As a result of a good many years of strenuous work in the laboratory and the drawing office, in which use has had to be made of a great deal of highly specialised chemical and metallurgical knowledge, I understand that a perfectly non-porous metal container for use in electric salt-bath furnaces has now been designed and placed on the market. This new device permits of a very wide range of control for the furnace, and the operation is as simple as could be imagined. The new type of metal pots are replaced simply by lifting up the furnace and removing the pot, a matter of only a second or two. The firm who have introduced this device have also brought out a new range of electric furnaces, which I hope to be able to describe shortly. I am informed that by use of these furnaces and the new non-porous container, where electrical energy is obtainable at a cost of one penny per unit, a ton of small steel tools can be hardened or otherwise heat-treated for about £2 5s. or less. I understand that the use of metal pots of this description constitutes an entirely new departure in electric furnace practice.

**A Touring Machine.**

One of the highest class touring planes I have yet had the pleasure of inspecting is the three-seater model, Bristol "Puma," which is intended for use as a high-speed, cross-country tourer. With its high-powered engine, large tank capacity, sturdy construction, excellent stability, and the ease with which it can be manœuvred it is eminently a machine suitable for safe and comfortable flying in all weather conditions; and more than that, its special features allow of it taking-off from and landing in comparatively small and restricted areas.

The engine used is the well-known Siddeley "Puma," which is of the six-cylinder vertical water-cooled type. It will develop 246 brake horse-power when running at its full normal speed of 1,400 revolutions per minute, but it may be run at as high a speed as 1,500 r.p.m. for short periods, at which speed it will develop 255 brake horse-power. The ignition is dual, for safety's sake, two six-cylinder type high-tension magnetos being fitted.

It is interesting to note that the carburettors, which are of the Claudel-Hobson type, are made with an altitude adjustment, which allows a correct mixture being obtained at any height above 10,000 ft., below which it is not necessary. For that reason, as an additional lever and control might be a source of danger in unexperienced hands, this altitude adjustment is, as a standard, locked at the carburettors in the Bristol Puma tourer, and no actuating mechanism is fitted.

A two-bladed air-screw, which is 9 ft. 6 in. in diameter by 7 ft. 7 in. mean face pitch, is fitted, and I understand that this particular size and pitch has been arrived at and decided to be the most suitable, after a good deal of experiment and calculations. What was required was an air-screw so proportioned as to give the best all-round performance, and this apparently has been found in the one which is fitted as a standard.

In this type of machine, a nose radiator is fitted between the fore end of the engine and the air-screw. This gives the best and simplest possible water-cooling system, and has been installed after the maker's careful consideration of other types. Venetian blind shutters are fitted to the front of the honeycomb surface, adjustable for the pilot's seat, and capable of covering entirely the honeycomb area, should climatic conditions render this advisable. This, as every airman knows, is a specially desirable feature in long glides. The pilot's seat, by the way, is so placed in the fuselage that his eyes are about 6 in. below and about 6 in. behind the trailing edge of the top centre section, this position having been found the best for visibility. The passengers are seated side by side in a comfortable and fairly roomy cockpit immediately behind the pilot.

I notice that the setting of the fixed tail plane is adjustable by means of a hand lever on the right-hand side of the pilot's cockpit, and by its use the machine may be trimmed so as to fly level with the pilot's hands off the controls. This can be done irrespective of the weight of the passengers and cargo, and, moreover, a glance at the hand lever will show the tail setting. I am informed that the Bristol three-seater tourer can also be fitted wih a coupe body in order to provide full protection for the weather for the passengers or the cargo. This coupe has been so stream-lined that the performance of the machine is in no way impaired.

The total weight of this machine, empty, is 1.900 lbs., and it carries 70 gallons of petrol, six gallons of oil, and seven gallons of water. Its total loaded weight is 3.120 lbs.

---

Messrs. J. J. Brown, F. W. Ingall, and D. N. Youle have been appointed general managers of the London County Westminster and Parr's Bank. The general management is now constituted as follows:—Chief general managers, Messrs. F. J. Barthorpe and John Rae; general managers, Messrs. J. C. Robertson, W. H. Inskip, J. J. Brown, F. W. Ingall, and D. N. Youle.

The traffic receipts of the Egyptian Delta Light Railways, Ltd., for the week ended July 20, amounted to £E12,784; total for year, £E128,921.

## THE FORESTS OF ANATOLIA.

The forests of Anatolia, which have been exploited commercially, can be divided into two general geographical divisions: The forests of the district of Sinope, three in number; and those of the Boyabad district, which also number three. As yet no concerns capable of exploiting these forests on an important scale have undertaken to obtain the necessary concessions from the Ottoman Government (says the American Consul at Samsoun, Mr. S. Pinkney Tuck, in a recent report). They have been worked mainly by local Turkish contractors on a small scale. Modern sawmill machinery is but little in evidence, and almost all work is done by hand in the most primitive way. There is no doubt that if modern machinery were introduced, and the conservation of these forests undertaken on scientific lines, the lumber industry of Anatolia would assume considerable proportions. Labour is cheap, water power plentiful, and the roads for transportation of lumber to the sea coast are adequate.

### Sinope District.

The forest of Seuyiouk-Dagh is situated between the villages of Cherze (near the Black Sea coast) and Allatcham, a tobacco-growing centre in Anatolia. It lies about 44 miles from the coast line and measures, roughly, 90 by 60 miles in extent, containing about 225,000 cubic feet of pine and spruce. That it has never been exploited is owing chiefly to the lack of roads to the coast. The forest of Tchantall-dagh lies between the villages of Boyabad and Avandjik (fifty miles to the west of Sinope) and its extent is approximately 70 by 105 miles. Its distance from the shore is eleven miles, and it contains about 1,500,000 cubic feet of pine and spruce. Logs are either floated down a small river to the village of Olousa or carried by ox cart overland to the coast.

The forest of Ellek-Dagh is situated between Boyabad and Sinope and lies fifty miles from the Black Sea. Cut wood is transported by ox cart to the coast line. There is one stream sawmill and numerous handsaw mills at a small village in the forest.

### Boyabad District.

The town of Bafra is located on the right bank of the river Kizil-Irmak (known as Halys) twelve miles from the Black Sea. It is the chief town of the Kaza district, and is under the governmental direction of the sanjak (Province) of which Samsoun is the capital. This district is made up of several small forests, which are at present rapidly disappearing, owing to the lack of conservation on the part of local exploiters. The trees that remain are principally oak, plane trees, beech, and walnut.

The small town of Vezir-Kopru, under the Mutessariflik of the town of Amassia, in the Sivas Vilayet, lies eight miles from the banks of the river Kizil-Irmak and about 95 miles from the sea. The only forest in this particular district worthy of mention is the Tomy-Dagh, which stretches along the river banks of the Kizil-Irmak for about 30 miles and extends back for about 25 miles. It consists chiefly of red pine to the extent of about 240,000 cubic feet. There are a number of small villages on the river banks, with a wood-cutting population. Logs are floated down the river either in drives or they are lashed into rafts.

The little town of Boyabad, in reality a large village, is under the governmental administration of the Vilayet of Castamouni and is situated on the river Geuek-Irmak, which in turn flows into the Kizil-Irmak, and is about 80 miles distant from the bay of Sinope. This district is very woody and contains several principal forests, which lie between Boyabad and Sinope. Their wood is chiefly used for constructional purposes. Several water-power sawmills are located in the village of Tchakiroglou. There are five smaller forests in this district, which are all situated on the banks of the river Gueuk-Irmak. They are composed chiefly of spruce and beech. Logs are sent down the river to Sinope.

All the forests above mentioned are the property of the Ottoman Government. The concessions necessary for those who desire to exploit these forests must be obtained from the Turkish Ministry of Mines and Forests at Constantinople. All bids for exploitation rights must be put in terms of cubic metres. Some 10 years ago two large firms from Samsoun undertook the exploitation of the forests in the Bafra and Vezir-Kopru regions, in order to supply railway ties for the projected inland connection, Samsoun-Sivas. This was abandoned when war was declared. These firms had previously exported wood to Egypt in considerable quantities. There were, before the war, as many as 10 firms located at the town of Sinope which were engaged in the construction of sailing vessels for coastwise Black Sea trade. The wood for this industry was obtained chiefly from the Ellek-Dagh forest.

---

The Macedonian saffron crop is estimated at 150 to 300 kilos.

Societe Anonyme du Behera.—Dividend of 8s. 2d. per share, less tax, on ordinary shares, paid July 26 (Coupon 19).

The Algerian Government have acquired a large quantity of sugar beet from France, with the object of encouraging sugar-beet production.

Mr. R. H. Tennant, Mr. Frederick Eley, and Mr. Robert E. Dickinson have been elected directors of the Bank of British West Africa, Limited, in connection with the recent issue of new shares.

Egyptian Guaranteed Three per Cent. Loan.—Dividend due September 1 will be paid by Messrs. N. M. Rothschild and Sons on that day and on each succeeding day (Saturdays excepted) between 11 and 2.

# NEAR EAST MARKETS.

## LONDON PRODUCE REPORT.

Dried Fruit.—Prices for practically all varieties are on the up grade. Supplies are inadequate except in the case of currants, in regard to which rates are influenced by the unfavourable crop reports from Greece.

Sugar.—There is no material change to report. Home refined continues to meet with an active demand.

Coffee.—Good qualities have been in strong request, but inferior grades have been neglected. Transactions have included Costa Rica at from 125s. to 160s., Mocha at from 165s. to 180s., and Colombian at from 100s. to 145s. The futures market has been quiet.

Oilseeds.—Linseed has been a firm spot at 38s. for Indian and 35s. 6d. for La Plata. Rapeseed closed rather quiet at 33s. for Toria and 31s. for Brown Cawnpore. Cottonseed is a shade harder, with Indian at 13s. and Egyptian at 18s. 6d.

Oilcakes.—A fairly brisk business has been done. Linseed has come to business round about 21s., while other transactions have included ground nut cake at 13s. 6d. and coconut cake at 12s. 6d.

Seed Oils.—Linseed oil is very firm at 81s. spot, 79s. 9d. August, and 78s. 3d. September. Rape oil has been done at 70s. for crude and 80s. for refined. Turpentine closes quiet at 142s. spot and 143s. 6d. for January-April.

## OPIUM MARKET REPORT.

Messrs. Barker Bros., Smyrna, report as follows for the week ended July 31:—With the exception of one case of selected manufacturing opium, which changed hands at 20s. per lb., c.i.f., we have nothing further to report. The position, however, is firmly maintained owing to non-arrivals from the interior. Our stock on this market is only about 700 cases, 80 per cent. of which is in very strong hands. The exchange to-day is piastres 417 per pound sterling for cheque, and 0.90 dollars for one Turkish paper pound. The arrivals are 32 cases, against 155 at same date last year.

## COMPANY NOTES AND REPORTS.

### Empire of India and Ceylon Tea.

The report of the Empire of India and Ceylon Tea Company for 1919 states that the Assam crop fell very short owing entirely to the unfavourable weather conditions which prevailed. The Dooars crop was short in the early plucking months, but the close was exceptionally favourable, and an excess was realised over estimates. The Ceylon gardens yielded a poor crop, both divisions making less than the previous year. The combined outturn was 7,003,938 lb., as against 7,215,854 lb. in 1918. The net profit was £116,843, to which must be added £9,947 brought forward. The directors recommend a dividend for the year of 16 per cent. on the increased ordinary share capital, of which an interim distribution of 3½ per cent. was made on January 1 last.

### Bank of Bombay.

The report of the Bank of Bombay for the half-year ended June 30 states that the profit amounts to Rs. 21,66,384, to which has been added balance brought forward, Rs. 3,82,339, making together Rs. 25,48,723. It is proposed to apply in payment of a dividend at rate of 15 per cent. per annum, free from tax, Rs. 7,50,000; bonus at rate of 5 per cent. per annum, free from tax, Rs. 2,50,000; special bonus at the rate of 2 per cent. per annum, free from tax, Rs. 1,00,000; transfer to reserve fund Rs. 6,00,000; to credit Government and other securities on account of depreciation Rs. 3,00,000; to pension fund Rs. 1,00,000; leaving to be carried forward Rs. 4,48,723.

### Bank of Bengal.

The profits of the Bank of Bengal for the half-year ended June 30 amounted approximately to Rs. 31,21,071, including five lakhs and a quarter brought forward. Of this total it is proposed to allocate Rs. 17,00,000 to the payment of a dividend at the rate of 17 per cent., to transfer Rs. 6,00,000 to the reserve, and Rs. 1,00,000 to gratuity and pension fund, and to carry forward Rs. 7,21,071.

### Bank of Madras.

The report of the Bank of Madras for the half-year ended June 30 states that the balance brought forward is Rs.2,80,947, and the profit, after making provision for all bad and doubtful debts, amounts to Rs. 12,88,654, making a total of Rs. 15,69,601. The directors recommend a dividend for the half-year at the rate of 12 per cent. per annum, free of tax, and a special bonus at the rate of 4 per cent. per annum, transferring to reserve Rs. 4,00,000, and carrying forward Rs. 5,69,601.

### Alliance Bank of Simla.

The profits of the Alliance Bank of Simla for the year ended June 30, including Rs. 18,775, carried forward from last year, amounted to Rs. 15,30,579. The directors propose to pay the usual dividend of 14 per cent., plus a bonus of 3 per cent., making 17 per cent. for the year, to place Rs. 2,00,000 to the reserve fund, making it 42 lakhs, to place Rs. 1,00,000 to the pension fund for the staff, and to carry forward Rs. 3,13,000.

---

The production of crude oil in Egypt in 1919 amounted to 231,180 tons, a decrease of 42,120 tons on the figures for the previous year.

## LANCASHIRE COTTON.

(From Our Own Correspondent.)

MANCHESTER, Monday.

The market during the past week has not displayed more life, and most merchants have been inclined to limit their commitments. A distinct feeling of uncertainty has prevailed with regard to European politics, and the world still seems to be in a state of chaos. International finance is also in a very unsettled position, and trading conditions at the moment are distinctly against enterprise. A revival of demand rarely happens without speculative operations, and scarcely any one is prepared at the moment to anticipate future requirements. The sales of Egyptian cotton in Liverpool and Manchester continue rather more encouraging. The crop outlook remains satisfactory, and there is a probability of a record yield. Prices, however, keep fairly steady. In yarns made from Egyptian cotton buying has been of small dimensions, and many complaints are to be met with from spinners. Certain counts and qualities can now be purchased at rates which mean no more than the cost of production. No development can be recorded in the inquiry for the Near Eastern markets. Some tentative bids have been mentioned for Egypt in shirtings, but nothing has been done. Conditions in South-Eastern Europe are very disturbed. India has continued to provide an extensive inquiry, and scattered transactions have been put through in dhooties, mulls, jaconets, and nainsooks, but the bids in grey shirtings remain unworkable. Some leading shippers to China have not received an offer from the other side for two or three weeks. Numerous manufacturers are in urgent need of fresh contracts and are prepared to accept low prices. American yarns have moved off slowly and prices at the moment rather tend to favour buyers. Fine counts have been in fair request for India. Extra hards for the Levant have attracted very little attention.

### Egyptian Cotton Acreage.

According to a cable just received from Alexandria, the official acreage for Egyptian cotton for the current season has been estimated at 1,827,000 feddans, against 1,568,000 feddans last year. According to some private advices, however, there is a possibility of the area under cultivation being about 2,000,000 feddans. In these circumstances a record crop is expected. The largest yield of Egyptian cotton was in 1913-14, the growth then being 7,684,000 kantars on an acreage of 1,723,000 feddans. During recent years, however, the yield per feddan has fallen, and where as in 1913-14 the output was 4.46, in 1917-18 it was only 3.77. Lancashire spinners of yarn are very pleased at the excellent prospects, and although the plants have still to pass through a critical period of the season, there is hope of a production of quite 7,500,000 kantars.

Woolmer, Glebe Court, Goring-on-Thames; I. Wissotzky, Hadley, Culverdon Downs, Tunbridge Wells. Solicitor: H. D. P. Francis, 19, Great Winchester Street, E.C.

## INDIAN INTELLIGENCE.

The week's Indian cable states:—Rain has been fairly general except in North-Western India, Upper Burma, and South-Eastern India, where local. General crop conditions good, but more rain required in parts Upper Burma, Bengal, Bihar and Orissa, Berar and Bombay. Slight delay and damage to crops in parts of United Provinces of Agra and Oudh, and in Bihar and Orissa, caused by heavy rain. Bombay cotton market steady. Fully good Broach August, Rs.430. Piece-goods market fairly steady with slackness of demand. Calcutta jute market old crop firm, new crop nothing doing. Heavy goods steady to firm without much business. Hessians quiet.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

PANDERMA.

The report for June states:—It appears that the cereal crop will fully come up to the forecasts received from different sources, and that the barley, wheat, and oat crops should give a yield of about 75 per cent. above that of the past year. Their quality, too, it is said, will be much better. As for maize, it is much too early to venture on a forecast.

The political situation of the country having reached an acute stage, business has naturally come to a standstill.

ADRIANOPLE.

The report for May states:—The trenching of maize and potatoes has already taken place. The frequent rains have greatly favoured the growth of these products, as well as the sowing of cotton, sesame, and tobacco plants. In general this year's crops, both the winter and spring sowings, appear to be much superior to those of the past year. The harvest, however, is likely to be seriously affected by the lack of labour, in view of the fact that all peasants able to work have been called to the colours for an indefinite period. The forecast of the yield of cocoons is very poor. From a production of 150,000-200,000 kilogrammes before the war, the yield has fallen to 20,000-25,000 kilogrammes.

The commercial situation is very difficult, recent political happenings being the cause. The exports for May were practically nil compared with those of the previous month. On the other hand, imports of manufactured articles, colonial produce, drugs, etc., for which the orders had been given in March, reached £T120,000.

JAFFA.

The report for June states:—The considerable increase of imports of various manufactures, and the general depression and the marked fall in prices in Europe and America have had the expected effect on our market. It has made more pronounced the attitude taken up by local banking establishments, which are showing themselves very reluctant to renew credits.

The arrival is to be noted of some small consignments of wheat, which are being dealt in at about PT.3 per kilo.

It is reported that the crop of oranges will be below that of the previous year.

STAMBOUL, July 10.

The position is unchanged. The continued fall of prices in Europe, and the difficult position in the interior do not point to any improvement in the near future. The transactions here are few, and are restricted to the needs of local consumption. The financial difficulty continues.

Manufactures.—The decline continues, but prices are not very much lower. Holders, although embarrassed, are confident, and maintain the hope that as soon as communications are restored with the interior business will become brisk without much delay, the need of Anatolia for manufactures being very great.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

**Egypt.**

(*The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked* (*L*) *are to be obtained.*)

Extension of Electrical Station of Zagazig and Belbeis.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the extension of the electrical station of Zagazig and Belbeis. Adjudication at noon on September 1. A copy of the specification, etc. (in French) may be consulted by British firms interested at the Enquiry Office of the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

Tunics, etc.—The Financial Secretary of the Egyptian Army, Cairo, invites tenders for the supply of tunics, pantaloons, trousers, etc., to the Ordnance Services Department, Egyptian Army, Citadel, Cairo. August 28. (L.)

Motor Launch.—The Inspector-General of Irrigation, Upper Egypt, invites tenders for the supply of a motor launch for 4th Circle of Irrigation. September 18. (L.)

Surface Condenser, etc.—The Director-General, Mechanical Dept., Ministry of Public Works, Cairo, invites tenders for the supply, delivery, and erection at Amriya Pumping Station, Zeitûn, of a surface condenser, together with air and circulating pump, a feed pump, oil separators, pipe work, valves, and accessories; plant to be capable of dealing with about 3,200 lb. of steam per hour. August 31. (L.)

Sewage Main.—The Chief Engineer, Main Drainage Dept., Ministry of Public Works, Cairo, invites tenders for the supply and laying of a 12-in. cast-iron sealed sewage main. September 21. (L.)

Air Compressing Plant.—The Chief Engineer, Main Drainage Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of an air compressing plant at Mansûra, consisting of two crude oil engines, driving two single-stage air compressors, complete with auxiliary machinery, water cooling plant, a travelling crane, machine tools, air mains, electric wiring, etc. October 1.

Pumping Machinery.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)

Dynamo and Switchboard.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply of 2 kw. dynamo and switchboard for Kombera Pumping Station. September 15 (L).

Paper, etc.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and office requisites, including paper (writing, typewriting, oiled copying, tissue, drawing, sectional, tracing, etc.); cloth-lined envelopes and buff envelopes; note blocks, blotters, waste paper wicker baskets, copying books, card index cabinets, vertical files, tracing cloth, ink pots, inks of all kinds, tie-on labels, note books, numbering machines (triplicate, six figures), stamping ink pads, penholders (wood), pen nibs, paper weights, shapirograph apparatus, copying presses, typewriters (European script), and copyholders for typists, etc. Tenders will be received up to noon on September 9, and should be addressed to the Director, Central Stores, Ministry of Finance, Cairo. A copy of the specification, etc., together with a list of articles required, may be consulted at the Department of Overseas Trade.

Brushes, Jerseys, and Socks.—The Egyptian War Department invites tenders for the supply of—(1) Brushes, brass; (2) Jerseys and socks. Tenders are returnable up to noon on August 27, and are to remain open for seven days (L.).

**India.**

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

## ON CHANGE.

### Rise in Roumanian Bonds.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Business in a general way has been on a very restricted scale this week, but on the whole the undertone has been firm and the tendency satisfactory. In Government stocks Egyptian Unified have improved ⅜ to 67⅜, but on the other hand the 3½ per cent. pref. have dropped ½ to 55¾. Turkish 4 per cent. 1891's, after rising to 64½, are closing ½ down at 63½, and the 3½ per cent. 1894 Loan has lost a similar fraction at 57. A feature has been a rise of 17 points in Roumanian 4½ per cent. Bonds to 55 on the imminence of resumption of interest payments. Greek securities have been a very strong market, and show a biggish rise all along the line on buying for Greek account. The 1881 and 1884 loans have jumped 2½ points to 56, Monopoly have risen 1½ to 45, Rentes 3 points to 44, Funding 1 point to 54, and Larissa 5 points to 56. The 1902 Loan is half a point better at 48, and the 1914 Loan one point up at 56½. The 1910 issue closes 1¼ points higher at 41½.

Among Bank shares National Bank of Egypt are 1-32nd lower at 19 15-32, and Agriculturals a similar fraction firmer at 4 15-32.

In Land shares, Aboukirs are 9d. firmer at 37s., and Anglo-Belgians a similar fraction up at 13s. Consolidated Lands are 1½d. firmer at 2s. 7½d., and Garbieh Land, after rising at one moment ¼ to 3⅝, finish ⅛ up at 3½. Mortgage Company of Egypt Bonds are 2 points higher at 74½, New Egyptian shares are fractionally firmer at 37s. 6d., Sidi Salem, after jumping to 2⅝, finish unchanged at 2½, but Sudan Plantations have been a very strong market, and are closing 7-16th higher at 5 1-16.

In the Miscellaneous group, Alexandria Water close 3-16ths down at 7½, and Egyptian Markets are 1-32nd easier at 1 1-32, whilst Salt and Soda have gained a similar fraction at 2 17-32. Morum's Stores are 3d. down at 17s. 6d.

In Oil shares, Anglo-Egyptian B. have improved 3-16ths to 2¾, and Roumanians have jumped 2s. to 19s. 6d.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |

## NOTES OF THE WEEK.

Elsewhere in this issue the real nature of the understanding arrived at between Lord Milner's Mission and the representatives of the Egyptian Nationalists is fully explained. Provided two preliminary conditions are fulfilled, the Mission has pledged itself to recommend a measure of independence for Egypt which has secured the approval of Saad Zaghlul Pasha and his colleagues. The conditions are that the cordial acceptance by the Egyptian people of the offer in a spirit of genuine friendliness towards Great Britain is guaranteed, and that Great Britain can induce the Powers concerned to agree to the abolition of the Capitulations. The delegates return to Egypt with the object of securing the consent of their fellow-countrymen to the offer made by the Mission, and if they apply themselves as wholeheartedly to this task as they did to the Nationalist agitation, there can be little question as to the result. Both parties to the understanding are deserving of credit. Lord Milner for postponing the presentation of the Report in the belief that Saad Zaghlul Pasha could, with tact and patience, be brought to see reason, and the Egyptian delegates for tacitly admitting the foolishness of their former attitude in the cordial message which Saad Zaghlul Pasha sent to the Mission on his departure.

---

The situation in Mesopotamia, instead of improving, has become distinctly worse, and it looks as if we must expect it to become worse yet before it becomes better. In the early part of last week a Paris telegram reported that Baghdad itself was threatened by rebels, who were trying to encircle the town; and though this was a case of exaggeration, it seems that communication with the city is seriously threatened, if not actually cut, in all directions save along the Tigris. That the metropolis of Irak will be allowed to fall before any purely Arab attack is highly improbable; but that a situation can have arisen in which such a contingency can be seriously discussed is in itself disconcerting. Unfortunately it is not only from Baghdad that bad news comes. Even the official *communiqués* make it clear that sporadic fighting is going on all up and down the country; and the Arabs appear to be showing themselves far more serious opponents than they were ever thought likely to become in in pre-war days, when a "big battle" might result in no deaths and less than a dozen casualties.

To give a list of all the places at which the spirit of unrest has manifested itself would be unprofitable, and in regard to most cases to give details of the manifestations would be impossible, since they are not vouchsafed to us in the *communiqués*. But two particularly regrettable incidents may be mentioned. The first is the killing, in circumstances of peculiar treachery, of Lieutenant-Colonel Leachman, C.I.E., D.S.O., who was shot at Khan Nukta, near Feluja, on August 12. Some particulars of this adventurous officer's career, and of his fine record of service in Mesopotamia, will be found on another page. The second incident is an attack by Arabs on the barracks of the levy at Shahroban, north of Bakuba, which was successful only when the little garrison's ammunition was exhausted, after a three days' defence. This cost us the lives of two officers, two N.C.O.'s, and an Irrigation Officer, while the wife of the last named has been captured by the attacking force. That such a thing can have taken place within fifty miles of Baghdad, and that it should have been impossible to rescue the gallant defenders of the post is enough to show the state of the country.

---

With things in such a serious state, this is not the time for criticism, and it is, perhaps, unfortunate that there have been of late so many demands for our immediate withdrawal from Mesopotamia, regardless of consequences to anybody but ourselves. To withdraw at a time, or in a manner, that would lend any colour to the idea that we were doing so in panic, or because we were driven to it by the Arabs, would indeed be fatal to our prestige throughout the East. Nowhere would the effects of such a withdrawal be more injurious than in Mesopotamia itself; for, having, for good or for ill, accepted the position of Mandatory for the young State, we cannot lightly abandon it; but neither can we hope to fulfil its duties if we lose the respect of the natives. We may be told that we should suffer no such loss as a result of withdrawal at this juncture, but this is a view that we are unable to accept. Let us, by all means, work steadily and hard to make the country able to stand alone, as we believe it can soon be made; and let us in the meantime do everything in our power to keep down the expenses of administering and training it. But let us hear no more talk of "withdrawal" under existing conditions.

Digitized by Google

A brief message from Belgrade announces that M. Vesnitch, the Yugoslav Prime Minister, has formed a new Cabinet in which all but two of the retiring Ministers will retain their portfolios. The latest Ministerial crisis has thus lasted a month. It is supposed to have originated in differences of opinion in the Ministry itself over the questions of exports and agrarian reform. The fact that M. Vesnitch has been able, after two failures which led him to return his mandate to the Prince Regent, to bring his team back into harness again, practically unchanged, justifies the hope that the spirit of compromise is at last entering into Yugoslav politics. A formidable programme of legislation awaits the Skupshtina before Yugoslavia can be said to have really grappled with the task of national reconstruction. In the meantime, fortunately, great strides have been made by the people themselves in promoting their own material welfare, and Serbia, a land of desolation a year ago, is no longer a suppliant for Allied help.

---

As a result of the visit of Dr. Benes, the Czecho-Slovak Minister of Foreign Affairs, to Belgrade and Bucharest the finishing touches have been put upon an entente or alliance between Czecho-Slovakia, Yugoslavia and Roumania. This first piece of constructive statesmanship to be registered in south-eastern Europe since the war is to be cordially welcomed, and it is to be hoped that it will ultimately lead to an extension of the policy of political and economic co-operation farther south. For the moment the only danger spot in this part of Europe is Hungary, who does not seem to have reconciled herself vet to the new order of things, quite apart from her purely domestic questions. In these circumstances it was natural that her neighbours, who can ill afford to be let in for fresh military enterprises, should wish to show their solidarity against any possible aggresive policy on the part of the Magyars. There is no reason to doubt the interpretation officially placed on the new entente, that it is a defensive alliance assuring integrity and independence to the three States concerned, as well as protection against reaction. Its utility as a factor "in facilitating a return to normal economic conditions, and in regulating the exchanges between these countries," must depend in part on the speed with which production is fostered in each State; but the sense of security which the countries will acquire from the alliance should enable demobilisation to be carried a considerable step forward.

---

In an article published in our last issue, entitled "Bolshevism and India," attention was called to the situation in Central Asia, and it was suggested that only a Central Asian Federation would avail to arrest Bolshevist penetration in that direction. The statement that the Uzbegs are disillusioned by their experience of the Soviets is confirmed by a recent message from India to *The Times*, which speaks of the intense hostility with which the Bolshevists are now regarded by the Moslems of Central Asia. In particular the relations between Soviet Russia and Bokhara are said to be becoming increasingly strained, and there would seem to be some possibility of a military alliance between the Bokharans and Afghans. At this critical juncture it is to be hoped that every encouragement will be given by the British or India Government to a movement which must considerably add to the existing embarrassment of the Soviet régime. There is no need to further aggressive militarism even in Central Asia: but a decisive setback for the Bolshevists in this direction as well, must still further encourage the forces struggling to restore peace and decent Government to Russia.

---

The postponement of the Prince of Wales' visit will cause widespread disappointment in India, where preparations for his reception have been in active progress, but we have no doubt that the prevailing sentiment will be loyal acceptance of the decision and genuine regret for the cause which has made it necessary. Failing the Prince, no better representative of the King-Emperor could be suggested than the Duke of Connaught, who knows India well, and whose long period of service in the country gave him an assured place in the memory of the people. From one point of view, indeed, the presence of the Duke at the opening of the Indian Legislature will be peculiarly appropriate, for he has himself taken an active part in the administration of a presidency under the old régime, and he will thus stand for the principle of Imperial continuity, the essential condition for the orderly development of the new institutions which he will inaugurate.

---

So far as this country is concerned, the preparations for this great enterprise are now practically complete. The list of provincial Governors was given in our last issue, the Joint Committee have made their second, and final, report on the statutory rules required, and there remain only the orders to be issued by the Secretary of State on matters which these rules do not cover. Most of the present heads of provinces are either continued in office, or re-appointed under the new Act, and apart from the selection of Lord Sinha, which we have already recorded, the only interesting feature in the list of Governors is the appointment of Sir William Marris to the miniature province of Assam. Sir William has had a large share in the framing of the new constitution, and it is certainly fitting that he should have an opportunity of applying its provisions in practice, while the fact that he belongs by birth to New Zealand is not without significance to those who, like ourselves, attach great importance to the growth of cordial and intimate relations between India and the Dominions.

---

The Joint Committee have again found little to alter in the draft rules prepared by the Government of India, and their most important decision relates to the thorny question of provincial contributions to the central revenue. It will be remembered that this question was examined by Lord Meston's committee last winter, and a scheme was formulated which, being intrinsically just to all, inevitably roused bitter hostility in some of the provinces. Lord Selborne and his colleagues have set themselves to alleviate this hostility, not because the original proposals were defective, but in order to "grease the wheels" of the new machine; they have accordingly provided for some concessions, which we should be sorry to have to justify on theoretical grounds, but their final conclusion is that provincial contributions must cease at the earliest possible moment, the central government arranging to meet its requirements entirely from the sources of revenue formally assigned to it, and the provinces being left free to dispose of their separate resources. In other words, there must be new central taxation, while the provinces will be relieved from raising fresh revenue to the extent of the contributions which the central government surrenders.

---

This decision will undoubtedly ease the position for the moment, but it will probably not commend itself to those who desire to see genuine and rapid progress towards responsible government. The new provincial legislatures, they will argue, will at first be out of touch with reality, and the most valuable experience will come when members who have voted fresh taxes to finance the schemes of popular Ministers find it necessary to justify those taxes to their constituents; then, and then only, will the electors realise that they have power to increase or mitigate their own burdens. The Committee's decision will give Ministers more to spend, and consequently will tend to postpone this crucial experience, while it will throw the unpopularity of new taxes on the bureaucratic central government instead of on the Ministers who spend the money. Such reasoning seems to us to be valid, but not necessarily conclusive in practice. The truth is that Ministers will at the outset be as horribly short of money as their bureaucratic predecessors have always been; they must in any case go forward, and they will probably find themselves compelled to present a bill to the provincial electorates within a very few years of assuming office. Abolition of the contributions may possibly postpone the evil dav, but it will come quite soon enough for the electors.

# THE WEEK AT HOME.

**The Recess.**

Parliament rose on Monday week, after Mr. Lloyd George had reassured the House on Poland. Labour did its best to defend its direct action of the week before. Mr. Thomas rather daringly compared it to the Prime Minister's passive resistance methods in old days; but the defence was not particularly effective.

The recess is to last till mid-October, unless something happens in the meantime. As Mr. Smillie threatens a coal strike in early September, it would not be very surprising if ministerial holidays were cut short. The Prime Minister wisely wasted no time in getting away to Lucerne, where he is meeting Signor Giolitti, the Italian Premier, and he is expected also to meet the German Premier during his stay there; but apart from these discussions he may hope for a real rest for three or four weeks. The remainder of the Ministerial team are scattered to the ends of England, and Parliament is a prey to the country cousin and the American, who are visiting London by the thousand just now.

**Parliamentary Personalities.**

The end of the season naturally leads to a kind of Parliamentary stocktaking, personal and general. The Government actually seems rather stronger than it was six months ago, partly because it has got its second wind, and has really put one or two achievements to its credit, but largely, it must be admitted, owing to the hopelessness of its opponents. Lord Northcliffe's vendetta seems definitely to have failed of success, the Government's foreign policy has hardly been seriously, or at least effectively, challenged; Ireland and the railways have been the most harmful to the Government's popularity. But on Ireland the Opposition have no alternative policy, or rather they have so many alternative policies that nobody believes in any of them.

On the personal side of politics Mr. Lloyd George's ascendancy remans unchallenged, and there is nobody in the present House who can stand up to him. Mr. Winston Churchill continues to exasperate Labour, but he is a bonny fighter, and although the Independent Liberals hate him for deserting them their opinions are not likely to cause him a moment's uneasiness. Mr. Austen Chamberlain has done very well indeed; he was both tactful and firm over the Budget, and appraised the opposition of big business and the little men who speak for it at its proper worth. Of Sir Hamar Greenwood as Irish Secretary it is too early to speak; if he succeeds it will be the greatest miracle since the walls of Jericho went on strike. Sir Eric Geddes boasts his efficiency, and is cordially disliked; but Sir Robert Horne is a great success, suave and strong in manner and devastating in argument. The most lonely figure among Ministers is Mr. Montagu, whose speech in the Dyer debate was and still is deeply resented. Of Mr. Fisher, the Minister of Education, little has been heard, but in that department at least those Ministers are happy who have no history.

On the other side of the shield there is little to say. Mr. Asquith's return to the House has finally disposed of the idea that he has the makings of an effective fighting leader in opposition; the bulk of the work seems to fall on Captain Wedgwood Benn, who is popular, and Commander Kenworthy, who bores everybody with his questions, speeches and interruptions. Sir Donald Maclean, the second in command of the Independent Liberals, is more like a churchwarden who has had a dispute with the rector than ever; the other Independent Liberals live not within the memory of man. One hears talk of a revival of Liberal feeling in the country, and I am half inclined to credit it, but it will have to produce its own leaders. Nothing will galvanise the Liberal corpse back into life in the Commons.

The ineffectiveness of Labour has been so often and so truly pointed out by their Liberal allies and friends that it is hardly necessary to pursue the doleful topic. It is a great pity that Mr. Henderson has been laid aside by serious illness for so long, for Mr. Adamson, the nominal leader at the moment, has quite lost his tongue; and with the exception of Mr. Thomas and Mr. Clynes, the rest are smitten with profound silence. Mr. Thomas counts for more than he did a year ago, and despite his quality of unexpectedness, he has done well; Mr. Clynes seems to have receded a little. It is the fashion to speak well of him, and indeed he is a most estimable little man: but his undoubted merits are overpraised by his opponents because he never hurts them, and personally I find his speeches dull, although his elocution is admirable.

Of the Independents, Mr. Bottomley strives to live up to his impersonation of John Bull, but his lieutenant, Mr. Palmer, is making more headway; he is a very vigorous personality, and the many years he spent in the Press gallery evidently give him an advantage over other new members. Lord Robert Cecil, who was spoken of as the future leader of a rejuvenated Tory party some time ago, has definitely receded in public esteem. At one time the note of statesmanship was very prominent, but the touch of fanaticism in his character, as in that of his brother, Lord Hugh Cecil, seems to have overpowered the statesmanship.

The future of parties is as obscure as ever. Mr. Bonar Law, the leader of the Unionists, is a kind of maid-of-all-work to the Government; he has definitely sold his soul to Mr. Lloyd George, and does not appear to repent of the bargain. The Liberals are hopelessly split, and there are a good many differences of opinion even in the Labour ranks. But for the time being party questions count for little in England, although there are signs that they may revive speedily and with unexpected bitterness.

**The *Daily Herald*.**

A sensation was caused this week by the publication of wireless messages alleged to have been intercepted between Chicherin and Litvinoff, the Bolshevist politicians, with reference to the financing of the *Daily Herald*, our one Bolshevist daily. The messages appeared to be explicit, and to show that Mr. Lansbury, the editor of the *Herald*, went to the Bolshevists for financial assistance which, if not given, would have forced the paper to turn "Right trade union" instead of its present bilious complexion. Mr. Lansbury has ridiculed the idea, and denied that he has ever had a sou; but the facts that he went to Russia recently, that his paper is ardently pro-Bolshevist, and that he has himself confessed in speeches that it is in financial difficulties, have not helped his denial.

The *Herald* sells a good deal better than it did in its pre-war days as a daily journal; it is read mainly by miners and railwaymen and electricians. It is generally advocating a general strike at home and the disruption of the British Empire abroad; it is rather violently written, but I should say that its weakness as a newspaper is that it puts in too much propaganda for any but the converted. And the converted, one would suppose, have passed beyond the stage at which pro-

paganda is necessary; while the unconverted—if I may humbly take myself as a typical specimen—soon tire of revolutionary sentiment and turn to less tendentious pages. The *Herald*, by the way, seems to cherish a vendetta against Sir Basil Thompson, of Scotland Yard. During the War it was strongly pro-German.

**Sir Norman Lockyer.**

The death of Sir Norman Lockyer, at a ripe old age, is a loss to British science. His astronomical work was well known, and he also came into prominence when his investigation into the Stonehenge problem enabled him to state the approximate date of that building. For many years he edited *Nature*, and had much to do with the success of that admirable weekly. Huxley's epigram in that connection is still remembered—"Lockyer is a good fellow, but he sometimes forgets the distinction between the Editor and the Author of Nature."

**The Cricket Championship.**

The position in the cricket world is now of extraordinary interest. Middlesex have now deposed Kent from the premier position, and with a fortnight's matches still to play, the chances are fairly equal for the metropolitan county, Surrey, Yorkshire, Kent, and even Lancashire. Had Surrey played more evenly they would easily have secured the lead, for on their day there is no side to touch them; but there are many other days when the team is all tail. Kent and Yorkshire strike me as better all-round teams; but the sudden push by Middlesex, who are always at their strongest in the holiday month, has before now upset many calculations.

Owing to an injury to Mr. Spooner, he will be unable to captain the M.C.C. team to Australia, and Mr. J. W. H. T. Douglas has been appointed in his stead. The alternative has been generally approved.

**The Lambeth Conference.**

The bishops in session at Lambeth have issued their report, which ranges from the birthrate to the problem of spiritualism. In a guarded fashion they approve of women taking an official part in the services of the church, and they definitely contemplate female deacons, but would debar them from the priesthood. Their pronouncement on spiritualism is so extraordinarily cautious that few will be able to understand it. On reunion they seem, according to the comments of Nonconformist divines, to have taken a real step forward, but it is doubtful whether anything will come of their proposals for a long time.

**Autumn Literature.**

A good many interesting books are now being announced for the autumn. Mrs. Asquith's Reminiscences, which come out week by week in the *Sunday Times*, will appear in book form; but some of the spice has been taken out of the cake by serial publication.

Colonel Repington's war diaries will be awaited with interest. The old military correspondent of the *Times*, who subsequently transferred himself to the *Morning Post*, by no means saw eye to eye with the Government of the day on military policy. The censor cramped his criticisms then, but we shall probably learn a good deal as to his views now that the censor is no more.

No great biography seems to be on the lists, but several novels by well-known authors are announced. Now that Mr. Wells has practically finished his history—he has just assured the world that Napoleon was a distinctly overrated person—it is to be hoped that he will return to novel writing, where he can ill be spared. But, according to the papers, he is first going lecturing in America, to "tell the Americans the truth," as he himself phrases it. Let us hope that they will like the novel experience.

**Dearer Water.**

Those who grumble at the extortionate price of beer, wines and spirits in these days will not be very surprised to hear that on top of the increases in other rates the London water rate is likely to be doubled. Air is now the only element which is not taxed; but if the population goes on increasing at its present rate, even that will have to be rationed.

## EGYPT.

CAIRO, August 6.

**The Conspiracy Case.**

The trial of the alleged members of the "Society of Vengeance," which is being heard before a military court in Cairo, is still the main topic of conversation in the capital. In the post which arrives in the Court each morning, there is invariably a collection of threatening letters to the President (Brigadier-General Lawson), the Judge Advocate (Judge Linton Thorpe), and counsel for the prosecution (Mr. F. M. Maxwell). That, at least, shows the interest which is being taken in the proceedings by sympathisers with the accused. As Mr. Maxwell has stated, the fact that these letters and circulars are still signed by the "Society of Vengeance" might be regarded as evidence that the members of the Society have not been apprehended, and that therefore, *ipso facto*, the men in the dock were not connected with the Society. On the other hand, as he has also pointed out, it may be taken as evidence of efficient organisation.

In my last letter, I outlined very briefly the plot as revealed by the evidence. Since those lines were written the Court has had twelve more sittings, but the proceedings have reached a stage bordering on dullness. Certain papers were found in the houses of the accused, and the machinery for proving that such documents were seized is rather cumbrous. A police officer searched the house, seized whatever papers he found, put "them in an envelope, and sealed it with my seal with red wax"—we have heard that sentence *ad nauseam*—and forwarded it to the Governorate, where an official opened the envelope and made a list of the papers which it contained. The point about these papers is that they are not, in themselves, sufficient to connect the accused with the conspiracy. Such papers have been sent to the members of the Court; so, obviously, possession of such documents is not incriminating evidence. But where there is other evidence of the connection of any of the accused with the Society, then the possession of such documents can be used in evidence against them. Therefore it has been necessary to prove that these documents were found in the houses of the accused, and during most of the week we have been sitting in a stuffy and close court-room listening to police officers deposing that the papers produced were the papers seized in the houses of So-and-so.

But there have been one or two notable incidents. One came earlier in the week, subsequent to the conclusion of the cross-examination of the witness who had turned "King's evidence." The next witness deposed that he had gone to the house of Abdel Rahman Bey Fahmy, the chief accused, and offered to join the Society. Abdel Rahman Bey Fahmy, according to the witness, had told the latter he could not join the Society till he had proved his sincerity by killing a British soldier or committing some such act. Counsel for the defence made a merciless attack upon the character of the witness, and elicited that his record was not by any means spotless. The climax, however, came the following day, when the next witness for the prosecution, overawed by the examination, collapsed and contradicted himself. He had made certain depositions before the Government's lawyers, but there "he had said what he had been told to say" by the previous witness, of whom it was patent he stood in awe. The circumstances have not been thrashed out, but it was a dramatic collapse. Counsel for the prosecution refrained from calling further evidence against the accused, but contented himself with formally proving the seized documents.

The second incident occurred yesterday afternoon. Throughout the case a mysterious document has been held by the Judge Advocate in a sealed envelope on behalf of Mr. Devonshire, who, pending the arrival from England of Mr. Mitchell Innes, K.C., and Major Hedley, has been defending Abdel Rahman Bey Fahmy. This document was read out yesterday. It was a letter addressed to the Commandant of the Police, and alleged to have been signed by some of the witnesses for the prosecution. After referring to the service which the witnesses had rendered to the Government, it insinuated that a sum of money in return would be deeply appreciated. But each witness for the prosecution to whom the document has been shown has denied that his written name at the bottom of the document is his signature. Each has avowed that it is a forgery. The Commandant of Police has not yet been asked whether he actually received the letter, but will probably be called for this purpose to-morrow morning.

Mr. Mitchell Innes, K.C., and Major Hedley have arrived, and will appear in Court to-morrow morning.

**The Holy Carpet.**

Yesterday morning the Mahmal left Cairo, and started on its journey to Mecca. A week ago the Kiswa and the Mahmal were on view in tents adjacent to the citadel, and on the Friday evening, beneath an Eastern moon, almost full, there seemed to be a miniature world threading its way around the venerable objects. The next morning the Mahmal was conducted through the streets to the Mosque at Abbassia, at the head of a procession of thousands, including representatives of every class of Moslem; and yesterday, without any untoward incident having occurred during the seven days it has been in the public eye, it was taken away on the annual pilgrimage.

**Egyptian Students for England.**

Half-a-dozen students, who won the highest marks in the Government School of Engineering's recent examinations are to be sent to England in the near future to complete their studies. Their expenses will be paid up to LE250 annually, and on their return they are expected to enter the Government service. Formerly, the trouble has been that the students who have gone to England to complete their studies have invariably been sons of wealthy men; and having won their diplomas, they have come back to live on the bounty of their rich parents. Under this scheme, however, it is hoped that the brightest youths will be enabled to fit themselves for service which will eventually be given to the State.

**Lord Allenby.**

Lord Allenby left for England on Wednesday on his annual leave. There are still rumours here that his Excellency is not coming back; but I have it on excellent authority that the High Commissioner has every intention of returning to his post. Much, of course, will depend upon the result of the current negotiations in London, and the recommendations embodied in the Milner Mission's report, but, in any case, Viscount Allenby may be expected to return here on the expiration of his leave.

---

CAIRO, August 13.

**The Alleged Revolutionaries.**

The case for the prosecution against the alleged members of the "Society of Vengeance" concluded yesterday. Before proceeding to review briefly the evidence which has been given, it may, perhaps, be opportune to explain the latest development in the case. Readers of THE NEAR EAST will remember that in my first letter concerning the trial I described the systematic attempt that was being made to threaten the witnesses for the prosecution, and so intimidate them as to force them to perjure themselves in the interests of the accused. But one man was sent to prison for five years after being convicted of having a hand in that business, and apparently the lesson was a salutary one, for changed tactics followed. The defence are now putting forward a distinctly novel story.

Digitized by Google

The police had interned most of the witnesses for the prosecution, thinking that by keeping them safe from contamination with the outside world all would be well. But among them was a person whom the judge has described as a "most extraordinary man." This individual succeeded in inducing most of the men interned with him to sign documents to the effect that all they had said previously was false, and that in fact there was nothing against any of the accused, and less than nothing against Abdel Rahman Bey Fahmy, the Cairo secretary of the Nationalist delegation. The defence obtained possession of these documents, and produced them in court. The position therefore now is that the witnesses for the prosecution who first gave evidence later signed a statement that this was all false, and was exposed only under pressure, and finally have come into court and told stories which, if not exactly in accord with their previous statements, are yet very much to the same effect.

The prosecution, of course, hold that the before-mentioned witness was an emissary of the defence, and that he very cleverly, under the very noses of the guarding police, succeeded in obtaining these statements from the witnesses. The latter allege that they did not know what was in the documents. They say that this man, Kilani by name, told them that the documents were protests against their internment. But the matter goes a step further. Kilani, it transpires, induced one of the witnesses for the prosecution while out on parole to accompany him to a flat wherein was Dr. Maher, nephew of Abdel Rahman Bey Fahmy. There the witness was handed a statement to sign, and was given £E15 for doing so, with the promise of more after the case. The witnesses who were interned and who had signed the statements already referred to were given promissory notes for £E50 each. The defence reply that this man Kilani was not their emissary, and that they did not know him until he introduced himself, but that he was an agent of the secret police, who wished to concoct a story showing that the defence had attempted to bribe the witnesses for the prosecution. Though the matter is in itself a subsidiary issue, it has been incorporated in the general case, and the defence will reply to it when answering the general case.

Mr. Maxwell admitted that these witnesses had succeeded in shaking confidence in their own trustworthiness, but he tendered their evidence for what it was worth.

The case for the defence will open to-morrow. Seven submissions have been made to the Court in writing by counsel for the defence, contending that there is no case against their respective clients. Mr. Maxwell has opposed them all, and decisions will also be given on these submissions to-morrow morning.

**The Political Outlook.**

There is naturally tense interest in the case, particularly among the native population; but though this interest is very real, there is no undercurrent of feeling likely to end in an outburst of resentment. The negotiations in London are receiving closer attention, and the rumours current of a split have focussed upon the situation the attention of many who hitherto have been rather apathetic, confident that all would come right in time.

Whether the attitude of the Nationalist Press is inspired or not I cannot say, but the leading papers are not displaying any undue alarm at the rumours of difficulties. The following paragraph culled from *Al Ahram*, the leading Nationalist organ, seems to sum up the tenour of their views:—

> The words "obstacles and difficulties" do not frighten us, for obstacles and difficulties were expected from the very beginning. Had the Delegation not been at the limit of its demands and of its warrant no obstacle or difficulty would have arisen. The occurrence of obstacles is not, therefore, against the aspirations and hopes of the Egyptians, but, on the contrary, it conforms with their aspirations and the removal of every obstacle by negotiations means the realisation of new hope, and every day that passes henceforth means a step onward. . . . .

In effect, this seems to say, "We have asked for more than we could hope to get. Nevertheless, there may be a chance that something will be conceded, and it is worth while making the effort." Momentarily, therefore, there are hopes and fears, much journalistic discussion, and more vocal eruption—and then we come back to the starting point, which is marked with a sign reading "Wait and see."

**Education in Egypt.**

Last year the students, suffering from what may be described as over-zealous patriotism, gaily took holidays at will. They were warned on all sides that the game of playing truant for months, so lightly undertaken, would react on them. It has; for not 50 per cent. of them passed the examinations, the results of which have recently been published. Now the popular cry is "the students were asked questions in subjects which they had not been taught." Of course, they never learned those lessons. One usually does not assimilate knowledge by roving about the streets, waving a flag, and uttering patriotic platitudes.

The Americans have been quick to observe the necessity for wider educational facilities in Egypt, and have decided to institute a university in Cairo, the doors of which will be open to receive students qualified for admission about November next. Dr. R. Watson, who for some years has been president of the American College at Assiut, is to be the first principal, and with him will be Dr. R. MacClenahan, who has also had a wide experience in training the youth of Egypt.

**Salaries of Government Officials.**

According to the native Press, the Government has decided that all foreign officials who were appointed to the staff of the Egyptian Government in 1914, but were prevented by the War from commencing their duties, are to have, on their actual entry into the service, all rights of the service as if they had joined their respective staffs in 1914. They will be entitled to seniority, allowances, and pension rights as from the date of their appointment. This decision will concern a large number of officials—about forty in one Ministry alone.

The salaries of officers of the Egyptian Army also are to be increased. This increase, tardy though it is, and liable to objection on the same grounds as have been advanced against the increments to officials in the administrative services, is one that has not aroused the same animosity as that against the generous increases to other branches. The Egyptian officers, in the main, are sons of wealthy parents, and therefore have been able to help support themselves through the bounty of relatives. But that principle is one that has fallen into general disfavour in most countries; and Egypt, late as ever, is following the example. But there is one class for whom this increase has not been granted. I refer to the veterans whose days of active service are over, and who are now existing as best they can on a pension calculated on a cost of living far below that of to-day. Their only disability is their age. They are surely deserving of more generous recognition from their country.

# YUGOSLAVIA.

BELGRADE, August 15.

**The Persistent Crisis.**

The political crisis has been dragging on for over three weeks, but without the bitterness of last year. Everybody has been optimistic, and well-informed persons have kept repeating that it would be all settled in a couple of days. At last, on Thursday, after a conference at the Palace, the Regent is reported to have expressed his opinion on this constant quarrelling very vigorously; he received the leaders of both blocs in audience, and as a result of the session the Radicals gave way on the question of exports, and a little later on the question of agrarian reform in Bosnia; it was announced in the Press that an agreement had been reached, that the same Cabinet would be reformed, with two modifications, and that M. Vesnitch required twenty-four hours to think it over finally. The Ministers then went for a picnic to Avala, to enjoy a day in the air and beautiful scenery after the comings and goings and talkings and meetings of the past three weeks.

But it seems that there is a slip between the cup and the lip; for at the last moment the Radicals are making new difficulties, and the Narodny Club has raised some points of a personal nature which may be difficult to overcome. The Ban of Croatia, who is the leader of the Narodny Club, came yesterday to Belgrade to a conference of the party. It is sincerely hoped that the Cabinet will really be formed to-morrow or Tuesday, as all must realise the great damage that is being inflicted on the country, and the threatening situation in Europe.

The question of exports has been agreed as follows:—There is no restriction on exports generally; 15,000 truck loads of wheat may be exported freely; if there be then a surplus over the country's own needs, the balance may be exported subject to approval of the Cabinet. As to the agrarian question, which has resolved itself into the problem of compensation to the landowning *begs* of Bosnia, it has been agreed that the Regent's Proclamation of December 1, 1918, be repeated, and steps be taken at once to pay the arrears of *hak* due for 1918, and, as far as financial resources permit, such claims for 1919 as can prove that great hardship has been inflicted, and the dispossessed *beg* has been left with no means of sustenance; further, that an Agrarian Committee of six Ministers be formed; and, finally, that all clauses of the reform apply not only to the *begs*, but to all other parties affected, such as war invalids, volunteers who have received grants of land, and *kmets*.

As to changes in the Cabinet, M. Stoyan Protitch is standing out, and having a rest in the country; he will be replaced by Professor Markovitch; M. Davidovitch is also standing out, and will probably be replaced by M. Drashkovitch, a much-respected Democrat and former Minister of Communications.

**The Outlook Abroad.**

Public opinion is very much agitated by the foreign situation. Grave fears are expressed of the country's being involved in more fighting, of which the Serbs have had enough to last them a long time; but they realise that they may be obliged to defend their frontiers. They do not like the rumour that Hungary is to be allowed to help Poland against the Bolshevists, as this would involve a revision of the Peace Treaty in favour of the Magyars. It is unthinkable that Yugoslavs should fight on any side other than that of the Entente, but it is equally unthinkable that they should fight on the same side as the Hungarians, their bitter enemy for five centuries. At the same time, they sympathise with Poland, but cannot take up an attitude of hostility towards Russia; most Serbs seem inclined to accept the Bolshevist army as now representing national Russia, against which they cannot be expected to fight. At the same time they are threatened on the flank by the bellicose attitude of the Italian Imperialists—not of the people—and by threat of invasion in force by the pro-Italian Albanians, and must keep a watchful eye upon Bulgaria. In these circumstances the recognition by France of General Wrangel excites the keenest interest. A long article in the Democratic *Pravda*, however, has pointed out that the Bolshevists are not and cannot represent the real Russia, and maintains that Yugoslavia cannot stand by indifferent while the Entente is supporting Poland. It will be interesting to see which view will be finally adopted by the people in general. Meanwhile, the peasant farmer merely asks to be left in peace to continue the work of restoring his shattered home and property.

At the urgent request of the Allied Council, the Government has reduced its catalogue of Austro-Hungarian war criminals from over 300 to 220. A peculiar situation arises in the case of those criminals who are now Yugoslav subjects, such as the notorious Dr. Halidbeg Hrasnitsa, who for one short hour was a Minister in the Cabinet of the scene of his misdeeds.

Dr. Edward Benes, Czecho-Slovak Minister of Foreign Affairs, is visiting Belgrade.

**Hard-dying Rumours.**

A prominent resident in Belgrade, who is a competent observer, has recently made a trip through the provinces of what was once the Austro-Hungarian Empire. He proceeded to Budapest, passed through Czecho-Slovakia, and called at Vienna; finally he motored from Maribor to Zagreb, and then to Pechuj, the colliery district, now unjustly granted to Hungary, and back to Belgrade *viâ* Zagreb. His impression of Hungary is that there is chaos there, except in Budapest. Next, that all these states have been kept in isolation from one another, with no idea of what is taking place among their neighbours. For instance, talking to a manager of a big industrial concern in Czecho-Slovakia—a country which, by the bye, is closely related to Serbia by many ties of blood and interest, he was astonished to find that his acquaintance flatly refused to believe that any British banking concern could now operate in Belgrade. "Why how," he asked, "can you do serious business, when your streets are running in blood and your country is full of revolution?" And the man in question, who occupied a responsible position and spoke excellent English, refused to believe that life in Belgrade is simple and ordinary to the point of monotony, and that the country is not on the eve of civil war. The result of insidious, persistent, and well-managed propaganda is thus well seen—even friendly and allied people like the Czecho-Slovaks are totally deceived. In the face of such an organisation, it seems useless to reiterate that the streets are *not* running in blood, and have not for several years (since the Austrians put up no fight in 1918), that there is *no* revolution in the country, nor is it in the slightest degree probable that there will ever be one, and that of all the countries in Europe this land of yeomen farmers is the last where Bolshevism is likely to take root.

Finally, the country is so rich, the crops so splendid, that in spite of all the political squabbles the country *must* be sound and prosperous.

## ROUMANIA.

BUCHAREST, August 12.

**Labour Conflicts.**

M. Trancu-Jassy, the Minister of Labour, has introduced a Bill for the regulation of labour conflicts, which has given rise to a great deal of discussion in the Chamber for several days. The Minister claims that the Bill is based upon the most recent French legislation on the subject, and that it is intended to benefit the workmen; but it has been severely criticised by the Socialists, who thoroughly disapprove of it. It would appear from the points raised in the discussion that the Bill does not recognise the workmen's syndicates, but treats of the workmen as individuals.

M. Trancu-Jassy stated that while drawing up the Bill he invited representatives of the workmen's syndicates to discuss its provisions with him, but they refused.

The Post Office strike has at last been settled, the workers being received back in groups according to the degree of their responsibility for the cessation of work.

Current letters are coming through with fair regularity, but as very little seems to have been done at the Post Office for two months before the strike actually took place, there are waggonloads of delayed letters and newspapers still awaiting distribution. No foreign newspapers for July have yet been delivered.

**Foreign Policy.**

One of the chief topics of the week has been the present situation in Poland, and the attitude which Roumania ought to adopt towards the Soviet Government of Moscow. A note has been received this week from Moscow inviting the Roumanian Government to enter upon negotiations for peace. M. Take Jonescu has announced the intention of Roumania to remain loyal to her Allies. So far no measures have been taken, except those necessary for the protection of the frontiers, but the fact that some troops have been moved seems to have caused alarm among the general public, whose greatest desire is, naturally, for peace.

**Import and Export Bill.**

Two Bills have been introduced this week for the regulation of the import and export trade respectively. These Bills provide for the freeing from State control of all Roumanian produce and the importation of foreign goods. This looks hopeful for trade, but when we examine the Export and Customs duties, the case presents a different aspect, for these taxes still remain so high as to leave all kinds of trading very badly crippled indeed.

It would appear, however, that the many protests which have been made by merchants to the Minister of Industry and Commerce have not been without result, for some of the taxes are being gradually reduced.

## GREECE.

ATHENS, August 14.

**Peace.**

August 10, 1920, will be a memorable date in the history of modern Greece, as it marks the commencement of a new era of revival and progress for Hellenism. Future generations will celebrate it as a national day, and will commemorate the great event which has put an end to a long period of oppression, persecutions and massacres. The official news of the signature of the Peace Treaty with Turkey was not known in Athens until Wednesday morning (August 11) from a telegram despatched to the Minister for Foreign Affairs by the Greek Minister in Paris, M. Romanos. The contents of this telegram were promptly communicated to the King and afterwards to the members of the Government. A few minutes later the news was posted up in Stadium Street and before very long circulated throughout the city. Work in the Ministries, other Government offices, and the banks was immediately suspended, the bells of the churches commenced ringing and the batteries on the Lycabetus and Colonos hills fired 101 salvoes. The War Office cancelled all disciplinary punishments in the army, and informed by wireless General Paraskevopoulos of the great event.

Long before sunset, and in spite of the intense heat, the main thoroughfares of Athens were invaded by dense enthusiastic crowds; military bands playing the Greek National Anthem and other patriotic airs passed through the principal streets, while aeroplanes flying over the town dropped small maps showing the new frontiers of Greater Greece. Stadium Street and the two squares, Omonia and Constitution, were gaily decorated with garlands of laurel leaves and Greek and Allied flags. At Constitution Square some of the trophies of the recent campaigns in Asia Minor and Thrace were exhibited. The Athenians looked with pride upon the guns, howitzers, rifles and the Turkish colours captured by their armies from Mustapha Kemal and Jaafar Tayar. At night Stadium Street, the two squares and the Acropolis were brilliantly illuminated, and there was a display of fireworks on the Lycabetus hill.

**The Premier's Return.**

M. Venizelos is expected here in the course of a few days, and an exceptionally enthusiastic reception is being prepared for him.

Immediately after the Premier's return a definite decision will be taken by the Council of Ministers with regard to the convocation of the Chamber. In any case the Parliament actually in existence will not be dissolved until the Peace Treaty with Turkey has been ratified, and certain Bills of extreme urgency have been passed. The Prime Minister will, it is anticipated, make certain political declarations of great importance. The life of the Parliament will not be prolonged for more than a month, and the long-delayed general elections will take place as soon as possible—probably towards the end of the year. It is hoped that it will be possible to hold elections in the newly-acquired territories simultaneously with those in Old Greece. Thrace alone, it is estimated, will send about seventy deputies to the Greek Parliament.

**In Asia Minor.**

From all accounts Mustapha Kemal has not become any wiser as a consequence of the recent little lesson given both to himself and his bombastic brother-in-arms, Jaafar Tayar, by the Greek armies. The Great Powers' decisions with regard to Turkey are not taken seriously by this Satrap of Anatolia, who considers the Peace Treaty nothing more than a scrap of paper.

Kemal, now anticipating a further advance of the Greek troops with a view to enforcing the peace terms, has concentrated the remnants of his forces at Ushak and Eski Shehr, where he is making hasty preparations for a desperate stand. It is said that the bulk of his artillery has been brought at Ushak under the command of Colonel Esref Bey, who was for some time interned by the British in Malta. Meanwhile, the revolutionary Government at Angora has issued a lengthy proclamation to the Mussulmans of Asia Minor abusing most vehemently Great Britain, France, and Greece. This manifesto is being distributed in thousands of copies and read out to the populace from the mosques. Extracts from it run as follows: ". . . England has ruined us with her gold, she divided our brothers and sent the Greek Army against us. . . . All Mussulmans must know that the world is to-day a prisoner of England, who is trying to bring about the extinction of our race. . . ." The remainder of the proclamation mainly consists of a series of abusive outpourings against Greece and France.

In the meantime, the Greek Army is held in readiness, and is awaiting but the word to advance and play the last act of the comedy of Asia Minor.

**Shortage of Houses.**

The housing problem in Athens has reached its acutest form, and the authorities do not apparently intend to take any steps to relieve the situation. Far from doing that, the various Government departmental services have installed themselves in a very large number of private houses in the capital, thus depriving of homes many hundreds of families now trying in vain to secure a house. Very few houses have been built in Athens during the last four or five years, and in the meantime

Digitized by Google

the population of the town has increased enormously. For every house under construction there are hundreds of applications; in most cases, however, the would-be purchasers or tenants are informed that the house is already either sold or let. New houses or houses which were hitherto occupied by the proprietor and are to let for the first time, do not come under the provisions of the moratorium; the owners, therefore, demand whatever rent they like.

It would no doubt surprise the Londoner to hear that the unfortunate Athenian has to pay anything between 600-1,000 drachmæ per month (£240 to £400 per annum at current rate of exchange) for a house consisting of six or seven rooms, without a garden and very often without a bathroom. One would, of course, pay less for a house which came under the restrictions of the moratorium laws, but no tenant of these would be so foolish as to part with his home in these hard and strenuous times.

## CYPRUS.

NICOSIA (Undated).

### High Commissioner Appointed.

The appointment of Mr. Malcolm Stevenson as High Commissioner has been no surprise. It has been received with approval by all communities. It does not much affect the views taken as to the island's future, although the long delay in filling the post was regarded as a favourable omen by some of the Hellenic party. The Greek papers hammer away on their absorbing topic of union, and quote articles from publications which comment favourably on the claim for union. It has generally been taken for granted here that, should the island be ceded to Greece within the five years referred to by M. Venizelos, or at any time, cession would be conditional, and that Britain would in any case retain a port and sufficient land for the construction of aerodromes and other stations, i.e., presumably the only port in the island—the south harbour of Famagusta. The making of a port at Limassol has never been seriously contemplated. It is assumed that the small Famagusta harbour would be enlarged in accordance with the designs of the late Mr. Samuel Brown, M.I.C.E. The cost, on a pre-war estimate, was £1,500,000, which would now presumably be at least trebled.

Frequent visits of the Mediterranean Squadron are among the visions of the future. For a considerable time after the British occupation the Fleet used to visit the island in alternate years bringing acceptable gains to contractors and traders. But from the time of the loss of the ill-fated Victoria, the calls became very rare. That the squadron came so seldom to Cyprus, while it cruised in more favoured Syrian waters, has always been rather a grievance. It is hoped that, if some dreams are realised, Famagusta, even if it cannot regain all its ancient splendour, will bring a new era of material prosperity to the island.

### Sanitation at Nicosia.

Loud complaints are being made at Nicosia regarding the state of the streets, the uncleanliness of which reflects no little discredit upon those responsible. During the present hot season the air is poisoned by accumulations of filth and rubbish, which are a danger to health. Municipalities have been invested with greatly enlarged powers under British rule, but several have failed to carry out elementary duties, and have had at times to be superseded by commissions. It is not the first time that complaints have been made respecting the state of the streets, markets, and public places, as well as the water supply of Nicosia, which ought to take the lead in municipal progress.

### General News.

Trade continues to be very slack; but the want of a weekly mail is felt as a grievance, seeing how many steamers reach Alexandria and Port Said; and considerable inconvenience is caused.

The road between the ports of Larnaca and Famagusta is to be diverted and improved—none too soon. Several villages interested in the diversion, which should reduce the distance from 32 to about 25 miles, are offering gangs of free labour. They quite realise the benefits of better transport for their produce, and of the enhanced value of properties.

The Russian settlement at Famagusta is beginning to send out its members to take up employment, and various advertisements appear in local papers. For example, a young Russian lady, who can speak English, French, German, and Polish, seeks employment as a typist, having typewriters of her own.

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR AND MIDDLE EAST.

*Embodies the following advantages:—*

Works satisfactorily with any kind of tobacco Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

# CORRESPONDENCE.

## SMYRNA AND RHODES.

TO THE EDITOR OF "THE NEAR EAST"

Sir,—I am interested to know whether the Powers have been as careful of Turkey's interests in the hinterland of Smyrna as M. Venizelos has been of Greek interests in Rhodes. Is the plebiscite, when taken, to be confined to the inhabitants who lived there before July 29, 1919? If not, why not?—I am, etc.,

Ruishton, July 15, 1920. COLES PASHA.

## KITCHENER.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have just read the review in THE NEAR EAST of my "Life of Lord Kitchener," which is as just as it is generous, except in one particular.

No author has any right to criticise a reviewer, but he can claim that he shall not be misquoted. Your reviewer speaks with scorn of my rhetoric, and closes with the phrase—which does not occur—"The voice of the Eternal." I have always understood that no words should be placed between inverted commas unless they form an absolutely correct quotation. "The voice of the Eternal" would be irrelevant—I have been assured that my words, "The vision of the Eternal," are at least appropriate.

This at least can be said—that if your reviewer cannot quote three words correctly, he will at least be indulgent to the unhappy author who has to guard against inaccuracies in three volumes; and of these at least he evidently holds me guiltless.

Again thanking you, I am, etc.,

23, The Boltons, S.W., GEORGE ARTHUR.
August 13, 1920.

## ITALY AND YUGOSLAVIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In THE NEAR EAST of August 5 I came across a letter from Mr. Harold E. Goad on the subject of "Italy and Yugoslavia."

Mr. Goad attacks the Belgrade Correspondent of THE NEAR EAST for his "untrustworthy" and anti-Italian information; and he condemns Yugoslav policy and attributes great glory to Italy, with her imperialist propaganda.

The Italians' propaganda in those parts of Yugoslavia which they have occupied is intolerable. They have without justice stepped in, and hold with military forces parts which are very dear to, and at the same time most necessary for, the economic development of the newly-created kingdom.

Mr. Goad compares the two nations, glorifying the Italians as an old race, pacific, liberal, and very highly civilised, and presenting the Yugoslavs as a young race with the hot blood of youthfulness. As a former soldier of Serbia who has shed a few drops of blood for the independence and liberty of my country, I now willingly shed a few drops of ink in contradicting Mr. Goad's unjust criticism.

Mr. Goad exaggerates the Italians' help to the Serbs in the retreat through Albania. We have not forgotten their help; on the contrary, we remember very well not only the Italians' help but the generous assistance rendered to the Serbians by all our Allies during our retreat through Albania and our stay on Corfu and on the Salonika front. It was undoubtedly the Allies' duty to help us, and thus enable our army to fight anew against the common enemy.

Mr. Goad said not a word in praise of Serbian heroism; he is, perhaps, completely ignorant on the subject, although all the Allies, and even our enemies, praised highly our gallant army and its superhuman bearing of hardship and sufferings in the great European war. I venture to recommend to Mr. Goad a book written by an Englishman who, I do not hesitate to say, knows more about the Serbs than Mr. Goad, wherein the latter may find better information on the subject. The book is "With the Serbs in Macedonia," and it is by Douglas Walshe, who greatly admires the Serbian nation and its heroism.

We all remember the great part played by the Serbian army, under the leadership of Marshal Sir Zivoin Mishitch, K.C.M.G., in the final struggle in Macedonia in 1918, and its military achievements; and it is all the more extraordinary that so little has been said about them by the Serbs themselves.

It is wonderful that Mr. Goad does not suggest that the Italians liberated our country and restored us to our homes. What a pity that they did not march on to Belgrade with our Crown Prince, to enter that city in triumph!

Within two months of the beginning of the Salonika offensive the Serbian army liberated every foot of Serbian territory, and, moreover, those parts of Dalmatia which the Italians by violence have occupied up to the present. It must be remembered that the Yugoslavs have manifested praiseworthy patience under extreme provocation by the Italians in awaiting a solution of the Fiume question. We do not terrorise Italian subjects, we do not confiscate their property, we do not invade Italian territory, our aeroplanes do not fly across the Italian frontier; but d'Annunzio's *arditti* do all these things, and swear that they will enter our Zagreb. They may enter Zagreb—but as prisoners, not as conquerors. We are not so ambitious as to claim Trieste, although there are more Slavs in Trieste than there are Italians in Fiume. We are peaceful, and we shall remain peaceful to the last of our patience. Why, then, such an outcry by Mr. Goad against the Yugoslavs?—I am, etc.,

University Club, D. GLISHITCH.
Birmingham, August 13.

# PRESS ON THE NEAR EAST.

## France, Great Britain and the East.

In two very valuable articles on "Inevitable Discords and Indispensable Accord," which appeared in the issues of the *New Europe* for August 12 and August 19, M. Albert Pauphilet seeks to analyse the existing relations between France and Great Britain. Of the differences which have arisen over the policy pursued in the Near East he gives the following account, as representing the Frenchman's point of view:—

No doubt business considerations played a part in the Mosul affair; but, in the eyes of the majority of Frenchmen, that was not the dominant trait in the controversy. What we criticise here is British Imperialism, which does not even respect the possessions acquired by, or promised to, France. The change in the status of Egypt; the grip on Persia secretly strengthened; Mesopotamia enlarged by skilful revision of the famous agreements of 1916—all this forms a whole drawn on a definite design. The Emir Feisal, whose pretensions have steadily grown even to the point of impudence, has always passed, in France, as a mere creature of England, not to say her *employé*. It was not on his own account that this personage conceived the idea of combining the Hedjaz, Damascus, and Syria. We in France know enough of the history of the first three years of the war to remember that there was not a single true Syrian who desired to see his beautiful country become a mere appanage of an Arab kingdom of the desert. Nor can we forget the innumerable approaches made to France by the Syrian colonies of the entire world. There are also some who know why the French military detachment in Syria and Palestine was never allowed to exceed a certain number, nor to include certain troops. And there are also a few Frenchmen, less numerous, but in possession of *authentic* information, who know exactly the obstacles placed in the way of the recruiting of those Syrian volunteers who offered themselves to France, and what propaganda was used for this purpose, long before there was any question of Arab national sentiment or the supposed Syrian preference for an American mandate. No, it was neither Turkey nor Germany who treated France thus in the Levant as a power, if not enemy, at least a rival. Frenchmen also notice that what you in London call Arab national sentiment directs its claims towards territories assigned to France, and not to those vaster regions where England is installed. *Quelle bizarre coincidence.* Why should the Emir Feisal desire Damascus, and renounce Bagdad or Cairo—those two Capitals of the Arab caliphs, magic cities enshrined in legend and history, irreplaceable and indispensable to the founder of a great new Arab State? . . . . Frenchmen think that these matters can only be explained as part of a definite policy obstinately carried out.

No doubt the mass of English opinion is innocent of all this, or does not take the trouble to collate all the facts and study them as parts of a whole; but the facts are there. The course pursued since the Armistice reveals England playing a greater and ever greater part in the Orient. She has no doubt encountered serious difficulties in Persia and Mesopotamia, which may perhaps account for the easing of the French situation in Syria recently. None the less, Palestine and Mosul have passed out of the French zone into English control, and it appears that even Damascus was not to be left under French influence. Out of respect for Arab sentiment? That is hardly probable. And, finally, we have had the prodigious and significant phenomenon of an interpellation of the *British* Government in the House of Commons on the actions of *France* in Syria. These Parliamentary critics could have adopted no more striking device to prove their belief that England has some share in the sovereignty over Syria. Even Mr. Bonar Law's perfectly correct attitude, and his insistence on the irregularity of the proceeding, cannot conceal the motive from which it came. Whenever French influence in the Orient is at stake, either Arab national sentiment or the principle of the League of Nations is brought out to resist it. But there was neither national sentiment nor League of Nations in the way when the Anglo-Persian Treaty was negotiated, or the oil of Mosul assigned to England.

M. Pauphilet then points out the Frenchman's difficulty in identifying the "lofty idealism" of President Wilson with the "skilful manœuvres" of Mr. Lloyd George, and proceeds to his statesmanlike conclusion:—

Now, in conclusion, let us compare these reciprocal reproaches in their very essence. British complaints bear upon the general conception of European policy; they do not touch the question of

any profit which might accrue to France. French complaints, on the other hand, find their target in the policy of exclusive personal interest pursued by England, often without France, sometimes against French interests. What the Englishmen call "the intrigues of the Quai d'Orsai" never lead France to encroach on her allies. What Frenchmen call *les procédés désobligeants* of England has for its deliberate and evident object the increase of British profits—even, if necessary, to the detriment of France. These two kinds of complaint cannot be compared, nor can they be played off one against the other. The endeavour to barter the right of intervention in the Ruhr Valley against a slice of Syria, to balance Krassin negotiations with Damascus—that is an unabashed return to Metternich and Talleyrand, in a word, to the Old Europe—a worthless proceeding. Let us make valid distinctions, and not mix oil and water. In doing so we may recognise that this difference between our complaints arises from our two ways of looking at war and the victory. . . . . Let us cease accusing one another of bad faith, and let us recognise that the return of peace has restored to us those divergent conceptions on life and the universe which animated our political thought in 1914. Let us aim at a mutual understanding, and for that purpose let us arrange each question in its true place.

In his final paragraph M. Pauphilet again appeals once more to Englishmen and Frenchmen to "rise above their strictly personal point of view and their attachment to certain habitual doctrines." "Let them (Englishmen) recollect history," he says, "and be impartial enough to realise that Syria for us is quite another thing than Bagdad for them; on the one hand, a long chain of tradition and secular influence; on the other, a mere recent ambition. And we on our side—let us understand that England sought in victory the suppression of German rivalry, and not the resurrection of the old French rival; that where she had been compelled to accept Germany as a partner, as in Bagdad, it seems natural to her now to accept no partner. Let us understand further—that everything in the egoism of others is not necessarily reprehensible."

## Mesopotamia.

In the *Sunday Times* Mr. T. E. Lawrence makes a striking indictment of the present campaign in Mesopotamia. He makes his charge at the outset of his article:—

The people of England have been led in Mesopotamia into a trap from which it will be hard to escape with dignity and honour. They have been tricked into it by a steady withholding of information. The Bagdad communiqués are belated, insincere, incomplete. Things have been far worse than we have been told, our administration more bloody and inefficient than the public knows. It is a disgrace to our Imperial record, and may soon be too inflamed for any ordinary cure. We are to-day not far from a disaster. The sins of commission are those of the British civil authorities in Mesopotamia (especially of three "colonels") who were given a free hand by London. They are controlled from no Department of State, but from the empty space which divides the Foreign Office from the India Office. They availed themselves of the necessary discretion of war-time to carry over their dangerous independence into times of peace. They contest every suggestion of real self-government sent them from home. A recent proclamation about autonomy circulated with unction from Bagdad was drafted and published out there in a hurry, to forestall a more liberal statement in preparation in London. "Self-determination papers" favourable to England were extorted in Mesopotamia in 1919 by official pressure, by aeroplane demonstrations, by deportations to India.

And for this state of affairs, he says, the Cabinet cannot disclaim responsibility; and he proceeds to point out the "deplorable contrast between our profession and our practice" towards the Arabs. For

our government is worse than the old Turkish system. They kept fourteen thousand local conscripts embodied, and killed a yearly average of two hundred Arabs in maintaining peace. We keep ninety thousand men, with aeroplanes, armoured cars, gunboats, and armoured trains. We have killed about ten thousand Arabs in this rising this summer. We cannot hope to maintain such an average: it is a poor country sparsely peopled; but Abd el Hamid would applaud his masters, if he saw us working. We are told the object of the rising was political, we are not told what the local people want. It may be what the Cabinet has promised them. A Minister in the House of Lords said that we must have so many troops because the local people will not enlist. On Friday the Government announce the death of some local levies defending their British officers, and say that the services of these men have not yet been sufficiently recognised because they are too few (adding the characteristic Bagdad touch that they are men of bad character). There are seven thousand of them, just half the old Turkish force of occupation. Properly officered and distributed, they would relieve half our army there. Cromer controlled Egypt's six million people with five thousand British troops; Colonel Wilson fails to control Mesopotamia's three million people with ninety thousand troops.

But, he says, the worst has not yet come.

We have not reached the limit of our military commitments. Four weeks ago the staff in Mesopotamia drew up a memorandum asking for four more divisions. I believe it was forwarded to the War Office, which has now sent three brigades from India. If the North-West Frontier cannot be further denuded, where is the balance to come from? Meanwhile, our unfortunate troops, Indian and British, under hard conditions of climate and supply, are policing an immense area, paying dearly every day in lives, for the wilfully wrong policy of the civil administration in Bagdad. General Dyer was relieved of his command in India for a much smaller error, but the responsibility in this case is not on the Army, which has acted only at the request of the civil authorities. The War Office has made every effort to reduce our forces, but the decisions of the Cabinet have been against them. The Government in Bagdad have been hanging Arabs in that town for political offences, which they call rebellion. The Arabs are not rebels against us. They are still nominally Turkish subjects, nominally at war with us. Are these illegal executions to provoke the Arabs to reprisals on the three hundred British prisoners they hold? And, if so, is it that their punishment may be more severe, or is it to persuade our other troops to fight to the last?

We say we are in Mesopotamia to develop it for the benefit of the world. All experts say that the labour supply is the ruling factor in its development. How far will the killing of ten thousand villagers and townspeople this summer hinder the production of wheat, cotton, and oil? How long will we permit millions of pounds, thousands of Imperial troops, and tens of thousands of Arabs to be sacrificed on behalf of a form of colonial administration which can benefit nobody but its administrators?

On the same subject the *Morning Post* of August 21 says:—

Undoubtedly we can crush the Arabs of Mesopotamia; but the first objection is that we do not want to crush them. We want them to be happy and to bless us. As far as can be judged the insurrection is not due to Turkish, Bolshevist, or any outside influence. No doubt agitators from the Bolshevist, Pan-Islamic, and Syrian centres will be putting their oars into the stream now that it has begun to run so strongly, but primarily it would seem to be a flow of common sentiment among the people of the land against the intrusion of a foreigner. An annexation outright they might have accepted, but the conception of a mandate which was presented to them they did not understand. It seemed to mean that the stranger was not there by his own wish and did not mean to stay, and they said to themselves: "Let us see whether he is talking in earnest." It is the mandate that is the mischief. There seems to be no getting away from it. It is the sanction of our position in the country, and in return it binds us to stay and fulfil the engagements against which it was obtained. On the other hand, the obligation is costing us valuable lives daily, sacrificed for no visible purpose, and promises to be positively ruinous in its drain on our finances. The position is no more advantageous to the wretched country, which must be exhausted by having to support a huge army of occupation, tripled by the inevitable followers. Where is the relief to come from? The calling of a meeting of notables at Bagdad to consider the drawing up of an electoral law has a suggestion of Mr. Montagu's inspiration. But what else remains? The discovery of a chief of commanding influence, to whom the formation of a Government might be entrusted. But the only personalities that can be discovered to fit the description are the Emirs Feisul and Abdullah. The latter is understood to be averse to the position, and the former to be ineligible because of the objections of the French. If ever a Government succeeded in getting itself into a position from which it is impossible either to go up or to come down it is our own over this business of Mesopotamia.

## I.—AN AUSTRALIAN IN THE NEAR EAST.

In some remarks made by the author on Cairo we find the key to the special charm of his book. "None of us," he says, "has known Cairo without its military context. . . . Perhaps none of us pines to know Cairo without its soldiers." Captain Dinning takes us to Taranto, Cairo, Palestine, and Syria. He takes us on a thoroughly enjoyable tour. Native life and manners interest him greatly. He is a master in the production of pen pictures of the landscape and architecture of these regions. But all through it is the presence of the Australian soldiers, the Light Horsemen of Australia, to whom (with "the horses that stood by them") the book is dedicated that gives it that peculiar flavour and zest which one reader, at least, has found irresistible.

There is very little of the actual war in this book, what there is being confined to air warfare and to the final *débâcle* of the Turkish Army. Of the former we have the gruesome vision of the terrible massacre of Turks by airmen in "the pleasant valley of Shechem." The tremendous strain on our troops imposed by the latter is skilfully brought out. The author's Mounted Divisional Train covered fifty-five miles over indescribably difficult country in forty-eight hours. At the end "the men slept like mad."

We hear very little of the English and Indian troops which took part in this expedition, but we do hear a good deal of our Arab allies, and what we are told makes it clear that the Australian horsemen did not love them, though Colonel Lawrence was one of their heroes. Here is an extract from Captain Dinning's diary:—

"This morning a party of the Cherifian troops passed along the Aleppo road. They are very flash, with good horses; but when you've said that you've said all. They love display, and I question their courage. They love to gallop aimlessly up and down the column, discharging their rifles indiscriminately into the air—a noxious habit! They have not grown up. As long as they have ammunition they seem bound to shoot it off into the heavens. As long as they can tear about with robes and turbans streaming in the wind, and hear the noise of discharge, they think they are fulfilling their destiny. Our troops cannot away with them. They always jostle each other in the bazaars. Bill-Jims, I fear, go out of their way to bump the Hedjaz in public places. The Hedjaz flashy pride resents this. That they should come to blows is not a wonderful thing. And they do come to blows. The Australian detests them because he detests flashness and because he feels the Hedjaz are claiming victories in Syria for which they have not done the fighting. It would never do for Australians and Hedjaz to garrison in the same town—never. The same country is hardly large enough to hold them."

It might perhaps be interesting to have a similar sketch from a "Hedjaz" of his impressions of Bill-Jim! In any case this frank opinion is of special interest in view of present events in Syria.

This extract is fairly typical of our author's style—unconventional, slightly slangy, picturesque, but always contriving to convey just the impression intended. Captain Dinning is a good Australian, and writes as one. He has the true literary artist's love of the right phrase. If that phrase is often not what an Englishman would have used, need we be other than thankful? It is authors of his stamp who will gradually lay the foundations for a specifically Australian literature.

We have left ourselves too little space to do justice to the work of Mr. McBey. Both the water-colour sketches and the etchings are delightful, especially, to our mind, the etchings which contain camels and the few masterly lines which bring out the fascination of the desert landscape in which they move. If we have any criticism to offer, it is on the method of reproduction of these etchings which has contrived to import an element of woolliness into some of them which we cannot believe to exist in the originals. We make this criticism all the more unwillingly as the whole book has been produced in such a way as to be a joy to handle and read. The bold black type, the liberal margins, the quality of the paper, thick but not heavy, combine to make a book which it is a pleasure to possess, a pleasure, too, which is cheaply purchased as book prices run now-a-days.

## II.—INDIAN RELIGION.

"The Religious Quest of India" is the title of a series whose aim is to describe the religious life and thought, and "to set each form of Indian religion by the side of Christianity in such a way that the relationship may stand out clear." In the latest volume Dr. Farquhar presents a sketch of the development of the religious literature. Writing with a wide knowledge of the material and a personal acquaintance with most of the modern sects, he provides an admirable though necessarily rather crowded survey, the value of which is enhanced by an extremely full index, and a splendid bibliography of over forty pages, which alone should commend the book to all who are interested in the subject. Instead of isolating the various religions and sects, he has endeavoured to divide the history into periods corresponding as nearly as possible to the great waves of change that swept over India from time to time and modified every religious body. This broader and more synthetic treatment is eminently desirable, and, viewed in the light of the comparative study of religions, brings many new and interesting problems.

Indian religion begins with the immigrant Aryans and their settlement among the indigenes (ch. i.). The circumstances both illustrate and can be illustrated by the entrance of the Hebrews into Canaan. Even the lofty ethical god Varuna has a noteworthy similarity to the Israelite Yahweh (Jehovah), and the worship of both gods underwent deterioration at the settlement among the inhabitants of the land. Interesting parallels can be found or suggested in the entrance of the Aryans with their hymns, the rise of family priests, the growth of ritual, and the different collections of priestly hymns. But, in addition to this, the early Vedic religion is a "healthy, happy system" (p. 13), and, as such, reminds us both of the characteristics of early religion as described by Robertson Smith and of the typical "heroic ages" which Prof. Chadwick has so fully illuminated. On the other hand, the early literature is, in a sense, a *torso*. The historical prelude is lost, although the figure of Varuna is certainly suggestive of some great wave of ethical inspiration. As for the sequel, we have the fusion of immigrants and natives and of their respective beliefs and customs. Thus the idea of transmigration is probably aboriginal, but the ethical shaping may be due to the invaders (p. 33, *seq.*); and throughout, in both India and Palestine, the fusion raises similar types of problem, and it must suffice to point out how comparison suggests new enquiries.

The history of religion is that of "experience," and interpretation, reflection and development, consciously or unconsciously influenced by social, political, and other conditions. The old Vedic conception of *rita* order (in an undifferentiated sense) and of its divine guardian Varuna, was a natural starting-point for the diverse theological and philosophical developments. The mystical experience of some fundamental oneness leads naturally to attempts to understand it, to reproduce it at will, and to describe in psychological, philosophical, or metaphysical terms how the individual is severed from his ultimate self where he finds beneath the world of space and time an ultimate reality, the precise relation of which to this self divides systems of thought. The later recognition of the inner unity of religious systems (pp. 227 *seq.*, 290) corresponds to the early recognition of the unity of the godhead; and the problems of Indian religion are from beginning to end particular forms of problems that recur elsewhere in other forms. In fact, the development of thought is like that of organic life: there is the most perplexing medley of similarities and differences, and the recurrence of analogous processes differing in shape and material.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

Digitized by Google

The sources for Indian religion go back to about the middle of the second millennium B.C. The actual beginnings are lost, even as the Puranic literature is preserved only in late forms, although there must have been popular religion of sorts long before the earliest extant material. The earliest Vedic religion, however, stands at the head of a new development, like Mosaism among the Israelites, and it is noteworthy that, not only was the ethical god Varuna known to the Hittites of Asia Minor about 1400 B.C., but names compounded with Arta (*Rita*, order) suggest the presence of an Aryan aristocracy in Syria, and even Palestine, at the same or an earlier period. The historical beginnings of Indian religion are tantalisingly bound up with some extremely perplexing but fascinating problems of the Near East of about the fourteenth century, B.C., an age which also saw the remarkable monotheistic reform of the Egyptian Pharaoh Ikhnaton.

Centuries later, about the middle of the first millenium B.C., a new stage was inaugurated by the founders of Jainism and Buddhism (pp. 55, 75); the human predecessor of the divine Vasudeva may possibly be contemporary (p. 50). It was an age of tremendous religious activity from Greece and Palestine to China; and even if Zoroaster be dated about 1000 B.C. (p. 12), rather than the traditional sixth century, some later development of Persian religion is also only to be expected. Not to mention, finally, the question whether the Bhagavadgita, which reflects a further advance in theism, is contemporary with the rise of Christianity (p. 86 *seq*), it will be recognised that not only is one led with Dr. Farquhar (p 78) to look for interrelations between religious and political movements, but when the great changes are viewed upon a larger background, one gains a more impressive picture of vaster interrelations at great periods of world history of which the present is evidently one. The deepened interest in religions is a stage in the actual development of religion; and Dr. Farquhar's volume, in common with the series to which it belongs, is calculated to add to our understanding of Oriental thought. It is upon such intelligent and sympathetic understanding that our position and prestige as an Empire indubitably rest.

## III.—PERSIAN POETS FROM ZARATHUSTRA TO FIRDAUSI.

The lure exercised by Persia is quite independent of her physical environment. It inspired the home-staying Edward FitzGerald to distil the essence of her poetry in his immortal "Rubáiyát of Omar Khayyám"; it has now moved an American man of letters to visit Persia on four occasions, and to saturate himself with a civilisation far older and finer than that of his fatherland. Professor A. V. Williams Jackson teaches Indo-Iranian languages in the Columbia University, and has achieved a certain reputation on both sides of the Atlantic as the author of several standard works on Persia. His latest contribution to the literature of the Middle East is an anthology of Persian poetry from its crude beginnings in the age of Zarathustra to the tenth century of our era, when Firdausi crowned the edifice with his deathless "Sháhnámah."

The universal passion for rhythmical expression finds its earliest vent in folksong or religious hymns. Fletcher of Saltoun's hackneyed dictum sums up the influence of ballad poetry on European races; but early Persian verse shows no trace of the lyric impulse. Such scanty fragments as have come down to us are psalms of praise to a beneficent Creator. Under the great Achæmenian dynasty illustrated by Darius, Xerxes, and Artaxerxes, minstrelsy must have flourished at Persepolis; but none of its fruit has survived. A total eclipse descended on Persia during the dark ages of Parthian rule (225 B.C. to 224 A.D.); and it needed a long succession of native rulers to bring about a revival of literature. The Sassanian King Bahram Gur (420-438 A.D.), and that hero of romance, Khosrau Parvis (590-628), are known to have delighted in verses chanted to the lute; but their tuneful numbers have shared the fate of the mighty volume of literature which passed into oblivion before the invention of printing.

The Moslem conquest, consummated in 651 A.D., meant for Persia all that William the Conqueror's successful raid meant for Saxon England. The Arab invaders brought with them a highly militant creed, which superseded Zarathustra's gentle doctrines, and a vernacular which is incomparably the richest of all Asiatic languages. While the Khalifate remained a living force, its sour bigotry was fatal to Persia's intellectual growth; but on its decline, in the ninth century of our era, poetry redolent of the soil once more raised its head. The reigns of three Iranian dynasties, extending from 820 to 999 A.D., mark a marvellous renaissance in Eastern Persia. Its final efflorescence was seen in the "Sháhnámah" of Firdausi (935-1025), whose 60,000 couplets illustrating the exploits of Persian sovereigns are known and loved throughout the Islamic world. The net result of Persia's tenth-century renaissance has been to stereotype her language. Professor Jackson justly observes that it "has changed far less in a thousand years than English in the comparatively brief period from Shakespeare to the present day."

In translating specimens of this marvellous literature, our author's aim has been to "combine the feeling of the original with the elements of faithful representation in modern form." He does not attempt to imitate Persian rhythms, which, like those of classical poetry, depend on the "quantity" of syllables, and do not lend themselves to English versification. Most of his rendering are, therefore, in rhymed verse. But our language is comparatively poor in assonances; and it requires a lord of words such as Edward FitzGerald to give Western students an inkling of the elusive aroma which pervades Persian poetry. Professor Jackson's versions are rarely felicitous and often descend to mere doggerel. He hints that a favourable reception given to this work may encourage him to follow it with two volumes, dealing with Persia's "Mystic, Lyric, and Romantic Poetry." In the interests of literature it is to be hoped that his sequels will furnish the Persian texts with a rhythmical but rhymeless translation of each on the opposite page. The best model for such an attempt is the famous French version of Heine's "Reisebilder"—"Travel Pictures"—whose haunting beauty far surpasses anything seen in the German original.

## CALENDAR OF THE WEEK.

**Showing Concordance of the Gregorian, Julian, Moslem, and Jewish Dates.**

| Gregorian (New Style). | Julian (Old Style). | — | Moslem. | Jewish. |
|---|---|---|---|---|
| 1920. August | 1920. August | | 1338. Julhijja. | 5680. Elul |
| 26 | 13 | Thursday | 12 | 12 |
| 27 | 14 | Friday | 13 | 13 |
| 28 | 15 | Saturday | 14 | 14 |
| 29 | 16 | Sunday | 15 | 15 |
| 30 | 17 | Monday | 16 | 16 |
| 31 | 18 | Tuesday | 17 | 17 |
| Sept. 1 | 19 | Wednesday | 18 | 18 |

The Metropolitan of Demotika has left London on his return to Thrace.

M. Beza, Secretary to the Roumanian Legation, left London on August 17 for Bucharest.

The Emir Faisal arrived in Naples on August 20 from Port Said en route for Switzerland.

Prince and Princess Georges Lotfallah arrived in London on August 19 by aeroplane from Paris.

M. Panourias, the Greek Commissioner at Sofia, arrived in the Bulgarian capital on August 15.

Fathollah Khan Noury, secretary to the Persian Legation, has returned to London from Eastbourne.

M. Venizelos, the Greek Premier, is making such satisfactory progress that his doctors have decided to issue no more bulletins.

Prince Arfa-ed-Dowleh, formerly Persian Ambassador at Constantinople, will represent Persia on the League of Nations, says *Le Temps*.

Hussein Khan Alai, Persian Envoy and Minister Plenipotentiary at Madrid, who has now recovered from his recent indisposition, left London last week for Switzerland to recuperate.

Mr. Ezra Sassoon, of Baghdad, has given £10,000 to the Jewish National Fund for the purchase of land in Palestine as the inalienable property of the Jewish people for the settlement of colonists.

The President of the Royal Institute of British Architects, Mr. John W. Simpson, has left England for Cairo on a mission for the Egyptian Government in connection with the Kasr-el-Aini Hospital.

The English Friends of Denmark League have conveyed to M. Venizelos their congratulations at his escape from assassination, and have received from the Greek Prime Minister an expression of his grateful thanks.

Dr. Trumbitch, the Yugoslav Foreign Minister, had an interview on August 18 with the Soviet Trade Delegates, M. Kameneff and M. Krassin, and discussed the question of repatriation of prisoners still interned in Russia.

The King of the Hejaz is sending a special mission to King George for the purpose of thanking His Majesty for his present, which the King of the Hejaz has received. The head of the mission will be Prince Habib Lotfallah.

The King has been pleased, by Warrants under the Royal Sign Manual, to grant permission to wear the following decorations, which have been conferred in recognition of valuable services rendered during the War:—

Greek Order of the Redeemer.—Cross of Officer.—W. W. Seton, M.A., D.Lit., Secretary of University College, London.

Greek Order of George I.—Cross of Chevalier.—Inspectors E. Buckley, J. Sandercock, and T. F. Cox, of the Metropolitan Police Force.

Order of the Crown of Roumania.—Cross of Officer.—E. W. Caruana, lately British Vice-Consul at Kherson, Russia.

Serbian Order of St. Sava.—Third Class.—Lt.-Col. H. L. FitzPatrick, C.B.E.

Serbian Order of the White Eagle.—Fourth Class.—Major A. S. Palmer (Ret.).

Prince Youssouf Kemal left London on August 24 for Paris.

The Maharaja of Alwar returned to London on August 23 from Harrogate.

M. L. K. Neumann, Secretary to the Czecho-Slovak Legation, left London on August 22 for Prague, on leave.

Mirza Abdol Ghaffar Khan Emad-ol-Molk, the Persian Chargé d'Affaires, left London on August 23 for Folkestone.

Prince Carol of Roumania arrived in New York on August 23 for a week's visit, during which he will observe the industrial and educational aspects of the city.

The British members of the Anglo-Persian Military Commission, says *The Times* Teheran correspondent, have, with the exception of General Dickson, now left Teheran. He also states that Mr. Hart, Inspector in the Ministry of Finance, has resigned his post.

## APPOINTMENTS, ETC.

Senator Garroni has been appointed Italian Ambassador at Constantinople.

Mr. Raymond J. Whitney has been nominated as United States vice-consul at Bucharest.

The Lord Mayor of Manchester has notified the Chamber of Commerce of the appointment of Hussein Agha Etemadet-Tojjar as Consul for Persia in Manchester.

The King has approved the appointment of General Lord Rawlinson, G.C.B., G.C.S.I., G.C.M.G., to be Commander-in-Chief of the Army in India in succession to General Sir C. C. Monro, G.C.B., G.C.S.I., G.C.M.G., who will vacate the command in October.

## OBITUARY.

A Bombay message states that Captain E. Crump, of the Irrawaddy Flotilla Company, has been murdered at Myinmu, Burma.

The death has occurred of the Rev. Claude Hermann Walter Johns, late Master of St. Catherine's College, Cambridge. Dr. Johns, who was born in 1857, graduated at Queen's College. In 1892 he became a Fellow and Lecturer in Assyriology at his old college. In 1909 he left his own college to become Master of St. Catherine's, a position which carries with it a residentiary Canonry of Norwich Cathedral. Dr. Johns's chief work was in Assyrian and Babylonian history, and he had lectured and written much on these subjects, his published works including histories of Assyria and of Babylonia, "Assyrian Deeds and Documents of the Seventh Century B.C." and "An Assyrian Doomsday Book," as well as numerous articles in scientific journals and dictionaries.

## COLONEL G. LEACHMAN, D.S.O.

The murder of Colonel Leachman takes away from Mesopotamia one of the most striking and picturesque figures, and one of the ablest officers, in that portion of the Empire. The present writer, who knew him in that country both before and after the war, must leave to others the work of describing his career as a regimental officer, and in South Africa. In Mesopotamia and Kurdistan, however, he was personally associated with him, and so, perhaps, may be allowed to bear a tribute to an honoured friend.

Leachman was one of that little group of adventurous officers who saw, after the South African war, that Mesopotamia was one of the fields where expert knowledge would be useful in the future, and he made the province his own. No doubt the mere craving for adventure had much to do with his choice; like Sir R. Burton, he was too big a man for routine duty, and the East drew him as it drew Burton, to go and wander among men with whom he had much in common, sure that some day his knowledge would "come in" when the need should arise, and enjoying the mere adventure in the meanwhile.

So, in the years before the war, he wandered from Busreh to Van, now turning up in more or less civilised garb at an English mission house in Kurdistan, now appearing, as a very ragged Arab, by night at the residency in Baghdad, and forcing a passage past a reluctant and astonished sentry. Hardy and tough, he was as absolutely indifferent to comfort as he was to danger, and on occasions his campaign kit was even lighter than the "piece of soap and two towels" of Charles Napier. The writer has heard him discourse eloquently on the joys of camels' urine considered as a liqueur, and when last he encountered him in Whitehall was informed, "I have just run over to have my appendix cut out." Thus he could live among

Digitized by Google

the Arabs as one of themselves, speaking the language forcibly and intelligibly, if not always elegantly (who, indeed, can imagine Leachman as elegant?) and striking their imagination as no other officer could do.

Then came the war, and he found his career as intelligence officer to General Aylmer's force in the first advance to Kut, only to be cheated of fame by one hair's-breadth. Scouting out alone in front of the force before the abortive attack on the Judaileh redoubt, he actually entered that post—and found it empty. Hurrying back to his brigadier, he told what he had discovered, and urged immediate advance. A telephone message to Headquarters, however, revealed the fact that touch had been lost with the artillery of the force, and all advance was forbidden, lest they should be shelled out of the redoubt by their own guns. Legend has it that Leachman broke out: "For God's sake cut the wire, Sir, and swear you did not get the message," but the brigadier held to his orders. So in due course the redoubt was re-occupied by the Turks, and the force watched them do it. After that they were shelled all day by the guns of the redoubt, and were finally withdrawn, leaving Kut unrelieved. Turkish officers have told the writer that they considered the game lost on hearing of an attack on the right bank of the river, and said to one another: "They will relieve Kut, but will get no further." Is it surprising that the memory of the night rankled in Leachman's mind, and that long after when someone said in his hearing: "The relief of Kut was an impossibility," he broke out with the quick reply: "It was not. Kut *was* relieved, once."

The reputation he had made travelled far in Mesopotamia, and thus it was that he, characteristically, was one of the first to enter Mosul at the end of the war, where he found a Turkish official of high rank busy in removing some stores which by the terms of the armistice were to be surrendered. Promptly, Leachman knocked the man down. The Bey rose in mighty wrath, demanding names and addresses, and threatening appeals to the Commander-in-Chief. "My name is Leachman," came the answer, "and if you do not leave these things I shall knock you down again." We understand that the Turk literally fell and licked his boots!

As political officer, or practically governor, of Mosul after the war, Leachman governed on the lines of Harun-er-Rashid, and various tales about him (such as his collision with the Armenian Patriarch, or his impounding all the donkeys of a disorderly Arab tribe) have already appeared in these columns without a name attached. Conventional he could never be; a governor of a province who disappears into the desert, and has to be sought for by aeroplane when the needs of the State require his presence, is perhaps better suited for days of disturbance than for those of routine. On other occasions he would vanish in like fashion into the wilds of Kurdistan, rushing from place to place with perhaps two (or more usually one) wearied orderly at his heels, appearing in the "kalas" of astonished Kurdish Aghas, and lecturing them on their duty to the new order of things. The risks that he took habitually were tremendous, as when he appeared by aeroplane in the midst of a council of Kurdish Aghas, who had met, as they thought, in secret to discuss revolt, and brought them to at least a temporary loyalty by mere personal prestige. "There was only one village of Kurdistan where I ever felt safe," he once told the writer, and we regret to say, he added, "and now those Assyrian scallywags must needs carry on a blood-feud in it!"

An orderly administrator was about the last thing that he could ever be. Had his life been prolonged to days of normal administration, some special berth would have had to be manufactured for him, such as "Controller of the Arabs of the desert." There was a legend current in political circles in Mesopotamia that he once sent in a statement of account in which the totals balanced admirably, but which contained an item of some 70,000 rupees on the expenditure side, with the explanation "spent somehow on Government service, but we none of us remember how." On another occasion, when he was plagued by an orderly-minded clerk about the absence of some vouchers in another such statement, he sent back a reply: "The vouchers are at the bottom of the Karun. Tell your d——d Babu to go and look for them there."

That such a man should meet his death by violence can hardly be considered an unnatural end for him, or one that he would have thought unwelcome in itself. The black treachery which (if the account be trustworthy) brought about his death must come as a shock to all who have been accustomed to trust themselves to Arab hospitality, and will probably be an even greater shock to all right-thinking men of the land itself. Perhaps no one of the many who desired "Leachman Sahib's" death would ever have dared to meet him face to face.

A daring man who constantly put his life on the hazard, and that with the keenest enjoyment, he would have been the first to admit that the day was sure to come when the risk that he took so often in Government service would be fatal to him. He was one of those (though he might never have used the phrase himself) who hold that if you once treat life as valuable it ceases thereby to have any value at all. Meantime, we must own with sorrow that in the present situation in Mesopotamia the gap left by the removal of "Leachman Sahib" is one that it will be hard to fill.

W. A. W.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**

## THE OFFER TO EGYPT.

Amid the welter of misunderstanding and worse from which the world is suffering at the present moment it is good news indeed that substantial progress can be reported in the conversations that have been taking place in London between the representatives of the Egyptian Nationalists and Lord Milner's Mission. An official statement, issued last week, announcing that Saad Pasha Zaghlul and his Egyptian colleagues had left for France and Egypt respectively, added that a very considerable measure of agreement on fundamental points had been revealed, which would, it was hoped, greatly facilitate the ultimate settlement of the Egyptian problem. It is probable, the statement continued, that at a later stage negotiations of a more formal nature will take place between accredited representatives of the British and Egyptian Governments. Subsequent unofficial reports were able to elaborate some of the fundamental points in regard to which the Mission and Zaghlul Pasha found themselves to be in agreement; but in so doing they misrepresented the nature of the proceedings in London. In the first place the powers of the Mission are restricted to reporting to the British Government and to making such recommendations as it considers advisable for the future government of Egypt; in the second place, Zaghlul Pasha and his colleagues, while representing an important political party, have laid special stress on the fact that they have no authority to bind the Egyptian people as a whole, and it is in order to sound the opinion of their own adherents on the conditions which they themselves are prepared to accept that they have returned to Egypt. Consequently it is a complete misnomer to apply to the London conversations either of the terms "agreement" or "settlement." Five months ago when the Special Mission returned from Egypt the position in regard to that country appeared hopeless. Lord Milner and his colleagues had been sent to gather information on the spot with a view to making recommendations for the future status of Egypt, but the only articulate body of opinion there stood resolutely aloof, demanding "complete independence," without attempting to explain the meaning that it attached to the words. In the face of this attitude it was obvious that the measure of self-government which the dispatch of the Mission implied that the British Government was prepared to grant would at once be utilised to legislate Egypt out of the orbit of the British Empire, and the Mission could have done no more in such circumstances than recommend certain improvements in the existing machinery of administration and leave for the future any elaborate charter of self-government. Lord Milner was wise enough to delay the final drafting of the Report in the hope that the Nationalists would come to see reason in time. The confidence was justified, and at the eleventh hour Saad Pasha Zaghlul and delegates from Cairo agreed to meet the Mission in London to submit the Nationalist point of view.

The position when the conversations opened was that, whatever steps the British Government might take on the recommendation of the Mission, it would have to reckon with a hostile Egypt. Lord Milner's purpose, therefore, in meeting Saad Pasha Zaghlul and his colleagues was to discover whether fuller knowledge on their part of the extent to which the Mission was prepared to recommend the grant of "independence" would not have the effect of changing a hostile Egypt into a friendly one. Thus, the first implied condition attaching to any understanding between the Mission and the Nationalist delegates was that whatever new status may be agreed upon, its whole-hearted acceptance in friendly relationship with Great Britain has to be guaranteed. One important point which the Nationalists had entirely overlooked while they held themselves aloof and demanded "complete independence" was that the Egypt for which they claimed to speak had no real existence. The British might have walked or sailed away from the Nile, but Egypt would still have remained under the Capitulations, and her "complete independence" would have been illusory. It is Great Britain alone, and not the Nationalists, who can free Egypt from the Capitulatory régime, and without this deliverance independence can have no real meaning for the Egyptians. Accordingly, another condition attaches to any measure of understanding arrived at between the Mission and Saad Pasha Zaghlul; it is that Great Britain will be able to induce the Powers concerned to consent to the abolition of the Capitulations. Clearly her chances of success depend on the extent to which she can persuade them that Egypt is entering upon a normal course of healthy self-development, safeguarded from political unrest and racial antipathies. In considering, therefore, the fundamental points on which the conversations showed the Mission and Saad Pasha Zaghlul in agreement, it must be borne in mind that any further steps in arranging for the future status of Egypt are dependent upon (1) the consent of the other Powers to the abolition of the Capitulations, and (2) the ability of the Nationalist delegates to guarantee that a settlement on the lines suggested will find Egypt ready to respect it and whole-heartedly responsive to Great Britain's friendship. This aspect of the situation was made very clear to Saad Pasha Zaghlul and his colleagues before they left London, and it is unfortunate that one version of the understanding has represented the negotiations for the abolition of the Capitulations as following instead of preceding any actual agreement between Great Britain and Egypt.

To many people the lengths to which Lord Milner's Mission is prepared to go in meeting the Egyptian demand for independence, in order to have a contented and friendly Egypt, will come at first as a surprise. Further consideration will show that in this particular Great Britain is merely indulging in an extension of an established precedent. Egypt's strategic position in the scheme of the British Empire is safeguarded; a garrison will be maintained in the Canal zone, and in case of war every facility and access to Egyptian territory are guaranteed. As Great Britain will make herself responsible for Egypt's integrity against outside aggression, there can be no call for a large native standing army. Any formal agreement between the two countries will doubtless clear up a number of points that the conversations in London did not cover. The Sudan does not enter into the picture, or, if it was mentioned, it was only to register the British Government's decision not to contemplate any alteration in the status of that territory or interference with its affairs. A more explicit statement regarding the relations between Egypt and the Sudan would be required in the final Act, especially as the southern country is dependent in part on the Egyptian railways for its communications. Egypt for her part would have her independence formally recognised, would regain control of her foreign relations subject to her not making treaties at variance with British policy, and would be freed from the Capitulations, while a veto on legislation affecting foreigners would be vested in the British representative. There can be no doubt as to the generous nature of the proposals. In practice the success of the scheme will depend largely on two things: the spirit in which the Egyptians undertake their new responsibilities and the personality of the British representative. If the Egyptians fail to live up to the spirit in which the offer will be made, or prove incapable of self-government, they will run the risk of losing their cherished independence. But the first step is that Egypt with something approaching a unanimous voice should signify her readiness to accept the proferred grant of independence with good will and friendly feelings. It is to be hoped that Saad Pasha Zaghlul and his colleagues will set more store on meeting their responsibilities in this direction than on trying to represent the British terms as a personal triumph for themselves.

# WITH THE FRENCH IN THE NEAR EAST.

**By F. Fells, Ex-Lieut. R.N.R.**

"You will report yourself to the French Commandant on board the ——— and take your instructions from him, placing yourself and your ship at his disposal until such time as you receive further instructions from British authority." These words, spoken by the British S.N.O. at one of the naval bases in the Grecian islands, formed the starting point of a period of intense interest, enabling me, a British officer, to view the whole system of transport from Marseilles and Taranto to Itea and thence overland to Bralo and Salonika through French eyes.

According to instructions received we proceeded to the French naval base at Itea, passing en route through the famous Corinth Canal. This wonderful piece of engineering, conceived and commenced by the Emperor Nero, was intended to form a link between the Gulf of Corinth and the Ægean, a short cut from Italy to the Roman Empire in Greece. However, the project was abandoned, and only completed in modern times. The effect of passing through the heart of a mountain by means of a cut as clean and well defined as a narrow wedge sliced through a lump of cheese is striking and unforgettable. The illusion, evidently caused by the angle which the strata of the towering rocky sides makes with the sea level, of climbing up and up a water hill adds to the strangeness of the journey.

Arrived at Itea I duly reported myself to the kindly French Commandant, who from the first moment of greeting contrived to make me feel that I was conferring a favour on him by placing myself under his orders. Never during the whole eight months of my intimate association with him and his staff did I for one moment lose that impression.

At that time the Base Navale d'Itea consisted of the old wooden battleship Shamrock, with her attendant armed trawlers, ferry-boats, tugs, and visiting cruisers and transports. Inquiry elicited the information that she dated from the early days of the Republic, when one General (?) MacMahon was a power at the Ministry of Marine, and it was proposed to name several ships in his honour. I understand that he died or was superseded before the scheme could be carried out, so that the old Shamrock is the sole surviving evidence of the project.

I was received with the greatest friendliness by the staff of officers, most of whom spoke a certain amount of English, but I recollect especially the efforts of the Engineer-Lieutenant who took upon himself the task of correcting my faulty diction and pronunciation. The efforts were mutual, and there were many laughable incidents occasioned by our endeavouring to find the correct French phrasing of English expressions, and *vice versâ*. On one notable occasion the expression "the pot calls the kettle black" came up for discussion, and seemed to possess a great fascination for my cheerful instructor. In and out of season, for many weeks, he would pounce upon me or hail me from a distance: "Hi! Fells écoute! Pott calls black kettle"!!!

I found that Itea, port of ancient Delphos, the home of the Oracle (ruins of whose cave near Parnassus exist to-day), although far from any battle-front, and protected from submarine attack by the well-guarded inland Sea of Corinth, was nevertheless the scene of great and increasing activity.

There, whither the barques and galleys of old-time princes and rulers were used to bring their lords to consult the sacred Oracle in questions of love and statecraft, now came great transports and ships of war to land the troops of Britain and of France and her colonies to fight the German and the Bulgar in the North. Here, too, came thousands of tons of war stores and material, all to be transported by heavy camions and British lorries up through the hills and mountain passes on the magnificent motor road, hewn in many places from the solid rock by British and French engineering skill. Day and night, activity never ceased; if ships were not discharging troops or cargoes, then large convoys were transporting men and material, to be met in the passes by other convoys bringing wounded or war-weary troops to be embarked at the jetties. Embarking and discharging of troops took place chiefly at night, and for these duties small craft of any kind were employed. I have vivid recollections of crossing the ghostly dark waters of the bay; my little ship laden with three or four hundred troops and their equipment arriving at and leaving the pile jetties lit by flares, and returning again for more until the job was done. The sudden transition from the noise and bustle and glaring lights to the calm, deep stillness and darkness, unbroken save by the fairy lamps of the distant transports, was eerie in the extreme.

Itea was a meeting-place for every race and nationality of the Near East. British and French troops rubbed shoulders with coloured colonials from North Africa, with brown Maltese labour companies, occasional Arabs from waiting ships; there were the stylish uniforms of visiting Serbian and Greek officers and the processions of hangdog Turkish prisoners going to and from their work. Through and amongst them all, going about their daily affairs as though there were no such thing as a war in progress for the salvation of their country, were the town-bred Greeks and Levantines in their ill-fitting European clothes, and the strangely clad mountain shepherds from outlying villages, together with wild-looking Montenegrins looking as though they had stepped from a picture. In all the centuries Parnassus has surely never looked down on a stranger and more motley gathering. The entire organisation in this area was in the hands of the French. All shipping arrived and departed to scheduled times, which were so arranged that the danger zone between Patras and Taranto was traversed at night. It says much for the excellence of this organisation that few, if any, sinkings occurred during the eight months I was in that area. British, French and Italian destroyers shared the work of convoying the transports between the carefully policed barrier across the Adriatic and the nets and patrols which guarded the Gulf of Corinth. Once inside the Gulf, ships could proceed independently in perfect safety to Itea, or further east until they left the Corinth Canal, where they found themselves once more liable to submarine attack in the Ægean. Troops and stores, once landed, proceeded in large convoys of about twenty lorries over the first twenty miles of the long road to Bralo, and then came into the British zone.

The British and French existed side by side at Bralo, both having their huge lorry parks and transport companies, which fed, as it were, the continual stream of outward and inward traffic from the railway to the coast.

Bralo itself consisted of practically one huge rest-camp or dumping-ground, where men and materials were constantly arriving by train and lorry from Salonika and intermediate stations in the North, and over the mountains from Itea, forty miles by road to the South. Organisation was perfect, and said much for the amicable relations existing between the two Allies. Thousands of mixed troops would arrive in the vast camp on the plain, which, to the untutored eye, would seem to be already overcrowded. Within a marvellously short space of time these troops would vanish to their allotted places, trains shunted to their sidings, and lorries parked. Then, as if by magic, other large bodies of troops would appear on the march, new convoys form, and once more the tide would ebb by road and rail.

As can be imagined, this continual and heavy traffic caused an enormous amount of wear and tear on the road, and called for never-ceasing repairs. To this end the Bralo section of some twenty miles was undertaken by the British, and the remaining, or Itea, section, by the French. Hundreds of girls and women, with a sprinkling of boys and men, were recruited from the country round about, and large labour camps existed at intervals by the roadside. The work was enormous and never ending; inspectors patrolled the route incessantly, and no sooner did the slightest crumbling or inequality of the surface appear than gangs would be hurried to the spot, steam-rollers appear from nowhere, and the defect be remedied at once. In winter the work was cruel and bitter cold. Apart from the damage caused by frost and howling blizzards, which held up the traffic, frequent

Digitized by Google

avalanches would descend, completely blocking the road and in places tearing portions of it away, necessitating immediate repairs. Quarrying, blasting, and stone-breaking were carried on incessantly, and the rugged mountain sides show many a scar which will bear witness for all time as to whence came the material to make the wonderful causeway. This should form a perpetual monument in Greece to the days when Briton and Gaul worked side by side for the defence of the country.

The question of water-supply to such a large body of troops in a sterile and practically riverless country was another problem which the French had to cope with. It is a peculiarity of that part of the world that rivers sink into the soil several miles inland, and never reach the sea unless by subterranean channels. It was in connection with this supply that I was called upon to assist the French authorities, and I hope on some future occasion to tell how we brought the water to Itea.

## TOPICS IN PARLIAMENT.

*The subjoined headings are those given in the official report* :— India (Prince of Wales' Visit). Montenegro. Persia and Mesopotamia. Syria. Mesopotamia. (August 16.)

## A RUSSIAN APPRECIATION.

The following copy of a letter received by the Commander-in-Chief, Mediterranean, from Dr. Danchakov, principal medical officer of the Russian Black Sea Fleet, has been promulgated in the Fleet :—"From the time of the arrival of the first British man-of-war in Sevastopol up to the present moment the Medical Department of the Russian Black Sea Navy has never been insensible of the practical help and moral support rendered by British medical men, all so tactfully given as literally to leave us no opportunity to say how we felt. Will you, therefore, convey to the medical officers who visited our shores the expression of our heartfelt gratitude of all they have done for us, and the assurance that if we can ever be of the slightest service to our British colleagues they have only to command us."

## NEWS IN BRIEF.

A detachment of the French troops in Syria have occupied Kuneitra.

News received officially in London states that this year's harvest in Yugoslavia will be a record one.

Starrosselski Cossacks have entered Menjil, in North-West Persia. They have met with great opposition.

About 8,000 Maltese emigrants have left Malta for British Dominions and other countries since the Armistice.

Three British destroyers, Stuart, Tourmaline, and Turquoise, were to leave Malta for Constantinople on August 20.

The Roumanian Chamber on August 14 ratified the treaty with Bulgaria, which had already been ratified by the Senate.

A Bucharest message, received in Paris, states that the Roumanian Chamber has ratified the Peace Treaty with Austria by 221 votes against 13.

An Order in Council fixing August 9 as the date of the termination of war between Great Britain and Bulgaria was published in the *London Gazette* of August 20.

It is stated that an Anglo-Roumanian Agreement has been signed by which Britain is to supply officers for the Roumanian Navy, now in course of reconstruction.

A Coptic Church Court in Cairo has sentenced a local Bishop, who advocated the abolition of the celibacy of the clergy, to three years' imprisonment in a monastery.

A contingent of ninety-six French, six Dutch, eight Serbs, and three Italians who have been released from Siberian prison camps arrived at Stockholm on August 18 on their way home.

A Commission, composed of several Albanian notabilities, has left Durazzo for Athens and Paris, and will enter into negotiations with America with a view to a loan for Albania.

It is announced that the Roumanian, Serbian, and Czecho-Slovakian Governments are negotiating with a view to reaching a definite understanding among themselves as to the policy they shall pursue towards Russia.

The Royal Scots Greys, who are at present stationed at Redford Barracks, Edinburgh, are under orders to proceed to the Near East, probably Palestine, and it is expected they will leave about the end of September.

Negotiations for the sale of Western Wave by Mr. Whineray to the Maharaja of Nawanagar were concluded successfully on August 21, and the horse, with the other animals purchased by the Maharaja, will leave on September 14 for India.

The Admiralty have issued instructions for the sloop Clio, Commander Charles H. Jones, attached to the East Indies Station for service in the Persian Gulf, to be paid off immediately at Bombay, and her crew sent to Gibraltar Dockyard to man the sloop Crocus, which is to be refitted at Gibraltar Dockyard in readiness to replace to Clio in the Persian Gulf. The sloop Cyclamen, which is to refit at Sheerness Dockyard for service in the Persian Gulf, is to relieve the sloop Odin, Commander Vivian H. Brandon, which was recommissioned with her present crew at Gibraltar in September last year.

# CHESS.

## THE BRITISH CHAMPIONSHIP.

The very general expectation that Sir G. A. Thomas would complete a wonderful season by winning the British Championship at Edinburgh was after all not destined to be fulfilled. After one of the closest contests on record the title has been gained by Mr. R. H. V. Scott, who has won the Hampstead and the Metropolitan championships on several occasions. Mr. Scott, with a score of 9, won by a margin of a point from Sir G. A. Thomas, who was half a point in front of Mr. E. G. Sergeant. Until the last round the two first named stood level, and it was not until later in the evening that the issue was decided.

Mr. Scott unquestionably deserved to win, for except in one game it cannot be said that he was favoured by luck. A player of the imaginative school he has hitherto failed to combine with that quality the soundness necessary to achieve the highest success. But that criticism cannot be passed on his play on this occasion. He was imaginative as usual, but where soundness was required he was sound. Sir G. A. Thomas did not display quite the form which gave him his triple victory in the London championships last spring and enabled him to win at Bromley, where the competitors included M. Kostitch, and judging by his play I should imagine that he was somewhat short of practice.

Here is another game from one of the early rounds of the championship.

QUEEN'S PAWN GAME.

| White. P. Wenman. | Black. Sir G. A. Thomas. | White. P. Wenman. | Black. Sir G. A. Thomas. |
|---|---|---|---|
| 1 P—Q4 | Kt—KB3 | 17 Kt—B (6) | KR—Q |

| 16 Kt x Kt | R x Kt | 32 Resigns. | |

(1) It is always a very difficult problem to decide on the line to be adopted against tactics of this type. I am of the opinion that the best way to meet Black's desire to control the diagonal is by P—B4, followed by Kt—B3, having in view the ultimate advance of the pawns with a view to shutting off Black's QB.

(2) Black assists in the process, and it should now be White's aim to keep Black's QP at Q4. White's QB can be developed by way of Q2, K, and KR4. P—B3 should, therefore, be played, followed by 0—0; Kt—K, and P—KB4.

(3) This manœuvre is unsatisfactory while the KBP is unmoved.

(4) White would now appear to have a shade the better of the position.

(5) White has now cause to regret having needlessly played P—QR3, as the QR should have gone to Q, leaving the KR available for an offensive against the King. K—R, R—Kt, followed by P—K Kt4 seems the most useful method of attacking.

(6) K—R was indicated. The text move merely hampers White's game, and absolutely prevents a King's side attack.

(7) Proving the uselessness of White's 9th move.

(8) White seems merely to have had in view defence by thus preparing for an attack which Black was not ready to deliver.

(9) Why? If the R had to be moved it should have gone to R2. At QKt it serves the useful purpose of defending a piece which was not, and could not be, attacked.

(10) Decisive.

Position after White's 23rd move. KtP × P.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The statistics for the imports of motor-cars and motor-cycles into Egypt for the first five months of this year make very unsatisfactory reading from the point of view of British trade. The Egyptian market for these commodities is on the increase, and promises to develop to a considerable extent. Unfortunately there is at present no indication that United Kingdom manufacturers will be able to obtain their share of this trade. The imports from the United Kingdom for the period in question totalled 53 motor-cars and 92 motor-cycles; while the imports from the United States amounted to no fewer than 675 motor-cars and 111 motor-cycles.

***

American cars have been given the preference, it appears, for two reasons, their cheapness and the certainty of delivery. There is a full appreciation of the good qualities of British cars, but while their superiority of finish and their durability are recognised, they are not being ordered on account of the high prices and the uncertainty of delivery. I understand, however, that British cars sent to Egypt are readily sold, and manufacturers might well consider the advisability of allocating a proportion of their output for export to this market. But that at best can promise only an uncertain trade, and it is evident that until the inevitable economic law brings about a readjustment of industrial conditions in this country, it will be impossible for manufacturers to hold their own in this and other similar trade outlets.

***

A further series of pamphlets, prepared for the League of Nations in connection with the International Financial Conference to be held in Brussels on September 24, has now been issued. These documents, which deal with various financial problems, the price of silver, trade promotion, etc., will in due course be reviewed in these columns, and I will, therefore, only briefly refer now to the most important of them, namely, the memorandum on the foreign exchanges and trade, written by Professor Gustav Cassel, of Stockholm University. Since the Armistice no problem has given rise to more anxiety than the question of the exchanges, and many have been the devices adopted to cope with it. But the artificial expedients have largely failed of their purpose, and to-day, almost two years after the Armistice, it has to be admitted that such improvement as there has been in the exchanges has been caused by the natural process of the growth of exports.

***

One solution of the exchange problem that has been much favoured here and on the Continent is the creation of an international currency standard. Professor Cassel is emphatically against this proposal. As he very justly points out, "the problem of keeping a stable exchange between two countries remains essentially the same whether the two countries have nominally the same unit of money or not." The crux of the position is, in short, not the unit of exchange, but what stands behind the unit. In other words, the solution is to be found in the word reconstruction. Given normal production in every country, creating normal exports, then the exchanges will right themselves. We have seen the effect on certain Near Eastern exchanges this year of the favourable harvest prospects coupled with progress in internal reorganisation, a marked movement towards parity taking place in certain cases. What has been happening in these cases points the moral that the restoration of the exchanges to a normal level need not be a slow process if only the necessity for hard work is realised in all countries.

***

One of the most significant features of Egypt's commerce for the first five months of the year has been the development of trade with Germany and Austria, whose competition will apparently be as severe at no far distant date as it was in pre-war days. The value of imports from Germany for that period was £E161,064, the figures in the case of Austria being £E84,913, the chief items in the trade being beer, china, glassware, caustic soda, and cutlery. Coming to the exports, it will be seen that in this direction, too, the former Central Powers are likely to make their influence felt, and possibly to a much more serious degree than in regard to the import trade. The value of Egypt's exports to Germany was £E724,760, while the figures in the case of Austria were £E137,640. Of these totals, £E715,210 and £E137,633 represented *raw cotton*. That means that at a time when the visible supplies of cotton are all but inadequate to meet the constantly growing demands, as the result, among other things, of the increasing utilisation of cotton for the manufacture of tyres, a new factor presents itself on the side of demand. It is a development which may well give rise to disquiet.

***

During the war France's projects for the development of Morocco were perforce restricted, but now that conditions are once again approaching the normal our Ally is making haste to repair the loss of time as far as possible. A new Moroccan loan of about seven and a-half million francs was recently voted by the French Chamber, and this is to be utilised for extensions of the ports, the construction of roads and hydraulic works, the development of irrigation, and the improvement of agriculture. At the same time, steps are being taken to develop the railway system of the country, in order that the Protectorate's progress may not be retarded by lack of adequate transport facilities. The present proposals provide for the construction of 1,000 kilometres of lines at a cost of between six and nine hundred million francs. Under the French régime the economic progress of Morocco has already been very marked, and this advance should be greatly accelerated in the future as the well-conceived schemes of development now in view make their influence felt.

***

We publish this week an important article on the economic position of Bulgaria, in which some of the openings in that country for British enterprise are briefly outlined. Apart from agriculture the resources of the country are as yet mainly undeveloped, and our correspondent draws attention to the opportunities that exist in connection with the development of the extensive lignite and anthracite deposits and other mineral resources, and the utilisation of the country's hydraulic power. There are extensive openings in other directions, notably for the construction of grain elevators at the ports, and especially for the supply of machinery for cement, textile and other factories. As regards the textile industries it is suggested that the problem of payment in view of exchange difficulties might be overcome by participation in enterprises. It is a feasible solution, and should prove quite workable.

***

The net earnings of the Darjeeling-Himalayan Railway for the half-year ended March 31 amounted to Rs.2,47,455, the available balance being Rs.5,34,614, out of which a dividend of Rs.6 per ordinary share is recommended, leaving Rs.3,17,780 to be carried forward. The net receipts of the Extensions Railway amounted to Rs.1,25,453, of which Rs.1,09,375 has been utilised to pay a dividend of Rs.2 8 annas, Rs.16,078 being carried forward.

# Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## EGYPT.

CAIRO, August 6.

### More Land for Cotton.

In spite of the outcry that the tax of P.T.35 per kantar of cotton was going to hamper the cotton-growing industry, the policy of planting cotton in preference to wheat and maize in Egypt has been persisted in so far that the Government has been impelled to make contracts for the supply of grain and flour to this country next year. I hear that the tax of P.T.35 per kantar is not sufficient to cover the deficit which is incurred by the importations of these foodstuffs; but so far there is no indication of any intention to increase it.

## GREECE.

ATHENS, August 14.

### The Value of the Drachma.

The control of exchange has now been removed, and though this would naturally cause a temporary setback to the value of the drachma, financial circles here are, nevertheless, confident that this will eventually show a considerable improvement of a more or less permanent nature. It should not be forgotten that in a few weeks time large quantities of currants and tobacco will be exported from this country, as a result of which important money remittances will be forthcoming from abroad. Furthermore, in view of the present serious deadlock in business caused by the enormous stocks lying at the Piræus and at other important centres in Greece, very few orders are being placed abroad, and consequently very little money is exported.

### Shipping Losses During the War.

The Union of Greek Shipowners has now published the figures in connection with the shipping losses incurred by Greece during the war through enemy action. On the eve of the war Greek shipping represented a total tonnage of 900,000, of which 397,000 was lost. The sums paid to the shipowners by the insurance companies in respect of these losses amounted to 310 million drachmæ. The total tonnage of Greek shipping to-day, including twenty steamers which are now under construction, is only 600,000. The president of the Shipowners' Union states that at least one more year will elapse before Greek shipping can attain its pre-war tonnage. The total number of steamers sunk during the war was 152; 210 sailing vessels, representing a tonnage of 20,000, were also lost.

### Arrivals at the Piræus.

There were 447 arrivals of various steamers in the port of Piræus during July of the following nationalities:—Greek 367, British 17, Italian 17, inter-Allied 11, Russian 7, American 6, French 6, Dutch 5, Roumanian 4, Spanish 3, Swedish 1, Norwegian 1, German 1, Polish 1. The number of sailing vessels of various nationalities which entered the port during July was 565.

## ROUMANIA.

BUCHAREST, August 12.

### The Budget.

In spite of much criticism the Budget Bill has been practically accepted. The full estimates have now been published, and are given below. As explained in a previous letter, these cannot be taken as final, as it is hoped by the introduction of new taxation to reduce the deficit of about half a milliard lei. Moreover, the Army estimates have been made for the Army at peace strength, and the charges on the debt have been calculated on the basis of the normal lei value, i.e., about 25 to the £.

The complete figures of the Budget estimates are as follows (the totals being in lei):—

Receipts:—Direct taxes, 461,000,000; indirect taxes, 1,900,890,000; stamp and registration fees, 575,250,000; State monopolies, 1,035,000,000; public services, 1,661,120,000; State domains, 164,355,000; subventions, 29,187,000; Ministry of Finance, 99,888,400; Interior, 30,758,000; Justice, 17,588,000; Foreign Affairs, 500,000; Domains and Agrarian Committee, 14,182,000; Industry and Commerce and Under-Secretaryship for Reconstruction, 92,636,000; War, 1,415,000; Public Works and Communications, 4,272,000; Public Instruction, Religion, and Art, 12,878,600. Total, 6,090,920,000 lei.

Expenditure:—Ministry of War, 900,367,570; Finance, 1,527,878,171.27; Public Instruction, 656,046,637; Religion and Art, 131,063,918.65; Interior, 702,281,969; Public Works, 420,982,353; Ways and Communications, 1,163,000,000; Justice, 203,400,000; Domains and Agriculture, 132,900,000; Industry and Commerce, 116,000,000; Foreign Affairs, 20,982,175; Labour and Social Welfare, 20,428,785; Presidency of Council of Ministers, 7,231,600; Agrarian Committee, 81,175,748.80; Under-Secretaryship for Reconstruction, 15,940,745. Total, 6,103,679,672.72 lei. Funds for opening of supplementary credits and extraordinary credits, 496,320,327.28. Total, 6,600,000,000 lei.

### Unsatisfactory Trade Position.

During 1919 Roumania's exports were practically nil, largely owing to the lack of implements and transport, and for the first quarter of this year things had not greatly improved. The following table shows the comparison between the exports of cereals during the first quarter of 1920 and the same period in 1916 (the totals representing kilograms:—

| | 1920. | | 1916. |
|---|---|---|---|
| Wheat | 228,900 | ..... | 242,820,200 |
| Rye | — | ..... | 20,662,000 |
| Maize | — | ..... | 230,408,800 |
| Barley | — | ..... | 161,571,200 |
| Oats | — | ..... | 42,730,400 |
| Wheat Flour | 6,600 | ..... | 73,255,400 |

This year Roumania will probably have very little, if any, wheat, but a good quantity of maize and barley available, but the difficulty still is to get it to the ports of shipment. If to the expense of transport an enormous export tax is added it is to be feared that the Roumanian producer will find himself unable to compete with the prices ruling on the world market. The petrol producer in Roumania is already in that position, for even in Con-

stantinople American oil has recently been sold much cheaper than it could be got from Roumania, Turkey's next door neighbour. The situation seems to be improving slowly but surely, however, and if this year's harvest is as good as it promises and the locomotives expected from America within a week or two perform all that is expected and hoped of them, the progress may continue more rapidly henceforth.

**The Exchange.**

The market of the lei to-day is about 165 to the £, so that it is falling again. About three weeks ago it touched 120, and there was general rejoicing, though there seemed to be no substantial reason for the change. It became difficult to sell sterling as most of the merchants were waiting for the lei to go to 100, when they intended to pay off their bills to British houses.

There are several representatives of British firms in Bucharest at the present time, but one does not hear of much business being concluded. During the last few months a Canadian firm has secured a large contract, however. The Germans are busy preparing the way by skilled propaganda for their merchants to resume their former hold upon the market.

**Withdrawal of Crowns and Roubles.**

The Bill regulating the withdrawal of Austrian crowns in Transylvania and Russian roubles in Bessarabia has been passed by the Chamber. The crowns will be withdrawn immediately, and the roubles later. The rate of the exchange will not be announced until the day when the operations begin, so that would-be speculators will have no definite information to go upon. It would seem likely that it will be something between two and three crowns to the lei. In order to provide the sum necessary for the above exchange, a Bill has been passed authorising the Government to take a loan from the Banca Nationala for the sum of five milliard lei. This is intended to cover the withdrawal of the notes of the Banca Generala (a German controlled bank which issued currency during the occupation) as well as of the crowns and roubles. The loan has been accorded by the bank free of interest, and the State will only have to bear the expenses of the emission of the necessary notes. The value of these will be covered by Treasury Bonds.

## YUGOSLAVIA.

BELGRADE, August 15.

**The Collieries of Pechuy.**

The *Progrès* publishes a report that an English syndicate has bought the collieries of Pechuy, on the demarcation line, from Hungary, who will receive in compensation the district known as the Baranya, among whose mixed population there are a hundred thousand Serbs.

**Credits for Guilds.**

The Ministry of Reconstruction has granted a series of credits to various guilds of artisans, etc., ruined by the war in Serbia and Montenegro, for the purchase of tools, plant, and material at cost price. The artisans of Belgrade get 3.000.000 dinars, the Central Union of Skoplje gets half a million, and the Chamber of Artisans at Cetinje a quarter of a million.

**Export Regulations.**

On the authority of a resolution of the Agricultural and Finance Committee, the Minister of Finance has directed the Customs authorities on the frontiers to permit exports without guaranteeing foreign currency in cash to the Central Bureau for Foreign Payments for the following articles:—Fruit, pepper, mushrooms, cuttings of sugar-beet, preserved fruit and vegetables, worked stone and millstones.

The Minister of Finance has issued an order that exporters may effect the change of their foreign currency into Yugoslav money only through the National Bank or its branches, the Central Bureau for Foreign Payments, or the Bourse, subject to the control of the delegates of the Ministry of Finance.

**Miscellaneous.**

Postal communication with Austria is interrupted owing to the postal strike in that country.

The Ministry of Food and Reconstruction has approved a credit of 300,000 dinars for the purchase of fishery plant and materials for the fishing industry on the Lake of Skadar.

The Director of State Monopolies has arranged to build a tobacco factory at Skoplje which promises to be one of the biggest in the Balkans.

It is reported that a number of Russian engineers are proceeding to London to get into touch with British capitalists with a view to constructing railways in Yugoslavia.

## ASIA MINOR.

SMYRNA, August 10.

**Postal Delays.**

Previous bitter complaints about the delay in the postal service to Smyrna sink into insignificance in comparison with what now obtains. Letters from the United Kingdom to Smyrna take from six weeks to two months. The s.s. Karnak reached Smyrna about July 10, and up to the present time the greater part of the bills of lading and invoices have not arrived, and therefore merchants cannot withdraw their goods from the Customs House. Some firms, who had obtained their goods by giving a banker's guarantee that the bills of lading would be produced in one month's time, have to renew the guarantee for another month—a costly affair.

Merchants are suffering considerable inconvenience at the present time through delay in receiving registered letters from the British Post Office. We know an instance where a registered letter was due for delivery at 6 p.m. on Saturday evening, August 7; the addressee was told three times to "call again," although he presented the receipt issued by the Smyrna Post Office. Finally, he solicited the assistance of a consular official, who obtained the letter for him about mid-day on August 9.

## SUGAR PRODUCTION IN YUGOSLAVIA.

The sugar production of Yugoslavia this year is estimated at 54 million kilogrammes, this amount being inclusive of the output of the sugar refineries and the sugar-beet crop. The consumption is estimated at about 60 million kilogrammes, but it is thought that the production, if evenly distributed, will suffice for local needs. A Belgrade journal states that the following are the forecasted figures in hectares for the sugar-beet crop:—Becherek 2.688, Belgrade 1.299, Baranavor 927, Novi-Vrbas 4.480, Ossiek 2.500, Cussora 250, Tzrvenka 5.280, giving a total of 17.424 hectares under cultivation.

The Constantinople Coaling Co., Ltd., has been registered as a private company, with a capital of £30,000 in £10 shares. Registered office: 8, Serjeants' Inn, E.C.

**BANQUE D'EXPORTATION PRIV. DU ROYAUME DE SERBIE.**

(Royal priv. Serbian Bank for Exportation.)

**BELGRADE, SERBIA:**

**Capital, Paid-up, 5,000,000 Dinars**

**Reserve - - 1,200,000 Dinars**

The Bank transacts all Banking Operations, undertakes all manner of financial, commercial and industrial enterprises and effects Money-Transfers to and from Foreign Countries.
*The Commercial Department* of the Bank deals mainly in the Export of Native Products on its own account and on commission basis.

***Cable Address Exportbank, Belgrade.***

# ARMENIA'S HYDRAULIC RESOURCES.

## GREAT POTENTIAL SOURCE OF WEALTH.

By G. J. AGABABIAN, E.N.S.M. (Paris)
(*Chief of the Department of Mines of the Armenian Republic*)

An important place among the natural resources of Armenia must certainly be given to the hydraulic power of its rivers. This importance is not merely the result of the normal difference in the matter of net prices of production between water energy and that obtained by the aid of combustibles—a difference which is, of course, considerably accentuated in consequence of the present high level of fuel—it is due particularly to the abundance of hydraulic energy in Armenia, and to the technical conditions which render its utilisation specially advantageous.

The rivers of Armenia are notable for their torrential character. Running into the Caspian Sea, the Black Sea, the Eastern Mediterranean, and the Persian Gulf, they show between the sources and the mouths differences of altitude often exceeding 4,000 metres. The neighbouring countries which extend along the lower reaches of the great rivers of Armenia, such as the Euphrates, the Tigris, the Arax, and the Chorock, show differences of less than 500 metres; the gradient of these rivers and their mouths being generally very low, and disadvantageous from the point of view of the production of hydraulic energy.

To estimate the value of the hydraulic power of the great Armenian rivers and their numerous confluences it is necessary to calculate their flow of water, etc. Such calculations have never been undertaken in Turkish Armenia, nor in Persian Armenia. As regards Russian Armenia, the maps of the Caucasus furnish a good deal of technical information concerning the Trans-Caucasian hydrographical system, while the official bulletins of the Waterways Department afford a certain amount of scattered information in regard to the systems of the Arax and the Kura. These details, together with a few personal observations, have enabled us to calculate the approximate minimum hydraulic power of twenty-nine rivers and streams.

The absence of gauging and levelling information makes it impossible to calculate the available hydraulic power of (1) numerous confluences of the Arax, Kura, and Chorock; (2) tributaries of certain confluences.

The following table summarises the results of the above data:—

THE ARAX SYSTEM.

| | Minimum Horse Power. | | Average Gradient. |
|---|---|---|---|
| Arax | 791,916 | ..... | 0·00207 |
| Akhurian (Kars-tchai) | 154,335 | ..... | 0·0077 |
| Arpatchai Occidental | 17,688 | ..... | 0·0119 |
| Sev-Djur (Kara-su) | 6,584 | ..... | 0·00088 |
| Ambert | 37,066 | ..... | 0·0850 |
| Kassak (Abarantchai) | 28,691 | ..... | 0·0166 |
| Dali-tchai | 20,027 | ..... | 0·0687 |
| Zanghi | 181,520 | ..... | 0·0095 |
| Maman | 11,892 | ..... | 0·0233 |
| Garni | 61,140 | ..... | 0·0358 |
| Vedi | 52,616 | ..... | 0·0399 |
| Arpatchai Oriental | 203,863 | ..... | 0·0231 |
| Nakhitchevan | 128,635 | ..... | 0·0381 |
| Yerindjak (Alindja) | 25,507 | ..... | 0·0449 |
| Ghilan | 24,316 | ..... | 0·0445 |
| Ramis (Urumis) | 14,452 | ..... | 0·0906 |
| Vanand | 27,790 | ..... | 0·0978 |
| Meghri | 128,635 | ..... | 0·0721 |
| Bassute | 23,810 | ..... | 0·0621 |
| Capan (Tchaundur) | 248,412 | ..... | 0·0332 |
| Akera | 505,630 | ..... | 0·0237 |
| Barguchate | | ..... | 0·0188 |

THE KURA SYSTEM.

| | | | |
|---|---|---|---|
| Bambak-Debeda | 126,760 | ..... | 0·0118 |
| Henevan (Kamenka) | 58,940 | ..... | 0·0236 |
| Gharpi | 4,270 | ..... | 0·0267 |
| Khram | 161,655 | ..... | 0·01394 |
| Akstev | 74,450 | ..... | 0·0173 |
| Thartar | 363,107 | ..... | 0·0199 |
| Karkar | 111,439 | ..... | 0·0384 |
| Total | 3,595,046 | ..... | — |

This approximate total ought to be doubled at least in order to represent the minimum hydraulic power of Russian Armenia. The minimum of its effective hydraulic power may be obtained by multiplying the result of this operation by a co-efficient of reduction equivalent, for instance, to 0.50. As regards the average and maximum powers of these watercourses, we are not in possession of sufficient information to give any precise figures. However, an approximate calculation based on details collected concerning eight of these watercourses gives the figure of 9,382,055 horse-power as an average total for the rivers of Russian Armenia.

The average gradients of most of the watercourses which we have studied vary, according to the table given above, between 0.030 and 0.040; a few reach 0.090. Four rivers in twenty-nine have average gradients of less than 0.010. These are the Arax, the Akhurian, the Sev-Djur, and the Zanghi rivers, which may be sub-divided into sections showing different gradients. The water-power of the low gradient sections corresponds to 350,119 horse-power, a figure which barely represents 10 per cent. of the total minimum power, which, as mentioned above, is 3,595,046.

The importance of the hydraulic power available in Russian Armenia may be better appreciated if the horse-power is represented in terms of fuel-power. At present the big fuel-consuming generating stations consume per horse-hour 3¾ lbs., or 3.75 × 0.453 = 1.699 kilogrammes of coal on an average. Under these conditions the minimum hydraulic power of 3,595,046 horse-power would correspond to an annual stock of 52,771,680 tons of coal, representing, at 20 francs a ton* a value of more than one milliard francs. 3,595,046 × 0.001699 × 24 × 360 = 52,771,680 tons; 52,771,680 × 20 = 1.055,433,600 francs.

From the industrial point of view these figures correspond to 14,577 kilogrammes of coal per horse-year, without counting other expenses, while the same unit of energy of the big hydro-electric stations under normal conditions would cost 50 francs, including interest and the writing off of the expenses of the original installations.

Looking at it from these two angles, the utilisation of the hydraulic power of Armenia (1) would enable the country to do without big stocks of combustibles, and would reduce its Budget considerably; (2) would provide private industry with abundant and cheap hydro-electric energy without which the national resources of the country would remain undeveloped.

## DOCK CONGESTION AT ALEXANDRIA.

The congestion at the docks at Alexandria is referred to in a report by H.M. Commercial Agent for Egypt. He states that in general the congestion may be said to be due to the stagnation of the local market causing lack of cash to take up documents, and that instead of selling goods importers have stored goods in bonded warehouses with a view to raising money on bonded warehouse warrants. The result is that goods are piled so high and in such confusion in the Customs and bonded warehouse sheds that it is almost impossible to sort the individual cases forming the consignments of importers who would withdraw them. The degree of congestion may be judged from the following figures for Manchester goods only: Stock in bonded warehouses at end of May, 10,480 bales and cases; withdrawals during May, 949 bales.

Some firms in the United Kingdom are now authorising banks in Egypt to release documents against three months' bills. This practice, if extended, will greatly relieve congestion. To remedy congestion on the quays themselves, the Customs Administration has taken over again the greater part of the sheds that were occupied by the military authorities and established a new section at the Mahmoudish Customs, so that the Customs formalities may be actively carried out. Further, the bonded warehouses have rented storehouses in Alexandria where goods may be placed. In addition, it has been suggested that the congestion is accentuated by large firms buying up consignments to small firms and paying storage on them rather than risk a fall in prices by their being put on the market. From enquiries from banks and merchants this does not appear to be the case, as the large firms are themselves overstocked.

Under the auspices of the Automobile Club of Ceylon, and the Ceylon Motor Traders' Association, the Ceylon Motor Show Syndicate has been formed for the purpose of organising a motor show from January 22 to 29, 1921.

## GENERAL BANK OF GREECE.

*Paid-up Capital, Drs. 3,000,000.*

**Head Office - ATHENS.**

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

## POPULAR BANK OF GREECE.

**Head Office, ATHENS. Branch, PIRÆUS.**

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

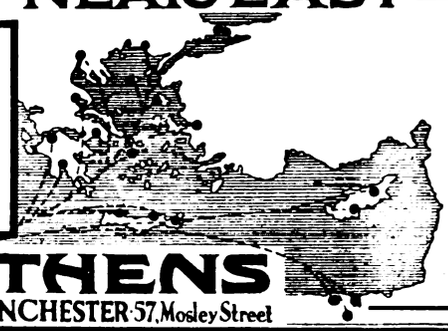
**CAPITAL - Drs. 1,500,000.**
**RESERVE FUND - Drs. 2,500,000.**
**Deposits and Credit Accounts, Drs. 100,000,000.**

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

*General Manager:* D. LOVERDO.

## TRADE WITH THE NEAR EAST

WITH its offices in all the principal towns in **Greece, in Egypt, Cyprus, Crete, Constantinople,** and in **Smyrna, the Bank extends exceptional Facilities for Export and Import Trade between Great Britain and the Near East generally,** and invites enquiries and correspondence relating thereto.



HEAD OFFICE: ATHENS.

## BANK OF ATHENS

LONDON 22, Fenchurch Street E.C.3. MANCHESTER 57, Mosley Street

## COMMERCIAL BANK OF GREECE, LIMITED.

**CAPITAL PAID-UP - Drs. 15,000,000.**
**RESERVE FUNDS Drs. 2,845,010.45.**

**Head Office: ATHENS.**

*Branches:*—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostitza (Ægion), Nauplia. Larissa.**

**AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.**

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 379,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 32·05 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10% primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

# BULGARIA'S ECONOMIC POSITION.

## II.—OPENINGS FOR BRITISH ENTERPRISE*

(From a Correspondent.)

In my previous article I outlined the present position of Bulgaria, and pointed out that in the development of the country British participation will be heartily welcomed, provided it is on a basis which will enable Bulgarians to share equally in whatever enterprises are undertaken. I now propose to examine some directions in which development is required. First and foremost there is a question of the adequate utilisation of the lignite and anthracite deposits. Quite close to Sofia there is a coalfield containing immense quantities of lignite in the plains and so-called anthracite deposits in the mountains. This material can be briquetted without the addition of tar, and there would be a ready market locally for the briquettes. The lignite is of 3,000 calories, and the briquettes would represent 6,000 calories. In other parts of the country extensive deposits exist which would not only provide for local needs, but would also enable the building up of a large export trade.

Another and a paramount need is for the installation of grain elevators at all ports. Hitherto exports of grain from the Bulgarian Danube ports have passed through the elevators at Braila and Galatz, to the economic disadvantage of the country, and a concession for the construction of elevators should prove a highly remunerative enterprise, and it can safely be said that in no direction would British assistance be more popular.

Apart from coal and lignite, the country possesses various other mineral resources, apparently of considerable value. Very many concessions have been granted in the past, but in the majority of cases little actual work has been done, and there is no accessible information regarding the extent of the various minerals. But from what is known it seems clear that in this direction there should be a promising field for enterprise.

It need scarcely be said that in Bulgaria, as elsewhere, there is a house shortage. Various cement factories exist, of which one is in operation. The others are in need of machinery, organisation, and up-to-date methods. There are large orders from Government and public bodies awaiting execution, while the demand for private houses is immense.

The textile industry is capable of considerable development, and there is undoubted scope in this direction for the supply of machinery, while technical advice is also required. Here, as in other cases, the exchange raises problems with regard to payment for machinery. One way of getting over the difficulty would be an arrangement by which participation in the enterprise was given in return for the supplies required.

No review of opportunities in Bulgaria would be complete without a reference to the utilisation of water-power. The mountainous regions of the country make the development of water-power for industrial purposes and for lighting an undertaking of particular promise. The people are familiar with, and appreciate the uses of, electricity, and it is no exaggeration to say that they are eagerly looking forward to its application.

In a preceding paragraph I touched briefly on the question of payment for machinery in the case of special enterprises. Obviously the general question of payment for goods does not lay itself open to treatment on the lines suggested. The present exchange rates preclude an exchange of values on a cash basis, but, that admitted, the difficulty is not so pronounced as it would appear. Probably there would be no obstacle to the payment of a small proportion in sterling, but the bulk of the value would have to be remitted for the time being in the shape of produce. Bulgaria is fortunate in possessing at the present time large surplus stocks of grain, and as the harvest outlook this year is uniformly favourable it is evident that the country will possess the wherewithal to create credits, and by so doing to bring about a further substantial rise in the value of the leu.

Looking ahead to future years, in addition to grain and tobacco, there will be minerals to export, and these commodities between them will furnish the basis on which Bulgaria should be able to build up a considerable trade in the exchange of commodities with Great Britain. Bulgaria must always look abroad for the majority of manufactured articles; Great Britain needs, and will always need, raw materials. Thus the way should be made plain for the development of close commercial intercourse between the two countries.

* The first article appeared on June 24.

## TRADE ANNOUNCEMENT.

SERBIANS know no English; consequently they cannot read and appreciate British industrial and commercial catalogues and price lists. British prospects in Serbia are high. Send to the undersigned your technical and commercial catalogues, pamphlets, booklets, price lists, and advertisements for translation, production and distribution in the kingdom of the Serbians, Croatians and Slovenians. It is important that your catalogues be translated CAREFULLY and with TECHNICAL EXACTNESS. Professor W. M. Petrovitch, author of *English Grammars* for the use of the Serbians, and of *Serbian Grammars* for the use of the English, whose works in English ("Hero Tales and Legends of the Serbians," and "Serbia: Her People, History, and Aspirations," published by G. G. Harrap and Co., 2 and 3, Portsmouth Street, Kingsway, London, W.C.) have been well received in England, is prepared to undertake all such work. If you are interested to extend your trade, industry, or commerce to the new, wealthy, and prosperous kingdom of the Serbians, Croatians and Slovenians, write to-day to Dr. WOISLAV M. PETROVITCH, Secretaire du Ministere de l'Instruction Publique, Belgrade, Serbie.

## THE PRAGUE FAIR.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you allow me to bring to the notice of your readers interested in foreign trade that a very important Sample Fair will be held in Praha, Prague, from September 12 to 28, 1920? The fair is the first of its kind in Czecho-Slovakia, and will in the future be held twice yearly. The importance of the sample fair is probably already known to your readers from the particulars published in the *Board of Trade Journal*, and submitted to the Chambers of Commerce.

The object of this letter is to invite all buyers or would-be buyers most cordially to visit the fair, which will be a representative collection of Czecho-Slovak manufactures in all lines. Merchants and shippers will have an opportunity to get into direct touch with manufacturers and secure their supply of goods of world-wide fame for all markets.

Detailed information and aid will be given by the Czecho-Slovak Legation in London.—I am, etc.,

L. V. Neumann.

Czecho-Slovak Legation, 8-9, Grosvenor Place, S.W.1.
August 13.

## INDIAN INTELLIGENCE.

This week's Indian cable states:—Rain has fallen fairly generally in Bihar, Chota-Nagpur, Northern Bengal, Assam, Lower Burma, Madras (North Coast), South-Western India, Central Provinces (East), and Punjab Hills. Local elsewhere. Monsoon generally weak. Crop conditions, generally, good, but rain needed in parts of North-Eastern India, Central Provinces, and in Southern India. Purneah-Kissenganj metre-gauge railway—preliminary survey of 36 miles by Eastern Bengal State Railway sanctioned. Bombay cotton market steady. Fully good broach August Rs. 447. Piece-goods market no improvement in rates and demand poor. Calcutta jute market old crop very firm, new crop nothing doing. Hessians steady with prices unchanged and moderate business. Heavy goods dull but steady, with limited business. No change in Bank rate.

## FOREIGN EXCHANGES.

# "STANDARD" TOBACCO MACHINERY

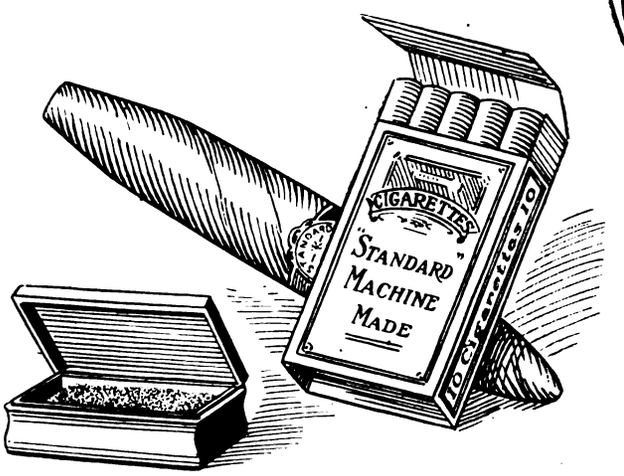
**Covers the entire field of varying requirements in Tobacco Factory Mechanical Equipment for the preparation and manufacture of the raw material—**

*From Plantation to Finished Product.*

AM&F Co

Whether you are concerned with the manufacture of Cigars, Cigarettes, Pipe Tobacco or Snuff, "STANDARD" Machines are available which have been developed to the highest state of mechanical perfection and are pre-eminent as regards—

Simplicity of Construction,
Consistent Reliability,
Ease of Control,
Low Power Consumption,
Rigidity of Design,
Efficiency in Output,
Perfection of Product,
Economy in manufacturing Costs.



*Write for our Illustrated Lists, stating the class of machines you are interested in.*

# ENGINEERING.

## Electric Accumulators.

At the present time, so rapid have been the advances made in electrical work, it is hardly possible to pick up any journal devoted or partially devoted to the engineering industry without finding the word "accumulator" therein. The word has little meaning to those outside the engineering industry, and even users of these storage batteries, as accumulators are sometimes termed, are often far from clear as to what the word means and as to what an accumulator really is.

In its early stage of development an accumulator was merely two plates of lead immersed in a solution of dilute sulphuric acid. These were not allowed to touch each other, and each plate was connected to one of the poles of an electric battery or some form of electrical generator. As soon as a current was allowed to pass, the acid solution was slowly decomposed into its constituent gases, and the metallic lead was changed, chemically, on its surface into a compound of lead. It was found that if the battery was disconnected after a time the lead compounds thus formed changed back to metallic lead, and in doing so caused a current of electricity to flow between them as soon as they were connected by a wire. The total quantity of this current bore a relationship to the current which had been allowed to pass through them in the first place. In this early form the efficiency of the accumulator was very low, but it was not long before improved methods of manufacture were adopted and higher efficiency resulted. About 30 years ago a method of manufacture was devised by which the plates were made in the form of a grid of lead, the spaces in which were filled with the lead compounds mentioned, so that the accumulator was ready to work as soon as the charging current had been allowed to flow for a sufficient space of time. Both plates were pasted or filled with the same lead compound, so that all the electrical energy had to do was to change this compound into a somewhat different form, which reverted to its original material during the discharge. From this it will be seen that an accumulator is really a piece of chemical engineering machinery, in which the action is purely chemical, so that an accumulator or storage battery does not store up current in the ordinary sense of the term. On the contrary, the electric current has the property of decomposing the liquid and causing a chemical change in the material forming the plates, and the subsequent reaction generates electric current in its turn.

The modern accumulator is a highly efficient piece of apparatus, and as it is easily put out of condition a certain amount of care is necessary in using it. When current is taken from a storage cell at too rapid a rate, or when the discharge is continued for too long a period, the acid solution with which the cells are filled becomes weak, and a hard and an insoluble sulphate of lead, in the form of a white scale, forms on the plates and impairs their utility. The battery then opposes a high resistance to the passage of the charging current, and it is difficult, if not impossible, to get it back to its original state of efficiency.

When batteries fail through this cause the user is apt to imagine that there has been some fault in the manufacture, but, as a matter of fact, manufacture has developed to such a pitch of excellence that a faulty cell is never allowed to pass outside the works, and given proper usage every cell can be relied upon to last for its rated life. Neglect has as serious an effect on an accumulator as failure to lubricate would have on an engine or any other piece of machinery. Makers invariably send out a complete book of instructions with their cells, and give full directions as to charging and discharging, and if proper attention is paid to these there is no danger of any fault occurring or of the battery failing to give its rated output. There are two very clear indications which enable the user to gauge the limit of safe discharge. One of these is a simple instrument called a hydrometer, which indicates the strength or specific gravity of the acid in which it is immersed, and the other is the voltage. In rough figures, as Messrs. Vandervell, who are well-known battery makers, point out, it may be taken that the battery will be injured if the specific gravity of the acid solution falls below 1.170 on the hydrometer scale, or the voltage falls below 1.8 volts per cell, at which figure the voltage of a six-cell battery will be 10.8 volts instead of 12 volts or over, which would be the normal figure.

After a battery of accumulators has been erected, which should be done strictly in accordance with the instructions of the makers, the cells should be filled with sulphuric acid diluted to the proper degree, so that the tops of the plates are just covered. The hydrometer should show a specific gravity of 1.225, and this can be obtained approximately by mixing pure sulphuric acid with four times its bulk of water. If the reading is not quite up to the figure mentioned, a little more acid or a little more water should be added, as the case may be. The battery should then be connected up, and charging commenced, and this first charge must be carried out for the length of time specified by the makers, at the end of which each 2-volt cell should give an average of 2.5 volts. The reading on the main discharge voltmeter should be equal to the number of cells multiplied by 2.5.

For the first few weeks no attempt should be made to discharge the cells to anything like their full discharge limit. Frequent charging up is necessary, and charging should always be continued until the liquid in the cells is in a state of violent effervescence. Should the gravity be found at any time to have dropped below 1.700 on the hydrometer scale immediate re-charging is necessary. A reduction of capacity can often be traced to weak acid solution which is always caused by insufficient charging. A point to be noted is that if batteries stand in a warm place for any length of time the water in the acid solution evaporates to some extent, and in such case pure distilled water should be added until the level and the gravity are both correct. The plates in the cells should never be allowed to stand uncovered with water.

Where accumulators are used the gases and the fine acid spray given off during charging are extremely corrosive, and not only should the terminals of the batteries be covered with thick vaseline, but the wires and cables used should also be protected with thick coats of enamel or pitch applied in a hot state. Care should also be taken to see that any acid accidentally spilled is immediately wiped away, and a large jar of strong ammonia or of ordinary washing soda (carbonate of soda) dissolved in water should be kept at hand, as either of these solutions will neutralise acid, and so should be applied at once in the event of any acid being accidentally spilled on the hands or clothing.

## Die Forging.

At no time has the use of what are known in the engineering trade as die forgings been more general than at present, and by the introduction of the process of producing finished forgings in dies, hand-made forgings, and small steel and malleable iron castings have been largely superseded.

It is possible to forge by means of heavy power-driven hammers and suitably cut and shaped dies the most intricately shaped pieces of work; pieces which it would cost

Digitized by Google

several times as much to produce in any other way. Motor-car engine connecting rods, with gudgeon pin and big-end bush seatings, and extremely thin and channel-shaped in the centre can be drop-forged out of solid steel in a remarkably short time. In fact, the writer has seen one of these rods, weighing 8 lb., and of an over-all length of 16 inches, forged direct from a 3-inch square steel bar by 30 cwt. power hammer in slightly under two minutes. A stub-axle for a heavy commercial lorry, which at one time could only have been produced by intricate casting, weighing half a hundredweight, can be forged out of a steel billet, five inches square, by a three-ton hammer in rather under ten minutes.

There are a number of power hammers on the market, and it is safe to say that good work can be done by all of these. In the opinion of practical men, the type of hammer which is allowed to fall by gravity after being brought up to the correct height, is perhaps the more efficient for producing finished forgings in dies. In the view of some engineers it is not so easy a matter to produce good clean forgings with hammers having solid piston-rods, mainly because their construction is such that it is necessary to put wood or other packing under the block. This protects the piston-rod from crystallisation, but the view held by many is that the elasticity provided by the packing takes away from the efficiency of the blow. In the gravity type of hammer, the anvil or platform on which the hammer falls can be fixed direct in solid concrete without any fear of vibrations affecting the mechanism.

**Early Forms.**

The earliest form of drop hammer was that in which a weight was raised to a required height by means of a rope and allowed to fall so that the force of the blow could be directed where required. This type was and still is used for pile-driving work, but it was known for many years, if not for many centuries, before the principle was applied to metal working. The oldest form of forging hammer of the kind was a heavy block raised to a height by a belt passing over a pulley. Later on, power was applied to the pulley, and the friction of the belt on its rotating surface reduced the labour of raising the block. This machine, if such it could be called, was not particularly efficient, and stamping was confined to very small work. The power hammer, as used for drop forging work, may perhaps be said to date from the introduction of a "lifter" by Messrs. Brett's Patent Lifter Co., Ltd., a Coventry firm who had devoted a good deal of time and money to experimental work in this direction. This firm are now making some of the highest class and most efficient tools of this kind known, and in the opinion of users, the British-made power hammer and drop hammers are far superior in every way to those produced as yet in other countries. The Brett lifters, it may be mentioned, are made in two patterns, the one for operation by means of steam or compressed air, and the other for driving by means of a belt or an electric motor.

**Wireless.**

The members of the Imperial Press Conference who met at Ottawa have been informed by the manager of the news department of the Marconi Co., that a new system of transmission will probably be introduced in the near future. This, in his opinion, will revolutionise the wireless service, and will permit of a wider range of transmission. Another point he made was that under the new system it would be impossible for one station to pick up high speed messages intended for another recipient. On the other hand, a slow speed transmission service would allow of a number of stations receiving, when desired, the same message as in general news transmission. It will be interesting to hear more about the new method to which Mr. Burroughs referred.

**Exide Batteries.**

All those who are at present using exide batteries for starting, lighting and ignition purposes will be interested to hear that the makers have issued a new catalogue which contains full descriptions of all types of this well-known and highly efficient storage battery. In addition to this information, it contains a short technical description of the Exide accumulators, and also a list of the cars to which it is fitted. The company who manufacture these cells has also organised a service department for the general benefit of storage battery users.

**Literature Received.**

Just to hand is a booklet issued by Messrs. D. Napier and Son, Ltd., of 14, New Burlington Street, W.1. Under the title of achievements in the air it gives an account of some of the more remarkable performances of aircraft fitted with Napier engines, and from every point of view it is a very fine production. Also to hand is a very well written booklet dealing with welding repairs, issued by the New Welding Co., of 26, Rosebery Avenue, E.C.1. This deals fully with this interesting subject, and the firm will be pleased to send a copy to any reader of THE NEAR EAST. A comprehensive catalogue dealing with the Autosun equipment, which includes car accessories of all kinds, has been issued by Messrs. Auto Sundries, Ltd., of 10A, Lower Grosvenor Place, Victoria, S.W. I hear that a new company under the name of British Timken, Ltd., has been formed to take over the manufacture of the Timken roller bearings hitherto made in this country by the Electric and Ordnance Accessories Co., Ltd.

**Road Transport.**

One of the outstanding difficulties in connection with the development of road transport appears likely to be solved. That is the question of return loads, for obviously it is uneconomical for any lorry to have to return empty. I am informed that the Automobile Association has prepared a map showing the location of 600 agents throughout the country who will register the local requirements of manufacturers, traders, etc., in regard to return loads for their commercial motor vehicles. The map is for the benefit of members of the Industrial Vehicle Section of the A.A., who, in addition to the map, are receiving a full list of the names and addresses of these agents.

Although clearing houses have been established in large centres, intermediate and outlying parts have hitherto been neglected; under this scheme the A.A. have linked up all the existing organisations besides all the outlying districts, for the benefit of the members of its Industrial Vehicle Section. As a matter of fact, the whole country is covered from Penzance, in Cornwall, to Wick, in the north of Scotland, so that if a member has a lorry running from London to Lincoln with the following loads: 1 ton to Peterborough, 10 cwt. for Grantham, and the balance to Lincoln, this clearing-house scheme will assist him in avoiding dead mileage. It will only be necessary for him to send a form to the Peterborough agent, and another to the Grantham agent, asking them if they can make up his capacity to the full load, either for Lincoln or an intermediate point. If the Grantham agent were unable to find him a load, he would apply to the Lincoln agent. The scheme is run in conjunction with the existing clearing-houses forming the Association of Road Transport Clearing Houses.

National Bank of Greece.—The Bank of Athens announces that Coupon No. 215 for the dividend on the shares of the National Bank of Greece for the first half of the year 1920, amounting to Drs.180 per share, will now be paid at the London office, 22, Fenchurch Street, E.C.3. Coupons must be left three clear days for examination.

# NEAR EAST MARKETS.

## EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in July :—

Cotton.—The weather was favourable with a considerable rise of temperature. The water supply was ample, except in some localities at the tail ends of canals. The cotton worm attack was very light, and has now almost disappeared. There have been very few signs as yet of the boll worm and the pink boll worm, and but some slight attacks of aphis. The crop has made excellent progress during July, and may now be said to have completely made up for its past lateness, except in a very few places. The flowering is profuse and the boll formation general. In Middle and Upper Egypt the picking of the early crop will commence shortly. In fact, some of the ginneries have already received samples of the produce of early picking.

Millet (Sefi).—The weather has been favourable everywhere. There has been an ample water supply, except in a few places in Middle Egypt and Qena Province. Thinning, manuring, hoeing, and watering are in progress. Attacks of stem-borer were reported from Minya and Upper Egypt and also smut in the latter, but without any damage worth mentioning. Cobs are formed, and harvesting is expected to begin towards the middle of August.

Sugar Cane.—The weather was favourable and there was a sufficient water supply, except in some places in Giza Province. Attacks of stem-borer were reported, but resulted in no damage of importance. The crop is looking well, and a good average yield is expected.

Rice.—The crop is doing very well, although it has suffered from shortage of water in some parts of the Province of Daqahliya. The high rates of wages for labour have interfered with the weeding.

Ground Nuts.—The weather was favourable and water supply adequate. The crop is growing satisfactorily, and a good yield is expected.

Maize.—In addition to favourable weather, there was an ample supply of water, except in some parts of Sharqiya and Middle Egypt. Manuring, watering, ploughing, and sowing are in progress.

## LONDON PRODUCE REPORT.

Dried Fruit.—There has been a strong demand for all varieties of dried fruit, but supplies continue very short. Prices have advanced sharply, and it is probable that there will be a further increase.

Sugar.—The position remains much the same. The demand for export and for manufacture is on a very restricted scale. Home refined continues in good request at the official rates.

Coffee.—Business has been rather dull during the week. Costa Rica has been done at from 125s. to 156s., Mocha at 165s. to 170s., and Indian at 130s. to 150s. The futures market has been depressed.

Oilseeds.—Linseed has been very firm. La Plata closes unchanged at 35s. 6d., but Indian is 9d. up at 38s. 9d. Rapeseed is harder, Toria at 33s. 6d. showing a rise of 6d., while real bold Ferozepore is firm at 32s. 6d. Brown Cawnpore is unchanged at 31s. There has been a sharp rise in cottonseed, Indian closing 1s. 9d. up at 14s. 9d., while Egyptian at 20s. shows a rise of 1s. 6d.

Oilcakes.—There are large supplies of certain descriptions available, and the fair demand has been without much effect on the market. Linseed is 3d. lower at 20s. 9d., but coconut cake is 6d. up at 13s. Sesame and soya bean cakes are scarce at the moment.

Seed Oils.—A firm tone has characterised the market. Linseed is 1s. 6d. up at 81s. 6d., the quotation for September-December being 78s. Rape oil closes at 72s. for crude, a rise of 2s., but refined is unchanged at 80s. Cotton oil is harder, Egyptian crude being 73s. and deodorised 90s., while Bombay crude is 63s. Turpentine has been rather quiet, but closes 1s. 9d. up at 143s. 9d., and is quoted 3s. 6d. higher for January-April at 147s.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended August 7 :—The sales on our market amount to 11 cases at 18s. 6d. for new crop, and 19s. 6d. to 20s. 6d. as to quality for old c.i.f. The exchange to-day is piastres 418 per pound sterling for cheque on London, and 0.89 dollars for one Turkish paper pound. The arrivals are 32 cases, against 212 at same date last year. The stock here in first and second hands is about 700 cases. The crop is estimated at about 4,000 cases, and stocks of old crop in the interior about 6,000.

## OIL OUTPUTS.

Anglo-Egyptian Oilfields.—Gemsah : Production for week ended August 15 2 tons (last week, nil tons). Hurgada : Production for week ended August 15 2,555 tons (last week, 2.675 tons).

The traffic receipts of the Smyrna-Aidin Railway for the week ended August 7 amounted to £9,298.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended July 31 amounted to £E14,297, making the total for the year £E143,218. The figures for the corresponding periods of 1919 were £E10,336 and £E66,960.

## LANCASHIRE COTTON

(From Our Own Correspondent.)

Manchester, Monday.

Business in the market during the week has been disorganised by the slump in raw cotton rates, and buyers of yarn and cloth have been less disposed than ever to place orders of importance. The tone remains very disturbed, and there is no probability of active trade until the conditions are more settled. Excellent reports continue to be received relating to the Egyptian cotton crop, and owing to selling pressure futures are much cheaper than a week ago. Less demand has been experienced from Lancashire spinners. The American growth is not doing well at the moment, but bullish weather news is offset by the uncertainty which exists with regard to political matters. Some sellers of cloth have met with a little more inquiry from certain Near Eastern outlets, but bids remain poor. According to some letters and telegrams, clearances in Cairo rather tend to improve. Very little business has been available for the Levant. Demand for India has tended to fall off, and only miscellaneous sales have taken place. Exporters to China are encouraged by the rise in silver, and business should become feasible before very long. Only occasional lines have been booked for South America. Manufacturers' engagements are very irregular, and it is possible to purchase many styles of cloth at cheap rates. It has been a poor week for American spinners of yarn, and only retail lots have changed hands in Egyptian descriptions. Prices in all quarters have favoured buyers.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Cunard Line s.s. Tyria, for Gibraltar, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina, will close for cargo at Liverpool on September 1, and at Manchester on September 4.

The Johnston Line s.s. Fernandina, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila, closes for cargo at Liverpool on September 11.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Malatian, for Algiers, Malta, and Alexandria, will close for cargo at Liverpool on August 28.

The Prince Line s.s. Syrian Prince, for Tunis, Malta, Alexandria, Syrian Coast ports, and Cyprus (with option of transhipment at Alexandria), will close for cargo at Manchester on September 2.

The Moss Line s.s. Amasis, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on August 28.

The Moss Line s.s. Limoges, for Gibraltar, Casablanca, and other Moroccan ports, will close for cargo at Liverpool on August 28.

The Moss Line s.s. Aberlour, for Gibraltar, Algiers, Malta, and Alexandria (accepting goods for transhipment to Morocco, Cyprus, and Syrian Coast ports), will close for cargo at Liverpool on September 4.

The Harrison Line s.s. Magician, for Calcutta, will close for cargo at Liverpool on September 4.

The Anchor Line s.s. Olympia, for Bombay, will close for cargo at Liverpool on September 4.

The Bibby Line s.s. Yorkshire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on September 8.

The Henderson Line s.s. Chindwin, for Port Said and Rangoon, will close for cargo at Birkenhead on September 1.

The Power Line s.s. Pangbourne, for Tangier, Larache, Rabat, and Saffi, will leave London on September 4.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

RHODES, July 5.

Rhodes exported in June, mainly to Smyrna, a small quantity of vegetables and fresh fruit (tomatoes, water melons, melons, and apricots). There are considerable stocks of manufactures here, consigned to Anatolia via Adalia.

The latest crop forecast is that the yield of cereals will be less than last year, but that the olive crop will be good.

The cessation of hostilities has enabled the resumption of sponge fishing on the Tripoli coast, and in the Dodecanese. It has been very profitable this year. England is the principal buyer, but the large buyers are holding their hands. Rhodes and Calymnos are the centres for the export of this commodity.

ALEXANDRETTA.

The report for June states: For the same reasons as in previous months, business inactivity has continued, and the despatch of goods for Aleppo via Beyrout is at a standstill. The interruption of the telegraph service with Europe, Syria, and Egypt prevents us from transacting whatever business offers itself. The lack of telegrams has not permitted us to be in daily touch with the fluctuations in the foreign exchanges, and has created difficulties for our operations.

ADANA.

The report for June states: As a result of the resumption of hostilities by the Kemalists there have been no transactions. The Mersina railway, the only system serving Adana, which has been suspended many times since February, has been greatly damaged since June 18, and our town finds itself cut off, no communication with the interior having been possible since that date except by the purely military service of aeroplanes. This interruption has caused a general rise in the prices of all articles of import, and even of provisions, vegetables, and meat. Sugar was quoted in May at 60 piastres the oke; it has now reached 180 piastres.

MERSINA.

The report for June states: The delayed Turkish Peace Treaty and the events which are taking place in Cilicia are contributing more than ever to depressing the market, and to rendering all commercial transactions almost impossible.

There is a great need of ironmongery, leather, paper and stationery, and glassware. The importation of these articles is still very difficult because of the lack of freight and the absence of promptness shown by exporters in Europe in carrying out orders given to them.

Goods consigned to the interior cannot be forwarded owing to the interruption of the Mersina-Tarsus-Adana line. Postal communications with Adana are carried on by aeroplane at a rate of 10 piastres per letter, or 1.25 francs. Telegraphic communications do not exist with the interior or with abroad. Mersina is completely isolated.

The Adana Fair, in which the town of Mersina was not able to take part because of the insecurity, commenced on June 12 and ended on June 26. The results obtained seem very satisfactory.

Agricultural machines have been freed from Customs duties. The prohibition on the export of cereals is maintained.

---

Southern Punjab Railway.—Registers of Ordinary stock will be closed from to-day to September 8, inclusive, for preparation of dividend warrants, which will be posted to Ordinary stockholders on September 8.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

**Egypt.**

(*The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked* (*L*) *are to be obtained.*)

Extension of Electrical Station of Zagazig and Belbeis.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the extension of the electrical station of Zagazig and Belbeis. Adjudication at noon on September 1. A copy of the specification, etc. (in French) may be consulted by British firms interested at the Enquiry Office of the Department of Overseas Trade, 73, Basinghall Street, E.C.2.

Tunics, etc.—The Financial Secretary of the Egyptian Army, Cairo, invites tenders for the supply of tunics, pantaloons, trousers, etc., to the Ordnance Services Department, Egyptian Army, Citadel, Cairo. August 28. (L.)

Motor Launch.—The Inspector-General of Irrigation, Upper Egypt, invites tenders for the supply of a motor launch for 4th Circle of Irrigation. September 18. (L.)

Surface Condenser, etc.—The Director-General, Mechanical Dept., Ministry of Public Works, Cairo, invites tenders for the supply, delivery, and erection at Amriya Pumping Station, Zeitûn, of a surface condenser, together with air and circulating pump, a feed pump, oil separators, pipe work, valves, and accessories; plant to be capable of dealing with about 3,200 lb. of steam per hour. August 31. (L.)

Sewage Main.—The Chief Engineer, Main Drainage Dept., Ministry of Public Works, Cairo, invites tenders for the supply and laying of a 12-in. cast-iron sealed sewage main. September 21. (L.)

Air Compressing Plant.—The Chief Engineer, Main Drainage Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of an air compressing plant at Mansûra, consisting of two crude oil engines, driving two single-stage air compressors, complete with auxiliary machinery, water cooling plant, a travelling crane, machine tools, air mains, electric wiring, etc. October 1.

Pumping Machinery.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)

Dynamo and Switchboard.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply of 2 kw. dynamo and switchboard for Kombera Pumping Station. September 15 (L).

Paper, etc.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and office requisites, including paper (writing, typewriting, oiled copying, tissue, drawing, sectional, tracing, etc.); cloth-lined envelopes and buff envelopes; note blocks, blotters, waste paper wicker baskets, copying books, card index cabinets, vertical files, tracing cloth, ink pots, inks of all kinds, tie-on labels, note books, numbering machines (triplicate, six figures), stamping ink pads, penholders (wood), pen nibs, paper weights, shapirograph apparatus, copying presses, typewriters (European script), and copyholders for typists, etc. Tenders will be received up to noon on September 9, and should be addressed to the Director, Central Stores, Ministry of Finance, Cairo. A copy of the specification, etc., together with a list of articles required, may be consulted at the Department of Overseas Trade.

Cotton Handkerchiefs, Cloth Clothing.—The Egyptian War Department invite tenders for—(1) Cotton handkerchiefs; tenders due September 1, and to remain open seven days. (2) Cloth clothing; tenders returnable by September 8. (L.)

**India.**

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

A firm of paint manufacturers is establishing a new factory at Bombay, for which a complete plant will be required. The firm also requires locks, decorative corners, hasps, handles, etc., for steel travelling trunks and kindred goods of various sizes and designs. Firms interested should write, enclosing catalogues and full particulars, prices, possible dates of delivery, etc., to the company, whose name and address can be obtained from the Department of Overseas Trade.

**Algeria.**

H.M. Consul-General at Algiers reports that a local trader desires to receive quotations from United Kingdom firms for the supply of iron or soft steel hoops for barrel-making. It is understood that the applicant is prepared to pay cash for the material. Firms in a position to offer supplies of the material in question can obtain the name of the inquirer, specifications, etc., from the Department of Overseas Trade.

## ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Business has again been on a very restricted basis, with generally an easier tendency. In Government stocks Egyptian Unified have again improved ⅛ to 67½, but the 3½ per cent. Preference have continued to droop, and have lost a further ¼ at 55¼. Greek securities have continued a strong market, the Funding Loan rising a further two points to 56, but dealings have been nil owing to the absence of sellers.

Among Bank shares National Banks are 3-32 lower at 19⅜, but Agriculturals keep firm at 4 15-32.

In Land shares the market continues quite firm, but New Egyptians are a little easier at 37s., and Sudan Plantations are closing ⅛ easier at 4 15-16.

In the Miscellaneous group Alexandria Water have been taken at 7¾, at which price there are still buyers, and Morums Stores are 6d. better at 18s.

Among Oil shares Anglo-Egyptian B have improved 1-16 to 2 13-16, and Roumanians are now quoted at 21s.

## COMPANY NOTES AND REPORTS.

**Dacia Romano.**

The report of the Dacia Romano Petroleum Syndicate for the period ended March 31 states that the two wells which had been destroyed by the British Commission when the Germans invaded the country, but which now have been partially restored, are steadily producing, though the yield last year was considerably less than it should have been, as production frequently had to be suspended through lack of storage accommodation and other causes attributable to the then unsettled state of industrial affairs in Roumania. The managing director, Mr. Van Sickle, reports a steady improvement of conditions in Roumania generally and hopes for no further hindrance to production. The oil lands exceed 130 acres, in specially selected areas, affording drilling sites for at least 500 wells, and believed by experts to have oil-producing prospects of great value. Material has been purchased (of which a considerable portion has now been delivered) for the drilling of additional wells. Work thereon has commenced, and with the improving transport facilities will now be accelerated. A freehold site of about 38 acres at the important centre of Ploesti has been purchased for a refinery, and a contract has been entered into for the erection of a complete and up-to-date factory and plant. Work is proceeding satisfactorily. The net profit for the period under review was £1,172, against which the directors recommend that the formation expenses, £938, should be written off, and that the balance of £234 be carried forward.

Crédit Franco-Egyptien.—The net profits for the year ended March 31 amounted to 703,505 francs, as against 701,716 francs for the previous year.

The directors of the Southern Punjab Railway have declared an interim dividend on the ordinary stock in respect of the year ended September 30 of £5 per cent., together with a bonus of £1 per cent., payable September 8.

## NOTES OF THE WEEK.

For all practical purposes Great Britain has now to reckon with a Mesopotamia ablaze, if not from end to end, at least from Mosul to Samawa. The tribes are on the war path; they have called our hand, in the language associated with the card-table, and we are forced to admit that we were relying largely upon bluff in our military occupation of the country during the last year. In these circumstances the nation's first thoughts must be with the Army and those civilians on whom the brunt of the Arab onslaught has fallen. They have had to cope with enormous odds, and there is no reason to suppose that in a single instance they have failed to uphold their country's honour. The satisfaction of a fair and square fight has in most cases been denied them; where they have not succumbed to a cold-blooded murder a sudden rising has found them isolated, and at times they have put up a gallant resistance, which they must have known to be hopeless from the outset.

The fighting in Mesopotamia has reached the proportions of a war, but there is still no indication of the Arabs being actuated by any common purpose other than indulgence in fanaticism and the desire for loot. Even the latest report of a Jehad in the Muntafik area does not alter this fact. When we read of forty-six tribal banners being carried by one force operating in the neighbourhood of Hillah, we find it difficult to believe that the tribesmen have any definite views, based on experience, regarding British administration, or that the call to which they have responded has necessarily come from political theorists in Baghdad. Just as in the war between Great Britain and Turkey they were ready to give their support where the prospects of booty were brightest, so now they may have been attracted mainly by reports which will have reached them of the success attending the new game of British-baiting. It would be more satisfactory if some information on this subject were forthcoming from the Government; for it may have a bearing on the fate of the unfortunate captives in Arab hands. The general attitude of the Arabs must certainly be taken into consideration in regard to any policy for dealing with the present situation.

As has already been announced, the British Government has sent out Sir Percy Cox as High Commissioner charged with the task of setting up "an independent State to be governed in accordance with the wishes of the people." No intention on the part of the Government could be more praiseworthy from the point of view of a constitutionally educated country, and no doubt many Arabs will be found in Baghdad ready to acclaim Sir Percy Cox's mission. But it would be a mistake—and no one will appreciate the fact more readily than the High Commissioner—to suppose that some speeches in Baghdad or even the appointment of a native Cabinet will cause the tribesmen at once to abandon the war-path for the pursuits of peace. Agents must have travelled far afield to bring about the present concentration of the tribes against the British posts and lines of communication, and almost the same ground will have to be covered, after the tide of battle has been effectually turned, to bring about in the Arab mind a fresh orientation of the position. Probably the quickest way to achieve this end is to enlist the services of the man whose prestige as ruler will carry farthest. The Arabs have to be reached through their own people and in their own way, and no amount of constitution-drafting in Baghdad is likely to be as effective as the fiat of a ruler whose claims override those of local chiefs, if the right man can be found.

While the Arabs of Mesopotamia are bent solely, as we are asked to believe, on ridding themselves of British administration, their kinsmen immediately East of the Jordan have been paying visits and sending deputations to Jerusalem to ask for an extension of British administration to their country. Sir Herbert Samuel, the High Commissioner for Palestine, has satisfied himself of the genuineness of this appeal, and has sketched out to a meeting of over 600 representative Bedouin the lines on which the British Government is prepared to assist the Arabs in governing themselves. If the same policy could only have been applied betimes in Mesopotamia, Great Britain would have been spared the present tragedy. "A small number of political officers, men of justice with experience of affairs and a complete knowledge of the people and the Arabic language" are to be sent to live in the chief towns or districts. They are "to help to organise defence against attack from outside, to organise local police and maintain order, to promote peaceful commerce, to help to see justice carried out, and to see that the taxes paid are honestly spent upon local needs." The Palestine administration will take steps to provide the Arab community with certain necessaries of life on the same footing as the peoples of Palestine; it will promote the opening of a bank to assist commerce, will improve facilities and postal communication with Palestine and other countries, and will

Digitized by Google

supply skilled advice as to the making of roads and other matters in which the Arabs are interested.

It will be well if no time is lost in giving effect to this charter of Arab independence under the British ægis, in order that information of the experience of Es Salt territory may follow to Mesopotamia hard upon the report of British intentions towards the Arab world. It is many months since a warning was uttered in these columns of the dangers of leaving inexperienced officers, who were unable to distinguish a sheikh from a coolie, and made no differentiation in their attitude towards the two, without instructions as to British policy in Mesopotamia and as to their duties as representatives of the future mandatory state. There can be little doubt that in due course the Arabs of Mesopotamia will stand as much in need of British advice and help as those just east of Jordan; and for this reason we deprecate the panic policy that is now being urged upon the Government under the stress of what is taking place in the country. By all means let our responsibilities and our financial commitments be reduced to a minimum; but to leave the Arabs entirely to themselves to-day would mean leaving a considerable Christian community to the certainty of extirpation, and would be a breach of trust on Great Britain's part.

The war that was to end war has merely deadened the world's conscience in the matter of war, and as a result little attention has been paid to the fighting that has been taking place for some time past on the Serbo-Albanian frontier. Each side accuses the other of invading its territory, and while the Albanians have appealed to Italy for support, the Yugoslav Government has asked for an inter-Allied Commission, in which Serbia will be represented, "to inquire into the causes of the last attack by the Albanians." The controversy is merely one illustration of the faulty nature of the Near Eastern settlement, which has settled nothing. As far as can be gathered, the Albanians claim the frontier allotted to them in 1913, while the Serbians consider themselves entitled to the demarcation formally approved by the Allies, and can no doubt point to the fact that the Albanians in their zeal for the principle of nationality have allowed themselves to overstep even the 1913 frontier line. Clearly the Allied Governments or the League of Nations must set up some authority to settle the boundaries of Albania once and for all. In view of the new orientation in Italy's Albanian policy it is difficult to believe that either Yugoslavia or Greece will deliberately press for a settlement which is likely to keep them permanently embroiled with Albania.

The spectacle of the Albanians appealing to Italy for help a few weeks after they have successfully driven the Italians out of their country is in keeping with the chequered history of Albania. Such an appeal, however, places Italy for the first time in her right relationship to the Albanians. Hitherto Italian policy has realised shrewdly enough the importance of Albania to Italy, but has hovered between different schools of thought as to the best method of identifying the interests of the two countries. In the face of the Austrian danger Italy was debarred by the exigencies of the Triple Alliance from openly espousing a programme which could only have put a spoke in her Ally's wheel, and so contented herself with intrigue and a clandestine struggle with Austria for the upper hand in Albania. In 1913 each country decided that an independent Albania would best serve its own purpose and help to checkmate the rival. When the war eliminated Austria and substituted Yugoslavia and Greece as Italy's bogey in regard to Albania, her first instinct was in harmony with the militarist atmosphere of the moment, and an Italian protectorate over Albania was declared. On this point, however, the Albanians, as was to be expected, had something to say.

Fortunately for the two countries public opinion in Italy has been undergoing a change. Albanian resistance to Italian penetration coincided with an accession of strength to Socialist pacifism in Italy, and a new Government in Rome found that a withdrawal from Albania both corresponded with its own policy and was more in keeping with the trend of national feeling. But the need for a privileged position for Italy in Albania is no less urgent than it was before. This it is now hoped to secure by a frank understanding with the existing Tirana Government. Italy recognises the complete independence and unity of Albania, and promises to use her influence to obtain recognition by the Powers of that independence; she abandons Valona, but retains the island of Saseno, and is entitled to occupy and fortify positions commanding the Bay of Valona. The Tirana Government is to be formally recognised as the supreme Albanian authority as soon as it is able to establish its authority over the whole of Albania. Such an agreement is the only practical one with any prospect of permanency, and it is to be hoped that it will prove the prelude to a revised general settlement in the Balkans.

Our Athens correspondent throws light on the unfortunate occurrences that accompanied the announcement in the Greek capital of the dastardly attack on M. Venizelos in Paris. The general feeling in Great Britain will be not a desire to pass judgment on the Greek people, but a profound regret that time has so far brought no relief to the tragic sore from which Greece is suffering. The fact that the report of the Paris outrage should have started the excesses in Athens confirms the statements of observers regarding the bitterness with which the Greek people are still divided into two camps. But it will cause amazement abroad that there should be any possibility of establishing a connection between the criminal and senseless action of the would-be assassins and men who have filled honoured and responsible posts in the Greek political world. After due allowance had been made for the Southern temperament, it was felt that the Opposition in Greece had realised the logic of events and was now set on fighting its political battle on purely constitutional lines. The forthcoming elections provided the ground for a trial of strength between the Government and its political opponents, and it seemed as if both parties were holding themselves back for that event.

No material destruction wrought in Athens is likely to have steadied all parties after the regrettable occurrences of August 13 as much as the death of M. Jean Dragoumis. The action of M. Venizelos in sending a message of condolence to the bereaved family is an earnest, not only of the spirit in which the Prime Minister will deal with this fresh complication, but also of the esteem in which this comparatively young politician was generally held. His tragic end might yet be made to serve the country's interests if it becomes the starting point of definite steps towards healing Greece's wound. The Government, it is announced, has information of a criminal conspiracy, and practically all the Opposition leaders would seem to have been placed under arrest. If their complicity can be proved, they will deserve the penalty meted out to them; for they stood publicly pledged to constitutional methods of challenging the Government's policy. If, on the other hand, no criminal intent can be brought home to them, it is to be hoped that they will be liberated at the earliest possible moment, in order that an ample interval may elapse between their incarceration and the general elections, and that no opportunity be afforded them of accusing the Government of seeking to use a criminal conspiracy for its own political purposes. To outside observers, whose one desire is to see Greece a united country, the approaching elections offer the best hope of a new era, as they must afford a purely constitutional test that no one can challenge. No anxiety for the future of Greece can exclude the keenest sympathy with the veteran Prime Minister, whose heavy burden, after efforts which might well have exhausted younger men, has been intensified by the physical and mental shock caused by the despicable attempt on his life.

There would seem to be no limit to the extent to which the Allied Governments stand committed to the policy of *laissez faire*. Yugoslavia has been spurred

Digitized by Google

to ask for an Allied Commission to deal with the territorial dispute between herself and the Albanians, and she would be equally within her rights in requiring that another Commission should settle once and for all the status of Montenegro. It can hardly be agreeable to the Serbian authorities to have circulated amongst their allies such documents as are now emanating from the Montenegrin Press Bureau. One of the latest purports to summarise recent "atrocities" committed in Montenegro, specifying by name certain military officers alleged to be responsible "for the most ghastly and unprecedented brutalities," and enumerating a series of incidents common to all Balkan atrocity reports. These statements must either contain some measure of truth or be wholly fabricated. If the latter, the Yugoslav Government might well question the friendliness of Italy in giving continued hospitality to an organisation claiming to act under the ægis of the Montenegrin Foreign Office, for the Bureau's attacks, it would be thought, if not countered, are apt to be more damaging than the physical aggression of the Albanian tribesmen. In any case, it is profoundly derogatory to Allied statesmanship that a blind eye should be turned to this very open sore in their Balkan settlement.

---

The Persians, thanks to their Cossack force, continue to make headway against the Bolshevist invasion of their country. A rapid advance brought the force to Resht on August 23, and a further dash was made on Enzeli. Here, however, it was proved that the Persians had overreached themselves. Reinforcements had reached the Reds by sea, and the Cossacks were actually enfiladed by gunfire from ships. The retirement, it is reported, became somewhat disorderly when they had to fall back on Resht; but they will now have the support of a British force which has been co-operating in the advance. It was the desire apparently of the Persian Government that the British should remain in reserve as far as possible, but the check at Enzeli will suggest the advantage of as big a concentration as possible against the Bolshevists at this stage. With fresh successes on the part of General Wrangel in the Caucasus and an anti-Bolshevist movement in Central Asia it is evident that the Soviet régime in Russia has its hands more than full in the Middle-East. The more it fails in Europe the more determined it will be to rehabilitate itself in the neighbourhood of the Caspian. For this reason it is to Persia's interest to push home her initial success in order to leave as little ground as possible for the Bolshevists to work upon when they are minded to devote more attention to that part of the world.

---

The selection of Lord Rawlinson for the post of Commander-in-Chief in India had been known for so long that the official announcement of his appointment, which we published last week, has produced little comment or interest, and such questions as have been asked relate to the nature of his position rather than his qualifications for filling it. *The Times*, for instance, took the opportunity of pressing for early publication of the report of Lord Esher's committee, and, while we recognise that some parts of that report may have to be treated as confidential, we trust that no time will be lost in letting the public know the whole truth regarding military organisation at headquarters. Distrust of Simla is still widespread, both in this country and in India, and it is not likely to abate until the verdict of the experts has been made available for discussion. The Indian Army has sometimes to move at very short notice, so that the question of the machinery for setting it in motion is one that should be promptly settled.

---

If any justification be needed for this statement, it is sufficient to refer to the present uncertainties on and beyond the North-West frontier. The news which comes through from Afghanistan is fragmentary and conflicting. On the one hand, we notice that some of the best informed journals in India are hopeful as to the results of the recent conversations at Mussoorie, and are inclined to anticipate a period of peaceful economic development. On the other hand, the stories of mutinous troops and various incidents reported in recent cables suggest that the internal conditions of the country are not precisely favourable to an immediate industrial advance; and without giving too much weight to the views of either side, we are justified in describing the situation as uncertain. In Asia uncertainty cannot be confined to one side of a frontier, and we are entitled to ask for some assurance that the Simla machine is better prepared for emergencies than has been the case on the last two occasions when it has been tested.

---

The key to the Afghan situation is probably to be found in the personality of the Amir, and the world as yet knows very little about that factor in the question. Asiatic princes are usually wise to conceal their qualities until they ascend the throne, and the present Amir's public record since his accession is so contradictory that no confident conclusions can be drawn from it. Some of his actions have appeared astute, while others have appeared fatuous, but with Eastern statecraft, as with Eastern carpets, it is dangerous to judge of the pattern from what may prove to be the bordering, and observers at a distance can say little more than that he has an exceedingly difficult task, with a thoroughly undisciplined kingdom exposed to the disintegrating influences of Bolshevist intrigue. His policy is doubtless directed primarily to the retention of his uneasy throne, but the tactics likely to be adopted in pursuit of that policy are so extremely uncertain that the only wise course is to be prepared for all emergencies.

---

As regards the internal situation in India, the most hopeful sign at present is the steady advance towards freedom of speech. The time seems to have passed when Indians were content to say "ditto" to some self-appointed protagonist, and influential Moderate organs are writing about the Extremists with point and vigour formerly reserved for the misdoings of the Administration, while individual leaders are saying what they think with a candour which is, at any rate, refreshing. To give only one sample, an eminent non-Brahmin declared recently, amidst applause, that the wheels of the Indian National Congress "had sunk deeper and deeper in the mire of reckless extremism and perverse optimism, egged onwards by selfishness and self-conceit." That diagnosis may be true or false, but the important thing is that it should have been made in public; it would have been unthinkable a few years ago, and it indicates that India is well on the road to Western methods of political discussion, where the truth gradually crystallises from a dilute, and occasionally turbid, mother-liquor.

# THE WEEK AT HOME.

### The Threatened Coal Strike.

Foreign politics having been uneventful during the week, the papers have been free to devote ample space to the threatened coal strike. Each side accuses the other of lying, by way of comforting the public; but the main facts are not in dispute. Domestic coal is supplied at cost price, and there is a large profit on export coal, the bulk of which goes to the Treasury in the shape of Excess Profits Duty; the miners want this latter surplus wiped out and used (a) to increase their wages, and (b) to reduce the price of home-consumed coal. It is suggested that while the first claim is the real object, the second is mere camouflage to capture the public sympathy. If that is so, it is doubtful whether it has achieved its object. The householder would certainly like to buy his coal at a lower price, but he does not believe that the way to do it is to increase the miner's wages; and if the contribution to the Treasury is wiped out, he sees that while the miners will get their increase, taxation will go up in other directions, and he will have to pay it. In that case he is no better off than before.

Nor does he forget that the miners struck work in 1915, and is inclined to hold the view that Mr. Smillie was a pro-German then, and is a pro-Bolshevist now. These matters, of course, are irrelevant to the real issue, but they count in the matter of public belief and sympathy. However, the miners' ballot shows a large majority in favour of a strike, and so far Mr. Smillie can therefore claim that his tactics have been justified. But beyond that point we enter debatable territory.

Mr. Smillie's object is to enforce nationalisation of the mines by the direct action of a strike; but nationalisation in his mind does not appear to mean State ownership in the ordinary sense of the word, but the ownership of the mines by the miners themselves, which is practically Syndicalism in another dress. Mr. Herbert Smith, the Yorkshire miners' leader, also believes in nationalisation, but he has no belief in direct action to enforce political issues, and has said so. This disagreement may have certain consequences; but it is also suggested that other trade unions, particularly the railway workers and transport men, are not keen on a miners' strike, and will do nothing to help it. If the Triple Alliance of miners, railwaymen, and transport workers strikes, the situation would be indistinguishable from a general strike, which is what Mr. Smillie wants; but from a certain shrillness and urgency in the language of the *Daily Herald*, the "Bolshevist organ," on the matter it does not appear that there is too great an anxiety on the part of other workers to pull the chestnuts out of the fire.

The Government, meanwhile, have given no sign, and are being soundly abused by the *Herald* in consequence. It accuses them of forcing the crisis, which is palpably absurd, for they have done nothing whatever beyond announcing that Mr. Smillie's demands are impossible. It would appear that there are, as usual, two sections of opinion in the Labour camp: one, which wants a strike at any cost on the chance that it can defeat the Government and the community, and so make itself the real ruler of the country; the other, which, now that the ballot is taken, would like to open up negotiations with the Government in order to prevent a strike, and to secure better terms for the miners without causing general misery and suffering. The former is more vocal, the latter on the whole probably more powerful. The latter may possibly succeed in building a golden bridge over which both sides can meet at a round table and discuss peace or war. There appears to be a general impression that peace is rather less unlikely than a week ago, for Mr. Smillie's tactics have not been enthusiastically applauded by his fellow-leaders in the trade unionist movement. Mr. Thomas has kept silence; Mr. Clynes is openly in favour of negotiations.

### A General Election?

With the controversy between direct and political action in the air, it is natural that some people should speculate as to the prospects of a General Election this autumn. A clear issue, on Nationalisation versus Private Ownership, and Direct versus Constitutional action, would be available; nor is there much doubt what the result would be. The Government, it is true, is a Coalition, with the weaknesses of such instruments in policy; but at least it fulfils the primary duty of a Coalition, and coalesces. Labour is also a coalition of divergent views, and although it rightly conceals the rifts within the lute as much as possible, the sounds which proceed from the instrument are not always in tune. Roughly the dividing line is that Labour in Parliament believes in constitutional action, while Labour which has been rejected at the polls inclines to direct action, for obvious reasons; but Labour in Parliament naturally thinks of the days to come when it will occupy Downing Street, and when as a Government *in esse* Mr. Smillie's thunderbolts will be directed at a Labour Prime Minister instead of Mr. Lloyd George.

The weakness of the present Government is its excessive strength; its majority is unwieldy and altogether too large.

It is by no means certain that a General Election would help it out of that difficulty, for Independent Liberalism shows no sign of a revival, and while Labour would probably win a few seats the public is rather suspicious of Labour at the moment. The glamour of a few months ago, when Lord Haldane assured us that Labour had scaled the heights of idealism, has quickly vanished; for on those heights we see Mr. Joseph King as Labour candidate at the Ilford by-election which is now being contested. And Mr. King, as a one-time Liberal member of Parliament with pronounced Pacifist tendencies, was known by friend and foe alike as the "Mad Hatter." Every political party, of course, has its ridiculous adherents, but one would think that adult Labour could at least produce its own mad hatters, and not adopt the returned empties and the rejected addresses of other organisations.

### The British Association.

The men of science met at Cardiff last week in the middle of a municipal strike. Sir Oliver Lodge attacked the Einstein theory; the presidential address was on Oceanography, and it is suggested that the British Government shall fit up another Challenger expedition to extend our knowledge of the deep seas. The idea has been well received, for our information as to the ocean bed is still inadequate, and zoologists are anxious to obtain further light on the conditions under which abyssal fish live; while the origin of their phosphorescent organs would illustrate philosophical, as well as purely natural problems.

The remainder of the papers read before the Association appear to have been sound rather than brilliant; perhaps they lacked that touch of popular appeal which leads to discussion and dispute. Or, perhaps the sub-editors were sleepy, and cut the reports below the minimum to make room for cricket.

### The Cricket Crisis.

There never was such a wonderful cricket year as 1920, and last week was the most wonderful of all. Tuesday at the Oval was an amazing day; Surrey's second innings against Yorkshire showed the usual rot after a couple of wickets had fallen, and except for Hitch, who hit a couple of sixes and was bowled in the same over, the southern batsmen muffed the bowling altogether. At three o'clock the game seemed fairly easy for Yorkshire. But Surrey fielding are a different team from Surrey batting; and they played an uphill game (which used to be the speciality of Yorkshire) with extraordinary zest. It seemed as difficult for a Yorkshire batsman to hit a ball to the boundary as for a woman to get into the Stock Exchange, and wicket after wicket fell. At the tea interval Yorkshire wanted 40 runs with two wickets to fall—not an impossible task, but they never looked like getting them. Their last two batsmen did their best, but they were hopelessly at sea; several maiden overs, a couple of lucky fours, and the game was over, Surrey winning by just over 30 runs. That disposed of Yorkshire's chance of the championship: but one felt that ten years ago, under Lord Hawke's leadership, they would have won. But Surrey

Digitized by Google

deserved their victory for their fielding alone; I have never seen anything better.

Kent are out of the championship, for Middlesex beat them towards the end of the week; and now with Surrey leading on their first innings against Middlesex—the game is now on at Lord's, with apparently the whole male population of the two counties watching—the anomaly of Lancashire, who have not won a single match against Middlesex, Surrey, or Yorkshire, being "champion" county has been perpetrated. Both Middlesex and Kent have claims to be regarded as the best county on form. But so are Surrey on their day; but their selected moments, to use Mr. Winston Churchill's phrase of the old German Navy, are so few. Surrey on somebody else's day are a team which makes the devout Surreyite contemplate "death, disaster, and damnation."

To judge from the crowds at all the London grounds, the county clubs should be flourishing. Before the war there was a cry—a perfectly legitimate cry—for brighter cricket, and during the war, of course, the clubs simply trod water. But now, although the entrance has been doubled, and the weather unspeakable, gates of twenty and thirty thousand are quite common. It is partly because scores have been low, and definite results are generally reached; perhaps the wickets have not attained their pre-war perfection. At any rate, the bowlers have the mastery at present, but one will be curious to see whether they retain it in Australia, where scores are higher, and matches longer.

**"Of Man's First Disobedience."**

Apparently the Broad Churchmen have abandoned the doctrine of the fall of man. In the last number of their review, the question is very frankly asked, How much can they give up without disloyalty?—a rather dangerous and difficult attitude to adopt, one would think—and it is admitted that many things in the creeds, such as the Descent into Hell and the Virgin Birth, are now accepted as symbolical. How any phrase that records what either is or is not a physical fact can be thus regarded, unless the word symbolical is tantamount to untenable, it is difficult to see; obviously, some men whose judgment one respects have bridged the difficulty. But Canon Barnes, preaching last Sunday, remarked that "Christian thinkers found it necessary to abandon the doctrine of the fall and arguments deduced from it by theologians from St. Paul downwards."

This seems a large admission, and although Canon Barnes, in the remainder of his sermon, which is reported in the daily Press, remarks that "while some elements of the Christian tradition were perforce discarded, the essential nature and strength of the Christian faith had been more clearly disclosed," his words are likely to arouse some controversy in orthodox circles. As a fact, the doctrine of the fall of man is, and always has been, one of the very roots both of Judaism and Christianity. Philosophically it is becoming, and scientifically it has become, untenable; so much is, of course, generally admitted. But for the Church, or part of the Church, to give it up, implies a good deal more than the squaring of religion with science; it means the abandonment of the whole basis of historical Christianity. It will be interesting to see what comments are made on these remarks of Canon Barnes. Fifty years ago they would have caused an outcry, but we have moved fast and far since then, and beliefs are now more fluidly held.

**Houses for Sale.**

While the clergy are becoming increasingly doubtful if we have a soul, the builders are beginning to wonder if we have a body; for some of the new houses for sale, and several of the old ones, have failed to find purchasers. The fact is that the price is too high, and the number of the public who were compelled to buy a house in a certain neighbourhood was always limited, and these are now accommodated. The rest can afford to wait, and are actually waiting, rather than pay the extortionate prices now demanded. At one or two auctions, recently, houses have been withdrawn because there were no bidders at the price. The builders blame the labourers, and both blame the Government; but the truth of the matter is that a cottage with a living-room, a kitchen, and three bedrooms costs a thousand pounds, and the number of young married men with a thousand pounds in their pockets is small. Nor are the banks ready to play the part of generous uncle.

The consequence is that houses are being built for sale and are not being sold. If they have to be let at a rental, the builders say they will cease building, because it does not pay them to let. What they really mean is that they are afraid the house will fall down in five or ten years' time; for some of the new semi-detached villas have about as much substance as a spook at a spiritualist séance.

Meanwhile, one notices that half the houses in the Lancaster Gate district are for sale. The story goes that the new-rich will not look at anything outside Park Lane, so that property on the wrong side of the park is likely to slump. The present prices are very high, and the houses, which are large and not too conveniently planned, require a multitude of servants.

**In the Lyons' Den.**

London was amused rather than annoyed last week by a strike of the girls employed in the Lyons' teashops. The immediate cause of the trouble was trivial—the wearing of a trade union badge by one of the staff while on duty—and two thousand female Daniels walked out and swore they would never return until justice was done. A few walked back two mornings later, after ineffectual picketing had a brave march through the streets—why is it that a thousand petticoats are so much less persuasive than one?—but the places of the others were immediately filled, and the teashop beauties will have to find other tables to serve.

**The Olympic Games.**

It seems clear that there will be no more Olympic games. The sports just held at Antwerp have given rise to a great deal of bad feeling, and the partiality and favouritism of the judge have been impeached on all sides. Even at the beginning there was little enthusiasm for the tournament in England, but the reports which have come over from Belgium have definitely set public opinion against participation. The games were originally devised to promote international comradeship in sport, but they appear to have had directly contrary effect.

OCELLUS.

## NEWS IN BRIEF.

Our Belgrade Correspondent writes (August 26):—

"Two aviators, Captain Liubisha Kosanovitch and Lieut. Vladislav Kambera, crashed and were killed when flying at Novi Sad last week.

Arrangements have been made for the transfer to their native places of the remains of Serbian soldiers killed on the Macedonian front.

Owing to the serious reports of the conditions in Montenegro, a committee of Ministers, consisting of M. Kosta Stoyanovitch (Minister of Finance), M. Trifkovitch (Minister of Justice), and M. Jojitch (himself a Montenegrin, Minister of Food and Reconstruction) are shortly paying an official visit of inspection to the districts in question.

November 28 is announced as the date of the General Elections for the Constituent Assembly.

The Ministry of Agrarian Reform has proposed that existing yearly tenancies be converted into quadrennial tenancies, to give greater stability to agricultural holdings.

A British transport has arrived at Dubrovnik (Ragusa) with a large contingent of Serbs, both officers and men and their families, from Vladivostok. The troops had been engaged in Russia and Siberia, and only now repatriated; the women and children were chiefly refugees from the north-east corner of Serbia, who fled from the Bulgarian invasion into Roumania and thence into Russia."

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

## YUGOSLAVIA.

BELGRADE, August 20.

**Political Changes.**

The political crisis has been a very dull one, and only lasted a month, in spite of the efforts of several parties to prolong it. About twice a week for the previous fortnight, it had been stated that it would be all over in a couple of days, and an agreement was reached nearly a week ago, the majority of the Ministers celebrating the occasion by a picnic to Avala, to enjoy a well-earned rest after the conversations, meetings, protocols, and negotiations of the preceding three weeks. The agreement was subject to a short delay for final consideration by M. Vesnitch, which was taken advantage of by the Narodny Club to reconsider a few minor details, but at last the thing was settled. M. Stoyan Protitch has withdrawn, and gone into the country for a holiday, leaving behind a written memorandum to bind his successor. His place as Minister of the Constituent has been taken by Dr. Mushitsky, a prominent Radical from the Voivodina; as he is at the moment away ill, the Minister of Justice, M. Marko Trifkovitch will act for him. Dr. Davidovitch leaves the Cabinet, and is replaced as Minister of the Interior by the other Democrat Leader, M. Drashkovitch.

**The General Elections.**

As the settlement has cleared the air on the chief pressing matters for the moment, the work of the new Cabinet will be chiefly to get to work on the general elections, which are fixed for November. As a forerunner, we are entering upon the throes of municipal elections, and the town is placarded with appeals by the different parties, upon differently coloured posters. At the same time it is announced that the elections for the counties or provinces of Prizren, Ochrida and Tetovo (which used to be called Kalkendelen in the bad old Turkish days) are postponed on account of the Albanian raid, and in Belgrade the sale of drink will be stopped from midday Saturday to midday Monday. The authorities seem determined to have peaceful elections.

**Czecho-Slovakia and Yugoslavia.**

Relations between these two young States have been cordial from the beginning; during the war and occupation, Czech troops and officers did all in their power to mitigate the sufferings of the Yugoslavs and Serbs; it was the Czechs who lit the spark which brought on the explosion in Austria; and since the revolution, they have remained firm friends, for both have common enemies, Austria, and above all, Hungary. A suggestion has been made that Czecho-Slovakia be invited to act as intermediary in the Yugoslav-Italian conflict, but probably the Italians will have none of it. Recently Dr. Edward Benes, Minister of Foreign Affairs, visited Belgrade, where he has been received with every honour by the Prince and the Government, afterwards leaving for Bucharest. One result of his visit as already announced, is an agreement between Yugoslavia and Czecho-Slovakia mutually guaranteeing each other's integrity; both are anxious to preserve their neutrality in the Russo-Polish conflict.

**The Albanian Conflicts.**

The almost perpetual Albanian raids have grown into a regular invasion, when forces some 10,000 strong invade on three points, harry and loot the country, and seize several villages. Yesterday it was reported that the weak frontier guards had retired before the vastly superior force of the enemy, who is armed with mountain and machine guns and hand grenades, and that the town of Debra had fallen; but this is now denied, and it is stated that the Government has hurried troops to the spot, and that the enemy's attacks are becoming feebler before the increased resistance. The Serbian papers announce that the Albanian leader is Bairam Beg Tsur, who is Minister of War and Commandant of the gendarmerie of the Tirana Government, chief of the clan of Has, and that he has locked up the supporters and relatives of the late Essad Pasha, and destroyed their houses and property, in accordance with the tenets of the ancient but unwritten law of Dukadjin. The enemy is now held, but fighting must have been pretty fierce, if on a small scale, for the Serbs admit that one battalion suffered very severely, that a Major and a Captain have been taken prisoners, and that five old-pattern guns, which were used simply for frontier-guard work in that wild mountain country, have been lost.

## GREECE.

ATHENS, August 21.

**The Attempt on the Premier's Life.**

The dastardly attempt on the life of the Greek Premier, M. Venizelos, produced the effect of a bomb-shell in the Greek capital. The first message giving a full account of the occurrence was received by he Government at about 11 a.m. on Friday, August 13. Unfortunately, M. Romanos, the Greek Ambassador in Paris, worded his telegram in plain language, and this was indirectly responsible for the shocking scenes witnessed in Athens a few hours later. The authorities, anticipating trouble, withheld the news of the attempt until all the necessary steps to maintain order in the capital had been taken. But, as already stated, M. Romanos' telegram was not transmitted in code, and the alarming news leaked out and circulated greatly exaggerated long before the Government had time to complete its precautionary measures. In a very short time the streets and squares were filled with thousands of angry, desperate people clamouring for news of their beloved Premier. The Government was then obliged, in order to calm the infuriated crowds, to publish the contents of M. Romanos' telegram, the last sentence of which emphasised the fact that M. Venizelos was out of danger. But the publication of this account had an opposite effect to that desired for. On hearing that the perpetrators of the cowardly attempt were ex-officers f the Greek Army and Navy, the crowd rushed up Stadium Street and attacked the offices of the two Royalist papers *Athinaïki* and *Nea Himera*, which it literally ransacked. Cheering for M. Venizelos and cursing his opponents, the angry crowd smashed up everything, including the printing press. Furniture, papers, files, and so forth were all thrown into the street and set on fire. The next victim was the huge building in Constitution Square, the property of the Editor of the *Esperini*. After the printing press had been wrecked and the editorial offices ransacked, the demonstrators set fire to the building. Fortunately the fire brigade was promptly summoned, and succeeded in extinguishing the flames before much damage was done. In the meantime another group of demonstrators had attacked and ransacked the offices of the two remaining opposition papers, the *Kathimerini* and the *Politia*. Outside the premises of the latter journal a detachment of soldiers with fixed bayonets attempted to hold back the attacking masses, but after a hand-to-hand fight which lasted for nearly ten minutes, the crowd forced its entry into the building.

The demonstrators, now divided into several groups, attacked each separately the houses of the opposition leaders. Extensive damage was done at the house of M. Scouloudis, an ex-Prime Minister, where, in addition to the expensive furniture, a number of paintings by Van Dyck, Rembrandt, and Michael Angelo was completely destroyed. A fine collection of Chinese vases of great value, and statuettes of Tanagra were broken. It is also said that a magnificent Sévres porcelain table service which had once belonged to Louis XV. met with the same fate.

Digitized by Google

Damage was also done in the house of M. Stratos, member of the Chamber and an ex-Minister. Several confectionery shops and cafés known to be centres of concentration of the ex-King's sympathisers were completely destroyed and—it must be said—plundered. The Cotopouli theatre at Omonia Square was likewise greatly damaged, in spite of the superhuman efforts of the troops guarding it to keep the crowds at bay. But undoubtedly the most regrettable incident of this eventful day was the death of John Dragoumis, a member of the opposition, ex-Minister for Greece in Petrograd, and son of the ex-Premier M. Stephan Dragoumis. The exact manner in which he met his death has not yet been ascertained, but it is believed that he was shot while being taken in a carriage to the police-station. The authorities have taken the matter in hand, and have promised prompt and exemplary punishment of the perpetrator of the crime.

A few hours after the disturbances related above, M. Repoulis, the Vice-President of the Council of Ministers, created an immense sensation by stating that a plot aiming at the overthrow of the Government and the establishment of an anti-Venizelist dictatorship in Greece had been discovered. M. Repoulis said that the Government had been aware of the existence of this plot during the last fortnight, and that the *coup d'état* was to have been carried out on the very night of the peace celebrations in Athens. The revolutionists' plan was to seize the Ministry of War, the barracks, the Prefecture of Police, and the prisons. The drastic measures, however, taken by the authorities and the numerous armed patrols which were on duty in Athens on "Peace Day" frustrated any attempt to disturb public order. It would therefore appear that the plotters had postponed their plans until the day the news of M. Venizelos' assassination had reached Athens. Warrants for the arrest of certain persons involved had been issued many hours before the attempt on the Prime Minister's life.

During the past week the authorities have been very busy arresting suspects, including the majority of the Opposition leaders and the editors of three anti-Venizelist papers. Their trial is expected to commence early next week.

On Sunday last the party of the so-called "irreconcilables" informed the public, through the morning Press, that a demonstration for the purpose of demanding an immediate and exemplary punishment of all those found in any way connected with the attempt on M. Venizelos' life was being organised for that afternoon. The authorities, however, fearing a recurrence of Friday's scenes, prohibited the gathering.

The capital is very quiet now, the Government having taken drastic steps to ensure order. The general opinion here is that the measures taken by the authorities on the day of the disturbances to prevent the attacks on the newspapers and private houses were inadequate. The fact that a new Military Governor was appointed in Athens on the following day is an indication that this opinion is shared by the Government.

## ROUMANIA.

BUCHAREST, August 18.

**Parliament.**

The Chamber of Deputies has had a busy week. On Friday last a Bill was introduced for the ratification of the Treaty of Saint Germain, and after a discussion in the course of which Dr. Vaida-Voevod and M. Také Jonescu both made long speeches in defence of the signature, and deprecating the attitude of the Liberals towards it, the Bill was passed by 221 votes out of 234. It will be remembered that one of the clauses most resented by the Liberal Party, who represented Roumania at the Peace Conference, was that which deals with the minority populations. It was on account of this, and of the boundary question in Maramuresh and the Banat, that the Liberals opposed the signature of the Treaty when it was voted by the Government of Dr. Vaida-Voevod. On the subject of the Jewish question, and the minority populations, Dr. Vaida stated in his speech on Friday that the only reasonable policy for Roumania to pursue was one of tolerance and equal protection to all her subjects, as it would ill become Roumanians who had so long suffered from the unjust repressions of Austria-Hungary in Transylvania to emulate the policy of their oppressors, now that the power was in their hands. M. Také Jonescu held the same opinion, and pointed out that the minorities population clause was not inserted for Roumania alone, but also for seven of the other belligerent nations, and he added that if former Roumanian Governments had been far-seeing enough to accord full liberties to the Jews, the Jewish question would in all probability not exist in Roumania to-day. Both deputies were well supported by the Chamber, and the Bill was passed as stated. The fact that these liberal sentiments were so heartily endorsed by the majority of the Deputies shows that not all Roumanians of the governing classes are such brutal oppressors as they are represented by the utterances of pro-Hungarian propagandists.

The following Bills were also passed: (a) For the creation of an Under-Secretaryship of the Treasury at the Ministry of Finance. (b) A Bill, introduced by M. Jorga, and unanimously supported by the Chamber for the foundation of an Institute for Higher Courses of Roumanian Studies in Paris and Rome. (c) A Bill granting to State employees allowances of 90 and 63 per cent. of their salaries to meet the higher cost of living. As reported in a previous letter, the non-payment of these allowances, previously promised, was one of the reasons for the recent Post-Office strike. (d) The Bill for the ratification of the Peace Treaty with Bulgaria.

A credit of 450 million lei was voted for the land expropriation operations.

Besides these measures, which were all voted on Friday, the law for the regulation of Labour conflicts was passed on the 12th inst. with very slight modifications, in spite of the long discussions it raised. The law has been drawn up on the basis of modern labour legislation in the West of Europe: it makes arbitration obligatory in cases of dispute in State institutions, forbids strikes except for the protection of technical rights and admits in principle the liberty of labour in regard to collective cessation of work. But it is claimed by some of the critics that its weak point will probably be found to lie in the fact that it makes no provision for the organisation of labour unions with responsible leaders. It was very badly received by the workmen, who held a mass meeting of protest outside the Chamber.

**Marshal Joffre in Bucharest.**

Marshal Joffre arrived in Bucharest this morning about 9.30 by a special train (the Simplon Express, in which he left Paris, having broken down or been delayed for some reason not explained). His official mission is to present the Croix de Guerre to the towns of Bucharest and Marasesti, and his coming is warmly welcomed by the Roumanians. The Bucharest ceremony will probably take place at the Parc Carol to-morrow forenoon, but no official programme has yet been issued. Marshal Joffre will be the guest of the King during his stay.

The Minister for Foreign Affairs of Czecho-Slovakia, M. Benes, with several of his staff and other officials, is also expected in Bucharest this evening.

## BULGARIA.

SOFIA, August 19.

TRADE  MARK

Digitized by Google

of Foreign Affairs, to listen to a sketch of his domestic and foreign policy. During his recent visit to Varna, and to the Royal Palace at Euxinograd, he was able, he said, to find out that the nation welcomed the new laws recently adopted by the Chamber, viz., the law allowing the expropriation of private buildings for use as State and municipal institutions, and of drinking and other saloons for use of schools and administrative institutions; the measures taken for grappling with the housing problem, particularly the supplying of homeless people with cheap land and with credit for building homes of their own; and the law in connection with the public labour service, which, M. Stambolisky said, had not been badly received, and had in some parts already begun to be applied.

**The Foreign Situation.**

The immediate future holds momentous consequences for Bulgaria as well as for the rest of the world, but at least the international position of this country has, after the ratification of the Peace Treaty, been considerably ameliorated. With all the Great Powers, and also with her neighbours, Bulgaria has friendly relations. Hitherto the most dangerous point lay in her relations with Greece, for it was feared that the Greeks occupying Thrace might pass the Bulgarian frontiers and thus violate the integrity of Bulgaria as laid down in the Treaty of Neuilly. But the Bulgarian Government addressed in time a Note to the Entente Powers, declaring to them that Bulgaria would preserve a strict and loyal neutrality towards her neighbours in whatever conflicts they might be engaged, but that the frontiers as laid down in the Peace Treaty would be defended by force of arms M. Stambolisky was convinced, he declared, that as long as the Greek statesman, M. Venizelos, held power in Greece, Bulgaria's territorial integrity would be respected by Greece. He had, he said, heard the news of the attempt on the life of M. Venizelos with surprise and indignation, and he earnestly hoped that the prominent Greek statesman, who had done so much for his country, would not refuse to come to an understanding with Bulgaria, and so win her friendship.

**The Thracian Refugees.**

Along the Thracian frontier matters are now quite peaceful. The frontier posts are occupied by Greek troops. The settlement of the Thracian refugees has begun, and the Government has voted two million levas for supplying them with land for cultivation and seeds for sowing. Some of the Turkish Thracian refugees are leaving for Constantinople, via Burgas.

## TRANS-CAUCASIA.

TIFLIS, July 25.

**Peace in Georgia.**

In the North Caucasus there are already fresh risings against the Bolsheviste: in Azerbaijan the Red plague is devastating the land: Armenia is still arguing about her rights to Karabagh; but Georgia has come out of all her troubles, and the ship of State is sailing on a calm sea. Now that the Georgian flag is waving proudly over Batoum, the Adjarians have closed their ears to the oily words of Turkish agitators, and have expressed their allegiance to their legal Motherland. The Georgian Government has made it clear that Georgia wants no revenge. Bygones are to be bygones, and all former rebels are now forgiven. Further, all those Adjarians who suffered innocently through the schemes of enemy propagandists will be compensated. But with all its leniency, the Georgian Government has issued a warning that any future attempts to undermine the law and order of the ruling authorities will be severely punished. The Adjarians have been ordered to give up their arms and to surrender all Turkish officers in their midst—the men chiefly responsible for the recent strife. A delegation of the Adjarian people has visited the Georgian Foreign Ministry, and the president of this delegation has assured the Government that all orders will be faithfully carried out.

The Ossetins, also, who have been carrying on "demonstrations" to the north of Gori, seem to be coming to their senses. The agitators who arranged the trouble have acted as agitators usually do when their schemes go wrong—they have already fled to the north, and the people realise that they have been deceived. So the senseless struggle against Georgia has ceased, but there is a new cloud on Ossetia's horizon. A group of bandits who call themselves the People's Red Guard and Militia continue to rob and plunder the people. Peasants who usually drive their flocks and herds from the plain to the hill pasture grounds are now afraid to do so lest their cattle be taken from them en route. Many of the upland fields are remaining uncultivated, and there is likely to be a food crisis. This state of things cannot continue, so the Ossetin people have appealed to the Georgian people and to the democratic Georgian Government to go to their aid and to help them to clear their land of the bandit robbers. Ossetia wants to live at peace with Georgia, and with the Red disasters in other parts of the Caucasus, one can only hope that the Bolshevist agents and agitators will flee, as so many of their former comrades have already done.

**Georgia's Progress.**

In a notable speech delivered before a large public gathering in Batoum, M. Noe Ramishvili, the Georgian Minister of the Interior, referred to the progress that the Georgian Republic has made in the past two years, and drew a striking comparison between Georgian accomplishments and the ruin caused throughout Russia by the Bolshevists. Turks, Denikin, Communists, and other enemies of Georgia's independence, he said, had all been before the gates of the Republic, and all had been repelled. "We have come through all our vicissitudes with honour," he said. "To-day in Batoum the Entente flags have gone, but in their place is the flag of democratic Georgia. I have the courage to tell you that our flag will always remain in Batoum." Ramishvili then went on to say that with all its victories the Georgian nation had become more united, the sentiment of patriotism had been strongly developed, and the people had received new self-assurance and renewed courage. "We have often been told that although we are strong in politics we are weak economically. Foreign assistance has been offered to us, but we will avoid becoming a toy in the hands of international speculation. Our economic situation is certainly not brilliant, but it is better than that in many other parts of the world. We are building, but in Russia there is simply ruin. Here we have construction; there is destruction. Even in Europe, if one considers the figures regarding industry, strikes, and unrest, one can see that everything is not so good as it might be. In Russia the people are dying of famine, dirt, and disease. The Bolshevists have made a cemetery of Russia. If one compares our own Georgia with the Russia of to-day one can see that it is not for the Bolshevists to show us how to construct our State. We are proud of our work, because we are now on the road that is leading us to the realisation of our dreams. We have a university; soon there will be a polytechnic. We have our own provincial local governments that are

**ROYAL SCHOOL**
FOR
**Daughters of Officers of the Army.**

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB. J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

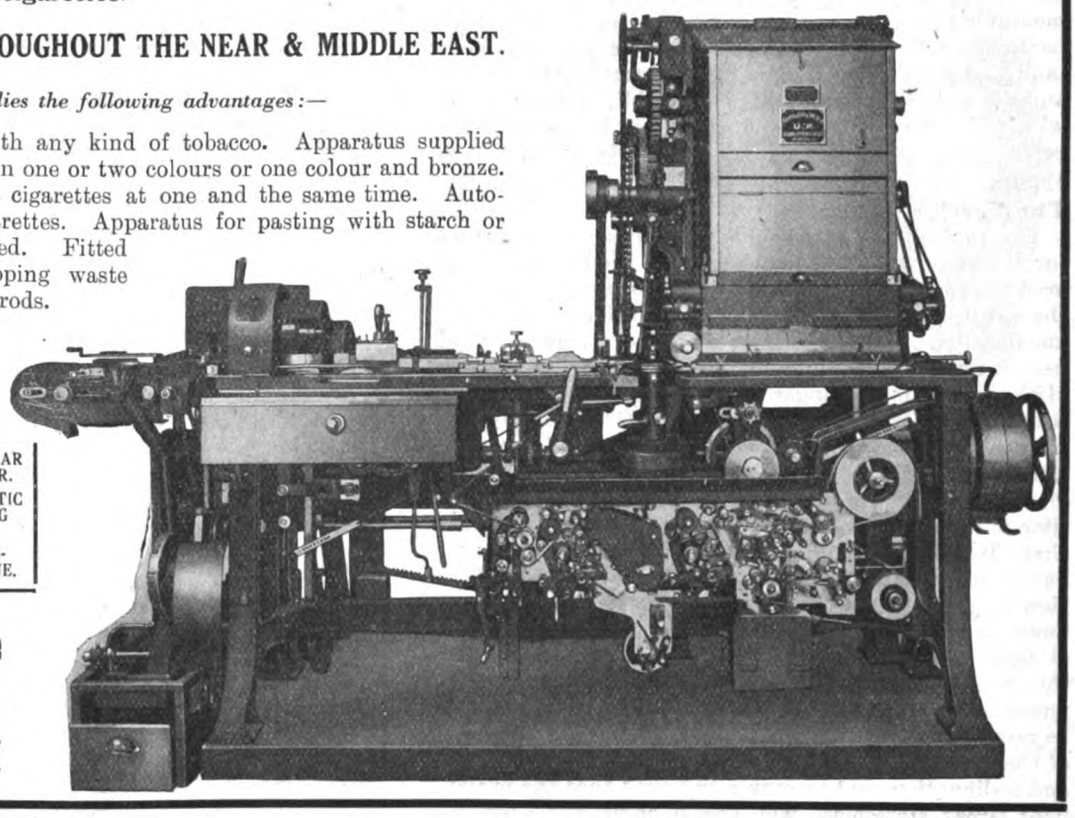
# The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

**IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.**

*Embodies the following advantages:—*

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.



*Also:—*
THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.
AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

**United Cigarette Machine Co., Inc.**

doing much to arrange the social and economic life of our State. We have an eight hours' day for our workmen. Our telephonic system is greatly increased throughout Georgia. We have almost finished the creation of many new post and telegraphic offices throughout the Republic. The Government has the confidence of the people, and is taking them on the road of progress and civilisation." Finally, Ramishvili appealed to the people to remain quiet and to work in peace, assuring them of the steady co-operation of the Government.

Ramishvili's speech was a great success, and at its close he had a long ovation from the Batoum people.

**Bolshevist Schemes.**

Meanwhile, the Bolshevists continue their underhand work in Tiflis. The Georgian people have already shown them that they will have no Soviet interference in their affairs, and that they will never let their democratic Government be razed by the Soviet rulers. Arrests of Soviet agents are made daily and only a few days ago the *Communist*, a Bolshevist organ, was closed down in Tiflis and the editor arrested. There is talk of Kiroff, the Soviet "ambassador," leaving. And in this there is a deal of humour. As I mentioned in my last letter the consensus of opinion in Government circles was that Kiroff and his mission would have to be expelled if the underhand work they were carrying on continued. Kiroff apparently scented trouble, for he is alleged to have declared that he is suffocating in the "bourgeois air" of Georgia and cannot any more breathe! So, apparently, he will go quietly, rather than be unceremoniously kicked out.

**Baku.**

Things in Baku seem to be going from bad to worse. Workmen, all of whom have been mobilised to forced labour, have received no wages for over two months. Prices are soaring impossibly high. Discontent is general. Bread is supposed to be sold at the fixed price of two roubles a pound, but in reality one has to pay more than 200 roubles a pound. Sugar is priced at five roubles, but sugar is almost non-procurable at any price at all. The workmen's rations are called "famine rations" by the men, as they are totally inadequate. Transport is falling to pieces, although a certain amount of ships are being repaired in the harbour. The armed merchant ships are being "demobilised," and efforts are made to strengthen the fleet of oil ships. Several of the Bolshevist ships from Astrachan and Petrovsk have arrived in very bad condition. Owing to neglect they are only capable of half their former speed.

Here is a case of "Jeddart justice." Some time ago Professor Simina, the well-known orientalist, was killed by the Bolshevists as he was accused of having participated in the death of Shaumian, the 1918 Baku commissar. Following Simina's death an inquiry was held, and it has now been found that he was quite innocent. Too late, of course; Bolshevist mistakes like those of the proverbial doctor, are to be found in the grave.

## THE SITUATION IN ARMENIA.

The Armenian London Bureau makes the following statement:—

The postponement of a final settlement in the Middle East is obviously producing lamentable results for some of the great countries of Europe with regard to their trade, military expenditure, and general economic conditions, but most nations at least are not suffering from shortage of food or of the bare necessaries of life; in Armenia, on the other hand, the people are not only deprived of most of the necessaries of life; they are also involved in a constant warfare on their Eastern, South-eastern, and South-western frontiers.

A report which has just come to hand from Alexandropol, describes the extent of starvation to which masses of Armenian people are still subjected in various areas within the frontiers of the Republic. It is a common thing to see hungry women and children wandering in the fields in search of roots and herbs to supplement their scanty rations of food. Owing to the uncertainty of the political situation, the Armenian Government had to mobilise various classes of recruits in order to strengthen the front in Zangezour and in the region of Olti against any possible aggressive action of the Turks. The best manhood is thus under arms, and there seems to be no prospect as yet of exemption of the youth of the country to recommence the work of reconstruction.

In the disguised struggle between the British Empire and Bolshevist Russia, the exhausted Armenian nation is struggling for its existence. The signing of the Peace Treaty with Turkey and the recognition of the complete *de jure* independence of Armenia do not seem to bring about a perceptible amelioration of the condition of the Armenian people. The Turks are as yet in occupation of the provinces of Van, Bitlis and Erzeroum, which are laid down as Armenian in the Peace Treaty. Another winter is at hand, rendering the occupation of these provinces by Armenian troops almost impossible until next Spring. That means, of course, that 300,000 refugees from those provinces will have to spend another winter within the borders of the Republic, which can scarcely feed and clothe its native population. Cut off from the seas by its geographical boundaries, the Armenian Republic is still under some sort of blockade, and owing to some mysterious agency, postal and telegraphic communications have not yet resumed their normal course, as one would have expected in the case of a small Allied nation. Fresh trouble seems to be brewing in Transcaucasia, owing to the course of events on the Polish front. There is reason to believe that Soviet Russia is withdrawing all its forces from the shores of the Caspian Sea and Baku, thus widening the scope of Tartar anarchy. It is reliably reported that the Tartar "Mussavat" party, which was defeated last May, and some of whose leaders are hiding in the region of Elisavetpol, has been sending agents to Daghestan and to the Mohammedan mountaineers of the Caucasus, to induce them to rise and avenge themselves on the returning Russians. The reaction of this new development would mean fresh fighting between Armenia and Azerbaijan, and fresh intrigues among the Tartars, Turks and Arabs. Such a development cannot fail to add fresh fuel to the smouldering fire in the Middle East, from which Armenia will not be the only sufferer.

## SERBIA AND MONTENEGRO.

Sir Roper Parkington, Consul-General for Montenegro, states that, notwithstanding the sufferings of the inhabitants of that country, owing to sickness and want of food, the Serbians, who are in possession of the country, have ordered the relief missions to leave. La Mission Sanitaire Internationale was the first, followed by the British Relief Mission; and now the Canadian War Hospital, headed by Colonel Burnham, has been forced to abandon humanitarian work.

Diplomatic relations between Yugoslavia and Bulgaria have been resumed.

At a meeting of the Viceroy's Council on August 26 an Indian member was informed that General Dyer's pension is £900 per annum.

The Zionist Organisation, 77, Great Russell Street, London, W.C.1, is sending out lecturers to give addresses on Palestine, free of charge.

Ramadan Scetem, the chief of the Misurati region, who was pursuing an anti-Italian policy in Libya, has been defeated and killed in tribal fighting.

The Government have cordially accepted the offer of the Maharaja of Kapurtala of his regiment of Imperial Service Infantry for service in Mesopotamia.

A War Office statement says that an examination of papers captured from a Bolshevist Staff officer in the recent action near Menzil disclose a comprehensive scheme for overrunning Persia and capturing Teheran.

For the around-the-world aerial Derby the proposed route is as follows:—New York to Seattle, to Yokohama, to Shanghai, to Bangkok, Siam; to Karachi, India; to Calcutta and Delhi; to Bagdad, to Rome, to the Irish coast, to London, Newfoundland, and New York. The total distance is 22,207 miles.

The *Zionist Bulletin*, of August 20, states:—

"The Jews in Roumania are still being persecuted. They are obliged to contribute more towards the upkeep of schools than the Roumanians; they are regarded as aliens, notwithstanding the fact that they have already been officially recognised as Roumanian subjects. They are also barred from occupying Government posts."

# CORRESPONDENCE.

## THE MILNER MISSION AND TURKISH NATIONALISTS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—One of our hymnals teaches us that "God works in a mysterious way His wonders to perform," and I am sure that we can find no better illustration of this precept than the Foreign Office policy in Egypt. First, we have armed interference to uphold the despotism of a Khedive. Then, having put the despot on one side, we have a long period of years supporting the rule of another despot (certainly benevolent), followed by the Gorst régime with its endeavours to show that the Egyptians were capable of governing themselves, an experiment which the Government and the world in general looked on as a complete failure. Next comes Lord Kitchener with a personal government even more pronounced than Lord Cromer's. There was no question as to the success of this latter administration, and one could only suppose that Home Rule was indefinitely postponed, especially as at the time of the Armistice the Nationalists were refused a hearing and even imprisoned! Finally, we have once more a complete change of front, and the report of the Milner Commission, or rather the *résumé* of the findings, as published. How far this agreement, if it materialises, will prove a success the future alone can tell, but as I so long ago as last November urged, both in *The Times* and THE NEAR EAST, that the Nationalist leaders should be asked to form part of the Commission, and be given a hearing, I cannot very well find fault with the result of their deliberations. At the same time, many will undoubtedly look on the recommendations of the Commission as very hazardous, and some of the proposals will meet with considerable opposition, and may possibly have to be modified before final acceptance. Not the least of these difficulties will be to find a British resident qualified to exercise *unaided* all the powers reserved for a Second Chamber in the many cases which must affect European interests. There are the minor details which are calculated to raise unnecessary question, and might possibly have been avoided. But appreciating these troubles, I nevertheless welcome the report, because I feel convinced that it will largely assist to undo the mischief caused by the Turkish treaty in the Mohammedan world. It is dangerous to prophesy, but I should indeed be surprised if the publication of this agreement does not have a very soothing effect throughout India and Central Asia. Even the Turkish Nationalists may once more look to England as their best friend, and hope for a not very distant time when the Egyptian policy will be extended to Asia Minor. It will surely, too, have its effect on the French mandate in Syria. Let us, then, take off our hats to the Milner Commissioners who have been broad-minded enough to see that the Egyptian settlement forms part and parcel of the larger Eastern question.—I am, etc.,

COLES PASHA.

Ruishton, Taunton,
August 29.

## STRANGERS' HOME FOR ASIATICS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We venture to ask permission to appeal to your readers on behalf of the Strangers' Home for Asiatics situated in the East End of London. This institution, founded in 1859, has kept an ever-open door for destitute strangers—chiefly Lascar seamen—resident in the continent of Asia.

The objects of the home—the only one of its kind in the kingdom—are to provide board and lodging under adequate supervision and, when necessary, to help towards repatriation.

The invaluable war services of the mercantile marine have been freely acknowledged by the Admiralty, who declared after the Armistice that they had made "victory possible and complete." Fourteen thousand men of the merchant and fishing services laid down their lives in the war, and 7,750,000 gross tons of merchant shipping were destroyed. Asiatic seamen shared fully and freely in this work and in the casualties, and Lascar crews of torpedoed vessels never failed to volunteer again and again for sea service. Much has been done for the European sailor, but so far his Asiatic brother has not shared in these benefits. A most important part of the machinery of our overseas trade owes, in no small measure, its efficiency to these humble fellow-subjects who man our ships. They stood, and are standing, by us in our need, and we feel sure that it will be acknowledged it is not only our privilege, but our duty, to see that they never want while on our shores.

The only alternatives to this home are the low doss-houses of the East End, and we must close our doors unless an Endowment Fund of £30,000 can be raised. Last year our loss was £1,100, and it is absolutely necessary we should be placed on a sound financial basis. Donations and subscriptions will be gratefully acknowledged by the undersigned, and we would earnestly appeal to your readers for support to enable us to fulfil in some measure the obligations of the Empire to her Asiatic subjects.—We are, etc.,

ISLINGTON, President.
AMPTHILL, Vice-President.
Strangers' Home for Asiatics, West India Dock Road,
Limehouse, London, E.14.

August 27.

# PRESS ON THE NEAR EAST.

## The East.

The *Round Table* of September contains a very instructive article upon "The Changing East." The writer points out that the phrase, "the unchanging East," is now the reverse of fact, and that Asia is, in fact, in the grip of "the civilisation-disease, the inevitable effect of too close contact with the West." He glances back at the past of the various peoples, and finds that even before the war the East was in a state of flux. During the war, he says, Asia discovered the principle of nationality as the basis of political action. Religion as the impulse to movement had gone; and in Asia "not the Galilean, but the politician had conquered."

He proceeds to sketch the future of some of the Eastern peoples. What he says of the Arabs is interesting:—

Arab movements begin in the desert, and usually travel up the shortest way into Syria—for it is remarkable that whereas all prophets go to the desert yet none of them are ever desert-born. It is the Semitic townsman or villager who receives the revelation. For this reason, for what seemed to be the immemorial finger-sign of history, this present Arab movement, the craving for national independence and self-government, was started in the desert. It, too, took the traditional road to Damascus, the traditional first centre of new movements, and with the successful establishment of Feisal there the second phase was finished. This is not, however, the proper end of the Arab movement; the weight and importance of the Semitic states have always lain in Bagdad, for very sound reasons of economics and population. Syria is a poor country, small and mountainous, dry, lacking in minerals and in arable land. There is no probability that her native population will ever be very dense. Mesopotamia has big rivers, and a huge area of irrigable land. Her wealth in grain and cotton will be very great, and nature may have bestowed on her abundance of cheap fuel. Should that be the case, she will inevitably take the headship of the Arab world in the future, as so often in the past. Damascus may hold an interim pre-eminence; Bagdad must be the ultimate regent, with perhaps five times the population of Syria, and many times its wealth. Mesopotamia will be the master of the Middle East, and the Power controlling its destinies will dominate all its neighbours.

Turning to the future of Persia, he says that it "seems possible that Persia will either be united under a national and unfriendly administration, or dismembered as before the war, and fought over by Russian and Persian partisans, nominally Persian subjects." He then gives his attention to two new features that have recently been inserted into the future of the Near East.

Two new elements of some interest have just set foot in Asia, coming rather as adventurers by sea—the Greeks in Smyrna, and the Jews in Palestine. Of the two efforts the Greek is frankly an armed occupation—a desire to hold a tit-bit of Asiatic Turkey, for reasons of trade and population, and from it to influence affairs in the interior. It appears to have no constructive possibilities so far as the New Asia is concerned. The Jewish experiment is in another class. It is a conscious effort, on the part of the least European people in Europe, to make head against the drift of the ages, and return once more to the Orient from which they came. The colonists will take back with them to the land which they occupied for some centuries before the Christian era samples of all the knowledge and technique of Europe. They propose to settle down amongst the existing Arabic-speaking population of the country, a people of kindred origin, but far different social condition. They hope to adjust their mode of life to the climate of Palestine, and by the exercise of their skill and capital to make it as highly organised as a European state. The success of their scheme will involve inevitably the raising of the present Arab population to their own material level, only a little after themselves in point of time, and the consequences might be of the highest importance for the future of the Arab world. It might well prove a source of technical supply rendering them independent of industrial Europe, and in that case the new confederation might become a formidable element of world power. However, such a contingency will not be for the first or even for the second generation, but it must be borne in mind in any laying out of foundations of empire in Western Asia. These to a very large extent must stand or fall by the course of the Zionist effort, and by the course of events in Russia.

He concludes with a suggestion of the attitude that Great Britain should adopt towards the changed spirit of Western Asia. The new Imperialism that he advocates "is not just withdrawal and neglect on our part. It involves an active side of imposing responsibility on the local peoples." He sketches the steps we should take for this end, and says that, although a muddle may be made at first, "on principle it is better that they (the local peoples) half do it than that we do it perfectly for them." His last words are optimistic, but eminently sensible:—

We do not risk losing them to another Power—for the Englishman is liked by everyone who has not too much to do with him, and the British Empire is so much the largest concern in the world that it offers unrivalled inducements to small peoples to join it. Egypt, Persia and Mesopotamia, if assured of eventual dominion status, and present internal autonomy, would be delighted to affiliate with us, and would then cost

Digitized by Google

as no more in men and money than Canada or Australia. The alternative is to hold on to them with ever-lessening force, till the anarchy is too expensive, and we let go.

### Mesopotamia.

In the *Manchester Guardian* of August 26 appeared an article on "The Tragedy of Mesopotamia," written by "One of Maude's Officers." It refers to the immense benefits which Sir Stanley Maude, before his death, conferred upon the Arabs, and to the respect in which he was universally held. The article continues:—

After November 18, 1917, there was no one to carry on the Maude tradition. With the end of his life commenced political confusion. No longer was the Arab considered as one to be helped, but rather he was regarded as a potential enemy. The poison of the Indian Government began to permeate the land. The wide, statesmanlike view disappeared, and the petty game of "making a bandobast" took its place. The interests of the Arab were forgotten and became overshadowed by those of Indian officialdom. An expensive, useless, and unwieldy foreign administration was established with British aggrandisement as its object.

Mesopotamia has become a Tom Tiddler's ground for the Indian official. That individual has no more qualification for governing the Arab than has the Eskimo for governing the Chinese. The Arab had hoped for a British regime. He had longed for it. He had tasted its benefits at the hands of Maude. He was eager to co-operate in its establishment. But instead he had the stifling bureaucracy of Indian methods thrust upon him. Those methods are unsuitable to the country and the people. The Arab is proud and intensely independent. The hopeless folly—now about to be reinforced—of garrisoning the country with Indian troops was foredoomed to failure. The Indian soldier has shown himself to be magnificent in our service, but in the eyes of the Arab the troops of the Indian Empire are inferior in race to themselves. Were Mohammedan troops only used it would not be so bad, but the Arab follower of the Prophet will not tolerate the Hindu. The use of white troops he can appreciate and understand, but the employment of what he regards as an inferior black race to play the rôle of policeman over him is certain to provoke revolt. The Arab has seen his aspirations strangled one by one; he has been insulted; he has been treated as one vanquished; he is taxed for an administration in which he has no share and the policy of which is hateful to him. These conditions make rebellion inevitable. After the defeat of the Turk our mission in Mesopotamia was to aid and to guide the Arab race in its development and to assist it to realise its aspirations. These were not inimical to us. The people asked for the bread of progress and were given the stone of coercion. Men trained in Indian methods and with the peculiar type of mind which that training confers are incapable of realising the requirements of Mesopotamia. They wrecked the campaign from 1914 to 1916. They have now repeated the performance. The results promise to be even more tragic.

Mesopotamia and her people, British prestige, blood, and money can yet be saved. The direction of Mesopotamian affairs must be taken from India and placed in the hands of the Home Government. The Arabs must have a full share in working out their own salvation. The present wasteful, irritating, and foreign policy and its instruments must go. It is men of the type of Colonel Lawrence of Arabian fame who alone can bring order out of the present chaos, but even they would be severely handicapped if their subordinates remain tainted with Indian "governmentalism," or consist of those who have no experience of the Arab mind and no sympathy with its ideals.

What is needed is an immediate radical operation. To delay is only to make certain that much British blood will again soak into the sun-scorched plains.

### Egypt.

*The Times* of August 25 takes a favourable attitude towards the new Egyptian propositions. It holds that the solution now put forward—

is both feasible and possible, that it will confer upon the people of Egypt the utmost freedom they have ever sought, and that it will not be inimical to those larger British interests which we are bound to conserve, because they relate not only to the security of Egypt against external aggression, but still more to the safety of the British Empire. It should be recognised that the proposal will give to Egypt an independence such as her people have not known for many centuries. They have never for ages past enjoyed the advantage of full freedom coupled with complete safety from attack. Their history has been one long record of foreign domination. Even to-day the privileges which it is now sought to grant to them are only rendered possible by the curtailment of the power of their former suzerain, Turkey. The scheme about to be submitted has the further advantage that it is generously in accord with the spirit of the new age. The Egyptians have been restive under the yoke, and as in the case of other restive peoples, the yoke will now be new dispensation is quite another matter. Our fear is that a purely Egyptian administration, such as is now contemplated, may be more lax, less efficient, and probably less beneficial to the masses than the order which is about to pass away. The same view is applicable to India, where the extension of popular control is likely to be accompanied by a deterioration in executive efficiency. If these assumptions prove to be unfounded, none will be better pleased than ourselves; but all Oriental experience, and perhaps not Oriental experience alone, supports our contention. Yet it is in accordance with human nature that the Egyptians should prefer to be badly governed by themselves than well governed by others; and so long as British Imperial interests are sufficiently protected, it is on the whole desirable that the change should be made.

It comments on some of the details of the new proposals, and concludes:—

Great Britain is taking a bold and perhaps a startling step in Egypt, but we do not believe it to be a dangerous step. The British nation can confidently leave the story of their occupation of the Nile Valley to the judgment both of contemporaries and of posterity. We found Egypt impoverished, misgoverned, oppressed, and almost derelict save for her perennial fertility. We shall relinquish our detailed control leaving her prosperous almost beyond belief, developed beyond all expectations, and with the condition of her inhabitants improved beyond measure. In spite of occasional mistakes in more recent years, Great Britain has never done a nobler or a more successful piece of work in the cause of civilisation.

The *Morning Post* of August 24, on the other hand, adopts a very different point of view. "The agreement," it says,

manifestly amounts to a sheer surrender. There is nothing in it about constitutional reforms. Egypt, being independent, is free to settle upon her own reforms or to do without them, which is the point the Nationalists contended for from the first. Lord Milner's Commission need never have gone to Egypt if this was the settlement intended. It would have been much simpler to announce Egyptian independence and the dissolution of the Protectorate by Proclamation, and much more graceful than to have it come about as the result of bargaining, and very unsuccessful bargaining on our part. . . And now, it would seem, the surrender is to be made in deference to an agitation which will assuredly use the grant of Egyptian independence as a starting point for a claim upon the Soudan, and will soon begin to chafe at the presence of our garrisons on the Canal. A strange story for sober international politics is that of our connection with Egypt. Wafted there by accident in 1882, we immediately undertake before all Europe to come away speedily. Events being too much for us, we next try to restore the country of the Turks, but the attempt is frustrated when the Sultan is on the point of signing the Convention by French influence! Next comes a time when we laboriously work for the consolidation of our position against European rivals. Finally, when our position has been finally assured and sanctioned by the assent of the Powers, we resign it under pressure of a domestic ferment. It is a very serious matter; for the manner in which the surrender has come about is a direct invitation to the agitators in India to follow in the footsteps of the Egyptian Nationalists and to be content with nothing less than what they have secured.

### The Future of the Arabs.

The *Manchester Guardian* of August 20 pleads for a refocussing of the ideals of 1918 in order to settle the Arab problem. It says:—

The Arabs are at the best a difficult and heterogeneous people; but they have racial if not political entity. Feisul was the most responsible spokesman they had. His deposition has thrown the whole delicate problem once more into the melting-pot. The latest British despatches describe the present warfare of the Arabs as being conducted under the "feudal system,' each chief rallying his men to further his own cause against the Allies. But even the feudal system worked when it was headed by a recognised feudal chief. Such a chief Feisul showed every sign of being. He might have united his people and led them in the path of national progress with Allied guidance, but his authority has been taken from him and chaos has accompanied the step. It should be said for British policy in Mesopotamia that it has suffered mainly through the failure of an Allied plan that would envisage the whole area involved. That failure has cost us lives and money and landed us in a morass of which the limits are not yet visible. But on the practical side we have been doing good work. Basra is once again a great port. The canals and waterways on which the resources of that rich land depend, and which the Turks neglected, have been largely restored, and Mesopotamia is becoming once again a great granary. Politically, too, we are now trying to fulfil our promises single-handed. We have appointed Feisul's brother to be ruler over our sphere, and we have summoned to meet, at Baghdad, Arab representatives who shall form an organic law for the Arab State so far as we are concerned with it. These steps are honest, and if they are tardy, that is not wholly our fault. But they cannot at the best be more than partial. No view of an Arab future can draw lines of government between the Gulf and the Levant. No doubt if we placate the Arabs to the north of us we can settle with more or less security in the Basra villayet, and use the frontier of the Shatt-el-Hai, which links the Tigris and Euphrates below Basra, as the line of defence for Basra and the neighbouring Persian oilfields. But that is a lesser and a baser plan than the reconstruction of an Arab nation. The ideal can be achieved only with French help. However deep the rift in the Entente may be on European questions, need France and England part company on this question? Cannot the impending visit of the Emir Feisul to Europe be made a ground for calmly working out afresh the plans for Arab regeneration that seemed so fair and hopeful when they were made two years ago?

V.—"MADELINE OF THE DESERT." By Arthur Weigall. (London: Fisher Unwin. 7s. net.)

## I.—SIR JAGADIS BOSE.

Sir Jagadis Bose's achievements in the field of experimental physics earned a place for him in the front rank of scientists many years ago, but it was only recently that it was accorded to him with the enthusiastic approval of his confrères, and it is now generally admitted that in his case recognition was far too long delayed. The silly legend that he was the victim of race prejudice, and that if he had been an Englishman instead of an Indian, his F.R.S. and other honours would have come to him much sooner is hardly worth discussing, and it is ridiculed even by Professor Patrick Geddes, his biographer and friend. Its persistence only demonstrates how profound must be the ignorance of the ways of the modern scientific world of the people who cherish it. Sir Jagadis Bose has had to pay the penalty of his originality of thought. Had he been content to labour in well-explored and familiar fields his work would have been recognised long ago, but his enterprise in plunging boldly into the unknown, even if it did not arouse the actual resentment of the scientific old guard, disturbed them profoundly, and their insistence on proofs that his discoveries were genuine would have tried the patience of many men less philosophic than the great Indian savant. But, after all, a man who advances revolutionary theories in a science so hedged around with laws as is Physics would be the first to recognise that nothing but the conclusive demonstration of their correctness could secure from the scientific hierarchy the seal of its approval. To his book Professor Patrick Geddes has given the title of the "Life and Work of Sir Jagadis Bose," and even if to non-scientific readers the amount of space devoted to the latter may seem disproportionate they are not likely to dispute the necessity in this case for the biographer to endeavour to bring home to the reader to the best of his ability the magnitude of the achievements of his distinguished friend. With all due deference, however, to an author whose thorough grasp of his difficult subject is obvious, we doubt the desirability of such attempts to reduce into simple form the substance of things essentially complex. It would have been better, we think, if he had divided his matter into two books, the first dealing with Sir Jagadis Bose's work written for the information of science teachers and students, and the second dealing with his life, for the benefit of a wider public. To give an adequate idea of the magnitude of Sir Jagadis Bose's scientific achievements in the space of a short review is obviously impossible, and we doubt whether it can even be obtained by the lay reader from the study of the chapters of the book devoted by the author to Sir Jagadis's work. Sufficient to say that it embraces his great contribution to the discoveries to which in recent years we owe the wonders of wireless telegraphy and kindred marvels, and his subsequent labours in a field peculiarly his own—the life of plants. The popular attitude towards science is frankly utilitarian, the value of a discovery being largely assessed on its wealth-producing possibilities. Judged even by this low standard the importance of Bose's researches is obvious, since it is more than likely that through the opening up for humanity of these new tracts of knowledge we may find a solution for the problem the growth of the population of this planet makes every day more and more insistent. Food shortage may ultimately bring human progress to an abrupt stop unless in the meantime we discover some means for increasing very greatly the productivity of the soil. Hitherto it has been to chemistry alone that we have looked for assistance; now, thanks to Sir Jagadis Bose, we may hope that Physics will bring us even more powerful aid in the future.

The chapters which tell the story of this great man's early difficulties and struggles are pathetic in the extreme, with their tale of long years of uphill work in the face of every conceivable obstacle. But as one reads one sees how great was the part played by adverse circumstances in the building up of the character of the man—a dull, unimaginative officialism hampered him at the start—as a paid professor the "Department" held that research was out of his proper province. When that difficulty was overcome another met him in the shape of inadequate funds; but, nothing daunted, he met it by utilising to their utmost capacity the narrow resources at his command. Financial misfortune having overtaken his father, his high sense of honour compelled him to devote the greater part of his small income to paying off the family debts. Ill-health dogged him persistently. He ignored it, never allowing it for a moment to interfere with his work. His enthusiasm never flagged, and, impervious to "the slings and arrows of outrageous fortune," this pioneer of science in India steadily fought his way up until, with the recognition of his work by the scientists of the world and the establishment in Calcutta of the Research Institute which bears his name, he may be said to have reached the goal of his ambitions. That modern India has produced such a man is full of hopeful augury for the future, for it brushes away effectually many of the silly generalisations on the subject of the Indian intellect which, accepted without question by only too many Englishmen in the past, have had so much to do with the widening of the breach between East and West in recent years. When young Bose was recommended by his scientific friends in England for a Professorship of Physics in India in the far-off days of Lord Ripon's Viceroyalty, his appointment was opposed on the grounds that it was unthinkable that an Indian could ever excel in pure science, the official theory being that the Indian intellect had no aptitude for exact methods of thought. No regular list of callings officially deemed to be unsuitable for natives of India has ever been printed, but it nevertheless exists in the minds of many Englishmen who claim to know the country and the people thoroughly, and one suspects sometimes that not a little of the unrest of recent years in India can be traced to the revolt of its over-classified inhabitants. Too long we have been taught to think of them under classified headings, warlike and unwarlike, and the like, forgetting that it is in his tendency to defy classification that man is distinguished from the brute creation. Sir Jagadis Bose is the first Bengali to achieve distinction in the field of experimental physics, and it is safe to prophesy that he will not be the last, for in the East a Master rarely lacks followers, and the force of his example cannot fail to appeal to the imagination of every young Indian with a scientific bent of mind. Sir Jagadis Bose has many friends in this country, and he has travelled in many lands; but his biographer leaves us in no doubt as to the fervour of his devotion to the land of his birth, and his nationalism is of the most uncompromising order. Indian nationalism as presented to the world by the political agitators who exploit it as a means for discrediting British rule has little to commend it, but when one has realised that behind the movement is the desire that India may eventually become self-supporting in every branch of human activity one can accord it a greater measure of sympathy. India is justly proud of Sir Jagadis Rose, but England may well be equally so, for he and all his fellow countrymen distinguished in science, art, letters, and affairs are, after all, the product of British missionary enterprise in the field of modern education. The mere fact that modern India can produce such men as Sir Jagadis Bose more than justifies the labours of the British administrators and teachers who have worked so devotedly for her awakening during the past century.

## II.—THE GREAT WAR.

To attempt to write a history of the European War in 400 pages is a stupendous task, one which no one who had not imagination and a power of generalising could essay; and it is largely through the possession, as full as it is unusual, of these two faculties that Professor Pollard has made his book a great success. There once was a sage jibe that Oxford historians were dull on purpose and Cambridge historians so because they could not help it; but it would now appear that the combination of one of the older universities with one of the newer foundations (in this case, Oxford with London) can remove this reproach. For it is no mere chronicle of events that is here given us; causes and consequences are lucidly explained; the relation which military, political, and economic matters bore to one another is never overlooked; no irrelevant facts are set down; indeed, it can be said that everywhere Professor Pollard has written clearly, certainly, and critically. His book is obviously the result of most accomplished scholarship.

The writer of this work has long been known as an historian of the Liberal School, and in dwelling upon the expediency of the various actions which he describes he therefore never forgets the principles informing them. Of the political side of his book it is difficult to speak too

Digitized by Google

highly: he is almost unerring in detecting the strong and weak points of Allied and enemy statesmanship. To summarize what at best was a tangled, and at worst a confused, mass of events, was no easy task, but he has culled the important facts with remarkable decision and acumen. His accounts of the intervention of Roumania and of Greece are particularly admirable examples of his power of knowing what to include.

To all the belligerents he does justice. This history is no mere patriot's exercise; it is a wholly sane and, in so far as the adjective denotes praise, an impartial work. It is true that Great Britain's efforts fill many of his pages, but this is nothing more than an exaggeration of a virtue which few good historians lack. There is no undue tendency to praise our Allies, *qua* Allies: Italy's share, for example, seems to us hardly overrated. But it is ungrateful to point out minor blemishes, or differences of opinion, in a popular work that has eminently achieved its purpose: rather should it be insisted that this book is well worth buying and keeping. Merely as a book of reference it will be found extremely useful, for its index is excellent, and the plentiful maps are quite satisfactory.

Professor Pollard's view of the Peace is deeply critical, but equally hopeful; he recognises the shortcomings of the Entente, but believes that "the Conference of Versailles achieved higher ideals than those attained by any preceding congress of peace"—a most commendable conclusion. When the late European War is really over, and when all the Treaties are ratified, we hope that Professor Pollard will be able to revise his book, and so standardize a work which is already the best short history of the war written.

## III.—AN AMERICAN COMEDY.

Andrew Stiles, who has been a journalist in New York for fifteen years, inherits a fortune and a tumble-down country house from his uncle Crater. In the first five chapters Baumgarten, a Jewish financier, Pullar, the local estate agent, old Judge Tyler, who lives in the neighbouring village, and had been a friend of the uncle's, and, lastly, Charlie Eksberger, the famous theatrical manager and producer, all show a desperate desire to buy the place. Stiles naturally jumps to the conclusion that his property must, for some hidden reason, be of great value, and the reader's interest is thoroughly aroused. Nor is the reader likely to lose his interest until he has finished the last page and seen Stiles off to New York again, engaged to Rose Fuller, the leading lady of one of Eksberger's companies. But his interest will not be quite of the kind that he expected, for the mystery is very soon solved with ingenious simplicity, and although unforeseen and exciting things keep on happening in nearly every chapter, they are not nearly so arresting as the gradual unfolding of the characters of the people concerned. We had expected at the beginning to find rather mechanical figures being hurried through a tale of adventure and mystery. In the end we were sorry to say good-bye to Judge Tyler with his anecdotes of the good old days, and to Pullar, well educated and of good family, making the best of the dullness of life as a country land agent and living for his fishing and his motor. But above all we were sorry to part with Charlie Eksberger—a delightful creation with his tremendous power of succeeding, his childishly simple outlook in life, his unblushing ignorance of subjects outside his own sphere, and his unceasing curiosity and thirst for fresh knowledge. Stiles himself is thoughtfully drawn, rather charming, inclined to be too indefinite, very ready to see both sides of everything. Baumgarten, Mr. Curtiss has tried to make a little like Eksberger, but with a difference, and the result is not very convincing.

## IV.—SAPPHO.

For some years now Mr. Way has enjoyed the reputation of being one of our finest translators of Greek and Latin verse, and in this, his latest, work he shows that he can put into English the grace and tenderness of Sappho's lyrics as well as he conveyed the strength and dignity of Sophocles or Virgil. It is a most delightful little book that he has given us.

The very name of Sappho is enshrouded with romance and mystery. Scarcely anything is known of her for certain, for we have lost, owing to the hasty though explicable actions of Hildebrand and other mediæval ecclesiastics, much more of her poetry than has been conserved. But what of her has remained has exercised a permanent and intense influence on almost all lyric poets. Chief among these is, of course, Swinburne, of whom a living poet has said:—

> His singing mistress verily was no other
> Than she the Lesbian, she the music-mother
> Of all the tribe that feel in melodies.

Mr. Way has attempted the very difficult task of connecting and supplementing the different fragments of Sappho, and he appears to have succeeded most worthily. It needs both a rare critical judgment and a keen poetical sense to piece fragments together into a comprehensible whole, but this translator, without any doubt at all, has the necessary gifts. Here, for instance, is a poem—"To a Girl in a Garden"—composed from four fragments:—

> O soft and dainty maiden from afar
> I watch you. As amidst the flowers you move,
> And pluck them, singing.
> More golden than all gold your tresses are:
> Never was harp-note like your voice, my love,
> Your voice sweet-ringing.

No verse from such sources could be a perfect poem, but it is an achievement. Mr. Way's choice of words is always fresh and clean: he avoids the *clichés* and the dry, classical combinations of older translators.

There is an admirable little introduction upon Sappho in this book; also a translation of the most lovely "Pervigilium Veneris," which, though it was written centuries after Sappho's death, is included because "of all the remains of antiquity, it seems to breathe most of the spirit" of the poetess. Mr. Way's effort in this is extremely good, but the poem has, we think, been better done before. He translates the most haunting refrain in all verse thus:—

> "To-morn who ne'er hath love shall love, and who
> hath loved shall love to-morn."

In these days, when books of lyrics and Greek Anthology are at the height of their popularity, this little volume of translations should be sure of welcome; it certainly ought to be read by both the learned and the wise.

## V.—MADELINE OF THE DESERT.

Many readers of THE NEAR EAST will doubtless be interested in this book before they have read it, by reason of the fact that its author is a well-known and popular Egyptologist; but after they have read it they will feel that it has other claims to their interest and liking. It is, in fact, a remarkably good "first novel," though its author, as so often happens in the case of the first story, has put rather too much into it. We much prefer the first half (or thereabouts) of the book to the second; for in the latter we get the "Labour Question" in exchange for the charm of Egypt, and, after all, we get quite enough so-called "Labour" in our daily papers to enable us to dispense with it in our fiction.

Madeline was "born and brought up in a back street in Port Said," and, having lived her own life very much in her own way, she was, when the story opens, not unnaturally very tired of it. In fact, she had made up her mind to put an end to it, and only the arrival on the scene of the hero prevents her from doing so. This hero, Robin Beechcroft, an explorer of a somewhat shadowy type, is pursued by a most unalluring lady (named Daisy Jones!), who, in turn, is hunted by "a mystic," named Augustus Blake. But Robin and Madeline speedily recognise that they are meant for one another, and lose no time at all in falling in with Fate's decree. Robin's uncle, a likable old priest, who spends his winters on the edge of the Egyptian desert, makes them man and wife, and the story begins. It would be unfair to tell it here, however briefly, and we can with an easy conscience recommend our readers to get the book for themselves and trust Mr. Weigall to interest them deeply. We do not like his "mystic" or his Daisy Jones, and we are not quite sure that we care greatly for his hero or even for his heroine. But the plot is good, and the book gives one plenty to think about.

Izzet Pasha has left London for Egypt.

The King of Italy visited Cannes on August 24 and called upon King Nicolas of Montenegro.

Colonel R. Rosetti, Military Attaché to the Roumanian Legation, left London on August 24 for Bucharest.

Lord Allenby is to receive the freedom of Bury St. Edmunds

Captain F. R. S. de la Cour has left for Ceylon to take up his appointment as A.D.C. to the Governor.

The Maharaja of Alwar left London on August 26 for Aix-les-Bains.

M. Loutis, Secretary to the Greek Legation, left London on August 26 for Paris.

Mrs. A. F. Walter and Mrs. A. E. Gill have returned to England after a four months' tour in Palestine.

The Minister for the Kingdom of Serbs, Croats, and Slovenes left London on August 26 for Hastings.

M. Taditch has been sent as Yugoslav *Chargé d'Affaires* to Sofia.

The Roumanian Chargé d'Affaires visited the Foreign Office on August 30.

Captain Arthur Snagge, R.N., left London on August 23 to take up his appointment as Senior Naval Officer on the Danube.

The Indian Caliphate Delegation have concluded their mission to England, and have arranged to leave this week for India.

M. Venizelos left Paris on August 25 for Greece. He appears to have recovered completely from his recent injuries.

Lord Allenby will in all probability return to Egypt in the P. and O. steamer Caledonia, which is due to sail from England about the middle of October.

Brigadier-General H. W. A. Christie, C.B., C.M.G., has left for India on a big-game shoot. Letters to Eastwick, Camberley, will be forwarded.

Dr. Resetar, Secretary of the Legation for the Kingdom of Serbs, Croats, and Slovenes, accompanied by Mme. Resetar, left London on August 26 for Serbia on leave.

On August 25, at Brussels, King Albert of Belgium received in private audience the Maharaja of Kapurthala, who was passing through Belgium, and also the Patriarch of Armenia.

By command of the King, Mr. Montgomery, Vice-Marshal of the Diplomatic Corps, in celebration of the anniversary of the King of Roumania's birthday, called, on August 24, upon M. Boeresco, Roumanian Minister and Chargé d'Affaires, to offer King George's congratulations.

Our Sofia Correspondent writes (August 19):—Last Saturday Sir Herbert Dering, the British High Commissioner in Bulgaria, called at the Foreign Ministry, and had a long conference with the Prime Minister, M. Stambolisky. Sir Herbert is leaving for Bucharest about September 12, to take up his new post in Roumania.

Lt.-Col. J. Procter, Assistant Director-General of the Imperial Ottoman Bank in Constantinople, who has been in England on a holiday, is shortly returning to Turkey. Lt.-Col. Procter has recently been elected President of the Council of the British Chamber of Commerce of Turkey and the Balkan States.

Our Belgrade Correspondent writes (August 26):—
Marshal Joffre arrived this morning from Bucharest. The famous soldier will be entertained by the Prince, by the Prime Minister, and the French Colony, and will visit the scene of the heavy fighting round Belgrade in 1914 and 1915.

The King has granted permission to wear the following decorations, which have been conferred in recognition of valuable services rendered:—
Egyptian Order of the Nile.—Second Class.—H. P. Keatinge, C.M.G., M.B., F.R.C.S., late Director of the School of Medicine and Kasr-el-Aini Hospital at Cairo. Third Class—H. Mayne, Deputy Inspector-General, late Assistant Inspector-General, Egyptian State Telegraphs. Fifth Class.—F. W. Goodwin, Director of Stores, Quarantine Department, Alexandria.

Sir William Marris, the Governor-designate of Assam, will, with the concurrence of the Governor-General, be proceeding on short leave to England in the winter. The King has been pleased to approve the appointment of Sir Nicholas Beatson Bell, K.C.I.E., C.S.I., the present Chief Commissioner of Assam, to be Governor of Assam for the period which will intervene between the introduction of the new form of Government in the Province and the assumption of the office of Governor by Sir William Marris on his return from leave. Sir Nicholas Beatson Bell had expressed the wish to be allowed, for private reasons, to retire from the headship of the Province, but has withdrawn his request to meet the public convenience, for the purpose of inaugurating the reforms in Assam during Sir William Marris's absence.

## APPOINTMENTS, ETC.

M. de Ledoulx, the French Vice-Consul in Malta, has been promoted Consul.

Mgr. Marmaggi is being appointed Papal Nuncio to Roumania.

Sir Arthur Robert Peel, formerly British Minister to Brazil, will succeed Sir Herbert Dering as High Commissioner at Sofia.

M. Mamartcheff has been appointed Chief of the Press Bureau at the Bulgarian Legation in London.

M. Hadji Micheff has been appointed Bulgarian Minister at Rome.

Prince Max Lobkowitz has been appointed First Secretary of the Czecho-Slovak Legation in London.

### SERVICES IN EGYPT AND THE SUDAN.

The King has given orders for the following promotion in and appointments to the Most Excellent Order of the British Empire, for services rendered in Egypt and the Sudan:—
To be a Knight Commander of the Civil Division: William Goodenough Hayter, Contentieux, Ministry of Finance, Cairo. To be Commanders of the Civil Division: Edward Smyth Crispin, Director, Sudan Medical Department, and Member of Governor-General's Council; Arthur Ferguson Macallan, M.D., Ophthalmic Hospital, Egyptian Department of Public Health; George Farquhar Morice, late Director-General, Public Security Department, Cairo. To be an Honorary Commander of the Civil Division: Mahmoud Fakhry Pasha, Governor of Cairo. To be Officers of the Civil Division: Henry George Fuller Archer, Cairo City Police; Major Stanley Smyth Flower, Director, Zoological Gardens, Ministry of Public Works, Cairo; Hugh Fraser, Director, Lands Department, Sudan Government; Temporary Major Herbert Garland, Arab Bureau, Cairo; Robert Taylor Grundy, Deputy Traffic Manager, Egyptian State Railways; Alfred Lucas, Director and Principal Chemist, Egyptian Government Analytical Laboratory; John Godfrey Matthew, Sudan Civil Service; William Edmonstone Pender, Eastern Telegraph Company; John Dawson Shepherd, Egyptian Ministry of Agriculture. To be Honorary Officers of the Civil Division: Joseph Khlat Bey, Ministry of the Interior, Cairo; Selim Izzeddin Bey, M.B.E., Arabic Secretary to Arab Bureau, Cairo.

Digitized by Google

To be Members of the Civil Division: Henry Charles Allen, Superintendent of Printing Office, Survey of Egypt; J. A. Clark, Medical Service, Egyptian Army; Christopher Cookson, Egyptian State Telegraphs; William Curtis, Engineer-Mechanic, Esna Barrage; S. Hague, Refugees Administration, Egyptian Ministry of Interior; Claud Aubry Douglas Hamilton, Cairo City Police; Charles Harle Egyptian State Railways; Alexander Henderson, Engineer-in-Charge of El-Lessi Pumping Station; Miss Helen Henderson, Staff of His Majesty's Residency at Cairo; Edward Burnip Hewgill, Engineer-in-Charge of Mex Pumping Station; William Logan, Superintendent of Geographical Drawing Office, Survey of Egypt; Miss Kate Morrison, Principal, Women's Elementary Training College, Boulac; Nessib Cleanthes Philippides, Legal Department, Sudan Government; George Foster Smith, Lecturer, Sultanieh Training College; John William Oran Treasure, Director of Stores, Egyptian Minister of Education; William Joseph Gabriel Watson, General Traffic Superintendent, Port Said Division, Egyptian State Railways. To be an Honorary Member of the Civil Division: Mahmoud Fahmy El Guisy Bey, Member of the Native Parquet.

## OBITUARY.

The death has occurred of Captain H. O. Newland, of the Government Commercial School, Baghdad. Captain Newland died at Baghdad, of dysentery.

The death has occurred of Colonel George Gordon Young, of the Indian Staff Corps and the Punjab Commission. He held at various times the offices of Deputy Commissioner of Hoshiarpur, Commissioner of the Delhi Division, and of the Divisions of Jullunder and Lahore. He took great interest in the work of Christian missionaries in India.

The death has occurred of Captain Sumpter, D.S.O., a British Intelligence Officer, who was killed in a skirmish between Greek troops and a force of Nationalists near Ismidt.

The death is announced of Captain W. T. Wrigley, M.C. He was killed at Shahroban on August 15. After fighting at Gallipoli and in Mesopotamia, Captain Wrigley was, in April, 1918, appointed as Assistant Political Officer and Administrator at Bakubah, Deltawa, and Deli Abbas. Since November last he had held a post in Mendali, a town on the Persian frontier, and at the time of his death had been but a few weeks in Shahroban.

Our Belgrade Correspondent writes (August 26):—
Miss Lucy Foote, of the American Red Cross, who had done splendid work for the Serbian war orphans, died this week at Chachak.

## THE NEW STAMPS IN PALESTINE.

We have received the following note in correction of a remark mande in our issue of July 29 on the new stamps issued in Palestine:—

The stamps about to be issued in Palestine for use until the introduction of a specially designed stamp, are Egyptian Expeditionary Force stamps, overprinted with the word "Palestine" in English, Arabic, and Hebrew. The English word is printed across the centre of the stamps, and over the letters "E.E.F." which appear at the top and bottom, are printed its equivalents in Arabic and Hebrew respectively.

## £140,000 FOR JEWISH RELIEF.

At the Jewish World Relief Conference at Karlsbad, it was announced that a gift of £140,000 had been promised by the South African Jews for, first, the relief of Jewish war victims in Europe, and, secondly, for a number of Jewish orphans to be taken to Palestine, where they would be brought up at the expense of the South African community. It was decided that a central committee should be formed in London, under the presidency of Sir Stuart Samuel, for controlling the world relief and economic reconstruction work for the Jewish people throughout Central and Eastern Europe.

## "THE NEAR EAST" INDEX.

The Index to Volume XVII. (January 2—June 24, 1920) of THE NEAR EAST is now ready, and copies will be sent to subscribers on application to the Manager, THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery overnesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
**SMEDLEY'S HYDRO.**

**TORQUAY**
**VICTORIA & ALBERT HOTEL.**

*Cairo's Hotels de Luxe.*

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

**THE ONLY ENGLISH HOTELS IN ALEXANDRIA.**
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

**SUMMER PALACE HOTEL,**
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant.
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

## A ONE-SIDED ALLIANCE.

The recognition by France of General Wrangel's Government at a moment when Great Britain was endeavouring to discover a way out of the Russian *impasse* by tentative negotiations with the Soviet regime was a serious blow to the complacency of those who cherished the hope that the experiences of the two nations in the war, quite apart from any formal alliance, rendered any separation of their interests out of the question. It is beside the point whether France was adopting the right course, and was within her right in refusing to follow the lead of Great Britain in a direction which she held to be entirely wrong; the shock to those whose political horizon since the war has been restricted to Western Europe was caused by the wonderfully crude method, amounting, in the sphere of diplomacy, to brutality, with which the French Government chose to indicate its dissociation from the British policy. Close acquaintance with the course of events in the Near East since the Armistice, however, will show that there is a tendency in France to regard the alliance with Great Britain as binding the latter to play watch-dog up against the German fence, but imposing no obligations upon the French themselves in any part of the world. It is because we believe that the understanding between Great Britain and France is in the nature of a fundamental alliance, and because it is essential that the alliance should remain, in M. Millerand's words, "close and cordial," that we venture to call attention to the one-sided interpretation that is being placed upon it, if not by the Paris Government, at least by Frenchmen, official and unofficial, in other parts of the world. In order to prevent the evil from spreading until it threatens the future of the Alliance, it seems better that the fullest light should be thrown upon it in its early stages. The absence of public criticism has already resulted in what may have been at first merely the idiosyncrasies of a few individuals assuming the proportions of a settled policy. If our Allies feel the necessity of soothing their consciences, they have only to reflect that, if the British themselves do not trouble to look after their own interests, it is not for the French to display any peculiar concern for them. On the other hand, French publicists have set an example of plain-speaking when they find themselves in disagreement with British policy, and they will therefore appreciate having their attention called to French shortcomings.

In the case of the Near and Middle East it is no exaggeration to say that French policy since the Armistice, as interpreted on the spot, has consistently run counter to British interests. The most obvious illustration of the fact is the French attitude towards the Arabs. The interests of the British Empire call for good relations between ourselves and the Arab world; we welcomed the Arabs of the Hejaz as our Allies in the war, and used them for a military enterprise which played an important part in deciding the issue of the struggle. France, in common parlance, had "no use" for the Arabs in Syria, and proceeded to deal with them in a way that could only be embarrassing to Great Britain. The Arabs were, no doubt, *difficiles;* but if the least consideration for British interests had been shown in Paris, the French handling of the Syrian problem must have been different. The rising in Mesopotamia is due to various contributory causes; but among them we may safely place the repercussion of events in Syria. For a considerable time we acted as mediators between the French and the Arabs, and the comparative ease with which the former dealt with the Syrian problem was in no small measure due to British efforts to render the Arabs, who had been friendly disposed towards British occupation, amenable to French jurisdiction. Since then, however, we do not seem to have tried to impose any check on French action, and we have apparently accepted the almost impossible task of justifying ourselves in Arab eyes without the least remonstrance to our French Allies. While in Syria France's strange action, in view of the Alliance, has been pursued openly, in other parts of the Near East British interests have been prejudiced in a more subtle manner. Both in Turkey and in Bulgaria the most sedulous efforts have been made to spread the belief that it is to Great Britain alone that both these countries owe the severe terms imposed upon them in the Peace Treaties. France is represented as having striven hard to secure some mitigation of the penalties; but invariably, so the allegation runs, she found the British Government obdurate. Even if the statement were true—in the face of M. Clemenceau's utterances there can be no authority for it—it would conform more with the generally accepted view of "playing the game" if it were not mentioned, inasmuch as the Allies all signed the Treaties, and in common accepted responsibility for them. From political intrigue to securing commercial advantages is a natural transition, and we may suppose that our Allies secretly welcome the supineness that prompts the British Government to accept without complaint an unfair allocation in the transport of mail matter, owing to which English letters and newspapers are penalised many days and sometimes weeks in transit to the Near East.

French action has helped to embroil us with the Arab world, and this difficulty for the present remains unliquidated. Apart from that, however, it need not be supposed that the curious activity of our Allies has achieved its purpose. In Turkey it may have shown the Turks that they can still count upon playing off one Power against another, as in the good old Abdul Hamid days, and it will certainly render the task of carrying out the terms of the Peace Treaty by Allied representatives more difficult; but the French have not enhanced their popularity among the Turks. In Bulgaria it has caused in unofficial circles a certain revulsion of feeling against Great Britain, because the belief in her capacity to secure reasonable terms of peace was previously so strong; but, again, those who dilated on Great Britain's vindictiveness have failed to win for their own country the place vacated in Bulgarian public opinion; for while they preached the disinterestedness of French love, it was France that was doing harm to Bulgaria by delaying the ratification of the Peace Treaty. As far, then, as the direct effect of these French activities is concerned, there would be no need to mention them. We are, however, more exercised over their possible influence upon the "fundamental alliance," for they tend to shake the faith of an increasing number of Britons in the efficacy of that alliance. As already indicated, we regard the policy as the spontaneous effort of individuals rather than as official; it springs from the keenness, amounting to over-zealousness, with which the French are throwing themselves into the work of reconstruction. This explanation will account for the failure to remember the value of the alliance between France and Great Britain, and to appreciate the necessity of allowing nothing to impair the vitality of that alliance. It would seem to need little more than a public reference to the anomaly of these French activities to bring about their immediate cessation. Certain it is that if the French Government cared to issue a formal reminder to one or two of its more zealous agents in the Near East, where it has chosen to send at least one notorious Anglophobe, there would be less cause for comment.

## THE RISING IN MESOPOTAMIA.

With fuller information received from Mesopotamia it is now possible to understand better the regrettable course of events in that country.

For prime causes we have to go back to the refusal of the United States to accept a mandate in Asia Minor and to the consequent delay in the Turkish settlement. The uncertainty surrounding the future of Mesopotamia affected the Arab population no less than the British authorities. The latter were left without guidance in the matter of policy; the former, having learnt all about self-government, began to chafe at being kept out of the golden opportunities which they associated with the coveted régime. On the top of the spirit of restlessness came the intrigues which the Turkish Nationalists, profiting by the success of their cause in Anatolia, had little difficulty in fomenting among a people who were already finding the ordered administration of the British irksome.

As far as can be gathered there has been no organised rebellion against the British administration. The trouble began in Kurdistan. A Kurdish chieftain seems, or at least considered himself, to have been encouraged in his resistance to the Turks by a British promise of independence. With the occupation of Mosul a political officer was sent to Suleimanieh, where he adopted the attitude of an adviser, and appears to have established satisfactory relations with the chieftain. Suddenly the British authorities in Baghdad decided that a different policy was called for; the political officer was recalled, and another sent in his place, who arrived with "protectorate" ideas, and, as the saying goes, "started collecting the rent." A Kurdish rising followed, some British officers were imprisoned, and a hurried attempt made to relieve them opened the long series of "regrettable incidents," amounting sometimes to disasters, which has been the record of Mesopotamia for the last year. Ultimately a costly expedition had to be equipped, and, after the prisoners had been released, columns were sent out through the country to impress or to punish the inhabitants.

The initial success of this rising, it is to be feared, served to familiarise the Arab mind with the possibility of getting the better of the British; agitators, the passion for loot and a repercussion of events in Syria and Cilicia did the rest. The spasmodic and isolated character of the earlier outbreaks is evidence against anything in the nature of organised rebellion, and it is probable that the success attending the various attempts has been the prime factor in bringing about what now amounts to something approaching a general rising. In spite of the outcry against the excessive cost of the military occupation of Mesopotamia, the fact remains that for the extent of the country the army has latterly been altogether too small. Some surprise is felt in England that certain garrisons which have been besieged should have to wait so long for relief. The only possible explanation is that there are no troops available to relieve them. In the early stages of the trouble it was within the power of the Army to send out mobile forces able to deal effectively with isolated outbreaks, and the effective manner in which these did their work tended to rob the outbreaks of any significance, and, no doubt, was responsible in part for the veil of silence thrown over the incidents. Before long the recurrence of unrest began to tell on the Army. There is a limit to which troops can be rushed hither and thither; moreover garrisons have sometimes to be left behind and lines of communication held; and the adequate guarding of lines of communication in Mesopotamia calls for a bigger army than the Commander-in-Chief had under him a few months ago. Again, the British section of the Army of Occupation, since the veteran forces of the war were relieved, belongs to the New Army; a large proportion is inexperienced, those with experience—and in this category will come the officers, probably all as brave as lions—will know more about trench fighting than what is required of them in Arab warfare. Very little has been heard of the Army's point of view in Mesopotamia; but it requires little imagination to understand the terrible strain under which it has lived for the past year or so. It has been numerically unequal to its task, and conditions of life have been on a war footing rather than what might have been expected after two years of occupation. The Arabs, led probably by officers trained in the Turkish army, have been formidable antagonists in guerilla warfare. Late in the day it has been realised at home that the rising in Mesopotamia has attained the proportions of a war, and it is to be hoped that adequate reinforcements will now be supplied.

Whatever may be the future relationship of Great Britain and Mesopotamia, there can be no doubt that the present system of administration cannot be liquidated until the Arab insurgents have been decisively quelled. For the benefit of those who think otherwise, it may be suggested that it would almost certainly require a larger force to enable us to evacuate the country at this moment than to restore order. The theory that we are confronted with a vast national rising against British interference or British administration cannot be borne out by the facts known to us. Reference has been made to the fortuitous beginning of the trouble arising out of the wrong-headed policy adopted against a single Kurdish chieftain. Subsequent outbreaks had other causes, and it is necessary to know something of Arab characteristics, of the intrigues at work, of the attraction of loot, and of the rivalry of tribes, which may be worked off in a common purpose at the expense of the British as well as against one another, before one can complete an analysis of the situation. That the Arabs want self-government, and must have it, cannot be gainsaid; but our responsibility does not end with meeting Arab wishes and minimising our own troubles. Immediate withdrawal from Mesopotamia in existing circumstances would certainly lead to the massacre of every Christian and Jew in the country. Great Britain cannot be party to such a horror by merely considering her own convenience. Not only have we to quell the rising and convince the Arabs that such outbursts do not pay, but we shall have to ensure the future safety of the Christian and Jewish inhabitants, whose lives will not be worth many weeks' purchase if we relaxed our hold upon the country altogether. British policy may have been actuated in the past, as the scoffers allege, solely by considerations of oil; but recent events have brought a worthier responsibility upon Great Britain's shoulders, and of this she cannot divest herself for financial or any other reasons. The extent to which we are willing to meet native opinion is shown by the offer now being made to the Egyptians, and there can be no fear that the Arabs will be prevented from indulging their desire for self-administration; but unless the British Government takes effective steps to safeguard the non-Moslem population after the events of the last few months, it might as well append its seal to their death-warrant.

# GREECE'S RÔLE IN THE NEAR EAST.

## By JEAN DRAGOUMIS.

[*The following article was written shortly before his death by M. Jean Dragoumis, who was killed in the disturbances that broke out in Athens. On August 13, M. Dragoumis entered the Greek diplomatic service and rose to be Minister in Petrograd. After the outbreak of the European War he left the service and was returned to Parliament as Member for Florina. He belonged to the Opposition, but, as far as is known, his influence was on the side of moderation. This article proves him to have been a thinker with a keen political instinct.*]

The Near East is undergoing one of its most important historical phases, and Eastern affairs are about to take a critical turn. At this precise moment, unfortunately, the Greek nation is found divided and weakened by internal dissensions of an unprecedented intensity, instead of being a united Greece, ready to face the new situation with a single mind and with its full strength.

I always believed and advocated that Greece, at a certain stage of the great war, especially after the Russian collapse and America's intervention, would have to join the Entente side, since the fate of the Near East was to be decided, and on no account should our nation have stood apart from the actors of this great drama. The Hellenic nation is such an important factor in the Balkans and in Asia Minor that it could not possibly remain indifferent to the approaching solution of the Oriental problem.

Greece's entry in the war with her forces fresh enabled her to render the Allied cause invaluable service on the Eastern front, in the same way as America did on the Western, and contributed to the final victorious turn in the struggle. This, however, does not at all imply that in the period of opportunist neutrality, favourable as it was to the Entente Powers, Greece had not afforded valuable aid to their cause in the East. Greek territory was used as bases by Allied troops and fleets, Greek volunteers joined the French, English and American armies, and under cover of Greek neutrality the Serbian Army was enabled to be reconstituted; these facts, apart from the help offered in various ways by the Greek unredeemed populations, prove that the Allies' cause received indisputable support during the three years.

As a result of not having been wasted at an early stage, (Greece's greatest asset from an opportunist neutrality) the powers of the Hellenic nation, both military and financial, were found in good condition at the hour of Greece's participation in the war; they remained in strength for the period after the Armistice, so full of unforeseen events; but the split of the Greek people into "Nationals" and "Anti-Nationals" was conducive to weakness.

Thus, two years have elapsed since the Armistice, years abounding in events, during which, notwithstanding the powerful Greek assets, the gains obtained by our nation have not been equal to its opportunities. Our national vitality is so great that we have overcome so far several of the difficulties created by the entirely new state of things in the Near East; but no one can assert that we have succeeded in overcoming all these difficulties. The agitated period of warlike peace, which followed the great war, has not come to an end, and we have not fulfilled all the objects which a nation like ours has in view and is capable of accomplishing. In order that peace should be established in the Near East, the modification to be brought about in the frontiers of the various States in the Balkans and Asia Minor should take a definitive form as near as possible to the ethnological distribution; at the same time, a somehow tolerable existence should have been secured by self-government, or by joint governmnt of Greeks and Turks, for the compact masses of Greek communities, which could not be included in the Greek kingdom. I do not advocate the complete destruction of Turkey, because it is neither wise, nor possible, nor just. As a nation, the Turks also have a right to live as an organised State in the interior tableland of Asia Minor, where five or six millions of compact Turkish population exist, though Greek communities as well are disseminated in these regions. I maintain that in the parts of Asia Minor where Greeks are in a majority, they should enjoy self-government, while in those districts where they are in a minority they should co-operate in the government on the basis of civic and political rights, but without interference of foreign elements in the country's government. After the severance from Asiatic Turkey of the Arab and Armenian countries, there remains under Ottoman rule only Asia Minor, a country in reality Greco-Turkish, in which, of necessity, Greek and Turk have to live together. Therefore, a way has to be found for both elements to live in peace, either jointly governing the country or each enjoying self-government.

In this humanitarian and just solution, it will be seen what an important mission the Hellenic nation has to fulfil in the Near East. This mission requires in consequence a most careful watch, in order to avoid any action in the wrong direction, and to keep all faculties united by a single purpose. In spite of Turkey's defeat, and after two years of Greek efforts, it is still necessary that we should act with energy. I much prefer for my nation peaceful political action rather than a military one, but if it is necessary to continue the military effort for some time longer in order to attain our above objects, this should be done, but with the powers of the whole nation in unison.

If my contention is right, it is incumbent on the Government—the obligation is imperative—to stop at once the policy of dividing the Greeks in "Nationals" and "Anti-Nationals." The continuance of this policy is bound to lead to disaster. Government must stop the trials against so-called "traitors," close definitely the period of menace, oppression, and persecution, and make use of every Greek who in the past has rendered useful services to the nation.

# CHESS.

The following game, played between Mr. R. H. V. Scott and Mr. G. E. Wainwright in the first round of the British Championship, gives a good example of the attacking methods adopted by the British champion :—

QUEEN'S PAWN OPENING.

| 23 | QR—KKt | Kt—R3 | 46 | P—K7 | Resigns |

(1) With the object of playing Kt x Kt without being liable to the check after moving the Kt at B3. But the move is useless, for White can, and does, play P—B4. P x KP might have been played to force White to castle on the King's side, followed by R—K and Kt—B enabling the Kt at B3 to be moved and the KB and K pawns to advance if necessary.

(2) While Black manages to gain freedom, the Kt is subsequently forced into an awkward position in which its utility is largely curtailed. (3) R—Q2 should have been played, followed by Q—B2 and KR—Q. Black would then have had a strong centre with good winning prospects. (4) Another wasted move. (5) Had Black played correctly the King would have been unable to gain this refuge. Now, of course, White has gained practically complete freedom for the attack. (6) A venturesome sacrifice, justified in success, but actually unsound. (7) Giving back the exchange without reason. Kt—B3 was quite good enough, and Black might then have justifiably hoped to win after a prolonged end game.

Position of Black's 18th move, Q—K.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Notable among the addresses given at the meeting of the British Association was that of Mr. J. H. Clapham, who dealt with the existing financial and economic problems from the historical standpoint, drawing a most valuable comparison between the economic condition at the close of the Napoleonic wars and the position to-day. Mr. Clapham emphasised the advantageous situation of an agricultural state after a great crisis such as that through which we have just passed. France recovered rapidly a century ago because she was then a rural country, a land of peasants, like Yugoslavia to-day. All the Near Eastern countries approximate, as a matter of fact, to France's position in 1815, and therein lies their strength. One and all, they depend mainly on the land for their wealth, and, as it was with France a century ago, even the worst situated of these countries should be able to carry out the work of reconstruction readily. That fact makes it possible to ignore the present position in the Near East as only a nominal reflex of the real state of things. Two good harvests, says Mr. Clapham, sufficed to restore France, so that given a good harvest in the Balkans next year we may anticipate that the exchanges will then reach what may be termed the stabilised level.

***

There is, however, another and a less pleasant aspect to the comparison with the situation after Waterloo. Then, as Mr. Clapham showed, Great Britain alone was partially industrialised, and suffered acutely. It was assumed that there would be an almost limitless demand for goods, but while the event proved that to be true, the fact was also disclosed in due course that the would-be purchasers lacked the means to pay for commodities. In those days, of course, the credit system was quite unequal to meeting such an emergency, and the resultant crisis and trade depression were inevitable. To-day the position is in many respects entirely different. Modern finance has enabled the nations affected by the war to obtain commodities and raw materials for the re-establishment of their economic life, and by so doing has tided over a considerable interval after the Armistice. It has in short put off the critical moment for the international trade in manufactures.

***

As to the eventual outcome, it must be borne in mind that in this, as in all other parallel cases, time counts. The longer a crisis is put off, the less severe it is likely to be. In the present case, it is a race between the approaching incidence of two factors. On the one hand, to use Mr. Clapham's words, there is the problem of when will the inability of the war-damaged nations to pay for what they want in goods and materials make itself felt. On the other hand, there is the question of the length of time it will take these countries to resume their normal activities, and once again to play their part in international trade. Mr. Clapham's view is that Great Britain will do well if there is nothing worse than a gradual decline which would be eased by our extensive connections with undamaged countries and our willingness to buy most things that any nation has to offer. He points out that the situation will be still further alleviated if countries such as Germany and Russia develop what might be termed a reconstruction demand to take the place of the satisfied reconstruction demands of our Allies.

***

Some remarkable particulars are given in an article in the current issue of the *Journal* of the British Chamber of Commerce of Turkey and the Balkan States of alleged thefts on a large scale at Constantinople of goods afloat and in the Customs, discharged from British ships, only a portion of which have been recovered. The instances cited are far too numerous for me to give in detail, and I must perforce confine myself to giving a few examples. In one case, a lighter containing 17 bales disappeared; the goods were afterwards recovered at Derindje in the Gulf of Ismidt. Another lighter, into which were discharged 73 barrels of oil, absolutely vanished. The barrels were eventually recovered empty of their contents. Besides these examples of robbery on a large scale, it appears that goods have been changed in transit, and have in some instances been obtained by false pretences from the Customs. It is to be hoped that by now, as the result of the representations made by the Chamber, strong action has been taken to put an end to what is clearly a most intolerable state of affairs.

***

In recent months there has been a rather pronounced decline in the prices of Indian railway stocks. To give a few instances in the case of shares quoted in these columns: Bengal and North-Western, which at one period of the year stood at 143, have dropped to 115½; Bengal-Nagpur are now in the neighbourhood of 100, after having been as high as 121; while Madras and Southern Mahrattas have dropped from 113 to 95. Among the reasons for this are, it is to be presumed, the general financial position, which has had a repercussion in all markets, not excepting oils, and the decline in rupee exchange; but I imagine it is also significant to a certain extent of a growing apprehension on the part of shareholders as to probable developments in India. It must be remembered that signs have not been lacking of the growth of a labour movement somewhat on the lines of that with which we are unhappily only too well acquainted with here, and while the signs may have been given undue importance, the mere utterance of the work "strikes" is quite sufficient excuse in these times for timidity on the part of investors.

***

The curious report was published last week that an American company was negotiating with the Bulgarian Government for the monopoly of the whole of Bulgaria's import and export trade and shipping business. No one could accuse the Americans of a lack of enterprise, but I do not imagine that any of them would approach a Government with a proposition of this character with any hope of success, for clearly anything of the kind would be vastly against the interests of a country whose prospects are so evident as Bulgaria's, as it would mean a restriction on the freedom of commerce of the most irksome kind.

***

I have made enquiries as to the origin of the report, but, as I expected, without finding anything to account for it. Very possibly some limited negotiations are in progress with regard to the export of produce, and that has become magnified into a much more glorious operation. But even that slender foundation is by no means certain. In recent months quite a number of reports of similar "deals" have appeared in the Continental Press, and the season is quite a sufficient excuse for the present version.

# Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## EGYPT.

PORT SAID, August 18.

**Oil Displacing Coal.**

Trade is much as usual in Port Said. The decreasing number of ships that are taking bunker coal here is very noticeable. there being a consequent increase, of course, in the number of ships that take oil fuel, while there is probably a large number of ships that burn oil, but fill up in the Far East sufficient for the round voyage. Also the number of ships fitted with internal combustion engines is increasing by leaps and bounds.

**Coal from Delagoa Bay to Denmark!**

A significant commentary on the coal situation was demonstrated by a large ship which passed through the Canal recently. She had brought coals from the United States to Genoa, and is now on her way to Delagoa Bay in ballast, and from there she will take a cargo of coals to Denmark! Put in another way, the ship will have to steam 5,700 miles without an ounce of cargo. When she gets her freight, she will have to steam 7,900 miles to her destination. To sum up, she will probably burn at least 2,500 tons of coal, and travel 13,600 miles to bring 8,000 tons of coal to a place within 700 miles of Newcastle.

## ROUMANIA.

BUCHAREST, August 18.

**Petrol Distribution.**

The Council of Ministers, at its meeting on August 14, discussed a bill for the formation of a new company to undertake the distribution of petrol and its products. It is expected that the I.R.D.P., the distribution company, lately formed by a decree-law which has not been ratified by Parliament, will be superseded by another more acceptable to the majority of producers.

**Austrian Commercial Delegation.**

It is reported, but without official confirmation so far, that the Austrian Commercial Delegation, which was recently received by the Minister for Industry and Commerce, has been able to conclude a contract with the Roumanian Government for the delivery of manufactured articles, machines, and chemical products. If this is so particulars will probably be published shortly.

**Miscellaneous.**

Delivery is shortly expected of 75 million boxes of cigarettes from Czecho-Slovakia destined for Transylvania and the Banat. There is still a shortage of matches in Roumania, and a box costs one leu, or more.

Owing to the continued shortage of sugar, the Ministry of Industry and Commerce has taken the necessary steps to have the Transylvanian sugar factories adequately supplied with fuel. The price of sugar is about 7s. 6d. per kilogramme, or 3s. 6d. per lb.

**The Floating Debt.**

The following figures from the report of the Budget show the amount of the debt (not yet consolidated) which has been contracted by the Roumanian State during the period between the time when military preparations were begun and April 1 of this year (the figures being in lei):—

| | Capital Borrowed. | | Interest. |
|---|---|---|---|
| 10% Loan from National Bank against Treasury Bonds | 1,600,000,000 | ... | 16,000,000 |
| 6% Treasury Bonds placed in Italy in Italian lira, at par | 10,012,500 | ... | 600,750 |
| 5% Treasury Bonds placed in England, in pounds sterling, at par | 1,300,000,000 | ... | 65,000,000 |
| Loan from National Bank against Treasury Bonds, free of interest | 1,500,000,000 | ... | — |
| New Loan from National Bank against Treasury Bonds at 0.50% interest | 1,000,000,000 | ... | 5,000,000 |
| Loan from Banque Belgo-Argentine of 25,000,000 francs, at par | 25,000,000 | ... | 2,500,000 |
| Internal Loan against Treasury Bonds at 5% interest | 400,000,000 | ... | 20,000,000 |
| Loan against Treasury Bonds abroad, in pounds sterling, francs, dollars, pesetas, for "ravitaillement," at par and on account of Bureau Britannique | 1,300,000,000 | ... | 65,000,000 |
| Loan granted by French Government | 10,000,000 | ... | 500,000 |
| Treasury Bonds for purchase of locomotives from Philadelphia, payable in five years, capital and interest | 17,387,500 | ... | 2,432,719 |
| Totals | 7,162,400,000 | ... | 177,033,469 |

That was the position on April 1. Since then a loan of five milliards has been granted to the Treasury (free of interest) by the National Bank, which is to be used solely for the purpose of the withdrawal from circulation of kronen, roubles and the notes of the Banca Generala. This brings the non-consolidated debt to the enormous figure of 12,162,400,000 lei. Besides this, Roumania's share of the debt of Transylvania, Bukovina, and Bessarabia will amount approximately to 10 milliards, which brings the total of the floating debt up to 22,162,400,000. When to this is added the consolidated public debt of 3,986,008,329 it will be seen that the total public debt of Greater Roumania amounts to more than 26 milliards of lei, or about twenty times more than the public debt of the Old Kingdom at the beginning of the war. No provision appears to have been made in the Budget for the payment of the interest on the above loans. It is the intention of the Government to raise another loan for this purpose.

## YUGOSLAVIA.

BELGRADE, August 20.

**Miscellaneous.**

Travellers leaving Yugoslavia are now allowed to take 1,000 dinars with them, as well as such foreign currency as has been already authorised.

The Ministry of Finance has forbidden the export and import of certificates of pre-war and war loans of the former

Austro-Hungarian monarchy until the stamping of the same is completed. This will begin on September 6, and will take place at various official offices throughout the kingdom.

**Poor Montenegrin Harvest.**

The position in Montenegro appears to be deplorable. The *Politika* reports that the harvest is very poor; in addition to all their other difficulties, the Montenegrins have suffered from a plague of locusts, which have consumed more than half the crops. The winter wheat, on which great hopes were placed, is reduced to about a quarter of the estimated yield, and the locusts have made very nearly a clean sweep in the districts of Podgoritsa, Cetinje, and part of the Bar (Antivari) and Nikshich districts. It was hoped that compensation would be forthcoming from the maize crop, but the drought of the last three weeks has so dried up the country that only about one quarter even of this valuable crop can be counted upon.

According to statistics, the country requires 400 truck-loads of flour and as many of maize, as there are 150,000 people to feed. 250 truck-loads of salt, 60 of lard, 60 of sugar, 60 of dried beans, and 30 of petroleum are also required.

BELGRADE, August 26.

The Yugoslav Government has ordered 30 million dinars worth of small coins, of 5, 10, and 20 paras value. The coins are being minted in Vienna, and delivery is shortly expected.

It is reported that the English "Danube River Syndicate," after securing control of various Central European steamboat companies on the Danube, has approached the Belgrade Company, but that every effort will be made to retain the purely national aspect of this undertaking.

## BULGARIA.

**Development of Hydraulic Resources.**

SOFIA, August 19.

The Government has asked the diplomatic representatives of Great Britain, France, Italy and America for information as to the terms on which their respective Governments would consent to send engineers and experts here to inspect the surveys made by the Water Department of the Ministry of Agriculture in connection with the programme for the development of the country's hydraulic resources, and to express their views on the measures which the Ministry has in view. It is the Government's aim to attract foreign capital with a view to carrying out its programme in its entirety.

**Large Grain Deal.**

The negotiations between the Consortium and the Czecho-Slovak Mission have resulted in the conclusion of a contract for the sale to Czecho-Slovakia of 19,600 tons of wheat containing 3 per cent. mixture and 20,000 tons of wheat containing 6 per cent. of spoiled maize from last year's harvest. Czecho-Slovakia is to make arrangements for the export of this grain by the end of the month. The terms of payment are cash on delivery of cheque in Paris.

The Consortium now has for disposal 1,120 tons of good quality wheat, 20,000 tons of rye, 2,100 tons of barley, 400 tons of oats, 200 tons of millet, 20,000 tons of maize containing more than 6 per cent. spoiled grain and 6,000,000 kilogrammes of extra quality wheat flour.

The result of the above contract is that the Consortium will bring into the country more than 160,000,000 levas in foreign valuta. The effect of this will be to cause a considerable rise in the leva.

## TRANS-CAUCASIA.

**State Bank.**

TIFLIS (Georgia), July 25.

The new Georgian State Bank was opened yesterday in the presence of most of the Georgian Ministers and a large gathering of public men. Following this ceremony, the cashier's department was open for business for half an hour. In that short time, 85,000,000 roubles were deposited.

**Speculation in Grain.**

The Minister of the Interior has issued a statement warning against any speculation in grain. The new crops are excellent, and the present slight food crisis will soon be over. Any speculation in grain or any export of grain is to be severely dealt with.

**Mail Services.**

Georgia has now entered the world's postal union. The Government has addressed a note to the Italian Minister of Posts and Telegraphs regarding the transportation of all inward and outward mails on Italian ships. An arrangement will shortly be concluded whereby Georgian mails for the time being will be carried on Italian ships.

**Georgian Valuta.**

At an important meeting in Tiflis yesterday, Professor Avaliani, Acting Minister of Finance, M. Chavjanidze, Assistant Minister of Supplies, and several important members of the Government discussed the question of valuta and the means of improving the rate of Georgian money. Professor Avaliani stated that he did not think the low rate of local money was so much due to speculation in the Caucasus as it was owing to the general situation in Western Europe. To regulate the valuta, he proposed: (1) increased exports, (2) the establishment of a valuta fund, (3) the monopoly of all operations in the different Government properties, especially in the State Bank.

Mr. Abkhazi, President of the Chamber of Commerce and Industry, said that the low rate of cheques was due to the economic and political situation in the Caucasus and to the impossibility of dealing profitably with foreign trade. He proposed (1) state economy and the printing of less money, (2) the regulation of transport, (3) to interest foreign capital (loans and concessions), (4) to profit by the geographical situation of the republic to strengthen commerce and to have greater credit, (5) to control imports (prohibiting the importation of articles of luxury), (6) to increase exports, (7) to stimulate home industries, (8) to appoint an economic council to work out the right policy.

M. Chavjanidze declared that one of the chief causes of the present situation was that merchants did not go further than Batoum for their goods. As they did not buy at first hand, they were compelled to purchase articles at too high a price.

The whole matter was carefully discussed, and it was finally decided to arrange a valuta fund immediately; to arrange for the economic council; to combat speculation and therefore to arrange that merchants bought at first hand and that goods did not pass through the hands of a number of people; and to improve the rights of merchants.

Georgia is immensely rich in raw materials, and with careful management the republic is assured of a prosperous future.

## PALESTINE AND THE PAPER INDUSTRY.

The *Palestine Weekly* suggests that the Holy Land may become a valuable new source of supply for the paper industry. Papyrus grass grows luxuriantly in the country, and there are vast quantities of peat in the swampy districts of Northern Palestine. The possibility of producing paper from peat pulp has recently been demonstrated by experiments in Manchester.

The traffic receipts of the Smyrna-Aidin Railway for the week ended August 14 amounted to £8.621.

# THE WORLD'S MONETARY SITUATION.

## PROBLEM OF ECONOMIC RECONSTRUCTION.

A very able survey of the financial and economic problems with which belligerent and neutral nations alike find themselves confronted in varying degrees as the result of conditions arising out of the war is given by Professor Cassel in his "Memorandum on the World's Monetary Problems." Its outstanding merit is its absolute directness. Professor Cassel is nothing if not concise, and in the plainest of terms he sets forth the problem that the nations have to solve for their well being, disposing on the way of the numerous fallacies regarding high prices, the exchanges and other matters that have been allowed to interfere with clear thinking on this vital subject, and then explains the path that it seems to him must be pursued if the disease is to be remedied. He does not cover new ground in his suggestions; the expedients he advises are those which have obtained general acceptance among economists and financiers, but those who expected novelty can scarcely fail to be convinced by his closely reasoned presentation of the case.

### High or Low Exchanges Immaterial.

What he says in regard to trade and the exchanges is of special interest. The restrictions on trade that have been introduced by various countries come in for strong condemnation. The prohibition of exports, the licensing or rationing of exports, measures to keep up higher prices for foreigners than for the home market, are examples of methods, it is pointed out, which all work in the direction of a corresponding depression of the international value of the currency of the country applying them. There are, of course, exceptions to the rule, as for example the restrictions on the imports of luxuries which obviously must have an enhancing effect on the international value of a currency.

It needs no emphasis that any deviation from the purchasing power parity of the exchange between two countries must adversely affect trade, but Professor Cassel lays stress on the point that as soon as this parity has been established it is immaterial whether the level is high or low. "Thus, the export trade of a country is not hampered by low quotations of the foreign exchanges as long as these quotations only correspond to a high level of prices in foreign countries or a low level at home; nor is it specially stimulated by high quotations of the foreign exchanges as long as these only correspond to the relative purchasing power of the monetary standards quoted. Likewise, low prices on foreign currencies do not mean an encouragement of imports from them or a handicap for the home producer, provided these exchanges are a true expression for the purchasing power of the foreign money; on the same condition, high prices of foreign currencies do not in any way hamper the import from them. In fact, the terms 'high,' or 'low' exchanges have no sense in themselves; if they are to be used they must obviously refer to the normal rates of exchange, i.e., to the purchasing power parities. But when used, as is generally the case, in reference to old parities which have lost all real significance, they are in the highest degree misleading."

### New Parities.

The temptation to regard the exchanges from the light of the pre-war parities is inevitable and natural, but it is, Professor Cassel points out, a grave mistake, as the result is that people often represent an exchange as being against a country when the opposite is the case, and *vice-versa*. The world, he says, will never come back to the pre-war parities, and sooner or later people will have to accustom themselves to look upon the new purchasing power parities which will in due course be evolved as the true parities. In commercial circles here, this view has long obtained, but it is not so abroad, where the parity to sterling, given that sterling itself is at par, is still looked upon not as an ideal, but as a readily realisable project. Obviously, the maintenance of this belief means the hampering of trade until it is understood that the parity to be looked forward to is the purchasing power parity, and not a parity which represents conditions that cannot be reproduced.

The exchanges are based on a country's internal financial position, and an improvement of a country's exchange can only be brought about by enhancing the internal value of its monetary unit; and to do that, Professor Cassel points out, a country must succeed in reducing its inflation. That is the way to the world's financial reconstruction, whether one considers the problem of the exchanges or any other aspect of the complicated situation. As Professor Cassel expresses it, "As long as inflation is allowed to go on, deteriorating still further the monetary standards, there is no hope for any work of reconstruction." Eighteen months have passed since the Armistice, but there has been so far no serious attempt to tackle the problem of inflation; on the contrary, by one means or another (perhaps unconsciously in the case of subsidies, etc.), the opposite policy has been pursued, and the problem that has now to be grappled with is far more serious than it was on November 11, 1918.

### Evils of Inflation.

The result of the continuance of inflation is that as the supply of available money can be arbitrarily increased, opportunities for its utilisation automatically increase, labour wants more wages, prices are increased, and the vicious circle is established. "In one word," says Professor Cassel, "we shall have all the factors moving which people generally look upon as the real causes of a general rise of prices. The deficiency of the popular explanations is plain enough: these factors are *always* at work as tendencies; but they are, normally, kept within due limits by a definite scarcity of money, imposing the hard necessity of restriction." The restoration of the scarcity of money is the only way, he points out, of combating the enhancement of prices and the rising cost of living.

The stabilisation of the monetary standard depends on a limitation of the supply of money, and can be achieved only by the imposition of severe restrictions alike on the business community and on the demands of Governments for money. These demands have obviously been the chief factor in the inflation that has taken place during the war, and has been going on to a greater or lesser degree since the Armistice. Professor Cassel urges that as soon as possible there must be a complete end to attempts to reduce the prices of commodities or services by means of subsidies. The withdrawal of the subsidies will obviously mean an increase in prices, the consumer's purchasing capacity will be decreased, and the tendency will be to the depression of other prices. In other words, the movement towards the re-stabilisation of internal values will have set in, and as soon as that process has been successfully accomplished the stabilisation of the exchanges will also have been achieved.

While inflation must be ended as the first step in financial and economic reconstruction, Professor Cassel does not view the idea of deflation with favour except in certain cases. A deflation within definite limits is possible, he points out, in the case of this country, where a reduction in the general level of prices by about 20 per cent. would probably be sufficient to establish the parity between the paper pound sterling and the gold sovereign, and therefore also to bring up the dollar exchange value of the pound sterling to its old parity. But it is emphasised that in other cases this aim is undesirable as the effect on industry would be seriously out of proportion to what would be achieved.

## INDIAN INTELLIGENCE.

This week's Indian cable states: Rain has fallen fairly generally in North-Eastern, South-Western and Central India. Local in Kashmir, United Provinces of Agra and Oudh, Bihar, and South-Eastern Madras. Crop conditions generally good, but more rain required in parts for transplanting rice, steeping jute and other agricultural operations. Churni Bridge-Santipur Railway.— Detailed survey of 10 miles by Eastern Bengal State Railway sanctioned. Bombay cotton market easy. Fully good Broach August Rs. 445. Piece-goods market quiet, with some retail enquiry and steady prices. Calcutta jute market old crop quiet, with some business done. Heavy goods steady, with strong demand for Cornsacks. Hessians firm with prices advanced. No change in Bank Rates.

NATIONAL BANK OF EGYPT.—An Interim DIVIDEND of 8s. per Share has been DECLARED PAYABLE on the 3rd September, on account of the profits for 1920. Coupon No. 28 will therefore be payable on that date. Forms for Listing Coupons may be obtained at the National Bank of Egypt, 6 and 7, King William-street, E.C.4.

## COTTON'S VIOLENT FLUCTUATIONS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I am inundated with correspondence from my business connections asking for my opinion as to the prospects of the cotton trade. I have always objected to playing the rôle of prophet, but have been anxious and willing to give at any time the results of a world-wide experience of the industry to enable the trade and the public to form correct judgments. These inquiries have been increased by the remarkable fluctuations in the prices of raw cotton that have recently taken place. I am one who firmly believes in the absolute indispensability of the legitimate middlemen who handle the cotton crop of the world, but I am entirely against those who make the raw material of an international industry a counter for gambling operations. It is this that is mainly responsible for the want of confidence and the lack of stability at the present time. The fall on the American cotton exchanges during the last few days is followed immediately by an almost unprecedented rise and another fall. The figures that appear in the Press of these fluctuations are misleading to those who are not conversant with the methods of the trade. The prices of the finer qualities of cotton, required by England more than by any other country, have been going up when the official prices recorded in the Press have been going down, and it is not unusual for futures to be declining while actual cotton has been rapidly going up.

I have always felt that such prices as usually appear in the Press should be supplemented by an explanation of the actual state of affairs. So far as people in the industry are concerned, all this technical information has been available for the last twelve years under the scheme for the regulation of wages, and may be had whenever it is called for in a wages dispute. This scheme, as I have often pointed out, might be applied to every industry in the country.

The dominant factors in the present situation are:—

(1) From various causes there is still a large amount of the cotton machinery of the world idle.

(2) Production has been considerably curtailed by the reduction of the working hours in England from 55½ to 48 hours per week and this process has been going on throughout the world during the past 12 years, or more.

(3) The machinery available, it is obvious, dominates the situation as regards the supply of the manufactured goods, and a fall in the raw material would not alter the present situation, especially as raw material bought now would require six, nine, twelve months, or even longer before it could pass through the numerous processes necessary.

(4) It is possible, as recent experience has proved, for any fall in the cost of the raw material to be counteracted by increases in wages and by the ever-growing cost of everything that enters into the manufacture of cotton goods.

(5) An enormous reduction has taken place during the war period in the output of cotton fabrics, which play a preponderating part in clothing the people of the world.

(6) The textile machinists, who were very largely employed on munitions, have an almost impossible task in making up the leeway of the war period, both in regard to renewals and in regard to the normal extension of textile machinery which obtained in the year before the war.

In conclusion, I would add that these are contingencies which may be gauged, but what cannot be estimated are the results of legislation by inexperienced men, of extravagance in the conduct of the nation's affairs, and interference by politicians in labour matters, to which I attribute more than to anything else the industrial unrest which has been and is so prevalent and which may ultimately prove disastrous both to the interests of Capital and Labour.—I am, etc.,

CHARLES W. MACARA.

33, York Street, Manchester.
August 24.

WANTED by an established London firm, a thoroughly qualified man to take charge of their Import and Export Department. Applicant must have had experience in purchasing goods, shipments and fixing up agencies. A good salary with interest in the nett profits would be entertained for the right man. A knowledge of the Markets in the Near East and East would be advantageous. Reply, which will be treated as strictly confidential, stating full experience with suggested remuneration, to—"Export 106," care Deacons, Leadenhall Street, London, E.C.3.

## COMMERCIAL POSITION IN TURKEY.

### Brisk Trade in Motors.

One of the most marked changes in Constantinople, says the Commercial Secretary to H.M. Commission, Constantinople, in a report covering the June quarter, was the large influx of motor-cars. To the casual observer the town seems to be already overstocked. Italian competition in this field, however, which during 1919 was considerable, seems recently to have greatly diminished and to have been replaced by American. One American firm in particular is expecting to do very large business in Anatolia when communications with the interior are opened. At the same time, a British firm has recently built a large modern garage in the best quarter of Pera.

Owing to the political position and consequent lack of organisation, companies are loth to commence any new industries or new commercial undertakings under the present conditions. A small concern, however, has been formed under the name of the British Sterilising Milk Company for the supply of sterilised milk. This is the only one of its kind in Constantinople, and should have a good future. Numerous representatives of United Kingdom firms are in negotiation and generally in the process of looking round for suitable openings, but for the most part they were not prepared to do anything until the conclusion of peace with Turkey.

The general anticipation is that this year is to be a very favourable one, and crops are expected to be a great improvement on 1919. Nevertheless, ultimate results must largely depend on the commercial situation.

During the last few months there has been in Constantinople a marked increase in building. This is especially noticeable, as during the previous year little or nothing was done. Bricks are difficult to obtain, even at very high prices. There is, however, a plentiful supply of Russian cement.

Summer in Constantinople being relatively a slack period for trade, business has suffered a lull, which, however, has been much more accentuated than during the same period in former years. In spite of this and the general fall of prices in the United Kingdom of the leading articles of export, such goods as mohair, wool, gum-dragon, and skins have maintained their price largely owing to the lack of supplies from Asia Minor, which has led to the gradual diminution in stocks on the local market.

## GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to June 30, 1920 (new style January 14 to July 13, 1920).

| | Monopolies, tobacco, stamps, stamped paper & Naxos emery. | Piræus Customs. |
|---|---|---|
| | Drachmae. | Drachmae. |
| Gross receipts, June, 1920 ..... | 5,247,816·67 | 4,174,651·50 |
| Do. do. 1919 ..... | 3,974,152·05 | 5,093,872·70 |
| Estimated receipts for 6 months (Law of Control) | 14,450,000·00 | 5,350,000·00 |
| Actual do. do. 1920 | 31,010,269·29 | 29,971,854·05 |
| Do. do. do. 1919 | 22,767,019·95 | 23,053,257·60 |
| Difference between estimated and actual receipts for 6 months ..... 1920 | +16,560,269·29 | +24,621,854·05 |
| Difference between estimated and actual receipts for 6 months ..... 1919 | + 8,317,019·95 | +17,703,257·60 |

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmae at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at the average rate.

A plan has been submitted to the French Chamber for the extension of Algiers Harbour.

The British Commercial Commissioner at Sofia reports that the Bulgarian Minister of Finance has been instructed to take in hand the winding up of the Direction de Prevoyance, which will probably take about a month. The victualling section will be placed under the Ministry of Agriculture and the control section will be under the control of the Ministry of Commerce. The remaining sections will be abolished. The Grain Consortium has been prolonged for another four months from August 1, the date on which it should normally have been dissolved.

# "STANDARD" TOBACCO MACHINERY

Designed and constructed by the Pioneers of Tobacco Factory Mechanical Equipment, "STANDARD" Machines have been developed to a unique degree of perfection, and consequently represent the most efficient and satisfactory methods of preparation and manufacture of Tobacco for all purposes.

*From Plantation to Finished Product.*

**"STANDARD" CIGARETTE-MAKING MACHINE.**
**The World's Premier.**

Output up to 36,000 Cigarettes per hour, printed in two colours, or one colour and gold, pasted seams, adaptable for cork, gold or paraffin tipping and "crimped" seams.

**"STANDARD-JUNIOR" CIGARETTE-MAKING MACHINE.**
**The Small Manufacturers' valuable asset.**

Output up to 7,500 Cigarettes per hour, pasted seams, printed in one or two colours.
Adaptable for either hand or power drive.

**Cigarette Packing Machinery.**

For Wrapping Cigarettes in paper or foil and inserting in paper "cups" or cardboard packets of the "shell and slide" type.

**Tobacco Cutters.**

In various sizes, ranging in output from 400 to 4,000 lbs. per day, each adjustable to produce any desired cut from the finest to the coarsest.

**Tobacco Mixers, Coolers, Dressing Machines, Sprayers, Stem Flatteners, &c.**

***Write for our Illustrated Lists, stating the class of Machines you are interested in.***

**AMERICAN MACHINE & FOUNDRY CO., LTD.,**
**59, HOLBORN VIADUCT, LONDON, E.C.1.**
New York, Brussels, Geneva, Athens, Christiana, Cairo, Tunis.
*Cables: "AMMAFOCO, LONDON."* *Codes: All usual.*

## ENGINEERING.

### A Lighting Outfit.

A new motor-cycle electric lighting outfit is now ready for the market, particulars of which have been sent me by the makers, the Rotax Motor Accessories Co., Ltd., of Willesden Junction. For some time past this firm has been working with a view to producing an appliance of the kind which should be suitable not only for users in this country, but which should meet the needs of overseas users, and following to some extent the lines of their well-known train lighting and motor-car lighting dynamos, a valuable speed current generator has been designed which will give a maximum output of five amperes. The dynamo is provided with three, instead of the usual two, brushes, and is shunt-wound, with the winding across the positive and demagnetising brushes.

The outfit is light, weighing only just over six pounds, and occupies little space. The small switchboard is designed so that it can be fixed into the side of the tank, or placed on top of it, as may be desired. It carries a barrel switch, which has three positions: for lighting the lamps, for charging, and for "off." At the top of the switch-box is a small slot, which shows white when the switch is off. When the engine is running and the switch is turned to either the "lamps" or "charge" position, this white mark is replaced by a red signal, which shows that the battery is being charged.

Provision is made, by arranging for all openings for wires, etc., to be at an angle, for protecting the interior of the switchboard from damp, rain, or dirt, and a suitable box is provided for holding the battery. The dynamo is arranged to be driven by means of a leather link belting from a pulley driven by the engine. In the case of engines with outside fly-wheel, the drive is easily arranged, as a small driving-pulley can be bolted to the outside. In other cases a small belt pulley could be attached to the spokes of the back wheel. In all cases, I believe, the makers would be glad to give such hints and information as lies in their power. The set in question is extremely well made and substantial, and has been subjected to prolonged tests before having been put on the market, and a good deal of attention has been paid to such details as arrangements for focussing the light, cleaning the lamp, and for rendering the whole attachment weather-proof.

### Roads and Road Making.

In the course of a powerfully-written article advocating the adoption of concrete roads in this country, an engineer of evident experience points out that loads can be hauled with less expenditure of power along roads made of this material than they can along almost every other class of road, with the exception of specially constructed asphalt. He points out that a load can be hauled, at a given speed, along a concrete road for, say, 30 lb. per ton. It would require from 60 to 100 lb. per ton to haul the same load at the same speed along any kind of macadam road, and from 50 to 90 lb. per ton along a road paved with stone blocks. In his view, the experiments going on in connection with road-making in different localities are all to the good. He says: "Even the rubber road now being constructed may turn out eventually to be of value to some others besides rubber companies."

But the fact seems to be that practically all modern methods of construction have been found wanting in that they deal with the conditions of traffic to-day, and show no signs of having been inspired by an intelligent anticipation of the needs of to-morrow. Concrete roads, however, are no longer in the experimental stage; they are the outcome of sound theory justified in every case by practice. So far as we have arrived, they offer the only solution to the traffic problem, and the sooner British engineers become aware of the fact the better.

Concrete roads should be reinforced either with steel bars or patent steel meshes, and the argument is that this raises the cost of such roads beyond that of those of macadam or other material. But it is sound business policy to pay more during construction if the results are of commensurate advantage. Another point is that where steel reinforcement is not used, it is advisable to have transverse joints or joints running right across the road, at every 20 yards distance. With reinforced concrete, it is not necessary to have these, and all that is necessary is the joints running the whole length of the road on each side between the roadway and the curbing.

What, it may be asked, are the chief advantages of concrete roads? In the first place, they have a far longer life and require considerably less repair than roads of any other kind, and, further, such repairs as are ever necessary can always be done locally. In that way, only small areas of a road are affected at a time, and no repairs need interfere with the traffic.

### An Efficient Car.

From an economical point of view, there is a good deal to be said in favour of the well-known Overland car, of the touring five-seater type. I understand that with a full load it will average, on an ordinary give-and-take road, from 28 to 30 miles to the gallon of petrol, which means that whilst some drivers do not get this result, others get a correspondingly greater mileage. Another feature which makes for economy is the scientifically-designed system of lubrication by which the car is enabled to run for 1,000 miles on one gallon of oil. The suspension of the car has been the subject of special study, and the weight is so distributed that, given a good set of tyres to begin with, the makers claim that from 8,000 to 10,000 miles should be obtainable before a new set is needed. The car only weighs 16 cwt., and its three-point suspension Triplex springs render it a particularly comfortable car to ride in. This efficient springing also protects the engine and chassis parts from undue vibration, and also tends to lengthen the life of the tyres. The car is well finished, and is remarkably cheap at the price at which it is offered.

### Air Pressure Lamps.

From Messrs. Stanleys (Stratford), Ltd., are to hand some details of the new air pressure and gravity lamps they are putting on the market. These are of quite a new type, and a variety of patterns ranging from hand lanterns to large chandeliers are obtainable. The lamps are fed with either petrol or benzol under air pressure, and the supply of vapour to the burner enables any intensity of light from a glimmer up to 300 candle-power, to be obtained. The petrol consumption for a 300-candle-power lamp is, I understand, about one gallon for 60 hours' burning.

It is stated that an increasing demand exists for motor vehicles in India, especially of the commercial type. Lorries up to four tons' capacity should sell well, and shippers able to obtain supplies of these should make the fact known to their Indian representatives.

---

The Persian Government has decided to extend the Mohammerah-Burudshird line to Hamadan.

According to the *Journal de la Marine Marchande*, the Greek Government intends to build at Smyrna a modern harbour, with all facilities for steamers to load and unload at the quays.

# INDIA'S COAL RESOURCES.—III.*

By JOHN KIRSOPP, M.I.M.E., F.G.S.

The Daltonganj coalfield has recently been opened, but its development is still only in an initial stage.

In the Palamau district in 1918 one mine was operating in the Daltonganj field, yielding 63,805 tons of steam coal and 19,766 tons of slack. In the Sambalpur-Hingir Rampur three mines aggregated 36,692 tons of round and 14,347 tons of slack. These two fields produced a total of 128,150 tons in 1913.

The chief prospective coalfields of the provinces of Bengal, Bihar, and Orissa are :—

(*a*) Daltonganj, containing one coal seam 9 feet in thickness, covering a proved area of one square mile and containing an actual reserve of nine million metric tons of first-class coal.

(*b*) Hular, containing three coal seams, 8 feet, 8 feet, and 13 feet 8 inches respectively, covering a probable area of twenty square miles, and containing a reserve of nine million metric tons.

(*c*) Aurunga, containing a probable reserve of twenty million metric tons of low grade coal.

(*d*) North Karanpura, containing coal seams aggregating 55 feet in thickness, covering a probable area of 250 square miles, and containing approximately a reserve of 8,900 million metric tons.

(*e*) South Karanpura, containing coal seams aggregating 50 feet, covering a probable area of 15 square miles, and having a reserve of 75 million metric tons.

(*f*) Bokara, containing coal seams aggregating 12 feet, covering a probable area of 180 square miles, with a reserve of 1,525 million metric tons. A large output may be expected from the Bokara Ramgarh coalfield within the next few years.

(*g*) Rajmahal Hills, with one coal seam 5 feet in thickness, covering a probable area of 70 square miles and having a reserve of 210 million metric tons.

Outside the Peninsula area the Gondwana rocks have not been proved to be continuous, patches being found at intervals along the base of the Himalaya from the Tisha Valley below Darjhiling to the gorge of the Dihong in the Abos country, and the belt being crossed at various points in Bhutan, and in the Aka and Duffa Hills. The coal is badly crushed, and of little value.

In Central India the coal-bearing Gondwana rocks occupy a large area known as the Rewah basin, lying in the southern part of the native State of that name. A number of distinct fields have been recognised in this basin, the chief being those of Umaria, Kórár, Johilla, Sohagpur, and Singrauli (others are Kurasia, Koreagarh, and Jhilmili, that of Umaria being the only field worked at present, and having an annual output of about 150,000 tons.

The coalfields of the Rewah State (Umaria, etc.) contains coal seams of from 7 feet 8 inches to 12 feet 4 inches in thickness, extending over a probable area of 2,000 square miles, and containing a reserve of 22,657 million metric tons.

The mean analyses from the different fields situated in Central India are as follows :—

(*a*) Umaria Field :—Moisture, 3.71 per cent.; volatile matter, 27.55 per cent.; fixed carbon, 56.14 per cent.; ash, 12.60 per cent. The coal as now sold is, however, much higher in ash than this figure.

(*b*) Johilla Field :—Moisture; volatile matter, 34.85 per cent.; fixed carbon, 54.47 per cent.; ash, 10.72 per cent.

The coalfields of the Central Provinces lie apparently in three separate basins of Gondwana rocks, viz., basins of Sarguja and Chattisgarh on the north-east, the Satpura and Chhindwara basin on the north-west, and the Godavari basin extending for nearly three hundred miles from the south-western corner of the province, down the valley of the Godavari and its tributaries, through the Nizam's dominions, into the Madras Presidency. Although apparently separate, it is possible that the coal-bearing rocks between the two first-mentioned basins may be continuous beneath the intervening mantle of Deccan trap, and again may pass beneath the trap of the districts of Betul and Amraoti into the great belt of Gondwanas deposits of the Godavari valley. Enormous reserves of coal may, therefore, have been preserved beneath the cretaceous lava flows which cover such a large portion of the Indian peninsula.

The Sarguja and Chhattisgarh fields form the south-easterly continuation of the great area of coal measures known as the Rewah Gondwana basin. Several fields, notably Ramkola-Tatapani, Jhilmili, Bisampur Korba, Rampur, have been more or less cursorily examined, but sufficient development has not been done on any one of them to form the basis of even an approximate estimate of the amount of coal available, though the coal measures extend over an area of several thousand square miles, and the reserves must be very large.

The coal resources of the portion of the Rampur coalfield, situated about twenty-two miles N.N.W. of Sambalpur, was first brought into prominence about 1890 (and, in fact, the whole of the Chhattisgarh coalfields) by the construction of the Bengal-Nagpur Railway line through this known Burrakur area, and the great distance to the nearest coal supply. Analyses of coal seams from three localities give :—(a) Dhoramuda, at a depth of 309 feet: moisture, 7.3 to 9.8 per cent.; volatile matter, 21.1 to 25.4 per cent.; ash (white), 30.7 to 40.0 per cent.: fixed carbon, 30.8 to 38.4 per cent. (b) Dhoramnda, at a depth of 768 feet: moisture, 6.2 per cent.; volatile matter, 19.0 per cent.; ash (yellowish-white), 31.4 per cent.; fixed carbon, 43.4 per cent. (c) Kodopali, at a depth of 352 feet: moisture, 4.6 to 7.5 per cent.; volatile matter, 17.5 to 19.6 per cent.; ash (reddish), 34.4 to 35.3 per cent.; fixed carbon, 38.5 to 42.6 per cent. (d) Eeb Bridge seam: moisture, 8 to 9 per cent.; volatile matter, 20.9 to 24.3 per cent.; ash (buff), 11.8 to 18.9 per cent.; fixed carbon, 52.2 to 54.9 per cent. A and b seams were not considered good enough quality to be workable; c, although of about the same quality, had a little better section, and was considered workable for local consumption, but for high temperatures, *e.g.*, smelting, etc., of small value; d is the best seam of this coalfield, of good steam quality, free burning, does not clinker, non-caking, possessing an average calorific value of 12.7, eminently suitable for locomotives or stationary boilers, and compares very favourably with Raniganj coals.

(*To be continued.*)

*The previous articles of this series appeared on July 1 and August 19.

The transit dues of the Suez Canal are to be lowered 25 centimes as from October 1. The dues will then be 8 francs 25 centimes per ton for vessels in cargo and 5 francs 75 centimes for vessels in ballast.

# NEAR EAST MARKETS.

## LONDON PRODUCE REPORT.

Dried Fruit.—The dominating factor in the market position is the shortage of supplies, and this week has seen a further sharp rise in practically all varieties. The crop yields generally appear to have been unsatisfactory. The Greek currant crop is reported to be small, while unfavourable advices are to hand regarding Smyrna sultanas. This of itself would inevitably react on prices, but there is, in addition, a further important factor to be taken into consideration, tending in the same direction, and that is the increased competition for dried fruit which is to be anticipated not only from Central Europe, but also from America. Altogether, it cannot be said that the outlook is in any way promising to consumers, and what has been happening this week probably reflects the likely course of events. Currants are up on the average about 3s. 6d., while there has been an increase in sultanas of from 9s. 6d. to 10s. 6d. Dates have advanced from 1s. to 5s. for various qualities, while figs are 1s. harder.

Sugar.—The position remains much the same. A quiet tone has characterised the free market. West Indian crystallised has been done at 110s. to 120s. Home refined continues in good demand at the official rates. Crop reports are better, except from Cuba, and the outlook as regards Continental beet sugar is said to be rather promising.

Coffee.—Business continues somewhat restricted, especially for export, and prices favour buyers. Costa Rica has been done at 160s., and Mocha at 170s. The futures market has improved. Quotations are: September, 70s. 3d.; December, 70s.; March, 68s. 9d.; and May, 69s. 6d.

Oilseeds.—Linseed has been inactive, Indian being 9d. down at 38s., while La Plata has fractionally improved to 36s. Rapeseed is firm, Toria showing a rise of 9d. at 34s. 3d., while Brown Cawnpore is 6d. up at 31s. 6d. Yellow Cawnpore has been done at 32s. 6d., while real bold Ferozepore is 3d. up at 32s. 9d. Egyptian cottonseed is unchanged at 20s., but Indian is 9d. down at 14s.

Oilcakes.—The demand for certain descriptions has improved during the week. Linseed is in fair request, and at 21s. 3d. is 6d. up. Coconut cake is 1s. up at 14s., while an advance of 10s. is to be recorded as regards cottonseed cake. Arachis cake is now quoted at 15s., while palm nut kernel cake has come to business at 10s. 6d.

Seed Oils.—On the whole, the market has shown a firm tendency. Linseed at 80s. is 1s. 6d. down, while for September-December the quotation is now 76s. 6d. Crude rape oil has improved 3s. to 75s. Cotton oil is again harder, Egyptian crude being 77s., an advance of 4s., while the deodorised is 5s. up at 95s. Bombay crude has improved 4s. to 67s. Turpentine at 151s. is 4s. up.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended August 14:—The sales this week on our market amount to 20 cases at 17s. 6d. to 21s. per lb. as to quality. The principal feature to be noted in our opium situation this week is that the arrivals from the interior have jumped up from 32 cases to 132, or a round number of 100 cases in a week's time. Should these important arrivals continue for a few weeks longer, we shall very soon replenish our stocks, and thus we hope to see an easier market.

## SUDAN PRODUCE.

### Gum.

The C.E.B. report for June states that the exports of gum during the month amounted to 14,934 kilos of bleached of the value of £E916, 843,579 kilos of hashab of the value of £E43,331, and 45,183 kilos of talh of the value of £E1,445, via Port Sudan, and 499 kilos of bleached of the value of £E31, via Halfa.

Kordofan Province.—7,215 kantars were sold in El-Obeid market during June. Arrivals from Nahud were 3,916 kantars.

Sennar Province.—93 tons of hashab gum and 100 tons of talh gum were exported by rail from Sennar, and 50 tons of hashab and 177 tons of talh gum were exported in June.

### Cotton.

Red Sea Province.—The exact amount of cotton bought during May was 38.137 kantars, total value £E189,899. The amount bought up to the end of May, 1920, is 142,373 kantars, total value £E872,176. The cotton season closed on June 21.

Kassala Province.—Considerable difficulty has been experienced in obtaining camels for the transport of the bales to Suakin; at the time of writing there are about 500 bales awaiting transport, but it is hoped to get them off in a few days' time. For the transport of the seed to Sassareib the Lhawin camels came fairly punctually, but the Sukria have been very backward; the early Gash flood and the rise on the Atbara have increased the difficulties in getting the seed away, but it is hoped to have the whole of the seed transported to Sassareib by the end of July or middle of August.

### Dura.

Blue Nile Province.—The dura price was again stable during the latter part of the month, remaining at 2,035 mims per ardeb of 300 rottles (135 kilos). The lowest price was 1,821 mims. The amount coming into Moradas increased slightly, viz., Medani 3,540 and Vassahissa 1,603 ardebs.

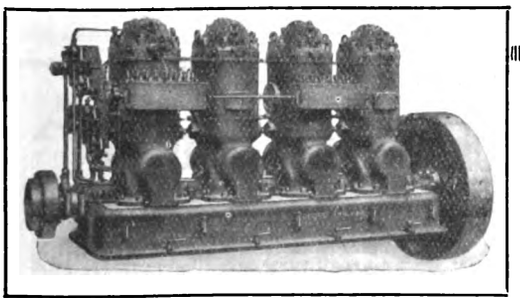
Berber Province.—Grain prices have not dropped yet, but it is expected that they will do so shortly. There has been a considerable fall in the price of certain commodities, both local and imported, and there is a generally optimistic tone among the people.

Dongola Province.—The dura is now coming up and looks well, and at present no reports of damage by pests have been received. The price of dura was 16 P.T. per kirat.

Nuba Mountains Province.—Some 200 ardebs of grain are being moved by Halafa bulls from Rashad Merkaz towards Rahad for the Army. The bulls engaged on this work are, however, in poor condition, and it is doubtful whether they can proceed further than El Butha and Tagale, in which places the dura is at present stored.

## PATRAS CURRANT CROP OUTLOOK.

While the Greek Government has fixed August 22 as the opening day for new-crop shipments, it does not seem probable that any important quantities of fruit can go forward on that date (says the United States Consul at Patras in a recent report). For the last four years the crop has been ready for shipment later and later each year. Lack of labour is probably the most important cause of this condition. It does not seem probable that labour conditions will be any better this year than in 1919, and it is thought no larger quantities of new-crop fruit can be prepared for shipment before September 15. The season has been very wet, and this has been a decided encouragement to the growth of peronospora, a most destructive fungus. The actual damage, so far, cannot be considered serious; but should present conditions continue throughout the next four weeks there would undoubtedly be a real danger that conditions such as existed in 1900 might repeat themselves, when fully two-thirds of the crop was destroyed by this pest.



"THE ALLEN"

*Heavy-Fuel*

OIL ENGINE.

THE "Allen" Heavy-Fuel Oil Engine is principally remarkable for its reliability and simplicity, while it will drive either by means of a belt or direct coupled to electric generators, pumps, agricultural or other machinery.

The "Allen" Heavy-Fuel Oil Engine is easily and quickly started, and will run for long periods with a minimum of attention.

We are building for stock requirements, against which early delivery can be given.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Johnston Line s.s. Fernandina, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila, closes for cargo at Liverpool on September 11.

The Johnston Line s.s. Pomeron, for Tulcea, Galatz, and Braila, closes for cargo at Liverpool on September 22.

The Johnston Line s.s. Cranmore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila, closes for cargo at Liverpool on October 2.

The Ellerman Lines s.s. City of Oxford, for Gibraltar, Malta, and Alexandria, will close for cargo in Liverpool on September 11.

The Moss Line s.s. Aberlour, for Gibraltar, Algiers, Malta, and Alexandria (accepting goods for transhipment to Morocco, Cyprus, and Syrian Coast ports), will close for cargo at Liverpool on September 4.

The Prince Line s.s. Syrian Prince, for Tunis, Malta, Morocco, Cyprus, and Syrian Coast ports, will close for cargo at Manchester on September 2.

The Cunard Line s.s. Tyria, for Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina, will close for cargo at Liverpool on September 4.

The Anchor Line s.s. Olympia, for Bombay, will close for cargo at Liverpool on September 4.

The Bibby Line s.s. Yorkshire, for Marsailles, Port Said, Colombo, and Rangoon, will close for cargo at Birkenhead on September 8.

The Henderson Line s.s. Bhamo, for Port Said and Rangoon, will close for cargo at Birkenhead on September 15.

The Harrison Line s.s. Magician for Calcutta, will close for cargo at Liverpool on September 4.

The Power Line s.s. Pangbourne, for Tangier, Larache, Rabat, and Saffi, will close for cargo in London on September 4.

The R.M.S.P. Co. will dispatch a steamer to Moroccan ports about mid-September.

### Notes.

The new Bibby Line motor ship, Dorsetshire, which is intended for the Eastern service, left the Mersey on August 27. This fine vessel, which has been built by Messrs. Harland and Wolff, Ltd., Belfast, is 450 ft. in length between perpendiculars, with a beam of 57 ft., and a carrying capacity of approximately 12,000 tons. She is built for carrying cargo but there is accommodation in six state-rooms for a dozen passengers. A remarkable feature of the ship is the small space occupied by the machinery, which is arranged slightly aft of midships. The total length of the engine-room, which includes two fresh water-tanks, is 64 ft. Seven engineers are carried, and ten greasers, in addition to two electricians. The fuel consumption of the Dorsetshire will be fourteen tons of oil per day of 24 hours, when sailing at full speed, and she will be able to take on sufficient oil in the East to return from Rangoon to London and back to Rangoon without the necessity of refuelling at any intermediate port. It is estimated that a motor ship on this run will save seven days on the round trip.

The trial trip took place, on August 19, of the s Chantala, built and engined by Messrs. Barclay, Curle, and Co., Ltd., Whiteinch, to the order of the British India Steam Navigation Co., Ltd. The run was entirely satisfactory, a mean speed of fully 14 knots being obtained. This vessel, which is intended for the Persian Gulf trade, is 342 ft. long, 46 ft. broad, moulded, and 32 ft. 6 in. deep, moulded to the shade deck. This steamer has accommodation for twelve first-class and 24 second-class passengers, state-rooms being arranged on the upper and shade decks. She is also designed to carry about 2,000 native deck passengers in 'tween decks, airing spaces being provided for these passengers by side openings in shell at forward and after ends. The propelling machinery is of the triple expansion direct acting surface condensing type, driving a single propeller, the steam being supplied by four single-ended boilers. The owners were represented by Mr. P. W. Armour, secretary of the company, Capt. Hodginson, marine superintendent, and Mr. J. L. Leslie, supt. engineer.

## LANCASHIRE COTTON

### Irregular Market.

(From Our Own Correspondent.)

MANCHESTER, Monday.

We have experienced an irregular market during the past week, and after a further decline in raw cotton rates there has been a recovery. The feeling prevails in many quarters that after the drop in values the time is ripe for placing orders in yarn and cloth on a freer scale, and to-day there has been an increased inquiry. The industrial situation still causes anxiety, and political news is not by any means all that could be desired. Advices relating to the Egyptian crop have continued healthy, and prices have moved in sympathy with the changes in the American staple. Rather more inquiry is now being met with in Egyptian yarns, but prices continue very irregular. Stocks at certain mills are beginning to show themselves, and some producers are being forced to curtail production. In piece goods for Egypt, a rather better demand is now coming round. Occasional sales have been put through in grey and white shirtings and printing cloths. The other outlets of the Near East, however, have given very little support. Wires on a considerable scale have been received from India asking for prices with a fair number of offers and a rather more encouraging turnover has taken place, especially in light bleaching descriptions. The China market remains quiet. Only isolated lines have been booked for South America. Prices of cloth when tested have displayed much variation. More demand is now being experienced in home American yarns than a few days ago, and prices are steadier. Business has been about in bundles for India, chiefly in fine counts. Bids in coarse numbers for the Near East have not been quite so scarce as recently.

## NEW COMPANIES.

### Anglo-Italian Trading.

The Anglo-Italian Trading Company, Ltd., was registered on August 19 as a private company, with a capital of £100,000 in £5 shares. Objects:—To carry on at Constantinople and elsewhere the business of general merchants. First directors: M. W. M. Cuningham, 19, Nazli Han, Rue Voivoida, Galata, Constantinople; G. Algardi, 19, Nazli Han, Rue Voivoida, Galata, Constantinople; H. M. Stourton, Club de Constantinople, Rue Calriston, Pera, Constantinople. C/o Messrs. Middleton, Sanders and Co., Ltd., 70, New Oxford-street, W.

### E. Constantinidi.

E. Constantinidi and Co., Ltd., was registered on August 23 as a private company with a capital of £20,000 in £1 shares. Agreement with E. Constantinidi. Manufacturers of and dealers in tobacco, etc. Registered office, 16, Coleman Street, E.C.

## OIL OUTPUTS.

Anglo-Egyptian Oilfields—Gemsah—Production for week ended August 22, nil tons (last week two tons). Hurgada, 2.622 tons (last week 2,555 tons).

## SUPPLIES AND PRICES IN THE NEAR EAST.

STAMBOUL, August 14.

There has been some commercial activity as the result of purchases for Roumania and the Marmora coast. But these purchases have only had a small effect on the market, which is far from recovering its normal activity. Prices of manufactures are a little firmer.

Sugar.—Numerous offers from centres of production for consignments afloat have not affected the market, which maintains its previous tone. Disposable is quoted £121-£122 per ton, afloat £108-£109 per ton, and in customs £T63 per 100 kilos.

Coffee.—No change is to be reported, despite the improvement at Marseilles. Rio is quoted Ps. 48.51 the oke, and Santos Ps. 52-55,

Petrol.—Large stocks exist here, and the lack of outlets in Anatolia has caused a marked fall in prices. Baku is sold at Ps. 530 per two bidons.

Sardines.—The large quantities sent here in consignment have depressed prices.

There is complete stagnation as regards exports. Opium, arrivals, 6 cases; Balikessar, no sales. Nominal prices £T10-£T10.20 Druggist, £T10.40-£T10.60 Maltia, £T11 Zillé, Tokat.

Mohair.—Arrivals 280 bales. Sales 160 bales Angora. Prices per oke: Extra Ps. 110, I. 100, II. 90.

Wool.—No arrivals and no sales. The market is weak.

PANDERMA.

The report for July states: The month saw the occupation of Panderma by the Greek troops. There has been no commercial activity.

The crop results, as our forecasts indicated, are very satisfactory. But arrivals, owing to the prohibition of exports, are appearing very slowly in our market. Disposable stocks of cereals amount to 40,000 kilos of wheat, valued at Ps. 11 per kilo.

Imports remain in the same stagnant condition, and the country is suffering, for there is a great need of many commodities.

HAIFA.

The report for June states: There has been a little business in the new crops of wheat, barley, and lentils. The harvest not being over the arrivals are not abundant.

The export of wheat from Hauran, in transit for Haifa, being authorised a rapid movement to Beyrout is to be noted.

## TENDERS INVITED.

**Tenders are invited for the following contracts, and must be made by the dates mentioned :—**

### Egypt.

(*The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked* (L) *are to be obtained.*)

Motor Launch.—The Inspector-General of Irrigation, Upper Egypt, invites tenders for the supply of a motor launch for 4th Circle of Irrigation. September 18. (L.)

Sewage Main.—The Chief Engineer, Main Drainage Dept., Ministry of Public Works, Cairo, invites tenders for the supply and laying of a 12-in. cast-iron sealed sewage main. September 21. (L.)

Air Compressing Plant.—The Chief Engineer, Main Drainage Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of an air compressing plant at Mansûra, consisting of two crude oil engines, driving two single-stage air compressors, complete with auxiliary machinery, water cooling plant, a travelling crane, machine tools, air mains, electric wiring, etc. October 1.

Pumping Machinery.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)

Dynamo and Switchboard.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply of 2 kw. dynamo and switchboard for Kombera Pumping Station. September 15 (L).

Paper, etc.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and office requisites, including paper (writing, typewriting, oiled copying, tissue, drawing, sectional, tracing, etc.); cloth-lined envelopes and buff envelopes; note blocks, blotters, waste paper wicker baskets, copying books, card index cabinets, vertical files, tracing cloth, ink pots, inks of all kinds, tie-on labels, note books, numbering machines (triplicate, six figures), stamping ink pads, penholders (wood), pen nibs, paper weights, shapirograph apparatus, copying presses, typewriters (European script), and copyholders for typists, etc. Tenders will be received up to noon on September 9, and should be addressed to the Director, Central Stores, Ministry of Finance, Cairo. A copy of the specification, etc., together with a list of articles required, may be consulted at the Department of Overseas Trade.

Cotton Handkerchiefs, Cloth Clothing.—The Egyptian War Department invite tenders for—(1) Cotton handkerchiefs; tenders due September 1, and to remain open seven days. (2) Cloth clothing; tenders returnable by September 8. (L.)

### India.

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

A firm of paint manufacturers is establishing a new factory at Bombay, for which a complete plant will be required. The firm also requires locks, decorative corners, hasps, handles, etc., for steel travelling trunks and kindred goods of various sizes and designs. Firms interested should write enclosing catalogues and full particulars, prices, possible dates of delivery, etc., to the company, whose name and address can be obtained from the Department of Overseas Trade.

### Algeria.

H.M. Consul-General at Algiers reports that a local trader desires to receive quotations from United Kingdom firms for the supply of iron or soft steel hoops for barrel-making. It is understood that the applicant is prepared to pay cash for the material. Firms in a position to offer supplies of the material in question can obtain the name of the inquirer, specifications, etc., from the Department of Overseas Trade.

## ON 'CHANGE.

### Business More Restricted.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Business has been even on a more restricted basis during the past week than it was in the previous one, and prices have been on the dull side.

Among Government stocks Egyptian Unified has dropped half a point to 67, and the 3½ per cent. Pref. stock has again shed another quarter at 55¼. Greek securities, although not at the best, are a steady market; but a little stock has come in here and there, and prices have consequently been rather inclined to sag. The 1881, 1884 and 1890 Loans have each shed a point to 55, and the 1902 Loan has also lost half a point to 47½. The 5 per cent. Greek "Currant" bonds are in request at 90.

Among Banks shares National Banks of Egypt have declared an interim dividend of 8s. per share, but are ⅛ lower at 19¼. Agricultural Bank shares have changed hands once or twice at 4 7-16, at which price they close.

In Land descriptions New Egyptians are again easier at 36s. 6d., and Aboukir have also shed 6d. to 36s. 6d., Béhéras have lost 1¼, they are in request at 15¾ with a small seller at 16¼. Delta Lands have changed hands several times at 15s., at which price there are still buyers. Sudan Plantations have dropped to 4¾, and Union Foncière, although there are not many sellers about, have also declined to 5, at which price they are in request.

In the Miscellaneous Group Alexandria Water have been done at 5⅞, a drop of 1½, Egyptian Hotels at 2, and Salt and Soda at 47s. 3d. and 47s., closing at the lower price. There has been some demand for Morums Oriental Stores, which in consequence have appreciated 9d. to 18s. 9d.

Among Oil shares Anglo-Egyptian B have been a weak market, falling ⅛ to 2 11-16, but Roumanian Consolidated are 6d. better at 21s. 6d.

## AUSTRO-ROUMANIAN COMMERCIAL TREATY.

Reuter's Agency learns that Austria and Roumania have concluded a commercial treaty which will temporarily be in force for one year. Neither of the contracting parties being at present in a position to renounce entirely its right to peace embargoes upon imports and exports, the treaty stipulates in what cases and up to what amounts exports must be permitted. Thus Roumania undertakes to permit the export to Austria of 120,000 tons of maize, 150,000 tons of barley, 20,000 pigs, 20,000,000 eggs, 46,000 tons of benzine, 72,000 tons of petroleum, etc. Austria will permit the export to Roumania of iron and metal goods, vehicles, electrical supplies, woven goods, hosiery, leather goods, paper, chemical produce, musical instruments, etc. By a special agreement Austria undertakes the repair of 500 Roumanian locomotives. Traders must not be dictated to by their respective Governments in what currency to pay. Each country will treat the subjects and the trade of the other no worse than the subjects and the trade of any third Power.

Madras Railway Annuities.—Registration books will be closed from September 6 to 30, inclusive.

The Loire-Maroc Company is instituting a cargo steamer service between Nantes and Casablanca.

A rich iron ore deposit has been discovered in Morocco near Oum-er-Riba and the Oued-El-Abid waterfall.

The output of the Kenedsa coal mines in Algeria, the exploitation of which was begun two years ago, now amounts to 100 tons a day.

## NOTES OF THE WEEK.

In an article published elsewhere in this issue Sirdar Ikbal Ali Shah puts forward the suggestion that a solution for the troubles of Mesopotamia may be found in the appointment of Ali Haidar as ruler. The proposal recalls the view expressed in these columns last week that one of the most effective ways of ensuring the maintenance of peace after the present trouble has been settled would be to obtain the co-operation of a ruler whose claims to overlordship have a good chance of being widely accepted in the Arab world. Whether Ali Haidar possesses the necessary qualifications remains to be seen; but the writer's statement of his claims will be read with interest. It must be pointed out, however, that the British Government is not called upon to appoint the ruler of Mesopotamia or to suggest claimants for the post. That is the task with which the Arab world is confronted, but it is well that the names of possible rulers should be brought before the people, especially from Mohammedan quarters. A unanimous choice is not to be anticipated. The candidate who could secure a substantial following in the towns ought, if he fulfilled the necessary conditions in regard to lineage and religious orthodoxy, to have little difficulty in winning the allegiance of the less settled population.

---

The enlargement of the borders of the Lebanon and its recognition as a State was proclaimed by General Gourard at Beyrout on September 1. The frontiers are to be:—North, the Dahr el-Chodib; South, the frontier of Palestine; East, the coast; and West, the heights of Anti-Lebanon. The national flag is to be the French tricolour with a cedar tree superimposed on the white ground; and the capital will be Beyrout. Made at the latter place, the announcement was naturally received with enthusiasm by a great crowd of Lebanese. What degree of independence the new State is to enjoy is not clear from the very brief telegrams reporting the event; nor is any mention made regarding the fate of those members of the Lebanese Mejliss who were arrested, apparently, for desiring "the complete and absolute independence of Lebanon."

---

Signor D'Annunzio has been spending some of his superabundant energy in drawing up a Constitution for a new State to be called the Italian Regency of the Quarnero, which, it is announced, "has been constituted for the town of Fiume and for the islands which belong to Venice by the tradition of centuries." At the same time it was announced by the Rome correspondent of the *Morning Post* that the Italian Cabinet had decided to place no obstacle in the way of any decision by Fiume regarding its independence. Whether the appearance of the two announcements on the same day is to be attributed to anything more than coincidence we need not, perhaps, inquire. It is safe to say that no settlement of the Adriatic question as a whole can be regarded as likely to last unless it be approved by Italy's Allies. Therefore, while D'Annunzio's essay at constitution-drafting may be regarded with interest, and even as a quite creditable attempt of its kind, the Regency of the Quarnero must be considered a somewhat delicate infant, whose chances of life are entirely dependent upon whether Nurse Europa will make herself responsible for its upbringing.

---

Although, as already reported, the Bolshevists repulsed the Persian Cossacks' attempt to seize Enzeli, and drove them back in some confusion upon Resht, they either could not or would not follow up their success. Reports are somewhat conflicting, and by no means clear, but it seems that both sides are leaving Resht alone just now, and that the Bolshevists have even withdrawn from Enzeli also. It is not to be expected that they will be content to leave things in a condition which from their point of view is most unsatisfactory, and sooner or later they are almost sure to endeavour to recover the ground they have just lost; but at present their hands are so full that this particular region may be left free from their obnoxious presence for a while. If so, it is to be hoped that the Persian Government will be able to turn the breathing-space to good account.

---

In Turkestan Bolshevism is losing ground in a way that is causing the Moscow *Pravda* much uneasiness, and, according to a Stockholm report, the middle classes have seized the power and are successfully countering the Bolshevist propaganda. As a result the Commissary Peters, of Sidney Street notoriety, has been despatched to the district with instructions to bring it back into the "Red" fold. What methods he will use can only be conjectured, but Turkestan is not the City of London, and it is possible that the fate he so richly deserves will overtake him ere long. Unfortunately in Bokhara the Bolshevists have been able to bring off a *coup d'état*. They are reported to have seized the reins of government under the cloak of a "Young Bokharan Party," and Bokhara has been proclaimed a Soviet republic. It

Digitized by Google

is hoped, however, that their successes will be short-lived; for the Bokharan Army, which was in process of mobilisation when the *coup* took place, is said to be able to deal with the Young Bokharans if they are not actively supported by Bolshevist troops. Whether the hope will be justified remains to be seen; but, unless the mobilisation was very near completion, it would seem unwise to build much upon it.

---

Mustapha Kemal has thus far failed conspicuously to execute any of his terrible threats against the Allies, but that fact in no wise deters him from indulging in further rodomontade. He has lately been telling his followers that Bolshevism, "that force which is so worthy of respect," and "unconquered Germany," are ready to help them, and suggesting that a kind of new Triple Alliance has come into being. The chief point of interest about this arrangement is that Mustapha Kemal has undertaken that should the Soviet Government be compelled to evacuate Persia temporarily, he will replace the Russian troops by Turkish and Persian soldiers. The present time would seem to be not entirely unsuited to testing his ability to fulfil this engagement.

---

Another plot to murder the Grand Vizier has been discovered, and a Nationalist who had travelled from Anatolia to Constantinople with the intention of assassinating Damad Ferid Pasha has been arrested, after a stiff resistance, which cost the life of a Turkish policeman. What purpose the Kemalists can hope to serve by such methods it is hard to imagine. If they should succeed in removing the Grand Vizier they would be no nearer to securing control of the government, and they would, if possible, have still further alienated the sympathy of the world from themselves. It is reported that their opponents have borrowed a leaf from their book, and that an attempt has been made on the life of Mustapha Kemal himself at Tokat. The assassin was captured and, after trial, executed.

---

As announced in another column, M. Stambolisky, Prime Minister of Bulgaria, will pay a visit to Great Britain in October. As a guest of the British Government, he will be welcomed both on his own account and in recognition of the studiously correct attitude that Bulgaria has maintained under his guidance. M. Stambolisky's record during the war is sufficiently well known to prevent the least suspicion as to the sincerity of his present attitude towards the Allies. He opposed Bulgaria's entry into the war on the side of the Central Powers, and he suffered imprisonment for his uncompromising hostility to King Ferdinand's policy. He is now equally determined that, as far as he can provide for it, Bulgaria shall make the best of her misfortunes and by disciplining herself to a hard course of work achieve her salvation on peaceful lines.

---

M. Stambolisky's visit to Great Britain and France, it may be taken for granted, has nothing to do with any question of Treaty revision. Its main purpose, unless we are mistaken, is educational. The Bulgarian Prime Minister has already experienced the difficulties of administration under existing conditions, and knows that they cannot be overcome solely by personal shrewdness, of however high an order. All the Balkan States are confronted with similar problems, they have to raise the maximum revenue without penalising future sources of income, and they have to encourage foreign interest in their country without sacrificing either independence or self-respect. The different Governments appear to have made mistakes in coping with these two problems, but it has proved easier for the Bulgarian than for any other to admit the possibility of error, and to try to meet legitimate objections. During his tour, M. Stambolisky will learn how the problems with which Bulgaria is faced are met in other countries, and for this reason it is to be hoped that he will meet not only the British Prime Minister, but also other Ministers and experts in various spheres.

If any evidence were needed of the risk of such incendiary agitations as have been recently conducted in India, it could be found in two items of news published last week, one coming from the always dangerous north-west frontier, the other from a remote corner of the peaceful province of Oudh. The Khalifate agitators have so far failed to set India ablaze, but the sparks so lavishly scattered have not in all cases been without result, and it is unfortunately impossible to conclude that the incidents already reported complete the tale. The Hazara district, where a definitely anti-British movement has broken out, lies between Kashmir and the ill-omened Black Mountain country along the Indus; it has not been concerned in the recent frontier operations, the seat of which lies far to the south and west, and the disturbances thus represent an addition to the various sources of anxiety with which the Indian Government has to reckon. The prospects here cannot be estimated with any approach to precision, but the movement is undoubtedly significant.

---

Even more significant is the atrocious murder of Mr. Douglas Willoughby, the Deputy-Commissioner of the Kheri district, a rural backwater with no politics of its own and little interest in the politics of India. The evidence already published shows that even in such soil incendiary preaching has produced deplorable results; the population, pre-eminently Hindu, has not been affected as a whole, but individual Moslems have been incited to the traditional exploits of fanaticism, and this unprovoked murder is the immediate consequence. Relations between rulers and ruled have for long been so cordial in this part of the country that the idea of precautionary measures would have been scouted if it had ever been suggested. Englishmen move freely among the people, assured of a welcome, and we do not doubt that the crime is viewed with horror throughout the length and breadth of Oudh. The fact that it has been committed is some measure of the responsibility incurred by the men who have set this agitation on foot.

---

The official statement explaining the Indian Auxiliary Forces Bill indicates a certain change of front on the question of compulsory service. In the House of Commons last May Mr. Montagu stated that he had held up the Government of India's proposals because he was opposed to compulsion in time of peace. Now we read that compulsion has not been provided for in the Bill, in view of the expressed opinions of the Imperial Government with regard to the general question of conscription throughout the world. There is a substantial difference here, but of greater practical importance is the further statement that adequacy of numbers will decide the question in the long run, and that if this consideration demands the adoption of a system of universal training, the matter will be one for determination by the Indian Legislature. The logic of this last sentence strikes one as defective, for if compulsion is proved to be necessary, there is surely not much left to determine, but the intention is obvious enough, and Europeans must either volunteer in sufficient numbers or face the prospect of being compelled to serve.

---

The death of Sir Charles Lyall is a serious loss to Oriental scholarship. Officially he was known for his exceptional abilities in what is spoken of in India as secretariat work, and his presence at headquarters, first at Simla and subsequently in Whitehall, was almost taken for granted; but his most permanent achievements were in the field of Arabic learning, too advanced perhaps for general appreciation, but known to a small band of scholars as always worthy of respect and very often as definitive. His death will be greatly felt by the Royal Asiatic Society, of which he was a vice-president, and, following so quickly on the losses of Dr. Vincent Smith and Mr. James Kennedy, comes as yet another reminder that the old guard of Anglo-Indian scholars must be steadily reinforced.

# THE WEEK AT HOME.

**Strikes and Lock-Outs.**

The industrial troubles, long predicted for the autumn, are now clearly upon us. The miners have finished their voting, and a strike is to be declared in the last week of September. A squabble over a foreman in Sheffield has produced a lock-out in the electrical trades. A printers' dispute at Manchester, which is involved in hopeless obscurity because the men struck without authority and the union is taking disciplinary action, threatens to lead to an impasse in that trade that will involve the whole of England, bar London. And there are difficulties in many other trades of less importance.

Each side, of course, is campaigning against the other; but the battle is not, of course, always to the stronger propagandist, and the arguments, although ingenious, are not always convincing. The *Daily Herald*, for example, states that the employer—who in those pages bears a suspicious resemblance to Milton's Satan—has created an artificial depression of trade to enslave the working class. I have known a good many employers, small and great, clever and stupid, but none of them has been such a fool as that; and even if they tried, I doubt if they could create an artificial depression. People either will buy or they won't buy, and the employer is as helpless as the workman if they won't buy, which is the case at present, because we are all hard up.

On the other hand, an employer's manifesto, published last week, struck me as one of the most futile things I had ever read. It is no use mincing words about this matter. The pronouncement drew a dreadful picture of Bolshevism. Now the ordinary British workman is not a Bolshevist, or anything remotely resembling it; he is quite extraordinarily the same type of man as his employer. But because his employer has been frightened about Bolshevism, the employee finds it very useful to pretend to believe in Bolshevism. In the second place, the employer's manifesto discussed the export of coal to starving Europe in humanitarian terms. But the British workman does not spend sleepless nights because of supperless Yugoslavs. He is thinking of his own interests, which is very wrong of him. And his employer is doing the same.

Most of this propaganda, then, may be disregarded; it does not touch the real issues. The employer is determined to refuse higher wages, because he has reached a point at which he finds it increasingly difficult to sell his goods; and, after all, an employer's real business in life is to sell goods, not to employ labour. The employee is determined to get higher wages, partly because prices go up, and partly because he thinks he can get higher wages. When that is the attitude on both sides, there is nothing for it but to fight it out sooner or later.

My own impression, derived from facts which would take too long to set out here, is that prices will rise still higher in essentials and fall in non-essentials, and that wages, on the whole, are not likely to rise much further, save in one or two special trades. In that event, the standard of living will fall a little during the next year. In recent movements the unskilled worker has done better than the skilled worker, as the jealousy between dockers and railwaymen proves; but the skilled man always asserts his superiority in the long run, and this tendency will probably begin to take effect in the immediate future.

A word may be added about a more sinister side of the trouble. A few foolish employers are out to kill Trade Unionism, and some stupid leaders on the other side are out for revolution. These people are making a great deal of noise, and the more noise they make the more important they feel; each side naturally exploits the other's folly as an awful example of grinding tyranny or callous indifference. But the extremists in both camps will fail. There is a certain amount of bad blood about, but not enough to kill the patient.

The Trade Union Congress meets this week at Portsmouth. It is bound to support the miners officially, but unofficially it is believed that it may seek a *modus vivendi*. Mr. Smillie is in the ascendant at the moment, but Messrs. Clynes and Thomas usually play the tortoise successfully to his hare. The proceedings are generally rather lively, and this year is not likely to be any exception, as there are two distinct streams of opinion in the Labour ranks, and the delegates generally speak their mind.

**The Newest Theology.**

There has been considerable discussion of Canon Barnes' sermon on the origin of matter, and his rejection of the fall of man. General Booth certainly scored a point by his remark that the Canon's "stuff," from which everything rose, seemed to him "stuff and nonsense"; the Salvation Army still believes in Adam and Eve. Various clerics have written to *The Times*, but the paper itself is uncommitted.

But the clergy have not shone in this discussion. There has been far too much reliance on the argument that, although the historical truth of Genesis can be no longer maintained, it is valuable as a record of religious truth. To the ordinary layman that is sheer casuistry of the worst description, and nothing will convince him that the person who employs such an argument is sincere.

**The End of Cricket.**

The greatest cricket season on record came to an end with one of the finest matches of the year. The result of the championship was uncertain until the third day of Surrey v. Middlesex. Surrey led on the first innings, and for some time it looked like being their game even on Tuesday, but they were not quite equal to the strain. There was no "rot," but man for man they were not good enough, and by winning the match Middlesex won the championship as well. Until a month ago they did not strike me as being quite in the same class as Kent, but Kent lost the fine edge of their achievement in August; and with Surrey as uncertain as a woman, Middlesex became the best all-round team, although perhaps the least brilliant.

Unluckily Mr. P. F. Warner has determined to retire, and the match which gave him one of his greatest triumphs saw his last innings at Lord's. He will be very badly missed from the game, for he was an excellent bat, just short of the classic excellence of the Palairets; and as a captain he was in the same rank as Shuter.

**Street Accidents.**

A return has just been issued of the street accidents in London, from which it appears that an average of two people are killed every day by the traffic. This is

not more than is to be expected among a regular population of seven million and a floating population of nearly one million, not all of whom are overcareful in crossing the road. It is not so much the pace that kills, as the fact that different classes of traffic move at different speeds, the taxi being the quickest, then the motor bus, then the tram, then the horse-drawn dray. The motor lorry varies its pace, and so does that most exasperating and dangerous type, the small boy on a bicycle.

The motor-bus driver has the most difficult task, as he has to keep to time on a long route which may reach from one end of London to the other or beyond—Camden Town to Reigate, Victoria to Wanstead, or Stamford Hill to Raynes Park. The accuracy of the drivers' steering is astonishing, and there is little doubt that most of the accidents that occur are more the fault of the public than of the drivers.

**The Theatres.**

Stageland is preparing to reopen—indeed, the autumn season began last week with a dramatisation of Mr. Stacpoole's book, "The Blue Lagoon," which seems to be very successful. This next fortnight there will be first-nights every evening; it is to be hoped that the pabulum will be better than was put on the boards a year ago.

**The Anglo-Saxon Olympic.**

It is impossible to summarise in a paragraph the athletic feast staged at Queen's Club on September 6, when teams representing the British Empire and the United States drew with five wins each.

Certainly since the London Olympic of 1908 no finer collection of athletes has been in London, and if one may throw the Paris apple to any two of those specimens of the human form divine I should be tempted to select Earl Thompson, the Canadian hurdler, and G. B. D. Rudd, the South African half and quarter miler. But there are others. There were some 30,000 spectators of the games, with thousands turned away.

Queen's Club, with all its classic reputation, is no track for record breaking, with three corners in the quarter-mile and seven for the half. The high jump, again, was staged in the south-east corner of the ground, some 120 yards from the Press table. Apart from these complaints the amateur promoters provided a magnificent day of sport without a hitch in time or temper, and the magnificent athletes, selected from 180,000,000 dwelling under the Union Jack and the Stars and Stripes, did the rest. G. B. D. Rudd's quarter-mile in the mile relay race in 48 2-5 secs. from an upright start with three turns to negotiate must surely have been equal or superior to the world's record for a straight quarter.

---

The first of September used to be renowned as the first day of partridge shooting. This year the public was the partridge that was shot. Telegrams went up from ninepence to a shilling on that day. Coal cost two shillings a ton more. Railway freight rates went up. Receipt stamps increased from a penny to twopence; newspaper postage from a half-penny to a penny, and the half-penny stamp will henceforth be a rarity like some useless antique. Workmen's tickets were doubled, and in some cases trebled; and it was announced that the price of petrol was to be put up, which presumably means higher motor-bus and taxicab fares very soon.

All the increases synchronised on the morning of the first of September, but perhaps the most extraordinary feature of that amazing day was that the sun came out in London for an hour or so. The Cockney, who had almost forgotten its existence, so sedulously has it hidden itself behind the clouds for several weeks, looked at this strange phenomenon in the sky with somewhat of the same curiosity as he would show towards a pre-war relic, and was just beginning to regret that he had not shed his winter clothing on the first day of autumn when the rain began again.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents.)*

## EGYPT.

CAIRO, August 18.

**The Case for the Defence.**

After almost four weeks' sittings of the Military Court which is trying the alleged members of the "Society of Vengeance," we know at last what the defence is. In the case of Abdel Rahman Bey Fahmy, Cairo secretary of the Nationalist Delegation and the first on the list of the accused, it is a complete denial of the allegations against him. Last Saturday morning Mr. Mitchell-Innes, K.C., made his opening speech for the defence. He laid stress on the fact that there was not one scrap of documentary evidence against his client. He directed attention to the fact that 186 houses had been searched throughout the length and breadth of Egypt; that over sixty sacks of documents had been examined; and that upon not one of these documents did the name of his client appear. He submitted that if his client was to be connected with the "Vengeance Society" it must, therefore, be by the oral evidence which had been given in the Court. He then proceeded, in striking phrase and with stinging satire, to review the character of the evidence given. The first witness had been the ex-member of the society who had turned "King's evidence." In other countries this man would be regarded as a vulgar malefactor seeking to save his skin. Further, he was an accomplice, and according to English legal traditions a jury could not convict on the uncorroborated evidence of an accomplice without being warned of the danger of such a course. The next witness was a man whose record was sufficient to warrant his evidence being put out of Court. But even if it was acceptable to reasonable men, he had, in his own perjured evidence, declared he had been willing to join the "Society of Vengeance," and to prove his fidelity had expressed his willingness to shoot a British officer. Therefore he was an accomplice, and could not corroborate the evidence of the informer. The next witness had been a wretched youth (continued Mr. Mitchell-Innes) who had been under the domination of the previous witness. The youth had made a clean breast of the manner in which he had been intimidated into perjuring himself, and therefore the evidence of the previous witness was doubly damned. The witness after that was a man whose finger-prints had been proved in Court that morning, and who was a thief and forger, and now a perjurer.

And so the K.C. went on until he came to the penultimate witness for the prosecution. Here his invective became stronger. In stirring tones he directed the attention of the Court to "a matter of the gravest importance." This witness, and the informer also, had stated that they had visited the house of Abdel Rahman Bey Fahmy. The witness described it in detail; the informer had merely mentioned that it had a garden in front. Counsel stated that the description did not fit his client's house, but tallied with one a little distance from it. He suggested that these witnesses had been given the approximate position of the house, had, as they thought, studied it from the outside, taken the wrong one, and described the wrong one. The Court's answer to this, given yesterday, was that it would go and view the two houses.

In summing-up, Mr. Mitchell-Innes submitted that the prosecution had endeavoured to bolster up a case against his client on the evidence of two informers, two criminals, and a number of ignoble youths who had deposed and recanted till the truth was wholly indiscernible in the maze of lies. Finally, his client had never been a member of the "Society of Vengeance." He knew not who were its members; he knew not what were its objects. The first time his client had ever believed in the existence of the Society was when he was charged with being connected with it. The counsel for the other defendants followed on the same line—complete and thorough denial.

Earlier in this week Abdel Rahman Bey Fahmy gave evidence on his own behalf. He deposed substantially what his counsel had said he would say. He also added that he had twenty-five years' service under the Egyptian Government, and recapitulated the various decorations that had been awarded him in recognition of his meritorious service. He characterised the evidence against him as lie upon lie, and held that the disciples of Ananias, who had come to swear away his life, had perjured themselves because they were paid to do so. Under cross-examination he admitted that he had retired from the Government service at the age of forty-three—the age limit then being fifty-five—on a pension of L.E.34 per month.

Yesterday afternoon there was a procession of two retired generals, two ex-ministers, and two ex-officials who had held high posts under the Government before the Court. These distinguished witnesses deposed that they had known Abdel Rahman Bey Fahmy all his life, that they had ever cherished the highest opinions of his character, and that they had been deeply surprised to learn he had been charged with conspiracy and incitement to murder. And so the case goes on into the fifth week.

**Coptic Bishop holds Ideas of Reform.**

For some months a Bishop of the Coptic Church in Cairo has been expressing dissatisfaction with the existing regulations of his Church. Particularly has he been opposed to celibacy. He has stated that many of the stern disciplinary regulations in vogue to-day did not exist in the time of Christ. They had been instituted through the ages by the ecclesiastical courts, and, therefore, being man-made laws, could be changed or abolished by the ecclesiastical courts to-day. Some of the younger clergy gathered round him, and finally he addressed a memorandum to the Coptic Patriarch upon the matter. Immediate attention was given to the document, and an ecclesiastical court was convened, but not for the purpose desired by the reverend bishop. He was indicted, the court tried him, and yesterday the decision was announced: banishment to a distant monastery near the Red Sea for three years—or unfrocking.

**News of the Negotiations.**

On Monday last there arrived what seemed to be the greatest journalistic scoop of the decade from London. *Al Ahram*, the leading Nationalist organ, issued a special edition, proclaiming that "there is now complete agreement between the Milner Commission and the Nationalist delegation on all essential points!" From the Egyptians' point of view, there could be only one meaning to what may be considered at best an ambiguous telegram. Incidentally the news had come from the correspondent of *Al Ahram*, but Reuter had sent no confirmation, nor did official circles admit any knowledge of the successful termination of the parleying. As I have said, the Egyptians could see only one meaning: that the Nationalist delegation had been able to break down the opposition to their demands, and were on the eve of returning with a document which doubtless would read like a combination of Magna Charta and the Declaration of Independence. The Local Nationalists confidently expected that corroboration was on its way, and when an even more ambiguous telegram arrived from Saad Zaghloul Pasha the Nationalist Press became as jubilant as

the Censorship would allow it. The telegram from the head of the delegation was to the effect that negotiations had reached a satisfactory stage, but conclusions were delayed "to allow both parties to enter into indispensable *pourparlers*." Then comes the announcement: "We have thought fit to pass these weeks in France."

In the absence of definite trustworthy information I will not be so unkind as to venture a guess at what has happened. But there is one point here in Egypt which seems to be well worthy of notice. Upon the evening of the day upon which the telegrams arrived there was a notable arrogance in the demeanour of a certain section of the population. It was not apparent among the educated classes, but was obvious among that class which last year seemed to take pleasure in vandalism—the ignorant, vindictive classes whom no leaders could ever hold. It is a grave charge. But I make it with a full sense of responsibility and upon the strength of what I saw personally. It is significant that though for days there has been no attempt to encourage the men who are being tried in the conspiracy case, yet upon that night a crowd assembled outside the Court, and when Abdel Rahman Bey Fahmy came out on the way back to the barracks the cheers lasted till he was well out of hearing and sight. There was the same evidence of subtle excitement at Alexandria, and added precautions were at once taken to guard against the repetition of the disgraceful scenes of last year.

**A Fourth Train Robbery.**

Somewhere in the vicinity of Wasta is a gang who have found a way of making easy money. The plan is simple. They merely enter the train at or about Wasta, eject the safe containing the railway receipts of the stations thereabouts, and apparently have a few weeks of glorious life till the necessity for more money arises—when they merely steal another safe. The latest *coup* was on Friday evening last. The Luxor-Cairo express arrived as usual at about 9 p.m. at Cairo, and the railways officials went to take a safe which wasn't there. Instead, they found the lock and chain of the door of the van in pieces. The safe, which had contained about £E1,400, had been there at Wasta. At Cairo it was missing—and it is still missing. This being the fourth successful robbery under exactly similar conditions, and in the same locality, suspicion fell upon some of the officials of the train, who accordingly were arrested, but have since been released because no evidence can be found against them. Approximately £E5,000 having disappeared, the railway authorities have decided that for the future two armed guards shall protect the treasure from the bandits.

**Railway Mishap.**

On Sunday evening last there was a mishap upon the railway line between Cairo and Alexandria, the results of which were serious enough; but the potentialities for disaster were infinitely greater. Approaching the station about a third of the way from Alexandria, the engine of a goods train rushed on to an iron bar placed across the rails. Sixteen of the goods-vans fell in various ungraceful postures on either side of the line, and all traffic was blocked for about six hours. At the spot where the accident happened some men had been repairing the line, and the explanation is that this bar was left across the line "by mistake."

## YUGOSLAVIA.

BELGRADE, August 26.

**Municipal Elections.**

The sensation of the week has been provided by the municipal elections throughout the old kingdom of Serbia, in which, to the astonishment and disgust of the public, the Communists, led by one Philip Philipovitch, a Socialist educated in Russia, have won the battle in the chief towns of Belgrade, Nish, and Kragujevats. In Belgrade they polled about 3,700 votes against the Radicals 3,300 and the Democrats 2,800. The truth is that the two chief political parties were engrossed in their own affairs, and never took the Communists seriously; no less than 20,000 voters abstained; and the Republicans obtained a paltry 605. Consequently, the Communists won the day, and announced their intention of taking office. It may be remembered that when they headed the polls at Zagreb, owing to the support of the non-Slav element, they were unable to take the necessary oath, and so could not assume office. Considerable interest was, therefore, aroused in Belgrade when they announced that they would take

# THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

**IN DAILY USE THROUGHOUT THE NEAR AND MIDDLE EAST.**

*Embodies the following advantages:—*

Works satisfactorily with any kind of tobacco Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Digitized by Google

the cath, subject to certain reservations. Yesterday there was a meeting at which the outgoing municipality were to hand over. The Communists triumphantly announced their intention of administering the town in the light of their own peculiar views, to which both the Radicals and the Democrats took exception.

This morning, however, there are complications. It appears that the Ministry of the Interior has served a notice on them that their reservations when taking the oath nullify the proceedings, and that they cannot legally take over unless they take the full oath in proper legal form. Consequently, the old officials refused to hand over, and some of the Communists ran off to the Ministry of the Interior to see what was the trouble. If this decision holds good, new elections will be necessary, at which, presumably, the Communists will not stand, unless they are prepared to take the oath in proper form. In that case, the negligent abstainers will probably wake up and the Communists be washed out. But if they do come in again, and consent to take the oath, they must be bound by it.

**Communism and the Country.**

As Serbia is essentially a country of yeoman farmers owning their own land, Communism is really unimaginable outside the towns unless, as at Uzhitse, a purely farming and stock-raising mountain community of pretty shrewd men, the Communists can succeed in deceiving the voters by fair words. It is, therefore, interesting to note the results from the country, more particularly as this is the first time the people have been articulate since the outbreak of hostilities against Turkey in 1912.

In Serbia there are 33 " okrugs," or counties; in six of these no elections were possible, owing to the Albanian invasion (incidentally, a very good proof that it is not the Serbs who are wantonly harrying and sacking Albania). The results of the elections are worth tabulating, and the following figures show the " opshtine," or communes or parishes, won by the respective parties. These are:—Radicals, 594; Democrats, 574; Radical-Democrat Entente, 32; Agricultural Party, 58; Undetermined,150; Non-Party, 7; Communists, 37; Republicans, 2; decided by lot, 2; no elections held, 14; Liberals, 25. This list is subject to correction when the provincial prefects issue the final official figures; but, meanwhile, it is interesting to note the utter rout of the Republicans in this monarchical country, the decline of the old Liberal party, the shrinkage of the once all-powerful Radical vote, and the growth of the brand new Agricultural Party, which is little known, but is most probably a healthy sign. The number of seats gained by the Agriculturalists, Communists, and the undefined groups is probably a form of protest against the constant party squabbles and almost eternal state of crisis which has afflicted the country since the end of the war. It will be most interesting to see how these municipal elections can be regarded as a forecast of the general elections in three months' time.

Preparations are now being made to organise Montenegro on the same lines as Serbia, and municipal elections will take place there when the organisation is complete.

**Bad Times for Brigands.**

Brigandage, one of the inevitable consequences of a prolonged war in the Balkans, and especially in the more unsettled districts, is now almost completely suppressed, owing to the energetic action of the gendarmerie and police authorities. The last brigands in the Belgrade provinces were rounded up a couple of weeks ago, and now a famous character, Stefan Lazarevitch, has been laid by the heels near Pozarevats; this precious fellow admits to five bad cases of highway robbery this summer, in one of which he murdered five people, in another two, and in the other three one only.

A regular story-book case is reported from Slovenski Brod, on the Save, between Bosnia and Slovenia, where a gang made their lair in some excavations underneath an old Austrian internment camp. The patience of the police eventually ran them literally to earth, where they found seven brigands and a couple of women carousing among a huge accumulation of goods and merchandise of all kinds, which they were dealing in very profitably both wholesale and retail. It is a hard time for robbers in Yugoslavia now.

The Albanian raids, or rather invasions, are being repelled as fast as troops and material can reach these remote districts. The Croatian and Slovenian recruits have especially distinguished themselves. It seems that the Roman Catholic Albanians are the most violent, and indeed, the Catholic tribesmen have always been considered among the most turbulent. The Mohammedan and Orthodox Albanians who are Serbian subjects remain loyal, and in some instances have given very valuable help to the authorities. The remarkable thing is that the papers report that the Albanian Government has apologised to the Serbian Government for these excesses, promising that the guilty parties shall be punished. They will have their hands full. As d'Annunzio has openly stated his intention of proceeding to Albania to fight the Serbs, it is not surprising that the Press sees Italian influence in these unprovoked attacks, but it is surprising to find the name of the Bulgarian *komitaji* leader, Protogeroff, associated with these intrigues. Presumably both parties will be repudiated by their respective Governments.

## GREECE.

ATHENS, August 28.

**The Royalists' Plot.**

The investigation in connection with the discovery of a plot aiming at the overthrow of the Government is still in progress. The greatest secrecy is maintained by the authorities who have disclosed no information whatever to the impatient public; so no one really knows what the examination has, so far, revealed. Many fresh arrests of persons suspected of complicity have been made, but at the same time a number of those originally arrested have been released, nothing incriminating having been found against them. The opposition papers which, apparently, suffered less damage than was at first thought, have, one after another, made their appearance again, and promptly resumed their old tactics of attacking and abusing the Government, despite the fact that the editors of four of them are still in prison.

M. Venizelos is expected to return shortly. No definite date is yet given, but from all accounts his condition has shown so much improvement of late that he will be able to travel in a few days. A great official reception is awaiting him in Athens on his return; this will, in all probability, be held at the Stadium a few days after his arrival.

The Turkish Prince Sabbah ed-Din, on being informed of the attempt on the Greek Premier's life, personally expressed his regret to the High Commissioner for Greece in Constantinople. Speaking to a journalist, the Prince stated that he had met M. Venizelos ten years ago, and that they have been good friends since. " Sentiments," said Prince Sabbah ed-Din, " have nothing to do with politics, and I am extremely glad to hear that M. Venizelos is out of danger."

**An Armenian Ex-Prime Minister.**

The ex-Prime Minister of the Armenian Republic, M. Hadisian, accompanied by his wife, arrived at the Piræus yesterday from Alexandria. He was welcomed by many members of the Armenian colony in Athens. In the afternoon a service was held at the Armenian church here, which was attended by M. Hadisian, who immediately afterwards visited the Minister for Foreign Affairs, M. Politis.

The distinguished Armenian statesman stated that he had just completed a tour of Paris, London, and Rome, where he had successfully concluded a national loan of 20 million dollars for the needs of his country. M. Hadisian is leaving to-day for Armenia, via Smyrna and Constantinople.

**Turks and Greeks in Asia Minor.**

During the advance of the Greek troops in Asia Minor a large number of Mussulman families, fearing

reprisals on the part of the invaders, had abandoned their homes and proceeded in all haste to the interior of the country. But the exemplary conduct of the Hellenic troops in the occupied territories and the calm which has reigned in these regions since the occupation dispersed the unjustified fears of the Mussulmans, and a considerable number of families have already returned to their homes. Thus, in the town of Philadelphia, up to July 26 6,000 Mussulmans had returned and asked permission to re-install themselves in the town. Naturally, this permission was immediately granted, and all possible assistance was afforded to them by the Greek military authorities. On the same day seven-eighths of the Mussulman population of Axari had already returned.

Between the dates of July 28 and August 2, 281 Mussulman families returned to their homes in the Aïdin region, and 515 families in that of Philadelphia.

From July 23 to August 2, 1,900 Mussulman families, representing approximately 6,000 people, had asked permission from the Greek authorities in Brusa to return to that town. Finally, between August 2 and August 6, 700 more Mussulmans returned to the Aïdin region and 690 to that of Philadelphia.

**Italy Evacuates the Dodecanese.**

In accordance with the recent Greco-Italian agreement, the Italian troops are now making preparations for an early evacuation of the Dodecanese Islands. A few days ago the Italian authorities in the Island of Kos—the second largest island of the group—notified the Greek Metropolitan that Italy had decided to restore the islands to Greece. The population received the news with great joy, and Te Deums were held in every church. All the restrictions imposed by the Italian military authorities have now been removed. It is thought that it will be possible to hold elections in the Dodecanese simultaneously with those in Old and New Greece. The Government has ordered 200 gendarmes to hold themselves in readiness to proceed to the Dodecanese for duty.

## ROUMANIA.

BUCHAREST, August 27.

**The Political Situation.**

The Polish victory has caused a sudden change of opinion in the leading political circles, and an immense relief amongst the masses, who are absolutely against starting another war, having already suffered too deeply during the late one. Strict neutrality has been strongly upheld, so that the few interventionists found themselves in the minority from the beginning. Only in the case of an actual invasion of the country would the Roumanians have risen to defend their rights. Moreover, the way in which "the necessity to save Warsaw" was put was not sufficiently convincing for the people; and had general mobilisation been risked it would have roused strong feeling in the villages, where up to now the Socialists' Bolshevist propaganda has not been fruitful.

The aim of the political leaders of to-day is to consolidate peace, and to further good relationship with all neighbouring countries. General Averescu's position has been strengthened by his neutral and peace-loving attitude. If he would adopt the same principles in his economic policy he would reap better results, though he is still handicapped by such things as transport difficulties, financial crises, reduced production, exaggerated import, unfavourable rate of exchange, etc. The present situation could be much improved by a large foreign loan of many milliards, which would enable Roumania to ease the strain, thereby increasing her production of cereals and petroleum, improve her transport system, expand her commerce with foreign countries, and reduce her imports by creating new industries in the country. Thus with her natural riches, backed by a sounder economic policy, Greater Roumania would in due time be able to rank herself among the foremost European countries.

Great hopes are cherished here that the External Loan which the Roumanian Government is now treating for through its representative, M. Titulescu, will materialise very soon.

The present parliamentary session will close towards the end of this week, after a very stormy existence, despite which the Government has succeeded in passing the following Bills:—The Pastureland Bill, Regulation of Labour Bill, Budget, Unification of Currency Bill, War Dependents Bill, and the Ratifications of the Treaties. A credit has also been passed (up to 30 million lei) for the reconstruction of the areas damaged by the war. The splitting up of the land among the peasants will begin very shortly.

There are signs that the Cabinet will be reconstructed during the recess. M. Matei Cantacuzino, the Minister of Justice, has already sent in his resignation, which goes to show that there is far from being complete harmony in the present Cabinet.

Since the visit of Dr. Benes, the Foreign Minister of Czecho-Slovakia, to Bucharest last week, a feeler has been thrown out to arrange an alliance between Czecho-Slovakia, Yugoslavia, Roumania, Poland and eventually, Greece, one of the objects of which is to prevent a Danubian Federation, by which Hungary would benefit most.

**General Joffre's Visit.**

When it was announced that General Joffre was coming to Bucharest, it was at first rumoured that it was on something more than a military mission, and people even talked about an "ultimatum" to Roumania, and of her being asked to intervene in the Polish-Russian struggle. These rumours proved to be false. General Joffre was received everywhere with enthusiasm by the Roumanians, and he fulfilled his mission by decorating the King with the "Medaille Militaire," and the towns of Bucharest and Marasesti with the Croix de Guerre. He also gave, on behalf of the French Government, several hundred thousand francs to various war relief funds.

General Joffre passed a very pleasant week amongst the Roumanians, and was a guest at several banquets and receptions given in his honour.

**Fire at Constantza.**

A disastrous fire has taken place at Constantza, in a large Government store, where imported goods of various kinds, ordered by the Ministry of Commerce, were awaiting distribution. The damaged goods are estimated to have cost 25,000,000 lei, although the present market value of same is estimated at 120,000,000 lei. They were insured for 80,000,000 lei.

A statement was made in the Chamber to the effect that there was evidence that certain quantities of these goods had been stolen before the outbreak of the fire, and a careful inquiry into the facts has been ordered.

# GEORGIA AND THE GERMANS.

**By Scotland Liddell.**

*(Mr. Scotland Liddell, the well-known war correspondent, was the Official British Press Representative in Mesopotamia and the Caucasus towards the end of the war. After twenty months in Trans-Caucasia, during which he was attached to the Intelligence Department of the British Staff in Tiflis, Mr. Scotland Liddell has only recently returned to England).*

Once upon a time there was a British newspaper correspondent who went to Tiflis. He only remained one day in the town, but he wrote a long article about the political situation in Georgia; and this article was published, and this article was absolutely untrue. Now, it so happened that the British correspondent went into a shop to buy a souvenir. He spoke to the shopkeeper in French, but the shopkeeper did not understand. Then he spoke in German, and the shopkeeper understood. But the shopkeeper did not say afterwards: "That Englishman is pro-German," but the Englishman wrote that the entire Georgian nation was Germanophil!

The libel spread, and the allegation has become a somewhat favourite one with those who have only a superficial knowledge of Georgian history, and who, briefly, do not stop to think before they write. So I must protest; the charges against Georgia have all been so very unfair. Georgia has come creditably out of many difficult situations; let us give honour where honour is due.

The latest cry of "pro-German Georgia" comes from the correspondent of a famous London daily who seeks to prove his charges by referring to (1) the Georgian-German alliance in the summer of 1918; (2) the employment of Germans in the Georgian Government departments; (3) the predominance of German goods in Georgia before the war; (4) the Georgians' knowledge of the German language; and (5) the fact that "large numbers of the leading public men, lawyers, doctors, and those engaged in commerce" were educated in Germany, and that "increasing numbers of Georgians start every day for a course at the German universities." Further, he states that the German was popular with the Georgians "even when German troops occupied Tiflis a year or two ago."

Now, as regards this last statement and that referring to the "Georgian-German alliance," there is only one fact that need be mentioned. In May of 1918, after the Russian *débâcle*, Georgia was faced with three evils—the Germans, the Turks, and the Bolshevists. She chose the first. On May 26, 1918, Georgia declared her independence, and the fact that the Georgian Republic was established with the aid of German bayonets is by no means to Georgia's discredit. The Bolshevists were thrown back, and the Georgian people were spared the agonies that Russia is suffering to-day.

Assuming that there really are "Germans" employed in Georgian Government offices, the correspondent ought to have made it quite clear that these officials are former Russian subjects—now Georgian subjects—from the German colonies in the Caucasus. These "Germans" and their families have been in Russia for generations. During the reign of Catharine II. (1762-1796) thousands of agricultural colonists came from Germany to Russia. "German" villages are dotted about the Caucasus. I have no recent statistics by me, but in the year before the war there were 60,000 German colonists in the Caucasus. Of these, 18,000 were in Trans-Caucasia, chiefly in the Tiflis and Elisavetopol provinces. To escape the horrors of Bolshevism, thousands of German colonists from South Russia have sought a refuge in the Caucasus, so that the figures are probably very much larger to-day than they were in 1913. If a government is pro-German because it has in its employment and service men of German origin, between whom and Germany there are a hundred and fifty years, then how very much more pro-German must the British Government be?—But this, of course, need not be gone into further! . . .

Before the war, Georgia was for a century a part of the Russian Empire—throughout which German goods predominated. Perhaps the German-Russian commercial treaties were specially advantageous for the trading Hun; perhaps the old-time Russian ministry was Germanophil; perhaps, simply, our British merchants were backward—no matter. The presence of German goods does not imply pro-German feelings. One might as well sneer at our little boys and girls because their nurseries were full of German toys.

As regards the Georgians' knowledge of the German language—this, also, is no crime. German, Russian, Georgian and Armenian are all spoken in the "German" colonies. The simple Georgian peasant invariably speaks at least two languages. The educated Georgian speaks three or more. During the Russian *régime*, the Russian schools—the only state schools then in Georgia—gave the German language first place in their curriculum. According to the new system of teaching modern languages in the Georgian schools to-day, the French language is given preference. Incidentally, I edited a weekly newspaper published in English in Tiflis, and as recently as June of this year three or four hundred copies were sold each week to local readers in Tiflis alone. Further, although the correspondent states that increasing numbers of students are proceeding from Georgia to German universities, he does not mention the fact that the Georgian Minister of Education has sent youths at the expense of the Georgian Government to be educated in England, France, Italy and the United States.

It has been repeatedly stated that secret treaties exist between Georgia and Germany. This is quite false. On the contrary, the presence in London to-day of the Georgian Economic Mission Extraordinary under the presidency of M. Kandelaki, the Georgian Minister of Finance, Commerce and Industry, shows Georgia's desire for economic relations with the Entente. This Mission has taken every means to interest British manufacturers in the exploitation of the forests, mines, and other natural products of Georgia, as is well known to the Chambers of Commerce of Manchester, Sheffield, and other large centres of industry, and to several British Ministers. If the energetic work of the Mission has not yet had much response from British capital it is no fault of the Georgian Government.

No doubt there are faults in Georgia's administration. But Georgia is only a baby Republic. She must creep before she can walk. With all her faults, there is this much to her credit: Georgia is, perhaps, the only part of the former Russian Empire where law and order exist to-day; Georgia is the only country of the former Russian Empire where Bolshevism has not obtained a footing—*au contraire*, the Bolshevists, having found strong opposition, have had to acknowledge Georgia's independence, and make a Treaty of Peace with her; during the two years of her independent existence Georgia has succeeded in organising her State administration and local self-government, has opened a large number of new schools and is almost the only part of the former Russian Empire where the lines of communication are working normally.

Finally, following the Bolshevist occupation of Baku, the Red army troops transgressed the Georgian frontiers with the object of linking-up with the Turkish Nationalists in Asia Minor, and setting the whole Mussulman world on fire with the Bolshevist-Young Turk torches. Georgian soldiers stubbornly resisted all attacks, and threw the Bolshevists back with heavy losses. War materials had been promised months before by the Allies, but they never materialised. Georgia unaided stemmed the Bolshevist advance, and for this alone we should ever be grateful to her. The Georgian Republic has been recognised by the Allies. The Allies should now help Georgia, and in doing so they will help themselves.

# CORRESPONDENCE.

## ITALY AND YUGOSLAVIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of August 5 you published a short letter of mine, in which I ventured to protest against what seemed to me the anti-Italian animus of an article written by your Correspondent in Belgrade. My object was to deprecate all violence of contumacious writing in view of the present state of international unrest.

In your issue of August 26 you published a letter from M. Glishitch containing a violent attack against myself. He accuses me of condemning Yugoslavian policy, which I never mentioned, of exaggerating Italian help to the Serbs in Albania, which cannot be exaggerated, and of saying no word of praise of the heroism of the Serbian army, which was certainly not in question and which goes without saying. Moreover, M. Glishitch takes the opportunity of repeating once more a mass of calumny against the Italians in Fiume and Dalmatia, which is totally without foundation, save in the heated imagination of himself and of his countrymen.

I yield to no one in my admiration of Serbian valour, proofs of which came to me almost daily for three years; but I had equal proofs of Italian valour in actions that took place under my own eyes. I am proud to number among my friends many Serbian officers, including Marshal Meshitch; but I have a still larger number of friends in the Italian army.

The Serbs have many reasons for gratitude towards Italy, not only because the Italian Fleet, with some aid from the Allies, saved the remnant of their heroic army in Albania. If M. Glishitch is ignorant of the proportionate aid of the three nations, let him consult the valuable little book by Mr. Archibald Hurd, entitled "Italian Sea Power in the Great War," published in the spring of 1918 by Constable. In it the author writes, on page 56: "It is not conceivable that restored Serbia will ever forget the debt she owes to Italy." "Nothing more epical in the war has been set on record than the amazing rescue of that stricken remnant," and he shows the truth of Mr. Balfour's remark in the House of Commons on February 23, 1916, that this amazing work was "chiefly due to the energy and ability displayed by the Italian Fleet." In any case, my letter was intended to be conciliatory, and to point out that Serbs and Italians were united in bonds of friendship when they fought together in Macedonia against the common enemy, and that there is no earthly reason, except the violence of such writing and calumny, why they should not be friends to-day. My only criticism of Yugoslavia was that they are "A young race with the hot blood of youthfulness." Does the violence of M. Glishitch's letter afford us a perfect demonstration of the justice of that criticism?—I am, etc.,

HAROLD W. E. GOAD,
(On behalf of the British-Italian League).

74, Grosvenor Square, London, W.1, September 2.

## ALBANIA AND ITALY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Having read the appeals of Miss N. E. Durham and the Hon. Aubrey Herbert in behalf of Albania in the recent issues of THE NEAR EAST, and knowing that your policy is to give the British public an opportunity to hear all sides of a disputed question, I believe that you will be as generous to the Epirotes as you are to the Albanians by permitting a few remarks to reach the British public through the columns of your excellent publication.

To-day, I received a communication from the President of the Northern Epirotic Society at Janina, containing valuable information about the Italo-Albanian war. The writer from Janina assures me that the reports sent out to the world about a real war between Italy and Albania are a smoke-screen. Northern Epirotes near the scenes of the reported battles assured him that the Italians have evacuated the country without a serious attempt at resistance; the casualties on both sides have been humorously few, and the Italians without the slightest resistance abandoned guns, machine guns and ammunition sufficient to equip fully an Albanian army of at least 15,000 men.

The letter then explains that Italy had long ago decided to abandon Albania, unable to raise men and money to hold and administer that country. But since Italy was the foremost nation to convince the Peace Conference that the Albanians were incapable of self-government, and would, therefore, need a mandatory—Italy—she could not now withdraw altogether from Albania, and permit another nation to administer the country of the Skypetars. Moreover, Italy could not look with equanimity upon the occupation of Northern Epirus by Greece. It was necessary for the sake of Italian interests to reconvince the world that the Albanians are a united people with a highly developed sense of nationality. And to attain this end the Italians, in spite of their agreement to surrender Northern Epirus to Greece, surrendered it to an Albanian Provisional Government, leaving to the latter large quantities of guns and ammunition with a view to enabling the Albanians to resist Greek occupation of the Province. This done, the so-called Italo-Albanian war was staged up in order to show the world that the Albanians are so united and so patriotic that they are capable of routing the armies of one of the Great Powers of Europe. The conclusion would thus be drawn that the Albanians would be able to defeat Greece if she attempted to enter Epirus.

Another letter from Korytsa gives the number of pupils attending the Greek schools of the district as 4,175, and those attending the Albanian schools as 442. It also states that France is pursuing a policy similar to that of Italy in respect of Korytsa. Thus, when the French troops evacuated Korytsa, the administration was not surrendered to Greece in accordance with the provisions of the Allied Note to Yugoslavia, of January 20, 1920, but was handed over to the notorious bandit, Sali-Boutka, who in 1916 sacked and burned the historic city of Moschopolis, with its last twenty-four Byzantine churches of rare architectural art. The French, like the Italians, left all their guns and ammunition to the Albanians with a view to opposing Greek occupation of the district.

Italy and France, for selfish reasons, are obstructing the union of Northern Epirus with Greece. There is only one great and loyal friends left to the Epirotes and the Greeks in general—Great Britain. Great Britain solemnly signed the note of January 20,1920. Whatever other nations may consider the violation of their solemn pledges, the British people look upon such practices with abomination, and abhor them as treacheries. The hope of the suffering Epirotes lies in the justice and the friendship of their beloved England.—I am, etc.,

N. J. CASSAVETES,
President Pan-Epirotic Union in America.

122, West 64th Street, New York, August 19.

## THE "LITTLE ENTENTE."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The entente arrived at between Czecho Slovakia, Yugoslavia, and Roumania as a result of Dr. Benes' recent visit to Belgrade and Bucharest has aroused considerable interest in European political circles, and has, on the whole, been favourably commented upon. Only a few Italian papers, such as the *Idea Nazionale*, evinced some misapprehension of this new entente, fearing that it might turn against Italy. These fears, however, have no justification whatever, for the main object of the Little Entente is the maintenance of peace in Central and Eastern Europe. It has no aggressive purposes at all. The idea of bringing these three States together was already developing in President Masaryk's mind during the war, and has been pursued ever since. To those who pleaded for the dismemberment of former Austria-Hungary it was evident from the very beginning that some kind of free economic and political co-operation must be brought about. The necessity for co-operation between Czecho Slovakia, Yugoslavia and Roumania has become all the more urgent in view of the threatening attitude of the Magyars, who even now cannot reconcile themselves to the present state of affairs in Central Europe.

The importance of the Little Entente can best be appreciated by the fact that it represents over forty million of people. Its constitution is the best answer to those who were afraid that, after the collapse of Austria, Central Europe might become a disturbing element and a danger to European peace.—I am, etc.,

ALEXANDER BROZ.

Czecho Slovak Press Bureau, 8, Grosvenor Place, S.W.1,
September 2, 1920.

In the third annual report of King George's Fund for Sailors, which, though inaugurated during the war, is to be a permanent fund, it is stated that among the grants made by the General Council during the year were the following:—£2,500 towards the establishment of the King George's Merchant Seamen's Hospital at Malta, and £1,000 to the Port Said Hospital towards the purchase of a new site for further extensions.

# PRESS ON THE NEAR EAST.

## Egypt.

*The Nation* of August 28 is avowedly thankful that British rule in Egypt is at an end. In commenting upon the condition in which we are leaving Egypt, and in particular of the benefits we have conferred upon her, it says:—

But there is one thing which we did not do in Egypt, and which time and fate have now decreed we shall never do. We gave Egypt the model, incomplete if you will, of scientific government. We never gave her institutions. When we, a people in the foremost files of time, leave Egypt to the Egyptians, as we are about to do, we bequeath them a country without a Constitution, a Code of Law, a system of education, or a University worthy of the name. We leave her village life unreformed and in its physical aspects untouched from the neglect of centuries. We bequeath to her new governors an all but illiterate population. And we have barely envisaged the Roman plan of enlisting the best thought and character of the people in the simple task of administering a country three-fourths of whose politics depend on the management of Nile water. The story of British administration in Egypt falls within a single chapter. With all its limitations, Lord Cromer's work of material amelioration was the deed of a master. It was achieved with a handful of disciples, and it never had a sequel. The more officials we added to his exiguous staff the less they did. Something lacking in our genius, a touch of spiritual sympathy with the people, and of political courage in our approach to them, stayed the work of reconstruction at the point when it might well have risen to moral grandeur. The second stage of the British occupation of Egypt is that of an Imperialism in decline.

It proceeds to say that "the final dissolvent of the Egyptian occupation was the war"; and so "it has happened that one of the great military and civil feats of the governing Englishman has begun and ended with an Occupation." It concludes:—

That the new relationship has been wisely conceived we have little doubt; nor do we share Sir Valentine Chirol's evident fears for its stability. If indeed it be true that after nearly forty years of mastery of Egypt we have left one of the most intelligent of Eastern races unprovided with a governing or an official class, Imperialism is its own accuser and judge. But in moving out of Egypt's way, while remaining by her side as a friend and adviser, we have done our best to ensure the success of this essay in a mixed Eastern and Western civilisation. Egypt is a simple problem in government; and if her rich will abstain from oppressing her poor, they may well make a better job of it than we made of Victorian Lancashire. Egypt under Great Britain was less a State than an outpost of Levantine trade. But with our departure the Capitulations come to an end, and the reign of equal law and taxation for native and foreigner begins. The Sudan does not, indeed, revert to her. But she will claim an equal share with us in the distribution of the waters of the Blue and White Nile; and as the Empire begins to take in sail, and to concentrate on the tremendous problems of its life nearer home, that dominion of the sand will lose its charm for the adventurous Englishman. Elsewhere there is pure gain. We are quit of a desperate and losing struggle with a united people of great political aptitude. We spare the best part of an Army Corps. We acquire a friend and a house of call on our way to the East, and an absolute security for that passage. We pacify Mohammedan India, and re-open the fast-closing path of the Montagu reforms. We husband our strength, moral, financial, political, and rise refreshed from at least one of the miserable conflicts of the war. We create a nation instead of destroying one; and build a bit of the new world, instead of waging insensate strife on its most plastic material. Imperialism is indeed stricken. Henceforth it is bound to recede in the national consciousness, and to take an ever lower and less honoured place in the fabric of the British Commonwealth. And that, in our view, is the greatest gain of all.

## Mesopotamia.

The *New Statesman* of August 28 utters a very plain opinion that Mesopotamia should be evacuated at the earliest possible opportunity. Its defence of this position is worth quoting.

We foresee several objections that will be raised to this plan. It will be urged that any such withdrawal will seriously injure our prestige, that our position in the East, and notably in India, requires a peaceful and amenable Mesopotamia, that the oil of Mosul is a real necessity, and that our presence is the only guarantee of its being effectively produced. None of these objections seem to us considerable. The capitalists of Europe and America have achieved more difficult things than getting the oil of Mosul; that is a task which can safely be left to them to manage, as they managed it under the old Turkish régime. And their power will not be weakened by the facts that the British Government is the largest of them and that the French Government is entitled to a quota of 25 per cent.! All the protection in a material sense that is needed for India will be assured by our position at Basra, whilst any attempt to enforce our will upon Northern Mesopotamia will only produce disturbances which will work us actual harm in India. As for our prestige, the days are gone when that depended on a large display of guns and bureaucrats. And surely to evacuate Egypt and yet to be frightened of the possible taunts of a few Kurdish tribesmen is to strain at a gnat and swallow a camel! All this, of course, is not to say that we ought at this moment to bolt before the "rebels" down the Tigris and the Euphrates. But we ought to make it clear that, if we are forced to "pacify" the country, that pacification is only the preliminary step to our leaving it. Trajan conquered and pacified Mesopotamia eighteen centuries ago, and Hadrian set it free within a year or two. Hadrian was a wise man.

## Egypt and Palestine.

In its issue for August 28 *Palestine* comments upon the new Egyptian proposals, and sketches their probable effect upon Palestine. It says:—

The agreement between Lord Milner and Zaghlul Pasha has a very direct strategic bearing upon the future of Palestine. Great Britain's strategic interest in that part of the world is constituted by the Suez Canal. That international highway, the road between the Eastern and Western halves of the British Dominions, must be kept secure. It was that necessity which brought England into Egypt. Now for practical purposes England is to abandon Egypt, for a garrison of 2,000 to 3,000 men in the Suez Canal zone by itself forms an inadequate security. This small force must have a strategic reserve in the immediate neighbourhood to which it can look. That immediate neighbourhood can henceforth only be Palestine. It is understood that Kantara is to be the headquarters of the Canal zone force. Kantara is the point on the Suez Canal from which the desert railway starts across the Sinai Peninsula to Palestine. The journey is not a long one, and as the Sinai Peninsula is practically uninhabited the railway line is safe. It is evident that the reserves for the Canal zone garrison will be stationed in Palestine, and that henceforth Palestine will be the real military bulwark for Great Britain of the Suez Canal.

Then, after showing how the substitution of Palestine for Egypt as the military base for the defence of the Suez Canal has been forced upon Britain, it proceeds:—

Economy, and particularly military economy, is the burning question of the day. Palestine is very happy to assume the task with which it is now entrusted, but its position must be understood. The defence of the Suez Canal is an Imperial burden, and that must be remembered when the accounts of Palestine are examined. The size of the garrison we shall keep in Palestine will be determined not by the needs of Palestine alone, but by the needs of the Suez Canal also, whose reserves will be maintained in Palestine. This distinction must be kept in mind in justice to Palestine, but there is a larger moral also. The strongest Palestine, the Palestine which is most capable of acting as warden of the Suez Canal, the Palestine which will relieve the British taxpayer of financial responsibility, is a Palestine inhabited by a laborious, devoted, intelligent, and politically mature population. It is, in other words, a Jewish Palestine fit to take its place among the self-governing Dominions. The policy of wisdom and the policy of financial prudence is to hasten, by every practicable measure of encouragement and assistance, the development of a Jewish Palestine.

# NEAR EAST BOOKSHELF.

I.—"KOSTES PALAMAS: LIFE IMMOVABLE." Translated by Aristides E. Phoutrides. (U.S.A. Harvard University Press. $2.00.)

II.—"WANDERINGS WITH A CAMERA IN MESOPOTAMIA (BABYLONIA)." By Alfred Vowles, F.R.G.S. (London: Simpkin, Marshall, Hamilton, Kent and Co. 6s. 6d. net.)

III.—"THE BRIDE OF SHIVA." By Henry Bruce. (London: John Long. 7s. net.)

## I.—KOSTES PALAMAS.

It was because we were told on the cover of this book that French critics have already placed its author, Kostes Palamas, as the greatest of all poets of contemporary Europe, that we opened it with misgiving and the chill fear of probable disillusionment. For the ordinary French critic has a flair for discovering genius: it is a habit of which in some extraordinary way he does not seem to tire. However, we freely admit that we are quite unable to appreciate the worth of the verse of Palamas, for the translation which Mr. Phoutrides here gives us is avowedly tentative—he has not, for instance, "attempted to render rime, a dangerous obstacle to a natural expression of the poet's thought and diction." We can but guess, therefore, that there is a beauty in the original which the translator has not been able to convey.

Kostes Palamas, Mr. Phoutrides tells us, was one of the group of Μαλλιαροί, whose contention that modern Greek literature should be written in the living language and not in the classical tongue of Ancient Greece raised such bitter quarrels among students in Athens about twenty years ago. The translator of this book himself was, when a student at Athens, on the side of the purists against Palamas, but gradually he saw reason, and after he had lived for some time in America the greatness of this poet "began to dawn" on him. Just before the European war he, as a travelling fellow from Harvard University, visited Palamas in Greece, and became a whole-hearted convert to his views. It is as a tribute to the man whom he once reviled that he came to compile this volume of translations.

The greatness of Palamas is not manifest in these English words. There is not enough life in the translation—not enough colour—to convince us that here the voice of a new poet is speaking. But Mr. Phoutrides wishes his work to be judged "as that of a mere pioneer," so that criticism must be withheld. At times, however, it must be admitted that he does succeed in faintly outlining what must be magic in the original; as, for example, in the opening of a sonnet on Athens in "Fatherlands," which is the first of five collections of poems that go to make up the first half of "Life Immovable":—

> Sky everywhere; and sunbeams on all sides;
> Something about like honey from Hymettus;
> The lilies grow of marble witherless;
> Pentele shines, birthgiver of Olympus.
>
> The digging pick on Beauty stumbles still;
> Cybele's womb bears gods instead of mortals;
> And Athens bleeds with violet blood abundant
> Each time the Afternoon's arrows pour on her.

It will be seen from this extract that though the translator does not come near to writing poetry, there must be something very like it in the original Greek. But his purpose in preparing this book is admirable, for modern Greek literature is very ill known outside Greece; and we hope that his work will succeed in arousing interest in the contemporary writings of what is now the greatest nation in the Near East.

## II.—PICTURES IN LOWER MESOPOTAMIA.

The title of this little book leads us to expect that the illustrations will be at least as important as the letterpress; and the expectation is justified. The photographs, of which there are sixty, placed together at the end of the book, are extremely good as a rule, though some of them would have looked better if reproduced to a larger scale; the letterpress is less satisfactory, by reason of a certain lack of cohesion. This defect is due, no doubt, to the circumstances in which the author gathered his material: he was a lieutenant in the 1/4th Dorsetshire Regiment, and must very often have had other things to think of than taking photographs or writing up the diaries on which his book is based. But if his notes take second place to his photographs' first, that is not to say that they are either uninteresting or valueless. As a matter of fact, they are the direct opposite. Mr. Vowles has a keen eye, an inquiring mind, and a large stock of enthusiasm, and his observations are shrewd and interesting. It is particularly refreshing to find him writing of the country with something like affection, and deprecating the "abuse and adverse criticism heaped upon it." Naturally he is particularly interested in the changes that have been wrought in the land since we set foot in it as its liberators; and his observations and descriptions, sometimes his casual mention of some point in connection with these changes are calculated to astonish those of us who knew the old land when the Turk still ruled over it. One or two of his pictures, too, set us rubbing our eyes, but others seem to show that in some ways at least the country and its people remain much as we knew them, and—frankly—we prefer them to the others. Therein we think lies the greatest charm of what is really a very pleasant little book: it will summon up agreeable memories for those who know the country; and to all who served with the Mesopotamia Expeditionary Force it is sure to make a strong appeal. We congratulate the author on a very creditable bit of work, and the publishers on their share in the production.

## III.—SHIVA, THE DESTROYER.

When we realise that this novel deals with the subject of the worship of Shiva in India and the rites connected with that worship, we expect to find it pervaded by a sinister atmosphere. And its whole tone is indeed one of sordid tragedy. Among the chief characters to whom Mr. Bruce introduces us is a native woman who had been a temple dancing girl, dedicated to the service of Shiva, and who had married an Englishman. Since her husband's death it has been the passionate desire of Venubai to atone for this marriage by gaining as a recruit to her former profession her beautiful half-caste daughter, Betty Stuart.

The difference between the native mother and the half-English Betty is very cleverly brought out. Fulton, a young Englishman, who loves Betty and tries to save her from her fate, and to enlist the help of the British Resident, is quite powerless against Hari Pant, chief priest of the temples of Lingam, the guide and adviser of the girl and her mother. In the end we leave Fulton terribly wounded in a religious riot, and the Resident killed by snake bites—a death planned by the priest. But even this rather lurid climax does not produce such an impression of gloomy horror as an episode near the beginning of the book. It describes a several days' journey, undertaken during the monsoon by a bigoted, fanatical missionary with his wife and family, and ends in his being swept away in an attempt to cross a flooded river. He refuses to travel on the Sabbath, and the picture of the family, ill and wretched, shivering through the day in the damp, cheerless, dâk bungalow, is most unpleasantly realistic.

There are some words in the last chapter which suggest that Mr. Bruce may mean to tell us more of Betty Stuart's fate in another volume.

Mr. H. S. Job, manager of the National Bank of Egypt, left Khartoum on August 13 for England.

Princess Bibesco and her brother, Mr. Anthony Asquith, left London on September 1 by aeroplane for Paris.

Ghaffer Khan, Persian Minister Resident, returned to London on August 31 from Hastings.

An exhibition of the statuary of the Serbian sculptor Ivan Mestrovitch was opened on August 29 at Antwerp.

The Hon. Percy Thellusson has left England for Egypt and India.

King Alexander has conferred upon M. Venizelos the Croix de Guerre with laurel leaves.

Lady Clerk, wife of the British Minister to Czecho-Slovakia, has returned to Prague.

Prince Carol of Roumania is staying for a short time at the Ritz Hotel.

A State visit by the Crown Prince of Yugoslavia to Bosnia and Herzegovina is being arranged.

Mrs. Sefton Findlay sailed on September 5 by the steamship Morea to join her husband in India.

M. Jan Masaryk, son of President Masaryk, has been transferred from Washington to the Czecho-Slovak Legation in London.

Mr. Tcheidze, the President of the Georgian Legation in London, accompanied by Colonel Prince Melikov, has arrived in town from Paris.

Mme. Gavrilovitch, the wife of the Minister of the Kingdom of Serbs, Croats, and Slovenes, returned to London last Friday from Hastings.

The President of Czecho-Slovakia, Dr. Masaryk, has left Prague for the country, where he intends to take six weeks' holiday.

M. Take Jonescu, Roumanian Minister for Foreign Affairs, is expected to arrive in London during the third week of September.

Rear-Admiral Sir Richard Webb has retired from the post of Assistant High-Commissioner at Constantinople, which he has filled for about eighteen months.

M. Stambolisky, Prime Minister of Bulgaria, who is coming to England at the invitation of the British Government, is expected to arrive in London on October 1.

Our Belgrade Correspondent writes (September 1):—

Captain Yovanovitch, who is well known in London, where he lived several years before the war, and then served as Assistant Military Attaché, has been appointed Honorary Consul-General.

Before leaving Belgrade, Marshal Joffre presented 2,000 dinars to provide milk for war orphans, and 15,000 dinars for the benefit of war invalids.

Exequatur has been granted to Don Sebastiano Romer y Radigales, the new Spanish Consul on the Kingdom of the Serbs, Croats and Slovenes.

Dr. Ante Trumbitch, Minister of Foreign Affairs, has arrived from Paris.

Admiral de Bon, commanding the French Mediterranean fleet, with 15 officers and 15 marines, has arrived at Jerusalem.

Sir Murdoch and Lady Macdonald have arrived at the Grand Hotel, Broadstairs, where the Maharanee of Cooch Behar is also staying.

Professor Garstang, of Liverpool University, who is Director of the British School of Archæology in Jerusalem, is preparing to excavate the famous Crusader city of Askelon.

It is stated that Lord Hardinge, now Permanent Secretary of the Foreign Office, will be appointed to the British Embassy in Paris upon Lord Derby's retirement in November.

M. Michel B. Boeresco, Minister Plenipotentiary and Chargé d'Affaires of the Roumanian Legation, entertained at luncheon on September 1 Captain Bowring, the British Naval representative in Bucharest, and Lieutenant Fletcher, R.N., of the Admiralty.

A marriage has been arranged and will take place in London on September 18 between Mr. A. Harold Masters, Secretary to the Consul-General of the Kingdom of the Serbs, Croats, and Slovenes in Belgium, and Miss Mabel Whybrow, of Selhurst, Surrey.

The King has granted authority to Commander Sir Edmund Wyldbore Smith to wear the insignia of a Commander of the Greek Order of George I., and to Mr. Octavius Pelly Dick, Mr. Henry Charles Reeve, and Mr. Bernard Henry Dobson, to wear the insignia of Officers of the same Order.

Mr. James Hamilton, of The Hollies, Newlands, Glasgow, merchant, of Messrs. William Milne and Co., of Glasgow, manager of the Burma Oil Company, Limited, who died on July 18, left personal estate valued at £212,829, of which his holding in the Burma Oil Company, Limited, is valued at £127,200.

The Crown Prince of Siam is expected to arrive at Calcutta on October 5. Arrangements have been made for him to visit, among other places, Simla, Peshawar, Delhi, Lucknow, Agra, Saugor, Bombay, and Madras. He will leave Calcutta on November 23 for Rangoon. The Prince will be the guest of the Government during his tour in India.

Sir Percy Cox, who is on his way to Mesopotamia as High Commissioner, has selected as his Chief Civil Secretary Mr. C. C. Garbett. Mr. Garbett, who is joining the Morea at Marseilles on September 11, has had considerable experience in Mesopotamia, for during the war he was responsible for the agricultural development scheme undertaken by the military authorities. Since 1918 he has been acting as additional Assistant Secretary in the Political Department of the India Office, where he has been studying the English side of the administration of Mesopotamia. During the Peace Conference meetings in Paris last January, Mr. Garbett accompanied Mr. Montagu as expert on Mesopotamian problems.

## APPOINTMENTS, ETC.

The Bulgarian Government has agreed to the nomination, as Italian Minister Plenipotentiary at Sofia, of Count Alduvandi Marescotti di Viano, who held Cabinet rank under Baron Sonnino.

Lieutenant-Colonel Stewart Symes, Assistant Director of Intelligence to the Sudan Government, has been appointed Governor of Haifa.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

ENGINEER age 36, with energy and ability, wishes to hear of appointment at home or abroad, in position of responsibility and trust. Is qualified mechanical and electrical Engineer, and has had good experience in manufacture estimating and contracting work, also general management of large manufacturing concern. Write Box 172, THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

## OBITUARY.

The death took place on September 1 of Sir Charles James Lyall, K.C.S.I., C.I.E. Sir Charles, who was born in 1845, joined the Indian Civil Service in 1867 and served in the North-West Provinces as an assistant magistrate and collector. He acted as Under-Secretary to the Government of the North-West Provinces in 1871-2, and after holding other Under-Secretaryships became Secretary to the Chief Commissioner of Assam, and later Judge and Commissioner of the Assam Valley Districts. Other offices held by him included those of Secretary to the Government of India in the Home Department, Chief Commissioner of Assam, and Chief Commissioner of the Central Provinces. After his retirement in 1898 he served for two years as Secretary of the Judicial and Public Department at the India Office. Sir Charles was a great authority on Hindustani and Arabic. He was the author of articles on Hindustani literature in the "Encyclopædia Britannica," and had published a sketch of the Hindustani language, as well as translations of ancient Arabic poetry. In addition to being a vice-president of the Royal Asiatic Society, he was a member of many other Eastern bodies. His son, Mr. Charles Elliott Lyall, who was born at Simla in 1877, entered the Sudan Civil Service in 1901 and since 1917 has been Governor of the Kassala Province.

Sir Henry Stewart Cunningham, late a Judge of the High Court of Calcutta, died at his house in Eaton Place on September 3. He had been ill for a long time, and during the past few weeks had been gradually sinking. He was born in 1832, and was called to the Bar at the Inner Temple in 1859. He was Advocate-General of the High Court of Madras and an additional member of the Governor's Council in 1872-7, and sat as a Judge in the High Court of Calcutta from November, 1877, until his resignation in July, 1888. The following year he was created a K.C.I.E. He was a man of strong literary tastes, and the author of several good novels of Indian life and of two excellent biographies.

## NEWS IN BRIEF.

The Imperial War Museum at the Crystal Palace has acquired the flag of truce hoisted by the Turks on the surrender of Jerusalem, the flag used by Lord Allenby on his entry into the town, and the flag of scarlet silk laid by the ex-Kaiser on the tomb of Saladin at Damascus (presented by Emir Faisal).

The Secretary-General of the League of Nations, on behalf of the Council, has invited the German, Austrian, Hungarian, and Bulgarian Governments each to appoint three delegates to attend the International Financial Conference, to be held at Brussels on September 24.

Persia has expressed regret for the murder of the German Consul, Herr Wustrow, at Tabriz, and for the recent attack on the German Consulate at Tabriz.

Lieutenant Vladimir Jabotinsky, the founder of the Jewish Legion, arrived in London last week.

A brother of the man Tserapis, formerly an official in the Foreign Ministry, now in the custody of the Paris police in connection with the attempt on the life of M. Venizelos, has been arrested at Athens.

The Zionist correspondent of *The Times* at Jerusalem writes (August 31)):—Jewish immigration has begun without incident, and the hundreds arriving weekly are finding work on Jewish farms and in the building of roads. The authorities have ordered every official announcement to be published in English, Arabic, and Hebrew.

A message from Valona states that the last Italian troops have left the town.

The *Kolnische Zeitung* reports that the Italian and South Slavonian Governments have asked Austria for the extradition of war criminals, among them Reichsgovernor von Horthy.

It is proposed to erect a memorial in India to the Gurkhas and their officers who were killed in the war. The memorial will take the form of a cenotaph and hostel at the recruiting headquarters of Gorakhpur and Darjeeling, where the widows of the fallen come to draw their pensions.

Prince Ahmed-Fuad-Eddin gave a dinner at Milan last Thursday in honour of the Emir Faisal and the chief members of his suite.

While on his voyage to England from the United States, the Crown Prince of Roumania presided over a concert in aid of seamen's charities, held on board the Aquitania. The Prince said that the Roumanian people were thoroughly cognisant of the noble contribution made by the British Merchant Service towards the winning of the war by the civilised nations of Europe. Many passengers were presented to the Prince by Viscount and Viscountess Maitland.

Our Belgrade Correspondent writes (September 1):—Diplomatic relations have been restored with Germany, whose Minister, Herr von Keller, was received by the Ministry of Foreign Affairs on August 31.

In the new Constitution of Malta the Colonial Secretary of Malta has decided that a proviso shall be introduced requiring a deposit from each candidate for the Legislative Assembly of £20, which will be returned if the candidate secures a prescribed number of votes.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

## PEASANTS AND POLITICIANS.

To the observer at a distance the population of the Balkan regions appears to be composed entirely of peasants and politicians, and while the generalisation, like most others of the kind, is, of course, not formally accurate, it is nevertheless true that these two classes are most conspicuous to the foreigner, and that their activities are the principal sources of the misapprehensions regarding Balkan politics which have prevailed for so long. The ordinary Englishman knows by experience what politicians are, but he is usually unable to forecast their activities in the Balkan countries; of peasants he knows nothing whatever, and any attempt to argue from experience of capitalist farmers to nations of small holders must inevitably lead to ludicrous misunderstanding of the real position. For there is a definite peasant mentality, tinged indeed by racial and regional peculiarities, but fundamentally one, and recognisable in Europe, Africa, and Asia, wherever masses of men earn their living by working on the land, not, as in England, for an assured wage, but for whatever return their toil and knowledge can extort. To the peasant, life and work mean the same thing. He knows nothing of fixed hours or "overtime," and if the day be too short for the task, the night must be pressed into the service of his holding. The land claims everything: the wife must work by her husband, the children by their parents. If relaxation be desired, it must come when no work is waiting to be done; the holding is a stern taskmaster, and the tale of the bricks is not diminished though the supply of straw may be withheld. In the conditions which have hitherto prevailed, such a life inevitably produces a distinctive character and outlook. The peasant in the Balkans, like his brothers in France, or India, or Egypt, is easily to be recognised by his strong points as well as by his weak. Narrow, suspicious, pessimistic, covetous, if you will, he is at the same time patient, sturdy, steadfast, and an admirable foundation for a strong and stable State.

If we ask what such a community can be expected to produce in the way of politicians, we shall be forced to recognise that the available sources are scanty. The peasant himself can rarely take an active part, for even though he should possess the necessary attainments, the land claims all his time and nearly all his thought. A wealthy leisured class may or may not exist, but at the best it is exceedingly unlikely that its members will be bound by that tradition of gratuitous and disinterested public service which has counted for so much in English history, and which in a somewhat different form is such a remarkable feature of life in the United States. The peasants must look to the towns and cities for their politicians, and until commerce and industry are highly developed, the demand must be met from the professional classes, and very largely from the law. Now, we are far from sharing the popular prejudice against lawyer-politicians as such. Lawyers are an indispensable element in our modern civilisation, and it is only right that they should bear their proper share of the national burden; but a superfluity of lawyers is a different matter, and we believe that informed opinion in general accepts the dictum of the Joint Report on Indian Constitutional Reform, that the preponderance in politics of men of any single calling is not in the interests of the community as a whole. In a peasant state, however, the lawyer-politician has a peculiar drawback arising from the nature of his relations with his constituents. We have described the peasant as suspicious, and, speaking broadly, his suspicions are concentrated on lawyers as a class. He hates the money-lenders, whose practices he can understand; but he suspects the lawyers, whose ways are beyond his comprehension, and his mistrust is ordinarily tinged with fear. A lawyer can, therefore, rarely hope to stand out as the natural leader of a peasant community, or even as the natural representative of a peasant constituency; to secure such a position, he must rely largely on promises, which, in order to be effective, must be concrete and localised. A new branch railway, a road or a bridge, a subsidy of some sort or other; these are offers which the peasant can appreciate, and we cannot wonder if they enter largely into electoral contests; but it is important to realise that, unlike some classes of electors, the peasant will insist on the delivery of the goods. Promises must be carried out, or a new constituency sought, and it is to the nature of the electioneering imposed by the conditions we have indicated that we must attribute many of the least satisfactory aspects of political life. When a large proportion of the popular representatives are committed in advance to distinctively local interests, the legislature as a whole is likely to be dominated by activities of the type described as "log-rolling," and to be characterised by dangerous incoherence of parties and the sacrifice of permanent national interests to momentary sectional advantages, while the administration must be weak at home, and can scarcely hope to escape the injurious contempt of other nations. In administration and legislature alike, corruption will be imputed, if it does not, in fact, exist, reasoned argument will give place to discussion of the motives affecting individual conduct, and the whole political environment is apt to take a sordid tint.

If such is the type of politics to be expected in a peasant State, in whatever continent it may be situated, let us turn to consider the possibility of its improvement. It may be taken as certain that for any permanent advance we must look to the peasants themselves. We do not suggest that they should cease to be peasants, but it is possible for them to develop gradually a wider outlook on the world, an increased reliance on their own judgment, and at the same time a demand for better politicians than those whose services they now secure. It is, however, exceedingly improbable that any body of peasantry will advance far in this direction without external guidance and inspiration: the impetus must come from the relatively small number of citizens whose experience has caused them to be dissatisfied with existing conditions, and who are sufficiently patriotic to be willing to devote time and energy to their improvement. The precise nature of the impetus will probably vary with the circumstances of individual States: in some cases a purely cultural movement may suffice, while in others a definitely economic basis may be required, but in all alike the burden must be shouldered in the first instance by the few. Perhaps we should rather say, the privilege must be claimed. In the Balkans, as in other peasant States, there are men and women profoundly dissatisfied with things as they are, but regarding the direct reform of politics as a hopeless enterprise. Let them turn their attention to the peasant, more effectively than they have yet done: let them concentrate their effort on widening his outlook: let them devote themselves to his education in the broadest sense of that ambiguous term, and we are confident that they will find the enterprise very far from hopeless. Experience gained in various countries shows that even a small advance in economic and social life may produce an altogether disproportionate effect in the political field. The way to get better politicians lies through the gradual uplifting of the masses of the peasants.

# THE RULERSHIP OF MESOPOTAMIA.

**By Sirdar Ikbal Ali Shah.**

It is a recognised and strictly observed principle of British diplomacy to make no suggestion and offer no advice on matters in which there may be a risk of international misunderstanding involved; and the British people, wishing not to hurt French susceptibilities, have refrained from discussing the present Near Eastern problems. But now that we are on the eve of what would seem to be a prolonged and troublesome war in Mesopotamia, the writer, an Afghan, may, perhaps, with advantage set forward the Moslem point of view, which is taken in the Middle East regarding events in Mesopotamia. What will follow is a very faithful account of facts.

It has been stated that an attempt has been made to "run" the Mesopotamian administration on Anglo-Indian lines, also that the Arabs have been heavily taxed in connection with the exploitation of the country, and have found British rule a good deal more irksome from the financial point of view than any other system of government they have yet experienced. Whatever the facts that support these statements, it remains undisputed that such ideas have actually got a firm grip in certain quarters. Moreover, in the general desire for self-determination, the Arabs have shown a wish to be governed by a chief of their own race. They have no intention of throwing off the British mandatory influence, just yet, but with it they will remain content if an extravagant bureaucracy be replaced by an administration economical in method and of reasonably intelligent aims, and if a man of their own race with a knowledge of Arab idiosyncracies be set over them to act as intermediary between them and the British officials who have been appointed to guide the destinies of their country into modern channels.

Perhaps no man is better fitted to rule the emirate of Mesopotamia or is more likely to mediate successfully between the Arabs and British officialdom than Shereef Ali Haidar, now in exile in Constantinople. He comes of a family which has in the past shown marked Anglophil sympathies, and he himself, despite the part he has been forced to play by German diplomacy, is no less a friend of this country than were his fathers before him. His ancestors have ruled in Arabia for one thousand years, and only ceased to do so through the machinations of the late Sultan Abdul Hamid.

The story of Ali Haidar is eloquent of the spirit of Oriental intrigue.

So lately as two generations ago the emirate of Mecca was held by Shereef Ghalib, who was exiled to Salonika through the intrigues of Mohammed Ali of Egypt. This schemer then suggested Mohammed Ibn-Awn as Emir, and effect was given to his wishes. But soon afterwards, Ali Haidar's grandfather, Shereef Abdul Muttalib, was restored to the throne of his fathers. In 1880, he offered a strenuous resistance to Turkish pretensions in the Hejaz; but when the family of Mohammed Ali proposed an anti-Turkish alliance with him the memory of ancient wrongs received from their house proved too strong to enable him to accept. In revenge for this the descendants of the Egyptian Khedive declared that Adbul Muttalib was intriguing with the British against the Turks. This statement naturally excited the strongest suspicions at Constantinople, and these were by no means allayed when the Sultan exiled Midhat Pasha to Mecca, with secret orders to Abdul Muttalib to kill him. That piece of treachery the Emir refused to carry out; he had, indeed, given Lord Dufferin his word that no harm would befall Midhat through his agency; and when, at last, Midhat was killed, Muttalib was imprisoned in his palace till the act was consummated.

At length, in 1882, Muttalib was deposed by Abdul Hamid for his pro-English sympathies, and it is clear that his countrymen seem also to have regarded him with some suspicion as being the friend of England. Indeed, *The Times* of June 5, 1882, states that they "attribute to the British Government designs of gaining ground and influence in Arabia." Muttalib's grandson, Ali Haidar, had been sent as a hostage to Constantinople whilst yet a child, and he grew up under the eye of the Turkish authorities. This, however, did not prevent him from being suspected of inheriting his grandfather's sympathies for the English, a suspicion which was carefully fostered by Refik and his party, whose head, Hussein, was given the emirate of the Hejaz.

When Muttalib died Ali Haidar, now grown to manhood, laid formal claim to the emirate of Mecca. But owing to his supposed pro-British attitude he was passed over and his cousin Ali was chosen. Circumstances arose which compelled Ali to fly to Egypt, and he was succeeded by Hussein, head of the rival branch of the family. When the great war broke out, and Turkey declared for the Central Powers, Hussein and his sons rebelled, and the Turkish authorities offered the emirate to Ali Haidar, thus acknowledging his right of succession. His acceptance was only natural, and when in 1916, with a large Turkish force under his command, he proceeded to Medina, he was, in reality, opposed to his British friends through circumstances over which he had no control. On the defeat of Turkey, Ali Haidar, of course, forfeited his emirate, which returned into the hands of Hussein, who is now King of the Hejaz.

To-day the Arab world is seething with discontent, and the outbreak in Mesopotamia might easily spread until it embraced the whole of Arabia proper. We shall do ill if we permit this to come to pass through lack of consideration of the claims of those great chieftains who are best fitted to voice the needs of their own race.

Ali Haidar, did he succeed to the emirate of Mesopotamia, would be the last to countenance the feuds which have distracted this district for so many generations. He is eminently a man of peace, and war or disturbance of any kind would be the last thing he would desire for the people over whom his ancestors formerly ruled. Nor would he place any difficulties in the way of Hussein or Faisal, who are his kith and kin. Haidar has undoubtedly a better right to an Arabian emirate than Hussein or Faisal, for not only is his ancestry from the ancient emirs of the country duly proven, but as a firm friend of Britain and a naturally capable ruler he is more suitable personally than either for the vacant throne. Moreover, he would be most acceptable to the Arabs of Mesopotamia, who hold his descent in the greatest reverence, and rightly regard him as in the true line of the Prophet. He would thus be able, because of the influence he could bring to bear on the more unruly chiefs, to mediate in all matters between them and the British officials who would adminster the affairs of the country. Nor would he in any way attempt to set up a rival Arab state in opposition to the Hejaz, or make efforts to annex that country, such as other claimants for the emirate might do.

It is unfortunate indeed that Haidar and his claims are not better known in England. He must in no sense be identified with the rebellion that has broken out, of which he is entirely innocent; and those who know him are aware that his love of constitutional and pacific methods would never have countenanced such a proceeding. Nor can it be too strongly declared that he has absolutely no connection either with Turkey or Germany. When he went to Mecca with a Turkish force, it was not because he desired to side with these reactionaries, but merely because he wished to claim his rightful inheritance.

Ali Haidar's family tree is in the hands of the writer. The importance of his branch of the House of the Prophet is shown by the fact that it has produced no fewer than twenty shereefs, while that of Hussein has produced only three. This circumstance naturally weighs very greatly with the Arabs, who regard him as a fitting and proper leader of the national cause. Such leaders as would be acceptable to the British Foreign Office are few and far between, and it would be most unwise to pass over the claims of Haidar in favour of those who are not regarded by the Arabs as having so strong a claim to the throne.

Digitized by Google

Nor are the claims of Faisal in Syria any less clear. Taking everything into consideration, his banishment by the French authorities has undoubtedly been a most maladroit act. Not only has Faisal proved himself a true friend to the Allies, but there is the clearest evidence that had he not assisted them in Syria in the most whole-hearted manner the French could not have been enabled to secure a sphere of influnce in that country. The causes of his banishment are obscure to all but those who brought it about, and the policy which dictated his removal cannot be regarded as sound by persons who have a knowledge of the political affairs of the Near East. Faisal himself will shortly arrive in this country, where it is to be hoped his case will receive that just and patient hearing to which it is most eminently entitled.

It is of the utmost importance to Great Britain that the interior affairs of the several Arab states should at the outset of our suzerainty of these regions be placed on a foundation prepared by sound and just statesmanship, otherwise, as has unfortunately been the case in certain of our Eastern Protectorates, internecine strife and age-long irritation will undoubtedly ensue, leading to the most vexatious and expensive disturbances, and turning what might be an excellent *milieu* for commercial expansion into a chaotic wilderness more fruitful of faction and rebellion than of industry and progress. In the welter of controversy in which our governors at present find themselves hasty decision regarding Mesopotamian affairs is much more strongly to be deprecated than would be the case elsewhere, because as our foundations are in that country, so will be the edifice we gradually raise upon them—ever insecure and threatening to fall, or sound and able to endure.

The State Department in America has received the British reply to the recent American Note requesting information on the reported Anglo-French policy regarding oil supplies, notably in Asia Minor. The Note, however, was so badly mutilated in transmission that it is incomprehensible.

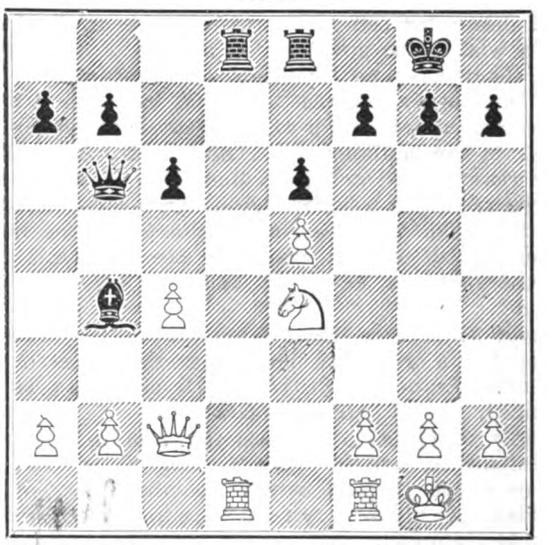
Position at White's 19th move.

Black.



White.

(1) Kt—B3 is much preferable. Then would follow 5 Kt x Kt, KtP x Kt with a fair game. QP x P is often recommended at this stage for Black, but it has the defect of leaving the centre very weak.

(2) B—K3 should have been played. In this opening the B serves no useful purpose at K2.

(3) Preparatory to P—QB4.

(4) Waste of time in view of White's previous move. Better would have been O—O followed by Kt—Kt3 with a view to a concentration on White's QP and also to prepare for P—QB4 after QR—QB.

(5) All this is excellently played by White, who is now in a position to establish himself at K6.

(6) P—Kt3 would have led to the isolation of the White P at K6, but it would not have saved the game.

(7) Winning a pawn.

CARO-KANN.

## AN EXPERIMENT IN PALESTINE

An interesting experiment in the allocation of public works in the Holy Land is reported in the *Palestine Weekly*, a contract for the construction of a road between Semech and Tiberias having been placed with the Jewish Agricultural Labourers' Association, a co-operative undertaking. The Association has its own system of taxation and a sick fund, and a portion of the wages of each member is placed to reserve to provide for the contingency of loss on the contract. Recently the Association was approached by the Palestine Arab Club of Tiberias with a view to local Arabs participating in the work, and a certain number of Arabs have been employed on a co-operative basis, the Arab Club being responsible for the behaviour of the workmen. This incident is typical of the better feeling now prevailing in Palestine between Jews and Arabs.

An unconfirmed report of an attempt to assassinate Kemal Pasha near Tokat has been received in Paris from Constantinople. It is stated that Kemal Pasha was wounded, and his companion, named Samis, was killed.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

British labour troubles are followed with close attention all over the Continent, and particularly in South-Eastern Europe. There the experiences of Western countries are faithfully reproduced, but, somehow or other, with a certain amount of unreality. Presumably labour has not found its feet to the same extent, and its efforts to imitate countries more highly industrialised fall short of the desired effect. Be that as it may, the threatened coal strike, we may be sure, is being watched with considerable interest, because, if the worst happened, the Near East must be affected in some degree. But for the benefit of our Eastern readers we will hazard the prophecy that the worst will not happen. The miners may come out on strike on September 27, but if our tenderfeet, whether inside or outside the Government, will "sit tight" and let them strike, the Labour movement will receive the biggest setback that it has known, and it will receive that setback in a remarkably short time after the declaration of the strike. The miners' leaders appreciate the fact; hence the mobilisation of other trades unions for the purpose of making peace before the strike day arrives.

***

The production of petroleum in Roumania for the first six months of this year amounted to 464,669 tons as compared with 539,392 tons for the same period in 1919, a reduction of 14 per cent. The output in 1919 represented a decrease of 25 per cent. as compared with that of 1918. This year's figures have benefited by certain oil eruptions (one on the property of the Steaua Romana and another from a bore-hole belonging to the Astra Romana). Otherwise a still further reduction would have had to be recorded. The backward condition of the industry is due to lack of machinery, aggravated by the labour question and, of course, the deficiency of transport. The total output in 1919 was 919,847 tons, as compared with 1,783,947 tons in 1914, and 1,885,619 tons in 1913.

***

On another page appears an authoritative statement regarding the present position of Roumania's oil industry. The author of the paper of which a summary is given estimates production for the rest of the year at only 2,200 tons a day, or 42 per cent. of the pre-war total. Whether this is an unduly conservative estimate remains to be seen; but it is certainly well below the output for the first five months of 1919. With this diminution of production goes the increased home consumption, due to the additional territory incorporated in the Roumanian kingdom as a result of the war, and the net result to the outside world is that it is likely to be shorter of petroleum products, as far as Roumania is concerned, by one million tons.

***

Elsewhere we publish the main features of a recent Order of the Direction de Prévoyance in Bulgaria issued with a view to preventing speculation in commodities and to limiting the profits of traders. The measures, it will be seen at once, are drastic, and in their entirety are not altogether feasible. I can quite understand that they have caused consternation among foreigners dealing with Bulgaria, especially our own countrymen. For instance, is it possible that a British manufacturer will appreciate having to have his invoices certified by "a Bulgarian Consulate, the local Chamber of Commerce or Municipality"? Unless I am mistaken, representations on the subject, which have already been made in Sofia, will cause the more vexatious of the provisions to be rescinded.

***

Full sympathy will be felt with the Bulgarian authorities in their desire to prevent their people from being exploited, and with the leva at anything between 150 and 300 (actually to-day 180) to the pound sterling, the need for preventing profiteering will be appreciated. But it is essential that trade should not be hampered, that is to say, in regard to those goods which are needed in the country. I think luxuries, of course, in the present state of all the Balkan countries ought to be banned. The danger is that when restrictions become unnecessarily vexatious, a grave injury is done to commerce, and they defeat their own end, because honest merchants drop out of the running and the trade is left in less desirable hands. Bulgaria has good reason to tread warily in this matter just now. At this distance away it looks as if the two State bodies, the Direction de Prévoyance, which superintends food distribution and controls the import and export trade, and the Centrale des Devises, which regulates exchange, had been appointed without sufficient attention being paid to the ability and experience of their members and chiefs.

***

According to a German paper, a commercial firm known as the Panhellenic Society of Salonika proposes to establish in that town a German commercial museum, which is to serve as a permanent exhibition of German goods. "This organisation," it is stated in the prospectus or in a letter, "will not be restricted to a simple exhibition of samples, but will combine with it a selling agency at Salonika with branches in Athens, Smyrna, Adrianople, and Constantinople. . . . Those who participate in the German commercial museum can be certain of dominating the Eastern market. Our society has reason to be proud of this important enterprise, and it is no exaggeration to say that with the means at our disposal and with the help of German exporters and manufacturers, the German commercial museum will constitute in the East one of the strongest wholesale establishments of the world."

***

All this, I suppose, is good business instinct. The letter, or prospectus, is printed in the German paper in French. I am wondering whether the Greek prospectus of the "Panhellenic" Society of Salonika is worded in the same way, and, if so, whether its Greek clients will share the satisfaction expressed by the Society at being the first in the East to revive German goods and "the traditional taste of the German race." It is necessary that Germany's export trade should be revived, and this can only be done by her goods finding a market abroad; but the "Panhellenic" has rather overdone its fulsomeness.

***

In Roumania the index numbers of current prices prepared by the Director-General of Statistics shows that the cost of living in 1919 had risen to fourteen times above the figure for 1901, and ten times the index number for the quinquennial period 1911-15. Anyone who has been to Roumania lately, I am told, knows that there have been further increases in the cost of things since 1919, and one is tempted to wonder how the people manage to subsist. But the depreciated currency (materially assisted by the German printing presses) and the shortage of foodstuffs started the vicious circle. If for foodstuffs grown in the country they have to regard the *leu* as the equivalent of ten *bani*, instead of a hundred as before, everything else must be priced accordingly. The depreciation would not matter so much, as was pointed out in the extracts published in our issue last week from Professor Cassel's Memorandum, if there were not such violent fluctuations. In regard to these the position of the foreigner in Roumania is particularly unfortunate. He or she is dependent upon imported goods, especially groceries, wearing apparel, and household articles, and the prices of these mount in proportion to the downward tendency of exchange; but having once touched rock-bottom, they show no sign of falling in sympathy with any improvement in exchange.

# Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## ROUMANIA.

BUCHAREST, August 27.

### Agriculture.

Roumania, essentially agricultural, exported annually before the war approximately 200,000 trucks of cereals, of which wheat was her most important product. Through her expansion she has gained the granary of Bessarabia, and a good part of that of the Banat, both of which granaries are famous for the quality as well as the quantity of their contents. Even this year, although having a middling production, Roumania will be able to export about 120,000 trucks, of which 80 per cent. will be maize, while the remaining 20 per cent. will consist of rye, oats, barley, millet, rapeseed, beans, peas, etc.

It will be some years before Roumania can reach her maximum production, or at least the pre-war one. This is mainly due to the land being split up amongst the peasants, thereby abolishing the big farms, where mostly agricultural machinery was employed. It is now up to the Government to assist the peasants, by procuring new machinery and inducing them to use more modern means of tilling the soil.

### Petroleum and Mines.

The internal oil distribution arrangement has now been ratified by Parliament. This concession will be turned over to a stock company for thirty years under State control. The capital of this company will be subscribed as follows:—25 per cent. by the State, 50 per cent. by the oil companies in the country, and 25 per cent. by Roumanian consumers.

The exploitation of the riches existing in the subsoil of the Roumanian mountains is still in its infancy. Petroleum, coal, lignite, natural gases, iron, gold, copper, silver, salt, etc., are all only exploited more or less on the surface, and are estimated to exist in gigantic quantities. The exploitation of these minerals was mostly in the hands of German and Hungarian companies before the war, but the Government is now liquidating these, or converting them into Roumanian concerns. This scheme will not be able to be carried out by Roumania single-handed, on account of the lack of sufficient capital and specialists for the work connected with them. Therefore immediate collaboration on the part of the Allies would be welcome.

There is a great scarcity of tools and machinery for the oil industry.

### Timber.

Another field for Allied collaboration is the exploitation of the great tract of forest land, which covers an area of about seven million hectares. Small quantities of timber have already been exported to the neighbouring countries, but this is nothing compared to what could be exported with a bigger and better organised system of exploitation, backed up by better means of transport.

### Trade and Money Market.

After the stagnation which prevailed during the last two or three months, the market is showing signs of improvement. Merchants are beginning to provide themselves for the autumn and winter season.

The exchange has lately become more stable—that is, fluctuating round 150 lei to the pound sterling. The Stock Exchange is a little firmer also, since the war scare has died away.

### Metal Currency.

A Bill was presented to the Chamber yesterday by M. Take Jonescu, by which the Ministry of Finance would be authorised to issue metal currency to the value of twenty million lei, in the following proportions:—30 million pieces of 50 *bani* and 20 million of 25 *bani*. The questions of the kind of metal to be used, dimensions, and weight are to be settled by the Council of Ministers upon the recommendations of the Ministry of Finance.

The expenses of the coinage are to be covered by the value of the coins, and the profit realised is to be added to the Budget.

These will be the first metal coins to appear since they were withdrawn by the Government at the outbreak of the war.

## GREECE.

ATHENS, August 28.

### Returns and Production of Salt.

Salt, which is a Government monopoly, has yielded 5,481,680.30 drs., in 1919, as against 5,405,754.80 drs. during 1918. The amounts realised by the Government from the sale of salt from 1914 to 1917 were as follow:—1914, 3,666,541.55 drs.; 1915, 3,539,321.20 drs.; 1916, 3,690,913.05 drs.; 1917, 4,354,744.45 drs.; the average for the years 1914-1918 being 4,131,275,01 drs. The monopoly price for salt in 1919 was 25 lepta per oka for the whole of Greece, with the exception of the privileged islands of Zante and St. Maura, where only 15 lepta per oka is charged. The returns for 1919 show an increase of 75,925.50 drs. on the amount realised during the previous year, and an increase of 1,350,405.29 drs. on the five years (1914-1918) average.

The quantity of salt sold in the country in 1919 amounted to 22,198,294 okas, of which the 21,519,362 okas were sold at 25 lepta and the remainder (in Zante and St. Maura) at 15 lepta. In 1918, 22,115,273 okas were sold, viz., 83,021 okas less than in 1919. The production of salt in the various salt pits of Old Greece in 1919 amounted to 17,772,010 okas. Of these Missolonghi produced 4,702,970 okas, St. Maura 4,699,294 okas, Anavyssos 5,027,995 okas, and Zante 1,163,817 okas. The production in 1918 was 20,652,611 okas, viz., 2,880,601 okas more than in 1919.

The total quantity of salt produced during 1919 was insufficient for the needs of the country, and the Government was obliged to import from abroad 11,269,636 okas; furthermore, in order to cope with the demands of consumption in 1920, an adjudication was held for 6,000 tons. The salt pits in the provinces of New Greece have only yielded 940,380 okas of salt. The average consumption in Greece per inhabitant and per annum was 10.764 kilos in 1918 and 10.795 kilos in 1919.

### Tobacco Production in Macedonia.

According to information received from the Ministry of Agriculture, this year's tobacco production in Macedonia will, it is anticipated, reach the following figures:—In the province of Serres 3,500,000 okas, in the province of Drama 4,000,000 okas, in the province of Salonika 750,000 okas, and in the province of Kozani 200,000 okas. The total production of Macedonian tobacco is, therefore, expected to reach about 8,450,000 okas.

### Greek Chamber of Commerce in Paris.

The Government has decided to establish a Greek Chamber of Commerce in Paris for the purpose of protecting Greek commercial interests in France and developing business transactions between the two countries. The necessary steps are now being taken to obtain the sanction of the French Government.

## MOROCCO.

The French General Residency in the Sous region of Morocco frequently receives requests from Europeans who desire to establish themselves at Agadir in commerce. As matters stand at present, however, it is impossible to give satisfaction to these demands, because the region in question is in the zone of insecurity. Commercial operations and transactions in real estate are, for the moment, forbidden. It is, consequently, useless to address demands which cannot be granted, says a French contemporary. The public will be advised when Agadir can be opened to trade and colonisation.

## TURKISH FRUIT CROPS.

Messrs. C. J. Giraud and Co., Smyrna, report as follows, under date August 20:—Our previous report was dated July 1 last.

Sultanas.—With the cessation of hostilities during the past few weeks it is now possible to communicate more freely with the fruit-growing districts and to obtain comprehensive information about the general prospects of the vineyards. Owing to the unsettled conditions which have prevailed throughout the province since last autumn, it is now becoming evident that the vines in many districts did not receive the attention which was necessary to assure the bearing of a full yield. Reports reaching us from our agents in the principal growing districts are to the effect that the yield is likely to prove below earlier estimates, and it is anticipated that the final result will not exceed 20-22,000 tons. On the other hand, the grapes are in sound condition and of exceptionally good development. Weather prevailing is favourable and if no rains fall during the next month, the fruit will be cut under satisfactory conditions, and the run of qualities should in such case prove superior to last season. The supply of inferior grades is likely to be small. Arrivals of new fruit to date amount to about 500 sacks, say 70 tons, which have been promptly taken up day by day at prices ranging from 105s. to 125s. cost and freight, mainly for sample purposes. Arrivals from all districts will not become general for at least another fortnight. The small lots of fruit that have so far come forward show exceedingly well as regards quality.

Red Raisins.—Prospects are unchanged and point to a reduced production. No prices have yet been named for forward delivery. This fruit will only be available for shipment towards end September or early October.

Black Raisins.—We have nothing to add to the forecast made in our previous report. As in the case of red raisins, this fruit will not be available for shipment before the early part of October.

Figs.—Outlook is in all ways satisfactory. Practically the whole of the Meander Valley, which is the centre of the fig production, is now under control of the Greek military authorities, and arrangements have been made by the Ottoman Railway Company for the quick transport of the fruit to market. First arrivals are expected in the early part of next week. The crop is estimated at anything between 80-85,000 loads, and the fruit, owing to the favourable and dry weather which has prevailed, gives promise of exceptional soundness.

General Remarks.—The military operations undertaken by the Greek Army during the past three months have necessitated the requisitioning of a large number of camels and carts in all districts for transport purposes. Complaints are now general of the want of sufficient transport for the moving of the crops, and owing to these considerations some fears are entertained that arrivals may not immediately come forward in the volume which under ordinary conditions we should expect.

As regards prices, buyers abroad are exercising considerable prudence, and have displayed little anxiety so far to operate for forward shipment either on sultanas or figs. If this policy is persevered in, our market will have to conform to the ideas of consumers abroad. Last year both sultanas and figs were under control, and owing to the heavy purchases effected by the British Ministry of Food, about 20,000 tons of sultanas and 10,000 tons of figs were rushed forward between September 1 and the end of October. Control was removed on the 2nd of this month, and it is unlikely that such heavy shipments as were effected last season in the course of two months can possibly go forward in the present campaign. Shippers will doubtless exercise some caution in the extent of their consignments, and unless encouraged by satisfactory and prompt sales abroad, will have little inducement to force large consignments on unresponsive markets.

So far as figs are concerned, American buyers, as a rule, were accustomed to operate on a large scale in advance of the season, but owing to the disastrous results of their purchases last year, are working very cautiously this season. Owing to their reserve they have been successful in forcing down prices to an unexpectedly low level. The extent of orders, moreover, which they have placed on our market is very much smaller than usual, and in view of the promising crop it is certain that prices will have to rule at a low and attractive level to stimulate consumption abroad, and to permit of the disposal of our crop on foreign markets.

First shipments of the season will go forward by the s.s. "Coya" and the s.s. "Venetian" for London and Bristol, and by the s.s. "Austrian" for Liverpool. These steamers are advertised to sail early in September.

## TRADE WITH GEORGIA.

On the occasion of a visit to Constantinople towards the end of July, Major F. W. Pinder, Commercial Adviser to the British High Commissioner in Tiflis, had some interesting remarks to make on the subject of trade with Georgia to a meeting of the British Chamber of Commerce of Turkey. From the Chamber's Monthly *Journal* we learn that Major Pinder, in the course of answering questions put to him, made the following points:—

Export Duties at Batoum are the same as those prevailing at Poti. Their application has brought about almost entire cessation of export. The fact has been repeatedly brought to the notice of the Georgian Government, which, however, has so far taken no steps to remedy it. That the charges may be reduced owing to the continued decrease in exports is not likely, as the Government's economic policy is of a very primitive nature, and the Georgian officials lack the experience to foresee the negative results which their present policy is producing.

Major Pinder said that he would refrain from putting in any reports to the Board of Trade for a month, during which time he gave the Georgians a chance to organise the export of tobacco and release this product from Government control and the heavy Customs duties to which it was subject.

Cash Before Delivery.—Major Pinder's advice to all traders is to exact payment beforehand. This applies to the Georgian Government as well as to the individual Georgian dealer. He pointed out the great difficulty many traders are experiencing in obtaining money due to them for goods delivered in Georgia.

The Export of Manganese.—The manganese industry and export is controlled by the Government. To arrange export is not easy. The terms are as follows: The Georgian Government takes 25 per cent. of all export profits, and, above this, 19 per cent. on the total output of manganese.

The "Shemo," a combine of manganese producers and exporters, has lately been joined by two British firms, and it is hoped that some sort of control over the export of this product will be possible.

What Georgia has for Export.—Major Pinder stated that the choice of goods for export from Georgia was very limited. The chief products available for export are manganese, tobacco, and carpets, the latter item in limited quantities. As regards the manganese and tobacco, the export of these products is "regulated" by the Government, with the result that it is very difficult to get these products out of the country. The duty on tobacco is £2 per pood (36 lb.).

Trade Difficulties.—Major Pinder said that as regards foreign trade in Georgia there was no favoured nation there at present. That is to say, all foreigners, whether they were British, French, or Italian, had to contend with the same difficulties and drawbacks. In this respect there was an equal chance for all.

The economic policy of the Georgian Government, as has been pointed out above, is a very unsatisfactory and shortsighted one. Unfortunately, it is a factor which must be considered, as at present there seems little hope of a change in their methods, which they consider the best.

The disrespect the Georgian Government has shown for Consular and Diplomatic regulations, and for official seals and documents, is another difficulty with which the merchant has to contend and overcome as best he can.

Bulgarian official reports state that this year's beet crops will be excellent.

The Bulgarian Grain Consortium has been prolonged for another four months from August 1, the date on which it should normally have been dissolved.

# THE OIL INDUSTRY OF ROUMANIA.

## THE PRESENT POSITION.

The following is a summary of a Paper on the position with regard to petrol production and export in Roumania read before a meeting of the Association of Engineers and Technical Experts of the Mining Industry on May 30 last by Mr. N. C. Matasaru.

The total stock in the refineries and conduit depôts on May 1 was as follows (in tons):—Light benzine, 50,211; heavy benzine, 28,711; lamp oil, 160,358; gas oil, 27,555; residues, 10,044; oils, 7,284.

It is estimated that up to the end of December of this year the following quantities will be produced (in tons):—Light benzine, 42,204; heavy benzine, 26,400; lamp oil, 137,280; gas oil, 31,630; residues, 221,760.

Taking the sum of these figures then we have the total quantity available up to the end of this year (in tons):—Light benzine, 92,415; heavy benzine, 55,111; lamp oil, 297,638; gas oil, 59,235; residues, 231,814.

These figures do not include insignificant quantities of petrol in stock at one or two small refineries nor the oil in the pipe-line itself (in the Constantza pipe there were about 10,000 tons of lamp oil).

The figures given for the production up to the end of this year are based upon an average production of 220 wagons, or 2,200 tons per diem. When it is remembered that the average production in 1913 was 5,237 tons per diem, it will be seen how far the industry is from its normal activity. The present figures show a falling-off even from those of the last two years; for in 1918 the daily production was 3,372 tons, and for the first five months of 1919 it was 3,156 tons. This decline is the more regrettable as the home consumption for Greater Roumania will be at least double that of the former kingdom. The relative positions may be stated as follows, the first figures being the amount (in tons) of the annual home consumption before the war, while the figures in brackets represent the estimated future consumption annually:—Light benzine, 8,000 (25,000); heavy benzine, 23,000 (40,000); lamp oil, 53,000 (100,000); gas oil, 48,000 (60,000); residues, 580,000 (800,000); mineral oils, 9,000 (20,000).

The amount of oil required for home consumption during the last seven months of this year Mr. Matasaru estimates as follows (in tons):—Light benzine, 20,000; heavy benzine, 26,000; lamp oil, 60,000; gas oil, 40,000; residues, 221,760; mineral oils, 13,000.

It is significant that this estimate of the heavy benzine and gas oil required for consumption exceeds the amount at present being produced. If we deduct from the computed stock of petrol products available up to the end of this year the above quantities put aside for home consumption during that period, we find that the following amounts (in tons) will be available for export:- Light benzine, 72,000; heavy benzine, 29,110; lamp oil, 231,630; gas oil, 19,230.

Certain contracts have been made for delivery abroad, of which part delivery had been made before May. The contracts actually signed up to May 1 represented the following amounts (in tons), the figures in brackets being the amounts delivered before May 1:—Light benzine, 61,910 (7,590); heavy benzine, 28,080 (3,290); lamp oil, 156,570 (49,842); gas oil, 20,020 (9,960); residues, 780 (780); mineral oils, nil (nil); crude oil, 7,100 (7,100).

Thus, after these contracts have been fulfilled there remains available for export the following surplus (in tons):—Light benzine, 18,090; heavy benzine, 3,770; lamp oil, 184,990; gas oil, 9,170.

On the basis of Mr. Matasaru's calculations, therefore, there are only some 216,000 tons of petrol products available for export this year (and for 20,000 tons of this an option has been granted which will probably be taken up), whereas the pre-war surplus, calculated in conformity with the above figures, was about 1,196,500 tons.

A new law has just been published considerably modifying the high export taxes which have been enforced for some time. This will introduce Customs duty of 20 per cent. on the world's market price on all petrol products exported, but it also provides that no exports are to be allowed until the home supply has been provided for.

---

An illustrated pamphlet giving interesting notes on "Carpet-knotting and Weaving" by Mr. C. E. C. Tattersall, of the Department of Textiles, South Kensington Museum, has been issued at the price of ninepence. Its purpose is to supply particulars of the technique of hand-knotted and hand-woven carpets of the kind largely made for many centuries in Persia, Turkey, and other Eastern countries.

Lecturing at a meeting of the Institute of Petroleum Technologists, held at the Crystal Palace on September 1, Mr. G. Howell referred to the importance of Mesopotamia as a source of supplies. The future of the country was, he said, assured by the rich petroliferous sands to be found there.

## THE ROUMANIAN OIL DEAL.

Another important landmark in the world's oil history—they crowd upon one another these days—has been reached with the arrangement now in process of completion for the liquidation of the German interests in the great Steaua Romana Company. The holding of the Deutsche Bank in the share capital of this company amounted to just over 50 per cent., and it is this block of shares that has now been apportioned between three syndicates—British, French, and Roumanian. Of the 100,002 shares involved 50.1 per cent. will be taken up by the Roumanian group, while the balance will be divided between the British and French groups, each taking 24.95 per cent. The three new groups retain control jointly of the Steaua Romana Company by means of a voting agreement, and together they will contribute eight directors—four Roumanian, two British, and two French.

The British company, to be known as the British Steaua Romana Company, will be launched under the auspices of the Anglo-Persian Oil Company, Messrs. Stern Brothers, and Messrs. James Dunning and Co. For its shareholding of 24,950 shares, it will have a capital of £2,025,000, divided into 2,000,000 ordinary shares of £1 each (of which the Anglo-Persian Oil Company take one-third) and 500,000 deferred shares of 1s. each. The ordinary shares will carry a cumulative dividend of 8 per cent., and after the deferred shares have received a cumulative £40,000 the ordinary shares will be entitled to four-fifths of the surplus. A sum amounting to about £1,000,000 will be lent at 10 per cent. to the Roumanian banks forming the Roumanian syndicate—*i.e.*, Banca Marmorosch Blank, Banca Romaneasca, Banca Generale, and Banca di Credit Romana.

The French group comprises La Banque de Paris et des Pays-Bas, MM. Mirabaud et Cie., La Société d'Etudes et d'Entreprises, MM. Mallet Frères et Cie., and an industrial group represented by M. Mercier.

This arrangement gives effect to the understanding reached at San Remo when the British and French Governments agreed that the two countries should participate equally in any reversion of enemy concessions in Roumania.

---

Postal correspondence between Bulgaria and Austria was established on August 17.

It is announced that the steamer Von Steuben, formerly the German ship Kronprinz Wilhelm, is being fitted up at South Brooklyn into a floating industrial exhibition, provided with 1,500 exhibits of American manufacture for a cruise round the world. According to the proposed itinerary the Mediterranean would be reached after the ship had been to South America, South Africa, Australia, the Far East, and back by the Suez Canal. The ports to be visited are to include Constantinople, Salonika, and, we must conclude, the Piræus.

## ENGINEERING.

### A Request.

For certain reasons, which may or may not be obvious, I am desirous of compiling a roll of those readers of THE NEAR EAST who are able to drive motor lorries and other heavy motor vehicles, steam tractors or electric vehicles running on rails. I should also like to have some idea as to which readers, possessing that ability, would have any time on their hands which they would be willing to fill up in an interesting and certainly a useful manner. I would also like to get a list of those owner-drivers of motor vehicles, ranging from the possessor of a Rolls-Royce, Napier, Vauxhall or Lanchester to the reader who only rides a little light-weight motor cycle, who would be willing, should occasion arise, to do a little something which may be specified later. I don't suppose all this is half as vague as it sounds, but whether it is or is not, I would like to have names and addresses. There is no need to write a letter; a postcard will do. But—and here I may say *verb. sap.*—I'd like the names as quickly as possible. So drop a card to-day to the "Motoring Correspondent," NEAR EAST, 1, Devonshire Square, London, E.C.2.

### Manganese Steel.

One of the outstanding features of the recent development of engineering has been the increased use of alloy steels, and it is safe to say that nothing like the same degree of progress in connection with machine tools, internal combustion engines, frames and general machinery could have been made without the great assistance rendered to industry by the chemist and metallurgist. Alloy steels themselves are of unusual interest to the engineer, not only because of the large number of different combinations of properties that can be obtained, but also because of the increased efficiency of these comparatively new steels. Further, not only have these steels themselves practically revolutionised engineering practice; they have also brought about a great number of changes in the design and method of working machines employed to bring these steels into shape for use as tools, as well as of machine parts. Of course, carbon steel, which we have known for so long, is itself really an alloy steel, but when reference is made by engineers and in engineering publications to alloy steels, what are usually meant are steels to which certain proportions of one or more of the so-called rare metals have been added. Amongst these metals, used for steel alloying, are nickel, chromium, vanadium, tungsten, molybdenum and manganese. The most interesting, although perhaps not the most important of these, is manganese, and manganese steel which contains from 12 to 14 per cent. of manganese is one of the most generally useful and valuable known.

It is a matter of history that this particular alloy was discovered by Mr. (now Sir) Robert Hadfield in 1886, although it was not until the late 'nineties that its valuable properties became generally recognised. The chief point to be considered in connection with it is that up to the time it was discovered, all metals that were hard enough to resist abrasive wear were too brittle to be used for any but special purposes. To illustrate what is meant by this, it may be pointed out that chilled iron is intensely hard but very brittle, and consequently unfit for many purposes. Ordinary steel is tough but not hard unless heat-treated. Hardened tool steel is hard and stiff, but is easily broken under shock. Manganese steel on the other hand is exceptionally hard, and at the same time is extremely tough, and can only be broken by great force.

### Machining Difficulties.

This property of toughness with hardness, as was pointed out by the Norton company recently, is obtained only after the manganese steel castings are heat-treated. When cast and allowed to cool slowly the castings are hard, but also are very brittle. After removing from the moulds the castings are heated and thrown into cold water, the result of this treatment being to render the casting not only hard and tough but so malleable that it can not only be rolled and forged but can be drawn out into fine wire. In this state it cannot be machined, that is, on a commercial scale, with any steel tool yet known, but it can be ground to shape. Where the finished castings will have to be drilled or tapped, or a keyway cut in them, provision is made for this by placing pieces of ordinary steel in the mould so that the manganese steel flows round them but leaves them in such a condition that the machining necessary can be done.

The uses for manganese steel, as has recently been pointed out by Mr. R. M. Johnson, who has had exceptional experience with the alloy, are practically without limit. In general, where moving parts are constantly exposed to gritty dust, manganese steel castings will give exceptionally good service. Possibly an enumeration of some types of machinery in the construction of which this steel is used, will be of interest. It can be employed to considerable advantage in the working parts of crushing and pulverising machinery for ores, coal, slag and cement; for clay working machinery; emery mill rolls; buckets, chains and sprockets for bucket elevators; for cement and concrete mixing machinery; for corrugated rolls, segments, gears and pinions of coal crushers; for wire ropeways, for wearing parts of steam navvies and steam shovels; for dredging and digging machinery; for pumps of both the reciprocating and centrifugal types, and a variety of other machines which have to withstand abrasive action. Manganese steel is also used in traction work for crossings, lay-outs, and guard rails, as well as for tractor links and sprockets, and also for the gears and pinions commonly used in steel mills. It is also employed to a large extent in the construction of office and other safes.

### Oil-Driven Trains.

Considerable interest was aroused amongst the general public by the announcement that an express train would run from London to Birmingham, drawn by an engine using oil fuel. Many regarded this as a novelty, and more than one newspaper treated it in the same way, regardless (or ignorant) of the fact that this particular oil-driven engine has been pulling trains over the North-Western Railway system for some months. Further, as every engineer is aware, oil-fired locomotives have been in use on British, American, and Continental railways for many years, and it is not easy to see why this sudden interest was aroused. It appears that the engine was an ordinary coal-burning locomotive of the "Precursor" type adapted for oil burning, and incidentally it may be mentioned that the changing-over of any locomotive from coal to oil burning can be carried out in about four days. When coal fired this particular engine consumed 70 lbs. of coal per mile and now used 30 lbs. of petroleum residue. Incidentally it may be pointed out that the newspapers which spoke of this substance as "waste, of which large supplies are available," may have given their readers a somewhat wrong impression. The inference some readers will draw is that the oil used was "waste" in the ordinary sense of the word, and that the "new" method of firing would consequently enable use to be made of something previously thrown away—or, at any rate, of little use. As a matter of fact the "petroleum waste oil" one paper referred to is a rather high-priced commodity, and the saving between the consumption of 70 lbs. of coal and 30 lbs. of oil per mile is considerably smaller than most people would imagine. The chief advantages of oil firing are that a

furnace can be "forced" more quickly than when coal is used; that the cost of transport of fuel is reduced; that there is little or no handling; that there is greater potential power, weight for weight; and that the strenuous task of the fireman is either simplified or eliminated altogether from train working.

### Optimism Justified.

I learn that a leading British firm of engineers has just secured two considerable oversea contracts as against American, French, Italian, and other competition, although the firm's tenders were easily higher than those of the nearest competitor. The secret of success in this case was that this British house was the only one to quote an outside fixed price, the buyers thus knowing the limit-expenditure imposed upon them. All the other competitors tendered the usual indefinite price dependent on rise in cost of material, etc., etc., which in these perilous times of distracted trade is not the courageous road of the noble optimist. The successful British house was, however, justified in its bold policy by the fact that the greatest portion of its raw material was in stock—coal, included, I will hope.

## PERSIA.

### Trade of Mohammerah.

The following statement on the trade of Mohammerah is taken from a recent report of the Acting British Consul :—

The trade of the port of Moharomerah during the Persian fiscal year, March 21, 1918, to March 20, 1919, amounted to £11,433,441, as compared with £8,117,635 during the previous year, an increase of £3,315,806, or 40.85 per cent.

Of this, total imports stood at £4,615,423, showing a decrease of £636,939 over those for 1917-18, and exports amounted to £6,818,018, as compared with £2,865,273 in the preceding year.

The great increase in exports is due mainly to the Anglo-Persian Oil Company's heavy exports of refined and crude kerosene oil and its products, including shipments on Government account amounting to £5,752,027. Opium exports also showed an increase of £403,092 over 1917-18. Of the total metal imports of £701,613, the Anglo-Persian Oil Company took £687,143 in 1918-19, and £577,974 in 1917, of a total of £598,218. Had it not been for the extensive operations carried on by this company, the metal trade of the port would be negligible.

Cotton piece-goods still held first place among articles imported, although they showed a decrease in value of £387,404 over 1917-18.

### Shipping.

During the greater part of the year under report there was such a congestion of imported goods at Mohammerah, due to the great shortage of river transport, that the existing Customs storage accommodation was inadequate, and it was only in the early part of 1919 that this congestion was relieved.

Seventy-four British ships (110,971 net tons) entered the port, and 39 (67,092 net tons) were cleared during the year, as compared with 81 steamers (132,075 net tons) entered, and 49 (81,887 net tons) cleared in 1917-18. The large difference between ships entered and cleared is due to the exclusion from the returns of ships which left Mohammerah without taking outward cargo for India or other foreign ports, and whose next port of call was a Persian port or a port in the Persian Gulf. In addition, 109 oil tankers (327,649 net tons) entered in ballast, and 110 tankers (332,064 net tons) cleared with cargo of kerosene oil and its products in 1918-19.

### Transport to the Interior.

Goods intended for the interior of Persia are shipped by country river craft and river steamers to Ahwaz and forwarded thence by caravans to Isfahan, Resht, Teheran, Hamadan, Sultanabad, Tabriz, Kasvin, etc. Goods which do not arrive ready packed for forwarding by mule, camel, and donkey caravans are opened up at Ahwaz and repacked into smaller packages so as to suit the kind of transport animals to be employed. Firms in the United Kingdom desirous of shipping goods ready packed for transmission to the interior of Persia should therefore bear in mind that each package should not exceed 260 lb. in weight, and that such packages should be of the following dimensions :—34 in. x 17 in. x 11 in.; 32 in. x 15 in. x 13 in.; and so on. Two such packages make one mule-load.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending August 20 :—The sales this week on our market amount to 18 cases at 17s. 6d. to 21s. per lb. as to quality. The exchange to-day is piastres 417 per pound sterling for cheque on London and 0.87 dollars for one Turkish paper pound. The arrivals are 160 cases against 360 at same date last year.

## INDIAN INTELLIGENCE.

The following telegram has been received from the Director-General of Commercial Intelligence, Calcutta, dated September 1: Rain has fallen fairly generally in North-Eastern and Central India, Eastern Rajputana, Konkan, Malabar, and North Coast of Madras; local elsewhere. General crop conditions good, but more rain required for transplanting rice and other agricultural operations in parts of Burma, Bihar and Orissa, and especially in the Punjab. Bombay Cotton market irregular. Fully good fine Oomra September Rs. 265. Piece-goods market practically unchanged with fair enquiry though little actual business. Calcutta jute market steady with little doing. Hessians firm. Heavy goods firm without much business passing. There has been no change in bank rates.

## SUPPLIES FOR ROUMANIA.

A Bucharest firm has secured from the Roumanian War Office an order for the following articles, and is anxious to purchase the goods in England. For further particulars application should be made to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1.

Vermorel apparatus for the disinfecting of rooms, 500 pieces; motor stretchers complete, for the transport of wounded (as used in the British Army), 200; bandage gauze (chiffon, hydroscopic), 500,000 metres; 3,000 knives, 3,000 forks, and 300 spoons (as used by the British Army); 10,000 enamel plates (as used by the British Army); 1,000 Primus lamps, with one and two burners; 3,000 thermometers for taking temperatures (corrected); surgical scissors: 2,000 straight, 2,000 curved; 20,000 glass cups for cupping (Ventuse); Record syringes: centimetre 1, 2,000, centimetre 2, 2,000, centimetre 5, 1,000, centimetre 10, 500; surgical knives: straight, 1,500, curved 1,500; platinum needles: 2 centimetres, 3,000, 3 centimetres, 5,000, 5 centimetres, 2,000, longer 1,000.

The 1920 tobacco crop in Western Greece is estimated at 4,000 to 5,000 tons, compared with 6,000 tons last year. The market is quiet, due to the reluctance of American buyers to take more stocks at existing prices.

Mr. James F. G. Hopkins, Controller of the Bureau of Commerce and Industry of Cairo (a Department of the Egyptian Ministry of Finance), is at present on a visit to Europe, and will be in London about the middle of September.

M. Vedor, a civil engineer representative of the Bulgarian State Railways, arrived in London on September 6 from Sofia. The object of his visit, we are officially informed, is to purchase materials for the Bulgarian State Railways, which have been considerably damaged during the great war.

Dr J. Collis Browne's Chlorodyne

Of all Chemists, 1/3 and 3/-.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

# NEAR EAST MARKETS.

## LONDON PRODUCE REPORT.

Dried Fruit.—Prices continue their upward tendency, but it is probable that there will be a considerable shortage in this commodity in the near future. Very few offers are being made.

Sugar.—The recent improvement in the tone of the American markets has not been maintained, and a considerable decline has occurred. Home refined is still in good request at the official rates.

Coffee.—The market has been dull. Costa Rica are in request, and prices are steady. Mocha and Indian very quiet. The futures market was closed.

Oilseeds.—Linseed has been firmer, with a tendency to rise. La Plata mid-October sold 36s.; September-October, same price; and October-November, 35s. 6d. Rapeseed is quiet and unaltered, Toria quoted September-October 34s. Brown Cawnpore remains firm at 31s. 6d. Real bold Ferozopore is up 3d. at 30s. Egyptian cottonseed is unchanged at 20s., and Indian also keeps the same level at 14s.

Oilcakes.—Although early the market is showing improvement. Linseed remains fairly steady, selling at from 21s. to 22s. Coconut improved a shilling up to 15s., while cottonseed was a little uneven, ranging from 13s. to 14s. 3d. Arachis cake quotations were 18s. to 18s. 6d. for decorticated, and 13s. to 14s. for undecorticated.

Seed-oils.—Fair sales are still being done in this commodity. Linseed is firmer, spot 80s., while for September-December the quotation is now 77s. 10d. Crude rape oil is lower at 74s. Cotton oil has dropped, Egyptian crude being 74s., a fall of 3s.; while the deodorized is 2s. down at 93s. Bombay crude has fallen 3s. to 64s. Turpentine has had a fluctuating market; quotations for September-December are 142s. 3d., and for January-April, 146s. 6d. Supplies of olive oil still fall far short of the demand.

**CENTRAL BANK OF GREECE**

## LANCASHIRE COTTON

### Unsettled Market.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

The market throughout the past week has presented an unsettled appearance. The conditions generally have been dead against business of weight being done. There are grounds for believing that a coal strike will be averted, but both the Government and the miners so far have refused to give way. There is every probability, however, of mediation of some kind. The strike of printers in Manchester and Liverpool continues to cause much inconvenience. Some advices relating to the Egyptian cotton crop are not quite so favourable. There is talk of the plants being injured by the pink boll worm. Lancashire spinners continue to purchase rather sparingly. In Egyptian yarns the demand remains slow. Users have only purchased small lots to meet urgent requirements. In standard counts the margin of profit has practically disappeared. Some producers, however, are fully sold up to the end of this year. Violent fluctuations are still taking place in American cotton futures, and the tone is very unsettled. Rather more inquiry has been about in piece goods for the Near East. Occasional transactions have been put through in grey and white shirtings for Egypt. Demand has also been mentioned in printing cloths. India has provided a considerable inquiry in a variety of fabrics. Most of the trade has been in light bleaching descriptions and offers in sized materials remain unworkable. Practically nothing has been done for China. Only small lots have been sold for South America. More cloth manufacturers are pressing for fresh orders, and there is a tendency in some weaving districts for curtailment of production to be extended. American yarns are cheaper than a week ago, and demand continues dull. There has been no activity whatever in shipping counts.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Johnston Line s.s. Fernandina, for Piræus, Syra, Smyrna, Volo, Salonica, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila, will close for cargo at Liverpool on September 11.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from reports received by the Imperial Ottoman Bank:—

ALEXANDRETTA.

Trade with the interior was non-existent during July, as communications with Aleppo were continually interrupted owing to the armed bands which infested the country. The production of silk cocoons shows an increase on that of last year, amounting in all to 41,543 okes (2.8 lb.) for the sanjak of Alexandretta, and to 150.000 okes for Antioch and Suedieh. The price for cocoons is 45 silver piastres the oke (about 70 Syrian piastres), but no buyers have been forthcoming at this price, as merchants have preferred to wait for a better exchange in Europe.

ADRIANOPLE.

Imports to this town during June amounted to £T100,000, but in July to £T30,000 only.

Political events in the region of Adrianople had already effectively stopped trade during the second week in July, and at the same time telegraphic and railway communications with Constantinople were cut. From that moment the people of Adrianople waited for the military events, which were gradually unrolling themselves, and which materialised suddenly on July 20. A fierce artillery duel did little damage on either side, but the Turks broke and fled three days after the opening of hostilities. The Greeks occupied Adrianople on July 28.

Exports for June and July included the following: Wool, £T5,000; cheese, £T45,000; brushes, £T5,000; skins, £T1,000.

Harvesting proceeded actively in spite of the departure of the able-bodied men for the front. As military events were anticipated, the villages hastened to get in their crops. Some even sold their barley on the market. The harvesting and sale of new cocoons took place towards the end of June, the price being 120 to 150 piastres the kilo. Maize on the high ground would seem to have been slightly affected by the excessive dryness of July; the maize in the plains, on the other hand, is most promising.

STAMBOUL.

The local market has been quiet throughout the week ending August 21, the small amount of business transacted for Roumania and the immediate neighbourhood having come to an end.

The scarcity of money weighs heavily on the market, and the prices of stocks held tend to fall more and more without finding buyers.

There is complete stagnation in regard to manufactured goods, with prices still weaker.

Sugar.—Offers of the producing countries, the absence of any demand and a few arrivals from Alexandria have contributed to a drop of £4 per ton. Sugar available is quoted at £117-£128 per ton; afloat at £103, and for despatch during August £100.

Rice.—The demand continues, and the few arrivals from Marseilles have easily found purchasers. American $28-30 per 100 kilos.; Saigon No. 1 Ps. 31-32 the oke; Baku, Ps. 35-36 the oke.

American Flour has risen £T0.50 to £T1 per sack, according to quality. This rise is attributed to the appreciation of the dollar and the lack of arrivals. A large cargo of 50,000 sacks is expected to arrive in a fortnight.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

### Egypt.

(*The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked* (*L*) *are to be obtained.*)

Motor Launch.—The Inspector-General of Irrigation, Upper Egypt, invites tenders for the supply of a motor launch for 4th Circle of Irrigation. September 18. (L.)

Sewage Main.—The Chief Engineer, Main Drainage Dept., Ministry of Public Works, Cairo, invites tenders for the supply and laying of a 12-in. cast-iron sealed sewage main. September 21. (L.)

Air Compressing Plant.—The Chief Engineer, Main Drainage Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of an air compressing plant at Mansûra, consisting of two crude oil engines, driving two single-stage air compressors, complete with auxiliary machinery, water cooling plant, a travelling crane, machine tools, air mains, electric wiring, etc. October 1.

Pumping Machinery.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)

Dynamo and Switchboard.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply of 2 kw. dynamo and switchboard for Kombera Pumping Station. September 15 (L).

### India.

Iron Pipes, etc.—The Madras Corporation invites tenders for the supply and delivery of about 220 tons of cast-iron spigot and socket pipes, with special castings, sluice valves, etc. (Specification, 5s., Messrs. James Mansergh and Sons, 5, Victoria Street, S.W.1.). Tenders will be received until September 8.

A firm of paint manufacturers is establishing a new factory at Bombay, for which a complete plant will be required. The firm also requires locks, decorative corners, hasps, handles, etc., for steel travelling trunks and kindred goods of various sizes and designs. Firms interested should write enclosing catalogues and full particulars, prices, possible dates of delivery, etc., to the company, whose name and address can be obtained from the Department of Overseas Trade.

### Algeria.

H.M. Consul-General at Algiers reports that a local trader desires to receive quotations from United Kingdom firms for the supply of iron or soft steel hoops for barrel-making. It is understood that the applicant is prepared to pay cash for the material. Firms in a position to offer supplies of the material in question can obtain the name of the inquirer, specifications, etc., from the Department of Overseas Trade.

---

The estimated traffic receipts of the Ottoman Railway from Smyrna to Aidin for the week ended August 21 were £8,815, or £23 5s. 2d. per mile.

The Egyptian *Journal Officiel* of August 9 contains a Notice from the Department of Supplies, Licensing Section, to the effect that, until further notice, empty barrels and barrel staves may be exported from Egypt without a specific licence, to all destinations with which trade is allowed.

Arrangements have been completed between the Department of Overseas Trade and the British Manufacturing Confectioners' Export Union for the despatch of an investigator to the Eastern Mediterranean markets to ascertain the conditions and prospects for the sale of British-made cocoa, chocolate, confectionery, jams and pickles. In the course of his tour the investigator will visit the following places:—Athens, Piræus, Canea, Salonica, Constantinople, Smyrna, Rhode Island, Crete, Cyprus, Beyrout, Jaffa, Jerusalem, Alexandria, Cairo, etc.

## ON 'CHANGE.

(FROM OUR OWN CORRESPONDENT.)

Throgmorton Street, Monday.

The market has again been very quiet during the past week, and prices consequently have been inclined to sag.

Among Government securities Egyptian Unified have fallen to 65¾ and the 3½ per cent. stock to 54¾. In Greek Loans, Rentes are ½ a point higher at 44½, Funding Loan 1 point lower at 55, and the 1902 is also a point lower at 46½. The 5 per cent. 1914 Loan is now ex. div. at 54.

In bank shares National of Egypt are at 18⅜ ex the interim dividend of 8s., while Agriculturals are 1-16th easier at 4⅜, Bank of Athens have fallen ⅛ to 3⅞, and Imperial Ottomans are no better than 9¼.

Among Land descriptions Aboukir are 6d. easier at 36s., Delta Lands have shed 6d. to 14s. 6d., and New Egyptians are 1s. down at 35s. 6d.

In Miscellaneous descriptions Salt and Soda are again easier at 45s., and Morum's Oriental Stores have lost the advance of the preceding week and are closing 18s.

In Oil shares Anglo-Egyptians have shed a further 1-16th at 2⅝; other shares are unchanged.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |
| Athens | Drachmae to £ | 25·22½ | 32·75-33·20 |
| Belgrade | Dinars to £ | 25·22½ | 92-94 |
| Bombay | Sterling to Rupee | 24d. | 1/9⅜-1/10¼ |
| Bucharest | Lei to £ | 25·22½ | 151-153 |
| Calcutta | Sterling to Rupee | 24d. | 1/10⅜-1/10½ |
| Constantinople | Piastres to £ | 110 | 413-433 |
| New York | Dollars to £ | 4·86⅜ | 3·55 |

| Sofia | Levas to £ | 25·22½ | 180 |
| Teheran | Krans to £ | 50 | 28½ |

## TRADE CREDITS IN YUGOSLAVIA.

A Decree of August 3 prohibits the granting of credits in Yugoslavia to persons or societies abroad to pay for the export of national produce.

In an explanatory note on the above announcement, the British Minister in Belgrade writes :—

"The business of trading with foreign countries, and buying or paying in foreign money by means of cheques or any bank or commercial paper, is controlled by the Centrale des Devises. It appears, however, that certain banks have lately opened credits with foreign countries, and these credits are being used to buy goods for export. Several consignments of goods have, therefore, been exported for which no monetary equivalent has been received thus causing the exchange value of the dinar to fall. It is understood that the above Decree is directed principally against Austrians, who, it is stated, have purchased in the Kingdom grain and other foodstuffs to the value of about 100 million dinars, but have been unable to purchase sufficient dinars or other good currency abroad to pay for these commodities. They therefore desire to open credits for the purpose."

---

In order to check profiteering the Ministry of Trade and Industry at Sevastopol announces that traders importing goods into the Crimea must produce the relative invoices.

The British Vice-Consul at Skoplje (Uskub), Serbia, will be glad to receive catalogues from United Kingdom manufacturers of agricultural and carpenters' tools. These were principally obtained from Germany prior to the war, but there is now a preference for British goods.

**Head Office, ATHENS. Branch, PIRÆUS.**

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

**CAPITAL - Drs. 1,500,000.**
**RESERVE FUND - Drs. 2,500,000.**
**Deposits and Credit Accounts, Drs. 100,000,000.**

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

*General Manager:* D. LOVERDO.

## TRADE WITH THE NEAR EAST

WITH its offices in all the principal towns in **Greece, in Egypt, Cyprus, Crete, Constantinople,** and in **Smyrna, the Bank extends exceptional Facilities for Export and Import Trade between Great Britain and the Near East generally,** and invites enquiries and correspondence relating thereto.

HEAD OFFICE: ATHENS.

## BANK OF ATHENS

LONDON-22, Fenchurch Street E.C.3. MANCHESTER-57, Mosley Street

## COMMERCIAL BANK OF GREECE, LIMITED.

**CAPITAL PAID-UP - Drs. 15,000,000.**
**RESERVE FUNDS Drs. 2,845,010.45.**

**Head Office: ATHENS.**

*Branches:*—Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia, Larissa.

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachma, equivalent to a Franc (10d.). The current rate of exchange is about 32·25 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10 % primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

*Branches:*

PIRÆUS, SYRA. PATRAS.

**Capital Paid Up - Drs. 10,000,000.**

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

*President.* L. EMBIRICOS. *Manager.* D. MIAOULIS.

## THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE.)

**Head Office - PIRÆUS.**

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

**REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.**

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

*Cable Address—Navigation Palios.*

*Codes used—Scott's (1906) 10th Edition; A.B.C. (1901) 5th Edition.*

## MARITIME BANK of GREECE

**AUTHORISED CAPITAL FULLY PAID DR.10,000,000.**

Founder—A. P. PALIOS.

**Head Office: PIRÆUS, GREECE.**

Cable Address: "Maritime Bank."

Codes Used.

Scott's 1906—10th Edition. A.B.C. 1901—5th Edition. Palios 1919

*Branches and Agents in the Principal Cities of Greece and the Levant.*

*The Bank undertakes every description of Banking Business, and by reason of its connections, throughout Greece and the Levant, is in a position to offer to the trade exceptional facilities.*

**Advances and Collections of B/Ls., Shipowners' Remittances and Disbursements to and from all parts of the World, by cable or mail. Loans on Vessels and other hulk. Bills of Exchange Negotiated. Letters of Credit and Drafts issued on the Principal Cities of Greece and Foreign Countries. Confirmed Credits at Home and Abroad. Loans on Government and other Securities. Loans on Goods and Warrants of Bonded Stores.**

AGENTS AND CORRESPONDENTS:—

For the U.K.—LONDON COUNTY & WESTMINSTER & PARR'S BANK, London.
BANCO NACIONAL ULTRAMARINO, London.
For the U.S.A.—NATIONAL CITY BANK OF NEW YORK, NEW YORK CITY, U.S.A.

# BANK OF ORIENT.

**Capital Paid Up - - - Drs. 25,000,000.**

## NOTES OF THE WEEK.

Not many days have passed since a certain amount of concern was caused by the report that Italy had decided to maintain the rank of Ambassador for her representative in Constantinople in opposition to the decision of the Allied Governments to appoint Ministers only. Then came the assurance that the question was the subject of deliberation between the Governments concerned, and it was confidently expected that Italy would fall into line with the rest of her Allies. What has happened apparently is that the Allies have fallen into line with Italy, for the British Government has also decided to retain an Embassy with the Sublime Porte and not to reduce it to a Legation. The immediate result of this decision is that the appointment of Mr. Max Müller has been cancelled—shortly after (unless we are mistaken) his servants and a considerable quantity of his luggage had reached Pera—on the ground that his position in the diplomatic hierarchy does not yet qualify him for ambassadorial rank. If the post is to go by Foreign Office seniority, it is not unlikely that Sir Horace Rumbold, Bart, will proceed to Constantinople.

---

At first sight it might seem that the question of the status of the Allied representatives in Constantinople was mainly a matter of words, so long as the Great Powers agreed among themselves as to the status to be maintained. Even the plausible theory that the importance of Constantionple calls for ambassadorial experience, in contradistinction to the inferior qualifications of a mere Minister, breaks down when a Minister-elect, who has made a special study of Turkish affairs, has to make way for an Ambassador to whom Turkey and the Turks will be an entirely new experience. But, unfortunately, at the root of the incident it is something more than a question of words.

---

Before the war the Great Powers were represented in Constantinople by ambassadors, as was indeed fitting in view of the tremendous issues at stake on the Bosphorus. The decision to reduce the embassies to legations was in keeping with the self-complacency with which the Supreme Council hugged to itself the belief that it was fashioning a "settlement" of the Near Eastern question. That the decision has now been cancelled we may take as a tardy recognition that the miserable tinkering applied to the Near Eastern question has left the matter as bad as, or worse than, it was before. It is no remedy, however, for its past mistakes for the British Government to be guided in its appointments by a close scrutiny of Foreign Office lists. What is required is a scrutiny of the man, and not of his place in any particular hierarchy, and a knowledge on the part of those who make the appointment of the post to be filled and of the qualifications required for it. As far as can be gathered the Appointments Committee of the Foreign Office is falling back, in respect to the Near East, into the old methods that made us a by-word in the Balkans before the war, and were largely responsible for the prolongation of the war.

---

The announcement that the Greek Opposition leaders, who were summarily arrested at the time of the riots which broke out in connection with the recent attempt on the life of M. Venizelos, have been liberated—with the exception of one—will be received with genuine satisfaction outside Greece. As was stated in these columns a few weeks ago, it was hard to believe that these men, however bitter their opposition to the existing Government, had stooped so low as to identify themselves with a policy of assassination. If they had, it would have meant that the internal situation in Greece was very much worse than had been realised abroad. The release of these leaders without trial is, to this extent, reassuring; but, on the other hand, it seems to throw rather a lurid light on the precipitancy of their arrest.

---

The domestic history of the Balkan Peninsula would have been a happier one if political parties when in power had made a more sparing use of imprisonment as a counter in the political game. Much of the bitterness between parties in all the States is traceable to the fact that individual politicians have spent a certain time in gaol. It may not have been possible to eliminate the prison-house altogether; but there have been scores of instances where arrest and immediate release on bail would have been a wiser policy to adopt. Before the recent occurrences in Athens there was reason to hope that the breach between the Government and the bulk of the Opposition was gradually being narrowed. It remains to be seen what effect the imprisonment of the Opposition leaders—with the regrettable death of one of their number on his way to prison—has on them. One thing they will not fail to notice: they were arrested in the absence of M. Venizelos, and they were liberated immediately after his return. After an absence, to all intents and purposes, of close upon two years, the man

Digitized by Google

who has made his mark in Europe for his statesmanship will surely be able to exorcise the evil spirit that has been responsible for dividing his own country into two such bitterly hostile camps.

---

A special correspondent of the *Morning Post* reports that serious disturbances have been taking place in Croatia, where the registration and marking of horses and cattle by the military authorities gave rise to rumours that the animals were to be seized and exported. This led to rioting at various points by bands of armed peasants, who attacked the official buildings and assaulted the officials, and communications with Zagreb were for a time interrupted. A disquieting feature of the occurrences was the way in which arms and munitions suddenly appeared in the peasants' possession, while the rapidity with which the trouble spread among the lower classes is said to have suggested a powerful organisation behind the movement. In Belgrade foreign influence is strongly suspected, but even if the suspicion should be shown to be correct, it would still be rather disconcerting to find the inhabitants of the newly-united kingdom so easily stirred up to mischief.

---

News from Mesopotamia is rather better this week. We still hear of small garrisons invested, and of attacks at many points by Arab bands, but a British column is conducting sweeping operations north-east of Baghdad, and is teaching the raiders and rebels that they can no longer act as they have been doing with impunity. It is very satisfactory to learn that Mrs. Buchanan has been released, and that one of the men concerned in the murder of her husband has been executed, and the later news that Captain Lloyd has also been set free is welcome. It is less satisfying to have to note that these results have been secured only by greatly increasing the number of our troops in the country.

---

The report of a Bolshevist *coup* at Bokhara, to which we referred last week, is, unfortunately, confirmed, and it is definitely stated that the Emir is a fugitive. This looks as if the real Bolshevist troops had had more to do with the move than their dupes, who are described as the "Young Bokharan Party." But the victors, whoever they may be—or however they may describe themselves, as we should perhaps say—have made a false step that may cost them more than a failure of their plot would have done: for a reason as yet unknown, they have arrested all the Afghans in Bokhara and cast them into prison. According to Indian telegrams, this high-handed proceeding has given rise to intense indignation in Moslem circles throughout Central Asia, and there seems to be a tendency to look to the Ameer of Afghanistan to take the lead in decisive action against the apostles of Anarchy. Should he decide to do so, those of our readers who have studied Sirdar Ikbal Ali Shah's articles would feel little surprise. At one time Afghanistan appeared to be ready to coquet with the Bolshevists; but the Afghans are a shrewd people, and it was not to be thought that they could remain very long blind to the true meaning of Bolshevism. It would be rash, indeed, to prophesy what they will do, for their Ameer has a difficult hand to play; but it will be surprising if they accept calmly such an insult as the imprisonment of their countrymen at Bokhara.

---

At the time of writing there is no news of any marked Bolshevist activity in Persia, although Apfelbaum (alias Zinovieff), Bela Kun, and some others of the same kidney are holding an "Oriental Congress" not far away, at Baku. One of the principal subjects to be discussed at this Congress is, it seems, the freeing of India from British "tyranny." What fresh steps the philanthropic Kun, Apfelbaum and company propose to take for the realisation of their project the world has yet to learn. Meanwhile, it is satisfactory to observe that their disciples in Persian territory are having a distinctly unhappy time just now, being kept actively on the move by the Persian Cossacks, who are harrying them and driving them from one village to another in a way to suggest that the advance to India by this particular route would prove a tedious affair for them.

---

All this is very well, as far as it goes, but it would be the height of folly to believe that the Bolshevists will leave Persia to go her own way if ever they feel themselves strong enough to attack her with a fair chance of success; and though she has done well against them so far, it is extremely doubtful whether she is fit to offer a prolonged resistance to strong pressure, or will be so for some time. It is therefore greatly to be regretted that she should, unofficially, though not officially, regard Great Britain with considerable suspicion. That such is the case, however, will hardly be denied by anybody competent to judge. Conscious of the honesty of our intentions towards Persia, we have been, as we always are, inclined to believe that the world at large would give us credit for that honesty, but as a matter of fact the world—as it always does—has felt cynical on the point; so that we have once more been living in a fool's paradise.

---

Our Persian policy is undoubtedly to blame for this condition of things. Honest in itself, it was worked out in a way suggestive of the old style of diplomacy, and it failed to take into account, or, at any rate, to give due importance to, certain factors, notably that determination to run before they have learned to walk which is so characteristic of certain "Young Persians." The result was that when the Anglo-Persian Agreement was made known it at once gave rise to intense indignation among a large circle of Persians, and the feelings with which it was received in France are well-known to our readers. French politicians have never forgiven our Foreign Office for—as they regard it—stealing a march on them, and Lord Curzon has been freely accused of sharp practice. The cry of "Perfide Albion" has been raised once more and has done untold harm, and it would be foolish to shut our eyes to the fact that the harm extends to Persia. Soon after the conclusion of the Agreement the Shah made his visit to Europe, and spent the greater part of his time in Paris, and, judging by subsequent events, it would seem that his entourage was during that time inoculated with an anti-British feeling which was reflected in the Press at Teheran, and was probably largely responsible for the overthrow of the Cabinet. These things all tend to increase the influence of the revolutionary spirit in Persia, and though we may hope that Teheran will not follow the example or share the fate of Bokhara, at any rate, so long as we have any troops in Northern Persia, we cannot regard the situation with any complacency. The meeting of the Mejliss may do little to improve things, but it should serve to let us know exactly how the Persians regard us and the Anglo-Persian Agreement.

---

In a volume of his "Recollections," just published, Baron von Eckhardstein tells, in all good faith, a story about a conversation which, he says, took place at Cowes in 1895 between the German Emperor and Lord Salisbury, regarding the future of Turkey. According to the Baron, Lord Salisbury propounded a scheme for the partition of the Sultan's dominions between Germany, Austria-Hungary, and Great Britain, but the Kaiser would have none of it. As nobody else was present at the time, it will obviously be as impossible to prove the story false as it would be to prove it true: but, although we do not forget that Lord Salisbury once remarked that we seemed to have "put our money on the wrong horse" in backing Turkey, we shall decline to believe that he ever made such a proposal as the one now attributed to him. He was, after all, a great statesman and an English gentleman; and he would not have forgotten either Great Britain's position as a Moslem Power or her duty as an honourable nation. The truth would seem to be, as shown in an article contributed to *The Times* by Sir Valentine Chirol, that the Kaiser calmly attributed to Lord Salisbury a proposal which actually emanated from himself. That, at least, is what Lord Salisbury said when the matter was brought to his notice, his com-

Digitized by Google

ment being that the story "showed the expediency of having a third person present when talking to the Emperor."

We published last April some particulars of a proposal to raise an endowment fund for Christ Church, Constantinople, and to place in the church a memorial to those of our race who fell in the Near East during the war. A further announcement in connection with the scheme has lately been made, and from this we regret to learn that "funds are now so urgently needed that the church may have to be closed." This, it is to be supposed, does not indicate that the situation has actually become worse since April; but it is not agreeable reading, and the circumstances themselves are not to our national credit. Apart from any thought of the present proposal for a memorial, it is sad to think that a church built as a memorial to the heroes of the Crimean War has never been able to secure an endowment, and the fact can hardly fail to give rise to strange reflections on the part of Moslem Constantinople. We have now an opportunity to remove the reproach, and it is unthinkable that an appeal addressed—as this one is—to Great Britain, Australasia, and India, should fail of success. The joint hon. treasurers in this country, to either of whom subscriptions of any amount may be forwarded, are: Lady Lawrence, Sudbury Hill, Harrow-on-the-Hill, and Admiral Sir Edmond Slade, 35, Surrey Street, Strand, London, W.C.2.

# THE WEEK AT HOME.

### The Coal Crisis.

The great coal question still fills the papers. The Government, through Sir Robert Horne, have had a long discussion with Mr. Smillie, which came to no definite conclusion; but nobody expected it would, for it suits Mr. Smillie's book to prolong the agony and keep us on tenterhooks, and probably he enjoys power and publicity as much as anybody. The discussion was courteous and good-tempered, and really served the purpose of explaining the respective standpoints to the general public, who are supposed, by a convenient fiction, to be the arbiters in the dispute. In actual fact, the public are helpless; they are ready to support the Government and to damn Mr. Smillie, but their maledictions are as impotent as those of the Cardinal in the historic case of the jackdaw of Rheims.

The Government appears to be willing to discuss the question of miners' wages, but not the reduction of the price of coal, which is coupled with that question. Mr. Smillie's agents have naturally made some capital out of this, but it has not proved very effective propaganda. A reduction in the price of coal—which has just gone up again, owing to increased railway freight charges—would certainly be welcome, but as it would merely mean increased taxation next year, it would have no real effect on the cost of living. The reduction proposed is, in fact, a move in the nationalisation campaign, and is, therefore, proposed for ulterior reasons—a consideration which the public has not forgotten; and it seems likely that in any appeal to the country on the nationalisation versus private ownership issue, the former would be in a considerable minority. The Labour Party as a whole appears to recognise this prejudice or convention, and to be opposed to any election on this issue at the present time. Nor does the country generally seem to be clamouring for an election, which is an expensive luxury that interrupts business; for an election at the present time would leave the parties in very much their existing position. It might improve the standard of membership in the House of Commons, but even that is rather doubtful.

### The Trade Union Congress.

Mr. Thomas delivered a carefully thought-out presidential address at the Trade Union Congress, and the proceedings, though not lacking the usual breezes and an occasional approach to a storm, were more interesting than usual. But the Congress rather carefully avoided the question of the miners—which gave the impression that the delegates were only formally in sympathy with the demands, and that they were thinking more of the unemployment in other trades which would result from a coal strike. Mr. Thomas definitely predicted a "black winter" in so many words; and it is obvious that a strike, followed by an enforced closing-down of many industrial works, would be a disastrous matter in these days of high prices.

Moreover, a coal strike differs from a railway strike in the fact that recovery is slow. Two days after last year's railway strike things were in running order again, and within less than a fortnight it was forgotten; but it would take many weeks to restore the coal supplies to factories and private houses. Both sides are well aware of this fact, and although available stocks are high at the moment and the railways are said to be well supplied with reserves of fuel, both sides are taking the position into account in their calculations of the chances.

### Home Trade.

The shadow of these threatened strikes and other troubles is very visible in home, and more particularly retail trade, just now. Although the majority of holiday-makers have returned to London, the shops hardly appear to be doing much business. The fact is that, hit by rising prices on the one side and uncertainty of employment on the other in the event of a strike, people are holding tightly to whatever money they have. The secretaries of charitable societies and similar organisations are pulling long faces, and lamenting the niggardliness of old supporters, and the Stock Exchange does not seem in much happier condition than the philanthropists. A few new issues have made their appearance recently, but values as a whole show a tendency to shrink, and they are not likely to recover this year, according to the prophets. But the worst slump of all is in the motor trade.

### Increased Rates.

A good many protest meetings have been held recently, and are being held now, in London, against the present and forthcoming increases of rates. In most cases these have doubled since the war, and they are likely to rise still further next year. They are now a very serious burden, and there is a general impression abroad that considerable economies could be effected in the municipal services without loss to health or efficiency. Several recent bonuses and advances of salaries of wages to officials have been sharply criticised, or even refused, by local councils, and more is likely to be heard of this matter.

### A Novel Placard.

The walls of London are now being decorated with a mysterious message to the effect that "Millions now living will never die." The statement seems to emanate from an American judge, whose photograph is displayed alongside the prophecy. So far as I can understand the announcement, it promises that those of us who can succeed in remaining alive until 1925 will secure earthly immortality. It professes to be a new interpretation of some obscure predictions in one or more of the Major or Minor Prophets, of a kind that was more familiar forty years ago than in these disillusioned days, and it is probably the herald of a new evangelistic campaign.

In that event, it is likely to fail, at any rate in London—the provinces, perhaps, give a kindlier welcome to these millennial excitements. The clergy of all denominations are nowadays opposed to these revival methods, and hardly give them the welcome they did, for past experience has shown that they do little good, and although the public, as a whole, is still ready as ever to credit a marvel, it has tired of Habakkuk and prefers spiritualism and the occult and other mysteries. In particular, the exact date of the end of the world no longer moves anybody. It has been postponed so often.

### Taxis and Tubes.

There was some talk of a taxicab strike early in the week, owing to the increased cost of petrol. Happily the danger seems to have died down, at least for the

Digitized by Google

time; but the increase in Tube fares—which is due in about a fortnight—will in the long run hit people more severely. Here again the trouble in the electrical trade has led to threats of a Tube and tram stoppage, such as London experienced eighteen months ago, but no definite announcement of the actual position has been made. It is quite apparent that some of the people who are fomenting this trouble are doing so with ulterior motives.

**The Population Question in France.**

The 1919 population statistics of France, which have just been published, have excited some interest and sympathy in London this week. While our own population is increasing by leaps and bounds, and babies come not in single spies but in battalions in every English county, in France the position is, unhappily, just the opposite. In every department across the Channel the past year saw an excess of deaths over births, and this, on top of the heavy mortality in the war, is a very serious matter. It is not known whether the position has appreciably improved in 1920, but it will be watched with considerable anxiety for some time. France was not really overpopulated even in 1914, and it is now actually suffering from under-population.

**"Bolshevist Gold."**

Two or three weeks ago the *Daily Herald* was indignant at the suggestion that it had taken Bolshevist gold. The anger was apparently assumed for the occasion. The paper in question has now admitted that one of its directors was in touch with Bolshevist agents, who offered a sum of £75,000 to the proprietors. As the paper is losing money every day, the amount seems of vital importance to it, and its directors say they can see no reason why they should not take it. They also profess that the Bolshevists will leave the journal a free organ of opinion after they have bought it, but this is not only childish in itself, but augurs a belief in the childishness of its readers. It is suggested that the particular director engaged in these negotiation entered upon them independently, and without committing his fellow-directors, but that also is a little difficult to credit, particularly in view of the wireless messages between the Russian agents whose genuineness can now hardly be disputed.

The *Observer* remarks that the *Daily Herald* has only confessed the truth because it knew it would be exposed if it did not; *The Times* suggests legal action, since the Bolshevist money would, in fact, only be subscribed with the idea of fomenting a disturbance, and, if possible, a revolution, in this country—a policy which the Bolshevists have long frankly confessed as essential to their purpose.

Whatever the *Herald* may now say or do about these transactions, it has seriously damaged its reputation. The ordinary man does not care to have his opinions decided for him by foreign money, whatever his politics. And, further than that, the *Herald* attitude as regards these negotiations has given the impression of being disingenuous. Only those who read the first denial very carefully could see that it left a loophole for prevarication, and the subsequent admission has seriously prejudiced, not so much its political as its moral character. Its future career may be variegated, but it is hardly likely to be glorious.

**A Club's Troubles.**

A curious story is being told of a crisis in the affairs of one of the West-end clubs. The committee recently moved into a new building, and extensive alterations were necessary. They were quite prepared to spend money on making the premises more suitable, and a contract was agreed upon with the builders for thirty thousand pounds. Unfortunately the committee, who were not business men, made other alterations and extensions after the contract had been signed, without discussing the price. When the work was completed the total bill came in for over a hundred thousand pounds, and the members are in a quandary.

In any event, club finance is not an easy matter in these days of high wages and food prices. Some clubs seem to have put up their coffee-room charges beyond all reason, others are unexpectedly cheap. But then some have a long waiting list, and others of a more old-fashioned kind are quietly making it known that they could do with a few new members of the right sort. The war has hit them rather badly, so many men on their waiting list having been killed or otherwise dropped out, while the new-rich is not wanted, and in any case that type of person will only join the more pretentious establishment.

**The Week's Books.**

A book of permanent interest as regards the war has been published this week in Colonel Repington's "The First World War" (Constable)—a provocative title, which indicates that the famous war correspondent has no belief in the idea that "the war has ended war." Much of the two bulky volumes detail the intimate personal gossip of the Government and the War Office and the General Staff in London, and it throws an extraordinarily interesting light on individual opinion at that time, in such matters as the Cabinet's attitude towards Lord Kitchener and the Shell and Gallipoli controversies, the Derby scheme, the relations between Mr. Lloyd George and Lord Kitchener, and a hundred other matters of which the outer public had only vague knowledge. The author knew everybody and went everywhere, and he is not overburdened with a sense of reticence; he tells the truth as he saw it.

Another work which will find many readers is Mrs. Philip Snowden's "Through Bolshevik Russia" (Cassell). Mrs. Snowden was taken on a personally conducted tour through Lenin-land early in the year. She knew nothing of the language, little of the people, and she evidently went out with a prejudice in favour of the Soviets. Personal experience seems to have cured her; she kept her eyes and ears open, and came back disillusioned as to democracy in Russia. The book shows considerable shrewdness of observation and honesty of purpose.

A very well-written work is "The Evangelical Revival" (Methuen), by the Rev. S. Baring-Gould. Evangelicalism is not the fashionable Anglican creed of the day, but it has had a great deal of influence in the Church, and produced at its height many considerable figures—men of action rather than thought. For that reason those who are interested in the rise and fall of ecclesiastical opinion will turn to this record with interest.

A much more formidable book is "Space, Time, and Deity" (Macmillan), by Professor S. Alexander. These are the Glasgow Gifford Lectures, 1916-18, and are, in fact, an exposition of that body of thought which is called the New Realism. The subject is controversial, but they are not written in the spirit of controversy—a fact which will be appreciated in these days of gentler manners in theology. It is an important contribution to thought, whose influence is likely to make itself felt rather slowly.

A war book of a rather novel kind is "Secrets of Crewe House" (Hodder and Stoughton), by Sir Campbell Stuart. Crewe House was the headquarters of our war propaganda under Lord Northcliffe, and the record of its activities certainly will not diminish his fame.

Perhaps the most curious point that emerges from the work is the fact that in the early part of 1918 the Allies had not finally determined on the break-up of Austria. A memorandum from Crewe House asked for a sketch of their policy in this matter for the purposes of propaganda. The reply was apparently rather vague, and Crewe House formulated a more definite plan, which involved the independence of the subject nationalities—probably the hand of Mr. Wickham Steed, the editor of *The Times*, was visible here, and also Dr. Seton-Watson. The plan was approved, and put into action on the Italian front and in Austria, with considerable effect on opinion there; and it has since been carried out. It is well known that there were contrary influences in the early part of the war, and even early in 1918 the Entente Governments had not got beyond "full autonomy," as one of Mr. Lloyd George's speeches shows.

## EGYPT.

CAIRO, August 28.

**The "Vengeance" Trial.**

The trial of the alleged members of the "Society of Vengeance" is still occupying the attention of the special military court that is sitting for the purpose, and is likely to do so for some weeks yet. During the past week, owing to the Kourban-Bairam holidays, the court has not been sitting. Since my last letter was written two sittings have been held, on Saturday and Sunday. One of the principal accused, Lutfy el-Musallamy, was further examined by his counsel, Mr. Moriarty. To the latter, as well as to several counsel for the defence who interrogated him, he monotonously repeated that the things he had written about the society, such as the list of members, were all dictated to him by the man who had turned "King's Evidence." He stoutly denied most of the charges made against him, put the responsibility of the others on the shoulders of the Sheikh "ex-conspirator," and spoke of a Students' Syndicate which was not to be confounded with the "Society of Vengeance." He was examined on the following day by the Prosecutor, Mr. Maxwell, and his cross-examination showed that he was certainly a past-master in the art of fencing, hardly ever failing to see whither a question might lead him, and always parrying it with marked ability—and this despite the fact that he was constantly confronted with a statement that he had signed at the first inquiry. After Lutfy el-Musallamy, the accused, his father came to give evidence, and corroborated his son's statements, again charging Abdel Zaher with deliberate falsehoods.

On the previous day further evidence for Abdel Rahman Bey Fahmy was heard, when Mohammed Fahmy Khutry, ex-Sub-Mudir of Beni.Suef—at the time when Abdel Rahman Bey Fahmy was Mudir of that province—was examined by Mr. Mitchell Innes, K.C., and cross-examined by Mr. Maxwell. This witness gave fuller details than had been given before as to the "good though strict administration" of the Mudir, and told the court the whole story of the difficulty Abdel Rahman Bey Fahmy experienced in finding a residence on his arrival at Beni Suef. Witness stated that he, himself, had found three abodes for his Mudir, and two of them were eliminated, the first because the owner did not want the Mudir to pay any rent for it, and the second because its owner did not have the necessary £E400 for repairs. The witness further denied the charge of immorality which was made in connection with Abdel Rahman Fahmy Bey, and finally stated that when the accused had retired from the Government service, when he was Mudir of Giza, it was to become Sub-Director of the Wakfs Administration. The court resumes its sittings to-morrow.

**The Anglo-Egyptian Agreement.**

The news of the provisional agreement reached between the Egyptian Delegation in London and Viscount Milner has been received in Egypt with mixed feelings. Among the native population, naturally, there has been a good deal of jubilation at the success which appears to have crowned the efforts of Zaghloul Pasha, albeit it is fully recognised that the end is not yet. The Pasha, in telegraphing to his supporters thanking them for their congratulations, emphasises the fact that it is still necessary to "work to realise the unalterable aspirations of the nation." The native Press, on the whole, adopts an expectant attitude, and the meagre comments on the agreement have not been very illuminating. It is apparent that the thinking public prefers to await the arrival of the members of the Delegation, who are bearers of the text of the agreement, before pronouncing a definite opinion. These delegates are due to arrive in the course of the next week. Meantime, I understand that the Egyptian Government has been officially advised of the terms of the agreement, and intends to facilitate the task of the four delegates in consulting their fellow-countrymen.

Among the European community the telegram announcing the terms of the agreement was received at first with a feeling almost of consternation. The public had been prepared to learn that the British Government would concede a good deal, but they never expected that it would contemplate the granting of such a large measure of independence as is foreshadowed in the present agreement. There can be no doubt that a purely Egyptian Administration would be laxer and less beneficial to the whole community, and there are many who view the contingency with feelings akin to alarm. It is generally expected, however, that the agreement, when finally passed by Parliament, will be so hedged with safeguards as to limit the dangers which, at first sight, would seem to threaten the country. In a sense, this measure of independence will be welcome, inasmuch as it will, in the first place, regularise the position of Britain in Egypt, and, secondly, it will enable the country to pursue its peaceful development untrammelled by political agitation.

## YUGOSLAVIA.

BELGRADE, September 1.

**Communists' Difficulties.**

The Communist Municipality has after all not been able to assume its functions, because at a critical moment, when the outgoing officers were handing over, there marched in a police official with an order from the Minister of the Interior forbidding the transaction on the grounds that the reservations with which they hedged their oath were illegal; and so the old municipality is carrying on pending a settlement, which will mean new elections. Meanwhile, the Communists have appealed to the State Council, which is the supreme court of appeal, with power to quash not only the decrees of Ministers but even resolutions of the Ministerial Council, upon legal grounds. The Council will have its hands full, for it is stated that it has already 500 election petitions to try. It is reported that the Communists at Nish have taken the formal oath, and so are allowed to remain in office; but by doing so they seem to stultify themselves and go back upon their own principals.

**Back to "the Bad Old Days."**

The Communists' victories in such out-of-the-way places as Jakovo, Veles, Kumanovo and so on are not really any victory for Communism; they are to be explained as an organised attempt of the anti-Serbian elements there to undermine the State. There appears to be a plot on the part of the Mohammedan Albanians of the Kossovo district, where there is a reign of terror, as in the bad old Turkish days, and *komitajis* are in the field again. The Serbs are asserting that they have traced connection with the Italians and support from Bulgarian *komitajis*, and there has been fighting with Bulgarian bands; the Press asserts that Protogeroff is the ringleader of the Bulgarians. It will be remembered that he is a Bulgarian general who was imprisoned for abuse of power in the war, but escaped from confinement at Sofia, and is now at large. He was an active *komitaji* in the old days, and seems to be at his old tricks. The enemy are supplied with Italian stores and munitions, and Italian uniforms have been seen among them. The genuine enemy Albanians have now been driven out and the captured villages liberated. The resident Albanians in the Prizrend district and elsewhere are loyally supporting the Government, but the enemy have destroyed their homes whenever they had the chance. Nikolite Montenegrins are also seen in the enemy's ranks.

Kossovo and the surrounding districts have been for

Digitized by Google

centuries essentially Serbian in character, but during the latter part of the Ottoman period the Turks gave every encouragement to Albanians to settle there in order gradually to outnumber the Serbian element, and undoubtedly there are places which have been Slav for a thousand years where to-day the Serbs are in an actual minority. This sowing of hatred between Albanians and Serbs is very regrettable, as the two peoples can, and have, lived in harmony side by side. Serbia has no wish to live on anything but friendly relations with her Shkipetar neighbours; and if they were left to themselves both parties would probably jog along all right, and jointly defend the principle of the Balkans for the Balkan peoples.

**Statement by Prime Minister.**

The Skupshtina met yesterday for the first time after the crisis, and M. Vesnitch made a statesmanlike speech. After a brief reference to the past crisis, he stated that the prime object of the Government was to effect the general election and bring into being the Constituent Assembly. He then passed to agrarian reform, quoting at some length from the Regent's Proclamation of December 24, 1918, promising the abolition of serfdom and of great properties, and referred to the agreement on the details of the question of the provincial governments. He insisted once more upon the necessity of all working together with the object of restoring and confirming order and prosperity in the country. Passing to foreign affairs, he referred with regret to the Russo-Polish fratricidal war between two Slavonic peoples, in which the South Slavs must remain neutral. He dwelt at some length, and with great moderation, upon the conflict with Italy, stating that the Government was in negotiation with Rome on the question of the unhappy disturbances in Splijet, Zadar (Zara), Fiume and Trieste, pointing out the disastrous result of maintaining the purely provisional state of affairs left by the armistice with Austria-Hungary. He pointed out that it was the duty of both parties to come to an understanding, and expressed the hope that the negotiations broken off at Pallanza would be renewed and the problem be brought to a conclusion which would be to the advantage, if not to the entire satisfaction, of all immediate demands, of the two peoples. "The declarations," proceeded M. Vesnitch, "which have been recently made by prominent and authoritative Italian statesmen inspire us with hope that even at Rome they are beginning to regard our relations in a proper light, which is what I always anticipated from a statesman of the wisdom and patriotism of Signor Giolitti."

M. Vesnitch then referred to the Albanian invasion, which has now been completely repelled; his congratulations to M. Venizelos on the occasion of his narrow escape were met with applause; bonds of sincere friendship unite the country with Roumania, especially when the affairs of that country are directed by such men as General Averescu and M. Take Jonescu. Then he announced the signature of a close defensive alliance with Czecho-Slovakia. Finally, he reminded his hearers that the international position and prestige of the country depends entirely upon the state of affairs in the interior, and he invited Parliament therefore to vote the indispensable laws in full agreement, to make it possible within the shortest delay to call the electors to the ballot-boxes.

**A Sequestered Estate.**

The Serbian authorities must take a peculiar delight in administering the sequestered estates of the Archduke Frederic, who distinguished himself for his brutality in the invasion of Serbia in 1914. The revenues of the estate are about as great as the total revenue of Serbia before 1912; the fishing rights alone bring in two million dinars, and the revenue from the sugar factory is about eighty million; the total annual revenue is said to be about 200 million dinars.

September 4.

Serbian gendarmes have been in action with Bulgarian *komitajis*, who had penetrated as far as the right bank of the Vardar; there were a few casualties on each side and the Bulgars withdrew.

**More Communist Troubles.**

A split is reported between two wings of the Communist party in Zagreb, probably because it is composed of very heterogeneous elements. It is reported that the police have confiscated the paper *Nova Istina* ("The New Truth"), together with 3,700 dollars which are said to have been sent from America to help the Communist movement in this country.

**Russian Immigrants.**

The Russian colony in Yugoslavia, though diminished by the departure of a considerable number to join General Wrangel, is still numerous, and also energetic; it provides most of the talent, some very good, for the entertainment in Belgrade, and among the more serious enterprises the chief is the Rusko-Slovenska Banka, of which the leading mover is M. Lebedoff, who acted as Minister of Commerce under General Denikin. This institution is already owner of two factories, and has now taken a coal-mining area. There is a Russian Insurance Company here, and commission agencies in several towns, also publishing houses, an engineers' association, a school of actors, some restaurants, a bootmaker's, and other commercial undertakings; many engineers, doctors and other professional men have filled in some of the gaps left here by the war; they are founding a university at Skoplje, a Cadet School at Serajevo, and schools for girls and boys.

The Electoral Bill has been passed by the Skupshtina, and the General Elections for the Constituent Assembly fixed for November 28.

**A Profitable Deal.**

Here is a strange story of an official's visit to the Argentine during the war to recruit volunteers among the Yugo-Slav colony in South America. He took 800,000 francs with him for his expenses. This money, being a simple soul, he converted into Argentine currency on arrival, instead of doing it according to his needs. After two years, during which he did his work very well, he had spent 200,000 pesos out of the 600,000 which he had received for his francs. On returning to Europe he found that, owing to the depreciation of the franc and the rise in the peseta, he actually had a profit of 2,000,000 francs to return to the Government. This is indeed a model official. His name is worth publishing, and is Shpiro Poznanovich. The story is vouched for by the *Politika*. *Si non e vero, e ben trovato.*

## ROUMANIA.

BUCHAREST, September 3.

**Political.**

Parliament closed on August 27, after a very strenuous session, which was not rendered any easier by the hot weather that prevailed during the greater part of the summer; so that members were very glad to get their long-promised holiday.

On the surface there seems to be a calm in political circles. Leaders and party whips are very active in preparation for the next session, and are not losing any time in trying to bring their members up to scratch in readiness for the re-opening of Parliament.

It looks as if in certain influential quarters attempts are being made to bring about collaboration between the Government and the Transylvanian National Party, under the leadership of MM. J. Maniu and Vaida Voevod, in order to ensure smooth working in carrying out the reforms necessary for the reconstruction and consolidation of the country and its new provinces. Should this collaboration not take place, however, it is bound to have an effect on the present Cabinet, and changes in the personnel will most probably occur. Besides, there is a rumour that the number of ministers now existing— that is to say twenty in all, including the Under-Secretary for the Treasury—is to be reduced; probably by abolishing the posts of Ministers without Portfolio (these posts representing the newly-joined provinces), as they are now considered superfluous, in view of the consummation of the unity between the provinces and the mother country.

**Roumania and the League of Nations.**

M. N. Titulescu, the Minister of Finance, and the first Roumanian delegate at the Peace Conference, and the two University professors, Dr. Thomas Jonescu and M. D. Negulescu, have been appointed Roumanian delegates to the League of Nations.

Digitized by Google

**M. Take Jonescu.**

M. Take Jonescu, the Foreign Minister, has left Bucharest to confer with the British and French Premiers. He will endeavour to negotiate for the foreign loan of which Roumania is in urgent need. It is reported that M. Titulescu has succeeded in obtaining a postponement of the reimbursement of the Roumanian War Loan for one year, and possibly longer. It is further rumoured that in case the United States should renounce the interest on the War Loan in favour of Roumania, England would do the same.

It is also reported that England has undertaken to indemnify Roumania against damage to the oil-fields during the retreat of the Roumanian army, in addition to her share of the indemnities imposed on the defeated nations.

**Civil Rights of the Royal Family.**

An additional statute to the existing act concerning the civil rights of the Royal Family has been passed by Parliament.

With this statute, any civil formalities in connection with the Royal Family, wherever they may be at the time, will have to be done in the presence of the Minister of Justice, assisted by the General Secretary. Any marriages contracted by the Crown Prince or Princes or Princesses of the Royal Family must have the consent of the King, otherwise they are void. Further, any act of adoption is forbidden.

As a consequence of this statute, the question of the marriage of Prince Carol to Mlle. Zizi Lambrino, and the eventual adoption of their child, is definitely settled.

The Queen and the Princesses Elisabeth and Marie have arrived from abroad, and have proceeded direct to Sinaia, to join the King, who has taken up his summer residence there.

**Farewell Dinner to H.M. Charge d'Affaires.**

A farewell dinner was given on August 31, at the Hotel Boulevard, by the British colony in Bucharest in honour of Mr. Frank Rattigan, H.M. Chargé d'Affaires, on the eve of his departure from Bucharest to take up another diplomatic appointment.

Mr. H. M. Watson presided, and the following gentlemen were present:—Messrs. Rattigan, Hartopp, Adams (H.M. Commercial Secretary), Rivett-Carnac, L. Keyser (H.M. Consul), Philip Simpson, McDuff, Rogers, Humphries, Guest, F. P. Archbold, F. B. Archbold, Hartley, Monckton, Johnston, Perrott, F. Masterson, T. Masterson, Smith, Hayward, Cooper, Back, Hillard, Reeve, Harwood and Evans. The following military officers were also present:—Col. Duncan, Military Attaché to H.M. Legation; Lt.-Col. Boyle, Col. Reid, Major Allen, Major Thynne, and Major Middleton.

The Chairman, in proposing the health of Mr. Rattigan, said that while Mr. Rattigan had been here he had been of great help to the British community in matters relating to the intercourse of the two countries, and in smoothing the way between the Roumanian authorities and Englishmen generally in the establishment of business relations.

Mr. Frank Rattigan, in reply, said:—

Gentlemen,—I appreciate very sincerely your kind thoughts in organising this farewell dinner to myself. Most of us have gone through critical and troublous times together, and I have been not a little proud of the courage and uncomplaining spirit displayed by my compatriots in this country. The British Colony have felt it their duty to stand by Roumania in her trials and adversities, and I believe that the Roumanians themselves realise what you have done to help them, and are grateful for the confidence you have shown in their ability to weather the storm.

The worst of the crisis through which Roumania has had to pass is now over, and I think we can all look forward with entire confidence to her regaining her pre-war prosperity, and, indeed, developing it to an extent which should make her one of the most prosperous countries in this part of the world.

For the development of her resources, however, Roumania must for some time to come be largely dependent on assistance from abroad. We must all sympathise with the wish of any country to develop itself unaided. "Roumania for the Roumanians" is a perfectly legitimate cry, and if it were a possibility we should have nothing to say against it; but the Roumanians themselves, or those of them who are aware of the real conditions of their country, fully realise that at present they cannot do without foreign help. It is up to us to show them that we are able and ready to afford them the assistance they require. British firms have never asked anything else than to be allowed to compete in an open market. They welcome rather than fear competition. They are confident of the ability of their goods and workmanship to stand the test of comparison with those of other countries. It has been suggested in a section of the Roumanian Press that it is apparently the desire of Great Britain and British firms generally to impose economic bondage upon this country. Nothing could, of course, be further from the truth. It is indeed difficult for us, who know that the prosperity of the British Empire is founded on the open door and fair dealing, to understand how such an idea could be seriously and honestly entertained; but as it does—though without the slightest apparent foundation—seem to exist in certain quarters, I should like to take this opportunity of making the following declaration, in which I am quite sure you all concur. British merchants are not professional philanthropists (let me hasten to add that I do not mean that they do not carry on a great deal of private philanthropy), but they do not carry on business on purely philanthropic lines. They expect, and have a right to expect, fair profits for the money they invest, the risks they run, and the work they execute, but they do not ask more than this. Moreover, the British theory is that loyal co-operation is the only right way of doing business. Our idea is that we grow rich ourselves, not by the impoverishment of our neighbours, but by their increased prosperity. Consequently, apart from the question of sentiment, and speaking merely from the point of view of business and common sense, we feel it to be in our interests to do all we can to contribute to the prosperity of those with whom we do business. It is true that most responsible Roumanians, and certainly all those who know Great Britain, are fully aware of this, and welcome our loyal co-operation in the development of their country; but as long as any doubts of our motive exist, it can do no harm to insist on the fundamental principles upon which British commerce and industry are based.

You have been kind enough to express your regret at my departure and to thank me for such assistance as I have been able to render you. I need hardly say that it is a matter of real satisfaction to me to feel that I have been of some assistance to you. It used to be a common complaint in old pre-war days that British diplomatists were out of touch with British business men, and confined themselves almost entirely to political work. I do not know that this charge was ever really justified, but I am quite sure that all his Majesty's representatives are now, at any rate, fully alive to the overwhelming importance of supporting British trade and commerce with all the means at their disposal. In thanking you once again for all your kindness to me, and for your open dealing and straightforwardness, without which no help of mine could have been of any avail, I would like to say that my regret at leaving this country is tempered by the thought of the many friends I have made amongst the British Colony here.

Col. Duncan, H.M. Military Attaché, in an interesting speech, referred particularly to the old question of founding a British Club in Bucharest, where all Englishmen in the town could have a common meeting-place for discussing matters of common interest, and especially that the club should be open to Britons passing through or staying in the town for a short time. They should be made to feel that they were not strangers in a strange country, but that here was an English institution where they could get accommodation, and everything that they required. He hoped that this club would soon be started, and he would do all he could to help to this end.

## TURKEY.

CONSTANTINOPLE, September 4.

**The True Situation.**

A recent article in a French paper concerning the strength of the Nationalist forces has been the subject of contemptuous comment in Constantinople, and is being cited as an instance of the inaccurate information supplied by European correspondents in this country. There appears to be considerable misapprehension as to the actual nature of the Nationalist forces, but recent

Digitized by Google

events have amply shown that they have absolutely no military value in comparison with a well-equipped, disciplined force such as the Greek Army. The truth of the matter is that the Nationalists have neither the money nor the material, nor, indeed, any of the supplies which are absolutely essential to the conduct of serious military operations. The Greeks are having a walk-over, and no really serious resistance has been offered, nor is such resistance possible. The Nationalist forces are inadequately supplied with rifles, their artillery is hopelessly defective, their food supplies are insufficient, the men are unpaid, and indiscipline is rife. The troops desert at every available opportunity, and, taking refuge in the hills, indulge in indiscriminate brigandage.

Mustapha Kemal and the former commander of the 56th Division, Bekir Sami, were recently attacked by one of these wandering bands near Tokat. It is reported that Mustapha Kemal was wounded and his companion killed. The peasantry, enrolled by force, are thoroughly dispirited, and there can be no question of their standing up to the Hellenic forces, which also greatly outnumber the Turks.

The question naturally arises: If these be, indeed, the facts of the case, upon what does Mustapha Kemal rely to save the country from final and irretrievable disaster? Here one must take into account the atmosphere of Angora, where there are no Allied troops, and no High Commissioners to recall hotheads to a sense of realities. Moreover, the Nationalists have been buoyed up with hollow promises of assistance, not only from the Russians, but also from the Italians; and with the spirit of the true gambler, Mustapha has staked all upon dissensions among the Allies and upon the arrival of Bolshevist armies. Now that it must be clear even to the fevered brains of the Extremists that Italian help cannot amount to much beyond honeyed words, all the hopes of the Nationalists are turned to Russia. The enormous distances that would have to be traversed by an army, and the almost insurmountable natural obstacles to the arrival of any considerable force, seem to have been left out of consideration, and the Nationalist press is full of absurd stories concerning the approaching arrival of Bolshevist armies on the Smyrna front.

### The Greek Advance.

The fall of Ushak and the steady advance of the Greek army, practically without loss, have recently stirred the Turks in Anatolia to some realisation of the true hopelessness of the situation. The press is publishing appeals exhorting the population to fulfil its duty and die, rather than be enslaved; but as the population has known nothing else but practical slavery for the last six years, the appeal is not likely to make a very deep impression. It is understood that the objective of the Greek troops is Eski Shehir, the most important junction on the Anatolian railway. Here, also, are situated the only ordnance works that the Nationalists possess. Thus the capture of Eski Shehir will be the heaviest blow the Nationalists have yet received, and there is not the slightest prospect of their being able to avert it. For the rest, it appears that in the occupied regions the utmost order prevails, and so long as the Greeks are wise enough to keep a light but firm hand upon the bridle there is every prospect of their having an easy task.

### In Constantinople.

The Government continues to discuss plans for the despatch of a military expedition to suppress the "rebellion" in Anatolia, but in many ways the Sublime Porte is in no better posture than the Great National Assembly. The treasury is empty, and far from being able to provide funds for a military expedition, there is no money to pay the salaries of the considerably reduced number of officials in the capital. It is rumoured that the Government contemplates the sale of State property in order to be able to pay the officials their August and September salaries, but this has not been confirmed.

With regard to recruiting for the projected expedition to Anatolia, men are no more plentiful than money; and even were they to come forward, there is every probability that they would desert at the first opportunity.

It is natural that there should be a Cabinet crisis at this moment. One is just about due, but the only trouble seems to be whether Tweedledum can agree with Tweedledee. How long the present situation can endure it is not easy to say, but that it is fraught with the utmost danger for Turkey goes without saying. The appetite of the Greeks for more territory is by no means appeased, and there are indications that unless the Turks show some energy, there are further disasters in store for the country.

## CYPRUS.

CYPRUS, August 10.

### The Cypriot Mission.

News from the delegates in London shows that they have been to Paris for a visit of some days, and on their return are renewing their visits to persons friendly to the Hellenic cause and likely to take up that of the Cyprus Unionists. They have hoped that questions would be asked in the House of Commons before the recess. Cypriot Greeks are urged not to be in any way discouraged by the recent Italo-Hellenic discussions, all of which imply that there may be, at the worst, longer delay as to a favourable ultimate solution than had been lately anticipated. It is held that the Cyprus question is now bound up with that of Rhodes. In the island the Italo-Hellenic differences are keenly debated, and the various phases, as reported in the European Press, eagerly followed. The latest rumours relate to the alleged decision which involves the retention of Rhodes by Italy for fifteen years, after which the question as to which Power shall possess the island will be decided by votes of the people under the supervision of the League of Nations. There could be no question, it is argued, as to the result. If Italy—unmindful of her Mazzinis and her Garibaldis—should desire to retain her hold for fifteen years, she would realise how unthinkable it is that the Greek element could swerve in the slightest degree from its age-long devotion to Greece. Neither in Cyprus, even after forty years of liberal British rule, could the flame of Hellenic patriotism be extinguished. It is only necessary that there should be such patience as M. Venizelos advocates.

### Accident to Police Commandant.

The Chief Commandant of Police, Colonel Gallagher D.S.O., while proceeding from Limassol to Nicosia, has had a narrow escape from what might have been a fatal accident. On reaching a bridge which crosses a small torrent near the village of Moni, about ten miles from Limassol, the car was precipitated below the bridge, the occupants being thrown violently out. Colonel Gallagher sustained serious injuries, and the chauffeur was less gravely damaged. Villagers who were near ran to give what first-aid they could; and fortunately a Greek from Limassol, M. E. Georgallides, who was approaching in his motor soon after, hastened to assist. He conveyed Colonel Gallagher to a house of his own at Moni, and, after doing all that was possible in dressing the wounds, sent him in his motor to Limassol, where medical attendance was at once procured. Happily, the injuries are not of a dangerous nature.

### General News.

The heat has been excessive, combined with great humidity in the plains. Fortunately for the carob crop, there have not been any parching winds. In the hills there have been refreshing showers, sometimes with hail, which is very unwelcome in the vine lands.

Hotels and all available houses and cottages are crowded at Platres, and considerable gaiety prevails in this favourite summer resort. There has been a continuous flow of visitors from Egypt by every steamer. Communications between Limassol and Troodos are vastly improved. Several of the Platres hotels run motors of their own. The greatest credit is given to the Cairo company which conveys passengers and mails in large and comfortable cars between the six chief district towns of the island. Meanwhile, there is much grumbling that in spite of these benefits mails are still carried between Limassol and Platres by mules; especially as large numbers of business men spend holidays in the hills.

The High Commissioner, Mr. M. Stevenson, has been to Limassol, notwithstanding the heat, for inspections, and to discuss various local matters. These visits of the Governor to places where various interests are at stake and can be much promoted by personal interviews, give great satisfaction. It is probable that His Excellency will arrange a visit to Papho before returning to the capital, as well as another to Limassol.

## PRINCE CAROL OF ROUMANIA.

Apart from the time spent on board ship, the few days of his stay in England must have represented almost the only respite experienced by the Crown Prince of Roumania in his long tour round the world. The visit to London did not belong to the formal programme, but was determined by the exigencies of geography or transport. It coincided with the holiday season. The King and Queen are in Scotland, and many of the people whom on personal grounds the Prince would have liked to meet were out of town. The Prime Minister returned from the Continent on September 7, but affairs of State, particularly pressing at the moment, prevented him from meeting his Royal Highness until the day of his departure. A luncheon given at Claridge's Hotel on September 9 by M. Boerescu, the Roumanian Chargé d'Affaires, was almost the only "set piece" of the London visit. On that occasion Prince Carol met a number of the diplomatists accredited to the Court of St. James's, as well as Lord Hardinge of Penshurst, the representative, in the absence of Lord Curzon, of the Foreign Office.

The Crown Prince's tour comprised visits to Egypt, India, and Ceylon, and he touched at Singapore, Hong Kong and Shanghai on his way to Japan. With India, it is understood, he was deeply impressed; the programme arranged for him by the authorities was a comprehensive one, and, in view of the heat, proved not a little strenuous. In Japan he had a mission to execute, the discussion of trade relations between Japan and Roumania, and for this reason more time had to be given to business. The Japanese, however, are past-masters in the art of entertaining, and would know how to enable the busiest visitor to appreciate some of the charms of their attractive country.

After the studied politeness of Japan, the aggressive attentions of American newspapers proved more than embarrassing, and it was with considerable relief that the Crown Prince left the Press-ridden United States and arrived in England, where some deference was paid to the private nature of his visit.

Prince Carol left London on September 11, travelling direct to Roumania. He will have been absent six months, and will return with a wider vision and with knowledge acquired that will always be at the service of his country. To Britons it is of interest to know that Prince Carol is an outdoor enthusiast. In the Carpathian Mountains the Roumanians have a wonderful asset both for mineral wealth and for physical relaxation. Now that the northern slopes have been brought within the kingdom it will be possible to develop winter sports in Roumania, and the movement with this end in view is led by the Crown Prince. As soon as Roumania has recovered from her severe ordeal in the war, and has replenished her rolling stock, the close political relations that exist between her and Great Britain will find expression in the more frequent intercourse between the two peoples.

## CORRESPONDENCE.

### ITALY AND YUGOSLAVIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of September 9 you published a letter from Mr. Harold W. E. Goad, who writes of the "heated imagination" of myself and my countrymen with regard to the Italians' arrogation of Fiume and Dalmatia. Will you allow me a final word on this subject?

Mr. Goad recommends me to consult the valuable little book by Mr. Archibald Hurd, entitled "Italian Sea Power in the Great War," in which the author writes, on page 56: "It is not conceivable that restored Serbia will ever forget the debt she owes to Italy."

But, on the other hand, in the same book, the author writes about the Serbs on pages 58, 59, 63, 64: "After a most gallant action had been fought at the passes of Katchanik and Babuna in the north and south respectively—rearguard actions worthy to be ranked with any recorded in history—nothing remained of Serbia to defend, and little of one of the most intrepid armies that the world has ever known, but the hungry, fever-stricken, and war-worn, but undaunted columns that were retreating through the inhospitable Albanian mountains.

"Many of these people were already so weak with hunger or disease that they fell beside the way, often to die; others were cut off and massacred by roving bands of Albanian bandits. . . . . Living skeletons, as the result of sleeplessness and starvation, many of them were already the victims of typhus, dysentery, or cholera. All had the same dazed and glassy look in their sunken eyes. . . . Rich and poor were alike in the hopeless misery into which they had sunk. . . . It was such a scene as no tragedian from Homer, Æschylus, and Euripides to Dante, Shakespeare, or Milton had ever succeeded in painting, even with the sombre or lurid colours of the imagination of genius, and one that the shores of the Mediterranean, strewn as they had been from time immemorial by the disasters of armies and the wreckage of nations, could scarcely have looked upon since time began."

After all this starvation of the Serbians, could any soul or any civilised nation, especially any Ally, not help us in that moment? Besides, it was the duty of the Allies to help us and enable us to renew fighting against the common enemy. In my letter of August 26 I mentioned that we remember well the generous help of Italy and the other Allies, and I repeat it again, because Mr. Goad, perhaps, did not notice this the first time.

The Italian Fleet transferred about 200,000 Serbians and saved their lives, but in return for this work of mercy they now keep under their yoke 400,000 groaning Yugoslavs, who are oppressively governed by D'Annunzio's military forces.

Although the Serbian Army liberated these 400,000 Yugoslavs from the Austrian yoke, yet after a short time of liberation D'Annunzio has occupied those parts by violence, and keeps them at present under his yoke.

Serbia, exhausted and war-worn during the great war, not yet recovered from her wounds, must now undergo a new operation, not from the hands of the enemy, but from an ally of yesterday, who tries to cut off the main vein of the worn-out heart of Serbia, and to lock the main door of the newly-created and united kingdom. What Dantzig at present is to Poland, so Fiume is to Yugoslavia. We remember the help the Italians extended to us, but we can never forget their injustice.

Mr. Goad mentioned that I took the opportunity of repeating once more "a mass of calumny against the Italians in Fiume and Dalmatia, which is totally without foundation save in the heated imagination" of myself and my countrymen.

If this is without foundation, let Mr. Goad justify this in facts. And if the majority of inhabitants are satisfied with D'Annunzio's rule, let them have self-determination, or at least let there be a plebiscite, but only on condition that the Italians do not interfere during the plebiscite. So will be justified all the Italians' claims.—I am, etc.,

D. GLISHITCH.

September 11, Birmingham.

## DISTURBANCES IN CILICIA.

The correspondent in Alexandria who sent us some extracts from a letter upon Cilicia which were published in our issue of August 12, sends us some further information, written on August 15. His Armenian correspondent says:—

On August 2 the Armenian forces east of Adana and between the two Cilician rivers Sihun and Jihun formed a provisional Mitchaket Armenian Government. Two days later all the Christians of Adana formed an Inter-Christian Extraordinary Council, and handed to Colonel Bremond a memorandum in which they declared the independence of Cilicia, with France as mandatory. This document met with the approval of Colonel Bremond, who promised to send it to his Government. In the meantime the Inter-Christian Extraordinary Council carried out its decision to capture the Government buildings on the morning of August 6. When this was made known to Colonel Bremond he immediately dispatched a company of his Algerians and forced the Armenians out of the buildings at the point of the bayonet. You should note that he who ordered this inhuman act is the same Bremond who had approved of the above document and showed great sincerity towards those who had compiled it, adding that the document in question was "called to open a new era in the Cilician contemporary annals." From that day on the French artillery does not partake in any combat which takes place at the very doors of Adana. Each and every town of Cilicia is isolated from the outside world. The policy followed by the French in the other towns of Cilicia is not different in any respect from that followed in Adana itself. Wherever the Armenians are able to stand by themselves becomes a centre of French intrigue; for instance, the Amanus Armenians had declared independence, but this being a "danger" to the existence of the French in Cilicia they were ordered to beat a retreat on military pretexts. The whole population is now wandering in the fields between Amanus and Adana, suffering hunger and thirst, and the continuous heat of the summer is causing considerable hardship. Another victim of the French Imperialist policy is the town of Hajin, under the siege of the Kemalists. Several times hundreds of daring young Armenians volunteered to go to the aid of their compatriots in Hajin, but they were never permitted to do so. In one case, when a company of volunteers had started without informing the French, they were overtaken on the road and returned to Adana under the escort of Mohammedan French soldiers. . . .

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

# PRESS ON THE NEAR EAST.

## Our Persian Policy.

The *Gazette de Lausanne* of September 7 contains an article entitled "La Grande-Bretagne et la Perse," which betrays a lively satisfaction at the predicament in which, the writer considers, our Persian policy has landed us. It begins with a reference to Mr. Lloyd George's attitude towards the Bolshevists at the time of their victories, an attitude which it attributes to the very difficult situation confronting us in the Orient, where Moslem sentiment has been deeply affected. The uneasiness of British opinion, as expressed in our Press, is caused not only by events in Mesopotamia, but also by developments in Persia:—

Under pressure from business men, and principally of great financiers who aim at gaining control of the enormous supplies of petroleum in Mesopotamia and in Persia, Great Britain has followed in the latter country a most dangerous policy, which to-day threatens to turn against her. Great Britain has to-day in North-West Persia a small force, now cut off from Baghdad, the fate of which, judging from the Press, seriously alarms students of the Oriental question.

The Moscow Government (the writer goes on to say) has denied any responsibility for the attacks on Persia made by Bolshevist detachments, but we know the value of Soviet denials, and the Russian Government is aware of the feeling of the Persian people towards Great Britain. It follows its policy there, as in other directions, and it believes that its revolutionary propaganda will lead to results in Asia sooner than in Europe.

Mr. Lloyd George thought to achieve a master-stroke in signing with the Persian Government, or, rather, in forcing it to sign, less than a year after the Armistice, an agreement which amounted in effect to a British protectorate over all the Persian Empire. By a loan of fifty millions, at a price of 7 per cent., Great Britain secured to herself by the Agreement of August 9, 1919, everything interesting and remunerative in the Shah's dominion. The Persians have not protested because they no longer have any *mejliss* and because they have been deprived of all power of control; but their irritation is great, and shows itself already, according to travellers, in an extraordinary xenophobia. The present Shah, accused of having sold his country, is extremely unpopular. A spark on this pile of touchwood and there may be the worst of complications. The military operations in neighbouring Mesopotamia have not yet secured the pacification of the country. In Persia, the military campaign of which that country is the scene is followed with close interest; in Moscow it attracts no less attention. British policy in Persia may, then, serve her a very bad turn.

The article concludes with a couple of quotations, from the *Revue hebdomadaire* and *The Times*. It remains to be seen whether the prophets of evil will be justified.

## The Eastern Empire.

The *Spectator* of August 28 charges the Government with having no definite policy towards our Oriental Empire.

While we throw away India and Egypt with the one hand, we are steadily taking on greater and greater commitments in Mesopotamia with the other—commitments which are enormously costly, which raise a great deal of ill-feeling against us and which cannot possibly give us quick returns. Moreover, they are commitments which must, under the terms of our mandate and of the prevailing demands of public opinion, lead to the ultimate destruction of the building we are rearing. The native Government to whom we look forward to resigning our work is not likely, unless East becomes West, to worry about keeping it in repairs. Roads, railways, irrigation, canals, dams, and flood-gates are fanciful shapes of a plastic earth which weary the Oriental mind. They are gross material things unworthy of the children of Allah. To put the matter in a nutshell, whatever is right or wrong, it can only be a proof of imperial senile *dementia* to build up a new Oriental Empire in Mesopotamia while we are busily and conscientiously destroying the old one in India and Egypt. This is a form of the white man's burden which honestly is quite too much for us. The objections which we have just raised come out very clearly in the new Egyptian policy. Apparently all that we are now proposing to retain in the region in which Asia joins Northern Africa is the stretch of desert through which the Suez Canal runs. On one side is to be the Jewish Republic which Sir Herbert Samuel and his friends are now eagerly preparing as a national home for the Jews of Poland and South Russia, and in which no doubt many a misunderstood Commissary from Moscow will ultimately find his physical and spiritual domicile. There some day Lenin and Trotsky will lie down with Rothschild and Mond, and Reading or Montagu will put his hand upon the cockatrice' den. And a little child, perhaps from Lympne, shall lead them. On the other side of the Canal Zone there will be an absolutely independent Egypt, but whether under a Sultan or a Moslem or Hebrew Soviet does not at present appear. At any rate, this disposition of the Canal will be thoroughly in the fashion. It will become a "Corridor." No doubt, in view of what is to happen to India, it is difficult to see why we should trouble about a corridor which will soon lead nowhere, or at any rate nowhere that will have any great interest for the British people.

Its conclusion is undiluted pessimism:—

We are not going to assert that because we can make the people of Egypt so much more comfortable than they can make themselves, therefore we ought to insist upon ruling them. Neither do we say that it is better for them to be comfortable than free, though we are inclined to think that, though this is entirely untrue of European nations, it is, in fact, true of the fatalistic Oriental. If it is the real wish of the Egyptian peasant to be like Grattan's Irishman—able to glory in the fact that if he is in rags he is at any rate not in tutelage—then no doubt we must say, "Have it your way." Though we end our reign, do not let us pretend that we are engaging in a generous piece of self-sacrifice in order to bestow great spiritual and material blessings upon the natives of Egypt We are not doing anything of the kind. Materially the benefit will be all on our side. Cobden and the men of his school were perfectly right when they said that the Oriental Empire was a huge material burden upon this country. Their mistake was that they did not realise that, though the Empire is materially a burden, it has raised us spiritually, and therefore prevented us having that relapsing fever which comes to nations which live too much at ease—the relapsing fever which in the last resort destroyed Tyre, Sidon, and Carthage, and but for their daily dreadful battle with the sea might have destroyed the sturdy, pursy burghers of the Netherlands. However, we need not as yet worry ourselves about the likelihood of getting too much ease, comfort, and economy out of the new system of Empire, or rather non-Empire. As far as we can see, we are to retain our Oriental Empire wherever it means responsibility and expense, and to abandon it only when it is a paying and going concern. A cynic might sum up the results of all we have written and suggested by the reflection that, at any rate, the men who have insisted upon the great revolution imminent in Egypt and in preparation in India will get their punishment and will rue the day that they forced us to give up our trusteeship. Unfortunately, we cannot share in this piece of grim humour. It will be a poor consolation to think that the fellaheen in Egypt and the ryot in India will once more sink back into the slavish savagery from which we had so largely redeemed them, and become almost as suffering and as hopeless as the overburdened camel and the all-enduring mule and donkey, who at this moment are suffering such pain and misery at the hands of the Faithful. Mahomet may have been punctiliously kind and courteous to his cat, but his followers all the world over are in sore need of a Society for the Prevention of Cruelty to Animals. Let us pray that they may not soon be in need of a society for the prevention of cruelty to men and women and children who are not officials, soldiers, usurers, or members of their own families.

# BRITISH DEAD IN TURKEY.

It has been suggested that a memorial should be established in Constantinople to all those who lost their lives within the Turkish Empire during the war. After the Crimean War a large sum was subscribed for the erection in Constantinople of a church, which was called Christ Church, and was dedicated to those who fell in that war; but while this sum was sufficient to build the church it was not sufficient to endow it, and funds are now so urgently needed that the church may have to be closed. It is, therefore, proposed that Christ Church should be endowed as a memorial for all time to British dead, and that, in addition, a worthy monument should be erected in it. A committee has been formed at Constantinople, with branches in London, Australia, and India, under the presidency of the British High Commissioner, Admiral Sir John de Robeck, to appeal for funds. Subscriptions of any amount may be sent to either of the joint hon. treasurers, Lady Lawrence, Sudbury Hill, Harrow-on-the-Hill; or Admiral Sir Edmond Slade, 35, Surrey Street, Strand, London, W.C.2.

# NEAR EAST BOOKSHELF.

I.—"THE EASTERN QUESTION AND ITS SOLUTION." By Morris Jastrow, jun. (Philadelphia and London. J. B. Lippincott Company. $1.50.)

II.—"IN A BENGAL BACKWATER." By John Hamilton. (Calcutta: Thacker, Spink and Co. Rs. 4 8.)

III.—"BARTHOLOMEW'S POLITICAL MAP OF THE NEW EUROPE, 1920." (Edinburgh: John Bartholomew and Son, Ltd. 2s. 6d. net.).

## I.—AN AMERICAN VIEW OF THE EASTERN QUESTION.

"The war is not over, nor will it be until the Eastern Question has been disposed of." With these pregnant words Dr. Morris Jastrow, professor in the University of Pennsylvania, begins an illuminating study of the main source of international conflicts. It entered on an acute stage early in the nineteenth century owing to the decay of the Turkish Empire, which had embraced the entire Near East in the great days of Selim and Suleiman. The "Sick Man" theory then took shape, and every Great Power embarked on a struggle for his inheritance. Thus the Eastern Question was a source of never-ending friction; and after embroiling Europe in these disastrous wars, it has ended by setting the civilised world aflame. In vain did the old diplomacy strive to deal with it by means of secret treaties and conferences. It was hypnotised by the sophism of a "balance of power," and became an agency for giving vent to the self-regarding instincts. For the morality of men in association is in inverse ratio to the numbers engaged. Every nation seeks its individual advantage, and is ready to draw the sword in order to advance it. "If I had done for myself," exclaimed the great Cavour, "all that I have done for my country, what a scoundrel I should be!" So every conference leaves behind it the seeds of future warfare; and when the fount and origin of evil be removed, it will assuredly make an end of our boasted civilisation.

The last internecine struggle has convinced men of the failure of diplomacy in the past. It is admitted on all sides that the Near and Middle East must be placed under tutelage until it shall have recovered from the dire effect of Turkish misgovernment; and that the task must be supervised by a League of Nations. But the form which that tutelage should take is still undecided. The Peace Conference favoured "mandates," giving a specified Power exclusive authority to guide the destinies of a specified region. Dr. Jastrow points out the evil inherent in this system. While the old diplomacy and the game of grab continue in force there is nothing to prevent a Mandatory Power from converting a trust into a protectorate, and finally adding it to its own dominions. Moreover, the mandatory principle involves the maintenance of a standing army in the protected region—a fact which deters America from entering the League of Nations. Dr. Jastrow prefers Internationalism as a solution. He urges the formation of mixed commissions for governing the erstwhile provinces of Turkey, comprised of foreign experts aided by natives of the protected regions. He instances the success of the Danubian Commission, instituted in 1856, as justifying a wider application of International control. Writing as an American, he might well have adduced the precedent of Washington City, which offers a model of municipal administration under Commissioners nominated by the President of the United States. Dr. Jastrow's book ought to be translated into the chief languages of Europe, and placed in the hands of statesmen who, in the teeth of enormous difficulties, are striving to set the Eastern Question at rest for ever. F. H. S.

## II.—A STUDY OF HINDU HOME LIFE IN BENGAL.

This is a simple, unpretentious account of Beatrice Weston's attempt to make friends with the Bengali women whose homes are in the clearing in the jungle where her husband's factory is situated on the banks of the Ganges. Her chief effort, in which she finally succeeds, is directed towards gaining the friendship of Binodini, the wife of Surenda, the Babu doctor attached to the factory. The tale opens with a description of Beatrice, who has just returned to her husband after five years spent in England looking after their children, gazing out at the ugly factory buildings on the river bank and feeling lonely and restless.

The idea of trying to understand and help her Bengali neighbours is given to her by a letter from her friend Alice Lancaster, who has lived in this very bungalow years before. There are several of these long, pious letters from Mrs. Lancaster scattered through the book, and extraordinarily irritating they are; however, they leave us thankful that Beatrice is not like her friend, but quite human and ordinary. The moral of the book is that much can be done by perseverance, patience, and sincere sympathy to bring East and West nearer together. The wrong methods of going to work are shown in the conversation of Miss Brown, who comes out to India filled with half-digested ideas of reform, and in the activities of the well-meaning but quite unpractical Padre, whom she eventually marries. Hammond, the principal of a large educational institute, and his wife are shown as entertaining a feeling for the Indians which is far removed from sympathy. We leave Beatrice cheered at having gained the friendship and confidence of the native doctor's family, and at having persuaded several of the other women to accompany her for a little air and recreation to a purdah garden cut out of the jungle. We are, however, confused by the fact that her friendship and not altogether wise attempts at interference have twice nearly brought ruin on the Bengali household, and that what has really helped them and brought them prosperity is the timely reappearance from Bombay of a wealthy brother of Surenda's, who relieves him of the heavy burden of having to support their mother and father and the widows and families of two other brothers, and thus enables Surenda to pursue his medical and literary studies in peace.

The author gives a delicately sympathetic picture of the Hindu wife in Binodini, and the straightforward simplicity of the little book is attractive.

## III.—THE NEW EUROPE.

This map, while being useful in many ways, seems to have been composed with rather less lucidity and accuracy than are usual with Messrs. Bartholomew's publications. It has been drawn up according to the Treaties of Paris, but, as everyone knows, the treaties are by no means definite on all points; so that while some of the frontiers here described are certain, others are only probable, and others only possible. It has not been finally decided, for instance, that Fiume is to go to Italy, or that Montenegro has been legally incorporated into Yugoslavia. Again, we do not see the grounds upon which Albania is allotted to Italy. That Egypt is here printed in British red is perhaps a quite excusable guess; but to mark the northern boundary of Armenia as extending from Batoum to the west of Samsoun is surely unpardonable. However, the difficulties in producing such a map as this must have been immense, and if they have not all been overcome, it is at least obvious to the student where the errors lie. We should have been pleased to see more detail, especially in the Near Eastern part of this map: the Dalmatian coast is an example of such not unimportant omissions. A revised edition of the map is needed, and, we hope, will be forthcoming.

| 20 | 7 | Monday | 7 | 8 |
| 21 | 8 | Tuesday | 8 | 9 |
| 22 | 9 | Wednesday | 9 | 10 |

Earl Curzon of Kedleston returned to London on Sunday evening.

Earl Winterton will arrive in London from Rhodesia on October 10.

The Sultan of Zanzibar is making a State visit to the island of Pemba.

Prince Paul of Serbia is visiting the Earl of Strathmore at Glamis Castle.

Viscount Milner has returned to London from Sturry Court, Canterbury.

Sir Henry and Lady Bax-Ironside left London for Ireland at the end of last week.

M. Loutsi, Secretary to the Greek Legation, has returned to London from Paris.

The Maharajah of Jhalapur spent the week-end on a visit to Bishop Welldon, Dean of Durham.

M. Nano, Secretary to the Roumanian Legation, returned to London on September 8 from Berne.

Lord and Lady Lamington will remain at Lamington House, Lanarkshire, until November.

General Paraskevopoulos, the Greek Commander-in-Chief, left Smyrna for Athens on September 7.

Mr. Marmaduke Pickthall is proceeding to India to take up editorial duties in connection with the *Bombay Chronicle*.

M. D. Ghambashidze, the Chargé d'Affaires of the Georgian Legation, arrived in London on September 8 from Georgia.

Princess Nicholas of Greece has been recalled from Territet owing to the critical condition of the Grand Duchess Vladimir.

Lady Lawrence, wife of Lord Lawrence, returned on Wednesday to Harrow-on-the-Hill from The Cottage, Dunster, Somerset.

Prince Karam and Prince Mahijit Singh and Prince Amarjit Singh of Kapurthala have arrived at the Hotel du Palais, Biarritz.

M. E. Gueguetchkori, Minister for Foreign Affairs of Georgia, arrived in London on September 9 from Paris on a special mission.

Colonel Arion, formerly Roumanian Military Attaché to the Legation in London, has been sent by the Roumanian Government to Japan on a special mission.

M. Pavlé Karovitch, First Secretary, will be in charge of the Serbian Legation during the absence of M. Gavrilovitch, the Serbian Minister, who left London on September 9.

In celebration of the name-day of the King of the Hellenes a Te Deum was sung at the Greek Church at noon on Sunday. The service was taken by the Archimandrite, Dr. Pagonis, and those present included the Greek Minister.

The Greek Minister has left for Paris to attend the forthcoming meeting of the Council of the League of Nations there. During his absence M. Polychroniadis, First Secretary of the Legation, will act as Chargé d'Affaires.

Lieutenant-General Sir William Birdwood, who commanded the Australian and New Zealand Forces at Gallipoli, returned to London last Friday, after a stay of several months' duration in Australia, where he was on a visit to his daughter.

Our Belgrade Correspondent writes (September 4):—

Exequatur has been given to Mr. Alfred R. Thompson, the American Consul at Zagreb.

The Naval Attaché, Commander Diggle, R.N., has arrived in Belgrade.

Major Neate has arrived in Belgrade on his way to rejoin the Military Mission in Sofia.

## APPOINTMENTS, ETC.

The Bulgarian Government has agreed to the nomination of M. Langa Rachcanu as the representative of Roumania in Sofia.

M. Pavloff, Consul-General, who has held the post of Chargé d'Affaires of Bulgaria in Albania, has been nominated as Bulgarian Chargé d'Affaires at Constantinople.

Mr. Aubrey M. Clark, Acting Agent, Bengal-Nagpur Railway, at present on leave in this country, has been offered and has accepted the post of Member of the Indian Railway Board. Mr. Clark leaves England to take up his appointment at once.

The Governor-General of India has appointed Mr. Alexander Frederick Whyte as the first President of the Legislative Assembly shortly to be constituted in India under the Government of India Act, 1919.

## OBITUARY.

Colonel Charles Evan Maberly, D.S.O., died on September 7 at 98, Piccadilly. He entered the Royal Artillery in 1874, and served in the Nile Campaign, 1884-5, and in South Africa, 1899-1900. He was for a time on the staff of Lord Kitchener, and was then invalided home. Colonel Maberly was unmarried.

## PRIMARY SCHOOL AT CONSTANTINOPLE.

The British School in the Rue Sakis Agatch, Pera, was opened in March, 1919, to provide English education for boys and girls until the two English High Schools could be reopened. It had over 200 pupils, and a balance-sheet made up to July 31, 1920, shows a total deficit of 700 Ltq. over the period of seventeen months, which the British Government is being asked to accept as an item of expenditure under the British Relief Fund.

The High School for Boys was reopened in October, 1919, and the High School for Girls will be reopened this month, and it is expected that the majority of the pupils of the British School will be entered at one or other of the High Schools. There remain, however, a large number of British subjects, especially Maltese, who are unable to pay the higher fees necessarily charged by the two High Schools. H.M. High Commissioner has applied to H.M. Government for a grant in aid of a primary school in Constantinople to provide English education at low fees, and his application is now before the Ministry of Education and Treasury.

In order to carry on the work until some decision can be taken in London, a committee has been formed, and has decided to issue this appeal for signature to a Guarantee Fund to cover any deficit resulting from the continuation of the school for a further period of twelve months from September, 1920. Any such deficit will be divided among the underwriters of the guarantee in proportion to the sum guaranteed by each.

Names of committee: Mary Dunn, R. Frew, H. H. Guest (treasurer), A. Mayor Metcalfe, J. Morrison, J. A. Sykes, A. T. Waugh (chairman).

A headmaster will be brought out from England. The school fees for British subjects have been fixed at Ltq. 2 per month. Foreign subjects will be charged at a higher rate. It is desired to raise the Guarantee Fund to £1,500, and the committee appeals to the British community and to British business houses for signatures, which should be sent to the chairman at the British High Commission, Pera.

## FAREWELL TO LORD SINHA.

On September 8, at the Savoy Hotel, Lord Sinha was entertained at a farewell banquet on his retirement from the Under-Secretaryship for India and his departure from England to take up the duties of Governor of Bihar and Orissa. Among those present were: Prince Fateh Singh of Limri, Prince Chenanjit Singh of Kapurthala, Sir M. M. Bhownaggree, Lord Meston, Sir J. D. Rees, M.P., the Chief of Aundh, Lord Carmichael, Sir B. Mitter (Advocate-General of Bengal), Sir M. Abbas Ali Baig, Sir N. Visvesvaraya, Sir M. B. Chaubal, Sir K. G. Gupta, Sir Dawood Khan (late Persian Minister in India), the Persian Chargé d'Affaires (Ghaffer Khan), Sir M. C. Seton, Sir F. W. Duke, General Sir E. G. Barrow, General H. B. Cox, Sir Charles S. Bayley, Sir Havelock Charles, the Hon. S. Aftad Ahmed, Mr. R. Mareau, and Mr. M. H. Ispahani.

Mr. E. S. Montagu, Secretary of State for India, who presided, expressed to Lord Sinha, on behalf of the Prime Minister and Government, their thanks for services rendered and good wishes for services to be fulfilled.

Lord Sinha, in his reply, said the political changes in India had been so rapid of recent years that it was difficult to appraise the sum total. It was because of these changes that a tendency was manifested in some quarters to depreciate the value of individual reforms. But we must make up our minds that, as in the past, so in the future, it was by steady successive steps, each perhaps a small one in itself, that the goal, now accepted by the Parliament of the United Kingdom, was likely to be reached. One aspect of his appointment was that, unlike his election to the Viceroy's Executive Council, there was hardly a murmur of dissent.

Lord Sinha left for India on September 9.

## NEWS IN BRIEF.

Yugoslavia and Austria have just concluded a commercial treaty.

At a fire in Bombay on September 17 3,700 bales of cotton were destroyed.

Last week the German Imperial Chancellor received Erik Bernstein, of the Georgian National Assembly.

It is understood that the 5th Dragoon Guards will leave Colchester for Mesopotamia early in October.

Lord Chelmsford, the Viceroy of India, has issued an appeal on behalf of the Westminster Abbey Fund.

A Bill constituting a Moslem University at Aligarth was passed at a meeting of the Indian Legislative Council on September 16.

On September 15 the Indian Legislative Assembly carried the Government Bill for prevention of corrupt practices at elections.

An India Office communiqué states that the Civil Commissioner, Baghdad, has telegraphed that Captain Lloyd has been released.

It is announced that M. Pashitch, the ex-Prime Minister of Yugoslavia, has resigned his seat in the Chamber, although no reason is known for his step.

It is probable that a conference will take place shortly between representatives of England, France, and Spain to make fresh suggestions upon the control of Tangier.

A letter from Enver Pasha was read at the Congress of Eastern Peoples at Baku. In this he declares that Turkey is struggling against world Imperialism, and in this struggle Turkey's only ally is Soviet Russia.

The *Times* Constantinople correspondent says that there are indications of an impending change in the Ministry. In this event it is thought that Tewfik Pasha will probably be selected Grand Vizier by the Sultan.

According to news received in London recently Armenia is suffering from a lack of agricultural implements and beasts of burden. Men and women have harnessed themselves to the plough, and do the work of oxen.

One Opposition leader, M. Mavromichalis, and others, together with several members of ex-King Constantine's entourage at Lucerne, have been sent to trial as the result of inquiries into the recent attack on M. Venizelos.

At the next sessions of both the International Danube Commission and the International Danube Conference Hungary will be represented by M. Miklos, Secretary of State, and Dr. Elemer Jarmay, Counsellor to the Ministry of Foreign Affairs.

A committee, consisting of the *Mufti*, the Rabbi, the Greek and Armenian Metropolitans, and representatives of the Turkish community, have arrived at Athens from Adrianople to submit to M. Venizelos greetings of gratitude for their freedom.

A communiqué issued from the India Office on September 11 reports that the Secretary of State for India has received a telegram from the Viceroy, stating that, according to reports received from the Chief Commissioner, North-West Frontier Province, the situation in the Black Mountain has been all quiet since September 3. All lashkars have now dispersed. The political situation in the Hazara district is well in hand.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
GRAND SPA HOTEL.

**EXETER**
ROYAL CLARENCE HOTEL
(*facing beautiful Cathedral*).

**LONDON**
HOTEL CRANBOURN
67a, Shaftesbury Avenue, W.C.2.
Self Contained Suites.

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
SMEDLEY'S HYDRO.

**TORQUAY**
VICTORIA & ALBERT HOTEL.

*Cairo's Hotels de Luxe.*

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

**SUMMER PALACE HOTEL,**
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant,
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

## THE FUTURE OF THE INDIAN ARMY.

Little attention has so far been given in this country to the announcement of a measure to constitute an Indian Territorial Force supplementary to the existing Regular Army, but the decision is of sufficient importance to justify careful examination; for, if we are not mistaken, it marks the close of an epoch in the long development of Indian warfare. The Army as it stands to-day is not an independent creation of British rule, but rather the result of the progressive adaptation of indigenous institutions to varying needs, and if the project for a second line be realised it will represent perhaps the most definitely foreign idea which has so far been introduced. To describe that idea as foreign is not to condemn it as unsuitable to the conditions; some such change is in our opinion necessary, and while judgment on the details of organisation must be suspended until the opinions of experts have been made public the reasons for action can be appreciated by everyone who takes an intelligent interest in Indian affairs. In India, as elsewhere, the nature and strength of the military forces are conditioned partly by the work to be done and partly by considerations of finance. The work to be done is reduced to comparatively small dimensions by the favourable geographical conditions, the long sea-frontier, and the mountain barrier on the north, leaving only the potential danger on the north-east and the ever-present danger on the north-west: but in addition to external anxieties provision has to be made for the maintenance of internal tranquillity, since the country has not yet progressed to the point where the police force alone would be sufficient for this purpose. The problem is, then, to watch the frontiers and keep the peace as effectively as possible for the money which can be made available, and the poverty of the people, taken with the natural reluctance of the Government to increase taxation, gives to the question of finance an importance which can scarcely be realised in England, where the tradition of large public expenditure seems destined to survive the conditions in which it originated. In India the effect has been seen in the rigid limitation of the numbers ordinarily recruited, and, as a necessary consequence, in the confinement of recruiting to the best available material, so that, apart from the temporary expansion of the last few years, the Army has consisted of a small professional force of men, naturally qualified and highly trained for the work they are likely to have to do: long service has been the rule, and the reserve of trained men has been correspondingly small. During the later years of the war the results of this system were vigorously criticised, and the Indian Army has undoubtedly suffered for the time in popular reputation, but much of this criticism was beside the point; the Army, organised for certain definite needs, was called on to undertake tasks which its organisation did not contemplate, and if it was almost worn out in attempting those tasks, the blame does not rest with the system. India, the poorest member of the Empire, has not attempted and cannot afford to maintain permanently a large Imperial force, under cover of which her richer partners may have time to improvise in emergencies; the strength of the Army must be regulated in the future, as in the past, mainly by local needs, and if forces for Imperial purposes are to be maintained it must be as part of an Imperial system in which the burden is adjusted to the variations of capacity.

The need for constituting a second line is not therefore based mainly on Imperial considerations. The true reasons for the change are: first, that the old system appears to be wearing out; and, secondly, that India is beginning to ask for something different. It must be borne in mind that the spirit of the Indian Army, magnificent as it is, is yet different in essence from that which animated, let us say, the English Territorials in 1914. The ordinary Indian fighting man has always looked on the Army primarily as a career, tending like most careers in India to be hereditary, giving the youth an immediate livelihood, and assuring him a maintenance when his son has taken his place. That view still prevails, but the career is less attractive than it was. There is less actual fighting, and there is ever-increasing drudgery in time of peace: new arts and crafts must be mastered year by year, and the old ideal of frequent short campaigns, separated by longer periods of comparative leisure, is becoming less and less easy of realisation. Other careers, too, are presenting increased attractions for some of the most valuable classes: the Jat has of late been coining money in his fields, and the Sikh in his workshop; the advance in prosperity does not, to say the least, make for increased recruiting, and those who are able to take a long view feel that it would be dangerous to rely indefinitely on a few classes, some of them living outside Indian limits, for the defence of the whole country. The probabilities are that, as time goes on, the net must be cast more widely, and greater reliance be placed on the general population. The force of these considerations is increased by the second reason we have mentioned, that some sections of the general population are begining to claim an opportunity of military service. At present the claim is put forward chiefly on behalf of the educated classes: it is not very definite, and not very practical; command rather than obedience appears to be desired, and in the absence of actual experience it is impossible to say whether the opportunity, if it be given, will be put to real use. Englishmen, however, cannot deny that national defence is at once the duty and the privilege of self-governing citizens, and seeing that India is now starting on the road to self-government the opportunity of service cannot logically be refused. The new sentiment, indeed, is, in our judgment, to be respected, and so far as possible fostered.

The measures announced by the Indian Government appear to us to be well adapted to meet the situation we have described. For the present the old Army will stand as before, but behind it there will be, if recruits come forward, a second line of territorial regiments, sufficiently trained on the old militia system to be available for service after a short period of intensive training given on the occurrence of an emergency, and this second line will be constituted with due reference to the man-power of India taken as a whole. It will thus give the opportunity of service, and, through service, of command, to those who now ask for it, as well as to the vastly greater numbers who have not yet spoken; and at the same time it will serve as a practical test of the possibility of widening the area on which reliance is placed for the maintenance of the first-line regiments. The scheme is in no sense a final solution of the problem; it is an experiment which may lead to a solution, and, as the official announcement says, its success will depend on the response made by the Indian people. If the new regiments fill with material which will stand the training, then the experiment will give results of the utmost value, and nothing but progressive adjustment of the system will be required to keep India furnished with the Army which she needs. If, on the other hand, the scheme should fail, whether through lack of recruits, or through reluctance to undergo the necessarily strict discipline, then further experiments will be required, but we hope that, in the conditions which now prevail, this necessity will not arise, and that enough young Indians will come forward to enable the authorities to make the scheme a practical and permanent success.

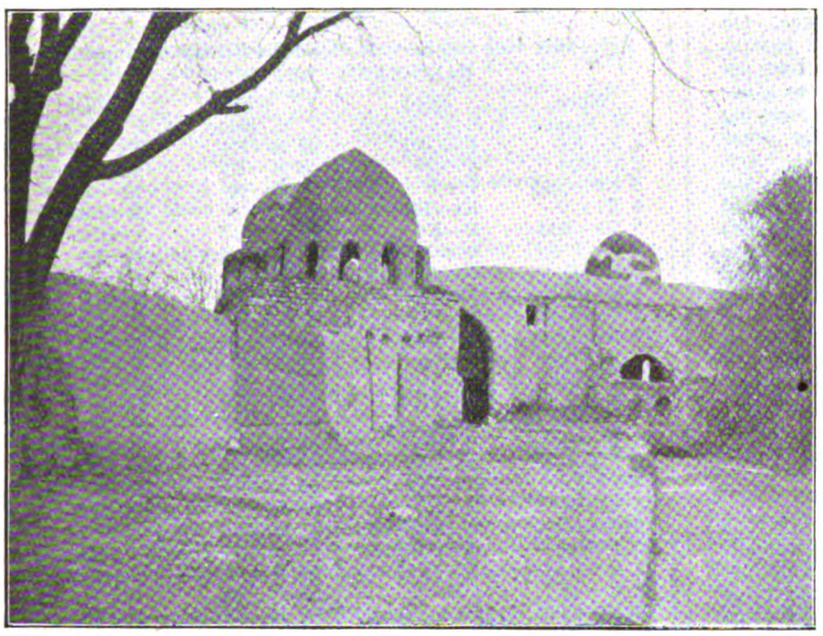
# SOME PICTURES OF THE E.E.F.

By Martin S. Briggs.
(*Photographs by the Author.*)

## DAMASCUS.

Damascus as it appeared to the writer just three months after it was evacuated by the Turks on October 1, 1918, was a centre for the troops of his Shereefian Majesty the King of the Hejaz, as well as for the more familiar soldiers of the E.E.F., who were encamped a few miles outside the city. The Arab troops were garbed in uniforms of many patterns, but where they chiefly shone was in their ingenious choice of headgear. There seemed to be no restriction on the design of the flowing and tasselled



**DAMASCUS: VIEW NEAR BAB TOUMA.**

scarves that hung over their shoulders from beneath the Arab *kufftan*, and combined with a grey-green *picklehaube* the effect was ludicrous. They were cheerful fellows, and after night fell one heard occasional rifle shots exchanged to liven the monotony of darkness. The main bazaars were deep in mud, for the corrugated-iron arched roofs had been removed, presumably by the Turkish military authorities in search of material for revetment. It was something of a shock to realise that the main thoroughfares of this ancient city had ever been roofed with so incongruous a material as corrugated-iron. A relic of the German occupation was a plan of Damascus in the lounge of the Hotel Victoria, with the chief *Schenswürdigkeiten* marked thereon; another was a new piano in the same room, which arrived from Leipzig just in time to greet the "New Crusaders."

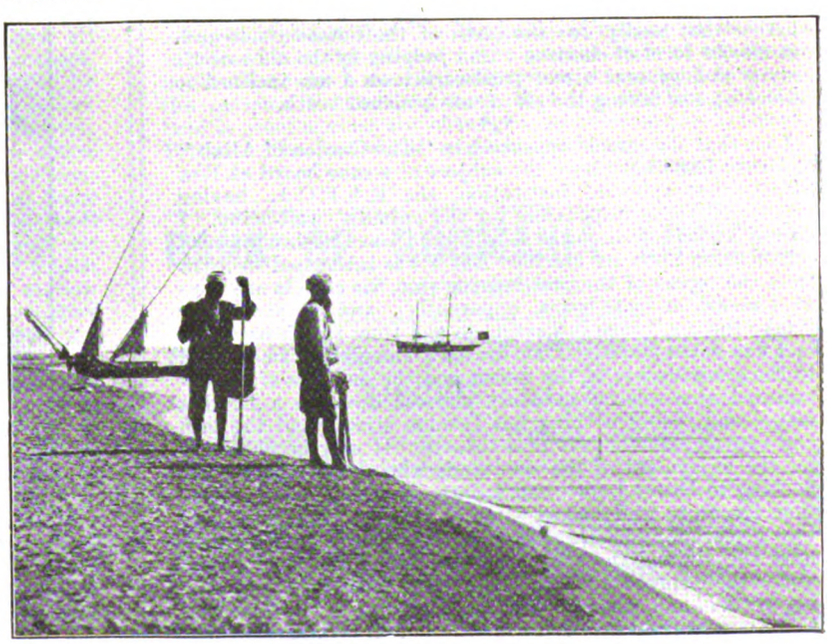
The city had settled down quite amenably to the new order of things, and was quieter then than a year later.

The photograph represents a group of characteristic domes over mediæval tombs, the burial-places of forgotten sheikhs, perhaps, and in the foreground is one of the numerous tributaries of the Barada that to Mohammed's followers thirteen hundred years ago made the green gardens round Damascus appear the earthly picture of Paradise itself.

## RAS EL-BAHR.

At the eastern mouth of the Nile a few miles north of the picturesque Arab town of Damietta, there springs into being in early summer each year a curious camp-village which takes its name from the neighbouring lighthouse and hamlet adjoining. It was little known to the "E.E.F." during the years of the war, for Damietta was a place of no military significance, and those who were curious enough to wish to visit it, and at the same time free enough to do so, were few and far between. Damietta may be reached by a long railway journey from Cairo, but for people with time to spare there is an even slower, but far more attractive, means of approach, by the leisurely paddle-boat that crawls across Lake Menzala, the great lagoon that extends from a point near Damietta to Port Said. Here one may loll through a summer day in splendid isolation on the upper deck, watching the clouds and the seabirds, and their cousins the white-sailed fishing boats, thinking, perhaps, of similar trips from Venice to Chioggia or Fusina, and listening to the ceaseless chatter of the crowd at the foot of the companion-ladder. Between the Arab streets of Damietta, where hardly a European lives,* and the sandy *plage* of Ras el-Bahr, is all the difference in the world. Damietta is, perhaps, the most typically Arab town in Egypt, whereas Ras el-Bahr is essentially cosmopolitan. But the Englishman is seldom seen there. He may favour the Ramleh quarter of Alexandria when his annual spell of summer leave arrives, or he may join the elect throng who gather at Brulos Beach, which must surely be one of the most exclusively British seaside resorts on earth. Yet as a rule he fights shy of Ras el-Bahr. It is hardly Bohemian, and yet perhaps that word best describes it. There is a dash of the East about it that prevents one drawing parallels with anything in the Latin Quarter. If Mrs. Grundy took ship from Damietta to this favoured spot she would assuredly return as soon as she had lunched at one of the flimsy "hotels." For here everyone is so gay and so effervescent that it is impossible to believe that they can be respectable. The boat from Damietta brings a motley throng of representatives of all the races of Europe and the Levant each day at noon, while others arrive in speedy motor-boats or discreet dahabiyehs. Except for the latter, and they are mainly rich Egyptians, the visitors to Ras el-Bahr, live in hotels (so-called) or huts, planted in rows on the spit of sand between the mouth of the Nile and the sea. These flimsy structures are made of palm-leaf matting (a universal building material in Egypt) supported on the minimum of wooden framework. When winter comes and the Mediterranean gets angry, the roofs and the walls and the floors are rolled up into bundles and sent up the Nile to Damietta. The hotels are also of matting, and only different in degree. Towards the Nile they stretch in a long line, widely spaced in case of fire. The front in each case is occupied by a restaurant, where one lives very much *en plein air*. Silk pyjamas may appropriately be worn at any meal; in fact, this costume perhaps best accords with the Bohemian atmosphere of the place. Behind the restaurant extends a long row of cubicles or bedrooms, raised on posts some few feet above the sand, and opening off a verandah. These "rooms" are only separated by matting, but privacy is the last thing that is expected or desired at Ras el-Bahr. The English craze for games is not encouraged, but everybody

* For a description of Damietta see the Author's "Through Egypt in War-time." (Fisher, Unwin, 1919.)



**RAS EL-BAHR, NEAR DAMIETTA.**
(The Mouth of the Nile.)

bathes, and even as early as 7 a.m. one finds crowds already in the water For the rest, one eats and drinks and smokes and chats and plays cards. The native musicians are not very talented, and the amateurs who occasionally perform on hotel pianos vary in their ability. Ras el-Bahr is, in fact, a perfect *milieu* for *dolce far niente*, simply because there is, in the English sense, nothing to do there.

## THE CARAVANSERAI.

*Think, in this batter'd Caravanserai*
*Whose Doorways are alternate Night and Day,*
*How Sultán after Sultán with his Pomp*
*Abode his Hour or two, and went his way.*

—Omar Khayyam.

A friend who lately returned from a visit to Yugoslavia tells me a story which, he assures me, is typical of the spirit now ruling among the peasants of the Balkans. On his way home he was a little exercised in his mind regarding the advantages of rising early and securing the first use of the washing basin that served himself and three other travellers, or of enjoying a little longer in his sleeping berth. The particular traveller who occupied the lower berth in his cabin settled the matter by securing "first go," though—my friend remarked—he failed to make the most of his opportunity. The two others evidently regarded washing as an entirely unnecessary bit of ritual, and left the basin free. Later, my friend discovered that they were a Serbian peasant and his wife; and, managing to strike up a conversation with them, learned that they were *en route* to America. "And how shall you go?" he asked. "Oh, we are going on to . . . " (the French port of embarkation) "by this train." "Very nice, but isn't it a little expensive?" "Yes, yes, it costs money, certainly, but think how comfortable! My husband and I have never slept in such a comfortable bed before. It is worth the price." Thus does even the simple Balkan peasant open out before the rising sun of Democracy.

***

Whenever I hear a "funny story" with, let us say, a suspicion of chestnut flavour about it, I find myself wondering how and when it first came into the world. And just now I am inclined to think that I have actually traced one of the breed to its birthplace, so to say. A little while ago an old sailor who was holding forth about some of his youthful experiences began talking about concerts he had attended; and very soon came to a description of one given at Gibraltar. It took place, he said, in a wine shop, or "pub," called the "Glass Barrel," which was then kept by a certain "Jimmy Sutherland," who was a musician as well as a host; and one of the artistes sang a very long song in which he assured the audience again and again that he had "dreamed a dream." One member of the audience, a sailor, who was anxious to reach a fiddle item of the programme before he had to return to his ship, got tired of the dream. "Arrah, now, come out of it," he cried, "or you'll be dreaming there all night." The singer stopped abruptly. "Come out of it?" he retorted. "Can you put me out?" "Yes!" yelled the bored sailor. "Then come out and see," answered the vocalist. Then things got lively. But I am not concerned with the sequel. I want to know whether that really *was* the birth of the Come-outside-and-put-me-out form of chestnut; and judging by the old sailor's gravity and general air of trustworthiness I am inclined to believe he was telling the plain, unvarnished truth.

***

I see that the camels appearing in "The Garden of Allah" at Drury Lane have been the subject of a case heard at Bow Street, that splendid institution, the R.S.P.C.A., having prosecuted those responsible for the animals' well-being. I do not know how the case went, and I have no intention of commenting upon its merits. But I was interested to learn from the report of the first hearing that the camels are kept at a mews, in loose-boxes, apparently; and if they ever "take the air," save in passing to and from the theatre, the fact was not reported. Poor brutes! Imagine a camel, used to the spaciousness of the desert and the delights of its unpolluted atmosphere, suddenly planked down in a London mews, and seeing nothing but London streets and the lath and canvas make-believe of a theatre. It may be necessary for the enjoyment of the thousands who, I understand, are flocking to Drury Lane; and I dare say the camels in question are quite well looked after in reality. But I suppose they *do* care for something besides their food; and they must miss the air and the space and the feel of the sand giving under their spreading feet. They must miss, too, the foraging for *arid* and other tit-bits (!). Poor beasts; in their case there must surely be excuse for the bored, cynical look that is common to their species.

Of course, the camel is a queer character, and when he is bad he *is* horrid. I have been told more than once by camel men that if they have a "bad lot" in their crowd they will never let him see where they lie down for the night when in camp; for they fear that if he knew that he would attack them, and possibly kill them. But, on the other hand, I was told by an Indian colonel that in a little "show" in which he took part, and in which camels, mules, and horses were engaged, the camels were easily first in the affections of his men. Personally I don't think I could ever work up any love for the humped ones: I could almost as soon worship "a not too French French bean." But I can heartily sympathise with what I imagine their feelings must be when they get booked for a long run at a London theatre. In such circumstances, I should myself become cynical and morose enough to attract the attention of any R.S.P.C.A. inspector.

Corsair.

## CHESS.

I give this week another game from the British Championship.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

In all probability most people would consider the present time very inauspicious for attempting to open up fresh business in Mesopotamia, but a few days ago I met a business man who held the contrary opinion, and as he spoke with many years' experience of the country and the Near East behind him, his opinion is worth some consideration. His argument was to the effect that although both Kurds and Arabs are making trouble just now, there is a very good chance that the unsettled conditions will not last long, and that the person who is ready to "nip in" as soon as things become more normal will stand to reap a good profit. I am not quite sure that I agree that the present trouble is bound to be over very soon—although I hope it will be, of course—but I am a firm believer in the potentialities as a market for British goods of the land whose name afforded so much satisfaction to Dean Stanley's old lady.

***

My faith was strengthened by reading a letter received in London a short time ago from a native merchant of Mosul. By the kindness of the recipient I am allowed to give a few extracts:—"Mosul is just beginning to fall on its feet after many years of neglect. Many improvements have been made during the past year or so, but there is a great deal more to be done. . . . The mountains around [the] Zab and the valleys of the Euphrates and Tigris rivers are at present supplying great quantities of wool, galls, skins, etc., but there is no doubt that when the irrigation of the country has been completed further up the output will be increased many times over, and an excellent opening [will be provided] for any enterprising firm that desires to obtain these materials." This may be only elementary, but it is worth the attention of "enterprising firms."

***

The writer goes on to say:—"With the growth of the export business there will be a great demand for manufactured goods from outside, and it is my desire to obtain agencies for any reliable firm or firms wanting to open up business here. . . . As soon as the Peace Treaty is signed with Turkey, Mosul will be the business centre for Mardin, Diarbekir, and Kurdistan, and for goods intended to be sent to the interior of Persia by Rowandiz; and when the railway is completed between Mosul and Nisibin, and the road to Aleppo is opened, there is no knowing to what extent will be the importance of Mosul." I like the spirit of that letter, and if I were a business man I should feel inclined to get in touch with the writer; though it might be only with an eye to the future. As it is, I can only offer to put him in touch with any reader in this country who thinks that he might be able to "do business."

***

As the raising of money has been one of the most pressing needs of the various Balkan Governments, they have all been tempted to sacrifice the future to present advantages. The value of any financial measure was apt to be gauged by its usefulness as an immediate source of revenue rather than as a permanent factor in the economic welfare of the country. No little consternation has thus been caused in circles where the State's urgency for money was not a compelling consideration. As a result of the criticism evoked both at home and among foreigners, a tendency has now manifested itself to model the financial policy of each country on sounder lines. The attempt to kill the goose that lays the golden egg is to be abandoned. Taxes on exports are being materially reduced in Yugoslavia, Roumania, and Bulgaria; a more reasonable attitude regarding the export of oil products has been adopted by the Roumanian Government; the Bulgarian Consortium has begun to see the need for regulating the price of its cereals by the level obtaining in the rest of the world. All this is a welcome sign, and justifies those who have not lost sight of the interests of the country as a whole in the face of each Government's natural desire to strengthen its own position.

***

Attention, I notice, is being called in German technical papers to the opening for pharmaceutical preparations and chemicals in Turkey. During the war, it is pointed out, there was a steady demand for these things which was never really met, and with the Armistice the withdrawal of the Germans robbed Constantinople of its chief source of supply. A considerable portion of what stocks there were in the city is supposed to have found its way to Asia Minor and South Russia, Mustapha Kemal having probably stipulated for medical stores being included in the military supplies that he has been able to draw from Constantinople. Be that as it may, that city remains the distributing centre for the Black Sea littoral and Central Asia, and it will be worth while to investigate this particular demand for drugs and chemicals (especially acids and dyes), as trade in other commodities is rather at a standstill at the present moment.

***

The appointment of an Administrator of Bulgarian property under the terms of the Treaty of Peace (Bulgaria) Order has now been made, and I am sorry to see that apparently for the settlement of pre-war enemy debts Bulgaria is to remain bracketed with Austria, and will be placed under one and the same Administrator. One result of this is almost bound to be considerable delay in the settlement of claims outstanding between British and Bulgarian subjects, for the Austrian section of the joint administration is sure to bulk much more largely than the Bulgarian, and there may be a tendency to hold up what ranks as the less important part of the work. In this connection it will be well for Bulgarians to realise that all moneys that they had in Great Britain before the outbreak of the war are impounded under the terms of the Treaty, and cannot be drawn upon for the payment of post-Armistice obligations.

***

The conclusion of a commercial treaty between Roumania and Austria is a reminder that sentiment cannot altogether override the claims of geography and expediency. By the treaty, which paves the way for a series of bartering transactions, Roumania stands to receive from Austria agricultural machinery, linen goods, boots and shoes, and she will give in exchange oil and oil products, cereals, and minerals from Transylvania. In the case of all the goods for which Roumania looks to Austria, she would undoubtedly prefer to have British goods, if they were forthcoming in sufficient quantities and under suitable terms. But the congestion of the British market, the hesitation of British manufacturers, and the rate of exchange are all adverse factors. In dealing with Austria the Roumanians are more favourably situated in regard to exchange; but it is the possibility of barter that is the determining factor.

***

Whatever changes in the political status of Egypt the future may have in store, it is evident that the country has reached a high mark of economic prosperity. Foreign trade has been rapidly expanding. In the first half of this year the imports amounted to £E47,770,586, as compared with £E19,488,180 in the corresponding period of 1919, while exports showed an increase of 181 per cent., from £E22,952,870 to £E64,623,998. Of this trade the United Kingdom can claim 41 per cent. of the imports and nearly 38 per cent. of the exports. Naturally there is a strong desire to see that neither the material prosperity of the country nor Great Britain's special share in its trade is affected by the proffered grant of self-government, and I am glad to learn that the consensus of opinion is that all will be well in this respect. The present state of affairs in itself constitutes a danger to Egypt, as it may tend to make the extreme Nationalists think that the well-being of the land is proof against any change in the relationship to Great Britain. The rest of the world knows better.

COMMENTATOR.

**BANK OF ROUMANIA LIMITED**

(FOUNDED 1866.)

*Head Office:* 27, THROGMORTON ST., LONDON, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

*Bankers:* BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Digitized by Google

# Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## ROUMANIA.

BUCHAREST, September 3.

**Currency Measures.**

In accordance with the proposals made by M. Take Jonescu, the Cabinet have decided to exchange the Austro-Hungarian kronen, stamped by the Roumanian Government, in circulation in Greater Roumania, into lei, at the rate of 50 bani to the krone. Five per cent. of the total value will be deducted for expenses where the owner has in his possession 100,000 kronen or over; this will bring the actual rate of exchange to 47.50 bani to the krone. The withdrawal of the kronen from circulation has already begun on September 1, and owners are getting 60 per cent. in new Roumanian national banknotes, and the remaining 40 per cent. they will get in promissory notes payable in three months.

The total amount of kronen declared has reached the figure of eight milliards. The delay in withdrawing these kronen from circulation has caused the Government a great loss, for at the time they were first stamped only two to three milliards were found; but the Government, in order to put a stop to the illegal practice of smuggling kronen into the country, has decided to exchange them at the value mentioned, although the majority of these kronen have been fraudulently stamped.

The rate of exchange of 50 bani to the krone has come as a pleasant surprise to the inhabitants of Transylvania and Bukovina, but more so to the speculators, who, only a few days ago, were able to buy kronen as low as at 20-25 bani.

**Commercial.**

The Cabinet has authorised the Ministry of Industry and Commerce to export a certain quantity of wheat flour, rye flour, and bran. The export tax is 50 bani per kilo for the first three, and 10 bani per kilo for bran. Best quality wheat flour produced up to August, 1920, will also be available for export.

**Import and Export of Oil.**

The import and export of oil and its products are only allowed with the consent of the Council of Ministers. The export of oil is free after the home consumption has been satisfied. On the exported products the Government will levy a duty of 20 per cent. on the prices prevailing abroad, which will be fixed every six months. This tax can be reduced by a decision of the Cabinet in case it should hinder the export too much. The Government has the right to buy from any exporter 20 per cent. of the quantity of oil to be exported, payable in lei at the general market price abroad at the exchange rate of the day.

## GREECE.

ATHENS, September 4.

**Matches.**

Matches, which are a Government monopoly, have yielded 4,615,092.60 drachmae in 1919 as against 1,151,528.74 drs. in 1918.

The amounts realised by the Government from the sale of matches from 1914 to 1917 were as follows:—1914, 2,328,730.15 drs.; 1915, 2,262,265.00 drs.; 1916, 2,510,256.15 drs.; 1917, 1,860,394.87 drs.; the average for the years 1914-1918 being 2,022,623.18 drs. The monoply price of matches was originally 5 lepta per box, but since September, 1913, this has been increased to 14 lepta per box.

The returns for 1919 show an increase of 3,463,563.86 drs. on the amount realised during the previous year, and an increase of 2,592,469.42 drs. on the five years' average (1914-1918). In 1919 38,404,800 boxes of matches were imported by the Société de Régie, as against 13,298,704 boxes imported in 1918. The consumption in 1919 was 32,964,935 boxes, that of 1918 being only 9,636,968 boxes. The matches imported in 1919 were of Swedish and Japanese make.

In order to meet with the continuously growing demands of consumption, the Government held, at the beginning of 1920, an adjudication for 6,000 cases (43,200,000 boxes) of matches. This important contract was secured by the "Svenska Tandisticks Actiebolaget" of Stockholm.

The total yearly consumption of matches per inhabitant was 690 in 1919, as against 201 in 1918. This enormous difference is due to the scarcity of this article in 1918 and the difficulties of communication by sea.

**The Export of Olive Oil.**

In view of the anticipated abundance of this year's production of olive oil, the producers in the islands of Corfu, Mitylene, and Crete have renewed their efforts to obtain permission from the Government to export this commodity abroad, but once again the Ministry of Foodstuffs has refused to grant any such permission. On the other hand, the Government has now sanctioned the export of olive oil to Thrace and Asia Minor.

The Ministry of Foodstuffs has decided to establish two stores in Athens for the purpose of selling olive oil to the public at a low price.

**Customs Receipts.**

The receipts of the Piræus Customs during the second ten days of August (o.s.) amounted to 2,042,113.20 drs. in paper and 113,242.50 drs. in gold. These figures show an increase of 796,293.90 paper drs. and 28,329.10 drs. in gold on the receipts of the corresponding period last year.

## CYPRUS.

NICOSIA, August 10.

**The Carob Season.**

The condition of the trees is most promising. The crop is likely to exceed that of last year by about 35 to 40 per cent. in quantity, and the quality of the beans should be excellent. The days fixed for gathering are August 23 for lower villages, and August 30 for the higher in the Limassol district, which grows by far the largest proportion.

The wheat harvest is reported to have yielded close on 3,000,000 bushels, and that of barley 3,500,000. Other cereals, including oats and vetches, are of good quality.

Shipments of terra umbra have been made from Larnaca. The French company, Les Affréteurs Réunis, now call at Cyprus ports, and have recently taken cargoes of carobs for Barcelona, and of asbestos for Belgium.

The Servizi Maritimi is now also calling at Cyprus ports. One itinerary proceeds via Egypt, Syria, Larnaca, Adalia, Rhodes, Smyrna, Constantinople, Salonika, Piræus, Patras, Corfu and Brindisi, to Venice. Another goes via Greece, Larnaca, Mersina, Alexandretta, Tripoli, Beyrout, Haifa, Port Said, Alexandria, Syracuse, Catania, Naples, and Genoa.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ending August 10 amounted to £E.13,806, making the total from the commencement of the year (April 1) £E.157,024. The figures for the corresponding periods of 1919 were £E.9,918 and £E.76,878.

# THE FORESTAL INDUSTRY OF GEORGIA.

**By A. Gugushvili.**

Georgia is a very mountainous country. About two-thirds of it consists of mountainous regions, and on the topographical position of the ground depends, to a very great extent, the economic life of the population. From a silvicultural point of view Georgia has not yet been sufficiently exploited, but the Government of the young Republic is striving to make the natural riches of the country the basis of a solid organisation for its industry.

The forests come first among the natural riches of Georgia. There are altogether more than six million acres of forest, and they cover approximately 39 per cent. of the territory. This percentage places our country,* as regards forestry, in the fourth position among European Powers, after Norway, Sweden, and Russia. During the Russian rule in our country the organisation of the forest resources covered only a limited number of parcels, in all about 7 per cent. of the grand total of the forests. In 1915, 22,320,000 c. ft. were cut down. The needs of the local population can be supplied by the yield from an area of 360,000 acres, and more than 5,817,000 acres remain for exploitation. The forests of Georgia command attention not only on account of their actual and relative extension, but also on account of their variety, their quality, and the value of the essences they contain. There are over 300 kinds of trees and more than 100 varieties of bushwood, which are peculiar to this country and are not to be found in the forests of the North. Many varieties are noted for the quality of their wood.

For this reason the forests are regarded as one of the principal sources of national wealth and as the most important item in the revenue of the State. Up to the present time by far the larger part of these forests represented dead capital, from which neither the State nor private owners derived any income whatever, owing to the exceedingly bad and bureaucratic administration of the forests. Under the Russian *régime* only the interests of the central parts of the State were cared for, and the outlying territories of the Empire were allowed to exploit only such natural wealth as could not be found in other parts of Russia. At present all the Georgian forests are nationalised, and the Government, together with the bodies of local self-government, take all measures necessary for the rational exploitation of the forests.

The forests of Georgia may be divided into three main regions: Western Georgia, the Valley of Mtkvari (river known under the Russian name of Koura), and Kakheti.

(1) Western Georgia, comprising the district of Sukhun and the Province of Koutais. The characteristic feature of this region is the immense variety of species which grow here In the mountain region predominate the birch, the white fir, the fir, and the pine; in the middle region the beech; and in the lower, the oak and hornbeam. Here also grow such valuable species as the samchite (Caucasian palm), the laurel, the Spanish chestnut, the horse-chestnut, the red rhododendron, the red laurel, and many others.

(2) The Valley of Mtkvari. In the region of its source (Abastouman, Akhaltsikhe, Borjom) is found a splendid growth of conifers, pine and fir predominating.

(3) Kakheti. In the mountain forests beech and oak hold the first place; in the lower region is a great variety of valuable kinds, such as maple, lime, chestnut, and walnut.

That most in evidence is the beech. It covers the whole middle region of the mountain forests from 2,500 to 6,000 ft. in altitude. The wood furnishes excellent material for carpentry, lathe-work, cooperage and carriage-building, and also for cross-beams. The oak, too, which abounds in Georgia, is of fine quality. Up to the present it has been used almost exclusively for building material, the bark being used for tanning purposes.

Among conifers, pine and fir take first place on account of their special qualities for building material. Turpentine and resin are obtained by making incisions in the tree. According to official data, there are about 1,000,000 acres of white fir. These forests are situated mostly in the western parts of Georgia along the border of the Black Sea. In these immense virgin forests the sound of the axe has never been heard. Roughly estimating the reserve minimum of timber of the fir forests (if cut at the average age of 120 years) as 7,000 c. ft. per acre, the white fir resources of Georgia represent in round figures 7,600,000,000 c. ft. of timber—an enormous figure indeed, the more so if compared with the amount of building timber still needed to cover all the requirements of Transcaucasia, which have never exceeded 70,600,000 c ft. The white fir reserves of the forests of Georgia, therefore, exceed by a hundred times the actual demand of Transcaucasia. If the area is cut over once in every 200 years it raises the annual production of timber to 35,000,000 c. ft., which is half of the annual supply needed by Transcaucasia for building purposes of every kind. So far, these white fir forests have never been exploited except on a very small scale; reserves have accumulated, and it may be said without exaggeration that their export would be sufficient to supply the demands of several countries of Europe, and at the same time for the creation of various industries in the country itself. For example, this wood is excellent material for the manufacture of paper on account of its long fibre, which is also very valuable for the manufacture of packing-cases.

The Black Sea coast-line, especially the Rion Delta, has an abundance of alder, almost untouched up to the present—an article of export which would interest the manufacturer of chests and veneered wood. The samchite, or Caucasian palm tree, offers a most valuable material for lathes and carving purposes, and especially for wood engraving, as its wood is as hard as bone.

The exploitation of the Georgian forests has so far been confined to cutting merely for mechanical work or fuel. The waste, however, could be utilised by extracting through a process of dry utilisation such useful products as acetic acid, wood-vinegar, wood-alcohol (methylated spirit), and creosote. There are also some species (*rus catinus*, oak, horse-chestnut) which furnish the substance used for tanning; others (alder, *rus catinus*, mountain ash, etc.) which furnish colouring material for textures or leather. Many possess medicinal qualities, as the buckthorn, the laurel, the lime, the juniper, etc. The abundance of cheap labour in this country favours the enterprise of paper manufacture on a large scale, which industry is at present passing through an acute crisis.

A regular and systematic forest service has been organised in the district of Borjom, where up-to-date lumber-mills have been established, and where a new branch has been added of late to the forest industries—the tapping of pine in order to extract turpentine and resin.

The districts of Gagry and Bsyb rank first among those of the coast-line, but exploitation of the rich and valuable forests in these parts can begin only after access (made difficult at present by the mountainous character of this region) has been gained through the construction of roads for transport and lumber-slides, as well as the improvement of the waterways for rafting.

In the Gagry district a lumber company has recently been formed to carry out a series of improvements along this line. This district comprises 40,000 acres; the lower parts contain, roughly estimated, a reserve of 2,400 c. ft. per acre, chiefly fuel wood; and its upper region 22,000 c. ft. of timber for building and industrial purposes.

The Bsyb district, an area of 350,000 acres, has abundance of samchite, but is also difficult of access. The Bsyb River and its tributaries could be used for rafting, but not until the necessary improvements have been carried out.

Not less valuable than these are the forests of Svanethi, in the basin of the Ingour River, which is navigable for rafts. The district of Svanethi, with an area of 175,000 acres, could furnish annually more than 3,000,000 c. ft. of wood.

The exploitation of the forests in the province of Koutais should begin with those of Baghdati, an area of about 175,000 acres. These forests are not yet accessible, and in order to render their exploitation possible, the building of a railroad and of quite a number of transport roads and railways will be necessary.

Besides these forests, which are to be found principally among mountains and in valleys affording little chance of access, there are also in Georgia lowland forests covering great areas specially adapted for agriculture. In view of the great expanse of forests and the need for arable land, the cutting down of these forests will be imperative. These forests, among other natural riches of Georgia, which are for the most part unexploited, are being gradually worked by the young Republic, which intends to use all its resources in order to assure the prosperity of the Georgian people.

From an industrial point of view the Georgian Government intends to give every facility and all possible co-operation to associated capital and private initiative in order to give the country a modern industrial equipment. Sufficiently large and liberal concessions will be granted to commercial and industrial concerns. These concessions of rights and appanages are based on the principle of participation by the State in the profits of the enterprise. The exploitation of mines, forests, water, and railways in Georgia, as well as the works of irrigation and drainage of hundreds of thousands of acres of proverbially fertile land, open a large field to the enterprise of foreign capital, and for the economic development of this country.

* M. Gugushvili is, of course, speaking of his own country, Georgia.

# BULGARIAN TRADE REGULATIONS.*

## MEASURES TO PREVENT SPECULATION

The following is an abbreviated translation of the chief clauses in an Order issued by the Direction de Prévoyance of Bulgaria, under date of May 22, 1920, and published in the Bulgarian *Official Gazette* of June 10 :—

### Purpose of Order.

Article 1.—In order to suppress speculation in articles of everyday use, and also in imports from abroad, some restrictions are necessary, and these restrictions are decreed by this Order.

### I.—Commerce.

PERCENTAGE OF PROFITS.

Article 2.—For all goods, except those specially provided for in the present Order, the following percentage profits are fixed :—

*First hand.*—The importer, calculating the invoice price, one per cent. personal on its value, plus all other original and documentary expenses franco his warehouse, reckoned according to the rate of the Bulgarian National Bank, and not that of the Centrale des Devises, at the date of certifying, if it is on credit, and if it is paid in earnest money and bill of lading, the rate of the day of payment, has the right to a profit on the net value up to 8 per cent. wholesale and 20 per cent. retail.

*Second hand.*—In retail up to 20 per cent.

Remark.—It is permissible for the second hand (middleman) to sell to a third party not in the same building at a profit of 6 per cent., and the re-seller may sell at a profit up to 12 per cent.

Article 5.—Chain commerce is absolutely forbidden. No goods may pass through more hands than those specified before reaching the consumer, namely :—*First hand*, producer, importer, and manufacturer; *second hand*, or re-seller who sells directly to the consumer.

Article 6.—No goods may pass twice through the hands of the same merchant, *i.e.*, goods that have been once sold may not be re-bought.

Article 7.—Only merchants with registered firms, or those who pay taxes for commerce, have the right of dealing.

Article 8.—No banking institution, except the Co-operative Societies, may buy up or buy back any sort of foodstuffs or any products whose export is prohibited. They may, however, be importers of goods whose import and export are permitted.

Article 11.—No wholesale merchant can refuse to sell goods which he has at his disposal to the retailer or to the consumer if he sells retail; and no retailer can refuse to sell to the consumer.

Article 12.—If the merchant, manufacturer or handicraft have new goods whose fixed price is higher than that of the old goods of the same kind, in no case can they sell the old goods at the price of the new ones, and, *vice versa*, when the new price is lower than the old one they may not sell at the old higher price.

CERTIFYING INVOICES.

Article 15.—Every merchant and Co-operative Society buying wholesale, even if the goods are of local produce, must possess an invoice, duly certified by the Chamber of Commerce, or by the Municipality if there is no Chamber of Commerce. This invoice, as well as all papers establishing the cost of the goods, must always be at the disposal of the agents of the Direction de Prévoyance.

Article 16.—Every wholesaler, producer, manufacturer, merchant or Co-operative Society is bound to issue invoices to the buyer.

Article 17.—The Chambers of Commerce and the Municipalities are obliged to examine most minutely the invoices, etc., presented to them, having the right to modify them if they prove incorrect. All sales certified by them will appear on the invoices, and they will certify invoices only for sales actually accomplished.

### II.—The Labelling of Goods and Price Lists.

Article 20.—All wholesale merchants, manufacturers, and Co-operative Societies are obliged to expose in a conspicuous place in their premises a clearly-marked price-list of their goods. No goods whether fixed price or otherwise can be sold without being supplied with a label of its price. The label must be distinct, not ambiguous, and not easily soiled. Goods exposed in windows must also have labels showing the prices.

Article 21.—All goods in a shop or store-house must be entered in the price-list. Those that are not so inscribed will be regarded as concealed for the purpose of being sold at a higher price.

Article 22.—Anyone who affixes labels or marks a price-list with prices higher than the fixed prices or profits will be deemed to have sold at these exposed prices, and will be prosecuted according to Articles 24 or 21 of the Law of Prévoyance.

### III.—Different Sorts of Goods.

IMPORT AND EXPORT.

Article 23.—The import and export of all goods mentioned in the attached list is free without special permission from the Direction de Prévoyance. Eventual changes in the list will come into force one month after publication.

Article 24.—Every importer of goods must produce an original invoice from the producer or from the manufacturer, duly certified by a Bulgarian consulate, a chamber of commerce (local), stock exchange, or, if none of these exists in the place where the goods are bought, by the municipality. In this certificate it must be explicitly stated by the seller that the prices are genuine.

Article 25.—An invoice from a foreign exporter, who has bought the goods directly from the producer and has sold them to a Bulgarian merchant in the country where the goods have been produced, will be accepted, but the certification of this invoice must distinctly contain a certified copy of the manufacturer's original invoice.

Article 26.—The invoice, signed by the importer with the clause, "I declare that the present invoice, as well as the prices shown in it, are genuine," must be deposited, together with a copy, in the chamber of commerce into whose district the goods are imported, or, if the custom-house is in a town where there is no chamber, with the Controlling Delegate (of the Direction de Prévoyance) or with the municipality. The copy of the invoice duly visèd by the chamber, delegate, or municipality, will be returned to the merchant.

Article 27.—If there is any ground for suspicion in regard to an invoice for imported goods as to the accuracy of the prices, the certifiers of the invoice may reduce them, and where dissatisfaction is felt over this action a committee composed of one control-delegate and two members of the chamber of commerce or two business men (as experts) shall examine and pronounce as to the genuineness of the price, and if they find it exaggerated they shall reduce it.

Any resulting disagreement will be adjudicated upon by the Direction de Prévoyance.

*Reference to these Regulations was made in "Notes and News" last week. By a new Order, published on July 8, large export houses are allowed to import goods into Bulgaria on production of their own invoices, without the obligation of having such invoices accompanied by a legalised copy of the original manufacturer's invoice. (See Article 25 above.)

## IRRIGATION IN BULGARIA.

Our Sofia Correspondent referred some time ago to various hydraulic works under contemplation by the Bulgarian Government. The British Commercial Commissioner at Sofia now sends the following details regarding the proposed measures :—

A water power and irrigation scheme and a Bill concerning water syndicates are at present before the Bulgarian Chamber, and investigations have been made as to the utilisation of the waters of the Rivers Topolnitza, Kritchim, Louda Yana, Strema, Eli Dere, Tchai, Toundja, Vinkos, and Sutlika. The results of these investigations show that the water resources of Bulgaria will make it possible—

(1) To exploit water energy amounting to more than 1,000.000 h.p. According to calculations, railways and industries will consume only 130,000-150,000 h.p., and the whole of the remaining energy will therefore be available for agricultural production and lighting.

(2) To irrigate by the canal system a total of about 4,600,000 decars.

(3) To irrigate, independently, the Danube plains, which suffer from drought in the summer, and to irrigate the plain of Deli-Ormana by means of electrically-driven pumps.

(4) To supply water for inhabited places which cannot obtain supplies from neighbouring wells, by means of ground springs or streams which are raised to reservoirs by pumps and then distributed for the use of towns and villages.

The undertakings which will have to be taken in hand under the State programme will include :—

(1) The construction of about seventeen barrage reservoirs.

(2) Canal systems in the plains of Thrace, Stara Zagora Yambol, and Sliven in Southern Bulgaria, and in Northern Bulgaria on the lower courses of the Rivers Isker, Vid, Ocem Rositza, Yantra, etc., as well as in the plains of Kustendil, Radomir, Doupnitza, and Nevropol.

(3) The building of electric power stations at the barrage reservoirs.

The execution of these water enterprises, according to the Bill for Water Syndicates, can be undertaken either by the State or by syndicates by means of loans, the repayment of which will be effected by instalments paid by the water syndicates.

A Supreme Water Council has been established at the Ministry of Agriculture and State Property to provide for the execution of the general State water programme and to solve all questions concerning water economy.

## NEW ADVERTISEMENTS.

Our advertisement pages are evidence of the growth of the business relations between Great Britain and the Near East, and we welcome the attention now being given to the Near Eastern trade by shippers and carriers. On the back cover will be found the advertisement of Messrs. Pitt and Scott, Ltd., whose world ramifications include many agencies in the capitals and ports of the Near and Middle East. Business is often expedited by mentioning with orders the name of the firm through whom it is desired that the goods should be shipped.

The success with which the attention given to the Near Eastern market by certain manufacturers of cigarette machinery is meeting has not been lost on the rest of the trade. On page VIII. Messrs. Alexander and Alexander set forth the advantages claimed for the British Empire Cigarette Machine, which has been supplied to some of the largest cigarette manufacturers and to various Government Régies.

The *Cyprus Gazette* for July 23, 1920, contains an Order (No. 802 of 1920), dated July 23, prohibiting the importation into Cyprus of shaving brushes manufactured in or exported from Japan, whether such brushes are exported direct to Cyprus or otherwise.

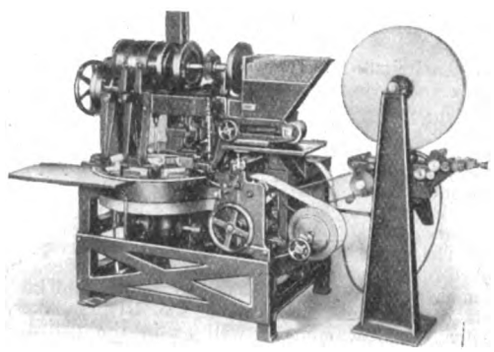
# "STANDARD" TOBACCO MACHINERY

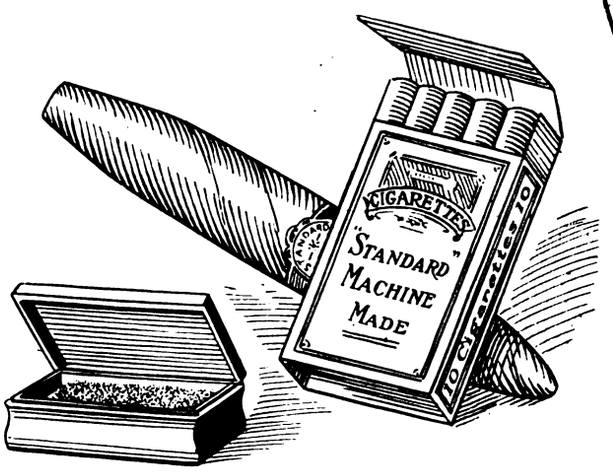
Designed and constructed by the Pioneers of Tobacco Factory Mechanical Equipment, "STANDARD" Machines have been developed to a unique degree of perfection, and consequently represent the most efficient and satisfactory methods of preparation and manufacture of Tobacco for all purposes—

*From Plantation to Finished Product.*

A.M.&F.Co.



**"STANDARD" Cigarette Packing Machine.**
Counts the Cigarettes, wraps them in Paper or Foil or a combination of both, places them in a cardboard slide, cut and folded by the machine, and inserts the whole in previously made cardboard "shells."



"STANDARD" for the highest development in efficient machinery for:—

Tobacco Cutting,
Mixing, Cooling,
Casing, Spraying,
Dressing, Ordering,
Stem Flattening,
Cigarette & Cigar Making,
Snuff Grinding, etc.

**AMERICAN MACHINE & FOUNDRY CO., LTD.,**
**59, HOLBORN VIADUCT, LONDON, E.C.1.**
New York, Brussels, Geneva, Athens, Christiania, Cairo, Tunis.
*Cables: "AMMAFOCO, LONDON."* *Codes: All usual.*

# ENGINEERING.

## The Machine-Tool Exhibition.

The opening of the Machine-Tool Exhibition has been by far the most interesting of recent events in the engineering world. It was awaited with interest by all in the industry as affording the first opportunity of seeing, as a whole, not only the general improvements in design, construction, and materials which have taken place as a natural development since the last exhibition in 1912, but the extraordinary development brought about by the war itself.

The exhibition is organised and conducted solely by the Machine-Tool Trades Association, who have adopted the very wise policy of avoiding continual minor exhibitions and of bringing together really comprehensive and complete displays of machine-tools and accessories at reasonable intervals. A period of eight years between exhibitions may at first blush strike one as being far too long, but it will be apparent on reflection that, leaving other considerations out of the question, it would have been unwise, to say the least, to hold an exhibition during the war at which a single technical observer might have ascertained exactly what we were doing, and have taken his knowledge to quarters where it would have been welcomed with open hands.

Speaking generally, the lessons of the war have had a far-reaching influence on industry throughout the world, but in no direction have these lessons produced greater results than in the machine-tool trade.

As Sir Alfred Herbert says, at the outbreak of the war the first cry was for fighting men, but it was quickly realised that the soldier was of little value to his country unless adequately supplied with the innumerable variety of articles comprised under the general term of munitions, and when an attempt was made to provide shells, big guns, rifles, machine guns, mechanical transport, aeroplanes, and other essential war material, it was quickly discovered that the main difficulty in the supply of these requirements was the fact that the machine-tools required for their production did not exist. As a consequence, the Government took steps of the most energetic character to obtain the tools which were indispensable, and without which no adequate progress could be made.

In order to meet the urgent demands of the situation, great developments were made in the machine-tool trade of this country, and, in addition, the resources of America and of other countries were requisitioned in order to supplement our own supplies. Many new firms were attracted to the industry, and the establishments of many of the older concerns whose names had become household words were enlarged, modernised, and improved in a remarkable way. The demand for the production of war material on an immense scale resulted in many valuable lessons being learned both by the designers and makers of the tools, and the men whom they employed. The great influx of comparatively unskilled labour, together with the rapid speeding up of the work done, necessitated a greater regard being paid to questions of personal safety. It was also necessary to improve the quality of the material used in construction both of the machines themselves and of the actual cutting and other tools used in them, and these features in themselves represent a really remarkable development.

The necessity of mass production and of repetition work was emphasised, and progress in this direction in particular was far greater than could have been expected in half a century of peaceful development. Repetition work, as a matter of fact, was introduced into hundreds of factories in which it had been regarded previously as impossible, and as these factories gradually changed over from war work to peaceful trade, the repetition idea has in many instances persisted, and continues to be employed on commercial lines.

The need for a higher degree of accuracy and workmanship, for greater care in the selection and treatment of materials, has resulted in a great development of technique. The tendency to specialisation has been encouraged and increased, not only in the manufacture of machine-tools themselves, but also in the method of their employment.

The continually advancing costs of labour have made it imperative to employ machine-tools of the most efficient type on a constantly increasing scale, and to pay greater and still greater attention to obtaining from them the last ounce of output. Old machinery, which had been cherished by its owners for a generation, has been scrapped in a drastic manner, and its place has been taken by modern plant, to the great benefit of the whole engineering industry.

Sir Alfred has now placed on record an opinion which was held by a number of engineers. He reminds us that the pessimists predicted that the immense output of machine-tools during the war, and the assemblage throughout the country of enormous engineering plants, would result in a great excess of machine-tools and a consequent slump in the machine-tool trade, but these predictions so far have been entirely without justification.

It was, of course, inevitable that many of the machine-tools laid down for the production of war material should depreciate very rapidly by reason of the extreme strain brought to bear upon them, not only by the continuous working, which in some instances amounted to twenty-four hours a day for weeks and even months, but also by the unskilled handling to which they were subjected in numbers of cases. In addition to all this rapid depreciation, which necessitated a continuous supply of new tools to take the places of those which were out, the engineering world at the time of the Armistice was confronted with an accumulated demand for peace-time requirements, which it had been impossible to supply or even to think of supplying during the war.

These causes, together with the general custom of working shorter hours which now obtains, have combined not only to absorb at comparatively high prices such surplus plants as were put on the market by the Government through the Disposals Board and by private concerns, but also to create such a demand for new tools as has kept the trade relatively well supplied with orders. It may be mentioned, further, that one of the lessons of the war which was most quickly learned by British engineers was that it is not the wisest policy to buy machine-tools to last, but, on the other hand, to purchase those which will produce at so much quicker a rate, and so earn so much higher a revenue as will more than compensate for the cost of renewal in a shorter time.

The present exhibition consequently offers a unique opportunity of observing the results which have been attained during the unprecedented period which has elapsed since the last exhibition, which, by the way, was held in the same building, and it is safe to say that no visitor will go away either disappointed or unimpressed by the gigantic strides that have been made during the past few years. In addition to the products of British manufacturers, very large collections of the latest achievements of machine-tool makers in the United States and other engineering countries have been brought together and are attractively displayed. Incidentally, however, it may be mentioned that the association has declined to permit the exhibiting of any machine-tool or accessory turned out of German or Austrian works. Altogether the number of visitors is well over 200, and the whole of the available space in the great building is occupied, even the annexe and the gallery being crowded with exhibits. There is no question but that the collection of machine-tools now on view excels both in magnitude and interest any previous achievements.

## Machine-Tool Progress.

Before dealing with the principal exhibits in greater or less detail, or enumerating the many specific improvements which are manifest, it may be said that the first and most dominant note that strikes the visitor to the exhibition is speed—speed not only in actual working, but in work-lifting and setting and in work removal.

At one time the comparatively slow working of our British-made machine-tools was more or less a tacit reproach to our designers. it was felt that whilst British machines would undoubtedly do their work and would probably outlast the Pyramids, they were slow in operation, and could not be driven at high speed in order to secure the maximum of production in the least possible space of time. It was felt that in this respect American and German lathes were superior; they were not so substantially built, but they could be "forced," and could be relied upon, under hard driving, to maintain the quality of their products until the machine itself failed through over-driving.

## Petrol Prices.

For years past the Automobile Association has tried to secure the intervention of the Government on the motor fuel question, which under present conditions constitutes a menace to the welfare of the community. At a recent meeting of the Executive Committee of the A.A., a resolution was adopted protesting against the continued rise in the price of petrol and the neglect of the Government to take any steps either to control the existing supplies or to encourage alternative sources for the production of motor fuel. Following on this resolution, the Automobile Association is taking further steps to impress upon the Government the necessity for action for the protection of the public, and the chairman, Sir William Joynson-Hicks, M.P., is urging the Prime Minister to fix a definite date to receive a petition recently signed by upwards of a million and a-quarter persons.

---

American firms have entered into an agreement for the introduction of agricultural machinery into Yugoslavia. Three experimental stations, each under an American expert, have been established in order to instruct farmers in its use.

A contract for forty all-steel sleeping cars for the International Sleeping-Car Company's services has been secured by the Leeds Forge Company, Ltd., in competition with all the leading British and Continental rolling-stock builders. The question of delivery was a determining factor in the award of the contract.

# INDIA'S COAL RESOURCES.—IV.*

## By JOHN KIRSOPP, M.I.M.E., F.G.S.

The Salpura basin contains a number of isolated fields, the best known being those of Mohpani, Shahpur, (Betul), and Pench (Chhindwara). The probable area of the Mohpani field covers 50 square miles, and contains an estimated reserve of 158 million metric tons. The Shahpur field of coal-bearing beds covers an area of about 26 square miles, but there is no reliable information respecting the thickness, number, or quality of the seams.

The Chhindwara group of fields cover an area of about 100 square miles in the valleys of the Tawa, Pench, and Kanhan rivers. A considerable amount of exploitation work has been carried out in the Pench Valley. The position with regard to this group of fields may be summed up as follows:—

In the Pench Valley district three groups of seams are proved to exist: (a) three seams having a thickness of fourteen feet each, proved over an area of 650 acres, and containing an actual reserve of 14,470,000 metric tons; (b) two seams with a thickness of 13 feet 6 inches each, extending over an area of 436 acres, with an actual reserve of 9,400,000 metric tons; and (c) three seams varying from eleven feet to twenty-four feet in thickness, covering a probable area of 2,870 acres, and containing a reserve of 64,664,000 million metric tons.

In the Pench River district there are: (a) a seam eight feet thick, covering an area of 506 acres, with an actual reserve of 6,170,000 tons; and (b) one to two seams having a thickness of eight feet to twenty-three feet, extending over a probable area of 1,402 acres, and containing a reserve of 31,500,000 metric tons.

The Central Pench district contains: (a) two seams with a thickness of thirteen feet, over a proved area of 736 acres, containing an actual reserve of sixteen million metric tons; and (b) two seams of a thickness of ten feet, covering a probable area of 1,012 acres, and with a probable reserve of 16,700,000 metric tons.

The Pench Consolidated Company's property contains seams of from six feet to nine feet in thickness, covering a probable area of 1,981 acres, with a reserve of about 24,200,000 metric tons.

In the Jalachapa district two seams occur with a thickness aggregating thirteen feet, over a proved area of 820 acres, having an actual reserve of 16,240,000 metric tons.

The Godavari Basin (or belts of coal measures) covers a very large area, including various fields in the districts of Chanda and in Berar, and others again in the Nizam's Dominions. The present knowledge as to the extent of, and the reserve contained in, these fields is rather imperfect, although considerable.

The proved extent of, and reserve contained in, one seam traversing this area in the various districts may be enumerated as follows:—

(a) Warora:—With a thickness of thirty feet of coal seam, extending over a probable area of three square miles, and reserve of 60,000,000 metric tons.

(b) Wun:—Fifteen feet thick; probable area eighty square miles, and with a reserve of 2,130 million metric tons.

(c) Wun-Papur:—Fifteen feet thickness, over an actual area of seven square miles, and containing a reserve of fifty-three million metric tons.

(d) Junara-Chicholi:—Thirty feet thick, over an actual area of five square miles, and with a reserve of seventy-six million metric tons.

(e) Ghugus:—Thirty feet thick, over a probable area of three square miles, and with a reserve of forty-five million metric tons.

(f) Ballarpur:—Twenty feet thick, over an actual reserve of two square miles, and with a reserve of thirty-one million metric tons.

(g) Paoni and Sasti:—Forty feet thick, over an actual area of one and a-half square miles, and with a reserve of thirty-million metric tons.

(h) Singareni:—Three feet 6 inches to seven feet 6 inches thick, over an actual area of four square miles, and with a reserve of 12,200,000 metric tons, and one seam six feet thick, with a probable reserve of ten million tons.

(i) Madavaram:—Five feet 6 inches thickness, over a probable area of ten square miles, and with a reserve of twenty-five million metric tons.

(j) Lingalla:—Four feet 6 inches thickness, over a probable area of five square miles, and with a reserve of eight million tons.

The coalfields of Kurasia and Koreagarh lie entirely within the limits of the Korea State, as also the eastern end of the Sanhal or Lohagpur field, the main portion of which is situated in Rewah State. The Sanhal field has an area of about 330 square miles, and in various localities contains at least two seams of importance.

The Kurasia coalfield is the second largest of the Korean coalfields, covering an area of about 48 square miles, being some ten miles long from west to east and six broad from north to south. In the Kurasia area six coal horizons have been noted, No. 4 horizon being the most important, with two to five seams ranging in thickness from 1 ft. to 3½ ft. Horizon No. 3 (with 11½ ft. coal at one locality, Bijaura Jharia) and horizon No. 2 (with 8 ft. coal at one locality, Gorghela Nala) are also worth investigation. In the Chirwiri area of this field the finest series of coal seams in the State is exposed in the Kaoria Nala, where seven seams, aggregating a thickness of 36 ft., were measured; composition: moisture, 7.7 per cent.; volatile matter, 29.1 per cent.; fixed carbon, 51.2 per cent.; ash, 12.0 per cent. This series of seams (horizon No. 4) appears to thin out in all directions, but there is probably about two square miles over which the coal is at least 10 ft. thick.

The Sanhal coals appear generally to be much inferior to the Kurasia coals, which are lower in ash and higher in fixed carbon and volatile matter, seams 3 and 4 comparing very closely in composition to that of the lower seams of the Raniganj series, but being about 2 per cent. better in ash.

Jhagrakhand coal area comprises the south-eastern corner of the Johagpur coalfield, projecting into Korea State over an area of about 22 square miles on the western side of the Hasdo river. It is a narrow strip eleven miles long from north to south and one to three miles broad, the area being crossed by the Jhagrakhand, Kulharia, and Neori streams, in all of which coal has been found. Three exposures also occur in the Kulharia Nala, in two of which the coal is only 2 ft. thick and of no value, whilst in the third it is 5 ft. thick.

*(To be concluded.)*

* The previous articles of this series appeared on July 1, August 19, and September 2.

# TRADE MARK REGISTRATION IN TURKEY.

The Federation of British Industries has received the following information in regard to the registration of trade marks and patents in Turkey:—

It is pointed out that whereas in Great Britain goods are classified and trade marks registered for the various classes to which the goods to be protected belong, in Turkey there is no classification, and a trade mark can be made to cover all the manufactures of a firm. Protection is good for fifteen years, and may be renewed indefinitely at the end of every successive fifteen years, though it should be noted that the formalities are not simply those of renewal but take the form of re-registration. Trade marks registered in Turkey may be transferred from individuals to firms or from one firm to another. Three documents are at present necessary to complete a new registration—a power of attorney signed by the applicant, an attestation by a notary public, and legislation by a Dutch, or after the ratification of the peace treaty, by a Turkish Consul.

American firms, it is stated on the same authority, are taking full advantage of the Ottoman Trade Mark Law, a considerable number of trade marks having been recently registered, especially for motor cars and accessories. Americans are also devoting a good deal of attention to the protection in Turkey of their inventions.

# SWEDISH ORIENT LINE.

*Direct regular steamship service with about weekly sailings outwards and homewards between*

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

*Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).*

*For further information apply to the following agents of the Line:*

At LONDON: J. E. Hyde & Co., 1, Lime Street Square.
„ SMYRNA: }
„ PIRÆUS: } W. F. van der Zee.
„ ALEXANDRIA: }
„ SALONICA: Cauchi Brothers.
„ CONSTANTINOPLE: Theo. Reppen.

*Or to the Head Office:*

**SWEDISH ORIENT LINE, GOTHENBURG.**

# NEAR EAST MARKETS.

## SUDAN PRODUCE.

Some further extracts from the C.E.B. report for June are given below:—

**Sesame.**

Kordofan Province.—31 ardebs were sold in El-Obeid market at an average price of 425 P.T. per ardeb of 330 rottles (148 kilos).

Kassala Province.—The average price of sesame in Gedaref was 400 P.T. per ardeb of 300 rottles (135 kilos), and Mafaza 396 P.T. per ardeb.

Nuba Mountains Province.—A certain amount of sesame is still being moved north, but as the Arabs have left the southern district for Dilling and El-Obeid, there is little movement.

Sennar Province.—14 tons of sesame were exported by rail in May and 51 tons in June.

**Tobacco.**

Darfur Province.—During May 502 kantars of tobacco were sold in Fasher Market.

**Livestock Hides and Skins.**

Darfur Province.—During May 25 bulls, 73 sheep, and 3 donkeys were imported into El Fasher.

Berber Province.—During June 1,624 sheep and 28 cattle were exported.

Kassala Province.—202 cattle were exported from Kassala to the interior of the Sudan.

Red Sea Province.—31 cattle and 1 sheep only were exported during June.

**Wells.**

Halfa Province.—A new well has been made near the Civil Hospital and Mudiria Buildings, and contains a plentiful supply of water.

Mongalla Province.—In May new 18 miles from Loge to Ruba was opened in Amadi district, as recommended by Bimb. Spence last October.

**Cattle Plague.**

Mild outbreaks occurred during June in Wad Hamid district of Berber Province, and in the Rufaa and Kamlin districts of Blue Nile Province. It is also reported to be existing in the Dar Eliab and Mongalla districts of Mongalla Province. Kordofan and White Nile Province were reported to be clear of this disease for the month.

**Contagious Pleuro-Pneumonia.**

The outbreak in the Rumbee district of the Bahr el Chazel Province is being dealt with, and innoculations are being carried out.

## NEAR EAST PRODUCE.

Dried Fruit.—Quotations continue firm, and in spite of the high prices it would seem that country buyers generally are catering for their season's requirements. There has been a heavy demand for all spot currants during the week, and evaporated fruits have also found ready buyers. The volume of business recorded for currants has been fairly good. Prices are steady. The sultana position is very strong, and spot stocks are almost exhausted. Valencia raisins have sold very freely to arrive, and prices are rising steadily. The supply this season is expected to be well below the average, and values can hardly fail to increase. Figs: Market quotations are steady. Plums are receiving a good deal of attention, and spot sales are heavier than usual.

Coffee.—Spot prices ruled steady. Costa Rica offered in sale this week has been of inferior quality. East Indians are rather neglected, probably because of the unsatisfactory quality of recent imports.

Oilseeds.—Linseed has been firm. Calcutta to London, afloat, £40 per ton; Sept.-Oct., £39 10s.; Bombay to London, Sept.-Oct., £40 10s.; La Plata to Hull, afloat, £36; Sept.-Oct. and Oct.-Nov., £35 10s. Rapeseed quiet. Real bold Ferozepore, Sept.-Oct., Antwerp, £33 5s. Yellow Cawnpore, Sept.-Oct., £32 10s.; brown Cawnpore, Sept.-Oct., Antwerp, £31 15s. Cottonseed quiet. Bombay to Hull, spot, £14 10s.; Sept.-Oct., £14 10s.; Oct.-Nov., £14 10s. Egyptian to London, f.a.q., Aug.-Sept., £18 10s.; Sept., £20; Sept.-Oct., new, £20. Sakellarides to London, Aug.-Sept., £18 10s., and to Hull, Aug.-Sept., £17 10s. Linseed oil very firm. Spot, £80 15s.; Sept.-Dec., £78 5s. Rape oil quiet. Crude, £74 per ton, net, naked, ex-mill. Refined, £90 per ton. Cotton oil quiet. Egyptian crude, £73 per ton, net, ex-mill; deodorised, in barrels, £91, and Bombay crude, £62 per ton. Turpentine quiet and unchanged.

Oilcake.—The market has been characterised by considerable activity. Sales have included linseed cake at 22s. to 23s., cottonseed at 10s. to 13s. 6d., coconut at 14s. to 15s., ground nut at 15s. 9d. to 16s.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending August 28:—"The sales this week on our market amount to four cases New Yerli qualities at piastres 1,000 per oke, which is equivalent to 18s. 6d. per lb. c.i.f. or $3, c.i.f. New York. No opium, old or new crop, came down from the Karahissar or other high plateau districts owing to those regions being still in the hands of the rebels, who for many months have stopped all communications. The exchange to-day is piastres 418 per pound sterling for cheque on London and $0.86 for one Turkish paper pound. The arrivals are 177 cases, against 360 at the same date last year."

## CHINA HORSE BEANS.

His Majesty's Commercial Agent for Egypt has transmitted to the Department of Overseas Trade copy of a circular giving particulars regarding the sale of China horse beans by the Egyptian Government.

These beans are being sold through the Egyptian Markets, Ltd., in the following markets, Cairo, Alexandria, Port Said, Ismailia, Suez, Damietta; and deliveries were due to begin at the end of August. They will be disposed of in sacks of 84 kilos (gross) and in quantities of not less than one sack and not more than ten sacks. Quantities exceeding ten sacks can be obtained on application to the Alexandria or Cairo Cereals Bureau.

The prices, on a cash with order basis, are as follows:—

(a) For quantities of ten sacks or less: Lower Egypt (including Cairo) 240 P.T. (Piastres Tariff) per sack of 84 kilos (gross) = 442½ P.T. per ardeb. Upper Egypt.—242 P.T. per sack = 445 P.T. per ardeb.

(b) For quantities exceeding ten sacks (ordered from Alexandria or Cairo Cereals Bureau: 440 P.T. per ardeb, ex store.

All above prices include sacks.

NOTE.—1 kilo = 2.20 lb., 1 ardeb = 155 kilos., 97.5 P.T. = £1.

## COTTON GROWING IN MESOPOTAMIA.

In view of the present scarcity in the supply of cotton, the attempts now being made to establish cotton-growing on a large scale in Mesopotamia are of particular interest, in spite of any temporary interference caused by the military situation. Cotton has been grown in Mesopotamia from very ancient times, and is still cultivated in small quantities by the Arabs in conjunction with food crops along the banks of both the Tigris and Euphrates. The fibre is used locally for spinning and as a stuffing material for pillows and mattresses. The country possesses a soil and climate favourable to the production of large yields of excellent cotton, and in course of time it should add materially to the world's supply.

Since 1917 experiments have been conducted by an expert from the Indian Agricultural Service with a view to discovering the most suitable kinds to grow, and the results of the work done in this connection and the prospects of establishing a cotton-growing industry are fully dealt with in the current number of the *Bulletin* of the Imperial Institute. So far, American types of cotton seem to be the most suitable for cultivation in Mesopotamia. The members of a deputation of the British Cotton-Growing Association, which visited the country towards the end of last year, were very favourably impressed with its possibilities for cotton production.

The acreage which will eventually be planted with cotton in Mesopotamia will depend on the quantity of labour available and the area on which a perennial supply of water can be guaranteed. It seems likely that a total of 150,000 to 200,000 acres could be cultivated annually by the existing population if the necessary facilities, in regard to agricultural machinery, transport, etc., were provided. At a low estimate, this area should produce from 15 to 20 million pounds of cotton yearly.

## ENQUIRY BUREAU.

*Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.*

*Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."*

*ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.*

*No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.*

### Agents Wanted Abroad.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

101. A correspondent in Lagos, Nigeria, wishes to get into touch with manufacturers of Arab red fez caps.

102. A stamp collector wishes to purchase in large quantities used Austrian stamps prior to the 1882 issue. Stamp dealers in the liberated provinces of Austria are asked to send bulk packages of such stamps to the care of the Editor of THE NEAR EAST, with the price in kronen of each stamp or price per dozen, per 100, etc., of each kind. All stamps required will be paid for at the price indicated and the rest returned. Newspaper stamps are not required, but rare postmarks should be included.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

## EGYPTIAN GOVERNMENT CONTRACTS.

The *Journal Officiel* of Egypt publishes the general conditions under which tenders are now received for Government contracts. These are as follows:—

1. Tenders must be submitted on the form supplied by the Administration and in double-sealed envelopes, with the object of the tender indicated thereon.

2. The tenderer must be a person residing in Egypt, or must have a representative in Egypt, and will give in his offer an address at which notices may be served upon him. All notices shall be deemed to be validly served which are left at such address or are sent there by registered post, and every letter sent by registered post shall be deemed to have arrived in due course of post unless the contrary is shown.

3. The price of tenders should be written, without erasures, in figures and in words.

4. Every tender submitted in the name of an incorporated company must be accompanied by authenticated copies of the documents defining the constitution of the company. Every tender submitted in the name of a private firm or partnership must be accompanied by such extracts, duly authenticated, from the partnership deed as shall suffice to show what persons are authorised to enter into contracts on behalf of the firm or partnership, and what persons are responsible for the due execution of such contracts, and can give valid receipts on behalf of the firm or partnership.

However, firms established in Egypt and having constant dealings with the Government may deposit with the Ministry of Finance authenticated copies of the above-mentioned documents. In submitting tenders, these firms should then simply state that the documents in question have been so deposited and that no subsequent changes in the constitution of the company, partnership, or firm have taken place.

5. Contractors must produce railway certificates in support of their invoices for transport expenses incurred on account of goods forwarded by them to Government departments. Such certificates will be delivered by the Railway Administration if applied for at the moment of despatching the goods, and in order to obtain the same, forwarding agents should mention on the waybill the name of the department concerned.

Claims for freight on goods shipped to Egypt must be supported by a copy of the bill of lading or other voucher showing the amount of the freight.

6. Each tender must be accompanied by a provisional deposit of 2 per cent. of the total value of the offer in money. Post Office orders or cheques on local banks will be accepted, but no cheques on banks abroad.

The provisional deposit may be replaced by a letter of guarantee from an approved bank in Egypt to the effect that the bank will hold at the disposal of the Government a sum equivalent to 10 per cent. of the total value of the contract in the event of the tenderer obtaining the same.

Letters of guarantee from banks abroad may also be accepted, but in that case the Administration may require the endorsement of such letters of guarantee by an approved bank in Egypt.

7. Within ten days after the acceptance of the tender a sum equal to 10 per cent. of the total value of the contract will be deposited by the successful tenderer as security for the due execution thereof. This deposit must be either in cash (on which no interest will be allowed) or in Egyptian Government or other approved securities, calculated at market value with a margin of 5 per cent. Cash may be paid to the contracting department or to the Ministry of Finance. Securities will be deposited with the Ministry of Finance in Cairo, or with the National Bank of Egypt in Alexandria or in London, for the account of the Government. The coupons maturing on these securities may be detached by the contractor. The deposit will be retained until the contract has been duly carried out to the satisfaction of the Government.

In the case of unsuccessful tenderers, their provisional deposit, if made in cash, will be returned to them; letters of guarantee will be returned to the bank which issued them, simultaneous notice being sent to the tenderers that this has been done.

Contractors may effect a permanent deposit in cash or securities with the Ministry of Finance in Cairo, on which certificates for provisional deposits may be granted to accompany their tenders, and also certificates for final deposit of 10 per cent. on value of contract accepted.

Should the successful tenderer not make the deposit as required by this article, the acceptance of his tender will be withdrawn, and any deposit he may have made under Article 6 will be forfeited.

8. The Government is not bound to accept the lowest or any tender, and may divide the order.

9. Unless all the foregoing conditions are complied with by the tenderer, the tender will not be considered.

10. Tenderers are permitted to attend when tenders are being opened or be represented by an accredited delegate and hear the prices read out of the various tenders as opened.

---

Striking increases in imports at the Port of Tangier of goods from the United States (90 per cent.), Belgium (80 per cent.), and Holland (100 per cent.), were noticeable in the second quarter of this year, as compared with the first three months. In the meanwhile British trade remained stationary.

Recent statistics show that exports from Turkey for the second half of 1919 were more than double the figures for the first six months, and imports advanced in the same proportion.

A tax varying from 10 to 22 per cent., payable in kind or foreign currency, is charged by the local Government on all goods exported from the Crimea.

## LANCASHIRE COTTON

(From Our Own Correspondent.)

Manchester, Monday.

The market has continued very quiet. Nothing has occurred to stimulate buyers to place orders on a freer scale, and the conditions, as a whole, may be described as depressing, there being considerable apprehension as to the outcome of the coal crisis. There is still time for a compromise to be arranged, but the strike notices are now running out. If a stoppage of production does take place, it will not be long before spinning mills and weaving sheds are bound to close down. Advices relating to the Egyptian cotton crop do not show very much change, but the prospects are not quite so healthy as a week or two ago. Less satisfactory reports are being received with regard to the American growth, but any upward movement in values is checked by the unsatisfactory industrial situation. Egyptian yarns continue to be purchased sparingly. Although spinners are doing very badly, there is not much probability of organised short time in this section. It is likely, however, that spinners engaged on American cotton will decide to work shorter hours. Rather more inquiry continues to be met with in piece goods for Egypt, but transactions have been few and far between. There has been no buying for the outlets of the Levant. Operations for India have been restricted to retail lines, chiefly in bleaching and printing qualities. Rather discouraging news has come to hand from China. There has been no life in the demand for South America. Home trade buyers have operated with considerable caution. Owing to the slack demand, some manufacturers of cloth are being compelled to stop looms, and unemployment in weaving districts is increasing. A dull feeling has prevailed in American yarns, and prices have favoured buyers. Trade in shipping counts has been within a small compass.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Johnston Line s.s. Pomaron, for Tulcea, Galatz, and Braila, will close for cargo at Liverpool on September 22.

The Johnston Line s.s. Cranmore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila, will sail from Liverpool on October 2.

The Ellerman Line s.s. Maronian, for Piræus, Syra, Smyrna, Volo, Salonica, Constantinople, Bourgas, Varna, Constantza, and Sulina, will close for cargo at Liverpool on September 18.

The Papayanni Line (Ellerman Lines, Ltd.) s.s. Belgravian, for Piræus, Syra, Smyrna, Volo, Salonica, Constantinople, Bourgas, Varna, Constantza, and Sulina, will close for cargo at Liverpool on October 2.

The Bibby Line s.s. Derbyshire, for Marseilles, Port Said, Colombo, and Rangoon, will close for cargo in Liverpool on September 22.

The Anchor Line s.s. Scindia, for Bombay, will close for cargo at Birkenhead on October 16.

The Harrison Line s.s. Discoverer, for Calcutta, will close for cargo at Liverpool on September 21.

## CYPRUS' SWAN SONG?

By a Customs, Excise, and Revenue Law, 1920, Cyprus gives preference to goods consigned from and grown, produced or manufactured in the British Empire. The preferential rates are two-thirds of the full rate in the case of clocks, watches, and parts thereof, musical instruments and parts thereof, cinematograph films, beer, ale, porter, and other liquors, sparkling wine, cotton yarns, thread and piece goods, woollen yarns, thread and manufactures; haberdashery and millinery, dyes, china and earthenware, furniture, soap, and matches; 60 per cent. of the full rates for wines other than sparkling wines; 95 per cent. of the full rates for spirits, liqueurs, and cordials, and five-sixths of the full rate for all other classes of goods. Information with regard to the actual rates of duty on specific articles, together with particulars of the general regulations under the above-named Law, may be obtained from the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1.

## SMYRNA FRUIT CROPS.

The Department of Overseas Trade learns that the prospects of the fruit crops for the coming season are very favourable. The quality of the crops is expected to be good, and the quantities are estimated as follows:—Figs, 1,700 tons; red raisins, 1,500-1,700 tons; black raisins, 6,000 tons; sultanas, 27,000-30,000 tons; olives, 36,000-40,000 tons. The export of olives is at present prohibited, but the prohibition will probably be raised once the result of the coming harvest is assured.

The question of the rate of exchange is likely to have an important effect on the export trade this autumn. Last year the £T dropped from about 400 to 328 per pound sterling between August and October. This year many firms are covering the exchange already, and it is generally expected that the drop will not be so heavy. At the same time, the uncertainty is causing buyers to be inclined to await developments.

The Greek Government Gazette of June 26 last contained a Law (No. 2284), dated June 23 (old style), which authorises the Ministry of Finance to exempt from import duty machinery and implements which have been imported since January 1, 1915 (old style), for the purpose of raising ships, belonging to Greek subjects, which have been sunk in Greek waters. The Law further provides that any import duties paid since January 1, 1915 (old style), in respect of such machinery are to be returned to the importers.

According to a Swiss journal, the American experts sent by the Yugoslav Government to examine the chrome ore deposits in the mountainous districts of Yugoslavia have reported that the deposits are of the utmost importance and extensive enough to meet the requirements of the whole world.

The estimated traffic receipts of the Ottoman Railway from Smyrna to Aidin for the week ending August 28 were £11,326, or £29 17s. 8d. per mile.

Arrangements have been made by the Greek Minister of National Economy and the Hellenic-Swiss Barter Trade Office for an exhibition of Swiss industrial products to be held at Athens next month. The Greek Government is materially assisting the enterprise by allowing articles for exhibition to be admitted duty free and by granting freight rebates when ships in the Government service are employed. In the latter case a reduction will be allowed of 35 per cent. for shipments via Marseilles and 45 per cent. for shipments via Brindisi.

## TENDERS INVITED.

**Tenders are invited for the following contracts, and must be made by the dates mentioned :—**

### Egypt.

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

Motor Launch.—The Inspector-General of Irrigation, Upper Egypt, invites tenders for the supply of a motor launch for 4th Circle of Irrigation. September 18. (L.)

Sewage Main.—The Chief Engineer, Main Drainage Dept., Ministry of Public Works, Cairo, invites tenders for the supply and laying of a 12-in. cast-iron sealed sewage main. September 21. (L.)

Air Compressing Plant.—The Chief Engineer, Main Drainage Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of an air compressing plant at Mansûra, consisting of two crude oil engines, driving two single-stage air compressors, complete with auxiliary machinery, water cooling plant, a travelling crane, machine tools, air mains, electric wiring, etc. October 1.

Pumping Machinery.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)

Envelopes and File Covers.—H.M. Commercial Agent for Egypt has forwarded copies of the schedule and conditions of contract in connection with calls for tenders by the Central Stores Department, Ministry of Finance, Egypt, for the supply of envelopes and file covers. Tenders on the proper forms will be received up to noon on September 30. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent. of the value of the offer must accompany each tender. The tenderer must be a person residing in Cairo or must have a representative in that city, and must give an address in Egypt at which notices may be served upon him.

The above-mentioned copy of the schedule and conditions may be consulted at the Enquiry Office, Department of Overseas Trade, 35, Old Queen Street, S.W.1.

### India.

A firm of paint manufacturers is establishing a new factory at Bombay, for which a complete plant will be required. The firm also requires locks, decorative corners, hasps, handles, etc., for steel travelling trunks and kindred goods of various sizes and designs. Firms interested should write enclosing catalogues and full particulars, prices, possible dates of delivery, etc., to the company, whose name and address can be obtained from the Department of Overseas Trade.

### Algeria.

H.M. Consul-General at Algiers reports that a local trader desires to receive quotations from United Kingdom firms for the supply of iron or soft steel hoops for barrel-making. It is understood that the applicant is prepared to pay cash for the material. Firms in a position to offer supplies of the material in question can obtain the name of the inquirer, specifications, etc., from the Department of Overseas Trade.

### Roumania.

Market Sought for Raw Leaf Tobacco.—The Director-General of the Roumanian State Monopoly announces that there are about 3,000,000 kilos of raw leaf tobacco available for export from Roumania, including tobacco suitable for cigars, cigarettes, and pipe. Prices and samples are available upon application to the Department of Overseas Trade, 35, Old Queen Street, S.W.1.

An organisation in Cluj (Roumania) requires quotations, c.i.f. Galatz, for complete outfits in men's and women's working clothing, boots, underwear, and men's hats for some 50,000 workers. No further particulars are available at present, but the fact is emphasised that the matter is very urgent, as other offers are shortly to be considered.

United Kingdom firms interested will be furnished with the name of the inquirers on application to the Department of Overseas Trade, but it is suggested that, pending the receipt of further particulars, offers should be addressed direct to H.B.M. Consul, Cluj, Transylvania, Roumania.

## ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

The market has suffered further relapses during the past week, and nearly all the prices with which this report is concerned have dropped.

Among Government securities, Egyptian Unified have dropped further to 65 and the 3½ per cent. stock to 54, both ¾ points down on the week. In Greek loans, Rentes, which rose ½ point last week, are back again, as far as buyers are concerned, to 44, while Funding Loan is at 53 instead of 55. The 1902 Loan, on the other hand, is back again at 47, and the 5 per cent. 1914 Loan remains at 54.

In Bank shares, National of Egypt are at 18⅛: Agriculturals are 3-32nds easier at 4 9-32. Bank of Athens are back at 4, but Imperial Ottomans have had a further fall of ¼ point to 9.

Among Land descriptions, Aboukir are easier at 1 11-16; Delta Lands are 1s. further down to 13s. 6d., and New Egyptians 1s. 9d. to 1 11-16.

Under Miscellaneous Salt and Soda have dropped ⅛, but Morum's Oriental Stores remain at 18s.

In Oil shares, Anglo-Egyptians have advanced 5-16ths to 2 15-16.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |
| Athens | Drachmae to £ | 25·22½ | 32·75-33·25 |
| Belgrade | Dinars to £ | 25·22½ | 96-98 |
| Bombay | Sterling to Rupee | 24d. | 1/10⅜-1/10½ |
| Bucharest | Lei to £ | 25·22½ | 160-165 |
| Calcutta | Sterling to Rupee | 24d. | 1/10⅜-1/10½ |
| Constantinople | Piastres to £ | 110 | 425 |
| New York | Dollars to £ | 4·86⅔ | 3·48-3·51 |
| Paris | Francs to £ | 25·22½ | 52·70-53·10 |
| Sofia | Levas to £ | 25·22½ | 195-205 |
| Teheran | Krans to £ | 50 | 29 |

It is stated in the *Progrès* of August 22 that the agricultural situation in Transylvania is excellent. Cereals have been collected in good condition.

Four leading French contracting firms have tendered for the rebuilding of Salonika, on which the Greek Government contemplates an expenditure of £20,000,000, spread over five years.

At a meeting of the Court of Directors of the Chartered Bank of India, Australia, and China, held on September 8, it was decided to declare an interim dividend for the half-year ended June 30 last at the rate of 14 per cent. per annum, free of income-tax.

The Greek Chamber has voted the Budget for the financial year 1920-21, ordinary and special revenue totalling 1,169,111 511 drachmæ. Bills have been introduced establishing credits of 20,000,000 drachmæ for the resettlement of the population in Eastern Thrace, and 10,000,000 drachmæ for the repatriation of poor refugees from Asia Minor and the Dodecanese, and to assist Greeks compelled to flee from the Caucasus.

The *Palestine Daily Mail* (published in Jerusalem) gives particulars of possible trade openings in the Holy Land, which since the arrival of Sir Herbert Samuel as High Commissioner seems to have entered upon an era of peaceful development. One of the most interesting of the new projects is the establishment of a perfumery industry on a large scale. Palestine possesses an extensive flora, rich in natural scents, and perfumery could be manufactured with very little difficulty. We may anticipate that before long "Eau de Sharon" will be exported from Jerusalem.

The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 33 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10% primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

*Branches:*

PIRÆUS, SYRA. PATRAS.

**Capital Paid Up - Drs. 10,000,000.**

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

*President.* L. EMBIRICOS. *Manager.* D. MIAOULIS.

## THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE.)

**Head Office - PIRÆUS.**

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

**REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.**

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

*Cable Address—Navigation Palios.*

*Codes used—Scott's (1905) 10th Edition; A.B.C. (1901) 5th Edition.*

## MARITIME BANK of GREECE

**AUTHORISED CAPITAL FULLY PAID DR.10,000,000.**

Founder—A. P. PALIOS.

**Head Office: PIRÆUS, GREECE.**

Cable Address: "Maritime Bank."

Codes Used:

## NOTES OF THE WEEK.

Simultaneously with the announcement that direct negotiations are about to take place between Italy and Yugoslavia for a settlement of the Adriatic problem comes the news that d'Annunzio has extended the boundaries of the "independent State of Quarnero" by the occupation of the Croatian islands of Arbe, Cherso, and Veglia. As everybody, except the Italian Government, has ceased to take d'Annunzio seriously, the incident may be regarded as concerning Signor Giolitti's Cabinet only. The islands in question belong either to Italy or to the Yugoslavs; in either case their occupation ought to be considered as an affront to Rome. While it is possible to find some excuse for inaction on the part of a Government confronted with the *fait accompli* of Fiume in d'Annunzio's hands, there can be none for a Government that allows him to extend his jurisdiction at will. It would have been thought that an effort would be made to confine d'Annunzio's activities to Fiume; but once again Italian regulars made common cause with the poet's legionaries. The *laissez-faire* policy of the Italian Government is not of good augury for the coming conference; for unless Italy can show that there is some authority in the country superior to d'Annunzio's whims, negotiations would seem to be valueless. In time, however, the Italian Government, it will be hoped, will be able to become master in its own house, and a settlement of the Adriatic question will thus be rendered possible.

---

The parliamentary session in Roumania, as our Bucharest Correspondent reminded us last week, has closed after a stormy existence; but not before the Government was able to pass some necessary measures. As a matter of fact, the storms of the session have gone some way to clearing the air, as in some instances they were violent enough to satisfy the more moderate people on each side that they could not be allowed to continue. It will be a matter for surprise, therefore, if the recess does not bring about certain modifications in the political position which will conduce to greater harmony in the administration of the country. In spite of the prestige enjoyed by the Prime Minister, General Averescu, the task of steering the Government through the session would seem to have devolved largely upon M. Take Jonescu, whose more vigorous personality and parliamentary experience proved a useful asset. If the Ministry could include representatives of the official Transylvanian party, which is too important to be omitted from a Coalition, the immediate future of Roumania would give no cause for the least anxiety. A recent utterance of the Prime Minister leaves a loophole for such co-operation, but is not enthusiastic on the subject.

---

According to Constantinople reports, Enver Pasha has arrived at Baku, either for the purpose of attending that "Oriental Congress" to which we referred last week, or else to take command of a Bolshevist force which is to march on India—in order, presumably, to free it from the British "tyranny" which so distresses the tender-hearted philanthropists at Moscow. Another report, of earlier date, and of Bolshevist origin, informed us that this army of liberation was composed of Red forces in the Caucasus, Persia, Afghanistan, and Turkestan, but omitted to give particulars of its strength and equipment It may well be that Enver's reputation stands higher in the countries mentioned than it does in Western Europe; but it is unlikely that it will suffice to attract any great force for such an adventure as that indicated; and for the present, law-abiding India may sleep quiet o' nights as far as this motley army is concerned. More disturbing is the announcement that Kiazim Karabekir has been coquetting with the Bolshevists at least to the extent of conferring with Halil Pasha. Kiazim, who carries a good deal of weight on the Turco-Persian border, has been something of an enigma of late, but it has been hoped that he would finally throw in his lot with the anti-Nationalists; and if the hope is disappointed it will be a blow for the forces of law and order.

---

A distinct improvement in the situation in Mesopotamia may be recorded, though numerous hostile demonstrations on a small scale continue to be reported from widely scattered points. The work of constructing blockhouses goes forward steadily, and in the Baghdad-Hit area and the Bakuba area the sheikhs are surrendering and giving guarantees for their good behaviour in the future. Mr. Strachan, who was taken prisoner at the same time as Captain Lloyd and Mrs. Buchanan, is reported to have reached the military camp at Shahroban on September 13 with all the Indian civil officials who were also made prisoners at the end of August. In a word, it looks as if the authorities were beginning to get control of the country again, thanks, no doubt, to the arrival of fresh troops in considerable numbers. That being so, we may expect the Arabs, and to some extent the Kurds also, to turn to ways of peace for a time. But how long a time remains to be seen.

Digitized by Google

In Egypt, where the Committee of the Egyptian Delegation arrived on September 8, it begins to look as if the Extremists are likely to find themselves left in the cold ere long, for opinion regarding the proposed Agreement is reported to be favourable upon the whole, and it is even announced that pro-British feeling is making itself apparent in many directions. Opposition there still is, of course, for in Egypt, as elsewhere, there will always be people with axes of their own to grind; and certain Princes have sought to gain applause by the display of a little cheap patriotism. But the men who count, the lawyers and merchants, several ex-Ministers and prominent Nationalists, and even some of the students, have declared themselves in favour of the proposed Agreement; while an unofficial meeting of the Legislative Assembly has almost unanimously voted for its acceptance. The danger now would seem to be that most Egyptians expect the new order of things to come about far sooner than can be the case even under the most favourable conditions. The first step to be taken, it is understood, must be the abolition of the Capitulations, and as that depends to a certain extent on the will of a very considerable number of natives it is obvious that it may take a long time yet, although the ground, we believe, has been already cleared to a large extent.

---

A curious incident, and one calculated to cause gnashing of teeth among the Democrats the world over, is reported, by a Teheran correspondent of *The Times*, to have taken place at Tabriz. The latter city has been for some time past regarded as a stronghold of democracy of the most pronounced variety, and recently when Mukhbar es-Sultaneh, appointed Governor of Tabriz, arrived to take up his stewardship, the Democrats refused to recognise him. They were led in their opposition by a certain Sheikh Mohammed Khiabani, who is described as having been virtual dictator of the town since the early spring; and they and their Sheikh have evidently advanced sufficiently far along the path of Democracy to believe that their will must prevail over that of people who differed from them in opinion. The Governor, however, who appears to bear some resemblance to governors of the old days, when party politics and Young Persians were unknown in the Land of the Rising Sun, regarded democracy less seriously, not to say less reverently. Taking up his quarters in the Cossack Barracks outside the city, he sent the Cossacks themselves into Tabriz to give the Democrats a lesson. This they did, killing fifty of the party of progress, including Sheikh Mohammed Khiabani, wounding 100 more, capturing a number of guns and some ammunition belonging to the Democrats, and, finally taking possession of the town. The fact that the Cossack casualties numbered only two seems to indicate that ancient methods still pay better than the modern in some parts of the Orient, though they have fallen into disfavour in the West.

---

A message from Constantinople to *The Times* states that certain members of the American Relief Commission to the Near East have been arrested on a charge of corrupt practices in connection with the relief activities. In a letter from a British officer in Georgia, quoted in the *Morning Post*, reference is made to a "scandal" connected with the American Relief Mission for Armenia. "Cases full of their supposed relief materials," the writer states, "have been opened by us and found to contain agricultural implements and machinery of all kinds intended for sale." If these reports are correct, the United States public will have reason to be glad that there is a chance of a stop at last being put to a state of affairs which was bringing discredit on a whole nation, and a particularly liberal one. Throughout the Near East the activities of the American Red Cross and various American relief funds have been brought into wide disrepute owing to the undisguised manner in which philanthropy was so often subordinated to the commercial spirit. There is no reason to suppose that these magnificent enterprises were not originally intended to be purely philanthropic, and if they were turned to other purposes it is a duty that the promoters owe to the charitable donors of the funds that those guilty of malpractices should be brought to book.

The autumn session of the Indian Legislative Council closed last week, and the Council itself is now a thing of the past, its functions being transferred to the Legislative Assembly to be elected in a few weeks' time under the provisions of the new constitution. This last session has not been wasted, for some useful measures have been passed, and perhaps some of the discussions may prove to have been even more valuable. Apart from the legislation regarding the army on which we commented last week, the outstanding achievements of the session are the Acts which bring into existence an Imperial bank and a Moslem university, two institutions which, in their different ways, are indispensable to the new India. The bank, which is to be formed by amalgamating the three Presidency banks, will provide that strong central direction of which the finances of the country stand so greatly in need, and will at the same time ensure a progressive extension of banking facilities, the scarcity of which has proved a heavy handicap to commerce as well as industry.

---

The passing of the Moslem University Act closes a long chapter in the volume of Indian education, but only to open another which is likely to be longer and sure to be of greater interest. The new institution will be Moslem in fact as well as name. Its constitution affords reasonably good guarantees that the standard of secular instruction will not be allowed to deteriorate, but the real difficulties will lie in the field of Islamic studies, which it is bound to foster. The controversy between the spirit and the letter—an old controversy in the days of Saul of Tarsus—is very much alive in Islam to-day; the new institution will scarcely be able to avoid taking a definite side, and on the side it takes will depend very largely the whole future of Moslem India. On that question any attempt at prophecy would be futile, but it is permissible to express the hope that the period of controversy, which we think inevitable, will in the long run prove fruitful, and that the result may be at the least a working arrangement with those other types of culture with which Islam is now brought into contact.

---

It is not altogether easy to follow the cabled messages regarding the Indian National Congress, which has been discussing in special session the project known as non-co-operation, or, more familiarly, the boycott of every form of Government activity. The difficulty is that the tone of the messages is somewhat alarmist, while the facts they disclose are reassuring. The tradition of the Congress is open unanimity based on compromise arranged in the Subjects Committee, which deliberates in secret, but tradition has been violated in this case, for we have been allowed to know that the Subjects Committee, though controlled by the Extremists, was almost equally divided, the majority for non-co-operation being only thirteen in a body of nearly 300 members, while in full Congress the project was approved by a majority of two to one in a vote from which half the delegates abstained. Two-thirds of one half is arithmetically one-third of the whole, and if that be the measure of active support for the policy of boycott, it looks rather as if the Congress has shared in the recent marked advance in political aptitude.

---

The apprehensions expressed in the messages conveying these figures arise probably from the consideration that *amour propre*, a failing from which saints suffer even more than sinners, may rouse the promoters of the boycott to fresh efforts, and that, having failed to stampede the educated classes, they may concentrate on exciting the passions of the mob. That consideration cannot be dismissed as altogether fanciful, for the promoters have hitherto shown no glimmering of a sense of responsibility, while they learned by experience last year that tow will blaze up if you set it alight. It is possible therefore that we are nearing the stage indicated in Lord Chelmsford's recent speech, when his Government "will be bound to use all the resources at its disposal" to protect the interests of the community at large, but it is still permissible to hope that the result will justify the policy he then announced, reliance on India's common sense and expectation that the movement would fail by reason of its intrinsic inanity.

# THE WEEK AT HOME.

LONDON, Monday Evening.

**The Coal Question.**

The coal crisis is still with us; and like the 1920 weather, the prospect is generally depressing, with an occasional glimpse of sun. The parties were negotiating last week, and the fact that the negotiations were not broken off was accepted as hopeful. Mr. Lloyd George, returned from his holiday in Switzerland, apparently refreshed and invigorated, watched the negotiations from Downing Street, but he has not directly intervened; Sir Robert Horne, for the Government and Mr. Smillie for the miners, being the protagonists.

It became evident early in the week that Mr. Smillie was shifting his ground. In a long letter to *The Times* he denied that nationalisation of the mines was an issue, and by admitting that nationalisation was a political question tacitly allowed that direct action does not apply to political questions. He did not define his position on direct action precisely, but he made it sufficiently clear that tactics had been changed, and the objection shifted, probably in deference to the opinions privately expressed at the Portsmouth Trade Union Congress by other Labour leaders.

Such was the first step. The second, which followed logically, was the division of the programme. The miners claimed an increase of wages for themselves and a reduction of the price of coal to the consumer. It was pointed out that the rise would be a real rise, whereas the reduction would be illusory, since it would merely mean cheaper coal and higher taxation—a doubtful advantage. The Government further took up the attitude that whereas wages was an industrial question, price was a political question; here they were obviously on impregnable ground, and Mr. Smillie—having found salvation on the Direct v. Political Action problem, consented to divide the two demands. The question of the price of coal was to be referred to a committee of inquiry—in other words, to be shelved for some time; that of the miners' wages was to be discussed at once. Since the two demands had been declared only a few days before to be one and indivisible, the position was now obviously more hopeful. The Government had scored the first trick by limiting the issue; moreover, the miners could no longer claim that their policy was partly altruistic. They wanted more money, like the rest of us, and the public could go hang.

So vanished the idealist reformer; but the practical man of business in Mr. Smillie now kept up a stiff upper lip. Production per man has been falling in the mines, although wages are up; and Sir Robert Horne demanded that any increase of wages should be dependant on increase of output. Mr. Smillie "hopes" for an increase of output, but he will not consider it until more wages are agreed upon. To the ordinary onlooker this seems distinctly like getting the goods without paying for them, and most of us would like to increase our incomes by the same easy means; but there the matter hangs at present. It would seem to be difficult to call a strike on this ground alone, but Mr. Smillie may feel that he has been "let down" by his fellow trade unionists, and out-manœuvred by the Government, and determine to "hack his way through" at the last moment by a policy of force.

It is doubtful, however, whether the policy would succeed. The miners were not very popular before; and they are less popular still at the moment. Not many people believed in the sincerity of their demand for a reduction in the price of coal; it can hardly be that more people believe in it now that they have in effect abandoned it.

Meanwhile the trouble in the electrical engineering trades has been settled, the men on strike abandoning their claim that foremen must necessarily be trade unionists. So London will not be plunged into darkness after all.

**The "Daily Herald."**

The relations of the *Daily Herald* to the Bolsheviks have been further elucidated during the week. It will be sufficient to set out the facts of a rather ugly business. When the intercepted wireless messages between Chicherin and Litvinoff showed that the *Herald* had been asking for a subsidy from the Bolshevists, Mr. Lansbury, the head of that paper, denied that a single rouble had been received, and accused the British Government of being "a notorious liar." Shortly afterwards, it announced, to the stupefaction of its readers, that one of its directors, Mr. Francis Meynell, had been negotiating with the Bolshevists for a subsidy *without the knowledge of the other directors*—a sufficiently startling proposition—and apparently with success, the Bolshevists offering £75,000. The *Herald* also announced that the subsidy would leave the paper independent and free to express its own opinions—another startling proposition, more especially in view of the Bolshevist attitude to the freedom of the Press—and asked the advice of its readers as to the acceptance. An outspoken letter from Mr. J. H. Thomas, strongly protesting against the subsidy, followed, and eventually it was refused; Mr. Meynell, the director concerned, resigned.

But the *Herald* had not revealed the full facts, for it was discovered through other sources that the subsidy in the form of jewels, had been brought to London already, sold, and changed into notes—Mr. Meynell stating to the brokers that he was acting for some "American friends"—and the notes had been traced to Mr. Meynell and the son of Mr. Lansbury, the father's assurance that he knew nothing of these transactions notwithstanding. Reticence must be cultivated in the Lansbury family circle to a quite remarkable degree.

It was further shown that a selection of the facts as to the subsidy was only published in the *Herald* after Mr. Lansbury, junior, who possesses the golden gift of silence in the home, had been interviewed by the police; but Mr. Lansbury, senior, still professes his ignorance until informed, and apparently considers this a complete answer to the whole matter, since no further reference has been made to it in the *Herald*.

These revelations have very seriously damaged, if they have not utterly ruined, the reputation of the paper. It cannot now take the money, and it can hardly get on without it, since it is run at a heavy loss; while Mr. Lansbury's continued connection with it will prevent its recovery of prestige. Obviously the best course would be for the Lansbury régime to cease altogether, and for a new Labour man, whom the public can trust, like Mr. Clynes, to be appointed to "clear up the mess and say no more about it," and to give orders that the paper is to be run as a daily Labour journal on recognised Trade Unionist and official Labour policy. Only by a clean cut with the past can it hope for any future.

The disclosures will probably do some damage to the Labour party itself. But the reaction against them is unjust. It has never been the official organ of the party and its policy has frequently been at variance with theirs; it has been frankly revolutionary, whereas they are constitutionalists. However, a little frank speaking on their part will soon undo the harm done to Parliamentary Labour by the *Herald's* downfall.

**The Last Match.**

The last cricket match of the season—Champion County v. Rest of England—ended in a downpour of rain and a drawn game at the Oval. It was chiefly remarkable for the hitting of the Rest against the not very strong Middlesex bowling, the tremendous score of 603 for five wickets being registered, of which Hobbs made 215. He is said to have hit rather fitfully and carelessly, but it was more or less a holiday match, and one does not expect the same serious caution as in a county contest. Middlesex responded with 318 and, on a difficult wicket, 192 for 4.

The England team are now on their way to Australia, and at this last moment some doubts have been expressed as to their competence. Nobody could impugn their batting ability, but nine great batsmen cannot always win a match. Their bowling, except for E. R. Wilson, is said to be ordinary, and the pessimists declare that on the hard Australian wickets it will be less than ordinary; the fielding is supposed to be their weakest point. This is perhaps the most serious part of the indictment.

**Exit "Black Maria."**

One of the familiar sights of the London streets will soon have vanished. The old-fashioned horse-drawn "Black Maria," a vehicle resembling nothing else on earth, that lolloped along with a gait of its own, is being superseded, and its place is to be taken by a closed motor-conveyance with accommodation for twelve prisoners. I am assured that the new type is carried out with all modern improvements, and that it will now be possible to go to prison in comfort—more pleasantly, in fact, than the ordinary man goes to his daily work by bus or tube, since there is no strap-hanging, and overcrowding is not allowed. The sole disadvantage of this admirable service seems to be that one's destination is arbitrarily chosen, and one is not allowed to alight on the way.

**The Week's Books.**

The most interesting book of the day is Mr. H. Belloc's "Europe and the Faith" (Constable). "The Faith," says the author, "is Europe, and Europe is the Faith"—and the Faith is naturally Roman Catholicism. The Reformation was the greatest disaster that ever came upon Europe, and the worst part of the disaster was that England turned Protestant; if Europe is to be saved England must revert to the old Faith. As England shows no sign of doing so, I take it that the fate of Europe is sealed. Protestantism, in Mr. Belloc's view, merely leads to Atheism; I am not quite sure what is the consequence of the Greek Orthodox schism—probably Bolshevism. It is a brilliantly written and provocative book.

Students of ethics will be interested in "Moral Values," by Professor Everett (Heinemann), which covers the large field of conduct, or, rather, what has been written about conduct, in useful fashion.

Mr. W. H. Mallock has published what appears to be his *ave atque vale* in "Memoirs of Life and Literature" (Chapman and Hall). It is extremely well done; but after reading it one cannot but regret that the brilliant author of "The New Republic" should have devoted himself so largely in his later years to economics and such heavy subjects. It is like putting a racehorse in a brewer's dray. It is a great pity that Mr. Mallock did not rely on wit, of which he has so large a share, rather than argument. After all, anybody can argue.

BUCHAREST, September 11.

**Future Legislation.**

General Averescu and the Cabinet are availing themselves of the Parliamentary recess to form several committees to study and prepare the various Bills which will come before Parliament in the autumn. The most important of these measures are:—The Land Bill: To deal with the question of dividing the large estates amongst the peasants; the Franchise Bill—this measure although maintaining universal suffrage, will be introduced to give the minority of the voters, comprising the upper and middle classes, a better control over the majority, who are the peasants, in the matter of electing representatives for Parliament; Fiscal Reform (the question has again cropped up of introducing the progressive system of income tax); the unification of administration of the new provinces. Several other reform measures will also be brought up.

**By-Elections.**

Recent by-elections point to the fact that General Averescu's party is still strong and popular, despite rumours to the contrary. Up to now this party has obtained eight seats out of ten. It is interesting to note that the late Premier, M. Marghiloman, who was in power during the time of the German occupation, has again failed at the recent by-elections.

**The Government and the Opposition.**

In view of the different rumours of collaboration with the Opposition, General Averescu took the opportunity, at one of the Parliamentary Committee meetings, of making a statement of policy. He first explained that the entry of M. Take Jonescu, Minister of Foreign Affairs, into the Cabinet was not on account of the supposed weakness of that body, but rather in fulfilment of an arrangement made between himself and M. Take Jonescu, which dates back to the time when the Government was at Jassy. He invited M. Take Jonescu into the Cabinet to keep his promise to him, and he felt sure that it was in the interests of the country to acquire a statesman of his qualifications.

With regard to the rumours of collaboration with the parties in Opposition, he admitted that it had been his intention to form a coalition when he first assumed office. The impossible attitude taken up by his political opponents during the last session demonstrated the impracticability of this arrangement, as they had not only questioned the right of his Cabinet to govern, but even went so far as to accuse it of dishonest dealings.

Regarding the reconstruction of the Cabinet, it was a matter which concerned his party alone, and would be carried out when necessity demanded.

General Averescu, in conclusion, declared that he had every confidence that they could carry on the Government successfully, relying on their own ability, and without appealing for outside help.

M. Matei Cantacuzino, ex-Minister of Justice, has given to a Press representative his reasons for his recent resignation. He said that when he first joined the Cabinet he imagined that General Averescu would favour closer collaboration with the Democratic party, and that the present Government would also move more to the left. He had since found out, however, that they were moving further towards Conservatism. He was also opposed to the attitude and actions of one or two of his colleagues.

**Disposal of Enemy Shipping.**

A large number of vessels belonging to Germany, Austria, and Bulgaria, which were lying in the Danube at the time when Roumania first entered the war, in 1916, have been seized and remain the property of Roumania. When Roumania recommenced hostilities, in 1918, in conjunction with the French Army, a further number of these craft were taken. They have now been distributed between Roumania and France in the following proportions:—Roumania: 13 tugboats, of a total of 6,290 h.p.; 50 barges and 2 tankboats, of a total tonnage of 29,620, as well as a small number of pontoons. France: 11 tugboats, of a total of 4,070 h.p.; 55 barges and 2 tankboats, of a total tonnage of 32,710, together with a small number of pontoons. This distribution has been done rather hurriedly, and there may possibly be lawsuits against the State by the owners of the vessels, who are not all late enemy subjects.

**Roumanian Socialists in Russia.**

The Roumanian delegates of the Socialist Party, who left a fortnight ago to take part in the Socialist Congress at Moscow, have sent word from Vilna that Germany will not allow them to pass into Russia. They will, therefore, be obliged to turn back from Germany and try another way of entering Russia. If again unsuccessful, they will return to Roumania and renounce the trip.

**The Royal Family.**

The King has gone into Transylvania on an eight days' hunting expedition, and will pass most of his time at the Castle of the former Emperor of Austria, which is situated in the picturesque district of Tg-Muresului. In accordance with the King's request, this Castle will be repaired and transformed into a summer residence of the Royal Family.

Prince Nicolas is expected to leave Bucharest on the 12th, to resume his studies in England. He will meet in Paris Prince Carol and Princess Ileana, who are on their way back to Roumania.

## YUGOSLAVIA.

BELGRADE, September 12.

**The Prince Regent.**

The most interesting event of the week has been the romantic dash of the Prince Regent to Paris. It was suddenly announced a little over a week ago that his Royal Highness, travelling incognito, under the title Count of Avala, had left unexpectedly for Paris, accompanied only by his secretary; that he would be there only three days, and that he had gone in reply to a telegram from his sister, Princess Helena. It was very generally supposed that this flying visit had a political object, and was connected with Marshal Joffre's recent visit to Belgrade on his way home from Bucharest, and, therefore, that it was in connection with France's endeavour to form a central European anti-Bolshevist *bloc*. But on Friday the *Politika* came out with the information that in well-informed circles it was understood that the Prince had taken the opportunity, when in Paris, of visiting Princess Marie, second daughter of the King and Queen of Roumania, and that before long the people of Yugoslavia may expect to hear an announcement which will please everybody—for everybody loves a Royal romance, especially when their own sovereign is concerned, and he has shared the sufferings of his troops in the days of disaster.

The news of the serious strikes in Italy caused some anxiety, as it was feared that the stoppage of railway communications would hold up the Prince, but it has been announced that the Italian authorities made use of the military to combine the two Simplon-Orient expresses which were detained, and to pass them on with the Prince to the frontier. He arrived safely at Zagreb, and came on yesterday to Belgrade by a special train, arriving at three in the afternoon, when he at once motored down to the racecourse in time for the first meeting held here for six years.

This was quite a festive occasion, and was admirably organised by the Danube Racing Club. The course is a very pretty one, the weather was fine, there were plenty of good entries, some very good horses, and very sporting events. There were half a dozen races, and each one gave a really good finish. The most popular of all was the last, the Officers' Hurdle Race of 2,400 metres, with

Digitized by Google

six fences. There were ten entries, all ridden by officers, often by owners. They started off at a tremendous pace, and a really good race was won by Captain Milosh Vidakovich on his own Bashlik, a six-year-old thoroughbred bay.

**Political.**

Politically the week has been a quiet one. Many Ministers are away on inspection in Bosnia and Montenegro, while the Croatian Ministers are in their own province, probably on account of the disturbances on that side of the river.

Dr. Stanojlo Vukchevitch has been elected Speaker. In his declaration he painted a sombre picture of foreign affairs, referring to the numerous enemies which surround the country, and especially to the threatening situation in the Adriatic. In his peroration he reminded the House how their ancestors had ejected the Turks a century ago, their fathers had recovered Nish, and the present generation, after unheard of sacrifices, had almost completed the work of liberation and union. But just as the separation of Alsace from France in 1870 had left a festering sore, so the placing of so much purely Yugoslav population under alien flags had left the seeds of future wars, and it will be the lot of the next generation to complete the good work.

The only other political event of any significance is the resignation of M. Pashitch from the Skupshtina. No reason has been given for his retirement, neither is it known whether it means a permanent withdrawal from the political arena. Some attribute it to his differences with M. Stoyan Protitch and his objection to that politician's draft Constitution, while others think that M. Pashitch intends to devote himself now to his numerous mining interests.

**The Bulgarian Representative Arrives.**

Diplomatic relations have been resumed with Bulgaria, whose Minister, M. Teodoroff, has arrived in Belgrade and presented his credentials. M. Teodoroff is said to be an intimate associate of M. Stambolisky, and to have been so hostile to the policy of Bulgaria during the war that he took advantage of a chance visit to Switzerland on the outbreak of hostilities to cross into France and join the Foreign Legion, in which he fought as a volunteer against Germany. If this is so, he should be a successful Bulgarian envoy to Serbia, and it is to be hoped that he will pave the way to a marked improvement in relations between the two countries.

**Wireless Communications.**

The old French military wireless station at Banitsa, on the outskirts of Belgrade, is insufficient for the needs of the country, and inefficient. It is only a 20-hectowatt plant, and can reach the Eiffel Tower only under favourable atmospheric conditions. It is now proposed to erect a 100-hectowatt station and duplicate to ensure the best possible connection with Western Europe, and so with America. The new station will be on the Topchider Hill. Meanwhile the military authorities have handed over the old station to the Minister of Posts and Telegraphs, and it will shortly be available for public use.

**Disturbances in Croatia.**

Serious rioting has occurred during the week in Croatia, where the authorities have been registering and branding cattle for military purposes. The simple peasants have not understood this, and lent a willing ear to the whisperings of anti-Slav agents, who have suggested that the Government is going to take their animals away from them. The agitation has been successful, and rioting has become very serious in some places, so that the gendarmerie have had to apply for the assistance of the troops. There has been a certain amount of bloodshed, and in one place near Sisak, the rioters succeeded in destroying ten or fifteen yards of the railway track, on the main line, so that for a time communication between Zagreb and the capital was interrupted. It is stated that it has been proved that Hungarian chauvinists knew all about this and took an active part in propagating the trouble, in conjunction with the renegade Croats of the thoroughly Hapsburgised Frankost party, three in number, who seem at present to be at Fiume, to the great content of d'Annunzio.

**Brevities.**

General Wrangel has asked the Yugoslav Government whether the country can receive another 10,000 Russian refugees, who are at present in great distress on the island of Lemnos.

There is a strike of typographers in Zagreb, so newspapers are not appearing.

## GREECE.

ATHENS, September 4.

**The Premier's Return.**

Quite unexpectedly, on Monday morning (August 30) the public were informed by the newspapers that M. Venizelos would arrive in Athens at six o'clock in the evening. The Premier was not expected back until the middle of the week, and the authorities had to make hasty preparations for his reception.

Immediately on the arrival of the Averoff at New Phaleron the Council of Ministers, the Bishop of Athens, the chief of the British Naval Mission in Greece, Admiral Kelly, and other officials, went aboard the cruiser to welcome the returning Prime Minister. M. Venizelos was accompanied by his two sons, who had journeyed to Paris a fortnight ago to see their father after the attempt on his life. The Municipal Council of Athens, together with thousands of people, had assembled outside the Premier's residence in University Avenue, and there was a veritable explosion of "Zito!" when the Presidential cortège arrived. Hats were thrown into the air, and cries of "Long live the Liberator of Hellenism!" rang out from one end to the other of the avenue. A few minutes later M. Venizelos appeared on the balcony of his house, but the crowd, who were clamouring for a speech, were doomed to disappointment. The Premier was too tired to speak, and after acknowledging the greeting by waves of the hand re-entered the house.

At seven o'clock King Alexander, accompanied by his aide-de-camp (General Contaratos), visited M. Venizelos and congratulated him on his miraculous escape in Paris. His Majesty remained with the Premier for about a quarter of an hour.

**A Council of Ministers.**

A Council of Ministers was held at 5 p.m. on August 31, under the presidency of M. Venizelos. The Premier having supplied all necessary information with regard to the actual position of national affairs, the Council discussed the question of the convocation of the Parliament, and it was decided that this should resume its sittings next Tuesday.

The life of the Chamber will be of a very short duration, and only Bills of extreme urgency will be passed. Among these is the provision for participation in the

elections of soldiers serving at the front. The General Elections are to be held early in November, but a definite date has yet to be fixed. One would say almost with certainty that Thrace will participate, but nothing definite has been decided with regard to the Dodecanese. The Council also decided that the ratification of the Peace Treaty with Turkey will not take place until after the elections and the convocation of the new Parliament.

Martial law will be withdrawn within the next fortnight, and the Press Censorship will probably be abolished at the same time.

**Italy and Castellorizo.**

The inhabitants of the Island of Castellorizo at a meeting held on August 20 protested against the injustice committted by the Powers in deciding to place a purely Greek population under Italian domination. The following note was telegraphed by the demonstrators to the Greek Government, the legations of the Allied Powers in Athens, and to the League of Nations:

1. The inhabitants of Castellorizo proclaim once again the complete and definite union of the island with Mother Greece in accordance with the wishes of the entire population.

2. The inhabitants view with horror and disgust the Italian occupation, which is against the principle of nationalities laid down as a basis by the Peace Conference.

This vote is signed by all the male inhabitants of age on the Island, numbering 560.

On the day following the meeting an Italian auxiliary warship anchored in the harbour of Castellorizo. The inhabitants, thinking that the Italian occupation was about to commence, closed their shops as a sign of protest and went to their homes, after hoisting the Greek and French flags in the main square of the town.

**General News.**

A telegram from Antwerp states that the Greek water polo team obtained fifth place in the final amongst fourteen other competing nations. This has been the first time that a Greek water polo team has taken part in an international competition.

The Government has decided to sell by auction a number of old ships of the Greek Navy. These include three cruisers, two destroyers, and two submarines. The auction will take place on September 30 (O.S.).

A Greek chamber of commerce numbering over 350 members has been created in Galatz. A Greek commercial club and a commercial college will also be established in that town.

A Bill will be introduced in the Chamber next week dealing with indemnities to be paid to the persons whose property was damaged or lost during the scenes in Athens on August 13.

## BULGARIA.

SOFIA, September 9.

**The Agrarians in Council.**

The Supreme Council of the Agrarian League has been in session since September 1, all the Cabinet Ministers being present, with some hundred delegates from the provinces. M. Stambolisky, the Prime Minister, made a very full statement regarding the policy of the Government both at home and abroad, laying great stress on the determination of his Cabinet to maintain strict neutrality in any conflicts in which Bulgaria's neighbours may be involved. The rumours concerning mobilisation which have been assiduously spread by the opponents of the present Government he categorically denied, declaring that instead of any further mobilisation the Government has decided to dismiss the infantry of the 43rd class of recruits on the 15th instant. This declaration was received with applause from all present, and the gathering approved the pacific policy of the Government.

**A Public Works' Scheme.**

The Ministry of Public Works is elaborating a project for the supply to all the towns and villages in the country of electric light and electric power for industrial purposes. The project will very shortly be submitted to the Chamber for consideration and approval.

Last Sunday the Prime Minister, accompanied by M. Janisson, the correspondent of the *Temps*, made a tour in Northern Bulgaria, visiting the towns of Pleven, Lom, Viddin, and Kula, where, to very large audiences, he described the present state of Bulgaria and the pacific policy of the Government, in which lies, he said, the only hope of the country's salvation in present circumstances. He was everywhere received most cordially and enthusiastically, and was cheered by the people without distinction of party. At the end of this week M. Stambolisky intends to make a similar tour in Southern Bulgaria.

**The Commission of Reparations.**

A part of the Inter-Allied Commission for the control of the execution of the Peace Treaty has already arrived. The Bulgarian Government has appointed as the country's representatives to appear before the Commission: Dr. Raiko Daskaloff, Minister of Commerce, Labour and Industry, High Commissioner; General Michael Savoff, who was Generalissimo of the Bulgarian Army in the war with Turkey, 1912-13, First Delegate; and M. Nicholas Stoyanoff, Director of the Public Debt at the Ministry of Finance, Second Delegate. As soon as the financial delegates arrive the Commission will begin its work.

**New British Minister.**

The British Government has notified the Bulgarian Government that it has appointed Sir Arthur Robert Peel as Minister Plenipotentiary for Great Britain in Bulgaria. The new Minister is expected to arrive here about the middle of next month, when the present High Commissioner, Sir Herbert Dering, will be able to go on to Bucharest, to take up his new duties there.

## TURKEY.

CONSTANTINOPLE, August 23.

**Peace.**

The Peace Treaty has been signed, and consular and diplomatic relations are to be resumed between the Allies and Turkey, but in reality the situation is precisely the same as it was before. The Nationalists continue to rule the roost in Anatolia, except in the occupied territories—that is to say, in the territories occupied by French, Greek, and British troops—and the Council of Ministers is still discussing ways and means of crushing the rebels or bringing them to reason. Every day some new commission is formed for the purpose of studying the Anatolian problem. The Government is said to be raising two divisions for the purpose of sending a military expedition to Anatolia, but it is becoming more and more evident every day that, unless the British or the French take the matter in hand, either the expedition will never get beyond the paper

stage or it will end in a farce like the famous Anzavur expedition. Not only is the Government hampered for want of money and material, but the men are not forthcoming. The Peace Treaty is universally condemned by all Turks, and it was signed only to avoid worse conditions. It is therefore unlikely that there will be many volunteers to enforce the conditions. That is how the matter stands, and the Government seems to be no more able to deal with the situation now than three or four months ago.

There is some talk of the Sultan himself proceeding to Anatolia at the head of an expeditionary force, but it is exceedingly doubtful whether even this desperate course would make any important difference, for the Sultan is regarded as a prisoner by the Anatolians, and therefore unable to act freely. At the same time a small section of Turkish opinion is alive to the dangers of the situation, for there was considerable comment in the anti-Nationalist Press with regard to a remark made by M. Venizelos in a recent speech to the effect that the additional territories occupied by the Greek troops would be held as a guarantee for the integral execution of the Treaty, and that Greece might have to open a new account with Turkey.

**Italy and Turkey.**

The announcement of the intention of the Consulta to nominate Marquis Garroni as Ambassador and Envoy to the Sublime Porte created something of a sensation. It would now appear that the Italian Government may think that the action was somewhat too hasty; for it is reported that Marquis Garroni will be accredited only as Minister. On the whole, no one who is acquainted with the policy pursued by the Consulta for the last eighteen months would be surprised that Italy should be the first of the Allied and Associated Powers to send a representative to the Sublime Porte.

The Marquis Garroni was Ambassador in Constantinople until the entry of Italy into the war, and such was his intimacy with the Austrian Ambassador, the Marquis di Pallavicini, that he was regarded as a fervent partisan of the Central Powers.

**Anatolia.**

With the exception of the signal defeat sustained by the National Forces at the hands of the French at Aintab, there has been no military activity in Anatolia recently, save for skirmishes between odds and ends of Nationalist bands and Greek outposts. There appear, however, to have been some not unimportant political developments. In the first place, it is stated in Nationalist circles that a Nationalist delegation in Moscow has concluded an alliance with the Soviet Government, and that soviet principles are to be introduced into the administration of Anatolia. This is somewhat hard to believe at first; but in their anxiety to obtain material assistance the Nationalists would probably promise anything and trust to Allah to get them out of the mess later on.

The progress of Bolshevist propaganda in Anatolia has been remarked upon in former letters, and there can be no doubt that there is to-day a strong party in favour of some brand of Islamic Bolshevism. Every traveller returning from Anatolia gives the same account of the state of affairs, and if only the Russians could send an army to Asia Minor there would certainly be some surprising developments. In view of the remarkable recovery of the Poles, however, and of the progress of General Wrangel's army, this is not probable for some time—if at all. At the same time it would be a mistake to suppose that the Bolshevists will be brought to abandon their Eastern campaign by defeats on the Western front.

One curious piece of information has recently leaked out with regard to the Bolshevist campaign in Anatolia. According to this report, Halidé Edib Hanem, the famous Turkish feminist and exponent of pan-Turianism, has been vigorously opposing Bolshevism in Anatolia, and the majority of the old pan-Turanian party are supporting her. Apparently the story of the massacres committed by the Bolshevists in the Elizabetpol Province of Azerbaijan has made some impression in Anatolia, after all.

# CYPRUS.

(Undated.)

**The Deputation.**

Communications from London bring little fresh information. The reply of the Under-Secretary of State to a question by Mr. Thorne in the House of Commons that no political change in the administration of the island is contemplated, and the appointment of a High Commissioner, do not strengthen any hope of abandonment in a near future. The Press trusts that in coming decisions regarding interests still unsettled "those of Cyprus will not be forgotten." The local Greek papers publish accounts of an interview of three of the London delegates with members of the Labour Party at the House of Commons. Many questions were put by the latter regarding island affairs, and full information was given. Mr. Clynes, in reply, stated that the matter of the Cypriot claims had not been under the consideration of his party, but that the deputation might rely on their sympathy, since the claims, as presented, seemed in accordance with the principles of the Labour Party. The latest rumour now under comment is to the effect that when Greece is in full possession of the Dodecanese Britain will exchange Cyprus for one or two of the islands nearest to the Dardanelles.

**War Against Locusts: A Cypriot Discovery.**

It may be remembered that mention was made last year of a discovery by Mr. Z. G. Solomides, entomologist, of the Agricultural Department, of a solution which, used as a spray, destroyed swarms of locusts, while being perfectly innocuous to other animal life. Mr. Solomides, having taken three months' leave, proceeded this summer to France in order to carry out further studies in connection with his discovery. Going to Montpellier, he conducted trials before French experts. Locusts which were turned into a field and sprayed were rapidly destroyed, and a flock of sheep, driven into graze immediately after, suffered no ill effects. The demonstration was highly commended and pronounced a complete success. Mr. Solomides was heartily congratulated, and large sums were, it is said, offered for the discovery by capitalists, but were not accepted. It is hoped that a drastic remedy has thus been found for a pest which is a scourge in so many countries, including Cyprus, and that the discoverer will be adequately rewarded.

**An Education Law.**

A new law has taken shape as the outcome of much discussion by legislators, School Boards, and the Press. Although the poverty of the island and other causes have been a drag on the wheel, there has been good progress under British rule, and the present measure, though far from meeting all requirements, marks a decided further advance and will satisfy some pressing claims. The status of village schoolmasters, with slender salaries—often partly paid in corn, wine, and oil—will be greatly improved, although no provision is yet made for pensions. Schoolmasters will be appointed by the High Commissioners on the advice of the Central Education Board. The school year will begin on October 1. As regards the financial provisions, there will be a small addition to the property tax (*Verghi Kimat*), and the taxes on sheep, goats, and pigs will be doubled. The bill is to be introduced this summer.

**General News.**

Commander H. C. Luke, Commissioner of Famagusta, who has been on special duty in the Caucasus and elsewhere, has been for a short visit to the island, has seen the High Commissioner at Troodos, and has returned to Constantinople. He will, it is said, shortly publish a book on "Cyprus Under Turkish Rule."

Game is plentiful, though hares have decreased largely in numbers, owing to relaxed regulations under the Game Laws, affecting the close season—due to complaints as to excessive damage done to produce by hares. For sportsmen the favours granted have been unwelcome. The number of gun licences now taken out is remarkable. They are issued in thousands, as against hundreds not many years ago.

About 200 officers and men are returning to South Russia. Many of the Russian and also Armenian orphans are to be sent to Alexandria, where they will be placed in an institution under Red Cross auspices and taught various trades.

Athens papers still call for Cypriot volunteers. The Fraternity of the Kykkou Monastery lately decided to award £200 to the first officer or soldier who should enter Adrianople and plant the Greek flag within the city walls.

Many summer visitors have continued to arrive. As many as 350 came by one steamer recently.

Mr. Grimshaw, president of the District Courts of Limasol and Papho, is going on four months' leave to Englan

# CORRESPONDENCE.

## THE RULERSHIP OF MESOPOTAMIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I beg to support the suggestion in the article of September 9 that the Shereef Ali Haidar has exceptional qualifications for an Emirate in Mesopotamia.

His lineage is longer and clearer than that of the present descendants of our King Alfred. His heritage contains a sacred connection with the Prophet of Arabia and with Ali, which mean more to Moslems than apostolic succession to Western Churchmen. His family are the heirs of twenty Shereefs, while his more fortunate cousins in the Hejaz have only three. Such traditions, growing steadily through a thousand years, cannot be lightly ignored; and, rightly used, they can introduce stability and contentment for the present and the future.

But the Shereef Haidar has qualities which should appeal to the West. He and his sons are well informed on European history and philosophy. I have discussed with them the philosophy of Hegel, the principles of science and education, the theories of Bolshevism and the value of religion, and their sane views would have been welcomed in any British University. Having been trained with a careful English education in addition to their own high culture, this family would be well fitted to mediate between East and West, for the good of both.

From the study of Semitic history and from an accidental acquaintanceship with the Shereef Ali Haidar and his family, I feel constrained to say thus much in support of the plea in your article on "The Rulership of Mesopotamia."—I am, etc.,

D. M. KAY
(Professor of Semitic Languages).

St. Andrews, Sept. 14, 1920.

## THE DEATH OF M. JEAN DRAGOUMIS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of September 2 your Athens correspondent, writing of my brother's murder, states that "the exact manner in which he met his death has not yet been ascertained." Practically all the circumstances, however, of the death are now known, and I should be glad if you could publish the following particulars:—

Early in the afternoon of July 31 Dragoumis was returning from Kifissia to Athens in a motor-car. At Ambélohipi, a suburb of Athens, near the quarters of the Special Corps of Guards (created two years ago), his motor-car was stopped by a squad. On giving his name he was taken out and illtreated, as well as his chauffeur, and conducted to the quarters. Ghyparis, who, from the state of well-digger was made commander of this corps, ordered a squad to take him to the commander of the Athens garrison in the town. On receiving these orders, the squad walked away with their prisoner, and what followed next is detailed in the following written report of a Russian officer, which was officially transmitted to the Greek Foreign Office. He states:—"On July 31, the day on which the attempt on M. Venizelos' life became known in Athens, I witnessed by chance the following:—

"About 4 p.m. I was awaiting the arrival of the tram with three or four other persons at the beginning of the Avenue Kifissia and the Jean Pappadiamandopoulos Street, near Pillar No. 907. My attention was drawn to a group of soldiers who were escorting a well-built civilian, having a very dignified appearance. To his right and left two soldiers were walking along, and another ten were closely following him, all armed with rifles. This squad, when approaching Pillar No. 905, turned to the left, stopped just near the pavement, leaving the prisoner on the pavement itself, at a distance of about four steps. The soldiers halted and fired about ten shots. No word of command was heard; the prisoner fell, shot dead, without uttering a word or a cry. A motor-car came near, the soldiers jumped in and went away.

"Later on I passed by this very spot again. There was no trace whatever of the drama which had taken place."

Some Greek workmen who also witnessed this tragedy corroborate the above facts and give more ample details, such as:—That a sergeant-major arrived in haste to pass the order to the squad to halt and execute there; that the escort, after shooting, and before entering the car, pierced J. Dragoumis' body with their bayonets and struck him with the butt end of their rifles: that J. Dragoumis, when ordered to stand for execution, said to the escort in a calm and steady voice: "You will repent this deed later on."

To his family, who, staying in Kifissia, were not aware of his death, the commander of the Athens garrison sent in the night a soldier to inform them of the burial. "If you wish," said he, "to be present at his burial you must be at the Athens cemetery to-morrow morning before 7 o'clock, otherwise after that hour we will bury him without waiting for you." This is the way his old parents and his sisters learnt the news. About midnight J. Dragoumis' sisters went by motor-car, escorted by officers and men of the Special Corps, to the Athens cemetery, where, at the entrance, a squad of the same corps was posted. These ladies were conducted to the keeper's lodge on the left

of the entrance; somebody lighted a candle, and they saw placed transversely on the floor a bier of four common planks covered by a dirty, torn, and blood-stained sheet; the floor and the stone entrance steps were also covered with blood. J. Dragoumis' sisters removed the sheet and his body appeared, quite naked, with gaping wounds from bayonets and bullets; the face was untouched and kept a lofty expression. The ladies went back to Kifissia in order to accompany their parents to the burial, which was over at 7 o'clock in the morning, the escort being all the time present.

The post-mortem examination made a few days later ascertained that J. Dragoumis' body was pierced by three or four bullets, had seven bayonet wounds, and the left thigh-bone fractured by a rifle butt-end.

I am, etc., P. DRAGOUMIS.

## THE OCCUPATION OF THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I was much surprised at the tone of the letter by "A British Reader of THE NEAR EAST," published on page 264 of your issue of August 19, and I would like to refute the statements contained in the third paragraph of the letter in question.

"British Reader" states that: "The Greeks maintained a hostile attitude towards the Entente for three years of the war, and that they never changed that attitude until French and British troops, after considerable loss of life, succeeded in deposing their King." Had "British Reader" the slightest knowledge of what he is writing about, he would have known that far from this being the case, it was the Entente which, from motives of mistaken diplomacy, kept ex-King Constantine on his throne by every means in its power.

1. The Entente refused to recognise Venizelos' Government until the very last moment.

2. It established a "neutral zone" on the frontier of Thessaly, guarded by French troops to prevent the movement spreading to the rest of Greece.

3. It allowed the Italians to occupy Venizelist Epirus.

4. It even gave guarantees to ex-King Constantine promising to defend him from the spread of the Venizelist movement; and when the island of Cythera threw in its lot with the latter, the Entente forced it to return to the Royalist side.

It speaks well for the Philententism of the Greek people that Venizelos was able to triumph eventually, in spite of such difficulties and discouragements.

As for the fable that "a plot existed for the passage of the whole Greek army of the Struma to the side of the enemy, which was only frustrated by General Franchet d'Espéry's rapid advance," I will simply state that the "rapid advance" in question would never have taken place had it not been for the co-operation of the Greek army on the *Struma*, Doiran and Vardar fronts; also that the *whole plan* depended on the operations of the Greek army on the Struma, which diverted and held up a great portion of the enemy forces. If it be remembered, in addition, that the commander of the Greek Struma army was General Paraskevopoulos, one of Venizelos' staunchest supporters, and who, in recognition of his services to the Allied cause, was made a K.C.B., besides receiving the highest orders of every other Allied country. I think that the untrustworthiness of "British Reader's" statement is sufficiently demonstrated.

In concluding, I would condole with "British Reader" on his extreme gullibility, or congratulate him on the fertility of his imagination (to use no harsher term). I wish to deplore at the same time the strange mentality of certain persons who are ever ready to insult their Allies, even those who are still fighting a common enemy (I presume that "British Reader" has heard of the operations of British troops at Ismid in Asia Minor), so as to belaud the enemy in question, provided naturally that the latter causes them no immediate anxiety or discomfort.

I am, etc.,

A FORMER VOLUNTEER IN VENIZELOS' ARMY.

The Secretary of State for India announces that revised rates of pay have been approved for Indian departmental officers and warrant and non-commissioned officers of the India Unattached List during furlough in or out of India and deputation out of India. The general effect of the revision, which has effect from July 1, 1919, is to give, during furlough, the rates admissible to corresponding classes of the British Service under the Royal Warrants of September 13, 1919; and, during deputation, the full pay rates laid down in these warrants, and, in addition, for one year, an Indian allowance ranging from £20 to £60 per annum. Details will be published shortly in an Army instruction (India).

## PRESS ON THE NEAR EAST.

### The Development of Palestine.

The *Zionist Review* for September contains an interesting and thoughful article by P. Horrowitz on the "Industrial Development of Palestine." The author tackles his subject squarely:—

Is it possible to establish in Palestine industries whose products can compete with those of the great manufacturing centres? For, to produce for home consumption alone would mean the limitation, if not the strangulation, of the industry at its birth. The maxim of modern day manufacture is large scale production, and therefore the ability to compete in foreign markets is a prime consideration.

Industries which must of necessity establish themselves in Palestine, such as building, road construction, tailoring, boot-making, etc., are but touched on in passing. The writer declares:—

If we really desire to see Palestine capable of supporting large numbers of Jewish industrial workers, we must turn our attention to those large-scale industries that serve to enrich other countries, and for these the new Jewish Homeland would possess certain advantages and certain serious defects. On the one hand, it will have incalculable assets in the capacity, efficiency, inventiveness, and adaptiveness of the Jewish worker; in the large capital which would be rendered available by the Jewish capitalist both within and without the country; in the favourable geographical position of Palestine as the bridge uniting three continents; in some of the natural resources of the country, such as water power and its slight mineral wealth, for example: building stone, phosphates, salt, sulphur and mineral oil. On the other hand, it will have to overcome serious difficulties in the lack of coal and iron, which form the basis of industry in most countries; in its distance at the end of the Mediterranean from the chief producing centres of Europe; in its lack of an efficient transport system to co-ordinate the various industries that may be established. Of these the lack of coal and iron immediately rules out the establishment of any great iron or steel industry, or any manufacture where these products form the principal items in the cost of the manufacture, but it does not necessarily rule out the manufacture of such articles where the cost of the labour bears a relatively high ratio to the cost of the raw materials used. In other words, large engineering works for the production of high-grade articles, such as small machinery, scientific instruments, electrical and motor accessories, watch and clockmaking on a large scale, etc., are not only possible, but would prove valuable assets in giving employment to large bodies of Jewish workers who have shown great skill in these manufactures in America and Europe, and to even larger bodies of Jews who have been debarred by circumstances from employing their natural talents in these directions.

The same reasoning applies to a certain extent to the chemical industries. Usually it is true that for these large quantities of coal are required, but, apart from the fact that certain small deposits of coal are to be found in the neighbourhood (sufficient probably for these purposes), the principal factor in the success of chemical industries lies rather in scientific knowledge and organising ability than in suitable location. When one comes to appreciate the large number of Jews who have been scientifically trained, and the exceptional results they have obtained, one cannot help looking forward with confidence to the early application of Jewish science and Jewish chemical knowledge to the task of creating in Palestine a continuously increasing chemical industry. Here we are assisted by one of the great natural resources of Palestine—the Dead Sea, with its high concentration of salts. Around that area, providing transport facilities to the coast are afforded, it would prove both possible and highly profitable to establish large-scale chemical industries for the manufacture of caustic soda, soda ash, glue, soap, tanning material, potash and potassium salts, artificial manures, bromine, sulphuric, nitric, and hydrochloric acids, and possibly even the jewel of the German chemical industry—viz., synthetic dyestuffs. One caveat must here be entered—such industries to pay must be established on a large scale and will require large capital. On the other hand, the prospects are so alluring that it can hardly be doubted that the necessary capital will be gradually forthcoming when the possibilities are realised, and, once established, they would prove of immense value for the revenue and prosperity of the country.

Other industries are touched on, and the author remarks that the whole question of industrial development depends on the co-operation of capital, labour, and experience.

### "The Way to Trieste."

Under the above title the *Morning Post* publishes (September 16) an article by its Belgrade correspondent on the grim struggle between Slav and Teuton. It has, the writer thinks, more to do with us and with the future of Europe than we realise:—

For sooner or later—there is not a doubt of it in the minds of people here—in five years or in ten, Austria will unite with Germany. That, people say, is beyond all question: whether the Powers like it or not, union will come, with the inevitability of the processes of nature against which man struggles in vain. Now the Karawanken heights are the last and most formidable obstacle opposing Germanism on its march to the Adriatic; between these and Trieste lie only the level plains about Ljubljana and the rolling uplands of South-West Carniola—from time immemorial the route of conquering barbarism. Only this little plebiscite area, with its stubborn mountain barrier and its no less stubborn Slav population, stands in the way. If that is lost, if the plebiscite goes against Jugo-Slavia, then, as soon as Germany and Austria become one State, the Pan-German *Drang nach Triest* will be resumed in all its intensity.

The article describes how the struggle went in the past—with all the advantages on the side of the German, and how the Slav element gradually dwindled as the others expanded. But the war has changed things, and

To-day the Slovenes have a last chance. And the valley is full of hurryings and scurryings, of people holding meetings, of choirs singing patriotic songs, and athletes playing patriotic football matches—for they play football here in midsummer. Propaganda is in full swing on both sides. The Jugo-Slavs rely mostly on cultural means—on concerts of national music, on appeals to national sentiment—the Germans, I am told, on gold and secret threats; but, there, I am pro-Serb, and believe the worst of the other party. Jugo-Slav hopes are high, but their expectations of sweeping the whole area were somewhat damped a month or so ago by the abolition of the demarcation line that had previously prevented all communication between the two zones. Until that line was abolished Tzelovetz, which had remained provisionally in Austrian hands, sat and starved, while the rest of the plebiscite district, with the overflowing granaries of Jugo-Slavia to draw upon, fed on the fat of the land. It was an object lesson more potent than any propaganda. Now, however, since the arrival of the Allied Missions, free intercourse has very properly been restored. Zone B has filled its larders from the accumulated stocks of Zone A, and Tzelovetz is no longer, for the moment, the scene of a tragic struggle between the claims of patriotism and those of the stomach.

The writer will not risk a prophecy, but he concludes with the statement that, according to the lowest estimate he has heard, "65 per cent. of the voters are Slovene at heart."

### Great Britain and Egypt.

Copies of the *Egyptian Gazette* received by the latest mail contain numerous comments on the Anglo-Egyptian negotiations translated from the native Press. One of these, from the *Ahaly*, contains the following passage:—

Before discussing the agreement we attract attention to a delicate point, which is this: The Egyptian Delegation now consists of two parties—those who refuse to sign the project on the understanding that it falls short of the nation's requirements and contradicts the principles for which the Delegation has been set up to serve and verify, Saad Pasha Zaghloul being at the head of that division; and those who are content with the privileges allowed by the generosity of Lord Milner and see that they are the best terms that can be secured by Egypt under the present circumstances. The latter party, failing to persuade the President to accept their opinion, have succeeded in convincing him to accept the principle of the consultation of the nation, though they know that the means of doing so is not quite available. We cannot help expressing our regret that His Excellency has not followed a constitutional method in consulting his colleagues on a question like this, which requires decisive opinion on his part.

Most of the extracts given by no means show any enthusiasm for the (reported) terms of the agreement. The following from the *Nizam* is rather more moderate in tone than most. It is (says the *Egyptian Gazette*) from an article commenting upon Rushdy Pasha's remark published by the *Akhbar* that "we were not in London in a position to dictate our will as the Allies did at Spa with Germany":—

This remark gives an idea of a call to the people to observe the political conditions when discussing the project, and to regard the position of Egypt before England when we sit to exchange thoughts on the affair and judge it. It is not our intention at present to enlarge this point and discuss it, for we prefer to await the arrival of the Delegates; but we find it fitting to tranquillise the mind of Rushdy Pasha in regard to the point he fears. The Egyptians are aware that they do not stand before England in a position of hostility or antagonism, but they stand in the position of one possessed of a right who believes that he finds supporters in England itself. . . . If the Egyptians cannot dictate their will to the British Government, they can understand that the British Government has a power derived from the principles of right and justice and the straightforwardness of the British public opinion, which will persuade it to conciliate Egyptians and give them satisfaction, and which can dictate to it what Rushdy Pasha thinks to be beyond the bounds of our ability. . . .

## MUSICAL NOTES.

The only musical event in London at the present time is the series of Promenade concerts at the Queen's Hall, which began on August 14 and end on October 23. Since these concerts may be taken as really representative of the English people's desires, it may be instructive to state from the programme of the series which composers are the most popular. First of all comes Wagner, to whom one evening a week is wholly devoted. Then Beethoven, Bach, and Mozart; then the Russian school, of whom Tchaikowsky is down to be played most; and, finally, individual composers like Brahms, Saint-Saëns, Strauss, Berlioz, Dvorak, and Elgar. It is the usual sort of list, good on the whole, but still deadly in its adherence to Tchaikowsky and Saint-Saëns, whom nobody now would dream of putting into even the second class of composers. But it is rather in the new music which the Promenades introduce that their interest lies; and this is where Near Eastern composers, who ought to have had a chance here, seem to have lost it.

In the whole list there is but one Near Eastern composer—Enesco, whose two Roumanian rhapsodies in A and in D are to be given. Surely this is not as good as it might have been. How is it that the Slavs of the Balkans are unrepresented, when their blood-brothers, the Russians, Poles, and Czechs, are already popular, and are becoming more so with the English? And what also of the Greeks and Roumanians? Little blame can be attached to Sir Henry Wood, who conducts these Promenade concerts, and who presumably draws up the programmes; for the evidence goes to show that he is quite ready to play what the public want, and they are more than catholic, they are omnivorous (provided enough sugar be put with their food!). It may be that the music publishers at Belgrade, Zagreb, Athens, Bucharest, Sofia, and so on are insufficiently enterprising, or that they do not send enough of their publications to England; but, whatever the explanation, the facts are lamentable. I am certain that there would be a market in this country for publications of Balkan music; for, real music-lovers apart, there are hundreds of musicians who are ready to grasp at any novelty—people who are already tiring of the craze for Russian, French, Spanish, and Italian music.

---

The New Queen's Hall orchestra is playing, in the old classics at least, quite well this year; it is better than it was last year, the principal violin now being Mr. Charles Woodhouse, but it is not yet up to pre-war standard. Sir Henry Wood has his own way of interpreting the classics, and although he has one or two little pranks and devices with which he never dispenses, it is, on the whole, a most agreeable and satisfying way. In newer music he is not so good as other conductors we have, but he is essentially a popular conductor, and it is doubtful whether anyone else could have done for the English public what he has done.

There are still features in the Promenades which make it impossible for one with any musical sense to remain until the end of the concert: I mean chiefly, of course, the presence of concert artists and the things which they are bidden to do. Some vapid air from some bygone opera is often inserted into the first half of the programme; and in the second half inevitably comes that sign of bondage to commercial interests, the singing of new ballad songs. Many sincere yet vain tears have been shed by the sensitive over the inclusion of these ballads, but it really seems that there are some stones upon which constant dropping has no effect. The most puzzling thing of all is how real artists can bring themselves to sing this ridiculous stuff; the other evening, for instance, I heard Mr. Cecil Fanning, the excellent American baritone, who proved to us last season his beautiful artistry, wade through some most terrible slush, and never missing withal a single trick of the genuine Promenade singer! There are, I know, some singers who survive this dreadful triumph of entry into the Promenade scheme; but for the majority it is as with the painter who enters the Academy: the end comes swift.

III.—"INDIA AT THE CROSSWAYS." The Rede Lecture for 1920. By Lord Meston. (Cambridge: Univ. Press. 3s. 6d. net.)

## I.—PIONEER WOMEN.

This small and unpretentious book of less than 200 pages is, in its way, a masterpiece. It is a careful and sympathetic study of that most vital problem, the extent and scope of women's labour, mental and physical, in the East; and it is written with a conviction and sincerity that make instant appeal. The first part of the book deals with the manual labour of women in the slowly awakening lands of the East, and the statistics given are simply appalling. Women are more than the equal of the men both in labour and in productive power; but, owing to physical disabilities and the added burden of children and household, their share is wrought at infinitely greater cost. We find them making roads in India, and bridges in Japan; toiling long hours under the burning sun, "bent double over the little rice plants" in China; as porters, gallantly struggling with loads far beyond a woman's strength; as boatwomen, and colliers. For a full day's work in the ricefields a woman "receives 1½d., or possibly 2d."; for coaling a steamer (often until late at night), "about 30 or 40 sen"—a sen being now worth a little more than a farthing. Even more distressing is the account of the women in factories in Japan, and it is strange to find that Japan, so modern and enlightened in many ways, is grievously backward in her factory system. Child-labour ("cheaper than machinery"), long hours, under-pay, a system of enclosure (ostensibly for the protection of the girls, but which really exposes them to danger without the help that comes from public knowledge and public opinion)—these things mar the fair name of Japan. "The average daily wage of women in silk-mills in 1911-12 was 31 sen; in shirt-making factories 26 sen . . . only one-third of the women employed were earning as much as £1 a month for eleven or more hours' work a day," in a seven-day week. "The working time for 'females and minors'" (from September, 1918) was to be "reduced from fourteen to twelve hours" (p. 64). Seventy per cent. of the women working in factories are compelled to live in dormitories in which day and night shifts succeed each other, "on bedding still warm from the girls who have just gone on duty" (p. 66). "The average space allotted per person is two square yards" (p. 65). No wonder that "of 4.6 girls taken ill, one dies" (p. 67), and that the percentage of insanity in Japan is higher than in any other nation (p. 173). Japan's high place in commerce is dearly bought at such a price; and the reckoning—inevitable, however slow in coming—will be terrible.

In glowing contrast to these horrible conditions of life is the movement of social reform which is beginning to flush the Eastern sky with light. Nowhere are women more keenly alive to the disabilities of tradition and environment, or more eagerly determined to snap their fetters. Curiously enough, in this movement towards light, liberty, Moslem women lead the van—in India, Persia, and Turkey. The protection of the veil is still held by some to be necessary, but all are agreed that eventually it must go, and all are set on the abolition of polygamy with its inevitable lowering of moral and physical standards—for men as well as women. In India and China there is a mighty move forward; with infinite labour, patience, and courage women are sacrificing everything to prepare the way for future generations. In every case progress and reform are being urged from within by the women themselves. We read of women's colleges, of women doctors, nurses, teachers, poets, orators, and leaders; and the work done is not only aflame with faith and hope, but is in itself excellent. In this struggle towards light the West is helping. Christian missions help because Christianity, however faultily expressed, is light and hope. It is the one religion which gives women their rightful place in life, and the teaching of Christ "the first true Gentleman that e'er wore earth about Him," and His example are absolutely definite. We entirely agree with the author where she lays stress on the great service that cultivated Christian women of the West (other than missionaries) can render their Eastern sisters simply through friendship, sympathy, and an open house; all who have experience of the East will endorse her very sane and practical opinion on this point.

The book covers too wide a field to be dealt with as fully as it deserves. It is a notable little book, one well worth reading and keeping; and though it reveals much that hurts and saddens one, yet above and beyond the sadness Hope shines like stars in a dark night.

E. M. E. B.

## II.—SAINT SOPHIA.

Within the limits of fifty pages, Dr. Volonakis has endeavoured to sketch the history of Constantinople and of Hagia Sophia; and he has added a few remarks on the destiny both of the city and of the Church. It was impossible in so small a space to admit facts irrelevant to, or perhaps hostile to, his thesis, which is the maintenance of the link between the Byzantine Empire and Orthodox Christianity; and he certainly never forgets that it is for English readers that he is writing his essay. But at least what he sets down cannot be gainsaid; his authorities are plentiful and sound; and he writes with a wholly admirable and attached enthusiasm. It is a quite useful pamphlet, and will surely commend itself to that increasing number of English readers whose interest in the Orthodox Church is vitally affecting their own position as Christians.

There is a foreword by Professor Gilbert Murray, who commits himself with unacademic enterprise to the statement that "the hideous feuds and cruelties and revenges for which the history of the Balkan States is notorious sprang from the root of hatred for the Turk, and have on the whole mitigated and diminished in proportion as the various subject nations have shaken off the influence and memories of the Turk."

## III.—INDIA AT THE CROSSWAYS.

Anyone who desires to obtain in short compass and convenient form a statement of the fundamental elements of the present position in India should read and ponder Lord Meston's lecture, which, in style as well as substance, was worthy of the occasion on which it was delivered. It brings out very clearly the revolutionary nature of the undertaking on which the Empire is engaged. Lord Meston brushes aside the fantastic theories of self-government in the old India, and shows that autocracy is in the very marrow of the people; he then explains how British rule has acted as a solvent of the old ideas, and he states the problems which result in the social, religious, and political fields. Some of these problems we can hope to solve, others can be tackled only by the people themselves; but they will need all the help and counsel they can get, and the lecturer concluded with an eloquent appeal to Cambridge to send India the very best men she can, to recognise the inherent difficulties of the country's position, and to allow for them with sympathetic tolerance. That is the attitude which Young England should adopt towards Young India, and we are glad that it has been presented with Lord Meston's great authority.

| 25 | 13 | Sunday ..... | 13 | 14 |
| 27 | 14 | Monday ..... | 14 | 15 |
| 28 | 15 | Tuesday ..... | 15 | 16 |
| 29 | 16 | Wednesday ..... | 16 | 17 |

Field-Marshal Lord Grenfell has left Overstone Park for St. Rode, Bournemouth.

Mr. H Charles Woods left London last week for a tour through the Balkan States.

Prince Nicholas of Roumania arrived in Paris on his way to London on September 15.

General Sir John Maxwell is lying seriously ill with pneumonia at 103, Lancaster Gate.

The Duke of Westminster will remain at Kylestrone, Isle of Skye, till the end of the month.

It is announced that General Ironside is to take up a divisional command in Mesopotamia.

Dr. Osusky, the Czecho-Slovak Minister to Paris, left London on September 16 for the Continent.

M. Také Jonescu, Roumanian Minister for Foreign Affairs, is expected to arrive in London this week.

Lord and Lady Lamington are in residence at Lamington, Lanarkshire, where they will stay until November.

Mehmed Bey Konitza, Albanian Minister for Foreign Affairs, left London on September 16 for Paris on his way to Tirana.

The report that Lord Milner contemplated resigning his position as Secretary of State for the Colonies very shortly is quite erroneous.

Colonel Stokes, the High Commissioner for Transcaucasia, left London on September 16 for Georgia. He is accompanied by Mr. Rooker.

M. Guequetchkori, Vice-President of the Georgian Government and Minister for Foreign Affairs, visited Lord Hardinge at the Foreign Office last Thursday.

Our Belgrade Correspondent, writing on September 12, reports:—Dr. J. Cvijitch ('Tsviyitch), Rector of the Belgrade University, the eminent ethnologist and geographer, who has been lying dangerously ill, is now improving, and the doctors pronounce him out of danger.

The engagement is announced of Major Guy Willoughby Anderson, 1/26th Punjabis, son of the late Colonel W. R. Le Geyt Anderson, C.B., and Mrs. Anderson, of Ryelands, near Stroud, Gloucestershire, and Edith, eldest daughter of Colonel and Mrs. O'C. Raye, The Leas, Folkestone.

Sir William Marris, the Governor-designate of Assam, is to take short leave in this country during the ensuing winter before taking charge. Sir Nicholas Beatson Bell, the present Chief Commissioner, has been appointed Governor of Assam for the period which will intervene between the introduction of the new form of government in the province and the assumption of the office by Sir William Marris on his return from leave.

General Baratoff, who gained such distinction as Commander of the Russian forces in Persia, and who co-operated with our army in Mesopotamia, arrived in England last week. He has, says the *Morning Post*, been the victim of a Bolshevist outrage, for when he was driving in a motor-car in Georgia agents of the Soviet threw bombs at him. He was so injured in the leg that it had to be amputated. He has come to England to have an artificial limb fitted.

General Birdwood will leave for India about the middle of next month, to take over the Northern Command. He is to be entertained at a farewell luncheon at the Connaught Rooms on September 30, by the Australian and New Zealand Luncheon Club.

Dr. Vojtech Mastny, the newly-appointed Czecho-Slovakian Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James, is expected in London at the end of this month from Prague.

## APPOINTMENTS, ETC.

Major S. H. Capper succeeds Lieut.-Colonel Symes at the Press Bureau, Cairo, on the latter's appointment as Governor of Haifa.

The Government of India has decided that the time has come for the appointment of a High Commissioner for India in London, and Sir William Meyer, G.C.I.E., has been nominated as the first holder of the appointment.

The post of Rear-Admiral at Bombay has just been created, and Rear-Admiral H. L. Mawbey, C.B., has been appointed its first holder. Admiral Mawbey has also been appointed Director of the Royal Indian Marine. Captain Neville Wilson, C.M.G., who has held the latter position since the beginning of 1919, now becomes Principal Naval Transport Officer for the East Indies.

Our Sofia Correspondent writes (September 9):—

The Bulgarian Ministry of Foreign Affairs has appointed M. Pavloff, Consul-General, former Chargé d'Affaires in Albania and at one time a deputy in the Turkish Parliament, as Chargé d'Affaires at Constantinople.

M. Koulicheff, of the Press Bureau, has been appointed Secretary at the Bulgarian Legation in the Turkish capital.

M. Sander de Kiss has arrived in Sofia as representative of Hungary, and has taken up his quarters in the building of the former Austro-Hungarian Legation, 2, Ulitza Shipka.

### INDIAN COUNCIL OF STATE.

A Reuter's message from Simla, dated September 17, announces that the Viceroy has appointed Mr. A. P. Muddiman, C.I.E., Secretary to the Government of India, Legislation Department, first President of the new Council of State.

Mr. Muddiman has had a very considerable share in drafting the new Indian Constitution and the rules under which it is to work, both in India and at home. He is a deservedly popular officer, who combines tact and patience with firmness.

The appointment of Mr. Alexander F. Whyte as the first President of the Legislative Assembly to be constituted in India under the Government of India Act, 1919, was, it will be remembered, announced in our columns last week. We are now able to congratulate India upon the appointment of two excellent Presidents for her new Parliament.

## OBITUARY.

Lieutenant-General John McKie Stewart, Indian Army, died on Sunday last at Carruchan, Dumfries, in his eightieth year. He joined the Army in 1858, and retired after thirty-six years' service. He fought in the Cossyah and Jyntiah Hills Campaign in 1862-3, and four years later saw service with the Abyssinian Expedition, for which he received the medal.

### GENERAL BABTIE, V.C.

Lieutenant-General Sir William Babtie, V.C., died on September 12 at Knocke, Belgium, aged sixty-one. He entered the Army Medical Service in 1881 and retired in 1918, with the honorary rank of lieutenant-general. In the South African War he did very fine work, and it was for his gallantry at Colenso, in December, 1899, that he was given the V.C. According to the official record: "The wounded of the 14th and 66th Batteries Royal Field Artillery were lying in an advanced donga close in the rear of the guns, without any medical officer to attend them; and when a message was sent back asking for assistance, Major W. Babtie, R.A.M.C., rode up under a heavy rifle fire, his pony being hit three times. When he arrived at the donga, where the wounded were lying in sheltered corners, he attended to them all, going from place to place exposed to the heavy rifle fire which greeted anyone who showed himself. Later in the day Major Babtie went out with Captain Congreve to bring in Lieutenant Roberts, who was lying wounded on the veldt. This also was under heavy fire." In the late war he served as Principal Director of Medical Services in the Mediterranean, Salonika, and Egypt, and as Director and Inspector of Medical Services at the War Office.

## PRISONERS AT BAKU

A message received in official circles in London last week stated that the Italian Ministry for Foreign Affairs had informed the British Embassy in Rome that, according to a telegram received from Tiflis, Signor Kirol had assured the Italian Consul in that town that the seventy British citizens who were arrested at the outbreak of the revolution at the end of April were transferred on August 15 from their prisons to private houses and the Polish Club at Baku.

## NEWS IN BRIEF.

On September 14 the Serbian Parliament ratified the Treaty of Peace with Bulgaria by 136 votes to 10.

A large building scheme is to be carried out to make Belgrade a great modern capital, and 10,000 houses are to be erected.

Every assistance is being given by the Commander to the Y.M.C.A. work among the troops now in action in Mesopotamia.

Sir Percy Cox arrived in Bombay on September 13 on his way to Mesopotamia. He spent a few days with the Governor at Poona.

Major Mary Booth will attend the annual meeting at Prague of the Czech Salvation Army, which has completed a most successful first year's work.

The *Echo de Bulgarie* announces that the League of Friends of English in Sofia has arranged a course of English lessons which will begin on October 1.

The forthcoming visit of M. Stambolisky, the Bulgarian Premier, to Prague to arrange for the inclusion of Bulgaria in the "Little Entente" is announced in the Bohemian Press.

Accompanied by M. Vesnitch, the Prime Minister, and three other Ministers, the Prince-Regent of Yugoslavia left Belgrade on September 17 to pay an official visit to Serajevo.

An Imperial *Irade* ratifies the convention concluded between a French company and the Ottoman Government for the creation of an aerial postal service between Paris and Constantinople.

Three delegates have been selected by the Government of India to visit British Guiana and make inquiries in connection with the scheme for obtaining Indian settlers for that colony.

During the month of July last 255 ships conveying 31,097 passengers arrived at Port Said from the Mediterranean, and 197 ships with 2,194 passengers passed through the Canal from north to south.

Sir Jagadis Chandra Bose, the famous Indian scientist, and Emeritus Professor of the Presidency College at Calcutta, has arrived at Stockholm, where he will lecture before the leading Swedish scientists.

Greek troops have occupied all the villages situated within a radius of twelve miles to the east of Ushak, sixty-five miles inland from Smyrna, and the Turkish Nationalists have blown up bridges on the railway between Ismid and Eskishehr.

A message from Beyrout reports that General Gouraud made his entry into Aleppo on September 13. All the local authorities, the Moslem religious leaders, and the various Christian communities, are said to have demonstrated their recognition of French rule.

A *communiqué* issued from the India Office on September 15 states :—The Civil Commissioner, Baghdad, telegraphs on September 13 (received September 15) : "Strachan with all Indian civil officials came into military camp at Shahraban September 13. All well."

A communiqué issued by the India Office states: In his capacity as High Commissioner Sir Percy Cox will be the chief British representative in Mesopotamia, and will be responsible for the civil administration of the country until he shall be able to give effect to the fixed policy of His Majesty's Government of setting up an Arab State in Mesopotamia. This will be his primary task, to be accomplished as soon as conditions permit.

Sir Roper Parkington, Consul-General for Montenegro, has sent us a copy of an official communiqué which he has received. It states :—Montenegrin men and women who refuse to testify their loyalty to the King of Serbia, and to admit the justice of the seizure and annexation of their country, are daily arrested and forced into Serbian prisons, notably at Podgoritza, Cettigne, Nikchitch and Kolachine. General Vechovitch, formerly Montenegrin War Minister, who led the guerilla warfare against Austria, has been arrested and taken before a tribunal at Belgrade, accused of high treason. Martial law has been proclaimed throughout the country, and all those who decline to recognise the Serbian authority are condemned to death. The stores of the American Mission have been burnt, and reports from other Red Cross missions confirm the carnage and misery which reign supreme throughout this unfortunate country. It is reported in Montenegro that the British Government has addressed a serious remonstrance to the Serbian authorities.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

## TURKEY AFTER THE TREATY.

The Allies required from eighteen months to two years to decide the terms of the Turkish Treaty, and there is some danger that it will take them a still longer time to enforce those terms, unless they can concentrate attention upon the problem. For the present the situation remains as it was before the Treaty was signed. The Nationalists are in power in Asia Minor; the Constantinople Government makes a great show of dealing with them, but, as our Correspondent points out, it is powerless to carry any decision into effect because it lacks men, money, and material. Time may, perhaps, prove to be on the side of the Allies, although it would be rash to count too much upon this factor. Mustapha Kemal has lost both prestige and power as a result of his encounters with Greek troops; he may still be a long way from throwing up the sponge, but with his hold on the peasants of Anatolia diminishing, the Nationalists' capacity for resistance must continue to wane, unless reinforcements are forthcoming from another quarter. Strenuous efforts, it is known, are being made to bring Bolshevist armies upon the scene; but it is doubtful whether help from Soviet Russia at this stage can have any military value. On the other hand, Bolshevist propaganda is not a negligible quantity, and although the success of attempts to graft it upon the Moslem frame of mind has yet to be established, the prospect of its unimpeded advance across Asia Minor must arouse misgivings. In the general situation there is thus just sufficient excuse to be found for marking time to make a policy of inactivity appeal to the Allied Governments. If Mustapha Kemal compasses his own downfall, the Entente will have been saved considerable trouble and expense; as the chances of his acquiring any accession of military strength are remote, the business of a campaign against him, if eventually it has to be undertaken, is not likely to be more formidable six or twelve months hence than it is now. It ought not to be necessary to insist upon the fallacy of this line of argument. The Turkish situation has been materially aggravated by the delay in the settlement, and it can only become worse if a policy of drift is persisted in by the Allies.

Apart from the position in Anatolia, the failure of the Entente Governments to take the Turkish problem in hand at once must lead to three grave evils: it will give free scope to the old rivalries between the Great Powers, it will make a *modus vivendi* between Turkey and Greece more difficult than ever of attainment, and it will destroy what limited ability for self-government the Allies hope to find among the Turks to enable the Peace Treaty to be carried out. Already the three Allied Governments—Great Britain, France, and Italy—are convincing the Turks that the solidarity among them created by the war is not proof against the disintegrating tendencies of peace. It is unnecessary to labour the point, as the fact is well known, and if this state of affairs exists in the early days of peace, it is likely to become worse when Constantinople settles down once more to the ordinary inter-play of international relations. Again, the hesitation or indifference of the Great Powers gives Greece her opportunity. So far she has performed her task with signal success, and it may seem invidious to suggest that she is not capable of increasing still further the sphere of her responsibilities. But those who believe in the destiny of Greece in the Near East must be the first to hope that her resources will not be overtaxed before she has time to develop them. It is one thing to prick the Mustapha Kemal bubble on the field of battle; it is another to convince large sections of the Turkish people that they are going to be well off if they submit to Greek jurisdiction. In course of time there is no reason why Greeks and Turks should not modify their present opinion of one another—much ground has already been covered in this direction in Smyrna—but the process will not be accelerated so long as administrative power, owing to the dearth of trained men, has to be entrusted to inexperienced officials who cannot be relied upon to subordinate ingrained personal feelings to the wise policy dictated by the Government. Finally, as the Turks are to be left to govern themselves, it is to the interest of the Allies that no time should be lost in giving effect to the provisions of a Treaty which is supposed to have paved the way for the better administration of Turkey. With the exception of Russia's fate, there can be no experience more demoralising for a country than that which Turkey is undergoing to-day, and the longer existing anomalies continue, the more difficult it will be to accustom the people and their rulers hereafter to ordered government.

After safeguarding Allied interests by instituting financial control, the Treaty leaves Turkey, within certain limitations, free to govern, or misgovern, herself. It would be little short of a crime, however, on the part of the Allies if they left the Turks, in common parlance, "to stew in their own juice" at this juncture. The delays of the Supreme Council are largely responsible for the chaos in Turkey, and the financial control contemplated by the Treaty becomes useless unless it goes hand in hand with decent Government. It seems essential, therefore, that the three interested Powers—Great Britain, France, and Italy—should come to some more practical agreement among themselves regarding the immediate future of Turkey than that provided by the Treaty. The first step will be to decide upon a common policy towards Mustapha Kemal; he must either be eliminated once and for all or brought officially within the picture of the new Turkey. If the Italians have actually been in such close relations with the Anatolian leader as is generally supposed, they will be able to contribute useful knowledge to enable the Allies to arrive at an understanding regarding him. Much will depend on Mustapha Kemal's own attitude; but it is not unlikely that he would welcome an opportunity now to reconsider his position, if he could be made to realise that the Allies are once and for all acting together, and are bent upon bringing about a final solution of the Turkish question. Although we are strongly opposed to all forms of international control, on the ground that it inevitably leads to friction, and consequently to bad administration, we recognise that, as things are, there is no escape from it in the case of Turkey. It is, therefore, desirable that the three Powers should come to an early agreement among themselves with a view to making a conscientious effort on Turkey's behalf and in their own interests. The present policy of drift is driving the three Powers apart, instead of keeping them together. Even financial control will be a farce unless their representatives pull together, and they will not do that unless a more definite attempt is made to unify the policies of the three Governments. We should like to see a joint Commission, of which the three members would be of Cabinet rank, appointed to draw up a detailed arrangement for assisting Turkey to rehabilitate herself in the family of nations. She has material to work upon if the present opportunity is not lost; but unless the three Powers act promptly her last state may well prove worse than the first.

# THE AGRARIAN QUESTION IN BOSNIA.

(From Our Belgrade Correspondent.)

Agrarian reform is the burning question in Yugoslav politics, but it is acutest of all in Bosnia. Here we have the survivors of the old feudal Serbian aristocracy who turned Turk in a body, in order to preserve their privileges, centuries ago. Though they may have been in their time fanatical oppressors of the Christian *rayahs*, they have never forgotten that they are Serbs, though usually referred to as "Turks," which in the Balkans generally means Mohammedans, with no reference to Ottoman race. The present generation have the national feeling well developed, though some have been more or less Hapsburgised, as the notorious Hrasnitsa.

The Democrat-Socialist *bloc* regard them simply as big landowners, and are openly out to spoil them; but the Radicals, who look to them for political support as the Conservative Party of the country, wish to let them down as gently as possible. They hold, with truth, that there is a great gulf between the *begs* of Bosnia, who are good Serbs, and the enemy-landowners of Southern Hungary, who were Magyars or Germans. An interesting article recently appeared in the *Samouprava*, the Radical organ, on this question of the *begluks* of Bosnia. The writer begins by stating that there are very few really large landowners in Bosnia; he says that in the whole of Bosnia and Herzegovina there are not ten who own more than one thousand hectares—about 2,500 acres—nor much more than a score who own over 500 hectares, while there are plenty with the title of *aga* or *beg* who have only from two to three hundred hectares.

It appears that there are three kinds of tenure—*kmetluk*, which is purely feudal; *begluk*, which is partly feudal; and private ownership on modern lines, by purchase or otherwise. *Kmetluk* was abolished by decree of February 25, 1919, by which the *kmets* were released completely from the obligations which tied them to the *begs*, their overlords. This question is settled for good, and neither party raises any point on it.

But the question of *begluks* is more complex, and their origins are various. If a *kmet* died without an heir, his *kmetluk* reverted to the *beg;* sometimes *kmets* sold their rights of *kmetluk* to a *beg*, and so the land in question would be merged in the *begluk;* again, if for three years a *kmet* failed to work his land properly, or to pay the *hak*, or dues, to the *beg*, the latter had the right of escheat, and the *kmetluk* was merged. Finally, a large number, perhaps the greater part, of the *begluks* were grants from the Sultan in reward for military services. In most cases, however, the origins of the *begluks* are lost in the past, and many may be of great antiquity. It has been stated that some of the old families have their title-deeds going back to the days of the Crusades.

It is generally agreed that a reform is necessary, and the *begs* themselves admit it, especially in cases of forfeiture of land for non-payment of *hak;* but they look upon their ancient rights as sound title-deeds, and their *begluks* as their own absolute property. As a matter of fact, the majority of Bosniak Mussulmen own a *begluk* of some sort, even if it is only a little strip of land; so that on the whole their position is similar to that of the peasants of Serbia. The majority of the Mohammedans are town dwellers, devoted to agriculture or crafts; they can scarcely eke out even a precarious living by their crafts alone, and so depend very largely upon their little properties in the country, just as in Serbia before the war, the smaller shopkeepers and artisans depended, perhaps, more on their little estates than upon their business or the exercise of their craft.

## MOSLEM TALES FROM JERUSALEM.

**By Estelle Blyth.**

### Ibrahim Pasha and the Sleepers of El Azhar.*

Ibrahim Pasha was searching Egypt from end to end for soldiers. Every strong man that he could find was pressed into his service to fight for the cause that the Pasha had so closely at heart, and yet he complained that they were too few. At this time there came one who told him of some five hundred men, young and strong, who owned no master.

"Where are they?" cried the Pasha, starting up. "Show me them, and I will give you gold—good English gold!"

"They are at El Azhar," answered his informant. "But," he added, "they are all mad, my lord."

"What is this? Do mad men, then, go to El Azhar? What do you mean?" asked the Pasha, frowning. "Play me no tricks, if you would see the sons of your sons!"

"Oh, my lord, they are lazy men," explained the other in haste, for the frown of Ibrahim Pasha was blacker than a thundercloud and his anger worse than the lightning; it was not wise to play with him at any time. "They lie there day and night without moving. They do not even feed themselves, for their food is put beside them and other men come daily to put it into their mouths. For even hunger cannot make them move."

So spake the man. Ibrahim Pasha made answer grimly: "Then must I find a cure for their sickness!"

With this purpose in his mind he went straightway to El Azhar. He found the great building crowded with men lying in lazy, huddled attitudes upon the ground; some few were being fed by kind hands; others, less fortunate, gazed with hungry eyes at the food waiting beside them, which they were too lazy to put into their mouths.

Ibrahim Pasha spoke to those who were nearest to him.

"How is it," he asked, "that you lie like this, sleeping away your lives—at most but as a sigh in Time—when the land of Egypt cries for every man, and even every boy, to rise and fight for her?"

"Thy servants are but fools," they answered, "and this is our life's work—to sleep. What is man's life at the best that he should weary himself with work when he can sleep? Let us be at ease while we may."

"Be it my work, then," cried the Pasha, in fierce anger. "to find you work!"

He ordered large fires to be lighted just without the walls of El Azhar, and he himself saw to the heating therein of many bars of iron, both large and small. Taking a bar in his hand, he sought out one of the sleepers, by whose side lay an untouched plate of food, now all covered with a greedy crowd of flies.

"Open your mouth," said Ibrahim Pasha to the sleeper, "for I have brought you food."

"Now may you be blessed and rewarded for your goodness to the poor! May flowers grow for ever round your feet in Paradise!" murmured the man, opening his mouth but not his eyes. Ibrahim Pasha thrust the red-hot iron into his mouth.

By the Pasha's command his "food" was given to others of the sleepers of El Azhar, whose piteous cries caused their companions more quickly to bestir themselves lest their turn should follow.

The ranks of Ibrahim Pasha's army were increased by five hundred strong men, with whose activity and alertness even he could find no fault.

* These tales were told to the writer by a Moslem in Jerusalem. Previous tales in the series appeared in the Near East, Nos. 451, 453, 470 and 484. This story is said to be true.

## THE CARAVANSERAI.

*Think, in this batter'd Caravanserai*
*Whose Doorways are alternate Night and Day,*
*How Sultán after Sultán with his Pomp*
*Abode his Hour or two, and went his way.*
—OMAR KHAYYAM.

Glancing through the *Egyptian Gazette* the other day, I came across a paragraph headed: "Masquerading as Secret Policeman." It referred to the arrest by the Cairo City Police of a certain Hassan Youshy for masquerading as a member of the Secret Police, and went on to say: "His latest trick was to instruct a policeman to arrest a lady who happened to be passing him in the street, on the grounds that her appearance was subversive of immorality." If by her mere appearance the lady in question could assist in the destruction of vice, she must indeed put the late Mrs. Ormiston Chant and Carrie Nation quite in the shade—must, in fact, be positively angelic; and one wonders how Hassan can have been suicidal enough to order her arrest, and how the policeman can have been foolish enough to obey the order. I am not surprised to learn, from the *Egyptian Gazette's* report, that she was found to be "a respectable member of a good family." It takes that kind of person to subvert immorality merely by her appearance.

***

The lady was, of course, released immediately, and Hassan was proved to have been telling tarradiddles about himself; and was also found to have cocaine and other drugs in his possession. After his "bad break," that does not surprise me! And, by the way, I notice that the next paragraph but one reports the arrest by a *mulazim awal* of the Cairo Secret Police (a genuine one this time, it appears) of "a native named Ibrahim Fahmy, who was selling cocaine to the public in cafés and other public places." There's enterprise for you! Was Hassan Youshy, I wonder, a customer of Ibrahim Fahmy? The *E.G.* affords no light on the subject.

***

I do not wish to be regarded as prophet of evil—or as a prophet of any other kind, for that matter!—but I am free to confess that I find myself in close agreement with a correspondent in Turkey who takes a gloomy view of the situation in the East. After referring to the state of affairs in Turkey, India and Egypt, he goes on to say: "The sleeping dog has been awakened. Let us hope that his bark will prove worse than his bite; but I fear he will never go to sleep again. The worst of it is that if we had given him a bone he would have been quite friendly. To-day, however, everyone's hand seems to be against us." That may be perilously near to a mixing of metaphors, but it is profoundly true, in my opinion; and I may add that the writer is very well placed to observe the current of events, and well qualified to make the most of his position.

***

He goes on: "Look where we will, we see encouragement given to revolutionaries and agitators of all kinds so long as they are the enemies of the British Empire. San Francisco, Lausanne, Rome, Paris, Berlin, Munich, Moscow, Damascus, Tashkend, Tokio, all shelter more or less vicious associations linked together by a common hatred of the only nation in the world that lives and lets live, of the only flag beneath which a man may eat, drink and say what he likes, so long as it does not result in "committing a nuisance." It is a great pity that India and Egypt could not have had a taste of the toe of a Prussian jack-boot. But when France has forgotten the million or so of British whose bodies fertilise her crops, and when Italy has forgotten the mad panic of the Piave when only Lord Cavan's cool head stood between the Huns and Rome, I doubt whether the *effendis* and the *babus* would behave any better!" It was not meant for publication, but if it is read by some of the people who are always ready to praise up other countries at the expense of their own, it will do no harm.

***

A little while ago I was very much surprised to see in a greengrocer's shop in the City some *badinján* exposed for sale; and had I been sure that I could have got it properly cooked at home, I should certainly have bought one. For, *properly cooked*, it is a delicious vegetable. For the benefit of those who do not know it, I may explain that it is shaped rather like a vegetable marrow, but is much smaller, and of a purplish-red colour; and in the East it is greatly esteemed as a delicacy. There are many ways of cooking it, but I think the best is the "Imam baldi" style, if I remember aright. "Imam baldi" may be translated as "the priest fainted," and the name is said to have been given to the dish because a certain priest was overcome by emotion when it was first set before him by its "creator," his wife. The attack of unconsciousness was produced by the extraordinary attractiveness of the dish, of course, and the holy man, I suspect, took care to recover in time to enjoy it before its "beauty" passed away.

CORSAIR

## ENQUIRY BUREAU.

*Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.*

*Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."*

*ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.*

*No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.*

### Agents Wanted Abroad.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be redirected to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

101. A correspondent in Lagos, Nigeria, wishes to get into touch with manufacturers of Arab red fez caps.

102. A stamp collector wishes to purchase in large quantities used Austrian stamps prior to the 1882 issue. Stamp dealers in the liberated provinces of Austria are asked to send bulk packages of such stamps to the care of the Editor of THE NEAR EAST, with the price in kronen of each stamp or price per dozen, per 100, etc., of each kind. All stamps required will be paid for at the price indicated and the rest returned. Newspaper stamps are not required, but rare postmarks should be included.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

It is announced that at the Congress of the International Postal Union, to be held in Madrid next month, the French postal authorities are to advocate the raising of the postage on letters for abroad from 25 centimes to 50 centimes, presumably in Great Britain from 2½d. to 5d. I hope that this proposal will be defeated, as there can be no doubt that it is unsound on economic grounds. The doubling of the postal rate must prove a handicap to international trade just at a time when every possible encouragement ought to be given to it. No one will pretend that the enhanced cost of letters for abroad will kill any particular trade; but it would be a retrograde movement at a critical moment, which will penalise the very people whom each country wishes to encourage at the present time—its exporters. It is to be hoped that, instead of wasting its time over this proposal, the Postal Congress will inquire into and remedy the unfair penalisation of the British mail to the Near East by the action of the French postal or railway authorities.

***

With a view to bringing the coming British Industries Fair to the notice of foreign buyers, the Department of Overseas Trade has prepared an attractive booklet, printed in seven languages, explaining the value of the exhibition, and some of the outstanding features of the three cities in which the fair will be held. The booklet is illustrated throughout with excellent views of the sights that make an unfailing appeal to the visitor, and also of the last fair at the Crystal Palace and elsewhere, and should accomplish a most useful work in bringing the purpose of the fair into greater prominence abroad.

***

The report on Turkey by Captain Courthope-Munroe, which has just been issued, is a perfect mine of invaluable information for British firms interested in, or who intend to enter, the Turkish market. Of special interest to the commercial community are his remarks regarding the business methods that should be pursued, and these are summarised in another column. It may be trusted that his advice will be noted and followed, for even in a market so favourable to British trade enterprise as Turkey we cannot afford in the future to meet our rivals on other than equal terms.

***

Few details are given as to the position of the Smyrna-Aidin Railway in the report which has just been issued, it being stated that the profits of the past half-year are unascertainable. The extent of the line now being operated amounts to 170 miles, and the area worked is the most fertile served by the system, so that the company should be able to profit by the development of more favourable conditions in the region.

***

I learn that the Algerian harvest has proved in general worse than the information on which I based my reference to it a few weeks ago suggested would be the case. Practically without exception the cereal crops have given a poor yield, owing to the prolonged drought. In some districts the yield of wheat was as poor as two quintals per acre, and it is now estimated that Algeria, normally an exporting country, will have to import 600,000 quintals of wheat and an equal amount of barley.

***

The rapid development of the Dunlop Rubber Company, which was reviewed at length by the chairman, Mr. Ormrod, at the recent extra-ordinary general meeting, convened for the increase of the company's capital by £12,500,000 for the purpose of bringing the company's capital into accord with the assets, is largely the result of the enterprise which this company has consistently adopted with regard to overseas markets. Throughout the Near East as elsewhere Dunlop's products are well to the fore, and the success of the company's forceful policy, which has its latest illustration in the issue of a substantial bonus to shareholders, ought to prove an incentive to firms of a more conservative temperament to attempt to take a fuller advantage of this period of almost limitless scope for trade endeavour in the great markets of the Near and Middle East and elsewhere.

***

Hesitation never accomplished anything, and now, if ever, is the time for British traders to establish themselves firmly in these markets before other countries have been able to anticipate us. But—and this is the all-important consideration—if the markets are to be entered it must be with absolute thoroughness. In the report on Turkey, to which reference is made above, it is mentioned that substantial Turkish merchants do not hesitate to say that they are unaware of the industrial products of the United Kingdom. This complaint is not restricted to Turkey in the Near and Middle East, and it is solely the fault of British merchants that it should be uttered at all. If they do not use the recognised mediums of publicity, but prefer to wait in their factories and offices for business from these regions, is it a matter for surprise that it does not come?

***

I have frequently had occasion in these columns to emphasise the scope for the extension of British trade with Morocco. The existing openings for commercial enterprise are dealt with at length in a report by Mr. E. H. Mulock and Mr. L. N. Barker, who were commissioned by the Department of Overseas Trade to visit Morocco and to investigate the possibilities and conditions of trade between that country and the United Kingdom. They point out that among the commodities for which there is a demand are gas engines from 6 to 200 h.p with producers adapted to burn refuse, Diesel and semi-Diesel engines, petrol or paraffin-driven farm pumps, telegraphic instruments and constructional material, light motor-cars, Portland cement, sewing machines, and motor-buses. This list, which by no means covers the requirements detailed, should serve to convince those who still believe that the Moroccan market is somewhat restricted that there is a very real opening there for enterprise.

***

Various recommendations are made for the extension of British trade with Morocco, notably that a more frequent and regular service of British trading steamers should be provided. Shortcomings in this respect provided one of the principal reasons for the decline of British trade with this country before the war. While there was a fortnightly service of Royal Mail Steam Packet boats the Germans were promoting their interests in Morocco by frequent services of cargo boats. The most interesting of the other recommendations are the publication of a monthly advertising journal in four languages for gratuitous circulation, and the establishment at Casablanca of central showrooms and stores for ironmongery, agricultural machinery, pumps, gas engines, and other goods. The journal would, no doubt, be extremely valuable, but I am of the opinion that in present circumstances at any rate the suggestion cannot be regarded as very practical. The second is a much more serviceable proposition, and it is to be hoped that steps will be taken to carry it into effect since the influence of the showrooms on the sale of British goods would in all probability be very pronounced.

# Commerce and Industry.

(Reports from Our Own Correspondents.)

## ROUMANIA.

Bucharest, September 11.

### A Roumanian Invention.

A young Roumanian engineer, M. G. S. Poppoiu, belonging to the Roumanian Air Service, after many experiments has invented and patented an aeroplane whose special feature is safety. It is a small type machine, carrying one to two persons only, and is known as the "Tutpoy."

### Withdrawal of Roubles.

Now that the crowns have been withdrawn, the roubles existing in Bessarabia will have to be exchanged. Only Romanoff and Lwov roubles will be accepted. Every owner of roubles will have the opportunity of declaring them between September 15 and 20, and the roubles will be exchanged into Roumanian national banknotes or cheques from September 28 to October 10. The owners will receive 60 per cent. at once and 40 per cent. in three months. The exchange will only take place in Bessarabia and Roumania proper. In conjunction with the withdrawal of roubles, the Government has decided to close the frontiers for fifteen days, beginning from September 9. All frontier ports and towns will be closed, excepting Temishvar and Constanza, where passengers and goods are allowed to enter the country, but special permits are required for this purpose. On the other hand the exit from Roumania of both goods and passengers is free. Boats actually arriving on September 9 will be allowed to discharge where they are, while vessels with merchandise for Braila or Galatz will be able to discharge only with the authority of the Minister of the Interior, in which case they will be strictly examined by the Custom House officials

The reason for the closing of the frontiers is to prevent the illicit smuggling of great stocks of roubles into the country. This has already been the case with the Austro-Hungarian crowns, resulting in a great financial loss to the State, and the authorities do not wish to embarrass further the already overburdened financial situation. The total amount of crowns and roubles which people were trying to smuggle into Roumania, and have been confiscated by the custom house officials, has reached the figure of 40 million lei.

Rumours had arrived from Bessarabia that smuggling into Ukrainia had assumed enormous proportions, as large quantities of salt, petroleum and textile goods have been passed over the frontier for which roubles have been received in exchange for the specific purpose of converting them advantageously into lei.

The withdrawal of the Austro-Hungarian crowns has already shown its effects in many ways. In Transylvania and Bukovina the prices of commodities valued at 25-30 bani to the crown have risen 100 per cent. and more owing to the fact that before the withdrawal of the crowns goods are now valued at 50 bani. This is the rate at which the crowns were changed into lei and merchants are now selling their goods at that value.

Another result of the exchange of crowns into lei is an inflation of paper currency. People who have had their money locked up in crowns are now speculating on the Stock Exchange with the result that there has been a great boom, especially in oil shares, stocks rising from 2-300 points. Trade has also greatly improved since merchants in Transylvania and Bukovina have increased their capital in lei as a result of the Government's rate of exchange.

### Agricultural Situation.

The last rains have been favourable to the rapeseed sowing and for the autumn ploughing. In Transylvania and Moldavia, and some districts of Muntenia, a great scarcity of wheat seed is felt, and measures have been taken to provide these districts with seeds from the territory along the Danube Valley, especially from Oltenia. Owing to the difficulties of transport, delays have been unavoidable.

In all probability the autumn sowing of wheat will occupy a surface twice as large as the sowings of last year, so that hopes are entertained that next year wheat will be exported.

### Austro-Roumanian Economic Convention.

With regard to the Economic Convention recently concluded between Austria and Roumania, the following are the articles for which the Government of the two countries have given permission for import and export:—(1) Roumania will be able to export to Austria 12,500 wagons of maize, 15,000 wagons of barley, 2,000 pigs, 20,000,000 eggs, 48,000 tons of petrol and 72,000 tons of lamp oil. (2) Austria will export iron and various articles of metal, vehicles, electro-technical articles, textiles and hides, paper, various chemical products, and articles of wood.

The Convention provides for the repairing of 500 Roumanian locomotives at Wabalowsky Works, Vienna. Payments for the merchandise in connection with this Convention will be made in lei, or crowns, at the rate of 6.40 crowns to the lei.

## BULGARIA.

Sofia, September 9.

### Reduced Duties on British Goods.

In view of the coming into force of the Bulgarian Peace Treaty in consequence of its ratification by England, France, Italy, Belgium, and Siam the Bulgarian Ministry of Finance has sent the following circular to all Customs houses in the country:—The Peace Treaty is ratified between Bulgaria on the one hand and England, France, Italy, Belgium, and Siam on the other by a protocol signed in Paris by the representatives of the above-mentioned States and the Bulgarian delegate, M. Hadji Misheff, on August 9, 1920. From that date Article 101 of the Treaty came into force on behalf of the States which ratified it. Therefore the goods imported into Bulgaria of the above States will be taxed according to the conventional tariff in conformity with the Treaties concluded before July 28, 1914, and the taxes will be collected at the rate of 700 levas per 100 francs.

For goods to be taxed at the reduced rates importers are required to send with the bills of lading certificates of origin issued by the Customs houses or chambers of commerce of the respective States or by Bulgarian consulates.

### New State Bank.

With a view to meeting the housing crisis the Ministry of the Interior is arranging for the establishment of a new State bank, with a capital of 300,000,000 levas, which will finance the construction of dwellings.

### Export of Cereals.

Since August 15 the exportation of the cereals purchased by Czecho-Slovakia has been in progress. The purchase money—42,000,000 French francs—is to be allocated for the payment of the Bulgarian public debt in France.

### Public Debt Service.

The Director of the Bulgarian Public Debt at the Ministry of Finance, M. Nichole Stoyanoff, on his return from his mission to Paris has issued the following report:—The French holders of Bulgarian State Bonds have consented to be paid in French francs, and the committee representing them has stated that it will advise the members not to claim interest on amounts unpaid during the war. On the other hand, the Banque de Paris et des Pays-Bas has agreed to pay 3 per cent. instead of 2 per cent., as arranged in the contract for the loan, on the sums deposited in the bank by the Bulgarian Government for the payment of the coupons.

Furthermore, the French Government has agreed that the payment of Bulgarian coupons should be effected, as in the past, through the Banque de Paris et des Pays-Bas, and not through the Department for Compensation as arranged in the Peace Treaty. Consent has also been given to the quotation of the lev on the Paris Stock Exchange from the day of the ratification of the peace. A very favourable impression has been produced here by these measures.

## YUGOSLAVIA.

BELGRADE, September 12.

### Sugar from Maize.

Extensive experiments are being made by the Tyupria sugar factory with regard to the manufacture of sugar from maize. It has been started in America and at Marseilles with marked success. Experts from Czecho-Slovakia and Marseilles report that maize from the Timok province yields 14 per cent. of sugar. Improvement is still required in the production of higher proportions of crystallisable sugar and less molasses from the maize. First-class alcohol can also be obtained from the same plant. As the country is specially rich in many excellent varieties of maize, great hopes are entertained of a rapid and profitable development of this new branch of industry in the country.

### Forged Notes in Circulation.

A large number of forged notes are in circulation, especially of the 20-dinar denomination; these are so numerous that 20-dinar notes are now generally refused in the shops. A few 1,000-dinar notes have also been recognised as forged, and this is very disquieting. An official of the National Bank states that the forged 1,000-dinar notes can be easily detected, as the violet ink in the forged ones is of one uniform shade, while in the genuine notes there are two distinct tints. The paper of the forged notes is very smooth and of finer quality than that of the good notes, which is coarser and uneven.

### Damage by Hail.

Considerable damage has been done by hailstorms in some parts of the country, where even barns have been smashed in and the corn spoilt. Certain portions of the counties of Pirot, Smederevo, Nish, and in places in the Voivodina have suffered so much that the Government has given a special credit of half a million dinars for the repair of buildings, purchase of seed, and other necessary relief.

## BRITISH CONSULAR REPORTS.

### IV.—TURKEY.

Conditions last year were almost uniformly unfavourable for commercial enterprises in Turkey, but a considerable amount of trade was none the less done by British firms—quite enough, in the circumstances, to prepare the ground for more substantial developments in the future. One of the most hopeful features was the number of firms new to the Near East who showed a disposition to interest themselves in the Turkish market, thus showing that the scope presented by the Near Eastern markets is now being grasped in a way that it never was before the war.

The position with regard to the Turkish market is ably reviewed by Captain C. H. Courthope-Munroe in his report on the trade and economic conditions of Turkey for 1919. In a general way he says that there is no question of Continental nations being able to oust Great Britain from a very large share in the trade of Turkey. The reputation of British commerce stands high, and although England does not adopt her competitors' methods she can more than hold her own. It is emphasised, however, that efforts must be made to meet organised foreign competition. In this connection it is to be noted that the heads of important enterprises in Turkey say that they know very little of the industries of the United Kingdom.

On methods of trading Captain Courthope-Munroe has much to say that is of interest. He points out that the British manufacturer places himself at a disadvantage by quoting f.o.b. a United Kingdom port. The advantage to all communities of c.i.f. over f.o.b. prices is clear, especially in a country like Turkey, where there is the keenest competition among native dealers and the margin of profit is narrow. What the local consumer wants to know is the cost of goods delivered at his shop.

Germany and Austria owed much of their success in the Turkish market to their long-credit methods. "Speaking generally," says Captain Courthope-Munroe, "where British firms used to insist on cash with order, or banker's confirmed credits, or cash on delivery or against documents in Turkey, either net or with 2½ per cent. discount, or where, in exceptional and isolated cases, the British terms were 30, 60, or 90 days net, the Germans and Austrians would readily allow three to six and even up to nine months' credit, and very often renew at due date for another six months. In the question of credit, firms should be entirely guided by their local representative.

"German firms especially were greatly assisted by the large information offices, which were in a position to present detailed reports on the standing of every possible purchaser of their goods, thereby checking their representative's report and avoiding dealings with all dubious customers.

"The usual credit demanded by the Turkish buyer is four months from the invoice date of the consignment, and he is always prepared to sign acceptances for the value of the goods. The Turkish consumer prefers this method to taking advantage of the discount offered for cash, since he is enabled thereby to place a portion of the goods before paying for same. Longer credits than this to purchasers should be, however, deprecated as unsound finance, and as responsible for many mushroom growths. They engender over-buying and then under-selling in competition with genuine trade, in order to unload stocks which cannot be disposed of in due course of business. Credit facilities, within reasonable bounds, are a powerful temptation even to firms of standing, though buyers are quite aware that they pay, therefore, a higher price for their goods; but it must be added that this is a necessity to the bulk of the Near Eastern traders, in view of the high rate of interest ruling in these countries. For the time being, since the Armistice, credit is a thing of the past, and no country, owing to the unstable rate of exchange and general chaotic conditions prevailing, can afford at present to give it."

## FRANCE AND THE BULGARIAN TREATY.

The French Government has officially informed the Bulgarian Government that it will not take advantage of the right accorded to it by the Treaty of Neuilly in paragraph "E" of Article 176 to create special machinery for regulating the payment of Bulgarian debts to French nationals.

By this Act France renounces the right of liquidating the assets and property of Bulgarian nationals in France or her colonies. In our issue of last week, under "Notes and News," reference was made to the appointment of an administrator of Bulgarian property under the terms of the Treaty of Peace (Bulgaria) Order, and regret was expressed at the prospect of delay in the settlement of claims outstanding between British and Bulgarian subjects. From the action of the French Government referred to above, and from the information sent this week by our Sofia correspondent, it is evident that the French are bent upon making everything as easy as possible for the Bulgarians as far as the financial terms of the Treaty are concerned. There is no reason why the British Government should lag behind in this respect, as the interests of the two countries are identical in a common desire to see everything done to promote economic development in the Balkans.

## TURKISH FRUIT CROPS.

### Good Fig Outlook.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date September 1:—Our previous report of August 20 can now be supplemented with fuller information about the opening of the fruit markets and prospects for the season.

Sultanas.—Arrivals to date, 10,500 bags, against 7,200 bags in 1919; sales to date 9,000 bags, against 2,800 bags. Arrivals of sultanas commenced reaching market on August 10. Quantities being small, the fruit was bought up in small lots for sampling purposes at prices ranging from 100s. to 115s. f.o.b. With increasing arrivals, buyers displayed greater anxiety to secure supplies, and with the small stock available prices were daily pushed up, reflecting an advance of over 15s. during the succeeding fortnight. These early and forced purchases are to be credited to shippers who had undertaken forward sales to Belgium and Holland for shipment August and September 1/15, operations which shippers frankly admit have involved them in considerable loss.

In the interval, however, reports reaching from all districts are of an unfavourable nature. Owing to transport and labour difficulties, farmers are everywhere experiencing unexpected difficulty in gathering and laying out their grapes on the drying sheds. The moving of the fruit to the railway stations is being delayed, and, with the high wages prevailing, farmers cannot afford the expense of properly removing stalks and dead berries, or sorting out the fruit into different grades. The consequence is that arrivals are showing very mixed quality, even the finest grades containing a proportion of stalks, dark and dead berries, etc., which tells heavily on both the appearance and value of the fruit. Round the larger towns farmers are also finding it more to their advantage to sell their grapes to distillers, and hundreds of tons of fresh fruit, instead of being dried into raisins, are being daily disposed of for wine and alcohol-making.

Weather has been variable, and the recent rains and hailstorms have not only stained a fair quantity of raisins, but also caused considerable loss of fruit in the principal districts. There is a tendency to reduce estimates of the yield, some forecasts being as low as tons 15/16,000. In any case, under existing conditions, it is probable that supplies during September will show a very heavy reduction on the comparative figures of last year, and shipments to all markets will be proportionately reduced. Advices from the U.K. are discouraging, both London and Liverpool dealers showing no inclination to pay ruling prices. On the other hand, Continental buyers are operating, and also a good demand is being experienced both from New York and Canada. As we stated in our previous report, shipments to London and Liverpool are likely to be on a moderate scale this month. Shippers are not inclined to risk large consignments at present cost on unresponsive markets. There is margin for decline on the prices prevailing to-day, but we doubt whether values this month are likely to recede to the level of present London and Liverpool biddings. Carabournou sultanas are in short supply, the yield in that district being estimated at a maximum of 150 tons. No supplies have yet come forward.

Figs.—In contrast to sultanas, every circumstance seems to favour the orchards in the Meander Valley. Little or no rain has fallen in the fig districts, and the damp weather prevailing is calculated in every way to develop the mass of fruit on the trees. The whole district, with the exception of some small outlying tracts, is this season under occupation of the Greek authorities. The Ottoman Railway Company, under progressive British management, has spared no effort to cope with the transport of the fruit to our market, and the manager of the line has assured us that the railway is in a position to transport without delay any extent of supplies which will daily reach the stations. As the orchards extend only a few miles alongside the length of the railway, the question of transport from the orchards to the stations does not offer unsurmountable difficulties. The drying and gathering of the figs is a much simpler process than that of sultanas, and there appears to be a sufficiency of labour for present wants.

Every credit is due to the Greek authorities, who have encouraged the return of thousands of Turkish peasants, restored to them possession of their abandoned farms, and provided food supplies to keep them going. Estimates of the production stand at about 18/20,000 tons. Arrivals are now coming forward daily in increasing volume. Owing to the wholesale destruction of villages and farms throughout the Meander Valley, farmers have nowhere to store their produce, and are under the necessity of sending their figs to market as soon as the fruit is dry. Large and steady supplies can therefore be reckoned with, and the eventual problem of disposing of the crop on consuming markets is likely to become an acute question before long. As we have reported previously, the United States has placed very few orders this season, and buyers continue very reserved. The Continent is a very small consumer, Germany and Austria abstaining from all imports. Under the circumstances there will be a heavy proportion of the production available for the British market, and it is certain that prices will have to be lowered to an attractive level to stimulate consumption.

Statistically viewed, the production of this season is considerably in excess of the maximum consumptive wants of importing countries. Stocks which remained over in this country last year were liquidated with difficulty at 8s. and 10s. per cwt., finding an outlet in the distillery trade. The outlook, if not encouraging from the farmers' point of view, is favourable for the foreign consumer. A moderate level of prices this season will again bring the fruit into favour and help to stimulate its consumption. Prices opened this season at the equivalent in the raw state of 70s. per cwt. into packers' store, a price absolutely unjustified by the weight of the yield, but somewhat precipitately paid by one or two packing houses. But this price could not be maintained, and the market broke 10s. a few days later, and at present remains weak.

General Remarks.—All we write above reflects as closely as we can gauge the present situation and outlook. Our clients must bear in mind that there is still a state of war prevailing in these parts, with continual frontier fighting, and the imminency of further military operations in the north-eastern section of the province. Military necessities rank first, and the requisitioning of transport and mobilisation of men may continue for some time. The Greek Military and Civil Administration is sparing no effort to facilitate the task of farmers and merchants, and to place as few impediments as possible in the way of trade operations, but until order is thoroughly restored, the unforeseen has always to be reckoned with. The yield of sultanas is proving below estimates, and supplies will certainly be retarded. Figs, on the other hand, promise to be in plentiful supply. Exchanges have been steady, and it is probable that rates will not break to the extent of last season. Weather recently has been very unsettled, and the possibility of damage to the fruit crops has still to be reckoned with.

## INDIAN INTELLIGENCE.

This week's Indian cable states:—During the week ending September 14 rainfall generally light to scanty. Prospects of standing crops still favourable on the whole, but more rain needed urgently all over the Punjab, in greater part of the United Provinces of Agra and Oudh, and parts of other Provinces. Crops withering in parts of Punjab, Rajputana, Bombay, Hyderabad, and Mysore. During week ending September 11 rainfall more satisfactory generally, except in Punjab and Rajputana. Bombay cotton market steady. Fine M.G. Oomra September Rs. 271. Piece-goods market no improvement, but some good retail enquiry visible and general circumstances slightly more hopeful. Calcutta jute market firm, with business done in old crop and nothing doing in new crop. Hessians very quiet with declining prices; heavy goods firm with fair enquiry. No change in Bank Rates.

Important deposits of coal, copper, and iron are reported to have been discovered near the village of Nebrojan, in Croatia.

The prohibition of import of sulphate of copper into Greece was removed on September 10.

# ENGINEERING.

## THE MACHINE-TOOL EXHIBITION.

### Some Notable Exhibits.

In my notes last week on the Machine-Tool Exhibition I pointed out that at one time the comparatively slow working of our British-made machine tools was more or less a tacit reproach to our designers, and that as far as speed was concerned it was felt that American and German lathes were superior.

Now it is evident that the conditions are changed, and that the British tools shown are every bit as efficient as regards both quantity and quality of production as the finest tools turned out of Cincinnati, Toledo, or New Haven firms.

A further point which will strike the visitor is the immense development of the unit drive for even comparatively small machines. Practically every tool on view of any size is driven by its own electric motor either direct or belt-coupled. In connection with this point there is a good deal to be learned by the visitor as to modern methods and speeds.

For all-round general engineering purposes the lathe, which was probably in some form or other the first tool used by man, is rightly considered as being pre-eminent, but between the variety of lathes shown at Olympia, and those used even by our fathers there is a great difference. This is naturally most marked in connection with what may be termed the refinements of the machine rather than in design. A few years ago the all-geared type was practically unknown; to-day the majority of special purpose and big power lathes are made in this way. Saddles, tool-holders, chucks, and moving mechanism have been improved almost beyond knowledge, and in addition there are a number of lathes, such as Charles Taylor (Birmingham), Ltd., are showing, which have been designed for carrying out work of a type which, before their introduction, was machined as far as possible and then finished by hand. An instance of this may be given in the shape of this firm's patent plugging lathe, which has been specially designed for the rapid production of plugs for steam, gas, and water-cocks, up to 4 inches long on the taper part. The makers guarantee that this lathe will produce more perfect plugs with greater rapidity than any other lathe on the market by semi-skilled labour. This may seem a big claim to make, but a study of the machine at work certainly seems to justify the contention. This firm also show a cock-boring machine which has recently been re-designed, and is said to be far more rapid and convenient than any other machine obtainable for producing the taper-holes in the cock bodies. This machine is suitable for producing work up to 2 inches diameter at the large end and up to 3½ inches long on the taper part. This firm also show capstan lathes, one of which is specially designed for machining castings and forgings, and is well adapted for brass work, and the other is suitable for the rapid and accurate production of small parts in brass and steel from round and section rods. They also show a spinning lathe suitably designed to withstand the great stress to which it is subjected in spinning operations.

Richard Lloyd and Co., Ltd., another well-known Birmingham firm, show their 6½ inches by 6 ft. Galtona straight V-bed lathes, with hollow spindle, screw-cutting, sliding, and surfacing shafts on front complete with travelling steady, etc., and a complete set of change gears and reversing counter-shaft. They also show a similarly sized gap-bed screw-cutting lathe with cabinet leg and tray, three-speed change gear-box, and complete equipment. A patent relieving lathe, shown by Smith and Coventry, Ltd., of Manchester, came in for a good deal of attention, and I understand that this machine has been sold in considerable numbers since its introduction in 1916, and has proved its value on all classes of relieving work. Compared with other designs, its chief features are its liberal proportions, the extreme directness of its driving connections from the lathe spindle to the relieving cam, the absence of all tumbler or bevel gear-reversing mechanism and all over-hung studs or spindles in such parts of the machine. This machine also has additional conveniences for timing the reciprocation to suit the gashes in the work, and gives a particularly wide range of change-gear possibilities.

One of the specialist firms in lathe production is John Lang and Sons, Ltd., of Johnstone, near Glasgow, and at this stand are shown the latest developments in various lathes, including surfacing and screw-cutting lathes, surfacing and boring lathes, axle lathes, automatic screw-cutting lathes, and cutting-off lathes designed and made at the works of this firm and also at the works of Messrs. Dean, Smith, and Grace, Ltd., of Keighley. Considerable interest was taken in the lathes shown in operation, and of these special attention was attracted by the 30-inch swing surfacing and boring lathe with patent variable speed and headstock driven by a constant speed electric motor. This headstock is fitted with Lang's patent automatic speed-changing mechanism whereby the revolutions of the spindle automatically increase as the tool travels towards the centre. By this means a surface can be finished in one-half the time taken on an ordinary stepped cone lathe. Further features which attracted attention in this lathe were the patent covered bed, which prevents cuttings from falling on the working surfaces of the lathe bed, the four-speed gear-box, and the large hexagon turret for carrying six tool-holders. Great interest was also taken in the new 8¼-inch centre manufacturing sliding, surfacing and screw-cutting lathe made by the Keighley firm mentioned. This lathe is said to be one of the best examples of the manufacturing type of lathe at present made in this country. It is filled with all geared friction headstock, self-acting sliding, surfacing and screw-cutting motions, with quick movement to saddle in all directions, automatic steps to longitudinal and transverse speeds, micrometer adjustment to saddle, and swivel slide screws, and pump and pan arrangement for the supply of water to the tool when cutting. This lathe was driven at the exhibition by a constant speed electric motor, but would be supplied with an ordinary single pulley drive headstock.

To those engineers who have to deal with the screw-cutting of parts in large quantities the new 6¼-inch centre Lang automatic screw-cutting lathe was certain to be of great interest. This lathe is specially designed for cutting square and V-threads, which are beyond the range of screws cut with a die, and a good deal of actual screw-cutting was being carried out on this machine in remarkably quick time. Also in operation at this stand was a cutting-off lathe for dealing with bars up to 4 inches in diameter, in which two tools were in operation, one cutting at the back and the other at the front.

Another special purpose lathe was shown by Messrs. Tangye's, Ltd., of Birmingham. This was an axle-turning lathe, 12 inches high in centres, and taking work up to 9 feet in length. On a tool of this type both ends of a railway carriage or wagon axle can be machined simultaneously. Four changes of speed are provided by the gear-box and the headstock is driven through double gearing providing two speeds so that a total of eight speeds can be obtained. The saddles have hand movement along the bed by a pilot wheel, and the cross slides have hand-screw feed and carry square turrets. The saddles may be operated independently or simultaneously by automatic feed provided with automatic stops. Both tailstocks are adjustable along the bed, and the

right-hand tailstock has an adjustable barrel, and the left-hand tailstock swivels so that axles can be easily withdrawn from the fast headstock. It is worthy of note that diameter stops and several new improvements in detail have been embodied.

Any reference to modern lathes would be incomplete without a brief description of the 8½-inch tool-room lathe and 8½-inch general purpose lathe of Messrs. Smith, Barker, and Willson, Ltd., of Halifax. The former is a distinct departure from general lathe practice, and has been designed to meet the present-day demand for a precision tool with the degree of accuracy and convenience required in a modern tool-room. Its outstanding feature is the method of supporting the carriage which moves on a hard steel guide strip situated on the front of the bed almost directly under the tool point so that the pressure of the tool is taken up without any tendency to "spring" or vibration. This guide strip is made of special hard alloy steel and, together with the leading screw, which is also situated under the front flat of the bed, is protected from falling chips and dirt.

These lathes are intended to be run in gangs of ten or more, and can be driven in an open shop in any situation as there are no overhead countershafts or fittings of any description. Power is transmitted by means of a silent worm drive, through a friction clutch, to the driving gears which, by sliding on a castellated shaft in the leg, give four changes of speed, the final drive being by belt to a pulley in the headstock. Two rates of back-gearing are provided which may be instantly changed by means of friction clutches, so that altogether twelve spindle speeds can be obtained. Reverse and knock-off motions are provided, the former being operated from the saddle. Other fitments include a taper-turning attachment and draw-in collet chucks.

The 8½-inch general purpose lathe, to which reference has been made, is a typical English lathe with backshaft and flat top bed of very rigid design. This tool is capable of taking very heavy cuts without strain, can be supplied with straight or gap bed, and is a reliable heavy duty machine turning out accurate work at high speed. It is equipped with a square steel turret, which allows tools for four different operations to be carried at the same time.

Amongst the exhibits of London firms, the stand of Messrs. Bryant, Simons, and Co., of St. John Street, was the object of considerable interest on the part of lathe users, as upon it were shown several examples of high-precision screw-correcting lathes, external and internal, for producing plug and ring screw gauges, taps, and dies, and similar screw threads of great accuracy. In this type of tool the chief feature is the lead screw with adjustable corrector-bar for increasing or decreasing the pitch. This permits of allowance being made for shrinkage or expansion in the production of hardened screw gauges, taps, etc. I noted at my first visit that the accuracy of pitch is guaranteed by a certificate of examination issued by the National Physical Laboratory.

The Warwick 6-inch centre-sliding, surfacing, and screw-cutting lathe shown by Messrs. Brown, and Ward, Ltd., of Birmingham, should be of special interest to buyers with probable trade overseas in precision tools. This lathe is specially designed for tool-room work, and is in great demand in garages and general engineering shops. The fact of its having a gap-bed makes it specially valuable for all general as well as tool work. It is fitted with a front shaft for surfacing, and is arranged so that bars of one inch cross-sectional area can pass through the spindle. The bed has raised V-slides, and travelling and fixed steadies are included in the shipment. The change-wheels are suitable for cutting all sizes of Whitworth threads, and a special wheel is supplied, by the aid of which all metric threads can be cut.

## IRON AND STEEL WORKS IN ROUMANIA.

The Ministry of Commerce and Industry, together with the Privileged Austro-Hungarian State Railway Company, have constituted a Roumanian Company under the style of "Uzinele de fier si domenile din Resita Societate Anonima" (Iron and Steel Works and Domains of Reshitza Joint Stock Company) with the object of acquiring and working the iron and steel works, mines, and other industrial establishments, domains, and forests belonging to the Privileged Austro-Hungarian State Railway Company, which are situated in the County of Caras-Severin (Banat). Further objects of the company include the creation of new companies and the erection of new works for the development of the metallurgical industry and the eventual incorporation of all domains, mines, and works of the neighbouring Transylvanian County of Huniedoara, at Iniloara (Vajda-Hunyad) and Cujir (Kudzsir), formerly the property of the Hungarian and now belonging to the Roumanian State. Among other activities of the company may be mentioned the establishment of works for the manufacture of material required in the petrol industry, under the guidance of the Department of Commerce and Industry. The capital is 125,000,000 lei.

The Privileged Austro-Hungarian State Railway Company are transferring to the new company the whole of their movable and immovable property, situated in the County of Caras-Severin, and receive in consideration thereof 148,400 shares (74,200,000). The remaining 1,600 shares of the first issue are also to be subscribed and fully paid in cash, with a premium of 100 per cent. to be paid into the reserve fund.

The constitution of the company is referred to in the local Press as a great national achievement, with important consequences for the future industrial and economic development of the country. It is anticipated that it will help to diminish Roumania's dependence on other countries for railway material, etc., besides being a sound industrial undertaking and a good investment for Roumanian capital.

## MARINE MOTORS IN CONSTANTINOPLE

The prospects of a large market in Constantinople and vicinity for marine motors, says the American Consul-General in that city, are very good, although the present demand is somewhat limited. Hardly any new engines are here, all of those in use having been left behind by the German or British armies. At the present time price is the greatest factor in the marine-motor market, but for the permanent holding of the market finish is indispensable. There is little demand, he adds, now for motor boats. The four-stroke engine and electric ignition are preferred. Benzine, gasoline, and all raw oils are equally available in Constantinople.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Prince Line s.s. Algerian Prince, for Tunis, Malta, and Alexandria (taking cargo for Jaffa, Haifa, Beyrout, Tripoli, Lattakia, Alexandretta, Mersina, and Cyprus ports), will close for cargo at Manchester on October 2.

The Moss Line s.s. Sitra, for Gibraltar, Algiers, Malta, and Alexandria (taking cargo at through rates, via Alexandria, to Beyrout, Jaffa, Mersina, Alexandretta, Haifa, Cyprus, Port Said, and Tripoli), will close for cargo on September 25.

The Moss Line s.s. Karnak, for Piræus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constanza, will close for cargo at Liverpool on September 25.

The Johnson Line s.s. Pensacola, for Piræus, Volo, Salonika, Bourgas, Varna, Constanza, Sulina, Galatz, and Braila will close for cargo at Liverpool on October 2.

The Cunard s.s. Brescia, closing for cargo at Liverpool on October 9, will call at Gibraltar, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constanza, and Sulina.

The Bibby Line s.s. Warwickshire, for Marseilles, Port Said, Colombo, and Rangoon will leave Liverpool on October 7.

The Anchor Line s.s. Scindia, for Bombay, will leave Liverpool on October 16.

# NEAR EAST MARKETS.

## LONDON PRODUCE REPORT.

Dried Fruit.—The animated state of the market has continued. Currants and sultanas have been in increasing demand, and prices have advanced. The position as regards supplies of sultanas is most unfavourable, and the news that there has been a considerable reduction in the crop estimate has given a marked upward tendency to forward prices. Figs have come to business well, and rates have been maintained. In view, however, of the prospect of greatly increased supplies from the Smyrna region, it is to be anticipated that prices will soon find a much lower level.

Sugar.—The position remains much the same. Home refined has continued in good request at the controlled rates. West Indian crystallised has been done in the free market at from 95s. to 100s.

Coffee.—Business has been transacted at somewhat lower levels. Costa Rica has been done at from 106s. to 155s., Indian at 100s. to 135s., and Mocha round about 160s. The futures market has been weak.

Oilseeds.—Generally speaking, a firm tone has characterised the market. Indian linseed has come to business at 41s. per cwt., an advance of 1s., while La Plata is a similar amount up at 37s. Rapeseed closes firm, with Toria at 36s. 3d., real bold Ferozepore at 35s. 3d., 2s. up, and yellow Cawnpore at 33s., an advance of 1s. 3d. Cottonseed is about the same, Indian being 14s. 3d. and Egyptian 19s.

Oilcakes.—Prices have firmed up. Linseed cake has come to business up to 24s., while cottonseed cake has been done round about 14s. Other transactions have included palm kernel cake at 12s., Arachis cake at 14s. 6d., and coconut cake at 14s.

Seed-oils.—Linseed oil is harder at 82s. Rape oil is unchanged at 74s. for crude and 90s. for refined. Egyptian cotton oil is steady at 73s. for crude and 91s. for refined. Turpentine is firm at 146s. for spot, while for October-December 148s. 6d. is quoted, and for January-April 152s. 6d.

## EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in August:—

Cotton.—The spell of intense heat that occurred this month appears to have had a somewhat harmful effect on the crop, especially in parts of Upper Egypt. The abundance of water on the arrival of the flood induced some cultivators to overwater, which resulted in the usual boll shedding. Pink boll-worm attacks are reported from all parts of the country. The intensity of the attack appears to be much the same as at the corresponding period last year. The first picking is taking place in Upper Egypt, and will probably become general about the middle of September.

Millet (Sefi).—The weather was favourable, and water supply sufficient. Harvesting is going on in Upper Egypt. Smut is now reported from all provinces, but this and the stem-borer, noticed nearly everywhere, do not seem to have caused much harm to the crop, which is reported to be in a good condition. A satisfactory yield is expected.

Rice (Sefi).—The weather has been favourable and water supply sufficient. The crop is free from pests and in a good state of growth. Flowering is general and late-sown crop is coming into ears. An average yield is expected.

Sugar Cane.—The weather was, on the whole, favourable, and water supply sufficient. The crop is growing very satisfactorily and is promising well.

Ground Nuts.—Both weather and water supply were satisfactory. The crop is healthy, and a good yield is expected.

The offices of the Bengal Iron Company have been transferred to Clutha House, 10, Princes Street, S.W.1.

The directors of the Barsi Light Railway Company recommend a final dividend of 3 per cent., together with a bonus of 4 per cent. (14s. per share in all), making 12 per cent. for the year to March 31.

## LANCASHIRE COTTON

### Revival of Demand Expected.

(From Our Own Correspondent.)

Manchester, Monday.

The market continues rather nervous with regard to several matters which are pending in trade circles, and there is not sufficient confidence on the part of buyers for business of importance to be attempted. The feeling is growing, however, that a revival of demand is not very far off. There is still a possibility of a coal strike, but in well-informed circles it is held that some agreement will be reached by the Government and the miners. Merchants continue to be harassed by the financial stringency, and it is reported that the Indian banks have decided to restrict accommodation to a greater extent than ever. Less favourable reports have been received relating to the Egyptian crop. Prices, however, since a week ago have given way owing to lack of demand. There is not much change in the outlook for the American growth. Buying in Egyptian yarns continues very limited. Producers are still losing ground, and wretched figures are now and again taken by needy sellers. More encouraging advices have again been received from Egypt as to clearances in piece goods, and supplies that have been held back are now going forward more freely. A little more inquiry has been about, but fresh orders have been few and far between. Comparatively little has been done for the outlets of the Levant. There are indications of improved bids for India in cloth, and some producers of light bleaching descriptions have now rather more work to get on with, but definite relief has not been experienced. Demand for China remains very slow, and there are some complaints of delay in remittances from the other side. Only isolated lines have been mentioned for South America. The depression in the weaving branch of our industry remains acute, and in some towns unemployment is of a serious character. American yarns for home use have been purchased in odd lots. In export yarns a moderate inquiry has been met with for India and the Levant.

### The Egyptian Crop.

According to advices received during the last few days, the Egyptian cotton crop for the current season has met with a setback. It is reported that the plants have been damaged by the pink boll-worm and by hot winds, and leading authorities are inclined to reduce estimates of the yield. A month ago there seemed to be a possibility of an output of about 7,500,000 cantars, against 4,826,000 cantars last season. It is now stated that the production will not be more than about 6,500,000 cantars. The development in the situation has caused disappointment to Lancashire traders, as there is a tendency for the consumption of Egyptian cotton to increase.

## NEW COMPANIES.

### Anglo-Caucasian Oil.

The Anglo-Caucasian Oil Company has been registered as a private company with a capital of £750,000 in £1 shares, to acquire all or part of the share capital of the Novo-Grozny Tashkala Oil Company, and all or part of the share capital (consisting of 600,000 shares of 100 roubles each) in a Russian company called the Grozny-Volga Naphtha and Trading Company, Grovol, and to pay for the same wholly or partly in shares of this company. The subscribers (each with one share) are:—T. F. Scourfield, 76, De Vere Gardens, Ilford, solicitor's clerk; F. J. Lovesay, 38, Dafforne Road, S.W.17, solicitor's clerk. The subscribers are to appoint the first directors. The solicitors are Messrs. Norton Rose and Co., 57½, Old Broad Street, E.C.

Greek Gold Loan.—The Bank of England are prepared to receive the coupons due the 1st proximo on bonds of the Greek Guaranteed £2 10s. per Cent. Gold Loan of 1898. The necessary lists can be procured on application at the Dividend Pay Office.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

STAMBOUL, September 4.

The market does not show any notable improvement. Purchases of manufactures for Roumania have not relieved the position to any appreciable extent.

The rise in the exchange on London has not so far improved the prices of manufactures. It has, on the other hand, increased the difficulties of traders.

There has been a sharp fall in colonial produce during the week, particularly sugar, which, following continual offerings from Marseilles, Geneva and America, in addition to arrivals amounting to 6,500 tons has fallen about £20 per ton for disposable. The fall would have been still more pronounced had not Roumania effected important purchases here. Quotations: Disposable, £99 per ton against £118; afloat, £100 per ton against £105; in Customs, £T52 per 100 kilos against £T60.

Coffee.—Prices are weak, owing to the low levels existing in the European markets. The large stocks here depress prices.

Rice.—The demand continues for Roumania and for local consumption. The last arrivals were sold at once at Ps. 30 per oke Saigon No. 1.

Petrol.—The market is quiet and prices are unchanged.

Sardines.—There has been a somewhat improved demand, and prices are sustained.

Flour (American). — As anticipated, 45,000 sacks arrived this week, but prices have not undergone any decline.

Cereals.—Arrivals from Thrace, where the harvest has been deficient, have completely ceased as the result of the Customs regulations imposed by the Greek authorities.

Constantinople has only received a very small part of the crops of Anatolia, and it is obvious that as long as the present state of affairs continues the capital will not be able to count on Anatolian produce.

Roumania having recently raised the prohibition on the export of barley, large arrivals have caused prices to fall from Ps. 10 to Ps. 6½ per oke. The tone hardened subsequently, and the quotation is now Ps. 7½ per oke.

Wheats are firm, and some consignments just arrived found buyers at Ps. 19 and even Ps. 20 per oke.

Exports.—Transactions are of little importance, and prices are weak. Buyers are holding back in view of the fall of prices in Europe.

Mohair.—Arrivals of the week, 280 bales; sales, 480 bales at Ps. 100 per oke for England.

Wool.—No arrivals; sales, 90 bales at Ps. 57 per oke.

Cotton.—No arrivals.

MERSINA.

The report for July states:—Railway communications with Tarsus and Adana, interrupted since June 19, not yet having been re-established, there have been no commercial transactions with the interior. The disastrous consequences of this state of things are now beginning to be felt.

---

The traffic receipts of the Smyrna-Aidin Railway for the week ended September 4 amounted to £16,583.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended August 20 amounted to £E14,177, making the total for the year £E171,201. The corresponding figures for 1919 were £E9,963 and £E86,841.

**(Over 80 Branches in the Near East.)**

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Digitized by Google

## TENDERS INVITED.

**Tenders are invited for the following contracts, and must be made by the dates mentioned :—**

**Egypt.**

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

**Pumping Machinery.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)**

Paving Stones, etc.—The Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of paving stones and granite headstones. October 15. (L.)

**India.**

Steelwork for Bridges.—The Great Indian Peninsula Railway invites tenders for the supply of steelwork for bridges (Wadi-Bundar Viaduct). (Specification £1. Secretary, 48, Copthall Avenue.) October 15.

Diesel Engines, etc.—The Municipal Board of Agra invites tenders for the supply, delivery, and erection of (1) four Diesel engines and high-tension alternators, including foundations, switchgear, transformers, and sub-station equipment; and (2) Fifteen miles of high-tension underground cables, 28 miles of overhead low-tension three-phase mains, and street lighting equipment, complete with all accessories. (Specifications £2. Messrs. Handcock and Dykes, 11, Victoria Street.) October 22.

**Algeria.**

H.M. Consul-General at Algiers reports that a local trader desires to receive quotations from United Kingdom firms for the supply of iron or soft steel hoops for barrel-making. It is understood that the applicant is prepared to pay cash for the material. Firms in a position to offer supplies of the material in question can obtain the name of the inquirer, specifications, etc., from the Department of Overseas Trade.

## COMPANY NOTES AND REPORTS.

**Smyrna-Aidin Railway.**

The council of administration report that the working of the railway during the half-year to June 30 last has been continued by the company's staff under the control of the Inter-Allied Military Commission, and that 170 miles are now working out of a total length of 379 miles. The traffic receipts are still, however, most adversely affected by the disturbed state of the country, and this has again interfered with the completion of the accounts. In the last report the council stated that negotiations had been continuously carried on respecting the general question of the future status of the company with the Foreign Office, the representatives of the Allied Powers and other bodies. These negotiations have, for the moment, been held up, as many of the questions at issue cannot effectively be dealt with till some opinion can be formed as to the approximate amount the company may be likely to receive by the award of the Reparation Commission. No sittings of the Reparation Commission have, so far, taken place, but the council will be fully prepared to put their case before the Reparation Commission as soon as the sittings of that body commence. With a view to clearing up outstanding questions relating to the claims and also to settle the accounts for the period since the railway was seized by the Turkish Government, a representative of Messrs. Price, Waterhouse and Co. is now at Smyrna. The general manager, in his report, states that the maintenance of the company's property has been carried on subject to great difficulty and delay in obtaining material, and should this continue it will be necessary to obtain supplies from other than British sources. American coal is already in use.

## OIL OUTPUT.

Anglo-Egyptian.—Gemsah production week ended September 12, nil (previous week, 1,131 tons). Hurgada, 7,597 tons, against 9,511 tons.

## ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

The downward tendency which we have noted for two or three weeks past has continued. Some increases have to be recorded, but quotations are generally lower.

Among Government stocks Egyptian Unified has lost 1½ points, standing to-night at 63½, while the Pref. has declined from 54 to 53. Greek 1902 has lost a point at 46, and there is the same decrease to record in the 1910 Loan at 40, and in the 1914 at 53. The 1881 Loan has, however, made a small increase, being quoted now 55¼, and City of Alexandria Bonds have gained half a point at 60.

Taking banks, we find that Agriculturals have declined 9-32 to 4, and National Banks ¾ to 17¾. Land Banks have gained ¼, and are again quoted at 5.

There are no increases to record among Railways. On the other hand, Egypt Delta Light has declined from 5¼ to 5¼, Ottoman Smyrna to Aidin from 9 to 8½, and Pyræus-Athens 3 per cent. from 37 to 35.

Land shares show three small increases. Anglo-Egyptian Land Allotment stands to-night at 3⅝, having gained ⅛. Egyptian Consol has appreciated 1½d. to 2s. 7½d., and Sudan Plantations have gained ¼ at 5. The decreases are Aboukir, which has fallen 1-16, at 1⅝; Béhéra, which has lost ⅜, at 14⅝; Béhéra Pref., which has depreciated 1s., at 65s.; Sidi Salem, which has declined 9d. to 33s.; and Union Foncière, which has gone off ¼ of a point at 4½.

In the Miscellaneous group, we find Associated Cotton Ginners have decreased ⅛ of a point at 1⅛, while Salt and Soda has fallen from 42s. 6d. to 39s. 9d. Khedivial Mail has gained 1-32 at 5 19-32.

Among Oils, Roumanian has lost 3d. at 21s. 6d.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |
| Athens | Drachmae to £ | 25·22½ | 33·25-33·75 |
| Belgrade | Dinars to £ | 25·22½ | 98-103 |

| Teheran | Krans to £ | 50 | 29½ |

## SMYRNA OPIUM REPORT.

Messrs. Barker Bros., Smyrna, report as follows for the week ended September 4 :—The sales this week on our market amount to five cases, at 17s. 6d. to 19s. as to quality. The exchange to-day is 430 piastres per pound sterling for cheque, and 0.84 dollars per one Turkish pound. The arrivals are 190 cases, against 685 at same date last year. We are pleased to say that the Greek regular troops have taken Ouschak, a very important opium centre, so we hope soon, when railway communications are opened, to see more important arrivals of the drug on our market.

The directors of the Alliance Bank of Simla have appointed Mr. L. A. Davis to be general manager of the bank. Mr. Davis has been deputy manager of the foreign department of Barclays Bank, and only recently relinquished the duties of financial adviser to the Overseas Trade Department. Mr. Melville Macfadyen, who, as managing director, has been carrying on the duties of general manager, will revert to his former position of resident director on the arrival of Mr. Davis in India. The latter will proceed to India to take up his new appointment towards the end of the year, accompanied by Mr. R. G. H. Boulton, the chairman of the bank.

## NOTES OF THE WEEK.

The Greek Chamber of Deputies has been dissolved, and the General Election has been proclaimed for November 7. This step has a special significance for the Hellenic world at this juncture. It disposes of the fears of the Opposition in Greece that the elections were to be indefinitely postponed, and consequently brings nearer the prospect of a better political understanding in the country. The Chamber that has just been dissolved was elected in 1915, dissolved by King Constantine in 1916, and recalled by M. Venizelos in 1917. Circumstances have compelled it to be prolonged beyond the period fixed by the Constitution, and the Opposition claimed to find in this measure a tendency on the part of the Government to rule solely in its own interests. With this obstacle removed, and with the elections conducted in a manner that gives no loophole for charges of unconstitutional practices, Greek political life should be cleared of much of the bitterness that has characterised it for the last two or three years. No one can belittle the signal services that M. Venizelos has rendered Greece in the sphere of foreign affairs, and the opportunity for ignoring these provided by an accumulation of domestic grievances has now been removed. Greece's responsibilities have increased with leaps and bounds in recent months, and it is greatly to be desired that she should be in a position to discharge them with a united front.

Unsatisfactory news from Montenegro remains the order of the day, and it is a matter for speculation how long the patience of the Entente Powers will endure. During the last twelve months three Relief Missions have been obliged to leave the country. The visit of Count de Salis gave rise to a report which the British Government considered it impolitic to publish in view of its relations with the Yugoslav Government. But a strongly worded appeal, it is understood, has since been made to the non-Serbian elements in the Belgrade Cabinet to bring the kingdom's policy in regard to Montenegro more into line with modern conceptions of justice, and further investigations into conditions in Montenegro are now being carried out. Unfortunately the Allied Governments have almost forfeited their right to intervene by tolerating the existing state of affairs so long. The Serbians have been encouraged to consider Montenegro as a district of Serbia, and consequently regard any protests on the part of Montenegrins who desire to exercise the rights of self-determination as open rebellion, to be dealt with in the way customary in the Balkans. Nobody inside Montenegro or out of it wishes to see Montenegro outside the Yugoslav State, but it is in the interests of Europe as a whole that a sense of injustice should not be left to rankle in a proud-spirited people to become a danger-spot for the future peace of the Balkan Peninsula.

The view expressed in these columns some time ago that if the Constantinople Government is to deal effectively with Mustapha Kemal and his Nationalists, it will have to receive substantial help from the Allies, finds confirmation in a recent message to *The Times* from its Constantinople correspondent. That writer reports that the Porte is understood to have requested Allied financial assistance in order to enable it, if necessary, to undertake the pacification of Anatolia; and he remarks that "it would seem to be an act of common justice and prudence on the part of the Allied Governments to give the legal Government of Turkey the necessary financial aid for this purpose." Turkey, he adds, has certain obligations to the Entente, which she must fulfil under heavy penalties, but she cannot fulfil them without the aid suggested. The inference is obvious, and unless the Allies agree to give the help that is asked for, it will be even more clear that the protestations of goodwill towards Turkey, of which they were so lavish a little while ago, were merely cant of the most nauseating kind. That it is almost as much to the interest of Europe as it is to that of the Sultan's Government that peace and order should be restored to Anatolia cannot be denied, and since, as *The Times* correspondent observes, Turkish troops, if properly paid and equipped, should be able to do the work, it would surely be advisable to provide for their payment and equipment, and set them to the task without further delay.

It may be urged—in certain quarters it almost certainly will be urged—that as Greek troops are already in Asia Minor, and have given an excellent account of themselves so far, they should be allowed, or requested, to extend their advance and see the undertaking through to the end. There are, however, many reasons against following such a course. Some of those reasons are indicated in the letter from our Constantinople Correspondent which we publish on another page, but the best of all is that mentioned above. Turkish troops can do the work, given the conditions mentioned, and it is clearly their job rather than anybody's else. Moreover, it is recognised now that it is not nearly such a formidable undertaking as was formerly supposed. Nationalism of the Kemalist pattern is crumbling badly, thanks

Digitized by Google

largely to what the Greeks have already accomplished, and by judicious handling of the situation it should be possible to hasten the process of disintegration, to detach the very large number of waverers and moderates, and to leave only the extremists in the field. The fate of these diehards would then quickly be sealed, and Turkey would be left, without a fresh grievance and without such embittered feeling as would be caused by following the other course of action, to show whether she were really capable of making a fresh start.

---

In this connection it is satisfactory to note that Turkey has been spared yet another change of Cabinet. At the beginning of last week it was reported that the Sheikh-ul-Islam, the President of the Council, and the Minister of Commerce, had resigned, being dissatisfied with the failure to take more active measures against the Nationalists; and it was feared that Damad Ferid Pasha, becoming thoroughly disheartened, would abandon the attempt to drive his difficult team. Happily this fear proved to be unfounded. Neither the Grand Vizier nor the President of the Council, Riza Tewfik Bey, has resigned, and though Mustapha Sabri Effendi, the Sheikh-ul-Islam, has left the Cabinet, his resignation is not necessarily a source of weakness at the present time. He had courage and energy, but he was extreme in his party views, and disinclined to show mercy to an opponent.

---

The latest mail to arrive from Egypt brought the translation of Saad Zaghloul Pasha's letter to the Egyptian people on the subject of the negotiations with the Milner Commission. The document, as might be expected, puts the conduct of the writer and his associates in a most favourable light, and the conduct of all other parties in a light that is seldom favourable, and its tone is such that it is easy to understand why it has called forth rather severe criticism. Thus, the Peace Conference is blamed for its apathy and its failure to "recognise the quality" of the (Egyptian) Delegation, while it will seem to most people that the determination of the Egyptians to boycott the Milner Commission was due—at the best—to a foolish misunderstanding of its purpose, as now admitted by the writer. But the most interesting part of the letter is that in which Zaghloul Pasha states that the negotiations between the Commission and the Delegation—

"resulted in drawing up three projects—the first was made by the Milner Commission, and was absolutely rejected by the Delegation; the second was presented by the Delegation and was absolutely rejected by the Commission; and the third and the last was presented by the Milner Commission, but the President of that body declared . . . that it had to be accepted or rejected as a whole, for it contained the maximum of what might be agreed upon by England, with Egypt."

In view of the favourable turn taken by events of late, it would be invidious to comment further on this epistle, and we will content ourselves with expressing the hope that its writer will use his undoubtedly great influence with his countrymen to their lasting good.

---

The situation in Mesopotamia continues to improve, although at Kufa and some other parts small forces are still invested, and fighting of a sporadic character is still reported—and likely to be so for some time. It is not without significance that the district west and south of Baghdad, that is to say the plain between Baghdad and the Euphrates, seems to be giving at least as much trouble as others more remote from the capital (if we may call it so). Khan Mahaweel, familiar to most travellers along the Baghdad-Hillah road, is mentioned as the centre of punitive operations being carried out by the 55th Brigade column; and the repairs to the Baghdad-Feluja railway line have now been completed: but that this district, which in Turkish days was regarded as "safe" should be giving so much trouble is strange indeed. Happily, the British women and children from the camp at Kerind, regarding whose safety there was some uneasiness, are now arriving safe and sound in Baghdad, whence, we may suppose, they will shortly be sent either to India or home. An attempt on the part of the Arabs to loot stores at Ahwaz carries the disturbance into Persian territory, but the incident is probably quite unimportant.

---

Parts II. and III. of the English edition of the Austrian Red Book have now been published by Messrs. George Allen and Unwin, and bring the diplomatic story connected with the outbreak of war from July 24 to August 27, 1914. All the matter may seem ancient history now, but time can hardly rob these documents of their human interest in view of the events to which they formed the prelude. Part II. contains the full *dossier* of Austria-Hungary's case against Serbia. Of special interest are the messages that passed between Berlin and Vienna regarding Italy's attitude, as well as the candid views on the situation of the Austro-Hungarian Ambassador in Rome. On another page we are reminded of Sir Edward Grey's prophetic words to Count Mensdorff regarding the threatened world-war: "It is the greatest step towards Socialism that could possibly have been made. We shall have Labour Governments in every country after this."

---

The appointment of Sir William Meyer as High Commissioner for India marks a beginning, but only a beginning, of the change we advocated two years ago, by which the business transactions of the Indian Government would be separated from the political and administrative control exercised by the authorities in this country. Sir William now takes charge of the supply of stores, the assistance offered to Indian students, and the supervision of the work of the Trade Commissioner, whose office will, of course, remain in the City, but all matters of staff and finance are left to be dealt with in Whitehall. Indian opinion would not be satisfied with this as a permanent arrangement, but ought to accept it as a very substantial instalment, while Sir William's record of tireless energy affords the best possible guarantee that new functions will be claimed as quickly as is consistent with the effective organisation of the departments now transferred.

---

Lord Lytton's selection as Under-Secretary of State for India, in succession to Lord Sinha, has been favourably received, and we have no doubt that he will fill the vacancy with credit, but the chief interest in his appointment is that it carries us back to that old-world Simla, where he was born in the days of his father's meteoric viceroyalty. It was a Simla without politics, for the Congress had not yet come into existence, and a small group of brilliant men could quietly direct the administration of India, doing what they thought was best for the country, and paying but little heed to what the country thought. Simla is very different to-day. The Viceroy and his counsellors, whom Lord Lytton will now help to control, must sleep with their ears to the ground, and a casual question in the legislature may claim precedence of the most important administrative schemes. The Englishmen of fifty years ago would probably find the new Simla intolerable could they revisit it: Indians of to-day can scarcely realise that the old existed in their fathers' time.

---

Judging by the Anglo-Indian journals recently received the everlasting passage question has entered on a new phase. A few weeks ago the complaint was that, owing to the expected influx of travellers for pleasure, there would be no accommodation next spring for merchants and officials coming home for health or business purposes: now we hear from all quarters that the recent increase in fares puts a journey out of the reach of all except the wealthiest members of these classes, and the agitation has already induced the Government of India to ask that "representations" should be made to the steamship companies concerned, a measure which may, or may not, be productive of results. The companies will doubtless reply, and with justice, that operating costs are rising; the malcontents will point to dividends and market quotations as evidence that the companies have been doing remarkably well, and the situation is analogous to that which produced the recent inquiries into "profiteering" in so many industries, a mass of

Digitized by Google

rather vague counter-assertions requiring to be tested quantitatively by some impartial authority.

In our judgment, the case is one where the public can fairly claim to know the facts. In this country we submit to heavy increases in railway fares because we know that the railways are for the moment insolvent, and that such meagre dividends as they pay come out of the pockets of the taxpayers in general. The Anglo-Indian, who finds himself deprived of his trip to England, has no corresponding knowledge regarding the shipping companies beyond the certainty that they are not insolvent. Convince him that the increase recently imposed is reasonable—as it well may be, in view of increased costs—and he will make the best of the position; but, until the facts have been impartially examined, he will cherish his grievance. Of course, he is negligible as a political factor, but India as well as Anglo-India is concerned, and under the new conditions Indian opinion will have to be taken into account. Indians are coming to Europe in steadily increasing numbers, and if their interests are taken seriously by the new popular governments a very different situation may result from that to which we have been accustomed under the mild bureaucratic *régime*.

# THE WEEK AT HOME.

London, Monday Evening.

**The Coal Truce.**

At the last moment, in fact, the very day before the strike notices expired, a truce was concluded with Mr. Smillie. True, it is nominally for no more than a week, but a fight once postponed is likely to be put off for a long time, and we may now get through the week without a coal strike. A few hot-headed revolutionaries are disappointed of their prey—undoubtedly the bleating of the capitalistic lamb has excited the proletarian tiger—and a few root-and-branch employers may be sorry not "to give these workmen a lesson." But most people are frankly relieved.

Credit for the result must be given mainly to Sir Robert Horne, who was persuasive but firm and reasonable throughout the long discussions. From the moment Mr. Smillie gave up his claim that the miners were out to reduce the price of coal to the public—a claim very few people really believed—there was nothing for it but to admit that their real business was an advance of wages, and to demand an advance without investigation of the justice of the claim before an impartial tribunal, as the miners' leaders did, was to take up an obviously untenable position. They could not get out of the fact that output per man has fallen with increases of wages, and it is quite clear that wages can only advance if output goes up—in other words, even time-work must have some relation to payment by results.

In the end it became increasingly clear that Mr. Smillie had not the support of the public, about which he probably cares little, or of the other trade unions, about which he cares a great deal. The railwaymen certainly do not want a strike; the dockers, when told that a tribunal of enquiry into miners' wages would not be impartial, replied that the judicial tribunal into their own rates of pay earlier in the year was absolutely fair. Mr. Smillie, it was noticed, used his favourite argument of the poverty of the miner and the danger of his trade again, but it has lost its novelty. The miner is notoriously able to live on three or four days' work a week, and the conditions are certainly getting better as regards safety. They are certainly less hazardous than on the railways, where accidents are still far too frequent.

The upshot of the whole business will be that the miners will meet the coal owners; if they will give a guarantee as to output, which could easily be increased, wages will go up. Probably this will be used as an argument for a further small increase in the price of coal to the public—a curious result of a policy which was to reduce the price—and the consumer will pay. That is the debit side of the account; on the credit side is the fact that constitutional action and reason have triumphed over direct action and revolutionary methods—a result which will enhance the reputation of Mr. Thomas and the Labour Party in Parliament and reduce the prestige of Mr. Smillie and the extremists outside.

In other directions the result will have considerable weight. Psychologically, the time for strikes seems to be over for the present. Prices and wages will still rise in certain directions, although they will probably fall in others; but it is evident that more can be done by Capital and Labour meeting at a round table than by a fight. We may, consequently, settle down for some time. When trade activity is falling off in many directions it is not precisely the time to strike.

**Political Activity.**

With the coal truce the talk of a general election is dying down. It was rumoured that the Government would have gone to the country had the miners challenged the constitution, and there could have been no doubt as to the result. At the Ilford by-election, which has been fought during the past few days, Labour has been disillusioned as to the support available for direct action and strikes, and it is frankly admitted on that side that the Government has the best of it; the Independent Liberals, with an excellent candidate, have cut no ice, since they have no definite policy as a party and still rely on formulæ. The Government will meet Parliament next month higher in credit than when the House adjourned in August. On the whole, popular sentiment is against a general election, unless it is shown to be inevitable. It does not want to be bothered with politics yet awhile, and the result would not substantially change the position of parties. When every side recognises this, there is no real reason for a political fight.

**The Return of Pussyfoot.**

Mr. "Pussyfoot" Johnson is back again from a holiday in the United States, and the autumn campaign to convert us to Prohibition will soon be in full swing. Pussyfoot has determined to plough up the hardest part of the ground first—in other words, he is going to Scotland to assist the Local Veto campaign. The brewers and distillers profess to be nervous, and the Temperance societies to be hopeful, but the public is only mildly amused and indifferent. To turn Scotland from whisky strikes the ordinary Southron as a feat which will put the greatest of the deeds of Hercules into the shade.

**The Bamberger Case.**

It was a little difficult to understand the amount of public interest taken in the Bamberger trial, which culminated last week in the prisoner being found guilty and sentenced to nine months' imprisonment. Mrs. Bamberger was a good-looking woman, of a not very spiritual type of beauty, who committed perjury in the Divorce Court—not a very uncommon offence. Her case was not essentially different from hundreds of other sordid stories; her lies were neither probable nor effective. Why the King's Proctor should suddenly have decided to prosecute her for perjury, while overlooking innumerable other instances, was a mystery of which Mr. Hayes, the defending counsel, naturally made the most; but as a matter of fact a couple were sentenced at the Old Bailey not a month ago for perjury in the same court—a fact which would rather have destroyed the effect of the argument had Mr. Hayes used it, as he wisely did not. Perhaps the King's Proctor is suddenly waking up to the necessity of discovering the truth—a commodity which, like the Okapi, owes at least some of its value to its rarity.

But if prosecutions followed in every such case an additional judge would have to be appointed, and the Central Criminal Court would cease not day or night.

Some of the newspapers have used this wretched woman as a text on which to hang more or less edifying sermons on the decay of morality, the decline of religion, and similar jeremiads. One need not take these things too seriously, but the case may be cited in future as an

Digitized by Google

argument for divorce law reform. Apart from that, it has little importance.

**L.C.C. and L.G.O.C.**

It is not only when thieves fall out that honest men come by their own. Neither the London County Council nor the General Omnibus Company are thieves—indeed, the general run of the tramway and omnibus fares is far lower than on the railways—but they are quarrelling violently at the moment. Some time ago the County Council decided to introduce a "twopence all the way" fare between 10 and 4, to encourage shopping traffic during the slack hours; and even at the busy times they will carry you all the way from Blackfriars to Lower Tooting—on the improbable supposition that anybody wants to go there—for fourpence. The L.G.O.C. protested against the midday reduction, and asked the L.C.C. to stop it as being unfair competition; the L.C.C. retorted that it paid, and carried on. Now the omnibus company has decided to follow suit, and see what happens, so we shall once again have competition and the joy of a traffic war.

It will be interesting to see which wins. The trams can carry more people, but, on the whole, they are slower than the omnibuses, except uphill; the trams, however, cannot vary their routes, and the omnibuses, by running beyond the tram termini, can get a load of passengers at the beginning of the journey where the trams often start half empty. But the battle is likely to be a long one, for the antagonists have formidable reserves of power—the omnibus company being part of the Underground Railway, which is about to raise passenger fares, while the L.C.C. has an enormous network of trams, and carries millions of folk to and fro. On one point at least the two rivals are agreed—that deficits shall be made good on short-distance fares, while the long-distance passenger from the Embankment to the wilds of Streatham or Hampstead shall be encouraged with low rates. The old halfpenny fares have everywhere been abolished.

**Theatres and Films.**

The theatre is busy this week with seven "first-nights," and bookings in advance are said to be reasonably good; this otherwise deplorable summer has in fact done the mummers a good turn, just at a time when the slump was making even low comedians cultivate a tragic demeanour in private. But the honours of the moment are with the cinema. An astonishing film has been "released"—I believe that is the correct technical term—dealing with the life of the soul after death. It is impeccably orthodox, with a touch of sentiment; the ghost displays the proper histrionic ability, and conveys his emotions to the audience without any of that tedious table-rapping or "medium" business to which Sir A. Conan Doyle's supra-mundane visitors have to resort. The film, in fact, beats the spiritualist at his own game, and provides the most convincing spook imaginable. The title of the film is "Earthbound," and it seems to me easily the best thing achieved as yet on the screen.

**Provincial Housing.**

The recent joint housing loan has been a pronounced failure largely owing to the uncertainty of the immediate industrial position. A five-million loan was announced by five provincial towns, but the underwriters were left with the following proportions of stock on their hands—Brighton 44 per cent., Bristol 66, Portsmouth 72, Plymouth 83, Swansea 91. This failure is bound to affect the prospects, and the prices of the next municipal loans; but it is only fair to remember that the earlier housing loans for Surrey, Kent, and Essex, issued in the spring of 1920, were over-subscribed. It was sheer bad luck that the provincial towns prospectus coincided so exactly with a slump in industry and the prospect of a mining strike.

But at least the houses are getting built. In travelling about England to-day, one notices a very general revival of building activity in towns and villages. As the population is still growing at the rate of five or six thousand a week steadily, builders can hardly have begun to catch up with the demand yet, but the difficult of obtaining materials has not yet been entirely overcome.

**Durham Coal.**

The County of Durham has been considerably disturbed by the statement of an authority on the subject that in twenty or thirty years the coal mines in the Durham area will be exhausted. For several years past there has been a gradual transference of mining operations from the south and centre of the county to the east, and "great tracts of land which were formerly hives of industry are now little better than wilderness." Mining has recently developed along the sea-coast, but when these are worked out the Durham coalfield will be practically exhausted.

**Distress in East London.**

There is a great deal of unemployment and consequent distress in the East-End and South-East of London just now, nor does there seem any chance of an early improvement in the position. The difficulty appears to be due mainly to the fact that the present high prices compel high wages, high wages in turn mean high manufacturing costs, which again means fewer purchasers and restrictions in business. The furniture trade is quoted as an example. The manufacturing cost is four times what it was before the war, and at that price the public simply cannot, or will not buy, with the result that the shops are ordering nothing, and the workers are unemployed. Four shillings an hour is not much use to the man who only gets two or three hours' work a week.

The slackness reacts on shipping in the Port of London, and the dockers are consequently on short time. As these poor people have no resources to fall back upon, and even the barest living costs twice as much as in 1914, Mr. Thomas's prediction of a "black winter" seems certain to be fulfilled in this district.

**The Welsh Church.**

The Archbishop of Wales has been discussing the financial prospects of the new independent Church of Wales. A million pounds fund was started to equip it for its work after disendowment; not quite £400,000 has been subscribed. Apparently the war millionaires of South Wales have not come forward, as was hoped; and the Archbishop suggested that the Nonconformists might subscribe something, as "conscience money"—not a very tactful observation. The five million fund, which the Church of England started for its own work, seems to be making even less satisfactory progress, although testators show no reluctance to leave legacies to missionary societies and benevolent institutions.

**The Week's Books.**

The most interesting book recently published is the "Letters of Mark Twain" (Chatto and Windus), which covers a period of many years in the great humorist's life. They date from his early days as a Mississippi pilot and newspaper reporter to his death in 1910, and they show him as a thoughtful as well as a witty man. The eighteenth century would have dilated on his "sensibility," as shown in these memoirs, and our own time is likely to treasure them as the last record of a very lovable man.

A word may be given to Carpentier's autobiography. "My Fighting Life" (Cassell) contains details of his great fights told, so far as can be seen from a casual glance through the book, with an attractive modesty that does not always distinguish the great boxer.

The second (and final) volume of Mr. H. G. Wells's "Outline of History" is now published by Cassells. It is a highly original and interesting, and even provocative work, which will find many readers from the brillians of its style; but I doubt if its judgments will be generally accepted as sound on either the Roman Empire or Napoleon, both belittled in these pages.

The publication of botanical works was practically suspended during the war, but they are now again making their appearance. Two of the best of these, whose character is sufficiently indicated by their title, are "The Outdoor Botanist" (Fisher Unwin), by A. R. Horwood; and "Water Plants" (Cambridge University Press), by Miss Agnes Arber.

## GREECE.

ATHENS, SEPTEMBER 11.

### The Convocation of the Chamber.

The sitting of the Chamber on September 7 proved a veritable apotheosis for M. Venizelos. Even the oldest members of the Parliament cannot remember such enthusiasm as that displayed on Tuesday, when the representatives of the nation welcomed the great patriot who by his persistent efforts and his indisputable genius created Greater Greece and liberated Hellenism from servitude. The Chamber was full to overflowing long before the sitting was opened. The British Minister, Earl Granville; the French Minister, M. de Billy; and the Ministers of the United States and Yugoslavia were occupying the box allotted to the Diplomatic Corps.

The sitting was opened at 5 o'clock by the President of the Chamber, M. Sofoulis, who expressed the immense joy felt by the Hellenic nation at the new glorious page added to its history. After offering his greetings and the nation's blessing to the Army and Navy, and expressing the Greek people's profound gratitude to the fallen, M. Sofoulis spoke of M. Venizelos and his contests to obtain the recognition of Greece's rights. Finally the President of the Chamber proposed a vote proclaiming M. Venizelos the benefactor and saviour of Greece, and that a column of honour be erected in the Chamber as a permanent token of its admiration and gratitude. This vote, signed by M. Sofoulis and many other deputies, was passed unanimously.

M. Venizelos, still looking rather pale, and with his left arm in a sling, rose amidst continuous cheering and applause, and after thanking the Chamber for the kind words addressed by its President, presented the three treaties: (1) The Treaty with Turkey; (2) the Treaty by which the Allied Great Powers transfer to Greece Western Thrace, which, by the Treaty of Neuilly, had been ceded to the former; and (3) The Treaty with Italy with regard to the Dodecanese Islands. He then stated that as the sittings of the Chamber would come to an end in ten days this would not give time for the ratification of the Treaties, but that in any case this was not a very urgent matter, as the clauses of the treaties referring to territories had already been applied. Immediately after the dissolution of the Chamber martial law and the censorship would be abolished. The general elections would be held during October (o.s.). He added that he had full confidence as to their issue. The Premier reputed the charges of certain of his opponents who accused him of tyranny, explaining that both martial law and the censorship were necessary pending the final settlement of the extremely important questions of the country still in abeyance. The discovery of plots organised by the Royalists proved how necessary these measures had been. M. Venizelos then spoke of his difference with ex-King Constantine, and added that it was the King who, by refusing to comply with the wishes of the people, violated its liberties and imposed his own misguided policy. He explained how the Provisional Government to Salonika, with its 60,000 Greek troops, who fought side by side with the Allies, had washed away all traces of shame and saved the nation from the catastrophe to which the ex-King's policy was leading it. Referring to the interior administration which he was accused by some of his adversaries of having neglected, M. Venizelos pointed out that in all the belligerent countries a certain amount of relaxation was unavoidably manifested during the war, and he was confident that now peace had been concluded, the administration of the country would once again revert to its former high standard. Concluding his speech, M. Venizelos gave his formal assurance that the elections would be carried out with absolute liberty; and he added that a provisionally constituted Government, for which the Royalists were clamouring, would only encourage and assist the latter to put into practice their subversive designs.

### The Report on the Plot.

The Press has at last published the official report in connection with the Royalist plot. According to this report, the organisation of the plot dates back a year and a-half, and is not in any way connected with other plots previously revealed. It was administered by a central committee calling itself the "Secret Government," the members of which were only known to a certain number of the adherents. The whole affair was so well organised that very few of the conspirators knew one another. These were divided into groups under the leadership of an ex-officer, who was the only one known to those initiated. It has been ascertained that one of these groups was under the orders of Peter Mavromichalis, a member of the Chamber. Justice has laid hands upon the majority of the members comprising this group, but has not, so far, been able to discover who the leaders and members of the other groups are. Nor has it been possible to ascertain the names of those comprising the Central Committee, as no member of the Mavromichalis group actually under arrest can himself give any information whatever. Mavromichalis, whose guilt has been clearly established, and who is undoubtedly in a position to supply very valuable information and throw light on many obscure points of the examination, refuses most emphatically to make any revelations which would assist the work of justice. It has now been established that the attempt to overthrow the Government was to have been carried out on the night of July 29 (o.s.). Mavromichalis's group, under the leadership of ex-Captain Tzivas, would have occupied the Ministry of War. All these plans, however, fell through, as a few hours before the appointed time for action, the conspirators were warned that the police had "smelt a rat," and were on the look out, and that consequently the *coup d'état* had been postponed for a more opportune date. Both the conspirators of the Mavromichalis group, and this deputy's secretary, M. Iconomacos, have made full avowals with regard to the organisation of their group and the objects aimed at.

Many of the Members of Parliament, journalists, and other persons arrested, have been released, nothing incriminating having been found against them.

### Miscellaneous News

The Greek Bishops of Thrace, accompanied by the Muftis of Adrianople, Gallipoli, Kirk-Kilissè and Rodosto, the Rabbi, and a representative of the Armenian Bishop of Adrianople, arrived in Athens for the purpose of paying the respects of the population of the newly acquired territories to M. Venizelos. The deputation was also received by the King, who awarded them the Order of the Saviour.

According to information received from Kirk-Kilissè the leading Bulgarian citizens of that town, accompanied by a Bulgarian priest, visited the Greek Governor of the region and declared that all the Bulgarian families of Kirk-Kilissè were desirous of reverting to the Greek Orthodox Church.

M. Venizelos has been staying indoors since Thursday last owing to a slight pain caused by his wound on the arm. The Premier's medical adviser, Professor Phokas, has directed him to remain quiet for a few days and refrain from doing any work.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

# YUGOSLAVIA.

BELGRADE, September 18.

**The "Little Entente."**

The Serbian press is attentively following the activities of M. Take Jonescu and devoting a good deal of space to the "Little Entente" which the Roumanian statesman is working so hard to build up. The defensive treaty between Yugoslavia and Czecho-Slovakia is a good foundation, and it will be remembered that the Czech Foreign Minister, Dr. Benes, went on to Bucharest on leaving Belgrade. If M. Take Jonescu succeeds in forming an alliance between Roumania, Greece, Yugoslavia, Czecho-Slovakia, and Poland, as the Serbian papers hope, it will be a fine piece of constructive statesmanship and a welcome change after the eternal bickerings of the past two years. Belgrade would welcome it as a guarantee of the much-needed peace and a bulwark against Hungarian chauvinism and aggression.

**The Trouble in Croatia.**

The disturbances in Croatia appear to have been more serious and extensive than was at first realised. Of the instigators, who were separatist agitators, several are under arrest; but these are only the agents of the Frankovists who are in exile, as Sachs, Dr. Franck, and Gagliardi, who are now reported to be in Fiume, and at the same time in touch with Budapest. The agents took advantage of the post-war frame of mind of the simple peasants, and when the authorities proceeded to stamp the cattle for purposes of registration, the people, unaccustomed to the process, were easily persuaded that their animals were going to be taken away from them. The agents drove round the villages to force the peasants to take up arms to resist, and when the men refused, their houses were burnt down. But directly the military appeared on the scene, the half-hearted rioters threw up their hands, and were easily persuaded to return to their homes, and convinced that their cattle would not be taken from them. The trouble would probably have been avoided if the authorities had educated the peasants previously and explained the object of the branding. A similar disturbance took place in Serbia forty years ago, but now the Serbian peasants know what it means and understand its significance. It is interesting to note that the rioters made no distinction of party, for they sacked the house of the Minister of Mines, a popular and respected member of the Narodny Club, totally destroying his property, burning all his papers, and doing damage to the extent of many hundreds of thousands of dinars. Last week a deputation of the peasants from the village in question waited on the Minister in Belgrade to express their regret, but it is not clear how they can make good any of the damage done.

**Foreign Minister's Statement.**

Dr. Ante Trumbitch, who recently returned to Belgrade from London and Paris, has made his statement on foreign affairs in the Skupshtina. He said that in spite of all the criticisms which had been levelled at the Peace Conference, the authorities there had made a real effort to give just decisions, after taking all factors into account, and the wonderful effort of Serbia in the war had not been forgotten. He reminded his hearers that the Treaty of Saint Germain had once and for all signed the death warrant of the Austro-Hungarian Empire, and even if all their demands had not been satisfied in full, still they should be very thankful for the immense results attained. He then passed to the question of the distribution of the commercial fleet of the late monarchy. As the Kingdom of Serbia had previously no outlet on the sea, it would have not participated in the distribution, but the Supreme Council had nevertheless, upon his representations, allotted them thirty-six vessels of over 2,000 tons for Yugoslav commerce in the Mediterranean and Black Seas, and for transoceanic services, making a total of 165,000 tons. Moreover, Italy had undertaken to hand over seven vessels which were at present in her ports. Of the Austro-Hungarian war fleet, Yugoslavia gets eighty-two craft, with a total tonnage of 172,000 tons. Referring to the Adriatic Problem, Dr. Trumbitch pointed out how the position of Yugoslavia was complicated by the existence of the Treaty of London. They based their claims entirely upon the question of nationality, and were unable to accept the solution of a buffer state which was advocated by France, England, and America. He said that he was convinced that the Italian Government was anxious to settle this thorny problem by agreement, and expressed the hope that now, on the eve of direct negotiations with Italy, the country would remain united as one man in the support of the Government. He concluded by stating that the Government had taken proper steps in connection with the state of affairs at Fiume, and that the proclamation of a so-called Regency of the Quarnero they refused to recognise or to take seriously.

**Another Italo-Yugoslav Difference.**

An incident has occurred during the week which sheds light on the intensity of national feeling in Slovenia. The Allied Commission for the plebiscite in Korushka, under the terms of the Treaty, called upon the Yugoslavs to withdraw from the region known as "Zone A" all their troops and gendarmerie, lest they should exert undue influence upon the voting. The Slovenes object, on the grounds that the Italians have troops available in the neighbourhood with the object of maintaining order; the Italians, as representing the Great Powers, are theoretically disinterested, as the land is in dispute between Yugoslavia and Austria, but the Slovenes declare that the Italians are in the first place openly hostile to Yugoslavia, and in the second place directly interested in seeing the territory fall to Austria, for strategic reasons. The Provincial Government resigned, and it is said that the two Slovene members of the Cabinet, Dr. Koroshets and Dr. Kukovets, will withdraw from the Government in protest, on the grounds that the central government has not been sufficiently energetic in protecting national interests in this district. M. Vesnitch has replied that what had been done was in accordance with the terms of the peace treaty, and that the Belgrade Government had no choice in the matter. He therefore declined to accept the resignation of the Provincial Government.

**The Serbian National Church.**

An interesting event of great national importance was the formal declaration by the Prince Regent of the new Serbian Patriarchate at Karlovtse in Srem. This once more re-establishes the purely national character of the Serbian Orthodox Church. As long ago as the thirteenth century the second King of the United Serbian Empire, Stephen the First, was alarmed at the influence of Rome in the country, and in 1219 sent his brother Sava to Byzantium to persuade the Emperor Theodore and Patriarch Germanus to grant Serbia an archbishopric. Sava himself was crowned first Archbishop at Uzhitse. This step isolated Serbia from the Roman Catholic Europe, and made Italy and Hungary her inveterate enemies, and so deprived her of help in later centuries against Ottoman aggression. The archbishopric was removed to Pech (Ipek), and raised to the rank of patriarchate at the coronation of Stepan Dushan the Mighty on Easter Sunday, April 16, 1346, which was recognised by Byzantium in 1375. The patriarchate was renewed in 1557, but finally abolished in 1766. It is interesting to note that when it was restored in 1557 the step was due to the energy of the Bishop Macarius, whose brother Sokolovitch was actually Grand Vizier of Turkey. It was the Patriarch Arsen II. who led the famous migration to Hungary in 1690. Now once more the old Serbian church is autocephalous.

**General News.**

A message to the *Politika* announces that the French are evacuating the Bocche di Cattaro, and Serbian troops will occupy the town and zone on October 1. The Allies have the right of free access to these magnificent fjords, which may not be fortified until the Adriatic question is settled.

A State Committee has been sitting on the distribution of seats in the Constituent Assembly. The number of members will be 419, of whom two are from plebiscite areas, and therefore may be excluded. The distribution of seats will be as follows:—Serbia, 158; Croatia and Slavonia, with Medjumurje, 93; Montenegro, 10; the unoccupied part of Dalmatia, 11; Slovenia, 40; Bosnia and Hercegovina, 63; and the Voivodina, 44

## BULGARIA.

SOFIA, September 16.

**Bulgarian Orange Book.**

The Bulgarian Foreign Ministry has issued an Orange Book containing diplomatic documents dating back to 1914. Among these the proposals of the Entente in case Bulgaria should remain neutral in the world war, and in case she should participate in it on the side of the Entente, are especially interesting. The first proposals were made by the British Minister Plenipotentiary on November 3, 1914, and suggested that in exchange for her neutrality she should receive up to the Enos-Midia line, and that an equitable correction of the Macedonian frontier should be made. On November 11 Russia also made proposals along similar lines. On June 14 the four Allied Powers promised Macedonia up to the river Vardar, and the Enos-Midia line. During this period several steps unfavourable to the Entente were taken by the Bulgarian Government, and an armed neutrality was declared.

On August 3, 1915, the four Allied Powers made a fresh offer, promising Kavalla to Bulgaria, with its hinterland; Greece to be compensated in Asia Minor. Almost immediately after this the Russian Minister, M. Savinsky, addressed a note to M. Radoslavoff, in which he said that the Allies would be able to induce Serbia to cede the undisputed zone of Macedonia. The documents about the negotiations with Turkey and the declaration of the Roumanian Government, that Roumania would participate in the war on the side on which Italy should join, are also interesting.

**French Minister Received.**

Last Friday the French Minister and Envoy Extraordinary, M. Georges Picot, was received in audience by King Boris, and presented his credentials. Besides the French Minister's suite, there were present M. Stambolisky, M. S. Dobrovitch, Colonel Christoff, aide-de-camp to King Boris, and M. Groneff, his Majesty's secretary.

His Excellency made a suitable oration, declaring that it would be his special endeavour to strengthen the friendly relations between France and Bulgaria, and saying that during his several months' residence in the country he had learned to appreciate the qualities of its people. King Boris expressed his thanks for this flattering opinion of the Bulgarians, and said that nothing would be lacking on the part of his Government to assist M. Picot in his noble work.

**Greece and Bulgaria.**

Last Monday the Greek Chargé d'Affaires received the representatives of the Bulgarian Press at the Greek Legation. He came here, he told them, as a sincere friend of the Bulgarian nation, inspired by the desire to work for a *rapprochement* between the two countries; and, attaching great importance to the influence of the Press in this direction, he appealed for their collaboration. He referred to the ratification of the Treaty of Neuilly and to his own appointment as the inauguration of normal relations; declared that henceforth the Greeks wished to live on the best terms with the Bulgarians; that Greece, as M. Venizelos had declared, had no ambitions in the North; and that it was now for the Bulgarians to show themselves friendly disposed, and for the individuals of both nations to play their part in bringing about better relations He concluded by saying that it was necessary first of all to work for the development of commercial and economic relations between Greece and Bulgaria.

## TURKEY.

CONSTANTINOPLE, September 11.

**The Heir-Apparent.**

The extreme nervousness of the Turkish Government with regard to the intentions of the Heir-Apparent, Prince Abdul Mejid Effendi, gave rise to the Gilbertian incident of September 7, at which all Constantinople has been laughing ever since. Details of the affair have no doubt already appeared in the British Press, and there is no need to describe again how part of the Turkish "army" and "navy" were mobilised to prevent the restless Prince from escaping at the dead of night to Anatolia. It is true that upon this occasion it transpired that the Heir-Apparent had no intention of escaping, but the nervousness of the Turkish authorities is quite comprehensible. Abdul Mejid Effendi has never made any secret of his profound sympathies for the Nationalist movements, and it is notorious that the Nationalists have for some time past been making desperate endeavours to persuade one of the members of the Imperial family to join them. The presence of an Imperial prince at Angora would add enormously to the prestige of the rebel government, and at the same time provide it with a formidable means of offence, for it would be a simple matter to persuade the ignorant population of Anatolia that such a prince had been sent to Angora as the representative of the Khalif. In spite of the utmost efforts of Nationalist propagandists to make the people believe that the Khalif has become the helpless tool of the British, the prestige of the Sultan is still very considerable, not only in Anatolia, but throughout the Caucasus and Central Asia; and there can be no doubt that the Imperial decree and the "fetvas" promulgated in April last, together with the propaganda recently scattered in certain Anatolian districts by aeroplanes, have been a cause of serious embarrassment to the Nationalists.

Why the Prince has become so warm a supporter of the Nationalists is not difficult to understand, although he has never been an enemy of the Entente, and, indeed, immediately after the Armistice, gave proof of distinctly pro-Entente sympathies. The same may be said of the Turkish nation in general, but just as the sentiments of the nation underwent a complete revulsion after the occupation of Smyrna by the Greeks, so was it with the Heir-Apparent, and for precisely the same reasons. The nature of these reasons was explained at some length in an earlier letter,* and there is no necessity to dwell upon them again; but in view of present developments readers of THE NEAR EAST might find it interesting to turn back to the letter referred too.

**The Greeks in Anatolia.**

Prophecy is always dangerous on the part of the average human being, but the increasing complexity of the Anatolian situation is bearing out the previsions expressed in the above-mentioned letter, in which it was stated that the Greek footing in Asia Minor would be made a basis for further territorial acquisitions, and doubt was thrown upon the advantages of establishing Greek dominion over mixed populations. With the supposed necessity for a further Greek advance in Asia Minor has arisen a renewal of Greek propaganda for the establishment of a "Pontus Republic" which would comprise the greater part of the Black Sea provinces. A telegram from Athens, dated September 8, states that a delegation from "Pontus" under the presidency of a M. Joannidis has arrived in the Hellenic capital for the purpose of urging the Government to take immediate action with regard to the Pontus question. It cannot be denied that there is a "Pontus Question," but those who have had any considerable experience of Hellenic methods in Anatolia recently, and of Hellenic *komitajis* or provocative agents in Macedonia in the past, will easily realise that the question has been rendered much more acute by the Hellenes themselves. Hardly a day passes without some story of "massacres" of Greeks in Anatolia, but nothing more is heard of the bloody events at Smyrna

* Published in THE NEAR EAST of July 1.—ED.

Digitized by Google

in May, 1919, nor is a single voice raised in protest against what is occurring in the silent retreats of the Anatolian hills at the present moment. The doings of the Turkish bands, composed of desperate peasants menaced on the one hand by the stupid and cruel tyranny of Mustapha Kemal, and on the other by the no less cruel "reprisals" of the Hellenes, are made known to every corner of the four continents; but not a word is heard of the action of the Greek irregulars, supported by Hellenic troops. Naturally, all accusations will be refuted, and proof will be forthcoming that the Greeks have behaved in Anatolia like lambs. Even Turks will be produced as witnesses, and will swear by Allah that it was even so. Yes, they will swear by Allah, for, by Allah! they will remember what happened to them and their women when the Greeks descended upon their village, and they will desire no repetition of that. Then, when the plebiscite is taken there will be an overwhelming Greek majority. It is the story of Macedonia over again, with this difference—that the Macedonian question was not taken up by the entire Islamic world.

The above remarks have been made neither in a pro-Turk nor in an anti-Greek spirit, but solely in view of British interests and prestige. The constant increase of unrest throughout the East is a source of serious prejudice to our material interests, and methods pursued by the Greeks in Anatolia, who are regarded as acting in our name, are damaging both our prestige and our good name. The fault lies with ourselves for taking the Greeks at their own estimate, a lamentable error on the part of our statesmen. For a hundred years we have supported Greece in almost all her undertakings, and every Englishman is convinced that Greece has a great future, but that does not warrant placing a minor in uncontrolled possession of a great estate that has for long been in the hands of the mortgage-holders.

**The Nationalists**

It would appear that Mustapha Kemal is now definitely committed to an entente with the Bolshevists, and if recent reports are to be believed, Soviet representatives have already arrived in Angora with large sums of money. In view of the utter impossibility of adequate assistance being sent to Anatolia from Russia, it can only be surmised that the objective pursued by the Bolshevists in Anatolia is political rather than military, but it is too early yet to speculate upon the precise nature of that objective. Of their ultimate objective the Bolshevists have never made a secret, for on innumerable occasions they have openly declared that they intend to destroy British power and influence in the Orient. It may be inferred, therefore, that their presence in Anatolia is intimately connected with that purpose, and it is in this connection that the presence of an Imperial prince in Anatolia would be a matter of such supreme importance. In any case, Bolshevist designs in the Middle and Near East are being persistently and steadily developed, in spite of all unfavourable occurrences elsewhere, and the boldest would hesitate to foretell what the results will be in the not very distant future.

For the rest, the constant advance of the Greek Army, want of money, and sporadic rebellions have thrown the Angora Administration into still greater disorder. The understanding with the Bolshevists has created considerable alarm among the more conservative elements of the Nationalists, who, unable to rid themselves of the ancient tradition, according to which Russia is the arch-enemy of the Turk, have formed a party strongly opposed to the policy of Mustapha Kemal. The famous Turkish feminist leader and writer, Halidé Edib Khanem is said to be playing a leading part in the new movement, which, however, does not appear to contemplate a reconciliation with the Sublime Porte, and is therefore unlikely to obtain much success.

**The Cabinet.**

Damad Ferid Pasha still remains in power, but it is becoming daily more apparent that there are serious differences among the members of his Cabinet, and a change is becoming inevitable. Whether this will involve the definite withdrawal of Damad Ferid Pasha is difficult to foresee; for the Grand Vizier undoubtedly exercises a great ascendancy over the Sultan. On the

other hand, the Grand Vizier's vindictive policy of persecuting his personal and political opponents by every means in his power has cost him the support of large numbers of his former partisans. Jemil Mollah, Reshid Mumtaz Pasha, and the late Minister of the Interior, Reshid Bey, are all mentioned as candidates for the Grand Vizierate. Reshid Mumtaz Pasha, who has spent many years in Europe, and only returned to Turkey to take up his present position, is believed to have acquired a mentality that would be of great advantage at the head of a Turkish administration at the present moment, and there seems to be a fair probability of his succeeding Damad Ferid Pasha, if and when the latter retires.

## EGYPT.

CAIRO, September 12.

### Arrival of the Four Delegates.

Since August 24, when *Al Mokattam* sprung the news on the country, the proposed agreement with Great Britain has not unnaturally been the sole topic of conversation; and during this last week the universal interest taken in the question has been rendered more intense by the arrival of the four members of the Egyptian Delegation, whose task it is to explain the details of the proposed agreement to their fellow-countrymen and ascertain whether they are in favour of a settlement on the lines in question.

Mohammed Mahmud Pasha, Ahmed Bey Lutfi Essayed, Aly Bey Maher and Abdel Latif Bey El Makabbati arrived on H.M.T. Meteor at Alexandria on the morning of the 7th inst. Long before the steamer had entered the inner harbour she was met by several launches, on which were accommodated the members of the local committee and a large number of students with their banners, who greeted the delegates with cries of "Long Live Egypt!" "Long Live Independence!" and, significantly when one remembers the state of affairs about three months ago, "Long Live England!"

The delegates had arranged to proceed straight up to Cairo, but they had to alter their programme at the last moment as the Local Committee had organised a reception for them in Alexandria. They were accorded a veritable ovation on landing and whenever they made their appearance, and were entertained first to tea at "Nuzha" Gardens, where in order to escape the attention of their admirers they hadt o seek police protection, and afterwards at a banquet at the Savoy Palace Hotel. Next day they were given a warm send-off when they left Alexandria by special train for Cairo, and on their way up they were enthusiastically cheered at every station at which the train stopped. Elaborate arrangements had been made to welcome them in Cairo, and invitations had been issued to thousands of people. Unfortunately, the crowd was so dense on the platform and in the station courtyard that it broke through the cordon and literally swept the delegates off their feet. It was with difficulty that they reached their cars and that the latter were able to make their way to the house of Saad Pasha Zaghloul, where the "four" held an official reception until late into the night.

Particular care was taken to make it clear that this reception was purely a personal welcome extended to the delegates on their return from their long stay in Europe, and that is was not to be taken as indicating approval of the terms of the proposed agreement. Nevertheless, there is little doubt that had the general public not approved in principle of the agreement, the main points of which had already been made known to them through the telegraphic and other agencies, the reception would not have been so spontaneous or so warm.

Since their arrival the four delegates have been mainly occupied with drawing up the procedure which is to be followed. They have officially issued the text of the outline with an explanation as to their own mission, and have held long meetings with all their Local Committees and with the Press, and on Thursday they will meet the members of the Legislative Assembly. After that they will hold meetings of the Bar and other professions, the students and the Government officials, and then will proceed to the provinces in order to ascertain the views of the agricultural element.

The time at their disposal is relatively short, for the understanding is that they are to telegraph their report to Zaghloul Pasha not later than the end of the month. It is therefore eminently desirable that no susceptibilities should be offended and no mistakes made such as would increase the difficulties of the situation, and so cause delay.

### Obstacles to the Agreement.

That there are difficulties no one can deny. There is, as was bound to be the case, opposition from those who are uncompromising in their demand for complete independence, from those who are personally antagonistic to Zaghloul and from those who are jealous of the fact that they have not played a prominent part in these negotiations; while there is naturally opposition from the element which does not want, and has reason to fear that it will suffer from, the removal of British control. All these elements, either because they want something more, or because by supporting it the particular result they desire will ensue from the rejection of the proposed agreement, join in the cry for "complete independence," which is thus tending to attain wholly fictitious proportions. The difficulties of the situation have been somewhat accentuated by the publication of a letter from Zaghloul Pasha, which, in an effort to explain the situation, has put the matter in a light which can but add force to the arguments of those who desire to oppose the proposed settlement.

The task of Mahmud Pasha and his colleagues would have been infinitely easier if Zaghloul Pasha in his letter, whilst putting the responsibility on the Egyptians themselves, had expressed his own personal view as to the acceptability or otherwise of the settlement. After all, his fellow-countrymen recognise that having been in close contact with European affairs and with the British Government for so many months, he is in possession of facts which must necessarily be unknown to the man in the street, and that he must have been enabled to gain impressions as to the possibilities of the situation which no one in this country could possibly form. Consequently, although he has always had to count with the opposition of those who are personally antagonistic to him and have their own axes to grind, a word of advice from him would not have been taken amiss—indeed, it was expected—and it would have gone a long way to strengthen what is believed to be the majority who while in favour of the agreement are somewhat unsettled in their mind as to whether it is really in the interests of the country or not.

At the last moment also a new factor has been introduced in the shape of a manifesto to the Egyptian nation signed by Prince Omar Toussoun and three of his relatives, in which they reiterate the principles enunciated in the now historic "Princes' Protest" made against the Milner Mission last January, and declare that they consider the Egyptians should not accept the proposed agreement, but should insist on the "complete independence" of Egypt and the Sudan untrammelled by any conditions or restrictions. This intervention of members of the Sultania Family in a matter which is essentially one for the Egyptians to decide for themselves is as inopportune as it is uncalled for, and those cognizant of the inner workings of Egyptian politics have not been slow to detect in this action the hand of a political personage who has everything to gain by discrediting the Egyptian Delegation, and so undermining Zaghloul Pasha's position.

Mahmud Pasha and his colleagues are therefore confronted with an exceedingly difficult task. On the manner in which they tackle it will, in a large measure, depend whether or not they will be able to report favourably at the end of the month. From what one can gather the bulk of the people are in agreement that the main lines are satisfactory, and only need skilful handling for the adverse influences at present at work to be completely counteracted.

## AZERBAIJAN.

(From a Special Correspondent.)

During the past week the Admiralty has issued an official report regarding the treatment of the British prisoners in Baku. Our officers and men are, as the Admiralty knows very well, kept in captivity by the Bolshevists, and whether the term "Soviet Russia" or "Soviet Azerbaijan" is used, the main fact is that the Lenin-Trotsky gang are responsible, and it is from Moscow that all orders regarding Baku are issued. But most of the British newspapers still refer to the "Azerbaijan Government" and to the "Azerbaijan Republic," although neither the Azerbaijan Government nor the Azerbaijan Republic exists to-day.

Politically speaking, there is no Azerbaijan at present. There are simply the Baku and the Elisavetopol Provinces of the former Russia. A group of Russian Commissars sits in Baku and calls itself a government: the towns of Baku and Elisavetopol are garrisoned by Red troops; the "laws" come from Moscow—but the Azerbaijanians are no more Bolshevists to-day than they ever were. One might even go so far as to say that the people are intensely anti-Bolshevist, and what was formerly indifference has now changed to bitter hate.

After the British occupational troops left Azerbaijan in August of last year, the Mussulman Republic began to settle down and to put its house in order. On January 12 of this year, the Supreme Council, on the initiative of Lord Curzon, recognised the Azerbaijan Republic, *de facto*. Everything promised well for the future, and the recognition *de jure* was looked upon as certain in due time. But the Mussulmans were reckoning without their Christian neighbours.

The Volunteer Army under General Denikin had been forced to retreat before the advancing Reds; the Volunteer Fleet had sailed from Petrovsk to be interned at Enzeli; Astrakhan, which had been ice-bound during the winter months, opened up in April to let the Bolshevist ships set out to sea; and the Armenians, casting the shreds of peace treaties to the wind, set out once more to massacre the Mussulmans. Villages were set on fire, and most of the wretched peasants who failed to seek safety in flight were cruelly done to death. Protests were in vain, and finally the Azerbaijan troops were sent to save the Mussulmans in Karabagh, the mountainous part of the Elisavetopol Province, which the Armenians were devastating. So it came about that when the Bolshevist forces approached Baku on April 27, there was no army to overcome. The Azerbaijan soldiers were away among the mountains in the south. Azerbaijan, too, had no ships to check the entry of the Red fleet to Baku harbour. So Baku went over to the Bolshevists without a single shot being fired, most of the members of the Government fled, and another red page was opened in the history of the luckless oil town.

To-day the Bolshevists are in power in Baku and in the town of Elisavetopol. But they are not in power among the hills. It is only a matter of time before the Azerbaijanian will turn against his oppressors. Already there have been risings in many of the villages, and bands of Azerbaijanians have thrown the Red troops out. These risings are increasing, and I am certain that they are the prelude to a great revolt. The oil of Mohammedanism cannot be successfully mixed with watery Bolshevism. The day will come when the people of Azerbaijan will drive out the Russian invaders and come once more into their own. It may not be just yet—the country is suffering from a lack of arms and ammunition—but it will come.

Then the future of Azerbaijan should be a rosy one. The geographical situation of the country is most important. It is a link between Europe and Persia and between Europe and Trans-Caspia. The Julfa railway line will in course of time be completed, and this will not only open up the fertile valley of the Arax, but it will also connect Baku with the important Persian commercial centre of Tabriz. It will lead to the further opening up of the whole of the Middle East.

What is equally important is that without an independent Azerbaijan it will be almost impossible for the new Republic of Georgia to maintain its independence. Georgia cannot exist without Azerbaijan—and without Georgia and the Batoum outlet to the Black Sea Azerbaijan would be shut off from Europe and choked to death.

From the purely political point of view, Azerbaijan is of vast importance. Russia, as Russia, does not exist. Revolution and civil war will go on for many years to come in the unhappy land of Soviet rule. Finland, the Baltic States, and Poland are already barriers to prevent the spreading west of Bolshevism and all the horrors that the name implies. Azerbaijan and Georgia can be the carriers in the south. The disease has spread quite far enough. For the health of the world it is of vital importance that it should be checked before it has spread further.

For over a century the old, historical country of Azerbaijan suffered from the oppression of the Russian yoke. Russians and Azerbaijanians have nothing in common—religion, language, or mode of life. For a brief spell Azerbaijan came to life again, only to die once more beneath the Russian blows. But the people have tasted Freedom. A new republic will be born, and all the creative work that had begun will be commenced afresh.

The Bolshevists have taken away the liberty of the country. But they cannot take away the country's natural wealth. The oil wells are practically inexhaustible, the giant forests and the fertile plains and steppes remain, and there are as good fish in the Caspian Sea as ever came from it to the land.

## EDUCATION IN MESOPOTAMIA.

From a Correspondent.

Baghdad, August 8.

Mr. H. E. Bowman, C.B.E., Director of Education for Mesopotamia, and Mrs. Bowman are shortly leaving Baghdad for Cairo, where Mr. Bowman is returning to take up an appointment under the Egyptian Ministry of Education.

A great deal has been accomplished since Mr. Bowman's first arrival in this country in August, 1918, to extend and co-ordinate educational policy, which has, on the whole, met with approval from all classes. There are some, no doubt, who would like the machine to have gone faster, and who complain that the present administration has not provided enough in the way of secondary and higher education. But, on the other hand, there are many who realise the difficulties in the way of finance in these early days, difficulties made no easier by the recent trouble on the Euphrates, which will tend to reduce still further an already attenuated budget. Again, the lack of suitable buildings has been a very serious handicap. Many of the buildings originally erected for educational purposes have been in continuous occupation by the military or by other civil departments. Some of them are gradually being returned to their rightful owners, but many still remain in alien hands.

Last, but by no means least, is the dearth of competent teaching staff. Every ex-schoolmaster who has offered his services to the department has been given employment. The majority of these, however, were never really well educated, and the four or five years which they have recently spent as officers in the Turkish Army has not tended to improve their professional capacity. The Baghdad Training College, where upwards of 100 students from all parts of the country are under training, will continue to be the main source of recruitment, while the department will have to depend for some years to come on Egypt and Syria to provide a limited number of experts for secondary and higher education.

A plentiful supply of school books and materials is now to be found in the central store of the department in Baghdad, and in the branch stores in Mosul and Busreh; while the bookshop in Baghdad, of fiction and general literature, provides books for the general public in various languages, and has proved an even greater success than was anticipated.

The Turk was an adept in producing a showy structure, of which the façade was everything, and the interior little more than a hollow shell. The policy of the present Administration has been to lay a solid foundation of primary education throughout the country before embarking on more ambitious schemes. The time has now come when a more advanced system can be inaugurated, and it is unfortunate that this should coincide with a change in *personnel* at the head of the department. It is hoped, however, that this change will not mean a break in educational policy, which is rightly regarded here as one of the pillars of the administrative structure.

# CORRESPONDENCE.

## ITALIANS AND YUGOSLAVS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I should not have troubled you with another letter had not Mr. Glishitch challenged me to "justify" a number of totally unreasonable charges that he brings against the Italian nation. He admits now that I did not exaggerate the work of the Italian fleet in saving the Serbian Army, as he said that I did in his first letter. He merely continues to point out the terrible state of the remnant rescued and its heroic endurance, which was never in dispute.

Then he proceeds to repeat some amazing legends that he and his countrymen apparently believe. He says that the Serbian Army released the 400,000 Yugoslavs of Istria and Friuli, who are now "groaning under the oppressive government of d'Annunzio's military forces." Is it necessary to point out that the Serbian Army merely played its part in the defeat of the Bulgarians in the Balkan side show, and that the sixty-three divisions of the Austrian Army were crushed at Vittorio Veneto by the Italians? The Italians, therefore, were the liberators of the Yugoslavs, who had groaned for centuries under Hapsburg tyranny, although the Croat divisions fought more fiercely against these "liberators" than either the Austrians or Hungarians did!

Actually in Macedonia the severest fighting in the final victory was done by the Allies, as is shown by the relative casualty lists. (Let Mr. Glishitch consult Mr. Collinson Owen's History of the Salonika Force.) The British had more than six times as many casualties as the Serbs in September, 1918, the French Armèe d'Orient about three times as many, and even the poor despised Italian Expeditionary Force in Macedonia suffered larger losses in the pursuit of the Bulgarians at the battles of Bucin, Baba Planina, Cer and Sop than the Serbian Armies suffered in the whole of their victorious advance from September 18 up to the Armistice. As a British staff officer observing these operations, I had a unique chance to know all about them. The main contribution of the Serbs to this Macedonian victory was (when the lines of the Bulgarians had been broken by the capture of the Sokol by the 148th French Infantry Regiment) the marvellous dash and endurance with which they turned the defeat into a rout by cutting the Bulgarian communications.

Nor are the Yugoslavs, released by the Italians, groaning under the oppression of d'Annunzio's military forces, for d'Annunzio's government is confined to the city of Fiume, where the population of 40,000 is mainly Italian by race or sympathy. The 400,000 he refers to lie within the strategic frontiers of Italy that are assigned to Italy by the Treaty of London and are now provisionally occupied by Italian troops under the terms of her armistice with Austria.

Mr. Glishitch, though a champion of these 400,000 Yugoslavs, says nothing of the two million subjects of alien race—Germans, Hungarians, Bulgarians, Albanians, and so forth—who are now "groaning" under the government of Yugoslavia. But "groaning" is Mr. Glishitch's word, not mine, and in view of the known liberalism of Italian rule and the faith that we all must desire to have in the liberalism of Serbian rule, would it not be best if we left all such invidious expressions out of the question?—I am, etc.,

HAROLD E. GOAD.

## RHODES.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I beg to send you herewith a literal translation of the Memorandum which was sent by the Representatives of the Rhodian People to the Italian Parliament, and which may be of interest to your readers. I have received many complaints as regards Italian maladministration in Rhodes, which I do not intend to publish before investigating.—I am, etc.,

THEODORE D. MOSCONA,
(late Dodecanesian Delegate in Manchester).

32, Oxford Street, Manchester, September 24, 1920.

(Enclosure.)

MEMORANDUM.

The Hon. the President of the Italian Parliament, Rome.

Mr. President,—The undersigned representatives of the Hellenic population of Rhodes, forming three-quarters of the whole population of the island, and acting in their name and by their authority, protest against the recent Greco-Italian agreement concerning Rhodes, for the following important reasons:—

1. Because this arrangement is contrary to the points of the Wilsonian doctrine, which the Allied victorious Powers have acknowledged as the basis for the signing of peace, and accepted the cancellation of the pre-existing pacts, whether open or secret.

2. It is contrary to the doctrine of nationalities, which the Italian people cannot overlook without chiefly hurting their prestige and their grandeur, because not only have they supported and consolidated their unity upon this doctrine, but also claimed, under the cover of the said doctrine, the liberation of their Irredenti brothers. It is well known that in Rhodes exist 31,716 Hellenes, against 5,023 Turks, 3,293 Jews, and 255 other Europeans of various nationalities.

3. It is contrary to the promises given to the people of the island by the Onorevoli Admirals Viale and Presbitero and General Ameglio, when Rhodes was occupied by them in the name of the King of Italy, that under these pledges none of the occupied islands would be restored to Turkey, but handed over to Greece. These official promises stand as a pledge of honour for Italy, form, and must form, a question of honour for the Italian people before the civilised world and history.

4. It is contrary to the liberal spirit and the traditions of the gallant Italian people, who always fought for liberty.

5. It is contrary to the well-meaning interests of the Italian people itself, who, while deriving no profit from an island which has no harbours, not even raw materials and the means of being self-supporting, on the other hand will bear the burden of the administration and the security of the island.

6. It is contrary to the interests and the prosperity of the island as well, which, isolated as it will be in the Ægean Sea, and having no means of self-sufficiency, will suffer suffocation and economic marasmus. When we take into consideration the national feelings of the people, who will always aim at the union with the Greek state, which now surrounds the island on all parts, it will be easily understood that every commercial, manufacturing, or agricultural movement will be neglected and destroyed.

7. It is contrary to the good relations which should naturally exist between the two sister nations, the Italian and the Hellenic—relations which are sought after on both sides.

It cannot be forgotten how close were the relations of the two peoples before the occupation of the Dodecanese, and how loosened they have been since the occupation, and, more especially, during the very tyrannical administration of the islands, to become at present hostile (why should we hide the fact?), and to such an extent, as to render it impossible for a statesman of the magnitude of M. Venizelos to modify them, as the last meetings in Athens have proved. It is not a secret, either, that as long as Rhodes is kept by Italy, under whatsoever pretext or formality, a Greco-Italian friendship will be an unrealisable dream.

For all these important reasons we warmly beg and pray the representatives of the noble and chivalrous Italian nation not to consider the question of Rhodes from the narrow Imperialistic view, but from the point of view of the general interests, and the historic honour which impose, on one side, to leave the people of Rhodes to be governed by that State to which, ethnographically, the great majority of its people belongs, and, on the other hand, if Italian interests in the Near East require the possession of a harbour or a naval base, Rhodes most gladly offers herself to compensate her great protectress on this point, out of gratitude for the national re-establishment of her people.

(Signed)

THE REPRESENTATIVES OF THE RHODIAN PEOPLE.

Rhodes, August 20, 1920 (o.s.)

## A TURKISH DISH

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I notice that "Corsair" states that a Turkish dish is called "Imam Baildi" (he will forgive my correction) because a priest was overcome with emotion at the sight of it, and fainted.

I know that is one theory as to the origin of the name, but does it carry conviction? No one could live in Turkey and hear the name without enquiring into the reason of the priest's "strong weakness."

The general idea seemed to be that the priest over-ate himself, and for a long time I accepted this explanation, and, indeed, I should have made use of it during the war for anti-Turk propaganda, but that once, when I mentioned this matter in Turkey, I met with such emphatic opposition that I felt bound to alter my opinion.

The true explanation, I was persuaded, is that the priest, after inventing the dish, advertised it for sale, and the crowd, to whom he had to ladle it out in consequence, was so great that he had not a moment's rest all day. He fainted from sheer hard work.

As the question involves the reputation of the Turks, it seems to me an important one. "Corsair's" theory makes the priest look both greedy and weak; my old idea is no more creditable to the Turks, but the third explanation not only clears them of all accusation of greed, but actually shows them to be a hard-working and discerning race.—I am, etc.,

H. C. DE J. DU VALLON.

86a, Lexham Gardens, W., September 23, 1920.

## THE DUKE'S VISIT TO INDIA.

A Reuter's message from Simla, dated September 22, says: It is announced with regard to the Duke of Connaught's forthcoming visit to India that his Royal Highness will arrive at Madras in the second week in January. At the end of January and beginning of February he will be in Calcutta. The Duke will, on behalf of his Majesty, inaugurate the Provincial Legislative Councils in Madras, Bombay, and Bengal, and also the Chamber of Princes, the Council of State, and the Imperial Legislative Assembly at Delhi. On these occasions he will deliver messages from the King-Emperor.

The programme includes a visit to Rawal Pindi, and the Duke will also pay private visits to the Central Provinces and Agra. His total stay in India will be seven weeks. The Delhi ceremonies are fixed for the second week in February. The Duke will sail from Bombay for home about the end of February.

# NEAR EAST BOOKSHELF.

I.—"DEAD TOWNS AND LIVING MEN: BEING PAGES FROM AN ANTIQUARY'S NOTEBOOK." By C. Leonard Woolley. (Humphrey Milford, Oxford University Press. 12s. 6d. net.)

II.—"HELLENIC STUDIES." By Stanley Casson. (London: Elkin Mathews. 6s. net.)

## I.—MEN AND RUINS.

Before the war Mr. Woolley and Mr. T. E. Lawrence were following, with marked success, the profession of archæological excavators, and when war came they placed their services and their somewhat rare knowledge of certain parts of the Near East at the disposal of the Government. Thereafter Fortune did not share her favours equally between them; for while Mr. Lawrence had a series of adventures that anyone might envy him, and achieved fame and honour, Mr. Woolley had the bad luck to be taken prisoner by the Turks—through no fault of his own—and was thenceforth doomed to inactivity. That he would have made full use of similar opportunities to those enjoyed by his friend if they had come his way this book is sufficient proof; but since it seems that we owe it largely to his captivity, we, being human, cannot altogether regret that captivity. For the book is really excellent, full of interest of a varied character, and written with a quiet sense of humour and an absence of affectation that are noteworthy in this class of work. We get, naturally, a good deal about the excavations at various sites in which the author took part or of which he was in charge, but he is skilful in avoiding technicalities and "dry" details, and we are never tempted to "skip." In a word, he makes both the "dead towns" and the "living men" interesting, and it would be hard to say which is the more interesting. For that matter, it must be added that when he is writing of Aleppo, which, with all its shortcomings, is still very much alive, he is equally entertaining; indeed, some of the stories of Turkish "enterprise," official generally, in this fascinating city, which are told in the last chapter, are among the best things in the book. There is a tale of the installation of the telephone by all-native talent which is delicious, and another of the attempt of a former Vali to bring water to the town from the Kuwaik, which is equally good; but unfortunately they are too long to be given here. We can only say that both projects ended in failure which would have been tragic if it had not been so intensely funny.

Mr. Woolley does not wax enthusiastic over the Egyptian fellah as so many archæologists and travellers do:—

He is a hard worker, and with experience becomes very skilful when called upon for delicate work; he is shrewd enough to have a very fair idea of the value of his finds and of their relative date, but he has remarkably little real interest in his work and less in you; with him it is a question of wages and baksheesh, and no more.

And this passage will be of particular interest at the present time:—

The fact is that the Egyptian does not like the Englishman or the English Government; it is partly a religious question, for Mohammedanism is more intolerant in Egypt than almost anywhere else, and partly political. The fellah, who more than any other class has benefited by our rule, is aware that our presence is, on the whole, to his interest, but its tangible advantages must be kept very clearly before his eyes if they are to outbalance its defects, for his historical memory is short and the old régime too much a thing of the past to suffice as a standing contrast. I have known a peasant who had heard that some money he had sent home by post was overdue, complain bitterly that he could see no use in having a Government at all if a man could not send money about in safety; thirty years before he would not have dared to let the Government know that he had any money, but that change in the general condition of things never struck him.

There are in this passage several sentences that might be italicised for the benefit of the idealists of to-day! The author holds that the Sudanis "are much pleasanter fellows than the Egyptians to work with"; they are "a cheery, open set . . . and have a sense of loyalty and attachment" that are lacking in the Egyptian.

What we read of the centuries-long struggle between sand and tamarisk at Faras is a mute tragedy that would probably appeal to Mr. Thomas Hardy. Planted by "the husbandman of an earlier day, Meroitic or Christian," the tamarisk has had to fight desperately for life against the silent, drifting sand:—

The wind-borne sand caught in the thick spiny growth and formed mounds against the bushes, but these pushed their branches through the drift and still formed a barrier. More sand blew on, the mounds grew higher, and still the bushes struggled to keep their heads clear, until now they are trees sixty or a hundred feet high, the tips of whose branches only push out from the sides and tops of the dunes, while their trunks go down through the centre to the solid ground beneath. Many are dead now. . . .

And, one supposes, the others are doomed, the living to be vanquished by the lifeless—the blind, driven sand that some of us hate so much.

But it is, after all, the "living men" that will claim most attention from the average reader; and they are a very human, very entertaining lot, whether Kurds, or Arabs, or Sudanis, or—dare we add?—Turks. Of the Italians we say nothing here, only because Italy is hardly "Near Eastern." Best of all the crowd to whom Mr. Woolley introduces us is Haj Wahid, a gay Lothario with four murders in one night to his account, a *chef* of parts, and, above all, a beater of Germans and a man of great bravery. On one occasion, in the interests of his masters, he "held off" for several days a German engineer of the so-called Baghdad Railway and his men, who wished to encroach on the English excavators' concession. On another, being annoyed by a second German engineer in the same manner, he "promptly knocked the engineer down, and, seizing him then by the back of the neck, proceeded to rub his face in the mud." Strange to say, the matter was allowed to drop! What Mr. Woolley tells us of the building of the great line and the ways of certain of its sub-contractors is amazing. The book is certainly one to read.

## II.—SKETCHES OF GREECE.

Mr. Casson has well called his volume of seven essays "Hellenic Studies," for it is instinct with knowledge and love of both modern and ancient Greece. There is in his sketches a delightful fragrance that only a nice learning can produce; and it is, incidentally, a fragrance which the publisher has done his best to conserve.

These essays deal chiefly with the facts of the present Greece as illuminating the events of the past Greece. Thus in the first, "Hymettos," that grey mountain dominating Athens, the "barren hill that frames the Parthenon in violet and is the last thing that catches the light of the setting sun," the influence of the height is shown to have been great even from the time when the Pelasgians (the reputed ancestors of the modern Armenians) possessed it. And a convincing claim is made in an essay called "Sacred to Pan and the Nymphs" that Pan was a purely Hellenic god—an essay that ends with a remark which poets of all civilised countries would certainly challenge: "In nowhere else can Pan be found but in Greece, for he was never a wanderer." But the three most charming things in the book are "Kings of the Sail," "The Waters of Greece," and "L'Exaltation de la Fleur." We are shown how, to use Mr. Casson's quotation of R. M. Heath:—

The old thalassocrats and merchant kings
Filled the Ægean with their scurrying wings.

we are shown "the almost sacred value of water in Greece"; and we are shown that nature worship, of which modern men fondly imagine they have the monopoly, was freely indulged in by the ancient Greeks. (As a matter of fact, the old jibe that the Greeks sacrificed substance to form is not often made by the present generation of Englishmen, who have read such reverers of form as Hardy, Bridges, and Flecker.)

Mr. Casson is much concerned with destroying the old idea of a rigid "Classicism" as applied to the Greeks; and as if to exemplify the truth of his comments, he allows his matter, despite or because of his love for Greek literature, to be far superior to its expression. It is indeed much more in the substance than in the form of this book that the charm lies. But to all lovers of the nice, out-of-the-way points belonging to Hellenic culture, this volume will be very welcome; and it should be added that in addition to the excellent production of the book there are seven attractive illustrations among the text.

Messrs. Hutchinson and Co. will publish shortly "Ex-King Constantine and the War," by Major G. H. Melas, who was private secretary to the King until 1915, when he joined the Venezelist party. The book is said to contain some "amazingly candid revelations" of the ex-King's personal character.

HINDUSTANI SELF-TAUGHT
AND GRAMMAR.

# PERSONAL AND GENERAL.

**TO-DAY.**

September 30 (New Style).
September 17, 1920 (Old Style).
Moharram 17, 1339 A.H., of the Moslem Calendar.
Tishri 18, 5681 of the Jewish Calendar.

Prince Nicolas of Roumania has returned to Eton.

Prince Antoine Bibescu left Paris for Roumania last week.

General Sir William Manning, Governor of Ceylon, arrived at Colombo last week.

Earl and Countess Granville have arrived at Kensington Palace from Athens.

Lord Sinha, the new Governor of Bihar and Orissa, arrived at Bombay on Saturday.

H.E. the Greek Minister returned to London from Paris on Sunday.

His Highness Nasr-ul-Mulk, ex-Regent of Persia, left London last Friday for Paris, after a few days' visit.

Colonel Jurjevitch, of the Serbian Army, arrived in London last week on a special mission.

Mrs. Francis W. Goodbody has left London for Egypt, and will not be back till after Christmas.

The Prince Regent of Serbia returned to Belgrade on September 23, after paying his first official visit to Serajevo.

It was announced on Monday that General Sir John Maxwell was out of danger and progressing so satisfactorily that no further bulletins would be issued.

M. Constantine Collas, First Secretary (specially attached) to the Greek Legation, returned to London last week from Paris, where he had been attending the Conference of the League of Nations.

Sir Frederick Rowlatt, K.B.E., Governor of the National Bank of Egypt, left London last Saturday for Egypt. Lady Rowlatt and the Misses Rowlatt will return to Egypt in November.

The engagement is announced of Captain Leslie E. Randall, Indian Army, only son of Mr. and Mrs. C. E. Randall, of South Norwood Park, and Ethel, youngest daughter of Mr. and Mrs. James Laird, of Catford.

Lieutenant-Colonel Amery, M.P., Under-Secretary for the Colonies, after spending some time on the Continent, returned to London last Friday and resumed his official duties.

A marriage has been arranged and will take place very quietly on October 20 between Mr. A. A. L. Parsons, Indian Civil Service, and Katharine, younger daughter of Mr. and Mrs. S. G. Parsons, Pelham House, Lindfield, Sussex.

The marriage of Lieutenant-Colonel George A. McWatters, 81st Pioneers, I.A., and E. M. Christina, younger daughter of the late Edward A. Harvey and Mrs. Harvey, of 26, Victoria Square, Clifton, Bristol, will take place in Bombay in November.

The King has granted unrestricted permission to Elise Isabelle Lady Watts to wear the Insignia of the Fifth Class of the Order of St. Sava conferred upon her by the King of the Serbs, Croats, and Slovenes, in recognition of her services to the Serbian sick and wounded during the late war.

Mr. H. Charles Woods, who, as announced in these columns last week, has left London for an extended tour of the Near East, is proceeding to Athens and Constantinople, by way of Yugoslavia, and hopes to return to this country through Bulgaria and Roumania.

On Sunday M. Boeresco, Minister Plenipotentiary and Chargé d'Affaires of the Roumanian Legation, entertained to luncheon Commander Balmesco and the members of the Roumanian Naval Mission.

An engagement is announced between Captain E. C. Mockler, 1st K.G.O. Gurkha Rifles, son of Major-General Mockler, Rochford Grange, Guernsey, and Kathleen Coutart De Butts, daughter of the late Captain F. R. De Butts, R.A., and Mrs. Forster, St. Louis, Guernsey.

A marriage has been arranged, and will take place in October, between Mr. L. P. Kent, of Mysore, India, son of the late Rev. Charles Kent, of Dinham Hall, Ludlow, and Mrs. C. V. Clement Davies, only daughter of Captain and Mrs. Allaway, of Astro House, Llanbedr, Merionethshire.

Deputy Surgeon-General William Arnold Smith Wynne, M.D., Indian Army, of The Priory, St. Olaves, Suffolk, died on July 1, leaving estate of the gross value of £12,174.

The engagement is announced of Major Colin F. Marr, Indian Medical Service, son of the late Surgeon-Major G. Marr, Indian Medical Service, and of Mrs. Marr, 2, Rubislaw Terrace, Aberdeen, and Alethea Seymour Martin, eldest daughter of the late Rev. Harry Martin Petty, M.A., vicar of Milton Abbot, Devon, and of Mrs. Petty, St. Martin's Lodge, Farnham, Surrey.

Subscriptions to the Christ Church, Constantinople, War Memorial Fund—of which particulars have already appeared in our columns—may be sent to the President of the London Committee, Lady Lowther, 23, Belgrave Square, or to either of the Hon. Treasurers, Lady Laurence, C.B.E., or Admiral Sir E. J. W. Slade, K.C.I.E., 35, Surrey Street, Strand.

Our Belgrade Correspondent writes (September 18):—
H.R.H. the Crown Prince Regent Alexander, accompanied by his suite and several ministers, left Belgrade on a State visit to Serajevo on the 18th.
The Rev. R. Laffan, Reader in History at Queen's College, Cambridge, who was chaplain to the British transport units attached to the Royal Serbian Army in Macedonia, author of the well-known book on Serbia, "The Guardian of the Gate," who has recently been revisiting Belgrade, left on Friday for Budapest.

The Britain and India Association is arranging a conference on India, followed by a social evening, for Saturday, October 30, at the Mortimer Halls, Mortimer Street (near Oxford Circus). The conference will begin at 2.30 p.m., and will be addressed by several speakers. Questions and discussion will follow. During the evening a short Indian play, adapted from Tagore, will be given. Miss Ratan Devi, a well-known singer of folk songs, will sing some British and Indian folk songs. Those present will also have the opportunity of seeing some beautiful exhibits of Indian arts and crafts, loaned and arranged by Thakur J. Seesodia. Full particulars and programme may be obtained from the hon. sec., 7, Southampton Street, High Holborn, W.C.1.

The Central Asian Society has arranged the following programme of lectures for the coming session:—October 21: Capt. E. W. Sheppard, "Some Military Aspects of the Mesopotamian Problem." November 10: Sirdar Ikbal Ali Shah, "Federation of the Central Asian States under the Kabul Government." November 18: Major F. M. Bailey, C.I.E., "Turkestan under the Bolsheviks." December 16, Major-General L. C. Dunsterville, C.B., "The Military Mission to N.W. Persia, 1918." January 20: Capt. P. D. Acland, "Communications in the East, their expansion by means of aircraft." The address of the Society is: 74, Grosvenor Street, W.1., and Lieut.-Colonel A. C. Yate is the Hon. Sec.

## APPOINTMENTS, ETC.

Colonel Douglas Capitaneano has been appointed Military Attaché to the Roumanian Legation in London, in succession to Colonel Rosetti.

The Earl of Lytton has been appointed Under Secretary of State for India in succession to Lord Sinha, who lately resigned that office on being appointed Governor of Behar and Orissa.

M. Georges Madjaroff, who has been in residence at the Bulgarian Legation some months, charged with Bulgarian interests, has now been officially appointed Bulgarian Chargé d'Affaires here. He is the son of M. Michel Madjaroff, who was Bulgarian Minister in London before the outbreak of the war.

The King, on the recommendation of the Secretary of State for War, has been pleased to approve the following appointments:—Major-General Sir Charles Harington, K.C.B., D.S.O., to be General Officer Commanding-in-Chief the Army of the Black Sea, with promotion to the rank of Lieutenant-General, in succession to Lieutenant-General Sir

Digitized by Google

George Milne, G.C.M.G., K.C.B., D.S.O., who will shortly relinquish that appointment.

Lieutenant-General Sir Philip Chetwode, Bt., K.C.B., K.C.M.G., D.S.O., to be Deputy Chief of the Imperial General Staff, in succession to Sir Charles Harington.

## OBITUARY.

It is announced that Mr. Francis Arthur Adam Cowley, C.I.E., Chief Engineer of Bengal, has died at Darjeeling, India, in his fifty-second year. He joined the India Public Works Department in 1890 as an assistant engineer, became superintending engineer in 1912, and chief engineer in October, 1917.

Major-General Henry W. Holland, C.B., died at Addiscombe on September 20. He was born in Bombay ninety-six years ago, joined the 13th Bombay Native Infantry in 1841, and retired in 1878. He saw service in the Abyssinian War of 1867-68, and was mentioned in dispatches, and from 1870 to 1877 he was Commissary-General of the Bombay Army.

The death has occurred at Helouan, Egypt, of Mr. George Wyman Bury, the explorer, at the age of 46. About 1895 he was travelling in Morocco, and from 1896 to 1901 he made journeys in the Aden hinterland and other parts of South Arabia, making archæological and natural history investigations, and penetrating into the Great Red Desert. He was political officer in the Aden Protectorate during the military operations of 1903-4, took part in a zoological expedition in Somaliland in the two following years, and then returned to the exploration of Southern Arabia. When the war broke out he joined the Intelligence Staff on the Egyptian front, and was later attached to the Red Sea Northern Patrol. He was one of the British officers who were associated with the revolt of the King of the Hejaz against Turkish rule. Mr. Bury was the author of "The Land of Uz," "Arabia Infelix," and "Pan-Islam."

## BULGARIANS IN BRITAIN.

We are asked to publish the following official communication—"The Bulgarian Legation in Great Britain (51, Queen's Gate, London, S.W.7. Chancery of the Legation at 3, Queensberry Place, London, S.W.7) informs all Bulgarian subjects residing in Great Britain and her Dominions that, in accordance with a new Act of the Bulgarian Parliament, they all are obliged to register in the Legation. The Bulgarian Legation requests all whom this may concern to send their passports and communicate their present addresses. Those who fail to comply with the prescriptions of this law are liable to pecuniary penalties and cannot expect any aid from the Bulgarian authorities."

## NEWS IN BRIEF.

The Secretary of State for India announces that the competitive examination for the Indian Medical Service will not be held during 1921, but that arrangements for the appointment of candidates by selection in India and in England will be continued for that year. The question of resuming the examination in January, 1922, is under consideration, and an announcement will be made in January, 1921.

M. Clemenceau sailed from Marseilles for India on September 22.

Riza Pasha, a former Turkish Minister of War, died last week, aged eighty-six. He had lived in retirement at Nice for some years.

It is stated that the Egyptian Ports and Lights Administration has decided to build a new lighthouse in the Red Sea at an estimated cost of £E25,000.

The new Palestine stamps are now issued. They have the word "Palestine" printed on them in Arabic (at the top), English (in the centre), and Hebrew (at the bottom).

It is announced that the Greek Communist Party has joined the "Third International."

Fifty-four officers and 970 men of the Indian Army recently made the pilgrimage to Mecca, and were the guests of the King of the Hejaz for fifteen days. The British Government provided free return passages.

The Mayor of Valona (Albania) and a number of his fellow-citizens have issued an appeal on behalf of Aveni Rustem, the Albanian student who assassinated Essad Pasha in Paris on July 13 last.

All Bulgarian prisoners who were detained in Greece have been repatriated except 600, and these will be repatriated as soon as the Greek juveniles still detained in Bulgaria have been returned.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses. Nursery Governesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
(*facing beautiful Cathedral*).

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

## THE OFFER TO EGYPT.

Egypt is to be congratulated on the ease with which the Delegation charged with the task of winning approval for the proposed agreement with Great Britain have completed their work. The members returned to Egypt on September 8, and are now due to leave again on October 1. In this time they have sounded to their own satisfaction Egyptian opinion on the general principles which they themselves accepted in England as the basis for the future status of Egypt, and with such favourable results that the negotiations in London should be resumed with complete confidence on both sides. Particularly noticeable have been the overwhelming verdicts in favour of accepting Lord Milner's proposals secured from both the Legislative Assembly, in unofficial session, and the Egyptian Bar. These two bodies were the backbone of the former agitation, and their emphatic endorsement of the offer should prove of good augury for the smooth elaboration of the details of the ultimate agreement. With their support, and in view of the general attitude of the different elements of the population which have been consulted during the last three weeks, it is unnecessary to lay much stress on the two discordant notes in the chorus of approval. The first came from a coterie of princes who have tried before to win notoriety by publicly espousing without any special reason what appeared to be a popular cause. This time they would seem to have made a miscalculation, as public opinion is not with them. Their action, indeed, is supported only by Hasb-el-Watani, the old Nationalist Party, which refused at first to associate itself with the line of action adopted by Zaghloul Pasha, and now finds no other way of justifying its existence than in permanent opposition to him. Its manifesto on the subject declares that the proposed agreement contains no advantages to Egypt, that it confirms the Protectorate of 1914, and robs Egypt of her internal and external sovereignty. The old Nationalist Party, therefore, advises the Egyptian nation not to accept Lord Milner's scheme as a basis of settlement, but to continue to fight for national aspirations by all legitimate means. This is precisely the attitude adopted a year ago by Zaghloul Pasha and his followers, which threatened to work the undoing of Egypt. At the eleventh hour it was abandoned by them, and it is pathetic to see their discarded rôle taken up by their political opponents in a desperate effort to obtain party capital. A far more practical and patriotic course would have been to make common cause with the Zaghloul delegation, and to work out in harmony with them the details of the final treaty between Egypt and Great Britain.

That final treaty, as was indicated in the Foreign Office statement issued when the discussions between Zaghloul Pasha and Lord Milner were adjourned, will be the subject of negotiations between accredited representatives of the British and Egyptian Governments. Before this stage is reached, however, the Egyptian Delegation have to report on their mission among their own countrymen, and the discussions in London will be continued, in order that any fresh ideas gleaned during the visit to Egypt may be duly considered. In view of the course of events, it would seem that the report of Lord Milner's Mission could now be reduced to small proportions, as it will need to contain little more than the general principles on which it is recommended that the final settlement should be based. The valuable material collected by the Mission in Egypt will have to be made available for official reference, but as a result of the favourable turn taken by the negotiations there can be no necessity to revive in any published document the story of the recent troubles. When the finishing touches have been placed on the understanding between Zaghloul Pasha's Delegation and Lord Milner's Mission, it will only remain for the full terms to be submitted to the British Government, which will have to decide whether it can endorse the recommendations of the Mission. From this point, therefore, interest in the Egyptian question may be said to have shifted from Egypt to Great Britain. The general outline of a future agreement between the two countries has been suggested, and Zaghloul Pasha's Delegation have secured the consent of the bulk of their fellow-countrymen to it. Lord Milner and the members of his Mission were selected by the British Government (actually by the Foreign Office) for the purpose of reporting on the Egyptian situation, and it is almost inconceivable that their recommendations should be overridden. We cannot, however, overlook the fact that the Mission has no executive authority. Except for the vital issues at stake, the Mission will have been on the same footing as any other similarly appointed body, and it is open to Parliament, or indeed the Cabinet, to accept or reject their conclusions. But the issues at stake are vital, and for this reason it is out of the question that any serious challenge should be offered to Lord Milner's scheme. It may well be that even to individual members of the Government the *modus operandi* agreed upon with Zaghloul Pasha is unwelcome. We can imagine that it is a source of embarrassment to the Secretary of State for India, a disappointment to his colleague at the War Office, and perhaps unpalatable to Lord Curzon. But it would be impossible to contemplate anything amounting to a repudiation at this stage of Lord Milner's authority to bind the Government in the negotiations with Zaghloul Pasha. A reference to the subject in no way implies that any such step has been thought of; but it may not be altogether superfluous to mention the point, in case any section of public opinion in well-meant anxiety for the future of Egypt and in perfect good faith may still hold that a less radical measure of self-government would be more in the interests of the country.

Both in Egypt and in Great Britain we are satisfied that the great bulk of British opinion is content to accept Lord Milner's judgment in regard to the future status of Egypt. This attitude has succeeded to the first feeling of astonishment with which the news of the general terms of the offer was received. To understand the change it is only necessary to compare the situation in Egypt to-day with that of a year ago. It was in November, 1918, that Zaghloul Pasha formally presented his demands to the then High Commissioner, and twelve months later a portion of the Egyptian Press was proposing to inaugurate the day as a national holiday on the lines of America's Independence Day. Although the worst excesses had been suppressed, the country was in a general state of ferment: something like the wholesale assassination of witnesses for the prosecution in the murder trials then pending was being carried out, and in due course the Milner Mission was boycotted, with the inevitable accompaniment of demonstrations and inflammable speeches. To-day, as a result of the tact and statesmanship of Lord Milner, Egypt is to a considerable extent under the influence of a wave of pro-British feeling. It should be possible by the successful carrying out of the scheme which has now been accepted by the Egyptians to perpetuate that feeling, to the great advantage of Egypt and of the British Empire.

# BULGARIA AND THE TREATY.

## THE QUESTION OF A VOLUNTARY ARMY.

In the last issue of THE NEAR EAST attention was drawn to the action of the French Government in notifying the Bulgarian Government that it did not propose to avail itself of the powers conferred upon the Allies by Article 176 of the Treaty of Peace for the payment of debts by means of a Clearing House. By the terms of the Treaty the provisions of the Article in question were not to apply unless within a period of one month from the deposit of the ratification of the Treaty notice to that effect were given to Bulgaria. France, therefore, in this instance has used the discretion allowed her by the Treaty, and it will be of interest to learn how many f the Allied or Associated Powers have been at pains to notify the Bulgarian Government that a Clearing House for debts has been established. In the case of Great Britain notice was issued of the formation of a joint department for Austria and Bulgaria; but in view of France's step it would be a simple matter to charge the clearing house with Austrian debts only and to relieve it of responsibility in regard to Bulgaria.

Perhaps the chief point of interest attaching to France's action is its bearing on the general attitude to be adopted by the Allies towards Bulgaria. It will be remembered that the Treaty, in addition to the reservation regarding the establishment of a Clearing House for debts, left in the matter of reparation a loophole for "a reduction or a postponement of any particular payment due or a reduction of the total capital sum to be paid by Bulgaria." The wisdom of the reservations is obvious, as the Allies had at the time no very certain information upon which to base the particular terms imposed. But it is eminently desirable that in any mitigation of the terms the Allies should act in unison. Already France has shown a tendency to treat with Bulgaria independently, and such a policy, coming on the top of the individual action of members of the French missions during the period of the Armistice, who tried to persuade the Bulgarians that the British and not the French were responsible for the severity of the terms imposed upon them, is apt to give rise to misunderstanding, if not to actual friction. In their anxiety to establish themselves in a strong commercial position in the Near East the French have realised that it is to the interests of all the Balkan States to see Bulgaria freed from any disabilities that may retard her economic recovery. Neither Roumania nor Yugoslavia nor Greece will challenge this view, but all three can only regard with misgiving a return to the old policy of one Great Power trying to score off another in the Balkans.

Another question that has engaged the attention of the French Press in regard to Bulgaria is the provision contained in Article 65 of the Treaty, which reads: "Universal compulsory military service shall be abolished in Bulgaria. The Bulgarian Army shall in future only be constituted and recruited by means of voluntary enlistment." It is a well-established fact, acknowledged by all the Allied Military Missions that have been in Bulgaria since the Armistice, that the raising of a voluntary army presents insuperable difficulties to the Bulgarians, and, sooner or later, the question will have to be seriously discussed between the Bulgarian Government and the Entente Powers. M. Stambolisky, the Bulgarian Prime Minister, will shortly arrive in England at the invitation of the British Government. It is understood to have been a stipulation on the part of the latter that the question of a revision of the Treaty should not be raised during the visit. M. Stambolisky will appreciate the spirit in which the request has been made; for he will understand that it would be distasteful to Great Britain to seem to be going behind the back of an ally in discussing alone with Bulgaria any item in a Treaty drawn up in consultation with a number of allies. But he would be less than human if he did not avail himself of any laxity on this score shown in France, as the subject can never be far from the mind of the Bulgarian Prime Minister. It is to be hoped, therefore, that, if the French Government considers the moment opportune for raising the question of the future Bulgarian Army, it will notify the British Government to this effect, and allow the latter to take advantage of M. Stambolisky's presence, in order to discuss the point at length with him.

Over and above the provision that the Bulgarian Army must be recruited by voluntary enlistment, the Treaty stipulates that the total number of military forces in the army shall not exceed 20,000 men, including officers and depot troops, and that the number of gendarmes, Customs officials, forest guards, local or municipal police shall not exceed 13,000, so that the total number of rifles in use in Bulgaria shall not exceed 33,000; that all officers, including the gendarmerie and other services, must be regulars, who undertake to serve at least up to the age of forty; that the total length of engagement of non-commissioned officers and men shall not be less than twelve years' consecutive service with the colours. These terms follow closely the provisions laid down in the German Treaty, and it does not seem to have occurred to the framers of the Bulgarian Treaty that the conditions in the two countries are wholly dissimilar. A system appropriate to a highly industrialised country is not necessarily applicable to an agricultural country, where the bulk of the inhabitants are peasants, and landed proprietors to boot. The Bulgarian peasant is wedded to his land, and is not going to volunteer for the army for any period, and certainly not for twelve years.

With a view to carrying out the terms of the Treaty the pay of the private soldier has been raised to an amount varying from 348 levas to 756 levas a month, a sum in excess of a captain's pay under the old system. It so happens that the daily wage of unskilled labour in Bulgaria to-day is from 40 to 60 levas, while that of a skilled artisan in coal mines, etc., may be set at 3,000 levas a month. Even if the Bulgarian Government were to fix the soldier's pay at an amount higher than that of unskilled labour—a course that would hardly meet with the approval of the Reparation Commission charged with supervising the payment of two and a-quarter milliards of gold francs—it would probably only succeed in attracting the least desirable elements of the urban populations, and the Army would run the risk of becoming a communist body, or the instrument of political rivalries. All efforts made so far to recruit for a voluntary army, it is understood, have failed. At one centre where recruits for the gendarmerie were required, it was with difficulty that 17 applicants were secured, and of these twelve deserted almost immediately, as soon as they appreciated the terms of service. There is no reason to attribute the Bulgarian Government's dilemma to bad faith, or any desire to evade the terms of the Treaty. The difficulty was foreseen in Paris at the time when the terms were imposed, and attention was drawn to the impossibility of a voluntary army in Bulgaria. The Supreme Council, however, held other views.

The solution that the Bulgarian Government is prepared to suggest to the Allied Powers is understood to be a form of restricted obligatory service. Under the system laid down by the Treaty Bulgaria at the end of ten years could count upon having in the country some 50,000 trained men. If, on the other hand, she were allowed to recruit compulsorily an annual contingent of 7,500 for three years' service, at the end of ten years

she would have, inclusive of gendarmerie, 85,000 men who had served with the colours. This number would be considerably more than the Treaty stipulates, but would be insignificant compared with the half a million reservists (by that time) in the neighbouring countries.

It is not to the Allies' interests that Bulgaria should become the prey to internal disorder as the result of having no military force capable of acting as a deterrent to lawless elements. The question of the Army is, therefore, important, and it must be inferred that the subject has already been brought to the notice of their respective Governments by the different Allied Missions. In these circumstances, and especially if it is probable that the question is to be discussed in Paris, there would seem to be no reason why the British Government should not take it up with M. Stambolisky during his stay in England.

## THE CARAVANSERAI.

*Think, in this batter'd Caravanserai*
*Whose Doorways are alternate Night and Day,*
*How Sultán after Sultán with his Pomp*
*Abode his Hour or two, and went his way.*
—OMAR KHAYYAM.

I have a grievance against the *Egyptian Gazette*. The other day, in looking over some back numbers, I came across the following paragraph, in its issue of August 31:—

> Fate recently threw a beautiful Greek girl, torn from her husband, into the hands of Ali Bey, Pasha of Aleppo. The husband, learning the retreat of his wife, went to the Pasha and offered him a considerable ransom. Not only did the Pasha refuse this, but he also reunited the married couple, with a present of 30,000 piastres.

Now am I not justified in feeling that the "E.G." ought to be much more careful in giving such stories to the world? What does the second word of the paragraph, the "recently," mean? The title, "Ali Bey, Pasha of Aleppo," seems to me to suggest that the incident must be dated back before General Gouraud and his North Africans took a hand in the game in Syria; but the "recently" makes me feel doubtful on the point. Then what kind of "Fate" threw the beautiful Greek girl into the arms—no, I beg pardon, the hands—of Ali Bey? It does not look as if the Bey had sent out his minions (ha! ha!) to scour the city for victims of his lust—or however it ought to be expressed!—otherwise he would hardly have behaved as he is reported to have done later on. Why did the husband offer the Pasha a ransom? Why did the Pasha refuse it? And why, why, *why* did he part with his 30,000 piastres? In these days that is a lot of money for a poor Pasha. Really, one is tempted to wonder whether some bright journalist has not been "pulling the leg" of the "E.G.," and passing off as "news" some choice bit from the "Thousand Nights and a Night." And the doubt is harassing, for the story, if true, or even nearly true, would serve to show that the Orient still is the Orient, in patches at least. As it is, the only thing I can feel really sure of is that the tale is not an invention of—a Greek.

***

Journalists are often accused of making trouble, and I fear the impeachment is not entirely unjust. But it seems to me that I have come across an instance of a directly opposite character. The *Sunday Times* of September 19, published, by request, a somewhat acrimonious correspondence that had taken place between Lord Curzon and Major W. Ormsby-Gore, M.P. Into the merits of the correspondence I do not purpose entering. Who am I to sit in judgment on the Pashas and Great Ones of the land? But I note that some kind assistant editor had placed immediately after the correspondence a pretty little "Kissing Song." Whether the Foreign Secretary and the Major took the hint, or what they thought about it, I am unfortunately not in a position to inform my readers. But who shall say that there are no peacemakers among the Fleet Street brethren—or that the sense of humour has passed utterly away from poor old England?

***

Some time ago, when it first became known that the *Daily Herald* was being financed to some extent by Zaghloul Pasha and certain Indians who are not famed for their loyalty, I met a friend who expressed surprise that "any paper, even a Labour rag, should care to be associated with such folk." A few days ago I met him again, and—apropos of the Bolshevist-diamond—etc.—etc., transaction—reminded him of what he had said. "Good lord, yes!" he exclaimed. "I remember, but I should think now that the Gippies and Tilakians would resent being spoken of in the same breath as the *Daily Herald*"

CORSAIR.

## CHESS.

The principal clubs are now beginning to make preparations for the coming season, which, it is expected, will more than come up to the pre-war standard. It is certain that at no previous period have so many players taken an active interest in the game. Most of the clubs report a greatly increased membership. The effect on the winter tournaments of this new-born enthusiasm for the game will be the introduction on a larger scale of qualifying heats. Most players dislike the system. It means in practice playing in two distinct tournaments, and it is not every one who can sustain his form through such a lengthy ordeal. But it is difficult to find an alternative unless the classes into which players are divided are increased, and new tournaments instituted.

I give this week the game between Sir G. A. Thomas and Mr. G. E. Wainwright in the British Championship.

(1) This form of the Lopez is not to be commended.
(2) P—Kt4 might have been played with advantage.
(3) White, in my view, now has rather the better of the position.
(4) Q—B3 allowing Black to take the B. was preferable.
(5) The offer of the Kt was ingenious, but I think that White might have taken it safely.
(6) A blunder losing two pawns. If 28 PxB, Kt—Q5 ch, winning a piece or the exchange.
(7) Towards the end Black played weakly, and threw away a winning advantage.

CARO-KANN.

## ENQUIRY BUREAU.

*Readers abroad desirous of getting in touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.*

*Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."*

*ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.*

*No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.*

### Agents Wanted Abroad.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,'" 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

101. A correspondent in Lagos, Nigeria, wishes to get into touch with manufacturers of Arab red fez caps.

102. A stamp collector wishes to purchase in large quantities used Austrian stamps prior to the 1882 issue. Stamp dealers in the liberated provinces of Austria are asked to send bulk packages of such stamps to the care of the Editor of THE NEAR EAST, with the price in kronen of each stamp or price per dozen, per 100, etc., of each kind. All stamps required will be paid for at the price indicated and the rest returned. Newspaper stamps are not required, but rare postmarks should be included.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

# PRESS ON THE NEAR EAST.

## A Turkish View of Venizelos.

In a recent number of the *Ileri*, a lament is made that the Ottoman Empire had not its Venizelos:—

When during the distracted state of Crete, and the disagreement in Europe over opposing interests, it was arranged that representatives should be sent from Crete to the Chamber of Deputies at Athens, the foundation stone of the political fortunes of Venizelos was laid. The building up of his reputation speedily followed. Had it not been for Venizelos, Greece would not have united with Bulgaria and Serbia in the Balkan war, and would not have annexed, as a consequence, a large territory with a minimum of loss. Venizelos by his adroitness outstripped the older politicians of Athens, and in the great struggle came into rivalry with the victorious Constantine in a duel which ended in the abdication and retirement of the King. At the end of the war his great services demanded a recompense, and it was no great wonder that he should demand the heritage of Turkey—that is, all the European possessions of the littoral He knocked at all doors, and succeeded in securing for Greece important slices of Turkey and Bulgaria.

Had there been no Venizelos, assuredly these results would not have been accomplished. Being convinced that further security was required, he succeeded in undertaking the charge of the campaign against Mustapha Kemal, and gained the title of guardian of the Eastern frontier. Greece would never have embarked on this war if she had been under the guidance of her old diplomatists. Where was the strength, or the daring? Where was the diplomatic ability needed for such a venture in former times? Now the voice of Venizelos is heard in the Conferences of the Allied Powers, and the British Premier supports his arguments. Yes, Venizelos. It is he who proposed the rejection, without discussion, of the Turkish protests and counter-proposals, and succeeded in making his arguments prevail in the Council of the Powers. In a word, it is Venizelos who has raised Greece to the acme of her aspirations. It is Venizelos who directs the course of events in the East; and we may well be asked why have we not a Venizelos among us.

## Georgia's Foreign Relations.

The *Daily Telegraph* published on September 16 an article on the Allies and Georgia, by "A Diplomatic Correspondent," which is based on an interview with the Georgian Foreign Minister. The writer remarks that it will be interesting to see whether the Allies or the League of Nations will be the first to recognise the new Caucasian State, or, rather, which will be first to agree to the conversion into a *de jure* recognition of the *de facto* recognition accorded by the Supreme Council last January. He continues:—

The point is of singular interest in view of Washington's latest Note, in which even *de facto* recognition is denied the Russian Border States, and Georgia is specifically referred to in a disparaging sense as a "so-called State." M. Gueguetchkori spoke with obvious feeling on this American pronouncement yesterday: It was with deep regret, he said, that the Georgian people had thus learned of the American Government's attitude towards them. They could not regard it otherwise than as a grave injustice to themselves, the more painful because of the prestige and authority enjoyed by Mr. Wilson as the author of the fourteen points, that charter of freedom for all nations. On this ground the Government's refusal to recognise Georgian independence seemed to them utterly incomprehensible. But not even he could prevail over the fact of Georgia's actual existence as an independent State, upheld by the unanimous will of its inhabitants. It was probable that Georgia was insufficiently known in the United States, or that she had been misrepresented there. If only the Washington Government had taken the trouble to inquire of Americans now or recently resident in Georgia of the true situation there, its attitude would assuredly have been very different from what it appeared to be. For Washington would then have realised that a nation which had successfully emerged from the travail of re-birth, with its attendant chaos, and which had known how to defend itself without external help against powerful foreign aggressors, had thereby earned for itself the right to full nationhood and statehood, as also to the sympathy and assistance of the civilised world.

As to Great Britain, we are told:—

So far as Great Britain was concerned, the Georgians would ever remain grateful to her statesmen for the manner in which these statesmen had championed her case at the Supreme Council. Lord Curzon's initiative in securing for her *de facto* recognition was not only a fine gesture; it implied an initial but highly significant step towards the establishment of close and friendly relations between the British and the Georgian peoples. M. Gueguetchkori expressed the hope that British statesmen would shortly crown their work of liberation in the Caucasus by granting Georgia full recognition, and that the "mighty and fair-minded British Press," as he termed it, would support them on this issue.

The article then touches on Georgia's relations with neighbouring States. After a naturally somewhat cautious statement regarding the Bolshevists, it concludes:—

Georgia is naturally on good terms with Armenia, whose interests coincide very largely with her own. But she expects no good from the Turkish Nationalists in Anatolia. The Georgians have always maintained that all the Trans-Caucasian Republics would have been much better off if only they had acted as one, and on the strength of their common interests as neighbours. The Georgian Foreign Minister assured me that the attitude of his Government towards General Wrangel would remain one of strict neutrality so long as the latter did not propose, as did General Denikin, with his "one and indivisible Russia" formula, to dispute Georgia's title to independence. His Excellency concluded by expressing disappointment at the scant attention which Western commerce was paying to a country of such natural wealth as Georgia. So far the few transactions that have taken place between them had savoured rather of profiteering than of trade properly so called. There is, he says, a fine perspective and bright future for foreign capital in Georgia, both the political and the social conditions there being favourable to the early and rapid development of trade and industry.

## A Big-Hearted Failure.

An article in the *Morning Post* of September 22, "Jewish Colonies in Palestine," has a sub-title which will probably surprise many readers: "Failure as Business Undertakings." It tells the story of a great experiment, and is extremely interesting reading. It begins:—

There are in Palestine, at the present time, some forty or more Jewish agricultural colonies organised for the most part on the co-operative principle. They range from large settlements like "Khedera," near Haifa, holding about 2,000 hectares, to small undertakings like "Beni Reuben," in the Jordan district, owning 200 hectares and supporting about a score of families. They are distributed over the country from "Metula" up north at the foot of Mount Hermon, to Ekron, in the south—the very home of the ancient temple of Baal-Zebub.

In 1890, the writer tells us, Baron Edmond de Rothschild became the proprietor of over 12,000 hectares at Muzab, a station on the Hejaz railway. "The part played by this philanthropic Frenchman in furthering the Jewish colonisation of Palestine is quite unrealised outside the limits of the country," the article continues. "It is speaking well within the bounds of fact to say that but for his efforts and money there would not now be a single settlement of his co-religionists left in the whole of the Holy Land." The Baron, by 1896, owned and controlled many other holdings, and in the fifteen years during which he interested himself in settlement work in Palestine, he spent between 50 and 60 million francs. But he got no return on his money, and in 1893 he was glad to cut his losses. The article continues:—

The existing Jewish settlements of Palestine are the work of the past forty years. The year 1882 saw the first colony established by Russian immigrants. It was called, not inappropriately, "Rishon le Zion," the "First to Zion," and cattle and grass "Rishon le Zion," the "First to Zion," and cattle and grass frequency of low fever and eye complaints. "Rishon-le-Zion" is the pride of the Jewish immigrants. Other Jewish settlements in Palestine have been modelled on its pattern, and have even followed the example of its cultivators in devoting themselves almost exclusively to viticulture. But, proud as the settlers are of their vines, it is none the less true that the encouragement given to viticulture has been the chief cause of the failure of the Jewish colonies as commercial undertakings. And thereby hangs the story of Baron Edmond de Rothschild's mistake—a mistake that cost him some fifty million francs.

The Baron, being a Frenchman, was largely taken with the French system of intensive culture, which enables a man to make a living on a minimum-sized holding. So, in planning the settlements he founded in Palestine, he considered how to get the largest number of people supported by the smallest area of land. And he came to the conclusion that the cultivation of the grape—for which Palestine is specially suited—would give the largest returns. Accordingly, the grape was made the staple industry at the "First to Zion."

This was the initial mistake. Then, to encourage other colonies to do the same, the managers were empowered to purchase all grapes grown and wine made at a fixed price. The price was far above the market value. The consequence was that for fifteen years the Baron paid the high rates for the grapes, increasing thus the cost of the wine. And he never got back the one-hundredth part of the outlay he incurred this way. The price of the wine artificially kept up stopped the sale, and then the price went down again so low that it did not pay to sell. Moreover, the vines planted proved to be unsuited for wine. Plantations had to be grubbed up and new varieties procured for growing. All this meant the sinking of additional capital in the business.

Then another trouble came about when the wine crisis passed. The land per settler having been calculated at a minimum, and on the assumption that viticulture would maintain the people, the area of the colony was found to be too small, so there was a demand for more money to increase the size of the holdings. This call for more land has arisen in most of the other Jewish settlements. And the want of foresight in this respect, together with the enormous outlay incurred in starting most of them, is quite sufficient to account for their failure as business undertakings.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

As the outcome of the Brussels Financial Conference, which commenced its sittings last week, it may be hoped that a clear and definite policy will be evolved to cope with the economic and commercial crisis from which the world is now suffering. Since the Armistice reconstruction has made all too slow progress in many countries, and it has become clear that what has been done will not suffice of itself, and in many respects conditions are worse now than when the war ended. Inflation has been steadily going on, prices have continued to rise, while the exchanges, reflecting the instability, have fluctuated to an extent that has gravely hampered the development of commerce. A continuance of these conditions would in the end lead to chaos. While all are agreed on the nature of the problem with which Europe and the world are faced, there is no such agreement as to its solution, and it is this that it is hoped the Conference will be able to provide.

***

The problem of effecting the economic regeneration of Turkey has been rendered far more difficult than would otherwise have been the case by the widespread damage caused to some of the country's staple industries as a result of the extremely short-sighted policy of its rulers during the war. An outstanding example of this is provided by the silk trade, which reached its highest point at the time of the Balkan war, but which to-day, according to Captain Courthope-Munroe's report, is "about to die out." In 1913 Turkey produced seventeen million kilograms of cocoons, and losses of territory in the Balkan war reduced the output to fourteen million kilograms. To-day, however, it is no more than three million kilograms.

***

This state of things is due to the fact that during the war the Christian population was either exiled or interned. "The Mussulman emigrants who replaced the Christian population saw no use in the mulberry trees which grew in clusters round the villages, and, on the other hand, found it far easier to cut these down for firewood than walk for miles to find something else. Logs of mulberry trees of fifteen and twenty years' growth were being sold for firewood in the market at Constantinople." It is estimated that only about one-third of the mulberry trees are left, and it is stated that in villages where 150 boxes of silkworm seed was brought to yield yearly, the returning peasants are barely able to breed eight to ten boxes. The Ottoman Public Debt is endeavouring to further the re-establishment of the industry, but it is doubtful, says the report, whether its efforts will be recompensed by any serious results.

***

Before leaving Captain Courthope-Munroe's report, I would like to draw the special attention of British firms to what is said with regard to the appointment of agents in dealing with Smyrna. Foreign Governments, it appears, take effective steps to prevent their firms being represented at Smyrna by other than their own subjects, and "a case is cited of a Government which intimated to a British firm that had been entrusted with a foreign agency that it need expect no support in any questions arising in connection with that agency." On the other hand, British firms have given their agencies at Smyrna to foreigners. It is obviously desirable from every point of view that British interests should be looked after by British subjects. It is also none the less essential that the British trader should have the same whole-hearted support from his authorities that his rivals receive from theirs.

***

An illuminating example of present industrial conditions, says a correspondent, is forthcoming from one of the leading centres of the boot trade. This industry has for some time been suffering from a very severe slump, many factories being on short time. An inquiry arrived for an estimate for 100,000 pairs of army boots, but while the news of the prospect of this order, which would have relieved the situation for the time being, was received with great satisfaction, we are told that before the order was fulfilled Labour would want to know for whom the boots were intended! As though this was a period when manufacturers could afford to select their orders! Of course, the apprehension doubtless was that good British leather would enable some wicked race to "foot it" against the Bolsheviks. As a matter of fact, the contract was for a Near Eastern country well out of reach of any possible contact with Russia, but the destination, after all, was immaterial, for the contract was not placed on account of the high prices.

***

Next week an extraordinary general meeting of the Chartered Bank of India, Australia and China will be held to pass resolutions authorising the sub-division of the 100,000 £20 shares into 400,000 shares of £5 each, and the increase of the capital to 600,000 shares by the issue of 200,000 new shares of £5 each, to be offered to shareholders in the proportion of one new share for every two held, at a premium of £2 10s. per share. It is explained that the increase of capital is rendered necessary by the increased demands of trade and the greater volume of business that the bank is being called upon to finance. A similar move is being made by the National Bank of India, whose directors have decided to make a further issue of 40,000 shares —the unissued balance of the share capital—to existing shareholders, in the proportion of one new share for every three shares held. As in the case of the existing shares, £12 10s. per share will be called up on the new shares which will be issued at a premium of £7 10s. per share. In the case of both banks the new issues will represent a handsome bonus for shareholders at present quotations.

***

The figures for the trade of the Sudan for the first six months of the current year make very interesting reading. The value of imports was £E3,446,435, as against £E1,995,274 for the corresponding period of 1919, while there was an even greater increase in the value of exports, which rose from £E1,418,269 to £E3,509,354. Rising prices have, of course, to be taken into account in these figures, but making allowances for that the statistics provide most gratifying proof of the steady expansion of the Sudan's commerce.

***

The marked progress made by the Alliance Bank of Simla in recent years was fully maintained in the year ended June 30. The total assets rose from Rs. 14,62,52,900 to Rs. 15,86,32,800, while there was a notable rise in the deposits from Rs. 12,72,20,900 to Rs. 13,35,58,900. The net profits amounted to Rs. 13,42,800, as against Rs. 10,23,800, and the dividend and bonus are maintained at 17 per cent. free of tax

***

Particulars are given in another column of the New Shipping and Mercantile Company which has been formed under the auspices of Messrs. Lionda and Company, of 3, Broad Street Buildings, to carry on business between the Black Sea Ports and Constantinople and the United Kingdom. I am informed that the largest shareholders in this venture are well-known Constantinople people.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## YUGOSLAVIA.

BELGRADE, September 18.

**Freeing Exports.**

The Government has removed all restrictions upon the export of the following commodities: Buckwheat, "krupnik" (a kind of barley), and "sitna proja" (a kind of maize), shelled and in the form of flour; bay leaves and seed; garden seeds and extracts; onion seed, shallots, chaff, root crops for cattle food, tares, peas, fodder, bran, hops and hop flour; hives and swarms of bees, crayfish, shellfish, fish, entrails, reeds, acorns, mast, mineral waters, soft and hard cheeses, jams, bricks, tiles and pottery, horse chestnuts and wine.

The commercial treaty with Czecho-Slovakia has been confirmed.

## BULGARIA.

SOFIA, September 16.

**The Budget.**

In an interview granted to the representatives of the local press, M. Tourlakoff, the Minister of Finance, declared that the Budget, despite the greatest economies, would reach a total of three milliards of levas. This would include 2 per cent. interest on the debt of two and a-half milliards of levas, 45,000,000 francs according to the Peace Treaty. The revenue would be more than was anticipated. From alcohol 120,000,000 levas would be collected, from coal 110 to 120 million levas, and from State taxes 150,000,000 levas, while there would be substantial receipts from the Customs. There would, however, be a deficit of nearly 500,000,000 levas.

## CYPRUS.

NICOSIA (Undated).

**Danger to Carob Trade.**

It would seem that serious warnings are needed for village producers, and perhaps, it might be added, for many dealers and middlemen. A circular, signed by eight leading merchants of Limassol, has been recently issued, calling attention to the danger which threatens the carob trade owing to the admixture of earth and other extraneous matter too often delivered with locust beans. Cyprus carobs, which form so large a proportion of the island's wealth, are reported to be second to none; but owing to the defects referred to they run the risk of losing this reputation on account of the short-sighted folly and negligence of producers. The fault lies, in the first place, with village growers, for the beans are stacked in the open after gathering, and all kinds of impurities are allowed to get mixed up with them. Then the stores in which they are placed while awaiting shipment in town or village, often for many months, are frequently dirty and full of insects. Carobs are exported also from Crete, Sicily, Spain, Portugal and Algeria, and dealers in those countries are said to ship them in far cleaner condition, and they are accordingly beginning to take precedence over Cyprus beans, which are in reality superior. The United Kingdom has hitherto taken the largest quantities for cattle foods. France has taken a very considerable quantity. A new market is being found in Greece, but merchants there complain that 10 per cent. of impurities have been found in consignments. All markets may soon prefer the cleaner carobs of other countries, unless steps are taken to put a stop to the present suicidal negligence. Merchants now warn villagers that in future contracts they will protect themselves in such a way as to secure compensation when necessary. Similar warnings are again needed in the matter of wine. There has always been much trouble over the introduction of excessive quantities of gypsum in the red wine made by villagers, which caused their exclusion from France years ago. Again, cereal produce, especially barley, has been open to similar complaint.

**Agricultural Prospects.**

Reports from the vine lands indicate that the yield will probably not be abundant, as—owing to excess of rain in the spring—leaves and shoots have been over-developed at the cost of fruit. This should affect the vintage and raisins unfavourably. The olive crop, always a matter of anxiety, should be abundant and of good quality. There should also be a large yield of onions. Fruit is very abundant, and there have been good shipments to Egypt; but the prices for townspeople have not been diminished.

NICOSIA, September 14.

**Good Yield of Carobs.**

The gathering of carobs has been actively carried out, and high prices are expected. If hopes are realised, these may reach any figure up to 30s. the kantar (£6 13s. 4d. the ton), though some have already changed hands at much lower prices. The yield is abundant, as anticipated, especially in the lower zones, trees in the higher levels having suffered to some extent from the great cold of last winter.

**The Agricultural Association.**

The High Commissioner has received a deputation of the new Agricultural Society, headed by the Bishop of Kition. About forty villages have so far joined the movement. Among the Greek deputies was a Nicosia advocate, M. Roussos, and among the Turkish members was Rashid Effendi, a lawyer and journalist. One of the principal objects discussed was that loans on a wider scale than hitherto should be granted to agriculturists by the island Loan Committee in order to facilitate progress. Full consideration was promised. Another topic was the desire of farmers that control of the prices of cereals should now cease. The High Commissioner was unable to give a favourable reply, since the result would be contrary to the interests of the community in general. The prohibition in force against the export of barley was another subject of strong protest, and it was urged that permission should be given to export half the year's harvest. His Excellency reminded the deputation that the crop was 15 per cent. below the estimate, and that there were no surplus stocks of grain from last year's harvest, as there were in 1919; and he expressed his agreement with members of the Legislative Council, who consider that the export of cereals should not be allowed until there can be a reliable forecast of the crops of 1921.

# MANCHESTER & EGYPTIAN TRADE.

## Marking and Folding of Cotton Goods.

Mr. James F. G. Hopkins, who has recently been appointed Controller of the newly formed Department of Commerce and Industry in Egypt, was the guest of the Manchester Chamber of Commerce on September 23.

In the course of the day interviews were arranged for Mr. Hopkins with representatives of the various trading interests between Manchester and Egypt, and in the morning an important conference took place with some of the largest users of Egyptian cotton on the question of the future production of cotton in Egypt and the necessity of maintaining purer types. Mr. Hopkins has undertaken to lay before the Ministry of Agriculture the views of Lancashire spinners in this connection.

Mr. Hopkins was entertained to luncheon at the Queen's Hotel as the guest of Mr. T. E. Casdagli, the chairman of the Egyptian section of the Chamber. Those present included Mr. Edwin F. Stockton, president; Mr. W. Clare Lees, vice-president; and Mr. W. C. Bacon, treasurer, in addition to other members of the Egyptian section. In proposing the health of Mr. Hopkins, Mr. Casdagli explained that at a meeting of the Trade and Merchandise Marks Committee held on January 26, consideration was given to the question of the evidence to be laid before the Board of Trade Committee referring to the false marking and folding of goods, and it was agreed that the committee should inform the Board of Trade Merchandise Marks Committee that as far as Egypt was concerned, the chairman of the Egyptian section of the Chamber of Commerce was going out to Egypt at an early date, and would report on the situation as early as possible. Meanwhile it was desired to defer the giving of evidence with regard to Egypt.

That resolution, Mr. Casdagli continued, was adopted on his pointing out the extreme difficulties of instituting reforms in Egypt at present, owing to the Capitulations. He suggested that when these were abolished, and the Egyptian Government was in a more settled condition, it would be preferable to allow that Government to institute its own reforms, but that in the meanwhile he would try and get information from the other side during his visit to Egypt, and report to the Chamber on his return. On his arrival in Egypt he had interviews with Mr. Hopkins and Sir Paul Harvey, Financial Adviser to the Egyptian Government, and two informal conferences were held, but nothing was definitely settled.

At the last informal meeting they had in Egypt Mr. Hopkins told him that he was shortly coming to England on a holiday, and he (Mr. Casdagli) suggested to him that a visit to the Manchester Chamber of Commerce would be beneficial to the large and important trade, both in exports and imports, which was carried on between Egypt and Manchester. Mr. Hopkins immediately accepted this suggestion, and promised to come to Manchester at any date which would suit the Chamber. He had much pleasure in extending to Mr. Hopkins, on behalf of the Egyptian section of the Chamber, a very hearty welcome. He was the first official of the Egyptian Government they had had the pleasure of receiving at the Chamber. Visits such as this were most influential, and would do a great deal of good, and would tend not only to maintain, but also to extend, the friendly and most important business relations between Egypt and Lancashire, who was Egypt's largest customer both for imports of textiles and exports of cotton.

In responding to the toast, Mr. Hopkins said he much appreciated the opportunity of getting into touch with the Manchester merchants who had such large interests in the future of Egypt. He had spent twenty-four years in Egypt, and as a result of his experiences, he declared himself to be an optimist at the present time. If English people would recognise the good points of the Egyptians and help them and stand by them in every way, the Egyptians would do the same for the English.

The President of the Chamber, Mr. F. Stockton, said how pleased the Chamber was to welcome Mr. Hopkins, and he felt sure that the visit would prove of mutual benefit.

At a special meeting of the Trade and Merchandise Marks (Statutory) Committee, held in the afternoon, to which members of the Egypt Section were specially invited, the question of the false folding of cotton goods exported to the Egyptian market was fully discussed, and Mr. Hopkins was able to hear the opinion so strongly held by Manchester merchants. The Chamber has long been anxious to make it impossible to send goods to Egypt with these false laps by which the fellah is deceived, since he buys by the lap under the impression that laps are a constant unit of length. Mr. Hopkins hopes that the new Egyptian Government will be able to introduce legislation whereby it shall be illegal to import into Egypt goods folded in laps of any other length than those of standard measurements. In this he will have the full support of the Manchester merchant and the Lancashire manufacturer, and the consumer in Egypt will, as a result, get full value for his money. The Chamber is to make official representations to the Minister of Finance in Egypt through the medium of the British Board of Trade.

Mr. Hopkins visited the Ship Canal on September 24, returning to London the same afternoon, and sailed for Egypt on September 25.

# PRODUCTION OF WOOL IN TURKEY.

In 1913 the total clip of wool for Turkey is shown in Turkish statistics to be 16,842,745 okes; in 1914 this production reached 17,413,891 okes. From 1915, on account of the outbreak of war and general dislocation of the services of the Ministry of Agriculture, no further statistics were kept. This was due also (says a British Consular report) to the fact that the production of wool in Anatolia during the war was no longer controlled by the Ministry of Agriculture, but by the Ministry of War, to the great advantage of the Germans, who thus succeeded in draining the country of its raw materials.

The following table shows the production of wool in okes during the year 1919 for the districts still remaining under Turkish sovereignty:—Broussa, 50,000; Kermasti, 50,000; Karadja-Bey, 55,000; Cesaree, 83,000; Eski-Chehir, 120,000; Seleuke, 10,000; Kutahia, 25,000; Semav, 20,000; Angora, 400,000; Adrianople, 250,000; Kara-Hissar, 600,000; Konia, 1,000,000; Samsoun, 58,560; Marache, 60,000; Nidge, 226,000—total, 3,007,560 okes.

Before the outbreak of war Anatolian raw wool sold at 6-7 piastres the oke. After the mobilisation, starting at 7-12 piastres, it gradually increased during the period of the armistice to 50-55 piastres, and now actually stands at 60-65 piastres the oke. This statement alone gives a sufficient idea of the severe ravages caused by the war on the flocks in Turkey.

Anatolian farmers, for different reasons, do not, as a rule, wash their wool. These reasons are the following:—(1) For the purpose of washing, special installation is necessary; (2) they are not fond of progress; (3) they are afraid of seeing their stocks of wool destroyed by mites if they are washed; (4) in certain districts there is a lack of water; (5) labour is very expensive, and it is more advantageous for them to sell the wool in a raw state than washed.

The farmers, as a rule, content themselves by driving their flocks into a river, and thus partially washing the wool. The portion of washed wool exported from Turkey is from 10—15 per cent.

As a result of the decrease in the production of wool and mohair during the war, a special trade, called "mattress wool," has come into existence. This wool, which before was not allowed to be exported, and was, consequently, sold at a knock-down price, was during the war a frequent object of trade with Germany and Austria.

Turkey occupies a unique position in the production of mohair. Her only competitor is Cape Colony, and the mohair produced there is not as good as that of Turkey. A very small quantity of Turkish mohair is consumed locally, the rest is exported to Europe, principally to England. The normal annual production is about 6,000,000 kilograms.

# INDIAN INTELLIGENCE.

This week's Indian cable states:—During the week ending September 11 useful rain has fallen. Prospects of standing crops generally good, but more rain needed urgently in the Punjab and the United Provinces of Agra and Oudh and in parts of Central and Southern India. Crops withering in parts of the Punjab, Rajputana, Bombay, and Mysore. During the week ending September 18 rainfall mainly confined to North-Eastern India, Burma and Deccan. Jute forecast: Final forecast, 2,502,273 acres, 5,962,192 bales.

Bombay piece-goods market dull and unsatisfactory. Calcutta jute market excited, with business at a standstill owing to decreased estimates in jute forecast of some districts. Hessians easier, with business small; heavy goods steady, but no business done. No change in Bank rates.

# RAILWAY SYSTEMS IN TURKEY

## FUTURE DEVELOPMENTS.

One of the most valuable features of Captain Courthope-Munroe's report on the trade and economic conditions of Turkey in 1919 is the section devoted to railway systems serving Turkish territory, in which some interesting suggestions are made as to future developments.

The future of the Anatolian Railway is most promising, it is stated, given a settled Government. The country has great agricultural possibilities, and also possesses extensive, and so far practically undeveloped, mineral resources, and given modern methods and encouragement from a settled Government its economic future would be very great. Roads and railways are badly needed everywhere to open up the country.

The opening of further branches and extensions of this railway would soon make it necessary, it is stated, to double the existing track in order to cope with the traffic. "It must be remembered that the interior of Asia Minor has few roads or navigable rivers. In former times the peasant cultivated enough for his needs and no more. It may be true that he is naturally indolent, but a more important cause of his want of enterprise was the impossibility of disposing of his surplus produce. In the districts traversed by the railway, this obstacle has been removed, and of late years the Anatolian peasant has shown that he is quick to learn and ready to use his opportunities. The railway has also mitigated the danger of famine, formerly very serious, as it is now possible for the products of a prosperous region to be sent to parts where the harvest has failed. A striking indication of the benefits conferred by the railway is given by the returns of the tithes collected by the Ottoman Public Debt, which in certain parts near the line yield five or six times the amount collected before the railway was built. It is not that the population has appreciably increased; on the contrary, the inhabitants of districts near the railway are always the first to be mobilised in time of war."

The future of the Smyrna-Aidin Railway and the Smyrna, Cassaba, and Extension, it is pointed out, is very promising, as the district behind Smyrna is a most productive one. The question is mainly political, a stable and enlightened Government being required. As regards the Mudania-Broussa Railway, a line of narrow gauge, 42 kilometres long, the report says:—"Very fertile and productive regions would be opened up by continuing the line to Ainegul, with a branch to Yeni-Shehir, or by building a line from Broussa westwards to Lake Apollonia and Mikhalij. Before the war all proposals for expansion had been foiled by German opposition. Since the Armistice an extension in a south-easterly direction has been projected to link up with the Anatolian Railway. All the chief railway systems in Asia Minor are built on the standard gauge, and thus the projected extension of the railway under review would be handicapped by the difference of gauge. Among the many disadvantages arising from this the most obvious one would be that through goods traffic could not come to the Port of Mudania. The simplest solution of this question would appear to be the construction of the extension on the standard gauge, and the conversion of the existing Broussa railway."

As regards the question of future construction, the report says:—"No construction until a settled Government is installed is at present at all likely. Numerous schemes were prepared by the German authorities during their occupation, some of which in due course may possibly materialise, but for the time being, until a firm Government is established and a definite trade policy is adopted, it is not likely that any constructional work will be begun. It must have been always evident to the Turkish military authorities that, in the event of war with Russia, the Black Sea would in all probability be too dangerous for transports, and that all troops and 'material' for the Caucasus front would have to be sent overland. Good and safe lines of communication from Constantinople to the Caucasus were an urgent necessity, and the importance of the matter was brought home to them by the war, as was indicated by the immediate commencement of the Angora-Yozgat and Extension Railway. From Yozgat the extension was to go to Sivas, and from this town a further continuation to Erzinjan and Erzeroum was projected. When the Black Sea was more or less closed to the Turks, they had to rely, for a great part of the way, on road transport to the Caucasus. The two chief routes used by them were (*a*) by rail from Haidar Pasha, *viâ* Konia, to Ulu Kishla, and thence by road *viâ* Kaisarié and Sivas, and (*b*) by rail from Haidar Pasha to Angora, thence by road *viâ* Kirshehir, to Kaisarié, where it joined the first-named route.

"Another important railway scheme contemplated by the Turkish military authorities and reported to have been sanctioned, was to open up by railway the vast stretch of country between Sivas and Mardin, and by this means considerably shorten the journey to Baghdad. The commencement of this projected line had naturally to await the completion of the Angora-Erzeroum scheme already outlined, and also the completion of the Taurus Tunnel section of the main Baghdad Railway. It is evident that both these other two railways were of much more urgent importance, and, in fact, the Turks are reported to have had no intentions of beginning the construction of this short cut to Baghdad till after the war. This railway is projected to run from Sivas *via* Kharput, Arghana, and Diarbekir, to Mardin, which is the terminus of the short branch line of the main Baghdad Railway. During the war a short Decauville railway was constructed from Mardin in a northerly direction towards Diarbekir, but this short stretch of light railway does not appear to have any bearing on the scheme under review.

"Sivas will be an important junction if the above two railways are constructed, and even more so if the projected railway from Samsoun to Sivas is carried through. In May, 1918, it was reported that the Baghdad Railway Company had been authorised to study the plane of this line with a view to connecting Samsoun with the Baghdad Railway, doubtless by the route through Kharput. The Anatolian Railway authorities have obtained a concession to link up the Ada-Bazar branch line with some point on the Samsoun-Sivas projected railway. This line would pass through Bolu. On the 1/1,000.000 map, the railway is shown as being already in existence as far as Duzje, a point more than half way to Bolu. No confirmation of this has been received.

"As regards the west of Asia Minor, there is information regarding three railway schemes. One of these is to connect the port of Adalia with Afion-Kara-Hissar on the Anatolian Railway and another is to join up Aidin to Marmarice with a line running parallel to the coast 20 or 30 kilometres inland. The third scheme is to join the town of Broussa with some point on the Anatolian Railway. There has also been discussed a projected railway following more or less closely the important main road Ulukishla-Kaiserié Sivas, used by the Turks during the war, which is now being used by the American Relief Committee for the Armenians."

# THE FUEL PROBLEM IN THE SUDAN.

## Afforestation Policy Required.

(From a Correspondent.)

There are only about 20,000 acres of land under cultivation by engine-driven pumps in the Berber, Khartoum, and Blue Nile Provinces of the Sudan. These pumps depend on wood for fuel, and it is always expensive and often difficult to obtain. The price of coal is prohibitive—it is now L.E.9. per ton at Khartoum, and even at that price is Government coal imported from South Africa, and not for sale to private individuals. Crude oil, or "mazout," as it is called in Egypt, is not available here, as there is only a small tank at Port Sudan, and very few railway tanks to transport it to the interior of the country even if it could be obtained.

Various remedies are suggested by a writer in the June issue of the *Journal* of the Sudan Chamber of Commerce. One is that natives should be exempted from the tax now levied on wood cut for fuel. Another is that the Government Steamers Department should facilitate the transport of wood fuel, and that cultivators should plant one-tenth of their area with quick-growing trees to avoid a sudden stoppage at a critical season. Gas producers might be of assistance, but at present there are none working in the Sudan. They would be useful and economical, as they consume cotton stalks and the refuse of trees and plants.

The position of the Government is just as difficult as that of the private individual or company. They are the largest consumers of wood fuel in the country, and have a monopoly of rail and steamer transport, and even then from time to time a wood crisis occurs. The staple fuel of Khartoum is charcoal, and each year the burners must go farther afield, consequently the price has risen to a point where it presses hardly on the poor.

The Government have never planted trees. During the twenty years since the re-occupation of the Sudan they have gradually denuded the forests that used to surround their wood stations on the White Nile until it is no unusual thing for a steamer to have to wait until sufficient wood is cut and brought in to allow her to proceed on her journey.

The cement for the Blue Nile Dam at Makwar, and the White Nile Dam at Jebel Aulia, is to be made locally; and the fuel to be used is charcoal, which will entail a heavy drain on the forests above Sennar.

As to the future, it is evident that if wood is to be used as fuel for the coming agricultural development of the Sudan transport arrangements will have to be made to get it where it is wanted. At the same time, it is suggested that an afforestation policy be laid down and rigidly adhered to. The experience of the Government of India is available as an example of what can be done by a Forestry Department. There it is laid down as an axiom that the irrigation policy is based on the preservation and extension of large forest areas which attract and conserve rainfall. Geologists assert that the Sudan is slowly drying up. Granted that this is a slow process extending over thousands of years—it can only be hastened by the deforestation now proceeding.

In the *Quarterly List* of the Sudan Government for July it may be noted that the Sub-Department of Forests has disappeared, and its place is taken by a Forests Section under the Department of Agriculture. Undoubtedly the Government has good reasons for its decision, but it is not one that is likely to add to the attractions of a service that requires trained men, who are not easily obtained.

It should not be forgotten that oil wells are working at Gemsah and Hurgada on the Egyptian coast of the Red Sea, and that there is reason to suppose that the same geological conditions prevail along the coast further south in Sudan territory. Extensive surveys for oil have been made in Egypt, and in all probability will soon be made in the Sudan. Lord Eustace Percy was in Khartoum last winter, and it is said that his visit was connected with the question of oil prospecting by one of the big British groups. It would be a great thing for the Sudan if oil was found. Port Sudan is being used extensively for coaling purposes at present, and with the rapid increase that is taking place in the use of oil fuel by ocean-going steamers it is certain that oil tanks will soon have to be installed. If their supplies could be drawn from Sudan territory it would leave the product of the fields at Gemsah and Hurgada available for use elsewhere.

---

The directors of the Assam Oil Company have declared an interim dividend for the half-year ended June 30 at the rate of 7 per cent. per annum on the Cumulative 7 per Cent. Participating Preference shares, payable October 1, to holders registered on September 22.

# BULGARIA'S MINERAL RESOURCES.

Major C. Burt-Andrews, Secretary of the Bulgarian Branch of the British Chamber of Commerce of Turkey and the Balkan States, in an article on the economic position and resources of Bulgaria in the *Chamber of Commerce Journal*, gives an interesting review of the mineral wealth of the country.

The mineral wealth of Bulgaria, he points out, has been known from ancient times. The researches of the last twenty years have brought to light many old mines dating back to the Roman period, and quantities of slag, the remains of former workings, have been unearthed. Old galleries and pits have been found in the districts of Burgas and Vratza. Under the Turkish domination the mining industry almost ceased to exist, with the exception of one small iron deposit at a place called Samokov, some 60 kilometres from Sofia.

Since the liberation of the country in 1878 mining development has only been carried out on a very small scale and with primitive methods. During the last ten years, however, German and Austrian engineers made a careful study of the Balkan Peninsula, and, although their reports were only revealed to the commercial departments at Vienna and Berlin, it is known that Bulgaria was considered the treasure-box of the Balkans for minerals. For two years prior to the war considerable activity was shown by German interests. During the war and up to September, 1918, large sums were spent by Germany in deep drilling, etc., for coal and other minerals. The information that did find its way to the people aroused such interest that in one year no fewer than 350 claims were filed in the Department of Mines. During the period 1900-1919 the total claims filed for all minerals and quarries numbered 3,514. A table is given by the writer showing that the concessions granted up to 1912 totalled 40 for an area of 13,174 hectares.

Since 1912, he continues, a large number of concessions have been granted for lignite and oil schist areas. In 1916 Germany had these areas carefully explored, and large samples of lignite were sent to Berlin for testing and briquetting. The results were highly satisfactory. The average calorific value of the lignite areas is between 2,300 and 4,500. The Pernic perimeters (Government areas) are very extensive (25 miles long and 8 miles wide), and contain the best quality lignite fuel in the country. This area is estimated to contain such quantities of fuel that by extracting 4,000 tons per day for six days a week, and working 52 weeks a year, it would take 500 years to work the perimeters out. In the vicinity of Sofia there are a number of lignite-bearing areas containing unlimited quantities.

Some 40 kilometres west of Sofia there is a very large basin some 40 miles square containing a black bituminous coal. The analytical tests of this coal give between 7,000 and 8,500 calories. There are two perimeters which have been developed, and seams ranging from 3 to 10 metres in thickness have been exposed. This coal, being of a light nature, and due to the dynamic forces, breaks up into small pieces. To make it a marketable product briquetting is necessary.

There are several rich copper deposits, one some 70 kilometres west of Sofia and another at Burgas, on the Black Sea. At the former, at a place named Placalnitza, a large smelting plant was erected years ago and is now being worked by a French company.

Iron and manganese have been discovered in several districts, but the want of knowledge and finance prevented their being exploited. It should be mentioned that in these areas are to be found water power sufficient to generate power for the largest industry which could be established. Coal, bituminous and lignite, is also to be found, so that it will be seen that power and raw materials are at hand for any commercial enterprise.

Zinc and lead deposits are numerous and only require development. In several of the river beds gold indications have been exposed, and several washings have indicated the presence of this valuable metal. Up to the present, through lack of knowledge and finance, no attention has been paid to this subject.

In several districts, specially in the mountainous parts, there are a number of quarries which, although being worked on a large scale, have not up to the present been sufficiently exploited to determine their classification and importance. They abound in a great variety of granite, marble, lithographic stones, and millstones, fuller's earth, fire clay, and several kinds of ochres, etc. Large quantities of soft limestone taken from the district of Rustchuk are yearly exported to Roumania. A number of the principal buildings in Bucharest are constructed of Bulgarian limestone.

The valuable mineral wealth of Bulgaria has really never been known, and it now only needs exploiting. Many of the raw materials which are now required in England are to be found in Bulgaria.

# ENGINEERING.

## THE MACHINE TOOL EXHIBITION.

### Some Further Attractions.

The Darling and Sellers high-speed lathes also present features of interest. A speciality of this firm is the relieving lathe, the machine turned out by them being designed for relieving ordinary formed cutters as well as for axial and end relieving. New models of turret and other lathes were shown by Pollock and MacNab, of Bredbury, embodying all the improvements suggested by a number of years' experience. This firm make a liberal use of ball bearings for the shafts which enables them to run at unusually high speeds, thus increasing output. Frictional losses are also practically eliminated, and the oiling rendered more simple and positive. In the construction of the headstock the concentric clutches for operating the gear changes slide on castellated shafts supported by internal walls in the headstocks as well as at the two ends of the headstock, this design following the general lines adopted for motor car gear-box operation. Another feature is the roller-bar feed, which, although more expensive than the gravity feed, is extremely rapid in action, smooth in working, and permits any length of bar to be continuously fed through the chuck. A noticeable example of this firm's work was a 20-inch swing combination turret lathe with a 12½ inches swing over the cross slide. The maximum distance from the spindle to the turret face is 55 inches, an ample distance for all purposes, and the lathe has 16 spindle speeds, giving a speed range of from 10 to 243 per minute. The spindle has a hole 4¼ inches in diameter, large enough to take any ordinary stock, and the maximum length chased is 12 inches. Chasing saddle speeds 8 being from 10 to 80 per inch, size of turret face 10 inches by 6 inches, and the machine has 16 feeds ranging from 20 to 288 per inch. The 11-inch capstan lathe, made by the firm, is also worthy of notice, in that its strong design and substantial construction renders it capable of machining a large variety of work usually done on larger machines. As an instance of this, it may be mentioned that it is capable of screw-cutting a 1-inch Whitworth thread at one traverse.

John Birch and Co., Ltd., of London Wall, showed a variety of lathes, all of high-class rigid construction, and a good deal of attention was bestowed on their Birmel, claimed to be the latest type of 3½-inch centre British made lathe. This has been designed to meet the demand for a sturdy precision lathe of small dimensions, which will do work within limits of one-thousandth of an inch accuracy. The fast head has a hollow steel spindle, and the bearings, which are of ample length, are of best phosphor-bronze of the split parallel type. An eccentric back-gear is fitted, also a reverse-gear with a three-position lock. The carriage is traversed by handwheel through double reduction gears on a machine-cut steel rack, and for the sliding and surfacing motions power friction drives are incorporated which are operated through a two-speed gear-box on the back shaft. The surfacing slide is indexed in the usual manner, and the compound slide rest is arranged to swivel into any position, and is fitted with a square steel turret. The lead screw has Acme thread of one-quarter inch pitch, and micrometer attachments are fitted to the surface slide and swivel rest. The loose head is adjustable for taper turning. I understand that this machine, which is just the thing for the smaller engineering shops, particularly overseas, where a good deal of general work is likely to be met with, is supplied complete with a full set of 22 change-wheels for ordinary screw-cutting, 127 toothed-wheel for metric threads, a face plate, catch plate, four tool square turret, countershaft and all spanners, and every lathe is fully tested before being sent out.

**A Large Output.**

The chassis output of Harper Bean, Ltd., for the first eight months of the year totals 4,690. The figures for August were as follows:—Bean 271, Vulcan 100, Swift 150. Owing to stocktaking the Bean assembly track was in operation for only thirteen days during the month, and the Vulcan works also were closed for a fourteen days' holiday, in addition to the usual week for stocktaking.

**Welded Crankshafts.**

An interesting point was recently dealt with by Mr. R. G. Woodward, director of the world-famous steel firm, Edgar Allen and Co., Ltd. The statement was made that welded crankshafts would break elsewhere than at the weld, and Mr. Woodward, in reply, said: If it is the fact that this occurs, it would be interesting to know to what heat treatment the crankshafts are subjected after being welded.

If the crankshafts are made of a special alloy steel, it would be necessary for the complete crankshafts to be re-heat treated after welding. The welding heat would alter the structure of the steel at varying distances at either side of the weld. Local heat treatment would fail to set matters right, because there would still be points of altered and therefore weak structure where the effects of the local heat treatment approached the originally heat treated portions. Of course, if no re-heat treatment were given after the cranks had been welded, the result would still be the same; that is, points of structural weakness would be present.

**A Solidified Lubricant.**

I have just had an opportunity of examining and testing a solidified lubricant sold under the name of Asbestoline, which, I understand, is made in four different consistencies. It is claimed that this compound will give perfect lubrication under even the severest working conditions, and so far as I could judge this claim could be well substantiated. The qualities obtainable are:—(A.) for ordinary engines and machinery under all ordinary conditions; (B.) a slightly more solid variety which is of use in every case where a somewhat stiffer grease is required; (C.) for use in high temperatures; and (CC.) "specially suitable for steam heated bearings." I found the material clean and absolutely free from dust, dirt, or other impurities, and I am informed that one pound of Asbestoline will do the work of at least two gallons of the average lubricating oil. In many cases the use of this compound will reduce lubricating costs by about 75 per cent., which is a consideration nowadays.

**A High Grade Plug.**

Some time ago my friends of the Robinhood Engineering Co. sent me a K.L.G. plug to test. Examination showed that it was constructed on sound scientific principles and made in the best possible manner. The design also was good, and such as should be conducive to a long life. The plug was put into service on a particularly hot engine, and since that time has run just over 6,000 miles. Close examination shows that it is as good as ever it was, and there is practically no trace of pitting at the substantial electrodes. The plug seems good for an indefinite number of miles service, and I have pleasure in giving this testimony to what is one of the finest British productions I have yet used.

---

Yugoslavia's coal output in 1919 amounted to about two and a-half million tons, or, roughly, 1,000,000 tons less than in the best pre-war year.

Large deposits of magnesite have been discovered near Bihac, in Bosnia, and a company with a capital of 6,000,000 dinars is being formed to exploit them.

During the first quarter of the current year Bulgaria's imports amounted to 399,296,000 leva and exports to 95,448,000 leva.

Major B. Temple, H.M. Acting Commercial Secretary in Persia, is returning home on prolonged sick leave. The current commercial work will be dealt with by the Legation and Consular staff at Teheran.

## LANCASHIRE COTTON

(From Our Own Correspondent.)

Manchester, Monday.

There has not been any move towards increased activity in the market during the week, and, owing to the lack of fresh contracts, engagements of spinners and manufacturers have tended to run down. The unauthorised strikes at the spinning mills in Oldham have brought some relief, and yarn producers have been enabled to reduce their stocks. Although no definite settlement of the coal crisis has been reached, it is believed that a stoppage of production will be averted. Bearish sentiment has prevailed in local trade circles, and prices in the raw material, and also in manufactured articles, have tended to give way. No development has occurred in the outlook for supplies of American cotton. With regard to the Egyptian growth the reduced estimates of the yield are being maintained, and there are fears of fogs causing further damage to the plants. Values in Liverpool and Alexandria have continued to favour buyers, and purchasing by local users has been very limited. Egyptian yarns appear to be going from bad to worse, and more spinners are experiencing difficulty in securing the output of the mills. Now and again wretched prices are taken by pressing sellers. Piece goods bought for the Near Eastern outlets continue to be taken rather more freely, and a few attempts have been made at fresh transactions, but the orders booked have been of retail dimensions. Rather better advices, however, are coming to hand from Cairo and Constantinople. Our customers in India continue very indifferent operators, and as is usual in a falling market, buying is held back. Some tentative bids have been mentioned in bleaching shirtings for China, and the position in the Far East is understood to be improving. There has been no activity whatever for South America. Unemployment in most weaving districts in Lancashire is increasing A little more buying has been reported in weft qualities of American yarns, but prices continue very irregular. The few offers recorded in export bundles have been impracticable, and very little has been done either for India or the Near East.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Johnston Line s.s. Cranmore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila will close for cargo at Liverpool on October 16.

The Cunard Line s.s. Brescia, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constanza, and Sulina, will close for cargo at Liverpool on October 9.

The Cunard Line s.s. Antigone, for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Varna, Galatz, and Batoum, will close for cargo in London on October 9.

The Ellerman Lines s.s. Destro, for Patras, Piræus, Syra, Smyrna, Volo, Salonika, and Constantinople, will close for cargo at Liverpool on October 2.

The Prince Line s.s. Algerian Prince, for Tunis, Malta, Alexandria, Syrian coast ports, and Cyprus (with option of transhipment at Alexandria), will close for cargo at Manchester on October 2.

The Moss Line s.s. Limoges, for Gibraltar and Casablanca (accepting cargo for transhipment to all Moroccan ports), will close for cargo at Liverpool on October 7.

# NEAR EAST MARKETS.

## LONDON PRODUCE REPORT.

Sugar.—A quiet tone has characterised the free market. West Indian crystallised has been done at 95s. to 100s., and White Mauritius at 116s., while American granulated has been done at 118s. 6d. There has been a good demand for home refined at the official rates.

Coffee.—The market has continued somewhat weak. Costa Rica has been done at 130s. to 150s., Mocha at 170s., and Nairobi at 98s. 6d. to 120s. The futures market has been weak.

Oilseeds.—Indian linseed closes 6d. up on the previous week's prices at 41s. 6d., but La Plata is a similar amount down. Rapeseed has been quiet, Toria at 35s. 9d. being 6d. down, while Brown Cawnpore is 32s. 9d. Cottonseed is firm, with Indian at 15s. 3d., a rise of 1s., while Egyptian is 2s. up at 21s.

Oilcakes.—Business has been fairly brisk. Linseed cake has been done at 23s. 6d., while other transactions have included ground nut cake at 13s. 6d., rapeseed cake at 13s., and palm kernel cake at 12s. 6d.

Seed-Oils.—Linseed oil is harder at 82s. 6d. Rape oil is unchanged at 90s. for refined, and 74s. for crude. Cotton oil is about the same, deodorised being 92s., while Egyptian crude is 72s. 6d. and Bombay crude 62s. Turpentine is about the same at 145s. 9d. spot, 147s. 9d. October-December, and 152s. 6d. January-April.

## SMYRNA OPIUM REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended September 11:—We have to report a drop in prices of about 10d. per lb., with sales amounting to twenty cases, at 16s. 9d. to 19s. per lb., c.i.f., 11 to 12 per cent. old qualities. Our exchange continues high—viz., piastres 424 per pound sterling for cheque on London and 0.85 dollars for one Turkish paper pound. The arrivals to date amount to 200 cases against 690 at same date last year.

## NEW COMPANIES.

### New Shipping and Mercantile.

The New Shipping and Mercantile Company, Ltd., has been registered with a capital of £55,000 in £52,000 £1 Ordinary shares and 3,000 £1 Founders shares. Objects: To carry on shipping and mercantile business between the Black Sea and Constantinople and the United Kingdom. The company owns the steamer Caplpark. The directors are T. D. Barnes, of Messrs Lionda and Co., Ltd., 3, Broad Street Buildings, E.C.2, and Major Williams, also of Messrs. Lionda and Co., Ltd., Secretary, J. Hudson, 3, Broad Street Buildings, E.C.2.

The public adjudication of the Spanish section of the Tangier-Fez Railway, known as the Gharbia section, is to take place on October 25 at Tangier.

Egyptian Delta Light Railways.—Coupon No. 46 falling due October 1 on the Five per Cent. Debentures of the Egyptian Delta Light Railways, Ltd., should now be lodged at the Bank of England, London, E.C., for payment.

The report of the National Bank of India for the half-year ended June 30 states that the net profits, after providing for all bad and doubtful debts, amount to £251,733, and adding £135,633 brought forward, the available total is £387,366. The directors have declared an ad interim dividend at the rate of 20 per cent. per annum, free of tax, leaving £237,366 to be carried forward. Mr. Henry Chalmers, the general manager, was appointed to a seat on the board on June 8.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

ANGORA.

Wheat.—The market is quiet. Arrivals from the interior have been purchased for despatch to Bilédjik and Broussa at Ps. 65 to 85 the yarim of 12 okes. Prices undergo marked fluctuations almost daily. Stocks existing in the warehouses at Angora: 200 to 230 wagons.

Barley.—There have been no transactions. Arrivals have been bought for local consumption at Ps. 23 to 26 the yarim of 12 okes. Stocks existing in the warehouses at Angora: 10—15 wagons.

Mohair.—The market has been quiet, and there have been no important transactions. Present prices are Ps. 65—75 per oke. Stocks existing in the warehouses at Angora: About 6,000 bales, old and new crop.

Wool.—There have been no transactions. Nominal price: Ps. 36—38 per oke. Stocks: About 500 bales, old and new crop.

The climatic conditions so far have given reason to hope for very satisfactory crops of cereals. It is difficult yet, however, to give an opinion on the yield and quality, as the hard winter has delayed cultivation to some extent.

SMYRNA, August 10.

The report for the first half-year states: The forecasts of the cereal crop have been satisfactory. The news that has reached us from the interior has been good. So far the crops appear to be better than those of the previous year, but recent political developments, with the new military operations, will greatly delay their raising, transport, and realisation.

The vines on this side of the military zone make a good showing, despite the late rains.

The tobacco crop, favoured by the rains, is also doing well, as is the fig crop, which is considered as better than that of the previous year.

Consignments from the interior are coming in very slowly, and have been much interrupted of late by the new military operations.

---

It has been decided to restore the direct train service to Bucharest via Budapest.

The traffic receipts of the Smyrna-Aidin Railway for the week ended September 11 amounted to £18,176.

Great inconvenience has been caused in Jerusalem by a shortage of small change.

**(Over 80 Branches in the Near East.)**

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.
Letters of credit granted.

## TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned :—

**Egypt.**

(*The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.*)

Pumping Machinery.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)

Paving Stones, etc.—The Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of paving stones and granite headstones. October 15. (L.)

Steamer.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply of an inspection steamer for the Upper White Nile Division. Specification P.T. 25. December 1.

Reservoir.—The Director of Technical Services, Municipalities and Local Committees Department, Ministry of the Interior, invites tenders for the construction of a masonry reservoir at the Assouan Dam. Specification P.T. 50. October 16.

**India.**

Steelwork for Bridges.—The Great Indian Peninsula Railway invites tenders for the supply of steelwork for bridges (Wadi-Bundar Viaduct). (Specification £1. Secretary, 48, Copthall Avenue.) October 15.

Diesel Engines, etc.—The Municipal Board of Agra invites tenders for the supply, delivery, and erection of (1) four Diesel engines and high-tension alternators, including foundations, switchgear, transformers, and sub-station equipment; and (2) Fifteen miles of high-tension underground cables, 28 miles of overhead low-tension three-phase mains, and street lighting equipment, complete with all accessories. (Specifications £2. Messrs. Handcock and Dykes, 11, Victoria Street.) October 22.

**Algeria.**

H.M. Consul-General at Algiers reports that a local trader desires to receive quotations from United Kingdom firms for the supply of iron or soft steel hoops for barrel-making. It is understood that the applicant is prepared to pay cash for the material. Firms in a position to offer supplies of the material in question can obtain the name of the inquirer, specifications, etc., from the Department of Overseas Trade.

## GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to July 31 (new style January 14 to August 13), 1920.

| | Monopolies, tobacco, stamps, stamped paper & Naxos emery. | Piræus Customs. |
|---|---|---|
| | Drachmae. | Drachmae. |
| Gross receipts, July, 1920 ..... | 5,222,312·71 | 4,102,654·65 |
| Do. do. 1919 ..... | 3,664,553·50 | 3,615,645·70 |
| Estimated receipts for 7 months (Law of Control) | 16,858,333·38 | 6,241,666·67 |

## ON 'CHANGE.

### Depression Continues.

(FROM OUR OWN CORRESPONDENT.)

Throgmorton Street, Monday.

The quiet but steady decline in prices which we have noticed during the last few weeks continues; there are but a few small increases to record; quotations, generally speaking, have either remained stationary or moved slightly in an adverse direction.

Among Government stocks the Egyptian Guaranteed 3 per cent. (British Funds) have moved upwards considerably, from 59 to 60¼, but Egyptian Unified have fallen from 63½ to 63, and City of Alexandria 4 per cent. from 60 to 59½. Greek 1881 has declined from 55½ to 55, 1884 from 55 to 54½, and Monopoly from 45 to 43, while Rentes and the 1890 Loan, at 43 and 54 respectively, have each lost a point. On the other hand, the 5 per cent. 1914 Loan has gained two points at 55.

In Banks, Agriculturals have appreciated 1-16th at 4 1-16, but Land Banks have lost half a point at 4½. Imperial Ottoman Bank has also suffered a similar decline at 8½, while Ionian have fallen from 5 to 4⅞.

Ottoman (Smyrna-Aidin) Railway has risen from 8½ to 9¼, but Egyptian Delta Light has lost ⅛ at 5.

Building Lands, which have increased from 1¼ (nominal) to 1⅜ (buyers), give the only case in the Land section of an upward movement. Béhéra has lost ⅝ at 14, Gharbieh has fallen ⅛ at 3, and New Egyptians have suffered a small decline from 33s. to 32s. 6d. The change in Union Foncière is little more than nominal, being from 4½ (sellers) to 4¼ (buyers).

Among the Miscellaneous stocks the only increase is the very small one in Khedivial Mail, from 5 19-32 to 5⅝. Egyptian and Foreign Trust have lost 3d. at 12s. 9d., Egyptian Consolidated Lands have declined from 2s. 7½d. to 2s. 6d., George Nungovich Hotels from 8 to 7, and Port Said Salt has fallen from 105s. (nominal) to 95s. (buyers).

Amongst the Oils the only change to record is an advance of 3d. in Roumanian Consolidated to 21s. 9d.

## FOREIGN EXCHANGES.

## EGYPT'S COTTON EXPORTS.

The raw cotton exported from Egypt for the first six months of 1920 amounted to 2,667,570 bales of the value of £E58,693,134, as against 2,254,496 bales of the value of £E18,285,929 for the same period in 1919. The imports of the United Kingdom amounted in value to £E21,496,902 as against £E9,551,666, but this increase was greatly exceeded by the United States, which occupied the first place with imports of the value of £E24,537,000 as against £E2,786,803.

From January 1, 1920, to June 30, 1920, the value of imports into Egypt of cotton piece goods was £E11,287,050, as against £E3,520,836 in the corresponding period of 1919. The principal countries from which supplies were drawn were the United Kingdom, £E9,776,033, and Italy, £E1,122,587.

Cotton piece goods to the value of £E24,680 were exported principally to Palestine and Syria, as against £E81,716 in the corresponding period of 1919. Re-exports were £E161,419, as against £E1,405,338 in 1919.

# BRITISH TRADE CORPORATION

## NOTES OF THE WEEK.

The Nationalist Delegation, having sounded Egyptian public opinion regarding Lord Milner's offer, has left for England to report on the result of its mission. If the statement which the members issued before leaving Alexandria has been correctly rendered into English, it is to be hoped that it will not serve as a model for the official *communiqués* of the new Egyptian Government. "Our consultations have created a new opportunity to show the ripeness of the people to appreciate the political circumstances bearing on a decisive judgment as to their destiny," runs the message. Fortunately we have less circumlocutory evidence to show that the mission has been successful, that the Egyptian people as a whole approve of the principles underlying the measure of self-government to be offered to Egypt, and that the delegates return with a number of suggestions in regard to details of the final agreement.

Reports are bound to vary as to the degree of support that Lord Milner's offer has actually received in Egypt. *Quot homines, tot sententiæ*. No doubt some Egyptians, aspiring to leadership of the people, have tried to show that the offer which has found favour with the Zaghlulites is a snare and delusion, while others have already expressed anxiety at the prospect of a complete withdrawal of Great Britain's guiding hand. Between the two the new Egypt may expect to find salvation. Perhaps the most significant incident is the effort of one of the four Princes who signed the manifesto repudiating the offer and demanding complete independence to retrace his steps and to seek an interview with the Delegation. The latter, having gained so much itself by abandoning a false attitude of its own, will, we may trust, continue to meet half-way all who differ from it, whether amongst its compatriots or when once again it has to continue discussions in London. The difficulties ahead before a final agreement between the two countries can be concluded should not be underrated, but we cannot help thinking that public opinion both in Great Britain and in Egypt will bitterly resent any breakdown in the negotiations which have successfully reached such an advanced stage.

The Emir Feisal, whose withdrawal from Damascus does not necessarily entail the termination of his public career, has made public, or allowed to be published by his Staff, the first instalment of his side of the Syrian question. He inveighs against French action in massing troops against Syria. When the French first advanced into the rich Bekaa plain leading to Damascus, M. Clemenceau promised that they would be withdrawn. Meanwhile the Syrian people through their representatives at Damascus had declared Syria an independent kingdom. The armistice with Mustapha Kemal Pasha was followed by a concentration of troops in the French zone. It would have been easy, say the Emir's advisers, for the Syrian Government to have overrun this western zone before the concentration had progressed far, but King Feisal, out of loyalty to the Alliance, forbore, and decided to return to Europe to obtain a settlement as between the French and Syrians. Then came General Gouraud's ultimatum, the French advance, the riots in Damascus and the expulsion of the Emir Feisal. Since his departure, it is stated, over a hundred Syrians have been condemned to death, including officers who were the backbone of Feisal's army in the operations against the Turks, and whole villages in the Hauran have been shelled, bombed and burnt for their refusal to admit the legality of the new régime in Damascus.

The French case, as far as we are aware, has not been set forth in its entirety. It has usually taken up the Syrian challenge at a comparatively late stage in the conflict, that is to say, after the French concentration in the western zone had caused the utmost disquietude among the Arabs. Crimes of omission and commission are alleged against the Damascus Government; and it is probably not difficult to tax the Emir Feisal with complicity in the actions of the more extremist of his followers. Whether anyone else could have handled the embarrassing situation more successfully will never be known. In England there is a general tendency to give the Emir the benefit of the doubt. The Arab resolve to oppose French penetration was known to the Paris Government when there was a mere handful of French troops in the country. Emir Feisal never sought to disguise the fact, although he loyally undertook to try to influence his people in the direction of a better understanding with France. He has been blamed for not having kept a firmer control of the situation; but the criticism ignores the strength of the Arab opposition to the French, of which subsequent events have given abundant proof.

In the interests of France, Syria, and the Arabs it is to be hoped that some settlement will be possible that will not always entail an armed occupation of the country. To all three the economic development of Syria should be the chief concern, and for this purpose the co-operation of the Arabs is necessary. Schemes of commercial exploitation are on foot, and, inasmuch

Digitized by Google

as British capital is interested, it should be possible for Great Britain to play the part of mediator, perhaps through the agency of Emir Feisal. If the Arabs have been as foolish and culpable as the French allege, they have already paid dearly for their inexperience. It is impossible that France should rule Syria as she does Cochin China, with both Egypt and Mesopotamia exercising the right of self-government. Commercial development requires the maintenance of peace and order in the land, and these need not be sacrificed if some concession is made to the Arab desire for a measure of independence under the French ægis.

The report that Turkish Nationalist leaders were assembling at Erzerum under the presidency of Mustapha Kemal Pasha to consider the world position in relation to Turkey and to decide upon the relative advantages of a forward movement towards the East or of one towards the West has been quickly followed by news of a Turkish invasion of Armenia. Enver Pasha is said to have supported the Eastern policy in opposition to Mustapha Kemal's natural desire to retrieve his fortunes against the Greeks. From the Nationalist point of view it would seem as if the wiser course had been adopted. Certainly the Turkish forces are more likely to gain successes in Transcaucasia than in Western Asia Minor. Olty has already been captured, and it remains to be seen whether the Turkish plan is to deal with Armenia or merely to hold the Armenians, while directing their main advance on Batoum. As the Allies can have no wish to see the Nationalist star in the ascendant, they must be prepared to help the Armenians and Georgians against this fresh attack. Any assistance, to be effective, must be prompt. A repetition in the East of the reverses suffered by Mustapha Kemal's arms in the West would go far to settle the problem created by the Nationalist movement.

It is not possible within the compass of a short note to pass judgment on the Report of the Committee appointed to inquire into the administration of the Army in India. The subject is one that can be approached from two main points of view, the Imperial and the purely Indian. Lord Esher's Committee chose the former. They sought "to lay the foundation of a sound Imperial military system." From this standpoint India becomes as much merged into the Empire as the Aldershot Command or South Africa, and it seems as natural to employ Indian troops for operations in the Middle East as to ask South Africa to deal with the South-West Protectorate. But two difficulties at once arise: the status of India in the Imperial scheme, and the fact that her geographical position and numerical strength are likely to impose under such a scheme military obligations out of all proportion to her financial capacity. In the leading-article in our issue of September 16 it was pointed out that "India, the poorest member of the Empire, has not attempted and cannot afford to maintain permanently a large Imperial force, under cover of which her richer partners may have time to improvise in emergencies." The Committee may well have despaired of being able to strike a balance between the Empire's military need and India's peculiar position.

The Bolshevist position in Central Asia has reached an interesting and probably critical stage. By the capture of Bokhara the Reds have shown that little reliance can be placed on their specious promises, and that anything not exclusively Bolshevist must be prepared to be swept away when the opportunity offers. The Emir of Bokhara is said to be making his way to Kabul, where he will be able to enlighten the Ameer on the subject of Bolshevist methods. In the meantime the Bolshevists are actively engaged in trying to win over Afghanistan to their way of thinking and acting. They want Afghan assistance in order to reach India, and with Turkish help they hope to make a useful tool of the Ameer. The arrival of the fugitive Emir of Bokhara upon this scene should at least be piquant, and it will be of interest to learn whether the Bolshevist cause is going to receive a fresh accession of strength by the Ameer's action, or will be found to have overreached itself in this direction.

The beginning of October is by common consent the best time for taking stock of the economic position in India, for the monsoon has then done its best, or its worst, and anyone who is in possession of the records of rainfall can make a reasonably close estimate of the prospects for the next year. The verdict on the past season cannot be altogether favourable; the rainfall has been "patchy," and the reports are consequently more conflicting than usual, but on the latest information it looks as if the country as a whole should do tolerably well, though some important areas may have suffered considerable loss. The inference from the condensed official records published by the India Office is borne out by the statement that a limited export of food-grains is to be permitted, and by the recent movements in the freight market, while some authorities derive further comfort from the decision to discontinue the sale of Reverse Council bills, which is taken as implying a hope that the export trade may gradually return to its normal condition.

In this connection it is worth noting that among the causes which have recently combined to reverse the trade balance of India, one at least gives no cause for regret. It has been stated officially that very large payments for imported machinery have contributed materially to the abnormal figures of the last few months, and imports of machinery imply increased capacity for export in the near future. The war came just at a time when the country was preparing for an extended use of machinery in agriculture as well as industries; the movement was inevitably checked for the time, and when the Armistice was declared India found herself with her existing stock practically worn out, and with four years' arrears of extensions to make good. At that time fears were commonly expressed that the necessary imports would be impracticable, and that progress might therefore be delayed indefinitely, but apparently we may conclude that these apprehensions were exaggerated.

It is unfortunate, but not altogether surprising, that the end of the monsoon should be marked by a recrudescence of the strike fever in some parts of India. The experience of the last two years shows conclusively that the old stability, or stagnation, of industrial labour has passed away, and the new aspirations of the workers, vague as they are, represent a force which may do much either to make or to mar the prosperity of the whole country. The problem of the moment is one of leadership. One looks in vain for any sign of this quality among the few unofficial Indians who have so far interested themselves in the question, and apparently the road must be pioneered, as is so often the case, by official agency, or, in other words, by the new Board of Industries. We hear encouraging reports of the manner in which the problem is being explored by the Board, but we are not so sanguine as to expect that everything will be put right at a few days' notice; the indications are that unrest in the labour world will continue, and perhaps extend, while practical methods of dealing with it are being devised and tested by experiment.

The election of Sir Verney Lovett as Reader in Indian History at Oxford may be taken as a sign of the times. Hitherto the appointments of this nature at the English Universities have tended to be given to men who knew more of the India of two thousand years ago than the India of to-day, and students have been heard to complain that when they had finished their course, they had learned more of Asoka than of Akbar, and more of Akbar than of the men who moulded the country as it now is. We shall not hear such complaints from Oxford while Sir Verney is there. He is not a specialist in the knowledge of the remote past, but he knows the history of the last two centuries probably as well as anyone now alive, and he has the gift of fastening on essentials and presenting them in an intelligible way; his students will go out knowing, at least how the new India has come into existence, and what are its relations with the old, and such knowledge will be of greater value just now than anything else they could learn.

# THE WEEK AT HOME.

**Coal.**

A week of negotiations has considerably improved the industrial position. The newspapers now speak of the coal "situation" in preference to the coal "crisis," and the change of phraseology accurately reflects the tempered optimism of the moment. The miners' representatives have tacitly recognised that output depends on wages, and that increased wages necessitate increased output—a point which was always obvious to the economists, but not quite so obvious to the protagonists in the fray. The question now is upon a "datum line," a rock-bottom production from which a minimum of wages starts, and a percentage increase of tons of coal produced on which a percentage increase of wages can be calculated.

On this point, of course, there are differences of opinion between employers and employed, and there have been awkward moments when the conferences seemed likely to break up. Mr. Lloyd George, in his original letter on the datum line, chose no definite figure, but took refuge in $x+y+z$. It was probably the first time a statesman has ever employed algebra, but the vagueness of that admirable science proved so useful that no politician in future is likely to be without at least an elementary knowledge of the higher mathematics. (Probably Mr. Austen Chamberlain, who is being attacked again by "big business," only wishes he could express the Excess Profits Duty in algebraic formulæ.)

The upshot of the whole business is that the coal strike is again postponed, and another ballot is to be taken in a fortnight's time. This appears to be sensible. It is generally recognised that a higher wage will be conceded anyhow, but the question is on the amount. When the parties have got so far, an interim settlement, and eventually a definite agreement, seem increasingly probable. Both sides have kept their tempers well in very protracted and occasionally technical discussions, and both seem to have an increased sense of responsibility as to the disastrous consequences of a strike.

The Yorkshire miners are definitely antagonistic to a strike, although they would no doubt obey strike notices if it came to the point; in Wales the sentiment is far more extreme, but even there a pronounced minority seems opposed to a strike. The general opinion of the country now is that the chief danger is over.

The Government has shown admirable patience and tact in carrying on the negotiations; the main credit must be given to Sir Robert Horne, who has earned golden opinions from both sides alike. Unfortunately for the advocates of a business government, Sir Robert is a lawyer, and even those who dislike lawyers as a class have to admit that he has shown honesty of purpose and public spirit in the way he has steered the country through this difficult position. A single mistake, and the chances of industrial peace would have vanished. As it is, the negotiations have furnished a signal instance of the advantage of constitutional methods over the violent courses which a small minority still hanker after, and the lesson is not likely to be forgotten.

It may perhaps be added as a postscript that the *Daily Herald*, the organ of the extremists, is again appealing for funds, and has given notice that its price will be raised from a penny to twopence. It was whispered in Fleet Street that the recent notoriety it acquired gave that revolutionary organ a temporary increase of circulation, but that is not likely to last very long. Its course has been altogether too erratic.

**Labour versus Churchill.**

The personalities of party politics seem to be reviving. Labour hardly cares to tackle Mr. Lloyd George, but a section of Labour announced at a congress this week that it would like to impeach Mr. Winston Churchill. The Secretary for War, who has played many parts in his time, would probably relish the experience, for with all his activities he would hardly be convicted. But a more practical difficulty that lies ahead of Labour at the moment is to exclude him from Parliament. Of the two seats at Dundee Mr. Churchill holds one and a Labour member the other. Labour will therefore have to put up two candidates if it wants to eject "the monster of modern militarism," and unfortunately the different sections of Labour cannot agree who is the right man to bell the cat. The Independent Labour Party wants to run Mr. Wallhead, a pronounced pacifist—in the very home of the Black Watch!—and others cherish a strange affection for Mr. E. D. Morel, whose peculiar activities during the war made him acquainted with the inside of a prison. And there are other Richmonds, or possible Richmonds, in the field, or looking over the hedge.

**The Examination Fiend.**

There is a panic in Whitehall at the suggestion that the temporary clerks there shall pass a competitive examination if they are to continue in Government employment. Many of the young ladies, who have very decided views on jumpers and face-powders, are a little vague in such trivial subjects as arithmetic and geography, and terrified at the prospect of putting their convictions in writing. But the little tin gods who order their days are said to have decided on the survival of the fittest—and a wicked rumour suggests that some of the temporaries have determined to resign rather than face the ordeal.

**The Right to Strike.**

Among a number of new autumn plays, one at least has hit the mark. It is "The Right to Strike," by Mr. Hutchinson, and it is likely to occupy the boards of the Garrick for some time. The bare bones of the plot are that first some workmen go on strike, and then, for an apparently sufficient cause, the doctor; but the medico relents when a woman, who is the wife of one of the strikers, is dangerously ill. He operates, and she recovers, and all is well. (It is a curious convention of the stage that while the parson is always a fool and the lawyer a rogue, the doctor is always a splendid fellow, whose look alone is almost a certain cure.) But there is a good deal of ethical discussion as to the rights of Capital and Labour, and most of the prominent capitalists and Labour leaders attended the first night, and blessed the dialogue as fair and convincing. Perhaps somebody will now give us a play discussing nationalism and private enterprise.

**Church Reunion.**

Some discussion is taking place in the religious Press, and in church and chapel circles, as to the possibilities of reunion of the churches—Anglican and Nonconformist, that is to say, for the Roman Catholics do not come into this matter, and they have made their position clear. The Lambeth Conference some weeks ago published resolutions dealing with this difficult problem in a very conciliatory spirit, and there have been many interchanges of pulpits. As the latter

custom is increasing, after a certain amount of High Anglican opposition a year ago, it may be assumed to be successful, and to have done no particular harm even to tender consciences.

The next step, apparently, lies with the Dissenters. The Established Church is ready to recognise Nonconformist ministers—at least, those of the great bodies—on certain terms. The question is whether the Dissenters will consider that these terms practically involve reordination. If they do so decide, then reunion is for all practical purposes at an end, since the Nonconformist minister would quite naturally consider that this involved a slight upon his previous labours, and would be tantamount to an admission on his part that he had in the past not been fully competent.

On the other hand, a great number of the clergy hold firmly to the hypothesis of the Apostolic succession, which the Nonconformists manifestly have not got and do not believe in. It is possible that upon that rock the ship of compromise will be wrecked. But at least the discussions have made it evident that the sharpness and rancour of the old differences have died out.

**The Halfpenny Shortage.**

The introduction of three-halfpenny instead of the penny fares on the omnibuses has led to a sudden shortage of half-pennies. The despised coin, whom none were so poor as to reverence a few short weeks ago, has now become the observed of all observers, the thing that every man desires. The newspapers, tactfully forgetting that they can no longer be bought for a halfpenny, and, therefore, cannot be charged with increasing the shortage, have been discussing the problem volubly. The introduction of a three-halfpenny coin has been suggested in many quarters, but the coinage experts hint that the remedy may be as bad as the disease, since if the now extinct penny fare eventually goes up to two pence, the man in the omnibus would pay it with a three-halfpenny piece and still have to search his pockets for the odd halfpenny. Much more probably the man in the omnibus would begin to walk, to the benefit both of his pocket and his appetite.

A more reasonable solution would be the introduction of a nickel coinage. Nickel weighs less than copper, is more durable, and looks cleaner; but the authorities at the Mint consider that legislation would be necessary.

**The Week's Books.**

Several interesting books have come out these last few days. The most popular will probably be "Herbert Beerbohm Tree" (Hutchinson), by his brother Max Beerbohm, which gives a vivid figure of the great actor, and quotes many of his epigrams, such as the characterisation of an unnamed person, "He is an old bore; even the grave yawns for him." The memoir is full of these good sayings, but I was not prepared to find that Tree was ignorant of poetry. Yet Lady Tree writes, "On the day before his death he took from my hands Dr. Bridges's 'Spirit of Man,' which does not name the poets it quotes. He read such a one as 'Hail to thee, blithe spirit,' or 'Fair Attic shape,' or 'He praveth best who loveth best'; and musingly said, 'That is lovely—I wonder who wrote it?'"

"Reminiscences of a Stowaway" (Chapman and Hall) will furnish entertainment to Anglo-Indians. The author, after an adventurous career at sea in the old sailing ships, entered the Indian service as a police official, and the reminiscences consist largely of his experiences in the old penal service.

"Human Psychology" (Constable), by Mr. Howard C. Warren, a professor of Princeton, is a very adequate introduction to the subject, in the light of recent theories and discoveries. It is clearly and carefully written, as a text-book should be, and contains one or two useful illustrations.

A word may be given to Miss Dolf Wyllarde's "Temperament" (S. Paul and Co.). It belongs to what is known as the best-seller class of fiction, which, perhaps, sufficiently describes its character.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents.)*

## EGYPT.

CAIRO, September 20.

**The Treaty of Alliance.**

The situation has certainly improved during the past week in the sense that there are more definite indications of the public attitude towards the proposed agreement. There is little doubt that the manifesto of the four members of the Sultania Family has failed in its object of rallying the public round the opposition. Wherever I go I find the same tendency to resent and ridicule the attempt to force an opinion on the nation by an element which, as one facetious Egyptian remarked, was the last to come in on the side of complete independence, and is the first to reject an offer which is generally regarded as conferring far more than the most sanguine expected. As a matter of fact, what I had hinted at last week is openly talked about to-day—viz., that the man really responsible for the Princes' action is Mohammed Said Pasha, the ex-Premier, and Zaghlul's bitter enemy, who, desiring to defeat the delegation in order to come in himself, has used the Princes for his own end, though he has, so far, carefully refrained from declaring himself openly.

By contrast we have this week had plain outspoken statements from such prominent Nationalists and former members of the Cabinet as Rushdi Pasha, Sarwat Pasha, and Sedky Pasha, who, in the form of interviews, have definitely supported the proposed agreement and have stated the reasons why they are in favour of it. Meetings of the Egyptian Bench and Bar, of the ulemas and clergy, of prominent notables and merchants, etc., have been held at which they have all signified their acceptance of the proposed scheme, and those notorious centres of active and extreme nationalism, the schools of Law and Medicine, have taken a similar decision.

**Attitude of the Legislative Assembly.**

But the most important factor has been the attitude of the Legislative Assembly. A banquet was given to them on Wednesday evening at which Mohammed Pasha Mahmud made a speech explaining the situation, and on Thursday afternoon they were invited to a private meeting at his house. The present Assembly, it should be explained, was elected in 1913, but owing to the war and the suspension of its deliberations, no new elections have taken place, and the vacancies which have occurred as a result of death, resignation, etc., have not been filled. There are consequently now only sixty members as against the fully constituted house of seventy-six. Of these forty-nine took part in the debates and recorded their vote; of the difference of eleven eight belonged to the delegation who for obvious reasons abstained from voting, while three were absent. The meeting lasted until midnight, and the result was that forty-four out of the forty-nine declared themselves in favour of the settlement on the basis of the proposed agreement. This meeting was, of course, not an official one, and must not be regarded as recording a vote which will appear in the official record. Nevertheless the result is important, and, taken together with the views expressed by other elements, will fully justify the four delegates in reporting that the country is in favour of a settlement on the proposed basis.

In the course of all these discussions various criticisms have been brought forward. Many of them are frivolous and reveal ignorance of what the proposed treaty really means. There are, however, certain points which are more or less reasonable, and which are worthy of consideration when the negotiations for the final treaty take place. It is highly probable that the four in reporting to their leaders will bring these points forward, and that if the delegation as a whole considers them sufficiently important they will be submitted to the Milner Mission. Since, however, the "inquiry," if one may so term it, is not yet concluded, although as a matter of fact its result may now be regarded as a foregone conclusion, it is preferable for obvious reasons at the present stage not to enumerate what the points in question are, but I shall hope to deal with these when the "four" leave.

They are due to sail for Europe on October 1, and as soon as they have reported, it is understood that the intention is for a new Cabinet to be formed under the presidency of Adly Pasha Yeghen. As this Cabinet will consist of men having a following in the country it is hoped that it will be considered as representative, and that it will be possible to select the Egyptian Plenipotentiaries for negotiating the treaty from the Cabinet and the Egyptian Delegation. The programme tentatively drawn up for the subsequent procedure is as follows:—It is proposed to proceed immediately with the new elections to the Legislative Assembly, and the latter, as soon as the Treaty has been initialed, will discuss and, it is hoped, ratify it.

Simultaneously, the Treaty will be laid before the British Parliament, and by the time the latter has ratified it, the Legislative Assembly will have drafted and approved the new constitution which the change in *régime* will necessitate. The Assembly will then be dissolved, elections for the new representative bodies will take place—it is understood that there will be two Chambers—and everything will be in readiness for the application of the Treaty. Opinions vary upon the date when it will be possible to introduce the new *régime*, but, in view of all the difficulties which must necessarily be encountered in elaborating a scheme requiring, among other things, the assent of two representative bodies, and, to certain important reforms, the consent of fifteen Powers, it would appear that, even as an optimistic view, the end of 1921 will be the earliest at which it can be hoped to be introduced.

**Effect of New Regime on Foreign Communities.**

I do not propose at this juncture to go into the question of the effect of the new *régime* on the European colonies. That they will be affected by the transfer to purely Egyptian hands of the administration of the country seems possible, though their position ought to be amply protected by the legislation affecting foreigners vested in the British representative and the presence in the Ministry of Justice of a British official who, it appears, is to watch over the administration of Justice as far as foreigners are concerned. So far, however, the foreign communities have not formulated any opinion on the matter, but it is noteworthy that a persistent decline has manifested itself in the share market since the announcement of the details of the proposed settlement. One fact seems pretty clear, and that is that the British colony will necessarily become a very small one, and that the French will increase considerably. The former will, of course, result from the reduction in the number of British officials in the service, while the French colony, if the French Government does not impose restrictions, will be expanded by the very large number of Syrians who reside in this country, and who have declared that they will opt for French nationality rather than continue to be considered as local subjects under purely Egyptian Government.

Finally, it is to be presumed that the reduction in the numbers of the British colony will knock on the head the projects for the erection of an Anglican Cathedral, for the creation of a large British hospital in the place of

the existing Anglo-American hospital, and for placing the recently-founded English School on a permanent basis. Obviously, from the point of view of the actual requirements of the community, there will be little *raison d'être* for either of these three institutions under the new *régime*, although from the point of view of propaganda and of British prestige, there may be some justification for their creation and maintenance.

## YUGOSLAVIA.

BELGRADE, September 22.

**Another Political Crisis?**

Yet another Ministerial crisis is brewing, which promises, for a change, to be interesting, and to have important political consequences. It will be remembered that the conservative Radical Party, which has governed the country for so many years, has made a pact with the Narodny Club or Croat Nationalists, and so balances the Democrat Socialist bloc. Now a proposal by the Radical Minister for the Constituent Assembly, Professor Markovitch, that the Parliament transfer legislative powers to the Executive, so that decrees can be issued with the full effect of laws, has raised a storm of opposition, not only from the other parties, but from some Radicals. M. Protitch and M. Pashitch, will, it appears, succeed in splitting the Radical Party as M. Vesnitch disagrees with them, and there is evidence that the Narodny Club will pass over to the Democrat bloc, at least to answer the elections to the Constituent Assembly, which are fixed for November 28. The new alliance will go into opposition and the Radicals be left to govern, if they can, meanwhile. An entente between the Democrats and the Narodny Club would give that much-desired stability to Yugoslav politics.

**The Prince Regent at Serajevo.**

Messages from Serajevo describe the brilliant scenes of the enthusiastic reception of the Crown Prince Regent by the Bosnians. On Monday, 20th, he attended a thanksgiving service at the Orthodox and the Roman Catholic Churches, then at Gazi-Husrefeg Mosque, and finally at the Jewish Synagogue. In a speech at the State luncheon he made felicitous allusion to the part which Bosnia and the sister province of Herzegovina had played in the history of the Serbian race. The first written memorial of the language was by a contemporary of Nemanja and Ban Kulin, and Saint Sava reposes at Mileshev. The great Bosnian King Turtko, who proclaimed himself King of Croatia in 1390, carried on the unification policy of Nemanja. Torn by the struggles between Rome and Byzantium, between Vienna and Stamboul, Bosnia and Herzegovina, divided by faith, remained Serb in language and sentiment: it was in Herzegovina that there broke out the rising against the Turks in 1875, which was the first step in the modern struggle for liberty which was but recently ended. That veteran warrior King Peter forty years ago had led a band of stalwarts among the crags of Bosnia and Herzegovina in their struggle against Austria, and fought side by side with the dauntless Luka Vukalovitch, Don Ivan Musitch, Husein Kanetan, and Ali Pasha Rizvan Begoritch.

The Regent has a happy turn of speech, and knows full well how to appeal to the national pride and vivid historical sense of his romantic people.

As souvenirs of his visit to the spot where was fired the shot that led through blood to the liberation of the enslaved Serbs, Croats, and Slovenes, the Regent brings back some interesting souvenirs. The Chamber of Commerce has presented a laurel wreath in silver, with a leaf for each victory of the Serbian Army, and Herzegovina a presentation sword in gold.

**The Danube Racing Club.**

The Danube Racing Club evidently means business. The first meeting was such a success that a second was held a fortnight later, in brilliant sunshine. The course was crowded, and there were plenty of entries and some really good finishes. The win by a horse from the Royal stables naturally caused enthusiasm.

## ROUMANIA.

BUCHAREST, September 18.

**The New Land Bill.**

On Sunday, September 19, the first act of distributing the land among the peasants will take place with great solemnity at a village near Bucharest, in the presence of the Prime Minister and Minister for Agriculture, M. Garoflid, the latter being responsible for the carrying into effect of the Land Bill.

This measure is important for two reasons. It is the beginning of a new era in Roumanian agricultural history, and it will also fulfil the promise made by the King during the war that he would give the land to the peasants who, by the fact of their being the tillers of the soil, should be the rightful owners of it. The preliminary work in the settlement of this question, which has been to establish what allotments can be given, and the rights of each peasant to hold such an allotment, has been successfully accomplished. Peasants of military age have been carefully examined to find whether they have done their duty to their country or not, as deserters are excluded from this scheme. The division of each area into allotments was arranged by local committees, consisting of the mayor of the village, a delegation from the peasants, the agricultural inspector of the district, and a military officer (the latter being for the purpose of determining the military status of the peasants). It is estimated that by next March every peasant will be in possession of his holding in Roumania proper, when they will continue the scheme in the new provinces. The State will have to compensate the former owners of the land to the extent of 2½ milliard lei.

**Mission of M. Titulesco to London and Paris.**

On the Bessarabian question M. Titulescu succeeded the last mission of M. Vaida Voevod, by which the latter obtained a recognition from Lord Curzon last March, with certain conditions, that Russia has a right to an eventual appeal to the League of Nations about Bessarabia, and that the Chilia tributary of the Danube Delta should be handed over to the control of the Danube Commission; but Roumania protesting against this, it was admitted that the latter question should be decided at the General Conference of the Danube Commission, and that the Treaty of Bessarabia would be ratified after the position of the English and French landowners in this province has been settled. M. Titulescu has now obtained from Lord Curzon a further letter consenting that the Bessarabian question can be settled after the ratification of the Austro-Hungarian Treaty in the Roumanian Parliament, thereby reducing the settlement of it to a simple formality which will be completed in a few days.

M. Titulescu also discussed with Mr. Chamberlain the precarious financial state of Roumania, and succeeded in concluding an agreement between England and Roumania, by which a postponement of the repayment of the Roumanian War Debt, and the liquidation of the Treasury Bonds, has been granted for fifteen months; and if America should allow England and France to forgo the payment of interest on the War Loans from America for three years, England would do the same for Roumania.

With regard to the destruction of the Roumanian oil industry during the war, the British Government took over the responsibility for this on August 12. With reference to the coupons of the 1913 Loan. M. Titulescu promised that they would be paid.

In Paris M. Titulescu had several discussions with M. Francois Marcsal, the French Minister of Finance, referring to the same subject. France asked for time to study the question. The possibility of a French Loan to Roumania was discussed, for the purpose of covering the amounts of the unpaid coupons to France. It is expected that France will agree to this. These arrangements with England and France are quite independent of the rights granted to Roumania at the Spa Conference.

M. Titulescu, after attending the Brussels Conference, will return to Roumania.

The local Press comments very favourably on the successful results of this mission, and it will have a good effect on next year's Budget, by giving Roumania a chance to take care of her internal reconstruction.

**The Concert Season.**

The concert season has been inaugurated in brilliant style by the appearance of the world-famous tenor, Leo Slezak, who is giving three concerts at the Carol cel Mare Theatre, Bucharest, commencing on September 19.

## GREECE.

ATHENS, September 18.

**The King's Name Day.**

The anniversary of the name day (St. Alexander's) of his Majesty the King was celebrated in all the principal towns in Greece. In the capital a service was held at the Cathedral in the presence of all the members of the Government, with the exception of M. Venizelos, who is still indisposed, and of M. Repoulis and M. Michalakopoulos, who were away from Athens. The Commander-in-Chief of the Greek Forces, General Paraskevopoulos, who had arrived from Smyrna a few days previously, was also amongst those present. King Alexander, following the example of his grandfather, King George, who made a point of never spending his name day in Athens, had left on the previous day for the island of Spetsai, accompanied by his morganatic wife.

After the service, the Bishop of Athens, the Council of Ministers, also the members of the Diplomatic Corps and other officials, proceeded to the Royal Palace and signed their names in the book of congratulations.

**The Political Situation.**

Although the Decree ordering the dissolution of the Chamber has not yet been published, the electoral campaign has already begun. In both the Liberal and the Nationalist parties the lists of the various candidates in Athens and the provinces are being prepared.

The Opposition are so far without a leader, and, although M. Gounaris, the absent chief of the Nationalist party, telegraphed from Rome to his friends here informing them that he expects to return to Greece for the purpose of taking an active part in the elections, this is considered very improbable, unless he receives a guarantee that all his accounts with Greek justice are to be regarded as settled.

In the meantime serious divergencies amongst the leading members of the Opposition party are reported by the Venizelist papers, but the anti-Venizelist Press contradicts these reports most emphatically, and assures us that perfect harmony of opinion reigns in the ranks of the Nationalists.

Immediately after the dissolution of the Chamber, which will take place next week, the Ministers will proceed to their respective constituencies, and M. Venizelos contemplates making a tour of the principal towns of Greece, in order to explain the importance of the approaching elections. The Greek Premier is so confident as to the issue of these that he declared, in one of the last sittings of the Chamber, that he would tender his resignation to the King if he did not obtain an absolute majority in Old Greece even though his party might be triumphant in New Greece.

**Northern Epirus.**

To a deputation from Koritza, which visited him a few days ago, the Prime Minister expressed his confidence as to an early and favourable settlement of the Northern Epirus question. The Greek Government, said M. Venizelos, has obtained a promise of support from the Governments of Great Britain, France, and Italy, and the only reason that no definite solution has been arrived at up to the present is the antagonistic attitude adopted by the United States of America. It is hoped, however, that after the General Elections in America these objections will be removed, and that the Northern Epirus question will be settled in a manner safeguarding Greek interests and in accordance with the wishes of the population of those regions.

**Miscellaneous News.**

By order of the Minister of War the Military Governor of Athens, Brigadier-General Tsimikalis, is appointed Commanding Officer of the Cidonia Division in place of Brigadier-General Othonaios, who has been nominated Military Governor of Athens.

Brigadier-General Othonaios was wounded during the recent operations in Asia Minor, but is now well on the way to recovery.

The last batch of 400 Bulgarian prisoners still in the hands of the Greeks left Crete for Salonika, whence

they will proceed to the frontier to be handed over to the Bulgarian authorities.

After the occupation of Ouchak the Athens Division, continuing its advance beyond that town, captured over twenty villages. These villages were previously looted by the Kemalist troops, which then retreated eastwards. So far over 1,200 of the latter were taken prisoners, but more than half of them were set free, as it was ascertained that they had been forcibly recruited by Moustapha Kemal's agents.

## TURKEY.

CONSTANTINOPLE, September 25.

**The Cabinet Crisis.**

In spite of the suddenness of the resignations of the Sheikh ul Islam and the Minister of Agriculture, few people were surprised by the crisis which arose early this week. For some time past determined efforts have been made to bring about the downfall of Damad Ferid Pasha by the numerous army of place-hunters, most of whom own allegiance to the Entente Liberale Party. The methods employed by the Grand Vizier's opponents include—in the bag of the shady professional politician—lying stories supported by "documents," persistently repeated rumours of a scurrilous nature, and so forth. The first punitive expedition against the Nationalists failed because it was undertaken with inadequate forces, inadequate resources, and before the administration had been purged of the numerous partisans of the Nationalists introduced by the previous Grand Viziers, Ali Riza and Salih Pashas, who pursued a policy of reconciliation with the Nationalists. Damad Ferid Pasha was then accused of weakness, treachery, and what not, although from the very outset it was plain even to the superficial observer that there was no hope of the expedition succeeding. Having learned wisdom from this experience, the Grand Vizier is resolved this time not to move until his forces are sufficient in number, and well equipped in every way, and, above all, not until he has the necessary funds to ensure loyalty. In the meantime, it is proposed to grant an amnesty to all those who have joined the Nationalists, with the exception of the ringleaders, and who make their submission within a given period. It was this proposal that was the ostensible cause of the crisis, and the resignation of the two Ministers. So far as the Minister of Agriculture is concerned this is probably true, for Jemal Bey has always been a consistent advocate of ruthless repression; but until quite recently at least the Sheikh ul Islam was certainly in favour of milder methods, and his sudden change of front can only be ascribed to one of those doubtful manœuvres which have become traditional with the Entente Liberale Party. As remarked above, the campaign against the Grand Vizier has recently reached a strong pitch of intensity, and the Sheikh ul Islam, with his Entente Liberale friends, doubtless thought the time had come when the slightest push would cause the downfall of the Cabinet. There is no doubt that it has been a close thing, and that further trouble is in store; but the support of the Sultan has enabled Damad Ferid Pasha to stave off the attack on this occasion.

At the same time, it is quite clear that the Government has reached an *impasse*, from which there is no issue except financial accommodation on the part of the Allies. Detailed plans have been elaborated for the despatch of a punitive expedition to Anatolia, and so far as can be judged these plans would have every chance of complete success *if* the necessary twenty millions of Turkish pounds can be provided. The Government can no more find twenty millions than it could pay off the whole of the Turkish debt at one swoop. There is not even enough money to pay the very reduced salary list, and Government officials are remaining at home because they cannot pay their fares to and fro. The War Office is threatened with an assault by army officers who have had no pay for two months. Therefore, unless the Allies come forward the expedition to Asia Minor can get no further than the paper stage. The alternative is clear. If the Sublime Porte is not to be given the means to clear up the situation itself, the Hellenes will have to be granted permission to proceed further into Asia Minor. Why should not Damad Ferid Pasha be given a chance? There is no reason to suspect his good faith, and if he were given the same assistance that the Hellenes have received from us in their operations against Mustapha Kemal, there would be no doubt of the success of the proposed punitive expedition. In any case, it seems very hard to refuse to untie the hands of the Turks, and later to punish them for not carrying out the task that they were thereby prevented from fulfilling.

**Anatolia.**

According to the latest reports from Anatolia, the leaders of the rebellion are at loggerheads over the question of Bolshevism, and there can be little doubt that the proclamation of an amnesty would cause large numbers of waverers to return to their original allegiance. The ancient Turkish tradition whereby the Muscovite was regarded as the most deadly foe of Turkey cannot possibly have been obliterated in a few months, especially as during those few months there have been such occurrences as the appalling massacres of Elisabetpol. Nevertheless, the Anatolian Press reveals little or nothing of the struggle that is taking place amongst the leaders of the movement, and continues to preach the hope of salvation from "our noble Allies, Lenin and Trotski." The Bolshevist plenipotentiaries who recently arrived in Angora appear to have reached Trebizond by sea, in a ship flying the red flag, and were enthusiastically received by the population. There seems, indeed, to be little doubt that the Bolshevists are serious in their attempt to make trouble in Anatolia, and are flooding the country with pamphlets printed in the Turkish, Greek, and Armenian languages. The success of General Wrangel's armies would solve more than one problem—temporarily at least.

**Pontus.**

An interesting sidelight has been cast upon the Pontus question by a recent pronouncement of the leader of the Greek delegation which is agitating for the establishment of a Greek "Republic" on the southern shore of the Black Sea. It is known, of course, that it has been proposed to give Armenia the port of Trebizond as an outlet to the Black Sea, but the Greeks now declare that they would *far rather remain under the sovereignty of the Turks*. Those who have swallowed the stories of "massacres" and "deportations" from "Pontus" should reflect deeply. They will probably realise that there is far more than they suspected in the "horrors" reported from Anatolia.

## CYPRUS.

CYPRUS, September 4.

**The Deputation.**

A new phase has been reached. The delegates, having to decide whether their presence in London could be any longer justified, resolved to consult M. Venizelos. Three members accordingly saw the Greek Premier in Paris, who told them what he had already said on several previous occasions. According to a Cyprus paper, a communication from M. Venizelos to Mr. P. Constantinides was as follows:—"The fate of Cyprus is my affair. Tell your compatriots so when you return to your beautiful island. I cannot press the matter at the present moment with a friendly Government which is fully occupied with two great and important questions. But I hope the time is not far distant when the Cyprus question will be satisfactorily settled. I shall return to England in November. The deputation can now return to Cyprus, as nothing further can be done at present." The Mission has accordingly informed the Committee in Aid of Cyprus that they propose, for reasons which cannot at once be stated, to return "temporarily" to the island; and they apply for the remittance of £1.000 for expenses. This news has caused no little perturbation and anxiety among the party of Union, who fear that it points to an indefinite postponement of a settlement.

The papers, however, express a conviction that the future of Cyprus is safe in the hands of M. Venizelos, who would never have spoken as he has done had he not arrived at a definite understanding with the British Government. It is not Great Britain that has coupled Rhodes and Cyprus.

Troodos, and the usual proclamation has been published. He has since visited Nicosia and Larnaca, and returned to Troodos.

Mr. J. C. Fenn has been appointed Chief Secretary and Member of the Executive Council.

The Chief Justice, Mr. Stanley Fisher, is expected from England early in October.

CYPRUS, September 16.

### The Season.

The summer is near its close. There has been great heat in the plains. On the heights of Troodos there has been an unusual amount of early rain, with hailstorms. The season has been a quiet and comparatively dull one. The High Commissioner, who is not so partial to Troodos as were his predecessors, is leaving early for Nicosia. The offices are going down on September 24.

### The Future of the Island.

The sense of doubt and obscurity which hangs over the island weighs heavy upon the spirits of all, and it will be well for all interests, economic and social, when the oppressive atmosphere, so long charged with disturbing elements, is cleared. Nobody can comprehend why a plain statement on what lies ahead cannot yet be made. Rumour succeeds rumour respecting the island's future, and people are more perplexed than ever. No one is surprised to hear that the Deputation is returning; and even the Press seems to consider that its work is done. If the truth were told, only too many would shake their heads and openly express their doubts as to any possible benefit that could come from a change of masters—*i.e.*, were the British element withdrawn. That a period of confusion and retrogression would follow is probable enough. There are many besides the 60,000 Turks who hold that the end of British rule would be the beginning of a series of troubles that would render hopeless any easy transition towards such progress as Cyprus needs. For all agree that, whatever the new settlement may be, a restoration of material prosperity can hardly be any longer postponed. Meanwhile, the general condition is far from what it should be. Legislation has proceeded while Greek members of Council have been absent in London. Business goes on, but the nightmare of stagnation from which agriculture and all industry suffer is still unbroken. The present High Commissioner has certainly interested himself on behalf of British officials, for whom little has been ever done in this impoverished island before. The rise of salaries for some came only just in time to save them from serious hardship and trouble.

### Cyprus and Foreign Aircraft.

According to an Order in Council under the Aerial Navigation Law of 1918, no flight over Cyprus or its territorial waters may be undertaken by foreign service aircraft without special permission of the High Commissioner. No explosives or ammunition may be carried over the island; and the carriage or use of photographic apparatus is similarly prohibited.

## INDIAN PENSIONS.

The Secretary of State for India announces the following revised scale of pensions for departmental officers (Commissaries, Deputy Commissaries, and Assistant Commissaries, with the respective ranks of major, captain, and lieutenant) and warrant officers (conductors and sub-conductors) of Indian Army departments. The scale must be regarded as provisional only, and is subject to revision hereafter:

The minimum rate of pension for each rank may be granted after twenty-four years' service, provided the required departmental service (sixteen years) has been rendered, and rises by annual increments up to a maximum after thirty-four years' service, as follows:—

| Rank. | Min. Pension. | Annual Increment. | Max. Pension. |
|---|---|---|---|
| (£ per annum in Europe or Rs. per mensem in India.) | | | |
| Major and Commissary | 300 | 6 | 360 |
| Captain and Deputy Commissary | 240 | 6 | 300 |
| Lieutenant and Assistant Commissary | 190 | 5 | 240 |
| Conductor | 150 | 4 | 190 |
| Sub-Conductor | 120 | 3 | 150 |

(The rupee rates in India are at present only applicable to existing pensioners.)

Special additional pensions at the rates shown in the column headed "Annual Increment" will be granted for each year or part of a year that an officer or warrant officer has been retained in the service beyond the age of fifty-five on account of the national emergency.

The revised rates of pension will be payable as from April 1, 1919. These rates will be subject to alteration either upwards or downwards after July, 1924, to an extent not exceeding 20 per cent., according as the cost of living rises or falls.

Revised rates of invalid pensions for Indian departmental officers and warrant officers will be notified hereafter. Forms of application for revision of pension under the foregoing rules will be sent out as soon as possible.

# CORRESPONDENCE.

## THE GREEKS IN ANATOLIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Allow me to express my great surprise at your Constantinople correspondent's amazing denunciation of the behaviour of the Greek troops in Asia Minor. He has the right to give his opinion, I will not contest him this right, and, of course, he may speak *ex cathedra*, as he happens to be on the spot and much nearer to the scene of action than I am. I will not try to embark on a controversy, because I have not finished yet with another one; I will simply say that the Greek troops closely co-operated together with the British contingents in the Near East since the *sans-culottes* of Mustafa have distinguished themselves in the New Anatolian Marathon race. The excellent conduct of the Greek soldier was highly eulogised by the British High Command and British staff officers. As for the Komitaji raids and Greek methods of terrorising Turkish peasants your correspondent gives no proofs and no details, with the exception of the well-known regrettable incidents of Smyrna, a question which has already been cleared and finally settled.

Indeed, "hardly a day passes without some story of massacres of Greeks in Anatolia." Last year it was Aidin, this year we heard about the Nazli and Demerdji Vespers and of the latest Nationalist prowess, the wholesale massacre of the Greek population of Kerasund, a town in the "Republic of Pontus," whose Hellenism was recognised by the Armenians themselves. All these massacres are but a bagatelle to your correspondent, though he must be aware that British officers took kodak snapshots of the Aidin massacres last June, 1919.

I am glad to see that your correspondent has at least condescended to confess at the end of his philippic that his remarks have been made neither in a pro-Turk nor in an anti-Greek spirit, but solely "in view of British interests and prestige." Perhaps he will be surprised to hear that M. Venizelos's opponents have accused him many times of having sacrificed Greece to Great Britain's interests. Without endorsing the opinion of the Greek Opposition I must, however, state that Greece without signing a Mephistophelian pact with England has become her ally and trustee in the Near East, and this theory was confirmed on July 21 in the House of Commons by the Premier when he openly (though not in a quite diplomatic way) declared that "England has no more confidence in Bulgaria" in her policy in the East. "The lamentable error" of the British statesmen, of which your correspondent talks about, was thus corrected, I mean the misunderstanding of the vitality of the Greek Kingdom and the Hellenic race committed in the past in this country after the 1897 disaster, when the Bulgarians, thanks to their splendid propaganda, made everybody believe that their country alone *erat imperare orbi Balkanico*.

Greece is not a pooh-bahed country at present, and needs British friendship. M. Venizelos said some days before the signing of the Turkish Treaty:—"Woe betide Greece, if she ever loses British friendship," and Greeks fully realise this theory, though they bitterly resent the scornful attitude adopted lately by Englishmen both at home and abroad who are eager to cast the first stone at an ally who did his bit in the common struggle. I read many Greek papers, and, so far, I have never found any attack or criticism of the British policy in Ireland, nor even have they hastened to brand without investigation the whole British Empire for the reprisals inflicted by the "black-and-tans" upon the Irish population.

Fair play is fair play, and your correspondent ought to bear in mind that it is hard for him to kick against the pricks.—I am, etc.,

THEODORE D. MOSCONA.

## MUSICAL NOTES.

The London concert season has again started, and this time in more deadly earnest than ever. One is simply appalled by the number of engagements at the various halls, for, as my readers know, the mere giving and hearing of a concert are not evidence of a musical sense. In some obscure ways this plethora of concerts may do good, but, for one thing, it inevitably means the clashing of two or more good performances which the critic at least (though I admit that he [or she] is the last person who ought to be considered in the matter) would wish to hear. I believe that the concert list in London, where these things begin later than in other countries, is larger than that with which any continental capital is blessed.

Much is heard in these days of the influence of Oriental music upon Occidental compositions, but little is really known of the matter. Apart from Mr. Fox Strangways, whose book on "The Music of Hindusthan" is authoritative, there are not many English critics who have cared to delve in the mysteries of Oriental music. But an increasing number of musicians, chief among whom is Busoni, assert that the possible combinations in Western music, melodic and harmonic, are becoming exhausted, and that therefore we shall have to introduce from the East smaller intervals than the semitone. Whether an octave with more intervals than twelve is inevitable I cannot say, though it is certain that some notable composers, Scriabin, for example, have felt themselves cramped by the limitations of the modern keyboard.

It was in a state of blushing ignorance, then, that I found myself at the Steinway Hall on September 29, listening to a "Grand Concert of Indian Music," which had been arranged by the Comtesse de Brémont. But I had better confess at once that I learned nothing; and the failure was, perhaps, not all my fault. To make the gullible critic hark to pianoforte solos by Mr. Isidore Godfrey of Chopin and Rachmaninoff, however earnestly they may have been played, was scarcely the way to teach him the rudiments of Indian art; nor could one be suffused in the spirit of Hindustan with a recitation by Mr. Rathmell Wilson of Kipling's "Mandalay." Moreover, the songs which Pandit Shyam Shankar declaimed were accompanied on the pianoforte, which was rather a bewildering error. A performance of Indian dances was given, representing a divine love allegory, the rejection and final acceptance of Krishna by Brahma, and though Rhoda Rani and Krishna Rani danced quite efficiently, the music to which they moved was again on the pianoforte, where a lack of harmony made the whole monotonous. Jasoda Rani sang well two songs, "Main Jamoona Ki par" and "Teri Soora ia," written by Pandit Shyam Shankar and arranged by Vrinda Rani respectively, but one could not discover anything very Indian about them, for they were surely written in European style. The most interesting item of all was a performance on Indian instruments by Uday Shankar. He played successively on the swar bahar, the dilruba, the fiddle, the piccolo, and the jaltarang, and in all but one he was accompanied on the drum by Pandit Shyam Shankar. Whether he did well or not is hard to say, but one did wonder how comfortably the fiddle could be played in a squatting posture, and why the jaltarang, which appeared to be a series of cups or bowls partly filled with water (just like our own musical glasses), should have been attuned to the ordinary diatonic scale. It cannot honestly be said that the sounds from these instruments made much impression. Perhaps Indian music is not an end in itself, but merely a prompter of a particularly desired state of mind, and the appeal which it makes on the native leaves us, who generally treat music as absolute and subservient to nothing, cold and in the dark.

The modern Italian school of composers is not too well known in this country, though there are critics who say that what has come to England from Malipiero, Casella, Rispighi, and their fellows, does not make of our ignorance a thing of shame. But of all these composers Ildebrando Pizzetti is probably the least known, and it was undoubtedly the fact that his Sonata in A was being played that brought so large an audience to Miss Kathleen Parlow's violin recital at the Æolian Hall on October 1. Now this Sonata had been extremely well spoken of in the Press, especially by the "advanced" class of musicians, and one was prepared for something extraordinary. But the most startling thing about this most modern Sonata is that it does not startle. It is obviously the result of mature and restrained thought, though this is a matter for pleasant surprise rather than praise. For it is not a highly distinguished work. In the first movement (*Tempestoso*), the writing for the pianoforte especially is not easily intelligible: it is covered with short, incomplete phrases, and the frequent changes of time do not seem to help out the main idea. As a matter of fact, it reminded one of some of the matches we used to get in war time: it misfired at first, then struck, fluttered and spat, gave a fitful light, and finally failed. The second movement, called "Preghiera per gl' innocenti," was really remarkable for its possession of ordinary common chords, and it achieved fluency; but though there was sincere thought underlying this, its main effect was one of commonplace. It was the third movement (*vivo e fresco*), built on a kind of folksong, which partly justified the extravagant praise given to the work. Here was some most ingenious writing, and the impulse of the theme was splendidly maintained to the end. Miss Parlow, for whom Mr. Charlton Keith was at the pianoforte, played in the Pizzetti with vigour and insight, qualities which the pianist did not sufficiently show. But she played much better in the concerto in E minor of Jules Conus. It was a pity that such confidence and finish should be wasted on such paltry stuff as this concerto. The "Sicilienne and Rigaudon" of Francœur-Kriesler were very suitable to her; even on such light pieces she infused the sincerity which is her chief virtue; and altogether hers was a recital much above the average both in interest and performance.

It is in America, I suppose, that an artist can most easily gain the world and lose his soul; but in England also this fate is not impossible. It has befallen Mr. Mark Hambourg. With this pianist, who has genius but is not one, there are times when he plays irresistibly, but there are far more times when he causes suffering to the pianoforte and the ears of his listeners. At his recital at the Wigmore Hall on October 2, his temperament, unfortunately, did not treat us kindly. He drew one of the largest audiences I have seen in this hall, and to put them into a fit devotional mood he commenced with Franck's "Prelude, Chorale and Fugue." But the austere, religious spirit of this was converted into corybantic, even bacchanalian whimsicality; and a plentiful series of firmly hit wrong notes merely added to the caricature. Yet worse followed in Beethoven's "Waldstein" Sonata. One is accustomed to hearing Beethoven played with *rubato* nowadays, but Mr. Hambourg simply played very fast and very loose with him. Uncontrollable temperament can explain many things, such as the break-neck speed with which he knocked off some Chopin studies, in which he merely went wrong; but nothing can excuse such violation of Beethoven. Yet in the glorious Brahms-Paganini variations, of which he played the second book, he found the enormous technical difficulties superable, and in places he played with extraordinary beauty, almost making one forget what had gone before. And in the "Whirligig" of Arnold Bax, and in Ravel's "Jeux d'eau," he played with a delicacy of feeling which should have inhibited his ever performing on a music-hall stage. But his die is cast; and the populace, whose affection he firmly holds, can in no wise help his salvation.

ANDANTE.

Commendatore Volpe, who acted as Italian Plenipotentiary during the negotiation of the Italo-Turkish Peace Treaty at Ouchy, is on a visit to Belgrade, where it is believed he will confer with the Yugoslav authorities with regard to the forthcoming conversations on Adriatic questions.

**I.—"DISCOVERY IN GREEK LANDS: A SKETCH OF THE PRINCIPAL EXCAVATIONS AND DISCOVERIES OF THE LAST FIFTY YEARS." By F. H. Marshall. (Cambridge University Press, 1920, 8s. 6d. net.)**

**II.—"INDIA." By Esmé Wingfield-Stratford. (Liverpool: Books, Ltd 6s. net.)**

## I.—THE EVOLUTION OF GREEK CIVILISATION.

Within living memory our knowledge of Hellenic art and all that it implies was derived from chance discoveries. Systematic excavation began as late as 1869; and its results have revolutionised our treatment of ancient history. We are able to view Athenian culture during the spacious days of Pericles, Plato, Praxiteles, and Pheidias in its true perspective, and realise its deep indebtedness to an immemorial past. Mr. F. H. Marshall has ably summarised the achievements of scientific exploration. He reminds us that Crete was the birthplace of Western civilisation. Its crude beginnings date from the twenty-ninth century B.C., when by dint of sea-power, a man of genius known in ancient legend as Minos extended his sway over the Ægean. Three millenia ago Crete was all that Great Britain is at present—the hub of a relatively extensive Empire. The civilisation termed "Minoan" lasted from 2800 to 1200 B.C. Its current was profoundly modified by external pressure, and the changes which it underwent are faithfully reflected by the results of excavation on the site of its capital city. The discoveries at Knossos include pottery and frescoes of surpassing beauty. Their modernity is very striking; a statuette figured App. 5 is draped in the fashion of the early Victorian era. Disraeli charged his fellow countrymen of that day with having "stopped short at comfort and called it civilisation." It is probable that Minoan art suffered from an exaggerated regard for life's material side. The systems of drainage, ventilation and water-supply laid bare at Knossos anticipate the latest devices of sanitary science. The Minoans had some knowledge of picture-writing, and a metrical system, but their inscribed clay tablets have not yet been decyphered. No traces of fortification survive, probably because the Minoan regime was a "Thalassocracy"; although strangely enough no pictorial representations of sea-going vessels have come to light.

About 1450 B.C. it was overwhelmed by foreign invasion, and the centre of civilisation was shifted to the mainland of Greece. The succeeding stage (1450-1000 B.C.) is styled "Early Prehistoric" or "Mycenæan," from the extensive discoveries made at Mycenæ, which was famed in the Homeric hymns as the home of Agamemnon. The Mycenæans were very skilful workers in metal, but they were unacquainted with iron; and succumbed to the invasion of a northern tribe, known as Dorians in ancient literature, who used weapons of tempered steel with terrible effect. Then was ushered in a "Later Prehistoric Era" (1000 to 700 B.C.). The works of art which it produced are full of vigour, but their crudity and childishness reveal the imprint of the rude northern conquerors. During the "Earlier Historic Era" (700-500 B.C.), the influence of Assyrian and Egyptian art made itself felt; the statues, bas-reliefs and pottery, although still archaic, show an increasing knowledge of technique and the principles of art.

The final stage of Greek civilisation began in the sixth century B.C., when the quarrelsome little City states united to hurl back the tide of Persian invasion. The struggle for independence generated energy which found an outlet in times of peace; and the victors' æsthetic faculty received a development which has endowed the world with models of unequalled beauty. But a recrudescence of civil warfare followed the removal of external pressure, and involved the centres of Hellenic art in ruin. After three and a-half centuries of progressive decadence the mainland and its colonies fell an easy prey to the nascent Empire of Rome. One of her greatest poets admits that "Greece subjugated her fierce conqueror." Roman civilisation at its zenith was to a great extent built on that of Greece, and the sixteenth century Renaissance revealed its incomparable grandeur to the modern world. F. H. S.

## II.—POST-KIPLING.

It was probably inevitable that after the war somebody should arise to explain the new India to Englishmen. Much of this task is, of course, being done in the political field, but Mr. Wingfield-Stratford has endeavoured to put into verse his thoughts about past, present, and future India; and his views are as likely to be accepted by the present generation as were Mr. Kipling's by the past one, the main difference in their methods being that whereas Mr. Kipling spoke as an Anglo-Indian, Mr. Wingfield-Stratford speaks as an Englishman.

This author does not like the Anglo-Indian; he implies, indeed, that the official mind is ignorant of or indifferent to the greatness of India's past civilisation, and to the dignity of her present population; and it is as much as a teacher as a poet that he has written the first part of his book, called "India Through the Ages." He deals with Hinduism, Buddhism, and Mohammedanism, and illustrates their spirit by versifying legends or facts concerning them. Probably the subject-matter prevents his writing anything very notable, but he does better in Part II. of his book, "India Mystica." Here where the transcendent beauty of his theme offers unlimited scope, he has written some appealing poems, of which we like best "Sita to Rama" and "Moonrise in the Mountains." But he also shows, in things like "The Bishop and the Fakir" a delightful ease in satirical writing, a power which is memorably expressed in the last poem in the book, "L'Envoi" (A Club Litany):—

Merciful God, have pity on folk without a soul!
I mean the Johnson Smiths and Mrs. Pogson Clarke
And Sir Pontius Pilate and Colonel Moale,
Who walk about at noonday in the dark,

And then play bridge because they lack the vital spark,
And if they talk discuss some bunker-guarded hole. . .
O Lord, deliver me from Mrs. Pogson Clarke
And Sir Pontius Pilate and Colonel Moale!

Perhaps a fellowship at King's and four and a half years' service with the Territorials in India make this kind of thing inevitable, but how much more refreshing it is, say, than Keynes's "Economic Consequences of the Peace"! We would not be so rash as to say that writing like this proclaims Mr. Wingfield-Stratford a poet; it is not, indeed, as poetry that this book should be appreciated, but rather as a philosophy which atempts to show the true way of dealing with India. Of the author's sincere love for both England and India there is evidence on every page, and it is really his ardent desire to see the cultures of the two countries harmonised that has produced this book. "India," then, is scarcely good poetry, but it is good, readable matter. If those who believe in "East is East, and West is West" and similar bygone jingles read this book, they may not agree with our verdict; but the possession of the world is not with those who desire stationary epochs.

There is a preface to "India," written by the Rai Pandit Radhakrishna Bahadur, whose remarks are chiefly upon the universal importance and influence of Indian civilization.

## BOOKS RECEIVED.

"Quatrains of Omar Khayyám." A new translation by O. A. Shrubsole. (London, E. Marlborough and Co., 51, Old Bailey, E.C.; 2s. 6d. wrapper; 3s. 6d. cloth).

Handbooks prepared under the direction of the Historical Section of the Foreign Office:—No. 57, "Mohammedan History," 3s.; No. 58, "Turkey in Asia," 6d.; No. 59, "Anatolia," 3s.; No. 60, "Syria and Palestine," 3s. 6d.; No. 67, "China," 3s.; No. 68, "Mongolia," 1s.; No. 69, "Manchuria," 2s.; No. 70, "Tibet," 2s.; No. 71, "Kiaochow and Weihaiwei," 1s. 6d.; No. 73, "Japan," 2s. 6d. (Published by H.M. Stationery Office.)

"Allenby's Final Triumph." By W. T. Massey. (London: Constable and Co. 21s. net.)

# PERSONAL AND GENERAL.

**TO-DAY.**

October 7 (New Style).
September 24 (Old Style).
Moharram 24, 1339 A.H. of the Moslem Calendar.
Tishri 25, 5681 of the Jewish Calendar.

The Maharaja of Alwar is staying at Cromer for a short time.

Lord Oranmore and Browne has left 12, Cavendish Place for Dublin.

Field-Marshal Lord Plumer left Malta last week for a fortnight's holiday in Sicily.

Sir Henry and Lady Bax-Ironside have returned to 23, Grosvenor Place from Ireland.

The Crown Prince of Sweden will shortly spend a holiday in Southern Europe, probably in Greece and Italy.

Our Belgrade Correspondent writes (September 22):—
Mr. and Mrs. J. B. Clarke have returned to Belgrade.
Commander Diggle, R.N., has left Belgrade for Rome.
Princess Helena Karageorgevitch, sister of H.R.H. the Crown Prince Regent, is staying at Ilidzhe, near Sarajevo.

Mrs. Elliadi, wife of Captain C. M. Elliadi, of Athens, gave birth to a daughter (Theodora Emily) on September 6.

Sir Solomon Bandaranaike, C.M.G., native A.D.C. to the Governor of Ceylon, has left the Royal Palace Hotel for Ceylon.

M. Gennadius, Honorary Greek Minister, and Mme. Gennadius have returned to London from their tour in Brittany and Normandy.

M. Michel Gavrilovitch, Minister of the Kingdom of Serbs, Croats, and Slovenes, arrived in London on October 4 from Belgrade.

Major-General Torquhil Matheson left for India last week. All correspondence should be addressed care of Messrs. Cox and Co., bankers, Bombay.

The Bulgarian Chargé d'Affaires last week had an interview with Sir William Clark, Controller-General of the Department of Overseas Trade.

General Ironside has proceeded to Mesopotamia to take over a divisional command under General Haldane, Commander-in-Chief of the British forces there.

Our Athens Correspondent writes (September 18):—
The Minister of Agriculture, M. Cafandaris, has proceeded to Paris on leave.
The High Commissioner for Greece in Smyrna, M. Sterghiadis, has returned to that town from Athens.
The Commander-in-Chief of the Greek Army, General Paraskevopoulos, has returned to Smyrna after spending a few days in Athens.

Viscount Milner, Secretary of State for the Colonies, has appointed Mr. A. C. C. Parkinson, of the Colonial Office, to be his Private Secretary, in succession to Mr. H. C. Thornton, who has been appointed a Crown Agent for the Colonies.

Mr. E. C. Ramsbottom, of the Ministry of Labour, will shortly proceed to Bombay to assist in organising a new Labour Department which the Bombay Government has decided upon in view of the frequency of strikes in the Presidency.

Our Belgrade Correspondent writes (September 26):—
Dr. Ante Manditch, who was well known in London as a prominent member of the Yugoslav Committee in 1918, has arrived in Belgrade.
M. Theodore Emandi, the new Roumanian Minister, has arrived in Belgrade. His predecessor, M. Langa Rascano, has left for Bucharest.
Colonel Fehler, the well-known Swiss military correspondent, has arrived in Belgrade to inspect the battlefields of Serbia. He has already published one work on the Serbian front, which he will shortly supplement by an additional detailed and well-illustrated monograph.
Dr. J. Cvijitch (Tsviyich), Rector of the University of Belgrade, the distinguished geographer and ethnologist, and Member of the Plebiscite Commission for Tselovats (Klagenfurt), has sufficiently recovered from his recent illness to leave for Carlsbad to convalesce.

M. Stambolisky, the Bulgarian Prime Minister, who is due to arrive in London on October 9, will stay at the Bulgarian Legation. His programme, according to present arrangements, will include a week's stay in London, and visits to Birmingham, Manchester, and Glasgow. He will also visit two agricultural colleges. M. Stambolisky will be accompanied during his stay in England by Dr. Stancioff, who reached London earlier in the week. Dr. Stancioff was formerly Bulgarian Minister in Paris, and his name is mentioned in connection with the London post, which has yet to be filled.

The officers who served with Field-Marshal Viscount Allenby on the G.H.Q. Palestine Staff in 1917-18 dined on September 28 at the Café Royal, Regent Street. Viscount Allenby presided, and among those present were Major-Generals Sir Louis Bols, Sir Walter Campbell, Sir John Adye, Sir Arthur Money, Sir R. H. Luce, C. P. Dawnay, and E. R. C. Butler; Brigadier-Generals W. H. Bartholomew and F. Gascoigne; Captain W. B. Macdonald, R.N.; Colonels Sir Graham Bowman-Manifold, E. M. Paul, B. T. Buckley, G. F. Davies, and G. E. Badcock; Lieut.-Colonels T. E. Lawrence of the Hejaz, Norman Coates, C. de Paravicini, R. C. Jellicoe, A. H. Clive Davies, Lord Dalmeny, H. V. Bagshawe, and H. H. Andrew; the Rev. P. N. Waggett, Major Alan Dawnay, and Captain Raymond Savage, who acted as Military Secretary to Lord Allenby in Palestine, and who organised the dinner.

The following are among the decorations and medals awarded by the Allied Powers at various dates to the British Forces for distinguished services rendered during the course of the campaign. The King has given unrestricted permission in all cases to wear the decorations and medals in question:—

**CONFERRED BY THE KING OF THE HELLENES.**

Order of King George I.—Commander: Hon. Brig.-Gen. R. C. Boyle, C.B., C.M.G., retd. pay. Officer: Lt.-Col. B. J. Ward, T.D., Essex R. (T.F.). Chevalier: Lt. (temp. Capt.) S. Ades, R.F.A. (T.F.); Lt. F. R. Sanderson, O.B.E., R.F.A. (T.F.)

**CONFERRED BY THE KING OF ROUMANIA.**

Order of the Crown of Roumania (with Swords).—Grand Cross: Lt.-Gen. Sir W. N. Congreve, V.C., K.C.B., M.V.O. Grand Officer: Maj.-Gen. Sir G. F. Gorringe, K.C.B., K.C.M.G., D.S.O. Officer: Maj. B. R. W. Beor, O.B.E., R.A. Chevalier: Lt. R. P. Bolton, 5th Bn., N. Staffs. R. (T.F. Res.); Capt. U. E. C. Carnegy, D.S.O., M.C., 3rd Dn. Gds.

**CONFERRED BY THE KING OF THE HEJAZ.**

Order of "El Nahda" (2nd Class).—Lt.-Col. H. D. Pearson, D.S.O., Ret. Pay, late R.E.; Brevet Lt.-Col. (temp. Brig.-Gen.) A. P. Wavell, C.M.G., M.C., R. Highrs.; (3rd Class) Capt. N. H. P. Whitley, M.C., 7th Bn., Manch. R. (T.F.).; Maj. E. Earl Winterton, T.D., Suss. Yeo. (T.F. Res.).

## APPOINTMENTS, ETC.

M. Dohajsky has been appointed First Secretary to the Czecho-Slovak Legation in London.

M. Max Lobkovitch has been appointed Second Secretary to the Czecho-Slovak Legation in London.

Sir Harrington Verney Lovett, K.C.S.I., has been elected Reader in Indian History at Oxford University.

It is understood in Paris that M. J. A. Defrance will shortly be appointed French Ambassador at Constantinople.

Dr. T. W. Arnold, C.I.E., who succeeded Sir Charles Mallett as Secretary for Indian Students, has been appointed to be whole-time Professor of Arabic at the London School of Oriental Studies.

M. Vojtech Mastny, the newly appointed Czecho-Slovak Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James, with Mme. Mastny, will arrive in London this week from Prague to take up his diplomatic duties.

## OBITUARY.

### THE LATE DR. CUFFEY.

The report for 1919 of the British Hospital at Port Said contains the following appreciation of the services of the late Dr. Cuffey:—

"It is with the deepest regret that, at the very time when this report was being prepared, a sad blow fell on the committee, the staff, and all those concerned in the activities of the British Hospital. For some time past our principal medical officer had been ailing, but his cheeriness and activity had prevented any of his colleagues from imagining that he was so near his end. On February 25 he passed away very suddenly, and no one who had known him could help feeling the deepest regret at so able and popular a man having been thus cut off in his prime.

For upwards of twenty years Dr. Cuffey had been the heart and soul of the hospital, and it is due in no small measure to his energy and enthusiasm that the present hospital was built, to replace the old bungalow in which he had for so many years upheld the true traditions of healing and curing the sick."

## NEWS IN BRIEF.

Japan is establishing Legations in Greece and Poland.

Yugoslavia ratified the treaty of peace with Austria on September 30.

French troops, states a Casablanca message, entered Wazzan on October 2.

Turkish Nationalist newspapers announce the arrival of the Soviet envoy, Comrade Iliava, at Angora from Baku.

On October 1 1,800 drivers and conductors on the Calcutta tramways struck work, demanding a 50 per cent. increase in wages.

The first number of the *Evreiski Golos* (Jewish Voice) has appeared in Batoum. The paper is the organ of the Zionist Federation in Batoum.

H.M.S. Emperor of India arrived at Smyrna on September 26 with Rear-Admiral Sir Richard Webb, High Commissioner in Constantinople, on board.

Special postage stamps have been brought into use during the plebiscite now in progress in Carinthia, which lies between German-Austria and Yugoslavia.

Mr. Israel Cohen, the emissary of the Zionist World organisation, has completed a short propaganda tour in New Zealand, during which he raised £20,000 for the Palestine Restoration Fund.

Rear-Admiral Dumesnil, who was recently appointed commander of the Cruiser Division of the French Eastern Mediterranean naval squadron, left Toulon on September 26 to take up his new post.

At a meeting of the Yugoslav Cabinet on September 28 under the presidency of the Regent, the Adriatic question was discussed, and instructions were drafted for the delegates to the forthcoming conference with Italy.

Turkish Nationalists were to assemble at Erzerum on October 1, under the presidency of Mustapha Kemal Pasha, to decide whether they should direct all their forces towards Transcaucasia and Mesopotamia, or attack the Greeks in the Smyrna region.

The Armenian Government has sent a telegram to M. Chicherin, Bolshevist Commissary for Foreign Affairs, protesting against the hostile operations of Bolshevist troops in Armenia regardless of the preliminary Peace Treaty signed at Tiflis on August 10.

According to the *Neue Freie Presse*, the population of a part of the Carinthia plebiscite area intends to submit to the Inter-Allied Plebiscite Commission a petition for the dispatch of four battalions of British troops as a guarantee of fair play, in view of a possible Yugoslav *Putsch*.

The War Office reports that a French punitive column in the Hauran defeated and completely dispersed a rebel concentration on September 14; three guns and six machine-guns were left behind by the Arabs in their flight. The Hauran chiefs are now reported to have made peace with the French.

Our Athens Correspondent writes (September 18):—According to information supplied by the Statistics Department of the Ministry of National Economy, 3.573 foreigners entered Greece during the first six months of 1920. Of these 609 were British, 559 American, and 454 French, the remainder being of various other nationalities.

At a sale held at Messrs. Harmer, Rooke, and Co.'s Fleet Street auction rooms on October 2, says *The Times*, £340 was realised for a complete set of twenty-five of the Baghdad occupation stamps. Only fifty-nine sets were issued, but it is doubtful whether half of these are now in existence, as many were bought at the post offices by soldiers, who had little idea of their value.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses. Nursery Governesses, Nurse Companions, Lady Nurses, etc.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX, LONDON, TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
**SMEDLEY'S HYDRO.**

**TORQUAY**
**VICTORIA & ALBERT HOTEL.**

*Cairo's Hotels de Luxe.*

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

**SUMMER PALACE HOTEL,**
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant.
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.

## THE LITTLE ENTENTE.

The understandings recently concluded by Czecho-Slovakia with Yugoslavia and Roumania—the first piece of constructive statesmanship since the war—throw an interesting light on the trend of events in South-Eastern Europe. The form taken by the combination is that of an alliance between Czecho-Slovakia and Yugoslavia, and an Entente between the former and Roumania, which allows the two allies to count upon Roumanian assistance in the event of any attempt by Hungary to infringe the Treaty. M. Benes, the Czecho-Slovak Minister for Foreign Affairs, was the prime mover in the creation of the "Little Entente," as it is generally termed, and his official statement to his fellow-countrymen of the reasons that prompted the understanding has been accepted as a full and accurate explanation. The Little Entente provides for the encirclement of Hungary. That country, declared M. Benes, after emphasising the desire of Czecho-Slovakia to maintain friendly relations with its neighbour, is at present the disturbing element of Central Europe; it has been the least changed by the war, and is still governed by the oligarchy which was in the main responsible for the war. He aimed at achieving security for Czecho-Slovakia, and this object had been attained by the understandings with Yugoslavia and Roumania. It was, moreover, in the interests of the Great Allied Powers that Central Europe should not be at the mercy of unforeseen events, and this immunity again would be secured by the Little Entente, which, while maintaining existing treaties, would render impossible new confederations and the restoration of the former monarchy. The alliance between Czecho-Slovakia and Yugoslavia, it goes without saying, looks eastwards only. It was formed under the menace of a Bolshevist seizure of Poland and the necessity for the Czecho-Slovaks to be safeguarded against Hungarian aggression if they should ever find themselves in difficulties on their north-eastern frontiers. There is no reason to suppose that Czecho-Slovakia intended to influence the dispute between Yugoslavia and Italy, although the knowledge of this Slav block, it would be imagined, would tend to make Italy more anxious than before to live in friendly relations with her neighbours across the Adriatic. In the case of Roumania there were difficulties in the way of a hard-and-fast alliance which did not confront Yugoslavia. The olive-branch had already been held out to Hungary, with whom it is entirely in Roumania's interests to establish a good understanding; simultaneously to conclude an alliance directed solely against the Magyars would not be calculated to predispose the latter to sweet reasonableness, although there was no reason why Roumania should not pledge herself to defend the Treaty of Peace. At the same time, it is evident that the Roumanian Government is anxious to retain for itself more freedom than would be compatible with a hard-and-fast alliance with only one or two of the neighbouring States.

While a good case can be made out by the three States concerned for hurrying through an agreement which offers protection against all possible developments in Hungary, there has clearly not yet been time for the peoples or Governments of South-Eastern Europe to determine the precise form that the new political orientation necessitated by the war is to take. Most of the statesmen of these countries have refrained from committing themselves on the subject. M. Take Jonescu, the Roumanian Minister of Foreign Affairs, however, has been the exception, and he has made some emphatic pronouncements on the subject of Roumania's foreign relations. As far as can be judged, his policy for the present does not go beyond the maintenance of the situation created by the war. Roumania is to strengthen the ties that bind her to her Allies, and all late enemies are to be kept severely in their places. He did not favour a definite alliance with Czecho-Slovakia unless it embraced Poland and Greece. M. Take Jonescu will have nothing to do with a Balkan Confederation, mainly on the ground that both Roumania and Yugoslavia now reach into Central Europe, and cannot, therefore, be relegated into an exclusively Balkan orbit. A Confederation on this account he rules out of court, and would have instead, according to a statement attributed to him by a Press representative, defensive alliances between the five victorious States—Roumania, Yugoslavia, Greece, Czecho-Slovakia, and Poland—stretching from the Baltic to the Mediterranean. "Into such an alliance," he added, "the vanquished States—Austria, Hungary, and Bulgaria—would be accepted with pleasure provided that, like ourselves, they consider the Treaties of Peace as definitive." Perhaps the first thing that will strike the student of political affairs in this enunciation of Roumania's policy is the implied admission that the smaller States of Europe will still have to trust to their own might for their mutual protection. The efficacy of the League of Nations, it is to be feared, finds few enthusiastic believers in South-Eastern Europe; yet if ever that fine conception was to justify the ink and words devoted to it, we should have expected it to have a very real significance for small States. M. Take Jonescu is too practical a statesman to imagine that anything but force or the show of it can secure permanency for the settlement evolved by the Supreme Council, and for this reason he ranks high the necessity of those who imposed the settlement holding together in order to enforce it. The view, coming from such a quarter, commands respect; the only thing likely to invalidate it is that the future of South-Eastern Europe should turn on economic rather than on political considerations.

European statesmanship, to say nothing of the League of Nations, must be bankrupt indeed if the main energies of the Near Eastern States have to be devoted at this moment to safeguarding themselves against aggression on the part of Austria, Hungary and Bulgaria. Fortunately all that is known of two of these three countries suggests that the fears on which such action might be based are groundless. Hungary may possibly try to regain by astute diplomacy something of what she has lost by war; but if her strength in this sphere is at all formidable, mere military conventions will hardly avail to lessen the danger. As far as can be judged, the only peril that threatens the countries of South-Eastern Europe comes from within in the form of unrest occasioned by economic pressure. Even if there be no direct connection with Russian Bolshevism, the existence of this active agency at the gate is always an incentive to such unrest. For the moment Red Russia's capacity for military expeditions in new directions is practically exhausted; but there is ample evidence that few opportunities for Soviet propaganda are lost. In these circumstances it would be well if all the Near Eastern States could devote less time to foreign affairs and concentrate all their attention on the arduous and complicated task of economic reconstruction. To insist upon the maintenance of the different treaties savours of beating the air, as the Allies are numerous enough and strong enough to ensure that no treaty can be modified without their consent. The suggestion that the concentrated wisdom of all time was to be met with in Paris during the Conference, which General Smuts described as "a seething cauldron of human passions and greed," and that consequently every treaty must remain for ever in its entirety as sacrosanct as the laws of the Medes and Persians, will not commend itself to any thinking man. No treaty is to be evaded by the country on which it has been imposed; but whether individual clauses may have to be modified by the Allies in the light of subsequent events or of fuller knowledge is a question that may safely be left to the good sense of

Digitized by Google

the Allied Powers or the League of Nations. In the meantime that Government will have deserved well of Europe which has been strong enough to assure its people that, as a result of the war, they can leave foreign affairs to take care of themselves, and may concentrate wholly on building up the material prosperity of the State. Old-time methods of production will no longer suffice; and old-time methods of administration will assuredly cause the richest country to fall behind in the economic struggle, even if they do not provoke the internal upheaval which is a possibility—and not a remote one—for every country to-day.

## THE PRIME MINISTER OF BULGARIA.

Monsieur Alexander Stambolisky, the Prime Minister of Bulgaria, who will arrive in London this week at the invitation of the British Government, is 41 years of age; he is powerfully built, and is, in every sense of the world, a strong man. Born in 1879, at Slavovitza, in the district of Tatar Pazarjik, he had to rely on his native village for his primary education, but afterwards attended the Gymnasium of Plevna. Subsequently he spent a short time in Germany, where he studied agriculture and political economy. On his return in 1899 to Bulgaria he began to write for agrarian publications, and in 1902 became editor of the "Agrarian Standard" (*Zemledelsko Znamé*), the official organ of the Bulgarian Agrarian League, a post which he held until the outbreak of the war. In 1908 he entered Parliament, and in 1911 was elected Deputy for the Great Sobranje (National Assembly) at Tirnova. It was in connection with the latter that he first came into clash with King Ferdinand, by protesting, in the name of the Agrarian Party, against the King's presence at the Assembly, and by opposing the amendment to the Constitution conferring on the King powers to conclude secret treaties. After the Balkan wars, M. Stambolisky again became prominent for his denunciation of Ferdinand as the author of the country's misfortunes. On September 17, 1915, he was one of the Opposition leaders who had asked for audience of the King in an endeavour to detach the Government from the Germanophil policy which it had espoused. They demanded a Coalition Government, and protested vehemently against any agreement being made with the Central Powers. M. Stambolisky on this occasion was characteristically outspoken, and did not hesitate to warn Ferdinand that the chief responsibility for the calamitous consequences which must ensue would fall on him personally. The warning elicited the retort that Stambolisky would do well to have a care for his own head. Before the end of the month he was arrested and sentenced by court-martial to imprisonment for life. Three years later he was pardoned at the instance of the Malinoff Cabinet, and on the same date, September 25, was summoned to the Palace for a second audience of the King, at which he showed that he held the same views as strongly as before. The following day he left for the Macedonian front, and three days later was proclaimed as an outlaw. He succeeded in escaping arrest, and was with the troops who mutinied and marched against Sofia as soon as the Allied offensive began. For a brief space King Ferdinand tried to stem the tide with the help of German troops, and his action convinced M. Stambolisky that only in a republic would Bulgaria find salvation. Meanwhile the situation in the capital developed along different lines. King Ferdinand abdicated, and Prince Boris, who inherits all the good qualities of his French mother, the Princess Marie Louise of Bourbon, and had no sympathy with his father's policy, came to the throne. A formal amnesty was granted to M. Stambolisky by the Sobranje in January, 1919, and he entered the Cabinet of M. Theodoroff, whom he succeeded as Prime Minister prior to the signing of the Treaty of Neuilly.

M. Stambolisky's tenure of office has been characterised by considerable firmness. He has made a bold stand for a scrupulously correct observance of the terms of the treaty imposed on Bulgaria; and is entitled to credit for the smoothness with which the Greek occupation of the ceded territory in Thrace was effected. Symptoms of internal unrest, as in the case of the strike on the Bulgarian Railways, have been dealt with sternly; and in these matters the Prime Minister has the good sense of the nation behind him. He advocates the doctrine that Bulgaria should devote herself single-mindedly to economic recuperation, and with this object in view has introduced the conscription of labour, a measure which compels all sections and classes of the people to devote a certain portion of the year to practical manual work. In forming an exclusively Agrarian Cabinet, M. Stambolisky has added to the difficulties of his task, as much of the legislation introduced has been

of an experimental kind. He has shown, however, that he neither fears criticism nor hesitates to profit by it.

M. Stambolisky is a warm partisan of Great Britain, and has set his face against the tendency of some of his fellow-countrymen to abandon their British sympathies on the ground that the British Government is primarily responsible for the harshness of the terms imposed upon Bulgaria. He desires to convince the Allies that the Bulgarians are not hankering after political adventures and that, while prepared to defend their national claims, they now realise that their salvation lies in promoting the economic prosperity of the country. M. Stambolisky is particularly anxious to interest British capital in certain development schemes to which his Government is committed. During his stay in England he will make a tour of some of the chief industrial centres. It is hoped in Bulgaria that his visit will be the precursor of the visit of King Boris to England. This wish, there is reason to believe, is strongly shared by M. Stambolisky, who has had opportunity to realise the advantages of a constitutional monarchy under an able and constitutionally-minded monarch.

### Russia and the East.

The *Yorkshire Post* of September 25 does well to lay stress upon Russia as the most important factor in any consideration of Eastern questions, for there is a tendency to forget that all recent settlements in the Middle East were made at a time when Russia's influence was at a discount. After looking at Turkish Asia Minor, Persia, and Mesopotamia, it says:—

A careful examination of these disturbed areas reveals one country and one doctrine as largely responsible for most of the trouble. That country is Russia, and that doctrine Bolshevism. If we imagine Russia eliminated, we see at once how the existing troubles, not only in Poland, but in Asia Minor, Persia, and even Mesopotamia, would diminish, or even disappear, with the removal of this great disturbing element. It is well known that besides the actual military pressure which Red Russia is exercising in some of these regions, a very pronounced Bolshevist propaganda campaign is being prosecuted in all of them and throughout the entire East. This campaign is particularly directed against the British Empire, for it is clearly recognised in Russia that we, as the greatest of Eastern Powers, stand in the direct road of advance of Bolshevism in those regions which the directors of its policy have specially marked out for its spread. In India, Afghanistan, Persia, and Mesopotamia, as well as in the highlands of Turkestan, on the shores of the Caspian, and in the Nile Valley and the Arabian deserts, it is against the British Empire—which has a more or less direct interest in all these regions—that the Bolshevists' chief efforts are directed. That dangerous firebrand, Enver Pasha, is said to have been present at a recent conference at Baku, and to have been given the command of the Bolshevist forces in the Middle East, and it is known that relations have long been established between Russian Bolshevism and Turkish Nationalism. It is probable that the results of this co-ordination of the efforts of two such distinct creeds may be apparent before long in Anatolia, where Mustapha Kemal has been unusually quiet for some time, and it must be remembered that the winter is especially favourable for military operations in certain Eastern countries.

If a peaceful solution is found with Poland, we may expect to see greater efforts put forth against General Wrangel, whose operations are beginning to constitute a grave danger to the Soviet Government; and also in Persia and Trans-Caucasia; and a combination of Red Russians with the more disorderly elements in these parts will certainly react upon the situation in Cilicia, Syria, and Mesopotamia. It is in these directions, rather than in India or Afghanistan, that developments may be expected, although frontier troubles are sure to occur upon the Indian North-West frontier. In such a situation, which more or less directly affects all the Western Allies, it is important that they go hand in hand, and that not only British but Allied policy be firmly determined and consistently pursued. It is not necessary to make any sudden departure or adopt any sweeping measures. It may not be advisable for us to create a separate Government department to deal with the Middle East, as is advocated in certain quarters, but what is essential is a clear understanding of local conditions, a recognition that Russia is the key to the situation in the East, and the prosecution by all the Allies of a firm policy based upon these facts.

### Mesopotamia.

In the *British Empire Review* for September there is an article upon "Our Eastern Mandates," by Mr. Roland L. M. Michell, C.M.G. He comments upon the various regions over which a British mandate is being exercised, and concludes in a manner rather different from what has now become the fashionable one:—

That there has been some blundering, want of tact, and over-officialism, here and there, on the part of young and inexperienced men is likely enough. But so far from blaming our officers, either military or civilian, we should give the greatest credit to Colonel Wilson and his colleagues, who have been upholding, under very trying circumstances, both native and British interests and prestige. Much progress has been made in every department, and the summoning of Arab representatives, in order to form an organic law for the new State, has been an honest attempt to fulfil our promises. There is no justification for the late attacks on the home Government, which have been largely misdirected. The road to peace is not through abandonment of our trust. We can hope that Sir Percy Cox, who is accompanied by Mr. St. J. Philby, will exert, with the best effect, that influence which he so eminently possesses. All parties are averse to military commitments or expenditure which are not absolutely necessary; but there can be no question that the risings should be quelled, and as much self-government as possible be given to the people. How far they can govern themselves at present remains to be seen. We shall, of course, in any case retain whatever territory north of the Persian Gulf is needed; but, even so, withdrawal would almost certainly mean a long-continued state of discord and tribal warfare. If the Government, which is in possession of much information not accessible to the public, continues to pursue a firm, sympathetic, and far-sighted policy, in fulfilment of our mandates, it should receive the full support of the nation.

### Articles to Note.

"Quo Vadis in India," by Lord Meston; and "Some Sidelights on Dalmatia," by Lucy Re-Bartlett, in the *Contemporary Review* (October).

## ENQUIRY BUREAU.

*Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.*

*Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."*

*ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.*

*No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.*

### Agents Wanted Abroad.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be redirected to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

101. A correspondent in Lagos, Nigeria, wishes to get into touch with manufacturers of Arab red fez caps.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The public proceedings of the Brussels Financial Conference, which have been devoted to receiving and discussing statements as to the position of the various nations and to general debates on public finance, have not been calculated to inspire any overwhelming confidence in the success of the Conference's mission. Still, as the real work of the delegates is being done in private by a system of committees it would perhaps be going too far to draw a generally unfavourable conclusion from the character of the debates. Speaking generally, the discussions were distinguished by few outstanding contributions. The doctors, to lapse into metaphor, did not differ as to the nature of the disease from which their patient is suffering, but there were marked divergences as to the remedy, and one of the physicians, indeed—the unofficial representative of America—seemed to be of the opinion that the illness had been allowed to go too far. He believed, he said, that Americans would find it difficult to convince themselves that Europe under present conditions was a good business risk. And yet Americans since the Armistice have simply been tumbling over one another to secure contracts and trade in the Near East and other zones of war-swept Europe.

***

On the debate on international credit, which came late in the public session, a really constructive note was touched when M. Delacroix, the Belgian Prime Minister, propounded a scheme for the exchange of commodities between countries on a basis which would enable the adverse exchanges to be ignored. Suggestions somewhat similar to those of M. Delacroix were made later in the discussion by M. C. E. ter Meulen, a Dutch representative, who proposed that the credits necessary for commerce should be secured on revenues in the importer's country. Something on these lines will clearly have to be done, for no one can tell when the exchanges will be stabilised at reasonable levels, and pending that longed-for event means must be found to enable trade to be carried on if Europe is not to be faced with absolute disaster. And the most obvious course would seem to be a system of barter based on some form of credit. On a small scale that is already being carried on in certain cases, but its adequate extension must obviously be a matter for international arrangement. It should be possible to crystallise the two proposals into a workable scheme, and there seems to be ground for hope that whatever else the conference fails to do a satisfactory solution will be forthcoming of the credit problem.

***

Hitherto, conditions have been such that a revival of the tourist traffic to Egypt on anything approaching pre-war lines has been obviously an impossibility. The lack of shipping accommodation alone has been an insuperable obstacle. While the position in this respect is still far from normal, there has been a pronounced improvement, and it is evident that as far as the obtaining of passages is concerned, would-be tourists should find no difficulty in visiting Egypt next year. There is, however, the all-important question of fares. The present rates would absolutely prevent the development of any considerable tourist traffic, but as shipping companies are not immune from the law of supply and demand, I imagine that this factor may bring about a decrease in the cost of passages.

***

I have often had occasion to emphasise the point that the position of British traders in attempting to develop commerce with countries like Morocco is immensely strengthened by the fact that the United Kingdom is in a position to take almost unlimited quantities of the produce of these countries. A notable indication of the development of trade on this reciprocal basis is afforded by the announcement of the consignment to the United Kingdom from Morocco of a cargo of about two and a-half million eggs. This is to be the first of a series of regular consignments of similar quantities. As the eggs can be delivered here speedily it follows that a satisfactory market for them is assured.

***

Companies such as the Smyrna-Aidin Railway operating in areas where there have been considerable territorial readjustments as the result of the war, are inevitably faced with new problems. Lord St. Davids, presiding at the recent meeting of this company, pointed out that before the war the railway only had the Turkish Government to deal with, but now they had to negotiate with Governments having special interests in different parts of the territory in which the line is situated. Still, the difficulties, such as they are, should prove readily capable of solution in the case of this company. It is in the interests of all the authorities concerned to do everything to promote the rapid development of commerce, and that provides an ample guarantee that transport facilities are not likely to be hampered by restrictions.

***

In view of the fact that the home market has been largely in the hands of foreign cinematograph film manufacturers it is not a matter of surprise that British films should have been conspicuous by their absence abroad, particularly in the Near Eastern countries. But now that British firms are showing signs of greater enterprise in meeting foreign competition it may perhaps not be untimely to point out to them that throughout the Near East they will find an admirable market for their productions, particularly in countries like Egypt and Turkey, if only they will take the trouble to study the types of films that appeal in the regions in question. The scope of the market may be gathered from the fact that a centre like Smyrna has no fewer than nineteen cinemas, and the popularity of this form of entertainment in the Near East is such that in the near future it is certain that no town, however small, will be without its cinemas. Unquestionably the market is one that British producers cannot afford to neglect.

***

The fact that foreign film producers have practically monopolised the Near Eastern markets has naturally had a detrimental effect on British interests. Our competitors are fully alive to the value of the film for propaganda purposes, and they have utilised it greatly to their advantage, and will do so still more in the future unless British firms are to the fore with a counteracting influence. And if British producers are to offer a really effective opposition it must be by means of carefully selected films. Anything emphatically will not do. There have been instances of films intended for propaganda which must have had a directly contrary effect. If I were to judge by the films that have been shown in this country I should have little confidence that these mistakes would not be repeated, and that even worse *faux pas* would not be perpetrated. Most of them—certainly all the worst, however—hailed from abroad, and I am not without hope that British film manufacturers will prove equal to the demands of the position.

***

Remarkable progress was made by the Bank of Athens during the first six months of the present year. At the end of that period the balance-sheet showed an increase of 83,874,349 drachmæ, while the profits amounted to 13,805,000 drachmæ, thus surpassing the results for the whole of the previous twelve months. An interim dividend of 5 drachmæ is being paid on the ordinary shares, and 11,405,000 drachmæ are being carried forward.

# Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

## GREECE.

ATHENS, September 18.

**Customs Receipts.**

The receipts of the Piræus Customs during August amounted to 5,658,962.85 drachmæ in paper and 279,656.50 drachmæ in gold. In comparison with the receipts during the corresponding period last year there is an increase this year of 1,543,634.55 drachmæ in paper and a decrease of 38,289.75 drachmæ in gold.

**The Housing Problem.**

Steps are at last being taken by the Government to cope with the housing problem in the capital. The Minister of Communications, M. Papanastasiou, has announced that a large company is about to be formed to undertake the construction of many houses to be sold against payment by yearly instalments. It is understood that the National Bank of Greece will be one of the principal shareholders in this company.

**Increased Tobacco Production.**

According to further information supplied by the Ministry of National Economy the total tobacco production during 1920 will reach twenty million okes. This figure, however, does not include the production in the islands of Samos and Chios and the provinces of Phtiotis and Phocis, for which no information is yet to hand. The production in the provinces of Serres, Drama, Kozani, and Argolida will exceed considerably that of last year.

**Good Wheat Crop in Thessaly.**

The latest news with regard to the crops of wheat in Thessaly is extremely reassuring. According to a telegram dispatched by the Commercial Club of Volo to the Ministry of Supplies, the production is so abundant this year that about sixty thousand tons will be available for export.

**Large Olive Oil Yield.**

With the exception of the island of Corfu this year's production of olive oil in Greece will be exceptionally abundant. In the island of Mitylene there has not been so much olive oil since 1900. In the province of Messinia the yield will reach 5,607,000 okes, last year's production having been only 1,700,000 okes.

The following are the forecasts for the production of olive oil for the whole of Greece (the figures representing okes): Lesvos, 17,900,000; Samos, 4,500,000; Crete, 35,500,000; Corfou, 3,000,000; Zante, 2,500,000; Arta, 50,000; Preveza, 200,000; Argolida and Corinth, 2,400,000; Achaia and Elida, 2,000,000; Arcadia, 900,000; Laconia, 3,000,000; Messinia, 5,600,000; Aetolia and Acarnania, 560,000; Phtiotis and Phocis, 2,500,000; and Eubœa, 1,500,000. There is no information to hand with regard to Jannina.

**The Lloyd Triestino and Patras.**

The Lloyd Triestino Steamship Company has notified by cable its agents in Patras that the company's boats will henceforth discontinue calling at that port. This measure was taken by the company as a protest against the high wages demanded by the port labourers at Patras.

## ROUMANIA.

BUCHAREST, September 18.

**Arrival of a D.H.9.**

A few days ago a D.H.9 aeroplane from Messrs. Handley Page, Ltd., arrived in Bucharest from London. The time taken was sixteen hours' actual flying time, and the machine was piloted by Mr. H. H. Perry, who carried as a passenger Mr. R. Wright, joint manager of Messrs. Nasmyth, Wilson, and Co., Ltd., locomotive and general engineers, Manchester. The arrival of the aeroplane caused a little sensation in aviation circles, being the first aeroplane to arrive in Roumania in a commercial capacity.

**Rejected Kronen.**

During the withdrawal of the kronen in Transylvania a good many have been rejected by the Government as being falsely stamped, and this has caused no slight anxiety amongst the holders. The Ministry of Finance has since decided to accept only kronen bearing the Roumanian stamp, and those which are unstamped, or have been obviously falsely stamped in Austria and Hungary, are refused.

In view of the pending withdrawal of the Bessarabian roubles the Government decided to close the frontiers to prevent the smuggling of this currency into the country. The necessity for precautions is shown by the discovery of an attempt to smuggle two million roubles into the country at Constantza. All passengers entering the country are being strictly searched, their clothing being subjected to a minute examination. To encourage the officials a certain percentage is given for each rouble found, and one official is reported to have already received about 100,000 lei in this way.

**Austro-Roumanian Convention.**

In my last letter I gave the terms of this convention. I am now able to give a detailed list of the products which Roumania will be able to export to Austria, as well as those with which Austria will be able to furnish Roumania:—

Clause 1 gives the list of products which Roumania will export to Austria, provided internal requirements are satisfied and no further restrictions are imposed for assuring home consumption. Cereals, etc.: Luxury wheat and flour, maximum, 3,000 truckloads; rye, 3,500; barley, 7,500; oats, 6,000; maize, 12,000; millet, 1,000; potatoes, 1,000; 20,000 pigs; 600 oxen (Vienna consumes daily 400 oxen); five truckloads of eggs (in normal times Austria imported from Transylvania annually 100 truckloads of eggs); cheese, 100 wagons; wine, 500 wagons; summer fruit, 3,000 wagons; dry cherries, 100 wagons; dry prunes, 200 wagons; plum jam, 100 wagons. Oils, etc.: petrol, 48,000 tons; lamp oil, 72,000 tons; heavy oil, 18,000 tons; crude oil, 10,000 tons; lubricating oil, 2,000 tons; 4,000,000 hareskins; 1,000,000 deer and roe skins; horns, 100 wagons; bones, 500 wagons; lime, 100 wagons; vinegar, 30 wagons; methyl alcohol, 30 truckloads; and alcohol, 50 truckloads.

Clause 2 represents imports from Austria, and includes the following:—Metal Goods: Iron and metal articles, 500 wagons; wire, 60 wagons; truck axles, 30 wagons; zinc wire, 60 trucks; agricultural implements to the value of 200,000,000 crowns; various instruments to the value of 90,000,000 crowns; nails to the value of 10,000,000 crowns; scythes and sickles, 1,000,000 each; horseshoes to the value of 6,000,000 crowns; screws and rivets to the value of 30,000,000 crowns; wire for the petroleum industry, 100 wagons; tubes to the value of 25,000,000 lei; pipe elbows to the value of 24,000,000 crowns; armatures to the value of 12,000,000 crowns; bridges to the value of 24,000,000 crowns; iron sheets of various qualities, 40 wagons; kitchen utensils, 10 wagons; iron barrels, 5,000 pieces; railway sleepers, 10,000 tons; bridge sleepers, 10,000 tons; pumps and meters to the value of 300,000,000 crowns; binders and reapers to the value of 100,000,000 crowns; apparatus for drying maize, 100,000,000 crowns; ploughs and milling machines to the value of 100,000,000 crowns; ploughshares to the value of 50,000 crowns; 12,000,000 seeds; 4,000 sowing machines; 6,000 typewriters; rails to the value of 100,000,000 crowns; railway locks, stoves, iron, furniture, pen-nibs, alpaca, electric lamps; zinc sheets, 20 wagons; lead sheets, 20 wagons; copper, 100 wagons; lorries; 1,000 cisterns; 10 locomotives for narrow gauge; 500 passenger coaches; 100 mail-vans; 300 animal trucks; 150 trams, barges, tanks, tugboats, carriages, tractors, locomotives; tin, 10 wagons; industrial tin, 10 wagons; antimony, 5 wagons; motor-cars; metal bearings, 60 wagons; telegraph and telephone apparatus, electro-technical material, accumulators; 30,000 electric lamps for mines; cables and insulators, 800,000 metres; hosiery, thread, coloured threads, and draperies; hides, 100 wagons; leather soles; transmission belting, 50 wagons; 1,000,000 pairs boots; saddles, reins, etc.; paper, two wagons monthly; newspaper, 20 wagons monthly; writing-paper and stationery to the value of 40,000,000 crowns; cigarette and other kinds of paper; cardboard; copybooks; wallpaper; chemicals and drugs; dynamite for mines and pits; surgical instruments, etc.

The Austrians have agreed to pay all export taxes, and in exchange will reduce the export tax for newspaper, which they expect to send monthly. The convention expires on August 21, 1921.

**British Group and Railway Contracts.**

A few days ago negotiations were started at Cluj between an English commission and a Roumanian railway company

which wishes to build a factory for locomotives and to construct new railway lines for Transylvania. The company intends to build a line to connect Roumania with Transylvania viâ the Nehoi Pass, the Predeal line being insufficient for the growing traffic. The Sibiu-Piatra-Olt railway project is also the subject of further discussion.

**Steaua Romana Developments.**

The "Steaua Romana" was freed on September 18 from sequestration, under which it has been since the entry of Roumania into the war, so that this company has now begun to resume its pre-war activity.

On the same day the Council of Administration was formed as follows: President, Prince Barbu Stirbey; vice-presidents, Sir Albert Gerald Stern and M. Champin; members: Messrs. Marmorosch, Blank and Co., represented by Mr. Mauriciu Blank; Banca Romaneasca, represented by Engineer N. P. Stefanescu; Banca de Credit; Banca Taraneasca; Banca Generala; Tarei Romanesti, represented by M. Victor Antonescu; Banca L. Bercovici and Co., represented by L. Mrazeca; the director of the Geological Institute; C. Osiceanu, mining engineer; M. I. Boamba; M. Anghel Saligny, engineer inspector-general; Banque de Paris et de Pays Bas, represented by two delegates; Bank Mirabeau, represented by M. Champin; Bank M. Mallet Frères and Co.; Ernest Mercier; Sir Albert Gerald Stern; Bank Stern Bros.; James Dunning and Co.; and Irving Watson, Wigan.

The council of administration, therefore, consists of ten foreigners and eleven Roumanians. The executive committee consists of eight members, namely, the president, the vice-presidents, one Englishman, one Frenchman, two Roumanians, and the general manager of the company, Engineer C. Osiceanu.

The above financial group have obtained the majority of the shares in this company, namely, 100,002 out of the 200,000, which constituted the capital of the company. The Roumanian group possess 50 per cent. of these 100,002 shares, whilst the English and French have 25 per cent. each.

The Council of Ministers has authorised the Ministry of Industry and Commerce to proceed with the stamping of the 100,002 shares of this company, which formerly belonged to enemy subjects, and existed as security in Switzerland. The above group bought these shares for 75,000,000 Swiss francs, which, together with expenses, brings the value of one share to about 800 Swiss francs.

**Oil Shares Soaring.**

The Stock Exchange has been very animated all through the week, there being an extraordinary boom in oil shares. Concordia and Credit Petrolifere shares have risen about 2,000 points in the last fortnight. Trade is improving despite the fact that prices are soaring, which is greatly due to the depreciation of the lei during the last few days. The pound has been fluctuating round about 170-180.

**Miscellaneous.**

Three first-class carriages are now being attached to the Simplon express between Bucharest and Temeshvar on Tuesday, Thursday, and Sunday of each week.

The Minister of Industry and Commerce has decided to establish Chambers of Commerce in Vienna and Berlin to ensure closer co-operation in business relations between Roumania, Austria, and Germany.

A decree-law has been passed authorising the issue of new certificates of Treasury Bonds, shares, and other valuable documents sent during the war to Moscow.

The average price of cereals at Braila during last week was as follows (the figures representing lei per 100 kilos):—Wheat, 100-139; maize, 120-135; barley, 125-140; oats, 100-115; rye, 115-125; millet, 85; beans, 150; rapeseed, 55; peas, 100-105; flax, 190.

## YUGOSLAVIA.

BELGRADE, September 26.

**State Sugar Monopoly.**

The Government has decided to add sugar to the list of monopolised articles. It is stated that the annual consumption of sugar in Yugoslavia is about 80,000 tons, of which 15,000 are produced in the country from fourteen factories, and the balance has to be imported. The State will buy the product of these factories at a fixed price of seven dinars per kilo and place it on the market at a fixed price of eleven dinars. As this is considerably below the average market price at present, this will be an excellent thing, for the public will benefit by obtaining enough of the commodity at a reasonable and fixed price, while the State will benefit by an addition of about 160 million dinars to the revenue.

**Forged Dinar Notes.**

It is stated that the forged 1,000 dinar notes in circulation may be recognised not only by the distinct two violet shades in the colouring, but by the watermark, which in the forged notes has a larger head with a pointed nose, while in the real notes the nose is rounded. The paper of the forged notes is smoother and of finer quality than that of the real notes, which are coarser and more uneven.

**A Tax on Turnover.**

A financial novelty is the introduction of a tax on turnover, which took effect from September 25. It applies to all commercial undertakings, and the penalties for failing to comply with the regulations are a fine of 5,000 dinars, and the payment of the tax doubled.

**General News.**

The Minister of Finance states that the wheat crop amounts to 120,000 truckloads, and the yield of wheat and barley to 100,000 truckloads.

# GREEK CURRANTS.

## POOR CROP ESTIMATE.

Messrs. Burlumi's annual report, dated September 30, states:—Our last report was dated September 30, 1919, when we estimated the crop of currants, 1919-20, at about 125,000 tons. On August 11 last year the British Food Minister decided to re-impose control on dried fruits, and the Government brokers invited the importers to make their offers to them. This method of purchasing continued up to October 20 and about 50,000 tons of currants were shipped, out of which about 30,000 tons consisted of low rain-damaged quality masqueraded as produced in the well-known districts of Vostizza, Gulf, Patras, and Zante. The Food Ministry having fixed the prices of purchase of these growths, and being several shillings below the ruling price in Greece, the shippers in order to secure the orders had no alternative but to ship rubbish, in order to avoid a serious loss. These 50,000 tons were shipped, principally in bags, during the space of less than two months to the United Kingdom, when the Government suddenly ceased further purchases. Notwithstanding the low quality of the fruit the luckless consumers had to pay 1s. 2d. per lb. for their currants without discrimination of quality. This state of affairs lasted for several months, until the dried fruit trade had to protest very forcibly against the continuation of this senseless method of dealing in dried fruits.

The currants shipped to foreign countries were distributed as follows: United Kingdom, 70,000 tons, against 86,000 tons in 1918-19; United States and Canada, 28,000 tons, against 4,500 tons; Holland, 6,000 tons, against 2,000 tons; France and other parts of the world, 6,000 tons, against 7,500 tons; total, 110,000 tons, against 100,000 tons.

The privileged company received during the season in their warrant stores 8,500 tons, all of which had been withdrawn before the end of the season. No dried fruit had been offered to the company for purchase, the ruling market prices being always very much higher than the convention limits. In their retention stores the company received 7,500 tons, making 12,400 tons with the certificates in circulation on August 22, 1919. The land tax, in kind, at 7½ per cent. on the exported quantities, absorbed 7,400 tons and 5,000 tons represented by certificates in circulation have been carried over. The retention currants have been sold to the local distillers and to wine makers. About 8,000 tons of low-quality currants, unfit for export, have been disposed of locally for the same purpose. The stock of old sound fruit carried over to the present season is computed at about 3,000 tons. Deducting 1,000 tons of old fruit brought over from the previous season, 1918-19, we find that the crop of 1919 has yielded 127,500 tons against 125,000 tons in 1919 and 117,000 in 1917.

Although shipments of currants to the United Kingdom ceased after the Food Controller's notice on October 18 last to the end of control, which was notified to the trade on May 29, the steady demand from the United States continued unabated during the winter months for good sound quality at from 72s. to 80s. c. and f. New York, packed in barrels and half-cases. This phenomenal increase in importation of currants to the United States must be, to a great measure, attributed to wine-making for home use, since Congress prohibited by law the sale of intoxicating drinks.

Shipments to the United Kingdom were resumed in June, and the first cargoes arrived at the beginning of July by the s.s. Gourko in London and the s.s. Grodno in Liverpool. The fruit was found by the trade to be of excellent quality and far superior to any shipped early in the season, and large business was done at from 82s.-84s. for Amalias, 85s.-86s. for Patras, 88s.-90s. for Gulf in bags, up to 98s. for Vostizza in quarter cases. The market continued steady all through July and August.

The clearances for home consumption in the United Kingdom were not published for over three years and publication was only resumed lately, therefore it is difficult to find out the exact figures of distribution. Nevertheless some 63,000 tons must have been cleared from the beginning of September, 1919, to the end of August last, notwithstanding the atrocious quality of the fruit offered to the consumers. The stock of currants in the United Kingdom as returned by the Board of Trade at the end of August, 1920, was 13,650 tons against 8,500 tons in 1919 and 1,400 in 1918.

The new crop is estimated according to the latest news received from Greece at 85,000 to 90,000 tons. Although no peronosporos has attacked the vines this year the excessive and continuous heat which prevailed during the summer months has considerably affected the fruit, thus diminishing the yield by more than 30 per cent. compared with that of last year. Business in new crop currants has been small. Very few sales have taken place on c.i.f. terms, and what little has been done consisted of Pyrgos growth in bags at from 78s. to 80s. c.i.f. for early shipment.

The s.s. Phrygia with new fruit arrived in Liverpool on the 15th followed by the s.s. Thurso in London on the 20th inst. These cargoes consisted of Pyrgos and Amalias growths principally, and the prices paid were 88s. to 89s. for Pyrgos and 90s. to 91s. for Amalias in bags. A few parcels of Patras, also in bags, fetched 95s. to 97s. in Liverpool, all per cwt. duty paid. The reception of the new fruit has been most disappointing, both as regards prices and weight. The s.s. Coya has also arrived in London followed by the s.s. Crane with a good selection of Vostizza, Gulf, Patras, and Zante growths, but the transactions have been so small in volume, that it is not worth recording them. The quality of all growths without exception has given great satisfaction, and it is considered by the trade to be one of the best grown for many years.

The privileged company distributed to the ordinary shareholders for the year ended August 22, 1919, a dividend of 26 drachmæ per share, equal to a little over 10 per cent. on the capital, and to the founders 7.10 drachmæ per share. It paid the State £20,000 as a share out of the profits, and carried over about £77,000 excess duty profit for the years 1918-19. The retention for the current year has been fixed at 5 per cent. in kind and 30 per cent. in money.

---

The Bank of British West Africa, Ltd., announce the appointment of Mr. David Wells Paterson and Mr. R. Roy Wilson as assistant general managers at head office.

The transfer books of the Aboukir Company, Ltd., will be closed from October 8 to 15, inclusive, for the preparation of the interim dividend of 8 per cent., payable October 15. Coupon No. 18 must be lodged at the offices, 134-135, Palmerston House, Bishopsgate, E.C., three clear days for examination.

## THE RUPEE POSITION.

### Suspension of Reverse Councils.

The announcement made last week that the Indian Government had suspended their offerings of sterling sales on London—commonly known as Reverse Councils—came as a surprise, and caused the Indian exchanges to fall sharply. In India the immediate effect was a drop of three-farthings, and although a slump to some extent was inevitable, it cannot be described as having caused a panic in the markets, in which terms one of our leading daily newspapers alluded to the fall.

It has been well known for some time that the weekly drain upon their resources in London to provide for Reverse Councils has been a source of anxiety to the Indian Government. Hopes had been entertained that a revived activity in exports would help to stiffen exchange and tend to relieve the necessity for sterling sales on London. Government themselves, however, have been responsible for a stoppage of exports with regard to wheat. During the monsoon months exports of grain from Karachi and Bombay usually require a large amount of tonnage, but this year Government imposed restrictions, which were only removed last week.

Fortunately, the wheat crop has proved the best since 1916, being considerably over ten million tons, so that the surplus available for outside consumption may be as much as one million tons. According to experts, this estimate is not excessive, although the wheat-eating population in the Punjab is on the increase. Government, no doubt, adopted a cautious policy in withholding permission to export wheat, as they naturally waited to see the result of this year's monsoon, and a free export of grain might have led to disaffection if local wheat prices had thereby been forced up. They are evidently satisfied that the situation justifies a removal of the embargo, and at a meeting held at Simla on September 27, they decided to allow 400,000 tons of wheat to be exported through the leading recognised shippers.

In mercantile and banking circles, it is expected that the financial arrangements required to enable this amount of wheat to be transported will so stimulate exchange that the recent setback will be fully recovered. Government no doubt would welcome any movement in this direction which would bring the rupee nearer the level of two shillings, which they are practically pledged to maintain. It would be foolish, however, to ignore certain factors in connection with exports which may influence the future of exchange.

The jute crop is shorter than usual this year, and will, therefore, require less money to handle it. The state of the tea industry is well known. Steps are now being taken to restrict the output, and there are several hundred thousand tons of common teas in the London warehouses which are absolutely unsaleable. The export of skins and hides from India is practically at a standstill, and stocks in this country are more than sufficient to meet all requirements for a long time. The monsoon is over, and, according to reliable estimates, results will show twelve annas only, which means that crops throughout the country will be no more than 75 per cent. of the normal.

India has, however, been blessed with a succession of good years, from which all classes have benefited, and although the immediate outlook for some industries may not be particularly bright, the business expansion in the country, which is rapidly growing, cannot be seriously retarded by temporary influences. The exchange question at the moment is a disturbing element in commercial relations; dealers decline to retire their bills because they have been led to expect a two-shilling rupee, and merchants look to Government for some guarantee. Stability in the exchange is the sure basis for satisfactory and successful trading, and it is to be hoped that a gradual return to normal conditions will place Indian exchange upon its proper level, although at the moment it is difficult to discern from which direction the stiffening influence may come.

GOLD MOHUR.

## THE MOTOR SHOW.

### Dunlop Rubber Company's Exhibits.

At the coming Motor Show, which opens on October 15, the Dunlop Rubber Company's exhibits, which will occupy one of the largest stands in the gallery, promise to be the most attractive in the tyre section, owing to their originality, diversity, and excellence. Those who mentally limit the scope of Dunlops to tyres and minor accessories only will be surprised to find that the company specialises in rims and wheels as well, and in the display of those component parts will be found new evidence of the enterprise that marks the management of this famous company.

Pneumatic tyres, whether giant or pigmy, require specially made rims, and in their application to commercial purposes it has been found desirable to devise special wheels for their fitment. In this development the company has taken a leading position. For giant pneumatics, a type that is destined to supplement solids for a hundred purposes, Dunlops submit cast steel wheels in which the steel felloe provides the rim for containing the tyre. A wire wheel, a new departure, is also supplied for the air-filled giants, lightness and strength being its chief characteristics. Following the twin tyre there is the twin rim mounted on a steel felloe band for use in conjunction with a wood wheel. Wood and wire wheels for twins make up a display that will attract alike motor manufacturers and users.

With the development of Fort Dunlop, the largest rubber factory in the kingdom, the company is now in a position to pursue the manufacture of giant pneumatic tyres for commercial and other vehicles. It is noteworthy that these tyres are of the straight side type. Built on multiple ply cord casing, 36 by 6 and 40 by 8, they are moulded on flat base rims, and are easily detached by the removal of one of the rim flanges without entailing any forcing over the rim by levers. There are giants amongst solids as well as amongst pneumatics. The Dunlop solid giants, made in 8 in., 10 in., and 12 in. sections, and in 36 in. and 40 in. diameters, give great cushioning capacity and prolonged durability.

A super-cushion makes its first appearance, a particularly resilient tyre for passenger service, which will be welcomed by those who remain sceptical about air-filled tyres for heavy loads. Standard solids are, of course, on the list, one with a non-skid tread which has been successfully used on fire-engines. A safeguard of this kind is essential. With giant pneumatics, super-solids, unbreakable wheels, light bodies, and unfailing engines, the progress of road locomotion is speeding to an end which as yet can be only conjectured. In this productive work Dunlops, in their particular province, are playing a prominent and praiseworthy part.

All reports received up to date have been most favourable for the tobacco crop of 1920 (says the American Consul at Smyrna in a recent report), and it is estimated that this crop will amount to approximately 28,200,000 lb., which figure represents tobacco grown inside and outside the zone of Greek occupation. The 1919 tobacco crop amounted to approximately 16,920,000 lb., grown only in the occupied zone.

According to reports received, there are about 120,000 deunums (80,000 acres) of tobacco land under cultivation this year in the regions held by the Greek Army, and about 12,700 deunums (8,560 acres) outside this area:

## ENGINEERING.

### British Iron Production.

The fact that the production of British pig-iron last month reached the highest level since the Armistice is certainly a good sign, but the rate will have to be increased very considerably if our production of steel is to be maintained. We have only been able to keep this at a reasonable figure by using to full advantage the enormous supplies of scrap in the country. Steel works have in this way been able to show a larger tonnage than the blast furnaces have yielded. As a matter of fact our steel output for August was approximately 80,000 tons below that for the preceding month. At present the situation is relieved to some extent by the available supplies of Spanish ore, and in the near future large cargoes of Newfoundland ore will be reaching the Tees, so that once again we are rapidly getting into the condition of being dependent on seaborne supplies.

### New Furnaces.

American and German ironmasters are putting down a number of new furnaces, and there is some reason to believe that they anticipate a great increase in production. Considerable developments are under way in connection with home and Empire mining enterprises, and provided ample supplies of coke are forthcoming, as seems likely to be the case, the output of British pig iron should receive a great impetus before Christmas. One of our chief needs is, however, the erection of a considerable number of new blast furnaces, and although at the present moment fifteen are actually in course of construction at least a further fifty could be used to advantage. In this connection it must be borne in mind that a number of the older furnaces now in commission are far from being as efficient or as economical in regard to fuel as could be desired. The cost of building the required furnaces at the present price of labour and material would be high, but the work will have to be done sooner or later, and as there appears to be no reason to suppose costs in this connection will be lower in the immediate future it would be the soundest policy to commence construction at once. One thing is certain: the furnaces must be built if our steelmakers are to have, and to continue to have, a sufficient supply of pig iron to meet the requirements of the British engineering industry.

### Coal Carbonisation.

In continuance of its campaign against the high cost of petrol the Automobile Association is arranging deputations to those able to assist in securing Government intervention. Urgent representations are being sent to the Government, particularly with regard to ensuring that the coal carbonised in this country should be so treated before use as to extract all the possible available motor spirit.

### An Economical Radiator.

Particulars have recently been forthcoming of a novel and interesting type of electric radiator which is not of either the luminous or the radiant heat type. A fair demand is likely to be found for this during the coming season, as the appliance is simple, highly efficient, and requires little or no attention. It heats the room in which it is in use by means of convection currents which it sets up in the air, and for this purpose the radiator is claimed to be the most economical on the market. The current consumption is very low, and the fire risk is practically non-existent. The radiators, which are known as the "Magnet," are made in two distinct types. Of these the column type comprises a system of tubular hot-water circulators provided with a large number of heat-distributing gills or blades. A dual immersion heater is fitted at the bottom so that a varying heat control can be obtained. The cabin type, as the other design is called, is of similar construction, but is broader and not so high. For this a single immersion heater only is use. These radiators require no attention, except that it may be necessary once a year to add a little water to that contained in the radiator. A water-filler, with cap, is provided for this, and the operation is simplicity itself.

### Magnetic Alloys.

A certain amount of interest attaches, from an engineering point of view, to the possession of magnetic and electrical properties by iron-nickel alloys. A series of tests involving considerable research work was recently undertaken to determine whether any iron-nickel alloys could be found which had what is called a higher saturation value than pure iron. A number of alloys containing varying proportions of nickel were submitted to test, and it was found that the saturation value decreased slowly between an increase of 0.1 and 20.0 per cent. nickel, and then rose rapidly to 30.0 per cent. and again rapidly up to 50.0 per cent. nickel. After this it fell off more or less rapidly until 100.0 per cent. nickel. It was found that at no point did it exceed that of pure iron.

### Brass Substitutes.

During the war, owing to the shortage of materials, a number of Continental metal founders and manufacturers not only had to exercise the utmost economy in the use of brass and bronze, but were driven to employ a number of substitutes for those alloys, some of which were far from satisfactory. On the other hand it was found that some answered their purpose so well that their use will be continued commercially by reason of their cheapness and serviceableness. In most cases it was found that good results were obtained by employing ordinary iron or steel faced with brass or bronze, especially in such parts as are normally subjected to sliding friction under pressure. For certain forms of bearings it was found sufficient merely to face or line these with brass or bronze instead of casting them throughout of the more expensive alloys. Whenever for certain reasons iron or steel could not be used as a base the use of a brass composition containing but little copper and no tin was found to answer most purposes, and in some instances good results were obtained by the use of coatings of zinc, lead, or cheap and low-grade brass. It was also found that pressed and stamped parts which before the war were made from brass, copper, or bronze as a matter of course equally answered the purpose when pressed from zinc, iron, or thin sheet steel. Bushings, taps, valves, large bearings for shafting, spindles, casings, and similar parts made of iron and brass, coated either electrolytically or by a heat treatment, were also found to be commercially successful. In many instances where bronze worm wheels had previously been used good results were obtained by using wheels made of a special kind of cast iron produced either in the crucible or in an oil furnace, and lengthy use under heavy duty showed that with a special heat treatment these worm wheels, as regards strength and elastic properties, are practically equal to the bronze parts they have supplanted. In Germany, in particular, substitutes for brass and bronze were largely used, and the general consensus of opinion amongst engineers of that country is that the use of steel instead of bronze castings and the use of special brands of cast iron and low-grade brass containing only a small percentage of copper has given results which far exceeded expectations.

## LANCASHIRE COTTON

### Better Demand for Cloth.

(From Our Own Correspondent.)

Manchester, Monday.

Prices throughout the market continue to favour buyers, and owing to bearish sentiment, activity in the way of a larger turnover is held back. Spinners and manufacturers are still struggling against adverse conditions, and although there is a feeling in some quarters that rates are near the bottom our customers have not the pluck to anticipate future requirements. Reports relating to the American crop are not favourable, but growers in the South are offering supplies more freely, this attitude, it is said, being due to the financial stringency. Mixed advices have been received relating to the Egyptian growth, and the climatic conditions vary a good deal. There are fears that the yield will not be anything like so large as at one time expected. Lancashire users continue to purchase very sparingly. There is no confidence in current rates. Yarns made from Egyptian cotton continue very slack. Now and again producers accept wretched figures in order to secure a little relief. Many counts and qualities are now being sold at a loss. Cloth inquiry all round shows some improvement. Shippers to the Near East have been more prepared during the last few days to purchase stock lots, and it is again recorded that distribution in Egypt and Turkey is on a more encouraging scale. More demand has also been about for India, and one or two leading exporters have placed substantial orders in light fabrics, such as dhooties, mulls, and jaconets for Calcutta. No particular change has taken place in the off-take for China, and only isolated transactions have been mentioned for Java and Singapore. Restricted buying has occurred for South America. Home trade buyers remain cautious. Unemployment in most Lancashire towns is of a serious character. American yarns although in slightly better inquiry have not moved off freely, and prices when tested have been very irregular. There has been no activity whatever in shipping bundles. Arrangements are now being made for curtailment of production on an organised scale in the spinning section of our industry, but the details of the scheme have not yet been made known.

## CINEMATOGRAPH FILMS FOR TURKEY.

Cinematographs are perhaps the most popular form of amusement in the larger towns of Turkey, as theatres are almost completely lacking (says a recent Consular report). Cinema theatres vary in size according to their class, accommodating from 500 to 1,000 persons. In Constantinople there are five first-class, eight second-class, and two third-class. In addition to Constantinople, all the larger towns of the interior boast of at least one cinema.

In Smyrna, besides the big theatre, which is the only legitimate theatre for the actual production of stage plays in Turkey, and which is also used as a cinema, there are ten cinema theatres in the town and eight in the suburbs.

Modern dramas with smart setting are by far the most popular form of film. These are generally of Italian production, such as "Itala" or "Cines," etc., but Pathé also sent several. Comic one-act films, such as the Vitagraph Company produce, are also much appreciated, especially in second and third class theatres. Films such as "Quo Vadis?" "Cabiria," "Antony and Cleopatra" run much longer than an ordinary film, and consequently fetch a much higher price per foot.

British films are quite unknown, but at the present moment would undoubtedly be very well received. All war pictures draw a large audience. Titles of films and explanatory details, etc., should preferably be in French, as this is commonly spoken throughout Turkey.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

ANGORA, July 31.

Wheat.—Arrivals have been small, owing to agriculturists being occupied in raising the new crop. The small quantities coming from the villages have been bought for local consumption at Ps.60-80 the yarim of 12 okes. Stocks, 250-300 wagons.

Barley.—The market is firm, owing to the lack of arrivals from the neighbourhood. Prices are Ps.26-30 the yarim of 12 okes. Stocks, 30-35 wagons.

The new crop of cereals is poor, contrary to the favourable forecasts of the spring; it is estimated at 50 to 55 per cent. of that of the previous year.

STAMBOUL, September 11.

The sales for Roumania have continued this week, and have imported a transitory animation to the market. Prices are, however, weak, and holders are trying to realise even lower rates. The fall in the price of cotton has also had an unfavourable influence here. The financial stringency continues.

Sugar.—The decline recorded last week has ended, and there has been a rapid improvement in prices following continued purchases for Roumania. The s.s. Liverpool Marou arrived last week with a cargo of 6,000 tons of sugar, and has only discharged 3,500 tons. The balance, which had been despatched in consignment, could not be disposed of here, and has been diverted to Genoa.

Coffee.—The situation is unchanged. There have been some insignificant transactions.

As regards exports quiet continues to rule here. The demand for the principal articles of export—rice, mohair, and wool—has been weak, and the arrivals are unimportant.

SALONIKA, August 31.

The drought, which continued through July and August, has had an unfavourable effect on the maize crop. Following large arrivals of cereals from Roumania the prices of wheat, barley, and maize have undergone a marked decline.

---

The British, French and Italian delegates on the Board of Administration of the Ottoman Public Debt assumed control on October 1 of Turkey's finances.

A branch of the Bank of British West Africa was opened at Cairo on October 1.

A contract for 50 bogie petroleum tank wagons, each 30 tons capacity, for the Egyptian State Railways, has recently been awarded to Cravens Railway Carriage and Waggon Company, Darnell, Sheffield.

The monopoly taxes in Yugoslavia on salt and petroleum (burning oil for lamps) have been increased respectively to 50 dinars (gold) and 100 dinars (gold) per 100 kilos.

Permission has been granted for the export from Algeria of a limited quantity of best quality figs, in modification of the order prohibiting the export of figs and dates other than those of the variety Deglet-Nour in view of the deficient grain harvest.

The Union of International Associations at Brussels has addressed to the Director of the Universal Postal Union at Berne a protest against the proposal to raise the charges for letters and other postal packets conveyed in the international service.

It is announced by the directors of the Bank of Athens that in connection with the exchange of the existing warrants to bearer of the 1913 issue for 600,000 Ordinary shares of the bank against new warrants to bearer for 480,000 Ordinary and 120,000 Actions de Jouissance warrants will be exchanged up to December 31, 1920. New share warrants to bearer for four Ordinary shares and one Action de Jouissance will be exchanged for every five Ordinary share warrants to bearer of the 1913 issue.

## TENDERS INVITED.

**Tenders are invited for the following contracts, and must be made by the dates mentioned :—**

**Egypt.**

*(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)*

**Pumping Machinery.**—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply and erection of pumping machinery for a pumping station at Tawila, in the Province of Gharbicha. October 15 (L.)

Paving Stones, etc.—The Ports and Lighthouses Administration, Alexandria, invites tenders for the supply of paving stones and granite headstones. October 15. (L.)

Steamer.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply of an inspection steamer for the Upper White Nile Division. Specification P.T. 25. December 1.

Reservoir.—The Director of Technical Services, Municipalities and Local Committees Department, Ministry of the Interior, invites tenders for the construction of a masonry reservoir at the Assouan Dam. Specification P.T. 50. October 16.

**India.**

Steelwork for Bridges.—The Great Indian Peninsula Railway invites tenders for the supply of steelwork for bridges (Wadi-Bundar Viaduct). (Specification £1. Secretary, 48, Copthall Avenue.) October 15.

Diesel Engines, etc.—The Municipal Board of Agra invites tenders for the supply, delivery, and erection of (1) four Diesel engines and high-tension alternators, including foundations, switchgear, transformers, and sub-station equipment; and (2) Fifteen miles of high-tension underground cables, 28 miles of overhead low-tension three-phase mains, and street lighting equipment, complete with all accessories. (Specifications £2. Messrs. Handcock and Dykes, 11, Victoria Street.) October 22.

**Algeria.**

H.M. Consul-General at Algiers reports that a local trader desires to receive quotations from United Kingdom firms for the supply of iron or soft steel hoops for barrel-making. It is understood that the applicant is prepared to pay cash for the material. Firms in a position to offer supplies of the material in question can obtain the name of the inquirer, specifications, etc., from the Department of Overseas Trade.

**Turkey.**

Railway Material.—The Anatolian Railway Administration, Constantinople, is urgently in need of glasses for point lanterns, paints for bridges, augers for bridge work, boiler-tube ferrules, lamp wicks, firebricks, fireclays for fire-boxes, etc. The schedule, etc., can be inspected at the Enquiry Room, Department of Overseas Trade, 35, Old Queen Street, S.W.1. Quotations should be submitted direct to the Director of Railways, Constantinople.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated September 29 :—During the week ended September 18 light to moderate rain has fallen. Prospects of standing crops generally good, but more rain needed everywhere in the Punjab, United Province of Agra and Oudh, Bihar, and Bombay, in parts of Central India, Madras, and Western Bengal, and in unirrigated areas in the North-West Frontier Province, and the Central Provinces. During the week ended September 25 monsoon active in Lower Burma, Southern India and extreme North, with local rainfall elsewhere. All India final wheat forecast 29,976,000 acres, 10,092,000 tons.

Bombay cotton market irregular. Good M.G. Southern October Rs. 430. Piece-goods market steady with little retail inquiry. Calcutta jute market steady with prices unchanged, though small business done. Heavy goods quiet but firm, with good demand for B twills. Hessians quiet with easier prices. No change in bank rates.

## ON 'CHANGE.

### Rise in Egyptians.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

The steady fall in prices which we have had to record during the past few weeks appears to have come to an end, at any rate for the present; there is a brighter tone in almost every group, and in some cases the advance in price is considerable.

Among Government stocks, however, Greeks have not participated in the movement, but show, on the contrary, a further weakening, the 1881 Loan having declined from 55 to 54½, while the 1893 and 1914 Loans have each lost a point at 52 and 54 respectively. Turkish stocks also have declined; the 4 per cent. (1891) has lost half a point at 62, and the 3½ per cent. Egyptian Tribute bonds have suffered a like decline to 53½. But Egyptian 4 per cent. Unified Debt has made the substantial advance of four points at 67, while the 3½ per cent. Pref. has appreciated from 53 to 55¾, at which price there are still buyers. City of Alexandria 4 per cent. has gained half a point at 60.

Among the Banks Agriculturals have advanced from 4 1-16 to 4 3-16, and the Cumulative Preference from 5 to 5 1-16. Imperial Ottoman Bank is half a point better at 9, and Land Bank of Egypt has gained ⅛ at 4⅝. Bank of Athens has suffered a small decline from 4 to 3 15-16.

In the Railway group Egypt Delta Light has gained ⅛ at 5⅛, while Ottoman Smyrna to Aidin has declined from 9¼ to 8¾.

Among Land shares Mortgage Company of Egypt's 4½ per cent. debentures have lost half a point at 73½, but elsewhere the improvement has been general. Aboukir has gained 6d. at 33s. Béhéra has risen from 14 to 14½, and the Pref. have jumped from 65s. to 68s. Egyptian Delta Land has gained 1s. at 14s. 6d., while Egyptian and Foreign Trust is 3d. better at 13s. Gharbieh Land, Sidi Salem, and Union Foncière have each gained ¼, and now stand at 3¼, 2¼, and 4½ respectively. Sudan Plantations have appreciated 1-16 at 5 1-16, while New Egyptian has jumped from 32s. 6d. to 33s. 9d.

In the Miscellaneous group Alexandria Water has gained 5-16 at 7 9-16, at which price there are still buyers. Associated Cotton Ginners has advanced from 22s. 6d. to 24s., while Egyptian Markets is 3d. better at 20s. 9d. Egyptian Salt and Soda has gained ⅛, and now stands at 2⅛. There is a small decrease to record in Morums Oriental Stores, this stock having receded 3d. at 17s. 9d.

The only change to note amongst the Oils is a decline of 9d. in Roumanian Consolidated to 21s.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |
| Athens | Drachmae to £ | 25·22½ | 33·75-34·25 |
| Belgrade | Dinars to £ | 25·22½ | 102-104 |
| Bombay | Sterling to Rupee | 24d. | 1/9 5/16-1/9 3/8 |
| Bucharest | Lei to £ | 25·22½ | 179-189 |
| Calcutta | Sterling to Rupee | 24d. | 1/9 3/16-1/9 3/8 |
| Constantinople | Piastres to £ | 110 | 410-430 |
| New York | Dollars to £ | 4·86⅜ | 3·48½-3·49¾ |
| Paris | Francs to £ | 25·22½ | 51·95-52·30 |
| Sofia | Levas to £ | 25·22½ | 247½ |
| Teheran | Krans to £ | 50 | 29½ |

## OIL OUTPUTS.

Anglo-Egyptian Oilfields—Gemsah—Production for week ended September 26, nil tons (last week, nil tons). Hurgada—Production for week ended September 26, 2,936 tons (last week, 3,092 tons).

Algerian Oilfields.—Production from leased area, August, 46,753 kilos.

## NOTES OF THE WEEK.

The visit of M. Stambolisky to England should prove an event of first-class importance both to Bulgaria and to the Balkans as a whole. By issuing its invitation the British Government paid a personal compliment to the man who had made a bold stand in his own country on behalf of the Entente Powers in 1915, and at the same time showed its readiness to recognise that the Bulgaria of King Boris and M. Stambolisky may well be an entirely different country from the Bulgaria of King Ferdinand and M. Radoslavoff. Little attention would have been paid by neighbouring States to any claims in this direction emanating from Sofia itself; but the fact that M. Stambolisky now has the ear of the British and French Governments will bespeak a hearing for him elsewhere. In this action the Entente Powers are consulting the interests of all the countries of South-Eastern Europe, for it is certain that the latter can never reach the high-water mark of prosperity so long as the old antagonisms and suspicions are perpetuated.

It was inevitable that the period immediately following the war should find Bulgaria an object of suspicion to her neighbours, and probably only M. Stambolisky, with his striking political record and with his reputation for strength and determination, could have succeeded, as well as he has, in rehabilitating his country in such a short time. Without a definite lead from a Great Power, however, he might still have been beating the air. As a result of the British invitation he has now the satisfaction of seeing some response to his overtures for more friendly relations with the neighbouring States. The statement of the Greek Chargé d'Affaires on his arrival in Sofia that the Hellenic people, forgetting the past, entertained no feeling of hatred towards Bulgaria, and had no other desire than for friendly collaboration with the Bulgarians for the good of the two nations, was in studied contrast with the chilliness with which official relations with another neighbour had been resumed a few months previously. Roumania is not likely to lag behind Greece in this respect, and it is to be hoped that a meeting in London between M. Stambolisky and M. Take Jonescu will convince the Roumanian Government that little time need be diverted from the task of economic reconstruction to creating elaborate safeguards in the realm of foreign policy against Bulgarian aggression.

The report that conversations between the Italian and Yugoslav Governments on the subject of the Adriatic problem are about to be renewed will raise no hopes this time, in spite of the assurance that both parties are resolved to come to a conclusion—satisfactory or unsatisfactory—without delay. In the absence of outside pressure there would seem to be no new factor calculated to bring the two Governments into agreement, unless it be the weariness of public opinion in Italy and in Yugoslavia, as well as in the world in general, over the dispute. The good intentions of the Italian and Yugoslav Governments are not questioned, but both fear to present their political opponents with a handle. Sooner or later it will be brought home to them that the good sense of their respective nations will welcome any settlement in preference to a continuation of the present anomalous position which prevents the two peoples from giving their undivided attention to the more pressing matter of economic recovery.

The trial, in Cairo, of Abdel Rahman Bey Fahmy and twenty-eight other Egyptians, on a charge of conspiracy, concluded on October 5, when four of the accused were released, and Abdel Rahman Bey Fahmy and the rest of the prisoners were found guilty. Their sentences will not be promulgated until the proceedings have been submitted to the General Officer Commanding; but it is safe to say that if they are not severe it will be solely due to the desire to avoid doing anything that might prejudicially affect the improvement in Anglo-Egyptian relations which has been observable of late. As it is, one Cairo report states that the "wholesale conviction has aroused a certain amount of bitterness among the natives," but it is satisfactory to learn that the prevailing impression appears to be that the trial has been absolutely impartial, and that the manner in which it has been conducted has increased Egyptian respect for British justice and helped to restore British prestige. The worst feature of the case was, of course, the attempt to prevent, by bribery or intimidation, evidence being given against the accused, but the firmness with which the worst of these attempts were handled by the Court had its effect, which, we may hope, will last for at least some time.

Apart from "sensational" and "dramatic" incidents of the class dear to certain newspapers, the trial would in any case have attracted much attention by reason of the expectation that the accused would be found to have been closely connected with many of the disturbances that have disgraced Egypt during the past year and a half, such as attempts on the lives of Ministers and of British soldiers. Reports available at the time of writing indicate that such connection has been established, and the "Vengeance Society

Digitized by Google

of which the accused are said to have been members, appears to have been formed by the amalgamation of half-a-dozen societies, all with melodramatic titles, and all intent on upsetting the established order of things by resort to methods of assassination and anarchy. How such associations can ever have acquired the power they undoubtedly did gain it is hard for Englishmen to understand. That all decent Egyptians will be glad that this particular gang has been laid by the heels is not to be doubted; and if other prosecutions on similar lines should have to be undertaken in the near future it is probable that the police and other forces of good government would find their task rendered much easier for them than has been the case in regard to the prosecutions just brought to a successful termination.

---

It now appears to be almost certain that the Nationalist-Turkish attack on Armenia was undertaken as the result of an understanding with the Bolshevists. Chicherin, it is reported, promised the support of the Moscow Government if the Nationalists would embark on a campaign for the capture of Kars, Ardahan, and Batoum; and a report received by the Armenian Bureau in London from the Armenian representative at Tiflis states that "the Turks [i.e., the Kemalists, of course] have demanded Kars and Ardahan in accordance with the Treaty of Brest-Litovsk." The Armenian Government has officially declared war on the Nationalist Turks, and according to latest reports is concentrating its forces at Kars. The Nationalist forces are led by Ali Shefik Bey, Kiazim Karabekir Pasha, and Muhi ed-Din Pasha, and Angora has announced that they will wipe out Armenia within a month and open up the road to Azerbaijan. If wishes were horses, beggars would ride; and Mustapha, Enver and Co. may find the wiping out process not quite so easy as they expect it to be: the Armenians are brave fighters, and Georgia, though preserving her neutrality, is informally lending them valuable help in one way and another. In connection with Georgia it is to be hoped that Nationalist calculations of a Turco-Ajarian rising at Batoum will be baulked, for the Georgian Government is reported to have taken exceptional precautions against anything of the kind.

---

Some details are now available of the proposals made by the Porte in its Note to the Powers on the situation in Anatolia. It proposes to raise and equip a force of 40,000 men, to be recruited from the population of areas now in Greek occupation; and it asks the Powers to assist it by releasing arms and munitions required, which are now under Allied guard, by rendering naval help, by providing gendarmerie instructors, and by agreeing to a loan of 4½ millions to defray the cost of a three months' campaign. The Porte also points out that the Nationalist forces have not proved very formidable in the field so far, and that it has entire confidence in the officers and men of the force that it proposes to raise. Therefore, it deprecates any further advance by Greek forces as unnecessary and provocative, and declares that an Armenian advance would almost certainly lead to concerted action by the Kurds. At the present moment, it is true, the Armenians are hardly in a position to undertake any offensive; but in any case, the Porte's contentions have more justification than is sometimes the case with regard to its Notes; and though the Allies will certainly want to feel sure that the £4,500,000 will be devoted strictly to the purpose for which it is asked, the proposals upon the whole do not seem to be unreasonable. Without assistance from the Western Powers it is clear that Turkey must be powerless. The giving or withholding of such help will, therefore, supply a test of their honesty.

---

The difficulty of obtaining trustworthy information regarding events in Mesopotamia is admittedly great, and we have frequently suggested that greater candour on the part of the Administration would be welcome, and would in the long run do good rather than harm. The censorship exercised in Baghdad over Press messages is the subject of a good deal of comment, not to use any stronger expression, and it is far from improbable that the "bad Press" in this country from which the Mesopotamian administration undoubtedly suffers, is largely attributable to the irritation thus created. Nevertheless, it is much to be regretted that in their anxiety to bring about an instant evacuation of the country—or their determination to "work a stunt"—at all costs, certain newspapers should allow themselves to be rushed into publishing statements which, though inaccurate and misleading, yet obtain credence with a section of the public, and may eventually do very real harm.

---

The latest example of the kind of alarmist report, to which we refer, was published by a London newspaper last Friday. Under three or four large-type headlines, referring to a "New Mesopotamia Surprise" and "Mystery Plans," it published a dispatch from its Allahabad correspondent to the effect that more troops are under orders to proceed to Mesopotamia in December, and commented on the announcement by asking why the troops should be sent, what was at the bottom of the mystery, and whether we are "going to get out of Mesopotamia or not"? All this is disturbing, and since the British taxpayer is informed by the paper in question that he is at present paying at the rate of £100,000,000 for the upkeep of "more than 300,000 persons" in Mesopotamia, he may perhaps be pardoned if he becomes restive about it. But for the present we would advise the long-suffering Briton to keep cool. More troops may, unfortunately, have to be sent to Mesopotamia eventually, but the moment all signs point to the improbability of their being called for in December; and the report that they are "under orders" has not only not reached us from any of the sources that we regard as well informed regarding Mesopotamia, but has also been authoritatively denied. Moreover, it is an unfortunate fact that whereas the dispatch, dated October 6, speaks of Sir Percy Cox having had "a triumphal journey to Baghdad," Sir Percy did not actually leave Busreh till October 6, and, according to latest reports, was not to enter Baghdad until the 11th. . . . . We apologise for spending so much time on this particular report, but in view of the urgent necessity for keeping a clear head about Mesopotamia and its future, it has seemed worth while to do so.

---

Whether because Sir Percy Cox has arrived in the country and taken over his duties as High Commissioner, or because the creators of disturbances are, for one reason or another, tiring of their game, the situation in Mesopotamia has sensibly improved, though it cannot yet be described as normal, or nearly so. The South is now more troublesome than the North, where the Kurds are showing a rather more friendly disposition to us. A column organised at Ur for the relief of Samawa has been making good progress, though not unopposed; Kufa still holds out, and pluckily signals "All Well" to our aeroplanes, although the burning of the defence vessel, "Firefly," must have been discouraging; and a column moving south from Hillah has inflicted a defeat upon a force of insurgents numbering 3,000, after a stiff fight lasting three and a-half hours. Other points of interest which may be mentioned are the safe arrival in Baghdad of all the women and children from Kerind (with the exception of a few sick), and the arrival at Kasvin of Major-General Ironside, to take over the command of our forces in North-West Persia.

---

The correspondence between Lord Curzon and the Russian Government contains a summary by the former of Bolshevist activities in Central Asia, which is of historical interest as a succinct analysis of the situation in that part of the world. The Soviet Government, Lord Curzon points out, has continued to send Russian troops to Persia; it is engaged in a military conspiracy assisted by the dispatch of considerable numbers of Bolshevist troops, with the Turkish Nationalist Party in Asia Minor, a movement ostentatiously directed against British interests; it has threatened, and continues to threaten, the invasion of Khorasan; it has created a great organisation at Tashkent for marshalling the forces of Central Asia in an attack upon British territory or British interests; it has brought about a revolution in

Digitized by Google

Bokhara with the same object; it has for months maintained a series of envoys in Afghanistan, engaged in an attempt to conclude a Treaty with the Ameer of Afghanistan, and openly aimed at inciting a tribal rising on the Indian frontier. At conferences held at Moscow, Baku, and elsewhere it has launched a veritable tornado of propaganda, intrigue, and conspiracy against British interests and the British power in Asia. The only comment that need be made on this indictment is that, in spite of these well-known facts, the British Government seems to have imagined that all these activities would cease at the wave of a wand to enable the Bolshevists to gratify the British Government's anxiety to trade with them.

# THE WEEK AT HOME.

London, Monday Evening.

**The Prince in London.**

In perfect weather London gave a rousing reception to the Prince of Wales this morning on his return from his trip round the world. It was something more than a mere perfunctory welcome home, for the Prince has done well, and has won his own place in the heart of London, which greeted him, not so much for the work he has done on the tour through Australia, as for his own sake, as somebody we are glad to have back.

It is to be hoped that the Prince will now be allowed a short term of rest before he is called on to take the lead at public functions by ambitious mayors and other officials. He has earned a holiday, and he looks as though he were in the mood to enjoy it.

**The Return of Politics.**

Coal has taken a back seat for the time being, the miners being now engaged on balloting, and Mr. Smillie having made it known that he favours a temporary settlement. A more accurate word to describe it would be a truce, as he has stated in an interview that he thinks the whole subject must come up again, apparently in some three to six months' time. We shall see. There are those who believe that the question will never be settled unless there is a real trial of strength in a fight, and others who hold that every postponement is so much gained in the interests of sweet reasonableness. The wise man stocks his cellar, and hopes for the best.

Meanwhile the approach of the autumn session reminds us that politicians succeed pheasants in the sportsman's calendar. Various Liberal statesmen have contributed long letters to *The Times* on Irish policy during the past few days, and have been duly shot at by the leader-writers. Lord Grey suggests a two-years' truce in Ireland; Lord Morley, with the sunny optimism of the octogenarian, pleads for a reasoned sanity; Mr. Asquith would give Ireland freedom in Customs and defence, confident that she would never use her ports or tariffs against Britain. Mr. Asquith, in short, suggests in Opposition what he never contemplated in office, when passing his own Home Rule Act, and these various solutions, if they can be given so dignified a name, have roused little response either in Ireland or England.

Mr. Lloyd George, speaking in Wales, denounced the Sinn Fein outrages and murders, and predicted that Home Rule would be passed by the present Government; he might have added that it would have been passed long before had Irishmen shown any signs of agreement among themselves. Incidentally, he referred to Mr. Asquith as Jehoshaphat; the implication is a trifle obscure, but it sounds offensive, Jehoshaphat having made a Coalition in his day with that astute politician Ahab—whom one had not hitherto regarded as a typical Conservative. Fortunately, the Prime Minister did not elaborate his parallel; if he is going to add the Book of Chronicles to his speeches as well as the algebraic symbols of last week we shall begin, as poor Pelissier used to say, to wish we had been educated instead of going to public schools.

But obviously Mr. Lloyd George is in high spirits, and he has good reason to be, for events are playing into his hands. At the last by-election the Government polled more votes than Liberal and Labour candidates combined; the threat of direct action ruined the latter, and the certainty of Liberal inaction has ruined the former.

**A Suggested Coalition.**

So evil are the prospects of the Opposition, indeed, that Mr. George Cadbury, of the *Daily News*, has propounded the novel idea of a Coalition Opposition. It was not very long ago that this newspaper was denouncing coalitions as unprincipled, but apparently that only applies to other people's coalitions when in power; the Bournville variety is high-principled, because it is not in power. The distinction is a trifle subtle, but Labour is not taking the offer.

It is wise in its generation. For many years it was the tail of the Liberal dog; now it is a complete political animal—not very fleet indeed, and a little too much like the stage elephant which pulls in two directions at once, but still a recognisable political animal, which some day hopes to get its feet into the trough of office. It has little to gain from Liberalism, and it does not want to risk its independence. In any event, its fundamental principles are different from those of Liberalism, and it cannot very well barter these. Besides, it would not gain very much if it did: it is in the position of the famous lady who replied indifferently to her tempter: "Sir, I will not sell my honour, and in any case you are much too poor to buy it."

**Short Work and Hard Times.**

Unemployment appears to be on the increase in a good many towns and industries, and employers as well as workmen are having an anxious time just now. All the same, the prevailing opinion is that the trouble is incidental and transient, and people are more optimistic than they were a few weeks back. That is proved by the fact that some rather big flotations of capital have been made during the past few days, including fifteen millions of local loans, and there are more to follow.

But unemployment and the prospect of its increase are serious enough for the Government to be considering remedies, and it is said to be contemplating a large policy of road construction, or rather reconstruction, for the relief of distress. Judging from the evil condition of some of the main roads in Kent and Essex, the roads might be reconstructed for other reasons as well; but the County Councils, with irate ratepayers looking suspiciously at their demand notes, are appalled at the cost, and also inclined to look to the Government for aid.

The newspapers have announced a slight fall in the cost of living as a set-off against unemployment. It is not visible to the naked eye, except perhaps in things like grand pianos and fur coats and high-powered motor-cars; luxuries are certainly cheaper, but ordinary household and personal expenditure seems much the same. However, the tailors are now advertising against each other for custom; Mr. Mallaby-Deeley started the fashion, and others follow every day, denouncing their rivals as quacks and profiteers and offering well-cut made-to-measure suits at low prices compared with those of the ordinary City or West End maker; and something of the same kind seems to be taking place among the boot-makers, whose windows are filled with figures and percentages and a catalogue of their virtues as well as shoes. It reminds one a little of the injudicious advertiser who placarded his shop with the legend "Don't go elsewhere to be robbed; come here"; but it seems to indicate that competition is returning.

**A New Port.**

The war demonstrated the potential usefulness of Poole Harbour, one of the finest sheets of water along the South Coast, but useless for modern shipping on account of the shallowness of its channel. Estimates have now been made for the deepening of the channel from 16 to 26 feet, which would permit the entry of large vessels, and the eventual provision of 18,000 feet of new wharfage; the total cost would be 3¼ millions sterling, not a very large sum as the times go. Southampton is scarcely likely to look on this rivalry with a very friendly eye, but Poole is anxious to regain some of its old prosperity, and may put up a fight for traffic.

If Poole developed a large transit trade, it would

Digitized by Google

probably compete for the Birmingham and Black Country export traffic; it could not expect much from London, which has its own docks, and it certainly could not live on the Somerset and Dorset traffic, which is mainly in tourists and milk.

**The London Diocese.**

The Bishop of London is notoriously overworked, but it is doubtful whether a suggestion, unofficially made this week, will be adopted. Somebody has put forward the idea that London shall be divided into four bishoprics, with an Archbishop at the head. There is a good deal to be said for raising London to archiepiscopal status, but I fear that a Bishop of Stoke Newington would find it a little difficult to live down his name, even in a Latinised form. But it is not organisation that the Church needs so much as more driving power.

**A Challenge to a Duel.**

The country has been considerably amused by a challenge to a duel being sent within the last few days. The challenge was sent by Sir Claude de Crespigny to his kinsman, Lord Kenyon, the challenger making public some pointed comments on Lord Kenyon, and more particularly criticising his alleged conduct during the war. Sir Claude is an Essex country gentleman, and a vigorous young man of between seventy and eighty. He recently married again. Lord Kenyon has laughed at the challenge, and expressed his surprise that anybody should be interested in the affair. Needless to say, it is not likely to come off.

**The October Summer.**

The British climate is, proverbially, fearfully and wonderfully made, but this year it has surpassed itself. In March it was as warm as June; in July we took to overcoats and in August to sitting over the fire; September began badly, but improved every day, and October has so far been a sheer ecstacy of glory—cloudless skies and mellow warmth and peacefulness. Never were the woods more perfect in their tints than now, and at some of the seaside places visitors have appeared again for belated holidays—a fact which will probably cause landladies to conclude that their charges for rooms have been too low, for it is our article of faith with these harpies that by the end of the season the holiday-maker should have only his return fare in his pocket and his eyes to weep with.

When the Government extended summer-time from the end of September till the end of October for the first time this year there were some doubts of its wisdom in doing so, as the early mornings are said by early risers and others who delight in such foolish works of supererogation to be a little chilly; but the Government evidently knew what they were about better than their critics. The story goes that, in view of the danger of a possible coal strike, Mr. Lloyd George offered the Sun the O.B.E. if he would increase his output, and the Sun, impressed by the Government's majority at the Ilford by-election, began doing overtime at once. But they do not quite believe this explanation in the Labour camp.

**The Golf Tournament.**

Youth will be served, even in golf. At the great professional tournament last week Braid and Taylor were defeated by Mitchell and Duncan, and the mantle of the prophet passes to new hands. Perhaps it was time; yet there is always a feeling of regret when the old heroes are deposed. Duncan is now the open champion, and Mitchell shares his glory as unofficial "match-play champion," having won the £590 tournament two years running—an extraordinary feat.

**Current Literature.**

I fancy the most popular book of the day is likely to be Sir Algernon West's "Contemporary Portraits" (Fisher Unwin). It is full of good stories, such as that of the Australian who complained that "the million and a-half Englishmen who inhabit these colonies, and during the last fifteen years have believed that they possessed self-government, have really been governed for the whole of that time by a person of the name of Rogers"—Rogers being Lord Blachford. Perhaps even better is a hitherto unrecorded epigram by W. S. Gilbert. When Garter King-at-Arms was one day remarking to Gilbert that he found it hard to provide arms and mottoes for newly-made peers and baronets, he instanced Sir Blundell Maple as an example. Gilbert replied: "For a coat of arms put Richard Cœur de Lion through the bars of his prison, and for a motto 'Blondel m'appelle.'"

An enormous tome has been published entitled "Phenomena of Materialisation: A Contribution to the Investigation of Mediumistic Teleplastics" (Kegan Paul), by Baron von Schrenck-Notzing. It is a scientific examination of certain aspects of spiritualism; and in view of the recent controversy on spirit-photography, its long and extraordinary series of photographs—all reproduced excellently in the book—should have a certain importance.

A book that will be indispensable to every student of London history is "The Great Fire of London" (John Lane), by Walter G. Bell. The account has never been written in detail before, and Mr. Bell collects a vast amount of curious evidence. The booksellers of Paternoster Row, confident that the Fire would never damage Old St. Paul's, deposited all their books in the Crypt; they were all burnt. The populace believed that the Fire was the work of Papists or Dutchmen—England was at war with Holland at the time—but there was no evidence to prove what was, after all, the natural consequence of a wooden city, an east wind, and a careless baker. The official verdict was that the Fire was due to "the hand of God upon us, a great wind, and the season so very dry," but on the Monument was subsequently cut the inscription, "Here by ye permission of Heaven, hel broke loose, upon this Protestant City, from the malicious hearts of barbarous Papists"—a statement which provoked Pope's couplet:—

"Where London's column pointing at the skies,
Like a tall bully, lifts the head, and lies—"

A book that deserves, and will obtain, serious consideration is "The Triumph of Nationalisation" (Cassell), by Sir Leo Chiozza Money. Sir Leo takes for his text the war-time control of industry, and argues that it was so successful that the State should pursue the same policy in peace. The weak point of the thesis is that the motive of patriotism is less to the fore in peace than in war, that a great deal of work is in itself unattractive, and that it can only be carried on from the motive of private gain or the need for making a living. Sir Leo performs ably enough the not very difficult task of picking holes in the present industrial system, but in fact the only alternative seems to be the full State control of Capital and the conscription of Labour—a system which England is unlikely in any circumstances to adopt. But since the relations between Capital and Labour, with the State as umpire, are obviously changing before our eyes, it is well to have this ground explored from every point of view. Sir Leo's remedies will not be accepted as a whole, but it is possible that some points in them will be found capable of being engrafted on our existing system.

OCELLUS.

**THE BAGGING OF BAGHDAD.**

**By ERNEST BETTS.**

A very real account of the Mesopotamian Campaign. Mr. Betts has the art of description, sketches character cleverly and wins his reader's confidence by the candid way he describes his own exact sensations. His book is as close to the outlook and attitude of the "foot-sloggers" who went through hardships and privations of every kind as a book can be.

## EGYPT.

CAIRO, September 27.

**Proposed Basis of Agreement Accepted.**

Matters have now advanced to the point where one can definitely state that the majority of the population of Egypt accept the draft as the basis for an agreement between Great Britain and Egypt. After the Legislative Assembly and other elements of the community, it was this week the turn of the provincial notables and of the provincial councils to meet the Egyptian Delegation and discuss the situation. Almost without exception these meetings have declared in favour of the proposal, while making reservations and recommendations on the same lines as those put on record at previous meetings. The latest development comes, however, from Prince Omar Toussoun, the chief signatory of the manifesto issued about a fortnight ago, to which reference has been made in my last two letters. His Highness, obviously realising the tactical blunder into which he had been led, has endeavoured to allay the irritation caused by the manifesto by explaining to Press representatives that he had had no intention of trying to influence public opinion, but had merely wished to make known his personal opinion. He has now intimated a desire to meet the Egyptian Delegation when they visit Alexandria on their way back to Paris, an invitation which the Delegation have most readily accepted; and this last gesture on the part of Prince Omar Toussoun may be expected considerably to strengthen the position of the Egyptian Delegation.

The four delegates, who will be accompanied by the three other members of the Delegation who are still in Egypt, are due to embark on the French steamer Lotus on October 1. They will proceed direct to Paris, where they will report to Zaghloul Pasha and Adly Pasha, and it may be forecast that those two Egyptian leaders, when conveying to Lord Milner the result of the inquiry conducted in Egypt, will state that that inquiry has shown that the majority of the Egyptian nation are in favour of an agreement on the basis proposed, and that they have full confidence in the Egyptian Delegation.

The Nationalist party, in a desperate attempt to strengthen the opposition, have this week published a detailed report, accompanied by a statement to the effect that the proposed agreement merely confirms the Protectorate declared in 1914 and deprives Egypt of her internal and external sovereignty. This is, however, but a flash in the pan, and the party's intervention has for all practical purposes fallen on deaf ears.

**Water Power at Asswan.**

According to reports that reach me, considerable progress is being made in connection with the scheme for the development of the water power running to waste at Asswan. Recently the Council of Ministers took a decision that the production and control of the power must remain in the hands of the Egyptian Government, but that there was no objection to granting concessions for the utilisation of the power produced. Sir Murdoch MacDonald, who is now in London, but will have to be back in Egypt by November 1 for the criminal libel action which he is bringing against Sir William Willcocks and Colonel Kennedy, has been busy for the past two months on his report, and it is expected that the scheme will be ready by the time he returns to Egypt. Its importance lies in the fact not only that it will provide power for water-lifting plants in Upper Egypt, where free flow irrigation would not otherwise be possible, but that it will provide for the manufacture of nitrates, of which Egypt requires, and will in the near future require, a very great quantity.

**A New "Nationality" Law.**

One of the results of the war, and one of the measures which the introduction of the new régime will necessitate, will be a new Nationality Law. The legal officers of the Government have been studying the question for some time, but until the present interregnum comes to an end and the negotiations with the Powers with regard to the change in régime are concluded it will not be possible to finish the draft. I gather, however, that in the new law the rights of children born in Egypt of parents of foreign nationality will be safeguarded, and that provision will be made for a very clear definition of "Egyptian" nationality and for its application to residents in Egypt who were formerly Ottoman subjects.

**The Conspiracy Case.**

The conspiracy case in which Abdel Rahman Bey Fahmy and twenty-eight others are being tried for treason and conspiracy before a Military Court still drags its weary way, and has now lasted for over two months. This past week, however, it entered upon the concluding stage, when Mr. Mitchel Innes made his final address to the Court in defence of Abdel Rahman Bey Fahmy, his speech lasting for a little over a day. As I write this, counsel for the other defendants are making their final addresses, and it will be the turn of Mr. Maxwell, the Crown Prosecutor, to reply, probably on Tuesday. After that the Judge Advocate will sum up and the Court will adjourn to consider its verdict. It is not expected that the sittings will be resumed or that the sentence—if any of the accused are convicted—will be promulgated until the end of the first week of October.

Taking advantage of the presence in the country of the two visitors from the English Bar, and wishing to show them some hospitality, the Council of the Egyptian Bar entertained Mr. Mitchel Innes and his junior, Major Hedley, at a banquet which they gave at Shepheard's Hotel. The evening was a huge success, and both hosts and guests delivered speeches couched in most felicitous terms. All the barristers associated with Mr. Mitchel Innes and Major Hedley in the defence were present, but it was noteworthy that no other representatives of the English Bar or Bench were invited to meet them.

## YUGOSLAVIA.

BELGRADE, September 26.

**The Crisis Averted.**

The Ministerial crisis which was threatening the country, and foreshadowed in my last letter, has been averted, at least for the moment. During the visit of the Crown Prince Regent to Serajevo, M. Vesnitch and several of the Ministers accompanied him, and it was during their absence that M. Protitch began a series of violent articles in the *Samouprava*, the Radical organ, attacking M. Vesnitch and other prominent Radicals on the ground of faint-heartedness. The piquant thing is that he attacked the new Radical Minister for the Constituent Assembly, Professor Markovitch, who was himself on the staff of the paper, and who at once resigned. A split seemed imminent in the party, the die-hards siding with M. Protitch and the moderates with M. Vesnitch. It was feared that this would lead to the resignation of some of the Radical members of the Cabinet, and so to a fall of the Government, and it was confidently anticipated in well-informed circles that the crisis would break out at the first Cabinet meeting after the return from Serajevo, and there was a distinct feeling of nervousness. But it appears that the crisis has been smoothed over by M. Vesnitch, and the disaster averted. At the best, it was a purely political move engineered with the hope of getting the Radicals into power so that they could influence the general elections in their own interest.

The Government has plenty to keep itself busy with apart from artificial crises. The Adriatic problem is approaching a most interesting stage, when Dr. Trumbitch is entering into direct negotiations with Rome. Naturally, the Belgrade Government declines to take D'Annunzio's latest escapade seriously. In internal matters there is the burning question of the pay of "chinovniks," or Government officials. In spite of numerous grants on account of the terrific cost of living,

Digitized by Google

this class has great difficulty in making both ends meet; which is as demoralising as it is unjust. The Minister of Finance has informed the Cabinet that he can give a credit of 200 million dinars for this purpose; other Ministers think that this money should not be given direct to the "chinovniks," but employed to reduce the general cost of living, which presses so hardly on all but the very richest members of the community.

**Serbia and Bulgaria.**

Relations with Bulgaria are occupying the attention of the Press, especially since our late enemies have signified their readiness to join the Little Entente. In Serbian circles this declaration is received with reserve, as the Bulgars are very naturally looked upon with suspicion and their honesty of purpose questioned. Serbs do not easily forget the fact that Bulgaria attacked their former allies treacherously in 1914, and it will be long before the soreness caused by Bulgarian behaviour during the three years' occupation of Serbian territory can be assuaged. Many Serbs recognise that the day must come when Bulgaria will enter the State of Yugoslavia, but as allies they will have little confidence in them as yet. "*Baja Ganje*," as the Serbs call "Johnny Bulgar," has much to expiate. And even if M. Stambolisky can inspire confidence in his good intentions, he has yet to inspire confidence in his strength. For while the Government is making assurances of friendship, the fact remains that Bulgar *komitajis*, under the leadership of the notorious Protogeroff, are busy in Serbian territory in Macedonia; they are frequently coming into conflict with the gendarmerie, who succeeded about a week ago in killing one of their leaders, with an evil reputation, in an action in which there were several casualties on both sides. The *Politika* says that the best guarantee they could offer would be to hand over their war criminals for trial, instead of trying them themselves, which is the official reply from Sofia. General Protogeroff was thus tried, condemned, and imprisoned, but in a very short time he re-appeared, organising his bands in Macedonia. And in the same connection, the *Tribuna* quotes an unfortunate article from the Sofia *Mir*, written in the most chauvinistic tone.

**Magyar Plots Against Yugoslavia.**

On the northern side, enemy intrigues, in the interest of the Hapsburgites or of Magyar chauvinists, are continuing with the same evil activity that promoted the disturbances at Subotitsa some months ago, and the recent deplorable rioting in Croatia. A plot has been discovered, again at Subotitsa, involving several prominent Magyars, such as Count Szecseny and Litke, manufacturer of the "wagon-lit" champagne. One of the objects of the plot was the murder of the Yugoslav representative and a *coup d'état* to place Magyar officials in power. It is announced from Pechuy, or Pecs, the colliery district in the Baranya, that the Subotitsa secret police have revealed a widespread organisation, of which the moving spirit is a man called Friedrich Fridech, who, under a false name, recruited a band of plotters to carry out his designs. When the police called at his house to arrest him, he succeeded in escaping through a back window and getting across the demarcation line into Hungary. It is on account of the ceaseless activity of the Magyar irredentists that Yugoslavs view with misgiving the inclination both of Great Britain and France towards Budapest.

**Miscellaneous.**

Among the numerous patriotic young Bosnians who helped the Serbian cause during the war, one, Predrag Kashikovitch, son of the editor of the *Bosanska Vila*, was condemned to be hanged by the Austrians. His mother was condemned to be hanged at the same time for the same offence. Prince George of Serbia, hearing this, went at once personally to Madrid and begged King Alfonso to intercede at Vienna on behalf of the condemned pair. The Spanish King's intercession was successful, and mother and son were both pardoned. This dauntless lady has now been decorated with the Medal for Valour by the Crown Prince on his recent visit to Serajevo.

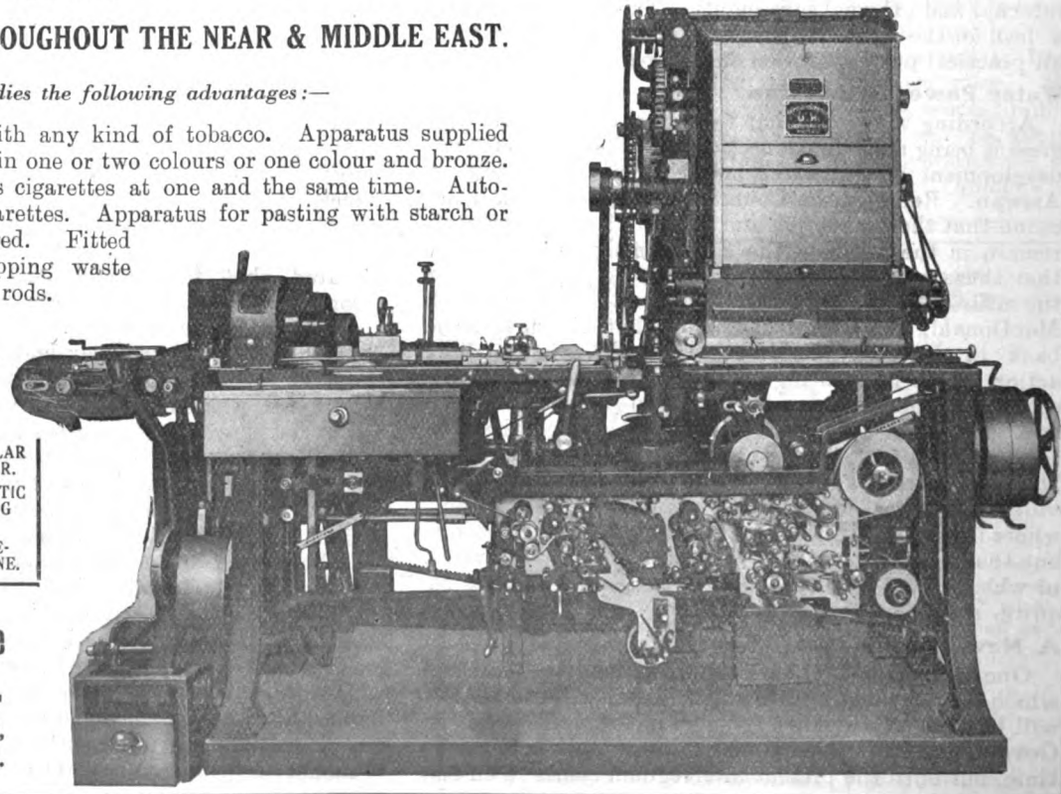
The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

*Embodies the following advantages:—*

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.



*Also:—*
THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.
AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

United Cigarette Machine Co., Inc.

A forger of 20-dinar Yugoslav notes has been arrested in Vienna.

The State Council has thrown out the appeal of the Communist Party against the decision of the Minister of the Interior, that the municipal elections were invalid, and consequently new elections will be held.

September 29.

**The Prince and Serajevo.**

Little anecdotes about the visit of the Crown Prince to Serajevo are now cropping up. One relates how the young lady who presented him with a bouquet of flowers had already had experience, for it was she who presented a similar bouquet to the late Archduke Franz Ferdinand on his fatal visit in 1914! In the same way, one paper states that Mme. Vesnitch lodged in the room in which the Archduke expired. But this is probably all sensation-mongering. More interesting is the account of the decoration of the plucky lady who was condemned by the Austrians to be hanged, together with her son, described in my last letter. A pretty incident is now forthcoming. On the road from the station to the Court there was a large party of *hanums* or Mohammedan ladies, duly clad in *feridje*. As the Prince passed by, the *hanums* with one accord lifted their veils, and a happy smile of welcome was seen on their pallid features; and in the evening they all took part in an unending procession, torch in hand, that defiled before the Palace, all singing national songs, to welcome their Prince.

**The Serbo-Bulgarian Frontier.**

The Commission for the delimitation of the new frontiers with Bulgaria is now at work, under the command of General Dushan Stefanovitch, who was until recently Military Attaché in Paris. A report from Skoplje states that the inhabitants have received the Commissioners with open arms, and the request that the officials and gendarmes who will be detailed to these districts be not from Serbian Macedonia, in which case they might have some old grudges to settle, but from old Serbia.

**Prince Milosh Obrenovitch.**

September 26 was the sixtieth anniversary of the death of Prince Milosh I. Obrenovitch of Serbia. He passed away in the *konak* at Topchider, which has for the last twelve months been the comfortable and picturesque home of the members of the staff of the Serbian Relief Fund.

**Miscellanea.**

King Peter has now taken up his residence in his villa on the Topchider Hill, near Belgrade. His Majesty is resting from the fatigue of his journey, but is receiving no one in audience.

General Sir George Milne, who commanded the British forces in Macedonia through the war, has arrived in Belgrade. On Monday the Regent gave a dinner in his honour.

The Yugoslav Government has decided that aliens resident in the country who are distinguished by race and tongue shall have no votes for the Constituent Assembly because they have the option of electing their nationality after one year, under Clause 80 of the Treaty of St. Germain.

M. Volpi, formerly Serbian Consul at Venice, has arrived in Belgrade. It is understood that his return is in connection with the forthcoming direct negotiations between Yugoslavia and Italy on the Adriatic question.

## GREECE.

ATHENS, September 25.

**The Dissolution of the Chamber.**

The life of the twentieth Parliamentary Period of the Chamber ended with the last sitting on Thursday, September 23. After a long debate, in which M. Venizelos and the Opposition members, MM. Pope and Eftaxias, spoke in connection with the interior questions, the Premier read out the Royal Decrees ordering the dissolution of the Chamber and the abolition of martial law in all the parts of Greece in which it was still in force.

The general elections will take place on October 25 (o.s.), and the new Chamber will be convoked on November 30 (o.s.).

**The Victory Festival.**

The organising committee of the Victory festivals, which will be celebrated on the 14th and 15th of this month (o.s.), has published the programme of the celebrations.

On the first day at 11 a.m. the mayors and presidents of communities in Greece will be officially received at the Municipal Theatre by the Mayor of Athens and the Municipal Council. In the afternoon they will assemble at the Zappeion Palace, whence they will proceed to the Stadium. Shortly afterwards the colours of all the regiments which participated in the war will make their entry into the Stadium accompanied by an escort of honour and military bands. The next to enter the Stadium will be the Bishops of the country attired in their official robes; these will be preceded by the banner of the monastery of St. Laura and a choir of 150 voices. A service will then be held in memory of the officers and men who fell during the war, and His Majesty the King will place a wreath of laurel leaves on the cenotaph specially erected in the Stadium. A thanksgiving service for the victory of the Greek arms will follow. At night the Acropolis, the Lycabettus Hill, and the main thoroughfares and squares of the capital will be illuminated.

In the afternoon of the second day there will be a performance of "The Persians," a tragedy by Æschylus, at the ancient theatre of Herod of Attica, situated at the foot of the Acropolis. At 8 p.m. a great banquet in honour of M. Venizelos will be given by the Mayors of Greece at the Zappeion Palace. At the end of the banquet the Mayor of Athens will, on behalf of the nation, present M. Venizelos with a golden wreath.

Hundreds of telegrams have been received from the mayors of various towns announcing their arrival in Athens, while a telegram from Crete announces the departure for the capital of 400 Cretan chieftains, all of whom are old comrades-in-arms of M. Venizelos at the time the Greek Premier was engaged in guerilla warfare against the Turks on the mountains of Crete. These old warriors will be attired in their picturesque national costume, and a great reception is being prepared for them by the Cretan Club in Athens.

In view of the anticipated large influx of visitors in the capital steps are being taken by the authorities to provide sufficient accommodation. Many hotel proprietors have offered to accommodate a small number of persons free of charge.

**A Requiem in Memory of Jean Dragoumis.**

A service in memory of Jean Dragoumis, who, it will be remembered, was shot dead on the day of the recent regrettable occurrences in Athens, was held last Sunday morning at the Church of St. Sotiros. In addition to the numerous personal friends of this unfortunate young diplomatist, many politicians and men of letters also attended the sad ceremony. After the service those present accompanied the deceased's father, M. Stephan Dragoumis, and his family to their residence in Boulevard Amelia.

**The Speed of Motor Cars.**

Owing to the numerous motor-car accidents which have occurred in Athens lately, orders have been issued by the Prefecture of Police to the effect that no motor vehicles must exceed 20 kilometres per hour in the town, while the maximum speed outside Athens will be 40 kilometres per hour. In certain parts of the city where the traffic is very heavy the speed must not exceed 10 kilometres per hour.

## ROUMANIA.

BUCHAREST, September 27.

**Foreign Policy.**

The local Press has little to say regarding the policy of Roumania in connection with the "Little Entente" and other important questions of foreign policy, but it gives its readers extensive translations of M. Také Jonesco's interviews in the Allied Press. This is largely due to the fact that M. Také Jonesco has been given a free hand by the Government to act as he thinks best in Roumania's interests; and, moreover, the Roumanian people feel confident that he is the right man in the ri

place with such intricate questions under consideration and discussion.

It is felt that since M. Jonescu became Minister for Foreign Affairs the country has had a well-defined foreign policy.

**Visit of British Professors to Transylvania.**

A few days ago, a party of Edinburgh University professors arrived at Cluj (Transylvania) from Buda-Pest. It consisted of Professors Webster, Pluming, and Curtiss, and the object of their visit is to study the Roumanian-Hungarian question, and especially the conditions referring to the various Protestant denominations existing in Greater Roumania. The party is staying at the house of Bishop Nagy, and is already in touch with the Roumanian authorities.

**Church Reform Bill.**

In connection with the Church question, M. Octavian Goga, the Minister of Religion, in an interview which he gave to the Press, made several interesting declarations concerning the Church Reform Bill which he intends to bring forward at the next Parliamentary Session.

He said that the most important point of the Bill will be the unification of the Roumanian Orthodox Church throughout the country, for at present there are four Church organisations, with four different legislations, in Transylvania, Bessarabia, Bukovina, and Old Roumania. It is absolutely necessary that the Orthodox Church, being canonically one, should have only one organisation. For the purpose of preparing this measure the Minister called a consultative meeting, which is now taking place at Bucharest. The gathering consists of representatives from the Kingdom and the newly-joined provinces. The basis of this reform will be the Synodical principle, based on universal suffrage, for the election of Church officials, and the participation of laymen in all ecclesiastic matters. In preparing the Church Bill, they will be guided by the laws set down by the late Bishop Saguna, the well-known ecclesiastic of the Orthodox Church in Transylvania.

At this meeting, or at the next Synod, a number of other Church problems will be discussed, the chief of which is the question of the monasteries. These monasteries have up to now been isolated, and were obsolete from every point of view. Besides their monastical duties, the monks will have to prove their usefulness to the community at large. The scheme is to establish libraries in some monasteries, whilst the monks at other monasteries will be taught to manufacture candles for any church requirements, to make priestly vestments, to take up bee-keeping, agriculture, etc. Another important question is the revision of the Church text and the translation of the Bible.

M. Goga further mentioned that he will not forget other national denominations in this country. He also invited officially all bishops of other Churches to swear the oath of allegiance to Roumania, in order that he may work in closer contact with them, and eventually subsidise them.

The Roumanian Minister to the Vatican has already left for Rome, and the Pope's delegate is very shortly expected in Bucharest.

## BULGARIA.

SOFIA, September 30.

**King Boris and President Millerand**

Immediately on the reception of the news of the election of M. Millerand as President of the French Republic, King Boris sent him a telegram of congratulations. M. Millerand, in the cordial reply which he sent, expressed his best wishes for the well-being of Bulgaria. These friendly telegrams are the first since the war exchanged between King Boris and the head of one of the Entente states, and thus acquire a real significance.

The President of the Honduras Republic, General Don Rafael Lopez Gulicaras, has, on the occasion of his election to that post, also exchanged telegraphic greetings with King Boris.

**Bulgarian Prisoners in Serbia.**

The Bulgarian Government has again made representations to the Yugoslav Government asking for the immediate release of the Bulgarian prisoners of war still remaining in Serbia. These number 2,000, and the Belgrade Government promised long ago that they should be sent back to Bulgaria.

**Territory to be Taken Over.**

It is expected that the Yugoslavs will enter into occupation of the territories awarded to them by the Treaty of Neuilly about October 6 or 7. A part of the population of these territories is emigrating and crossing the new frontier in order to remain still in Bulgarian territory; but a great part will still remain, the people clinging to their native villages. The Bulgarian Government will urge with all its force upon the Supreme Council at Paris that guarantees shall be given for the protection of the rights of the minorities in regard to their schools and churches.

**Communications With Hungary.**

Regular postal and telegraphic communications between Hungary and Bulgaria will be resumed to-morrow, October 1.

**M. Stambolisky's Visit.**

The news of the British Government's invitation to M. Stambolisky to visit England was received with much satisfaction by the whole nation, and it is earnestly hoped that this visit will win again for Bulgaria British friendship and sympathy. Dr. Dimitri Stancioff, formerly Bulgarian Minister Plenipotentiary at Paris, is leaving this evening for London in connection with M. Stambolisky's visit there. Captain W. B. Heard, H.B.M. Commercial Commissioner in Bulgaria, is also leaving this evening by the Orient Express for London in connection with the same visit.

**War Criminals.**

The Bulgarian Government is preparing a Note in reply to the Entente's demand for the extradition of 500 Bulgarian war criminals. The Note requests that, in accordance with the precedents established in the case of Germany and Austria, Bulgaria also may be granted the right to try these accused before her own tribunals on her own soil.

## ASIA MINOR.

SMYRNA, September 27.

**Departure of the British.**

Commodore Maurice Fitz-Maurice, who has been in command in Smyrna since the Armistice, goes home on his flagship H.M.S. Bryony on October 1. H.M.S. Cardiff and Centaur will be stationed in Smyrna for a short time after the departure of the Bryony.

The British Military Mission will leave Smyrna on October 15, when the Inter-Allied Passport Bureau will also close, and Smyrna and district will then be left entirely in the hands of the Greek Government.

**Capitulations.**

Though the British Government is willing to waive the capitulations under which European subjects obtain many commercial advantages in Turkey, the French and Italian Governments absolutely refuse to make this concession to the Greeks, and insist on the capitulations remaining in force throughout the Turkish Empire. The Greeks claim that it will be impossible successfully to carry out their mandate for the Smyrna province if the capitulations are not abolished. It is rumoured that Mixed Tribunals, after the model of the Egyptian Courts, will be established. This means that the task allotted to the Greeks is such that a Sisyphus would have preferred his lower-world punishment rather than take it on.

## CYPRUS.

CYPRUS (undated.)

**General News.**

Among the new laws is one providing for the taking of a census next year. The Municipality of Papho has been authorised to borrow £2.000 towards a new water supply. Carobs of the new crop, which are of excellent quality, are being brought into the town stores. At Limassol there is now plenty of space in the merchants' stores. Three large steamers have shipped cargoes from that town. At Famagusta yet another Greek paper is about to be published under the title of *Demiourgia*: Mr. K. P. Rossider being the proprietor. Mr. E. McDonald is acting as Commissioner of Famagusta.

# CORRESPONDENCE.

## THE HUB OF THE MIDDLE EAST.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Reading this morning your quotation in THE NEAR EAST of October 7 (p. 506) from Mr. Roland Michell's article on "Our Eastern Mandates," I was struck with the suggestion which what you quoted distinctly puts forward, viz., that the Central Asian Society really was becoming a power in Asia, and if in Asia, then also in Europe. Your paragraph names four men—Mr. Michell himself, Sir Percy Cox, Sir A. T. Wilson, and Mr. St. J. Philby—all members of the Central Asian Society, all men of note in their line, and, after all, only four out of a Society which numbers over 300.

Putting aside Ireland, the very subject which Mr. Michell has been handling is the one which at this moment causes Britain, and, indeed, I may say, the British Empire, the profoundest anxiety. As you will remember, in February last Captain the Hon. W. Ormsby-Gore handled this theme before the C.A.S. in an admirable address, which drew from Lord Carnock, Sir Edmund Barrow, Sir Francis Younghusband, Colonel C. E. Yate, and others at once *encomia* and criticism which enhanced its value. If you will look at the programme of lectures of the C.A.S. for the current session, which you were so good as to insert in THE NEAR EAST for September 30, you will see that they all centre in that region which for half a century or more has been known as "the Buffer States" *par excellence*, meaning those that protected India from the ambitions of other European Powers. Whatever the future may bring forth, those buffer States must exercise a great influence over the fortunes of India; and if, twenty years ago, the Central Asian Society founded itself as, so to speak, the champion of British rights in Asia as opposed to Russian, to-day it is, or in the near future will be, the centre of an organisation which proposes to keep a close watch on British interests in all those countries over which Britain holds a more or less direct mandate. It is a most important duty, and in my opinion it is matter for public congratulation that the Society which undertakes this duty has in the last two years greatly increased its numbers and its influence. Political, commercial, strategical, social, and religious interests of great moment are bound up with this region, through which runs what was in the Middle Ages one of the two great caravan routes connecting the Far East with Europe. For the first time, perhaps, in the annals of history the Ægæo-Euxine Straits are an open commercial highway. It remains now to eliminate the unquiet spirit of Bolshevism from the breast of those Moslem races—Turkish, Persian, Afghan, and Uzbek—who have in their heart of hearts no sympathy with it; and if the Central Asian Society can contribute to that end, depend upon it, it will do so. Roads, railways, air routes, and commercial and financial relations pave the way to friendly intercourse and mutual interest, and it is in such-like enterprises that at this moment many members of that Society are closely engaged.—I am, etc.,

A. C YATE, Lieut.-Col.,
Hon. Sec., Central Asian Society.

The Athenæum, October 9, 1920.

## THE GREEKS IN ANATOLIA.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Your Constantinople Correspondent in his letter of September 11 again raises the question of alleged "reprisals" committed by Greek "irregulars" in Anatolia.

Knowing perfectly well that these allegations are entirely unfounded and are simply the fruits of the imagination of persons who for various reasons desire to foment further trouble in the Near East, your Correspondent, notwithstanding attempts to forestall all criticism and denial of these—to put them mildly—allegations by declaring that "naturally all accusations will be refuted and proof will be forthcoming that the Greeks have behaved in Anatolia like lambs. Even Turks will be produced as witnesses, and will swear by Allah that it was even so."

It is perfectly useless to argue with a correspondent who does not hesitate to use such methods in attempting to pervert the truth. But, still, I must ask to be permitted to state that the Greek authorities have in their possession numerous declarations, made by the populations of all nationalities and creeds inhabiting the districts of Anatolia occupied by the Greek forces, in which these populations express their satisfaction with the conduct of the Greek troops. I have every reason to believe that these declarations were made quite voluntarily, and not as the result of coercion or fear of "reprisals." Besides, I may add that there are absolutely no Greek "Irregulars" in Anatolia.—I am, etc.,

M. LYKIARDOPOULOS.

33, Marsham Street, Westminster, S.W.1, October 4, 1920.

## GRECO-BULGARIAN UNDERSTANDING.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Athenian papers write how M. Panurgia was well received by King Boris, to whom he presented his credentials, also that the Bulgarian Press unanimously hailed the resumption of Greco-Bulgarian diplomatic relations. This is but the first step towards a sincere and closer *rapprochement* which is much needed in the two countries, and, as I pointed out through your journal some time ago, the old feud may be buried only with the collaboration of the Press on both sides.

Exaggerated statements, fiery reminiscences, antagonistic tendencies, and reprisals must cease once and for all. M. Venizelos, fortunately, is not the man to trample upon a prostrate foe. On the other hand, M. Stamboliski has proved to be the modern Stambulov of Bulgaria, an iron-fisted man who intends to stand by his word and means to keep the pledge he signed on behalf of his people. M. Panurgia's name may sound for the Bulgarians as that of the illustrious son of Laertes, and my countrymen may repeat sceptically as the Trojan archpriest Timeo Danaos to the fervent assurances of the Bulgarian Premier, the essential thing is that confidence and not defiance are now urgently required in both countries.

When the liberated Bulgarian prisoners of war leave with cheers the Greek territory, and if King Boris receives through M. Panurgia the greetings of "his good brother and dear cousin," "why is not the persecution of Greeks in Bulgaria stopped?" We heard lately of the very critical condition of the Greeks in the districts of Kavacli and Sozouagathopoli. I expect that these incidents may prove that they are sporadic and not general, and that a sincere *rapprochement* may lead not only to the Little Entente, but, perhaps, to a Balkanic Entente, now that Greece, Bulgaria, and Albania are the only countries which can boast of being purely Balkan countries.—I am, etc.,

THEODORE D. MOSCONA.

32, Oxford Street, Manchester, October 9, 1920.

## "A TURKISH DISH."

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Mohammed advised his followers not to eat garlic and onion because the strong, unpleasant odour of these liliaceous plants usually remains a long time with those who eat them, and becomes a cause of annoyance to the decent people in mosques and in society. Therefore, Mohammedan priests and many other Moslems dislike their scent, and cannot eat them. "Imam Baildi" is a simple dish composed of eggplants and the bulbs of garlic cooked together, and its name is an allusion to the excess of garlic in it and to the fact that Imams dislike its odour to the point of fainting.—I am, etc.,

M. N. B.

Oxford, October 10, 1920.

## ALI HAIDAR PASHA.

A correspondent writes from Constantinople:

"I was very interested in the article by Sirdar Ikbal Ali Shah in the issue of September 9. I have known the former Emir, Ali Haidar Pasha, for many years, and can heartily endorse every word of the article. It is during such critical times as when one is a prisoner of war that one discovers the value of friendship. During the whole four years of the war both Sherif Ali Haidar and his son Sherif Abdul Mejid were consistently kind, and never once did I hear of their having associated themselves with the rabid anti-British current that directed all Turkey's activities at that time. The sons of Ali Haidar Pasha have all had an English education, and efforts are being made to obtain permission for one of the younger ones to proceed to a well-known British University. Surely in these circumstances we should at least not injure our own interests if we gave Ali Haidar Pasha a chance to come forward as a candidate for the rulership of Mesopotamia. He does not ask any more than our moral assistance. He asks neither for guns nor soldiers. Why should he not be allowed to try his luck with the turbulent Arab tribes? If he succeeded, it is perfectly certain that our task in Mesopotamia would be immensely simplified."

A Gibraltar message states that much pleasure is evinced at the action of the Spanish Government in withdrawing the recent decree demanding that all persons entering or leaving Spain in this neighbourhood shall be provided with passports. Police tickets will be sufficient till further orders for the local populations of Gibraltar, Algeciras, etc.

## M. TAKE JONESCU.

Monsieur Take Jonescu, Roumanian Minister for Foreign Affairs, who with Madame Jonescu arrives in London to-day, needs no introduction to the British public. As becomes a specialist in foreign politics, he is better known abroad than any other Roumanian statesman. Throughout his political career he has stood for the policy of a close understanding between Roumania and the Entente Powers, a natural corollary, perhaps, to a French education and to the circumstance that his first wife was English. In the critical days of 1914 his unswerving opposition to the proposal that Roumania should throw in her lot with the Central Powers went a long way towards confirming the country in a line of action which undoubtedly coincided with the national bent, although at variance with the official State policy of practically a generation. When the Germans overran Roumania, they showed their appreciation of the part played by M. Take Jonescu by selecting his property for a special exhibition of wanton destruction. The Roumanians have passed successfully through their ordeal, and to none can the consciousness of a definite policy pursued to a victorious end appeal more strongly than to M. Take Jonescu.

As head of the Conservative-Democratic party he finds himself in home politics midway between the National

**M. TAKE JONESCU.**

*[Photo by F. A. Swaine, 146, New Bond St., W.1.*

Liberals under M. Bratianu and the Conservatives. His following hitherto has not been numerically strong enough to obtain for him the chief post in the Government. When after the resignation of M. Bratianu, the Cabinet of Dr. Vaida Voevod, during the latter's prolonged absence abroad, came to grief over domestic questions, Roumania turned to General Averescu for a Government that would not be entangled with the complications that beset a purely party administration. But the new Prime Minister, in spite of the unique position he enjoyed, was obliged to turn to M. Take Jonescu for the Parliamentary experience essential to the conduct of the country's affairs, and it has been in no small measure due to the latter's handling of Parliament that the Cabinet has weathered a difficult session.

Freed from Parliamentary preoccupations, the Foreign Minister is now able to devote his attention to the affairs of his own Department, and it is evidently M. Take Jonescu's wish to be responsible for a new orientation of Roumania's foreign policy. He has identified himself with the Czecho-Slovak scheme of a "Little Entente" between Czecho-Slovakia, Yugoslavia and Roumania, but only as a stepping-stone to a wider agreement which is to embrace Poland and Greece. In the present stage of international relations in Europe, any grouping of States is bound to cause misgivings in some quarters, even if it does not actually provoke another grouping as a counterweight. While, therefore, the "Little Entente" in its present form may be accepted as a natural reply to the uncertainty of Magyar politics, any extension of it would at once raise a variety of points to which Great Britain and France, to say nothing of Italy, cannot be altogether indifferent. M. Take Jonescu has already explained that he is prepared to see late enemy States enter the proposed confederation, if they can satisfy the five countries that they intend to abide by the Peace Treaties; but the manner of the reservation implies considerable doubt on this subject. It so happens that M. Take Jonescu's visit to this country coincides with that of the Bulgarian Prime Minister, who would hardly have come at the invitation of the British Government if any doubt were felt as to Bulgaria's acceptance of the Peace Terms. A meeting between M. Stambolisky and M. Take Jonescu in England is almost certain to take place, and it is to be hoped, as a result of it, that the Roumanian Government will no longer feel that any insurance undertakings against its southern neighbour are necessary.

The advantages that General Averescu counted upon from the co-operation of the Conservative-Democrats are not restricted to parliamentary support and good relations with the Entente Powers. The portfolios held by M. Take Jonescu's party include those of Finance and Public Works as well as of Foreign Affairs. For Roumania at present the question of finance is most important, and it is possible that the Foreign Minister, who has been acting Minister of Finance during the absence of his colleague, M. Titulesco, may wish to continue the negotiations begun by the latter with the British and French Governments. But whatever be the affairs of State that may occupy M. Take Jonescu during his visit to England, he is assured of a hearty welcome on his own account, and the British public will be glad of the opportunity of showing its appreciation of a foreign statesman who has proved such a staunch supporter of the Allied cause in his own country.

## MOSLEM LITERATURE AND TRADITION IN EAST AFRICA.

Speaking on September 30 at the London School of Oriental Studies, Miss Alice Werner said that the Islamisation of East Africa was not due to any great movement of conquest or invasion. The settlers brought their religion with them, and their children by native wives grew up in it, while the slaves adopted it as a matter of course. At present "Swahili" and "Moslem" were practically synonymous terms, and the members of inland tribes who Islamised usually called themselves Swahili. Practically all Swahili Moslems were Sunnis, and most of them belonged to the Stefir sect. It was uncertain how long ago the Arabic character was first applied to the writing of Swahili—no manuscripts more than a hundred years of age appeared to be in existence; but some of the poetry extant was known to be of great antiquity. The Inkishafi was certainly earlier than the advent of the Portuguese in 1498, and some verses attributed to Liongo Fumo were dated by some before the thirteenth century. A great body of Swahili verse was in existence; much of this was written, and fresh manuscripts were continually being brought to light. Much of it was oral, being either handed down by tradition or continually produced afresh, for song and improvisation were as much a part of the people's life as they were, or used to be, in Italy. Most of the popular poetry and all the written poetry differed from the non-Islamised Bantu by possessing a distinct system of rhyme and metre. A feature entirely due to Moslem influence was that much of the poetry was of a religious character. Some of the poetry was by women.

Miss Werner gave extracts from or translations of some of these poems. One was a variation of the story of Job; others had been derived through the Koran ultimately from the Talmud or the apocryphal gospels. Another, of which she did not know the origin and which had not previously been published, was briefly as follows: The archangels Michael and Gabriel disputed as to whether there was any longer any compassion left on earth. Michael said that all men had become entirely hardhearted and cruel; Gabriel took a kindlier view. To settle the point they took human shape, and Michael, as a very sick man, sat at the door of a mosque in Mecca, attracting the attention of the people as they passed in and out. Gabriel appeared then in the form of a doctor, and was asked what would cure Michael. He replied that there was only one possible remedy. A man and wife must be found who had had seven children and lost them all excepting one; then, if they would sacrifice this one, Michael could be cured. It happened that a man, wife, and child fulfilling the required conditions were to be found in Mecca, and, being asked, all three were quite willing that the sacrifice should be made. In a great many stanzas and with much weeping the poem then related how the child's throat was cut, after which Gabriel appeared in his proper shape and restored the child to life.

# MUSICAL NOTES.

### The Aria.

My remarks last week on the inevitable clashing of two or more important events have all too soon and sadly been verified. On October 5 Miss Ursula Greville and Mr. Leigh Henry were giving a lecture recital at the Æolian Hall on "The Aria: Its Development in Form and Feeling" at the same time as M. Lazare Saminsky was introducing his new Russian Choir at the Wigmore Hall. The unfortunate critic could thus be present only at half of either programme. At the first concert Mr. Henry, who is a notable English critic with something more than a bent towards modernism, explained the origin and growth of the aria, how it developed from the simple air or tune to the elaborate melody of modern times; and a little to enlighten the obscurity which an account of origins and growths always involves Miss Greville sang some arias. What I heard her sing were some folk-songs and Elizabethan arias, and a group of seventeenth-century Italian arias; and it was both because she does these things so well and because of the rather heavily-witted delivery of the lecture that one could have wished her interruptions to come more frequently. But, in spite of the unusual course of making the concert one more of instruction than of entertainment, she aroused a good deal of enthusiasm by her singing, especially of "Stizzoso, mio stizzoso," by Pergolese. Miss Greville's future was not made clearer by this concert, but it certainly was made more secure.

### The New Russian Choir.

It was great fortune not to miss Miss Lilias Mackinnon's playing at the concert which M. Saminsky had organised. "Two Sarcasms" of Prokofieff which she gave did not seem very distinctive works; but her playing of some Scriabin preludes made one think more highly than ever both of her and of the composer. Mme. Zoia Rosowsky, who sang some songs by Miaskowsky, Saminsky, Stravinsky, and Moussorgsky, was in great form—better than ever I have heard her in; two songs by Saminsky which she sang over a year ago at another concert were much more impressive this time. But the main event of the evening was the singing of the New Russian Choir, which is composed of a body of Russian refugees in this country. There are about fifty voices, and, if one considers the short time which they have been under M. Saminsky's instruction, they did not do badly. Everyone knows the tendency of sopranos and tenors to wander from the truth, and the accompaniment by the pianoforte was probably a necessary, if unfortunate, precaution. In two old Russian folk-songs, "O, Duckling of the Meadows" and "I was at the Feast," they sang with a rare lilt and exhilaration which did not often degenerate into mere eagerness. But their finest performance was in "The Fall of Jericho," a Biblical cantata of Moussorgsky. In this composition, which is almost unknown to English audiences, there is strong and unusual writing; it could, one imagines, be made a thing of tremendously stirring import. This Russian Choir intends to perform some extremely interesting and little-known works by Russian composers; and if its technical achievements in any way approach the standard of the music it is going to perform, it will deserve very well of this country. From how big a field it is possible to choose the members of this choir I do not know, but they cannot have a better interpreter and conductor of Russian music than M. Saminsky.

### An Impeccably Inefficient Singer.

One does not go to Mr. Gerald Cooper's recitals to hear him sing, for that he does not do; but one must go to hear what he has to sing. He is one of a very rare body of vocalists whose programmes are in spite of themselves irresistibly attractive. For Mr. Cooper has an almost impeccable taste and judgment combined with a strange and quite undeserved inability to sing what he knows is the best. He, with the Wadsworth Quartet, gave a chamber concert at the Mortimer Hall on October 6, and what was provided was pleasing, if not enjoyable. Arias of Bach and Mozart must indeed be sung badly not to be liked, and Mr. Cooper, whose vices as well as whose virtues are negative, should be praised for singing these things. He also sang some Elizabethan airs with a certain reserved charm; and later, with narrow conviction, songs by Philip Heseltine, Bridge, Bernard Van Dieren, and Richard Nicholson. Van Dieren, a Dutch composer, whose genius is little known but loudly acclaimed by those who do know his works, was represented by a song called "Schön Rohtraut," for voice and string quartet, in which it appeared that his methods are simple, direct, and successful compared with most modern composers. The Wadsworth String Quartet gave, with mezzo-soprano, tenor, flute, English horn, and double bass, the first performance of Rhapsody No. 2, by Arthur Bliss. This young composer's works generally have something to commend them; and this rhapsody certainly showed fluidity, even though a slight thinness of idea was apparent. The best thing of the whole evening was Mozart's Quartet for flute, violin, viola, and violoncello. Mr. Fransella, an extremely accomplished flautist, made an admirable leader, but he was indifferently supported by the strings. This concert was a shining example of how the tone of the chamber concert is being raised in England.

### A New Italian Tenor.

Whether it is true that every singer bears the characteristics of his nation I do not know, but the common notion that an Italian tenor should writhe with passion, and pantingly exude the dramatic sense, was dispelled by M. Luigi Rangoni at his recital at the Æolian Hall on October 8. M. Rangoni was unexpectedly reserved, and though this was partly due to nervousness, it was also partly natural. He obtained all his effects legitimately, and his sins were almost all of omission. In Carissimi's "Vittoria" his consonants were weak enough to rob him of half of the joyous effect of the music; in César Franck's "Nocturne" there was a lack of subtle *nuance* which is absolutely necessary for the atmosphere of the song; and in Gretchaninow's "La Steppa" one could not feel the break upon the wanderer's chill solitude. But he sang finely things as difficult and as different as Friedmann Bach's "Non Cresce un picciol stelo," Respeghi's "Nebbie," Zandonai's "I due tarli" (a new and very good song), and Pizzetti's setting (which is not as good as Da Parma's) of D'Annunzio's "I' Pastori." M. Rangoni is new to this country, and will probably do much better when he has settled down. He appears to be an artist, though it should be remarked that singing out of the tune for the sake of effect can become very inartistic.

### M. Mischa-Leon.

The worth of M. Mischa-Léon's singing is pretty well universally recognised now, and to miss one of his recitals is both a folly and a crime. His artistry is consummate, and he is a master of practically any form of song. At the Æolian Hall on October 9 his was pure singing all the time; he has apparently relinquished the tendency which was faintly discernible last season to introduce illegitimate methods of interpretation. His programme, which consisted of songs in French, Spanish, Basque, English, and Scandinavian, was beautifully chosen, the weakest song in fact being one "Talisman," by himself. I do not think I have ever heard anyone sing with more perfect *legato* tone; and his tone-colour, notably in Rhené Baton's "Crépuscule," Malipiero's "Chanson Morave," Roussel's "Sarabande," and Laparra's "Iraten hari nuzu" was utterly lovely. If there are any better tenors living, then they have not yet come to this country.

### M. Siloti.

One does not willingly leave before the end of so fine a recital as M. Mischa-Léon's, but I had to do so in order to hear M. Siloti, the eminent Russian pianist who was giving a recital at the Wigmore Hall. M. Siloti was a pupil of Liszt, and is reputed to be one of the great master's finest interpreters. But I was able to hear him only in Bach's "Sicilienne" and "Chromatic Fantasia and Fugue," and in some slight Russian pieces. His grades of *piano* tone in the "Sicilienne" were a revelation, and but for the inexplicable use of *rubato* it was a perfect performance. His interpretation of the "Chromatic Fantasia and Fugue" was certainly individual but scarcely distinguished; there was no eccentricity about it, but the presence of original thought did not bind one to the interpretation. Points were either less or more emphasised than is usual, though the glorious climax in the Fugue was grandly developed. It was a shameful descent from the sublime to the plain when he proceeded to play such trivial rubbish as Rachmaninoff's Prelude in C sharp minor and Rubinstein's Barcarolle in G minor; and it was fortunate that he included in this group, as a salvation of it from complete dulness, a charming little study of Roger Ducasse and his own very clever transcription of a Russian dance by Liadoff. M. Siloti's playing is, I should think, a thing that grows upon one. I should certainly like to hear him again in stuff of more moment. ANDANTE.

# NEAR EAST BOOKSHELF.

**I.—"MEMOIRS OF THE COUNT DE ROCHECHOUART 1788-1822 IN FRANCE, SOUTHERN RUSSIA, IN THE NAPOLEONIC WARS, AND AS COMMANDANT OF PARIS." Authorised Translation by Frances Jackson. (London: John Murray. 16s. net.)**

**II.—"CASHMERE: THREE WEEKS IN A HOUSEBOAT." By A. Petrocokino, F.R.G.S. (London: Longmans, Green and Co. 6s. net.)**

## I.—THE DUC DE RICHELIEU.

In all history there is probably no event which has caused a greater number of memoirs to be written than the French Revolution. Every student of the subject knows the almost interminable list of books, full of personal and sometimes valueless details, which he is supposed to study; and he also knows that those are least to be prized which have for their purpose the self-glorification or the self-justification of their author. But the book under review does not come into this category at all; for although it is sufficiently personal and intimate to interest the ordinary, non-historical reader, its origin is to be found in the author's desire to see justice done to the Duc de Richelieu, the Minister who presided over the affairs of France from 1815-1819. Most of the details which the author includes are designed to prove the worth of the Duke; but there are also some charmingly irrelevant remarks which illuminate the psychology of the *emigrés* of this period.

Much of this book does not concern readers of THE NEAR EAST; but no one could pick it up without finishing it. Lessons from it can be learned in connection with the *emigrés* from Bolshevist Russia; in fact, one might say that the book is of universal interest at the present time. Incidentally, it may be remarked that whatever one thinks of those Frenchmen, of whom our author was one, who fought with English, Russians, Prussians, and the rest, against Napoleon, there is no denying their loyalty to their king and their courage in the demonstration of it.

Louis-Victor-Leon de Rochechouart, who was born in 1788, first met the Duc de Richelieu at Odessa in 1804. An exile from the Revolution, and separated from all relatives, he was immediately adopted by the Duc as a son, and was not parted from him, except during the campaigns in 1813 and 1814, until the death of the Duc de Richelieu in 1822. De Rochechouart was entered into the Russian Army, and became the aide-de-camp of the Duc de Richelieu at Odessa, which province the Duc was administering on behalf of the Tsar, Alexander. When war broke out between Russia and Turkey in 1806 he entered Bessarabia and Moldavia with the forces of General Michelson. What he says of Moldavia is interesting and typical of his style:—

Moldavia is a delightful country. The soil is very fertile and the people afford an interesting study; they are of Roman origin, as may be easily seen from the beauty and regularity of their features and their robust constitution, especially in the case of the peasants. Were it not for their language, it would be difficult to recognise the descendants of the rulers of the world in these people, with their meek, timid, and cringing manners—the result of long servitude.

He was present at the attack on Chetal Island, and bears witness to the "desperate valour of the Turkish cavalry" on that occasion. Next year he was in Circassia, and gives a vivid description of the town of Anapa. Returning to Odessa, he was put in charge of some civil offices, but in 1808 the Duc de Richelieu chose him as companion on a visit to the colonies near Odessa. This tour gave de Rochechouart an opportunity of examining the effect of the German colonisation, undertaken at the instigation of Catharine II., upon the "New Russia," and his description of these provinces is extremely interesting and valuable. But that part of the memoirs which readers of this journal will read with most interest is the chapter devoted to the Crimea. In 1808 our author went all over the Crimea, and describes such towns as Kertch, Kaffa (a very important place when under the Genoese), Karassa-Bazar, Sudak, Alupta, Balaklava, Sebastopol, and Batchiserai. This chapter shows the author to possess a keen sense of the past, for what he says of Italian, Greek, Bulgarian, Armenian, and Tatar influence upon the Crimea is at once vivid and accurate. Soon after this de Rochechouart was made aide-de-camp to the Tsar, and though what follows is important, it scarcely concerns the Near East. However, before the plague broke out in Odessa, and he was called away to the North to fight against Napoleon, he was sent on a boisterous expedition into Circassia, of which he gives a spirited account.

Hence onwards the author's activities were spent in Russia, Germany, and France. He has notable things to say upon men like Bernadotte, Moreau, Schwarzenberg, but for the psychological light which the reports of his conversation with and his comments upon these men throw upon the great figures of this period the reader must go to the book itself. When the Allied armies entered France de Rochechouart was made Commandant of Paris, but apart from his remarks upon the various members of the Ministries of Louis XVIII., the personal element in his memoirs decreases. The book ends with an account of the death of the Duc de Richelieu in 1822, but the translator appends a note briefly relating the subsequent history of the author down to his death in 1858.

It is a rather melancholy thing to read this history of a man whose main activities were actually devoted against his country; though, of course, in his own mind French interests were identical with the interests of the Bourbon dynasty. He pays homage to the genius of Napoleon, but he never fails to regard him as an upstart. It was nothing but his royalist loyalty that made him, a pure Frenchman, carry out his appointed, though obviously and utterly distasteful, task of executing Marshal Ney. The ceaseless intrigues of the reactionaries all over Europe are dealt with very frankly here, for the author is not apparently concealing anything in his record of the persons involved.

This book does not contain historical matter of the first importance; it will make few estimates of men or events necessary; but it is all very readable and entertaining, and, as we have said before, is not without a bearing on happenings of the present day. The translator appears to have made a very faithful translation—erring, if at all, in giving a too literal rendering. The book has a valuable index.

## II.—CASHMERE.

It is rather difficult to imagine why this book should have been written. This seems an ungracious view to take after one has read the author's unpretentious Foreword, in which he says "if anyone . . . finds my experience in any way useful this book will have more than served its purpose," and that he hopes it may induce some "to take a trip they will never regret." But, except for one or two pieces of advice, the information given is not nearly detailed and full enough to be of any real help to anyone travelling in Cashmere, and one feels that the most ordinary guide-book would be much more useful. To a reader who knew Cashmere well this account of the hurried doings of a tourist very much pressed for time would prove merely irritating. If it had any value as a record of personal impressions and sensations this would not, of course, be so; but it appears to be only an enlarged diary of what the author did from day to day. One cannot think that the uninspired descriptions and the poor snapshots would really fill any reader with a desire to visit Cashmere, unless he had already longed to see that wonderful country.

Surely wood is not such a very unworthy material that the author need grudge it the decorations given to it by the artists of Cashmere; he does not seem to object to its being carved, but only to its being used as a foundation for the painted designs.

The book suggests exactly the conversation of the returned traveller showing his friends the snapshots he has taken during his tour. "Yes, that was taken the day we took the trip I was just telling you about. It isn't very clear, but still it gives you an idea." We can imagine the author in these circumstances giving a most entertaining and interesting account of his expedition; but to make of it a heavy book in a rose-pink cover, with the snapshots figuring as twenty-five plates, was unnecessary. There are two clear maps illustrating the journey at the end of the volume.

# PERSONAL AND GENERAL.

**TO-DAY.**

October 14 (New Style).
October 1, 1920 (Old Style).
Moharram 31, 1339 A.H. of the Moslem Calendar.
Hesvan 2, 5681 of the Jewish Calendar.

We are informed that Riza Tewfik Bey is coming to England.

Mr. C. T. Allen, of Cawnpore, India, arrived in England on October 11.

Prince Habeb Lotfallah arrived in London on October 6 from Paris.

Prince and Princess Bibesco have left Paris for Roumania.

M. Pierre Almanacho. Secretary to the Greek Legation, left London on October 8 for Paris.

The King of the Hellenes, who was bitten by a monkey, is reported to be progressing favourably.

M. A. Gugushvili, Secretary to the Georgian Legation in London, has left town for The Hague.

Dr. Granville left Egypt on September 24 to attend the International Hygienic Conference at Paris.

M. Ghambashidze, the Georgian Chargé d'Affaires, returned to London on October 5 from Paris.

Sir John and Lady Bland-Sutton were among the passengers who arrived in England by the Balmoral Castle on October 5.

Colonel Rosetti, formerly Military Attaché to the Roumanian Legation, returned to London on October 6 from Bucharest.

M. Boeresco, the Roumanian Chargé d'Affaires, entertained at luncheon on October 5 Princess Ghyka, Mme. Greciano, and Captain and Mme. Ghyka.

Dr. Rextar, Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes, and Mme. Rextar returned to London on October 10 from Belgrade.

Our Cyprus Correspondent writes:—
Commander Luke, R.N.V.R., is leaving Cyprus to take up an important appointment at Jerusalem.

Colonel Sir James Dunlop Smith is on sick leave, and Mr. M. S. D. Butler, C.B., of the Indian Civil Service, is acting as Political A.D.C. to the Secretary of State for India.

M. Nicolas Vladesco, the newly-appointed Attaché to the Roumanian Legation, has arrived in London from the Foreign Office at Bucharest, and entered upon his duties.

Mr. Montagu, the Secretary of State for India, is suffering from a slight indisposition, and it is not expected that he will be able to return to the India Office within the next two weeks.

M. Guequetchkori, the Georgian Minister for Foreign Affairs, has arrived in London from Paris, where he was received by M. Millerand. M. Guequetchkori will visit Earl Curzon at the Foreign Office this week.

The engagement is announced of Miss Constance Helen Block, daughter of Sir Adam Block, K.C.M.G., and Lady Block, to Captain J. D. Woodall, O.B.E., M.C., R.F.A., son of Colonel Woodall, C.M.G., and Mrs. Woodall.

In honour of the visit of the Roumanian Minister for Foreign Affairs and Madame Také Jonescu, a luncheon is being given at Claridge's Hotel, October 16, at 1.15 p.m., by M. M. B. Boeresco, Minister Plenipotentiary, Chargé d'Affaires of Roumania.

Our Belgrade Correspondent writes (October 6):—The Crown Prince Regent of the Kingdom of the Serbs, Croats, and Slovenes has conferred the Order of St. Sava, 5th Class, upon M. D. Janitch. M. Janitch, who has been settled in England for nearly thirty years, is a prominent member of the small Serbian colony in London. He has the distinction of having written in English a play dealing with the heroic folk-songs of his country, which was produced some years ago at the Strand Theatre under the title "The Raven's Cry."

Prince Mirza Mehdi Khan Ala-es-Saltaneh Amir Nooyan, the Persian Minister in London, who is staying in Switzerland to recover his health, is making satisfactory progress towards convalescence. He hopes to return to England in the early part of next year.

H.M.S. Temeraire, writes Reuter's Malta correspondent, on October 8, with Prince George among her naval cadets, has arrived, and is remaining here for a fortnight. The Prince will be given an opportunity of visiting all the places of interest during his stay. The visit of the Temeraire to Algiers has been cancelled, owing to reasons connected with the Prince's health. According to present arrangements, Vice-Admiral Sir John de Robeck, Commander-in-Chief of the British Fleet in the Mediterranean, is returning to Malta from Constantinople with the remainder of the fleet on October 23.

Our Belgrade Correspondent writes (October 6):—
M. Nikola Pashitch has declined to be one of the Yugoslav representatives in the forthcoming negotiations with Italy. It is anticipated that his place will be taken by M. Adrija Radovitch.

The Faculty of Philosophy of the Belgrade University has unanimously elected Voivoda Sir Zhivoyin Mishitch Honorary Doctor of Philosophy. The only other Honorary Doctor is M. Toma Masarik, President of Czecho-Slovakia.

Dr. Koroshets, Minister of Communications and Leader of the Slovene Clerical Party, has entirely recovered from his recent serious illness, and will resume his duties this week.

M. Milan Rakitch, Yugoslav Minister at Copenhagen, has been appointed to Sofia.

Dr. Reiss, the eminent Professor of Lausanne University, who is the representative in Belgrade of the Inter-Allied Council on War Criminals, has been appointed chief of the Police Technical Service of the Minister of the Interior.

## APPOINTMENTS, ETC.

General Savoff, the former Bulgarian Commander-in-Chief, is reported by the *Temps* to have been appointed Bulgarian Minister in Paris.

M. Pappas, Hellenic Chargé d'Affaires at Bucharest, has been appointed, says the *Orient* of September 29, Greek Minister to Armenia, and proceeds immediately to Erivan.

Our Cyprus Correspondent writes:—Dr. F. B. Thompson has been appointed Chief Medical Officer. Dr. E. Corsellis, who has for some time filled the acting appointment, will, it is believed, be offered a higher post elsewhere.

Mr. J. C. Howard has been appointed President of the District Court of Larnaca, on probation.

Mr. E. D. Vergette will act as President of the District Court of Papho during the absence of Mr. H. C. Grimshaw.

## THE VISIT OF M. STAMBOLISKY.

M. Stambolisky, Prime Minister and Minister for Foreign Affairs of Bulgaria, arrived in London on Saturday evening, October 9. At Dover he had been met by M. Madjaroff, Chargé d'Affaires, and Dr. D. Stancioff, of the Bulgarian Foreign Office, who had reached London on the previous Tuesday. The Ostend steamer was over two hours late, and it was 10.45 p.m. before the boat train arrived at Victoria Station. Among those on the platform to meet M. Stambolisky were Mr. Owen Monk, M.B.E., representing the Foreign Office, Mr. W. B. Heard, H.M.'s Commercial Secretary in Sofia, M. Mamartcheff and M. Radkoff of the Bulgarian Legation, and Mr. J. D. Bourchier. In the Prime Minister's party were M. Karakarcheff, Minister for Railways, M. Kissimoff, the newly appointed Bulgarian Minister to Athens, M. Milosheff, Director of the Bank of Sofia, and Mademoiselle Nedejda Stancioff, who will act as M. Stambolisky's private secretary and interpreter. M. Stambolisky will reside at the Bulgarian Legation during his stay in London.

On Monday M. Stambolisky saw Lord Curzon at the Foreign Office.

The programme of the visit includes a visit to Messrs. Saunderson's Tractor and Implement Works at Bedford, a visit by motor-car to Cambridge on October 14, and lunch at the London Chamber of Commerce on October 15. On October 17 M. Stambolisky leaves for Birmingham; Manchester will be reached on Tuesday evening, and Glasgow on Friday, the 22nd. During his tour of the provinces he will be the guest of the British Government, and he will be entertained at luncheon by the Chamber of Commerce of each city.

## PILGRIMS TO JEDDAH.

The *Pioneer* of September 10 states:—"In forwarding the report of the Protector of Pilgrims, Bombay, for 1919-20 to Government, the Commissioner of Police points out that the year under report was remarkable for two reasons: First, it was Akbari Haj, and, secondly, it was the first Haj since the war, under more or less normal conditions. Over 9,000 pilgrims proceeded on Haj during the year under review, and the number would have been higher but for the Afghan War. One important point to which the Police Commissioner draws attention is in regard to the creation of a Pilgrim Department at Jeddah similar to the one in Bombay. Such a department under the supervision of the British Agent at Jeddah, he says, would go a long way to help the pilgrims."

## NEWS IN BRIEF.

The new Turkish Chargé d'Affaires arrived at Rome on October 5.

Private messages can now be transmitted by wireless telegraphy between France and Roumania.

The *Palestine Weekly* states that this year's olive crop in the Holy Land will be a bumper one.

M. Stamati Pezas, the first Greek Minister appointed to the Argentine, has arrived in Buenos Aires.

Owing to a strike at the gas and electricity works, Cairo was in darkness on the night of October 5.

The first sitting of the Advisory Council to the High Commissioner of Palestine was held on October 6.

A Paris message says that the Italian Government has refused permission to ex-King Constantine to enter Italy.

Bengal Ministerial officers have received temporary increases of salaries of 15 to 30 per cent. to meet the high cost of living.

Sir Herbert Samuel, High Commissioner of Palestine, on October 5 opened the standard gauge railway between Ludd and Jaffa.

According to a Constantinople message, the Turkish rebels have pillaged the ancient town of Nicaea and destroyed the historic church there.

At the request of the inhabitants of Klagenfurt, the Council of Ambassadors has decided to send fifty Allied officers to supervise the preparations for the plebiscite there.

According to a Moscow wireless message, a military and economic alliance has been concluded between the Governments of Soviet Russia and the Azerbaijan Soviet Republic.

A postal aeroplane while on the way from Rabat to Toulouse fell into the sea on October 2 off the French coast. Most of the mails were recovered, but two persons were drowned.

A Blue-book (Cmd. 957) has been issued containing reports of his Majesty's High Commissioner on the finances, administration, and condition of Egypt and the Sudan for 1914-1919.

The *Temps* states that it is probable that the first important journey M. Millerand will take as President of the Republic will be to Algeria, and perhaps to Morocco, some time next spring.

According to a Rome telegram, *pourparlers* have been opened between the Serbs and Albanians for a cessation of hostilities, but it is considered improbable that an agreement will be reached.

Interesting archæological discoveries are reported from Janavar Tepé, a hill near Varna, Bulgaria, where a cross and other articles and coins in gold have been unearthed, dating from the days of Constantine the Great.

The *Palestine Weekly* states that a conference of the boy scouts of Palestine has just been held. It has been decided to encourage the scouts to take up agricultural work. The palm has been chosen as the emblem of the Palestine Scouts.

The Conference of Propagandist Societies of the League of Nations was to have opened on October 12 in the Blue Room of the Royal Palace at Milan, and delegates of Poland, Roumania, Czecho-Slovakia, and Yugoslavia were to be among those present.

The Government of India has received a gift of 100 aeroplanes from the Imperial Government. Some have been given to the local governments, while others have been offered to ruling princes, and twenty have been made over to the Royal Air Force.

It is announced from Malta that a heated discussion took place at the last meeting of the Council over the question of the indemnity to be paid for damages which were sustained in June, 1919, through disturbances caused by private persons. As a result, three elected members were ordered out of the Council Chamber.

The Postmaster-General announces that letters for prisoners of war in Mesopotamia should be addressed with the address-ending "Prisoner of War, care of General Headquarters, Mesopotamian Expeditionary Force," the usual particulars of number, rank, unit, and so on being included in the address for the purposes of identification.

## APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

ABROAD. Lady Nursery Governess desires Post, October. Experienced. Reference. Box 173, "The Near East," 1, Devonshire Square, E.C.

# WHERE TO STAY.

**For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—**

**"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO**

**(The visitor's name and place of residence abroad to be added)."**

**which would indicate that two rooms were required at Matlock on the 20th of the month.**

**BRISTOL**
**GRAND SPA HOTEL.**

**EXETER**
**ROYAL CLARENCE HOTEL**
*(facing beautiful Cathedral).*

**LONDON**
**HOTEL CRANBOURN**
**67a, Shaftesbury Avenue, W.C.2.**
**Self Contained Suites.**

**MANCHESTER**
The Victoria House, 254, Oxford Road.

**MATLOCK**
**SMEDLEY'S HYDRO.**

**TORQUAY**
**VICTORIA & ALBERT HOTEL.**

***Cairo's Hotels de Luxe.***

**SHEPHEARD'S HOTEL.**
Open all the year round.

**SEMIRAMIS HOTEL.**
Splendid position on the East Bank of the Nile.

**THE ONLY ENGLISH HOTELS IN ALEXANDRIA.**
Proprietor: AUGUSTUS VAN MILLINGEN.

**WINDSOR HOTEL**
(Facing the Sea, opposite Y.M.C.A.), **ALEXANDRIA.**
**American Bar and Restaurant, Billiards, and Lift.**

**SUMMER PALACE HOTEL,**
**GLYMENOPOULO, RAMLEH.**
This Hotel is situated near the Beach. Open all the Year.
**Every Modern Comfort. American Bar, Restaurant. Bathing Cabins on the Beach. Billiards. Daily Concerts on the Verandah.**

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
**NIKOSIA—Cyprus Palace Hotel.**
**LIMASSOL—Olympus Hotel.**
**FAMAGUSTA—Savoy Hotel.**
**LARNACA—Majestic Hotel.**
FOR SUMMER SEASON—
**TROODOS—Olympus Hotel.**
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
**NAJEM HOURY & SONS, Limassol, Cyprus.**
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
**Head Offices and General Stores: LIMASSOL.**
All arrangements for Transport, &c., are made by the above Firm.

## THE ESHER COMMITTEE'S REPORT.

Further study of the report of Lord Esher's Committee on the Administration and Organisation of the Army in India serves to confirm the impression we recorded last week that to the wider public its chief interest lies in the conflict of ideals which it discloses, and in the aspirations towards Imperial unification on which some of its most important recommendations are based. At the same time it must be recognised that these matters affect only a portion of the report. The terms of reference were drawn widely, and the questions before the Committee may be divided into two main groups, the efficiency of the army serving in India and its relations with the authorities in this country. The constitution of the Committee suggests that the former group was most prominent in the minds of its selectors: Lord Esher had as colleagues six eminent administrators, four military and two civilian, while Indian opinion was voiced by two members of outstanding ability, and it may fairly be said that on what may be called internal questions the decisions of this body are in all cases authoritative, and in many cases conclusive. On the wider constitutional issues the Committee as a whole commands less confidence: here Lord Esher stood practically alone, and the conclusions must be regarded not as the verdict of experts, but as the opinions of a body of able men, all of them but one without special qualifications for their task, and, on their individual records, likely to be predisposed in favour of a particular line of action. Further, there is the fact that, by what we must regard as a most unfortunate accident, the constitutional issues had been disposed of before the Indian members joined the Committee, and Sir Krishna Gupta's minute on matters already decided cannot take the place of that free discussion which would doubtless have occurred if he had been present at the earlier meetings. The recommendations made in the report must therefore be examined separately, distinguishing the pursuit of efficiency within the borders of India from the attempt to lay the foundation of a real Imperial unity.

Under the former head we have no criticisms to offer. The Committee have examined the working of the administrative machine, have ascertained the defects established by experience, and have indicated the changes which are required, rejecting revolutionary proposals, and fixing their eyes steadily on the goal of progressive efficiency. It is common knowledge that the greatest weakness was at the top, and it is in dealing with Army Headquarters that the Committee are at their best; we need not enter into technical details of the proposed reforms, but we can accord unreserved approval to the principles underlying them, real decentralisation of authority and effective financial control from within. If these proposals are accepted, and if they are worked in the spirit in which they are made, the army in India will be very much more efficient as an instrument of defence than at any time since our relations with the country began. Efficiency, however, is a matter of spirit as well as of machinery, and the bulk of the report is devoted to the difficult task of removing the grounds of that discontent which has of late been so much in evidence. Service questions, as the phrase goes, are notoriously controversial, and we do not anticipate that the recommendations under this head will secure unqualified approval from all the interested classes; but there can be no doubt that, if these recommendations are adopted and carried out in the generous spirit shown by the Committee, they will attain their object of a great increase in the efficiency of the army as a whole. The cost will, however, be high; no precise estimate is offered, but the Committee hope the expanding revenues of India will suffice to meet it, and they do not take formally into account the question whether the new Legislature will be disposed to acquiesce in the large and progressive increase in expenditure. On this question we are still in the dark, but if the constitution of the new Legislature resembles that of the old, we must expect that all military expenditure will be regarded as *primâ facie* suspect, and that increased funds will not be willingly provided, unless the scheme as a whole is found to fit in with the new national aspirations. Whether it does so will depend mainly on the decision taken in regard to the conflict of ideals, to which subject we must now turn.

The Committee prefaced the first portion of their report with the postulate that they could not consider the administration of the Army in India otherwise than as part of the total armed forces of the Empire, and their detailed recommendations for supreme control are in strict accordance with this view. Moderate Indian politicians have concentrated on the early attainment of the status of a Dominion, and they ask that all official action shall be framed so as to help them to attain that goal. There is the conflict, for no one can assert that the army in Canada or Australia is part of the total armed forces of the Empire; the Dominions maintain forces of their own, which hitherto they have put at the disposal of the Empire, in case of need, and Indian politicians will be likely to ask, not perhaps that India should attain that position immediately, but that any changes which may be made shall tend definitely in that direction. India, in fact, wants to draw level with the Dominions as they now stand, while the Committee would have her take the lead in an advance towards a higher stage of Imperial organisation, in which a common force should be controlled by a common legislature and executive. As our readers are aware, the Empire is not yet unanimous as to the desirability of such an advance; opinion in its favour is probably increasing, but there are many who hold that the bonds of interest and sentiment suffice, and at the moment there are few signs of a project of organic union in the field of practical politics. The best solution of the conflict would undoubtedly be that India, in recognition of the great change in her status, should voluntarily accept the proposals made by the Committee, and declare that, so far as her resources permit, she will lead the way in placing her forces permanently at the disposal of the Empire, content to await for a time the grant of powers correlative with her new liabilities. Such action at the present juncture would do more than anything else to consolidate her position in Imperial politics, and to win for her the respect and admiration of the world at large. We do not anticipate, however, the adoption of that heroic solution. Imperial sentiment is in India a new growth, not yet firmly rooted in the soil, while particularist nationalism is at least as strong among the political classes as it is in any of the Dominions; the gift of political imagination is still imperfectly developed, and unless the new Legislature should be characterised by a very great advance in this direction we must expect that the Committee's proposals will be received with an indignant negative. In that case we are convinced that any attempt to insist on them would be most unwise. The case should be fairly stated, the opportunity should be offered of securing an unassailable position in the Imperial brotherhood, but the decision of India should be accepted as conclusive for the time. If she chooses the ideal of a Dominion of to-day, the prophets of closer Imperial organisation must be content to wait. In any case, the work of the Committee will not be wasted. They have shown how the army in India can be made efficient, and increased efficiency is the immediate need, whether the reorganised forces are to be regarded as Indian or Imperial.

# THE REPUBLIC OF GEORGIA.

## ITS PRESENT-DAY SITUATION.

**By A. Gugushvili.**
(*First Secretary to the Georgian Legation in London.*)

Independent and sovereign Georgia has had little more than two years' existence. In normal conditions, two years in the life of a State are but the twinkling of an eye, but in the present exceptional epoch, when events unheard of before in history are taking place, when the social and national problems brought to the forefront by the world war and great revolutions destroy the old foundations in a moment and on their ruins create a new basis for the intercourse of nations, during these desperate struggles new national States come to life; and in such an epoch two years of creative labour are equal to tens, nay, scores of years, in their significance and rich conquests.

While the National Council and National Assembly proclaimed under exceptional conditions the political independence of their country and people, the Georgians were passing through a very critical period. The outlook for their future existence as a people was dark and uncertain, for at that time Georgia was menaced by two enemies: on the one hand by the social anarchy and civil war which threatened from the north, and on the other hand by the horrors of an invasion by the Turks, to whom the Bolshevists had, by the Brest-Litovsk Treaty, ceded an integral part of Georgia, namely, the province of Batum and Ardahan, thus giving the Turks the means of threatening Georgia. Fortunately the Georgian Army defeated and threw back those Bolshevist hordes, which from the north tried to penetrate into Georgia, and also checked the Turkish advance.

The country and people underwent a deep psychological change, and in the stress of these heavy trials and desperate life and death struggles there was forged, tempered, and hardened in the consciousness of the mass of the people a deep conviction of the fruitlessness of depending upon others; of the necessity of recreating their own State; and, still more important, of the necessity of national unity, which is a security for independent political existence. This unity of the Georgian people enabled them to show to the world a strong national front; they were, and ever will be, ready to defend to the last man the honour and dignity of their Republic. By this national unity they have fully expressed their will and determination to direct their own destiny, and, although already exhausted by the world war in which they fought the common enemy, together with the Russian army, and in spite of all the difficulties they had to overcome, they worked, and are working, ardently at the reconstruction of their State.

Thanks to these circumstances, the Georgian Republic has been organised as a modern democratic State; and, although it is surrounded by countries in which civil war, anarchy, and chaos prevail, it has safeguarded law and order throughout the country. By the political self-control of its people the country has been saved from the horrors of civil war; and of the whole of the former Russian Empire, Georgia is the only oasis where a quiet and nearly normal life exists. The Revolution in Georgia has not destroyed the State, as in Russia. On the contrary, it created a State on a purely democratic basis. This is the best proof of the political maturity of the Georgian people. They have not only organised a Constituent Assembly and Government, but have also reorganised the administration.

There is to-day in Georgia compulsory public education, a national University, and a people's University at Tiflis, the creation of which Georgians had vainly demanded from the Russian Government for some scores of years. The country has now a national army, which, organised on democratic principles, is not a menace to anybody, but at the same time will not allow anyone to devastate the small oasis of Georgia.

The Government has been brought nearer to the people. Municipal and rural self-governments, elected, like the Constituent assembly, on the basis of a universal electoral system, have been created; by means of the State Agrarian Fund, the Government has safeguarded the small peasants, by allotting them the land they require at a low price; an eight-hour working day has been instituted; and insurance and a tariff-chamber for regulating workers' wages have been introduced. Numerous elementary and preparatory schools and colleges have been created and placed under the rural and municipal councils; and the Courts of Justice have been reorganised, so that from instruments of bureaucratic oppression have become institutions in which the people have confidence.

Thus, in the course of these two years, Georgians have proved to the world that they can exist independently, and that the 200-year-old tradition of independent state life of the Georgian nation has not only not been obliterated, but has not even been diminished by a century of Russian domination.

The State organisation has a purely democratic basis, and it is the earnest wish of the Government and people to imbue it with the best European culture. If a century ago, in order to establish a new connecting link with Western Europe (of the old one viâ Constantinople they were deprived by the fall of that city to the Turks), the Georgians concluded a voluntary Alliance with Russia (1783), which she shamelessly violated in eighteen years' time (1801), to-day it is the wish of the country to have an independent connection and to renew a direct relationship with the West. In order to take part in the intellectual and material progress of Europe, the Georgian people, with the aid of the knowledge and experience of the Europeans, want to develop all that Nature has so abundantly given to their country, and to introduce it on the European market. If economic stability is one of the necessary conditions of the independent existence of a State, then the enormous natural riches of the country are a sufficient guarantee of a sound economic foundation of the Georgian State. It is true that economically the country is not yet on a sound footing, but who has built up a State, or even a house of business in a year or two?

Georgia has at her disposal everything necessary for the development of her own industry, such as raw materials, labour, etc. But such development of the country did not constitute part of the programme of the old despotic Government of Russia, and to-day the Georgian people have a country rich in raw materials and mineral resources, enormously rich potentially and poorly developed industrially, comparatively poor actually. Georgia wants foreign capital, knowledge, and experience to come to the country in a friendly way, in order to utilise its wealth to mutual advantage, and the Government is prepared to grant favourable conditions for the exploitation of these riches. There is no doubt that on this field, too, the Georgian people will achieve success in a few years' time, provided that they are not disturbed externally. They are diligent, industrious, and painstaking; the country has not known a single strike since the day of the Revolution, and there has been, and will be, no civil war there.

Unfortunately, however, in this sphere of economic work, the Georgian Government is handicapped by the fact that some uncertainty still prevails in the attitude of the Allied Powers regarding the final recognition of the *de jure* independence of Georgia—uncertainty which makes the establishment of economic relationship between Georgia and Western Europe very difficult. The *de facto* recognition of Georgia's independence by the Supreme Council in Paris on January 16, 1920, was a great step towards the final political emancipation of the country; but in spite of that, the withholding of the *de jure* recognition is very injurious to her, especially at the present moment, when there are so many possibilities of foreign capital coming into the country to take up the exploitation of its natural riches. This question is now, therefore, a subject of great anxiety and solicitude to the Government.

The final recognition of the *de jure* independence of Georgia, and of the other Transcaucasian States, is absolutely necessary, not only for the political stability and peaceful economic and cultural development of

Digitized by Google

Georgia and Transcaucasia, and of the whole of the Middle East, but, what is most important for the Allied and Associated Powers, for the prevention of the spread of political and social anarchy in Central and, in fact, in the whole of Asia. It is superfluous, and would be a waste of time, to argue that civil war will cease in Russia in the very near future; this means hoping against hope. The vast territory of Russia has often been soaked with the blood of the Russians themselves, and who may venture to predict that it may not be drenched yet more?

Whatever the end of the struggle between the Bolshevists and General Wrangel and his associates, one thing is certain: that none with a fair knowledge of things Russian can say that Russia will in the near future be able to become creative and to advance on the road to peaceful development. Russia cannot become a normal, orderly State as long as she cherishes ideas of conquest and expansion. Russia has first to create and nurse her nationhood, to develop nationally; people who have not developed themselves into a nation cannot rule others, nationally better developed.

What was the cause of Russia's failure in the world war? Nearly half the territory of the Russian Empire was inhabited by peoples discontented and racially and nationally different from the Russians; and this fact, depriving her of creative power, gradually brought her to the state she is passing through to-day. The re-establishment of the *status quo ante bellum* would be the same old-new source of disease, and this time, possibly, of death to her. Finland, Esthonia, Latvia, Lithuania, Poland, the Ukraine, Kuban, Azerbaijan, Georgia, Armenia, and many other components of her vast pre-war territory represent national units, politically, culturally, and economically so well developed that they will not have the slightest desire to supply those explosives which kept Russia constantly in a volcanic state. And, it is useless to argue that it will be possible to crush and annihilate these national units by means of knouts and military power.

The restoration of Russia within her old-pre-war frontiers is impossible. Her resurrection and deliverance does not lie in gathering Russia (sobiranie Russi) *à la* Ivan Kalita, but in marking out national territorial frontiers, encompassing Velikorossia (Great Russia) which is Russia proper, and which, after comprehending its own interests, will, no doubt, find that the deliverance of Russia is impossible unless it will fully utilise all its creative genius and energy for the benefit and wellbeing of the Great Russians within Great Russia's frontiers.

Of the surprising phenomenon that is going on in Russia, Georgia is an outside spectator. The Georgian nation, which has separated itself entirely from the Great Northern Empire, asks only to be recognised, and that the act by which the Georgian nation expressed the re-establishment of its independence, which had been unjustly interrupted for a whole century, be respected.

## THE Y.M.C.A. AND THE BRITISH SOLDIER IN INDIA.

The Y.M.C.A. reports that it is catering for the needs of the British soldiers in thirty-two centres in India at an annual cost of over two and a-quarter lakhs of rupees. Commanding officers are anxious that these activities should be extended. The present number of Army Y.M.C.A.'s in India could be doubled immediately if workers and funds were available. The aim of the Association is not only to keep the men fit by providing recreation and wholesome amusement, but to help them to take an intelligent interest in the people and the country during their stay in the country, to teach them the responsibilities of Christian citizenship, and as far as possible to equip them for a larger share in the life of their own community when they return to their homes.

SCHOOL OF ORIENTAL STUDIES.

# PRESS ON THE NEAR EAST.

### Armenia and Russia.

A writer in the *Daily Herald* of September 29 comments upon the recent resumption of the campaign on behalf of Armenia. He says that though Armenian claims have been met and its independence granted, yet she does not yet possess independence, because she is still at war with her neighbours. He continues:—

No purpose will be served by discussing what brought Armenia to her present plight. Let us accept the fact that Armenia desires peace above everything. Well, she can get it if she is prepared to face realities and ignore the counsel of some of her reactionary friends. She has nothing to gain, and everything to lose, by maintaining an unfriendly attitude to Russia and appealing to the Allies for military or diplomatic support. If she is, as alleged, encircled by armed foes, the Allies cannot save her. Their hands are fully occupied. The French have more than enough to do with the Arabs in Syria; the British will not, thanks to Labour, take up arms against Russia.

The only policy left to Armenia is, therefore, that of a *rapprochement* with Russia. Had the Armenian Government been wiser, such a policy would have commended itself to them from the first for two reasons. M. Tchitcherin, on behalf of the Soviet Government at Moscow, has on several occasions assured Armenia of his readiness to recognise her independence. Then, again, M. Tchitcherin has the advantage of enjoying considerable influence with Mustapha Kemal, the head of the Turkish Nationalists at Angora and the foe of Armenia. With the good offices of Russia the opposing claims of these hereditary enemies could doubtlessly be settled without further bloodshed. As a matter of fact, M. Tchitcherin actually offered to give diplomatic recognition to Mustapha Kemal as the upholder of Turkish national rights, if he in return respected the aspirations of the Armenians to independence, and, furthermore, he stated that he was willing to mediate between them in order to secure peace. A *rapprochement* with Russia would also obtain for Armenia friendly relations with her Eastern neighbour Azerbaijan, now a Soviet Republic. There is no other practical course for Armenia if she is to achieve her liberation and attain stable conditions of peace.

### Egypt.

The *Yorkshire Post* of October 4, in discussing our Egyptian policy, remarks that the Agreement has yet to be considered by the British Government, that it has not yet been put before the Cabinet, and that Egyptian consent has also to be obtained. It continues:—

But official opinion in Egypt has been very much disturbed by what is known of the Commission's proposals. Egypt is a remarkable country, occupying an unique position and requiring unique handling. The position of the British Empire in regard to it has no parallel in history, and the fact that through it runs the most essential international waterway in the world—the direct and shortest highway of communication between East and West—gives it a peculiar importance no other country possesses. In all arrangements for the government or administration of Egypt there are two points of view in addition to that of Egypt itself—those of the British Empire and of the other nations which have a more or less direct interest—political, financial, or military—in this historic land. It is no secret that the British officials in Egypt, from the highest downwards, are much concerned at some of the Milner Commission's proposals, but it is not fair to represent this concern as being due to a fear for their own position or pockets. British public men, whether civilians or soldiers, are capable of rising above such personal considerations, and most of them who have been associated with Egypt for a number of years feel a real interest in the fortunes of the country, as well as in the effect the drastic changes now recommended will have upon the safety of the Empire.

These changes would probably lead, certainly at first, to a great set-back to Egypt's present prosperity, and the large financial interests in the country—not only British and Egyptian, but of other nationalities—view with profound alarm what amounts to the surrender of the government of Egypt into purely Egyptian hands. Still more alarming are the effects that would be produced upon the military position, the safety against both internal disturbance and external aggression. The proposal to withdraw all British troops from the Delta and the Nile and to maintain only a small force upon the Suez Canal for its special defence is not accepted with any favour by any military authority. Egypt is not so settled and happy nor so free from foreign intrigue as to be safely left to the rather doubtful care of the Egyptian Army, which throughout the war was kept in the Sudan, for the most part, out of touch with the rest of the disturbed world. As to the defence of the canal, against whom is it to be defended? If against external enemies, then the 3,000 men or so designated as its garrison will be wholly insufficient; if against attack from Egypt itself—a much more possible danger—then this paltry force would be far better situated in the Delta, controlling the railway lines, the water supply, and certain centres of disturbance, such as Tanta, where trouble of this sort invariably shows itself first. It is rumoured that the latest idea is that the Suez Canal garrison should not be on the Canal itself, but in the desert to the East of it, and wholly out of touch with Egypt proper, but we can hardly believe that so absurd a proposal is seriously entertained. It is surely time for this question to be tackled in earnest by our Government, who should hasten the publication of the Report of the Milner Commission and make known their intentions in regard to it.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The visit to this country of the Bulgarian Prime Minister for the purpose, among other things, of arranging for the increased imports of British goods to Bulgaria, is an event of outstanding importance. M. Stambolisky wholeheartedly supports the idea of the development of close commercial relations between the two countries, and in his policy he has aimed at the removal of all restrictions that might prevent the achievement of that aim. After the war the Bulgarians, faced with the necessity of raising money, did not hesitate to have resort to all kinds of unsound methods of taxation, such as taxes on imports, etc., which, of course, were economically indefensible, and had the inevitable result of retarding the recovery of the country, and preventing the growth of trade with the United Kingdom which is alone is a position to supply many of its essential requirements. Many of these restrictions have already been abolished by M. Stambolisky, and the remainder are going, so that only the unfavourable exchange stands in the way of commercial development, and it may be assumed that the result of the negotiations between the British authorities and M. Stambolisky will be an arrangement which will enable that difficulty to be overcome.

***

The reports of the four committees appointed by the Brussels Financial Conference for the consideration of the questions of International Trade, International Credit, Currency and Exchange, and Public Finance are comprehensive, if nothing else. Unquestionably the delegates have done their best to carry out the purpose for which they were appointed, but their very thoroughness is likely to undermine the results of their labours. The whole field of international relationships would appear to be covered by the resolutions, but, unfortunately, something more concrete than the expression of what in a number of cases strikes one as being mere platitudes is needed to heal the ills from which Europe and the world are suffering, and the conference must be judged not by the arduousness of its labours, but by its consequences. These in the immediate future are not likely to be great, but in one important direction, at any rate, a tangible result may be forthcoming as the result of the recommendation of what would seem to be quite a workable scheme to meet the problem of a country which needs imports but lacks credits to pay for them.

***

If apart from the credit scheme there seems little likelihood of any speedy results arising from the Conference, the delegates have at any rate accomplished the invaluable service of setting forth in plain terms the sound lines for the conduct of financial and economic affairs by Governments. Particularly noteworthy in this respect is the report of the Committee on Public Finance—a document which brings into clear relief the immense gravity of the position with which the nations affected by the war are faced. Twelve European countries placed before the conference a statement of their finances, and of these all but one anticipate a Budget deficit. The country which accepts the policy of Budget deficits, says the report, is treading the slippery path which leads to general ruin; to escape from that path no sacrifice is too great. The recommendations of the Committee are that the ordinary expenditure should be reduced to an amount that can be covered by the ordinary revenue, that expenditure in armaments should be rigidly reduced, that all unproductive expenditure should be ended, and that all artificial expedients which conceal from the people the true economic situation should be abandoned. This policy represents the only way to recovery, and must be adopted by the countries which are at present allowing matters to take their course on the principle of *après nous le déluge* if something approaching a general catastrophe is to be avoided.

***

The Indian exchange continues to decline, and is now in the region of 1s. 7d., or roughly, 5d. below the parity which the Government desires to maintain, and so far as can be judged, the prospect is that it may reach a yet lower level since the outlook for India's export trade is uniformly unfavourable. It might possibly be unkind to cite the example of King Canute, but one cannot help feeling that in view of the chaotic conditions of world commerce it was rather too optimistic to endeavour to fix a permanent figure for the rupee until the position became somewhat clearer.

Naturally, the result of the instability of the rupee is that the commerce of the United Kingdom with India is being gravely hampered. The warehouses at Indian ports are overloaded with goods which are not going into consumption because the Indian merchants who ordered them expected a 2s. rupee, and are refusing to take up consignments now that the rupee is at its present level. At the same time, fresh orders are not being given in view of the uncertainty as to the exchange at the time of delivery, and at the moment trade is practically at a standstill.

***

There is a most illuminating reference to the effects of Government control of the dried fruits trade in Messrs. Burlumi's annual report on currants, which was given in these columns last week. On the re-imposition of control in August of last year the Food Ministry fixed the prices of currants produced in the Vostizza, Gulf, Patras and Zante districts at several shillings below the rates ruling in Greece at that time, and so, we are told, "the shippers in order to secure the orders had no alternative but to ship rubbish, in order to avoid a serious loss."

***

Altogether 50,000 tons of currants were shipped, of which 30,000 tons consisted of "low rain-damaged quality masqueraded" as produced in the districts named. It is not surprising that after two months the Government ceased making purchases! Bearing in mind the quality of the bacon and butter and other staple articles of consumption that we have had to put up with in recent months, I strongly suspect that the explanation is to be found in a series of transactions similar to that related in the report. It only goes to show that trade cannot be satisfactorily dealt with on official lines.

***

The absence of British films in Egypt is commented on in an article in a recent issue of the *Journal* of the British Chamber of Commerce of Egypt. At the present time it is pointed out that there are about 40 cinemas in the country, and their programmes are nearly all of United States, French, or Italian origin. In this respect the position is merely the same as it is elsewhere in the Near East, but it is particularly to be deplored in the case of Egypt, which should prove a specially good market for British film manufacturers, and it is to be hoped it will be possible to tell a very different story in the near future.

***

An excellent report is forthcoming from the Barsi Light Railway Company for the year ended March 31. There were notable increases in both passenger and goods traffic, and the net profits, after deducting Indian income-tax and super-tax, amounted to £59,213, as compared with £33,366, to which has to be added the exchange adjustment, making the total £88,394. Deducting debenture interest and interest and sinking fund instalment on the Latur Extension debentures, and adding £11,210 brought forward, the available total is £88,356. Out of this it is proposed to allocate £30,296 to the reserve account for the equalisation of dividends, etc., to place £15,000 to the taxation reserve account, to increase the dividend and bonus from 8 to 12 per cent., and to carry forward £11,860.

Athens, September 26.

**Reasons of the Trade Crisis.**

The manager of the Bank of Piræus, M. Tombros, in an interview with a representative of the *Ethnos*, stated that the present trade crisis is due to the following reasons:—(1) The overburdening of the market with orders exceeding its requirements; and (2) the appearance of many new merchants, the majority of whom are quite inexperienced, and who, holding but small capital, placed large orders, hoping to realise huge profits. These merchants, however, on discovering that the Near East markets were already overburdened with merchandise, and could not therefore absorb any further quantities, were placed in a very critical position, seeing that they had to fulfil immediate obligations, and were obliged to dispose of their goods at low prices. The fall of prices in the countries of production and the reduction of freights obliged the merchants to be cautious. Orders from abroad have diminished, and stocks are now being consumed; but large stocks still remain, causing a scarcity of ready money. This scarcity is increased through other reasons—viz., the circulation of the drachma not only in the newly liberated territories but also in many parts of the Balkans, Europe, and the United States of America. In Albania the value of the drachma is such that the villagers there in their dealings demand Greek paper money (100 drachmæ notes), which they call "black," and decline to receive the French 100-franc notes, which they call "red." On the other hand, the last loan of 300 million drachmæ has absorbed from the market a considerable amount of paper money, in addition to which a large amount of capital has been locked up in foreign currency notes, causing heavy losses. Persons in possession of large amounts of lei make no use of them, but are instead waiting until they go up in value.

The two principal reasons for which the banks are unable to meet the demands of the merchants are as follows:—(1) the execution of orders over and above the needs of the market and the inability therefore of the banks to render any assistance to their clients; and (2) the scarcity of paper currency. In no other country to-day is there such a small circulation of paper money as in Greece in proportion to its population and size. Another cause which largely contributes to the scarcity of paper currency is the fact that Greek villagers who during the present time dispose of their produce—viz., currants, tobacco, etc.—hoard the proceeds of their sales, amounting to considerable sums, and the money is thus held back from circulation. At this time of the year, even prior to the Balkan wars, when Greece only extended as far as Larissa, the scarcity of paper currency was much felt.

**Exports of Currants from Patras.**

Statistics just issued by the Greek Chamber of Commerce at Patras show the amounts of currants, in kilos, exported from that port to various foreign countries from August 10, 1918, to August 10, 1920 (o.s.). During the past year 110,872,285 kilos of currants were exported, as against 112,880,619 kilos for the previous twelve months. Of this total the United Kingdom and the United States took between them 103,799,231 kilos, the respective figures being 59,385,700 and 44,413,531. France was third with 2,711,424 kilos, and Canada fourth with 1,701,196 kilos. A comparison with the preceding figures shows marked alterations in the direction of trade. The United Kingdom was then easily first with 87,553,805 kilos; while France was second with 15,458,781 kilos, and the United States third with only 4,882,419 kilos.

**Customs Receipts.**

The receipts of the Piræus Customs during the first ten days of September (o.s.) amounted to 2,047,392.50 drachmæ in paper and 168,266.10 drachmæ in gold. These figures show an increase of 873,695.75 paper drachmæ and 59,297.95 drachmæ in gold on the receipts of the corresponding period last year.

## ROUMANIA.

Bucharest, September 27.

**Cultivation Statistics.**

According to the information collected by the Statistics Department of the Ministry of Agriculture the following areas were sown throughout Roumania, including the new provinces, during 1919-1920 (the figures representing hectares):—Wheat, 2,016,454; rye, 292,127; barley, 1,222,367; oats, 893,304; maize, 3,007,812. The statistics for the various provinces are as follows:—Old Kingdom: Wheat, 835,536; rye, 73,470; barley, 451,775; oats, 459,925; maize, 1,954,874. Transylvania: Wheat, 689,767; rye, 76,753; barley, 124,524; oats, 238,034; maize, 463,125. Bukovina: Wheat, 10,728; rye, 14,108; barley, 18,986; oats, 18,734; maize, 553,148. Bessarabia: Wheat, 447,423; rye, 127,796; barley, 627,082; oats, 176,011; maize, 553,248.

Compared with the areas sown in pre-war years there is a decrease as regards wheat and rye of about 40 per cent., and of about 20 per cent. as regards maize. On the other hand, oats and barley have been cultivated on a larger scale than in previous years.

**Exchange of Bessarabian Roubles.**

The Council of Ministers at their meeting held on the 25th inst., fixed the rate of exchange of the roubles existing in Bessarabia and the rest of the country at one lei for the Romanoff rouble and thirty bani for the Lwov rouble. This decision has come as a blow to owners of roubles as well as to speculators, since, although they expected one lei for the Romanoff rouble, they thought they would get at least fifty bani for the Lwov currency. The Minister of Finance, in fixing this rate, knew that the Lwov rouble was mostly used by speculators, and he thought that the rate of thirty bani was very generous. The total amount of roubles declared, as gathered from the figures at the Ministry of Finance, is one milliard 200 millions. Of this sum three-quarters are Lwov roubles, which is a further sign that the Lwov rouble has been introduced by smuggling, and does not require a better rate. In connection with this, as mentioned in my last letter, all frontier towns and ports were closed for a certain period. They were reopened on the 25th of the month.

**Markets.**

At the Bucharest exchange 500,000 kilos of lubricating oil have been sold at 400 lei per 100 kilos, and 1,020,000 kilos of distilled lamp oil (viscosity 820-825) at 300 lei per 100 kilos.

At the Braila exchange 4½ wagons of barley have been sold at 1,425 lei per wagon, 7½ wagons of maize at 13,500 lei per wagon, 1½ wagons of rye at 13,250 lei per wagon, and 1½ wagons of oats at 12,250 lei per wagon.

**The Oil Question.**

M. Ilescu-Brançeni, the General Secretary of the Ministry of Industry, has made the following statement in connection with further measures which are being taken in respect of the internal consumption and export of oil and of the petroleum industry generally:—

1. The necessity of increasing oil production. Before the war the oil production in Roumania was about 500 wagons per day, but owing to the destruction of oil wells during the war, and the fact that very few new wells have been bored, the production has decreased by one-half, so that now the daily production is about 250 wagons. This production must be increased by every means, both for internal consumption and for exportation on a larger scale in order to improve the present rate of exchange. The chief difficulty in increasing production is the high cost of material necessary for digging wells. An oil well cost before the war 150-200 thousand lei, but to-day the figure would be from four to six million lei. A further obstacle is the general lack of means of transport, which impedes the arrival of the necessary material, hinders the working of the refineries, and consequently limits production. Another reason is the considerable reduction in working hours, and finally the unstable measures taken by the authorities, which are too often changed for oil producers to be able to estimate their figures with any degree of certainty.

Digitized by Google

2. Measures for improvement. Following a conference between oil experts and the authorities, the following measures have been adopted:—In the first place a stable regime will be assured for a longer period, thereby allowing producers to estimate their figures satisfactorily. In connection with this prices for petroleum products have been fixed, which will allow new wells to be dug. Internal prices have been limited to the minimum for consumers, producers being allowed to compensate themselves by export.

3. Exports. In order to assure to producers the maximum profit from the export trade, they have been guaranteed the monopoly of the export of oil, so that export prices and the rate of exchange are left free, and the export tax of the State is permanently fixed. The authorisation for export will be granted immediately, as it is in the interests of the country to export as much as possible.

4. Quantities allowed for export and home consumption. Home consumption is given priority, and statistics have been compiled establishing the amount required, also of the average production and stocks existing at present. The following percentages may be exported of the different kinds of oil:—Light petrol 80 per cent., heavy petrol 20 per cent., lamp oil 50 per cent., "motorine" 10 per cent. Light lubricating oils can be exported, but not heavy lubricating oils. The export of residual oil is totally prohibited. In order to facilitate the work of the large producers, home consumption is being undertaken by the "Distributia" Company. The State guarantees to the oil producers that products destined for internal use only will not leave the country in any form.

5. Means of transport. The lack of means of transport is a great handicap. Because of this, it has very often happened that factories have been obliged to close down. One hundred and eighty wagons of oil products per day are supposed to be transported, but a few weeks ago hardly 15-30 wagons a day were being moved, and there were some days when only two wagons left the oilfields. All the transportation for home consumption is being carried out by private locomotives, and 25 per cent. of the carrying capacity of these engines is reserved for oil transport.

6. Consumption of residual fuel oil. There is a deficit of this fuel oil. During the last few years a number of engines burning residual oil, which is a very cheap fuel, have been in use. The monthly consumption of residual oil is as follows:—(*a*) For industries of the first importance, such as railways, mills, river navigation companies, hospitals, water and power stations, etc., 2,500 wagons. (*b*) Sugar and cement factories, ironworks, etc., 1,600 wagons. (*c*) Private heating during the winter, 500 wagons. The total production is, however, only 1,700 wagons, so that what is produced is not sufficient for the consumption of industries of the first importance. The increase in production will take time, and the only means of making up for this deficit will be to burn with residual oil its superior products, such as "motorine" and lamp oil.

**Production of Oil.**

According to the *Monitorul Petrolului*, the production of crude oil is now stationary round about 260-275 wagons per day. The lack of electricity continues to hamper production, but hopes are entertained that this will be remedied in a few days. Some firms have already installed petrol and steam engines in the place of electrically driven machinery to ensure the motor power necessary for the working of the factories.

Oil well No. 69, belonging to the Astra Romana Company, continues to spout 40-50 wagons per day, while at Ochiuri this company has been successful with another well, No. 27, which has started with a small eruption.

The Concordia Company has succeeded in striking oil at Runcu with well No. 346, at a depth of 475 metres. This well made a good start, but was afterwards stopped for the purpose of completing the installations for tanking and transportation. Operations on this well, as also on well No. 27 belonging to the same company, will begin very soon.

## YUGOSLAVIA.

BELGRADE, September 29.

**Credits and the Exchange.**

The Centrale des Devises is now abolished, and its functions are transferred to the General Inspectorate of the Ministry of Finance. Henceforth the sale of products will be in dinars, so that foreign buyers must first obtain a supply of this currency either on the Bourse or through the National Bank or some other recognised financial institution. Certain restrictions still prevent banks from accumulating foreign currency with a view to speculation, and credits may be given to foreign firms only with the approval of the Ministry of Finance. Banks are forbidden to give credits on the basis of foreign currency, and any such credits now existing must be liquidated within a month. Money-changers at last come under the control of the Ministry of Finance. It is hoped that by this means traders will be relieved of many troublesome regulations, and that the Government will be in a position to support the dinar during the dead season on the strength of the imports of foreign currency during the export season.

**An Emigration Tax.**

Emigrants to America or Australia must now pay an Emigration Tax of 250 dinars. As a further discouragement to emigration to America, a U.S. visa now costs ten dollars, which at present is equivalent to another 250 dinars.

**Iron Ore for Germany.**

The Ministry of Mines and Forests has concluded an arrangement for the export to Germany of 100,000 tons of iron ore in exchange for 13,000 tons of coke. The price of the ore is fixed at 140 marks, and of the coke at 107 marks.

## CYPRUS.

NICOSIA, September 22.

**Commercial Activity.**

There has been great activity at the ports, especially at Limassol, where four large steamers have been loading carobs. These have been sold at 26s. and 27s. 6d. the kantar (£5 15s. 6d. and £6 2s. 2d. the ton). Large quantities are being brought daily into the stores. There have been good shipments of wine, grapes, raisins, pomegranates, and other fruits. The launching of a new sailing vessel at Kyrenia is announced, which shows enterprise in that district. Wheat is being sold at Nicosia at 14s. to 18s. the bushel, and barley at 5s. to 8s. Large numbers of families are returning from the various hill quarters, and the seaport towns are crowded, which adds to their usual liveliness.

Tunisia's wine production this year is estimated to amount to 418,000 hectolitres, a decrease of 100,000 hectolitres on the previous figures.

The Oilfields of Egypt, Ltd., announce that the first heavy drilling rig ordered by the company in Holland has been inspected, passed, and shipped. The second rig is expected to be ready for shipment in a few weeks. The field manager, Mr. W. F. MacDonald, is returning to Egypt on October 22, and a staff of six drillers is also leaving for the field this month.

**BANQUE D'EXPORTATION PRIV. DU ROYAUME DE SERBIE.**

(Royal priv. Serbian Bank for Exportation.)

**BELGRADE, SERBIA.**

**Capital, Paid-up, 5,000,000 Dinars**

**Reserve - - 1,200,000 Dinars**

The Bank transacts all Banking Operations, undertakes all manner of financial, commercial and industrial enterprises and effects Money-Transfers to and from Foreign Countries.
*The Commercial Department* of the Bank deals mainly in the Export of Native Products on its own account and on commission basis.

# EGYPT'S TRADE DURING JULY.

## Great Increase in Imports.

(From Our Own Correspondent.)

Cairo, September 29.

The July statistics issued by the Egyptian Customs show a further unprecedented increase during the month in the external trade of the country. Imports during the month amounted to £E10,532,666 and exports to £E2,774,235, as against £E3,616,453 and £E3,774,173 a year ago. Imports therefore increased during the month by about seven millions, and exports fell off by about a million. For the seven months the figures are: Imports £E58,303,252 (£E23,104,633) and exports £E67,398,233 (£E26,727,043)—the figures in parenthesis are for the corresponding period of 1919—thus showing an increase of over 35 millions, or 150 per cent. in imports, and of 40 millions or 160 per cent. in exports.

The chief imports during the period have been: Boots and shoes, £E371,837 (about half from the British Empire); wheat, £E2,016,426 (of which two-thirds from Australia); flour, £E5,260,312 (of which over 40 per cent. from the British Empire and about 20 per cent. from the United States); oranges and mandarines, £E186,928 (mostly from Palestine); raw sugar, £E1,689,042 (half from Java); coffee, £E814,354 (of which 20 per cent. from British Possessions, 30 per cent. from Abyssinia); coco-nut oil, £E247,727 (of which 70 per cent. from British Possessions); kerosene, £E1,207,335 (of which 20 per cent. from the United States, and a large portion of the balance from Russia); oil-fuel, £E655,563 (of which 25 per cent. from Mexico); mineral lubricating oil, £E219,304 (equally divided between United Kingdom and United States); printing paper, £E226,120 (of which 35 per cent. from the United Kingdom); building wood, £E996,513 (of which 35 per cent. from Sweden and 14 per cent. from Turkey); coal, £E2,760,437 (equally divided between United Kingdom and United States); cement, £E152,724 (one-third from the United Kingdom); manures, £E1,367,846 (of which over 80 per cent. from Chili and the rest from the United Kingdom); household soap, £E391,185 (of which two-thirds from the United Kingdom and 25 per cent. from Palestine); cotton yarn, £E916,834 (of which 75 per cent. from the United Kingdom); sewing cotton, £E250,209 (of which 80 per cent. from the United Kingdom); cotton textiles, £E12,552,199 (of which 90 per cent. from Great Britain); woollen textiles, £E1,851,581 (of which 90 per cent. from the United Kingdom); silk yarn, £E335,088 (two-thirds from China and the rest from Italy); silk textiles, £E1,226,506 (of which 20 per cent. from China, 35 per cent. from France, 30 per cent. from Japan); empty sacks, £E686,210 (from India); manufactured iron or steel, £E2,464,936; tobacco, £E1,890,742 (of which more than half from Greece, 25 per cent. from China).

As regards exports, the principal items were: Eggs, £E285,968; hides and skins, £E306,371; rice, £E163,925; cotton seed, £E2,045,069; cotton cake, £E371,434; onions, £E527,451; sugar, £E771,129; phosphates, £E249,880; cotton, £E60,590,310; cigarettes, £E581,586. Practically all the eggs, cotton seed, cotton seed cake went to the United Kingdom, which also took 75 per cent. of the onions. Of the sugar 70 per cent. went to British Possessions, while of the cotton the United States took 40 per cent., Great Britain 35 per cent., France 10 per cent., and Italy, Japan, and Switzerland 10 per cent. between them.

As regards the share of the various countries, that of Great Britain more than doubled under imports, and increased by not quite 100 per cent. under exports. On the other hand, Italy more than quadrupled her share of imports, and the United States more than trebled hers. Under exports Austria and Germany reappear once more, the former with £E198,107 and the latter with £E764,500, mainly cotton, while the share of the United States rose from a little over three millions to just under twenty-five millions, as a result of their purchase of cotton, which increased in quantity from 394,000 kantars to 1,150,000 kantars.

Trade with the Sudan during the seven months has also improved. Imports into Egypt have risen from £E978,760 to £E1,569,011, and exports from £E1,521,369 to £E2,317,015. The chief imports into Egypt have been: Bullocks, £E274,996; sheep, £E257,966; sesame, £E321,958; dates, £E118,449; groundnuts, £E110,256; charcoal, £E54,008. The only decrease of any importance was in gum, which fell from £E95,921 or 3,000 tons, to £E29,668 or 621 tons. The chief exports from Egypt were: Wheat flour, £E71,519; sugar, £E664,075; coffee, £E143,618; cotton textiles, £E536,701; sacks, £E83,796; and tobacco, £E136,752.

---

Under an economic agreement which has just been concluded between the two countries, Czecho-Slovakia undertakes to supply Bulgaria with sugar and coke in return for oil and cereals.

# MOTORS IN MESOPOTAMIA.

## A NEGLECTED MARKET.

In a recent leading article the *Busreh Times* gives some interesting particulars of the development of the uses of the motor car in and around Busreh, and emphasises the growing importance of the Mesopotamian market, which British manufacturers have up to the present mainly left to their American competitors. We give the following extracts:—

"Busreh may fairly be described as the principal motoring centre in Mesopotamia. Not only is the number of privately owned cars considerably in excess of the number Baghdad can produce; there is also a large fleet of public utility vehicles—approximately 150, we believe—with the result that all classes of the community have become familiarised with the most modern means of transport. The Busreh-Ashar taxi-service has done a flourishing trade for the last twelve months, notwithstanding the fact that inexperienced drivers have had to be utilised for the work, and their training in many instances has been an expensive matter for the proprietors. The motor service is showing no diminution of popularity, albeit, at eight annas for each passenger, it does not provide particularly economical transit between the two towns. The explanation of Busreh's lead in motoring matters is to be found in the fact that most of the roads in the immediate vicinity are very much better than one finds in other parts of Mesopotamia. Only a short portion of The Strand remains to be completed, and it should be possible in the forthcoming winter months to maintain the taxi service regularly, no matter what the weather has in store for us. The road from Ashar to Makina should also give little trouble for some time to come.

"The commercial aspect of motoring is of first-class importance in Busreh. Most of the big firms in the trade in this country, including those who have head offices elsewhere, have found it necessary to have representatives here to take over delivery of their cars and spare parts from the shipping companies, to attend to the requirements of the local market, and to establish workshop facilities for the repair and upkeep of the vehicles which they sell. Perhaps the most striking feature at present is the overwhelming preponderance of American cars. . . . We are glad to see signs, however, that the British makers are beginning to realise that cultivation of overseas markets is vital to their interests. At the moment they are hampered not only by the enormously increased costs of production, but also by a shortage of certain essential parts (entailing the holding up of nearly finished cars), and by the difficulty of getting ample supplies of raw materials, especially of steel. When some of these difficulties have been overcome we hope to see a large influx of mass-production British cars in Mesopotamia. The reliability, workmanship, and economy in running costs of the British product are proverbial; and, in our opinion, if the difficulties associated at present with the question of delivery were solved, the British makers would find a very promising field for development and enterprise in Mesopotamia and Persia."

# ENQUIRY BUREAU.

*Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.*

*Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."*

*ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.*

*No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.*

## Agents Wanted Abroad.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be redirected to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

101. A correspondent in Lagos, Nigeria, wishes to get into touch with manufacturers of Arab red fez caps.

102. A stamp collector wishes to purchase used Austrian stamps prior to the 1882 issue. Stamp dealers in the liberated provinces of Austria are asked to send bulk packages of such stamps to the care of the Editor of The Near East, with the price in kronen of each stamp or price per dozen, per 100, etc., of each kind. All stamps required will be paid for at the price indicated and the rest returned. Newspaper stamps are not required, but rare postmarks should be included.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

## ENGINEERING.

### Oil Fuel.

A considerable extension in the use of oil fuel in industry is anticipated, and a number of improvements in oil-burning furnaces of various kinds are foreshadowed. The successful results of the change over to oil fuel burning of the big Atlantic liners recently also focussed attention on the possibilities of this method of firing, and information is now to hand that two particularly interesting industrial developments have taken place in the United States. It appears that the pottery manufacturers of the upper Ohio valley, together with those of Western Pennsylvania and the tile makers of Ohio, have been interested in a number of tests carried out with a view to ascertaining how far the oil furnace would prove useful in pottery firing. Altogether over 500 firms are connected with the trade organisation, and with the gradual increase in the demand for natural gas and the cost and shortage of fuel it is believed that unless oil firing can be adopted on a commercial scale their position is likely to become extremely difficult. It appears, further, that fuel troubles are being experienced in the glass manufacturing business, and both glass makers and brick makers are seeking information as to the possibility of using oil fuel. Whilst from one point of view this probable development of the use of oil is gratifying, it may prove to be the cause, should it eventuate, of a further increase in the price of oil in this country.

### A Steel Combine.

It has long been known that American and German steel makers were anxious to find some openings by which it would be possible for them to work not exactly in co-operation, but at any rate in close co-ordination, and it is now over a year since the U.S. Steel Trades combine made their first overtures to German iron and steel masters. Something very like a steel combine has now been formed, in which not only U.S. and German, but also French firms are represented. The only conspicuous absentees are the British steel makers; and whilst they are to be congratulated on their sturdy independence, it is evident that more than mere admiration of their attitude will have to be forthcoming if we are to help them face the fierce competition they will have to meet. Some time ago, under the old International Steel Rail arrangement between the producers in various countries, our trade received a setback from which it was exceedingly difficult to recover in spite of the superior quality of our productions, the vast size of our Colonial and Indian markets, the tremendous amount of capital we had invested in foreign undertakings, and other advantages. At present we are suffering from a shortage of rail mills, and it would seem that at any cost that deficiency must be overcome. The far-sightedness of our steel firms in keeping aloof from the new International Combine is to be commended, and their efforts should be assisted in every way possible by all interested in British trade development. From every point of view our people are likely to do better fighting than assisting the combine, and British industry should certainly be the gainer by this attitude of sturdy independence.

### Japanese Coal.

A good deal of apprehension existed a few months ago in coal-exporting circles as to the result of the efforts Japan was making to secure a big market overseas for the output of her collieries. It seems, however, from advices just to hand that the mine owners are having to curtail their efforts and dispose of their stocks at any price they can obtain. A big decline in price has already occurred which is likely to be more marked in the course of a few weeks. At Kawaguchi, to give only one instance, over 250,000 tons have accumulated which must be sold. The actual output last year amounted to 28 million tons, and it was anticipated that this year production would reach the 30-million mark. Instead, a singular depression set in, and out of over seventy coal mining companies established in Japan since the outbreak of the war, only two or three are in existence to-day.

## TRADE WITH BULGARIA.

The Bulgarian Prime Minister, M. Stambolisky, is to address the members of the London Chamber of Commerce at the offices of the Chamber (97, Cannon Street, E.C.) on Friday, at 2.30 p.m., on the possibilities for British goods in the Bulgarian market, and the advantages offered for the investment of British capital in Bulgaria.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended September 10 amounted to £E200,655.

The Government of India has ordered 4,000,000 ft. of creosoted British Columbia ties.

The traffic receipts of the Smyrna-Aidin Railway for the week ended September 25 amounted to £21,414.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

The Johnston Line s.s. Aviemore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila, will close for cargo at Liverpool on October 16.

The Johnston Line s.s. Cranmore, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila, will close for cargo at Liverpool on October 30.

The Byron Steamship Company's s.s. Admiral Hamilton, for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Galatz, and Braila, will close for cargo at Liverpool on October 20.

The Cunard Line s.s. Antigone, for Gibraltar, Corfu, Salonika, Smyrna, Constantinople, Varna and Galatz, will close for cargo at Antwerp on October 16, and in London on October 21.

The Ellerman Lines s.s. Asturian, for Patras, Piræus, Syra, Smyrna, Volo, Salonika and Constantinople, will close for cargo in Liverpool on October 23.

The Ellerman Lines s.s. Austrian, for Gibraltar, Malta and Alexandria, will close for cargo in Liverpool on October 23.

The Papayanni Line s.s. Andalusian, for Algiers, Malta, Piræus, Syra, Smyrna, Volo, Salonika and Constantinople, will close for cargo on November 6.

The Moss Line s.s. Amarna, for Gibraltar, Algiers, Malta and Alexandria, accepting cargo for transhipment to Moroccan, Algerian, Cyprus and Syrian ports, will close for cargo in Liverpool on October 16.

The Moss Line s.s. Assiout, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo in Liverpool on October 16.

The Anchor Line s.s. Massilia, for Bombay, will close for cargo at Liverpool on October 20.

The Bibby Line s.s. Leicestershire, for Marseilles, Port Said, Colombo and Rangoon, will close for cargo in London on October 22.

The Bibby Line s.s. Leicestershire, for Marseilles, Port Said, Colombo and Rangoon, will close for cargo at Birkenhead on October 20.

The Henderson Line s.s. Mandalay, for Port Said and Rangoon, will close for cargo at Glasgow on October 20.

The Clan Line s.s. Clan Stuart, for Bombay and Persian Gulf, will close for cargo at Glasgow on October 20, and at Birkenhead on October 29.

The Harrison Line s.s. Explorer, for Calcutta, will close for cargo at Liverpool on October 18.

## BUCHAREST-LONDON FLIGHT.

Mr. Reginald Wright, managing director of a Lancashire firm of locomotive engineers, who was conveyed to Roumania last month by a Handley Page aeroplane piloted by Mr. Perry, arrived back at Cricklewood Aerodrome on October 11. On the homeward journey a record was created in a non-stop flight from Strasburg to London, a distance of 420 miles, which was covered in three hours fifty minutes. For the whole journey from Jassy to Cricklewood the average flying speed was slightly over 100 miles per hour. Besides making the journey both ways by aeroplane, Mr. Wright used the Handley Page machine in travelling in Roumania. Thus on one occasion he visited Jassy from Bucharest and returned the same day, whereas if he had had to travel by railway the journey would have taken altogether forty hours.

Mr. Murray Harris, general manager in the Near East of the Royal Exchange Assurance, was honoured by a long interview with the Sultan of Egypt on September 23.

# NEAR EAST MARKETS.

## LONDON PRODUCE REPORT.

Dried Fruit.—Business has been rather restricted. The market is very short of supplies, and the prevailing high prices and the general uncertainty have had the effect of making buyers hold aloof for the time being.

Sugar.—The free market has been steady. West Indian crystallised has been done at 97s. to 103s., white Mauritius at 115s., and American granulated at 118s. There has been a good demand for home refined at the official prices.

Coffee.—There has been a small demand for export. Mocha has been done round about 170s., while Costa Rica is quoted at 125s., and Brazilian at 68s., all these prices being for sound qualities. The futures market has been very dull. Quotations are: December 54s. 6d., March 54s. 3d., May 54s. 3d. In their weekly report Messrs. Reynolds and Gibson point out that "so long as primary markets continue to press their product upon markets that are out of joint through financial stringency and other causes, no improvement can be expected in futures. On the other hand, the comparative steadiness of values in the terme market of late, while heavy falls have been daily recorded in other leading staple commodities, is perhaps not without significance in betokening a level that coffee has reached, which perhaps is adjusted to the present adverse conditions. It must not be forgotten, however, that a most severe decline has been recorded in coffee during the last three or four months, and this anticipation of the downward course that has since overtaken other markets, has tempered the present adverse chilly current of cut prices in marked degree to coffee. We hear that the force of the financial current has in the course of its onward sweep and irresistible pressure upon all and sundry markets in the U.S. been the cause of compelling actual traders in coffee to part with their holdings, and this has naturally exercised a depressing effect upon the future market there. Additionally, these movements have discouraged retailers in up-country centres, with the result that deliveries from importing points show a falling off compared to last year. Eventually this will prove a matter of strength to the market as traders come later on to replenish bare shelves. This wave of price reduction and financial stringency in America is undoubtedly bringing about an entirely revised perspective of values all round and a fresh outlook. It may be that the present efforts have nearly run their course. Curiously, the movement synchronises with the coming Presidential election and all that this means."

Oilseeds.—A quiet tone has characterised the market. Indian linseed has been done at 38s., while La Plata has come to business at 35s. Rapeseed has declined somewhat, Toria being 34s. 9d., bold Ferozepore 33s. 9d., and brown Cawnpore 32s. 3d. Cottonseed is rather weak. Indian has been done at 14s. 3d., and Egyptian at 19s. 3d.

Oilcakes.—Business has been fairly brisk, a number of varieties being in special demand. Linseed cake has been done at about 22s. 6d., cottonseed cake at 11s. to 14s., and arachis cake at 14s. to 19s. Other transactions have included coconut cake at 15s., and palm nut cake at 11s.

Seed Oils.—Oils have been rather featureless. Linseed oil has been done at 77s., while refined rape oil has come to business at 90s., and the crude variety at 75s. Turpentine is easier at 136s.

## SMYRNA OPIUM REPORT.

Messrs. Barker Bros. report as follows for the week ended September 25: "The sales this week on our market amount to 16 cases, of which 14 are New Karahissar at 17s. to 18s., and two Old Karahissar at 19s. The exchange is 416 piastres per pound sterling for cheque, and 0.85 dollars for one Turkish paper pound. The arrivals are 32f cases, against 650 at same date last year."

Mr. Thomas M. Ainscough, O.B.E., H.M. Senior Trade Commissioner in India and Ceylon, will read a paper on "British Trade with India" before the Indian Section of the Royal Society of Arts on Friday. The chair will be taken by Sir C. C. McLeod.

## EMPIRE COTTON-GROWING COMMITTEE.

Mr. L. G. Killby, Superintendent of the Department of Technology, City and Guilds of London Institute, has been appointed secretary to the Empire Cotton-Growing Committee. He took his B.A. degree at Oxford in 1904 in the Honours School of Natural Science, with first-class honours in chemistry. He then became demonstrator in chemistry, and in 1907 was awarded the B.Sc. degree for research work. He has been on the staff of the Department of Technology for fourteen years. During the war Mr. Killby received a commission in the Army and served in France as one of the chemists on water supplies in the field, and was afterwards transferred to the Chemical Warfare Department of the Ministry of Munitions. He was mentioned in despatches.

## SUDAN PRODUCE.

### Gum.

The C.E.B. report for July states that the exports during the month were 44,656 kilos of bleached of the value of £E2,620, 725,721 kilos of hashab of the value of £E35,545, and 37,749 kilos of talh of the value of £E1,208 viâ Port Sudan, and 75,120 kilos of hashab of the value of £E1,223 viâ Halfa.

Kordofan Province.—1,707 kantars were sold in El Obeid market during July, as against 3,621 kantars during the same month last year, at an average price of £E1.357 per kantar of 100 rottles. Arrivals from Nahud were 1,453 kantars, as against 934 kantars during July last year. The amount sold at Um Ruaba was 13 kantars, as against 180 kantars last year, the average price being £E1.050 per kantar. No gum was sold at Rahad during the month; 560 kantars were sold in July, 1919.

### Cotton.

Khartoum Province.—American cotton grown at Sabon, in Sennar Province, as a Seluka crop turned up in Omdurman market during the month in the hands of small merchants, who failed to get anything like its value in Omdurman, but on the attention of the Director of Agriculture being called to the matter this cotton was bought by him at its true value.

### Wheat and Barley.

Halfa Province.—Wheat has risen slightly to about PT.20 the kirat. This slight rise is accounted for by nearly all the taxes having been collected.

Halfa Province.—The price of barley is PT.289 per ardeb. Wheat is in demand, preference being given to American, which is cleaner than that of Dongola.

Darfur Province.—The price of wheat is £E2.450 per ardeb of 300 rottles (135 kilos).

### Sesame.

Nuba Mountains Province.—Trade stagnant, as always during the rains. It is noteworthy that directly the road between Kadugli and El Obeid is closed owing to mud, the Talodi Meikaz attracts the Simsim from Kadugli district which has not already gone north. Transport of this Simsim and of onions from Rashad district have been the only signs of activity during the month.

### Livestock, Hides and Skins.

Berber Province.—Eighteen cattle and 746 sheep were exported during the month.

Darfur Province.—Six hundred and eighty-eight head of cattle passed through El Fasher quarantine station during the month.

Halfa Province.—One thousand seven hundred and sixty-six cattle, 12 goats, 7,856 sheep, and 310 skins were exported from the Sudan viâ Halfa during the month to Cairo.

Kassala Province.—Thirty-four cattle and 94 sheep were exported from Kassala to the interior of the Sudan.

The restrictions on the exportation of onions from Malta have been removed.

A new company has been established in Alexandria by Messrs. Mokhtar Nadoury and Ahmed Chabana for the importation of motor-cars and accessories.

The annual general meeting of the Egypt and Levant Steamship Company, Ltd., will be held to-day at the head office of the company at Smyrna.

# COMPANY MEETINGS.

## CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

### Increase of Capital Approved.

An extraordinary general meeting of the Chartered Bank of India, Australia, and China was held on October 6 at 38, Bishopsgate, for the purpose of considering resolutions subdividing the shares and increasing the capital of the bank. Sir Montagu Cornish Turner (chairman of the bank) presided.

The Chief Manager (Mr. W. E. Preston) having read the notice convening the meeting,

The Chairman said: Ladies and Gentlemen,—Our circular letter of September 16 last will have explained the object of our meeting here to-day, and, as regards the first resolution, few words on my part are required, I am sure, to recommend its acceptance by the shareholders. For some time past we have appreciated the fact that the denomination of our shares, £20 each, plus the premium attached thereto, made the share a rather heavy security to deal with in the market, and it has been somewhat difficult for the smaller class of investor to take up a share which, perhaps, commands a value of from £70 to £80 in the market—or even £90, as it did at one time—so that many desirable people whom we would welcome as constituents of this bank are unable to enjoy the privilege of being shareholders in the Chartered Bank. Therefore, it is with pleasure that I shall presently propose the resolution that the £20 share be subdivided into four shares of £5 each. Then, as regards the second resolution, our letter states that, in order to meet the increased demands of trade and the greater volume of business that the bank is now called upon to finance, the court of directors consider it desirable to put before the shareholders proposals for the increase of the bank's capital. In my remarks at our extraordinary general meeting in September, 1918, I gave particulars as to the gradual increase of the capital and reserves of this bank. I need not refer to these figures to-day, but I will give you some figures which are of considerable interest. They show the growth of the business during the past two years, and also the necessity for our coming to you to-day with proposals for an increase of capital.

#### Current Accounts and Deposits.

Taking first the figures with regard to current accounts and fixed deposits, on December 31, 1918, when we made our last issue, they stood at £33,777,000. On December 31, 1919, they stood at £48,000,000—an increase of 42 per cent. On June 30 of this year they totalled nearly £54,000,000; that is an increase of 59 per cent. over the figures of 1918. Bills of exchange at December, 1918, totalled £22,244,000; in December, 1919, they were £26,500,000, an increase of 19 per cent. On June 30, 1920, they amounted to approximately £28,000,000, an increase of 25 per cent. over the figure of 1918. Bills discounted and loans in December, 1918, were £12,600,000, and twelve months after that date they were £17,500,000, an increase of 40 per cent. In June of this year they were £26,400,000, an increase of 109 per cent. over the figures for 1918. Bills of exchange, re-discounted at December, 1918, amounted to £4,000,000, in round figures, and in December, 1919, to £16,000,000, an increase of 306 per cent. In June, 1920, they stood at just about the same figure. Forward contracts outstanding we can only give up to December 31 last, because the year has not expired yet. At December, 1918, they were £13,300,000, and on December 31, 1919, they were £48,500,000, an increase of 164 per cent. The total figures shown in our balance-sheet—the total assets and liabilities—were £47,600,000 in December, 1918, and £68,700,000 in December, 1919, an increase of 44 per cent. In June, 1920, they were approximately £75,600,000, an increase of 59 per cent. over the figure in 1918, when we made our last issue of shares.

#### Increase in Net Profits.

Ladies and gentlemen, I think no further words are necessary on my part to show that we are fully justified in coming to you to recommend an increase of our capital. Our profits have also increased quite satisfactorily. In 1914 our net profits were £372,000. Then came, in 1916, that terrible tax, the Excess Profits Duty; but in spite of that we showed an advance on 1914, the amount being £331,250. In 1917 the net profits were £402,500, in 1918 £409,000, and in 1919 £447,347, after payment of Excess Profits Duty. I think, therefore, you will agree with me that, along with our increase of business, we are able to show an increase of profit, and for this year I do not anticipate a falling off from the profits shown last year. We have had a satisfactory half-year, and I hope we shall not have a very unsatisfactory six months ending December 31, 1920. As regards the terms of issue, I am sure the shareholders will appreciate the fact that they will now get one new share for every two old ones, as against two for every three on a previous occasion, and that the premium on the £5 share is only £2 10s. Had we made the issue on previous lines the premium would have been £5 per share; in other words, shareholders would have had to pay £10 for their share instead of £7 10s. We did this with the purpose of giving our shareholders a good turn. We think they deserve it, and we are able to make it. I was rather pleased at having a letter from one of our shareholders saying that he was astonished at our liberality, and asking whether we could afford it. Well, gentlemen, we are just able to afford it. Then it was thought desirable that full payment of the new shares should be made by December 31 of this year, because by so doing they will rank for full dividend *pari passu* with the old shares as from January 1, 1921. There, again, you have an advantage which you did not have before and which I hope you will appreciate.

#### The Reserve.

With the issue of these shares, if the resolutions are confirmed, the capital of the bank will in future stand at £3,000,000, and the reserve at £3,500,000. We shall have to build up our reserve again, and I hope we shall do so in the course of time. I should like to point out, however, that if we had made the premium £5 instead of £2 10s. we would have had a reserve of £4,000,000 instead of £3,500,000. There, again, we considered our shareholders. We must not forget that the large increase in our business, which is evidenced by the figures I have read to you to-day, has entailed considerably more work, far greater responsibility and devotion to duty on the part of our staff. It is only right and fair that their efforts should be suitably rewarded, and the directors have not overlooked this consideration. I mention that because another shareholder wrote a letter in which there was a slight insinuation that we were considering the staff more than the shareholders. Well, it was very ungrateful, because I can assure you that that is not the case; we considered both alike. We should be absolutely failing in our duty, however, if we did not try to meet the fair and just demands of our staff, considering the increased cost of living, which is terrible in some parts of the East, the difficulty of housing, and the discomforts of living in a tropical climate.

#### The Future.

Another shareholder has just written to me saying that he regretted he could not be present to support the resolutions to be submitted to-day, but he would be glad to have an assurance from me that we shall be able to maintain the present level of our dividends. I should like to ask that gentleman if he can assure me what trade is going to do in the next twelve months, what is going to happen in the East and in the West, what is going to happen in the case of the remarkable coin the rupee, and various other little considerations. We cannot tell, but we do hope that we shall not disappoint the expectations of our shareholders. We do assure them that every effort will be made on our part to maintain that fair return on the shares of this bank. We would not recommend at any time to give them what I call an outrageously big dividend, but we do try to give them a fair and just return on their investments in this bank. As regards the present position of trade, undoubtedly we are in for a dull time. We are in, perhaps, for a period of anxiety and difficulty, but with calmness and moderation on the part of the directors of the bank and with fair treatment of our customers, who have always stuck so loyally to us in the past, I think we can assure you that there will be no great catastrophe as regards the business of the Chartered Bank, and I am fully convinced that once this cloud of unrest in the labour world, once this period of unrest due to militarism, has passed away we can be pretty well assured that trade in the East and in the West will not be much worse in the years to come than it has been in the past. We must not give way to pessimism or to despair—our trade and our commerce were not built up on those lines—but we must go on with courage, firmness, and conviction that all will be well when once the clouds roll by. Now, ladies and gentlemen, I have talked enough, and I beg to propose the first resolution: "That the present capital of the bank—viz., 100,000 shares of £20 each, be sub-divided into 400,000 shares of £5 each."

The Rt. Hon. Lord George Hamilton, G.C.S.I.: Ladies and gentlemen, I have great pleasure in seconding that proposition.

Mr. Henley: I believe that in the original deed of settlement of this bank, and for some years, the minimum subscription of a shareholder was five shares. Is that the case now, and how will it affect the fresh arrangement?

The Chairman: So far as we know it will be still five shares. There is no reason to anticipate that any change will be made. I must also tell you that until recently, under the terms of our articles of association, we could not have issued the new shares of £5 each; that is to say, without having two classes of shares. There would have been one class of £20 and one of £5, but we have had the consent of the Treasury to make all the shares of one denomination. I do not think you need anticipate any trouble on that score.

The resolution was then put to the meeting and carried unanimously.

The Chairman next moved: "That the capital of the bank be increased to 600,000 shares by the issue of 200,000 new shares of £5 each, and that such shares be offered to the existing shareholders in the proportion of one new share for every two shares already held at a premium of £2 10s. per share, payment to be made as follows: £5 on or before November 15, 1920, £2 10s. on or before December 31, 1920. Interest on these instalments will be paid at the rate of 6 per cent. per annum, free of income-tax, from date of payment until December 31, 1920, after which date the new shares will rank in all respects *pari passu* with the existing shares."

Mr. Thomas Cuthbertson seconded the resolution, which was unanimously agreed to.

The Chairman announced that a confirmatory meeting would be held on October 27, and the proceedings then terminated.

## AGRICULTURAL SHOW IN ALGERIA.

It has been arranged to hold the annual congress of French agriculturists at Algiers next year, and the Union of Agricultural Associations of Algeria has decided to avail itself of the occasion to organise an agricultural show and exhibition fair, the honorary presidency of which has been accepted by the Governor-General of Algeria. The exhibition is expected to open in the month of April next, and will be held on the Champ de Manœuvres, in the suburbs of Algiers, and will occupy an area of nearly 12½ acres. H.M. Consul-General at Algiers states that the agricultural show will consist of displays of various classes of horses, cattle, poultry, and other domestic animals and birds, of wines and spirits, all kinds of products connected with agriculture, and aids and appliances. The exhibition fair will not be competitive, and will comprise an exhibition of motor-cars, motor-tractors, and the industrial and other products of North Africa. The first two will include foreign as well as French exhibits. The price of sites for tractors is 15 francs per square metre in the open, and exhibitors may erect their own structures; that for cars has not yet been settled.

The exhibition of North African products will be divided into the following classes:—Foodstuffs, various native industries, textiles, mine products, wood, and Algerian, Tunisian, and Moroccan arts. Inquiries respecting the exhibition should be addressed to M. Celestin Granier, Commissaire General, 4, Rue Marechal Bosquet, Algiers.

## COMPANY NOTES AND REPORTS.

### Barsi Light Railway.

The report of the Barsi Light Railway for the year ended March 31, 1920, states that the net earnings, less Indian income-tax and super-tax, amounted to £59,212, or, adding the exchange adjustment of £29,181, £88,394. After providing the interest on the debenture stock, £5,600, and the interest and sinking fund instalment, etc., on the Latur Extension debentures, £5,649, there is left £77,145, which, with the balance of £11,210 brought forward, makes £88,355 available. The directors have transferred £30,295 to reserve for equalisation of dividends, depreciation on investments, etc., which account now stands at £115,000, and £15,000 to taxation reserve to meet the balance of income-tax. The directors recommend a final dividend of 3 per cent., with a bonus of 4 per cent., making 12 per cent. for the year, leaving £11,859 to be carried forward.

### Egyptian Consolidated Lands.

The report of the Egyptian Consolidated Lands for the period ended June 30 states that the area sold aggregates 738 feddans, of which 473 feddans were reclaimed land, realising an average price of £E.75 per feddan. The balance, about 260 feddans of unreclaimed land, realised approximately £E.50 per feddan. The area unsold at June 30 last was 1,391 feddans, of which 400 feddans are in course of reclamation. The Rodah Island property consists of a building estate, the area of which, excluding roads, is 110,605 square metres. A property of 117 feddans purchased for cash during the early part of the year at £E.54 per feddan was subsequently sold on terms at £E.71 per feddan. The balance due from purchasers in respect of land sold appears in the balance-sheet at £116,402, and is secured by the vendor's lien on the land. Meeting, Winchester House, E.C., October 19, 12.30 p.m.

### Assam Railways and Trading.

The report of the Assam Railways and Trading Company for the year to March 31 states that the gross earnings of the railway were Rs.14,79,820, an increase of Rs.1,01,741 over 1918-19, and the expenditure totalled Rs.10,48,450, an increase of Rs.1,45,692. The general revenue account shows a profit for the year of £110,035. After payment of debenture interest, and allowing for all the preference dividends, there remained a balance at credit of net revenue account of £19,219. From this has to be deducted the interim dividend on the "B" stock of 2 per cent. paid in March last, and the directors now recommend a final dividend on the "B" stock of 3 per cent., making 5 per cent. for the year, leaving £4,219 to be carried forward, subject to excess profits duty, if any. Meeting, Winchester House, October 20, noon.

## NEW COMPANIES.

### Yule, Catto and Co.

Yule, Catto, and Co., Ltd., has been registered as a private company with a capital of £100,000 in £1 shares. Objects: To carry on business of East Indian and general merchants, bankers, ship owners and brokers, etc., formerly carried on at Finsbury House, E.C., as George Yule and Co. Solicitors: Slaughter and May, 18, Austin Friars, E.C.

### Anglo-Eastern Trading.

The Anglo-Eastern Trading Company, Ltd., was registered on September 29 with a capital of £250,000 in £1 shares. Objects: To carry on the business of importers, exporters, refrigerators, shipowners, charterers of ships or other vessels, warehousemen, etc. The subscribers (each with one share) are: W. C. Bacon, Shawbrook Lodge, Burnage Lane, Withington, Manchester; E. Latimer, Kirtle House, Knutsford, Cheshire. First directors: J. D. Williams, E. Latimer, W. L. Norbury, L. L. Bunting, J Heys, W. C. Bacon, and D. Beith.

## LANCASHIRE COTTON

### Continued Inactivity.

(From Our Own Correspondent.)

Manchester, Monday.

Increased activity in the market is still held back by the falling tendency of prices, the unfavourable position of Eastern exchange rates, and the general financial stringency. Enterprise remains at a very low ebb, and owing to spinners and manufacturers not nearly selling the output of the machinery, ground is still being lost. There have been no indications during the week of an early change for the better, and reports from sellers have been depressing. Lancashire users continue to purchase Egyptian cotton on a limited scale. There has not been anything particularly new in the private advices relating to the crop. One authority has put out an estimate of 6,250,000 kantars. During the last day or two a little more inquiry has been met with in Egyptian yarns, but most of the demand has been of a tentative character, and buyers cannot make up their minds that the time is ripe for freer operations. More mills in Bolton and district are stopping part of the spindles. It is anticipated that the Masters Federation will easily secure the necessary majority in favour of stopping all the spinning mills on Saturdays and Mondays for a month. In cloth for the Near Eastern outlets there has not been any general business. Some merchants have picked up cheap stock lots from time to time. Goods now being distributed in Egypt and Turkey are at prices much higher than those ruling to-day in Manchester. With regard to trade for India progress has been considerably blocked by the fall in the value of the rupee, and very little progress has been made by buyers and sellers in arranging transactions. The drop in silver has also been a discouraging factor in the situation, and scarcely anything at all has been done for China. More manufacturers have pressed for fresh contracts, but leading shippers refuse to be tempted to operate, even when very low figures are quoted. Unemployment in weaving districts still tends to increase. A dragging state of affairs has existed in home American yarns, and prices continue to favour buyers. Only retail lots have been sold in export yarns both for India and the Near East.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

HAIFA.

The report for August states: The satisfactory result of this year's harvest would have given rise to a brisk export trade if exportation were not prohibited by the local authorities. The town will soon have abundant stocks of wheat, barley, chick peas, and lentils, which will be stored in the warehouses.

The market is much quieter because of the political situation of the Hauran and the interruption of communications between Haifa and Damascus. There have been increasing imports of colonial produce and manufactured goods for this region.

JAFFA.

The report for August gives the following particulars :—In the first half of the month the prices of cereals remained at the relatively high level to which they had risen as the result of the lack of important arrivals; but towards the end of August a fall took place following the appearance in the market of considerable supplies. Consumers alone have profited by the fall, for the large buyers, foreseeing another decline, abstained from entering into any transactions. Compared with preceding months the market in cotton goods and other manufactured articles has been fairly favourable.

ALEXANDRETTA, September 1.

Despite the occupation of Aleppo and Damascus by the French troops and the submission of several brigand chiefs, communications between this port and the interior continue to be interrupted, and only a very few consignments have been despatched to Aleppo via Beyrout.

Except for some imports of merchandise for local needs, there have been no transactions, but it is hoped that shortly, with the pacification of the country, business will assume its pre-war aspects.

RHODES, September 6.

The treaty of peace with Turkey has placed Rhodes under the rule of Italy, while the other islands of the Dodecanese are restored to Greece. It is to be foreseen that the new political régime will have a profound effect on the island's economic future. The customs barriers that will be set up between Rhodes and the other islands will certainly be injurious to the existing reciprocal economic relations. On the other hand, the Italian Government has the intention of making Rhodes the transit port for merchandise destined for Anatolia (Adalia, Makri, etc.), and for that end will proceed with the improvement of the port and the construction of docks and warehouses.

---

According to advices from Bucharest the complete returns for the month of August from the various oil producing companies show an increase of 17,210 tons over the output for July, the chief increases being in the districts of Prahova, Dambovitza, and Buzau.

Ottoman 3½ per Cent. of 1894.—Messrs. Dent, Palmer and Co. give notice that the bonds drawn for redemption on October 15, and also the half-yearly dividend due on that date on the outstanding bonds of the above loan, will be paid on and after October 15.

Mr. Montague Gluckstein, chairman of J. Lyons and Co., has joined the board of the Guardian Eastern Insurance Company.

The numbers are announced of 112 debentures, amounting to £11,200, of the Land and Mortgage Company of Egypt Four and a-Half per Cent. Debentures (Series B), which have been drawn for repayment at par on November 11 next.

## OPENINGS FOR MACHINERY IN PERSIA.

If Persia is destined to be a great wheat-producing country in coming years it will be necessary, in addition to the prosecution of irrigation schemes, to supersede the primitive agricultural methods of the country by the importation of agricultural and other machinery from Europe (says H.M. Consul at Shiraz in a recent report).

At the present time there are certain difficulties which stand in the way of agricultural developments on modern lines. For example, it is difficult to bring anything up from the sea to Shiraz which cannot be carried on a mule's back. It is necessary, therefore, that the motor road from Bushire should be completed and improved. Again, coal is unknown, and wood and charcoal very expensive. Petrol also is so expensive as to render its use alone almost prohibitive. Lastly, there are no native Persian engineers or mechanics, and all repair work would have to be done by foreigners, the cost of living for whom, including Indians, is very high.

There appears to be an opening for pumps in order that greater use might be made of the water in numerous wells for irrigation purposes. Pumps of the most simple nature and capable of being easily repaired would be in demand if available. These could be fixed down the wells and operated from the surface by hand or engine. For example, the greater part of the plain of Marv Dasht, which at one time supplied Persia with huge quantities of cereals, is now lying fallow as the natives have no suitable facilities for drawing water from the Bandamir River. At Bandamir there is plenty of power at the dam which is now being wasted, except where it drives a few primitive flour mills. Here, with hydraulic rams, the water could be lifted and the whole countryside flooded for many miles at little expense beyond first cost. Higher up the river the water could also be lifted, but the working expense would be greater. At Bandamir modern flour mills could then be worked, which would be capable of coping with the increased crops obtained by the new irrigation.

It is not surprising that Persians cannot be persuaded to undertake the expense of any simple irrigation scheme, or of experimenting with the soil with British ploughs and tractors until they see such apparatus in actual operation. It is necessary, therefore, for British firms to show sufficient enterprise to take this first step in carrying out practical demonstrations. There is a danger that if this pioneering work is delayed for any length of time we may see some of our competitors in the field before us.

As mentioned at the outset, transport difficulties are at present a serious consideration, but may be overcome. There is also the question of customs duty, freight, and other charges, coupled with the fact that other countries can step in with their trade on an equal footing with pioneers. The whole question of developing the agricultural resources of Persia, therefore, requires serious consideration from many aspects if it is to be tackled with success by a British firm.

## TENDERS INVITED.

**Egypt.**

Steamer.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply of an inspection steamer for the Upper White Nile Division. Specification P.T. 25. December 1.

**India.**

Brass Boiler Tubes, etc.—The Secretary of State for India in Council invites tenders for the supply of (1) brass boiler tubes, steel boiler tubes, tyres, steel, engine, and (2) locomotives. The conditions of contract may be obtained on application to the Director-General of Stores, India Office, Whitehall, S.W., and tenders must be made by 2 o'clock p.m. on October 26 for No. 1, and on November 5 for No. 2.

## ON 'CHANGE.

### A Discouraging Week.

(From Our Own Correspondent.)

Throgmorton Street, Monday.

Any tendency to rally that prices may have shown at our last report has been entirely offset during the past seven days; they have fallen in every department. Among Government stocks, Egyptian Unified has lost two points at 65, and the 3½ per Cent. Pref. has declined from 56¾ to 54½. The Greek 1884 likewise has declined from 54½ to 54, the 4 per Cent. Rails and 4 per Cent. 1910 have each lost a point at 45 and 38 respectively, and the 1914 Loan has fallen from 54 to 52½. Turkish 4 per Cent. has declined from 62 to 61½; the Egyptian Tribute Bonds, however, are an exception, having gained a point at 54½.

Taking the Banks, Agriculturals have declined from 4 3-16 to 4⅛. Bank of Abyssinia from 1⅛ to 1, Bank of Athens from 3 15-16 to 3¾, Imperial Ottoman Bank from 9 to 8½, and Land Bank from 4⅝ to 4½. Here the exception is provided by National Bank, which has appreciated from 17⅞ to 18⅛.

Among the Railways, Ottoman Smyrna to Aidin 6 per Cent. Pref. has lost a point at 9.

In Land Shares, Anglo-Egyptian Land Allotment has declined from 3⅝ to 3 17-32, Béhéra from 14½ to 12¼, Egyptian Delta Land from 14s. 5d. to 13s. 9d., Gharbieh Land from 3¼ to 3⅛, New Egyptian from 1 11-16 to 1⅝, Sidi Salem from 2¼ to 2, Sudan Plantations from 5 1-16 to 4 13-16, and Union Foncière from 4½ to 4¼. There is a small gain in the case of Aboukir, which has gained 1-32 at 1 23-32, and Anglo-Belgian has gained ⅛ at ⅜.

The Miscellaneous group tells much the same story. Abyssinian Corporation has lost ⅛ at 5-16. Alexandria Water has declined 1-16 at 7½, and Morum's Oriental Stores have dropped 3d. at 17s. 6d. Associated Cotton Ginners have gained 1s. at 25s.

Among the Oils, Anglo-Egyptian B have appreciated from 2 15-16 to 3⅛, while Roumanian have gone off 3d. at 20s. 9d.

## FOREIGN EXCHANGES.

| Country. | Method of Quoting. | Parity of Exchange. | Latest Quotations |
|---|---|---|---|
| Alexandria | Piastres to £ | 97½ | 97 7/16 |
| Athens | Drachmae to £ | 25·22½ | 36·00-36·80 |
| Belgrade | Dinars to £ | 25·22½ | 110-112 |
| Bombay | Sterling to Rupee | 24d. | 1·7-1·7⅜ |
| Bucharest | Lei to £ | 25·22½ | 185-190 |
| Calcutta | Sterling to Rupee | 24d. | 1·7-1·7⅜ |
| Constantinople | Piastres to £ | 110 | 418-438 |
| New York | Dollars to £ | 4·86⅜ | 3·49½-3·50½ |
| Paris | Francs to £ | 25·22½ | 52·90-53·20 |
| Sofia | Levas to £ | 25·22½ | 247½ |
| Teheran | Krans to £ | 50 | 30 |

A motor show is to be held at Delhi in February of next year under the auspices of the local motor trade association. It will be open to those motor firms in India who are agents or recognised sub-agents for motor-cars and vehicles, motor-cycles, and motor accessories.

The annual general meeting of the Imperial Ottoman Bank will be held at Winchester House, Old Broad Street, E.C., on November 17.

Bombay, Baroda, and Central India Railway.—The directors will propose, at the general meeting to be held in December, the payment in January, in addition to the half-year's guaranteed interest of £1 10s. per cent., of an interim dividend of £1 per cent. in respect of the profits for the year 1920-21.

The Banca Commerciale Italiana and Romena (Bucharest) has opened a branch at Braila.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

## GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 296,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

**IMPORTS** (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

**EXPORTS** (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

**COINAGE.**—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 36 Drachmæ to £1.

**FREIGHT.**—From England, 160/- + 10% primage.

**WEIGHTS AND MEASURES.**—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

## BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

*Branches:*

PIRÆUS, SYRA. PATRAS.

**Capital Paid Up - Drs. 10,000,000.**

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

*President.* L. EMBIRICOS. *Manager.* D. MIAOULIS.

## NOTES OF THE WEEK.

On the foundation laid by M. Benes, Czecho-Slovak Foreign Minister, M. Take Jonescu is now endeavouring to erect a substantial edifice which may materially alter the political appearance of Europe. The Little Entente is essentially an emergency effort, and the Roumanian Foreign Minister, recognising its possibilities, has set himself to create out of it a formidable and lasting instrument of peace. Both in Paris and in London he has found a cordial welcome awaiting his scheme, which could not fail to commend the support of all who are interested in maintaining the peace of Europe. If comment on the subject were invited, it could only take the form of a suggestion that the cult of peace, to secure its real end, must be based on general goodwill. The theory of the balance of power sooner or later leads to conflict.

M. Take Jonescu has been quick to realise this point in the course of his journeyings westwards. In Paris he received the assurances of the French Government that no secret understanding existed between France and Hungary. As the allegation regarding such an agreement was meant to emphasise the intensity of the Magyar danger, it follows that without the agreement there is a proportionate diminution of this particular danger. The French Government will not have taken upon itself to urge that Hungary was above suspicion and did not require to be watched; but the purport of its communications must have been to the effect that possibly the Magyar peril was being overdone. In the same way in London, M. Take Jonescu, as a result of his visit coinciding with that of the Bulgarian Prime Minister, will have been reminded that the Powers of the Great Entente see no reason why they should not place implicit confidence in M. Stambolisky's assurances, and respond whole-heartedly to his efforts to direct a new Bulgaria along a path of peaceful progress. If, therefore, a meeting takes place in London between M. Take Jonescu and M. Stambolisky, the first step will almost certainly have been taken towards a further widening of the basis of the Little Entente.

Both Yugoslavia and Roumania afford Bulgaria an object-lesson in the disadvantages attending an unstable political situation. It is, accordingly, to the interests of the Bulgarians as well as of her neighbours and the rest of the Allied Powers to see M. Stambolisky's position at home strengthened. The significance of his success abroad will not be lost upon his fellow-countrymen; and if on his return he is able to apply to home politics the experience gained on his tour, Bulgaria ought to be assured an era of political stability. M. Stambolisky has already won the cordial approval of foreign interests in Bulgaria for the courageous manner in which he has recognised mistakes made in certain legislative proposals and has had the measures modified in accordance with enlightened opinion. If any cause for misgiving remains, it is to be found in the prosecution, amounting at times to persecution, of political opponents—a common failing in all Balkan countries, for which the West never feels inclined to make allowances. In the present instance there is reason to suppose that M. Stambolisky is not kept informed of all that is done in the name of his Government, and advantage may have been taken both of his preoccupations prior to his departure and of his absence. It will be well if, on his return, this practice, which has been in the past responsible for much of the unrest and intrigue in the Balkans, is sternly checked.

The reassuring reports issued when it was first announced that King Alexander of Greece had been bitten by a tame monkey in defending a dog have been tragically belied, and at the moment of writing, we deeply regret to learn, the young King's condition causes the gravest anxiety. The duration of his illness has compelled the Greek Government to discuss the question of a Regency. In these circumstances, it is inevitable that speculation should be rife regarding the future, in the event of the King's illness terminating fatally. But what may be the justifiable concern of the Greek Cabinet does not necessarily form a subject of profitable discussion in the public Press.

The occupation by Serbian troops of parts of the Klagenfurt plebiscite area, after the announcement that the voting has gone in favour of Austria, must be regretted, even if it evokes little surprise. No doubt the Yugoslav Government can point to the provocation of Fiume, and to action on all fours with its own elsewhere, in extenuation of the step; but, nevertheless, the occupation cannot be regarded as a contribution to the peace of Europe. It has been quickly followed by a decision of the Council of Ambassadors in Paris to demand the immediate withdrawal of the Serbian forces from the Klagenfurt area, as by the terms of the Treaty both the southern and the northern zone now go to Austria. It is to be hoped that Yugoslavia will recognise its responsibility to Europe in this matter after having set such a wonderful example of self-restraint in the matter of Fiume. The incident, however, should help to bring the Council of Ambassadors to a sense of its duty in terminating without further delay the Fiume nuisance.

News from Mesopotamia during the past week has shown a further, and marked, improvement in the situation. Samawah and Kufa have both been relieved, the former on October 14, after some six weeks' investment, and the latter on October 17, after having been besieged since the end of July. The column which relieved Samawah was led by Brigadier-General F. E. Coningham, and on its advance from Nasiriyeh had encountered considerable opposition, notably at Khidr, where it had to fight a stiff little engagement; the Kufa relief column was commanded by Brigadier-General Greer, and it also had to clear its way of Arab bands and snipers as it advanced on the Hillah-Kifl road. Both the relieved garrisons are to be congratulated on having held out so well; and their endurance coupled with the success of their relief will help greatly in restoring our prestige, which, it is to be feared, has suffered rather severely on the Euphrates this year. Already leaders of the insurgents in the Kerbellah region have made formal submission to the O.C. in that area, and have been sent on to Baghdad to be dealt with by the High Commissioner; and on the Diala the principal sheikhs have entered into a formal agreement to remain peaceful, to pay taxes regularly, and to give compensation for damage done and property looted.

Sir Percy Cox would probably be the first person to deny that there was any connection between his arrival in Mesopotamia and the improvement in the situation there; and a lengthy statement issued last week by the War Office suggests several reasons for the welcome change. The passing of the hot weather, the advent of the sowing season, and the correct attitude of certain tribes who have refused to adopt an anti-British attitude, are all in favour of improvement, as the War Office suggests; yet, in spite of all this, it is not too fanciful to believe that the arrival of the High Commissioner may, in fact, have been a very important factor in bringing about the amelioration; for personality counts for much with the Arabs of Irak, and for "Cokkus" they have a very great respect. Thus, while Sir Percy, in a speech at Busreh, has deprecated the idea that he can perform any feat of conjuring, it would not be surprising to find that the country was so convinced to the contrary that he would, unconsciously, work wonders in it. In the speech referred to he emphasised the British determination to complete the task we have begun, "to help the people of the country to work out their salvation as a self-governing State," and added that the sooner the people of Irak realised this and set to work to co-operate with us, the better it will be for all. He has since repeated the same statements at Baghdad, and has made it clear that no real progress can be expected while the disturbances continue. Only on such lines can the country find its salvation, and Great Britain fulfil the pledges she has given.

Reports regarding the fighting between the Armenians and the Kemalists are not quite clear, but unfortunately it appears to be the case that the Armenians have had to abandon Igdir, Novoselim, Kagisman, and Ardahan. The last-named place is, however, reported to have been occupied by Georgian troops, who disarmed the local Turks. On the other side of the account may be set reports of Armenian successes against the Bolshevists at Nakhitchevan and Delijan. A speech made by Mustapha Kemal at the Angora Congress, reported in the *Yeni Giun*, the official organ of the Nationalists at Angora, and translated by the Armenian Bureau in London, throws some light on the origin of the Kemalist campaign. It represents that the Armenians were "aiming at the occupation of Erzeroum on the first opportunity," and that the (Nationalist) Turks thought it their right and duty, under the treaties of Batoum and Brest-Litovsk, to occupy the mountain passes of Sarikamish and Soghanli. Rather curiously, at this time, Chitcherin advised his "allies" not to take the offensive, and "on the intervention of a Russian agent" they were compelled to suspend their operations "for the time being." Subsequently, the Bolshevists having failed to crush the Armenians, and having been "compelled to exterminate the Mohammedan rebels in Elisavetpol," and the Armenians having begun operations in the Olti and Zangezour direction, the Kemalists plucked up courage to take the offensive themselves.

If correctly reported, this speech is very interesting, if only by reason of its reference to the Elisavetpol massacre and to the "rebellion organised against the Bolshevists" by Nuri Pasha, which is coupled with that outrage. These things appear to indicate that the co-operation between the Bolshevists and the Kemalists is not of a very cordial kind. That, of course, is exactly what might be expected; but, such being the situation, it is a thousand pities that the Allies cannot give the Armenians the little help which would, apparently, enable them to hold their own against their enemies. Our own Government was reported a week ago to have sanctioned the despatch of 1,000 tons of fuel oil for use on the Armenian railways, and that should be of great assistance to them if it can be delivered; but whether the appeal to the Entente Powers and Greece for war material will meet with success is not yet clear.

The report of the Esher Committee is a substantial volume, and in discussing the wider questions which it raises we had to pass over various topics which are in themselves both interesting and important, among them the machinery for what is officially described as "production and provision," or, in other words, the control of the ordnance and clothing factories, and the arrangement of contracts for the various needs of the Army. Following the drift of present-day opinion, the Committee agree that this is essentially civilian work, but the position of the civil controller has given rise to a dispute, the only one which is prominent in the report. Lord Esher himself proposes to have a Surveyor-General of Supply under the Commander-in-Chief, but the majority of the Committee go further and recommend an entirely separate department under a whole-time member of the Viceroy's Executive Council, thus reverting to the earlier phase of the Kitchener scheme, but with a civilian instead of a general, so that there may be no risk of divergent military advice being tendered to the Viceroy.

The arguments advanced in the report treat this question solely from the military standpoint, and, as the members are divided on it in the proportion of six to four, the man in the street is justified in concluding that "there is very little in it," and that, while neither plan is perfect, either of them might be expected to work tolerably well. The Committee were not, of course, called upon to determine whether there is room on the Viceroy's Council for a departmental passenger, but we trust that this aspect of the matter will be kept prominently in view when the final decision is taken. The new Viceroy, whoever he may be, will need statesmen rather than administrators at his table; it is, of course, conceivable that an expert in clothing and contracts might also possess the rare qualities required for a counsellor at an exceptionally difficult time, as the next few years will certainly be, but nobody is likely to argue that the combination is in itself probable, and, if the choice has to be made, the vacant seat should certainly be assigned to wisdom rather than to departmental efficiency.

The latest news from India shows that the unfortunate Moslems who were persuaded to emigrate to Afghanistan have had an even harder time than was anticipated. We do not altogether blame the Afghans for this, seeing that their country was not in a position to absorb a sudden influx of population, and that at an early stage in the movement they did what was possible to discourage it; the blame must fall on other shoulders. The emigrants are now trickling back to their Indian homes as quickly as their depleted funds and the scanty means of transport will permit, and the officers of the British Government, which they had abjured, are working overtime to provide them with subsistence for the moment, and resettle them on the land which they had abandoned. We cannot find that any share in this charitable work is being taken by the men who promoted

the movement, most of whom seem to be bsusy at the other side of India; perhaps they are wise, for their dupes have returned full of bitterness, and a disillusioned Punjabi is apt to explain his feelings with a club, but, however that may be, the failure of the Hijrat is now placed beyond question.

Non-co-operation appears to be going the same way. Indians were adjured to lay down their titles, and ten of them have done so; they were urged to resign posts in Government service, and in all India 248 resignations have been received, mostly from policemen and office messengers, many of whom have since applied for reinstatement; while there is as yet no sign that the law courts are being inconvenienced by the proposed withdrawal of legal practitioners. Perhaps a just idea of the strength of the movement can be formed from two paragraphs regarding a certain politician which have gone the round of the Indian Press. The first states that the gentleman in question has returned his Coronation medal, and resigned his seat in the Provincial Legislature; the second, that "it is understood" that he will shortly retire from practice at the bar. The medal in question does not take high rank in India, and the Legislature is on the verge of dissolution; the practice, on the other hand, is believed to be tolerably lucrative, and the difference in wording may fairly be taken at its face value, or a little more.

# THE WEEK AT HOME.

LONDON, Monday Evening.

**The Coal Strike.**

To the astonishment of everybody—and not least, apparently, of Mr. Smillie and the miners' leaders—the ballots for acceptance of the Government's offer showed a huge adverse majority, and the coal strike began on Saturday. On that day naturally the weather suddenly turned much colder.

There can rarely have been a more unpopular strike than this, which seems calculated to cause the maximum of inconvenience and suffering for the minimum both of reason and of profitable result. It was practically certain after the Government's offer that the miners would get increased wages, so long as they did not produce less coal—the weak point in the miners' case is that each successive increase of wages has meant decreased output of coal. The amount of the increase depended on the award of an impartial court; and to refuse to submit the case to such a tribunal can only put the miners wrong with the public by making it appear that they are not sure of the justice of their claim, and are determined to extort by force what they cannot claim by reason. The ostensible reason for rejecting the inquiry is the fear that it would not in fact be impartial. But that is absurd. The dockers, who submitted their claim for an advance some months ago to a precisely similar court, have never even suggested that they did not get fair play; and Mr. Smillie himself can have had no doubts of the impartiality of the proposed tribunal, since he advised the miners to accept it.

Speaking personally, from close observation of these industrial questions, I should say that the time has definitely gone by for the employee to sandbag his employer or the public in the miners' way, but that it has by no means gone by for friendly negotiations between the parties for a periodical readjustment of wages and the costs of living. Practically every recent strike has failed—only this week a prolonged strike among Nottingham lace-workers has collapsed—but demands that have been followed by friendly negotiations have generally obtained at least partial success—provided, of course, there has been any case to go upon. Nor is the trade handicapped by lost time while the negotiations are going on.

The objection to such methods of negotiation comes from the extremists who want a fight for the sake of fighting. They say, truly enough, that the upshot of negotiations is almost invariably a compromise, and that neither side wins all that it thinks itself entitled to. But it probably gets all it is really entitled to, and that without any of the losses entailed by a strike; and on that ground alone reasonable men on both sides of the capital and labour hedge seem likely to employ the round table method increasingly in future.

On the actual coal issue by far the most sensible remark has been made by Mr. J. H. Thomas, that "a fight to a finish between capital and labour might be the finish of the country." Both Mr. Thomas and Mr. Clynes, who are more and more clearly taking the lead as the real statesmen of Labour, are appealing for further negotiations, but it is too soon yet to say whether their advice will be listened to.

Beyond this they, and several other Labour leaders, are doing their best to prevent the conflict spreading. We shall have to do with fewer trains in a day or two, but the railwaymen as a whole clearly do not want to strike. There is some talk of the Road Transport Workers—the third party to the Triple Alliance—going on strike on Saturday; theirs in an old-standing dispute, and they may choose this time to bring the trouble to a head. But it is still hoped that moderate counsels will prevail.

In any event, thousands will be thrown out of employment, particularly in the industrial North and Midlands, and the strike will add to the difficulties of industry and reconstruction at a time when those difficulties were already sufficiently great. It is also likely to check the recent tendency to a fall of prices before it had actually spread from the wholesaler to the consumer.

**Parliament Re-opens.**

The strike has naturally taken some of the political interest out of the re-opening of Parliament to-morrow, although it has revived the talk of an early general election in the clubs. Ireland and finance would have been the main topics of the autumn session in the ordinary course, but in the circumstances both topics, although urgent, will be rather roughly shouldered aside by the industrial trouble. Unfortunately, everybody is conscious that whereas the worst shock of a railway strike comes immediately, and its ill-effects cease within a day or two of the resumption of work, a coal strike is not felt for the first week or two, but its results are not overcome for months. The one is like apoplexy, the other like slow paralysis.

**A Club Subscription.**

An extremely difficult problem faces the Liberal Party. The National Liberal Club, like other clubs, is faced with the alternative of raising the subscription or re-imposing the entrance fee, which was taken off some time ago; and the discussion as to the relative merits of the two suggestions is loud and hot. The N.L.C. will shortly be returning to its old home opposite the Embankment, which has been unkindly com-

pared to an underground railway station by wicked Tories; the more evil-minded political opponents of the party used to declare that the forks were chained to the tables and the soap to the wash-basins at one period of the club's history, "to prevent misunderstandings." But I am assured by an old and respected member that the story is an exaggeration; it is not considered necessary even to number the coffee-pots.

It is believed that when the N.L.C. moves back to its old premises from the Westminster Palace Hotel, where it has kept house for the past three or four years, the hotel itself may be taken over as a club by the Labour Party. It is convenient enough for Parliament, but rather a stuffy and unattractive place in the ordinary way. But Labour needs a club rather badly in London, and particularly one with several billiard-rooms, that being the one redeeming vice of the new model.

**Marrying the Prince.**

The Prince of Wales had hardly reached home when the newspapers began discussing the question of his marriage. It must be a little embarrassing for the Royal Family, and not perhaps in the best of taste; nor is there in fact any immediate hurry. But Fleet Street has kindly assured the Prince that if he chooses to marry an English girl instead of a foreign Princess it will not raise any objection, presumably, to reporting the wedding in the usual ecstatic strain; and leader-writers, with a sentimental sob in their fountain pens, have asked him to choose the girl of his heart and the whole nation will ratify the choice. I will confess that this particular kind of slobber afflicts me with nausea.

To the old constitutional axiom that the King can do no wrong it may shortly be necessary to add that the Prince of Wales can do without impertinent advice.

**Railway Fares Again.**

The railways, who are rapidly qualifying for the position of a national Mrs. Gummidge, are in trouble again. Even with the recent increase of fares they are not happy, and last week the first steps were taken towards asking for another 5 per cent. The recent increase of railway and omnibus fares has not brought in the anticipated increase, as any child could have told the traffic managers; and a further increase would clearly reduce the number of travellers still more.

**The Week's Books.**

The third and fourth volumes of "The Natural History of South Africa" (Longmans), by Mr. F. W. Fitzsimmons, are now published. From a casual glance at the text and the many illustrations, they seem no less worthy of commendation than the previous volumes, which I mentioned some months ago.

Two books of the personal type that have recently come out need little more than mention. Sir Henry Lucy's "Diary of a Journalist" (Murray) is as good as its predecessors from the same source, which is saying a great deal; it contains some new stories of Gladstone, which will be welcome. And in "Our Family Affairs" (Cassell), by E. F. Benson, we get another view of the inexhaustible Archbishop's domestic circle. He appears to have been as stern a parent as he notoriously was a headmaster; but I am amazed to read that the Archbishop's wife frequently indulged in a cigarette, and once smoked a pipe—needless to say without the knowledge of the Primate. They were not all so conventional, those Victorians!

Mr. Edward Clodd is a hale and vigorous veteran, the last survivor of the old agnostic school. In "Magic in Names" (Chapman and Hall) a great deal of sound anthropological learning is combined with an occasional sneer at religion.

According to Mr. Gwynne, of the *Morning Post*, who contributes an introduction to an anonymous book, "The Cause of World Unrest" (Grant Richards) is the Jew. One would have thought there were a few other reasons, but the Jew appears to be the *primum mobile*, as Aristotle would have said, of the trouble, as set forth here.

BELGRADE, October 9.

**Election Activities.**

In view of the forthcoming general elections, all politicians are very active in the constituencies, and it is interesting to note how minor differences are being smoothed over. Dr. Joseph Smodlaka, leader of the Non-Party group, who, it will be remembered, worked so hard in the spring to bring about a Coalition Government and finish the crisis, and Dr. Trumbitch have called upon all sound elements in Dalmatia to go to the ballot as one party in the interests of national unity. From Zagreb it is reported that the Narodny Club is trying to effect a similar union of Croats, whose programme is the national unity of the Serbs, Croats, and Slovenes upon a federal basis. This is the policy of Dr. Lorkovitch, leader of the party in the Skupshtina, but Dr. Petrichitch, a former minister, and Dr. Iv. Kovachevitch, Minister of Mines and Forests, disapprove, and it is thought probable that they will withdraw from the party. It is believed that they have actually begun negotiations with the Frankovsist and Raditch's party, who are frankly separatist, in the hopes of persuading them to recognise a *fait accompli*, and bringing them into the fold. Unfortunately, there is no news of a *rapprochement* between the Narodny Club and the Democrats. Neither will Dr. Koroshets join them. He is carrying on a campaign in Croatia, Slovenia, and Srem in the hopes of winning the Catholic vote, for he is a Papist, and has declared that he is out for the independence of Slovenia. He has a big following among the peasants in his own district, but in the towns the Democrats are stronger, and fully realise that Slovenia cannot think of standing alone.

**The Adriatic Question.**

The Italian Chargé d'Affaires at Belgrade, M. Galanti, has assured the Press that the Adriatic question will shortly be settled, both Governments being desirous of coming to a decision. He has also expressed a desire that delegates from all the provinces of Yugoslavia should take part in the negotiations that he is opening. It would be interesting to know by what right he makes the suggestion, for Yugoslavia naturally claims entire freedom in managing her own affairs. If M. Galanti really voiced the opinion of Italy he might surely employ his time more profitably than embarking on negotiations that can lead nowhere.

**Zionism and Serbia.**

The Zionist Movement is having a curious reaction in Serbia. There recently called upon Dr. Trumbitch, Minister of Foreign Affairs, Dr. Landmann, General Secretary of the Zionist organisation in London. Dr. Landmann's object was to arrange for the passage through Yugoslavia of Jews who are proceeding to Palestine to settle; considerable numbers are wending their way, or propose to wend their way, from Poland, Eastern Galicia, and Hungary, and under present circumstances their best route is through Belgrade. Dr. Trumbitch promised to have facilities given them and many of the present difficulties in the way of their passage removed.

**Good-bye Summer.**

The weather has broken, and on October 4 the first real autumn gale blew with devastating effect; the streets of Belgrade emptied promptly, and nobody who was not obliged to do so ventured out into the clouds of dust and the chilly gale that made life miserable.

**Crowded Belgrade.**

The work of reconstruction here is proceeding as rapidly as can be expected in the circumstances existing to-day, but is much hampered by various causes, among which is an inadequate supply of water. What is available may have sufficed for Belgrade before the war, but now, with its rapidly growing population, the city urgently requires further supplies. As things are, half Belgrade is waterless during the day, and gets a supply only at night, with consequences that need not be described.

The city is very full, owing to the influx of many people from the country and elsewhere for the winter, and rents are terribly high, as much as 4,000 dinars a month being asked for a five-roomed unfurnished house. As a result, an English lady who has just started an English school here finds it almost impossible to secure such premises as she desires, and has to be content with a small number of pupils as a beginning. This is a pity, as the school would certainly seem to supply a long-felt want.

**An English Hospital.**

Dr. McPhail has acquired a new hospital, her work having grown so rapidly that her present premises have become too small. Dr. McPhail established a small hospital after the retreat, and has done wonderful work since then. This is the first children's hospital to be established in Serbia, and she and a small party of English nurses have done splendid work in relieving the sufferings of Serbian children.

**Railway Work.**

Negotiations are being pushed on for the resumption of the direct train service between Budapest and Trieste.

The director of railway construction has obtained a credit of 40,000,000 dinars for the repair of the Belgrade-Liubliana-Salonika line.

## ROUMANIA.

BUCHAREST, October 7.

**Administrative Reform Bill.**

At the last meeting of the Parliamentary Committee which is working on the Administrative Reform Bill, under the direction of the Minister of the Interior, M. Argetoianu, this measure was discussed in all its bearings, and it was decided that the principle of local government and decentralisation should be adopted throughout the country. It is thought that this system will be more adaptable than the present one of the whole State coming under the jurisdiction of Bucharest, since the newly-joined provinces have been used to a quite different administration from the one existing in the old kingdom.

In view of the complaints and general dissatisfaction at present prevailing in Bessarabia, a parliamentary committee has been sent to investigate the matter on the spot, and has received an enthusiastic welcome from the inhabitants.

**Prince Carol.**

After his seven months' world tour, Prince Carol has now returned to Roumania. He was received in state all along the line from the frontier, and went straight to Sinaia, where he has joined the Royal Family. He was accompanied from Paris by Prince George of Greece and his two sisters, and the arrival of these three visitors has given rise to some interesting rumours regarding matrimonial alliances, and, it may be added, to some embarrassment in certain diplomatic circles.

**Court-Martial of Ex-Prisoners from Krefeld Camp.**

After a long series of preparations and examinations, lasting two years, a number of officers of the Roumanian army, who were interned at Krefeld, in Germany, during the war, have been brought before a court-martial in Bucharest, to answer charges of having assisted the notorious Colonel Sturza in his traitorous dealings with the enemy. The officer in question was at one time thought to be one of the ablest men in the Roumanian Army, and after the retreat into Moldavia, he was put in command of a brigade at a vital point in the line. During the crisis which occurred at that time he went over to the Germans, and placed himself and his command at their disposal. He was sent by the Germans to the camp at Krefeld, where all captured Roumanian officers were interned, to spread anti-Roumanian propaganda among them and to prepare an army in the occupied territory of Roumania to fight against Russia, and, in consequence, against the Roumanians. The ultimate object was to bring Roumania

Digitized by Google

under the control of the Central Powers and to break her connection with Russia. The plan did not materialise, and out of the 320 officers who were brought from the Camp at Krefeld, only sixty have been found guilty of traitorous acts, and of accepting appointments under German administration. The remainder have been found "less guilty," as they were not directly useful to the enemy, and have been sent before a disciplinary committee to answer charges of having failed in military honour, by accepting bribes and consenting to being sent into the country as enemy agents.

## GREECE.

ATHENS, October 3.

**The Stadium Celebrations.**

Never before, not even during the Olympic Games in 1896 or 1906, was such a huge crowd seen at the Stadium as that assembled there last Monday, the first day of the Victory celebrations. Although the sitting accommodation in this magnificent marble structure is only sufficient for 60,000 persons, it is estimated that over 100,000 succeeded in gaining admission, while at least another 40,000 who had been unable to secure tickets had, from the early hours of the afternoon, taken up every available space in the Zappeion Park waiting patiently in the blazing sun to catch a glimpse of the procession on its way to the Stadium. The anti-Venizelist Press, maintaining that these celebrations—undoubtedly purely national—were nothing less than a Venizelist demonstration, advised their followers to abstain from participating. Whether this advice was acted upon or not one cannot say, but the fact alone remains that the vast amphitheatre was full to overflowing.

At 3.30 p.m. the gates of the Stadium were closed, and the various officials commenced entering into the arena by the Propylæ. The first to appear were the Mayors and Presidents of Communities of about 2,200 towns and villages in Greece. Amongst these one could distinguish four or five Turkish mayors from Thrace wearing their red fezzes.

The next to arrive were Admiral Coundouriotis and the Commander-in-Chief, General Paraskevopoulos. Both received a very enthusiastic ovation from the crowd. But the greatest reception was reserved for the Prime Minister, who appeared a few minutes later, accompanied by the members of the Cabinet. Everyone present stood up, and cries of "Long live Venizelos" rang from one end to the other of the Stadium. The pandemonium of cheers was renewed soon afterwards when H.M. King Alexander, attired in an Admiral's uniform, entered the Stadium while the bands struck up the Royal Anthem. Suddenly the bugles sounded "Attention," and the colours of all the regiments which fought during the war were borne in. Preceded by two military bands and escorted by guards of honour, the glorious colours, pierced by enemy bullets, torn and discoloured, advanced amidst deafening cheers and lined up at the far end of the cenotaph, which had been erected in the centre of the arena. Then came the Bishops, grave and grey-haired, in their gorgeous multi-coloured robes, wearing their golden mitres adorned with precious jewels, who took up the positions allotted them on each side of the cenotaph. The King then, advancing amidst a deathlike silence, placed a wreath of laurel leaves on the cenotaph. A solemn requiem for the fallen followed, and the bugles sounded the "Last Post." The ceremony was concluded by a thanksgiving service for the victory of the Greek arms.

October 9.

**An Accident to the King.**

Just over a week ago King Alexander met with a mishap which has since cast a gloom over the country. While strolling in his estate at Tatoi followed by his favourite wolfhound, Fritz, His Majesty approached a female monkey belonging to one of the members of his household, chained to a tree. Fritz, noticing the animal, attacked it, and a terrible struggle ensued. The King, realising that the monkey was unable, owing to its being chained up, either to defend itself or run away, and was getting rather badly knocked about, rushed to its assistance and endeavoured to liberate the unfortunate beast from the strong grip of the wolfhound. The male monkey, however, sitting on a tree near by, noticing that his mate was in danger, descended in all haste to offer a helping hand. Mistaking the King for one of the aggressors, the male monkey bit him first in the leg and then in the hand. The former wound caused blood poisoning, and at the moment of writing the King's life is still in danger.

The last bulletins show a slight improvement in His Majesty's condition, and his medical advisers are hopeful, provided that no complications arise.

The culprit monkey was shot a few hours later by order of the doctors, who wished to ascertain whether there were any signs of hydrophobia.

**A Demonstration of the Socialists.**

A demonstration of the Socialist-Communists was held in Athens last Sunday. The demonstrators assembled at five o'clock in the afternoon in the Square of the Municipal Theatre, and speeches were delivered by several of the Socialist candidates for Parliament. The Socialists, then numbering about 6,000, preceded by red flags and banners with various inscriptions, passed through the principal streets of the city with cries of, "Down with the war" and "Down with the rich." The authorities had taken extraordinary measures to ensure public order during the demonstration, and even two fire-engines had been placed outside the House of Parliament in readiness to turn their hose pipes on the crowd in case of any disturbances. With the exception of one incident, which occurred in the early part of the meeting, when a couple of revolver shots were fired, and a workman dangerously wounded, the demonstration was very orderly, and the crowd dispersed quietly on reaching the Socialist Club Headquarters.

## BULGARIA.

SOFIA, October 5.

**A Double Anniversary.**

Yesterday was solemnly celebrated as the twelfth anniversary of the proclamation of Bulgaria's Independence and the second anniversary of the accession to the throne of King Boris. The streets and houses were decorated with flags, and a "Te Deum" was sung at the Cathedral, the Archbishop of Sofia officiating, assisted by the Cathedral clergy. The King attended this service, as did all the Cabinet Ministers, deputies, high State officials and military officers, and an immense crowd of citizens. After the service the King was most enthusiastically acclaimed by the troops and the public.

## TURKEY.

CONSTANTINOPLE, October 5.

**The Heir-Apparent Again.**

The sensation of the week has been provided by Prince Abdul Mejid Effendi, who was said to have attempted to commit suicide on the night of September 30. Not a word in contradiction or confirmation of the report has been allowed to appear in the Press, but it is now said that the trouble was not due to sublimate of mercury, but to an overdose of calomel. According to another story, one of the Prince's attendants saw him pour a few drops of some liquid into a glass of water, and dashed forward just in time to prevent his august master from

CROWE & STEVENS,

*Commercial Representatives,*
PATRAS, PIRÆUS, ATHENS, SALONICA.

Digitized by Google

swallowing the presumably deadly potion. All that now remains is for the Nationalists to advertise the latest dastardly deed of the British. Why the Heir-Apparent should poison himself is not at all clear, except upon the assumption that two or three months' confinement in a very roomy palace, pleasantly situated withal, has affected his mind. Prince Abdul Mejid Effendi, however, is a decidedly intelligent prince, and there must be more in the matter than mere boredom. Heirs-Apparent in Turkey have been confined in much worse quarters for a much greater length of time before they have proceeded to such lengths, and in spite of much stronger inducements. However, if Prince Abdul Mejid regains his liberty, he will doubtless have gained his immediate object, for he is very fond of shooting and riding, and it is rather hard luck to be shut up, even in a palace, just when quails are so plentiful. Naturally, His Highness will have to give some strong guarantee that he will not run away to Angora, and precautions will doubtless be taken to prevent him from breaking his word, but, when all is said and done, the Prince is really a very gifted artist, and he ought to realise that his position as a sham Khalif in the hands of Mustapha Kemal and his Bolshevist friends would be the reverse of artistic.

**The Cabinet.**

It was not until September 28 that the nomination of a successor to Mustapha Sabri Effendi as the Sheikh ul-Islam was announced. The newly appointed Minister, Nuri Effendi, was formerly Kadi of Egypt and a Kazasker, as the Supreme Judges of Anatolia and Rumelia are called. He is an old man, and does not seem to have played a very prominent part in politics, but will doubtless serve his purpose quite satisfactorily, for never was there a time when men with axes to grind were less required in Turkey than at present. Mustapha Sabri Effendi apparently became enamoured of the office of Grand Vizier when he acted as *locum tenens* during the absence of Damad Ferid Pasha in Paris, and conceived a desire to fill the post permanently. There was a time when the office of Grand Vizier was like that of the priest of Nemi—

". . . who slew the slayer,
And shall himself be slain,"

as Macaulay put it. If that rule held good to-day, there would probably be fewer competitors for the position, and perhaps a speedy end to the Nationalist rebellion. Damad Ferid Pasha is accused by his enemies of being a reactionary of a Hamidian bent, and of being desirous of restoring the old despotic form of government. This is undoubtedly untrue, but there is probably more than a little truth in the theory that the veteran statesman is no lover of the system of government which made it possible for a clique of irresponsible and unscrupulous individuals to seize the reins of power and drive the unhappy country from one catastrophe to another with bewildering despatch. In spite of surface appearances in Constantinople, the Turkish nation is Asiatic and not European, which means that although many a Turk may be quite at home in London, Paris, or Berlin, neither British, French, nor German institutions can be successfully adopted without modification.

**The Pillage of Yildiz.**

It was possibly with some such feelings that Damad Ferid Pasha caused the court-martial to prosecute a large number of persons who played prominent parts in the revolution of 1908, when Abdul Hamid was dethroned and sent away a prisoner and an exile to Salonika. A number of the most prominent generals in the Turkish Army have been sentenced to various terms of imprisonment, and the heirs of others who have died in the interval are to be forced to make restitution for what is said to have been removed from Yildiz Palace by the army of "liberation." The most interesting part of the judgment delivered by the Court, however, was the conclusion, wherein it was affirmed that the famous counter-revolution of April, 1908, was not instigated by Sultan Abdul Hamid, and that both he and his household were subjected to insult and brutality from which his position should have rendered him immune. This singular document can only be regarded as an attempt to vindicate a monarch who has always been held up to universal opprobrium as a bloody-minded tyrant. Whatever may have been the state of public opinion with regard to the "Red" Sultan some years ago, it is certain that it is believed on all sides to-day that had he remained on the throne, Turkey would never have come to the pass that it finds itself in to-day, and that the little finger of Enver was thicker than Abdul Hamid's loins. To that extent, the findings of the court-martial reflect public opinion, but it is very doubtful whether the moment was well chosen for condemning men like Shevket Torgud Pasha to penal servitude, even though the sentence has been commuted to exile and degradation. It looks too much like spite.

**Anatolia.**

According to the latest reports from the interior, matters are developing along the lines that were to be foreseen. The Nationalists seem to have irrevocably committed themselves to Bolshevism, and there is reason to believe that the number of Russians in Angora is steadily increasing. The administration is being modified to fit the new ideas, although there is nothing like a "Soviet" form of government established as yet. There is no reason why even this improbability should not come to pass, however, if only the Bolshevists can get a strong enough hold upon the country; and there is little doubt that there are occult forces at work within the country itself to bring it about. The military force of the Nationalists is of little account, but the extent and nature of the country would make its subjugation a task of no little difficulty—and expense. Matters seem to have reached a deadlock; to go forward involves great difficulties, to retreat is impossible. The only remedy seems to be to leave matters as they are, and let the Turks themselves try to clear up the mess on the lines suggested by Damad Ferid Pasha himself. By their announcement that they intend to retire from Adana and Tarsus the French are showing that they have no more settled policy than ourselves, for it was only the other day that they proclaimed completely contrary intentions. The presence of an Italian mission in Angora is a sufficient indication—if any were needed—of the direction of Italian policy; and as there are no British forces left in Anatolia, the Nationalists are right when they maintain that they have only the Hellenic army to deal with. That they hope to dispose of with Bolshevist assistance. Whether their hopes are well founded or not is open to discussion, but that there is long and serious trouble ahead is hardly a subject for doubt.

**The Baku Congress.**

The congress of Asiatic peoples held at Baku under Bolshevist auspices appears to have been somewhat of a farce; but although it was a failure from the strictly Bolshevist point of view—after all, that was to have been foreseen by anyone but a Bolshevist—it does not follow that it was altogether a failure from every point of view, and particularly from that of the Pan-Islamic and other agitators who foregathered from all quarters of Asia. The mere fact of such an assembly has a significance full of dangerous potentialities, and must have been encouraging for those fugitive criminals, like Enver and Talaat, who hope, like Turkish firemen, to gain something by a widespread conflagration. The Bolshevists will doubtless be less confident as to the aptness of the Orient for their communistic doctrines; but they will hardly abandon their schemes for the destruction of British power and prestige in Asia. However comical may have been some of the incidents at the Baku Congress, therefore, it would be better not to laugh too heartily just yet.

## CYPRUS.

NICOSIA, September 22.

### The Situation.

Even the most strenuous of the Greek advocates of "union" have now realised that little has been gained by means of the last mission to London, and that the outlook is precisely what it was before it started. Two pronouncements stand out; first, that of M. Venizelos, that Cyprus affairs cannot be discussed pending the settlement of more important outstanding problems; and, second, that of the British Government that nothing will be determined regarding the future of Cyprus before the matter has been before the House of Commons. It is clear, therefore, that the petition presented by a body of Greek Cypriots must wait its turn, and that nothing can be gained by impatience. The town politicians now await the verbal explanation of the Deputation concerning the rather cryptic message which announced their decision to return. The Press is adopting a much less jubilant tone, but continues to express unabated confidence that a favourable decision will be arrived at "after two or three months." Several papers now discuss the coming Egyptian settlement, and find in the British attitude towards Egypt an encouragement as regards their own claims. Meanwhile the bulk of the population are, as always, fully engaged in their various occupations without troubling their heads over any political dreams.

The Greek papers devote much space to Hellenic politics, but, like Greeks elsewhere, pass lightly over the fact that Greece has obtained—thanks entirely to M. Venizelos—far more than her most ardent supporters could have ventured to hope for; and hence, it might well be said, the acquisition of Cyprus by Greece is in reality quite beyond the range of reasonable aspirations in the present disturbed state of the Near East. They do, however, now generally recognise that a political change, should it be contemplated in any coming settlements, would certainly be conditional, and that an absolute annexation of the Island by Greece can hardly be expected to come about in any very near future.

The new territories hold out fresh prospects of employment to well-educated Cypriots. The Greek Consul, M. Artemis, has been in Athens, and appears to have come to arrangements regarding judicial and scholastic appointments of Cypriots in Thrace. Lists are to be forthwith submitted, and the Consul has been authorised to pay the passages of those whose appointments will be notified by telegraph.

### New Legislation.

The Legislative Council was summoned to meet on September 11, to consider several draft laws affecting Customs and two new education measures. In connection with the latter the proposed increases in taxation relate to tobacco of different classes and cigarettes, as well as a raising of the property tax of 4 per thousand in town and 2½ per thousand in villages, besides the doubling of the sheep, goat, and pig taxes.

### General News.

Colonel Tompkins has been appointed a Commissioner, and will probably take charge of the Kyrenia district.

The persistent rumours that British troops will be sent to Cyprus, and that the camp at Polemidia, near Limassol, will be reoccupied, would appear to be well founded.

## PALESTINE.

JERUSALEM, September 27.

### An Immigration Ordinance.

As nothing could be worse for Palestine than an unrestricted indux of undesirables, a measure to regulate the entry into this country of persons who desire to reside there permanently or temporarily has been an obvious need. An ordinance passed at the end of August, which came into force this month, is a welcome enactment; and it would be well if its provisions were as widely known as possible in all countries from which any exodus to the Promised Land may be expected. Under its provisions the High Commissioner will regulate such influx according to the conditions and needs of the country. He may appoint a Director of Immigration, and officers "to control the entry of all persons into Palestine." Those who desire to come "by sea, or land, or air" must possess valid passports or papers of identity, and (except in the case of Moslem women) photographs of the holders. They must obtain the authority of the Director or of an officer authorised by him, who may enter any vessel or railway train. Every immigrant must have the means of sup-

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR AND MIDDLE EAST.

*Embodies the following advantages:—*

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Digitized by Google

porting himself and his dependants. Provision is made for medical inspection, the detention of persons to whom permission is refused, and their removal from Palestine. Persons allowed to enter must register within fifteen days at the police headquarters of their district; but this does not apply to *bona fide* travellers or persons in transit to other countries.

The High Commissioner may, under certain circumstances, or should he consider such order conducive to the public good, make an order for deportation, within five years of entry, of any person. Any person who aids and abets or harbours any person who has acted in contravention of the ordinance is liable to severe penalties. The Director of Immigration may, with the High Commissioner's approval, issue from time to time orders or regulations for the better control of immigration into Palestine.

There has been a considerable influx of returned residents, as well as newcomers. More than 100 Jews have recently arrived, and over 400 Germans have sought old abodes in the German quarter.

### Unauthorised Communications.

Another ordinance, which also comes into force this month, aims at preventing the communication of information by any person in an official position to a person not in the service of the Government. The penalty, which is imprisonment up to one year or a fine of £100, or both, may be extended to three years, should the communication be contrary to the interests of the Government. Any paper or periodical publishing such information is liable to a fine not exceeding £100.

### General News.

Sir Herbert Samuel has been making several tours. To the south he has visited Gaza, *via* Ludd, Medjel and Askalon, where he camped and viewed the ruins. He has been for a tour in the Galilee District, visiting Nazareth, Tiberias (Tabarieh) and Safed, where many Sheikhs and notables expressed their warm appreciation of British rule. He dined with the Mufti, and was received everywhere with great cordiality by all communities.

In Jerusalem there have been many social functions. Coming improvements include the widening of several main streets. A service of motor omnibuses is to be established, and will be greatly welcomed.

Much work is needed on the railways, *e.g.*, on the Ludd-Jaffa line. The boundary between Palestine and Egypt is at Rafa.

Land Registries are to be opened in all districts in October.

## NEW TURKISH MINISTRY.

Telegrams from Constantinople dated October 18 announce that Damad Ferid Pasha, the Grand Vizier, has resigned for reasons of health, and that Tewfik Pasha has agreed to form a Ministry on condition that he may choose his colleagues himself. It is thought that the change may facilitate negotiations with the Nationalists, who dislike Damad Ferid Pasha intensely.

## ANGLICAN AND EASTERN CHURCHES.

To celebrate the fourteenth anniversary of the Anglican and Eastern Churches Association, on October 28—the day of the Feast of S.S. Simon and Jude, Apostles—a Solemn Eucharist, with procession and sermon, in the Church of St. Mary-le-Bow, Cheapside, will be held at 11 a.m.; at 7 p.m., in the hall of Sion College, Victoria Embankment, the annual general meeting will be held; and this will be followed by a public meeting at 7.30 p.m., at which speeches will be delivered on the subject of "The Lambeth Conference and the Eastern Churches." There will be a collection for the association and Serbian Church Aid funds.

## SCHOOLS IN TANGIER

According to the *Depeche Marocaine* of August 14, the sum of 4,700,000 frs. of the new Moroccan loan is to be devoted to educational purposes in Tangier. The following are the works on which it is proposed to spend the money:—The completion of the boys' school, 200,000 frs.; the building of a girls' school, 2,000,000 frs.; the construction of two "groupes scolaires," 1,500,000 frs.; the construction of a Franco-Moorish school, 500,000 frs.; and the building of a Jewish school 500,000 frs.

The following information has been received by the Secretary of State for India from the Government of India in regard to the riots which occurred towards the end of September in the tea gardens in the Lakhimpur district of Assam, and of which reports have appeared in the Press. Coolies of eight gardens within a six mile radius of Dum-Duma went on strike for higher wages. They looted the local market and Marwari shops, assaulted an assistant manager and garden officers, and damaged officers' bungalows. Superintendent of Police Furze went to the spot with police, but he and the constables were assaulted. A few platoons of the Assam Rifles were despatched, and order was restored. No further disturbance has occurred.

## THE BRITISH INSTITUTE OF FLORENCE.

British and Italian interests meet in the Balkans, and this fact justifies a reference in these pages to a British institution in Italy which has for its object the promotion of intellectual relations between Great Britain and Italy. The British Institute of Florence was founded in February, 1918, by His Majesty's Government, and was formally opened in June of the same year by the British Ambassador to the Italian Court. The Institute was intended to create in Italy a wider knowledge of the English language and of British life, literature and institutions; it was also hoped that it would serve as a meeting ground for English and Italian men of letters. Premises were taken in the Via dei Conti, Florence, which included two lecture halls, a reading-room, several rooms for the library, four class-rooms, and other rooms for offices. Special attention has been given to the training of Italians who are to teach English in the middle schools of Italy; the Institute also publishes six times a year a review, *La Vita Britannica*. In the first year of its existence the Institute, under the direction of Mr. A. F. Spender, had two hundred and fifty pupils. Unfortunately, like many other creations of the war, the Florence enterprise has reached the period when the financial support of the British Treasury can no longer be counted upon. A final grant, considerably reduced, it is understood, has been made for the current year, but the Institute has been fortunate enough through the generosity of an Englishman resident in Italy to obtain the balance of the funds required. No establishment, however, can achieve maximum efficiency if it is forced to live a hand-to-mouth existence, and the British Institute of Florence deserves to be placed on a footing which will enable it, without the recurrence of yearly anxiety, to plan far-reaching programmes of usefulness for the future.

Many of those who have been to Italy or are accustomed to visit the country, will be glad to know of a practical way in which they can help to spread the knowledge of their language, ideas, and culture for the betterment of the relations between Great Britain and Italy.

Mr. Ramsay Macdonald, Mrs. Snowden, and Mr. Tom Shaw, M.P., British delegates, M. Renaudel, French delegate, and M. Vandervelde, Belgian delegate, have concluded their mission to Georgia, where they met members of the Government and representatives of the working classes. The British delegation has returned to London, and Mr. Ramsay Macdonald, since his return, has had an interview with a representative of the Georgian Legation.

## ENQUIRY BUREAU.

*Readers abroad desirous of getting in'o touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.*

*Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."*

*ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.*

*No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.*

### Agents Wanted Abroad.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be redirected to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

101. A correspondent in Lagos, Nigeria, wishes to get into touch with manufacturers of Arab red fez caps.

102. A stamp collector wishes to purchase used Austrian stamps prior to the 1882 issue. Stamp dealers in the liberated provinces of Austria are asked to send bulk packages of such stamps to the care of the Editor of THE NEAR EAST, with the price in kronen of each stamp or price per dozen, per 100, etc., of each kind. All stamps required will be paid for at the price indicated and the rest returned. Newspaper stamps are not required, but rare postmarks should be included.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

107. Old established Turkish firm handling general stores situated in Smyrna and having branches in the interior invites exporters to quote prices for groceries. The firm also acts as agents for articles of general consumption in Asia Minor.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

## M. TAKE JONESCU'S VISIT.

A luncheon was given by the British Government at the Carlton Hotel on October 15 in honour of M. Take Jonescu, Roumanian Foreign Minister. Lord Curzon presided, and among those present were: M. Titulesco (Roumanian Minister of Finance), Lord Crawford, Lord Bessborough, Lord Burnham, Mr. Ian Macpherson, M.P., Sir Eyre Crowe, M. Boerescu, M. Stoicescu, Lieutenant-General Sir J. Hanbury-Williams, Rear-Admiral Sir C. Lambert, Sir H. Creedy, Sir A. Hardinge, Sir Charles Stewart-Wilson, Lieutenant-General Sir G. Macdonogh, Sir M. Hankey, Sir J. Tilley, Sir W. Grey-Wilson, Sir A. Stern, Sir W. Tyrrell, the Lord Mayor of London, the Dean of Westminster, Sir A. Rollit, Colonel R. Rosetti, Rear-Admiral E. F. Bruen, the Hon. A. Nicholson, M. Vladesco, M. Nano, Mr. R. H. Campbell, Mr. J. Conway-Davies, Mr. H. Wickham Steed, Mr. J. A. Spender, Mr. H. T. Montague Bell, Mr. F. W. Emett, and Mr. A. Leeper.

Earl Curzon, in proposing "Our Guest," said that M. Jonescu was known throughout Europe as a man who had devoted himself to the study of foreign affairs, not merely in his own country, but in their international aspect. There was no statesman in Europe who, because of his knowledge and experience, stood in greater respect or carried higher esteem than his Excellency. M. Jonescu was specially endeared not only to the English, but to all the great Powers that had fought and won the war. From the earliest days he had been the devoted friend and adherent of the Allied cause. In good report and ill he had never wavered for one moment. In the anxious days of six years ago, when some men took one side and some another, and even his own countrymen took different sides, this illustrious statesman never wavered. He gave his advice to his countrymen, and they wisely followed it. M. Jonescu had been a great deal in this country, and was familiar with the characteristic institutions of our time and the liberal ideas that prevailed in the world at large. It was with great pleasure that they saw him for the second time Minister for Foreign Affairs in his country, and they hoped that his term of service might be prolonged to the advantage not only of his own country, but of the Allies. Roumania had a great and vivid interest for Englishmen. Her Sovereigns were well known here. The Queen of Roumania, a very able woman, was an English Princess, and we felt drawn to the ruling family of Roumania by domestic as well as international ties. Roumania suffered terribly in the war; no one of the Allied States suffered more. With a cruel enemy in possession of her capital and a great part of her country, she experienced not only the rigours of warfare in fighting, but all the hardships incidental to a long occupation of her territories. Through all these dire events the spirit of her Sovereign, statesmen, and people never faltered, and now, at the end, she emerged a great State, the outpost of civilisation and culture in the East, with a powerful present and an assured future. As a recompense for her sacrifices six millions of Roumanians, previously torn from her, had been added to her national stock. He was very glad to have borne a humble part in that reunion, and congratulated their guest upon the attainment of his national wishes. When all these matters were cleared up they would find Roumania, numbering sixteen millions of people, a very powerful and closely consolidated State, whose influence on the populations and countries in Eastern Europe must be very great. At present Roumania required peace, not an evanescent and ephemeral, but a permanent peace with her neighbours, and nothing gave him greater pleasure than to read in the papers how the mind of Eastern Europe was moving in the direction of close alliance and co-operation among the Eastern States, in which Roumania must play an important and prominent part. He warmly sympathised with his Excellency's object in his journey for the extension and consolidation of these States. M. Jonescu had come to this country to obtain assistance—financial and otherwise—and if he could settle external affairs and if Roumania, partly by her own efforts and partly by foreign assistance, could build up her internal resources, great would be his achievement and honourable his fame.

M. Take Jonescu, who spoke in English, said that he knew that it was only for Roumania's sake that they had exaggerated his merits. Reference had been made to the two years during which Roumania remained neutral and to when she drew the sword on the side of the Allied cause. If he was proud of one thing it was that he had never said to his people that he promised them victory. He never said that a nation should fight only when it was certain of success, or that it should fight only for national unity, which was a matter of the greatest necessity to them. There was something even greater than that. This had not been a war, like others, between Governments and nations, but, as they hoped, the last struggle between right and might, civilisation and barbarism. They had only done in a small way what England had done on a large scale, but what they did was for the sake of civilisation. Although their services were as nothing compared with what England had given, they had achieved their dreams of more than a thousand years, and were now in a position to show whether or not they were worthy of the sacrifices that had been made for them. They would feel gratitude for ever, and would do what they could to show it. They had already secured social order by the largest agricultural reform ever carried out in any country without revolution, and had now to face only economic and financial difficulties, which were much easier than social difficulties. For external politics they only wanted peace. The British Empire had always been the most pacific, though the most heroic, of nations. War was such a calamity that if we had a new general war the social fabric of all countries would be broken for ever, and the time for little wars and little combinations had gone. The endeavour was to create such a feeling of union between those who had emerged from the war happy and victorious that nobody could oppose them without the knowledge that the price would be so heavy that they could not succeed. Roumania would always be the friend and ally of the British Empire, where liberal institutions were born, and of the British people, who had set an example to all civilised peoples.

On Saturday, October 16, Monsieur and Madame Take Jonescu were the guests of Monsieur Michel Boerescu, Minister Plenipotentiary and Chargé d'Affaires, at a luncheon at Claridge's Hotel. The gathering recalled one of the main objects of the Roumanian Foreign Minister's visit to London, as it was essentially an embodiment of the Little Entente scheme expanded to the limits proposed by M. Take Jonescu himself, for there were present the Ministers in London of Czecho-Slovakia, Yugoslavia, and Greece. The Minister for Poland would also have been there if he had not been compelled to leave for Paris the previous day. The large company of guests included M. Titulesco and M. Stoicescu, Lord Burnham, Sir A. Hansell, Colonel Rosetti, and many ladies.

The Roumanian Minister entertained a further company to dinner at Claridge's Hotel on October 18, when Monsieur and Madame Take Jonescu were again the chief guests.

## M. STAMBOLISKY.

The first week of the Bulgarian Prime Minister's visit to England was concluded on Saturday; he has had few leisure moments since his arrival. On October 13 a busy day was spent at Bedford; the following morning he left early by car for Cambridge, and it was past ten o'clock at night before he returned to London. On the way to Cambridge a visit was paid to Letchworth Garden City. Arrived at the University, M. Stambolisky was entertained to luncheon by Mr. James Bourchier at King's College. Among those who were present to meet his Excellency were the Vice-Chancellor, the Master of Emmanuel, the University Librarian, Mr. Jenkinson, the Vice-Provost of King's, Mr. John Walter, Colonel Villiers-Stuart, Mr. Noel Buxton, Sir Clifford Allbutt, Mr. H. A. Roberts, and Mr. de Beaumont. The Bulgarian members of the party were M. Madjaroff, Charge d'Affaires, of Bulgaria; M. Stancioff, Minister Plenipotentiary; Mdlles. Stancioff and Popoff; M. Kissimoff and MM. Radkoff and Mamartcheff, Secretaries of Legation. The Foreign Office was represented by Captain Heard, British Commercial Secretary in Bulgaria, and the Ministry of Agriculture by Mr. D. Stuart. In the afternoon M. Stambolisky inspected the School of Agriculture and the University Experimental Farm, and subsequently visited King's Chapel, Trinity College, and the University Library.

Friday, the 15th, was no less strenuous a day; after a series of interviews in the morning he lunched with the London Chamber of Commerce, and subsequently addressed a meeting of that body. His speech will be found on another page in this issue. Later in the afternoon M. Stambolisky was present at a reception given in his honour by Sir Edward and Lady Grogan, and afterwards dined with Mr. and Mrs. Noel Buxton. On Saturday, accompanied by his Bulgarian suite, he visited the printing works of Messrs. Waterlow, near Watford, and was entertained to lunch at Harrow by Sir W. A. Waterlow. The party then proceeded to Highclere Castle, Newbury, as the guests of the Earl and Countess of Carnarvon. Among those assembled at Highclere were Lady Victoria Herbert, Mr. and Mrs. Leland Buxton, Sir W. E. Garstin, Sir Marshall Reid, Mr. D. G. Hogarth, Mr. J. D. Bourchier, and General Keyes. On Sunday afternoon M. Stambolisky and the Bulgarian party left for Birmingham.

## "THE EGYPTIAN PROBLEM."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I can assert that not a few persons who know Egypt, and have studied the situation in the country, consider that it would contribute towards a happy solution of the problem now under consideration, if educated Egyptians who do not know English could peruse in their own language what is written by leading Englishmen. Indeed, every week shows that the lack of a healthy propaganda in Eastern countries is still a weak point requiring attention. I would refer especially to Sir Valentine Chirol's work, "The Egyptian Problem."

Many thousands of Egyptians would be glad to read this book, if translated into Arabic. They would realise the fairness with which the subject is handled. It shows that the British occupation, while it has brought inestimable benefits to Egypt, has in reality done nothing to deprive Egyptians of progress towards independence. It admits grievances and a share of British responsibilty in respect of circumstances that led to the anarchical deadlock of 1919. It presents a well-considered sketch of Egyptian nationalism, and would help native readers to reflect wisely on the difficult task which lies before their leaders, and on the need of a friendly British alliance and guidance, in view of the lack of experience in administration, and of any foundations of native growth upon which they could build in the coming experimental period of self-government.

There could be found, I believe, in London, persons thoroughly competent to carry out a faithful translation, and, if so, I would urge that one should be taken in hand as soon as possible, and that help, if needed, should be given in the right quarter, or quarters, towards so desirable an undertaking.—I am, etc.,

October 18. ROLAND L. N. MICHELL.

## AN APPEAL TO YUGOSLAVIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I ask you to publish the following appeal?—I am, etc., KENNETH K. LEDWARD, Lt.R.G.A., F.R.G.S.

October 1, 1920.

To the people of Yugoslavia!

When, six years ago, Turkey blindly followed her German mentors and plunged into the war on behalf of the oppressors, the writer addressed an appeal to the people of Bulgaria not to follow her example, but to form a United Balkan Confederation on the Entente side in order that each State might reach, as a reward of victory, its full ethnical boundaries. Unhappily, the weak-kneed diplomacy of the Western Powers and the duplicity of the Bulgarian "Tsar" and his Prime Minister, M. Radoslavoff, brought that country in on the wrong side against the will of the Bulgarian people, whose wishes were never consulted, and who were tricked by their rulers. As a result, your unhappy country was overrun on all sides, and those Serbs who escaped death or slavery had to taste the bitterness of exile.

Those clouds are now happily dispersed: the dauntless valour of the reborn Serbian Army at Dobrepolye brought the Allies from Salonika and Bitolj to Skopje, Nish, and Belgrade. Your country was freed of foreign oppressors; nay, more, by the break-up of the Hapsburg Empire your national unity was well-nigh achieved by the union of Bosnia, Dalmatia, Croatia, and Slovenia with the mother land. Bright is the future of the new Yugoslav Empire, and there are few in this country who do not rejoice at it and wish you well. Yet a word of advice will not, I hope, be deemed impertinent from one who strove in the pages of the Press to keep Bulgaria neutral in 1915, and who subsequently was proud to shed blood for a cause in which the unification of the Southern Slavs was one of the most cherished principles.

In this appeal a friend of your race invites you, for the sake of future peace, not as a "Bulgarophil," to be moderate in your hour of triumph and generous to your late enemies, however bitter may have been your feelings towards them.

The Treaty of Neuilly allowed you a rectification of frontier for "strategical reasons," which will give you the purely Bulgarian towns of Tsaribrod and Basilograd. To Bulgarian Central Macedonia you would add yet other Bulgarian districts. From the declarations of M. Stambolisky, Bulgaria's Premier, who himself suffered imprisonment for opposing Ferdinand's attack on you, you will see that Bulgaria is eager and willing to cultivate friendly relations with you. Forget the past, or, if you must remember 1915, Ferdinand's conduct was no worse than that of Milan in 1885, when there was no Treaty of Bucharest to leave the Balkans in a ferment.
