, Mrs. Carlos, is a delightfully clever sketch.

This is a novel with a good solid plot, which is worked out thoughtfully and in a very workmanlike and unflustered style. Its course is so smoothly planned and runs so placidly that we are rather surprised to find that the plot turns on a murder and the difficulty of identifying the body. The author's method of showing the principal events through the eyes of one of his characters is decidedly effective. Mr. Lowis has drawn his chief characters very carefully, with an almost photographic truth to life, and an evident desire not to throw any of the glamour of romance about them. The result, however, is a certain flatness and tonelessness, which has, on the whole, a depressing effect, and it is some of the less important people who seem more truly living. Consequently our feeling on closing this novel is largely one of disappointment that the author could not after all arouse our interest more definitely in the men and women whose doings are set before us with such leisured clearness and against such a powerfully suggested background.

Prince Paul of Serbia left London on August 5 for Paris.

Both Dr. Trumbitch and M. Pashitch were in London during the last week.

Lord Allenby is on his way to England, and arrived at Marseilles on August 8.

M. Dasatch, the head of the Serbian Delegation in Paris, has arrived at Claridge's Hotel.

The Greek Minister visited Olympia on August 7 and inspected the Greek troop of Boy Scouts.

Earl Winterton sailed on August 6 from Southampton for Cape Town in the R.M.S. Carisbrook Castle.

M. Venizelos arrived in London on August 5, stayed at the Greek Legation (51, Upper Brook Street), and left for Paris the following day.

Vice-Admiral Sir Sydney Fremantle, on board his flagship Revenge, accompanied by the Royal Sovereign, has left Constantinople for England.

The King of the Hellenes visited Kirk Kilisse on July 31, and was received by General Maxarakis and his staff. He has since returned to Athens.

The King of the Hellenes has conferred upon the Chief Scout, Sir Robert Baden-Powell, the honour of Commander of the Order of the Redeemer.

General Milne, Commander-in-Chief of the Army of the Black Sea, who since last March has been in command at Constantinople, is now in England.

It is announced that Sir George Macartney, K.C.I.E., is permitted to retire from the service of the Indian Government, with effect from November 26, 1920.

Mme. Ostoitch, wife of Colonel George Ostoïtch, Military Attaché to the Legation of the Kingdom of Serbs, Croats, and Slovenes, left London on August 8 for Vienna.

Mme. Trumbitch, wife of Dr. Ante Trumbitch, Minister for Foreign Affairs of the Kingdom of Serbs, Croats, and Slovenes, arrived in London on August 9 from Paris.

Dr. Mastny, the newly appointed Czecho-Slovak Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James, will arrive in London in the early part of next month.

Sir Henry Cunningham, K.C.I.E., has had a serious relapse, and has been obliged to leave East Sheen for his London residence, 83, Eaton Place. His condition causes great anxiety.

M. Michel B. Boeresco, Minister Plenipotentiary and Roumanian Chargé d'Affaires, entertained at dinner on August 6 M. Titulesco, Roumanian Minister of Finance, and the personnel of the Legation.

Dr. Reiss, the representative of the Allied Council for War Criminals, is shortly leaving for Athens at the request of the Greek Government, to investigate the misdeeds of the Turks and Bulgarians in Asia Minor and Thrace.

M Michel Gavrilovitch, the Minister of the Kingdom of Serbs, Croats, and Slovenes, and Mme. Gavrilovitch entertained, on August 5, at luncheon M. Nicolas P. Pashitch, formerly Serbian Prime Minister, and the personnel of the Legation.

Mr. Theodore D. Mosconas, M.M.E.O.S., of the Dodecanesian Delegation, Manchester, gave a lecture on August 8 at the County Forum Debating Society, Manchester, on the Islands of the Dodecanese, illustrated by lantern slides.

Our Belgrade Correspondent writes (August 2):—Everyone will be relieved to hear that the health of Field-Marshal Sir Zhivoyin Mishitch, K.C.M.G., is improving. The gallant Voivoda has been lying ill at the Vrachar Sanatorium ever since his return from France, and now it is reported that his health is taking a turn for the better, and hopes are expressed for his successful convalescence.

Our Tiflis Correspondent writes (July 10):—"Mr. David Ghambashidze, F.R.G.S., delegate of the Georgian Government in Europe, arrived a fortnight ago from London, and at once set to work to straighten out many of the difficulties that had arisen during his absence abroad. The invaluable experience he acquired during years of residence in England, added to his complete knowledge of the psychology of his own countrymen, makes Mr. Ghambashidze an admirable adviser for the Georgians, and he is by far the best person available to bring about increased friendly relations between Great Britain and Georgia. While fully aware of the weaknesses of the Georgians and of the difficulties besetting the path of the administrators of Georgia in these early days of her independent existence, he is at the same time not without knowledge of the problems confronting Great Britain herself. Therefore his moderating and enlightening influence, supported by his natural cheery optimism, will go a long way towards putting things right and to setting aside or mitigating many of the vexatious regulations and formalities which might well be calculated to hinder the promotion of good relations abroad." Mr. Ghambashidze, it will be remembered, has contributed to the columns of THE NEAR EAST.

## APPOINTMENTS, ETC.

Mohammed Sultaneh has been appointed Secretary to the Persian Legation in London.

Mr. W. L. Lowrie, American Consul-General at Lisbon, has been appointed American Consul-General at Athens.

Major W. N. Bolton (Commissioner of Limassol) has been appointed a member of the Legislative Council of the Island of Cyprus.

Mr. Lesseps Loisidis, the Vice-Consul of Portugal at Port Said, has been promoted to the grade of Consul, and the Vice-Consulate of the town of Port Said has been raised to the rank of Consulate. Mr. Loisidis has given twenty years of service to his Government.

The King has made the following promotion in the Most Eminent Order of the Indian Empire for services during the operations against Afghanistan. To be dated January 1, 1920:—K.C.I.E., Major-General P. Hehir, C.B., C.M.G., C.I.E., M.D., Indian Medical Service.

M. Paraskevopoulo, Acting Diplomatic Agent for Greece, and Consul-General in Cairo, has been appointed by the Hellenic Government political adviser to the Hellenic Residency in Thrace. He is joining his new post after the arrival of Mr. Argyropoulo, the newly-appointed Diplomatic Agent in Cairo.

## OBITUARY.

It is announced that Captain R. C. Geard, 15th Cavalry, Indian Army, Assistant Political Officer at Tabriz, has been killed by Shahsevand tribesmen on the Tabriz-Mianeh road. He served with the Indian Cavalry Division in France until its return to India in 1916. He was then sent to Busreh, and was second-in-command of an expedition sent in support of General Sir Percy Sykes's great march from Bandar Abbas to Ispahan. He was afterwards attached to the Persian Political Service, and served as Political Officer at Shustar, Urmia, and Enzeli, remaining at the last-named Caspian coast town until within a few weeks of its occupation by the Bolshevists, when he was despatched as Special Service Officer on a mission to the Maku Anratile Shahsevand tribesmen, which was accomplished with success. Captain Geard was a splendid linguist, with a wide knowledge of Eastern tongues.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

## GREAT BRITAIN'S HANDICAP IN THE NEAR EAST.

British interests in the Near East are being handicapped by the condition of postal comunications with that part of the world far more seriously than either the public in this country or the Government seem to appreciate. While a slight improvement—by no means a constant factor—in the period occupied in the transmission of letters has to be recorded in recent months, the position in regard to the newspaper post has remained more or less stationary—with a possible exception in the case of Belgrade—since the Armistice. Three, or even four, weeks may still be taken by British newspapers to reach Bucharest, or Sofia, or Constantinople, and it is not an uncommon occurrence for the newspapers of one week to arrive before those published a week later. Even when full allowance is made for strikes of railway or postal officials in one or other of the countries traversed, the service can only be described as chaotic; and it constitutes a legitimate grievance, not only for the British communities and British trade interests in the countries concerned, but also for the nation as a whole, which has realised as a result of the war something of the significance of South-Eastern Europe in the general scheme of the British Empire. The handicap to trade caused by indifferent postal communications is sufficiently obvious not to require special emphasis. What is not so apparent to those at a distance is the moral damage suffered by Great Britain in having her point of view with regard to the political questions of the day practically unrepresented among the peoples of the Near East. A controversy arises in international politics—as a concrete instance we may take the recent difference of opinion between France and Great Britain regarding the Allied attitude towards German intransigence, or the visit of Krassin to London—and the more enlightened sections of the Balkan people require fuller information than is supplied by their own exiguous Press. For ten days or a fortnight the only source available to them will be the newspapers of France, Germany, and Italy. Is it likely that when their interest in the subject has begun to evaporate they will turn to belated English newspapers in order to study the whole question afresh, and, perhaps, modify the opinions they have already formed? The delay in the arrival of the mail robs the English Press of the value it possesses as an educative factor in Near Eastern opinion, because a large number of people will not read a newspaper two or three weeks old, which ought to have reached them within five or six days.

The reason of the unsatisfactory postal service between Great Britain and the Balkans is well known. The train service is in the hands of our French Allies, who look after their own interests first, and are not minded to trouble themselves overmuch regarding a matter which does not seem to lie particularly near to the heart of the British Government. Where the mystery comes in is that a condition of things so manifestly unfair to British interests should have been tolerated so long, in spite of the constant protests that have been made both at home and abroad. For an explanation we have to turn to the tragic ignorance prevailing in high quarters of the importance of South-Eastern Europe in its relationship to the British Empire. In the general settlement the opinion of one or other of the peoples concerned has been accepted uncritically, and no attempt has been made to master the problem as a whole with a view to imposing a settlement which would be fairer than any dictated by the interested parties. In such circumstances, the matter of the delay of a few days or weeks in the postal communications with that part of the world would necessarily be held to be of no account. At the same time indifference to the subject would fit in with the easy policy of playing second fiddle to the more vigorous politicians of France, whose intimate knowledge of what they conceive to be be their country's interests in the Near East could only be countered by the careful study of Near Eastern affairs which Great Britain's representatives in the Allied Councils have had neither the time nor the inclination to make. To-day, however, the injustice to British interests in connection with the postal question is so glaring that there can be no excuse for failure on the part of the British Government to bring the matter to a head. Further negotiations between the post office authorities on the two sides of the Channel are of no avail. A certain weight of mail matter daily is allowed the British Post Office, and there for the present the matter ends. The fact that it is wholly inadequate to British requirements, and that it is a mere fraction of the weight allotted to the French service, which is apparently regulated solely by French needs, is overlooked. Until Great Britain can impress upon the French Government that the provision of adequate mail facilities with the Near East is as important in British eyes as the supply of coal or any other commodity to France, the existing unsatisfactory state of affairs is likely to continue.

## MESOPOTAMIA.

It is evident that Great Britain is confronted with an awkward problem in Mesopotamia, but a moment's reflection will show that the first panic suggestion will not necessarily provide the best solution. A policy of ignominious scuttle will, no doubt, reduce the expenditure on the Army in the Middle East, and will obviate the recurrence of regrettable incidents; it will satisfy the faint-hearted among us who forget that the British nation has come successfully through far more formidable difficulties in the past: and it will be another nail in the present Government's coffin. Whether the evacuation could be justified on any higher ground is another question with which its advocates do not seem to trouble themselves. We went to Mesopotamia under the conviction, born of the war, that the old policy of indifference and *laissez faire* in the Near and Middle East was a definite menace to the safety of the Empire; we counted on being instrumental in building up an enlightened and progressive Arab State, which would be an additional bulwark of peace in the place of the disintegrating influences of the old Turkish Empire. To our surprise we find that the Arabs not only refuse to display the least partiality for the régime we have imposed upon them, but actually attack our troops and inflict reverses upon them.

In dealing with such a situation the first point of inquiry should be whether the principle which prompted the occupation of Mesopotamia still holds good. If it does, we must next examine whether the régime inaugurated has been a satisfactory one, and whether the hostility shown to us is due to transient causes or is ineradicable. The right of the Arabs to form an Arab State is not likely to be challenged nowadays, and there will be the same consensus of opinion regarding the inability of such a State to stand alone in its earlier years. In other words, the mandatory system adopted by the Allied Conference does violence neither to common sense nor to Arab interests. It is, therefore, possible that in some way or other the British administration of the last year or two in Mesopotamia has fallen short of the theoretical principle that it was supposed to embody. There can be little doubt that it has. For a long time the authorities in Mesopotamia were left entirely in ignorance of the British Government's intentions regarding the country. An administration was set up which did not feel called upon to concern itself with ill-defined theories of modern State-building. Under the ægis of military rule it aimed at efficiency,

Digitized by Google

and, as the Home Government grudged non-military expenditure, it set out to obtain as much revenue locally as possible. The result was that Mesopotamia made rapid progress; but the ordered methods of government were altogether above the heads of the people; they cared little for the benefits for which they were taxed far too heavily for their liking, and they were easily persuaded that a régime which they could not understand must needs be a bad one. Add to this sympathy with their compatriots in Syria, who were also having trouble with a European occupation, as well as the insidious intrigues of Mustapha Kemal's agents, and there is little cause for wonder that there has been unrest or worse in Mesopotamia.

There could be no more fatal policy than precipitate evacuation at the present moment. It is essential that Great Britain should re-establish her military prestige. The whole administration requires to be overhauled. Where the people were entitled to look, in their own parlance, for their "father and mother," they have found an unimaginative martinet, who was probably as much disliked by his fellow-countrymen as by the natives; the country has suffered from a bureaucracy, which, while admittedly efficient, has been unsympathetic; and far too little attention was paid to instructing the Army of Occupation to play its part in the difficult role of adapting military exigencies to the theory of the mandate. It is inconceivable that Great Britain should simply leave the Arabs to their own devices. Such a course would mean an immediate outcrop of internecine feuds, which would inevitably react on neighbouring States. A middle way is surely possible between evacuation and the continuance of the régime that has brought us into conflict with the people; but it can only be indicated by those who have knowledge of, and sympathy with, the Arabs.

## MOSLEM TALES FROM JERUSALEM.

**By Estelle Blyth.**

### THE STORY OF ABU QUIK.

There once lived a man and his wife. The man was good and honest, but very foolish, and because he had no brain his work grew less and less, and at last he had to sell his cow—the only one he had—to buy bread and to pay his rent. He set forth for the market, driving the cow before him, and on the way he became weary and sat down to rest awhile under a big tree. Now in this tree an owl had built its nest, and it was disturbed by the man who sat in the shade, groaning and lamenting his hard fate in having to sell his cow; and the owl began to move in its hole, and to cry, "Abu Quik! Abu Quik!"—which is what the owls say. Then the man Mustapha, who was a good man and kind, but very foolish, looked around him and said, "Who spoke to me?"

"Abu Quik! Abu Quik!" cried the owl.

"Oh, Abu Quik, I know you not," said the man.

"Abu Quik! Abu Quik!" replied the owl.

"Oh, my lord, Abu Quik," said Mustapha, "since you are willing to speak with me, who am but a poor man, let me tell you my trouble. I have lost all my money, and now I am going to the town to sell my cow. To whom shall I sell it?"

"Abu Quik!" said the owl.

"Will you buy it, O my lord?" cried Mustapha, delighted. "Will you then save me the trouble of going all the long way to town?"

"Abu Quik! Abu Quik!" said the owl.

"You shall indeed buy the cow," said Mustapha, "but perhaps I had better ask my wife about it first, for she told me to be sure and sell it in the market."

He tied the cow to a branch, and ran quickly back to his house to tell his wife; and she, not knowing who Abu Quik might be, said: "Let who will buy it, only see that you bring back a good sum, for it is our last hope."

So Mustapha returned to the tree; but, alas! while he was away, someone had taken pity on the lonely cow and had removed the beast to his own stall. Then Mustapha began to beat his head, and to cry aloud: "Abu Quik! O my lord, Abu Quik!" until he awoke the owl, which began to cry in its turn: "Abu Quik! Abu Quik!"

"Oh, Abu Quik, who has taken my cow?" asked Mustapha, weeping.

"Abu Quik! Abu Quik!" answered the owl.

"But where is the money, O my father?"

"Abu Quik!" said the owl. And that was all that "Abu Quik" would say.

"Have you hidden the money for fear of thieves, O wise Abu Quik?" at length suggested the man. "Shall I then dig for it?"

"Abu Quik!" replied the owl, in a hoarse voice, for it was getting tired of the stupid, noisy fellow who would not let it rest.

Then the poor man, not knowing what else he could do, began to dig in the shade of the tree, and, Heaven being merciful to the poor, before very long he found a pot full of gold pieces. With this he hastened home to his wife.

"See here," he cried, "and count how much gold my lord Abu Quik has given me for the cow!"

So the man and his wife were very happy.

But gold is like truth and like murder in that it cannot be hidden, and presently it came to the ears of the police that Mustapha, whom all men knew to be a good man but very foolish, had dug gold out of the ground. The police straightway went to Mustapha's house, and said: "What is this that we hear, O Mustapha? Know you not that all gold which is dug out of the ground belongs by right to our lord the Sultan, and shall we not take charge of it for him till we can learn his will concerning it?"

But it chanced that Mustapha had gone to the bath, and his wife came to the door, and she was a woman with a strong head. She said: "Know you not that Mustapha is but a foolish man and has no mind? If he says that he dug gold out of the ground, believe him not, for his words are not the words of a wise man; they tumble from an empty mind. Come again to-morrow morning at this hour, when he will be at home, and you will then see for yourselves that what I have told you is the truth."

So at last she persuaded the police to go away for the present, though they assured her that they would return without fail the next morning to test the truth of her words; for they were the guardians of the law, and were they going to stand by in silence and see the Sultan robbed?

When Mustapha came home his wife said to him: "The police have heard that you found gold in the ground, and they want to take it from you, but I have told them that you are such a wonderful man that you can do anything you like—you can even cause the sky to rain bread at your word. Now, listen to me, O Mustapha: to-morrow, when the police come, I will throw out all our bread from the roof into the courtyard, and you must cry out that it is raining bread; and when they see that they will be afraid to ask you for the gold. On your head be it!"

And Mustapha promised to do exactly as she told him.

The next morning when the police came, Mustapha's wife threw the loaves of bread down from the roof, and Mustapha ran out into the courtyard and began to pick them up, crying: "Oh, see how good the sky is to-day! It is raining bread upon us as I commanded it to do!"

Then the police looked at each other and shook their heads, and they said: "It is true what the woman told us. The man is surely mad. He could not have found gold, for he is too stupid. Let us go away, for here we shall reap nothing for our pains."

So the police went sadly away, and the man Mustapha and his wife were troubled by them no more.

## TOPICS IN PARLIAMENT.

*The subjoined headings are those given in the official report:—*

EGYPT: Cairo Police Force. PEACE TREATIES: Bulgaria. SYRIA. RUSSIA: British Prisoners (Baku). TURKEY (GREEK OPERATIONS). INDIA: Army Instruction (Amendment).—30th Baluchi's Regiment (Insubordination). EGYPT: Nationalist Delegation.—Administrative and Judicial Systems. ITALY (MUSTAPHA KEMEL). SALONIKA (EXPORTS TO GREAT BRITAIN). (July 29).

ALBANIA. CABLE MESSAGES. INDIA. RUSSIA: British Prisoners (Baku). (August 2.)

INDIA: Army Officers (Invalid Pensions).—Police Pay. (August 3.)

INDIA: Army Pensions (Increase).—Riots (Ball Ammunition).—Compulsory Military Training.—Punjab Disturbances.—Cables. ROYAL NAVY: Naval Mission, Teheran. RUSSIA: British Warships (Crimea). MALTA (RELIGIOUS FREEDOM). (August 4.)

RUSSIA: British Prisoners (Baku). MESOPOTAMIA: British Casualties.—Oil. INDIA: Punjab Disturbances. MIDDLE EAST (INDIAN TROOPS). MESOPOTAMIA (CIVIL ADMINISTRATION). ROUMANIAN LOANS (UNPAID COUPONS). ARMENIAN REFUGEES, BAKOUBA. (August 5.)

## NEWS IN BRIEF.

Fishermen have discovered a complete German wireless apparatus off the coast of Malta, which was anchored below the surface.

Damage estimated at £500,000 has been caused by large fires at Damascus.

An English steamship company has just secured the mail service between Malta and Syracuse for a period of three years at £16,000 per year. The mails are to be delivered three times a week.

At the invitation of the Socialist Government of Georgia, a Labour Mission will visit the country next month to investigate the social and political conditions there. The Mission will include MM. Vandervelde, Huysmans, and de Brouckere (Belgium), Messrs. Ramsay Macdonald and Tom Shaw, and Mrs. Snowden (Great Britain), and possibly Herr Kautsky (Germany). The object of the visit is to compare the conditions in Georgia with those in other countries. The Mission will leave on September 1.

Roumania continues to suffer from the heat. Our Bucharest Correspondent writes that on July 27 the temperature was 40 deg. centigrade (104 deg. Fahrenheit) in the shade.

A Supplement to the *London Gazette*, issued on August 5, contains a dispatch from the Commander-in-Chief in India on the military operations in Aden, South Persia, of the Bushire Field Force, Assam, and Burma, Transcaspia and East Persia, and the Protection of the Indian Coasts. The dispatch is dated September 29, 1919.

A Simla message states that the Government of India is considering a Bill to constitute an Indian Territorial Force on the lines of the old Militia in England, and an Auxiliary Officers' Corps.

A Belgrade message states that Dr. Benes, Czecho-Slovakian Foreign Minister, and M. Take Jonescu, Minister for Foreign Affairs in the Roumanian Cabinet, were to meet there on August 10 for an important conversation, after which M. Jonescu will continue his journey to Athens, Paris, and London.

Railway communication between Bulgaria and Western Thrace has been resumed, and the first train to Dedeagatch ran on August 6.

The *Zionist Bulletin* states:—The "Pro-Jerusalem" Society is publishing a periodical in English, Hebrew and French which will contain a general survey of the holy places, antiquities, and the environs of Jerusalem. Mr. Ashbee, civil engineer of the Administration, will edit the English, and Dr. Slousch the Hebrew part. Members of the Hebrew Exploration Society who visited the tombs of King Herod found everything quite in order.

The exchange of the ratifications of the Bulgarian Peace Treaty took place on August 9 in Paris at the Ministry of Foreign Affairs.

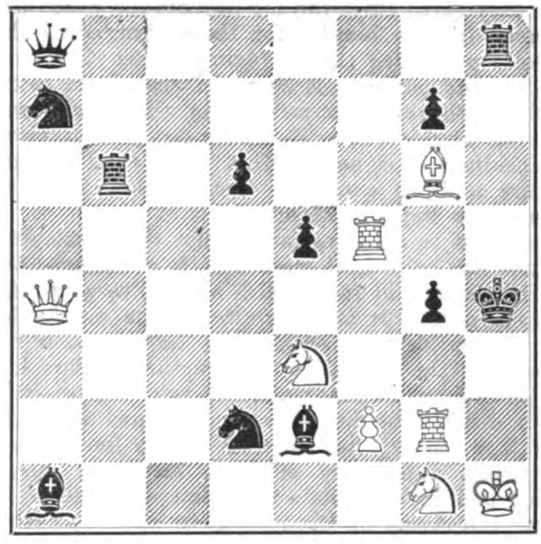
The latest news concerning the British prisoners at Baku is that they are still in prison, but safe.

The presence in London of the Greek delegation to the Lambeth Conference provided the opportunity for holding, in Southwark Cathedral on August 5, a solemn service of intercession for the liberation of the Christians in the countries of the Near East from oppression and the danger of death at the hands of the Turks; for the persecuted Russian Church; and for the reunion of the Anglican and Eastern Churches. Taking part in the service with the Bishop of Southwark were the Metropolitan of Demoticon, Thrace, the Great Archimandrite Const. Pagonis, and the Archpriest Const. Callinicos (members of the delegation); and there were also present the Bishop of Coventry, the Bishop of Woolwich, the Bishop of Harrisburg, U.S.A., the Archimandrite Serge (Dean of the Russian Church at Athens), the Archimandrite Vasdekas and the Rev. V. I. Theokritoff (of the Greek Church in London), Archbishop Mathew Indjiean (the Armenian Archbishop of Smyrna), and Bishop Francis Hodur (Bishop of the Polish National Catholic Church of America)

## CHESS.

Problem No. 24.

Black.



White.

White to mate in two.

The above problem by Valentine Marin took the first prize in the Third National Spanish Tourney.

Monday saw the commencement of the Edinburgh Congress, which has attracted 92 entries for the various contests, as against the 123 players who competed at Hastings. Unfortunately, the championship does not now promise such an interesting contest as appeared probable, as Mr. H. E. Atkins, who has held the title seven times in succession, and was to attempt to make the seven into eight, has withdrawn under medical advice. As my readers know, I had anticipated his victory after a keen struggle with Sir George Thomas, who should now have a comparatively easy task.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The unsatisfactory condition of the postal services between this country and the Near East is dealt with this week in a leading article, in which it is emphasised that British interests are suffering severely from this handicap. The subject is one to which I have had occasion to refer again and again, for while from time to time there has been an improvement in the communications it has proved only temporary, and at the present juncture the position is again giving rise to widespread complaints. As regards the letter post, it is true that, with the exception of one or two regions, mails are arriving here and in the Near East with some semblance of regularity (though how long that will continue is another matter); but the newspaper mails are in a state which may justifiably be described as chaotic. There is no certainty here regarding their arrival. Sometimes in a rare spasm of generosity one is deluged with two, or perhaps three, mails in one week, and then a long period passes with "nothing of interest to report," and, what is most aggravating of all, it is a common experience for the mails to arrive out of their order. In the Near East, as I have excellent reason for knowing, things are much worse.

***

The responsibility for the irregularity of the services, it is pointed out in our leading article, rests with France, who has been putting her own interests in the foreground to the exclusion of other considerations. But the principal blame must naturally attach to the home authorities, who during the past year might surely have been able to make effective representations to our Ally in this matter, which so vitally affects Great Britain's interests in the Near East. Evidently such action as may have been taken has been quite inadequate, and more determined representations will have to be made to convince our Ally that postal communications between the Balkans and this country must be brought to something approaching the normal. Obviously things cannot be left as they are, for (apart from numerous other considerations) it would be impossible to compete satisfactorily with other countries in the Near Eastern markets faced by this handicap, and we do not desire to see the unedifying picture of more British firms having to make arrangements for the despatch of their mails in Paris because the authorities here are unable to guarantee a satisfactory service.

***

Whatever may be the case in the future, for next year the plan is again to be adopted of holding the British Industries fair simultaneously at London, Birmingham, and Glasgow. The London section of the fair is, however, again to have a new home, as this time it is to be held at the White City instead of at the Crystal Palace. From many points of view this change is for the better. The White City is certainly much more accessible than the Crystal Palace, and provides ample scope for an exhibition, the available floor space amounting to considerably over four million square feet. This section of the fair, as before, covers what may be called the smaller exhibits, such as cutlery, glassware, paper, leather, scientific instruments, musical instruments, and fancy goods. Since its inauguration the fair has been steadily growing in favour, and there is no doubt that a record number of applications will be received from firms anxious to exhibit.

***

A very satisfactory report is forthcoming from the Bank of Athens for the past year. The net profits are about double at 13,388,510 drachmæ, out of which 7,308,050 drachmæ is written off against "loans on sundry guarantees" and "loans on securities," leaving a balance of rather over 6,000,000 drachmæ, which is being utilised to pay a final dividend of 3 per cent., making 8 per cent. for the year. Noteworthy features of the balance-sheet are the increase in the total of 116,207,306 drachmæ to 486,359,963 drachmæ, and the marked growth of the immediately available assets from 154,131,000 drachmæ to 215,350,000 drachmæ. It will be remembered that recently the bank formed an influential London Committee, which consists of Mr. O. V. G. Hoare, Mr. W. H. Hollis, Mr. E. M. Rodocanachi, and Mr. P. M. Caridia, and the improvement in the position of the institution is doubtless to be attributed in no small degree to this step.

***

The interesting announcement has just been made that of the new capital of the Bank of British West Africa, consisting of 200,000 £10 shares, half has been subscribed for in equal proportions by the London County Westminster and Parr's Bank, the National Provincial and Union Bank of England, and the Standard Bank of South Africa at the price of £6 5s. per share, this representing a premium of £2 5s. per share which has been placed to the reserve. It will be recalled that not very long ago Lloyds Bank acquired a substantial interest in the bank, taking up 37,500 shares, and this new development means that three of the great joint stock institutions are now associated with one of the most progressive of British overseas banks, while the association of the Standard Bank means for the two banks representation throughout Africa. The importance of the transaction to the Bank of British West Africa should be very considerable, for it will mean infinitely greater scope for expansion and for the extension of its influence.

***

Last week saw the issue of the prospectus of the Phœnix Oil and Transport Company, Ltd., which has been formed for the development of various Roumanian oil properties. The company has a capital of £2,050,000, consisting of 2,000,000 £1 shares and 1,000,000 1s. shares, and its assets include shareholdings in the Beciu (Roumania) Oil Fields, the Traian Roumanian Oil Company, the Anglo-Roumanian Oil Company, and the Stavropoleo Moreni (Roumania) Oil Properties, while it has also acquired the businesses of the Anglo-Continental Oil Company, and the Masterson Roumanian Oil Syndicate. It has a very strong board of directors, which includes Mr. E. Manville, M.P., of the B.S.A., who is the chairman; Mr. T. J. Callaghan, Lieut.-Col. Sir John Norton Griffiths, and Mr. F. H. Houlder, of Houlder Brothers and Furness Withy and Co. Mr. Houlder's association with the company is particularly interesting in view of the Danube shipping scheme; and as other shipping interests are represented on the board it is evident that the question of transporting the oil by sea from Roumania will present few difficulties.

***

As I have had occasion to point out recently, for local reasons Roumania's oil industry has not kept pace with the general reconstruction of the country. In recent months, however, conditions have shown considerable improvement, and there is every reason to hope that within a reasonable time Roumania's chief industry will soon be nearing its pre-war position. In furthering this development the new company should have a wide field of useful endeavour, especially as a considerable portion of the 10,000 odd acres worked by the various concerns now taken over is situated in the rich Moreni fields. This enterprise is specially satisfactory in view of the interest other countries are showing in the Roumanian oilfields, notably America.

(Reports from Our Own Correspondents.)

## EGYPT.

Port Said, July 16.

**Teutonic Enterprise.**

One of the signs that the war is officially over is an advertisement that recently appeared in the local Press of a German who wanted agents for his manufactures in Egypt. Many Austrians are back in Port Said, attempting to regain lost business. However, it is not surprising that both of our former enemies should find a welcome in this country, where a large proportion of the inhabitants prefer a continuance of the evils of the Capitulations and Mixed Courts rather than a unified judiciary.

Port Said, July 31.

**Surplus of French Money.**

Considerable inconvenience is being caused in the town by the refusal of the banks to accept any more French money. In this cosmopolitan place at least five kinds of coins pass current freely, viz., English, French, Italian, Greek, and, of course, Egyptian; also, at one time during the war, Indian rupees were legal tender as well. Naturally, this free exchange of all sorts of money was a great convenience to the trade of the town, as passengers would give or take in change whatever money they had or would be likely to want. Also the fact of the circulation of large numbers of 5-franc, 2-franc, 1-franc, and ½-franc pieces materially helped to relieve the inconvenience of the small change shortage, and we in Port Said never had to resort to the postage stamp expedient that was necessary in other places.

However, it seems that the banks here have been accumulating large quantities of French silver, either because of the surreptitious export of it from France, or other causes, and now find it difficult to get rid of it, as many of the firms who draw big sums for the payment of their workpeople do not want French money, as, perhaps, a good proportion has to be paid in the Delta, where only Egyptian money is current. The banks accordingly, to protect themselves, have been obliged to refuse any more French silver. No doubt it will not prevent the circulation of these coins in the town, and probably things will adjust themselves very shortly. It might pay the French Government to buy up this bullion, and re-export it to France, to help to redeem their paper circulation.

**Prices.**

Trade, although not at a standstill, yet does not seem to be bounding ahead, and as the ultimate factor in healthy trade is the buyer, anything that makes him shy tends to militate against prosperity. To give an instance that was related to your correspondent last week; a man wished to buy a type of stove which is imported from America by one firm only, and by them is distributed to retailers in Egypt. The man went to one retailer in the place, and £18 was quoted as the price. Another shop asked £25, and eventually he got the same thing in another town in Egypt for £11! There could be no question as to a difference in quality, and assuming that the man who sold it for £11 made a fair profit, what adjective should be applied to the profit of the man who asked £25? It is an interesting philological and ethical question.

Another case that was brought to the writer's notice was of some leather goods which were imported and sold to retailers in Egypt at £1 14s. each. The retail price of these articles in at least one large store in Egypt is £6 15s. Naturally, the buyer, in other words the general public, does not spend freely, as whatever price is asked there is always the haunting wonder whether it could not be got elsewhere for 50 per cent. less. This sort of uncertainty does not tend to the encouragement of trade.

**An Unusual Vessel.**

A rare type of vessel arrived here a few days ago from Buenos Ayres, the City of Pascagoula, a five-masted barquentine with auxiliary engines. This rig is extremely unusual, at any rate in the Eastern Hemisphere.

## GREECE.

Athens, July 23.

**Production of Wines.**

The Statistics Department of the Ministry of National Economy has issued details regarding the production of Greek wines from 1914 to 1918, and the quantities in kilos exported from 1915 to the end of March, 1920. The total production in 1914 amounted to 300,410,971 okes, in 1915 to 265,021,802 okes, in 1916 to 214,643,543 okes, in 1917 to 236,445,309 okes, and in 1918 to 247,960,462 okes. The total quantity of wine exported was as follows:—In 1915 32,146,190 kilos, in 1916 20,001,188 kilos, in 1917 10,223,517 kilos, in 1918 9,673,097 kilos, in 1919 18,326,651 kilos, and in 1920 (up to March 31) 9,341,876 kilos.

**Custom House Receipts.**

The receipts of the Custom House at Volo during June last amounted to 377,115.75 drachmæ. At Patras the receipts from Custom duties during June amounted to 821,912.50 drachmæ, as against 312,222.10 drachmæ collected during the corresponding period last year.

Athens, July 31.

**Moratorium in House Rents.**

The principal clauses of a moratorium which has been published in the Government Gazette are as follows:—This does not embrace any building for which the monthly rent is or exceeds 1,200 drachmæ. The rent of dwelling houses for which less than 1,200 drachmæ is paid per month can be increased by 60 per cent. if let before September 1, 1915, 40 per cent. if let between September 1, 1916, and September 1, 1917; 20 per cent. between September 1, 1917, and September 1, 1918, and 10 per cent. if between September 1, 1918, and September 1, 1919. The rent for any house let after the last-mentioned date cannot be increased. The rent of houses for which 100 drachmæ or less is paid per month, can only be increased by 30 per cent., this including any increase which has taken place since the moratorium came into force. In Salonika an increase of 10 per cent. on dwelling houses and 15 per cent. on shops is authorised. if let before the fire (August 18, 1917). There will be no increase for houses or shops let after that date.

**Receipts from Tobacco Taxes.**

The receipts from taxes on tobacco consumption during the month of May last are considered very satisfactory. 217,800 kilos of tobacco were consumed in Old Greece during May as against 215,000 kilos. during the corresponding period of last year. The receipts amounted to 3,683,000 drachmæ, as against 2,075,000 drachmæ in May, 1919, an increase of 1,608,000 drachmæ.

# SWEDISH ORIENT LINE.

*Direct regular steamship service with about weekly sailings outwards and homewards between*

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

Digitized by Google

In New Greece only 166,000 kilos. were consumed in May this year, against 235,000 kilos. during the corresponding period of last year. Despite this decrease the receipts from taxes show an increase of 330,000 drachmæ, the total being 2,330,000 drachmæ in May, as against 2,000,000 drachmæ during the same month last year. The decrease in the consumption of tobacco in New Greece is due to the departure from that region of the demobilised soldiers who returned to their homes.

**Forecasts of Tobacco Production.**

The Direction of Statistics at the Ministry of National Economy has given the following figures in connection with the anticipated tobacco production in 1920: Mitylene, 39,000 okes as against 288,000 okes last year. Lemnos 115,000 okes as against 375,000 okes; Imbros, 450 okes as against 8,000 okes; Samothrace, 5,500 okes as against 70,000 okes.

The cultivated tobacco area in the whole of the Provinces of Lesbos is 92 per cent. less than that of last year. This is due to the complete deadlock in the tobacco trade caused by very little demand for the 1918 and 1919 production. In the province of Trikala the cultivated area is about 20 per cent. smaller than that of last year, and the production there is anticipated to reach 2,800,000 okes. In the province of Larissa the cultivated area is equal to that of last year, and the production is expected to reach 3,800,000 okes. In the Cyclades Islands 77 per cent. less than last year was cultivated. This year's production will only be about 58,000 okes.

## ROUMANIA.

BUCHAREST, July 29.

**Relations with Ex-Enemy Countries.**

The Roumanian Government has announced its intention of resuming commercial relations with Austria and also with Germany. A delegation of fifteen Austrians, representing various industries, was received a few days ago by the Minister for Industry and Commerce, and it is understood that proposals were made for the supply by Austria of locomotives in exchange for food and petrol products. A small deal of this kind has already been made, and the Minister has now requested the delegates to draw up a definite plan to form a basis for a further exchange on a larger scale. A German and a Czecho-Slovak delegation have also been received for the same purpose, and the Minister has appointed a special committee to carry out the negotiations.

**Trade with Czecho-Slovakia.**

A number of deals have been concluded with Czecho-Slovakia during the past few months, including an exchange of maize for agricultural machinery, and the petrol and locomotive agreement referred to a few weeks ago by the writer. The Roumanian Government have now placed their second order for locomotives with the Skoda Engineering Works in Czecho-Slovakia (the first having gone to Baldwin's, of Philadelphia, as will be remembered). The contract is for the repair of 500 old Roumanian locomotives and the delivery of 80 new ones within a period of three years. There is still no word of any British firm having secured an order, the arrangement of terms for payment having apparently proved an insuperable obstacle.

**Redemption of Kronen Currency.**

The Minister of Finance has published instructions regarding the withdrawal and exchange of the kronen currency in Transylvania. All holders of crowns must notify the Ministry of the sum in their possession between August 1 and 6, and the rate of exchange will be fixed after stock has been taken of the quantity in hand. Crowns bearing a false stamp will not be considered valid.

According to some rumours, the rate of two crowns to the leu will probably be allowed, but this would involve a sacrifice on the part of the State of 1,986,000,000 lei, whereas, in his statement on the subject this week, the Minister of Finance estimated that according to his project the sacrifice would amount to 1½ milliards. It is clear that the Government is faced with the alternative of reducing the fortunes of its Transylvanian subjects by 50 or more per cent., which is neither to their advantage nor to that of the State as a whole, or of making a sacrifice far too great for the Treasury to bear, for if the kronen were exchanged at par the sum required to pay for them would be 3,972,000,000 lei. After all, it may well be argued, why should Roumania charge herself with so enormous a debt in order to meet the obligations of the Banque Austro-Hongroise towards the citizens of Transylvania?

**Handicap to Trade.**

The export taxes on all exportable commodities, *e.g.*, grain, petrol, and timber, are still very high, and render trade almost impossible except under certain conditions and with special permits. A bill for the freeing from control of the export and import trade has, however, been presented to the Chamber, and awaits its decision. No discussion has as yet taken place, and it is difficult to foresee how it will be received by the majority. Several delegations from different branches of trade have been received by the Minister of Industry and Commerce, who protested against the very high rate of the export taxes, and several Ministers have expressed the view that they ought to be abolished.

**Exploitation of Mines.**

By a decision of the Ministry for Industry and Commerce, all permits for the exploitation of mines which have expired between November 26, 1906, and the present date shall be prolonged for one year after the publication of the present decision. In order to benefit by this regulation, those interested must apply to the above Ministry within two months from the present date. After that term all permits for which renewals have not been applied will be considered cancelled. This decision applies both to the Old Kingdom and to the annexed provinces.

## YUGOSLAVIA.

BELGRADE, August 2.

**Credit for Agricultural Machinery.**

A credit of one million dinars has been voted to the Ministry of Agriculture for the purchase of agricultural machinery and apparatus. A Commission has been appointed which will proceed to Austria to make the necessary purchases. It is unfortunate to see the Serbs looking once more to Central Europe for these supplies, but Great Britain does not appear to be able to compete, either in delivery, credit, or prices; the exchange, of course, has an enormous influence on the latter.

**Housing Schemes.**

Contracts have been placed by the municipality of Belgrade for the construction of new houses, chiefly for the poor, who are suffering severely from overcrowding and lack of accommodation. Six contractors have been commissioned to erect ten houses each.

## BULGARIA.

SOFIA, July 25.

### Czecho-Slovak Delegation.

The Czecho-Slovak commercial delegation to arrange for the exchange of goods between Bulgaria and Czecho-Slovakia arrived here last Monday. A banquet was given in their honour at the Grand Hotel de Bulgarie, at which M Tourlakoff, the Finance Minister, and Dr. Raiko Daskaloff, the Minister of Commerce and Labour, and M. Tzanko Bakaloff, the Minister for Public Works, were present. The speakers urged the broad development of the commercial relations between the two countries.

### Flour for Export.

The Direction of Prevoyance Social, after providing for the needs of the population, has a surplus of 6,000,000 kilogrammes of flour. The Consortium has offered the flour to Czecho-Slovak and Greek merchants.

The Consortium has concluded a contract for the sale of 2,250 tons of barley to a French firm.

The cereals stored at the port of Varna sell at a higher price than those stored at the Danubian ports because the Consortium has instructed its agencies to expedite the dispatch of grains for Varna.

## ALBANIA.

ALBANIA, July 27.

### Favourable Harvest Prospects.

The harvest this year is magnificent and the maize harvest promises to be equally good. If nothing unforeseen happens, the olive crop will be very plentiful, which has not been the case for some ten years. It is estimated that Albania will have some 3,000,000 kilos of olive oil for export and some 8,000,000 kilos of maize. There are also great quantities of skins, wool and furs. Thus there will be fine openings for trade, of which Great Britain should avail itself, both in regard to exports and imports. What Albania chiefly needs just now are glass and glazed ware, cotton and piece goods, woollen goods, footwear, telegraphic and telephonic material and agricultural machinery.

Unfortunately there are only Italian vessels serving the country at present, save for a few rare Greek boats calling at Semani (between Valona and Durazzo).

Cattle, of which the numbers had fallen off during the war, are beginning to increase again. The price of horses and of oxen has fallen by 50 per cent.

## CYPRUS.

NICOSIA, July 15.

### An Agricultural Union.

In recent notes attention has been drawn to the decided awakening of interest in the matter of agricultural progress. As Cyprus lives almost entirely on its agricultural resources, and as it must be honestly admitted that the Agricultural Department has never been either properly equipped or supported by adequate funds, any genuine and public-spirited movement is deserving of praise and encouragement. An association is in process of formation which aims at introducing real reforms in the methods of island husbandry, at carrying out expert selection of cereal and other seeds (a matter almost entirely neglected hitherto), and at increasing knowledge among the ranks of intelligent agriculturists. The centre of the movement is at Lefkóniko, a large and industrious village in the Famagusta district. As it is impossible that delegates can attend from all parts of the island it is proposed to confine preliminary meetings to the two districts of Nicosia and Famagusta for the purpose of organising the society. But the other four districts are invited to form branch committees, which will co-operate. In Turkish villages only Ottoman representatives will be chosen, and "mixed" villages will appoint both Turkish and Greek associates.

## NEW COMPANIES.

### Hydro-Electric Development.

The Hydro-Electric Development Co., Ltd., has been registered with a nominal capital of £50,000 in £100 shares. Objects: To investigate, develop, or assist propositions or schemes for the utilisation of water power in the generation or production of electricity for power, lighting, heating, or otherwise in the United Kingdom or elsewhere. The first directors are Sir Henry Babington Smith, G.B.E., K.C.B., C.S.I., 121, St. James's Court, S.W., and G. Manzi Fe, 1, Porchester Gate, Bayswater, W.2 (director of the British Italian Corporation, Ltd., and Compagnia Italo-Britannico). Registered office, 12, Nicholas Lane, Lombard Street, E.C.

# EGYPTIAN COTTON.

## REPORT ON ITS YIELD AND QUALITY.—II.

(From Our Cairo Correspondent.)

In the first of this series of two articles I outlined the proposals made by Mr. Martin H. Leake, Director of Agriculture, United Provinces, India, on the methods to be adopted to secure finer and greater yields of Egyptian cotton up to the time the seed goes to the cultivator. It will be evident that such an organisation as described for maintaining the purity of the proved seed up to the stage when the first issue is made to the public should not offer any great difficulty. What we have now to consider is the organisation required for the further multiplication of that seed. And it is here that the work of the Commercial Section will commence.

The initial work, as already outlined, devolves to a large extent upon the agricultural section. This organisation's duty is to secure proved pure seed sufficient to sow 500 acres. Allowing a margin for cases in which doubt attaches, Mr. Leake considers that the circle officer should be able to recover seed to sow 4,000 acres in the succeeding year. His plan is that the circle officer should intercept a fair proportion of the crop grown from the proved seed as it comes into the ginneries, and by arrangement with the ginner have the seed kept separate. Such seed would then receive a Government mark indicating that it had been passed as *taqawi*. The ginner will be allowed to dispose of this *taqawi* as he deems fit, and in the normal course of his business, but he will keep a record of the purchasers. The circle officer will thus be able, by a system of inspections in the succeeding year, to draw up a list of cultivators whose crop is sufficiently pure to serve as a source of *taqawi*.

But in order to make certain that the requisite information will be kept, certain ginneries only will be licensed to gin *taqawi*. The licensee of each ginnery will keep a record (*a*) of the cultivators whose crops have gone to the production of *taqawi*; and (*b*) of the persons to whom he has disposed of that seed. These two lists, suggests Mr. Leake, should go to the Commercial Section. Under this scheme the circle officer will be able to exercise control over the bulk of the cotton crop of his circle, with the minimum of effort. It is obvious at once that the success or failure of the scheme will depend, to a large extent, upon the goodwill of the licensees. But Mr. Leake appears confident that there is a body of responsible ginners who fully recognise the importance of seed control, and who would willingly undertake to make such returns. The position really seems to be one of a co-partnership for mutual benefit than enforcement of a restrictive order. For the service provided, of course, the Government would guarantee the ginners a partial monopoly.

It is also apparent that for the scheme to attain a due measure of success there must be continuity in the organisation. Up to this stage we have considered the work of three sections of the Ministry of Agriculture—the Botanical, the Agricultural, and the Commercial. Yet in spite of the discontinuity of agents there must be continuity of work; the only way to prevent that discontinuity is to ensure that there shall be no hiatus where the work of two sections meet, meanwhile providing the maximum of freedom within the sections themselves.

It is this consideration that makes Mr. Leake question the present jurisdiction of the Cotton Research Board. As it appears to him, the underlying idea is that the control of cotton research shall be undertaken by the Board and the practical aspects of the problem by the Ministry. He holds that such a division of functions is hardly consistent with the development of continuity, since it institutes a duality of control, and contributes to the establishment of the very hiatus which it is necessary to avoid

To meet this danger Mr. Leake suggests that a cotton committee should be instituted within the Ministry itself. The functions of this committee should in effect be those of a nerve centre, which shall tend to control all matters affecting more than one section, and decide all questions of general principle. He recognises that this proposal appears to undermine the position of the Cotton Research Board as at present instituted; but at the same time it indicates the desirability of a board occupying the same position with respect to the Ministry as the existing board but with somewhat different functions. In other words, Mr. Leake's conception of the functions of the board is that it should fulfil the duties of liaison agent between the Ministry of Agriculture and such extra-Ministerial bodies as are concerned with the cotton problem. The present instructions to the Board include directions to maintain close touch with growers, ginners, and spinners, so as to know their needs. Mr. Leake considers that this comes under the heading of economic effort, and therefore should be left to the Commercial Section.

Mr. Leake's formal recommendations include—(1) Maintenance of the purity of Sakel; (2) the establishment of one or more types with the same intrinsic merit as Sakel, but with an improved vegetative habit; (3) the maintenance of the present classes by a system of purification and establishment of pure races; (4) the development of types agriculturally better suited to the environment, including the demarcation of type tracts; (5) the development of a class of cotton superior in quality to the best Sakel; (6) the division of the country into the circles determined, as far as possible, by climatic considerations and each with its experimental farm; (7) the establishment of a seed farm in each of the circles so defined; (8) the introduction of a system of licensing ginneries for *taqawi;* (9) the introduction of a system licensing persons desirous of introducing new varieties; (10) the division of the Ministry of Agriculture into a series of sections; (11) the establishment of a Ministerial Cotton Committee, composed of the head of sections concerned and possessing power to co-opt; and (12) the establishment of an extra-Ministerial Cotton Board.

In the course of the two articles I have dealt with all of these recommendations seriatim, giving the reasons for and potential results of each recommendation, if carried into effect—with the exception of (12): the establishment of an extra-Ministerial Board. This Board is necessary to provide co-ordination between the multitudinous sections each of which have their appointed sphere in the general scheme. Mr. Leake has preferred to refer to this as a new board rather than as a reconstitution of the existing Cotton Research Board. The function of the Research Board is "to combine and co-ordinate scientific researches." Mr. Leake holds that the duty of such an institution should be to co-ordinate practice with the results of those researches.

He does not imply a wholesale and immediate condemnation of the present Board, since he considers that it has a useful function at the moment. Therefore he urges that his proposals be regarded in the light of an ultimate policy, requesting that no interim proposals be adopted which will vitiate the eventual adoption of his policy, or yet of these individual interim proposals.

The scheme is a comprehensive one. It starts at the beginning with experiments upon the soil in which the cotton will be grown; and it progresses, by logical stages, to the time when the cotton is ginned. It provides for practical research, experiments, and cultural development. Those who, outside the Ministry, engage in it stand to lose nothing by it. On the other hand, Mr. Leake has made out a case for his scheme, leaving those who know the problem of cotton development in this country with the feeling that his proposals, sweeping as they are, and necessitating time before they can be co-ordinated into one working whole, seem to point the way to an enhanced yield of Egyptian cotton of greater purity.

## BANK OF ATHENS

HEAD OFFICE: ATHENS

LONDON 22, Fenchurch Street E.C.3. MANCHESTER 57, Mosley Street

## COMMERCIAL BANK OF GREECE, LIMITED.

**CAPITAL PAID-UP - Drs. 15,000,000.**
**RESERVE FUNDS Drs. 2,845,010.45.**

**Head Office: ATHENS.**

*Branches:*—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia. Larissa.**

**AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.**

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

**The MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 30·87 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10 % primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

*Branches:*

PIRÆUS, SYRA. PATRAS.

**Capital Paid Up - Drs. 10,000,000.**

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

*President.* L. EMBIRICOS. *Manager.* D. MIAOULIS.

## THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE.)

**Head Office - PIRÆUS.**

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

**REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.**

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

*Cable Address—Navigation Palios.*

*Codes used—Scott's (1905) 10th Edition; A.B.C. (1901) 5th Edition.*

## MARITIME BANK of GREECE

**AUTHORISED CAPITAL FULLY PAID DR. 10,000,000.**

Founder—A. P. PALIOS.

**Head Office: PIRÆUS, GREECE.**

Cable Address: "Maritime Bank."

Codes Used.

# BRITISH CONSULAR REPORTS

## III.—EGYPT.

Mr. E H. Mulock, H.M. Commercial Agent, Cairo, in his report on the economic and financial situation of Egypt for 1919, emphasises the flourishing financial position of the country as the result of a series of favourable trade balances, the rise in the price of cotton, and other factors.

Regarding the fuel shortage, Mr. Mulock says that owners and users of engines are wondering where their fuel is coming from now that cotton-seed cake is no longer available, coal so expensive and hard to obtain, and the supply of Egyptian mazout so uncertain

"As early in 1918," he points out, "there were 11,100 engines of all kinds of 50 I.H.P. upwards, driven by steam, kerosene, crude oil, or suction gas, and as the steam engines (which amounted to nearly 70 per cent. of the total number) were then burning fuels of such various kinds, as coal, cotton, cotton cake, oil fuel, vegetable refuse, wood and mixed fuel, the withdrawal of two and the difficulty of obtaining three of these combustibles are very serious considerations. The supply of cotton sticks, which run to about one ton per feddan, and which proved their value as fuel during the war, will probably be large owing to the increased acreage under cotton, but wheat and maize straw, if their use is allowed, in view of their consumption during the war for portable engines especially, will probably be short for the same reason.

"The amount of fuel required depends, in the case of engines working pumps, on the Nile flood, which, if high reduces their work, but in view of the conversion during the war of large numbers of engines of all kinds to the use of oil fuel, and the necessity for reconverting to coal in order to cope with the threatened shortage of mazout, the solution of the fuel problem would seem to be the importation of crude oil or the problematical alternative of obtaining coal at satisfactory prices. The former alternative is the most practical so long as coal costs more than mazout, since two tons of the latter used with burners are equal to about three tons of the former, and 1,173,000 tons of coal or their equivalent are needed annually for the steam engines alone."

### Labour Difficulties.

The most important recent developments in the sphere of labour during the year were, Mr. Mulock remarks, a Syndicalist movement, strikes, hitherto practically unknown in the country, and the formation of the Labour Disputes Conciliation Board.

"It is difficult," he adds, "to determine the extent to which Syndicalism on the part of the native labour element is likely to become a force in Egypt; on the one hand, the mutual distrust prevailing among the men themselves which is not conducive to the selection either of delegates or of treasurers of strike funds, and the fact that a considerable proportion of the labour employed at Alexandria is casual and seasonal, militate against the possibility of real trades' union organisation among native workmen; on the other hand, in trades and industries where there is a majority, or even a leaven of European employees or workmen, the Syndicalist movement is naturally more pronounced, since an educated minority is sufficient to counterbalance the fact that the average native workman is only slightly educated, if at all, and to ensure a more or less reasoned presentation of the workers' claims. However, it is to be hoped that the success of the Conciliation Board in meeting the brunt of the first strike wave will be repeated in dealing with subsequent strikes, and that they will be curtailed, where they cannot be averted, by the men's use of it as a forum where they can air their grievances and obtain an impartial hearing of their demands and explanations.

"That the relations between masters and men have greatly improved is shown by the fact that several strikes have been curtailed and even averted by personal and direct negotiations between the two parties; and the adoption by enlightened employers of co-operative schemes for furnishing the men with foodstuffs and clothing at reasonable prices should do much to forestall demands for increased wages to meet the increased cost of living. Schemes of this kind, however, are attended by difficulties in the case of employers who depend to a considerable extent on casual labour, as the men engaged under this category do not appear in the regular pay-sheets, and the fluctuations in their numbers, depending as they do on the needs of the moment, would make it impossible to fix, on any given date or for any given period, the number of men to be catered for under any co-operative scheme."

### Shipping Shortage.

"The present situation as regards shipping resolves itself into an acute shortage of passenger accommodation, owing to the fact that homeward-bound liners from countries east of Suez are so booked up with passengers from India and the Far East that the passenger from Egypt is almost entirely dependent on the fortnightly services run by the Lloyd Triestino, Marittima Italiana, and Sicilia steamship lines. The first-named calls at Brindisi and Taranto, between Alexandria and Trieste, the two latter at Genoa and Naples. The French Messageries Maritimes boats are very irregular, and as the transport service run by the British authorities during 1919 between Marseilles and Port Said, calling sometimes at Alexandria, has been stopped, it is Italian steamers that will reap the harvest during the coming season, unless some enterprising British shipping concern undertakes to inaugurate a frequent and regular service of fast passenger steamers between Alexandria and Marseilles, combining it with a cargo service between Alexandria and the United Kingdom, as it is impossible to live by passengers alone in the absence of a Government subsidy. It should also be borne in mind that the home-going passenger season coincides with a poor homeward cargo season, and that outward-bound boats often bring very few passengers to Egypt during the summer months.

"In view, however, of the probability that the intention of the Lloyd Triestino to run a weekly service for passengers during the coming season will secure for an Italian steamship line the virtual monopoly of the English passenger traffic, British shipping and commercial interests will suffer unless either the authorities can see their way to the renewal of the transport service or a new British shipping line steps into the breach.

"As regards tonnage for exports to the United Kingdom and for British imports, cargoes have been amply catered for. Cotton has been shipped by the Ellerman, Moss, Owen Phillips, Prince Line, Furness Withy and Cunard boats; while there has been enough casual tonnage, in the shape of steamers chartered in the open market, for the transport of cotton-seed, cotton-seed cakes, onions, etc., owing to the demand for Egyptian produce other than cotton not having been great. Had it been so, tonnage would have been short."

## ENGINEERING.

### Impulse Starters.

One of the most interesting contrivances I have had brought to my notice recently is the type G magneto with impulse starter, made at Coventry by the British Thomson-Houston Co., Ltd., and which is suitable for four or six cylinder engines. It generates high-tension current, can be made for rotating in either a clockwise or anti-clockwise direction, and for fixed or variable ignition, and with four-cylinder engines it revolves at engine speed, and at one and a-half times engine speed with engines of six cylinders. For the four-cylinder engine its weight is 11 lb. and for the six-cylinder 11½ lb.

I may say that the B.T.H. Impulse Starter can only be supplied as an integral part of the type G magneto made by the same company. In brief, the function of the device is greatly to simplify the problem of engine starting, and by its means any size of engine can be started with comparative ease under even the worst of conditions, such as being out of tune, using low-grade spirit, or starting up from cold in cold weather. Anyone who has had experience of anything of this kind in the case of a large engine provided with handle starting, as, for example, with a heavy commercial vehicle, knows that the human energy that has to be expended in rotating the engine at a sufficiently high speed to enable the magneto to produce a hot enough spark to bring about ignition, is only too frequently of a very distressing character. On a motor-lorry fitted with an electric starter it is often a lengthy job to get the engine to start up on a cold morning, and the drain and strain on the battery is far greater than anyone would believe. Incidentally, it may be mentioned that this sort of work shortens the life of any battery, no matter how robust its construction may be.

In either case the adoption of an impulse starter will greatly improve matters, because once an explosive mixture has been sucked or injected into the cylinders the impulse starting device causes the magneto armature to receive a very sharp and sudden flick over, which ensures that an intense spark is produced. This invariably brings about satisfactory ignition. The use of a B.T.H. Impulse Starter will therefore greatly reduce the fatigue of starting an engine provided only with hand starting, and it will prolong the life of a battery if applied to an engine fitted with electric starting.

The device, which is of compact cylindrical form, with no protuberances, has no openings through which dirt or other foreign matter can gain access to the working parts. I am assured by the firm—by whose courtesy I am able to reproduce a diagram of dimensions of the device—that all the wearing parts are made of special steel, and all that require machining are tooled to very fine limits of accuracy. I understand that the makers anticipate that this device will find its most immediate application on commercial vehicles, tractors, etc., where electric starting is not provided, although it can undoubtedly serve a most useful purpose on engines provided with an electric starting motor if the slowest running speed is not less than 250 r.p.m., on a four-cylinder engine, and 180 r.p.m. on a six-cylinder engine.

### Pneumatics for Lorries.

A good deal has been said regarding the giant pneumatic tyres which are to be used on certain motor-buses in the near future, and a number of those who have only had experience with solids are somewhat dubious regarding the success of the experiment. Their view is that punctures may be more frequent than is anticipated, and that the covers may burst at the bead, with possibly disastrous results, under the strain of turning a corner. The advocates of the pneumatic, who are many, consider that the puncture danger is greatly over-rated, and that the possibility even of a burst bead is remote. They point out that pneumatics on big racing cars have to stand a greater strain than would be put on the covers of commercial vehicles; but so far few supporters of the big pneumatic have mentioned that the experiment is not a new one, and that giant covers of the kind have been in use on heavy lorries since 1911.

The first big pneumatic covers were fitted during that year to a big Reliance lorry, and were of the beaded edge type introduced years ago by the Clincher people, and which are now made by many other large firms. For some reason it was found that the beaded edge was not so suitable as had been hoped, and that they did not seem quite the thing for the heavy air pressure they had to withstand. Straight-edge tyres, such as are now used on a number of American cars, were then tried, and it was found that they gave much better results on commercial vehicles than did the solid rubber tyres hitherto used. It was found that they greatly reduced vibration, and that the vehicles to which they were fitted did not require such constant overhauling. Springs stood up to their work better; metal parts had not the same tendency to crystallise and fail; and there was not so much damage to the cargo carried. A further and most important point was that both the petrol and the oil consumption was less, whilst greater speeds could be attained. As a result of all this, it was found that the chassis could be lightened considerably.

On the other hand, it was found that the inner tyre carried more than its share of weight, and that it was a matter of practical impossibility to ensure that all tyres could be

Digitized by Google

inflated to and maintained at the same air-pressure unless connecting-valves were used, a drawback to which was that if one tyre was punctured the corresponding tyre on the other side went flat. Taking all these points into consideration, however, it is generally agreed that there is an appreciable gain in using giant pneumatics, and up-to-date tyre-makers should have no difficulty in building pneumatics that will stand up to their work and give no trouble.

**Motor Accessories.**

A further indication of the progressive policy adopted by the British Motor Trading Corporation, Ltd., is afforded by the opening the other day of new showrooms at King Street, London, S.W., to deal exclusively in accessories. The depôt is well appointed throughout, and carries a comprehensive range of the latest accessories and tools, including everything of use on the car or in the private garage.

**Continental Motor Tours.**

Notwithstanding difficulties in connection with bad roads and occasional shortage of petrol, motoring in France and Belgium is steadily increasing in volume. Members of the Automobile Association who intend to take their cars or motor cycles to the Continent are advised to give the Touring Department at least ten days' notice to ensure reservation of space on the steamers, and to allow sufficient time for the preparation of all necessary papers.

**Wasting Oil Fuel.**

A good deal of comment has been aroused in engineering circles (says a correspondent) by Professor H. E. Armstrong's remarks in connection with the conversion of steamers to oil fuel. The point is that the process adopted renders an extremely lavish and actually uneconomical use of oil unavoidable, and in view of the possible shortage of oil which may exist more quickly than we imagine, there is much in his argument. He says that such profiteering at the expense of future generations should not be possible. "If we are believers in the importance of the internal combustion engine. . . . it behoves us to economise in the use of oil in every possible way."

It should be noted that oil used for firing ordinary steam boilers, burned in the furnaces by air or steam draught, and used in every way as would coal be used in the same boilers, is a wasteful method by which to obtain the heat value, and that a fraction of that amount of oil used in a Diesel or other efficient type of oil engine would generate the same power. It is felt that we have no right, knowingly and willingly, to make a wasteful use of our oil reserves, but that it is our duty to conserve them as much as possible, and to take care that such use as we do make is not open to a charge of extravagance.

It is to be hoped that shipowners, shipbuilders, and marine architects alike will ponder this aspect of the question, and it may be of some assistance if the facts of the case are resolved to plain figures. The largest Diesel-engined vessel uses only 126 tons of oil per week, and for this she will carry 14,000 tons of cargo at the extremely high speed of 14 knots. With the fuel burned under the boilers of two big liners a fleet of 70 Diesel-engined cargo boats, carrying over a million tons of freight, could be driven at a rate of 14 knots.

## LANCASHIRE COTTON.

(From Our Own Correspondent.)

MANCHESTER, Monday.

Although the tone of the market has continued more hopeful business has not developed to any important extent during the past week. Inquiry has been abundant, but there is still much difficulty in arranging terms of fresh contracts, and numerous buyers refuse to operate freely at current rates. There is some uneasiness with regard to political matters in Europe, and financial stringency still hampers trade. A rather steadier feeling has prevailed in Egyptian cotton prices. Although buying continues irregular a fair business has been done during the week. In yarns made from Egyptian cotton operations have been patchy and there has not been any general flow of orders. Prices remain irregular when tested. There has not been much activity in piece goods for the Near East, but a few more offers are now being met with for Egypt. According to letters and telegrams from the other side clearances of goods are not coming up to expectations, and, of course, there are many unsettling influences in that part of the world. A large inquiry has been reported in piece goods for India, and a very fair turnover has taken place in bleaching descriptions, with steady buying in printing materials. Sized goods, however, lag behind, and producers of shirtings are in urgent need of relief. A moderate trade has been done for South America in sheetings and printed and dyed goods. Business for China has been practically at a standstill. There continues much variation in the quotations of manufacturers. American yarns for home use have moved off quietly at irregular rates. Twists remain stronger than wefts. Export business in yarns has been restricted, but rather more inquiry has been about for India.

**Egyptian Cotton Crop.**

Some particulars are now available of the Egyptian cotton crop for the season ended July 31. The growth may be put down at 5,654,000 kantars, against 4,826,342 kantars in the previous year, and 6,315,841 kantars in 1917-18. Shipments to Great Britain amounted to 401,250 bales, as compared with 385,650 bales in 1918-19, and 346,000 bales in the previous season. An important feature of the past year was the larger takings of spinners in the United States, and shipments from Alexandria to America amounted to 291,000 bales, against 65,230 bales in 1918-19, and 75,420 bales in 1917-18. Exports from Alexandria to all parts amounted to 834,000 bales, against 624,000 bales in the previous season, and 656,000 bales in 1917-18. Very favourable news continues to be received with regard to the outlook for the growth for 1920-21, and if the conditions remain satisfactory there is a probability of the output being over 7,000,000 kantars.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended July 17:—The sales this week on our market amount to 35 cases manufacturing druggist at 19s. to 20s. per lb. c.i.f. as to quality. The exchange is piastres 410 per pound sterling for cheque, and 0.97 dollars for one Turkish paper pound. The arrivals are 28 cases, against 75 at same date last year.

Messrs. Barker Brothers, Smyrna, report as follows for week ended July 24:—The sales this week amount to 12 cases at 20s. 6d. for extra selected manufacturing, and 19s. for lower grades. The exchange to-day is piastres 420 per pound sterling for cheque on London, and 0.92 dollars for one Turkish pound. The arrivals are 28 cases against 115 at same date last year.

# COMPANY MEETINGS.

## GHARBIEH LAND.

The report of the Gharbieh Land Company, Ltd., read at the ordinary general meeting held at Cairo on June 10, states:—

The salient fact of the period has been the exceptional rise in the price of cotton, which has reached levels never hitherto attained, and which has had a most favourable influence on the economic situation of Egypt. Occurring towards the end of the cotton season it was especially the business community which profited by this rise, but the cultivators have also obtained from their crop a much greater profit than in previous years. If the price is maintained they will reap a greater profit this year, and the prosperity of the country will be considerably increased.

It is a known fact that the savings of the average Egyptian are usually invested in real estate, and more particularly in cultivated land. The increase of wealth as a result of the rise of cotton ought then to have, and, in fact, has had, as its direct consequence, a marked increase in the price of certain classes of lands. The sales of the year amounted to 1875 feddans, an area much above the total of our sales since the establishment of the company.

In consequence of the transactions carried out during the year, the lands of the company at February 29, 1920, did not represent more than an area of 6022f., 17h., 09s., figuring in our books at that date for a total sum of £E338,358.628.

It will be recalled that a certain slackening was produced in the progress of the work of development under the stress of adverse circumstances, which we have recorded in detail in previous reports (notably those of 1912-13 and 1913-14). The war accentuated this slackening, and during the years which followed the board of directors concentrated its attention and energies on the means of meeting the most urgent needs and engagements of the company. It neglected nothing, however, that was necessary for the maintenance in good condition of the company's lands, and in our reports for the years of war, notably those of 1917-18 and 1918-19, will be found the enumeration of important works carried out during that period, and more particularly the perfecting of our system of irrigation.

The system of rotation of 1919 has been more strict than usual, but we have been able to supplement the insufficiency of water from the El Sahel canal by using our machines on the Nile. It is that which in part explains the increase in the expenses of irrigation. We have constructed at North Wastani a new drain about 1,000 metres in length to assure the better drainage of a part of the land, and we have continued the cleaning out and repair of the large drains and canals of the properties.

In previous reports we have indicated the reasons which during a certain period, especially since the war, compelled us to reduce the expenses for works of construction to what was absolutely necessary. The want of accommodation made itself felt with growing intensity each year, and what we have been able to do to remedy it has been by no means sufficient to meet the needs of the position and to assure the good development of certain parts of the property newly opened up. The cost of materials and labour remains very high, but in view of the imperative necessity for increasing the number of houses for creating new centres and for enlarging those already existing, we have taken steps to put into operation immediately a programme drawn up to that effect. The increased population which will result is a vital question for the development of our lands, and will fully justify the expense necessitated for the work.

The operations of the year left a net profit of £E92,394.400 after the deduction of £E12,000 for the credit of the account "Provision for sales for the account and for doubtful credits." Net profit is composed as follows:—Receipts profits from development, £E16,451.422; profit on sales of lands, £E102,503.089; interest collected, £E8,191.223; total, £E127,145.734. Expenditure interest on 5 per cent. debentures, £E13,145.841; general expenses, £E5,717.067; interest paid or due, £E3, 824.727; various payments, £E63.699; total, £E22,751.334, leaving £E104,394.400. Deducting provision for sales and doubtful credits, £E12,000, there remains £E92,394.400. From the net total there has to be deducted the remuneration of the board of directors, £E1,000, leaving £E91,394.400. Deducting the debit brought forward from the previous year of £E94,554.560, there remains a debit of £E3,160.160.

The debit balance of the profit and loss account has then fallen from £E94,554.560 to £E3,160.160, and the company, definitely freed from the difficulties of all kinds with which it has been faced in recent years, can to-day regard the future with confidence. The small debit balance which remains can already be considered as counterbalanced by the increased value of the portfolio, and the real value of the lands of the company is much above that at which they figure in the balance sheet. The results already obtained, and the efforts which we are unceasingly making to promote the development of the company's lands enable us to count upon a period of prosperity which will compensate our shareholders for their waiting.

The balance sheet and the accounts were unanimously approved by the meeting, and resolutions were also passed re-electing M. A. Nourrisson Bey and M. L. Robin as directors, and appointing Messrs. F. H. Russell and J. C. Sidley, of Messrs. Russell, Harris and Co., chartered accountants, as auditors for the current financial year.

# SHIPPING INTELLIGENCE.

## Forthcoming Sailings.

The Anchor Line s.s. Circassia, for Bombay, will close for cargo at Glasgow on August 13, and at Liverpool on August 23.

The Cunard Line s.s. Tyria, for Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina, will close for cargo at Liverpool on September 4.

The Cunard Line s.s. Sea Victory, for Piræus, Salonika, Constantinople, and Galatz, will close for cargo at Antwerp on August 18, and in London on August 25.

The Ellerman Lines s.s. Trentino, for Patras, will close for cargo at Liverpool on August 26.

The Ellerman Lines s.s. Andalusian, for Gibraltar, Malta, and Alexandria, will close for cargo at Liverpool on August 21.

The Ellerman Lines s.s. Asturian, for Malta, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on August 21.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Malatian, for Algiers, Malta, and Alexandria, will close for cargo at Liverpool on August 28.

The Moss Line s.s. Amasis, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on August 14.

The Bibby Line s.s. Derbyshire, for Rangoon, will leave London on August 17.

The Clan Line s.s. Clan Chisholm, for Bombay and Persian Gulf (cargo for Persian Gulf transhipped at Bombay), will leave Glasgow on August 19, and Birkenhead on August 28.

The Henderson Line s.s. Burma, for Port Said and Rangoon, will close for cargo at Birkenhead on August 18.

## DEMAND FOR BRITISH MOTORS IN INDIA.

H.M. Trade Commissioner in Calcutta reports that the Government of India Department of Posts and Telegraphs has experienced considerable difficulty in obtaining motor vehicles of United Kingdom manufacture. So far as motor cars are concerned, this difficulty has not been felt acutely, as the American cars have given satisfaction, but in the case of motor lorries the position has been entirely different; experience going to show that a lorry manufactured in the United Kingdom has a considerably longer life than lorries of foreign manufacture. It is further stated that at the close of the current year lorries will be required for the Kashmir service. The immediate requirements will be in the neighbourhood of six 3 to 4 ton lorries and nine one ton lorries. It is suggested that United Kingdom firms in a position to quote for these vehicles should communicate at once with the Director-General of the Department of Posts and Telegraphs, Council House Street, Calcutta.

Algeria is suffering from a severe house shortage.

The traffic receipts of the Smyrna-Aidin Railway for the week ended July 24 amounted to £7.799.

The French authorities have authorised the export from Morocco of 60.000 tons of barley and 10.000 tons of maize.

The directors of the Bengal-Nagpu Railway Co. notify holders of debentures, bonds to bearer, amounting to £448,900, falling due on August 18, that they are prepared to renew such debentures at £98 5s. (1¾ per cent. discount) for a further period of two years, at the rate of 6½ per cent. per annum, provided the holders send their bonds to the office, 132, Gresham House, E.C., before noon on August 16. A commission of 5s. per £100 will be allowed to brokers and other recognised agents.

ANCHOR LINE

## SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

JAFFA.

The report for May states:—Business inactivity continues to rule in our market, and is more accentuated than in the previous month, that being due to the cautious attitude of the financial houses here—an attitude very generally adopted each year during the slack season—as well as to the considerable fall in the prices of many manufactures, especially cotton goods, in the European markets.

ADANA.

The report for May states:—The crop of barley, of good quality, has made its appearance on the market, where 150,000 okes have already been sold at Ps. 8 per oke, and were it not for the insecurity outside the town and the uncertainty regarding permits for the export of this commodity one could look for an improvement in the price.

The recent abundant rains, although they have delayed the wheat crop, have, on the other hand, proved very favourable for the sowing of cotton, regarding which it seems more and more probable that the yield will justify previous forecasts. The crop of wheat will commence about the beginning of June.

In order that this region may profit by these good crops, it is essential that security should reign outside the towns, and that the local disquiet should be ended. Everything points to the fact that once the treaty of peace with Turkey is concluded and signed, calm and security will not be long in making their effect felt in our market.

ALEPPO, June 25.

The market was inactive and quiet during May. There were practically no transactions, and the principal exporters maintain a waiting attitude, and are watching closely the variations in the foreign exchanges. Despite the interruption of communications with the interior, some little business has taken place in English manufactures, following the arrival of merchants from the interior to make purchases in this market.

STAMBOUL, July 3.

The situation in this market shows no improvement. The prices of nearly all the articles of import and export tend to fall. There is general inactivity.

Manufactures. — The stagnation continues. Prices are weak, and buyers are lacking.

SALONIKA, June 30.

The crops of certain products have suffered from the recent rains.

The crop of wheat is good, and superior by about 50 per cent. to that of last year. The quality is rather worse, owing to the abundant rains.

The production of cocoons is estimated at from 80,000 to 100,000 okes. The prices vary from 10 to 15 drachmæ per oke.

White wool is quoted at seven to eight drachmæ per oke. The quantity is sufficient only for local needs. Black wool is quoted at from 3.60 to 3.80 drachmæ per oke. The stock is from 50,000 to 60,000 okes.

Forecasts of this year's crop are favourable, and a decrease in the price is to be foreseen. The current prices vary between 7.50 and 8 drachmæ per oke.

The crop of opium has been damaged by the rains. The quantity gathered is estimated at from 3,000 to 4,000 okes.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

**Egypt.**

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Extension of Electrical Station of Zagazig and Belbeis.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the extension of the electrical station of Zagazig and Belbeis. Adjudication at noon on September 1. A copy of the specification, etc. (in French) may be consulted by British firms interested at the Enquiry Office of the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

Braces (Web), etc.—The Egyptian Government invite tenders for the supply of: (1) Braces (Web). Tenders returnable by noon on August 16. (2) White Drill Clothing. Tenders returnable by August 25. Tenders will remain open for 14 days. (L.)

Tunics, etc.—The Financial Secretary of the Egyptian Army, Cairo, invites tenders for the supply of tunics, pantaloons, trousers, etc., to the Ordnance Services Department, Egyptian Army, Citadel, Cairo. August 28. (L.)

Motor Launch.—The Inspector-General of Irrigation, Upper Egypt, invites tenders for the supply of a motor launch for 4th Circle of Irrigation. September 18. (L.)

Surface Condenser, etc.—The Director-General, Mechanical Dept., Ministry of Public Works, Cairo, invites tenders for the supply, delivery, and erection at Amriya Pumping Station, Zeitûn, of a surface condenser, together with air and circulating pump, a feed pump, oil separators, pipe work, valves, and accessories; plant to be capable of dealing with about 3,200 lb. of steam per hour. August 31. (L.)

Sewage Main.—The Chief Engineer, Main Drainage Dept., Ministry of Public Works, Cairo, invites tenders for the supply and laying of a 12-in. cast-iron sealed sewage main. September 21. (L.)

Paper, Etc.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and office requisites. September 9. (L.)

Air Compressing Plant.—The Chief Engineer, Main Drainage Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of an air compressing plant at Mansûra, consisting of two crude oil engines, driving two single-stage air compressors, complete with auxiliary machinery, water cooling plant, a travelling crane, machine tools, air mains, electric wiring, etc. October 1.

**India.**

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

**Morocco.**

Road.—A call for tenders has appeared in the *Boletin Oficiel de la Zona de Protectorado Espanol* for the construction of a road between Alcazaquiver and the French zone on the Tangier-Rabat route. Tenders, which should be within 318,000 pesetas, must be lodged with the Departmento de Formento, Tetuan, not later than August 14

This week's Indian cable states :—Rain has fallen fairly generally throughout except in North-West Frontier and South-Eastern India where local. General crop conditions good, but more rain required in parts. Bombay cotton market weak. Fully good broach, August, Rs. 415 8 annas. Piece-goods market firmer tone with advancing prices. Calcutta jute market firm with fair business in new crop. Hessians very firm with prices advanced. Heavy goods slightly firmer but quiet. Bank rate is Bengal and Bombay, 5 per cent.; Madras, 6 per cent.

## ON CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Our market has been upset this week by the renewed political uneasiness, and transactions have been on rather an unimportant scale. There has been a general reaction in prices, but all offerings have been taken, and there has at no time been any undue pressure to sell.

In Government stocks Egyptian Unifieds close ¾ down at 67 and the 3½ per cent. Prefs. have lost a like fraction at 56¼. Turkish Fours of 1891 and 3½'s of 1894 have been in steady demand, and are exceptionally higher than last week, both being 2½ points up at 64 and 57½ respectively. Turkish Unifieds, on the other hand, are ¾ down at 34¼. In Greek securities there has been irregularity; the Rente Loan has jumped 1½ points to 41 and the 1914 Loan a similar fraction to 55½. On the other hand, the 1881, 1884 and 1887 Loans are all half a point down at 53½ for the two former and 43½ for the latter. The 1890 Loan has dropped back one point to 51, and the 1902 Loan half a point, to 47½. "Currant" Bonds are quoted at 89 ex.-div.

In Bank shares Nationals close a quarter down at 19½ and Agriculturals are fractionally easier at 4 7-16, the latter's Preference shares have eased a trifle to 5⅛. Ottoman Banks are ⅜ down at 9¼ and Land Bank of Egypt remain at 5.

In Railways Delta Lights remain at 5⅜ ex. div., while Piræus-Athens Bonds have become a nominal market at 55 for the 4½ per cent. and 40 for the 3 per cent. respectively.

Amongst Land shares, in Aboukirs after a certain amount of firmness there was a reaction to-day, and the price closes 1s. 3d. down at 36s. 3d. Béhéras have dropped a half to 17¼, and Consolidated Lands on local realisations have fallen 6d. to 2s. 6d. Delta Lands have been in demand for Egypt, being strong buyers at one time at 15s. 6d. and closing unchanged at 15s. 3d. bid. There has been a smart advance of 7 points in Egyptian Agricultural Bonds to 80. A few Gharbieh Land shares changed hands to-day as high as 3½. Land and Mortgage of Egypt Ordinary are a weaker market and are quoted about 26s. Mortgage Company of Egypt Pref. have been in demand and close ⅜ higher at 6½. New Egyptians, after rising to about 38s. 9d., finish 1s. 3d. down at 37s. 3d. Sidi Salems have remained about 2½. Sudan Plantations have dropped 3-16 to 4⅝. Union Fonciere are unaltered after having been done up to 5¼.

In Miscellaneous descriptions Salt and Sodas have receded 3-32 to 50s., while Morum's have been an improving market and are closing about 9d. better at 17s. 9d.

In Oil shares Anglo-Egyptian B are a quarter down at 2 9-16, and Roumanians are 4½d. better at 17s. 6d.

## FOREIGN EXCHANGES.

The accounts of the Bank of Athens for 1919 show that net profits amounted to Dr.13,388,510. A sum of Dr.7,308,050 is written off "loans on sundry guarantees" and "loans on securities." Out of the balance of about Dr.6,000,000, a final dividend of 3 per cent. is paid, making 8 per cent. for the year. The sum of Dr.600,000 is placed to reserve.

## NOTES OF THE WEEK.

News that the Turkish Treaty was actually signed reached us too late for inclusion in last week's NEAR EAST. The event took place at Sèvres in the afternoon of August 10, M. Millerand presiding at the ceremony. The signatories were: Great Britain, France, Italy, Japan, Greece, Roumania, Belgium, Armenia, Portugal, Poland, Czecho-Slovakia, and Turkey. The Hejaz was unrepresented, King Hussein having withdrawn his delegate in consequence of the French occupation of Damascus; while Serbia held aloof because she is unwilling to assume that part of the Turkish debt which was to fall to her share with former Turkish territory. The absence of their signatures is to be regretted, but obviously it was impossible to delay the ceremony any longer. At the same time the Italo-Greek Protocol was signed, as was a Protocol regarding zones of influence in Asia Minor.

The last-named document, it seems, delimits the "zones of occupation," and is described as having for its object "the rendering of assistance to Turkey in the development of its resources in response to the request of the Turkish Government for the constant aid necessary for the reorganisation of its administrative services." If this is the manner in which the Turkish Government prefers to be helped, there is, of course, no more to be said on the subject; but it is to be remarked that such particulars of the Agreement as have been published up to the present seem to suggest that Turkey's admiration for the contracting parties is almost unbounded. For, according to the said particulars, the agreement is chiefly concerned to secure (1) The equal representation of the contracting parties on all international commissions in Turkey, and (2) their "common diplomatic support for the maintenance of their respective influence in the zones where their particular interests are already recognised." Of the "interests" of Turkey, the reports that we have seen fail to make mention, though it is true they refer to "other things" included in the agreement. Until we know what those "other things" are we find it difficult to be enthusiastic over a document which bears a strong resemblance to pre-war efforts of the old diplomacy, which we all hoped was discredited.

Two days after the signing of the Turkish Treaty, which was so great a triumph for him personally as well as for his country, M. Venizelos was the victim of a dastardly attempt at assassination by two Greek ex-officers. The attempt was made at the Gare de Lyon, whence the Greek Prime Minister was about to set out for Marseilles; and though, happily, it failed, M. Venizelos was wounded in two places, and had, of course, to abandon his journey. One of his assailants, Georges Kyrikis, is a reserve lieutenant of the Greek Engineers; the other, Apostolos Tseropis, was formerly a lieutenant in the Greek Navy. They appear to have been very well informed about M. Venizelos' movements, for at the time of the outrage he was entering the station by an unusual route; and they showed considerable determination in their wrong-doing, for they contrived to five seven shots altogether before the police who were guarding him could secure them. They confessed that the crime was premeditated, and declared that they had wished to "free Greece" from an "oppressor" who will not let the country have peace.

It would be a happy thing for Greece if the investigations which are now being made into the antecedents of the would-be assassins should confirm their story to the extent of showing that they acted on their own initiative; but Paris reports all tend in the opposite direction. The two men are known to have been together recently at Stettin, and to have arrived in Paris on July 22; and a search of their rooms has resulted in the discovery of documents that are said to point to the conclusion that they are instruments of a widespread conspiracy to restore ex-King Constantine to the throne of Greece. There are variations of the story, one being that Prince George, not the ex-King, would replace King Alexander; but whatever the details may be there seems to be no room to doubt that the crime is due to instigation from the quarter indicated. That the attempt should be made at the very time when M. Venizelos' popularity with his countrymen might safely be reckoned higher than ever would fit in well with the clumsiness that has marked other manœuvres of the Constantinists.

The attempt has served to show that, although ex-King Constantine and his circle may be stirred to nothing but envy by the great things that M. Venizelos has been able to accomplish for Greece, an overwhelming majority of Greeks in Greece and in other lands has at last realised his marvellous skill and his strength of character, and is resolved that he, not Constantine, shall shape the policy of the Greater Greece which he has done so much to create. The demonstrations of popular indignation which took place in Athens when the news of the outrage was received there show how M. Venizelos has regained the ground that he lost as a result of the "Royalist" intrigues against him; nor can the Constantinists comfort themselves with the fiction that they

Digitized by Google

were "made to order"; for extraordinary demonstrations of rejoicing at the happy escape are reported from Constantinople, where the Greek community could not possibly have been coerced into any display of the kind by the Athens Government, and from other cities where Greeks congregate. It is most unfortunate that in Athens the excitement led to the shooting of a former Greek Minister at Petrograd, and to some other excesses; but clearly the Government cannot be blamed for being caught unprepared to deal with such an ebullition at a moment's notice. For the rest, the sympathy of the Allies with M. Venizelos has been suitably expressed by their proper representatives; while the accounts of his good progress towards recovery have been received with a satisfaction which shows that Europe knows well what the loss of his influence just now would mean to the peace of the world.

---

The latest reports regarding the situation in Albania are distinctly disturbing. According to them, no sooner has Italy recognised Albanian independence and withdrawn her troops than Yugoslavia and Greece have violated that independence by invading Albania and putting forward claims to territories they have already occupied. The reports, which come by way of Rome, may very well be exaggerated, but it is known that Albania, as well as Italy, has been extremely nervous lest something of the kind reported should occur; and it is certain that until it is made clear that no encroachments beyond the frontiers of Albania laid down in 1913 will be tolerated the temptation to trespass will always be present. In a letter to the Press, Mr. Aubrey Herbert, M.P., Miss Durham, and other influential friends of Albania ask that those frontiers may be speedily recognised and guaranteed by the Powers against any further aggression. In the interests of the peace of Europe and of fair play for Albania it is much to be hoped that such recognition and guarantee may be given.

---

We publish elsewhere an official *communiqué* about the first meeting of a committee called to Baghdad to frame proposals for an electoral law for Mesopotamia. This is a step in the right direction, towards fittings the Arabs to govern themselves; and as we are told that the Committee, when completed by the co-option of additional members, will provide a source to which the Administration will be able to look for advice on points connected with the welfare of the country, we shall hope that its completion will not be long delayed. Meanwhile most of the news that comes to us from Mesopotamia is unsatisfactory, and indicates that unrest is prevalent throughout the country. The Shammar Arabs have again been giving trouble, and at Tel Afar a British officer and six troopers have been treacherously killed by men of that tribe while a parley was in progress. As we have observed before, such incidents must be expected, but the frequency with which they have occurred of late is rather disconcerting; and taken in conjunction with the organised attacks on the lower Euphrates they indicate that there is something very wrong indeed. Admittedly the Bedouin must always be particularly difficult to deal with, owing to the facility with which they escape into the desert. But the trouble in the Kufa-Hillah district is not, we understand, purely, or chiefly, due to the Bedouin; and another recent report, that the railway between Baghdad and the Persian frontier has been cut, seems to suggest that all sections of the population are suffering from the unrest.

---

With the forces of disorder gaining successes in so many directions, it is particularly pleasing to learn that the reverse is the case in Persia. Kutchik Khan has fallen out with his friends the Bolshevists, and as a result most of the Jangalis withdrew from the field of operations; and simultaneously two or three powerful tribes, laying aside their differences, turned on the "Reds" and made things highly uncomfortable for them. The latter looted and set fire to Resht: but between Menzil and Kasvin they have been severely handled by Government troops, while the Cossacks are expected to capture Resht very shortly, and British troops are moving on Menzil, with the intention of occupying it. Thus far, it will be seen, the Bolshevists have achieved next to nothing in Persia, and the Persians are to be congratulated upon the successful resistance they have put up in difficult circumstances.

---

A further step towards the new order of things in India is marked by the announcement that Dr. Tej Bahadur Sapru has been selected to succeed Sir George Lowndes as Legal Member of the Viceroy's Council. Dr. Sapru will be the third Indian Councillor, so that the promise made not long ago has been promptly fulfilled, and, apart from that consideration, the selection is a good one; the new member belongs to the United Provinces, which have not hitherto secured one of these appointments, so that the principle of rotatavism, so dear to Indian politicians, receives further recognition, while no one is likely to suggest that Dr. Sapru's legal attainments are inadequate to the departmental duties which he will have to perform. What is more important just now, his recent public activities have been marked by a distinctive quality of statesmanship, and we are justified in anticipating that he will prove a valuable adviser to the present Viceroy and his successor.

---

It has been known for some time that the India Office is to lose the services of Lord Sinha almost at once, and it is now announced that he will shortly become Governor of Bihar and Orissa, the smallest of the major Indian provinces, but one which has difficulties and perplexities of its own. We notice in the Indian Press a certain amount of uneasiness regarding this appointment; provincial patriotism is, as we have said before, a force of rapidly increasing importance, and patriotic Biharis would like not merely an Indian Governor, but a Governor born in their own province, while they look with suspicion on anything which emanates from their great neighbour on the East. We think they may accept Lord Sinha with confidence. He must by now be effectively de-provincialised, or it would be fairer to say imperialised, and his success in offices not previously held by Indians has been so marked that there is every reason to anticipate a fortunate outcome to this, his latest enterprise.

---

We have so often insisted on the need for a forward Labour policy in India that we may be pardoned for recording with satisfaction a small step which has now been taken in that direction in the decision to set up works committees in the official printing presses, in order to ensure closer touch between "hands" and staff. The arrangement is described as experimental, which means, we take it, that the practical difficulties of forming and working such committees will be explored first of all in the presses, and that the results will then be applied to State factories of other kinds. We may be reasonably confident that other employers who are now harassed by almost daily strikes and disputes, will be quick to learn by this experiment, and to apply its results in their own concerns. It may therefore mark the beginning of a new era, and we trust that the authorities will put their very best men on to the first committees, and spare no pains to make them a genuine success.

---

One important point about this experiment is that it is initiated while workers' unions are still in their infancy. In England the trades unions came first, and the later developments of works committees, Whitley Councils, and the rest, are devoted in great measure to counteracting the evil effects which incidentally resulted, particularly the spread of the disastrous doctrine that masters

---

## A CORRECTION.

By a slip of the pen, we wrote last week of "a rumour that the British Government may invite the Emir Abdullah to assume the sovereignty of the Mesopotamian State," when the rumour actually referred to the Emir Faisal. The mistake must have been detected at once by anyone in touch with recent developments in Syria and Mesopotamia, but others may have been puzzled by the reference, later in the note, to "the Emir's brother, Abdullah," and we apologise for our error.

Digitized by Google

and men are necessarily enemies. The trades unions, which are now springing up in India, take that doctrine as an axiom, but it is not yet firmly established in the mentality of Indian workers, and there are grounds for hoping that the development of works committees, concurrently with, or even in advance of trades unions, may lead to an attitude in closer agreement with the fundamental facts of organised industry. Employers will be well advised to seize this chance: it may not come their way again, and every class of Indians would benefit if the new principle of solidarity within the works could be placed on at least an equal footing with the older one of solidarity within the craft.

# THE WEEK AT HOME.

**The Future of Europe.**

There has been some talk of Dominion Home Rule for Ireland during the week, but even the Irish question has had to take a back seat before the critical European situation. Opinion in England was perfectly definite against war on behalf of Poland, and as nearly unanimous as it is ever likely to be; and there was very general regret that France should have aggravated a situation already sufficiently difficult by her recognition of General Wrangel. There is no desire whatever to break with France, for it is universally felt that our tried Allies in war should be our first friends in peace; but people here are strongly of opinion that for France, as for ourselves, the first requisite is peace, and an absolute refusal to engage in foreign adventures. If France sees the future differently, then we are sorry, but we believe that she will come round to our opinion in the end. Moreover, we believe—such is our insular pride and prejudice—that a good many Frenchmen are of our opinion already.

As regards Poland and the other new States, it is impossible not to recognise that there is a certain disillusionment of opinion at home. Every Englishman believed in freeing the oppressed nationalities; but having freed them he did not precisely expect them to embark on careers of conquest before they were out of their swaddling clothes, and to prove themselves more Imperialist than Berlin. It is a little disconcerting, to say the least, when the crushed worm of 1914 turns into the tiger of Riga in 1920, but in a sense it might have been foreseen. One remembers, during the very darkest days of the war in 1917, when Polish independence seemed about as probable as a flight to Uranus, a map of the proposed new Poland was being shown round by the Polish politicians in London, and it included not only legitimate Polish territory and Lithuania, but also the whole of the Ukraine from Kieff to Odessa. Happening to have some personal acquaintance with those countries, I thought then that if the Poles were ever in a position to indulge in a campaign of conquest from the Baltic to the Black Sea, they would not only get themselves into trouble, but stir up trouble all round; and within a year of securing their independence they have done it thoroughly.

There never was any case for the Poles holding the Ukraine, or Eastern Galicia, and the sooner they abandon that idea the better for themselves and everybody else. Not many Englishmen, perhaps, knew much of the history or the rights of the case, but our political instinct was dead against the Polish invasion from the start. I doubt whether the very lavish propaganda that has been indulged in has made the slightest difference to anybody's judgment in the fundamentals of the situation; the fact is that political propaganda has not only been overdone, but it has overshot the mark. The theory that the Englishman takes his opinions ready-made for him, which is often advanced by superior critics of this country, is in fact only partially true. He takes his opinions ready-made so long as he agrees with them; after that he is not taking any more. At the present time, no sensible man believes a word of the Polish and Russian propaganda; he cannot disprove it, but he has a feeling that neither side can be trusted to tell him the elementary truth about the situation. And once an Englishman comes to that conclusion, he is the most obstinate mule on earth.

**Labour and Direct Action.**

When the European crisis was discussed in the House of Commons last week, Mr. Adamson, the nominal Labour leader, was highly indignant because Mr. Asquith "caught the Speaker's eye" first; and after an ineffectual protest he stalked from the Chamber, in a spirit of righteous wrath or inarticulate fury, according to one's sympathies. Mr. Clynes followed with a judicious speech, in which he declared that Russia must respect the independence of Poland, but that on no other ground would England intervene.

As this was the common sentiment of the Government and the man in the street, there seemed no particular occasion for anything further. But Labour does not trust Mr. Winston Churchill not to spike the Prime Minister's gun; it looks upon the Secretary for War as a fire-eater in the most dangerous place in England, and is always afraid that he will commit us to war with Russia while we sleep. Accordingly, Labour assembled a Council of Action—it should have been called a Council of Direct Action—and for once it demonstrated its unity, for the Smillie lion lay down with the Thomas and Clynes lambs, and all threatened a general strike if England went to war.

It was a fairly safe threat, since no war was contemplated; and it was safeguarded by a reference to the independence of Poland, to pacify Mr. Clynes—in other words, the direct action was in support of the Government's policy. But the fact that it was direct action could not be, and was not in essence, denied; and every leader-writer pointed out that it formed a dangerous precedent, since it was outside the ordinary contitutional channels. That is perfectly true, and its significance is not to be minimised. But these are days when precedents are made and broken every week, and it seems to me to prove the weakness of direct action rather than of the constitution. Mr. Smillie and the extremists have threatened direct action about once a fortnight for the last five years, and it has always been opposed and rejected by Labour; it is only approved when the whole nation is unanimous in favour of the policy which it advocates. If it were to be employed on every occasion when the Government is faced with a difficult problem, it would, of course, be intolerable, and the next Labour Government would be the first to find it out; but if, as one suspects, it proves a broken reed, then it is of little account.

We shall hear more of it this autumn, when the miners threaten to go on strike again; and since a good many industrial troubles are threatened in the rather difficult winter that lies ahead at home the relation of both official Labour and the Government to direct action may be more closely defined. On the whole, the Labour Party in Parliament seems to be strongly against it, if only for the reason that its extra-constitutional character (which they recognise clearly) would prevent them from securing a majority, and so holding political power. In this world one can have one thing or the other, but not both things, and it is the Labour Party that will eventually have to choose between direct action and political power.

**Rising Prices Again.**

The price of bread is again to be increased, in order to reduce the Government subsidy to the bakers, and this synchronises with an anticipated general increase in prices, owing to the higher railway freight rates which come in force on the first of September. The inevitable consequence will be a further demand for increased wages all round, but it is understood that this will be strenuously resisted by the employers on the ground that industry has reached its limits. In that event there will be a series of industrial crises later in the year. There is, in fact, a good deal of pessimism at the moment among manufacturers and traders, but perhaps the optimists may derive a crumb of comfort from the fact that the July returns for both imports and exports were the highest in the history of the country.

Incidentally, the increased railway rates for passenger fares have most certainly reduced traffic, and the half-

Digitized by Google

empty condition of many of the long-distance expresses to holiday resorts has been marked. It will be very surprising if the railways secure anything like the increase of revenue they anticipated from the additional twopence in the shilling; and a proof, if proof were needed, of their nervousness at motor competition has been the sudden inauguration of a few excursion trains to the South and East Coast. A couple of months ago we were told that excursions were utterly impossible; then they suddenly became very desirable indeed, but neither locomotives nor rolling-stock were available; a week later some locomotives had been miraculously discovered—asleep on a siding, one supposes—and coaches to fit the locomotives suddenly materialised. One suspects that, even in these matters, where there's a will there's a way—particularly when the motor bus finds the way first.

**The Village Parson.**

Some hard things are said about the village parson by a Committee which has reported upon him at the request of the Archbishop of Canterbury. "The Church has failed," they say, "owing to lack of vision, timidity, love of compromise, and class-selfishness, to champion the weak against the strong, as was the wont of the Church in days long gone by." The weakness is ascribed very largely to the personal factor, and it is said that the village parson is now looked on not with hostility, but with indifference. All that is, no doubt, true, but the Committee might also have added that one cause of the failure is the lack of response in rural congregations.

It happens that I know a good many parsons; and, while the town clergy admit that they can fill their churches and arouse enthusiasm by good music, bright services, and forcible preaching, the rural clergy assert as one man that it is hopeless to rouse a village congregation out of their rut. They resent innovations; they want "the same old thing in the same old way"; their interests are limited, and after a few years the parson either sinks to their level or takes up some branch of study to keep himself abreast of the times. But it is difficult to do so, because he is hampered by poverty; the rural clergy are scandalously underpaid. One cure, of course, would be to amalgamate parishes, but when this was tried tentatively during the war, every village was up in arms at the idea. One does not wonder that the rural clergy lose heart; they are buried alive.

The discussion is bound to stimulate once again the old controversy as to the desirability of country life. Theoretically, we all worship the country, but in practice not one Englishman in ten tolerates it. It was more lively during the war, when soldiers were billeted in the villages, but now that peace has returned, the rural torpor has returned, and for eight or nine months in the year the country is dead, and for twelve months in the year the country town is a hotbed of scandal, and nothing else. The country is all very well for people like Virgil and Horace, who can meditate on its beauties, and, above all, leave it whenever they are tired of it—which probably happened much more frequently than those immortals allowed us to suspect: but for those who have to make a living out of the soil it is a hard and ungrateful taskmaster. I never met a countryman yet who did not long to live in London, and I respected him for it. On this matter Dr. Johnson talked sounder common-sense than all the poets, and the little chemist in "Tono-Bungay" who compared a country town to "cold mutton fat" was a true philosopher.

**The Week's Publishing.**

The book of the week, and of a good many weeks, is Professor Einstein's "The Theory of Relativity" (Methuen). It contains a detailed account of both the special and the general theories of relativity, with an appendix discussing the experimental confirmation of the theory by recent astronomical observations. These matters are not for every reader, nor should I advise anybody not acquainted with non-Euclidean geometry to tackle it. On the further question which arises, "whether the universe in which we live is infinite, or whether it is finite in the manner of the spherical universe," Mr. Einstein admits that "our experience is far from being sufficient to enable us to answer this question," but he thinks that the theory of relativity permits us to answer with "a moderate degree of certainty" that "if matter be distributed uniformly, the universe would necessarily be spherical (or elliptical): since in reality the detailed distribution of matter is not uniform, the real universe will deviate in individual parts from the spherical—i.e., the universe will be quasi-spherical. But it will be necessarily finite." He does not enter into the wider metaphysical question on which his theory impinges.

In "Arrows of Desire"—how many will recognise the source of the quotation?—Mr. J. S. Mackenzie discusses the long-debated question as to the real character of the Englishman, the Scot, the Irishman, and the Welsh. Of course, his discussion is neither conclusive nor final, but it amasses an amount of very interesting information, and his comments are often acute. The book is published through George Allen and Unwin.

Miss Mary Johnston is one of the best known American writers, and "The Old Dominion" and other stories have had many thousands of readers. Her latest novel, "Michael Forth" (Constable) breaks fresh ground, in that it touches on psychic sympathy and love on another plane. According to the nature of the reader, it will be found either beautiful or incomprehensible; it is a type of fiction that is, perhaps, a little ahead of its time, and the author is quite obviously struggling to express herself through a new medium, of which she has not yet altogether obtained the mastery.

OCELLUS.

## TOPICS IN PARLIAMENT.

*The subjoined headings are those given in the official report:*—

PERSIA:—Anglo-Persian Agreement.—Tabriz and Kasvin (situation). MESOPOTAMIA: Oil.—British Policy.—Military Situation. MANDATES (MESOPOTAMIA AND SYRIA). EGYPT (MILNER REPORT). CEYLON (FRANCHISE REFORM). BRITISH ARMY: Educational Training (Troops in Mesopotamia).—Mesopotamia (British Prisoners). CEYLON. INDIA: Hague Convention (Dangerous Drugs).—Military Works Services (Rates of Pay). MIDDLE EAST (INDIAN TROOPS). (August 9). MIDDLE EAST (RAILWAY PROGRESS). SYRIA: French Action. ROUMANIA: Government Bonds (British Holders).—British Railway Mission. PERSIA. (August 10.)

INDIA: Government of India Act, 1919 (Draft Rules).—Non-Co-operative Movement.—General Officers (Pensions).—All-India Khalifate Committee.—Punjab Disturbances. MESOPOTAMIA.—Administration. INDIA: Civil Service Pensions.—Suppression of Riots (Ball Ammunition).—Auxiliary Force Bill.—Drugs and Surgical Dressings (Army Supplies).—Rupee Pensioners. MONTENEGRO. (August 11.)

*(From Our Own Correspondents.)*

## YUGOSLAVIA.

BELGRADE, August 10.

**Statistics of Population.**

The Minister of Social Policy has recently published statistics on the area and population of Yugoslavia for the month of June in the current year. The figures are as follows:—

| Province. | Area. Sq. kilom. | | Population. |
|---|---|---|---|
| Serbia | 87,358 | ..... | 4,456,919 |
| Voivodina | 41,750 | ..... | 2,675,232 |
| Montenegro | 14,180 | ..... | 435,000 |
| Bosnia and Herzegovina | 51,199 | ..... | 1,898,044 |
| Dalmatia | 12,831 | ..... | 645,666 |
| Croatia and Slavonia | 42,533 | ..... | 2,621,954 |
| Slovenia | 21,681 | ..... | 1,610,082 |
| Total | 271,532 | ..... | 14,343,987 |

It must be remembered that while the new provinces include a certain number of non-Slavs, such as Jews, Germans, Magyar, and a few Roumanians in the Banat, there are over 100,000 Serbs included on the Roumanian side of the demarcation line of the Banat, and that the Treaty of Neuilly gives 400,000 Slovenes to Italy. It is not stated what frontier line has been taken in the neighbourhood of Rijeka (Fiume).

The figures for density work out approximately as follows:—Serbia, 51 per square kilometre; Voivodina, 64 per square kilometre; Montenegro, 31 per square kilometre; Bosnia and Herzegovina, 37 per square kilometre; Dalmatia, 50.3 per square kilometre; Croatia and Slavonia, 61.4 per square kilometre; Slovenia, 74 per square kilometre. The average density is thus 52.4 per square kilometre. There is a marked difference in population between the population of the northern and older parts of Serbia and the wilder districts of Macedonia recently liberated from Turkish rule.

**The Political Deadlock.**

As the *Pravda* points out, the young united kingdom has now spent just one quarter of its life in a state of political crisis. The present crisis has now lasted just three weeks, and is running the usual course—conferences of party leaders, resolutions of party clubs, audiences with the Regent, rumours of settlement, optimism and assurances that it will certainly be over in two days and the same Cabinet returned. About a week ago M. Vesnitch returned his mandate to the Regent, who requested him to make one more attempt. It was generally reported that a settlement had been reached on all points except Agrarian Reform, on which M. Stoyan Protitch was adamant. The difficult questions of the provincial governments and of exports were reported settled. Everybody was smiling and hopeful. Yesterday there was a Council meeting at the Palace, but to-day it is stated in the papers that the Radicals and Democrats cannot agree on the question of exports, and that M. Vesnitch is once more returning his mandate. What the next phase will be it is hard to say. Dr. Trumbitch, the Minister of Foreign Affairs—the only portfolio which has not changed hands since the union—has arrived in Belgrade, and M. Pashitch is expected soon. Perhaps that old veteran will be successful where M. Vesnitch failed.

It is generally believed that the origin of the crisis was not so much the disagreement between the members of the Cabinet, as unwillingness to take arms against Russia, to which the country is persistently reported to have been invited by the Entente. It is stated now that M. Také Jonescu has arrived from Bucharest to enlist the help of the Yugoslavs against the Bolshevists; but even he can hardly hope to succeed. Apart from the fact that the Serbs and Croats have had enough fighting to last them a long time, they now recognise that the Bolshevist army to-day represents Russia, and the Serbs say they will never fight their "brother Russians" in whatever form they appear.

It is difficult to foretell what form the crisis will now take. The Democratic journals claim that the mandate will be offered to their party, as they recommended the Crown many months ago to dissolve this Parliament as incompetent, and at once proceed to elections. This Parliament certainly is out of date and incompetent. The Serbian members represent a very different electorate from that of 1912; the ranks of the electors have been so sadly thinned, and a new generation has grown up; and it is quite time that a new Skupshtina were elected. It is anticipated that in this case the Radicals will lose heavily in the old frontiers of Serbia. But the members for the new provinces were elected under totally different conditions, and for different Parliaments and Diets. How many of them would be returned in a new election it is hard to say, probably very few. And that is one reason, the cynics say, why the politicians, who notoriously think of their own interests first in all countries, are postponing the evil day as long as possible.

It is stated that the indispensable new electoral law has passed the first reading, and therefore it is considered probable that the second and third readings will be passed by decree, and the elections carried out under the new law, as the new members will probably retrospectively approve their own birth certificates. What the general results of the elections will be, it is hard to prophesy.

**News Items.**

The United States have appointed a consul at Zagreb.

It is reported that the French Government has recalled all military missions from Yugoslavia.

Italian carrier pigeons with important despatches are reported to have been brought down in Slovenia, and Italian aeroplanes have again been flying over Yugoslav territory near Bakar.

## GREECE.

ATHENS, July 31.

**The Occupation of Adrianople.**

Although certain newspapers here had received the news in the early hours of Monday morning (July 26), the occupation of Adrianople by the Greek troops was not officially known until about 11 a.m. The Athenians, of course, expected the news, but they also expected that some sort of resistance would be offered by Jaafar Tayar, especially after the bombastic statements which he made but a few days ago to the effect that both he and his men were prepared to die rather than let the Greeks enter the capital of Thrace. The unexpected tidings, therefore, that the Greek forces had entered the town without bloodshed caused considerable relief to everybody. Shortly after the official announcement was made, the bells of the numerous churches in Athens began ringing, simultaneously Greek and Allied flags were displayed from every public building and most of the shops and private houses, and 21 shots were fired from the Lycabetus hill. At 7 p.m. a Te Deum was held at the Cathedral, at which the Council of Ministers, the Foreign Diplomatic Corps, the Allied Military Missions, and many other officials were present. The Archbishop of Athens officiated at the service. There was an enormous crowd outside the Cathedral continuously cheering for the King, the Army, M. Venizelos, and the Allied Nations. At night Stadium Street and Omonia and Constitution Squares were brilliantly illuminated, while a number of military bands passed through the main thoroughfares playing patriotic airs.

King Alexander, accompanied by his A.D.C.s, the Commander-in-Chief of the Greek Armies in Thrace, the High Commissioner for Greece, M. Sachtouris, and numerous Greek and foreign war correspondents, entered Adrianople at 11 o'clock on Monday morning. A thanksgiving service was immediately held at the Greek Cathedral in the presence of the Turkish Mufti, the Armenian and Bulgarian Archimandrites, and the

Digitized by Google

Chief Rabbi. The Bulgarian Archimandrite, after congratulating the Greek Monarch upon his entry into Adrianople, expressed himself very strongly against the oppressive and unjust Turkish administration, and assured His Majesty that the Bulgarian element will always remain loyal to the new *regime*. Further, the Bulgarian Archimandrite expressed his wish that King Alexander should definitely liberate Constantinople from the Turkish yoke and restore the Empire of Byzantium, of which he would be proclaimed Emperor in the famous church of Saint Sophia. These words, spoken by the head of the Bulgarian Church in Adrianople, created a favourable impression in Athens, and the *Estia*, in a leading article, states that they denote a promise for the future which Greece accepts with joy.

On this historic occasion it may be interesting to review briefly the history of Adrianople ("Edirneh" in Turkish). The town was called "Orestia" by the ancient Greeks, and subsequently received its present name from the Roman Emperor Adrian. Later on, when Constantine the Great formed the Greek Empire, Adrianople became one of its largest and most important towns, resisting the repeated attempts of the Goths, the Germans, and the Bulgars, who knew that they could never cherish any hope of reaching the city of their dreams—Constantinople—as long as Adrianople held its own.

Finally, in 1361, this famous town fell into the hands of Murad the Second and became the residence of the Sultans from 1362 to 1453, when Constantinople itself fell. In 1829 Adrianople was temporarily occupied by the Russians, and it was there and then that the famous treaty ceding the mouth of the Danube to Russia and recognising the independence of Greece was signed.

**Jaafar Tayar.**

The official announcement that Jaafar Tayar was a prisoner in the hands of the Greeks caused much amusement here. Everybody thought that after playing so successfully his great game of bluff he would make good his escape, taking with him into safety as much money as he could possibly carry. Or did he find the banks empty? Jaafar Tayar was making in all haste for Bulgaria, but a nasty fall from his horse resulted in his capture by Greek soldiers, who conveyed him to Adrianople and thence to Dedeagatch. He is very depressed, and attributes the unfortunate issue of his defensive campaign to his officers, who, he states, abandoned him soon after the Greeks commenced their advance. Tayar admits that although official Bulgaria did not afford him any assistance his numerous friends over the border were able to supply him with many guns, machine guns, and other war materials, in addition to a few thousand *Komitajis*. The Greek Press is informed that the "Hero of Adrianople" will be brought to Athens to spend his summer holidays.

## ROUMANIA.

BUCHAREST, August 4.

**Political.**

The reply to the Speech from the Throne has been presented, and in his reply the King took the opportunity of again expressing the hope that, putting aside all other considerations, all parties of the Chamber would realise the importance of uniting and getting to work on the important measures awaiting decisions. In this connection His Majesty specially mentioned the Agrarian Reform Bill and the Budget. It is satisfactory to be able to report that, in view of the persistent protests of the Opposition, the Government has consented to cancel the recent alterations in the regulations governing the procedure in the Chamber, which, it was claimed, were carried in a high-handed manner without proper regard to existing rules. The Chamber is, however, unanimous in considering that some revision is necessary, and the Federation has now expressed its willingness to co-operate with the Government to this end, but until such revisions have been passed the Opposition is withholding its vote on other business. The suggestion has even been put forward by several Ministers that one of the leaders of the Federation should be made a member of the Council, and such a step would no doubt go far towards conciliating that body. It is probable that one of the Transylvanian members would be chosen. This would, of course, involve a reconstruction of the Ministerial Council.

In the present Government M. Také Jonescu still plays a leading part. He made a very able speech in the House this week in reply to some criticisms advanced by M. Mihalache, whose statements he described as incomplete, and in some cases unjust. In carefully-worded sentences, calculated to give a minimum of offence in any quarter, M. Také Jonescu deprecated recent biassed and unjust criticisms of this and preceding governments; and by claiming for each its due measure both of praise and blame he succeeded in drawing applause from all sections of the Chamber. He said the main object of all must now be to work for the future, so full of promise. M. Také Jonescu's foreign policy is, however, still regarded with some distrust in many quarters, and he is also freely criticised for his continued advocacy of "the open door" in relation to foreign trade. He is one of the chief supporters of the Bill recently introduced by the Ministry for Industry and Commerce for making both export and import trade free from State control. It is feared that if the export of petrol, for instance, is freed from control, there will soon be a shortage in Roumania itself.

**Post Office Strike.**

Up to August 2, some 700 to 800 Post Office employees had returned to work, and the telephone service was at full strength; but many officials still remained "out," the soldiers continued to deliver the letters (under the greatest difficulties, poor fellows, for they did not know the streets), and many ladies still gave their services daily at the General Post Office. Cartloads of letters and newspapers await delivery in the cellars, where for weeks they have been a prey to rats and mice. For about a week the current correspondence has been passed out fairly regularly, and efforts are being made gradually to reduce the piles of delayed letters. It was announced yesterday that the strike was over and the officials returned to work, but they immediately came into collision with the military authorities temporarily in charge, who tried to continue their control, and again left in a body. To-day, however, it is rumoured that this difference also has been settled to the satisfaction of the employees, who will begin work to-morrow. It is said that no concessions have been made by the Government.

The tramway strike still continues, to the great inconvenience of the public this hot weather. Some attempt has been made to replace them by running motor lorries on certain routes for the use principally of workers in the city, but these have no seating accommodation, and it is pathetic to see the passengers, generally packed like sardines, being swung along the rough streets in the blazing sun.

**Case of M. Schina.**

Judgment was pronounced this week in the case of M. Schina, President of the Court of Appeal, who was accused of encouraging the employees at the Court of Justice to strike for higher wages. His public statements in this connection were declared by the Court to have been false. However this may be, it is a fact that many educated officials in the service receive lower pay than the tramway conductors and drivers who are now on strike. The proceedings of the Court were private, so that few details are known, but M. Schina has been condemned to two years' suspension from office. During the hearing some 3,000 employees assembled outside the Court, greatly excited, and on the appearance of their ex-Chief after sentence had been passed they received him with shouts of enthusiasm, and carried him shoulder high to his house amid loud demonstrations of loyalty.

It is true that this is one of the worst paid of Government departments, but conditions will be improved if the Bill introduced to the Chamber by M. Také Jonescu (in his capacity of interim Minister for Finance) on July 26 for increasing the emoluments of Government employees by 63 to 90 per cent. becomes law. From the

Digitized by Google

point of view of the officials such a measure is necessary to meet the very high cost of living at the present time, but in its present state the Treasury can ill afford to meet the extra expenditure involved, and on this account the measure has already been severely criticised in the Press.

**Constantin Brancovan.**

Many proofs exist of the virility of the Roumanian race, which has retained its national character and consciousness in spite of foreign invasions and centuries of subjugation to foreign rule. A remarkable instance of the persistence of the national patriotism was given the other day when with great solemnity the 200th anniversary was celebrated of the transfer of the remains of the Voevod Constantin Brancovan from Constantinople, where he was decapitated, to Bucharest where he was buried. The King was represented at the service by his aide-de-camp.

## BULGARIA.

SOFIA, July 21.

**The Fate of Tsaribrod.**

Belgrade reports state that the Serbian Government announces that the Inter-Allied Commission charged with the establishment of the frontier line between Bulgaria and Serbia will meet shortly at Tsaribrod. The Serbian representative, General Doushan Stefanovitch, will meet the Bulgarian representative several days before the arrival of the Commission.

**Prisoners of War From Greece.**

The Bulgarian Government has taken energetic steps for the release of the Bulgarian prisoners of war in Greece. Communications were made viâ the French representative in Bulgaria, who on July 17 asked his Government to intercede on behalf of these prisoners. At the present moment they are in Demir-Hissar: their condition is very miserable, and many of them are suffering from malaria.

**The Requisitioned Steamships.**

The Government here has, through the French command, addressed a note to the Supreme Council for the removal of the requisition upon Bulgarian steamships. In the present state of affairs not even a motor-boat can be employed without the consent of the Allies.

**Greece, Turkey and Bulgaria.**

All the reports concerning the mobilisation and the movement of Bulgarian troops towards Thrace are apparently of Greek origin, and are certainly false; for the Bulgarian Government is firmly resolved to maintain an absolute neutrality.

Since the vacation of the Chamber, the Premier, M. Stambolisky, has been enjoying a well-deserved rest in the country. His colleague, M. Alexander Dimitroff, Minister of the Interior, now takes over the duties of President of the Chamber, and is responsible for the Ministries of Foreign Affairs and War.

The harvest is at its height; and more than two-thirds of the standing army is on six weeks' leave in order to help the garnering of a very rich harvest.

**Bulgarian Communists and the Bolshevists.**

In response to the invitation given to the Bulgarian Communists by the Russian Soviet Government to participate in the great Bolshevist "International," which opens its sittings to-day at Moscow, the Bulgarian Communist party three weeks ago delegated four members, two of whom are members of the Bulgarian Chamber. They started from Varna in two motor-boats, but without the necessary legal documents from the home authorities. The first boat, carrying the two deputies, MM. Kolaroff and Dimitroff, having met with unfavourable weather, was caught by the Roumanian authorities, and the two deputies were arrested and sent to Bucharest. However, the second boat, after many days' wandering, reached Odessa, and the other two delegates, MM. Maxinioff and Kalaktchieff, were able to proceed safely to Petrograd and Moscow, where they will represent the Bulgarian Communists.

July 31.

**Bulgaria and Events in Thrace.**

During the recent events in Thrace, Bulgaria played the part of a spectator pure and simple and loyally preserved her neutrality. The Government, knowing that Greece had behind her, in overcoming the Turkish resistance, the approval and support of the Great Powers, refused to help the Turks in any way; and under M. Stambolisky's direction adopted rigorous measures to prevent the formation of bands. The country is against any warlike policy, and believes that by an understanding with her neighbours she will yet be able to secure a revision of some of the most onerous of the Peace terms.

Perfect order reigns throughout the kingdom. The Cabinet has granted a credit of two million levas for the maintenance of the Turkish refugees from Thrace, who number 30,000. The number of Turkish soldiers who gave up their arms at the Bulgarian frontier is put at 15,000. They have been sent to the prisoners' depots at Yamboli and Tirnova Symen, under the supervision of Entente officers.

**Sir Herbert Dering's Transfer.**

Yesterday morning M. Stambolisky had an interview with Sir Herbert Dering, the British High Commissioner, news of whose transfer to Bucharest, as H.B.M. Minister Plenipotentiary, has been received here with great regret. Sir Herbert and Lady Dering during their too short stay here have, by their kindness and constant readiness to help, won the regard of all who have been privileged to meet them.

**A Russian Visitor.**

M. P. Struvé, the "Foreign Minister" in General Wrangel's Government, arrived here the day before yesterday, and yesterday morning, accompanied by the Russian representative, M. Petroen, visited the Prime Minister, M. Stambolisky, at the Ministry of Foreign Affairs. He also had interviews with some of the former Ministers and party leaders. Yesterday evening he left for Varna, where an Allied torpedo-boat was in readiness to take him to the Crimea.

**MM. Kolaroff and Dimitroff.**

The delegates of the Bulgarian Communistic party to the Second Congress of the Third International at Moscow, MM. V. Kolaroff and G. Dimitroff, who were captured by the Roumanian authorities on the Black Sea, and were released a few days ago, have arrived here. Yesterday they addressed a large audience at the Communistic Club, narrating their adventures and escape.

**Fire at the Arsenal.**

A fire broke out at about half-past two this morning in the foundry department of the military arsenal, and, spreading with extraordinary rapidity, involved the whole building and passed on to the intrument-making department. In spite of great efforts by the firemen and soldiers of the garrison, the two buildings were completely destroyed. The Prime Minister was very early on the scene, and took an active part in directing operations. Unfortunately the cold wind blowing gave him a chill, with the result that the Cabinet meeting was not held to-day. The losses caused by the fire are considerable. An inquiry has been opened, in the hope of detecting the perpetrators of what is regarded as an abominable crime.

## TURKEY.

CONSTANTINOPLE, July 13.*

**The Greek Advance.**

It is announced that with the occupation of Brusa the operations of the Greek Army have for the moment come to an end, and that M. Venizelos is discussing with the Allies under what conditions further operations may be undertaken. It will be remembered that it was stated in a previous letter, that the principal reason

Digitized by Google

why the Turks objected to the presence of the Greeks in Anatolia was that they were sure that, whatever might be the conditions attaching to such an occupation, it would merely be the prelude to further territorial aggression. We are apparently committed to the support of the *megala idéa*, and it is therefore not surprising to hear that the Greeks regard the annexation of Constantinople itself as a foregone conclusion. In spite of one's admiration for M. Venizelos and the truly excellent performance of the Greek Army, one cannot help feeling some qualms as to the wisdom of allowing such a great estate to be under the unrestricted control of a minor—a brilliant minor, admittedly, but nevertheless a minor.

**The Nationalists' Discomfiture.**

The explanation given by the Nationalists of the complete discomfiture of their forces is that they were themselves actually caught in the act of concentrating for an offensive in the Smyrna area, and were taken completely by surprise. Be this as it may, it is reported that they do not intend to risk a fight in the open if they can possibly avoid it, but it is difficult to see how they will be able to avoid it. The Greek Army possesses the initiative, and unless the Nationalists are prepared to see the greater part of Anatolia overrun by the enemy they will have to make a stand somewhere.

It is difficult to believe that the whole Nationalist movement was nothing more than a gigantic bluff, for there have been no lack of witnesses of various nationalities, friendly and unfriendly to the movement. The Greeks have maintained from the beginning that it was nothing more than bluff, while Nationalist partisans told wild stories of the strength of the forces at Mustapha Kemal's disposal. Impartial observers, however, while discounting the wilder stories, have been unanimous in their estimates of the National forces as a force to be considered. At the same time, there can never have been any serious question of the superiority of the Greek Army in numbers, organisation, equipment, and *moral*, and the National forces have never stood any chance of success in the open field. But it has certainly been a surprise that their whole position should have gone to pieces without a fight worthy of the name. It now remains to be seen whether, if and when a further advance is decided upon, they will be able to hinder the Greeks from taking Afion Karahissar and Eski Shehir, the centre of Bolshevism, and, what is more important still, the location of the Nationalist arsenal.

One effect of the disasters on the Smyrna front has been the outbreak of anti-Nationalist disturbances of a serious nature in the Yozgat district. The position of affairs became so dangerous that guns were turned on to the town, and much damage was done: but the outbreak has not even yet been quelled. It is believed that the movement is in reality one of revolt against the dictatorship of Mustapha Kemal himself by the leaders in Anatolia of the Moderate Party mentioned in last week's letter. Exactly who these leaders are is not yet quite clear, but there have been rumours of differences between the Nationalist dictator and the Commander of the Fifteenth Army Corps at Erzerum, Kiazim Karabekir Pasha. If this is true, the position of the Nationalists is indeed critical, for Kiazim Karabekir is a good soldier and a man of strong personality. In spite of the fact that at one time or another he must have had tempting opportunties of attacking the Armenians, he appears to have behaved with considerable discretion. It is true that there have been reports from time to time of aggression on the part of the Turkish troops on the Eastern frontier against the Armenians; but to judge from the language of the Armenian Press which, on the occasion of the Greek advance, talked in grandiose fashion of the entry into action of the Armenian "army," and of the impending conquest of Erzerum, it would appear that the aggression has not been all on one side. Even the devil must be given his due, and if Kiazim Karabekir can make an end of the mild men in Anatolia who have brought final ruin upon their country, he will have deserved well of his country—what little there will be left of it!

**The Raid on Beykos.**

Much excitement seems to have been caused abroad by the exploits of the Nationalist band that raided the Bosphorus suburb of Beykos last week, but in reality it amounted to nothing more than an impertinent demonstration, of which the objects were pillage and bluff. Metaphorically, the Nationalists came to make faces at the British High Commission over the Bosphorus at Yenikeuy. They were very severely punished for their temerity, for 110 of them were caught in the forest on the other side of the Alem Dagh, about twenty miles inland, and were shot out of hand. The Asiatic shore of the Bosphorus has been made a war zone, and has been evacuated by Turkish troops, while Greek troops have been landed at various points.

The Nationalists seem fated to do the wrong thing, whatever they undertake.

---

July 25.

**The Decision to Sign.**

The Crown Council that was assembled at Yildiz Palace on Thursday, July 22, with the single exception of General Riza Pasha, agreed unanimously that the Peace Treaty should be signed in accordance with the demand of the Allies. The Sultan himself presided over the proceedings, but in many other respects the "Diwan" differed profoundly from similar councils that have been held from time to time in the past, with the exception of the Council that was held in January, 1913, to consider the note from the Powers calling upon Turkey to yield to the demands of the Balkan States whose armies had conquered the whole of European Turkey. In days gone by, it was customary when the Empire was in danger for the Sultan to convoke a special council at the Palace. The Diwan consisted not only of all the highest military and civil officials in the Empire, but also of all the principal Ulema and Mollahs, the presidents of corporations, heads of the various orders of dervishes, leading merchants and land owners and peasant delegates from all parts of the country. The present Sultan, then second in succession to the Sultanate, attended the Diwan of 1913, but the Diwan held last week was even less of a representative assembly than that convoked by the wily Kiamil Pasha. Less than fifty persons were present, of whom twenty-nine were senators, including six Christians. The rest, with the exception of the Kazasker and the Fetwa-emini, were marshals and generals. The alternative, which the Diwan was asked to decide, was worded as follows:—

> To accept the clauses of the Treaty, and thus to preserve Constantinople as the capital of a small State surrounded by regenerated or restored countries, or to reject them, and by recommencing hostilities, to risk the final destruction of Ottoman sovereignty.

After the proceedings had commenced with the reading of various documents relative to the situation, Damad Ferid Pasha made a moving speech, in which he rightly pointed that the real question at stake was, "to be or not to be," and compared the present phase of history with that of the fall of the Roman Empire, 1,700 years ago. After a few short speeches, all in favour of the acceptance of the Treaty, the matter was put to the vote, with the above-mentioned result. Dr. Riza Tewfik, and Hadi Pasha, who, with Reshad Halid Bey, Turkish Minister at Berne, will be the Turkish plenipotentiaries for the signature of the Treaty, left for Paris, via Constanza, in a French torpedo-boat on the afternoon of the 23rd.

**The Nationalists.**

The Great National Assembly, as the Nationalists call the Angora Government, has already announced that no agreements entered into by the Sublime Porte since the Armistice will be considered by them as binding. This decision was intended to apply especially not only to the Peace Treaty, but also to a supposed secret agreement between the British Government and Damad Ferid Pasha, which has been the subject of a former letter. By whom this story was originally invented is not

known, but it crops up from time to time in the Anatolian Press.

According to the latest information from Anatolia, the Nationalists are credited with the intention of making a stand on the Eski Shehir—Afion Kara Hissar line, but it is doubtful whether this is to be taken seriously. It is possible that they will organise some kind of resistance to a further advance of the Hellenic army, but it is unlikely that they will attempt to give battle in the ordinary way. Proclamations issued by Mustapha Kemal harp continually upon the help that he expects from Russia, and if there is anything more than bluff in the whole Nationalist campaign, it can only be the possibility of Russian help. At the same time, in view of the fact that the command of the Black Sea is in the hands of the Allies, it is difficult to see how this help, even supposing it possible at all, can be effective any further west than Sivas—and even then some considerable time must elapse, and considerable resistance in the Caucasus must be overcome. On the other hand, if the Nationalists really intend to push matters to extremes, nothing less than the conquest of the whole of Anatolia will ensure the application of the Peace Treaty in its integrity—and it is a far cry from Smyrna to Angora, to say nothing of Sivas and Erzerum.

The Nationalist Press made much of the Bolshevist victories against the Poles, and announced that as soon as the Soviet Government had dealt with the situation in the West, it would turn its attention to the East, when the Greeks would suffer the "chastisement they deserve," and British prestige would be finally destroyed. It is of interest to note that the Press of Anatolia pays great attention to the doings of the Sinn Feiners and of the Labour Party.

**The Occupation of Thrace.**

Beyond the fact that the occupation of Eastern Thrace has commenced, and that Greek troops have been landed on the European shores of the Marmora, little is yet known of what is taking place in regard to the progress of the operations. The Orient Express is no longer running, and it is said that four bridges between Adrianople and Constantinople have been blown up or damaged. The Greek *communiqués* speak of fighting at the bridge heads, and mention bombardments as being heavy. It is premature to pass any opinion, but it looks as if Jaafar Tayar has made a better show than Mustapha Kemal. The landing of Greek troops at Rodosto, however, must result in the isolation of the Turkish forces from the capital, and their only line of retreat will then be Bulgaria.

**The "Fete of Liberty."**

The twelfth anniversary of the restoration of the Constitution passed almost unperceived on July 23. Only the Government buildings hoisted flags, and there were no meetings. The *Ileri* made the following comments: "Unhappy national fête that we pass again in mourning! The sanguinary party strife that we have provoked in the belief that it was necessitated by the Constitution, has been one of our most lamentable political mistakes. . . . We have passed years under an apparently constitutional government, and we have celebrated each anniversary of our victory over despotism under another form of despotism, and amidst the mourning for disasters to the country. Dare we say to-day that this anniversary is the fête of liberty? Ah, Liberty! when wilt thou bring the happiness and peace for which our hearts yearn?"

## PALESTINE.

JERUSALEM, July 25.

The *Official Gazette* announces that the Right Hon. Sir Herbert Samuel, P.C., G.B.E., assumed office as and from July 1 as His Britannic Majesty's High Commissioner for Palestine, with the charge of establishing a Civil Government in the place of the Military Administration. His Excellency has very favourably impressed those whom he has met, and has taken up his duties with great energy.

"Occupied Enemy Territory Administration" is now termed "The Government of Palestine," with headquarters in Jerusalem. Military Governors are now styled "District Governors." The address of what has been O.E.T.A. (South) at Cairo will now be "Palestine Agency," 6, Meidan Suleyman Pasha, Cairo.

**A New Survey.**

An Ordinance passed under the administration of Sir Louis Bols provides for the initiation of a cadastral survey, to commence in the district of Gaza and Beersheba. The necessary powers are given to authorised officials to carry out their work, and occupiers of land are called upon to demarcate and erect and maintain boundary marks, clear boundaries, provide labour, and otherwise assist. As regards boundary pillars, or marks, in village or public lands, the *Mukhtar* (Headman) is responsible. Contraventions under the Ordinance are punishable by fine or imprisonment, or both. It is most desirable that the survey should be taken in hand without any avoidable delay, and extended as circumstances may admit, and that the native mind should become acquainted as soon as possible with methods of order and exactitude, which have been for so many centuries absolutely outside his ken or comprehension.

The Survey Department is inviting applications for posts by candidates possessing the necessary qualifications in various classes, at adequate salaries. The period of probation is in all cases one month.

**Standard Time.**

The Government has done good service to the public in Jerusalem by arranging to fix the correct time daily at noon. A clock has been placed in the hall of the Post Office, which can be seen through the door by passers-by. The standard time (which is the same for Palestine and Egypt), as taken at the Cairo Observatory, is telegraphed from that city and the clock set daily. The arrangement is welcome, as the irregular striking of numerous clocks, with its attendant confusion, has hitherto been a great nuisance.

**Public Health.**

Public health continues to be good. Restrictions are in force against Suez, Constantinople, and the Piræus as regards plague, and as to cholera against Sebastopol, Odessa, Trebizond, and Samsûn. Restrictions against Beyrout are removed.

**Village Headmen.**

The status of *Mukhtars* is being recognised, and this will contribute much towards the reign of order and honesty in rural districts. The haphazard Turkish methods are being replaced by rules which will do much to bring their office, with all its miscellaneous but important and responsible work, into good repute. A revised scale of fees on a very fair basis is published. The *Mukhtar* is responsible for issuing certificates which are the basis of many transactions, such as land registry transfers, sales of animals, matters of inheritance, guardianships, marriages, records of births and deaths; all of which duties have been very casually performed in the past. An important duty relates to the collection and payment into the Treasury of tithes on cereals and certain other produce within three months of publication of tithe redemption prices by district governors. The *Mukhtars* are paid 2 per cent. on such collections, settlement being half-yearly.

# CORRESPONDENCE.

## ARMENIANS AND ENGLISHMEN.

TO THE EDITOR OF "THE NEAR EAST"

Sir,—In your issue of June 3, an extract from Mr. Still's book drew my attention. The first sentence, "Englishmen don't like Armenians," is rather a grave charge against a nation that boasts of more British sympathy than that of any other nation. Can one individual answer in the name of his nation? Yes, when that individual represents his nation; no, in this case; for Mr. Still does *not* represent his nation. Coming to the second sentence, Mr. Still says: "I don't myself." Mr. Still is quite free as regards his personal opinion; but when that opinion is published in the shape of a book and an extract from it is inserted in a paper such as THE NEAR EAST, then I feel it a duty to ask for an explanation. Pray, Mr. Still, what reason have you for disliking a whole nation who has sacrificed a million and a-half of her children for the very same cause for which hundreds and thousands of your own compatriots fell? Although an Armenian might be vermin from the Turkish point of view, Armenia is the *pioneer of civilisation* in the Near East, as your statesmen have declared on several occasions—from Gladstone to Lloyd George.

Reading your charge reminds me of a similar one made forty years ago by Sir Wilfred Lawson, who, replying to Prof. (now Lord) Bryce, who had appealed to the House for the first time since his election in order to interest his colleagues in Armenia, said: "In Europe the Armenians are scoundrels," this occasioned a long laughter in the House. Later on he added: ". . . .In the world." Naturally this declaration caused general indignation in all Armenian circles, and the Armenian Committee asked for an explanation from Sir Wilfred in a letter. The last words of this letter said: "Can we say that the Scotch are the greatest scoundrels in the United Kingdom because they are noted for their wit and wisdom?" The reply from Sir Wilfred said: "It was with no intention to wound the feelings of the Armenians that I made this declaration. On the contrary, fearing that to help Armenia would cause a war, I expressed myself in those terms. . . . As a proof of my sincerity, I beg you to give both our letters to the press."

Both the letters were published in the *Spectator* in 1880. Would you, then, kindly state on what facts do you base such a strong charge against a small ally of England?

Turkish money has worked miracles in a different country, but I never think that Englishmen can ever be bribed.—I am, etc.,

V. M. MOSDITCHIAN

P.O.B. 600, Alexandria, July.

## ZIONIST IMMIGRANTS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of July 8 you quoted the Bishop in Jerusalem as an authority on Zionists in Palestine. In fairness to your readers I trust you will bring the enclosed extract from *The Palestine Weekly* to their notice. Rabbi Kook holds as important a post in the Jerusalem community as the Bishop in his. —Yours, etc.,

*Palestine Weekly.*

Jerusalem, July 26, 1920.

Enclosure:—

### REPLY TO BISHOP MCINNES.

Replying to the remarks made by the Bishop in Jerusalem at the annual meeting of the "Mission" to the effect that opposition to Zionism was growing stronger among orthodox Jews, Rabbi A. Kook, who is a leading representative of all orthodox Palestine Jews, says:

"We feel it our duty publicly to refute the statement of the Bishop concerning the increasing opposition among orthodox Jews to Zionism, specially during the last eighteen months. It is difficult to state from what source the Bishop obtained this unfounded information. We can all testify that, precisely during the last months, the recognition has been growing stronger among the extreme orthodox that Zionism was a movement guided from above to realise the vision of the prophets of the redemption of Israel and the deliverance of humanity. I hereby beg to inform the public that the orthodox feel that, with the growing of the National renaissance, piety and deep faith are increasing in all our ranks, and the feelings of brotherhood and internal unity are becoming more intense. There is no room for quarrels between or suspicion in our ranks. With regard to the false accusation that the new immigrants—Russian, Polish and Rumanian Jews who have escaped from the menacing sword—are all Bolsheviki in principle, there is no need to reply. It is a recognised truth, however, that all the immigrants who choose Palestine as their home are imbued with national and religious feelings which differ essentially from Bolshevik teachings. As a responsible person, the Bishop should announce publicly that his information was derived from an unreliable source."

[The "false accusation" mentioned in the passage quoted above from the *Palestine Weekly* was not, of course, made by Bishop McInnes, who merely said that *many* of the Russian, Polish and Roumanian immigrants were thoroughly Bolshevistic in their ideas.—ED. NEAR EAST.]

## THE OCCUPATION OF THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—My attention has been called to a letter from the Rev. Alexander T. Callinicos in your issue of August 5, who states that I have signed myself "Britisher." The use of this slang term is unknown to me; it was invented, I believe, on the other side of the Atlantic as a sobriquet implying contempt and derision.

The reverend gentleman claims the right to deride the defeated enemy. His boastful mockery of the fallen foe is neither in harmony with the teaching of the philosophic Democritus (who advocated a placid smile in the hour of adversity) nor with that of our common Christianity. Neither can it win the approbation of the average "Britisher," whose instinct prompts him to a chivalrous treatment of his prostrate opponent. The vaunting of the reverend gentleman recalls that of the Homeric heroes—*ἡμεῖς τοι πατέρων μεγ' ἀμείνονες εὐχο'μεθ' εἶναι*. We latter-day Greeks, he tells us, have brought about the downfall of the Bulgarian "Empire"; we saved the French army from "annihilation" in Southern Russia; we have "rounded up" in fifteen days the brigands from whom great France was compelled "to sue for an armistice."

What will they say to this in Paris? They may retort that the Greeks maintained a hostile attitude towards the Entente for three years of the war; that they never changed that attitude until French and British troops, after considerable loss of life, succeeded in deposing their King; and that even during the final Macedonian campaign a plot existed for the passage of the whole Greek army of the Struma to the side of the enemy, which was only frustrated by General Franchet d'Espéry's rapid advance.—I am, etc.,

A BRITISH READER OF "THE NEAR EAST."

August 14.

## "MESOPOTAMIA."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is not often I am courageous enough to differ from THE NEAR EAST. In common with all your readers, I owe a debt to your paper for its very valuable and concise presentment of Middle Eastern politics. For all that, I cannot understand a significant passage in your current leader on Mesopotamia. I refer to this sentence:—"To our surprise we find that the Arabs not only refuse to display the least partiality for the regime we have imposed upon them, but actually attack our troops and inflict reverses upon them."

The surprising thing is not that this should be the case, but that anyone familiar with Arab character and Arab environment should suppose that it could be otherwise. There are two questions I am anxious to have answered. First: Why should the Arabs welcome a regime which is as hostile to them, and as unintelligible, as an Arabian administration would be to us? I am not considering the ideal form of government for Mesopotamia as dictated by the Powers. That point does not immediately arise. Before you can begin administering a country you must know the races for whose benefit your administration is being put into force. And unless it is widely recognised that the Arab does not want our administration but that for the safety of the Middle East he must be educated into wanting it (as all political communities have been educated), we cannot set about governing Mesopotamia at all. The paradox of self-determination is that it is always applied to countries who can determine nothing for themselves.

The second question is this: Why should not the Arabs attack us? They will always attack us. You remark that, "they actually attack our troops and inflict reverses upon them"—as if such a contingency were beyond the contemplation of the Arab mind. But is it not obvious that for many years to come the Army of Occupation will have to be prepared for these attacks? The astonishing thing is that when they are made we are peacefully sleeping a hundred miles away from the scene of action.

Nobody wants the evacuation of Mesopotamia. That would be disastrous. But to suppose that we can hold so turbulent a country without a shot being fired is equally preposterous. We shall not begin the firing, but the Arabs will, and we shall have to defend ourselves. When it comes to government we shall do well to remember that: "The tribes of the Irak have advanced but little beyond the Moot Court, and should the shaping of their destinies become our care in the future, we shall be wise to eschew any experiments tending to rush them into highly specialised institutions—a policy which could commend itself only to those who are never wearied by words that signify nothing."

I quote this from a little work on "The Arab of Mesopotamia," printed at Busreh—by the Government Press.

I am, etc.,

ALEC PENROSE STANTON.

London, N.W., August 12, 1920.

## ALBANIA A SECOND ARMENIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We trust that you will give publicity to the following very urgent telegram, which we have just received from the Albanian Delegation. "In spite of assurances that the Albanian Government has always given to the Yugoslav Government of its desire to live in peace with them, the Serbian army on August 10 suddenly invaded Albanian territory, through the regions of Scutari, Dibra, and Elbasan. The invading army is advancing towards the interior, bombarding towns and villages, destroying

Digitized by Google

everything in its passage, and terrorising the population. Judging from the systematic extermination of the Albanian element in the districts annexed by the Serbs, and the considerable forces and artillery in action, it becomes evident that this invasion is premeditated and aims at the extermination of our race. The Albanian people, in deadly despair, appeal to the justice and dignity of His Britannic Majesty to stop this wanton aggression and save them from catastrophe."

Unless intervention take place the wholesale massacre of the Albanian race will be even worse than the Armenian massacres. All lovers of justice are asked to appeal against this direct violation of the rights of peoples and of the treaty of 1913.

Europe then intervened and saved Albania. Albania cries again for help. May her cry be heard before it is too late.

I am, etc.,

M. E. DURHAM
(Hon. Sec., Anglo-Albanian Society).

## PRESS ON THE NEAR EAST.

### The Middle East.

In the *Nineteenth Century* of August, Major W. Ormsby Gore, M.P., writes on "Great Britain, Mesopotamia, and the Arabs." His conclusions are worth quoting:—

Our future in Asia will depend very largely on our treatment of Middle Eastern problems during the next few years. We have undertaken obligations of honour and great responsibilities in the Middle East during the war; on the fulfilment of our obligations, and on our capacity to see the realisation of those aspirations which we have encouraged, will depend not only our good name but our whole future in Asia. It is for us to make or mar the new political conception embodied in the Article of the Covenant of the League of Nations dealing with mandates; and on our scrupulous fulfilment of that article of the Covenant, will depend largely the future of the League itself.

Then there is the almost equally important question of the future relations of Western Powers with non-European races. The relations between Englishmen and the races of the Middle East, Arabs, Jews and Egyptians, will in all probability determine the future relations between Eastern and Western civilisation. If these relations develop on the lines of racial antagonism, or racial subjection, or if they result in a revival of religious prejudices and religious animosity, not only will trouble ensue for Britain as an Empire, but the possibility of European and Asiatic civilisation assisting each other towards peace, solvency, and progress, will be endangered. Nothing can exaggerate the importance of the problems now before us in the Middle East; even the problems of Central Europe are temporary, and comparatively local, when compared with what may be the permanent results of a wise, or unwise, policy in any one of the Near Eastern countries. The whole of Europe and the whole of Asia are involved, and upon us lies the chief and greatest responsibility; and upon the way in which our trust is fulfilled we shall be judged by history. The tasks may be great, but there is no reason why they should be beyond our reach. The war brought out the amazing capacity of the right type of Englishman in dealing with the Arab peoples; and the work of Colonel Joyce in creating and training an Arab Army, and the work of Colonel Lawrence in handling it, as well as the political insight of the latter and of many others, whose names are less well known, show that with faith and enthusiasm great things are possible. We shall henceforth require new Arabic-speaking services, political, civil, and technical, but no amount of authority or official position given to them by a British Government will enable them to succeed in their task, unless they are endowed with the faculty of understanding the Arab, and of getting on with him not as his ruler, but as his guide, philosopher and friend. The personal equation is what counts in the Middle East.

Finally, it must be emphasised that the problem of Mesopotamia is only part of the wider Arab problem. Unless the Arab world is envisaged as a whole, the wrong perspective is obtained. We cannot confine our policy within a number of new artificial boundaries.

### The Viceroyalty of India.

*The Times* of August 12 has a leading article upon the "Viceroyalty of India." In commenting upon the proposal that Mr. Montagu should be made Viceroy, it says:—

There are many reasons why Mr. Montagu, whose name has been so prominently associated with the approaching vacancy, should not be appointed. Some of those reasons need not be set forth here, but two appear to suffice. We hold that a Secretary of State for India should never be appointed Viceroy, while no Viceroy should afterwards be made Secretary of State. If a precedent is now created, future Secretaries of State may be tempted so to frame their policy of control as to facilitate their subsequent selection as Viceroy. On the other hand, a Secretary of State who has previously been Viceroy might be led to regard himself as still Viceroy in all but name. For somewhat similar reasons, no Secretary of State should ever visit India during his term of office except in very exceptional circumstances, such as existed when Lord Crewe accompanied the King Emperor to the Delhi Durbar. Lord Crewe's visit was so tactfully managed that it had no untoward results, but there can be no doubt that Mr. Montagu's visit materially weakened Lord Chelmsford's position. The relations between Lord Chelmsford and his official superior were excellent, and Mr. Montagu scrupulously observed the prescribed etiquette, but the inevitable consequence was that the Viceroy suffered an eclipse from which he has never quite recovered. The second and far more potent reason is that no man should be chosen as Viceroy of India who has drifted, however accidentally, into a contentious position upon current Indian controversies. We have the better title to make this objection because we supported the broad principles of the constitutional reforms with which Mr. Montagu's and Lord Chelmsford's names are associated. We were, moreover, in substantial agreement with Mr. Montagu's view—though not with his handling—of the case of General Dyer. Yet the very fact that Mr. Montagu has been both fiercely assailed and warmly supported in these controversies renders it imperative that the choice now to be made should not fall upon him. The first duty of a Viceroy is, in Lord Curzon's historic words, to "hold the scales even," and however much we may believe that Mr. Montagu would be entirely impartial, large numbers of people, both in India and in this country, hold, very strongly, a contrary view. The new Viceroy must have a clean sheet, in the sense that he should be acknowledged on all hands to be free from partisan predilections. There should be no appointment which would be the signal for a further outbreak of recrimination. Mr. Montagu should be content with the knowledge that he has already indelibly inscribed his name upon the broad pages of Indian history, but it would be best that he should leave to others the completion of the task he has so arduously begun.

### Mesopotamia.

Writing in the *Graphic* of August 14 on "Should we abandon 'Mespot'?" Sirdar Ibkal Ali Shah commences by saying:—

The recent thoughtless outcry that we should abandon Mesopotamia has almost certainly had its origin among people who do not understand how deeply we have committed ourselves to the work of progress in that country, and who are unaware of the commercial and strategical possibilities it will hold for us.

He looks back on the pre-war condition of the country, and proceeds:—

The great obstacle we shall have to face will undoubtedly be the pacification of the native populations. The Arabs of Mesopotamia are intractable and freedom-loving, and will by no means take so kindly to European rule as did the Fellahin of Egypt; but even now their attitude is less unfriendly than it was in 1916. Many of the great Sheikhs, however, still adopt a hostile attitude, and as they have a good deal of influence among the people it will be necessary for us to enlist their friendly offices by every means in our power. It is, indeed, because of internecine feuds that the country had remained so long in a neglected condition; but we have made the Mesopotamian land to blossom like the rose, and are gradually introducing those elements of civilisation which will in the end render it prolific and flourishing.

By the introduction of suitable irrigation we have already extended the area upon which it is possible to plant the date-palms which yield one of the chief commercial assets of Mesopotamia, and furnish at least a million Arabs with subsistence. From the small creek of Asshar has developed the wonderful port of Basra, with its imposing wharves, on which powerful electric cranes load and unload the cargoes of many ships. In the vicinity of Basra hundreds of miles of metalled road have now been constructed; it is equipped with electric cars, and the telephone service is more extensive than that of Bombay. Electric light, too, has been installed in all the towns on the Tigris. The Arabs of the urban district are taking kindly to factory life, and in addition to the oil refinery, the dockyards, and the repairing sheds, there are ice factories and cloth mills.

He then gives figures proving how we have ministered to the needs of the native population, and concludes:—

The re-birth of Mesopotamia will make for the prosperity of Persia and India, and to abandon it would be folly of the most egregious character, not to be thought of.

---

The King has approved the institution of a bar to be worn with the Meritorious Service Medal awarded to Indian troops, the bar to be identical with that sanctioned for the British Meritorious Service Medal, and to be awarded under similar conditions.

With a view to helping the Jew in the new developments in Palestine and Eastern Europe the British and Foreign Bible Society are spending another £10,000 in reprinting Yiddish Bibles, and are also engaged in producing an improved version in the Yiddish of the Ukraine.

In connection with the opening up of Palestine, arrangements are being made for directing to the country the stream of Jewish emigration which is beginning to set in from Central and Eastern Europe. Prague, Vienna, and Constantinople are to be the principal centres for this work, and Mr. S. Landman, of the Zionist Organisation, is about to visit these centres in order to supervise the establishment of the necessary emigration bureaux.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

III.—"THE FORBIDDEN TRAIL." By Honore Willsie. (London: Thornton Butterworth. 7s. net.)

IV.—"OUR SMALLEST ALLY." By W. A. Wigram, D.D. With a Map (London: S.P.C.K. 1s. 6d. net.)

## I.—THE EGYPTIAN PROBLEM.

On the subject of Egypt two books have become classics—the first, by Lord Milner, "England in Egypt," 1892; the second, by Lord Cromer, "Modern Egypt," 1908, with a supplement on the ex-Khedive Abbas, 1915. Both of them reveal the weakness of the native Egyptian for self-government. Sir Valentine Chirol's new book, entitled "The Egyptian Problem," can challenge comparison with those predecessors in dignity of style, in moderation of statement, and in its noble desire to set forth the truth to his fellow-countrymen. He tells us of the fictions and limitations of our control, and its breakdown; of active and passive rebellion; of the barren period of drift; of government by martial law; and he has exposed the iniquities of the Labour Corps which wrecked Egypt and brought about the present discontent. It is impossible to do justice to this invaluable and statesmanlike survey by brief quotations, but every trader and tourist will be rewarded by its careful perusal, because the author has put his heart into it, and as he reaches the end his pages burn with fire and sympathy for the Egyptians. In submitting the need for an honourable solution, he offers a constructive policy for our future guidance. The various powers in the administration should be defined. First, the authority of our High Commissioner should be distinctly specified; and all other powers, with the responsibilities they carry, should be vested in native Ministers. There should be a complete separation of our control from the native executive, the British Advisers appointed by our Government being responsible to our High Commissioner, who would control their relations with the native Ministers. Our British Advisers and their British staffs should be British officials instead of being camouflaged as now under Egyptian red tarboushes which they wear during office hours and throw aside in the afternoon. A new department should be set up at home for the Middle East, and its Secretary of State, to whom the High Commissioner would be responsible, should enjoy the assistance of a small council with Egyptian experience, and composed partly of native Egyptians. We may adorn, he writes, any scheme of reforms with the most copious assurances of our anxiety to help Egypt to self-government, and set before them as an ultimate goal their national independence under our ægis—they will have no faith in our honesty unless the scheme provides a substantial guarantee for the redress of outstanding grievances. Our control must be limited to essentials, such as foreign relations, army, public security, communications, irrigation, and, so long as there is a foreign debt, finance. We might leave to the natives their local government, education, agriculture, public works, and sanitation, subject to British expert advice as distinct from executive control with only a few British officials carefully chosen, as in the beginning of our Occupation.

"The Egyptians certainly have yet to prove their capacity for self-government. But we are pledged to give them an opportunity to practise it, and it must be a sufficiently wide one to put them on their mettle and develop their sense of political responsibility. We may believe that it will lead, at first at least, to very much worse government, and to the revival of many old-time abuses. But that is no reason for breaking the promises to which we are committed."

The golden thread of charity runs through his pages; the honour of England involved in our trusteeship, the sympathy of Lord Cromer for the Moslems impress the reader.

Closing the volume for a moment, I submit the following remarks. In time of trouble we must find a scapegoat, and in the case of Egypt we have held the Foreign Office to blame for the sins of others. This is not just. Throughout the world, when dilemmas occur, foreigners run to the British Ambassador or Minister or Consul for advice, the traditional trust in the practical wisdom of the Foreign Office, spreading over its agents abroad, still remains unimpaired. However the case may be put, the Defence of the Realm Act ("Dora") enforced by the presence of a large army effaced the authority of the F.O. in Egypt. During the war the country was ruled by a miscellaneous group of honourable gentlemen and officers who knew little or nothing of the civil situation, who were constantly being changed, and whose irresponsibility in solidarity brought about the iniquities practised in our name under the cloak of the Labour Corps, into which no commission dare inquire. A time had to come when martial law would cease, when F.O. would have to sweep away the litter and be held responsible for the damages caused by Dora, the outgoing tenant. There was plenty of warning, but, unfortunately, the censorship choked off discussion. Deplorable riots followed, reminding us of the days of Arabi, showing that the turbulent townspeople had not changed their nature, whether pagan, Christian or Moslem, since the days of the Greeks and Romans and Byzantines, down to Mehemet Ali. Then the Foreign Office did penance for the sins of others and sent out a strong commission, which was boycotted; and by this boycott the Egyptians have condemned themselves as unfit for self-government, not a man among them showing traces of statesmanship and moral courage; they will never wipe off the stain of refusing to meet old friends like Milner, Rodd, and Maxwell. As for the Capitulations, a civilian does not criticise the manœuvring of a cavalry brigade, yet there were officers newly arrived in Egypt, who, with a wave of the hand, laid down the law, and "abolished" the Capitulations. These treaties of friendship and commerce, dating back to the times of the Phœnicians, imply capital and commercial credit, and can no more be abolished than the pyramids and palm trees. They can be modified under our flag if we accept responsibility for public security. The third party, the foreigner, does not believe in the Egyptian policeman. Safety first, before the Capitulations go. As for education, a teacher in my youth, I helped to start the English language prize fund in Cairo in 1890, and have always taken interest in every kind of school in Egypt. It is not our system that is to blame, but the material; the ordinary Arab boy cannot learn; the peasants, some 90 per cent. of the population, remain in darkness as serfs bound to the soil under the yoke of a cotton autocracy. If the peasant were to learn, he would cease to be a peasant. Forty years' study of Arabic has shown me that there is only one Arabic, the classical, the real written language, as alive to-day as in the time of Mohammed. But, apart from the language, unfortunately, the letters of the alphabet are not separate, but generally joined together, and this defect has prevented the growth of daughter languages from Morocco to Baghdad. For example, with our separate letters, the Latin roots of noct, pect, lact, change in the

Romance or modern Italian languages, as they cross the Alps or Pyrenees, and we can write notte, nuit, noche, petto, poitrine, pecho, latte, lait, leche, etc. But in Arabic we should still be saying and writing nkt, bkt, lkt, because the three letters are joined together. It is the elementary difficulty of the alphabet, like the Old Man of the Sea round the neck of the Arab Sindibad, which hinders the relations between our officials and their native colleagues, so that it is often impossible to decide where "advice" ends and "control" begins.

Here for the present I must leave the subject. Of Sir Valentine Chirol's book, no praise can be too high; he is worth all the Nationalist Party put together, and appeals to us to do justice in Egypt, to renew the old charity and sympathy of my revered master, Lord Cromer.

D. A. CAMERON.

## II.—ANCIENT ORIENTAL HISTORY IN RELATION TO THE HEBREWS.

Professor Grant's book, "The Orient in Bible Times," should prove useful to the student of the Bible and to the general reader interested in the Near East. We have here in outline the history of the Empires of Egypt, Babylonia, Assyria, and Persia, to the fall of the East under the army of the Macedonian conqueror. All this is here introductory to the story of the Hebrews and the history of that unique land which they inhabited. It is a familiar tale, yet to some the more modern way of looking at this history may be new. The coming of the Hebrews may be viewed as part of that "nomadic pressure" from the desert which "has continued to be the persistent historic experience of thousands of years." The nomad is always there on the border. When the control of Palestine is firm and friendly he stays on the border or near it, but should the government of Palestine weaken, the nomad intrudes. At the time of the Hebrew invasion, which may be viewed as a process of centuries, the internal government of Palestine was growing weaker. The Hittite shrank away northward, and the Egyptian neglected the land more and more. The Phœnician cared little for the interior. The tracts of land which meant least to either Philistine or Canaanite were occupied by frontiersmen, who learned in a humble way the advantages of agriculture as a means of ekeing out a decent living. From such humble beginnings gradually was built up a national self-consciousness which culminated in a kingdom. Briefly, the history of the rise and fall of the kingdom—and the divided kingdom—is traced. The decadence of the temporal power and the days of menace and stress witnessed the wonderful rise of that prophetic spirit and of those high ethical ideals which have given the Hebrews a message to the whole world. To many who may, through old-fashioned teaching and consequent lack of interest, have found no attraction in the prophetic book, the outline here given of the writings of these great patriots and zealous reformers—in their historical setting—will be a revelation. The history is followed down to the destruction of Jerusalem by the Romans. A study of this book will give much food for thought to many of those who are concerned in the future of Palestine. It has always been a strange meeting-place for surrounding nations on every side. Into it once flowed Hittites from the north, Damascans and Arabians from the east and south-east, Egyptians from the south-west, and Philistines and—the writer here suggests to a considerable extent—the Phœnician. That is, he thinks this race was only half-Semitic. "Some," he says, "would go so far as to say that a considerable part of the mixed Phœnician population was a colonial offshoot of the race which once inhabited Crete and, later, the other islands, as well as the coast land of Asia Minor."

To-day we find the Syrians, a very mixed race, in the Lebanon, together with Druzes, Maronites, etc., to the north; nomadic Arabs in close touch with the restless tribes of Arabia to the east and south-east; Egyptians to the south-west; while from the west a very heterogeneous mass of European Jews are restlessly endeavouring to reassert their claims to the land their ancestors inhabited two thousand years ago. As in the past, so now there must be inevitable clashings and turmoils, and after a truce a rearrangement once again for a time of the ever-changing kaleidoscope of this unique little land.

There is no historic period touched upon in this volume which will not pay for a longer study, and the author gives useful hints about suitable books at the end of each chapter. A wide survey like this makes a valuable text-book for a course of study. A number of excellent illustrations, mostly from Palestine scenery, are scattered through the text.

## II.—THE ARIZONA DESERT.

Roger Moore, we are told, was a "dreamer of dreams." His dream was the invention of a solar engine. At the age of thirty he at last gets a chance of proving its practicability by putting up a solar power plant to be used for irrigation in the desert country of Arizona, and goes there accompanied by his devoted friend, Ernie Wolf. There they find settlers trying to irrigate some acres of the desert and grow alfalfa, who turn out to be Dick Preble and his sister Charley, whom Roger remembers as a slender little girl of seven. She is now a wonderfully tall, strong, young woman, with hair "a wiry burnished bronze" (Roger's own "black hair, with the sunset full upon it, was like molten bronze").

At this point we have no doubt that the end of the tale will see the invention successful and Roger at last aware that Charley is more to him than "a good fellow." But there are many difficulties to be overcome before this end is reached, and they follow one another with relentless speed. They include sandstorms, cloudbursts, Dick's bouts of drinking, Roger's outbursts of temper, the question of raising money, the death of Charley's little sister, Felicia—we suspected that the authoress was preparing to sacrifice her as soon as we met her and saw her winning her way to everyone's heart—and finally the treacherous attempt of Ernie, who is of German origin, to sell the engine to the benefit of the Fatherland. Certainly there is a fascination in hurrying on from one disaster to another, sustained by the conviction that all will surely end well, which probably accounts for the apparent great popularity of Mrs. Willsie's works in America. Apart from this the impression that she gives of camp life in the desert is both definite and convincing.

## IV.—PRESENT-DAY ASSYRIANS.

This is the story of the gallant struggle against odds made by the Assyrians of to-day against Turks, Kurds, and Persians in the course of the Great War. It is a story of which "our smallest ally" has every right to be proud, and it is told by Mr. Wigram with a directness, a sympathy, and, happily, with a sense of humour that make it easy and pleasant to read. The least pleasant feature of the story is the manner in which the Russians failed again and again to render the help that the Assyrians expected to receive from them—and very naturally expected, after being instigated to throw in their lot with the Entente as they were. Indeed, the Russians play a sorry part in the narrative; and it is not surprising that their conduct in this field of the war has been subjected to strong criticism from many quarters.

No more stirring story of the war can be found than that of the great march of the Assyrian people from the Shina plateau to the Persian district of Salmas. Cumbered not only with their women-folk, but also with their flocks and herds, deserted by their friends, and driven from the homes they loved so well, they yet conducted an orderly retreat and finally won through to safety. The story and its sequel deserve to be better known than they are in this country, and we hope that this very attractive booklet will serve to make them so, and to win fresh friends for "our smallest Ally."

# MUSICAL NOTES.

## THE KOLOS.

It is a distinction of Near Eastern countries, not, indeed, possessed by them alone, but one on which Western European nations cannot greatly pride themselves, that with them music and dancing are truly allied. The existence of this alliance was really not manifested to the modern English and French peoples until the Russian ballet, a body derived from Slav inspiration if not composed of Slavs, made obvious the use of the choreographic art in interpreting music. I suppose the greatest dancers are of Spanish or Russian origin, for the Iberian and the Slav still seem to have the passion of the dance in their blood; but in most other countries the dance as an expression of one's soul appears either to have become barbarised (as in Hungary) or to have been slowly degraded by the adoption of industrialism as the economic system of life (as in England).

Whatever the explanation of these things may be, the fact remains that the natural passion for dancing has survived in the Slav race, and, in particular, in the Yugoslav race.

Digitized by Google

Everyone has heard of the "kolo," the Serbian national dance, though all have not been fortunate enough to see it executed. But both for those who know and those who do not know it, a little book called "Serbian Kolos" will be extremely useful. It has been written by Miss E. R. Clarke, the late lecturer on dancing at the Dartford Physical Training College, and by Miss Vivian Edwards, whose recitals of and lectures upon Serbian folk-songs are well known to readers of this journal; and it is published by the Bergman Osterberg Union at 3s. net. (The proceeds go to the benefit of Serbian funds.) It is an interesting little book, very efficiently done, with explanations, general directions, and examples of the kolos; and there is also a note on Yugoslav peasant costumes. The task of the two authors was not very easy, for the dances they describe were collected entirely from Serbian boys who came to be educated in this country when their own country was occupied by the enemy—boys to whom the dance was as natural as any explanation or analysis of it was unnatural. Their practical suggestions for learning the forms of the various kolos are most clear, and no one acting upon their advice could go wrong. From the increasing number of enthusiasts in this country for English folk-dances this book is certain to have a welcome, and it undoubtedly deserves it. I cannot imagine that anyone who delights, for instance, in our own "Black Nag" or "Sweet Kate" could fail to enjoy the "Jatchko Kolo" or the "Banatsko Kolo," to mention but two of the nine dances published in this book.

The main difference between Yugoslav kolos and English folk-dances is the comparative unimportance of steps in the former; they have little or nothing set, everything depending, first, upon the music and its rhythm, and then upon the *kolovoja*, the leader of the kolo, or circle, and the *kets*, the end man of the circle or line. They appear to have many phases, through which the pace is worked up and down, but the essentials of them all remain throughout freedom and informality. This is possibly one of the reasons for the preservation of the spirit of the dance in Yugoslavia: there are no such things as memory or etiquette with which to decrease the naturalness of it all. And, moreover, whatever steps there are are derived solely from walking, running, and hopping, the dance therefore being a genuine primitive means of expression, and not the unreal, civilised method of impression that it has become in more advanced societies.

One would think that there is more vigour, if not more agility, required by these kolos than by our own folk-dances; but I doubt whether they are more graceful or pleasing. In both, however, is the same lack of conscious art, the lack which Mr. Cecil Sharp and the English Folk Dance Society assert (wrongly) can alone make true art; and in both is that same close connection or identity of music and dance to recover which Western nations have had to receive lessons from negroes. I hope, therefore, that the authors of "Serbian Kolos," who are to be congratulated on their work (and who, I am very glad to state, intend to publish more on this subject), will be able to organise some exhibition of these dances. Much has already been done to popularise the kolos in schools and colleges, but nearly all the displays of them were given during the war, at a time when a true appreciation of their worth was difficult to make and to remember.

ANDANTE.

## NEWS IN BRIEF.

Greek authorities have occupied the Custom House at Smyrna.

A Valona message received in Rome states that an American Red Cross depot at Podgoritza has been burnt down.

A group of French financiers is shortly visiting Belgrade to study the project of a canal between the capital of Yugoslavia and Salonika.

A request has been addressed to the Colonial Secretary asking him to divert the flow of Maltese immigrants into the United States to British Guiana.

A Bulgarian delegation has arrived in Prague to study the conditions prevailing in Czecho-Slovakia and the possibilities of economic and political intercourse between Bulgaria and Czecho-Slovakia.

On August 9 the Roumanian Senate unanimously passed the Bill ratifying the Peace Treaty with Bulgaria, and M. Take Jonescu, the Minister for Foreign Affairs, introduced a Bill for the ratification of the Treaty with Hungary.

Pilgrims arriving at Peshawar from Turkestan continue to bring accounts of Bolshevist oppression in that country, and state that the Bolshevists have incurred much hatred among the entire Moslem population by their behaviour.

The British Armenia Committee learns officially that the preliminaries of peace were signed on August 11 between Russia and the Armenian Republic of Erivan. The districts of Karadagh, Zangezur, and Nakhichevan, being disputed territory between Armenia and Azerbaijan, remain temporarily in Russian occupation until the dispute is settled.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**

| 24 | 11 | Tuesday ..... | 10 | 10 |
| 25 | 12 | Wednesday ..... | 11 | 11 |

Lord Oranmore and Browne has left Cavendish Place for Dublin.

M. Pashitch, formerly Serbian Prime Minister, left London on August 11 for Belgrade.

M. Constantin Constantinesco, Secretary to the Roumanian Legation, left London on August 11 for Bucharest.

M. Collas, First Secretary to the Greek Legation, has returned to London from San Sebastian.

The Queen has sent a donation of £20 to Lady Minto's Indian Nursing Association.

Lord and Lady Barrymore have left London for Marbury Hall, Northwich.

General Sir Bryan and Lady Mahon arrived in Dublin on August 13.

Crown Prince Carol of Roumania has arrived in San Francisco from Honolulu.

M. Titulesco, the Roumanian Minister for Finance, having concluded his mission to London, left on August 14 for Paris.

Our Sofia Correspondent writes (July 21):—Yesterday H.M. the King received in audience the Russian Admiral Butenow, who came to Sofia from Sebastopol.

Marshal Joffre left Paris on August 14 by the Simplon-Orient express for Roumania, where he will present the Croix de Guerre to Bucharest and Marakesti, which have been mentioned in army orders.

Mr. Rattigan, who during Sir Herbert Dering's leave is in charge of the British Legation at Bucharest, will not leave the Roumanian capital to take up his new post in Brussels until September 10.

M. Venizelos is making such rapid progress towards recovery that he is expected to be able to leave Paris for Nice in about two days' time. After a few days' rest there, the Greek Premier will return to Athens to prepare for the forthcoming general elections.

Field-Marshal Viscount Allenby arrived at Paddington on August 14 on leave from Egypt. He was met at the station by Lady Allenby. He expects to be in England about two months. On August 16 he was received by the King at Buckingham Palace.

General Sir George Milne, General Officer Commanding-in-Chief Army of the Black Sea, had the honour of being received by the King on August 14, when His Majesty invested him with the Insignia of a Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George.

Major-General Sir Lee Stack, Sirdar of the Egyptian Army and Governor-General of the Sudan, and Brigadier-General Sir William Manning, Governor and Commander-in-Chief of Ceylon, had audiences of His Majesty on August 13.

The King of the Hellenes has conferred the Golden Cross of the Knights of the Order of the Saviour on Mr. P. W. Everett, joint managing director of Messrs. C. Arthur Pearson (Limited), for his services in connection with the Boy Scout movement in Greece.

The Rev. C. Hobley, rector of Knockholt, has been appointed Rochester Diocesan Secretary for the Jerusalem and the East Mission in the place of the Rev. J. Rooker, of Sevenoaks, who is going to Palestine to work for the London Jews' Society.

It is reported that Lord Sinha, who was appointed Under-Secretary of State for India at the end of 1918, will return to India after the close of the summer session, in order to take up his new post of Lieutenant-Governor in Council of Bihar and Orissa, in succession to Sir Edward Gait, whose quinquennial term expires in November next.

Our Sofia Correspondent writes (July 31):—General Fourton, Commander-in-Chief of the French troops in Bulgaria, has been appointed President of the International Commission of Military Control in Bulgaria. He retains his position as Delegate of the C.-in-C. of the Entente troops in the Orient.

The marriage arranged between Viola, second daughter of the late Albert Crossland (Egyptian Civil Service) and Mrs. Crossland, of Heliopolis, Cairo, and Kenneth Agnew Wills, M.C., younger son of the late Richard Wills, of Adelaide, South Australia, and Mrs. Wills, of Bath, will take place at All Saints' Church, Fulham, on September 1.

## APPOINTMENTS, ETC.

The King has been pleased to approve the appointment of Dr. Tej Bahadur Sapru, LL.D., to be a member of the Viceroy's Executive Council, to succeed Sir George Lowndes, K.C., K.C.S.I., on the completion of the latter's term of office in December next.

The King has been pleased to approve the following appointments, to take effect as soon as those parts of the Government of India Act, 1919, which relate to the Local Governments in India are brought into operation in the early part of next year:—To be Governor of the United Provinces, Sir Harcourt Butler, K.C.S.I., K.C.I.E.; to be Governor of the Punjab, Sir Edward Maclagan, K.C.I.E., C.S.I.; to be Governor of the Central Provinces, Sir Frank Sly, K.C.S.I.; to be Governor of Bihar and Orissa, Lord Sinha of Raipur, P.C., K.C.; to be Governor of Assam, Sir William Marris, K.C.I.E. With His Majesty's approval, the present Governors of Bengal, Madras, and Bombay will continue in office on the introduction of the new scheme of government under the Act.

Herr von Druffels has been temporarily appointed German diplomatic representative to the Caucasian Republic of Georgia.

The *Progrès* of August 8 announces the following diplomatic appointments of Roumanian Ministers:—M. Constantin Hiotu to be Minister at Prague; M. Trandafir Djuvara to be at Athens; M. Théodore Emandi to be at Belgrade; and M. Langa Raschano to be at Sofia.

The following communiqué has been received through the India Office from the Civil Commissioner in Baghdad:—

"First meeting of Committee summoned by notification of July 9 to frame proposals for an electoral law took place in Baghdad on August 6 at the Law Courts. Nineteen former deputies from various parts of the country have come to Baghdad in answer to the invitation of this administration. One of their first tasks will be to co-opt additional members in place of those ex-deputies who are absent or deceased. By so doing areas and communities at present without a member will be represented on this committee, and it will become a gathering which may fairly be considered representative of the country. As far as is at present possible, its functions will be to frame proposals for the provisional electoral law under which members will be elected to a general assembly, which will frame in consultation with the administration an organic law for the country. It will also provide a source to which administration may in the meantime turn for advice or information on any points connected with the welfare and future of the country. In the meeting of this committee a further step has been taken towards the setting up of national institutions in this country in compliance with the obligations undertaken by Great Britain when accepting the mandate."

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

EGYPT—Danish girl, good family, offers service; very fond of children, clever at housework and Danish cooking—Eilër, 25, Carlton Hill, London, N.W.8.

## THE LESSER NATIONS.

Already there are signs that the world is tiring of the lesser nations. It is not many months since their charter was framed by the idealist statesmen of Versailles, whose labours were hailed as marking the advent of a new political era, but criticism is now the dominant note, and impatient publicists are reverting to the standpoint of last-century diplomacy, which recognised, indeed, that particular small nations might be necessary, but regarded them in the lump as at the best a nuisance, and at the worst a standing menace to the world's security. We should regard the re-establishment of that attitude as a disaster to great nations as well as small, to England or France or the United States, no less than to the Balkans, the embryo Arab States, or the republics of Latin America; and the danger is sufficiently pressing to justify us in examining the whole question, and attempting an estimate of the tendencies at work. Let us in the first place recognise the attractions of the older view. The diplomatists of the last century played a great game for high stakes, for national power and national wealth, for national security and sometimes for national existence; they were not on the whole unequally matched, and, realising as they did that force was the deciding factor, they inevitably tended to regard the smaller States as counters in their game. When, however, the States to which this rôle was assigned claimed instead to take an active and independent part in the determination of their own destinies, the difficulties of the position were at once magnified; the experts resented the intrusion of amateurs and the distraction caused by claims irrelevant to their immediate objects, and the complications were too often increased by the attitude of the intruders themselves. The diplomacy of the smaller nations tended, like their politics, to be narrow, or even parochial, in outlook; they were fretful and impatient; they took no account of great questions affecting distant portions of the world; and they were more ready to imitate the vices than the virtues of their models. We insist on these facts not from any desire to rake among the ashes of the past, but because their persistence, or apparent persistence, is in our judgment largely responsible for the change in the world's attitude which we are discussing. The world wants peace, and a largely increased production of material goods: it reads day by day of nations bickering with their neighbours, or of parties bickering within the nation; it is told little of the material developments or of the slower movements of opinion which are undoubtedly in progress; and we cannot wonder if the resultant feeling is one of despondency, or even of disgust. Idealism is for the moment out of fashion, and if the small nations appear to be unchanged in their behaviour, it is easy to understand the attitude of those who would revert to the older view of their position.

How far this attitude is based on ignorance is a question on which we shall not hazard a conjecture, but there is no doubt that ignorance exists. The world's Press has not yet entirely recovered from the spoon-fed diet of the war; for the moment views seem to count for more than news, and unhappily it must be added that sometimes in the competition for space, those facts have the best chance of prominence which are most agreeable to the opinions of a particular organ. If the world is disgusted with the smaller nations, one reason is that the world does not really know what they are doing, still less what they are thinking. The great States have urgent problems of their own, and cannot spare much time to consider the difficulties of others; what is offered may be read and even pondered, but if popular organs present nothing but the seamy side, then it is on the seamy side that public opinion will concentrate. How far views so formed may differ from the truth can be judged if we consider whether an intelligent foreigner could obtain a just opinion of England even from our own Press. He would learn much indeed of our failings, of our social and political feuds, of our sports and trivialities, but he would scarcely catch a glimpse of the England which lies below, of the abiding consciousness of sorrow, the satisfaction resulting from work well done, the determination to have things a little better than they were. We do not include such matters among our exports, and doubtless our reputation suffers in consequence: the best antidote for despondency regarding the affairs of other nations is to remember that they too may keep their best for home consumption.

Even, however, after we have allowed for such considerations as these, the hard fact remains that there are grounds for disquietude. We may be shown too much of the seamy side, but we cannot question its existence, and while we appeal to the great world to strive for a due sense of proportion, we would urge the lesser nations to endeavour to abate the peculiarities which bulk so large. The Covenant of the League of Nations marks a stage rather than a goal. It is a long step forward that the small nations should sit in council with the great, but they have still to take such measures as shall secure a respectful hearing for their claims; they cannot hope for this until they have made some approach to harmony among themselves. The world could not fail to respect the voice of Latin America, though it might not be impressed by the demands of Peru or Uruguay; the general opinion of the Balkan States would be vastly more important than the particular opinion of any one of them; and, to look a little further ahead, Arab sentiment would carry weight denied to that of Syria or Mesopotamia. It will be noted that we have spoken of harmony rather than of union. Political union may in the case of some small nations be a desirable ideal, but it is not necessary for the purpose which we have in view. What is necessary is that the contiguous groups of small nations should take their stand on common ground. They are united in fact by ties of interest and sentiment, much more important in the aggregate than the disputes which tend to keep them apart. So long as they appear to the world to be concerned only in securing petty advantages over their neighbours, their welcome in its councils will be cold, and their estimation is likely to diminish rather than increase; their time will not come until they have proved themselves able to rise above purely local matters, until they have attained a broader outlook, and until they have manifested a juster appreciation of the position of those with whom they have been brought in contact. We recognise that this achievement will not be easy; the masses cannot hope to move forward without a guide; any forcible interference from outside would, in our judgment, be fatal, and the future of the small nations depends almost entirely on the quality of the leaders they can produce. It is to the leaders, therefore, that we appeal. Their task is difficult indeed, but to the right man difficulty is the same as opportunity, and the reward will be at least proportionate to the effort. Let them strive to adjust their local bickerings, let them insist on common interests and common sentiments; let them inculcate the widest possible view, and they can hope to win for their peoples a safe and honourable position in the world. By that course, and by no other, can they complete the work begun last year by the statesmen at Versailles.

# BOLSHEVISM AND INDIA.

By SIRDAR IKBAL ALI SHAH.

It is questionable whether for Britain the Polish problem is really so important as that created by the Bolshevist invasion of Persia and the enslaving of Central Asia. The greatest of all the dangers to which India is exposed is the one foreshadowed by the Bolshevist advance and propaganda in Central Asia and Persia. The threat first became apparent when the Khanates of Khiva and Bokhara allied themselves with the Bolshevists. In 1837 and 1878 emissaries of imperialist Russia, who found their way to Kabul and forced Afghanistan to wage war against India, achieved the purpose at which Bolshevism is aiming to-day. In the Anglo-Persian Agreement of 1907, now a dead letter, Russia promised "no annexation and no indemnity," in Asian lands; but although the Bolshevists may be seeking no material annexation or indemnity, they certainly are making every effort to exert political influence among all those people with whom they come in contact. It is a moral duty for Great Britain to provide an antidote to the poisonous doctrines which emanate from Moscow, and which have already affected the Uzbegs and a considerable number of the Persians.

The danger in Central Asia can only be countered by supporting the policy of the late Ameer of Afghanistan, whose intention it was to form a confederacy of the Central Asian Khanates. As the complete independence of the Afghans is now acknowledged by all the parties interested, there is nothing to prevent Afghanistan from annexing to itself Shignan, Roshan, and Durwaz, and, by retaining the Merv region, forming an anti-Bolshevist alliance with Khiva and Bokhara. It is now more than ever desirable that the Ameer's country should continue its rôle of buffer State between India and the Slavonic possessions—a rôle which it has played for nearly a century.

I learn that the "independence" accorded to Bokhara and Khiva by the Bolshevists is merely nominal, and that in practice the actions of their rulers are subject to quite as many limitations as they were during Tsarist times. The Uzbegs are, therefore, disillusioned and discontented. In point of fact, there is evidence to show that at one time, not very long ago, the Khanates evinced a desire to enter into friendly relations with the British Government, through Afghanistan; but their overtures were disregarded, or rather misunderstood. We have thus lost an opportunity of uniting Bokhara, Khiva, and the Turkomans with Afghanistan against Red Russia. But this indifference notwithstanding, the Persians, the Afghans, and the Uzbegs were hopeful that the British nation would not listen to any solicitations of the Soviet Government without making sure that the Bolshevists would respect the liberties of the Mid-Eastern peoples. In this respect they have been disappointed.

The question "What is Poland to this country?" has been asked recently. But, keeping India in mind, can one put a similar question regarding the value of the friendship of the Persians, the Afghans, and the Uzbegs? It would, therefore, seem to be very desirable that a stipulation should be made with the representatives of Lenin's Government that the Bolshevist forces must be withdrawn from Persia before any further negotiations are entered into. Not only should a promise be taken—for as such it has shown itself to be of no value—but immediate action on the part of Soviet Russia should be demanded. Great Britain has given a solemn pledge to befriend Persia: how is that pledge being fulfilled? With the Eastern peoples it is only personal safety which is in danger; but Great Britain has more at stake—her good name and her honour in the eyes of all Asia. Persia, not Poland, ought to have been our chief concern when the Soviets were allowed to open negotiations with this country. But all is not yet lost. Central Asian opinion can yet be placated, to the great advantage of this country, and, what is more hopeful, owing to the reasons given above, that opinion is capable of being very easily swayed towards the British point of view.

Only through two means can the grave situation in the Middle East be saved, the first being that strong diplomatic pressure be brought to bear upon the Soviet representatives now in London to have the "Red" forces withdrawn from Persia and to have the attitude of their Government towards the Uzbegs modified. This must be done at once. The next step should be taken together with the Afghan Government, and should be the discussion of the question of a Federation of Central Asian States, which, if brought into friendly relations with the Indian Government, would provide a powerful first line of defence for the Indian frontier. The Afghans and the Uzbegs alike are anxious to realise the plan of the Ameer. If such a Central Asian Federation were completed, Bolshevist penetration could not proceed farther than the upper Oxus; indeed, Bolshevism would be forced to withdraw towards Orenburg. It would, therefore, undoubtedly be to British interests to place no barriers in the way of a Grand Mid-Eastern Alliance. Such an arrangement would result in the withdrawal of the Russian representatives now at Kabul. But no direct pressure should be employed for the ejection of the Bolshevist agents from Kabul or Bokhara, as such a demand might bring about what happened with Vickvitch in 1837 and Stolietoff in 1878. The formation of a Federation of the Central Asian States would by its moral force alone counteract the Bolshevist agencies, which at present agitate those countries in their separate and "independent" conditions. Nor are the Central Asian people unaware that their distance from one another has proved a source of weakness. By an alliance of the kind indicated forces would be secured and the territories of the United Khanates would be opened to commercial undertakings of importance. The cotton industry of Subzwar and the oil wells of Ferghana await development, and the Bokharian markets are eager for tea and printed cloth from the looms of the Hooghly.

The political situation has grown so complex in Central Asia that without an earnest desire to understand the Eastern point of view nothing can be accomplished. Lord Grey very wisely remarked in a speech made recently that it was of immense interest that other nations should understand the difficulties and point of view of the British Empire; and in the same manner it is of as great, perhaps even of greater, importance that the British public should endeavour to understand the point of view of the Eastern peoples, especially the peoples of Central Asia. The war is not over, nor will it be until the Eastern Question has been settled.

# MOSLEM TALES FROM JERUSALEM.*

## By ESTELLE BLYTH.

### The Learned Physician and his Servant.

Jerusalem is the House of Mercy and of Learning, and of all the learned and merciful men that have adorned her, not one has surpassed a certain physician who gave all his care and time to the poor and unfortunate among the Faithful. He was called one day to visit the only son of a very poor man, whom he found to be sick indeed, but not beyond hope. He went to the house daily for many days, and he could not understand why the boy became no better, though every day he gave him a new medicine, and frequently pills as well. At last one day he found the reason, though quite by chance.

"Your son has been eating *koussa* (vegetable marrow)," he said sternly to the father.

The father of the boy cried out at once: "No, no, O my lord, he has taken nothing but the milk you said he might have!" But when the wise physician insisted, the man at length confessed, with tears: "Great is the wisdom of my lord! The boy had one little bit of *koussa* this morning when he woke, because he cried for it."

As the physician left the house his servant asked him: "How did you find out that the boy had been eating *koussa*?" The physician replied: "Was not the skin of the *koussa* thrown outside the door, and to a man with eyes is not a candle enough to light his way?"

The servant said no more, but he thought in his heart, "How great a man is my master! How can I become as wise as he?"

The next day it happened that the physician had fever, and could not go out as usual; but because he was troubled about this boy, he sent his servant with a fresh bottle of medicine and bade him inquire exactly how the patient was. On entering the room the servant said no word, but, greatly to the surprise of the boy and his parents, he locked carefully all around him, and last of all behind the door, and there he saw a donkey's hoof. Straightway he seized the boy's father by the arm and shouted in his ear: "Your son has been eating a donkey!"

"Now, by the beard of the Prophet——!" cried the man.

"Words are nothing," said the physician's servant; "here is the donkey's hoof! What you have done with the other three I know not, but one is proof enough."

And he hurried away to tell his master that the boy could not be better, for he had been eating a donkey; and to show that he spoke the truth he had brought back with him one of the hoofs of the beast.

Thus were the wisdom and learning of the physician brought into disrepute by the exceeding folly of his servant.

---

The *Glasgow Herald* of August 12, in writing on "The End of Military Turkey," has the following paragraph:—

The absolute disappearance of Turkey as a military factor may be deferred for a time by the prolongation of the Kemalist operations; but the delay will be a brief one. The attempt to reform the battered Nationalist contingents under the name of the Senoussi Army might possibly have had some success if Mustafa Kemal had been really a great Mohammedan leader; but he is nothing of the sort, and the suggestion that he is now being backed up by the powerful Senoussi sect, which has its headquarters in Northern Africa but disposes of a good deal of influence also in Asia, and more particularly in the Hejaz, may be dismissed as very doubtful. Lack of money and supplies must soon render Kemal's position precarious; and, with the Nationalist movement disposed of, Turkey's fighting days will be brought to a definite conclusion. None too soon, it may be added, for there were still directions in which she could have given trouble even if no rapprochement between her and Bolshevism had been possible. In Europe she was practically a spent force, as sharply demonstrated by the futile effort lately made in Thrace to contest the Greek occupation. From Egypt she would in any case have remained cut off by political as well as territorial insulation. But a really strong Turkish leader, able to galvanise what remains of the old Turkish Army into genuine fighting efficiency, might have helped the Bolshevists to do an infinity of mischief in Persia, Syria, Mesopotamia, and Afghanistan, where already the state of affairs is by no means all that could be desired. Under Turkish leadership the Kurds may yet have to be reckoned with; but they might have been much more dangerous had Turkey continued to exist as a military Power. As things are, the Turkish Government can be called upon to take arms against any Turkish military organisation not authorised by the Treaty, and the retention of a foothold in Europe is conditional upon the fulfilment of such demands if made. Not only is the Turkish Army dead, but the Allies have security against any attempted exhumation of the corpse.

---

* These tales were told to the writer by a Moslem in Jerusalem. The first of the series was published in No. 451, and others in Nos. 453, 470, and 484.

# CHESS.

## THE EDINBURGH CONGRESS.

At the time of writing, the British championship is in a very open position, and Sir G. A. Thomas does not look like scoring the easy victory that it had been anticipated he would. Probably he is a little short of practice. His closest competitors are Mr. E. G. Sergeant, always a most consistent player, who is making a most determined bid for the championship, and Mr. R. H. V. Scott, who seems to be playing much more carefully than usual. Sir George Thomas, with the exception of the game against Mr. G. E. Wainwright, which he should have lost, has displayed the soundness for which he has come to be noted, but some of the best chess of the meeting has been shown by Mr. Sergeant, who has brought off quite a number of sacrifices. The three players mentioned now stand level with 5½ each.

---

One of the most interesting contests in the first week of the Championship—interesting on account of the extremely incisive character of the play of the winner—was the game between Sir G. A. Thomas and Mr. J. H. Blake. It ran as follows:—

QUEEN'S PAWN OPENING.

| White. Sir G.A.Thomas. | Black. J.H.Blake. | White. Sir G.A.Thomas. | Black. J. H. Blake. |
|---|---|---|---|
| 1 P—Q4 | P—Q4 | 20 B—B3 | Q—K4 |
| 2 Kt—KB3 | Kt—KB3 | 21 R—Q4 | P—QKt4 |
| 3 P—QB4 | P—K3 | 22 Q—Q2 | R—B5 |
| 4 Kt—B3 | B—K2 | 23 R—Q | KR—QB |
| 5 P—K3 | P—B4 | 24 P—QR3 | K—B (6) |
| 6 QP x P (1) | B x P | 25 P—R5 | R x R |
| 7 P x P | P x P | 26 Q x R | Q x Q |
| 8 B—Kt5 | B—Q2 (2) | 27 R x Q | R—B4 (7) |
| 9 0—0 | 0—0 | 28 K—B | K—K2 |
| 10 Q—Kt3 | B—K3 (3) | 29 K—K | K—Q3 |
| 11 Q—B2 | QKt—Q2 (4) | 30 B—K2 | R—B (8) |
| 12 R—Q | R—B | 31 P—QR4 | P x P |
| 13 Kt—Q4 | Q—B2 (5) | 32 R x P | R—QKt |
| 14 B—K2 | B x Kt | 33 R x P (ch) | K—B4 |
| 15 R x B | Kt—K5 | 34 K—Q | P—Q5 (9) |
| 16 B—Q2 | QKt—B3 | 35 R—R5 | K—Kt5 |
| 17 Q—Q | KR—K | 36 R—R4 | K—Kt6 (10) |
| 18 R—B | Kt x B | 37 K—B (11) | Resigns |
| 19 R x Kt | P—QR3 | | |

(1) Pointing very clearly to an intention to avoid complications, and to depend solely on the slight advantage derived from creating an isolated pawn in the centre.

(2) Preferable seems Kt—B3, leaving the B free for offensive work.

(3) B—B3 would lead to the loss of a pawn.

(4) Kt—B3 might have been better. If 12 B x Kt, P x B; 13 Q—R4 (if Kt—Kt5, Q—Kt3) Q—Kt3, 14 Kt—K5, Q—Kt4 followed by B—Kt3.

(5) P—R3, followed by P—Kt4 and P—Kt5 was worth trying.

(6) Black is now in a position where there is no really satisfactory course open, and it was probably a lost game at this point.

(7) If R—B5 then 28 R x R, QP x R (if Kt P x R; 29 P—K4 and White will gain a pawn) B—Kt7 and either the RP or the KtP is lost.

(8) R—B3 would at any rate have enabled Black to put up a fighting defence for the RP. As it is, the R fills the square that should be available for the B.

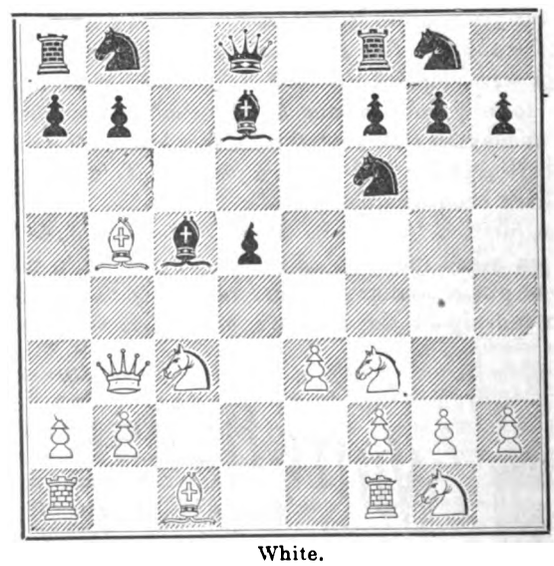
(9) It is interesting to note how the position of the Black King safeguards White's Kt P.

(10) Into the mating net.

(11) The finish is remarkably neat, the offer of the piece giving it quite a problem-like appearance.

Position after White's 10th move. Q—Kt3.

Black.



White.

CARO-KANN.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

It is eminently satisfactory to learn that the payment of coupons in arrear of the Roumanian Government bonds will very shortly be made. The announcement follows the conclusion of the mission to the British Government of M. Titulescu, the Roumanian Minister of Finance, as a result of which it is understood that a favourable settlement has been arrived at in regard to various Anglo-Roumanian financial matters. Roumania, it may be pointed out, has always been most punctilious in the discharge of her interest obligations, and, indeed, it was not until 1918 that the coupons were allowed to fall into arrear, the reason being, of course, the chaotic state into which the country had been reduced as a result of the German invasion. The resumption of the payments is a further indication that marked progress is being made in the work of reconstruction.

***

The question of compensation for the destruction of Roumania's oil wells to prevent their being utilised by the enemy was, no doubt, one of the questions which came up for settlement during M. Titulescu's visit. This question is, of course, one of special interest in view of the extensive British interests in the oilfields, the claims for compensation amounting in the aggregate to a very substantial amount.

***

There has been some uncertainty regarding the attitude of the Roumanian Government towards foreign interests in the oilfields. According to a correspondent of a contemporary, it is proposed to introduce a Bill shortly to regulate the export and home production of oil products. The export of oil will be subject to a tax not exceeding 20 per cent., which would be reduced should it be clear that it would prevent Roumanian oil from competing with foreign oil. As regards internal distribution it is understood that a new company will be formed for its regulation in which the share of producers will be 50 per cent., and that of the State and consumers 25 per cent. each.

***

The publication of "Currencies after the War" has now been followed by the issue by the League of Nations of a notable series of pamphlets embodying the material obtained from the various Governments as the result of a *questionnaire* asking for detailed information on the economic and financial situation of the world, together with the views of eminent economists on the position. The first series of these pamphlets contains statistics and other information on currency, public finance, and international trade, supplementing and bringing up to date the particulars given in "Currencies after the War." Other pamphlets which will shortly be issued will deal with such subjects as exchange control, coal production, the European transport situation, relief credits and the prevention of exports, and the schemes proposed for remedying present financial difficulties. The completion of the series will mean that for the first time there will be accessible in a comparative form details regarding the economic and commercial position of all the chief countries, in itself a most valuable achievement.

***

A considerable amount of criticism has been directed recently against the export credits scheme. It is true that the progress so far made has not been very great, only about £100,000 having been advanced out of the endowment of £26,000,000, but it must be remembered that conditions have been the reverse of favourable for the promotion of trade with some of the regions with which the scheme deals. There is also the very important fact that the business to be dealt with must consist in the main of transactions which are regarded as too hazardous by the banks. The method of doing business is for importers to deposit with approved banks sufficient currency to cover the cost of the goods, and in the event of the exchange for sterling falling to increase the deposit proportionately. That of itself must serve to check the operation of the scheme, for it follows that with the exchanges in their present condition, importers stand to suffer considerable losses as the result of violent fluctuations. Fortunately, the position is undoubtedly improving, and as the exchanges move towards parity, the tendency to take advantage of the scheme will grow.

***

Attention is drawn by our Belgrade Correspondent to Germany's endeavours to enter the Yugoslav market. In general the conditions are greatly in Germany's favour at the present time, the exchange in particular being an important factor, and it is evident from what our correspondent says that in Yugoslavia as in other markets Germany intends to profit as much as possible by her opportunity. Thus we are told that her agents are already at work, and that the circulars are arriving. But, however favourable present conditions may be for Teutonic enterprise, there is the obstacle of the remembrance of events since 1914 to be overcome, and it is not surprising that a not very cordial welcome should be awaiting the advance guard of Germany's commercial army in Yugoslavia. If Germany does obtain any measure of success it will merely be because Yugoslavia's requirements cannot be satisfied on reasonable terms in other quarters.

***

Further particulars are now available regarding the coming tractor trials in Egypt. The trials, which will be open to all classes of agricultural tractors and self-contained ploughs, will be held in two parts. The first test, which will take place at the end of January, will be ploughing of medium land for cotton in the Southern Delta, while the second, which will be held early in March, will be the ploughing of heavy land in the Northern Delta. The same machines may take part in both trials, but separate reports will be issued. These trials offer the British manufacturer a unique opportunity of entering the Egyptian market, and it may be hoped that there will be no hesitation to take advantage of it. It remains to add that firms whose machines are not already on the market and who are desirous of competing at these trials can obtain all assistance in the way of information and advice from H.M. Commercial Agent, the Residency, Cairo.

***

Manufacturers of agricultural and carpenters' tools will, I am informed, find an excellent opening at the present time in the Skoplje district of Yugoslavia, where there is a great shortage of these goods. Before the war the tools in question were principally obtained from Germany, but now British goods are desired, and, it is stated, are assured of preferential treatment by importers if only the prices are reasonable. Firms who desire to interest themselves in this particular market should send their catalogues to the British Vice-Consul, Skoplje (Uskub), Serbia.

***

I learn that a motor-car transport company is being formed in Fez by British subjects, with a working capital of £5,000, which is to be increased in the event of the company's activities proving successful. Firms interested should send catalogues and particulars to H.M. Consul, British Consulate, Fez.

# Commerce and Industry.

(Reports from Our Own Correspondents.)

## YUGOSLAVIA.

Belgrade, August 10.

**Germany and Yugoslavia.**

There has recently been a marked attempt on the part of Germany to get a foothold once more in this market. Our former enemies have much in their favour, especially a low rate of exchange, which enables them to sell beds to the Yugoslav Ministry of War at 400 marks apiece, which is a ridiculous rate compared with the price at which any British firm would have to sell. Besides this, they have the advantage of knowing the market thoroughly, and of being pushing and unscrupulous in their methods. Their agents are already at work, and their circulars are arriving. They are not, however, finding an altogether warm reception in Yugoslavia.

An association of German industrialists has recently applied to the Chamber of Commerce here with the suggestion that the Yugoslav Government should appoint a delegation in Berlin or some other industrial centre in Germany to facilitate the placing of orders in Germany for various machines, tools, and so on, and at the same time the Association promises to use its influence with its own Government to obtain facilities in transport and delivery, free from any demands for compensation articles. The Yugoslav Press do not welcome the idea. The *Politika* says that German merchants and manufacturers are to-day so demoralised that they are worse than Galician Jews, asserting that many orders have been placed by Yugoslavs in Germany, chiefly on account of the favourable rate of exchange, and in the hope of quick delivery, but though the goods have long since been paid for in advance no delivery has yet been effected.

**Miscellaneous.**

The Ministry of Agriculture is taking over the silk industry of Serbian Macedonia.

The Ministry of Public Works has approved a credit of 700,000 dinars for repairing the road from Ochrida to Bitolj (Monastir).

The Ministry of War has ordered 5,000 beds from Germany at 400 marks apiece.

## BULGARIA.

Sofia, July 31.

**Export of Maize**

The export of maize is proceeding very regularly through the port of Varna. Up to the present the Varna agency of the Consortium has despatched 1,132 tons by the s.s. Polinezia, 1,020 tons by the s.s. Scrivia, and 1,044 tons by the s.s. Tibet. A further consignment is now being shipped by the s.s. Mavritania. All these cargoes of maize are consigned to Italy to the Societa Granaria, which has contracted for 2,500 truck-loads of from 10 to 15 tons each.

The harvest is making it difficult to increase the transport of grain to the ports. For this reason there has been a certain diminution in the activities of the Consortium. The work of organising agricultural syndicates at the railway stations of the principal line is, however, proceeding successfully. Syndicates have already been established at the following stations:—Tcherven Breg, Telish, Dolni-Dubnik, Pleven, Pordim, Kamenetz, Levsky, Gornya-Orehovitza, Trumbesh, Strajitza, Pavlekiyny, Popovo, Provadia, Shumen, Varna, Kaspitehan, Esky-Djumaya, Burgas, Aitos, Haskovo, Nova-Zagora, Stara-Zagora, Yambol, Tatar-Pazardjik, Kustendil, Bela Razgrad, Lom, Orehovo, Somovit-Preslav, Krumovo, Bela-Slatina, and Svishtov.

The high prices of grains continue, and there is no likelihood of their falling owing to the harvest outlook in Europe and America. The time limit for the export of cereals has been extended.

**Production of Cereals.**

According to the official bulletin of the Ministry of Agriculture, the yield of last year's harvest was as follows:—

| | Area. (Hectares.) | | Production. (Tons). |
|---|---|---|---|
| Wheat | 841,717 | ..... | 926,112 |
| Rye | 180,406 | ..... | 164,860 |
| Mixed | 86,519 | ..... | 94,541 |
| Barley | 191,694 | ..... | 225,809 |
| Oats | 122,016 | ..... | 107,226 |
| Spelt | 7,449 | ..... | 7,523 |
| Millet | 13,587 | ..... | 13,847 |
| Maize | 563,448 | ..... | 985,296 |
| Rice | 1,779 | ..... | 2,396 |
| Buckwheat | 26 | ..... | 4·5 |
| Totals | 2,003,641 | ..... | 2,527,614 |

It is estimated that the present harvest will show a 30 per cent. increase, so that the total production of cereals should amount to about 3,286,000 tons. For internal consumption and seed 1,905,000 tons are required, so that there would remain a surplus for export of about 1,381,000 tons.

**Coal Strike.**

A strike was declared two days ago by the engineers at the Pernik coalfields. The strike is due to difficulties that have arisen between the engineers and the Ministry of Labour.

**Czecho-Slovak Delegation.**

The negotiations between the Czecho-Slovak delegates and the authorities for the development of trade relations between Czecho-Slovakia and Bulgaria having been brought to a successful issue, the delegation is to-night entertaining at a banquet the Bulgarian delegates and some of the Ministers.

**Communication with Western Thrace.**

Railway communications between Bulgaria and Western Thrace were resumed to-day, when the first train was despatched from Slivengrad (Mustapha Pasha).

## ROUMANIA.

Bucharest.

**Bread Control.**

Owing to a shortage, the sale of wheat flour is still under the control of the State, and new regulations have been issued which came into force on August 1. According to these dispositions only three grades of flour may be prepared, and in the following proportion:—10 per cent. of pastry flour at 8 lei per kilogram, 25 per cent. of first quality flour at 2.25 lei per kilogram, 40 per cent. of second quality flour at 0.34 lei per kilogram, 25 per cent. of bran shall be separated and sold at 0.25 lei per kilogram. The price for pastries and milk bread is apparently not fixed, but the prices of first and second quality loaves are respectively 2.25 and .75 lei per kilogram.

It is claimed that the cost of a 1-kg. loaf of first quality is 2.18 lei, and from the difference of 7 bani between this and the selling price 5 bani per kilogram of flour is to be paid to the Food Commission, and supervision is to be exercised by this body in all flour mills. Punishment for infringement of the law is a fine of 10,000 lei for the first offence, and 50,000 for subsequent ones. These regulations have been in force for four days, and the immediate result has been a shortage of bread, as the bakers are dissatisfied with the profits allowed them, and many refuse to bake anything but the pastries and the fine milk bread, which they have raised considerably in price. The chief sufferers are as usual the poorer classes, who have the greatest difficulty in obtaining bread.

## PALESTINE.

Jerusalem, July 25.

**Statistics of Live Stock.**

A recent census of certain animals shows the following figures for Palestine:—Sheep, 262,000, an increase of over 60,000 as compared with last year; goats, 271,750, a decrease of 40,000; camels, 9,000, a decrease of 5,500; buffaloes, 620,

an increase of 120. While the figures for sheep and goats are satisfactory (since goats are not to be encouraged), it may be said that there would probably have been a much larger increase in the number of sheep had it not been for the excessive prices of fodder and the exceptionally severe cold and storms of last winter, which did so much harm to flocks here, and also in Syria, Asia Minor, and Cyprus. Experiments in cross-breeding in sheep should be of much interest and advantage in the future.

Wheat, barley, maize, and cotton-seed may now be imported free of Custom duty, provided that the consignees must furnish certificates, and guarantors, that any seed so imported will be used for sowing only, and not sold to the public. The penalty is an imposition of double duty.

## GURIA: A LITTLE-KNOWN REGION.

### OIL POTENTIALITIES.

(From a Correspondent.)

In the Western Caucasus, in the district at the back of Batoum and Poti, there is a little-known country called Guria. It was once an independent principality, absorbed into Russia about a hundred years ago. It has been little visited by foreigners, and the natives are suspicious of visitors, and, they say, the Tsar's writ did not run far from the main road to Osurgethi, the chief town, or from the railway line from Tiflis to Batoum, which skirts the edge of the former principality. The Gurians are a branch of the Kartheli or Georgians, and to-day form an integral portion of the Georgian Republic. They are tall and slim, active and lithe in their movements, of fiery temperament but lazy disposition; the men are well built and fine, the women often very handsome. They are mostly swarthy of complexion; frequently with a bronze glow in the hair like burnished copper. They wear the usual Caucasian costume, but prefer the *bashlyk* to the *papakha*; they do not wear it as a turban, as the Turks do, nor, except in full dress, as a university hood, as do the wearers of the *papakha*, but either as a loose Capucine hood in very sunny or wet weather, or else tied round the head with the tails sticking out at a rakish angle: there is a great art in doing this, and there are several recognised methods, though every man, especially the dandies, has his own favourite way. Instead of the rather clumsy, though very becoming, long flowing *cherkess*, they frequently wear a black or dark brown shirt, with a sash round the waist.

Guria is a hilly country, but not mountainous, the greatest altitude being about 500 feet: it consists of a series of small anticlines of Oligocene and Upper Miocene marls and soft sandstones. The climate is warm and moist and the soil productive; but the indolence of the people is an obstacle to its proper development. A French syndicate, a year or two before the war, approached a large landowner with a view to renting a portion of his estate. The landowner welcomed the Frenchmen, offering them very favourable terms. But the people would have none of it: they feared a competitive element which might compel them to work harder or deprive them of some of the extensive area available, which enabled them to farm with a minimum of labour, and they compelled the proprietor to decline the tempting offer.

Life is still primitive in Guria: it is a land of splendid forests of azaleas and rhododendrons, where luscious fruits grow wild and neglected: it is a land where the carts still have solid wheels, as they probably did in the days of Noah: it is a land where bread (only made from maize) is eaten hot, of a weight that would make an ostrich hesitate. The favourite delicacy is a piece of white goat's-milk cheese cut into a finger, which is stuffed into a hole in the hot bread and withdrawn when of the consistency of india-rubber and of a not very dissimilar flavour. Meat is rarely eaten. Wine is thin and poor; the local spirit is made from honey, and is strong and not unpleasant at first, but quickly palling. Yet with all these drawbacks the people have much charm, and the traveller who arrives with credentials is received with cordial hospitality and friendly smiles.

The hope of the country may be summed up in the word oil. Tradition associates the region with Prometheus. Here it was he gave the priceless gift of fire to mankind, while it was on the towering crags of Mt. Elbruz, not far away, where he was bound to make the eagles' daily supper. The marls and sandstones are impregnated with oil: the drinking water tastes of oil: if you scratch the sandy banks of the brooks black oil oozes out. Many years ago an enterprising Belgian syndicate bored for oil here and struck promising results: they promptly sold their interests to a group from Baku, who bought them out to prevent the development of a possible rival and stopped further exploration: to this day bitumen exudes from the old hole and provides a minor local industry. Several years later a British syndicate approached the landowners, who are here proprietors also of the mineral rights, secured concessions, and began to bore. The work was well managed: one hole struck oil in substantial quantities and showed every promise of success: another was down to a depth of several hundred feet, and a third plant was on the way, when the war broke out and business came to a standstill.

The recognition by the British Government of the Georgian Republic and the reopening of free communication with Batoum has once more brought this oilfield within the range of practical politics. The geological conditions are far more favourable than at Maikop, where the oil occurs in lenticular masses of porous sandstone, which are buried beneath horizontal beds of marls and clays, so that they can only be found by boring on chance, by groping blindly, that is to say; and this is the explanation of the wild gambling that occurred during the Maikop boom. One lucky boring was enough to encourage a host of speculators and explorers, but science could do little to advise the prospector, as there were no indications on the surface to show where the lenticles lay buried. But in Guria we have a totally different structure: the series of anticlines and synclines are very clearly marked, and the exploring company has very wisely expended a substantial outlay on a thorough geological survey, which has been admirably carried out by two competent geologists, who have thus been able to direct the explorers in their search for a site and to indicate places where chances are favourable, and to avoid those where a negative result is to be expected. The war has shown the disadvantages of the remoteness of the Baku oilfield, and even in the piping times of peace the Grozny field was not exactly a safe resort owing to its proximity to the fastnesses of the Chechents and other wild tribes. One chieftain from the mountains was hunted by the Russian authorities for years with a price on his head, but he defied them to the end, and cheated them even in death. He raided Grozny from time to time, murdered officials, and looted stores and motors. In Guria the population look forward to the development of the oilfield, which will bring them prosperity, and during the dark days of isolation did much to preserve the plant from ruin. The place is of easy access from the Black Sea, and is a very promising field for development.

### OIL OUTPUTS.

Anglo-Egyptian.—Hurgada production for the week ended August 6, 2,675 tons (last week, 2,441 tons).

British Burmah.—Total production of crude oil by this company and the Rangoon Oil Company amounted to 62,230 barrels for month of July.

# INDIA'S COAL RESOURCES.—II.*

By JOHN KIRSOPP, M.I.M.E., F.G.S.

The Indian fields may firstly be divided into two broad categories, viz. :—

1. The Gondwana fields, the coal of which occurs in the lower portion of the Gondwana system, and is approximately of permo-carboniferous age.

2. The Tertiary fields, the coal of which is of Eocene or Miocene age. Under this heading may be also grouped a few small and unexploited fields belonging to the Cretaceous and others the Jurassic age.

The Gondwana fields are by far the most important, contributing over 96 per cent. of the total Indian output. Originally they must have covered a very much wider area, but owing to the free action of weathering agents, they have been very largely cut into or denuded, and now form but a fraction of those that once existed, being preserved as small patches let down mostly by faulting into the great crystalline mass of the peninsula. Isolated patches of coal-bearing rocks have been involved in the folder extra-peninsula area in the Darjhiling district and in Northern Assam. The string of patches determining the direction of the river Damuda includes, however, the most valuable deposits of coal, as also the valleys of the Mahanadi and Godavari rivers on the eastern side of India, the Mahadoe and Galpura ranges on the western, and also under the great basic flow known as the Rajmahal trap in the Rajmahal hills of Bihar.

The Gondwana system may be classified into two sub-divisions, Upper and Lower, but it is only in the Lower that coal seams of importance have been found. This is again divided into three series: (1) Panchel; (2) Damuda (Raniganj stage, ironstone shales, Barrakur stage); and (3) Tatchir.

The Damuda series is the only important one from an economic point of view, and supplies all the Gondwana coal that is being exploited. The principal coal fields are found in the following provinces; Bengal, Bihar and Orissa (the most important known as the Giridh, Raniganj and Jharia fields), Central India, the Central Provinces, and Hyderabad.

The chief fields, arranged according to provinces, are:—Bengal—(1) Raniganj (in part); Bihar and Orissa, (2) Giridih, (1a) Raniganj (in part), (3) Jharia, (4) Bokaro, (5) Karanpuro, (6) Auranga-Hutar, (7) Daltonganj, (8) Rajmahal, (9) Darjeeling, (10) Talchir; Central India—(11) Umaria, (12) Sohagpur, (13) Singrauli; Central Provinces—(14) Ihilmili and other fields of the Sirguja and Chattisgarh basin, (15) Mohpani, Pench, Shahpur (Salpura basin), (16) Ballapur and other fields of the Wardha valley and Godavari basin; Nizam's Dominions—Singareni.

Of these the first ten lie within the limits of the old frontiers of Bengal, and have long been known collectively as the "Bengal coalfields." As a result of the territorial redistribution of 1912 most of the coalfields were transferred to the new province of Bihar and Orissa. Up to the present time only three of these fields have been developed to any appreciable extent, these being the Raniganj, Giridh, and Jharia fields.

At the end of 1918, in the province of Bengal, six small mines were operating in the Bankura and Birbhum districts of the Raniganj field, and in the Burdwan district of this field there were 193 operating mines, the output from the entire field aggregating 4,471,005 tons of steam coal and 903,858 tons of slack, 4,549 tons of hard and 23,197 tons of soft coke being made, compared with a total of 4,649,852 tons for the year 1913.

The average analyses of the Bengal coals may be taken as follows:—

(*a*) Raniganj upper seams:—moisture, 6.81 per cent.; volatile matter, 32.19 per cent.; fixed carbon, 44.76 per cent.; ash, 16.24 per cent; calorific value (estimated), 5,870 calories.

(*b*) Raniganj lower seams:—moisture, 3.76 per cent.; volatile matter, 31.57 per cent.; fixed carbon, 49.68 per cent.; ash, 15.05 per cent.; calorific value (estimated), 6,417 calories.

(*c*) Burrakur seas:—moisture, 1.06 per cent.; volatile matter, 25.96 per cent.; fixed carbon, 56.22 per cent.; ash, 16.76 per cent.; calorific value (calculated), 6,915 calories.

The Raniganj coalfield covers an area of about 500 square miles. The best seams are known as the Dishargarh, Sancloria, and Sibpur, probably comprising about 518 million tons of first class coal, containing carbon, 75 to 90 per cent.; volatile matter, 12 to 15 per cent.; and a calorific value of 7,700 to 8,800 calories. Three other seams of not quite such good quality are estimated to contain 360 million tons, and the total supply of the field is placed at about twenty thousand million tons. Much of this, however, is of poor quality, and falls into the category of "second class" coal.

At the end of 1918, in the district of Sonthal Parganas, there were six working mines in the Raniganj field, yielding a total output of 9,317 tons for the year, whilst in the Jainty field four mines were operating, having a total output of 137,464 tons. The total yield from these two fields amounted to 136,933 tons of steam coal and 11,781 tons of slack, compared with a total of 5,400 metric tons for 1913.

The Jharia coalfield covers an area of 150 square miles, consisting chiefly of beds of the Runekin stage, in which there are 18 coal seams. The seams of the Raniganj field are comparatively thinner and of poorer quality, although there is one seam of value. Of the Burrakur seams the nine lowest are of inferior quality. It is estimated that about 500 tons of "first class" coal is available in this field, whilst the quality of "second class" coal is very large, being comparable to that available in the Raniganj field.

*The first article of this series appeared on July 1.

At the end of 1918 in the Manbhum district there were 324 working mines in the Jharia field aggregating a total output of 10,761,848 tons, and 86 mines operating in the Raniganj field with a total output of 1,056,907 tons. The total yield from these two fields amounted to 10,248,394 tons steam and 1,959,487 tons slack, compared with a total production of 8,681,087 metric tons for the year 1913. 136,008 tons of hard coke and 212,008 tons of soft were produced in 1918.

The Giridh coalfield is a small one, covering only 11 square miles, but much of the coal produced is of excellent quality. Of the seams the upper group (the Hill seams), only yield an inferior fuel, but the lower (the Karharbari seams), yield a first class coal, 9 to 21 feet in thickness, and covering an area of 2¾ square miles calculated to contain a reserve of thirty millions tons of coal. Large quantities of coal in both groups have been completely destroyed by igneous dykes, but the Hill seams are believed to contain an additional eight million tons worth extracting.

In the Hazaribagh district, at the end of 1918, in the Bokaro-Ramgarh coalfield, twelve working mines yielded 541,422 tons for year, ten mines operating in the Giridih field gave 846,592 tons, and five in the Jharia field 189,212 tons, a total of 1,567,226 tons, of which 1,233,789 tons was steam, compared with a total of 811,752 tons produced in 1913. In 1918, 45,284 tons of hard coke and 5,064 tons soft were produced.

## RAILWAYS IN THE RED SEA REGION.

### New Schemes Outlined.

The Aden, Red Sea, commercial district, which includes the Arabian Red Sea Provinces of lower Hedjaz, Asir, and Yemen, and Gulf of Aden territory, on the Asiatic side, and Eritrea, Abyssinia, and the Somalilands, on the African side, is very poor in railways, says the American Consul at Aden, Mr. Addison Southard, in a recent report. The approximate area of this district is 850,000 square miles, and the population is estimated at from 12,000,000 to 15,000,000. The entire territory has considerably less than a thousand miles of railways.

**Franco-Ethiopian Railway.**

The railway which runs from Jibuti, on the Gulf of Aden, to Adis Abeba, the capital of Abyssinia, is the oldest and longest in the district. It was begun in 1897, but was not completed until 1916. The engineering difficulties encountered were not great, but the financing of the project caused the long delay in its completion. According to figures available, the steepest gradient is 1 in 140, and its sharpest curve 164 yards radius. The length of this railroad is about 487½ miles, nearly one-half of which is through desert or semi-desert country. Somewhat less than the last half passes through fertile country of considerable agricultural and grazing value. The trip from Jibuti to Adis Abeba is made in three one-day stages.

The Franco-Ethiopian Railway is of metre gauge (39.37 inches). The ties or sleepers are of steel and, together with the rolling stock, are of French make. The locomotives and passenger coaches are small and most of the freight wagons are of from 10 to 20 metric tons capacity. Open wagons are much used for the moving of freight on the Jibuti half of the road, as there is very little rainfall. Coal and wood are used for fuel. The present equipment is old, and much of it will soon need to be replaced. The operating company is known as the Compagnie du Chemin de Fer Franco-Ethiopian.

**Massowah-Asmara Railway.**

The second railway built in this district was the one running from the Red Sea port of Massowah to Asmara, on the plateau of the Italian colony of Eritrea, a distance of about 80 miles. It was begun in 1900 by military forces of the Italian Government, and was completed in 1911. Beginning on the coastal plain, it runs for some miles through desert country, then rising through the rocky and semi-barren foothills to the mountains of the main plateau, which it ascends to Asmara, the capital of the colony, about 7,500 feet above sea level. Considerable engineering difficulties attended the building of this 90-centimetre gauge (35.43 inches) railway. From the foothills the gradient is, for most of the way, 1:28 or 1:29. There are a number of sharp curves, bridges, viaducts, and tunnels. There are in all 29 tunnels, of which the longest is nearly 900 yards in length. The journey by train is made in six hours, and some remarkable scenic effects are offered.

This road is owned and operated by the government of the Italian colony of Eritrea. It is well ballasted, and the ties or sleepers are steel. The equipment is well taken care of, but has been in use for some years, and much of it will soon need replacement. Coal is the usual fuel, but owing to its shortage wood has been used to some extent.

**Railway to Abyssinian Potash Mine.**

From the little Red Sea port of Mersa Fatimari, about 70 miles south of the port of Massowah, there has been built a light narrow-gauge railway of the Decauville type. This road has a length of about 46 miles over desert country and reaches the Abyssinian frontier. It was built, and is used, for the hauling of potash salts from a deposit which is in the Asale salt plains, about 10 miles beyond the terminus. Originally small steam locomotives were used, but owing to the scarcity of water this was found to be very expensive and almost impracticable. Motor trucks were fitted to the rails, and about 16 of them are now used by the company working the potash deposits. This company is known as the Societa Mineraria Coloniale. The potash railway runs over desert plains, and no engineering difficulties had to be overcome in constructing it. Keeping the tracks clear of drifting sands is sometimes a problem during the seasons when the hot winds are strongest.

**Aden-Lahej Railway.**

The Aden-Lahej Railway was begun in 1915 by British military forces operating from Aden against Turkish forces on the Arabian mainland. It was built through to Lahej, about 25 miles from Aden, in 1918-19, and has now been extended a few miles beyond that desert oasis. The gauge is 1 metre (39.37 inches). The equipment was originally used on the Bombay, Baroda & Central India Railway in British India; it is old and must soon be replaced to insure efficient operation. This is a Government-owned military road, but when not required for military use is available for the transportation of commercial products.

**Lines Projected or Being Constructed.**

In addition to those already discussed, there is nearing completion a railway from Asmara to Keren in the Italian colony of Eritrea. It runs north from Asmara, a distance of 105 kilometres (65.24 miles), and may be opened for traffic during the present year. Its purpose is to connect the Red Sea port of Massowah, via Asmara, with the commercial caravan routes converging on Keren from the Sudan and the potentially rich Barca River district of Eritrea.

Italian railways are proposed from Asmara south via Adi Caieh, or Adi Quala, into Abyssinia; and from Keren via Agordat, Elaghim, and Gondar, in Abyssinia, to Adis Abeba; but their actual construction is still a matter for future consideration. They will be important in the opening up of the very rich districts of the Abyssinian Eritrean Plateau, which is well watered and fertile, and there would seem to be no doubt as to their eventual construction.

A project for building a railway, distance under 300 miles, from the port of Assab across the waterless Danakil desert to the productive Abyssinian plateau near Dessie has been considered by the Italian Colonial Government. This would be less expensive to construct than others projected within the colony of Eritrea, and would incidentally open a potentially very rich commercial field which would offer skins, hides, and other raw products for export, and would take considerable quantities of general hardware and kerosene, and of such simple manufactures as unbleached cotton piece goods and yarn.

There has also been considered the extension of the Franco-Ethiopian Railway, by French interests, from Adis Abeba southwest to Gambela on the Sobat River, a distance of about 400 miles. Here there is in the rainy season steamboat connection with Khartoum via the Sobat and White Nile Rivers, a distance of about 900 miles. This road would open up very rich and important commercial territory, but the approximately 400-mile route across mountainous country would make construction expensive and entail considerable engineering difficulties.

Other railway schemes for opening up the rich territory of Abyssinia are roads from Adis Abeba south through Italian Somaliland to the Indian Ocean port of Itala in that territory (by Italian interests), and from Dire-Dawa, a station on the present Franco-Ethiopian Railway, to Harrar in Abyssinia (by French interests), with a possible extension eastward to the port of Zeila in British Somaliland (by British interests). This latter scheme will possibly be the first to receive active or definite consideration.

On the Asiatic side of the Red Sea there is the projected railway from port of Hodeida to Sanaa, the capital of Yemen Province. Several years ago this railway was actually surveyed and construction begun by a syndicate formed in Paris. Five or six miles of single metre gauge track were put down and some thousands of tons of material for further construction landed near Hodeida. The war between Italy and Turkey in 1912 interfered; and the European war, following shortly, prevented further progress. The material lies rusting on the beach. When the political status of the Arabian Red Sea coast has been decided, and conditions approach normal, it is possible that this important project will be revived, presumably by British interests. For the first 40 or 50 miles the track would run across lowland, and construction would not be too difficult or expensive. For the remaining distance of approximately 100 miles to Sanaa it would have to be built through the foothills and difficult mountains, rising to Sanaa, on the Yemen Plateau, some 7,000 or 8,000 feet above sea level. Such a road would open up a very rich, well-watered, inland plateau, which could feed the desert coastal plains with its agricultural products, and which would offer greatly increased supplies of the famous Mocha coffee, skins, hides, and other raw products for export to world markets through the port of Hodeida.

## CROP CONDITIONS IN TRANSYLVANIA.

The area under cultivation in Transylvania and the Roumanian Banat is below that of normal years, a fact partly due to the scarcity of draught animals and agricultural machinery, and the migration to towns and industrial centres of field workers (says H.M. Consul at Cluj in a recent report). With regard to the harvest, the prospects of winter-sown grain were greatly improved by good rains in May, and field work which had been hampered was resumed under more favourable conditions. Spring sowing is now finished and the grain, especially maize, is said to be coming up very well. Fodder is also satisfactory. On the whole a good average crop may be expected. There have been no hailstorms or late frosts, which so often damage the fruit crops in Transylvania, and the vines are also reported to be doing well.

According to a recent report published in the local press, the area sown last autumn in Transylvania was as follows:—Maize, 598,220 hectares; rye, 68,380 hectares; barley, 23,791 hectares; rape, 1,122 hectares.

The prospects of the tobacco crop are also good. The area under cultivation has increased from 3,000 hectares in 1919 to 4,500 hectares in 1920, and this year's production is estimated at 4,500 to 5,000 tons. This is about 20 per cent. of the estimated yield for the whole country. The requirements of Greater Roumania being roughly 15,000 tons, it is expected that about 10,000 tons will be available for export. Hungarian leaf tobacco and Turkish "yaca" tobacco are grown for the first time in this district this year.

The cultivation of potatoes has increased considerably of late years, and a company with a capital of 20 million kronen has been formed in Sibiu for the manufacture of starch, syrup, sugar, etc., from potatoes.

Fifteen thousand wagons of Roumanian maize, oats, and millet are to be set aside for export out of this and last year's crops, and in exchange it is proposed to import agricultural machinery, agricultural implements, cotton and linen. It is understood that those peasants who have sown more than one hectare this year will be supplied with these necessaries at cost price.

It is estimated that about 10,000 tons of tobacco will be available for export from Roumania this season.

The prohibition on the importation of cinematograph films into Yugoslavia has been withdrawn.

## GENERAL BANK OF GREECE.

*Paid-up Capital, Drs. 3,000,000.*

**Head Office - ATHENS.**

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

## POPULAR BANK OF GREECE.

**Head Office, ATHENS. Branch, PIRÆUS.**

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

**CAPITAL - Drs. 1,500,000.**
**RESERVE FUND - Drs. 2,500,000.**
**Deposits and Credit Accounts, Drs. 100,000,000.**

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

*General Manager:* D. LOVERDO.

## TRADE WITH THE NEAR EAST

WITH its offices in all the principal towns in **Greece, in Egypt, Cyprus, Crete, Constantinople,** and in **Smyrna, the Bank extends exceptional Facilities for Export and Import Trade between Great Britain and the Near East generally,** and invites enquiries and correspondence relating thereto.

HEAD OFFICE: ATHENS.

## BANK OF ATHENS

LONDON 22, Fenchurch Street E.C.3. MANCHESTER 57, Mosley Street

## COMMERCIAL BANK OF GREECE, LIMITED.

**CAPITAL PAID-UP - Drs. 15,000,000.**
**RESERVE FUNDS Drs. 2,845,010.45.**

**Head Office: ATHENS.**

*Branches:*—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostitza (Ægion), Nauplia, Larissa.**

**AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.**

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 31·50 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10 % primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

*Branches:*

PIRÆUS, SYRA. PATRAS.

**Capital Paid Up - Drs. 10,000,000.**

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

*President.* L. EMBIRICOS. *Manager.* D. MIAOULIS.

## THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE.)

**Head Office - PIRÆUS.**

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

**REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.**

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

*Cable Address—Navigation Palios.*

*Codes used—Scott's (1905) 10th Edition; A.B.C. (1901) 5th Edition.*

## MARITIME BANK of GREECE

**AUTHORISED CAPITAL FULLY PAID DR. 10,000,000.**

Founder—A. P. PALIOS.

**Head Office: PIRÆUS, GREECE.**

Cable Address: "Maritime Bank."

Codes Used.

## ENGINEERING.

### An Efficient Tractor.

A tractor which drives on all three wheels has recently been brought to my notice, and so far as I can judge without actually seeing the machine at work it is likely to prove highly efficient. It is original in design, and I hear that the makers have received an offer to take supplies of these to the value of one million pounds sterling as soon as they can be produced.

The tractor is an entirely different proposition from others on the market, and is typically British in the entire originality of its design. It seems as though it should be one of the best types of tractor for hilly country, as, amongst a number of other good points, it has a very low centre of gravity. I suppose to some extent the machine is an outcome of the experience of working American tractors in England and Scotland. At the same time, it is something of a revolution in tractor building, and as such it is of interest to note that it did remarkably well at the recent tractor trials. It was never in difficulties, and looked as if it could be seen to greater advantage under much more trying tests.

In regard to the advantages of a three-wheel drive, it is pointed out that tractor wheels, when not driven, press down into the soil only, and use up power in so doing. If a tractor is driven by the back wheels only, the reactions due to driving the tractor tend to raise the front end. In the same way, if the front wheels are driven, these reactions tend to raise the back part of the machine. Only when all wheels drive can the tractor remain stable when pulling heavily. If the tractor is fitted with a differential the pull on the draw-bar is only twice the wheel effort of the slipping wheel. In certain cases this may only be 60 per cent. of the grip on the other wheel; therefore the draw-bar pull can fall, when most required, to 60 per cent. of the rated horse-power at the draw-bar. From this it is argued that the ideal tractor must have all three wheels driven, and be designed so as to work without a differential.

The tractor in question weighs 4,200 lb., and is driven by a four-cylinder engine of 4⅛ by 5¼ bore and stroke. It is rated at about 27 brake horse-power, and can be fitted for use with either petrol or paraffin. The oiling system is a combination of forced feed and splash lubrication, and the tank has a capacity of 14 gallons. The wheel-base is 6 ft. 3 ins.; total width, 5 ft.; total height, 4 ft. 10 ins.; and total length, 11 ft. The front wheels are 3 ft. 3 ins. by 9 ins. face, and the back wheel 3ft. 3 ins. by 12 ins. face. The engine is, of course, water-cooled, and the radiator, which is of the gilled tube type, is of 8 gallons capacity. The ignition is by high-tension magneto, and the reduction gears are of chrome nickel-steel, hardened, heat treated, and accurately ground. The speeds are 5 miles per hour on top, 2½ miles per hour on low, and 2¾ miles per hour on reverse. Altogether this tractor seems to be a thoroughly sound engineering proposition.

### Car Lighting.

Now that the summer is well advanced, car owners are beginning to turn their attention to the subject of lighting, and many who have hitherto been content with gas sets are now deciding to have an electric lighting or a combined electric lighting and starting set fitted where possible. It is not a difficult matter to instal one of these, but the starting presents rather more difficulty than does that of lighting alone. In most cars there is ample room for a lighting dynamo and a small storage battery, and the main question for consideration is not so much the actual fixing but the matter of driving.

### The Dynamo.

Naturally, the position of the dynamo will vary with the different makes of car, but it should be placed so as to get as direct a drive as possible, and, further, it should be well protected from the weather, from road dirt, and from oil and grease. The best place to arrange a drive is, of course, off the clutch shaft between the clutch and the gear-box, or under the bonnet. If it is not possible to fix the generator in that position, it may be driven off the cardan shaft as near to the foot-brake drum as can be arranged. If any other method of driving can be adopted, however, it would be as well to avoid driving from the cardan shaft, especially if the car has a heavy body, as there is always a certain amount of movement, or "whip," about the chassis, which would put undue strain on the belt, which might break in consequence. It is advisable to keep the dynamo as far away from the exhaust pipe and silencer as possible, as the majority of car-lighting dynamos are built within a fair margin of their capacity, and it is consequently advisable to keep them as cool as possible.

Something may be said here as to the kind of belt to be used, and whilst the writer prefers leather it goes without saying that the old-fashioned flat belt should not be used, as not only is it inconvenient as regards size, and liable to slip, but it collects dust and dirt, and wears the pulleys badly. The V-type leather link belt should be used, although fairly good results can be obtained from round belting if the other is unobtainable. A ⅝-inch leather link belt is most usually employed, although one of slightly larger size may be used if space permits. The best link belts are those of the built-up type, with which fasteners are not required. Belt fasteners are seldom a success in dynamo driving, as owing to the small size of the dynamo pulley the fasteners are constantly breaking.

It goes without saying that the dynamo and driving pulleys should be in perfect alignment, the alignment being taken from the centre to centre of the V-grooves of the pulleys. If out of truth to even a small extent the belt will wear badly, and the pulleys soon require renewing.

The gear ratio to be employed between the engine and the dynamo will vary slightly with the different engine speeds, but according to the Rotax Motor Accessories Co., Ltd., who have made a special study of car lighting and the building of car-lighting dynamos for many years, 2 to 1 will generally be found satisfactory; that is, the dynamo should be running at about twice the engine speed. Many car-lighting dynamos will commence charging the battery at about 700 revolutions per minute, and attain their rated output at about 1,700. What should be done in this matter is to ascertain first the revolutions at which the dynamo will give its rated output; then ascertain the speed of the shaft on which the driven pulley is to be placed, taking this speed at the average normal running speed of the car, and calculate out the necessary diameters of the pulleys accordingly.

### Power Alcohol.

In engineering circles generally the memorandum issued by the Fuel Research Board, which is considering the whole question of fuel for use in connection with internal combustion engines, under the auspices of the Department of Scientific and Industrial Research, has been received with some degree of amusement. It would seem as though the committee had carefully avoided going into any but the most orthodox and old-fashioned suggestions for producing power alcohol; had judged these wanting, and then had

immediately rushed out a report to say that in their opinion nothing could be done in the matter.

One or two writers on the subject have been content to take the findings of the board as final, and recently one definitely stated that power alcohol was an imaginary fuel . . . neither practical nor possible. As a matter of fact, it is a very practical and possible fuel that has been used for internal combustion work in certain other countries for many years, either alone or in combination with benzol, petrol, or paraffin. It is argued that power alcohol, made from barley, would cost for raw material alone about 7s. per gallon. If potatoes were used the cost would be about 8s. 6d., while in the case of mangolds the cost would be 3s. Obviously, very considerable acreages would be required to grow the crops, and for a production of 250,000,000 gallons (the estimated consumption of petrol in the United Kingdom this year) it would be necessary to put 5,593,293 acres under barley, 2,118.64 acres under potatoes, and 1,282,513 acres under mangolds.

This is all very much beside the point. No engineer would propose to grow barley or mangolds for distillation. On the other hand, he would produce his alcohol from other starch-containing vegetation; from the waste lye of paper and pulp mills; from the Indian bassia flowers; from calcium carbide; and from a host of other readily available and cheap materials.

**Car Lighting Accumulators.**

In the majority of instances the accumulator set accompanying a car-lighting outfit is sent out by the makers or suppliers in a dry state, in which case the requisite quantity of dilute sulphuric acid must be added. If the cells, on the other hand, have been sent out filled with acid and charged, they should, on receipt, be carefully cleaned and the brass terminals coated with vaseline. Any acid that may have been spilled in transit should be replaced, and care should be taken in this event to use acid diluted to the correct specific gravity, which is 1.200. The acid used is the finest sulphuric, known in the trade as "brimstone acid," and this is diluted to the required degree with pure distilled water. If the cells are sent out dry they must be filled to the correct height with this acid, and careful attention must be given to the first charge, otherwise trouble will be certain to ensue.

The battery, for the first charge, must be filled and the charging commenced at once at the rate given on the instruction label or card which is always sent out by makers with the battery. This first charge must be continued for twenty-four hours without any break, and no current must be drawn from the cell on any account until the charging is completed. This will be known by reason of the cells being in a state of fairly violent effervescence, gas being given off in fine bubbles. The positive plates will by that time have turned to a fine chocolate-brown colour, and the negative plates to a clean slate-grey. At full charge each separate cell should give from 2.25 to 2.5 volts, or where they are arranged in 4-volt units, from 4.5 to 5 volts. If the specific gravity of any cell is above 1.215 when tested with the hydrometer, fresh dilute acid should be added to bring the figure to the correct degree. On the other hand, as the Rotax Manufacturing Co., Ltd., point out in their excellent little descriptive pamphlet dealing with their lighting sets, if any cell has not risen to 1.215 specific gravity, on no account should stronger acid be added. Subsequent charging will bring the cell up to the proper reading in due course. The level of the acid, by the way, should not reach higher than a quarter of an inch above the plates.

Undercharging will cause the acid to decrease in density gradually, and the positive plates may then become coated in patches with a white deposit known as sulphate. This can be broken down in the early stages by charging the cells fully, but if it is allowed to continue to form the plates will commence to deteriorate, and will ultimately go to pieces.

The cells should never, in the case of the usual 12-volt battery, be drawn upon until the voltage given registers below 11 volts, the reading being taken with all lamps alight. The cell must never be allowed to stand in a discharged condition, and the battery should never be allowed to give off its energy quickly, or otherwise than through the lamps or the starting motor, as otherwise the strain will cause the plates to buckle or bend, doing them serious and perhaps irreparable injury. Any corrosion that may be found to be taking place on the brass terminals should be thoroughly cleaned off as soon as it is noticed, and the metal parts coated with vaseline. Only pure water should be added to any cell that has lost part of its contents through evaporation, but spilt acid should be replaced by acid of approximately the same specific gravity as that in the cell.

**Non-Porous Container.**
