SUDAN

A PERFECT WINTER RESORT

KHARTOUM, a modern town, at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING

The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

Express Steamer and Dining and Sleeping Car Services between Cairo and Khartoum.

SUDAN GOVERNMENT RAILWAYS AND STEAMERS,

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Box and Cox in Albania.

If Albania must have a revolution every six months, it is well that each should be as nearly bloodless as possible. When Mgr. Fan Noli raised the standard of revolt last June, the Government of Elias Bey Vrioni fled precipitately to the coast and escaped abroad. Ahmed Bey Zogu, who, although not at the time a Minister, was the power behind the Cabinet, put up a nominal struggle, but eventually sought refuge on Yugoslav territory. The casualties in the course of such fighting as took place were not serious. Now comes the turn of Ahmed Bey Zogu, who, from the friendly shelter of Belgrade, has been able to engineer a counter-revolution, and, without meeting with any resistance worth mentioning, has successfully established himself again in Tirana. Mgr. Fan Noli, the late Prime Minister, emulated the discretion of his predecessor and fled by way of Valona to Italy. The ease with which Ahmed Bey Zogu has turned the tables on him suggests that during his brief tenure of office Mgr. Fan Noli was more concerned with administrative or other measures than with strengthening his own position or the defences of the country. This is, in a way, to his credit, although it has led to further unrest in the country. Albania, however, now has this advantage—the pendulum will not swing quite so easily in future, for the reason that, when revolution becomes established as a national industry or pastime, the country is liable to suffer from the drawbacks of publicity. Ahmed Bey attracted little or no notice during his recent stay in Serbia; Mgr. Fan Noli, on the other hand, if he were tempted to convert, as his rival did, the fleshpots of exile into munitions of war, would find that a much sharper watch was being kept on his movements. His wiser policy would be, therefore, to come to terms with Ahmed Bey Zogu.

An International Nuisance.

It is high time that Albania took itself seriously, even if other people find difficulty in doing so. If the Albanians as a whole have nothing better to do than to range themselves behind anyone who offers to upset the *status quo*, it is the duty of those who claim to be their leaders to see that the opportunity for indulging in the sport is denied them. No one outside the country will want to inquire into the rights or wrongs of the quarrel between Ahmed Bey Zogu and Mgr. Fan Noli. The fact that the Government of the one is supposed to be pleasing to the Yugoslavs, while that of the other is preferred by the Italians, ought to be sufficient to bring the two men together in a common effort to promote the interests of Albania without foreign interference. Ahmed Bey Zogu is credited with being Albania's master mind; Mgr. Fan Noli has knowledge of the outside world which the new Prime Minister lacks, and has played a creditable part on behalf of Albania in the League of Nations. There would seem, therefore, to be special reasons why the two should try to work together for their country's good. They represent, no doubt, conflicting schools of thought, Ahmed Bey standing for a feudal system of government, while his rival has more modern ideas. If, however, each could agree to refrain from working for his own interests, they might between them evolve a suitable administration for Albania, or, in any case, confer upon the country the boon of a few years' freedom from political upheaval. As a result of the agreement recently reached in Rome, it is to be hoped that both Italy and Yugoslavia will refrain from trying to persuade their respective *protégés* that they are individually the salt of the earth, or, at least, of Albania; but will rather bring home to both the fact that, unless they turn over a new leaf, they are qualifying to be regarded, together with their country, as international nuisances.

Communism in the Balkans.

It matters little what serves to bring Yugoslavia and Bulgaria together, provided that the two Governments have an opportunity for a friendly discussion, which, it is to be expected, will range over a variety of subjects. The main purpose of the Bulgarian Prime Minister's visit to Belgrade is said to be to arrange a basis of co-operation against Bolshevist intrigues in the Balkans. These intrigues, as all other intrigues from whatever source, batten on suspicion and mistrust, and the Soviet régime in Russia has merely taken advan-

Digitized by Google

tage of a state of affairs provided it by the Balkan peoples. Accordingly, the best weapon against the danger is to remove the suspicion and mistrust as between the various countries, and in each country to remove the causes of the violent political antagonisms by which practically every State is racked. Communism in Bulgaria would, now at least, make a very poor showing, for all Moscow's help, if it were not for the fact that a large proportion of the peasants, strongly anti-Communist at heart, had been led to suppose that they stand to gain more from the Communists than from the bourgeois parties. They are undoubtedly mistaken, but Communism remains a menace until they are convinced by practical measures of their error. In Yugoslavia the Soviet propagandists have known how to use to their advantage Croatian dissatisfaction with Serbian centralisation. The Belgrade Government is now reported to have decided to dissolve the Croatian Peasant Party, depriving its members of the right to take part in the coming General Election, on the ground of its relations with Soviet Russia. Active steps against the insidious propaganda of Bolshevism are undoubtedly called for; but it is to be hoped that M. Pashitch's Government will not be led to suppose that, because the Raditch party has been eliminated, a rigid system of centralisation has become more popular in Yugoslavia.

Macedonia's Problem.

Macedonia for the moment has ceased to be a problem for others, and has, instead, a problem of her own. Internal dissensions have preoccupied the Revolutionary Organisation ever since the murder of Todor Alexandroff. The trouble started with the enlistment of Soviet aid by a section headed by Peter Chaüleff, one of the governing Triumvirate. His action was repudiated by his colleagues, Alexandroff and M. Protoguéroff, and shortly afterwards Alexandroff was murdered. No fewer than four prominent members of the Communist section in the organisation were killed by way of reprisal; but Chaüleff escaped. He was, however, condemned to death, and the man to whose lot it fell to execute this order has at last run him to earth in Milan, where he was shot in a bar in the centre of the city on December 23. Nothing could be calculated more to alienate foreign sympathy with the Macedonian movement than the events of the last six months. It is difficult to recommend autonomy for a people who prefer to settle all disagreements by assassination. Moreover, those under whose jurisdiction such a people is placed are provided with a strong argument for employing brute force as a corrective to murder tactics. M. Protoguéroff, the surviving member of the Triumvirate, is thus left with the task of bringing the Macedonian movement into constitutional channels or of watching the gradual elimination of the Macedonians by violence from within or without.

Egypt Divided.

The Egyptian Parliament has been dissolved, and new elections will take place on February 24. It cannot be said that the outlook for the country is promising, unless the electorate is capable of realising, and of recording its conviction, that Zaghloulism is hopelessly unpractical for Egypt's immediate needs. The election manifesto signed by Zaghloul Pasha shows that the Nationalist leader has learnt nothing from recent events in the country. He indulges in a bitter denunciation of the Government, without apparently any admission that the circumstances governing Ziwar Pasha's actions were beyond his control and were, indeed, the direct outcome of Zaghloul Pasha's own policy. The return to power of the Zaghloulists must almost inevitably lead to a further tightening of Great Britain's hold; for it is out of the question that this country should tolerate a continuance of the only tactics of which Zaghloul Pasha has shown himself capable. It would be well if the Egyptian electorate could face this elementary fact. Great Britain sincerely desires to see Egypt managing her own affairs and to reduce British responsibility to a minimum; but no British Government can allow itself to be dragooned by a murder campaign or by any other methods. Egypt has paid heavily for Zaghloul Pasha's mishandling of the situation, and the only way out of the present unsatisfactory position is to place abler men in power, who are capable of governing and will not allow Egypt's policy to be dictated by a handful of students or desperadoes. Great Britain does not ask Egypt to be less Nationalist, but merely more practical.

INDIA.

The Old Year.

A year ago we wrote of India as prosperous but perplexed, and the description still holds good, but there are indications that some at least of the perplexities are being slowly straightened out. Extremist politicians indeed will, we fear, dissent from this view. On the one hand, they are committed to the fantastic creed of progressive impoverishment, and consequently they are bound to ignore such obvious facts as the flood of imports of gold, which show that the country has money to spend, though the method of spending may be wasteful. On the other hand, their own little perplexities, which they are apt to confuse with those of the country, are as troublesome as they were twelve months ago, and as we write they are trying to accomplish at Belgaum what they failed to do at Coconada, and heal their breaches with a salve of formulas. In private, we believe some of them have come rather closer to reality during the year, but they cannot be expected to say so in public just yet, and their deliberations, if the word be appropriate, are of much less importance than the tendencies which are in operation elsewhere.

Liquidation.

In two directions in particular the outlook has become clearer during the past year. The question of the Khilafat has not been settled, for Indian Moslems cling to the institution, or rather to their conception of it, unhistorical as that conception is, and desire to see an end of the present interregnum, but it has passed, we hope for ever, out of the region of Indian politics, to which it never really belonged. In the Punjab again, the openly rebellious movement of a section of the Sikhs shows signs of giving way, now that the slow-witted countryside has at last thrown some of its weight into the scale of common sense. In these respects, at any rate, things are better than they were, and if we take the long view it is possible to say the same regarding the tension between Hindus and Moslems, which at the moment is the ugliest thing in India. In this case liquidation must be a tedious business at the best, and it may perhaps be said that the first step towards it has been taken, now

that the facts of the situation have been impressed on people who had kept their eyes shut for so long.

The Prospect.

The real hope for India lies, as we have often said, in an extension of the area of public life, and the consequent destruction of the closed circle within which a small number of active politicians delight to play. This change, too, can only be slow, but there are signs that it has set in, and, once started, it is not likely to be checked. The mobilisation of opinion in the Sikh countryside does not stand alone. In the Deccan the growing non-Brahmin movement derives its force largely from the soil, and we shall not be surprised if the sturdy peasants of the Central Provinces decide shortly to take a hand. Moslem opinion, too, is gathering force, especially in Bengal, where the community consists largely of peasants, and from other rural areas we hear whispers that the people are, at any rate, beginning to think. If the Indian ship of state has taken a somewhat erratic course in recent years, the fault has lain largely in the want of ballast. As we wrote recently, the most important thing now is to bring the forces of rural stedfastness into play, and the indications are that the year which opens to-day may witness definite progress in this direction.

THE WEEK AT HOME.

London, Tuesday Morning.

Christmas.

The traditional spirit of Christmas was this year much more widely remembered and indulged in than it has been at any time since the War. Not only was the holiday fortunate in its incidence—most people being able to avoid the dull routine of daily work from Wednesday night until Monday morning—but there was undoubtedly a more contented atmosphere about. This sense of stability was shown in various ways, but most notably in the abundance with which people showered about presents and Christmas cards (said a few years ago to be a doomed industry). The mails were heavier than they had been for a long time.

In general, then, content and a sense of peace prevailed. But the weather was a dazzling exception. It was as unlike Christmas as possible. Mild and rainy at first, it wantoned a few hours away in brilliant sunshine, and then, on Boxing Day and after, blew and tugged itself about in a sixty-mile-an-hour rage. Really it was the gustiest holiday that I can recall. Traffic and people were swept off the roads, which became quite desolate. Driving through London on Christmas and Boxing Day, one met scarcely anyone; even the taxi-drivers, one had to suppose, were somewhere enjoying a rich retreat.

On Saturday night, at a late hour, things took on a more festive appearance, and the West End, with its wet, glistening streets reflecting all the electric signs, became for children, both real and temporary, a fairyland of delight. Every available automobile seemed to have been chartered for theatre parties, and getting from Piccadilly Circus to, say, Cambridge Circus was like being in a bus in Oxford Street on the worst days of the Christmas shopping.

The Journalists' Respite.

One found on Christmas and Boxing Day, when no newspapers were published, that those superior people who affect to despise journals were in a sad minority. There was a real thirst for news, which was the more unassuagable in that the holiday interrupted the Test Match at Sydney. When, however, news of that event did come through, it was satisfactory—quite good enough, in fact, to cause more than one enthusiast to "have another" for the sake of the health of Gilligan's team.

The poor journalists really were the sole people to benefit from the two-days' absence of news, but there is no question that they as much as anyone deserved a respite. For they are, whatever we may say at other times about them, quite indispensable.

In Cobbett's Line.

Mr. T. H. W. Crosland, who died last week, made many enemies, but he cleft a mark in the history of his time. The vigour of his words was combined with conviction and with wit, and he will, I imagine, have gained a place in that distinguished band of strongly literary journalists which includes Cobbett and Cecil Chesterton. It was the fashion, in the pusillanimous "notices" of his death, to praise his verse at the expense of his prose—as if, indeed, "The Unspeakable Scot" were not still a thrilling delight, but the truth is that little of his actual work will survive for its own sake. Crosland will be remembered as one of the few journalists of our modern time who expressed his opinions without fear and certainly without favour; it was not so much his opinions as his expression of them that marked him from his fellows. He will, in short, be forgotten when the leader-writers of, say, the *Telegraph* and the *Spectator* are remembered—but not till then.

Christmas Accidents.

One always seems to pick up the newspapers of December 27 with presentiment of reports of holiday accidents, but this year people were more than usually horrified by the disaster to the air mail which befel last Wednesday. The air services from England to the Continent had been so safe and so consistent that this unhappy accident came as a real shock. How it happened may never be found out, but it is extremely satisfactory to know that other passengers were not deterred by it from flying. Those who have had actual flying experience are the last, in fact, to be apprehensive of disaster to the aeroplane.

1924 Publishing.

If there be anyone who can take heart from the fact that 1924 was a "record" year in the number of books published, one must, as Shakespeare says, commend him to his own content. There are those who would even introduce the word "progress" *à propos* of the fact that during the last year 327 more books have been published than in

the previous "record" year of 1913. Nor is it really instructive to see how the figures compare with last year's. Fiction, of course, maintains itself at the head in frivolous, moribund splendour; but books on Technology, Science, History, Medicine, and Geography have all decreased. So, too, have those on Education, Military and Naval, Philology, Agriculture and Gardening, and Domestic Arts. To some minds these decreases appear as serious, and are scarcely compensated by the increases in Biography, Descriptive Travel, Religion, Poetry and Drama, Games, and Sociology. The general conclusion is that there has been a slight gain on the part of the lighter side of literature; but even that is not certain. What is quite obvious is that the publishers either enjoy unusual prosperity or have uncommon audacity.

Mr. William Archer.

Mr. William Archer, who died the other day, was in some ways a typical product of the later nineteenth century, at once an agnostic and a scholar, sincere but—it must be confessed—dull. As a dramatic critic the authority of his statements could not be questioned, but we know, even in our own time, how unpersuasive those learned critics are who do not leaven their writings with humour or satire. Simply, we cannot in these later days be so painfully in earnest about the value of the stage. As a translator of Ibsen into English Mr. Archer performed a considerable service. Whether that service was of benefit to English drama and letters is perhaps an open question, but in all probability the propaganda stage of the drama was an inevitable one in any case. And of Mr. Archer as dramatist I am not competent to speak, having seen neither his early plays nor "The Green Goddess." But there is no doubt that the austerity of his views immensely impressed a great many clever people, and it was probably not his fault that their conversion to Ibsenism has not been permanent.

The Work at the Mint.

There were few things more pitiable just after the War than the work of the Royal Mint. Some of the War medals issued were appallingly inartistic; nor was the merit of certain coins much higher. But there has since that time been a very great improvement, and, as shown by the Report of the Deputy Master and Comptroller for 1923, the Mint has really regained its place as the centre of the art of medallic design for Britain and the Empire. Its authorities are freely consulting unofficial experts, and it is suggested that the Mint should accept work, in the execution of medals and seals, for non-official bodies. Quite often the value of such an industry is not perceived until some centuries after it has decayed; but the art of medallic design is in truth one well worth fostering.

NEWS IN BRIEF.

King Hussein arranged to leave Akaba on December 29 for Basra.

The second son of the Amir of Afghanistan, a boy of one year, died at Kabul on December 19.

Prince and Princess Arthur of Connaught, who are touring in India, left Calcutta on December 28 for Bikanir.

It was reported last week from Baghdad that formal ratifications of the Anglo-Iraq Treaty had been exchanged.

The Queen of Iraq arrived in Baghdad recently from Jeddah. She was met by her son, the Crown Prince, and the Mayor of Baghdad.

Mr. Howard Carter arrived in Cairo last week from Europe, and hopes to resume excavation work on the tomb of King Tutankhamen next month.

The New Year's Day proclamation parade at Delhi will be attended by eight naval officers and 140 ratings on a sight-seeing visit from "H.M.S. Chatham."

The Earl of Reading recently unveiled, in Calcutta, a statue of Lord Ronaldshay in commemoration of his term as Governor of Bengal from 1917 to 1922.

The inquiries made by the Roumanian police following upon the arrest of 430 Communist members of various secret terrorist societies have resulted in the alleged discovery of three organisations supported by Soviet money.

The Bulgarian Premier, M. Zankoff, arrived at Belgrade on December 26, and conferred with M. Pashitch. He left for Bucharest last Sunday. His object is to co-operate with Yugoslavia and Roumania in forming an anti-Bolshevist front.

An Institute of Jewish Studies in the new Hebrew University, Jerusalem, was opened December 22, in the presence of Sir Herbert Samuel, the High Commissioner. It was emphasised in the speeches that the University was open to all nationalities and creeds.

The International Court of Justice will hold an extraordinary session on January 12, 1925, in order to deal with the controversy between the Greek and Turkish Governments as to the interpretation of the word *établis* in the Convention for the Exchange of Populations.

The Indian National Congress last Friday passed a resolution ratifying the pact between Mr. Gandhi and the Swarajists which suspends non-co-operation and allows the Swarajists to represent the National Congress in the Legislature. Hasrat Mohani was among the opponents of the resolution.

According to *The Times* Cairo correspondent, King Fuad has approved the appointment of Ahmed Bey Hassanein, the well-known Egyptian explorer, at present First Secretary of the Egyptian Legation in Washington, as First Secretary in London, vice Mahmud Bey Sabet, who goes in the same capacity to Rome.

In view of delays which have occurred in paying gratuities to Indian police officers who have been wounded and pensions to dependents of those killed on duty, the Indian Government has addressed a strong circular to the local governments urging that every possible step should be taken in future to avoid such delay.

Mr. Meyer Elias Sassoon, of Bombay, India, of Port Breton, Dinard, France, and of Hamilton Place, Park Lane, London, W., of Messrs. E. D. Sassoon and Co., Ltd., merchants, of Bombay, who died on November 5, aged 69, left, exclusive of property abroad, estate in England of the gross value of £64,636, with net personalty nil. His will opens with the following statement:—"Being the descendant of Jewish ancestors, who, having left Baghdad, settled upwards of a century ago in India, and having myself been born in Bombay, my domicile of origin is British Indian," and he added that it was his intention to retain such domicile.

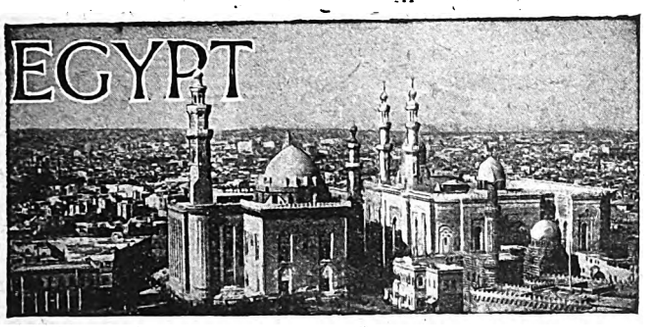
The Near and Middle East.*

From Our Own Correspondents.



Cairo, December 20.

Parliament.

The period for which the King adjourned the House expires on Christmas Eve, but it seems certain that it will not be allowed to reassemble. In all probability, long before this reaches you, the decree dissolving the present Parliament and ordering new elections will have been promulgated.

Dissolution was clearly forecast in Ziwar Pasha's final reply to the petition presented by the Deputies for a reduction in the period of adjournment. The Prime Minister, in notifying that he had advised the King to reject the petition, pointed out that the special circumstances that had prompted the adjournment still existed, and that the atmosphere was so charged that a resumption of Parliamentary debates would merely further excite the spirits and aggravate the situation. Everyone is, indeed, making preparations for new elections, which it is expected will be fixed for either the last week in February or the first week in March.

An indication of the change in feeling has been forthcoming in the by-election in Sharkia, where the Wafdist candidate only obtained one-third of the majority that his deceased predecessor secured, and in the elections for the Native Bar Council, which, in spite of obstructions set up by the Wafdist element—to cover the defeat which it anticipated—resulted in the election by an unprecedented number of votes of a non-Wafdist leader and non-Wafdist members of the Council. It may here be added that the three more important Wafdist candidates who held in the last Cabinet the portfolios of Public Works, Communications, and Wakfs, and who took a leading part in the obstructive tactics at the election meeting, were at the bottom of the poll with but one vote apiece.

These two events are certainly an instructive indication of the way the wind is now blowing, but the appearance of a non-Wafdist majority in the Chamber will largely depend on the activities which the Liberal Constitutionals and Watanists display during the electioneering campaign, and the extent to which the people are convinced that the Wafdists will not be allowed again to take office.

The Government's Work.

The present Government is steadily repairing the injustice and harm done by its predecessor. I reported a week or so ago that Aly Gamal Eddin Pasha, who had been dismissed in such disgraceful fashion by the Wafd and replaced as Under-Secretary of State for the Interior by Nokrashi Effendi, had been reinstated in that post, from which Nokrashi had been dismissed as one of the first acts of the new Cabinet. This week Hilmy Issa Pasha, Mudir of the Gharbia, who had been dismissed by the Wafd for his actions during the elections in trying to stop intimidation of electors and had been shamefully prosecuted, was appointed Additional Under-Secretary of State for the Interior, where he will superintend the coming elections; while his successor at Tanta, whose only qualification was that he was a rabid Wafdist, has been put on pension and replaced by Rashwan Mahfuz Pasha, another Mudir who, like Issa Pasha, had been dismissed and prosecuted by the Wafd for similar reasons. In addition, so many complaints have been received with regard to the injustice done to Omdas all over the country under the late régime, which carried out wholesale dismissals of any who did not subscribe to its views, that the Cabinet has appointed a special commission to investigate every case and recommend what action should be taken.

Al Azhar.

All these measures cannot fail to have their effect on the prospects of the Wafd at the elections, and what may be considered as a further blow to that party is the decision of the Council of Ministers to appoint a special committee under Sidky Pasha, the Minister of the Interior, to examine and report, with the utmost dispatch, on the grievances of the inmates of Al Azhar.

The Wafd must indeed bitterly regret its procrastination in this matter. Al Azhar had always been its great ally, but about six weeks ago it struck and adopted a hostile attitude towards the late Cabinet on account of the non-satisfaction of its demands, submitted and reported upon earlier in the summer. The Wafd lost an invaluable opportunity of strengthening its relations with this element, and now the intervention of the present Government has converted Al Azhar into a strong asset and drawn a formidable force on to its own side against the Wafd.

The London "Plot."

Much surprised amusement has been caused among the foreign communities here by the news of the measures taken in London to protect Cabinet Ministers from the plot which was said to have been hatched in Egypt against their lives. As far as can be ascertained, no positive informa-

tion was conveyed to London, merely a warning that it had been said that such a scheme had been talked about in certain Egyptian circles. It was certainly never thought for one moment that the authorities in London would be seized with such a panic as the measures taken would indicate, or that they would allow such publicity to be given to their precautions.

We out here, who live in the midst of plots and during the past five years have without any special protection daily had to run the gauntlet of assassins, who shoot from behind, cannot restrain a smile of pity for the perturbation which a mere rumour has caused in high circles in London. It is certainly sincerely regrettable that in London such a serious view should have been taken of the matter, not merely because of the ridicule it has aroused, but also because of its effect on the irresponsible "boys" in Cairo, who are daily giving expression, without any idea of executing them, to just as wild and foolish notions, for they, seeing the stir caused by this wholly unconfirmed rumour, will be encouraged by the conviction, which the telegrams received here certainly will convey to minds such as theirs, that their vapourings can make British Cabinet Ministers tremble in their shoes.

YUGOSLAVIA.

Zagreb, December 18.

The Forthcoming Elections.

Public interest is centred exclusively on the forthcoming elections, or, rather, in the preparations for them. Neither Dr. Nintchitch's journey to Rome and the questions of Fiume and the Adriatic in connection with it, nor current events in Albania, notwithstanding the gravity of their importance, especially to Serbia, can rouse Yugoslav public opinion at the moment. Everybody knows that no question can be finally dealt with until after the general election, and that every solution must be in the nature of a provisional measure until it has been approved by the majority in the Skupshtina.

Fiume Again.

The Yugoslav Government is quite sensible of this. It is also the reason that, despite the best intentions on the part of Dr. Nintchitch, no agreement was reached in Rome and the conference in Venice had to be interrupted. Only questions of minor importance have been dealt with, whereas the most important of all—that of Fiume—did not advance by one hair's breadth. As a matter of fact, it would be a puzzle to discover a mutually fair settlement of this matter. Without Yugoslav trade, Fiume is dead. On the other hand, Yugoslavia can scarcely be expected to furnish proof that it was wise and right to detach Fiume from its natural backlands. Moreover, Yugoslavia has harbours of her own in Sushak and Bakar. The harbour of Sushak is unfortunately not adequately equipped at the moment, nor can it ever be adequately developed if all Yugoslavia's trade is to go, as from now and henceforth, over Fiume. In other words, Yugoslavia cannot afford to let her own harbour of Sushak be killed by Fiuman competition, and for this reason Yugoslavia cannot defer to Italy's wishes in this respect. Italy, on her part, would like to prove that the annexation of the town of Fiume does not spell its economic ruin, and is, therefore, making great efforts to obtain from Yugoslavia special privileges for it, although this is clearly contrary to Yugoslav interests.

But the dilemma is not confined to this fundamental difference. The most trying part of the business is that the problem has to be solved in an atmosphere of national tension, and that, unfortunately, Italy is constantly adding fresh fuel to the flames of this deplorable hostility.

Italy and Yugoslavia.

It is common knowledge by now that in consequence of the War, Italy acquired Yugoslav territory with close on 600,000 inhabitants. It is only too intelligible that the Yugoslavs of the kingdom should not be indifferent to the fate of their conationals in Italy. Many a time has the Yugoslav Press emphatically explained that good and friendly relations with Italy cannot possibly be established until the national rights of the Yugoslavs in Italy are duly safeguarded. Here one must point out that the Yugoslavs in Italy have proved themselves most loyal citizens. During all the time they have been under Italy, not one Yugoslav has incurred penalties for seditious action. In contrast to the Italian provinces, where scarcely 50 per cent. of the young men of military age are accepted for service, almost without exception some 97 per cent. to 100 per cent. are called to the colours in the Yugoslav regions, and their Italian officers are fain to admit that the Yugoslav troops represent the best material in the Italian army. Thus Italy has every reason to grant her Yugoslav citizens at least the most elementary national rights. But in spite of her own experiences with Austria, and Austria-Hungary's experiences with her subject nationalities, this is what Italy will not do. Latterly, an embargo was placed on all performances (concerts, plays, and so on) in Slovene or Serbo-Croatian. The prohibition was presently withdrawn, but not before it had created a profound and painful impression throughout Yugoslavia. Obviously, negotiations in Venice were not facilitated by incidents like this. It is in the interests of peace and good neighbourliness between Italy and Yugoslavia that the former should certainly demand unstinting loyalty from her Yugoslavs, but also that she on her part should be loyal in her attitude towards them, and allow them, as we said before, the most elementary civic and national rights. This, and this alone, can provide an auspicious approach to a solution of Fiume, and, with it, of the whole Adriatic question.

Albania.

If Yugoslav public opinion has shown itself indifferent to the negotiations in Rome, despite their grave importance, it has similarly refused to get excited over the alarming news from Albania, which appears once more to be plunged in complete anarchy. Apparently all that thunderstorm atmosphere of the Balkans of yore is now concentrated in Albania.

There are various reasons for this Albanian unrest; but chief of them is surely to be sought in unsettled agrarian conditions. In spite of great natural resources, the country's expenses at present exceed its revenue, and it is dependent upon imported foodstuffs. In the olden days Albania's food problem was forcibly solved by the adjoining regions, which the Albanians used to raid regularly for cattle. But now this method of obtaining provisions is out of date, and the result is trouble in the interior. The cultured Albanian (the *intelligenzia*) is for the most part keenly national and also patriotic, and therefore every Government is in danger as soon as it too obviously enjoys the countenance of some foreign Power. Mgr. Fan Noli's Government had friends too good to be approved of on the other side of the Adriatic.

Albania is an independent State, yet incapable of existing independently. It is dependent upon Italy at sea, and upon Yugoslavia for the import of foodstuffs. Hence the Albanians are always afraid that the influence of one or the other of these Powers should wax too great, and by this fear their foreign policy is determined.

Unfortunately Yugoslavia is sensibly affected by this Albanian unrest. She has to maintain a strong body of troops on the frontier, although she harbours no plans of aggression against Albania. On account of Italy, if for no other reason, Yugoslavia may not cherish any such plans. But for Albania the moment is surely ripening when that country will have to lean economically above all things on Yugoslavia, and the Balkan idea will appear to the Albanians also as the one sound ideal. For these reasons we may safely accept the statement of Dr. Nintchitch to the effect that Yugoslavia is disinterested in Albanian current events, as perfectly sincere, although it is clear that Yugoslav sympathies must be with Ahmed Bey, a kinsman and partisan of Essad Pasha, who frankly and sincerely embraced the cause of the Entente during the War and rendered possible the Serbian retreat through Albania.

The Elections.

"Who will win?" That is the great question. The Government, or the Opposition? The National Bloc, so-called, as represented by the two Government parties, or their opponents? Each side is strenuous in its efforts to persuade the public of its chances of victory, in order to predispose the electorate in its favour. How far these efforts will prove successful is, of course, another question; but for the moment the situation may be summed up as follows:

In Slovenia, Croatia, North Serbia (Sumadiya), and the Voivodina there will probably not be any material changes. The chief parties will maintain their strength, and as regards the regions specified the new Skupshtina will present much the same face (or faces) as the old. But the decision may very easily come to lie with South Serbia and her forty-two deputies. The side that wins South Serbia is likely to find itself master of the situation. Until recently there was a general impression that election results in South Serbia were a matter of police pressure. But recent experience has proved this assumption wrong, and has shown South Serbia to possess an opinion of her own together with a will to voice it. The Opposition parties have united; the former Minister for the Interior, or Minister of Police, as they say in South Serbia, has personally organised the Opposition campaign, and his labours, which have already extended over a month, cannot fail to bring forth fruit. If the Opposition succeeds in winning only one-half of the mandates in South Serbia, its victory will be certain—and that is what is most likely to happen, if one judges by the present situation.

The University of Zagreb.

The action of M. Svetozar Pribitchevitch, as Minister of Education, in pensioning off four professors of the University of Zagreb, together with the incidents that followed, evoked a vigorous protest from the entire academic youth of Yugoslavia. The warm interest taken by the public in this protest must, on the whole, be put down to the fact that the public generally takes the side of youth. All the same, the affair has thereby materially weakened the position of the Government and provided fresh grounds for discord between Radicals and Democrats. The recent incidents at the three Universities have greatly shaken the united front of the National Bloc rather badly, and in Slovenia, Croatia, and Dalmatia it has practically come to grief.

The Campaign.

Almost all parties are meeting with incredible trouble in compiling their lists of candidates. In some constituencies no fewer than five candidates of the same party are competing for one mandate. Obviously, such cases are hailed with joy by the opposite side; but there is scarcely a party that has not to contend, more or less, with this evil.

The electoral campaign proper has hardly yet begun, in spite of several incidents which have led to bloodshed; but after the New Year it will start with all the vehemence meet for a young nation of fighters. Whatever the final upshot, one thing is certain. It will have been useful, because it will contribute to the democratisation of Yugoslavia, and, notwithstanding all excesses, to the consolidation of the State.

The *Pioneer* learns that a small force of Persian troops has been sent from Bujnurd to Simalqan in Khorassan to cope with the local Turkoman unrest.

The King and Queen of the Serbs, Croats, and Slovenes arrived in Paris last week to visit the King's uncle, Prince Arsène, who is ill.

Air Vice-Marshal Sir Sefton Brancker, Director of Civil Aviation, who is flying to India, arrived at Bushire last Saturday. He left for Bandar Abbas the following day.

A PRE-WAR REVOLUTION IN ALBANIA.

By A. WALTER.

We have become rather *exigeant*. If the casualties do not run into thousands, then an international or inter-national difference of opinion is hardly worth chronicling.

Yet the old-fashioned "scrap," so well and so often exemplified in the Balkan cockpit, was not without a certain sentimental interest. The personal element counted for so much. The combatants were often personally known to one another, a fact that did not always tend to lessen the bitterness of strife.

Albania blossomed into autonomous life late in 1913, under the ill-starred auspices of Ismail Kemal Bey, and vanished temporarily from the international stage late in 1914, under the even more calamitous leadership of His Serene Highness Prince William of Wied, known to the irreverent as "Weedy Willie."

Ismail Kemal opted for pretty Valona as the seat of Government, but the backstairs influence of the notorious Essad Pasha subsequently saw to it that King William installed his regal palace at pestilential Durazzo. The more important Scutari bided its time, basking in the beneficent rays of British military administration.

In the spring of 1914 Durazzo, viewed from the sea or, for the matter of that, from the land as well, presented an extremely inhospitable appearance; and first impressions were more than confirmed by closer acquaintance. The Palace, indeed, boasted of an electric light plant and other modern conveniences, which functioned intermittently; but the accommodation available for the diplomatic and consular representatives of the various nations, not to speak of that unwieldy body the International Commission of Control, consisted in the main of typical lath-and-plaster Turkish houses, let at outrageous rents by the enterprising Essad, and of the "Hotel National," an outsize specimen of the foregoing, where for the nominal sum of 125 Austrian kronen (£5) per diem the harassed Attaché or Secretary could obtain two meals of sorts and a room conveniently situated above the poultry run.

The principal actors were, of course, the Italians and Austrians, both of whom felt that juxtaposition gave them an undoubted right to "protect" the new-fledged kingdom. The others—Russians, French, Germans, Greeks, and British—held more or less of a watching brief, while the police arrangements were, perhaps wisely, left to the Dutch. Thereby hangs a tale to be told anon.

Prince William of Wied, first and last King of Albania, was a fine figure of a man, some six feet three in height, and moustachioed *à la* Kaiser. But he lacked an essential part of the composition of a man, vulgarly known as "guts." He was a mere pawn in the hands of that prince of adventurers, Essad, and it was not long before the latter became king in all but name.

Ismail Kemal's star had set, and Prenk Bib Doda, the Northern chieftain, was well looked after by Colonel P. at Scutari; the way was, therefore, open for Essad, and he was not slow in starting to make trouble. A master of intrigue, he had given a foretaste of his quality by the "sale" of Scutari to Nicholas of Montenegro during the first Balkan war, and he now proceeded to raise the Central Albanian tribes against William of Wied.

The unfortunate princeling was ill-equipped by nature to deal with a man of Essad's stamp, and the position was further complicated by the plots and counter-plots engineered by the Italians, Austrians, Greeks, and Serbians. Austria officially backed the Prince, and Italy naturally lost no opportunity of checkmating her. The Greeks and Serbians both coveted part, if not all, of the unfortunate little kingdom, and it called for considerable tact on the part of the British Delegate to the International Commission (the only member of that body inspired by a sincere desire for the prosperity of the latest arrival on the map of Europe) to keep the peace.

Essad's machinations came to a head in May, 1914, when Durazzo was invested on the land side by rebels from Tirana, a town in which he held almost feudal sway, and the surrounding district. Trouble also started in North and South Albania, though neither Scutari, held by international detachments, nor Valona were ever in any real danger.

Had William of Wied, at this early stage, shown any signs of possessing the qualities which appeal to the Albanian, foremost among which is personal courage, all would probably have been well. But, despite the advice of those who knew the country and the people, he persisted in shutting himself up in his palace at Durazzo, where he passed his days in the anguish of physical cowardice and mental indecision. A most imposing figure of a man in the theatrical Albanian uniform—silver grey with aigrette-topped kalpak—he was at heart an arrant coward.

Fortunately for the chances of the defenders of the capital, there were in the town, masquerading as commercial travellers, journalists, and so forth, many German and Austrian reserve officers, as well as a considerable leavening of adventurers from all parts of the world. These, then, formed the nucleus of the loyalist force, together with the native gendarmerie, then in the course of being trained by a Dutch Military Mission. By some fortunate dispensation of Providence, a battery of Austrian mountain-guns had also found its way into the town, whereas the rebels were armed with rifles only.

Fighting took place daily, and the town was continuously under rifle-fire. The headquarters of the International Commission of Control, situated on the outskirts of Durazzo, was particularly exposed, being only a few hundred yards from the firing line. In fact, it was not long before it was voted unhealthy by the Delegates, only one of whom (needless to say, the British, Sir Harry —then Mr.—Lamb) held the fort until the bitter end.

However, in spite of the millions of rounds which must have been fired from start to finish, casualties were surprisingly small, and consisted mostly of live-stock, which strayed between the rival trenches. The mountain-battery did a certain amount of execution among the assailants; the losses of the defence were slight; by a cruel stroke of irony, the only European to lose his life was Colonel Thomson, of the Dutch Military Mission, an exceptionally capable officer, who had seen years of adventurous Colonial service, only to fall to a stray bullet in what might almost have been termed comic-opera warfare.

On one occasion the rebels succeeded in capturing one of the mountain guns, but any uneasiness which this might have caused among the defenders was speedily set at rest by a ludicrous mishap, as a result of which the gentleman training the piece received the recoil amidships, and died from his injuries. The gun was then voted a common danger, and promptly buried!

Amusement was also created one day by William of Wied, whose cowardice so far got the better of him that, on hearing a subsequently unconfirmed rumour that the rebels had actually entered the

Digitized by Google

town, he bolted on board the Misurata, an Italian armed yacht then lying in the harbour, from which it took the united persuasion of the various Miniters, delegates, and Consuls to dislodge him.

Once, and once only, did this princeling summon up enough courage to visit another part of his realm; he paid a short visit to Valona, communications by sea being, of course, still open, and hurried back to Durazzo the same day. His visit there was marked by a sharp dispute between the Dutch officer in charge of the gendarmerie at Valona and a mysterious American, who entitled himself "Commander-in-Chief of the Southern Albanian Army," both of whom claimed the honour of receiving the Prince. The result was that the furious Dutchman was ignominiously kicked into the sea; international complications were avoided by the Prince's action in depriving the American of his command! The latter was afterwards compensated by being appointed to command the Albanian "Navy," which consisted of a small tramp steamer, chartered from an Austrian firm, and armed with one of the ubiquitous mountain guns. Incredible as it may seem, the honour was accepted in all seriousness by the gratified recipient.

Essad had remained all this time in Durazzo, directing the rebel operations from the King's palace! His bank account, already swollen by cute and successful land speculations at Durazzo, he having foreseen the choice of that town as capital and therefore bought up most of the land and houses available, was receiving gratifying additions from the various countries which he, with considerable skill, was playing off against each other. Some idea of Essad's commercial acumen may be gathered from the fact that, in the summer of 1914, an ordinary rental for a miserable five-room lath-and-plaster house was three or four hundred pounds per annum.

All good times come to an end, however, and at last Essad's nefarious activities became so blatant that he had to be expelled. This, of course, simply meant that, instead of aiding and abetting the rebels in a roundabout way from loyal headquarters at Durazzo, he was now able to side with them openly.

So the summer months dragged along, the military situation being one of stalemate, and the Albanian coffers becoming more and more depleted. Food was not actually short, but it was of very poor quality, and the swampy ground round the town was responsible for a good deal of sickness. So, despite some slight alleviation caused by the arrival of H.M.S. Defence and a destroyer and the German Breslau, the lot of the defenders was not an enviable one, and the news of the outbreak of the Great War was hailed with feelings of unfeigned relief. It was interesting to note how two distinct groups were immediately formed among the disgruntled diplomats, Austria and Germany giving a wide berth to Britain, France, and Russia, while Italy and the lesser States hovered in the offing, with a tendency to gravitate towards the Triple Entente. *Cela y est*, remarked the French delegate when the news came through, to which his British colleague rather neatly replied, *Et nous y sommes!*

As may be imagined, Governments had more important fish to fry, and little time to waste on the affairs of a tiny State which, from being the cynosure of European eyes, suddenly reverted to a thing of no account. Italy, it is true, used every effort to maintain the International Commission *in statu quo*, despite the outbreak of hostilities, seeing in this a chance of checkmating Austrian concupiscence at little or no cost to herself; some of the means she adopted to attain this end were not too creditable, but that is another story. In any case, it was not to be, and the little band which had withstood the heat of summer and the worrying, though not dangerous, rebel onslaughts, began to scatter to their respective destinations by more or less devious routes.

By this time, the financial affairs of the mushroom State were in chaos; at the end of the July matters had reached such a pass that the Finance Minister (an ex-printers' devil from Constantinople) was able to carry on temporarily only by a personal loan from the Austrian Minister. The aged Turkban Pasha had discovered that the post of Turkish Ambassador at the Court of St. James was a sinecure compared to the hopeless task of keeping his unruly and inexperienced henchmen in order. The Prince's German Majordomo and his British A.D.C. left for their respective regiments. The Defence and Breslau, "chummy ships" overnight, had, one fine morning just prior to the momentous news, left Durazzo on their several occasions, as had the Austrian and most of the Italian units.

For weeks past the rebels had only been held off by the menace of the warships' guns; yet, strange to say, now that they had an opportunity of walking into the town, they did not take it. Did they realise that a greater crisis was impending, in which their puny efforts could have no part?

The fertile brain of William of Wied had evolved the brilliant idea of instituting, as some slight recompense for those who had worn out their tempers and their digestions in his service, two decorations, the "Order of the Black Eagle of Albania" and the "Albanian Medal for Courage." It is said that some 10,000 of each were struck, and they were certainly issued broadcast, the British Delegate and his Secretary being practically the only two people who succeeded in evading these dubious honours. The Grand Cordon of the Black Eagle was a most imposing affair, and was the cause of much secret gratification among the already liberally decorated diplomats of some minor Balkan States.

It was not until August 18 that the British Delegate and his Secretary, the only two of that nationality left in the now derelict Durazzo, heard in a roundabout way of their recall or, as it seemed to them, release, and they lost no time in journeying to Brindisi, where the newly instituted British Relief Fund enabled them to continue their journey

to Rome, for they were temporarily penniless, Albanian banking facilities having naturally gone the way of all others in those chaotic days.

And thus ended the brief reign of the German puppet, Prince William of Wied, as inglorious a monarch as can well be imagined. He returned to Germany, where he vanished from the European stage. Few will sympathise with him, for his troubles were principally of his own making.

Many, however, will sympathise with the struggling little State; emerging from the age-long Turkish thrall, and at last winning her independence, she fell into the usual Balkan error—the united front which had served to secure the removal of the oppressor degenerated, once that feat was accomplished, into tribal jealousy culminating in civil war. A tragedy in little, engulfed in the world-wide cataclysm, yet it may not be easily forgotten by those whom Fate destined to play a part therein.

It was only a "side-show."

PERSONAL AND GENERAL.

TO-DAY.

January 1, 1925 (New Style).
December 19, 1924 (Old Style).

Lord and Lady Cable will leave shortly for India.

Bishop Gore will be in Egypt or Palestine until the end of April.

Abdul Rahman Fikry, Secretary at the Egyptian Legation, has left London for Paris.

Sir Victor Warrender will leave England early in the New Year for Mesopotamia.

The Roumanian Minister and Mme. Titulesco left London last Friday for Paris.

Abdul Samad Khan, Secretary at the Afghan Legation, left London on December 29 for Berlin.

Mohammed Fahmy Hussein Bey, Counsellor of Legation, left London on December 23 for Cairo on leave.

The Bulgarian Minister, who is accredited also to the Netherlands, left London this week for The Hague to present his letters of credence to Queen Wilhelmina.

Captain George Panas, Naval Attaché at the Greek Legation in London, entertained at dinner on Christmas Day some of the Greek Naval officers now on special duty in England.

The Hon. W. Ormsby-Gore, Under-Secretary of State for the Colonies, Major Church, and Mr. Linfield, who have been on a visit to East Africa on behalf of the Colonial Office, have returned to England.

Lady Sharp is sailing to-morrow (Friday) for California, and will be away for several months. Her daughter, Mrs. E. E. Palmer, wife of the American Consul-General at Bucharest, has been visiting her.

The engagement is announced of Lieut. Edgar W. E. Lane, R.N., elder son of Lieut.-Col. W. B. Lane, C.I.E., C.B.E., I.M.S., and Mrs. Lane, to Mary Alice, daughter of Mr. and Mrs. Julius Singer, and niece of Dr. and Mrs. Charles Singer, of 5, North Grove, Highgate Village.

During the two months' absence in Switzerland of the Egyptian Minister in London, Sesostris Sidarouss Bey is acting as Chargé d'Affaires. Sidarouss Bey, who was until recently Chargé d'Affaires in Brussels and First Secretary at the Legation in Paris, arrived in London last week.

APPOINTMENTS, PROMOTIONS, ETC.

The King has approved the appointment of Mr. David Grierson Waller, I.C.S., to be a Puisne Judge of the High Court of Judicature in Madras, in succession to Sir Francis Du Pre Oldfield, I.C.S., who has retired from the service, with effect from November 8.

The King has approved of the following rewards in recognition of gallant and distinguished service in Iraq :—

DISTINGUISHED FLYING CROSS.

Wing-Commander E. H. Johnston, O.B.E.
Flight-Lieutenant F. L. Luxmoore.

The Secretary of State for India has offered a seat on the Council of India to Mr. Robert Erskine Holland, C.S.I., C.I.E., C.V.O., Indian Civil Service, Agent to the Governor-General, Rajputana, in succession to Sir Charles Stuart Bayley, G.C.I.E., K.C.S.I., I.S.O., who has resigned from the Council on completing two years of his second term of office. It is intended that Mr. Holland shall join the Council in March next.

The King has given authority to Major Claud Scudamore Jarvis, 3rd Battalion, Dorsetshire Regiment, Governor of the Sinai Province, Egyptian Frontier Districts Administration, to wear the insignia of the Fourth Class of the Order of the Nile conferred on him by the King of Egypt, in recognition of valuable services; and to Captain Eugene Daniel McCarthy, Indian Army, to wear the insignia of the First Class of the Saidi Order, conferred upon him by the Sultan of Muscat, in recognition of valuable services rendered by him to that State.

THURSDAY, JANUARY 1, 1925.

THE BALKANS IN 1924.

If the past year has been no *annus mirabilis* for the Balkans, it has at least seen the Peninsula occupying its fair share of the limelight devoted to the European continent. The establishment of two republics in Greece and Turkey, a settlement of the Adriatic question between Italy and Yugoslavia, overtures for a *rapprochement* between Yugoslavia and Bulgaria carried far enough to allow the Bulgarian Prime Minister to visit Belgrade at the close of the year, a marked tendency of the different exchanges to avoid the violent fluctuations of previous years suggesting economic recovery; these are among the more notable features of the last twelve months. For each country, moreover, the year has provided abundant opportunity for national heart-searching, with the result, we are inclined to believe in every case, of definite progress being made towards better things. The Italo-Yugoslav Agreement may be regarded as an essential preliminary to a Balkan confederation, for it represented the abandonment by Italy, in the face of the logic of hard facts, of her dream of shaping from outside the destinies of the Peninsula. Events in Albania during the last few days have given Italian public opinion an occasion to show how reluctantly it will accommodate itself to the self-denying ordinance; but there can be no doubt of the loyalty of the Italian Government to its pledges, or indeed of the endorsement of the wisdom of the undertaking by the thinking section of the Italian people.

YUGOSLAVIA.

With the danger of complications with Italy removed, and in its place substituted a treaty of friendship protecting the new kingdom on the west, the main preoccupation of the Serbs, Croats, and Slovenes during the year has been the question of centralisation *versus* federalism. Although there has been no very definite weakening of the rigid system introduced by M. Pashitch, the fact that he abandoned office to allow his political opponents a chance of grappling with the problem indicates that he, too, is beginning to realise that some compromise in the direction of local autonomy may be advisable Owing to the impossible attitude of M. Raditch, the Ministry of M. Davidovitch was unable to carry through its task of reconciling the desire for decentralisation with the Serbian fears of Communist Republicanism, which the wild speeches of the unpractical Croatian leader have roused. Accordingly, M. Pashitch is back again in office, and an attempt will be made in February to solve the Parliamentary deadlock by fresh elections. The quarrels of the Macedonians among themselves have tended to make another problem less acute for Yugoslavia. Finding the cause without hope of support in any other direction, a section of the Macedonian Central Organisation decided to take advantage of Soviet promises of active help. A split followed, leading to the assassination of Todor Alexandroff, the soul and brains of the Macedonian movement; within the last few days M. Chaüleff, the member of the Triumvirate who favoured Communism, has been murdered, and now Protoguéroff remains alone at the head of the Organisation. He has had abundant opportunity of learning that so long as revolutionary methods are practised by the Macedonians they will be left severely alone to settle their accounts with the Serbians, and they can gauge their prospects of success from the experience of Montenegro. On the other hand, the adoption of more constitutional forms of protest, under whatever provocation and however difficult, must materially assist a settlement of the whole Yugoslav question on constitutional lines, to the ultimate benefit of the Macedonians themselves.

GREECE.

For no country has the year been more epoch-making than for Greece. The deposition of King George, who had left the country the previous December, and the proclamation of a Republic took place on March 25; on April 13 the Republic was confirmed by a plebiscite. At the end of 1923 Greece seemed to have decided that her one hope of salvation lay in M. Venizelos. The elections held on December 16 had been not only a success for the Venizelist Party, but also a personal triumph for its leader; he yielded to the renewed solicitations to return to Greece, and reached Athens on January 4. A week later he became Prime Minister; but he was quite unequal to the task of healing the breach which he himself had originally created, and on February 4 he resigned the Premiership, to leave Greece on March 10. His negative policy had accomplished nothing; he had given his support to the theory of a Greek republic, but hesitated to put it into practice. All the country's energy rested with the Republicans under military instigation, and M. Papanastasiou at their head carried through the necessary measures in the Chamber. If there was little real enthusiasm in Greece for the republic, there was a genuine longing for internal peace, for a truce to the politicians' quarrels. So long as M. Venizelos remained in the country there could be no burying of the hatchet on the part of Royalists and Venizelists. When the Officers' League resolved that there must be a republic, the Greek people accepted it not from conviction, but because they were cowed and politically tired. The experience of the last nine months suggests that the Greeks accept the *status quo* with fatalistic indifference, well content to let the politicians wrangle among themselves, provided only that the national instinct for trade can be indulged without undue distraction. For the fact remains that, whereas there have been six Prime Ministers of Greece during 1924, the country as a whole is on the crest of a wave of economic prosperity.

ROUMANIA.

Tendencies rather than achievements have characterised the past year in Roumania. The Liberal Government, under M. Ian Bratianu, assisted by his brother, M. Vintila Bratianu, as Minister of Finance, has remained in power, nominally carrying its financial and economic programme through further stages according to plan, but in reality concerned to make its measures a little more palatable both to home and to foreign interests. It is unfortunate that a Government which knows its own mind and has a well-defined policy should not be able to command wider recognition; in Roumania it is accused of purely selfish ends, some striking instances of graft are cited in support of the contention, and it will never be forgiven the methods adopted at the last elections. Abroad, after the first outcry against legislation that seemed to aim at expelling foreign capital rather than subjecting it to justifiable restrictions, opinion

Digitized by Google

tends to become crystallised that the trouble is not so much what the Bratianu Government does as "the nasty way it does it." Internal discontent undoubtedly gives a handle to foreign dissatisfaction; for there is a temptation to take the worst view of any subject when from all sides emphasis is being laid on the sins of the Government responsible. Thus the attitude of the Roumanian Government on matters affecting foreign capital is apt to be judged by the grievances of Magyars and its own Transylvanian compatriots, or by alleged sharp practice in dealing with Bulgarian property in the Dobruja. If the Bratianu Ministry had learnt early in the day the value of making friends, instead of merely promoting the interests of those it already had, a valuable page of constructive work might have been added to Roumanian history. In any case, it has to its credit the balancing of the annual Budgets.

BULGARIA.

Life for the Bulgarian Government during the last twelve months has been a succession of alarms and excursions, and it was not until towards the end of the year that it could really begin to share the optimism that it has conscientiously preached to the people. Many of its daily troubles passed unnoticed at home and call for no reference abroad: but with the standing menace of Communism and the uncertainty as to what the morrow might bring forth from over the Yugoslav frontier ever at hand, the sleep of the Sofia Cabinet must have been more troubled than that of any other Balkan Government. It is not that Bulgaria finds being on her best behaviour so irksome; the difficulty is to persuade her neighbours that she is on her best behaviour. Actually the year has passed without serious incident. At the beginning of March the sudden arrest of several hundred Macedonians was an indication that the Government had resolved to expose itself no longer to the charge of playing with fire in that particular direction. The compulsory dissolution of the Communist and Labour parties followed in April. Communism for the time being appeared to be scotched, but the troubles of the Government were not necessarily at an end. Considerable dissatisfaction prevailed among the peasants, owing largely, it is to be feared, to the failure of those charged with the duty of stamping out Communism to differentiate between Communists and others whose main offence was that they belonged to the Agrarian Party. In spite of political troubles, however, the country, thanks to the industry of its inhabitants, is forging ahead steadily in the economic sphere. Sooner or later it will receive the outlet on the Ægean Sea that it needs; but it will do well not to attempt to force the pace. The more confident a people is of itself the more steadfastly it can afford to bide its time when, as it claims, it is asking only for justice and entertains no imperialist ambitions.

TURKEY.

Turkey dates the first year of the Republic from 1924. The Grand National Assembly abolished the Khalifate in March, and with this step—the last in a series carefully designed to accomplish the end in view—the last obstacle in the way of the enthronement of the Turkish nation was removed. The ills from which Turkey had suffered were attributed in the first place to the despotism of Yildiz Kiosk. If a constitutional monarchy had been considered possible, it would most probably have been preferred as an alternative; but a constitutional monarch, it was decided, was not to be obtained, and so recourse was had to a Republic, with Mustapha Kemal Pasha as first President. The conference between Turkey and Great Britain to decide the question of the northern frontier of Iraq, as provided for by the Treaty of Lausanne, was opened in Constantinople on May 19. No agreement was reached, and on June 5 negotiations were broken off. An attempt was made by the Turks to peg out a better claim to the Mosul vilayet by a military occupation of districts within the British sphere, and the League of Nations had to intervene before any attention was paid by the Turkish Government to the British protests. To-day, however, the incident stands adjusted by a decision of the League, whose Commission appointed to delimit the frontier is on its way to Iraq. A better spirit prevails in Turkey at the close of the year than was apparent at the opening. Angora is less of the heavy schoolmaster towards Constantinople, for the danger of stifling the most important revenue-producing centre is at last appreciated. A Commission appointed to investigate conditions in the city and port has handed in its report. Constantinople stands to benefit from the changed attitude of Angora, which is beginning to find that the art of good government has to be learned carefully, perhaps laboriously, and is less enamoured of the hasty legislation that has been a burden to the country and has made the inexperienced National Assembly a byword among the nations. The new Turkey, however, is in deadly earnest and deserves respect for this fact; if her capacity proves equal to her courage she will yet go far, and it is to be hoped that she will find the guiding hand that she needs in Great Britain.

ALBANIA.

This hasty review of the past year in the Near East can close with a brief reference to Albania, where the problem of government is still waiting to be solved. Instability remains the order of the day. A reconstruction of the Ministry took place in March, when Ahmed Bey Zogu resigned the office of Prime Minister; but with his father-in-law at the head of the new Cabinet he remained supreme in the Government of the country. In June an insurrectionary movement broke out against the Administration, and, proving successful, brought Mgr. Fan Noli to power. The late Ministers fled the country, Ahmed Bey Zogu, after a longer resistance than the others, seeking ultimately a refuge in Serbia. Before the end of the year he is found heading a revolt against Mgr. Fan Noli, and this time becomes Dictator. He certainly stands out amongst his countrymen, but he lacks experience and proved unequal to his task before. The fact that Ahmed Bey Zogu should have organised the insurrection from Serbian territory has caused misgivings in Italy; but it was probably only a coincidence that the invasion of Albanian territory by Zogu's supporters should have occurred at the time when the Italian and Yugoslav Governments were renewing on a more formal basis the agreement reached in June not to interfere in the internal affairs of Albania. Continued unrest in the country is a reproach to Europe; but there is no difficulty in localising its effects if Albania's neighbours refrain from fishing in troubled waters.

Near East Bookshelf.

A WINDOW INTO THE FORBIDDEN LAND.

"TIBET PAST AND PRESENT." By Sir Charles Bell. (London: Humphrey Milford. 24s. net.)

The title of this book is perhaps hardly fair to the author. The space devoted to the semi-legendary and nearly always obscure past history of Tibet is small, and only serves to give some idea of how the country has developed into what it is now. The modern history of Tibet begins with Mr. Macaulay's mission to Lhassa in 1885, and it is the history of Tibet from that date till now with which Sir Charles Bell is mainly concerned. In 1900 his delicate health made his transfer from the Bengal Plains to the Darjeeling district necessary, and it is to this accident that his long connection with Tibet is primarily due. If ever there was a case of Providence intervening in the details of mundane affairs, we would say that this was it. For Sir Charles, by reason of his sincere religious nature, his gift for languages, his ready and sympathetic understanding of "the other man's" view, his patience, his courtesy, and his diplomatic skill, has been an ideal representative of the British Government with this isolated, proud, and suspicious but loyal and (to an extent not yet generally realised) civilised people.

He found them actively hostile, and left them our trusting and admiring friends. His book is necessarily an account of matters *quorum pars magna fuit*, a fact which gives the work its unity and its chief value. No Englishman has ever known the Tibetan anything like so familiarly and intimately as our author, and he has made good use of his chances, while his political views are clearly sound, and their execution can only be honourable to both parties.

We were relieved in the course of our reading to learn that Sir Charles does not intend this book to be his only contribution to the interpretation of Tibet to Europe. He has still to tell us of the circumstances of daily life in the various ranks of Tibetans and in various parts of the country. He will no doubt enlighten us on the consequences of the existence of tens of thousands of celibate monks and priests in this thinly populated land, a feature of Tibet which seems to us to be of immense interest. We wish, too, that he would tell us more of the curiously close connection between Lhassa and Urga, in Mongolia, hundreds of miles apart, and those miles being over almost the most difficult routes in the world. It does not seem to us to be enough to say that the Tibetans and Mongolians are racially closely allied, and that they have the same religion. Did the Tibetans come from Mongolia? How did the Mongolians come to adopt the curious Tibetan form of Buddhism? And how has this close connection been able to survive for all these centuries in spite of extraordinarily formidable natural barriers?

A curious light is thrown on the humanity shared by the Tibetans with us in a pathetic little love poem by the sixth Dalai Lama, the somewhat unorthodox God-King who ruled Tibet between 1680 and 1706 A.D. He was necessarily a strict celibate, but he had his human side, and felt the disadvantages of his exalted position. As translated by Sir Charles Bell, the poem reads curiously like one by a seventeenth-century English contemporary. Here are some stanzas of it:—

Last year the crop was young and green,
'Tis now but withered strands;
And youth, grown old, is dried and bent,
Like bows from southern lands.

Dear love, to whom my heart goes out,
If we could but be wed,
Then had I gained the choicest gem
From Ocean's deepest bed.

I chanced to pass my sweetheart fair
Upon the road one day;
A turquoise found of clearest blue,
Found—to be thrown away.

High on the peach tree out of reach
The ripened fruit is there;
So, too, the maid of noble birth,
Though full of life and fair.

My heart's far off; the nights pass by
In sleeplessness and strife;
E'en day brings not my heart's desire,
For lifeless is my life.

We have to thank the author for a book of great interest and—what is rarer—of permanent value. The numerous excellent photographs by the same hand, some of them colour-photographs, enhance its usefulness and beauty. We look forward with pleasurable anticipation to Sir Charles Bell's next book on Tibet. C. S.-W.

MACEDONIA.

"ETHNOGRAPHIE VON MAKEDONIEN." Geschichtlich-nationaler, sprachlich-statistischer Teil, von Prof. Dr. Gustav Weigand, Mit einem Trachtenbild.. (Leipzig, Fr. Brandstetter, 3 marks.)

This is an extremely interesting book, and every one of its 102 pages is full of meat. While the philological part will appeal only to a few specialists, the general ethnological portion, with its correlation with history, should interest every educated person. The author spent six years in Macedonia with the special object of studying the ethnology of that country, and is thoroughly well qualified for his task; no one who touches the political aspect of the Balkan Peninsula can speak with authority until he has read this work. As a German who served on the Macedonian front, the author's sym-

pathies incline very naturally towards the Bulgars, although he writes, according to his own claim, "unbekümmert am Lob oder Tadel, niemand zu Lieb, niemand zu Leid." Still, there is little, indeed, over which one will want to cross swords with him, even when he makes a bitter attack upon the present short-sighted policy of Belgrade in Macedonia, which can but make the best friends of the Serbs shake their heads in sorrow.

TRADERS IN EAST AND WEST.

"TRADERS IN EAST AND WEST." By Florence L. Bowman and Esther J. Roper. (London: The Sheldon Press. 2s. net.)

The sub-title, "Some Aspects of Trade in the Seventeenth and Eighteenth Centuries, Illustrated from the Sources," gives an adequate idea of this book, which consists of selections, occasionally rather scrappy, from contemporary documents relating to the East India and Hudson's Bay Companies, the trade in slaves and tobacco, the Royal Exchange, and the Bank of England. The literature is so voluminous that it would be easier to criticise than to justify any selection that might be made: the selection before us is, at any rate, calculated to stimulate the interests of students, and the short bibliography appended will enable them to get in closer touch with the real story. The explanatory matter contributed by the compilers is commendably brief, but is marred by some inaccuracies. The date of the grant of Madras, for instance, is given as 1643 instead of 1639, while the statement that the experiment of trading with the Spice Islands began after 1613 overlooks the fact that this trade was one of the primary objects of the company, and that Lancaster and Middleton had been concerned in it several years previously.

THE SALONIKA REUNION.

It has been arranged, on behalf of the Salonika Force, that the parade and service in commemoration of the signing of the Armistice with the Bulgars will in future be held on September 30, when a Sunday, or on the first Sunday following.

Next year, after placing the wreath on the Cenotaph on October 4, a reunion dinner will be held in one of the Territorial drill halls in Westminster. A central committee has been formed, and local committees will be entrusted with the details of organisation. Major F. W. Sharpe is the chairman and Mr. A. H. Thurston, 23, Stavordale Road, N.5, is the honorary secretary.

It is proposed, if sufficient numbers are forthcoming, to organise a party to visit Salonika cemeteries and to be present at the unveiling of a memorial on Colonial Hill. The party would leave London early in April.

Snow fell in Baghdad on Boxing Day. This was the first fall for fourteen years, and it was followed by eight degrees of frost.

Mr. Zankoff, Bulgarian Prime Minister, arrived at Bucharest on December 29 from Belgrade, and has had an audience of the King, and interviews with M. Bratianu and Dr. Duca.

The Literary and Dramatic Society of Birmingham University will perform in February Pushkin's "Boris Godunov." This will be the first production of the play on the English stage. The translator of "Boris" is Professor Alfred Hayes, Principal of the Midland Institute, who has also translated "Tsar Feodor." Mr. Stuart Vinden, of the Birmingham Repertory Theatre, is the producer. The stage settings and costumes are being designed by Mr. A. R. Shanks, and Dr. Granville Bantock, Professor of Music at the University, is writing a new orchestral work as a prelude. This will be treated as an integral part of the performance, and, together with selections from Moussorgzky's "Boris" music, will be conducted by Mr. Adrian Boult, Director of Music to the City of Birmingham Orchestra.

OBITUARY.

The Rev. D. G. M. Leith, of the Wesleyan Mission, Madras, was drowned in the sea off Ennore, a suburb of Madras, last Saturday night.

The death occurred last week at Florence of Mr. A. H. Savage Landor, who was a grandson of Walter Savage Landor, and had travelled all over the world. Among the places he visited were both sources of the Brahmaputra, Mount Lumpa in Nepal, Morocco, Salonika, Persia, Afghanistan, Baluchistan, and so on. Besides being a traveller, he was painter, sculptor, and inventor.

Colonel Francis Pitt Stewart Taylor, C.M.G., late of the Royal Army Service Corps, died at East Cowes on December 22 at the age of 55. He was Assistant Adjutant and Quartermaster-General to the Fourth Division during 1914, and in 1915 and 1916 was Brigadier-General commanding the British Adriatic Mission, being awarded the C.M.G., the Serbian Order of the White Eagle, the Order of the Crown of Italy, and a brevet colonelcy.

The death occurred on December 20 of Major Robert C. B. Lethbridge, late of 4th Bedford and Herts Regiment, at the age of 49. He was in the Nile Expedition of 1898, and took part in the Battle of Khartoum, afterwards serving in the South African War. During the Great War he was on the Western front from December, 1914, to November, 1915, afterwards serving in Greek Macedonia, Serbia, Bulgaria, European Turkey, and the Ægean Islands.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Ionian Bank.

A very satisfactory report is forthcoming from the Ionian Bank for the year ended August 30. There is an increase in profits from £49,644 to £63,076, and with £12,467 brought in, the total is £75,543, from which an interim dividend has been paid, making the available surplus £60,976. It is proposed to add £20,000 to the reserve, as against £15,000, to transfer to the Greek branches pension fund 1,000,000 drachmæ, £4,056, to pay a final dividend of 3s. per share free of income-tax, making 6 per cent. for the year, and to pay a bonus of 2s. per share tax free as against 1s. for the previous year, leaving £12,640 to be carried forward. There has been a very general improvement in conditions in the Near East in the past year, and the directors point out that the business of the bank has continued to show satisfactory expansion.

Further Near Eastern Loans.

Following the success of the Greek Refugees Loan, it was perhaps inevitable that there should be talk of further Near Eastern issues, and during the past week it has been rumoured that a Turkish Loan was on the tapis. There is, however, no prospect of anything of the kind at the moment, and as a matter of fact, Turkish financial methods have been such that it is probable that a loan would meet with anything but a good reception. But the fact that there is no immediate prospect of a loan does not alter the fact that one is inevitable at no distant date. Capital is essential for the new Turkey if the country is to recover from the effects of the War, for only by that means can the many necessary works of development be carried out. Before a loan here can have any real chance of success Turkey will have to put her finances in order, for if investors are to respond to a further invitation to lend their money they must have confidence that it will be secure against all contingencies, and that they certainly have not at the present time. As a matter of fact, I do not expect that Turkey will be the next Near Eastern country to raise a loan on the London market. If rumour had associated the word loan with Roumania it might have been more accurate.

American Competition in India.

It is almost impossible to take up an American trade paper without receiving some indication of the growing importance which Americans are evidently inclined to give to the Indian market. I have just been reading a short article in an official publication entitled, "Winning the Indian Market," the title of which shows very plainly the attitude. The fact is that Americans realise only too well that as a result of the war the markets where sound trade is to be obtained are few and far between, and that the most important of them is India. They also know, as the article in question shows, that they will meet with very stubborn competition in endeavouring to enlarge their foothold in that market; but they are evidently prepared to do everything possible to secure a greater opening in India for their goods, and an instance of their thoroughgoing preparations is the issuing by the Department of Commerce of a circular on the Indian market which, to quote a description of it, "goes into all phases of winning trade in India, explaining in detail the obstacles to be overcome, and pointing out pitfalls to be avoided by firms entering the market for the first time." It only goes to show that British firms must leave nothing to chance in regard to the Indian market, but must be prepared in the next few years to meet much greater competition.

New Sudan Project.

How development rapidly follows on secured conditions is well exemplified in the case of the Sudan, in connection with which, since the future of that region has been placed beyond doubt, several interesting schemes have come on the tapis. News of one of the most important of these projects was given this week in the *Daily Mail* by Mr. G. Ward-Price. He states that an agreement is to be signed this week between the Sudan Government and a British group, which comprises the Prudential Assurance Co., the English Electric Co., Dorman, Long and Co., and Callenders Cable and Construction Co., for the construction of a nine-span steel bridge across the White Nile from Khartoum to Omdurman. The length of the bridge, which will be constructed by Dorman, Long and Co., will be 1,150 yards, and its cost will be between £250,000 and £300,000. Further, the group will take over the present steam tramway system and electrify it, supply electric light throughout Khartoum and Omdurman, and lay down water-mains at Omdurman and Khartoum North.

Cotton Growing in Iraq.

It is understood that an issue of capital is to be made very shortly in connection with a company formed to work a concession granted by the Iraq Government over an extensive area suitable for cotton growing. The capital of the company will be about £500,000. This is the first time that investors will have had the chance of participating

in the development of Iraq under the mandate, and in view of the happy results that have attended cotton growing in the Sudan, it may be taken for granted that the issue will meet with a warm response.

The British Industries Fair.

The abandonment of the London section of the British Industries Fair has been received with anything but favour by a section of the exhibitors. The view taken is that the alternative of exhibiting either at Wembley or at Birmingham by no means meets the situation, though it is difficult to see much justification for this attitude. The ideal solution would have been to have held the London section at the time of the opening of the Wembley Exhibition at Wembley itself, subsequently utilising the space for other purposes. Quite possibly that would have been done but for the dilettante policy of the late Administration in its closing months, when it was left in absolute uncertainty as to whether there was to be a Fair or an Exhibition or both, the fact being presumably that, in view of the shadow of impending events, the Government was unwilling to take a decision one way or another. It is, of course, unfortunate that the continuity of the series of Fairs should be interrupted, more especially as it may give the Leipzig Fair an opportunity to re-establish itself. We can only hope that the spring of 1926 will see the London section itself again, and an overwhelming success, as it should be if the trade outlook continues to improve as it shows every sign of doing.

Egypt's Trade.

The figures for the trade of Egypt for the eleven months ended November 30 are now available, and make a very favourable showing. The value of the imports stands at £E45,683,995, while that of the exports is £E54,860,125. As compared with the same period of 1923, there is an increase of £E4,786,466 as regards imports and of £E6,824,632 as regards exports, cotton, of course, being responsible for the increased value of the exports. Statistics of the full period are not available as regards the countries exporting to Egypt, but the particulars already issued go to show that Great Britain has not shared to any extent in the increased imports, and it is to be hoped that our traders will in future pay more attention to a market which is distinctly promising. After all, we take Egypt's cotton, and have, therefore, provided the increased value of the exports, and it is only reasonable that we should look for compensation on the other side of the account.

SHIPPING INTELLIGENCE

NEW EGYPT AND LEVANT SHIPPING COMPANY.

Launch of New Steamer.

The fine new steamer Antinous, built to the order of the New Egypt and Levant Shipping Co., Ltd., London, by Messrs. Workman Clark and Co., Ltd., successfully carried out a series of trials in Belfast Lough on December 17. During the trials the owners were represented by Messrs. Langdon Rees, Ltd., the managers. The vessel, which is of the shelter deck type, 415 ft., in length, with a gross tonnage of 4,560 and 8,400 tons d.w., has been constructed to the requirements of Lloyd's Register of Shipping for their highest class. The machinery consists of a set of triple-expansion engines taking steam from three large multi-tubular cylindrical boilers, this machinery also being built by Messrs. Workman Clark and Co., Ltd. There are five large holds, and complete shelter 'tween decks arranged for the carriage of grain and general cargoes, and the loading and discharging arrangements are most up-to-date. On the conclusion of the trials, the Antinous returned to the builders' yard to take on board the owners' stores prior to proceeding on her maiden voyage early in the New Year.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Malia for Port Said, Colombo, Madras, and Calcutta (London, January 10).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, January 14).

British India Line.—S.s. Morvada for Bombay and Karachi (London, January 2); s.s. Mantola for Colombo, Madras, and Calcutta (London, January 3).

Ellerman "City" Line.—S.s. City of Nagpur for Calcutta (Birkenhead, January 16).

Ellerman's Westcott and Laurance Line.—S s. Bulgarian for Gibraltar, Piræus, Salonika, Constantinople, and Smyrna (London, January 7).

Johnston Line.—S.s. Vedamore, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 3.) M.v. Tramore, for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza. (Liverpool, January 31.)

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, January 9); s.s. Novara for Colombo, Madras, and Calcutta (London, January 10).

Negotiations for a new commercial treaty between Norway and Greece to replace that which lapses on March 1 will shortly begin.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 10 amounted to £E13,387, making the total from April 1 £E245,301.

The traffic receipts of the South Indian Railway Company for the week ended October 29 amounted to Rs. 9,05,500, making the total from April 1 Rs. 3,26,39,784.

LONDON PRODUCE REPORT.

Firmness All Round.

(From Our Own Correspondent.)

London, Tuesday Morning.

Sugar.—Home refined has continued in fair demand at the last prices. Tate's cubes are 37s. 9d., London granulated is 32s. 10½d., while Lyle's granulated is 33s. 1½d. Foreign descriptions have been steady. White Mauritius spot has sold at 30s. 6d., white Java spot has been done at 30s. 4½d., while Czech granulated has been done at 30s. 10½d. Futures have been firm, December being 17s. to 17s. 4½d., January 17s. 1½d. to 17s. 3d., March 17s. 3d., May 17s. 6d., and August 17s. 9d.

Coffee.—The market has been quiet but steady. Stocks here are now 12,661 bags, as compared with 28,820 a year ago. Futures are firm, March being 122s. 6d., and May 121s.

Rice.—The market has been quiet. Burma cleaned has been done at 18s. spot, while the new crop has been done at 14s. 10½d. for January-February.

Maize.—A very firm tone has been in evidence, and prices have risen sharply. For La Plata afloat 47s. 3d. has been asked, 47s. 9d. for December-January, 48s. 9d. for January-February, and 49s. 9d. for February-March.

Barley.—Business has been brisker. Bombay afloat has been done at 41s. 6d., while Karachi, December, has come to business at 42s. 9d.

Oilseeds.—Linseed has been very firm, Calcutta being 24s. 4½d., while La Plata has been done at 22s. 9d. Rapeseed has also been very firm, Toria being 21s. 9d., while Ferozepore is 21s. There has not been much doing in cottonseed, though the undertone has been firm. Bombay is 11s. 1½d., Egyptian black is 14s., while Sakellaridis is 13s. 6d.

Seed Oils.—Linseed oil has been very firm, and at 49s. 3d. spot and 48s. 3d. for December shows a considerable advance. Rape oil has been steady, with crude at 51s. 6d. and technical refined at 54s. 6d. Cotton oil has been firm. Refined common edible is 52s. 6d., Egyptian crude is 48s., while deodorised is 54s. 6d.

Currants.—As in the case of other markets, there has not been much doing in dried fruit generally on account of the holiday season. Currants have remained a very firm spot. Stocks are small, and it is expected that with the resumption of general business there will be an advance in prices.

Sultanas.—A good tone has prevailed. Large supplies are not available, and the market position may be summed up as firm, and it will not be surprising if higher prices are shortly seen. Stocks of Australians are being rapidly used up.

Figs.—This commodity has continued to move off very freely, and the demand indeed has been quite of an exceptional character. Layers have been in special request, and stocks are now running low. Naturals have also been a very good spot.

Plums.—The demand for plums has not been so good of late. Some grades are in rather short supply, and if, as appears probable, there is a development of demand in the New Year there will be an advance in prices.

Dates.—This commodity has been in good request, and it is evident that the market is rather tending to harden.

Almonds.—The demand for this commodity has resulted in higher prices, and it will not be surprising if rates go even higher in the near future.

Oranges.—The market up to Christmas was extremely brisk, all classes being in good request. Jaffas have been in good demand, and are somewhat dearer.

AGRICULTURE IN IRAQ.

Large Date Exports.

The following particulars are taken from the Monthly Agricultural Bulletin of Iraq for the month ended November 15 :—

The comparatively hot dry conditions which prevailed at the beginning of the month, though they assisted the ripening of the late summer crops, rendered germination of early sown vegetables and winter crops difficult. Irrigation conditions have on the whole improved. The Yusufiyah Canal was opened after silt clearing on November 3, and the Saklawiyah was completely opened on November 2. A south-westerly wind during the first half of the month piled up the tide in the river at Basrah with very good effect on the water level, and irrigation of date gardens was thereby improved. Towards the end of the month, however, this wind again dropped. A slight rise in the Tigris was recorded, relieving greatly the anxiety of pump-owners, and improving conditions in the Amarah district. A similar rise in the Dialah resulted in an improved supply for the canals taking off that river.

Cultivators are generally busy with preparations for winter crops, and the normal areas of early barley have already been sown. Wheat and barley remain steady at high prices, and this may adversely affect the area sown, particularly of wheat. The Hillah district reports a good average crop of late sown rice which is now being harvested. Amarah reports a good average crop, but over a smaller area than usual, due to the poor irrigation conditions that have prevailed. Transplanted rice is reported to be good. Maize harvest was in pro-

Digitized by Google

gress during the period under report, and a fair average crop is reported. Grazing still remains poor, and the general condition of stock leaves much to be desired.

The Basrah date harvest was practically completed during October, and the final results confirm the estimates made previously. Hallawis were a full crop of only fair quality, Khadrawis gave only an average yield, but of excellent quality, whilst Sayer are good average, both in yield and quality. Prices have remained fairly steady, with a tendency to harden towards the end of the season.

Cotton pickings continued throughout the period under report. Up to the end of October seed cotton equivalent to 1,560 bales was delivered to the ginnery as compared with an equivalent of 780 bales for the same period last year. Pickings on the whole were poor during the month. As a rule October pickings amount to nearly one-half the total crop, but this year early pickings have been very good, and the late pickings poor, though the average total crop remains about the same. In some cases pickings ceased altogether, and cultivators have turned in their live-stock to graze. This is especially noticeable in the Yusufiyah and Saklawiyah areas. The small number of bolls on plants has led to an enormous increase in the percentage of boll-worm attack, though the boll-worm population is probably under normal. On the experimental farm at Rustam the different varieties of cotton under experiment had given yields varying from 1,291 lb. to 1,663 lb. per acre.

An agricultural office has been established at Mosul and an organisation is being formed to undertake an anti-locust campaign. This pest has been entirely uncontrolled during recent years, and has increased the area of its depredations especially towards the south, in a disquieting manner. The entomologist has visited the district with a view to discovering the hibernation places of the Sunn pest. This pest is reported to be increasing in activity, and considerable alarm is felt amongst cultivators in the north. A careful search was made of all accessible places, but no insects were found. The entomologist is of opinion that the hibernation haunts are in the higher inaccessible mountain regions to the north. It is hoped to undertake further investigations in the spring of the coming year.

A consignment of citrous fruits imported into Basrah was found on examination at the seed testing station to be infected with a *Phyllocistid* leaf minor and a citrous butterfly. They are both highly dangerous pests of citrous fruits so far not noticed in Iraq but common in India. The trees were thoroughly disinfected before being handed to the owners. The importance of adequate examination of such consignments cannot be over-emphasised.

The July to October exports of wheat from Iraq were 953 tons and of barley 21,524 tons, total 22,477 tons as compared with 81,274 tons for the same period last year. The August-October exports of dates from Iraq were 112,783 tons, valued at Rs. 1,45,86,592, as compared with 54,010 tons, valued at Rs. 71,85,749 for the corresponding season last year. The July-October exports of wool from Iraq were 12,699 tons, as compared with 2,436 tons exported during the same season last year.

EXPORT OF CAPITAL FROM ROUMANIA.

The British Commercial Secretary at Bucharest reports that it has now been decided that no permits to carry foreign money out of the country will in future be granted unless the application for such permit has first been approved by the Office for the Control of Foreign Exchanges. Furthermore, the applicant will be required to indicate the name of the bank where the money was exchanged, in order to show whether the bank in question is authorised to deal in exchange.

The Commercial Secretary further reports that the Ministry of Finance has sent orders to all the Customs Houses to the effect that all travellers into Roumania, whether Roumanians or foreigners, should have a note made on their passports on entering the country of the amount of money carried, in order that, on their departure again abroad, they may not apply for a permit to carry out a larger sum than that with which they entered.

The tobacco crop of Palestine this year is estimated at 1,200 tons of Turkish tobacco and 540 tons of Baladi tobacco.

The quantity of gold extracted from the mines in India during September amounted to 35,824 oz., valued at Rs. 19,58,444.

The Turkish Council of Ministers have approved a proposal for the exemption from Customs duties of all commercial lorries imported into Turkey. This decision must be ratified by the National Assembly before it can become operative.

Mr. Andrew Grant, of Pitcorthie House, Colinsburgh, Kilconquhar, Fife, retired merchant, formerly in business in Bombay, and afterwards in Liverpool, Liberal M.P. for Leith Burghs, 1878-1884, a former president of the Bombay Chamber of Commerce, who died on October 23 last, aged 94 years, left, exclusive of real estate and settled property, unsettled personal estate valued at £607,746. The estate duties on the property at this valuation will amount to over £164,000, in addition to any sums payable by way of legacy or succession duty.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Continued Activity in Futures.

The Alexandria Commercial Company, in their report for the week ended December 18, state :—

Since our last report the futures market has been very active, and wide fluctuations have been registered; the net changes on the week are the following :—Sakellarides : $1.85 up for January, $1.70 up for March, $1.40 up for May, $1.20 up for November, 1925. Ashmouni : $3.10 up for December, $2.90 up for February, $3 up for April, $1.55 up for October, 1925. The week commenced with excited and rising markets for Sakel, and touched, on Saturday last, $58—the highest of the season; this rise was due to speculative manipulation and to a certain amount of commercial buying; however, the advance was too rapid, and resulted in almost completely stopping business with spinners, and causing some profit-taking, which made the market lose a good portion of the rise. We think that Sakel futures have recently been somewhat overbought, and unless the demand from abroad revives, which is doubtful, owing to the approach of Christmas and New Year holidays, we think that a recovery in the immediate future is somewhat unlikely. Ashmouni contracts, in opposition to Sakel, have shown much strength; the reversing of straddles and heavy commercial buying are the reasons for this strength. The difference between Sakellarides January and Ashmouni February is now $21.25, whilst the difference of the latter with March New York is $8.82. At the second December tender no dockets were issued; there are, however, rumours that at the third tender fairly big lines of cotton will be delivered. The news from the textile centres is satisfactory, and all reports point to an increased consumption of cotton during the current season. The movement in the interior is slightly quieter. A few factories are now working only intermittently. Native holders of cotton are, in general, in a good financial position, and there is no obligation for them to sell their cotton. The week's receipts amount to 356,701 krs., against exports 283,692 krs.; the stock stands at 2,033,443 krs.

Spot.—We have had a week of good markets at Minet el Bassal, and sales amount to about 38,400 B/s, of which we estimate 12,000 B/s Sakellarides, 16,500 B/s Uppers, 8,900 B/s Zagora, 300 B/s Pilion, 300 B/s Brown, and 400 B/s White. Spinners have continued to show great interest in Uppers and Zagora, and these growths have absorbed the major portion of the demand. Sakellarides has been, by comparison, neglected, although speculative interests have pushed Futures prices up considerably. The present high level of prices is obviously attractive to holders, especially of Sakel, excepting the really high grades, which are in some degree specialities, and there has been free offering of cotton all week and a marked disposition to meet the market.

Sakellarides.—Good grade cotton has attracted most attention, though there has been a fair demand also for medium qualities. Good Fair and below are in poor request. Prices of spot against contracts are generally considerably cheaper, although Good and better have not eased as much as the other qualities. The demand for Sakel generally has fallen away considerably.

Upper Egypt and Zagora Lower Egypt have been in very good demand, and a large business has been transacted. Spot premiums are a little easier for Good Fair and below; for Fully Good Fair they are without change and firm, but for the better qualities they are appreciably dearer. Cotton, however, is freely offered in the qualities below Fully Good Fair, the level of prices being attractive to holders, who are now marketing their cotton freely.

Pilion.—A fair business has been done without much change in spot parities.

Brown has met with a moderate demand at about last week's rates.

White.—A fair business has been done. Spot premiums have eased considerably.

COTTON TRADE REVIEW.

Indian Demand for Cloth.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended December 27 states :—

The Christmas holiday has restricted the working days of this week to three, and, as usual, the last of those was not taken very seriously from a business point of view. On those three days, however, the better inquiry of last week was continued, and a fairly satisfactory state of affairs prevailed.

Yarn.—Without any feature of special note, the tone has been a little better, and it appears that the turnover last week was larger than estimated at the time. Quotations are firm, and apparently the increased production is being absorbed. In Egyptian spinnings the tone is very firm, although new orders are not plentiful.

Cloth.—India has shown signs of more activity than recently, and there is consequently a slight change for the better in this section. China remains very sluggish, but for Egypt and other Near Eastern outlets several contracts have been placed.

Raw Cotton.—Prices of American are practically unchanged, business in Liverpool having been very small. The ginning report published last week-end gave a total of 12,796,000 bales to date. The figures were considered satisfactory, but were without effect on the market. In Egyptian cotton the position remains doubtful, and quotations are ¾d. up. Closing quotations on the 24th instant were as follows :—American Middling, 13.24; Egyptian Fully Good Fair, 29.35.

A Sound Buying and Selling Organisation

British manufacturers desirous of developing their trade with the Near East are invited to write us. Our knowledge of these markets extends over many years and we know the requirements.
Similarly we place our organisation at the disposal of exporters generally in the Near East who wish to enter the Home market. We have a selling service of which we are justly proud; let us demonstrate to you our claims.

LIVERPOOL COTTON REPORT.

Rather Quieter Tone.

Messrs. Reynolds and Gibson report as follows for the week ended December 24 :—

Egyptian Futures.—Rather a quieter tone has been in evidence in this market throughout the week, and in the earlier days a reactionary movement in the Alexandria Sakel options, coupled with a fair amount of local liquidation, carried the list approximately 150 points below our last circular rates. With spot premiums well maintained and our contract still running about 200 points below an import basis, it is obvious that sustained pressure is out of the question, and once the periodical bouts of liquidation are terminated, fresh buyers find difficulty in securing any weight of cotton without materially affecting values. This week has been no exception, and with quite a moderate amount of trade support and speculative buying during the past two days, prices have practically regained the earlier losses, closing to-night at 25 to 45 points decline for near positions and 25 lower to 30 points advance for the distant months. Whilst we have no definite news on the point, we rather surmise that the sharp break witnessed in the January option in Alexandria during Thursday and Friday's sessions was due to the weaker part of the "Bull" element unloading. This naturally tightens the hold of the stronger outstanding interest, who will probably run the position till well into the month; heavy fluctuations are inevitable, but with the knowledge of the limited stocks of pure Sakel cotton and the heavy premiums obtaining for same, a further pronounced upward movement is quite likely to be forced. Business in Manchester is proceeding on quiet lines, and it will have to be left to the first few weeks in the New Year to disclose in full the effect of the recent appreciation in the raw material on the trade generally. Spinners' takings continue on very healthy lines, last week's figures totalling over 18,000 bales. The present situation is such that a very conservative policy is essential. However, our contract appears a reasonable proposition in comparison to spot values, and should any material set-backs occur, minor operations on the "long" side would probably be justified. Little interest has been shown in the November, 1925, Sakel and Upper options, and prices on the week are unchanged for the former and 10 points higher for the latter.

Egyptian Spot.—Despite fluctuations of a more or less important character in the futures market, the general tone has been somewhat quieter than during the past two or three weeks, and an increased irregularity in prices has been accompanied by an easier tendency all round. No doubt the approaching holidays, coupled with the huge forwardings, have been responsible for this. It is indeed remarkable under the circumstances that prices have not eased much more than has actually been the case, as the daily inquiry has shrunk to very meagre proportions, and the amount of business passing is very small. Manchester in particular has shown very little interest in Egyptian cotton this week. Alexandria still holds the key to the situation, and as long as such a firm front is maintained in that market there seems little hope of any substantial decline here. There is nothing fresh to report in the local situation. Uppers have fully maintained the ground they gained recently as compared with Sakel, and at a present difference of 10.00d. per lb. there would still appear to be room for further appreciation. Nineteen pence per lb. appears to be the spinners' idea of the value of Good Uppers at the moment. (The official quotation for such cotton to-day is 19.75d.)

There has been a fair inquiry for the lower grades at from 17.50d. to 18.00d., but such cotton does not seem to exist in our market. In Sakellaridis, the better cotton at from 350 to 450 on has met with some inquiry, and the low and inferior grades have received slightly more attention, but in both cases the amount of actual business has been very small. Alexandria offers of Sakellaridis have been far from attractive, and certainly our selection here, although showing latterly a considerable improvement as regards quantity, leaves a great deal to be desired as regards the quality of the staple.

Pilion continues to enjoy a small sustained inquiry, but prices show great irregularity. Some very good cotton changed hands this week at under 23.00d., which appeared very reasonable with F.G.F. Sakel quoted at 28.60d. on the same day. A fair business has taken place in Sudan cotton at prices ranging from 20.50d. for the White variety to 31.00d. for the Sakel. C.i.f. business has been very quiet. Forwardings to spinners for the week ending 19th instant were returned at the large figure of 18,774 bales. Estimated sales 1,100 bales Egyptian and 800 bales Sudan. Quotations of Sakel are reduced 15 to 35 points, those of Brown and Upper 35 points. F.G.F. Sakellaridis 29.25d.

A report from Jaffa dated November 29 received by the Imperial Ottoman Bank states that the sale of the first direct shipment to England of oranges realised 11s. 1d. to 13s. 6d. per case, which is not a favourable price.

The Greek Government is encouraging the construction of a railway from Agrinion to Janina, which is designed to form a section of a more extensive line, ultimately to link up with other railroads of the Government (says an American Consular report). The extension is also contemplated of railway communications north of Janina.

Company Meeting.

LAND BANK OF EGYPT.

Increased Dividends.

The following is a translation of the report of the Land Bank of Egypt for the year ended September 30 last, which was presented at the annual meeting held at Alexandria on December 2:—

Before submitting for your approval the ordinary accounts for the year 1923-24 the directors have the honour of presenting to you first the financial results with regard to our 4 per cent. bonds issued in francs. As we announced in our report for the previous year, we have continued during the past year to purchase these bonds, capital and coupons, at the sight rate of exchange on Paris. Most of the holders, appreciating the advantages of utilising their French funds at a more profitable rate of interest than that provided by our shares, have responded to our offer, and we have repaid more than four-fifths of our bonds. As regards those which are still in circulation we have made adequate provision in France for the service of their interest and amortisation for the remainder of the period still to run, which is 57 years.

The repayment, either by purchases or by amortisation, of our 4 per cent. bonds being thus assured, the premiums and charges of our bonds of all classes being wholly amortised, the net profits resulting from these operations so successfully continued during two years stand at £E999,124.558, of which £E737,551.349 arises from the bonds purchased, the balance being in respect of the provision constituted as stated above. On the advice of eminent counsel, whom we have consulted in France and Egypt, these substantial profits can now be made the subject of a distribution in conformity with articles 44 and 45 of the statutes. But we feel that their distribution ought to be subject to the rules of prudence, which your directors have always followed in the direction of your business, so as not to diminish the volume of our mortgage transactions. Wishing to give satisfaction at the same time to all legitimate interests and to the duty which is incumbent on them of taking care of and furthering the development of our business activity, the directors submit for your approval the following proposals based on the principle that exceptional profits should be distributed on account of each of the classes interested, following the order and the proportion indicated by the statutes, the rights of each being henceforth and already definitely fixed by the decision which your meeting will take with full knowledge of the circumstances. Consequently, by the application of article 44 of the statutes, the sum of £E999,124.558 will be divided as follows:—10 per cent. to the statutory reserve (£E99,912.455), 10 per cent. to the board of directors (£E99,912.455); the balance (£E799,299.648), 70 per cent. to the ordinary shares (£559,509.754), 30 per cent. to the founders' shares (£E239,789.894), total, £E999,124.558. The privilege of each of the classes having rights being thus definitely established an account will be opened in the company's books for those interested, the sums written down being carried to their respective credits. Each account will receive interest at the rate of 5 per cent. on the balance after the special distribution which will be referred to later, this interest being taken each year from the profit and loss account of the year as from the year 1924-25. As regards the capital itself, it will be amortised in a maximum period of forty years, by equal fractions of a fortieth, the necessary amounts for amortisation being taken from the capital recovered on our mortgage loans. The maximum delay can be diminished, and on the proposal of the directors, your meeting will have every facility compatible with the circumstances and the financial conditions of the company for deciding on an earlier distribution, so as to reduce the delay in the repayment of the accounts.

It appears to us equitable and to conform to the rights of all to proceed this year to pay by way of bonus a sum of £E100,000, representing about a tenth of the special profits of the purchase of our bonds. After this distribution there will remain to the credit of each of the classes interested the following sums.—Statutory reserve, 10 per cent., £E89,912.455, to the board of directors, 10 per cent., £E89,912.455; the balance, £E719,299.648, to the ordinary shares; 70 per cent., £E503,509.754, to the holders of founders' shares; 30 per cent., £E215,789.894, total, £E899,124.558. The interest of 5 per cent. on these various amounts will be raised in future years, as we have said above, on the profit and loss account. The distribution of annual profits of each year will follow this order:—(1) Statutory dividend of 5 per cent. on the ordinary shares; (2) 5 per cent. interest on the balance due to each class having rights; (3) *tantièmes* and the ordinary dividend of year pro rata established by the statutes.

Profit and Loss Account.

The receipts of the year arising from interest on mortgage loans, short term advances, etc., have been £E366,919.100. The service of the bonds, general expenses, fiscal taxes paid or due to the French Government, and various redemptions we propose to you, which stand at £E15,511.817, absorb a total sum of £E176,232.990. The profits to be distributed amount to £E190,686.200. From that sum there has first to be deducted the statutory 5 per cent. in favour of our 195,000 shares, £E47,531.250, and there remains to be divided £E143,154.950. In accordance with our statutes, 10 per cent. is placed to the statutory reserve £E14,315.495, and 10 per cent. goes to the board of directors £E14,315.495, £E28,630.990, leaving £E114,523.960; 70 per cent. to the shares £E80,166.772, to which has to be added the amount brought forward from the year 1922-23 £E8,276.729, making £E88,443.501. We propose to you to give out of this sum to the 195,000 shares 9s. per share, £E85,556.250, which, added to the statutory interest of 5 per cent. already mentioned, will represent a total dividend of 14s. per share. The carry forward for the shares will thus be £E2,887.251. An interim dividend of 5s. having been paid on June 15, it will remain to pay a dividend of 9s. per share. The 30 per cent. belonging to the founders' shares represents £E34,357.188, to which has to be added the amount brought forward from the year 1922-23, £E4,596.269, We propose to distribute a dividend of £7 12s. on each founders' share, and to carry forward £E1,903.457.

The Resolutions.

The general meeting unanimously (1) approved the accounts and balance-sheet for the year ended September 30, 1924, and gave the directors their discharge for their administration. (2) Approved the fixing at £E999,124.558, the net profit resulting from the purchase of the 4 per cent. bonds on their amortisation by drawings or as regards those still in circulation from the provision in francs adequate to guarantee their service in respect of interest and amortisation. Of this £E999,124.558 there will be taken immediately the sum of £E100,000, which will be distributed in accordance with article 44 of the statutes as follows:—10 per cent. to the statutory reserve £E10,000, 10 per cent. to the board of directors, £E10,000, the balance, £E80,000, 70 per cent. to the ordinary shares, £E56,000, 30 per cent. to the founders' shares, £E24,000; total, £E100,000. A special supplementary coupon, bearing the number 28, will then be paid this year, under the head of bonus, at the same time as the ordinary coupon hereafter arranged, and it will be for the ordinary shares 5s. 10d., for the founders' shares £4 18s. After the distribution of £E100,000 there will remain a profit which, in conformity with article 44 of the statutes, will be divided in the following manner:—To the statutory reserve, 10 per cent., £E89,912.455; to the board of directors, £E89,912.455; the balance, £719,299.648, to the ordinary shareholders, 70 per cent., £E503,509.754, to the holders of founders' shares 30 per cent., £E215,789.894, total, £E899,124.558. The allocation of this total of £E899,124.558 to each of the categories having rights is thus definitely established; there will be opened in the books an account for the interested parties, the sums being carried to their respective credits. Each account will bear an annual interest of 5 per cent. on the balance remaining at the end of each year, the said interest being taken each year from the profits and loss account of the year from the year 1924-25. As regards the capital itself it will be amortised in a maximum period of forty years by equal fractions of a fortieth, the sums necessary for amortisation being taken from the capital recovered from mortgage loans. (3) Approved the division of profits proposed by the directors, and fixed the dividends as follows:—14s. on the ordinary shares, £7 12s. on the founders' shares. An interim dividend of 5s. per ordinary share having been paid on June 15, it will remain to pay as a final settlement for the year 1921-22 9s. per share. (4) Decided to carry forward £E2,887.251, or 74,847.51 francs, for the ordinary shares, and £E1,903.457, or 49,344.31 francs, for the founders' shares. (5) Re-elected MM. S. Wellhoff, E. Cazalet, and S. E. Ahmed Ziwer Pacha, the retiring directors. (6) Nominated as auditors, MM. Franz Sofio, H. Pougin, and A. Ferren. (7) Fixed the directors' fees at £5 per meeting.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

The Sudan.

Steel Tank.—The Inspector-General of Sudan Irrigation, Khartoum, invites tenders for the supply of a mild steel tank, dimensions 10 × 10 × 2½ metres, to be used for water, with a small head between the two levels; the plates and the angle frames should be supplied drilled and cut according to the dimensions required, and ready to be erected in the sudds zone. January 15.

Egypt.

Printing Paper, etc.—The Superintendent, Government Press, Bulâq, Cairo, invites tenders for the supply of printing and writing paper, bristol-board, grey-board, and straw-board. January 13.

Locomotives.—The Egyptian State Railways invite tenders for five passenger engines for the Luxor-Assuan Line. The gauge of this line is 3 ft. 6 in. January 13. (D.O.T.)

General Stores.—The Ministry of War invites tenders for the supply of general stores and clothing required by the Frontier Districts Administration for the year 1925-26. The goods required include permanent stores, oils, paints, varnishes, and other consumable stores, and clothing and cloth. Tenders, on the proper form, must reach the Director of Stores, Frontier Districts Administration, Alexandria, not later than noon on January 14, 1925. It should also be noted that samples of permanent stores, oils, paints, etc., should reach the F.D.A. Arsenal ten days before the date fixed for opening tenders. (D.O.T.)

Calico and Sash.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of calico and sash required for the next financial year, 1925-1926. February 10.

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, equipment, tents, etc., required for the year 1925-1926. January 16.

Binding and Printing Material.—The Superintendent, Government Press, Bulâq, Cairo, invites tenders for the supply of binding and printing material. Price of conditions of contract: 50 mills. per copy. January 23.

Stationery, etc.—The Director, Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of stationery articles and papers required for the year 1925-1926. February 2.

Candles.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of two English tons of candles. February 3.

Surgical Instruments, Appliances, and Sundries.—The Ministry of the Interior invites tenders for the supply of surgical instruments, appliances, and sundries required for the central stores of the Department of Public Health for the period April 1, 1925, to March 31, 1926. January 27. (D.O.T.)

Roumania.

Sulphate of Copper.—The Roumanian State Railways invite tenders for the supply of sulphate of copper. (D.O.T.)

Turkey.

Barbed Wire.—The Commission des achats des chemins de fer d'Anatolie invite tenders for the supply of five tons of galvanised barbed wire. (D.O.T.)

Adjudications.

The call for tenders by the Egyptian State Railways, Telegraphs, and Telephones by October 20 for the supply of modern railway sleepers, resulted in sixteen offers being received, and among the orders placed were the following:—Messrs. Millars Timber and Trading Co., Ltd., London: 90,000 oregon pine sleepers for normal gauge line, at the price of 362 mills. each, delivered c.i.f. Gabbary; Messrs. Canusa Trading Co., London: 60,000 oregon pine (Douglas fir) Sleepers for normal gauge line, at the price of 364 mills. each, delivered c.i.f. Gabbary; 3,000 oregon pine (Douglas fir) sleepers for turnouts, 3 metres long, at the price of 516 mills., delivered c.i.f. Gabbary; 4,000 oregon pine (Douglas fir) sleepers for turnouts, 3.50 metres long, at the price of 589 mills. each, delivered c.i.f. Gabbary.

The Anglo-Egyptian Bank, Ltd., has opened a branch at Musky, Cairo.

The first power cotton ginning plant to be established in Syria is under construction by a French firm.

The ordinary general meeting of the Ionian Bank will be held at the offices of the company, Basildon House, Moorgate, E.C.2, on January 13, at 11 a.m.

COMPANY NOTES AND REPORTS.

Indo-Burma Oilfields.

The report of the Indo-Burma Oilfields (1920) for the year to March 31, 1924, states that the working expenditure in Burma was £37,997 and the revenue £27,755, giving an actual working loss of £10,242. To this has to be added the well site rents at Yenangyaung, the amount written off advances to well site owners at Yenangyaung, loss on sale of surplus stores, loss in exchange, etc., altogether amounting to £8,775, interest on debenture stock and directors' and debenture trustees' fees accrued and unpaid £30,721, and London expenditure £3,310, making a total debit for the year of £53,049. A sum of £20,006 was received in respect of premiums on preference shares, and this has been applied as regards £18,254 in writing off underwriting commission on preference share issue, expenses of capital reduction, and in reducing book value of various assets. The balance of £1,752 has been used in reducing the debit on profit and loss, making that figure £51,297. Since June last practically the whole of the expenditure in Burma, both in production and development, has been met by the proceeds realised from sale of crude oil.

As a result of the geological examination of properties in Chindwin district, it has been decided, on the recommendation of the geological staff, to surrender Chaungzauk, Hmawgyi, Kwyedaung, and the two Patalon areas, and to retain Mawlaik and Mawku areas, which have been favourably reported on. An exhaustive survey has been carried out on the extensive Yenanma area during the last two years, and the directors regret to state that no additional areas have been located which show promise of developing into oilfields. The geologists have accordingly recommended that the whole of the Yenanma area, with the exception of the present producing area and a small extension thereof, be also surrendered. A geological survey has also been made of the Mindegyi area, and as a result of this and of experience gained from drilling on the area the geologists recommend that the whole of this area, with the exception of one square mile, be also given up. The company's properties will, therefore, as soon as existing prospecting licences run out, be as follows :—0.8 square mile Yenanma oilfield, 4.8 square miles Padaukpin oilfield, 1.0 square mile Mindegyi oilfield, 4.0 square miles Okpon area, 8.31 square miles Mawlaik-Mawku area, Upper Chindwin district, a total of 18.91 square miles. Drilling has been carried on continuously, drilling of company from its formation totalling 90.230 ft. The production for the year totalled 7,711.6 tons. The whole of the output of crude oil is being sold to the Burmah Oil Company. At Yenanma a number of additional wells have been drilled on the present producing area, and have been brought in with an average production of between 6 and 7 barrels per well per day, being approximately the average for the field. The production obtained has more than counterbalanced any slight falling off in production in earlier wells drilled on the area.

Ionian Bank.

The report of the Ionian Bank, Limited, for the year ended August 30, states that the profits, etc., amount to £63,076, to which has to be added the balance brought forward, £12,467, together making £75,543, from which there has been paid an interim dividend at 3s. per share, free of income-tax, paid June 10, £14,567, leaving available for distribution £60,976. This the directors propose should be disposed of as follows : Final dividend at 3s. per share, free of income-tax, £14,567 ; bonus at 2s. per share, free of income-tax, £9,711 ; transfer to reserve fund, making that fund £190,000, £20,000 ; transfer to Greek branches pension fund, Drs. 1,000,000, £4,056 ; leaving a balance to be carried forward of £12,640. The dividend and bonus, if agreed to, will be payable on and after January 14. The directors are pleased to report that the business of the bank continues to show satisfactory expansion, as a result of which they are recommending to the proprietors an increase in the customary rates of bonus from 1 to 2 per cent. per annum. An agency of the bank has been opened at Argos in connection with the Nauplia branch, and a sub-branch to the bank's office at Constantinople (Galata) has been opened at Stamboul. The investments of the bank stand on the books at figures well below the actual market value. Meeting, Basildon House, Moorgate, January 13, 11 a.m.

East Indian Railway.

The report of the East Indian Railway for the half-year ended September 30 shows that the gross receipts from all sources were Rs. 83,55,872 more than those of the corresponding period of 1923. The working expenses were also greater by Rs. 34,83,404, there being an increase in net earnings of Rs. 48,72,468. The net earnings of the undertaking and the South Behar Railway, together with the sum received for working the D.U.K. Railway for the half-year, amount to Rs. 3,60,55,437. From this has to be deducted Rs. 2,15,02,543 in respect of charges, leaving a divisible surplus of Rs. 1,45,52,894, the company's share of which is Rs. 4,21,029. This amount, after deducting Indian income and super taxes, has, at the contract rate of exchange, produced £30,258. After payment of the dividend authorised at the meeting held in July last, the balance in the surplus profit account enables directors to recommend the payment of a dividend (subject to English income-tax) of 7s. 10d. per cent. on the capital represented by the deferred annuity and deferred annuity Class "D" of the company. This, with 3s. 10d., the amount received under Clause 4 of the Secretary of State's contract with the company as compensation for income-tax for the period of the half-year under review, will make 11s. 8d. in all, which is in addition to the guaranteed interest. The guaranteed interest up to the end of July, 1924, was distributed on August 1 last, and there remains, therefore, only that for the five months from August 1 to the end of the contract. This amounts to £1 13s. 4d. per cent. on the capital represented by the deferred annuities of both classes, making a total distribution of £2 5s. per cent.

The traffic receipts of the Suez Canal from December 20 to December 26 amounted to 3,910,000 francs, as compared with 3,160,000 francs.

Major Robert Findlay, chairman and managing director of T. D. Findlay and Co., East India merchants, a director of the British and Burmese Steam Navigation Company and of J. Dunn and Stephen, vice-chairman of the Irrawaddy Flotilla Company, left personal estate in Britain valued at £209,416.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LAL-IMLI PURE WOOL

Makers of the famous Lal-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPOREWOOLLEN MILLS CO.,
CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO.,
CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Everything in Leather.

COOPER, ALLEN & CO.,
CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co.,
DHARIWAL.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Serbs and Croats.

On the ground that the Croat Peasant Party is a Communist body under the orders, through its leaders, of an alien subversive organisation, its immediate dissolution has been ordered by the Yugoslav Government. All meetings, publications, and other public work of the party are prohibited; its archives and correspondence are confiscated, its members will not be allowed to stand for Parliament, and criminal proceedings are to be taken against its leaders. Such is the reply of the Pashitch Government to the exasperating tactics adopted by M. Raditch. If the Croat leader had been a wiser or more practical man, he would have known how to come to terms with M. Davidovitch, the late Prime Minister, and would have collaborated with the Belgrade authorities in constitutional amendments of the Vidovdan Constitution. He persisted, however, in purely wrecking tactics, and the heavy hand of M. Pashitch has now descended upon him and his followers. The experience of the Davidovitch Cabinet proved that a working arrangement with the Croat party was out of the question so long as its destinies were controlled by M. Raditch, and the new Government has sought to cut the Gordian knot by proscribing the leader and his followers. Many will regret the drastic step, and Yugoslavia may even come to rue it; but those who feel inclined to challenge M. Pashitch's action must first produce a workable alternative.

Might Have Been's.

M. Pashitch would have been able to meet criticism more confidently if he had shown himself at any time willing to effect a compromise with the Croats. They stood at first merely for a different conception of what was the best form of constitution for the new Kingdom, favouring a federal system of government in opposition to the highly centralised form that commended itself to the Serbs. If M. Pashitch had adopted more persuasive methods of giving effect to his own policy, it is possible that the alienation of Croatia would have been avoided. It was not Communism that originally prompted M. Raditch to champion the federal system; but when he discovered the strength of the forces arrayed against him, he coquetted first with republicanism, and then in desperation placed himself in the power of Moscow, as he came to realise that there was no chance of help from any other quarter. Foreigners who have known him personally will be inclined to regard him more as a fool than as a traitor; but when he deliberatly flouted the overtures of the Davidovitch Cabinet, he could hardly expect the Serbs to take an equally charitable view of his actions. The new Government has satisfied itself that his party has come within the arm of the law, and it has proceeded to extreme measures. Political exponents will regard the proscription of the Croat Peasant Party as a preliminary precaution for a Radical success at the elections next month. They will, however, be effectually answered if the arrested leaders are tried before the elections and the evidence against them proves conclusively that they were acting under the direct orders of the Soviet authorities against the institutions of the Yugoslav State. M. Raditch himself has been found in hiding in Zagreb—an ignominious *dénouement*. Never has a perfectly sound and reasonable policy been advocated in a more unreasonable way or on unsounder lines.

The Bulgarian Tour.

Although the Government of M. Pashitch has shown no objection to taking a leaf out of Bulgaria's book in dealing with its own Communists, it does not seem to have extended a very practical welcome to the Bulgarian Prime Minister, who came to Belgrade ostensibly to discuss joint action against Soviet intrigues in the Peninsula. M. Tsankoff, on his return to Sofia from his visits to Yugoslavia and Roumania, has made the admission that the Bolshevist peril was not so great as to justify a formal pact, and he has had to be content with an exchange of views with the idea of common action against Bolshevist agitation. In spite of the outward failure of his mission, we are not inclined to believe that the tour has been altogether in vain. It is good that there should be discussions between the different Balkan Governments. If M. Tsankoff was unwise enough to use in Belgrade

Digitized by Google

the Communist peril as an argument for an increase in the strength of the Bulgarian Army and the abolition of the voluntary system of enlistment, he will have courted a rebuff. Bulgaria's contention on each point is entirely justified, but it would have been an unfortunate error of judgment to have urged these contentions on the occasion of a first visit to Belgrade for the purpose of concerting joint action on the part of Yugoslavia and Bulgaria. Statesmanship would suggest the joint action first, and then the making use of it as an additional argument for ridding Bulgaria of her unfair disabilities.

Bulgaria's Dilemma.

The Bulgarian Government is deserving of sympathy in that it finds itself on the horns of a dilemma; if it makes no protest, it is apt to be regarded as content with the *status quo;* if it puts forward arguments in favour of its contentions it exposes itself to the charge of challenging the peace of Europe. The embarrassing predicament is almost an inevitable outcome of the War. Bulgaria has gone a long way towards rehabilitating herself as a result of the dignified attitude that she has adopted hitherto. It would be unfortunate if her exemplary patience were to become exhausted at this point, for her one chance is to persevere in the correct course that she has followed until now. Whether in regard to the Treaty of Neuilly or in the details of Reparations she will do better by confining herself to official protests in responsible quarters and avoiding anything in the nature of "enveloping movements." A Press campaign, for instance, is more likely to lose ground for Bulgaria than to gain it: in the same way it would have been a tactical mistake to raise in Belgrade the question of the strength of the Bulgarian Army, which is a matter for the Allied Powers to settle.

Elections in Egypt.

The primary election for the electoral delegates in Egypt is fixed for January 20, and the country is preparing eagerly for the event. Much is being made of secessions from the Zaghloulist party, and these suggest that terrorism is no longer as potent in Egyptian politics as it was before. The determining factor, however, will be the efficacy of the organisation of the different parties. The Zaghloulists had actually nominated a candidate for practically every one of the 214 constituencies, as compared with 154 Constitutional Liberals and 140 Independents, but defections have reduced their numbers to 192. Thus more anti-Wafd candidates will be in the field than followers of Zaghloul Pasha; but it is doubtful whether their organisation will be as efficient as that of their opponents. One method of eliminating terrorism has been attempted by prohibiting the formation of students' committees for the purpose of intervening in the electoral campaign. The students are protesting on the ground that such a veto is interference with the liberty of the individual; but it must be evident even in Egypt that the student nuisance had passed all limits, and sooner or later would have to be dealt with. Excesses directed to-day against the British may suit the authorities for the time being, but to-morrow the system is capable of being used to bring all government to a standstill, and no self-respecting Administration could allow the evil to go unchecked, as Zaghloul Pasha himself did. Ziwar Pasha's Cabinet has at least shown that while it is in power it is prepared to govern—a novel experience for the country after Zaghloul Pasha's flabby tenure of office.

The Constantinople Press.

There has been further trouble between the Angora Government and the Constantinople Press, leading to the suspension of two or more papers, one of them an English publication. As nothing is known here of the merits of the dispute, we can only refer to the question involved on general lines. There can be little doubt that the Turkish Press is apt to mistake liberty for licence; its remarks, whether on the shortcomings of its own Government or on those of foreign countries, are often characterised by what seems to the English reader an amazing lack of ballast, if not of decency; but one must infer that the practice would not be indulged in if it were calculated to give equal offence to Turkish readers. In the circumstances it is difficult to accuse the Angora Government of being over-sensitive in regard to Press criticism. Its own point of view is that it has no objection to—but rather welcomes—constructive criticism; on the other hand, it resents mere destructive criticism or abuse, such as it meets with from time to time in the Turkish Press of Constantinople, and no less the unhelpful sarcasm or jibes of which it complains in a section of the English Press. With regard to the latter it is probably only necessary to call attention to the Turkish Government's point of view to ensure that its susceptibilities will not be further offended. The British Press is instinctively prepared to give everyone who is known to be doing his best a fair chance; and if it has been sarcastic in the case of certain Turkish matters, it will have been because these did not seem to be of sufficient importance to call for too serious handling. In these questions there is generally room for a policy of give and take. The changed outlook of the Turkish Government in regard to foreign affairs in general, and in particular towards Great Britain, is welcomed in this country, and no newspaper mindful of its responsibility in the matter will deliberately set out to prejudice Anglo-Turkish relations by thoughtlessness.

A Pilgrim Premier.

While Turkey is eliminating the Moslem religion from public affairs, even to the extent, so it is anticipated, of laying hands on the Evkaf, Persia is emphasising the close relationship of Islam and the State. When the Prime Minister, the Sardar Sipah, was on the point of transforming the Monarchy into a Republic, he was prevented from taking the step by the influence of the Shiah priesthood, and felt called upon to make a gesture of resignation to atone for his impious intentions. Now at the zenith of his power, when he has successfully disposed of the only challenge to his authority in South Persia, and has brought the Persian army to a higher standard of efficiency than it has known before, he has undertaken a pilgrimage to the Iraqi Holy Places, Nejef and Kerbela. The immediate result would seem to be a marked accession of popularity, for his return to Teheran has been made the occasion for great popular enthusiasm. The contrast thus presented by the two neighbouring countries in their attitudes to Islam is most striking. Only the future, however, will be able to point the moral. In the meantime, Mustapha Kemal Pasha may feel tempted to envy the Sardar Sipah his waxing popularity.

INDIA.

Extremists in Council.

The political palavers which still mark the Christmas season in India appear to be declining

Digitized by Google

steadily in importance, and this year they carry the country a very short distance on the long road before it. The extremists at Belgaum seem to have paid very little attention to Mr. Gandhi, whom they had placed in the chair, and his address has been aptly described by a Calcutta journal as a stately mausoleum reared over the remains of once sacred and beloved objects! To put matters more bluntly, the practical politicians have at last succeeded in shelving the impractical saint, and, though Mr. Gandhi's course cannot be predicted, there are at present no signs that the verdict of the Congress will be reversed in the court of public opinion. According to the rules of the game, as it is played in India, the politicians who have combined to secure this result should now begin to fight among themselves for the vacant throne, and the struggle ought to furnish an interesting spectacle, seeing that among the protagonists are some of the cleverest men in the country, but we fear it will not carry us much further, unless, indeed, it should help to open the eyes of the electorate to the futility of the whole business.

The Failure of the Liberals.

Nor can we see much hope for the country in the deliberations of the Liberals at Lucknow. They had a great chance under the new Constitution, but they muddled away their initial advantages, and now they are trying to reconstruct their platform out of planks already appropriated by their successful opponents. The result does not inspire much confidence, for the borrowed planks do not fit the substructure, and we fancy that those electors who have a taste for extremist measures will stick to the party which offers all of them, while those who want something different will be deterred from supporting the party which offers so many. The present Liberal programme, at any rate, does not provide a rallying-point for the various steadying elements of Indian life, which, if only someone could bring them together, would probably be strong enough to control the situation. There is room here for leaders gifted with courage and insight, but those gifts have scarcely yet had time to develop, and they were certainly not conspicuous among the Liberals at Lucknow. When a real leader comes forward, he will not have to wait long for an adequate following.

The Anglo-Indian Community.

We have to thank the Anglo-Indian Association in London for a copy of the memorandum now being circulated to members of Parliament on the position of the community under existing conditions. Its gist is that Anglo-Indians and domiciled Europeans have already been affected prejudicially by the new Constitution, and that their interests are threatened more seriously by the possibility of further concessions to the demands of Indian politicians; they ask, therefore, that any future legislation shall protect their vital interests. The community thus comes into line with various other sections of the population—Moslems, non-Brahmins, Sikhs, depressed classes, and so on—each of them apprehensive of any extension of what is in effect an inchoate Brahmin oligarchy. We fear it must be admitted that these apprehensions are reasonable, in view of the action of some of the provincial Councils, and the Association has ample justification for approaching Parliament direct, but would it not be possible to find allies in India also from some of the other minorities in the same position? Or is it too soon to suggest that such heterogeneous communities may further their interests most effectively by a working alliance among themselves?

THE WEEK AT HOME.

London, Tuesday Morning.

The New Year.

For a few hours on New Year's Eve the weather held its hand, and we were able for the briefest nonce to look at the heavens through rainless distances. Hopefully, therefore, we wrung out the Old Year, and, it seemed, many others—far more than usual—did the same. But those pitiless, rainless heavens deceived us; another few hours and we were dismally wringing in the New Year. The time is indeed fit but for "little tiny boys."

The Gales and Floods.

Not for thirty years has this country been so buffeted with wind and with rain. The Old Year went out, roughly speaking, in howls and tears; nor can the New Year yet escape from them. Much damage has already been done, and the countryside must be seen to be believed. In certain parts, indeed, towns built on a hill are complete islands; roads, with stakes pegged in to show the way, are now used as the course of rivers, for boats are the only means of transport. Little rivers like the Colne, the Wey, the Lodden, the Kennet, and the Mole, have risen and spread most fiercely, and, in many places, alarmingly. The Thames Valley is, in fact, become a waste of waters. Runnels and ditches have everywhere been converted into streams, and the bosom of Father Thames is simply overflowing with grief. I have never seen anything like it.

Of course, there have been worse times—there always have been. The sagest old men still whisper fearfully of the time when the waters climbed the wall of Twickenham's old church. But this is good enough for most of us.

Honours.

Quite the most notable thing that Mr. Baldwin's Administration has achieved is its drawing up of the Honours List. The gloss over the services of politicians is delightfully complete; there is hardly a man or a woman in the list who does not manifestly deserve some honour. There is little point in going into detail, but it is worth noting that practically every name is evidence of the Prime Minister's interest in the "humane" side of life. The Prime Minister is—so patently and yet so unostentatiously that one cannot withhold expression of admiration—that increasingly rare phenomenon in English politics, a cultured and gentle man. For a party man thus to pass by the petty controversial services and make straight for permanent values is a most hopeful and encouraging sign.

The Dearer Loaf.

The Royal Commission which is sitting on the question of the dearer loaf has not yet got very far. It has, it is true, tackled the baker, from whom the consumer buys his bread. But the baker blames the miller, so that the charge against him is difficult to sustain. The miller, no doubt, will blame the wheat rings (who will scarcely be summoned to Whitehall!), who will doubtless blame the American farmers, who will doubtless blame the weather! The manifest trouble is the host of middlemen; but it hardly needed a Royal Commission to tell us that.

The New Zealanders.

I did not see the All Blacks beat England on Saturday, but nobody with whom I talked has suggested that the New Zealanders did not thoroughly deserve their win. It was a very great thing, indeed, so to have maintained their unbeaten

Digitized by Google

record, and the Empire is proud of them. That is all for the moment that can be said.

But there is one aspect of international Rugby on which a word may perhaps be said. The journey to and from Twickenham is now one not lightly to be undertaken, the reason being the extraordinary popularity of Rugby since the War. Whether this is due to the Press or not I do not know, but certainly the Press is exploiting it. And with that exploitation comes the inevitable threat of commercialisation, and of the lowering of the standard of the game. Already there are signs that the game is attracting spectators whom, one likes to think, professional Soccer alone should welcome. The spectator who knows more than the referee is the worst danger that any game can have. Club games in Rugger—and, for that matter, in better class Soccer—are safe enough with their spectators; but the fear that international Rugger may follow in the dreadful wake of professional Soccer has already become genuine and well-founded.

England at Melbourne.

Everyone's thoughts and hearts are now in Melbourne, whence the cables with the Test scores come with maddening slowness. It is, one supposes, absurd how much our dispositions depend on the news in the very early evening papers, but the effect of the cricket cables is a fact. There was literally no one who, after hearing on Saturday of the English first wicket stand, could not with the more comfort entertain the prospect of England's being beaten by the New Zealanders in the afternoon; it was "Hobbs is still in: all's right with the world."

But now, how low are we fallen! Sisyphus with his stone was not more tantalised than are we at the fateful inconsistency of England's Test batting. 283 runs for no wickets was indeed the seeing of a great light; and 479 all out was our being plunged into outer darkness again. We will, until we see how Tate's fine fury dismays Australia's batsmen, restrain our weeping and gnashing of teeth, but these middle Colonial bats (I write before seeing the result of Monday's play) are like trumpets outside our walls of faith.

The New English Art Club.

Nothing could so show the differences between "official" and "unofficial" art as a comparison between the Royal Academy and the New English Art Club, the latter of which has just opened a retrospective exhibition in the old London County Council Hall, Spring Gardens, W. This exhibition shows work done during the last forty years, and displays the amazing fertility of the Club and the vital connections which it keeps with its time. It contains beautiful examples of men like Steer, Tonks, Sargent, Orpen, John, Whistler, Rotherstein, Sickert, and of others like the two Nashes, Meninsky, Bone, and McEvoy. Probably it is the show of the year; certainly the most instructive and intriguing. During the next four or five weeks it provides an opportunity of understanding what immense developments have taken and are taking place in English art, and, from the very fact that from this exhibition are excluded some of the crudities which occasionally characterise some of the Club's shows, more visitors will be taught the meaning and the potentialities of English painting.

In a quite different category is the exhibition which the Pastel Society is holding at the Royal Institute Galleries, Piccadilly. There, too, though in much slighter degree, can be found evidence of progress and of individuality in a very charming medium. A very pleasant degree of memorability is to be found in the examples of men like Vernon Hill, Leonard Squirrell, and Littlejohns.

"F. C. G."

Few things could better illustrate the passing of the amenities which used to bedeck the old two-party system of England than a recalling of the success, universally recognised, which greeted the cartoons of Sir Francis Carruthers Gould. His death last week signified the passing, perhaps for all time, of a force in politics which in its day was undoubtedly great. "F. C. G.'s" work delighted Conservatives almost as much as Liberals; it was good-natured, and it appealed to the citizen's sporting instincts. Nowadays the satirist is needed more than the witticist; politics are altogether more earnest and deadly; and it is the distorted caricature rather than the likely cartoon which gets home.

It may be that Dean Inge is right when he praises the spacious pleasaunces of, say, fifty years ago; yet we, who have our Max Beerbohms and our Will Dysons, are not wholly discontent.

1924 Weather.

1924 was the dreariest year of modern times; there is no one who could not write pages on such a thesis. Wet in the spring, wet in the summer, wet to the end. Sunlessness and wet. Let us, looking at 1925, forget all about it. But no; there are those, beside the ridiculous doctors and statisticians, who will not let us forget. We are reminded that we, as players of outdoor games, cannot expect universal acceptation of our judgment of the weather. Very well, then, we say, take instead the opinion of the farmers. But even their sounder prosecution of the case is unacceptable to the shouters of "My country's weather, right or wrong." These people cherish lovingly remembrance of that softening of the cold spring, when gardens burst into sudden and complete glory, of the late September chestnuts and beeches looking still like June, of December flower-beds up through which spurted nasturtium seedlings and larkspurs. There are, it seems, some compensations for everything; and those for whom, even in our 1924's, life is still an adventure, a questing for beauty.

ALTER EGO.

Mr. Asquith returned from the Sudan to Cairo on January 4, and after breakfasting with Viscount Allenby departed for Port Said to embark on board the Pando for England.

Riza Khan, the Sardar Sipah and Prime Minister of Persia, returned to Teheran last week. He was welcomed with a demonstration of great popular enthusiasm, and passed through decorated and greatly crowded streets.

Christmas Day according to the Russian Calendar was celebrated in London yesterday, when a special service was held at the Russian Church of St. Philip, Buckingham Palace Road, which was attended by members of the Russian, Bulgarian, Yugoslav, and Roumanian colonies.

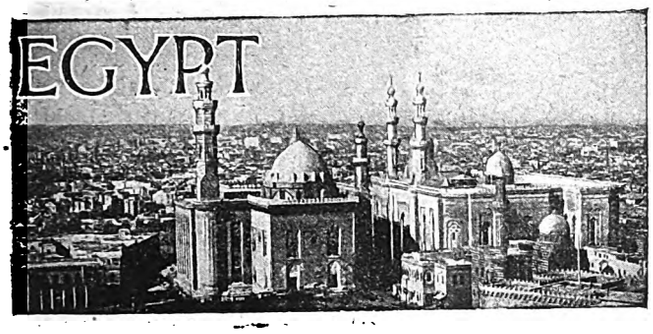
The Near and Middle East.

From Our Own Correspondents.



Cairo, December 27.

The Electoral Campaign.

Parliament having been dissolved and new elections ordered, Egypt is now fully embarked on the electoral campaign. Manifestoes, party meetings, and discussions of merits and prospects of candidates are the order of the day, and will so remain until February 24, 1925, the day fixed for the final polling.

As has already been foreshadowed, the elections will take place in two degrees, as on the first occasion, and not in one degree, as provided for in the law which Zaghloul Pasha got Parliament to pass last session. The latter had laid down that its application could not be effected unless new electoral lists had been drawn up, but at the time Parliament was dissolved these lists were far from complete. On the other hand, the provision in the Constitution limiting to two months the interval between dissolution and elections rendered it essential that the decrees dissolving Parliament and ordering new elections should be promulgated simultaneously. There was, therefore, no possibility of completing before its application the new lists required by the new electoral law; a return had, therefore, to be made to the original system of two degrees.

Whether the old system will be in the interest of the present Government or not is a question on which opinions are much divided. In a good many quarters, qualified to know, it is maintained that a one-degree election is entirely in favour of the party in office, since the Mudirs, Mamurs, and Omdas, being naturally inclined to support Government candidates, would have a very effective influence on the voters. In a two-degree election, however, where electors only elect groups of thirty electors-delegate, who themselves do the voting for the various candidates, the administrative influence, it is contended, is not likely to be such a satisfactory obstacle to the tactics of an organisation like the Wafd.

The change to one degree in the system of elections effected by the Wafd was undoubtedly based on the assumption that its Cabinet would be in office at the time elections took place. As a precaution, however, the lists were purposely left uncompleted, the idea being that, in the event of an emergency where a Wafd Cabinet might suddenly be replaced by one belonging to the Opposition, the Wafd would force a dissolution, and, by depriving the Government in office of the material time to complete the lists, compel it to resort to the old two-degree system. The Wafd recognised that this system gave more opportunity to an Opposition, particularly an Opposition using its peculiar tactics, and it was undoubtedly encouraged in its plans by the success which had attended its efforts at the last elections when it had also been in opposition. In this connection it should be borne in mind, however, that on the last occasion the Government remained so neutral that it did not even try to prevent the illegal intimidation exercised by the Wafd agents, whereas in the forthcoming elections the Government, far from being neutral, will be compelled to take an active part, since it is itself so directly interested in the defeat of the Wafd.

Egypt is such an extraordinary country, the electorate is so inexperienced, and corruption plays such an important part in the elections that it would be dangerous to make any forecast, particularly at this early date, on the way the elections may go. One thing, however, is certain: the Wafd organisation will on this occasion be somewhat handicapped by the strong measures which the Government is taking to prevent any incursion into the provinces during the period of elections of the students who last autumn contributed so largely to the success of the Wafd.

Cocaine.

The letter on the subject of cocaine addressed by Russel Pasha, the Commandant, Cairo City Police, to the local Press is a timely warning to the public of the very grave danger with which the country is menaced by the almost daily extension of the cocaine-taking habit.

The manner in which this vice has spread since the War is appalling. It has become a far more serious national menace than "Hashish," which in pre-War days was considered to be such a danger that a special agreement was made with Greece, whence the main import came, whereby in return for the prohibition of export to Egypt by the Hellenic Government, Egypt undertook not to grow tobacco, so as not to compete with the imports of leaf from Greek Macedonia.

Evidence increases daily of the ravages which cocaine is making, and all classes of the community are becoming affected. An alarming feature is that the present wave of cocaine-doping is not confining itself to the towns, but is spreading amongst the fellahin, and so is threatening the national life at its very root; while amongst prominent *habitués* now are the taxi-drivers, who often can be seen openly sniffing it while waiting for

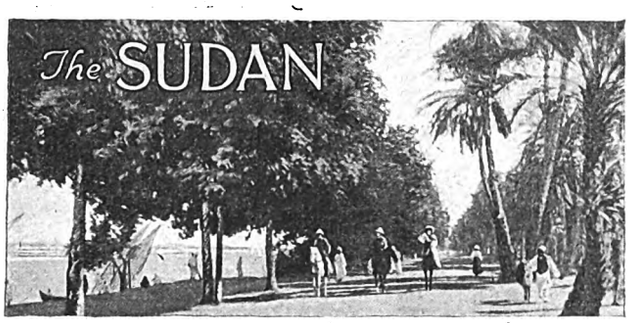
fares, and have latterly caused several scares and serious accidents in the main streets by their mad antics.

There is every reason to believe that the main supplies come from Germany. A very sharp watch is kept at the various Egyptian ports, but although the Customs authorities have made repeated hauls, the import still goes on, mainly because it is so easily concealed and the profits are so enormous. Try as they will, the police have so far been powerless to stop the traffic. It cannot be said that the existing legislation affords them any assistance, for, after all, a law which fixes the maximum penalty for each offence at £E1, or seven days' imprisonment, is not likely to act as a deterrent in the pursuit of a trade which daily brings in several hundred pounds to the offender.

As Russel Pasha rightly remarks, without appropriate laws it is quite impossible to combat this scourge, and it is astonishing that so far the hands of the police have not been strengthened in this respect, particularly when the Commandant affirms that with proper legislation he could stamp out three-quarters of this traffic in a year. The main obstacle to fresh legislation seems to have been the capitulations, which make it difficult to introduce laws or change existing ones affecting foreigners without the unanimous consent of the fifteen Capitulatory Powers. There should, however, in this instance, be no opposition on the part of the latter to special legislation; indeed, they should render every assistance, for their own colonies in Egypt are as much threatened by the spreading of this pernicious vice as are the inhabitants of the country themselves. Russel Pasha's efforts are deserving of the warmest support; and it is sincerely to be hoped that he will no longer be denied the legislative assistance he so badly needs, that the Egyptian Government will provide whatever extra staff and funds may be necessary to ensure an efficient control, and above all that the public will show its appreciation of what is being done to protect it against this insidious vice, by lending its co-operation on every available occasion.



Khartoum, December 21.

The Political Situation.

Although during the early portion of the period under review the native inhabitants of the three towns, Khartoum, Khartoum North, and Omdurman, were still in the throes of a great political excitement following the mutiny of certain Sudanese soldiery, at the time of writing they have calmed down to very nearly normal, and the situation at the moment may be termed "easy."

With the exception of a minor number of Egyptian Army details who keep arriving from out-stations, all Egyptian troops have been evacuated to Egypt.

It was most unfortunate, however, that the Government had not received earlier information regarding the activities of the Egyptians, particularly of Rifaat Pasha, Commandant of Artillery, and his officer associates in instigating the Sudanese to revolt against the British Administration and afterwards leaving them to their fate. Had this been possible prior to the departure of the Egyptian Army from the Sudan, there would have been a further court martial, and most probably the extreme penalty would have been paid by a number of them. As things are, the originators and actual culprits of the mutiny have left the country untouched, whilst of the puppets, the Sudanese officers, three have been shot, one killed in action, and one sentenced to servitude for the best part of his life.

The natives have not been slow to recognise this, and their feelings towards their co-religionists have already undergone a subtle change. Had the instigators been shot at the same time as the Sudanese, then the prestige of British Administration would have risen to the heights at the expense and degradation of the Egyptians. Even with the knowledge of such intrigues by representatives of the Egyptian nation and the activities of the British in forcing them out of the country, the curious fact remains that the Egyptian flag flies from the masthead on an equality with the British, and this is a feature the native cannot understand; nor does there appear any chance of the green flag ever being hauled down.

The majority of European residents in the Sudan are of the opinion that the British Note presented by Lord Allenby to Zaghloul Pasha did not, unfortunately, contain the most vital reprisal of all. Instead of informing Egypt that the Sudan Government may extend the Gezira cotton area to whatever limit it desired, the note should, it is claimed, have stated that the Egyptian flag should be sent back to Cairo with the evacuated troops, that the 1899 Convention ceased to exist, and that the Egyptian Government had no further interest in the country. Had this been done, the Nile waters, passing as they would through an independent country, could be utilised by much the same method as that described in the note.

However, there is no object to be attained by suggesting what should have been done. The one opportunity to have made the Sudan an independent country and the Sudanese a nation of their own has been missed for the time being; but there may, it is thought, arise an occasion when such a principle will be enforced.

Egyptian Civil Employees.

The local English paper, the *Sudan Herald*, has repeatedly urged that, unless the Egyptian civilian elements now employed in the main in Government offices are expelled from the country political

agitation is certain to recur. It is understood that the Government has taken the matter in hand and intends to evacuate a number of individuals who have associated themselves with any political organisations during the last few months. Naturally, it would not be just to get rid of all of them, for a number of the older Egyptian officials have remained loyal to the Sudan Administration. The majority, however, are antagonistic to the British, and are dangerous elements to remain in the Sudan, and the more quickly they are sent out of the country, the earlier will the country settle down to normal living and work.

Activities of Political Prisoners.

A large number of political prisoners confined at the Khartoum North Central prison during the latter period of November refused to obey the instructions of their warders. They ran riot in the prison compound and destroyed everything that was possible of destruction. These prisoners were a mixture of Egyptians and Sudanese. The authorities took no action against them for some days, except to reinforce the police guards, who patrolled the top of the compound walls. The inactivity of the prison authorities in quelling the trouble was attributed, in popular belief, to the fact that the Egyptians had instigated this disturbance, and had the British taken drastic action against the prisoners they would have had a strong case to put forward on their own behalf that the British had killed men who had only expressed loyalty to the King of Egypt. Eventually, after the evacuation of the Egyptians, the prisoners were rounded up and placed inside the barbed wire enclosure situated within the British barracks. There they are learning the error of their ways.

Sir Geoffrey Archer.

The appointment of Sir Geoffrey Archer as the new Governor-General of the Sudan in succession to the late Sir Lee Stack has created a most favourable impression amongst all sections in the Sudan.

Sir Geoffrey, accompanied by Lady Archer, is now en route from Uganda via Rejaf to take up his new appointment, and is expected at Khartoum about January 7. It is generally hoped that with the appointment of a Colonial Office official the Sudan will eventually come under the Colonial Office for its administration.

BULGARIA.

Sofia, December 30.

M. Tsankoff's Voyage.

At the time of writing, M. Tsankoff is visiting Bucharest. He spent two days at Belgrade last week, and will return to Sofia on January 1.

His object in visiting Yugoslavia and Roumania is to enter into personal contact with the political chiefs, and to try to come to an understanding regarding different matters pending between the countries concerned.

In addition, it is surmised that the formation of a Balkan *bloc* against the Bolshevists has also a certain bearing on the Bulgarian Prime Minister's voyage. Two weeks ago, M. Marinkovitch, the ex-Yugoslavian Minister for Foreign Affairs, paid an unofficial visit to Sofia, and it was common gossip that his object was to find out the views of the Bulgarian Government regarding the Bolshevist menace. At Belgrade M. Tsankoff is reported to have been satisfactorily received, but there are not wanting voices who declare that the real aim of the Paschitch Administration is not to secure Bulgarian support against the Bolshevists, but to strengthen its own position *vis-à-vis* the Croats and Slovenes. Certainly the *rapprochement* —for it deserves that epithet—between Yugoslavia and Bulgaria has come rather too quickly to convince one of its genuineness. No one, except a few Bulgarian political *emigrés* living in Yugoslavia, can but desire that the *rapprochement* become an accomplished fact, but the circumstances in which it has been begun entitle the cautious and impartial observer to entertain serious doubts on its reality.

With Roumania, there would seem to be no valid reason why a complete and sincere *rapprochement* should not take place. The two countries have hardly any conflicting interests, although the situation of Bulgarians inhabiting the Dobruja is a point in dispute. These wretched people stand to lose practically their all, as their properties have been sequestrated. It remains to be seen whether M. Tsankoff will succeed in coming to some arrangement with the Roumanian Government regarding this matter. As the Roumanians declare that their schools and churches in Bulgaria have been shut, perhaps some *quid pro quo* will be found possible.

In any case, it is to be hoped that the voyage of M. Tsankoff will bear a certain fruit. Relations between the different Balkan States have for too long been animated with hostility. Now there may be a new era dawning, but it seems more probable that internal politics are at the back of the matter.

The Geneva Protocol.

Yesterday the Sobranye approved of the Bulgarian-Greek Minority Protocol signed at Geneva last September. The only party which opposed the measure was the Communist. Meanwhile, Bulgaria is watching with great interest the Greek attitude towards this matter. Day by day the opposition to the ratification thereof seems to be growing, and the fact that M. Venizelos has himself advised his political friends to oppose the Protocol is a most significant step. For it was M. Venizelos who in 1919 drew up the Convention regarding emigration between Greece and Bulgaria, and had it affixed to the Neuilly Treaty, which Bulgaria had to sign whether she liked it or not. Now that a Protocol, which admits the presence of Bulgarian Minorities in Greece, has been signed, M. Venizelos, besides other Greek statesmen, are beginning to grow nervous. They are apprehensive of the consequences that may take place when the Bulgarian Minorities are allowed to have freedom of speech and religion. On the other hand, Bulgaria has immediately signed and ratified a Protocol which places on her the responsibility and obligation of ensuring complete freedom to Greek Minorities in Bulgaria. The two Dele-

gates of the League of Nations, Colonel Corfe and Commandant De Roover, are leaving Sofia early next year to instal themselves in Athens, where they may be expected to have a difficult task in persuading the Greek Government to agree to the Protocol. The Cabinet in power at the present moment will agree to ratification, as its own delegate, M. Politis, signed the Protocol on behalf of Greece. But if there is a change in Government, which seems not impossible, then there is no saying what will happen, and Bulgaria, which has so far studiously refrained from commenting on the Greek attitude, will have every right to ask the League of Nations to intervene.

The Murder of Peter Chauleff.

The Macedonian Revolutionary Organisation has once again shown that it never forgives. M. Chauleff, formerly one of the committee of three which controlled the organisation, was expelled earlier in the year on account of his friendliness with the Bolshevists. He was accused of receiving various sums of money from various Bolshevist officials, notably the Soviet Embassy in Rome, and when Todor Alexandroff (the former chief, who was himself murdered in Macedonia four months ago) met Chauleff in Vienna, he made him an offer, saying: "Return the money you have received, go abroad, and retire from all political activities. If you do this, we shall leave you alone. Otherwise, you will be killed." Chauleff seems to have chosen the latter alternative, as on December 23, whilst drinking in a Milan bar, he was shot at and instantaneously killed. His assailant, a young Macedonian named Dimitri Stephanoff, gave himself up to the police, although it is reported that he first tried to commit suicide.

It seems that Stephanoff had for long been watching for a favourable occasion to kill Chauleff, but the latter took extensive precautions, as he knew his life was in danger.

Athens, December 29.

A New "Republicanism."

Anti-Venizelist Republicanism is the latest "creation" in Greek internal politics. How far are those anti-Venizelists who to-day appear to favour the Republican régime sincere? Have they, or have they not, something up their sleeves? A decided affirmative is the answer of those who claim to understand the tactics of the partisans of the late King Constantine. They feign, it is said, to recognise the new order of things, while, on the other hand, they are carrying on a veiled propaganda against the régime which is the outcome of the Plastiras revolution. The Royalists have a hard nut to crack, for the masses are thoroughly tired of party politics, and they are asking themselves whether there is anything to be gained by another change of régime. The Royalist leaders, however, are determined to stick to their guns, and their every move is calculated to discredit the powers that be in this country to-day, and to demonstrate to the people that no good can ever come of a Government owing its existence to the Plastiras revolution, which, they allege, was the sequel of M. Venizelos' policy. The *leit motif* of the Royalist Press has been for some time past that the Anatolian *débâcle* was due to the cowardice of Plastiras and of his lieutenants on the battlefield.

The Royalists and Plastiras.

The Royalist Press is constantly levelling disparaging remarks at General Plastiras. Recently the evening journal *Apogevmatini* accused General Couroussopoulos, who took an active part in the Plastiras revolution, of cowardice, and held him in a large measure responsible for the Anatolian *débâcle*. The General brought an action for slander against the *Apogevmatini*, and the trial afforded the Royalists an opportunity to give vent to their feelings against General Plastiras and his partisans. From the outset the trial took a political character, and the criminal court in which it was held was the scene of so grave incidents that the trial was eventually adjourned *sine die*. The Prime Minister, replying to a question in the National Assembly, took the presiding judge rather severely to task for having tolerated political demonstrations in court, and an inquiry is in progress to establish responsibilities.

The Royalist leaders are very active, but it is doubtful whether they will find any support amongst the people, who are thirsting for a quiet life.

The Trial of General Loufas.

General Loufas, the leader of a conspiracy to dissolve the National Assembly, and a handful of officers who followed him have just been tried by court-martial. The trial aroused little interest in spite of the importance which the Press tried to give it. General Loufas is the officer who was sent to Corfu by the revolutionary leaders to arrest Prince Andrew, and who placed him under arrest and brought him to Athens for trial by court-martial. In those days General Loufas appeared to be one of the pillars of the Plastiras revolution. In the course of his trial, however, he inferred that the leaders of the revolution were impelled less by patriotism than by political motives, and that neither General Plastiras nor General Gonatas was a soldier of any real value. General Loufas went on to say that both General Pangalos and General Kondilis, political adversaries to-day, are intriguing with a view to the establishment of a dictatorship in the country, and that each is aspir-

Digitized by Google

ing to become dictator. General Loufas said *in toto* that the internal situation had become unbearable, and that no effort is made in the National Assembly to improve it—the party leaders' sole preoccupation being to satisfy their personal ambitions.

General Loufas found fault with everybody and everything, and he evidently would have had much to say about General Kondilis, Minister of the Interior, had not the President of the Court warned him against taking members of the Cabinet to task. In the course of his defence, however, General Loufas spoke of reports which had reached him to the effect that General Kondilis had organised a Fascist movement, and that he intended to establish a dictatorship if the present Government lost the National Assembly's confidence. He (General Loufas) had organised a movement to counteract the schemes of General Kondilis, but as soon as he realised that the Kondilis movement was not to be realised, he also set his plans aside. General Loufas was sentenced to two and a-half years' imprisonment, and his followers to minor penalties. Counsel for the defence have demanded the revision of the case. It is not yet known whether their demand will be complied with. A decision must be reached within forty days of the passing of the judgment.

The Œcumenical Patriarch.

The question of the assimilation of the newly-elected Œcumenical Patriarch to an "exchangeable," and of his deportation from Constantinople, is greatly preoccupying the Greek Government, which is very closely following the doings of Angora in connection with the Phanar Patriarchate. The point of view of the Turkish Government may be summarised as follows:—

(1) Mgr. Constantine is a native of Triglia, and, in view of the fact that he came to Constantinople after 1918, he comes under the category of "exchangeables."

(2) According to the Lausanne Treaty, the seat of the Œcumenical Patriarchate is, as before the War, in Constantinople, but the agreement reached on the subject does not apply to the personnel of the Patriarchate. It is obvious that prelates who come under the category of "exchangeables" are not eligible to the Patriarchal Throne.

The Greek point of view is, briefly, as follows:—

By the term Œcumenical Patriarchate is not implied the Patriarchal Palace, but the traditional Patriarchal organisation which is composed of human beings (the Patriarch, the Holy Synod, and so on), who, in virtue of the Lausanne Treaty, are at liberty to reside in Constantinople.

The headquarters of Greek Metropolitans is the Phanar Patriarchate, on which they depend, and where they exercise the most important of their privileges—e.g., the election of the supreme chief of Orthodox Christians. The Turkish Government has from all times recognised the Phanar Patriarchate as the legal residence of the Metropolitans. So much so that, whenever, for one reason or another, a Metropolitan became undesirable in his diocese, he was ordered by the Turkish Government to return to the Phanar.

It now remains with the Mixed Commission for the exchange of Greco-Turkish populations to decide whether Mgr. Constantine can be considered as an *établi* or not. It also remains to be seen whether Angora will accept the ruling of the Commission if it is favourable to the Greek point of view.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

IRAQ.

Baghdad, December 21.

The Cabinet's Manifesto.

In order to induce the electors to vote for candidates who are the partisans of the present Government, the Cabinet has just issued a special statement of its policy, both foreign and domestic. So comprehensive is this manifesto that it is difficult to conceive of any elector escaping the Cabinet's net. It opens in the spirit of the times with an assurance of the Government's eagerness to "maintain all the rights the country has won," and to attain as quickly as possible the goal of complete independence. These aims, says the proclamation, can be realised in co-operation with Iraq's ally—but the Treaty must be amended in accordance with the request made by the Constituent Assembly at the time of its ratification. Further, it is hoped that "only light burdens" will be laid on Iraq.

Turning to home affairs, the Government takes efficiency and economy as its watchwords, particularly with a view to improvement of the Civil Service. Iraq is to take its stand as a Muslim country, and religious beliefs and traditions are to be upheld. Social and moral evils such as gambling and drunkenness are to be put down with a heavy hand, and (somewhat unexpectedly) the Government is anxious to encourage properly organised athletic sports. Public health is considered of the first importance, and the need for better housing conditions is recognised. The manifesto goes on to declare the Government's wish to introduce a special coinage for Iraq, to establish a national bank in the near future, and to link up the districts by railways as soon as possible. Local industry is to be encouraged, particular attention being paid to the careful use of Government funds; the land tax is to be revised, and efforts made to attract foreign capital into Iraq. With regard to education, the Government's reforming zeal includes primary education for every child, the institution of schools of medicine and agriculture, and the improvement of the existing technical school. A general revision of the laws of the land is also promised. Truly an ambitious and optimistic programme! Lastly, with regard to agriculture, a far-reaching scheme of river control, involving the extension of areas under cotton, silk, and flax, is outlined, besides a suggestion of reclaiming the marshland and of establishing an agricultural bank. Such a manifesto seems to call for only one remark: it is an amazing spread of canvas for a rudderless ship.

Financial Position.

A short time ago a delegation was sent from Iraq to Constantinople to discuss the question of the Ottoman Public Debt. The return of the delegates and their announcement of the large proportion of the debt to be borne by Iraq have awakened the Government to a realisation of the seriousness of the country's financial position. Iraq is appealing against the proportion she is required to pay, on the ground that as a much neglected outpost of the Turkish empire she derived little benefit from the loans. The King, to assist in balancing a budget which shows a deficiency of over thirty lakhs of rupees, has agreed to give up half his very liberal civil list.

Mosul.

The High Commissioner has just returned from a visit to Mosul, where, at an official reception given

Digitized by Google

by the Mutasarrif, he met a number of the leading inhabitants. With reference to the forthcoming visit of the Commissioners appointed by the League of Nations for the settlement of Iraq's northern frontier, Sir Henry made some important statements. The decision of the Commission, so vitally interesting to Iraq, would probably not be made known until after their return to Europe. The Commissioners—Colonel de Paulis (Belgium), Count Paul Teleki (Hungary), and M. af Wirsen (Sweden)—are expected to reach Baghdad on December 28, and will probably make their headquarters at Mosul, to which town all the necessary house furniture is being sent from Baghdad; for outside the capital Iraq is still very deficient in the amenities of European life.

New Ministry.

A Foreign Ministry has now been established in Iraq. The Prime Minister, Yassin Pasha al Hashimi, will act as Foreign Minister. It is expected that the portfolio of Defence, at present also held by Yassin Pasha, will be handed over to Jaafer Pasha al Askeri, a former Prime Minister.

The Queen of Iraq.

Her Majesty the Queen of Iraq arrived in Baghdad from Jeddah on December 17, having travelled from Abadan in the steamer Ihsan, which was placed at her disposal by the Mesopotamian Persian Corporation, Limited. The ship was met some distance from the city by a party including the Crown Prince, the Prime Minister's brother, the Mutasarrif, and the Lord Mayor of Baghdad. The absence of King Faisal was due to his visit to the Mosul vilayet in connection with the delimitation of the frontier.

Fire at Basrah.

A serious fire occurred at Basrah on December 14, a populous area near the dockyard being completely wiped out. The fire brigade was fortunately able to save the rest of the town by preventing the spreading of the flames, but could do nothing for the four acres or so in which the fire, aided by a strong wind, was raging. The whole area was devastated in the short space of one hour, about a thousand people losing their homes and all they had. Until about two years ago a very efficient and up-to-date fire brigade, under a British officer, had its station in Ashar (the quarter in which the fire occurred); but when this was offered to the Municipality at a very reasonable figure it was refused, and the town was left relying solely on the British fire brigade at Magil, six miles away. With Sunday's object-lesson before them, the municipal authorities are regretting their misplaced economy.

Relations with Persia.

A special mission is being sent to Teheran to discuss certain questions in connection with this country's relations with Persia. It is being headed by Ibrahim Effendi al Haidari, Minister of Auqaf, and is expected to leave Baghdad as soon as the Sardar Sipah has returned to Teheran after his visit to Arabistan. Abdul Hassan Chalabi, ex-Minister of Education, and Jowdat Beg and Saiyid Mohammad Bahr, both of the King's Household, make up the mission.

Riza Khan is now in Iraq, visiting the Shiah holy places—Nejef, Kerbela, Kadhimain, and Samarrah. It is hoped that the Sardar Sipah's visit will result in the reopening of the Persian pilgrim traffic.

British Cemeteries.

The Imperial War Graves Commission requested the Iraq Government, through the High Commissioner, to grant in perpetuity all lands in Iraq used as British War Cemeteries. The Cabinet decided that such sites as were State property could be so granted, but that privately owned sites must be purchased by the Commission. An announcement in the local Press states that the State-owned sites have now been handed over. It is to be regretted that in this small matter the Iraq Government, unlike other Governments in the same circumstances, was so ungenerous as to neglect a very fitting opportunity of paying a tribute to the British dead.

General.

General Sir Sefton Brancker, K.C.B., who is travelling by air to India in connection with the proposed airship route, arrived in Baghdad on December 21, after a flight of four and a-half days from Constantinople. It is not expected that the route will pass over Iraq, Ismalia, in Egypt, being the only suggested halting-place, for in the early stages of airship development it is considered best to fly as much as possible over sea rather than over land, in order to have the benefit of the more equable temperatures. Baghdad will, therefore, not be a station on the route, but will be brought within three days of London by linking up with Egypt when the regular mail service is inaugurated. General Brancker was received with the greatest hospitality by the Turkish officers at Konia, and also by the French garrisons at Aleppo and Rakka. His aeroplane is a De Havilland Fifty, with a 230-h.p. Siddeley-Puma engine, and has given no trouble during the flight.

A special Christmas mail was arranged by the Overland Service, by which letters and parcels posted on December 16 were due to reach England in time for delivery on Christmas Day. Greetings from the British community in Baghdad to their friends at home will thus be only nine days in transit—provided, of course, that such acts of God as the flooding of the Euphrates near Ramadi, and the storm at sea which delayed the P. and O. mail ship and consequently the Overland Mail of last week, do not intervene.

Mrs. Rosita Forbes, who recently passed through Baghdad on her way to take part in the production of a cinema film in the Persian Gulf, is suspected (according to the *Baghdad Times*) of concealing beneath this innocent enterprise a plan to visit Ibn Saoud, in Central Arabia, and there to meet Mr. St. John Philby. Such a project would not be looked upon with any great favour by the authorities at home, and Mrs. Rosita Forbes has, therefore, been "requested" to go to Bushire, on the other side of the Gulf, instead of to Bahrain, her professed objective.

The *Baghdad Times* points out an interesting contrast between the attitudes of Iraq and Turkey towards the problem of securing foreign capital for the development of natural resources. The new Government in Turkey is doing its utmost to promote commerce by all possible means, and for that reason has proclaimed its anxious wish to be on the most friendly terms with Great Britain, the nation which can best help on its commercial development. Iraq, on the other hand, seems unable to rise above the distrustful and haggling spirit of petty commerce, and, in spite of her dire need of foreign capital, still bargains suspiciously over any financial proposition, in a way which is far more likely to repel than to attract the outside capitalist.

The grant of "passage pay" to members of the superior Civil Services in India now covers the cost of passages from "port to port." Formerly the grant applied only to passages between Bombay and London. The new modification of the concession of this grant of "passage pay" enables officials to travel overland to or from Marseilles if they wish.

PERSONAL AND GENERAL.

TO-DAY.

January 8, 1925 (New Style).
December 26, 1924 (Old Style).
Jomada II., 12, 1343 A.H., of the Moslem Calendar.
Tebeth 12, 5685, of the Jewish Calendar.

The Countess of Wemyss left London on December 31 for India.

Lord and Lady Swaythling will leave by the Kaisar-i-Hind for India on January 15.

The Earl and Countess of Dudley left England last week for India on a four months' tour.

M. Yovanovitch, Yugoslav Consul-General in London, arrived in Belgrade last week on a special mission.

Aziz Izzet Pasha, the Egyptian Minister in London, last week arrived at Zurich, where he will stay for two months.

Sir Felix and Miss Evelyn Schuster left London last Thursday for India, and will be away for about three months.

M. Marco Beza, Consul-General for Roumania, and Mme. Beza left London on January 2 for the South of France.

M. Grégoire Michaesco, Commercial Attaché at the Roumanian Legation in London, has recovered from his operation, and has resumed his duties.

Vedil Bey, Secretary at the Turkish Legation, who has recently arrived in London, has taken up his residence at 7, Queen's Gardens, Hyde Park.

General M. Yoximovitch and Captain Kovatchovitch arrived in London on January 2 from Belgrade on business concerning Yugoslavia's war debts.

Dr. Georges V. Todorovitch, Counsellor and Chargé d'Affaires of the Kingdom of Serbs, Croats, and Slovenes, is now residing at 195, Queen's Gate, S.W.

The Earl and Countess of Plymouth and the Dowager Countess of Plymouth left London on December 31 for India, and will be away until after Easter.

The Roumanian Minister left London for Paris last week to attend the meeting of Allied Finance Ministers, which commenced on January 6. M. N. Misu is acting as Chargé d'Affaires.

M. Dimitri Stancioff, formerly Bulgarian Minister in London, and Mme. Stancioff arrived last week at Whilton Lodge, Rugby, from Sofia on a visit to Sir Alexander and Lady Muir.

The marriage arranged between Colonel Sydney F. Muspratt, C.S.I., C.I.E., D.S.O., A.D.C., and Rosamonde, youngest daughter of Sir Edward Barry, Bt., of Ockwells Manor, Bray, will take place on Thursday, January 22, at St. Michael's, Bray, Berks.

Sir Joseph and Lady Tichborne were among the passengers by the P. and O. Bombay express which left London last Thursday to connect with the steamship Naldera at Marseilles. Viscount and Viscountess Portman and Lord and Lady Cable embarked in the vessel at Marseilles.

Sir Atul Chandra Chatterjee, the High Commissioner for India, and lately a member of the Executive Council of the Governor-General, arrived in London on January 3 from Bombay. He began his duties in London last Monday at the office of the High Commissioner, 42, Grosvenor Gardens, S.W.

On December 27, at All Saints' Church, Moda, Constantinople, and previously at the British Consulate-General, the marriage was solemnised of John S. Collmann, elder son of the late Henry Gordon Wharry, M.R.C.S., and of Mrs. Wharry, 105, Cadogan Gardens, to Esmé, second daughter of Mr. and Mrs. Reginald Whittall, of Rosalind House, Moda.

NEW YEAR HONOURS.

Among the honours which will be of special interest to readers of THE NEAR EAST may be included the following:—

KNIGHT.

Wasey Sterry, C.B.E., Legal Secretary to the Sudan Government.
William Foster, C.I.E., Historiographer, India Office.

K.C.M.G.

The Hon. Ronald Charles Lindsay, C.B., C.V.O., His Majesty's High Commissioner at Constantinople.
Basil Shillito Cave, C.B., His Majesty's Consul-General at Algiers.

The following promotions and transfers in the Colonial Service have been made by the Secretary of State for the Colonies:—

Sir S. Nettleton, Chief Justice, Bahamas, to Chief Justice, Cyprus.

Mr. B. Lewis, Deputy Chief Accountant, Posts and Telegraphs Department, Kenya, to Chief Accountant, Posts and Telegraphs Department, Palestine.

THE EAST IN TRANSITION.

Prejudices die hard, and it is doubtful whether many people in Great Britain have appreciated and accepted the fact that the East of to-day is not the East of yesterday. Human nature in that part of the world may not have changed much; but the articulate few have absorbed Western ideas and are resolved to graft them—or those at least that appeal to them—as best they may on to local conditions. The wonderful transformation of Japan from a mediæval State of pronounced hermit tendencies to a first-class Power was effected in comparatively few years at the instigation of a small but powerful section of the Japanese people. Is it possible that the same process is now at work on a reduced scale in the Near and Middle East? The first efforts will be accompanied by many mistakes, for the Near Eastern peoples labour under a sense of reaction against the foreign supervision under which, in a greater or less degree, they have hitherto been. Close acquaintance with the foreigner has prompted them to exaggerate his personal shortcomings, while it has not detracted from the advantages that his civilisation holds out to them. They will, therefore, not readily subject themselves to that conscientious schooling and strict discipline which were the foundation of Japan's success. In the end, however, they will be compelled to learn from those whom they are trying to imitate: for the instinct which has made them dissatisfied with the old order will show them where the new fails, and will in time point the way to the only remedy. There can be no question as to the attitude that the West ought to adopt towards these strivings; in spite of imperfections, and in spite of crude manifestations of hostility, the desire for better things and every attempt to introduce the new order are to be encouraged. The world stands to gain in the long run, however unpleasant the transition stage may prove to those in closest contact with the peoples concerned. Because in the early stages of the new order the old blemishes are still much in evidence—*laisser faire*, procrastination, even corruption—it is no reason why the movement should stand condemned for all time. The more gradual the process of regeneration the more thorough it is likely to be, for it will give time for the new leaven to permeate more widely through the nation, instead of leaving the greater part of it entirely untouched by, or sullenly opposed to, the changes.

In view of her many points of contact with the East, Great Britain is naturally concerned to know how the new order in the different countries will affect her. For the moment the outlook is not flattering. Turkey has shown strong anti-British bias; Egypt has staged a very effective quarrel of her own seeking; and even Iraq allows the pettiest grievances to override the gratitude that ought to be felt towards the country responsible for her liberation from the Turkish yoke, and for setting her feet on the path of independence. Here again in the details, as with the new movement as a whole, in these Eastern lands, it is easy to miss seeing the wood on account of the trees. An angry sea vents far more fury on the wall or cliff that restrains it than on the shore where it is free to come and go. The peoples of the East have been in closer touch with the British than with any other nation, and in seeking to prove their ability to stand alone feel obliged to emphasise their determination to dispense with help or guidance from Great Britain. If our previous relations with the individual countries have been based on nothing more solid than the might of the stronger, and have been productive of nothing of permanent value in national development, then complete estrangement for the future has been deserved. On the other hand, if British character, British methods, and British institutions have been and are still called upon to play a useful part in the history of the world, we can afford to ignore passing ebullitions of spirit and to wait for a truer appreciation of what Great Britain has to offer the smaller nations. It is pointed out in many quarters in regard to Egypt that all political parties are strongly Nationalist, and therefore at heart hostile to the British. Consequently, we are told, whether the political complexion of the next Assembly be Zaghloulist or "moderate," the British Government will be confronted with an unfriendly country. This pessimism makes no allowance for the inevitable failure, sooner or later, of a purely negative policy. Egypt, under the guidance of Zaghloul Pasha, allowed herself to be persuaded that she could dictate to Great Britain as to what should constitute Egyptian independence. She has been forced to admit the effectiveness, in the last resort, of Great Britain's heavy hand, and there are signs that a far from negligible body of public opinion is now realising that it is in Egypt's interests to accept, and to make the best of, the British interpretation of what is practical in the way of independence. As soon as this view is accepted by a satisfactory majority of the nation, then, provided that Great Britain plays her part tactfully and allows Egyptian independence to cover all that can be legitimately claimed for it, anti-British feeling will begin to wither for want of something to feed upon. In its place will come the hundred and one matters on which political opinion in a country is apt to divide itself, and it will be possible to fan the flame of Anglophobia to any effect only when some action has been taken that unites all political parties in a single camp. It will be Britain's duty to avoid, if possible, such action.

Anti-British feeling in Turkey is a plant of far from luxuriant growth. It has already begun to droop, and at the first sign of any really genial warmth in the rays of British friendliness, will die down altogether. The reason for this state of affairs is to be found in the fact that the Turkish nation, in spite of its inability to understand Western, or, rather, British, mentality, is well served by a primitive instinct, which enables it to recognise on which side its bread is buttered, and which causes like to respond to like in the characteristics of the British and Turkish nations. When it is realised what the policy of making Greece the overlord of Turkish territory meant to the Turks, and that through the mouth of her chief spokesman Great Britain virtually accepted sole responsibility for that policy, there can be no occasion for wonder that Anglophobia has been virulent in Turkey. So great, however, have been the advantages accruing to the Turks from that wrong-headed policy, and so clear has it become that the policy was the aberration of one man rather than the settled resolve of the nation, that it is proving difficult to make

Digitized by Google

a sudden outburst of temper proof against the interests of long standing which have in the past brought the two countries together. Great Britain, therefore, has only to make sure that she does not, by keeping the Turks waiting too long, drive them into the arms of others, and so miss the psychological moment for erasing the memories of the last few years, in order to pick up again, as far as Turkey is concerned, the threads of what is her true position in the East. Similarly, there is no reason why the Iraqis should not ultimately come to realise that they can help their country in other ways than by devoting all their time and energies to baiting Great Britain. It is feared that the entry of the Shiahs of Kerbela and Nejef into the political arena, from which they have hitherto kept aloof, must mean an intensification of the campaign against the British, but their purpose may equally well be to play a more prominent part in purely Iraqi affairs. They will certainly bring no pro-British influence to bear on the counsels of the country, yet they will find it increasingly difficult, as Iraq takes more and more upon herself responsibility for her own administration, to sustain before the public a case against Britain's watching brief. In a word, then, Great Britain has no need to be pessimistic as to the outlook in the Near and Middle East for 1925. If she remains true to her instincts, she will find herself still called upon to fill an important and honourable rôle in the development of these countries.

AFGHANISTAN AS IT IS.

By G. K. NARIMAN.

During the zenith of the Khilafat agitation in India, it was the cue of the prominent actors in the melodrama to depict all Islamic countries as perfectly civilised and even surpassing most Western countries. Nothing so ridiculous was said about any country as about Afghanistan. It had schools and colleges, a disciplined army; it had a perfect system of finance, administrative offices, roads, a system of perfected taxation, a contented, industrious, wealth-producing population, and so on. Unfortunately, some of the Continental Powers lent support to this extravaganza. In a sumptuously illustrated magazine, called *Islam France* (May, 1923), Afghanistan was portrayed as a modernised State which might have been carved out of Western Europe or America. The recent pronouncement of the French Minister at Calcutta has done something to counteract the delusion. In this connection M. Reymond Furon, Professor at the French College in Kabul, on his way back home, granted me an interview in Bombay. After two years' service he was returning to Paris a disappointed man. There were, according to him, two heavy obstacles to the progress of Afghanistan. First, the country was exceedingly poor and unproductive; and, secondly, the people were still in a mediæval condition. There were practically no sources of revenue. The Afghan Army used to be maintained by the subsidy which the British paid. Since its cessation the dislike of the British has grown in proportion to the increasingly straitened circumstances. At present the finances of Afghanistan are supplied by the treasures accumulated by the predecessors of the present Ameer and Russian succour, stated to be one million gold roubles. "When this is exhausted," said M. Furon, "like Persia, Turkey, and other Islamic countries, Afghanistan will have to go to the West for a loan or sink into insignificance."

"What about the Khost rebellion?" I inquired. M. Furon said the information sent out to India was misleading. The members of the great upheaval have not yet died out. There was no relying upon the information supplied by the Afghan Foreign Office. While all the bazaar was humming with the invasion of the Khostwals who had come perilously near the capital, the officials complaisantly told the European foreigners that no trouble was apprehended. Any way, they deserved credit for imperturbability. Or was it lack of imagination? It may also be want of an adequate sense of responsibility.

According to M. Furon, the French College had 350 students who had a great aptitude for acquiring languages. The German College had about 100. Despite their unpopularity, the language of the English was making more progress than any other Western tongue. The trouble between the Khostwals and the present Ameer was due to this, that while the latter is a modernised Moslem, after the model of the Turk, Khost represents the orthodox, and would have no law—civil or ecclesiastical—except that of the Koran.

The Italians are in an unhappy predicament, says M. Furon. There was a quarrel in which an Italian assaulted an Afghan, and on his refusal to go to the authorities when summoned, his house was besieged. He seems to have lost his nerve and fired across the street, hitting an innocent person. This created a hubbub; the relations of the victim demanded the Italian's blood. He is still under custody. It is difficult to say when the affair would end. The Italians, however, have left, except five or six persons. The name of the Italian under Afghan arrest is Pipperno.

The Mangals seem to have struck terror amongst the populace, and even the troops. They are not more than 10,000. But with their allies of the Suleman Khel they are a dread to the Afghan soldier, some of whom shed tears when ordered to march against them. As usual, continued M. Furon, Britain comes in for a considerable blame in this affair, too. Although the rifles possessed by the Mangals are of German make, it is hinted that they are provided by the British.

The relations with Teheran are amicable, and the bitterness between Sunni Kabul and the Shiahs of Persia has greatly diminished; for it is a mistake to suppose that Afghanistan is all Sunni. There is a considerable Shiah element in the country of the Ameer. The most important modern emblem of civilisation in Kabul is the French Citroen caterpillar, which performed the feat of reaching Meshed overland without vestige of a road, and hitherto covered only on horseback. "I was astonished to see," said M. Furon, "the Kabulis in their home. From the way in which their representative lives in pomp and magnificence in Paris, one would think that Afghanistan was flowing with milk and honey. For a matter of fact, it is a vast desert, void of trees and water, and by no means so exceedingly rich in unworked minerals. The arrogance, however, of the people goes to make up for much. They believe, for instance, that sovereignty of the Punjab is their own birthright, and their ambition would stop

short of nothing but the harbour of Karachi. The Hindus are not ill-treated. The prejudices against the British increase in proportion to the calm sphinx-like courage displayed by the representative of that nation. By a suicidal ordinance all import of British clothes is prohibited. A few months ago the Persian Minister, clothed in an English suit, had his coat cut out by a pair of scissors by His Exalted Highness the Ameer. An equally ruinous tariff shuts out all European provision from entering into Afghanistan. Cheese, for instance, is taxed at 200 per cent." "Among the minerals for which I prospected," M. Furon went on, "I noticed considerable iron ore, some copper, gold, and lapis lazuli in large quantities. Rock salt is also found in some regions. The only minerals which can be worked in paying quantities are iron ore, iron, and lapis lazuli. The much-vaunted coal is insufficient in quantity and poor in quality. A minor source of income is sugar, which is a monopoly of the State. It is an article imported direct from Java, and sold at a profit to the people. The Ameer of Bokhara is still in Afghanistan, his country having been Bolshevised. The attitude of Kabul with regard to Russia is indefinably peculiar. While Afghanistan and its Ameer are attracted to Russia in the hope that they may make common cause with them as against Britain and procure them, perhaps, their Punjab and Karachi, the tenets of the Bolshevists are abhorrent both to the orthodox and, to a lesser degree, the modern Westernised Afghan. Kabul has a French wireless station and a Russian one. The British are allowed none." "I am not returning to Afghanistan," emphatically declared M. Furon. And he was energetically supported by his wife, who speaks English with fluency. "I do not think there will be a successor to M. Fouchet, the French Minister who recently left for France. With regard to archæological concessions, I am unable to state how the Germans have been excavating and conducting researches in Afghanistan, for France has a monopoly of it. M. Fouchet, the Buddhist authority, visited Bamiyan, and prepared a note on the two colossal statues of the Buddha, but the rest of the country has no promise. M. Fouchet is in Balkh with his wife. All the European colonies have their women, who live and travel unmolested. M. Furon heard regularly from home in France, but on the spot knew nothing of the German activities, and had not seen Neidemeyr's illustrated folio on "Afghanistan," and wondered how Herzfeld could conduct investigations of old ruins. The Afghan winter was not favourable to any travel, the snow often lying a yard deep.

America showed prudence in refusing to instal an ornamental agent at Kabul. France would only have now a *Chargé d'Affaires* at the French Legation. Unless Afghanistan received a fresh supply of gold from Russia, her representatives in European Courts, in M. Furon's opinion, must curtail social display or must be withdrawn.

M. Vintila Bratiano, Roumanian Minister of Finance, left Bucharest for Paris to take part in the conference of Allied Finance Ministers.

Sir Sefton Brancker left Karachi by boat on January 1 for Bombay, where he met the airship experts from London and discussed the site of a permanent air base in India.

Nearly 300 emigrants began the New Year and a new career by sailing for Canada from Southampton in the Cunard liner Antonia. Two large parties consisted entirely of Poles, Roumanians, and Yugo Slavs.

Acording to the *Pioneer*, of Allahabad, 200 persons have died of a mysterious disease which has appeared on the Perso-Afghan frontier, and which the local doctors are unable to diagnose. The symptoms are bleeding from the nose, mouth, eyes, and other parts of the body, which later turns yellow.

OBITUARY.

Sir William Emerson, who died on December 26 at Shanklin, aged 81, was President of the Royal Institute of British Architects from 1899 to 1902. At the age of twenty-one he went to India, where he built the Bombay markets, several churches, and other buildings. On his return home he designed for the Government of India the Allahabad University, carried out by the Royal Engineers, and also the Cathedral at Lucknow, the Bhounuggur Hospital, and a palace for the late Maharaja of Bhounuggur. In 1906 his present Majesty, then Prince of Wales, laid the foundation stone of Sir William's Victoria Memorial Hall at Calcutta, and the Prince of Wales opened the building during his visit to Calcutta in 1921.

Mr. Francis G. Newton, the well-known archæological architect, and the director of the Egypt Exploration Society excavations at El-Amarna, in Egypt, died suddenly from sleepy sickness (*encephalitis lethargica*) at Assiut on December 29.

Mr. Newton had been engaged on archæological work for several years. He assisted Dr. Duncan Mackenzie in his excavations in Sardinia and for the Palestine Exploration Fund in Southern Palestine. In recent years he also assisted Sir Arthur Evans at Knossos, in Crete, and for two seasons was architect on the staff of the joint expedition of the British Museum and the University Museum, Philadelphia, at Ur, in Southern Babylonia. After helping in the work of the Egypt Exploration Fund at El-Amarna, he was appointed last year director of the society's excavations in Egypt, and left two months ago for Egypt to carry on work.

Lieutenant-Colonel William Hussey-Walsh, late Egyptian Expeditionary Force, who died in London last Friday, after a long illness, at the age of 61, joined the Cheshire Regiment in 1884 from Sandhurst, and served in the Burmese War and the Chin Lushai Expedition. On the outbreak of the European War he raised and trained the 26th (3rd Tyneside Irish) Northumberland Fusiliers and the 2nd Garrison Battalion Royal Welch Fusiliers, for service abroad. In 1916 he was made Commandant of the Cairo Citadel, and in 1917-18 he served with the Western Frontier Force of Egypt, being mentioned in dispatches. From 1918-19 he was Base Commandant at Beyrout (graded A.A.G.), and from 1919-20 at Port Said. In 1920 he was appointed hon. secretary for the Levant of the Officers' Association (Lord Haig's Appeal), with headquarters in Cairo; in the following year £10,900 was collected in Egypt, the Sudan and Palestine. Colonel Hussey-Walsh received the Order of the Nile, the Crown of Italy, the Legion of Honour, and the French Médaille d'Honneur of the first class.

Near East Bookshelf.

A GLIMPSE OF THE FIRST CENTURY.

"ORIENTAL FORERUNNERS OF BYZANTINE PAINTING." Oriental Institute Publications. Volume I. By James Henry Breasted. (U.S.A.: The University of Chicago Press, 4 dols., postage extra.)

This is the first publication of the University of Chicago Oriental Institute, and it promises well for the series. It is a full account of the discovery made by Captain M. C. Murphy in March, 1920, when a British detachment was in occupation of a strategically strong hillock on the banks of the Upper Euphrates, where there were some ruins of the origins of which no one knew anything. Our troops were then on the point of leaving this place to take up a better line further south. Col. Leachman had fortunately heard of Mr. Breasted's party being in the country, and rightly considered that something should be done about the curious old paintings which had so mysteriously shown themselves. Sir Arnold Wilson gave all possible facilities and Mr. Breasted and his party were able to make a dash which brought them to the spot just a day before it was to be evacuated. In that one day they did wonders. These are chronicled in this book. They cleared the Hall where the paintings were and its surroundings. They photographed the paintings in whole and in detail, and made a very careful examination of them, including some full notes on the colours, that it was possible to colour the photographic prints in facsimile. Not only this was done, but a later painting done in Roman times was discovered, though it had by then grown too dark to get it photographed. Everything was then packed away as carefully as possible, but, alas! not carefully enough to keep the curious and image-hating Bedouin entirely off. When, under French auspices (for the spot finally became part of the French mandated territory) M. Cumont, the ancient Belgian scholar, was enabled to revisit the site for further investigation, the paintings had been largely destroyed, so that Mr. Breasted's hurried record now represents what has already been lost after being safely preserved by the desert for some nineteen centuries.

The plates show the paintings as they were found, with their curious likeness to Byzantine paintings of some centuries later. The artist's name is known, and the names of the persons portrayed. Mr. Breasted has been able even to identify the site and to reconstruct its history, which is in itself a fascinating tale. Founded as a fortified town by a successor of Alexander the Great on the site of a very ancient Babylonian city, it fell into the hands of the Parthians, and was finally held for a short time by the Romans, after which it died. The townspeople seem to have held fast by their Hellenic tongue and civilisation long after the place became a remote oasis in the Barbarian wilderness. The many inscriptions on the pictures are in Greek, and most of the portraits bear Greek names. There are the materials for a great poem in the tale unfolded in the book. This tale, the accidental sort of way in which this Greek colony got itself set down here, the accidental way in which this work of art happened to escape destruction, the accidental way in which it was discovered, the circumstances in which its record was preserved, and finally its immediate partial destruction, seem to be "all of a piece."

The book is full of interest and of learning handled in the right kind of way. Photographs are numerous and useful. The actual records of the paintings are marvellous when the circumstances are considered. Finally, the book is thoroughly well produced.

C. S.-W.

THE CULT OF SELF-PERFECTION.

"YOGA AS PHILOSOPHY AND RELIGION." By Surendranáth Dásgupta, Ph.D. (London: Kegan Paul, Trench, Trubner, and Co., Ltd., 1924. Price, 10s. 6d.)

Yoga may be defined as a graduated series of mental and physical exercises carried out with a view of achieving self-perfection. It was practised in India long before its principles were reduced to system by Patanjali, who probably flourished in the second century B.C. There are three types of Yoga. The highest concerns itself with transcendental philosophy and its ethical application; next in importance is that which aims at strengthening the human frame and warding off disease; and the third description prescribes prolonged meditation on certain mystical sounds. Dr. Dásgupta has not succeeded in rendering the highest form of Yoga intelligible to European students. He sacrifices clarity of expression to an effort at exactness, which must be futile because many ideas in Indian philosophy are too subtle for the ablest translator. His treatise begins by setting forth the metaphysical theories of Yoga, which deal with the eternal enigma of Mind *versus* Matter. The solutions offered by Plato and Aristotle, Descartes and Spinoza, are unconvincing; Kant imagined them as two unrelated worlds, and the distinction drawn by Yoga is nebulous in the extreme. It defends the reality of the external world against the assaults of idealistic Buddhists who maintain that all phenomena are the illusion of our imperfect senses; but its attempts to define Mind, Matter, Fate, and Freewill were foredoomed to failure.

Yoga has an ethical side which is intimately connected with the doctrine of Metempsychosis. It distinguishes the soul, *Purush*, from the intelligence, *Buddhi*, and holds that the Ego, or personality, results from injurious identity between them. Hence arise attachment to pleasure and repulsion from pain, with all the attendant emotions. Hence comes love of life, which is implanted in the human organism by the memory of death in previous existences. These are hindrances, *Klesas*, which involve us in the world's entanglements, and keep us far from our goal, which is freedom from servitude to earthly passions. They are also the source of virtuous and vicious actions—

which in their turn produce, as the result of their fruition, birth, death, life, and experiences of pleasure and pain, and residues of the memory of these experiences. Again, every new life or birth is produced from the fructification of actions in a previous life; a man is made to perform actions good or bad by the Klesas which are rooted in him, and these actions, as a result of their fructification, produce another life and its experiences; and thus the cycle is continued.

From a theological standpoint the cult preached by Buddha is thinly veiled agnosticism; and rival systems of Hindu philosophy are frankly atheistic. Yoga, however, affirms the existence of a universal Soul, *Iswara*, who is omniscient, omnipotent, and all-pervading; who deals with each human being according to his deserts; but does not nullify the law of *Karma*, which makes future rebirths contingent on merit inherited or self-acquired. In the devout Yogin's eyes the worship of Iswara and devotion to his service are essential to achieving one-ness with him.

The ethical side of Yoga is not without value, and its attitude towards religion has much in common with Christian theology. It adumbrates the scientific doctrine of the Conservation of Energy; and its physical exercises deserve far more attention than they have received. Its incursion into the realm of transcendental speculation adds little to our knowledge of the Universe. Metaphysics has been likened to "the search in a dark room for a black cat which is not there"; these old Hindu philosophers wasted much time and brain-power on a hopeless quest.

RELIGIOUS BELIEFS IN WESTERN INDIA.

"THE FOLKLORE OF BOMBAY." By R. E. Enthoven. (London: Oxford University Press. 14s.)

Mr. Enthoven worthily maintains the scholarly traditions of the Indian Civil Service. Not content with giving us his invaluable "The Tribes and Castes of Bombay," he now presents us with a monumental book of 350 pages dealing with the folklore of the same Presidency.

The foundation of the book was a list of questions sent out to all primary schoolmasters in the Presidency by the late Mr. A. M. T. Jackson, of Mr. Enthoven's service. After the tragic assassination of this extraordinarily promising officer, Mr. Enthoven took over the materials thus collected. These he published in India some ten years ago. Further inquiries followed, with a view to the revision of completion of these notes, and the result is now before us.

A very interesting introduction is followed by a series of chapters dealing in detail with the collected notes on such subjects as Worship of Natural Objects, Tree and Snake Worship, Worship of Ancestors, etc., Spirit Possession, Toteism, Evil Eye and Magic, etc. Each chapter is suitably sub-divided, so that reference is made easy, while occasional notes usefully assist the reader. It would not be true to say that every chapter is equally good. For instance, that on totemism barely touches the fringe of its difficult subject. Most of them are, however, perfect mines of information, and are a revelation of the true religious tendencies of peoples supposed to be mainly orthodox Hindus, but in whose mind the ancient animism has very deep roots.

Reading in THE NEAR EAST a few weeks ago a long letter by the distinguished Bulgarian Civil Servant, Monsieur Stoyanoff, on the subject of the Anglo-French-Italian Inter-Allied Commission in that country, we could not help wishing that we had seen that it is believed in Bombay that "if a company of three start on a mission, the mission is sure to fail." We fancy that he and the Editor might take different views as to the trustworthiness of Bombay folklore as a guide! C. S. W.

AN ARMENIAN HISTORICAL ROMANCE.

"SAMOUEL." Par Raffi, Traduit de l'Arménien Moderne par Altiar et Kibarian. (Paris: Editions de la Vraie, France. 12frs. 50c. les 2 volumes.)

This is a sombre historical romance, written in the leisurely, old-fashioned style which spends a long time carefully introducing each character, and which explains much of the action through long soliloquies. The story tells how Samouël, son of Vahan, of the Royal house of Armenia, in the year 400, killed first his father and then his mother in order to save his country from the dominion and religion of the Persians. It is a sad picture of a little nation struggling for independence between the great powers of Byzantium and of Persia, and has as its central subject the question of whether Christianity or the religion of Persia was to be grafted on to the ancient Pagan beliefs of the mountain people. None of the characters ever become very real, and are more or less figureheads representing vices or virtues or the different parties of the State, but there is a certain grandeur about them standing up against a rugged but beautiful background. In his heavy, slow way the author does produce a vivid impression both of the Persians wading through blood to an attempted conquest and of the struggle of Samouël's naturally gentle spirit, torn between filial affection and strong patriotism.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Turkish Reparations.

Attention may be called to the official notices of the "Commission for the Assessment of Damage Suffered in Turkey," published on another page. Particulars are given of the categories of damage laid down by a convention between the United Kingdom, France, Italy, and Japan in respect of which claims may be dealt with, and the decision of the Commission is announced as to the persons of British nationality who shall be deemed to have complied with Article 5 of the said Convention. It is now some time since the Commission was set up, and the announcements which may be taken as meaning that the preliminary work has now been finished, and that the Commission is about to begin business, will naturally be widely welcomed by the numerous people concerned who have had to wait long to receive satisfaction for their claims.

Sufficient Cotton.

Nothing has occurred to modify the favourable forecasts of the yield of cotton this season, and it is now estimated that the world's cotton crop will be over 23,300,000 bales. This would represent the largest yield for nine years, and it means that for the moment there is enough cotton for the world's restricted requirements, even if, as will evidently be the case, the present year sees a great expansion in the demand for cotton goods. The vital consideration for manufacturers is that they should be able to obtain cheap cotton, and they ought to be able to do this with such an exceptional crop. If high prices were to rule for cotton it would simply mean that the growing demand for cotton goods would be checked, for under present conditions foreign markets—most of them, that is—must have cheap goods or none at all.

The Outlook.

As to the prospects for next year, it is difficult to write with any confidence, for cotton is one of the most uncertain of crops, and the fact that this season the yield is abundant is no criterion that the opposite will not obtain for 1925-26. In short, it is still very far from certain that we shall not even now be faced with a serious shortage of cotton, with its inevitable sequel of high prices. The one certain thing is that the demand for cotton goods will steadily increase, and the more rapid the progress of the world towards the normal the greater will be the rate of the increase. It is essential for Lancashire that in the next few seasons there should be large cotton crops in the regions outside the Empire, for it will, unfortunately, be some little time yet before the production in the Empire will have reached the point at which it will assure Lancashire of adequate supplies if other crops are short. The ideal, of course, is self-sufficiency as far as the Empire is concerned, but to visualise that is to look far into the future.

Empire Cotton Growing.

In view of the great projects in train in the Sudan, it would perhaps be surprising if some people did not wonder whether it was worth while to undertake further great projects in other regions, on the ground that once the production of cotton has reached a certain level the tendency must be to depress prices, with the result that in some years it may not be a very remunerative crop. That view would be a highly erroneous one to take, for it loses sight of the all-important fact that the demand for cotton goods must always normally tend to increase, and it is essential that constantly increasing supplies of cotton should be available to meet the demand. Of course, as I have pointed out, cotton is a variable crop, and countries which depend on it, or indeed on any produce of the soil, must be prepared for occasional periods of depression; but it may be taken for granted that a country could not have a more useful crop to rely on, speaking generally, than cotton. And in this case there is, of course, the added incentive that we wish to be free from dependence on other sources of supply, and only by ceaseless development within the Empire will it be possible to bring this ideal within the practical stage.

Export Credits.

The question has recently been raised as to the extension of the export credits scheme to India, Ceylon, and other places in the East. There is no question that the need for the scheme in connection with the trade with these centres cannot be compared with the position in regard to countries with depressed currencies; but it is felt in commercial circles that the scheme could be of considerable assistance also in the Eastern trade.

COMMISSION FOR THE ASSESSMENT OF DAMAGE SUFFERED IN TURKEY.

By a Convention between the United Kingdom, France, Italy and Japan, signed in Paris on November 23, 1923, it was agreed to devote jointly to the reparation of the damage suffered by their nationals the sums in gold referred to in Article 58 of the Treaty of Lausanne, and by the same Convention the British Government agreed to devote to the same purpose the 5 per Cent. Turkish Treasury Bills (1911), of the nominal value of £846,100, which the British Treasury had purchased from the holders in 1914; and, by the same Convention, it was further agreed that a Commission should be set up within one month of the coming into force of the Treaty of Lausanne to assess damages suffered by the nationals of the Contracting Powers—*i.e.*, as follows:—

(a) Direct damage in respect of persons or property (other than that referred to in sub-section 2 of Article 6 of the Convention) suffered on territory which was Ottoman on the 1st August, 1914, or at sea between the 1st August, 1914, and 6th August, 1924, as the result of any act or negligence of the Turkish Government, including damage resulting from measures of requisition, sequestration or confiscation and, also, direct damage suffered on the same territory between the dates named as the result of any acts of war whatever party may have been the author of such acts:

(b) Direct damage caused by the fire of Smyrna, to the rights and property of the nationals of the Contracting Powers (but subject to the terms of para. (b) of sub-section 1 of Article 6 of the Convention);

(c) The damage referred to in paras. (a) and (b) suffered, on territory remaining Turkish, at the date of the coming into force of the Treaty of Lausanne, by Ottoman Companies in which the nationals of the Contracting Powers had a preponderating interest on the 1st August, 1914 (but subject to a deduction of the value of advantages of an economic character referred to in sub-section 1 of Article 6 of the Convention).

By the same Convention the Commission is precluded from dealing with claims in respect of the following categories of damage:—

a) Indirect damage, including deprivation of the use of property and loss of profits.

(b) Claims relating to amounts payable by the Hellenic Government in accordance with the Convention of the 24th July, 1923;

(c) The claims of concessionary companies, on account of the utilisation by the Turkish Government, of their property, or of their services, which are to be settled by the Turkish Government, as provided in the Protocols and Declarations forming part of the Turkish Peace Settlement.

This Commission was duly set up on the 6th August, 1924, and has established its headquarters in Paris, where it is now prepared to receive claims from nationals of the Contracting Powers (including persons protected by the Contracting Powers in cases where the patent of protection is of a date prior to the 1st August, 1914.)

Such claims, together with all documents and evidence in support thereof, should be sent to the Commission, addressed to the Delegate of the nationality concerned, at the headquarters of the Commission, 66, rue Boissière, Paris (XVIème), France, and should reach the delegate concerned not later than the 6th August, 1925 (the last day for the reception of claims provided by Article 5 of the Convention.)

66, rue Boissière,
Paris (XVIème, France).
December 10th, 1924.

(Signed) F. CLEMENT-SIMON, French Delegate and President.
H. E. GARLE, British Delegate.
DIEGO TRIPEPI, Italian Delegate.

COMMISSION FOR THE ASSESSMENT OF DAMAGE SUFFERED IN TURKEY.

At a plenary session of this Commission held on December 10, 1924, it was decided that the following persons of British nationality, including persons under British protection whose patent of protection is of a date prior to August 1, 1914, should be deemed to have complied with Article 5 of the Convention between the United Kingdom, France, Italy and Japan, signed in Paris on November 23, 1923, *videlicet*:—

1. Those who have already made claims to and received an acknowledgment from the Reparation Claims Department of the Board of Trade, London, but not including those who have made claims to the Public Trustee and the Foreign Claims Office.

2. Those who have already made claims to the British Foreign Office, India Office, the Government of India or the Government of any British Dominion, Colony, Dependency or Mandated Territory, and have received an acknowledgment from the authority concerned.

3. Those who have already made claims to the French authorities in Syria and have received an acknowledgment from such authorities.

4. Those who have already made claims to the Office des Biens et Intérêts Privés, 146, Avenue Malakoff, Paris, and have received an acknowledgment thereof.

Persons who have already made claims to any of the authorities above mentioned may nevertheless make fresh claims if they desire to do so, or may add to, or remodel, or otherwise modify their existing claims, and in that event should signify their desire in that behalf to "The British Delegate, 66, rue Boissière, Paris (XVIème) France," stating to what authority their existing claim was made and the reference number allotted thereto.

Copies of the Convention of November 23, 1923, can be obtained from the British Embassy and Consulate in Paris, the British Embassies, Legations and Consulates in Central Europe and the Near East, or from H.M. Stationery Office, Adastral House, Kingsway, London, W.C.2.

(Signed) F. CLEMENT-SIMON, French Delegate, and President.
H. E. GARLE, British Delegate.
Paris, December 10, 1924. DIEGO TRIPEPI, Italian Delegate.

Near East Markets.

LONDON PRODUCE REPORT.

Demand for Dried Fruit.

(From Our Own Correspondent.)

London, Tuesday Morning.

Oilcakes.—The market has been steady. Linseed cake is unchanged at 270s., coconut cake is unaltered at 230s., while cottonseed cake is the same at 170s.

Sugar.—Home refined has continued in fair demand at the last prices. Tate's cubes are 37s. 9d., London granulated is 32s. 9d., while Lyle's granulated is 33s. 1½d. Foreign descriptions have been quite steady. White Mauritius spot has sold at 30s. 6d., white Java spot has been done at 30s. 6d., while Czech granulated has been done at 31s. 9d. Futures have been firm, January being 17s. 10½d., March 17s. 10½d., May 17s. 10½d., and August 18s.

Coffee.—The market has been very firm. Costa Rica is unchanged at 174s., East Indian is unaltered at 166s., Kenya is the same at 162s., while Santos remains at 128s.

Rice.—The market has remained quiet, but prices in some instances are a shade harder. Burma cleaned has been done at 18s. 3d. spot, while for the new crop 14s. 9d. is asked for January-February.

Maize.—The demand has been moderate. La Plata afloat has been done at 47s. 6d., while 48s. 9d. has been asked for January-February and 49s. 6d. for February-March.

Barley.—An inactive tendency has prevailed. Bessarabian has been done at 42s. 6d.

Currants.—There has been a great development of activity in this and other sections of the dried fruit market. A good deal of business has been done in currants, Vostizzas being in special demand, while Gulf and Panariti have also been in request.

Sultanas.—Transactions have been on a good scale. Cretans have been in particular request, and most of the business has been done in this quality, though Australians have also been a very good spot.

Figs.—The exceptional demand for this commodity, which has already been noted, has continued, and the fruit has been moving off very freely. As usual, Layers have been in special request, and prices have shown a tendency to harden.

Plums.—A steady business has been done, and the inquiry for this fruit seems to be broadening. The market shows a very firm tone.

Dates.—An excellent trade has again been done, and the market continues to develop a hardening tendency.

Almonds.—The market is very steady. Better supplies are now available, but even so they are inadequate to meet the demand, and the market shows an upward tendency.

Oranges.—The market is very active. Supplies are plentiful, but the fruit is being taken up readily, and it is evident that the demand is increasing.

Oilseeds.—Linseed has been very firm, Calcutta being 4½d. up at 24s. 9d., while La Plata has been done at 23s., a rise of 3d. Rapeseed has also been very firm, Toria being 6d. up at 22s. 3d., while Ferozepore is unchanged at 21s. Cottonseed has been steady. Bombay is unchanged at 11s. 1¾d., Egyptian black is 3d. down at 13s. 9d., while Sakellaridis is unaltered at 13s. 6d.

Seed Oils.—Linseed oil has again been very firm, and at 50s. spot and 49s. for December is 6d. up. Rape oil has been steady, with crude unchanged at 51s. 6d. and technical refined unaltered at 54s. 6d. Cotton oil has been firm. Refined common edible is unchanged at 52s. 6d., Egyptian crude is the same at 48s., while deodorised is unaltered at 54s. 6d.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Printing Paper, etc.—The Superintendent, Government Press, Bulâq, Cairo, invites tenders for the supply of printing and writing paper, bristol-board, grey-board, and straw-board. January 13.

Locomotives.—The Egyptian State Railways invite tenders for five passenger engines for the Luxor-Assuan Line. The gauge of this line is 3 ft. 6 in. January 13. (D.O.T.)

Clothing, etc.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing, equipment, tents, etc., required for the year 1925-1926. January 16.

Binding and Printing Material.—The Superintendent, Government Press, Bulâq, Cairo, invites tenders for the supply of binding and printing material. Price of conditions of contract: 50 mills. per copy. January 23.

Surgical Instruments, Appliances, and Sundries.—The Ministry of the Interior invites tenders for the supply of surgical instruments, appliances, and sundries required for the central stores of the Department of Public Health for the period April 1, 1925, to March 31, 1926. January 27. (D.O.T.)

Paper and Stationery.—The Ministry of Finance, Egypt, invites tenders for the supply of paper, stationery, and various other allied goods required by the Central Stationery Stores Department during the year 1925-6. February 2. (D.O.T.)

Candles.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of two English tons of candles. February 3.

Calico and Sash.—The Surveyor-General of Egypt, Gîza (Mudirîya), invites tenders for the supply of calico and sash required for the next financial year, 1925-1926. February 10.

Pumping Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of pumping plant. February 15. (D.O.T.)

Printing Plates.—The Surveyor General of Egypt, Gîza (Mudirîya), invites tenders for the supply of aluminium lithographic printing plates required for 1925-1926. March 18.

India.

Impedance Bonds.—The Bombay, Baroda, and Central India Railway Company invites tenders for the supply of impedance bonds for track circuiting. January 20.

Roumania.

Fire-extinguishing Pump.—The Roumanian Railways Administration invite tenders for the supply of fire-extinguishing pumps. January 26. (D.O.T.)

Weighing Machines.—The Roumanian State Railways invite tenders for the supply of weighing machines. January 30. (D.O.T.)

Porcelain Insulators.—The Roumanian State Railways invite tenders for the supply of porcelain insulators, sleeves, and plates. February 3. (D.O.T.)

Sulphate of Copper.—The Roumanian State Railways invite tenders for the supply of sulphate of copper. (D.O.T.)

The Sudan.

Steel Tank.—The Inspector-General of Sudan Irrigation, Khartoum, invites tenders for the supply of a mild steel tank, dimensions 10 × 10 × 2½ metres, to be used for water, with a small head between the two levels; the plates and the angle frames should be supplied drilled and cut according to the dimensions required, and ready to be erected in the sudds zone. January 15.

Turkey.

Barbed Wire.—The Commission des achats des chemins de fer d'Anatolie invite tenders for the supply of five tons of galvanised barbed wire. (D.O.T.)

THE DRIED FRUIT MARKET IN 1924.

Disappointing Trade in Currants.

We give the following extracts from Messrs. J. C. Houghton and Co.'s review of the dried fruit market since the opening of the season :—

Currants.

The closing days of the year provide a suitable opportunity for retrospection with regard to the chief features which have influenced markets during the past few months. Without question, the dominating factor has been the development of the principle of governmental control which was decided upon by the Greek legislature when it became evident that this year's crop promised to be of record dimensions.

The great success which attended the scheme originally introduced in 1905, and the experience of its practical working over a long period, no doubt encouraged the Government to an extension of the principle, and an Act was introduced imposing a tax on the 1924 crop of 600 drachmæ per 1,000 Venetian lbs., the proceeds of the same being devoted to the purchase of fruit for distillery purposes, powers being granted for acquiring stocks up to 20,000 tons. The original restriction fulfilled its purpose in stabilising values, and the authorities were so convinced that a very serious position would have to be faced if remedial measures were not adopted, that they showed no hesitation in introducing the Act referred to, it must be acknowledged with beneficial results.

The new season opened on September 10 with the arrival of s.s. Darino, followed by Esneh and Phrygia, total about 2,000 tons during September. These met a good reception, sales taking place in cleaned Pyrgos 46s. 6d. to 48s., cleaned Patras 50s. to 54s., Gulf and Vostizza of attractive colour were readily saleable at 54s. to 56s. for the former and 60s. to 63s. for the latter. Fine shade dried 65s. to 70s. During October we were amply supplied with 5,000 tons, comprising a good selection, amongst which some excellent quality was noticeable. Although trade could not be described as active, considerable progress was possible. Owing to the scarcity of fine Vostizza, up to 72s. was paid in the early days, but with the advent of more liberal supplies, prices dropped towards the end of the month, sales being made in Vostizza at 58s. to 63s., shade dried 65s. to 70s., Gulf and Panariti 50s. to 56s., Zante 46s. to 48s., Pyrgos 44s. to 45s. Cleaned varieties were in more plentiful supply, and lower prices were accepted in order to make progress, cleaned Pyrgos 44s. 6d., better class cleaned 46s. to 50s.

Arrivals in November and December have been heavy, about 4,000 tons being warehoused. Although the fruit showed really attractive quality, it failed to interest buyers, and a most disappointing business was recorded. Concessions in price were continually offered in order to stimulate trade, but without success. The strength of the Greek market helped holders to maintain prices, and although we close the year with a slightly lower range of values, quotations have kept wonderfully firm considering the disappointing trade of the past two months. Vostizza was an exception, being pushed for sale, with the result that values declined 10s. per cwt. Closing quotations :—Pyrgos, 42s. ; Amalias, 43s. to 45s. ; Patras, 45s. to 48s. ; Zante, 45s. to 48s. ; Gulf and Panariti, 50s. to 53s. ; Vostizza, 56s. to 62s.

It has been extremely difficult for some time to understand exactly what has been influencing the markets. The general election is blamed in some quarters as a disturbing element. A point which should not be overlooked is the increasing quantities of dried fruit arriving during the summer months from Australia and South Africa entering into competition, and undoubtedly attracting some of the trade from the usual channels of previous years.

Australian.—The Ulysses and Fordsdale during May brought the first of the new crop. Quality was disappointing and compared very badly with that of last season in colour and condition. Opening prices were 60s. to 65s. Later arrivals in June showed no improvement in quality, and slightly lower prices were accepted—viz., 55s. to 58s. In July a still lower range of values was introduced to make progress, and business was possible at 46s. to 55s. During August, in sympathy with the advance in Greek fruit, the additional supplies realised 50s. to 54s. The fruit arriving in September showed a great falling off in condition, and some very low prices had to be accepted. Sales took place at 30s. for out of condition parcels, and 40s. to 45s. for inferior grades, best lots making up to 50s. These values were maintained until the close of the year.

Sultanas.

Smyrna.—The first shipment of new crop arrived per Gerano, the quality being most disappointing, and each arrival provided further confirmation of the almost entire absence of fine fruit. Some interest had been displayed in good average quality prior to shipment on the basis of 42s. c.i.f. August, 38s. 6d. to 39s. c.i.f. September, 37s. c.i.f. October. Upon samples being available sales were made of medium at 54s. to 58s., good 60s. to 65s., and fine 75s. to 85s. A steady upward movement was in progress during October in good qualities, this grade selling 60s. to 70s., and the scarcity of fine fruit being severely felt, up to 95s. was paid for oil-bleached Carabournu, but common and medium fruit remained difficult of sale at 52s. to 55s. Towards the end of November arrivals were more plentiful, and with a falling off in the demand prices for most grades had an easier tendency, and through the continued indifference of buyers, December witnessed a further decline in value all round. Closing quotations :—Fair, 52s. ; medium to good, 55s. to 60s. ; fine, 65s. to 85s.

Cretans benefited by the absence of fine Smyrna fruit and sold readily at 80s. to 95s., although at the close there have been forced sales, and some excellent quality changed hands at 65s. to 70s.

Greeks.—Very little fine fruit has been seen. Sales were made at 65s. to 75s. for coloury fruit, and 60s. to 62s. for ordinary quality.

Australian.—The first small lot of the new crop realised 65s. Further shipments in June were heavier, quality being very mixed as to size and colour, and therefore not appreciated by buyers. Business was difficult to negotiate at 52s. to 60s. Arrivals during July were unfortunately very dark in colour and unattractive, and in order to effect progress lower prices had to be accepted, ranging from 46s. to 50s., a few coloury lots being sold at 54s. to 60s. August witnessed fairly important sales: several steamers arrived, and with the temporary shortage of Smyrna fruit advantage was taken to make all progress possible, and a considerable quantity changed hands at 50s. to 54s., and continued selling steadily until the end of November, ordinary dark realising 45s. to 48s., a few 50s. to 52s , good coloury parcels 55s. to 60s.

Digitized by Google

Cape.—The first new came to hand in March per Kildonan Castle and realised 50s. to 70s. for sulphured variety. This was followed by shipments of sun-dried, selling at 44s. to 48s. On the whole, the demand did not come up to expectations, and only at one period were sales readily effected, during the temporary scarcity of Smyrna sultanas—viz., sun-dried, 46s. to 50s.; sulphured, 52s. to 60s.

Afghans have been a disappointing sale, quality being unattractive, red variety opening 50s., yellow at 60s. Stocks carried over from the summer were eventually placed, red at 35s. to 37s., yellow at 42s to 50s.

Figs.

During July and August new crop genuine sold at 23s. 6d. to 24s. c.i.f. for September shipment. Arrivals of new crop skeletons met a ready sale, large boxes 80s. to 95s., small boxes 90s. to 100s., Locoums 115s. to 120s. A large quantity of genuine bags was disposed of afloat at 27s. c.i.f., while the opening sales were: In bags: good, 31s. 6d. to 34s.; genuine, 37s. to 40s. Steady progress was made with further supplies as they arrived, large boxes mostly in request at 65s. to 85s., small boxes slow 70s. to 85s., Locoums 115s. to 125s., pulled 48s. to 52s., bags good 31s. to 33s., genuine 35s.

It became apparent as November was drawing to a close that arrivals were overtaking consumption, and unless drastic steps were taken, large stocks would be carried over Christmas. In order to obviate this, holders decided on substantial concessions in price, and with a decline of 15s. per cwt. considerable progress was made, selling, large boxes, 47s. 6d. to 52s. 6d.; small boxes, 50s. to 60s.; while even as low as 40s. to 45s. was accepted for unattractive parcels. Locoums, being scarce, realised 65s. to 85s. Bags naturals, good 33s. 6d., genuine 35s. 6d., boxes pulled 42s. 6d. to 48s.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Haifa, December 6.—The grain market has been without notable fluctuations, and there has been no important change in prices. Towards the end of the week there was an improvement in the demand.

Jaffa, December 13.—Rain is badly required both for the crop and the orange groves. The prices obtained in the United Kingdom for oranges remain the same. They have averaged from 11s. to 15s.

Hamadan, November 29.—The sugar market has been more animated during the week as a result of the demand from the interior, and prices have risen about 3 per cent. On the other hand, quotations for manufactured goods have fallen in sympathy with the quotations of Baghdad.

The will of Mr. Harry Gay, of Antlers, Phyllis Avenue, Peacehaven, late Deputy Chief Auditor, Great Indian Peninsular Railway (net personalty £286), has been proved at £1,373.

Sir Maurice Fitzmaurice, C.M.G., F.R.S., of 54, Onslow Square, S.W., and of 9, Victoria Street, S.W., Chief Engineer to the Egyptian Government during the building of the Assouan dam, a former president of the Institution of Civil Engineers, who died on November 17 last, aged 63 years, left estate of the gross value of £94,215.

NEWS FROM ALL SOURCES.

Sir Henry P. Burt has joined the board of the Southern Punjab Railway Company.

The Alexandria and Ramleh Railway Company has declared a dividend of 4s. 6d. per share.

The annual general meeting of the Crédit Foncier Egyptien will be held at Cairo on January 16.

An order for 15,000 ploughs has been placed by the Turkish Board of Agriculture with a Leipzig firm.

It is reported that the application of the new Greek Customs tariff, which has been fixed for March 1, has been postponed.

The Czecho-Slovak State Air Service, Prague-Bratislava-Kosice, is to be extended to Uzhorod, the capital of Carpathian Ruthenia.

The *Pravda* states that the Soviet State Black Sea and Azov steamship service is opening a regular line between Odessa and Marseilles.

Professor E. Borel, of Switzerland, has been appointed arbitrator in the dispute arising out of the apportionment of the Turkish Debt.

The yield of wheat in Bulgaria for the past year was 10,333,000 quintals, that of maize 4,720,000 quintals, and that of barley 3,060,000 quintals.

A Cologne firm of contractors have received a contract for the construction of a railway line in Roumania, in the Carpathians, 70 kilometres in length.

The closing date for tenders for the contract for the improvement of the municipal water service in Damascus has been extended to January 30.

Indo-Burma (1920).—The production for November was 3,665 barrels, being 2,873 barrels from Yenanma field and 792 barrels from Padaukpin field.

The output of the Anglo-Egyptian Oilfields for the week ended December 26 was:—Gemsah, 13 tons (previous week, 16 tons); Hurghada, 3,167 tons (against 3,271 tons).

An order has been received by the Bedford Engineering Company from the India Store Department for two electric goliath cranes, of 5 and 15 tons capacity, running on rails 60 ft. span.

Steaua Romana (British), Ltd., are advised that Steaua Romana Well No. 14 Runcu flowed 260 tons on December 26, 110 tons on the 27th, 160 tons on the 28th, and 120 tons on the 29th.

The foreign samples and foreign catalogues section of the Department of Overseas Trade has been removed from 7, Old Bailey, E.C., to the headquarters of the department at 35, Old Queen Street, Westminster.

Delhi Umballa Kalka Railway.—The preference stock transfer books will be closed from January 17 to 31, inclusive, for the preparation of interest warrants. No transfer will be received while the books are closed.

Among the twenty-one names chosen by Mr. Henry Ford from a list of 500 names of the world's greatest inventors, scientists, and philosophers to be engraved on the façade of his new office and laboratories at Dearborn is that of Dunlop.

It has been decided by the Roumanian Economic Council to raise the import tax on sugar from 10 to 30 gold centimes on the ground that Hungarian sugar is being dumped on the Roumanian market. The Minister of Commerce has fixed home prices as a safeguard for the consumers.

Rohilkund and Kumaon Railway.—The transfer books of the 4 per cent. debenture stock will be closed from January 17 to 31, inclusive, for the preparation of interest warrants payable to shareholders whose names are on the register at the time of closing. No transfer will be received while the books are closed.

The British Government is said to be seriously considering the desirability of pressing upon the Roumanian Government the need for the promulgation of a law laying down a definite standard of length and weight for cotton yarns imported into Roumania. Both manufacturers and merchants closely interested in this trade express their approval of such a suggestion, and the Manchester Chamber of Commerce has informed the Board of Trade that such a measure would prove beneficial to those having business relations with Roumania.

Mr. W. H. Himbury, head of the British Cotton Growing Association, is leaving for Iraq this week. For five years the Association has been interested in cotton development in Mesopotamia, and in the last two seasons excellent progress has been made. A crop of some 2,500 bales has been purchased this season, and the outlook for cotton-growing in Iraq is regarded as most promising. Cotton has also been received by the Association from Jerusalem, and it is possible that Mr. Himbury may devote some time to studying the prospects in that area.

THE GREEK MARKET FOR AGRICULTURAL MACHINERY.

The Greek market for agricultural machinery has been unfavourably affected by the disturbed economic conditions prevailing for some time, (says an American Consular report).

Prior to September, 1922, Greek agriculture was chiefly in the hands of big landowners and practically the first efforts to introduce modern types of agricultural machinery were made by these landowners about 1911. During the period 1914 to 1923, a fairly important quantity of agricultural machinery was imported, despite war conditions, for use principally on the large farms. Since the arrival of the refugees, however, the Greek Government, in order to utilise them in agriculture, has begun to enforce a law which was passed in 1918, which provides that large farms and properties should be expropriated and distributed among small cultivators. In consequence, more than 100 large farms have already been distributed to peasants and refugees. This policy greatly restricts Greek imports of agricultural machinery, since the small farmers use hand tools and primitive types of implements.

The staple crops of Greece are tobacco, currants, raisins, olives, and figs, and none of these crops are well suited for the use of harvesting or weeding machinery. A large part of the cereal crops is grown on small terraces on hillsides, in olive orchards, or on very stony ground, and harvesting machinery cannot well be employed under such conditions. The savings which might be realised by using cultivators on tobacco and corn would probably be offset in most localities by the loss from planting the rows farther apart. In most sections also the growth of weeds during the summer, which is the dry season, does not offer a serious problem.

Formerly the United States was one of the largest sources for Greek imports of agricultural machinery. Most of the tractors which have been imported into Greece are of American make, and about three-fourths of the reapers and binders have been imported from the United States. More than 1,000 winnowing machines are in use in Greece, and most of them are of the French Marot type. About 150 large threshers are used, mostly of British manufacture.

Agricultural machinery is not manufactured to an important extent in Greece. There are five plants specialising in the manufacture of agricultural implements whose chief product is ploughs. One of the plants has been only recently organised. The ploughs produced by these plants are much cheaper than the cheapest types imported from Germany and are said to be equally serviceable. These plants have numerous sales branches, which also handle imported machinery. In addition to such plants, many small foundries, machine shops, and blacksmith shops produce various kinds of agricultural tools, such as spades, hoes, axes, and shovels. The products of the local plants are used mostly by the peasants, while the implements and tools employed by the larger farmers are principally imported.

The period 1914 to 1922 shows an increasing tendency in imports of agricultural machinery, owing principally to the increase in the Greek territories after the Balkan wars of 1912 and 1913 and to the resulting cultivation of large new areas which, in the absence of men of military age, were cultivated by women, children, and old men. During this period imports were also stimulated by steps taken by the Ministry of Agriculture to encourage the use of modern farm machinery. During 1922 and after imports showed a decreasing tendency.

The United States was the principal sufferer in this latter period, and in 1923 imports from that country were practically negligible, particularly as compared with 1921. Imports from Germany and Great Britain, which had been quite large in 1921 and 1922, decreased considerably in 1923, although less than did those from the United States. In 1921 imports of reapers from the United States amounted to 79,249 kilos, and from Great Britain 67,588 kilos, while in 1923 none were imported from the United States and 50,149 kilos were purchased from Great Britain.

Austria, France, Italy, and Hungary have also occupied important places in supplying Greece with agricultural machinery, but have not in any way compared with the three countries first mentioned, and imports from these countries in 1923 were in most cases negligible. At present there seems to be a preference for German-made agricultural machinery, influenced by lower prices, the facilities extended by German manufacturers, and the advertising carried on by them. Advertising is an important item in the sale of agricultural machinery in Greece, and in many cases local agents or representatives attend to the details and charge the manufacturer with all or a part of the expense.

The attitude of local importers and dealers regarding future prospects for the sale of agricultural machinery in Greece is somewhat pessimistic particularly as regards imports from the United States, in which cases credit terms granted are generally less favourable than those extended by European manufacturers. Another important factor in selling American machinery in Greece is the lack of a good spare-parts' service. Such a situation, of course, tends to increase sales resistance. The enforcement of the land laws will naturally restrict the use of heavy agricultural machinery, but as soon as there is an improvement in the present economic situation there should also be some improvement in the demand for agricultural implements.

The Greek Government's refusal of the demands of the strikers in coastal and island merchant ships and the ensuring of communications by employing non-union men has irritated the trade unions, and a general strike is considered imminent. The Government declares that it has taken steps to meet every eventuality.

According to Reuter's Bombay correspondent, the All-India Moslem League on December 31 passed resolutions urging the immediate withdrawal of the Bengal Ordinance, appointing a committee to formulate the Moslem demands in regard to their representation in the Legislatures and a proper share in the public services, and recommending Mussulmans to revive hand-spinning and hand-weaving, and to use indigenous cloth, to the exclusion of foreign cloth as far as possible.

Cotton and Cotton Goods.

RAIN COTTON DEVELOPMENT IN THE SUDAN.

Position in Blue Nile Province.

To what extent can the output of rain-grown cotton be developed in the Sudan is one of the most important issues in connection with the extension of the cotton areas in that region. The position as regards the development of rain and flood American cotton, with special reference to the Blue Nile and surrounding provinces, is the subject of an informative article by Mr. A. J. C. Huddleston, O.B.E., Governor of the Blue Nile Province, in the current issue of the *Empire Cotton Growing Review*. He gives some interesting statistics regarding the Blue Nile Province, which show plainly the rapid development of the output of cotton. Thus for 1923-24 the bags of seed issued by the Government numbered 550, as compared with 70 for the previous year, and the total crop was estimated at 5,500 kantars as compared with 2,000, while for 1924-25 the bags of seed issued totalled 3,300. The writer continues :—

The figures are somewhat approximate, and on merchants' returns I should be justified in putting the 1923-24 figures higher, but as considerable quantities of mixed American and native cotton left the province, I have not thought it safe to take a higher figure for the American. As regards native cotton, I have no figures available for the 1921-22 and the 1922-23 seasons, but the export was certainly very small—in the 1923-24 season the Blue Nile Province production was certainly not less than 4,000 kantars, of which it is estimated that 3,150 were exported from the Sudan. This export trade in native cotton has sprung up in consequence of the trade in American cotton, and steps have now been taken to prohibit it, as there have been signs of attempts being made to pass off a mixture of American and native cotton as American.

The surrounding provinces have also been sending cotton into the Blue Nile, the total exports from that province during the 1923-24 season being 11,700 kantars of 315 lbs., giving 2,320 bales, which are believed to represent approximately (in kantars) :—Blue Nile Province, American, 5,000: Blue Nile Province, native, 3,150; Kassala Province, probably half American, half native, 1,200; Fung Province, 1,850; White Nile Province, entirely native, 500; total, 11,700.

The above are the facts as known at present, and though extremely satisfactory from a local point of view, it is obvious that a production of 1,000 bales of American cotton in one province is of no great general interest unless it is likely to lead to bigger results. If this production can be largely increased and extended into other parts of the Sudan, the methods by which these results have been obtained may be of general interest.

In the Blue Nile Province the rainfall is the limiting factor—the average rainfall at Wad Medani is 14 inches, and cotton requires at least 20 inches. It can, therefore, only be grown in natural depressions, known as "uguds," into which water naturally drains, or in small quantities near banks (terraces) constructed in places where there is some slight slope, so as to concentrate the water falling on the whole of a plot of land on to one particular portion of it. There are also certain possibilities of growing American cotton on land flooded by the river. The areas of all such classes of land are definitely limited, the great bulk of the province requiring irrigation to grow cotton. Once the seed issues reach 5,000 bags, I consider that the rate of increase will slow down very appreciably.

In the Fung and Kassala Provinces there is a much greater rainfall, which carries with it greater difficulties in dealing with weeds, and in Kassala there is a shortage of population. I have not had the same opportunities of studying White Nile conditions, but I believe they are similar to those in the Blue Nile, except that there are greater possibilities of flood cultivation on the river.

It is difficult to forecast ultimate possibilities, but I am convinced that if rain cotton cultivation is pushed as a consistent policy in all four provinces, the seed distribution will reach 10,000 bags within three years, which should enable 200,000 acres to be sown with American cotton. This should give a yield of not less than ½ kantar an acre, while in years of good rainfall 1 kantar may be reached. I look forward, therefore, to a production in the immediate future in these provinces of anything from 100,000 to 200,000 kantars, giving 20,000 to 40,000 bales. There are good prospects of still further expansion in these four provinces apart from probable development in other provinces.

It is worth while referring here to the effect of this increased cotton production on the food resources of the Sudan. I recently studied carefully the effect of the 1923-24 cotton production in the Blue Nile on the food position. The Blue Nile Province is the largest producer of dura of all the Sudan provinces. Dura is the staple food of the people, and in some years there is a considerable export trade in it, but if the rains are bad, local prices rise to a height that makes export impossible, unless there are large reserves in the country from previous years. In 1923 the rains were only moderate, and the crop was well below average, but large reserves were known to exist. The exact amount was, however, unknown, and there was some doubt as to whether any large export of dura from the country was desirable, in view of the possibility of bad rains in 1924. Actually, local prices kept at a level which made any large export impossible, and this was undoubtedly partly due to the extension of cotton-growing in the province. In fact, Blue Nile cultivators received approximately £E40,000 for their cotton. Of this it is estimated that £E10,000 was spent on luxuries that would not have been purchased but for the cotton, and £E30,000 was used for the purchase of necessities and the payment of taxes, the money for which would otherwise have been obtained by the sale of dura. This would have brought some 7,000 tons of additional dura into the markets, and would have forced dura prices down considerably. The actual exports from the province during the cotton season, including export to other provinces, amounted to 15,000 tons approximately. With lower prices and an extra 7,000 tons on the market,

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25 Princess Street, Manchester. (Established 1887).

Digitized by Google

it is probable that an additional 2,000 tons would have had to be sold to enable cultivators to find their cash requirements. Some 9,000 tons, therefore, probably remain in the hands of the cultivators, which, but for cotton, would have come into the market, and, with lower prices, would certainly have been exported from the country. Against this must be put 3,000 tons, which is the maximum production of the land under cotton had it been sown with dura, and we are left with a figure of 6,000 tons as the net additional food reserves left in the country owing to the 1923-24 cotton crop.

As the cotton crop increases, the amount of money spent on luxuries will, of course, increase, and the greater spending capacity of the people will benefit trade generally and importers in particular. The export of dura will fall off, but there is so much land in the Blue Nile suitable for dura, and not for rain cotton, that I do not consider this cotton development will endanger the local food position in the Sudan. It will, on the contrary, tend to stabilise it, as more dura will be stored in years of good rains and more stored dura will be available in years of bad rains.

THE EGYPTIAN MARKET.

Futures Variable.

The Alexandria Commercial Company, in their report for the week ended December 24, state :—

Since our last report the futures market has been erratic, but again closed firm; the net changes on the week are the following: Sakellaridis \$1.25 up for January; \$1.50 up for March; \$1.20 up for May; \$1.35 up for July; \$0.15 up for November, 1925. Ashmouni: \$0.35 down for February; \$0.60 down for April; \$0.15 down for October, 1925. The week opened with very weak Sakel markets, due to profit-taking and a marked falling off in the demand from abroad, but towards the close bull speculators re-entered the market, and on account of its narrowness easily succeeded in making prices more than recover the ground lost earlier in the week. Despite the reduced demand tenderable, Sakel cotton keeps its heavy premiums over Futures, and this naturally strengthens the position of the latter, as it restricts hedging operations and makes heavy tenders extremely unlikely. As regards the Uppers contract, fluctuations were much less pronounced, and despite the continued good demand enjoyed by this variety from buyers abroad, prices receded somewhat. At December 3 tender krs.51,750 dockets were issued. These dockets were anticipated, and did not affect the market in the least. They were taken up by the leading export houses. The movement in the interior has been much less, and the arrivals in the factories have now dropped considerably. The total arrivals in Alexandria up to date are about 5¼ million kantars, and we estimate the remaining cotton up-country at about 2 million. Export figures keep very satisfactory indeed, the quantity of cotton shipped so far being fully equal to that of the same period last year. The week's receipts amount to 257,579 kantars, against exports 239,206 kantars; the stock stands at 2,051,816 kantars.

Spot.—We have had a quieter week at Minet el Bassal, and there has not been the same volume of business as for some weeks past, due, no doubt, to the approaching holidays. Sales amount to about 23,200 bales for the five business days, of which we estimate 9,500 bales Sakellaridis, 8,800 bales Uppers, 4,200 bales Zagora, 200 bales Brown, 250 bales Pilion, and 250 bales White. Arrivals are considerably less than last week, but this is explained by the fact that there have been heavy rains, which have impeded the movement of cotton.

Sakellaridis.—The bulk of the business has been in the medium and good grades, the lower grades having been rather neglected. Spot parities are steady, without much change for Fully Good Fair and better; for Good Fair and below they are somewhat cheaper.

Upper Egypt and Zagora Lower Egypt.—There has been business in all grades, with the medium and good grades in most request. Spot parities are steady with a hardening tendency, especially for the better grades.

Brown.—A moderate business has been done in medium and good grades. Spot parities are unchanged for Good Fair and below, but are rather dearer for the higher grades.

Pilion.—A fair business has been done mainly in good grades. Spot parities are without much change except Good, which is dearer.

White.—A fair business has been done in the better grades. Spot parities for Fully Good Fair and upwards are somewhat dearer. The lower grades are without much change.

COTTON TRADE REVIEW.

Greater Activity.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended January 3 states :—

The past week has been a fairly active one for this time of the year. New Year's Day was a holiday, and a large number of firms are now engaged in stocktaking, but, nevertheless, sufficient business has been done to maintain the cheerful belief that 1925 will be a better year for the cotton trade than any since 1920. For this belief the assured supplies of American cotton, with their accompanying lower prices, are chiefly responsible, since they have already resulted in considerable improvement during the last few months, which there is no reason to doubt will be continued. The shortage in, and high price of, Sakellarides is, of course, a serious matter for firms who must have that class of cotton, but the number of these is small as compared with those who are beneficially affected by the greater supply of American.

Yarn.—Whilst a large business could not be expected, a moderately good turnover has taken place in American counts, and the tone in this section remains fairly healthy. Egyptian spinners are still labouring under the difficulties referred to above, and naturally business has been very small.

Cloth.—The greater activity displayed by India towards the close of last week has again been noticeable, and it is thought that the prospects of this continuing are good. Business for other markets has been up to expectations in view of the holidays both abroad and here.

Raw Cotton.—There has been a firmer tone in this section, a rise of 40 points taking place in American on Monday, the first day after the Christmas holidays. Egyptian has also maintained its recent strength. Closing quotations yesterday were as follows:—American Middling, 13.57; Egyptian Fully Good Fair, 30.15.

LIVERPOOL COTTON REPORT.

Moderate Inquiry for Spot Cotton.

Messrs. Reynolds and Gibson report as follows for the week ended December 31:—

Egyptian Spot.—Conditions over the holidays have ruled quiet, and a very moderate inquiry for spot cotton has been in evidence during the three business days under review. There is a tone of optimism about, however, and an undercurrent indicative of business pending in the near future, unless the price asked for the raw material gets beyond control. Lately many complaints have been heard from spinners, who protest that manufacturers are not paying the latest advances asked, and that in order to make business a considerable cut in their margins has become necessary. Inquiries for Sakel have ranged chiefly from 26.00d. to 28.00d., and beyond the latter figure business is very slow indeed. More interest has again been shown in the lower qualities. Uppers continue in steady request at from 19.00d. to 21.00d. for the better class of cotton, and from 17.00d. to 18.50d. for the lower. There appears to be very little offering in the lower qualities. Sudan cotton has been in poor request, but one parcel of Sudan Sakel changed hands at 31.50d. C.i.f. business has been practically at a standstill, but offers from Alexandria have shown no signs of weakening. Forwardings for the week ending 26th instant were returned as 5,238 bales. Estimated sales (three days), 600 Egyptian and 100 Sudan. Quotations of Sakellaridis are advanced 40 points—fair exceptionally 10 points. Brown and upper are 40 to 50 points higher on the week. F.G.F. Sakellaridis to-day (30th instant), 29.65d.

Egyptian Futures.—Although last Wednesday's session is included in this report, we do not purpose devoting much space to the happenings on that date. Trading was essentially of a pre-holiday character, and after minor operations and fluctuations the level showed little change on the day. The resumption of business on Monday witnessed a further outburst of "bullish" activity in the overseas market, and fresh high levels for the season were established during the course of the morning, when the January position touched $58.80. Whilst this naturally influenced a sharp advance at this side, we did not respond to anything like the extent necessary to maintain the differences at a normal parity. In fact, from the commencement of the week to the time of writing, the local market has shown a somewhat hesitating tendency, and, with Alexandria maintaining a steady tone, our contract now stands at quite an appreciable discount. There has been little support in evidence from trade sources, and probably this has induced a certain amount of outside liquidation, which, in view of the rather restricted business, has had more than its due effect on values. Manchester reports indicate a very fair inquiry, which is expected to materialise into a good business in the early New Year. We generally experience a wave of optimism at this period, but certainly there are more substantial grounds for the expectation of a prosperous New Year in the textile industry than we have had for a long time. We do not believe that the local contract can be subject to any sustained pressure as long as ruling spot values are maintained and with Alexandria holding its present premium; therefore, conservative purchases on easy markets should give satisfactory results. The new Sakel and Upper options for November, 1925, delivery have attracted little attention since we last wrote, and the former is quoted nominally unchanged from the ruling level at the time of our last report, whilst the latter, in sympathy with the rise in American values, is nominally advanced 65 points. The present contract at noon to-day showed advances of 45 to 90 points for near and 90 to 105 for distant, from the close of the 23rd instant.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Malia for Port Said, Colombo, Madras, and Calcutta (London, January 10).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, January 14).

British India Line.—S.s. Mandala for Bombay and Karachi (London, January 16); s.s. Merkara for Colombo, Madras, and Calcutta (London, January 17).

Ellerman "City" Line.—S.s. City of Nagpur for Calcutta (Birkenhead, January 16).

Ellerman's Westcott and Laurance Line.—S s. Bulgarian for Gibraltar, Malta, Piræus, Salonika, Constantinople, and Smyrna (London, January 24).

Johnston Line.—M.v. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 31). M.s. Sycamore for Galatz and Braila (the first steamer of the season for the Danube) (Liverpool, February 7). S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 28).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, January 9); s.s. Novara for Colombo, Madras, and Calcutta (London, January 10).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Beyrout, Jaffa, and Haifa (Manchester, January 15).

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar & Egypt.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Situation in Yugoslavia.

It is noticeable that the arrest of M. Raditch and the proscription of the Croatian Peasant Party have coincided with attempts on the part of the Government of M. Pashitch to ease the internal situation in other directions. There are signs of a genuine desire to reach a *détente* with Montenegro, and for the moment the absence of news from Macedonia suggests that the quiescence of the Macedonians has been reciprocated by the local authorities. It would materially strengthen the position of the Government if it could point to some constructive policy in regard to Montenegro. Hitherto the system of rigid centralisation has been marked only by the unyielding opposition that it has provoked. Now that M. Raditch, by his Communist leanings and impossible tactics, has played into the hands of M. Pashitch, the latter has an exceptional opportunity for showing that his system is compatible with contentment among the reasonable elements in the new kingdom. The trouble in Montenegro to-day—whatever may have been its origin a few years back—turns largely on the economic distress. If practical steps to relieve this could be taken by the Yugoslav Government, and if it could be shown that, although it could not budge from the policy of making Montenegro part of Serbia, it had no wish to obliterate Montenegrin nationality, but was prepared to give it full separate recognition, as, for instance, in the Yugoslav army and in the matter of local autonomy, there would seem to be no reason why the relations between Montenegro and Serbia should not be on a par with those between Wales and England. Whatever measures, however, that are adopted to this end must be sincere, and not prompted by the mere desire to throw dust in the eyes of either Montenegrins or foreigners. A bold policy in this direction could hardly fail to impress the Croats, many of whom must be beginning by now to be tired of M. Raditch and his tactics, and to be desirous of being able to think better of M. Pashitch and his policy.

The Croatian Leaders.

A significant development is reported from Yugoslavia in the release by the Zagreb Court of all the detained Croatian leaders, with the exception of M. Raditch, on the ground that there is not sufficient evidence against them. The Belgrade Press is said to be very angry over this unexpected *dénouement*, and talks of other Yugoslav Courts ordering the re-arrest of the leaders on other indictments. It is to be hoped that M. Pashitch will not allow himself in such a matter to be pushed to unwise lengths by his extremist followers. He will be able to recall an incident in his own life twenty-six years ago when he too was arrested in Serbia on a trumped-up charge and kept in prison for three months while evidence was being procured (he might himself say manufactured) against him. Those were unregenerate days, and he will not willingly be a party to reproducing them in 1925. The action of the Zagreb Court may be a blow to the Government; but it is more concerned to establish its case against M. Raditch than to supply his subordinates with real grounds for grievances. If action against the Croatian Peasant Party has been taken in the interests of the State, the fate of the subordinate leaders can be a matter of indifference to the Radical Cabinet; their detention on suspicion or their actual imprisonment can only become of importance if it were desired to influence in any way the free course of the approaching elections.

Refugees in Greece.

Urgent appeals continue to reach this country from Greece on behalf of the refugees, and it is to be hoped that they will meet with a generous response. The Greeks, thanks to the help that they have received from abroad, have already a notable achievement to their credit in the manner in which they have contrived to absorb so many of these destitute newcomers in the daily life of the country. A lot still remains to be done, however. It is reckoned that a fifth of the refugees in Macedonia must remain under canvas during the present winter, and great need exists in a number of camps. The cold is felt very much in winter in most parts of Greece; in Macedonia the weather can be very severe at this

Digitized by Google

time. Donations should be addressed to Sir Maurice Bonham-Carter, Hon. Treasurer, All-British Appeal, 26, Gordon Street, Gordon Square, London, W.C.1, and gifts of clothing, blankets, etc., should be sent to the All-British Appeal, New Hibernia Wharf, London Bridge, S.E.1.

Electoral Signs in Egypt.

With the formation of a new party in Egypt the approaching electoral contest resolves itself into a triangular contest between Zaghloulists, Liberal Constitutionalists, and Unionists. As there is little difference in policies between the latter two, it is to be supposed that in the actual election their candidates will not oppose one another where there is a Zaghloulist to be defeated. The Unionists come into the field late in the day. Their programme, which includes "Work for the realisation of the complete independence of Egypt and the Sudan," is as "Nationalist" as that of Zaghloul, but it suggests a profounder appreciation of the needs of the situation and a tendency for more practical tactics. Domestic reforms may be expected to precede any attempt to raise the independence question in an acute form, and will certainly provide a shorter cut to the goal in view than the measures adopted by Zaghloul Pasha. It is of interest to note that of the two names mentioned in connection with the presidency of the new Unionist party, one is that of Aziz Izzet Pasha, Egyptian Minister in London, who is now on his way to Cairo. If Izzet Pasha should be elected, his leadership of the party would be a guarantee that it would proceed along constitutional lines and set store on reaching a *modus vivendi* with Great Britain.

Wahhabi Raids.

In a dispute between Sultan Ibn Saud of Nejd and the Hejaz it is possible for Great Britain to adopt the passive attitude of an onlooker; but already the Wahhabis, who seem definitely to have entered upon one of their periodical overflows, have been guilty of trespassing on British preserves with an attack on Transjordan, and now comes news of a series of raids on Iraq. Three years ago, when similar raids took place, Sultan Ibn Saud apologised for his insubordinate followers and undertook to keep them in better order. The value of his promises is seen in recent events, although we may expect him to urge his presence in Mecca, beyond the borders of his own country, as an excuse for the shortcomings of the Wahhabis left behind in Nejd. Perhaps Iraq ought to be satisfied with a period of three years' freedom from Wahhabi incursions and attribute it to the effective punishment then administered to the raiders. As the strength of Sultan Ibn Saud's hold on his tribesmen is problematical, and as there can be no question of military measures to bring him to book, the best course is to develop defensive measures on Iraq's southern frontier. The Air Force has again punished the Wahhabis fairly severely, but not before the unoffending Iraqi tribesmen had suffered badly. It will be a sound course to establish one or more strongly held posts in the danger zone, which, if equipped with wireless, will be able to give much earlier notice to the Royal Air Force of the presence of raiders.

Iraq and the Ottoman Debt.

The Iraq Government is sending a deputation, comprising one British and one Iraq official, to raise the question of the share of the Ottoman Public Debt to be apportioned to Iraq. The amount actually fixed is seven and a-half million pounds sterling, a sum which bears little relation to the total of the debt, but is a serious burden for the new Arab State. It is not unnatural, therefore, that the Baghdad Government should feel called upon to protest against the Iraq allocation, and on this point it has the sympathy of British officials connected with the country. A point that is not likely to be lost sight of is that, whereas other Succession States of the old Ottoman Empire and even Turkey herself, may fail to pay their shares, the British connection is certain to result in prompt payment by Iraq. Judged by a certain standard, the financial clauses in the Iraq Treaty may have been just; they were certainly not generous. There has now been time to reflect whether British interests, as well as those of Iraq itself, will not be better served by lightening the burden on the new State as much as possible, in order that the period until her complete rehabilitation may be reduced to the shortest limits.

TO READERS OF "THE NEAR EAST."

If you find any merit in "The Near East," if you hold with us that British interests in the Near and Middle East call for a Paper devoted exclusively to the affairs of that part of the world; if you consider it a worthy cause that Britain and the British should be sanely interpreted to the people of the East, and those people in their turn be made better known to Britons, support "The Near East" by becoming a subscriber yourself if you are not already, and by securing for us new subscribers. Specimen copies will be forwarded gratis. A subscription form will be found on page 78 of this issue.

THE WEEK AT HOME.

London, Tuesday Morning.

Liberalism.

The mighty corpse of Liberalism, heavy with past achievements and unfulfilled aspirations, has during the last week been pulled hither and thither by mourners anxious to bring it to life again. A call to youth has been made (something is always amiss when the fallibility of senile intelligence is implied); political war songs have been written; and the Liberal organs of the Press have been striking their most piercing and fulsome notes.

But still no sign from the corpse. Dead, dead as a door-nail it is. It is all passing strange, because without any doubt at all, there is plenty of room for a real Liberalism in this country. But it is a ringing, challenging avatar that is needed; not a negative, luke-warm comforting of the middle-classes. Something may conceivably come from Manchester, which was represented in the great Liberal "rally" of last week; but as yet the doctrines emanating from that dull home of prosperity are academic and sterile; nor have they touched a national note. The part that Mr. Lloyd George will play in this revival will probably be that of a bewildered spectator, assisting at a game the rules of which have completely changed since the days when he could be both referee and chief goal-getter.

The Meat Rings.

The evidence which the "meat magnates" gave to or withheld from the Royal Commission on Food Prices last week was by no means encouraging. It confirmed in the darkest way the public's suspicion that very tight meat rings have been formed, although that fact was quite evident to anyone who took the trouble to compare the price paid, say, to the Australian exporter on the embarkation of his meat in Britain, with the price paid by the English

Digitized by Google

consumer. The profits made by meat-importing firms have been really colossal, a fact of gratification to very few people in this country.

It becomes increasingly doubtful whether the Commission will be able to get its nose right inside the problem—if it did, the unsavouriness of the atmosphere might appal it. But at least no harm will be done by the public exposure of the character of these wealthy meat-importing people.

St. Paul's.

The word has gone out that St. Paul's dome is falling down. That it must be saved is obvious; and that it will be saved (the amount of £140,000 is to be subscribed to the fund which *The Times*, which has, at least on this matter, a finely national conscience, is raising) is certain. It is rather interesting to discover the motives which are impelling Englishmen from all parts of the Empire to help support the great dome that is from Fleet Street one of London's loveliest sights. The religious instinct can scarcely be the major one in this business; probably the national and the æsthetic senses are what is chiefly being exercised. In a way, it is fortunate that the possibility of such a disaster was reported in our age, which is increasingly anxious for the architecture of London. Architecture has in the last few years become something of a popular study: the work that such societies as the London Society and the Architecture Society, for example, have accomplished has been of very considerable national value.

Agricultural Policy.

The Prime Minister's plan of persuading a conference of English agricultural interests to formulate a policy for the salvation of British husbandry seems to have been foiled. Complaint has been made that the landowners and the farmers on the proposed conference outnumbered the workers, who have now definitely refused to participate. This is extremely unfortunate, but it is difficult not to lay a certain blame at the door of the Government for its vagueness. The Government refused responsibility for the conference, which would therefore, in any case, have been rather groping in the dark. Now, imperatively, the Government must of itself formulate a policy. If it is Protection—well, let it be Protection; but, at all events, let us have a policy, and not continue longer to see the degeneration of the countryside.

Cup-Tie Football.

That orgy of speculation in which nine out of ten Englishmen indulge—I mean the subject of the winners of the Football Cup—began last Saturday. It is amazing how national, or, rather, fiercely local, this institution has become; "supporters" go almost mad over these Cup games; and he who on Monday knows not all the important results of the previous Saturday is looked upon either as an eccentric or a non-sportsman.

From the point of view of the game itself, it was a great pity that the Corinthians—the one amateur team in the Cup—were so easily knocked out by Sheffield United. It seems to be a fact that this glorious side is not so strong as it was, say, last year. But Association amateur football generally is regaining something of the strength which it lost when so many public schools deserted it for Rugby; and competitions like the Arthur Dunn and the A.F.A. Cup are this year being fought out on a satisfactorily high level of football. With schools like Westminster, Malvern, Winchester, Repton, and Shrewsbury, and so on still playing, there is not any real fear of the submergence of Association.

A Victorian Hogarth?

It has been a late fashion of Georgian times to expose the seamier side of the Victorian régime, its cant and smugness, its facility and its content. But under all this veneer of religion and prosperity and the rest of it there were yet Englishmen who were still Englishmen, enjoying life in a simple, primitive way. No histories tell us of this bourgeois underworld, just as no histories would give one any idea of social conditions in the eighteenth century unless Hogarth's art had preserved them to us.

Now something in this way has been done for the late Victorian era by Walter Sickert, the strangely created A.R.A., whose exhibition of etchings and engravings is now being held at the Leicester Galleries. Sickert is, of course, a very beautiful and creative artist, but it is rather of the general than of the artistic value of his works that I am now speaking. How lovable those garish and hectic 'eighties and 'nineties must have been! In his pictures you may live again in the old music halls, now for ever drowned in a sea of respectability—*e.g.*, the Bedford and the Middlesex—and catch for a while the tang of a life that was much more than it has been supposed to be.

Theatres and Broadcasting.

The fight between the theatre-managers and the broadcasting company goes merrily, or rather, acridly, on. Another round was begun on Saturday, when Mr. Donald Calthrop, resolving to broadcast his revue, "Yoicks," was told by various provincial managers that they would refuse to produce provincial shows of the revue. Mr. Calthrop, who has a refreshing air of enterprise, replied that he would produce the provincial shows himself; and "Yoicks" was duly broadcasted on Saturday night.

It seems a little silly thus to fight against broadcasting, which obviously is a thing which will increase in its uses. To say that things heard by its agency will not be listened to in a theatre is the veriest nonsense; one might as well say that pianoforte scores of Gilbert and Sullivan would destroy the popularity of the d'Oyly Carte Company.

The Cross-Word Puzzle.

Whence the cross-word puzzle came I do not know: it is sufficient that it is. Not a railway carriage, a bus, a home that has not its devotees: its popularity has even reached the heights of being ridiculed in *Punch*. Apparently, like chess, it came from the East—some say in the fifteenth

century, in which case I have no doubt that my Liberal friends will see the dark hand of the Turk in it all. It is, according to those who make it their business to instruct us on these matters, a combination of the anagram, the acrostic, the rebus and ancient magic squares; and it seems that when Britons went by other names, peoples in Hindustan and China were attempting to discover, say, a word of five letters of which they knew only the middle letter.

Of course, the craze is being eagerly exploited by the advertising agents, so that one almost, when one turns over the pages of a journal in the morning, has one's doubts of how many were consumed the night before, so abundant are the crosses and jig-saws and general blacks and whites.

Progress in Broadcasting.

There is for scientific developments no word so applicable as the word "progress"; many thinkers, indeed, believe that it should be applied to science alone. In very few things has there been more progress than in broadcasting in Great Britain. There is no doubt that, whatever may be thought of it as an entertainment, broadcasting has come to stay. Very much was discovered in the last year, and there are signs that the B.B.C. really intends to use its monopoly sagaciously and generously. A new high-power station at Daventry, which can be used by crystal sets for a hundred miles and by two-valve sets all over Britain, will very soon be working; and the prospect of alternative programmes will be exciting indeed to the enthusiast.

A Ministry of Fine Arts.

It is possible, if we were to have a succession of Prime Ministers as enlightened as Mr. Baldwin, that one fine day we might wake up and find a Ministry of Fine Arts created. At present, however, the signs are scarcely propitious. But there is no harm in hammering away at the subject, and one was rather pleased to see the Incorporated Society of Musicians doing this the other day at its Harrogate Conference. It was pointed out that teachers of music should be placed on an equal footing with other branches of the teaching profession; that some diplomas, by which the public were gulled, were worthless; and that the only way to remedy the present scandal would be the instituting of a Ministry which should govern all matters relating to the issue of diplomas in music and in the other arts.

Roman Britain.

From time to time in these columns I have remarked on the evidence which comes increasingly to light for disbelieving the myth current in Victorian times that this island owes but little to its Roman forbears. The pendulum is, in fact, swinging now heavily the other way. During the past week two very important finds have been made: the first near Shrewsbury, where a considerable Roman city, Uriconium, has been uncovered, and the second, in St. Michael's, Cornhill, where three separate walls of Roman workmanship have been found. Will British achievements in foreign lands from which ultimately and inevitably we shall have to withdraw endure so long?

ALTER EGO.

NEWS IN BRIEF.

M. Marianovitch, the Mayor of Belgrade, fell into an apoplexy on January 5 and died.

Heavy rain has fallen at Aden, and the great tanks which are usually empty are now full of fresh water.

On December 30 the Bulgarian Sobranye ratified the Geneva Protocol for the Protection of Minorities.

Sir Geoffrey Archer, the newly appointed Governor-General of the Sudan, arrived at Khartoum on January 5 from Uganda.

The appointment is announced of the Sheikh Shawish, who has been a prominent figure in the Nationalist agitation, as Controller of Elementary Education.

The "Proceedings of the Standing Joint Committee on Indian Affairs (Session 1924)" have been printed by H.M. Stationery Office as a White Paper (15), price 2d. net.

Zekkai Bey, Commissioner for the Public Debt, left Angora on January 8 for London to take part in a conference on financial questions arising out of the Lausanne Treaty.

Niazi Bey, Deputy Master and Comptroller of the Turkish Government Mint at Constantinople, arrived in London last Thursday, from Angora, for the purpose of visiting the Royal Mint at Tower Hill.

The Egyptian Government has appointed Mr. Horace Mayne to be Inspector-General of the Egyptian State Telegraphs and Telephones, with seniority as from November, 1923, the date when he began to act in that position.

According to Reuter's Cairo correspondent, it is stated that the Ministry of Foreign Affairs of the Hejaz has informed the Consuls at Jeddah that the Southern Hejaz ports are under blockade, and that all ships within the area of the blockade are liable to seizure.

Prince and Princess Arthur of Connaught will pay a private visit to Madras on March 2, after a trip to Rangoon. There will probably be some snipe shooting at the famous grounds near Chingleput. The Prince and Princess will leave Madras on March 5 for Mysore.

A cable to the Eastern Transport Company from Beyrout states that Arabia is experiencing the most severe winter in the memory of man, and the climate is intensely cold. Snow has fallen in Baghdad and Palmyra and the desert is covered with a layer 10 inches deep. Severe night frosts accompany the visitation.

The Rev. Dr. D. Mackichan, who has been three times Vice-Chancellor of the University of Bombay, and a former Moderator of the General Assembly of the United Free Church of Scotland, arrived recently in Bombay to take part in the opening ceremony of the extension of Wilson College, Bombay, of which he was Principal for over forty years.

At their monthly luncheon next Friday (January 23) at the Criterion Restaurant, the Central Council and members of the Overseas League will entertain as their guest of honour General Sir William Birdwood, late General Officer Commanding-in-Chief, Northern Army in India, and Commander of the Australian and New Zealand Forces in Gallipoli during the War. Sir Ernest Birch will preside.

Field-Marshal Lord Allenby reviewed last Saturday morning the first battalion of the Hampshire Regiment at the Cairo Citadel preparatory to the battalion's departure for India on January 17. The Commander-in-Chief of the British troops in Egypt, Lieut.-General Sir Richard Haking, who is also Colonel-in-Chief of the Hampshire Regiment, was present, as well as several high military officers and a large assembly from the British community. This was the first occasion on which Lord Allenby has inspected any British troops since the murder of the Sirdar.

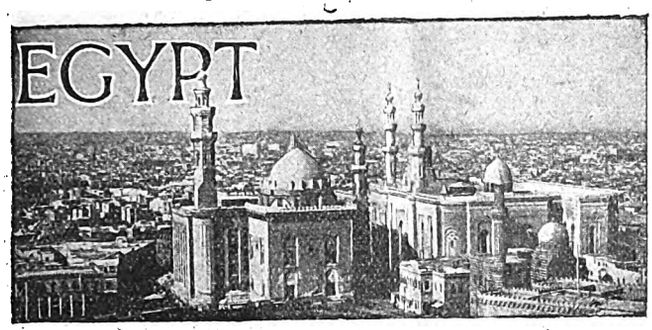
The Near and Middle East.*

From Our Own Correspondents.



Cairo, January 3.

Egypt in 1925.

It has been a curious coincidence that since the Armistice the turn of the year has always found Egypt faced with a critical political situation, and 1925 has proved no exception to the rule. It has opened with the country plunged into the midst of an electoral campaign, which bids fair to be more violent and more tense than any that has taken place in Egypt since elections were first introduced, and in which are involved what are probably the most serious issues that have as yet confronted the country.

The Question of the Students.

The first days of the New Year have, moreover, witnessed an acute situation in the schools. Realising what a reprehensible part the students and the schoolboys had played in the past elections and what grave consequences to public order might ensue from the incursion of such an irresponsibly minded element, the Cabinet decided, on the advice of the Ministers of the Interior and Education, to issue very strict instructions in this connection. No pupils in any of the Government schools are to be allowed, under pain of severe penalties, to absent themselves from their classes, to form committees, to participate in demonstrations, to go on journeys into the provinces, to take any part in the electoral campaign, or in any way to mix themselves up in politics; and the masters and provincial authorities have been ordered to see that these instructions are strictly adhered to. The publication of this decision was met by an insolent manifesto from the Government school pupils announcing their determination to refuse to obey these orders and to participate as in the past in the forthcoming elections.

In their defiance of the authorities they have been openly encouraged by the Wafd, and their action has been applauded, and that of the Government severely criticised, by the Wafd organs. The situation is admittedly serious. There is no doubt, however, that from every point of view the Government has been fully justified in taking this step, and it is much to be regretted that the extremist leader, by his silence and the manner in which he has condoned the attitude of his supporters, should have lent his countenance to this defiance of authority which no political considerations can justify. No one but a man equipped with the peculiar mentality of Zaghloul Pasha and his associates would ever dream of encouraging insubordination among schoolboys in the manner in which they are doing. No one but a demagogue, who was blind to the real interest of his country and only thought of himself, would have enlisted on his side, purely for the purpose of furthering his own personal ends, an element which in no civilised country is allowed to participate in such a serious business as general elections and the incitement of which cannot fail to have the worst possible reaction on the generation to which Egypt must look for her intellectual and social development.

While on the one hand the attitude the Zaghloulists have taken up reveals the true weakness of their position, on the other hand, by their refusal to second the efforts of the Government to re-establish discipline in the schools, and, indeed, by their active support of the pupils in their flagrant defiance of the authorities, Zaghloul Pasha and his associates are doing once again the very thing calculated to discredit them in the eyes of the world and to confirm the impression, already fairly prevalent, that they stand for everything that is revolutionary and reactionary.

The Wafd.

The part which they are playing in this matter has, indeed, aroused the lively condemnation of the entire foreign community, which sees, with regret, that the Wafd has by no means learned a lesson from recent events, and that it is still prompted in its policy by the same short-sighted and self-seeking motives which were responsible for the grave crisis that followed the reassembly of Parliament.

In other directions also the Wafd is leaving no stone unturned to counter the Government and the Opposition parties. The decision of the Council of Ministers agreeing to certain of the demands of the Azharites was certainly a blow to the Zaghloulists, since it was calculated to draw the inmates of that establishment to the side of their opponents. Something had to be done to remove from the public mind any impression that Al Azhar had defected from the Wafdist leader, and so it was arranged that a deputation should wait on him and testify to the continued loyalty of that institution. It was, however, a very poor affair. None of the leading Ulema or Azharites was represented, and although

a great splash was made in the Wafd Press no one has been deceived by this manœuvre.

Let it not be thought, however, that the victory of the anti-Zaghloulists is in sight. The Government is certainly gaining ground, and with the growing activity of the Watanists and Liberal Constitutionalists, the campaign against the Wafd is making noticeable progress. The latter is, however, determined to put up a stern fight. At a recent meeting one of the executive committee declared that the coming elections were a question of "life and death" to the Wafd, and, knowing as one does of what it has been capable in the past, one can confidently expect that in its desperation it will not be deterred by moral considerations from enlisting any factor or element that may assist to ward off the danger that threatens its existence. The electoral campaign may, therefore, show some unexpected developments, and there may be several interesting surprises in store.

YUGOSLAVIA.

Liubliana, January 7.

Dissolution of the Raditch Party.

As early as December 23, 1924, the Yugoslav Government determined that the Croatian Republican Peasant Party, called the Raditch Party for short, must be dissolved and all its party activities brought to an end, on the grounds that it had infringed the Defence of the State Law (the Yugoslav "Dora," in fact). Relative to this determination, a special notice was to be published, called the *Obznana*, in which the Government was to specify in full its reasons for so weighty a step, together with the measures it proposed to take.

With keen interest this *Obznana* was awaited by the public. But day after day passed, and the notice failed to appear. Already an impression was beginning to gain ground that the whole business was just bluff, that there was going to be no *Obznana* after all, and in Zagreb they were beginning to treat the matter as a joke. All of a sudden things became serious, and the *Obznana* appeared, after ten days of hesitation and delay.

The accepted explanation for this delay is that its reasons must be sought for in recent events in Croatia, and especially within the fold of the Raditch Party itself. M. Raditch holds the view that a deputy is only the minister of his party, wherefore he may serve no policy save that of his own party. A deputy may not have a given constituency, and when addressing his constituents he must have nothing to recommend him but his adherence to his party. In accordance with these views, M. Raditch has carried out a radical regrouping of his candidates for the forthcoming elections. Popular candidates had to resign their constituencies, although all local election organisations emphatically demanded the return of their old deputies.

M. Raditch also holds the view that a deputy's daily allowances are the property of the party, and not of the deputy. He therefore demanded that his deputies should hand over their daily allowances to the party funds, and the central committee took his part. He furthermore forbade his deputies all intervention on behalf of their constituents. The right of intervention is vested in the party alone, and even then only for matters touching the whole community. All other form of intervention was forbidden by M. Raditch lest some one of his deputies should become popular enough to be able to set the party at defiance.

Apparent Rifts in the Raditch Lute.

These dictatorial views naturally created much bad blood in the ranks of the Raditch deputies, and ended in a definite little revolt. M. Raditch opposed a blank silence to all protests and remonstrances on the part of his deputies, and even went a step further by excluding from candidature all deputies who failed to hand over the whole of their daily allowance to the party funds! In his leading party paper he pilloried these deputies, representing them as covetous and undisciplined members of the party.

The first consequence of this arbitrary proceeding was that the Deputy Lovrekovitch rose openly against M. Raditch, and began to publish a paper of his own (if a politician starts a fresh faction in this country his first step is always to start a fresh paper as well, in spite of the plethora of small party papers already in existence), in which he brought forward a series of serious accusations against M. Raditch. He stated that M. Raditch was making use of party funds for himself and his family; that he had not summoned the Central Committee for over a year, although by the statutes of the party this committee was to meet at least once in three months; and, above all, that the Central Committee alone had the right to determine candidatures. Dr. Lovrekovitch went even further. He started a party of his own, declared himself a Monarchist on the occasion of his audience with the King, and was especially emphatic in condemning the adherence of the Croatian Republican Peasant Party to the Moscow Peasant Internationale.

Dr. Lovrekovitch's secession was thorough and more than radical, and so it is not to be wondered at that his step found but little support among the rest of the discontented Raditch Deputies. Still, they could not see their way to swallowing their leader's bitter pills without a struggle. So it came to a conference of the malcontents under Dr. Horvat, who had from the first been against adherence to the Peasant Internationale.

This conference aroused great interest in Government circles. It was openly said that a split in the Raditch Party was certain and imminent, and that thirty-six Deputies (more than one-half of the total) had declared against M. Raditch's policy.

Over two hundred organisations were said to have joined the secessionists. High hopes prevailed in the Government set, and the publication of the *Obznana* was delayed so as not to anticipate the auspicious issue of events.

But all these fair hopes proved deceptive and false. M. Raditch was in Zagreb (which he had probably never left, by the way), working with zeal. As he is hampered by exceedingly short sight, he had his correspondence read to him by his wife and daughter, tirelessly dictated letters and circulars, despatched his couriers to every spot where the secessionists seemed to be gaining ground; and as even the threatened *Obznana* failed to materialise, he gained a complete victory, and the secessionists had to capitulate.

They declared that it had never been their intention to found a new party, that they submitted to all party decisions, and that they only desired to protest against the reproach of having withheld their allowances. Other Deputies kept theirs, and M. Raditch kept silence about it. His accusations were directed against them alone, and that because they had dared to protest against joining the Moscow Peasant Internationale. M. Raditch's proceeding was not an act of justice, but of revenge, and that is why they protested.

The Government and the Raditch Party.

The Government now realised that its delay had been a mistake, and that it was vain to count upon a split in the Raditch Party. So the decision of the Cabinet was put in force, and Yugoslavia experienced her second *Obznana*.

In virtue of the Defence of the State Law, the Raditch Party was declared to be dissolved and its activities forbidden. The leaders were arrested, and the whole procedure justified by the party's alleged Communism, which transpires from the following facts:—

(1) That M. Raditch and his secretary had spent some considerable time abroad, where he was engaged in illicit propaganda; he had gone to Moscow and inscribed his party in the Peasant International. He was by way of having declared at the time that the Peasant International was founded by Lenin, that its programme was drawn up by Zinoviev, that Smirnov was its president, and therewith all its leading functionaries were well-known Communists. The party's adherence to the Peasant International was approved on May 1, 1924, at a plenary sitting of the Raditch deputies, and was followed by the formal inclusion of the Croatian Republican Peasant Party in the Moscow Peasant International.

(2) That M. Raditch's party had not only remained in touch with the Peasant International, but had publicly defended the latter, making propaganda for it—*i.e.*, for the Communist International. Hereby the Raditch party had adopted Communistic aims hostile to the State, and had engaged in co-operation with the prohibited Independent Labour Party, as the Communist Party in Yugoslavia now calls itself.

(3) That the Raditch party had also been in close touch with the Macedonian Organisation, led by Todor Alexandroff, which agitated for the forcible detachment of South Serbia from Yugoslavia.

(4) That the president of the party—viz., Stepan Raditch—contributed, furthermore, to the Vienna paper, *Balkan Federation*, which likewise agitated for the detachment of South Serbia from Yugoslavia.

Wherefore the Council of Ministers determined:

(1) That the Raditch party be dissolved forthwith, as by joining the Moscow Peasant International it had become a component part of the Communist International.

(2) That all meetings, conferences, and all activities of the party be in future forbidden; likewise the appearance of all its Press publications, books, and leaflets.

(3) That par. 18 of the Defence of the State Law be applied to the Raditch party in all its rigour.

(4) That all archives, leaflets, publications, and correspondence of the party be confiscated without delay; and

(5) That the criminal prosecution of the responsible leaders of the party be set on foot as speedily as possible.

This *Obznana* of the Government made no special impression upon the public. The proofs advanced by the Government were not overwhelming—they were not even convincing. That M. Raditch had joined the Peasant International had been public property long ago. It was also a fact that the Raditch party had continued faithful to its non-revolutionary programme, and that latterly M. Raditch preached only pacifism, and desired to bring about his victory solely by means of parliamentary activity.

The whole of the Opposition protested emphatically against the *Obznana*, and stigmatised it as an absolutist ordinance, serving only special party interests, calculated to injure the prospect of a Serbo-Croat agreement most acutely, and to jeopardise the consolidation of the State. In Government circles it was pointed out that the measure was aimed solely at the leaders, and that it must in no wise be interpreted as a *démarche* against the Croats; that the evidence was overwhelming, as would appear at the trial.

The publication of the *Obznana* was followed immediately by numerous arrests in Zagreb. The most important of these was unquestionably that of Dr. Matsek, the first Vice-President of the Skupshtina, who, according to the Serbian view, most certainly enjoys the right of immunity.

As for M. Raditch himself, the police for a long time failed to find him. However, at a second very thorough search of his house, M. Raditch was discovered in a hiding-place under the floor, so it is said, and arrested. There are many rumours afloat concerning the details of this arrest, and the truth is not likely to come out before the trial, which will probably not take place until after the elections are over.

The Raditch party is dissolved, and now the question arises whether the Croatian electors may vote for the Raditch lists, almost all of which had already been approved previously and confirmed by the courts. However this question may be

dealt with, it was pretty well certain that the Croats would vote solid for the Opposition parties, and will do so all the more now after M. Raditch's arrest.

ROUMANIA.

Bucharest, December 31.

The Peasant Party.

Roumania is principally an agricultural country. Her industry and commerce are, one may say, little older than the present century, and are subject to the usual economic vicissitudes. The cultivation of the soil still is, and will continue to be, the basis of the wealth of Roumania, which before the War was an important cereal exporting country.

It is hardly necessary to remind readers how, in their anxiety to avoid a revolutionary movement in sympathy with Communism and to fulfil the promises made under pressure of the War crisis, the first Parliament which sat after the Armistice decided upon the Agrarian Reform and immediately carried it into effect. This measure, which was the more remarkable as it was carried out by a majority of large landed proprietors, gave a political status to the peasants, and it may be said that from that time dates the existence of their ideals as a class and of the doctrines upon which the "Tsaranism" of to-day is based. (Tsaran means a peasant, and the party is known as the Tsaranists.)

M. Raducanu, a distinguished professor of Political Economy and one of the most enlightened of the leaders of his party, has given for THE NEAR EAST a general outline of his ideas, which explains the constitution and aspirations of his group.

First of all he defines the Peasants' Party as the party of democracy in its purest form, and protests against all insinuations of Communism. The Peasants' Party is anti-Communistic, for its foundations rest upon individual proprietorship and the respect for liberty. It includes a kernel of peasant proprietors, and it believes in defending their interests, which are those of Roumania itself. It has gathered together a majority of intellectual and University men, who realise the importance of the peasant's place in the national economy. The party does not put forward a programme opposed in its doctrines to that of the Liberals, but considers that the difference between them lies in the method of application—the principles for which they stand.

Criticism of the Liberals.

M. Raducanu describes the Liberal Party as one which pursues a class policy. The members of the Liberal Party are, according to the Tsaranists, the exclusive beneficiaries of political power. They are recruited from the former large landed proprietors, bankers, lawyers, and certain merchants—all elements which are attempting to make political power compensate for the loss of their economic influence. They are unproductive intermediaries, making their livelihood essentially from their profession of politician, whereas even before the War the Roumanian peasants were in themselves an economic force in Roumania. The Liberals are the expression of national capitalism with Chauvinistic tendencies, using their wealth as a means of establishing their privileges and founding their monopolies and for organising the private utilisation of public funds. So say the Tsaranists. They further draw attention to the fact that this class of capitalists has not the same origin as the capitalist class in Western countries. They do not represent a bourgeoisie which has accumulated its economies laid aside during past years of hard work, but are a *parvenu* class, having their origin in the exploitation of public funds as politicians, and in the exploitation of peasant labour as landed proprietors.

The Tsaranists regard themselves as the party of the productive classes, as opposed to the intermediary or "parasitic" class.

The Constitutional Significance of "Tsaranism."

The Peasants' Party is firmly attached to the monarchic régime, by which they mean a constitutional monarchy in the English sense, such as, unfortunately, has not yet existed in Roumania. It is well known that the great reproach brought against the Liberals, and one of the reasons of their reported unpopularity, is that they did not come into power by the will of the people, but by that of the King; that their Parliament is not representative of the people, but of the present Cabinet, the great majority not having been *elected*, but, in M. Raducanu's words, "brought in like contraband." (Here he refers to the irregularities at the elections.)

The present system is one of absolute power with the semblance of a Constitution. This is generally the case in the Balkan States, as in Yugoslavia, Bulgaria, Hungary, where the same régime and the same methods of procedure are to be found. M. Raducanu declares that there is some blood relationship between Bratianu, Pashitch, Horthy, and Tsankoff, who, he says, are not the defenders of the general interests of their respective countries, but under a semblance of organisation and order the exploiters of the producing classes.

Political Power of the Peasants' Party.

M. Raducanu considers that, in spite of irregularities at the elections, the Peasants' Party is the most important in the Opposition, both as regards number and fighting force. It represents, he thinks, the majority in the country, consisting of the agrarian population.

It is the hope of the leaders of the party that, situated as it is between Bolshevism and Liberalism, Tsaranism will gradually grow in influence, defending the interests of the producing class, raising it to power and the conduct of affairs, and thus bringing about a state of peace between the nations, the interests of this labouring class being identical with that of Pacifism, which precludes all idea of expansion beyond the borders of the State itself.

Political Future.

The Tsaranists believe that the Liberal Party no longer enjoys the confidence formerly placed in it even by the bourgeoisie from which it is recruited, because the realisation of its programme has neither enhanced the comfort nor improved the living conditions of this bourgeoisie class, and also because in its system of administration both public and private corruption has not been sufficiently suppressed. When the moment arrives the Peasants' Party, if called to power by the will of the people, will accept office.

It should be noted that the leaders of this Party would be in favour of introducing foreign capital.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

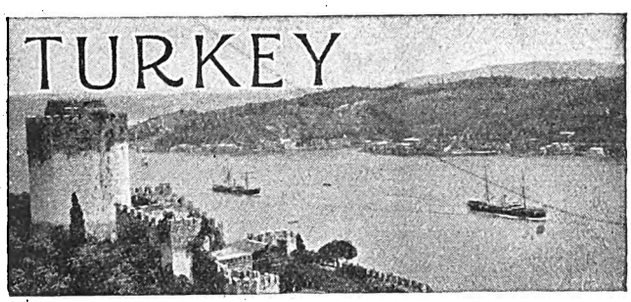
Digitized by Google

They consider this necessary to the economic development of Roumania, and believe it would bring material welfare and stimulate the progress of intellectual education.

They see no danger in this collaboration, and think it should be called upon to play an important part in Roumania with a view to establishing an equilibrium between the financial power, introduced from abroad, and the political power within the country itself.

It should also be noted that the Mining Law, which, according to the Tsaranists, contains good principles, could be revised in regard to those special clauses which favour only certain privileged companies.

Those are the views expressed by M. Raducanu in the name of his party. They are given in their original form and without any responsibility, and may prove an interesting study in so far as they summarise the aspirations of this new party, born of the general upheaval, and, apparently, destined to have a brilliant future.



Constantinople, January 6.

Rejeb Bey.

The difference of opinions on the question of the election of the Prefect of Constantinople has resulted in the loss by the Turkish Government of one of its strongest Cabinet Ministers in the person of Rejeb Bey, the Minister of the Interior, who is also a staunch supporter of the Popular party. The question whether Constantinople should elect its Prefect, or whether he should be nominated by the Government, is one which has been much discussed, and several special commissions have been formed with a view to modifying the municipal law regarding this subject. It might be remembered that on the submission by the recently formed Progressist Party of their programme, it was specifically mentioned therein that all Prefects should be elected by the people. Rejeb Bey, however, is resolutely against this mode of election, and holds that the Prefect of Constantinople should be an official of the State, and designated by the State. On finding the Cabinet in a majority against him on this question, the Minister of the Interior tendered his resignation yesterday, which stated that as he considered that, after this divergence of opinions, his presence in the Cabinet might create an embarrassing situation, he preferred to withdraw. This statement eliminates any possible erroneous conclusions regarding the reasons of his retirement. Jemil Bey, the Secretary-General of the Popular Party, has been appointed as successor to Rejeb Bey, and there is some talk of the latter's taking over the duties of Secretary-General.

Greeks and Turks.

The situation created by the decision of the Government to resort to reprisals against the Greeks here has, in view of Shukri Kaya Bey's declarations in the Assembly, returned to normal. The Press reports regarding the adoption of such measures caused considerable apprehension on the part of Greek residents in Constantinople and its suburbs, but the comparatively reassuring statement of the Minister of Foreign Affairs has done much to dispel such fears. Until now, however, nothing in the form of reprisals has been evident, and it is possible that, in view of the Greek Government's intention to restore to the owners all property seized from Mussulmans before 1912, the question might be settled without the proposed measures having been put into force. M. Exindaris, the chief Greek delegate of the Mixed Commission for the Exchange of Populations, is expected to arrive in Constantinople to-morrow, and as he is reported to have been given full powers, it is thought likely that he will sign the accord arrived at between himself and Tevfik Rushdi Bey.

The Mosul Commission.

During the last week Constantinople has entertained as guests the three members of the Commission of Inquiry who are en route for Mosul. They are now at Angora, where they have been entertained by the President of the Council, and they propose to leave for Baghdad in three days' time, following the route Konia-Adana-Aleppo. Turkish circles are very optimistic regarding the solution of the Mosul question, some even declaring themselves certain that the decision of the inquiry will be in Turkey's favour.

The "Orient News."

An unfortunate incident of the past week was the suppression by the Turkish Government of the *Orient News*, the only British newspaper in Constantinople. For the last six months there has been a steady diminution both in the size and circulation of this journal, the publications of which were more or less limited to accounts of the social doings of the British colony here. The article to which the authorities appear to have taken exception was one concerning the economical decadence of Constantinople, which was written, I am convinced, with no intention of giving offence. The decision to expel the Editor of the *Orient News* has not yet been carried out, and it is to be hoped that the matter may be satisfactorily explained.

THE DELHI MANŒUVRES.

The troops taking part in the Army Manœuvres in India assembled in the areas round Delhi last Friday. The operations began on January 12, under the direction of Lieutenant-General Sir George Barrow, who has a force of 30,000 in the field, including a division at war strength under Major-General C. J. Deverell, commanding the United Provinces District, the brigades (Indian Infantry) of his command being the 17th, 18th, and 19th, from Dehra Dun, Bareilly, and Lucknow. The manœuvres conclude on January 21 with a review by General Lord Rawlinson.

THE JORDAN VALLEY.

The Public Works Department of the Palestine Government has erected a large iron notice board on the Jericho road to indicate where the road falls below sea-level. This is about six kilometres above the entrance to the Jordan Valley. As is well known, the depression of the Jordan Valley is one of the most remarkable features on the earth's surface, and it should be of interest to tourists and others to mark visibly the point at which they begin to sink below the level of the Mediterranean.

PERSONAL AND GENERAL.

TO-DAY.

January 15, 1925 (New Style).
January 2, 1925 (Old Style).
Jomada II., 19, 1343 A.H., of the Moslem Calendar.
Tebeth 19, 5685, of the Jewish Calendar.

Count Léon Ostrorog returned on January 7 to town from the Continent.

Sir Kay Muir arrived at Blair Drummond on January 7 from Whilton Lodge, Northants.

Sir Herbert and Lady Vernon and Miss Nina Vernon have left for India, and expect to be away until Easter.

Mrs. Alec-Tweedie will be for some months at Hotel Miramar-Grimaldi, Ventimiglia, on the Franco-Italian frontier.

Viscount and Viscountess Portman left Cannes on January 2 for Egypt. They intend to spend the winter on the Nile.

The Hon. Alexander and Mrs. Shaw left London last Thursday afternoon by the P. and O. Bombay express for Marseilles to join the s.s. Malwa for Port Said.

General Milivoye Joximovitch, chief of the Ordnance Department of the Yugoslav War Office, who arrived in London last week, has had interviews with British Treasury officials in connection with the payment of war debts.

The Marquess of Graham is leaving England shortly on a business mission to Turkey, where he will interview Ministers in Angora. He will not return before the middle of March.

Under the auspices of the East India Association, at the Caxton Hall, Westminster, at 3.30 p.m., Professor J. W. Scott will read a paper, entitled "Unemployment—A Lead from India." Mr. J. St. Loe Strachey will preside.

The Duke of Orleans sailed last Thursday in the s.s. Guildford Castle for Port Sudan for a shooting trip in the interior. Viscount Cobham and the Hon. Lady Lloyd-Mostyn and Miss Rhona Lloyd-Mostyn are sailing in the same ship to Mombasa.

In celebration of Christmas (according to the Russian calendar) Dr. Georges V. Todorovitch. Counsellor and Chargé d'Affaires of the Legation of the Kingdom of Serbs, Croats, and Slovenes in London, entertained at luncheon on January 7, in the Savoy Restaurant, the personnel of the Legation, members of the colony, and several English friends.

The engagement is announced between Captain K. I. M. Fegan, M.C. (late Naval Brigade), of Dhajea Tea Estate, Darjeeling, India, elder son of Mr. and Mrs. F. Fegan, of Bexhill, Sussex, and Stornoway, N.B., and Violet Marian, only daughter of Mr. and Mrs. Perceval G. Shaw, of Moondakotee Tea Estate, Darjeeling, India, and Blackheath, London.

An engagement is announced between Captain George Arthur Falconer, 6th Gurkha Rifles (Indian Political Department), youngest son of Mr. and Mrs. E. J. Falconer, and Esther Alexandra, only child of the late Major Boyd Bredon, J.P., of Ballintaggart, Co. Armagh, sometime Commissioner, Imperial Maritime Customs, China, and of Mrs. Boyd Bredon, Bryanston Mansions, W.1.

The engagement is announced of Captain Edward Wollaston Geidt, late 2nd Bombay Pioneers, eldest son of the late Bernard George Geidt, I.C.S., Judge of the High Court, Calcutta, and stepson of Mrs. Geidt, Beaconstone, Crowborough, Sussex, to Anna Dorothy Margaret, younger daughter of the late William Reginald Partridge, I.C.S., and Mrs. Partridge, Cofton, Starcross, Devon.

Sir Montagu Butler, the new Governor of the Central Provinces, India, who has been in England for the past month on short leave, left London on January 8 for Nagpur. He will take over charge from Sir Frank Sly, the retiring Governor, on or about January 26. Lady Butler and her elder daughter will go out to Nagpur in the late autumn. Sir Montagu Butler has appointed Major T. S. Paterson, 19th Lancers, to be his private secretary.

DECORATIONS.

His Majesty the King has been pleased to award the Medal of the British Empire Order (Civil Division) to the following members of Khartoum Province Police in recognition of the gallantry displayed by them during the recent disturbances.

Sol. Ibrahim Negib.
Shawish Jak Taha.
Nafar Mohammed Abdulla Mohammed.

ORDER OF THE BRITISH EMPIRE.

A notification appears in the *London Gazette* to the effect that the King has given orders for the following appointments to the Order of the British Empire (to be dated February 20, 1924) :—

To be Honorary Knights Commanders of the Military Division.—General Sir Tej Shumshere Jung, Bahadur Rana, K.C.I.E., Nepalese Army; and Lieutenant-General Kaiser Shumshere Jung, Bahadur Rana, Nepalese Army. This is substituted for the notice in the *Gazette* of April 15, 1924, relating to the Civil Division of the Order.

THURSDAY, JANUARY 15, 1925.

DELHI AND THE INDIAN STATES.

The question of the relations between the Indian States and the Government at Delhi is forcing itself rapidly into prominence. On one side there is the central Executive, which deals directly with the States and exercises control over some of their activities, but which is itself coming more and more under the influence of the new representative institutions of British India. On the other side are the States, which refuse -quite rightly—to accept British India as their suzerain, or to allow the lawyers and journalists of Calcutta or Madras any voice whatever in their affairs. The conflict is already real, and may at any time become serious. If anyone supposes that the authorities at Delhi can for long keep the two sets of functions separate, he need only glance at the map of India, with the conventional yellow patches scattered through the red. Even assuming that the brain at the centre could be divided into two lobes working independently of each other, an assumption which will commend itself to few psychologists, there is a recurring clash of interests, and not merely of sentiment, which calls for the interposition of an impartial authority, rather than one which is bound to be drawn more and more to one side. The Customs tariff furnishes an obvious example of the divergence of interests. The States are probably as protectionist as British India, but they want protection against British India, which wants protection against Europe. Their subjects are, in fact, paying high duties to help the steel industry in Bihar, which itself threatens their own modest ventures in the same direction. A less familiar, but not less serious, example is furnished by the railways. The Central Indian States, for instance, have hitherto been served by three great railway companies. They have not been served too well in the past, but they have had the assurance that the companies would not discriminate against their interests. The railways in question are now coming under official management, and there is no such assurance for the future. The officials will, of course, try to be fair, but they will be subjected to the daily pressure of the politicians, and efforts to ease the political situation in Delhi may have a disastrous reaction on the people of Gwalior or Indore. In all such cases, and there are many others, an impartial authority is needed to decide between Delhi and the States. Delhi, as a party, is disqualified, reference to Whitehall is now out of the question, and what is wanted is some machinery for adjustment in India itself.

The change was foreseen by the framers of the Reforms Report, and their proposals went, on paper, some way towards meeting the need. In accordance with them, the States are now being severed from the provinces to which some of them were attached for administrative purposes, and this is a definite gain. The Chamber of Princes is in being, and apparently developing a certain amount of energy, though the abstention of important States still prevents it from speaking for the Princes as a whole. The Reformers' hope that difficulties could be adjusted by joint deliberations between the Chamber of Princes and the Council of State has, on the other hand, not been realised, nor is it likely to be. The Council of State, as it now exists, is a very different body from the rather shadowy entity which was designed to meet so many difficulties, and in existing circumstances there would be no advantage in joint deliberation with the weaker, if the wiser, half of the central legislature, even if the Princes should agree to participate in such discussions. Nor can we find any practical solution of the problem in the columns of our Indian contemporaries. Many of them talk lightly of a federated India, comprising both Provinces and States, but they show little appreciation of the obstacles in the way. Federation is a worthy ideal, but a distant one, and what is wanted now is some practical arrangement on the basis of which a federal structure may gradually develop. The only other suggestion we have noticed is that the portfolio of political affairs, which, by time-honoured usage, is held by the Viceroy, should be transferred to some member of his Council, who should act as the watchdog for the States. We doubt whether this change would be of much use. The Viceroy is probably a better watchdog than anyone else would be, and already the Council is far too much a patchwork of races, religions, and interests to be really efficient in the exercise of its primary function as the guide of British India on the uphill path leading to democratic self-government. To add one more purely departmental member would weaken it further, and would do little to achieve the object in view.

By a process of exhaustion, then, we are led to the position taken up by Mr. F. H. Brown in the current number of the *Empire Review*, that a special inquiry should now be directed to the whole question of the relations between British India and the States, between an aggregate of provinces on the road to self-government and a body of Princes whose existing privileges, rights, and dignities have been guaranteed as inviolate and inviolable. We know, of course, that India is sick of Commissions, but that fact is due very largely to the unfortunate practice of filling them with representatives already committed to particular views, and in the inquiry now suggested there should be nothing of the kind. Obviously, it should be initiated from Westminster, not from Delhi, and should be paid for by Parliament, while the three, or possibly five, members should constitute an impartial tribunal, committed to no interest other than that of the Empire as a whole, and charged with the task of meeting present difficulties by methods which shall be consistent with, and as far as possible shall promote, the ultimate bringing together of States and Provinces as a unit of the Empire. The task will not be easy, but the men to grapple with it can be found, if this condition is kept steadily in view. Those of us who can recall the value of the services rendered on Royal Commissions by King Edward VII. when Prince of Wales, will hope that the House of Windsor may be directly represented in any form of inquiry that may be decided on, but in any case the business is one for gentlemen—men of large views, with no axes to grind, able to appreciate the eager strivings of what is best in the new India, but at the same time not devoid of sympathy with the old. Their task, as we have just said, will not be easy, but there is work to be done, and the longer it is postponed the harder will it be.

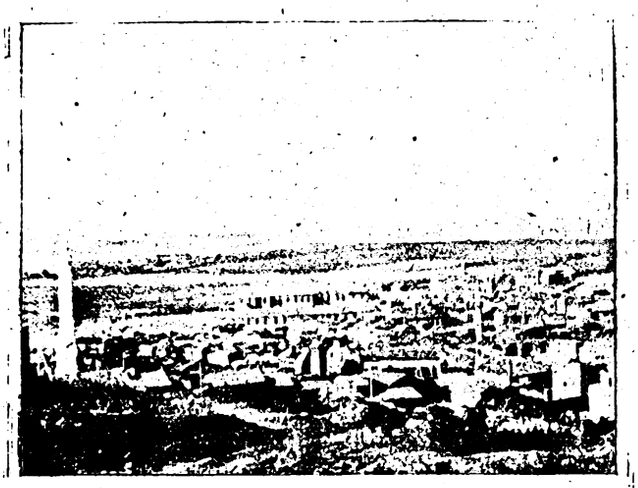
ANGORA: CITY OF PREJUDICE.

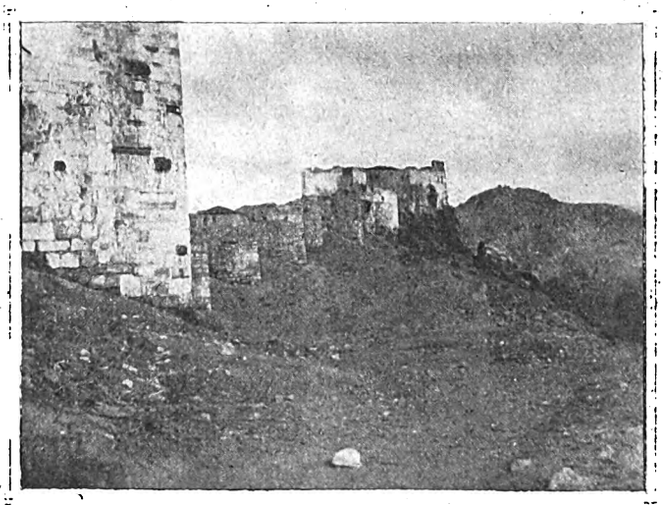
In Constantinople to contemplate a visit to Angora challenges at once commiseration, not unmixed with some of the respect felt for those who undertake hazardous enterprises. The prejudice against the new capital of Turkey is strong. A Wagon-Lits coach at Haidar Pasha Railway Station, on the Asiatic side of Constantinople's broad waterway, seemed to clash with preconceived ideas of an original or rash venture, and



Angora: New Town from the Citadel.

only a pampered traveller can have much fault to find with the conditions under which the journey to Angora is at present undertaken. True, it must be one of the slowest on record for a line of easy gradients. Whether because the track is ill-laid, the bridges and culverts insecure, or the new German locomotive merely too heavy for its work, the fact remains that the train after leaving the double-line section of Constantinople's Asiatic suburb fixes its pace by its capacity up the worst "bank," and takes down-gradients and long level stretches with an exasperating uniformity, thus keeping at a twenty-four hours' distance from Constantinople, the new capital, which might otherwise be reached in ten hours.

Comparisons among capitals are obvious. Angora belongs to a category by itself. Regarded as a town it is of necessity in a transition stage. Blessed above many in the magnificence of its situation—at the far end of a long narrow plain on a high hill rising gradually from the south-west, and falling more abruptly on the other side, with high mountains beyond—it is calculated to rouse the enthusiasm of any Western town-planner, as it has in the ages past attracted the attention of those whose first concern was security. Military considerations have prompted the Turk to make it the capital of the new republic, for inaccessibility is in his eyes Angora's chief asset. As an afterthought he is trying to justify the selection by making something of it as a town. The present Vali has elaborated a scheme for the future development of the capital, but, unless provision is made for an extensive programme of rebuilding, the final results are likely to prove of a patchwork description. The main hill of Angora is crowned by a dilapidated fortress of Turkish times, built or repaired with a lavish use of Roman columns and capitals let in promiscuously throughout the length of the walls. Within the fortress, and nestling immediately below it at the south-western end, is the old town. On the western flank of the Citadel hill was the Armenian quarter, now a heap of ruins, with the many-domed church alone standing, but sacked and derelict. A single thoroughfare leads from the "Citadel" to the present centre of gravity of the town, skirting the former Armenian quarter; it is paved in the approved style of Near Eastern towns, with substantial stone sets placed in position without much attention having been paid to the foundation on which they happened to rest. Nevertheless, there are worse stretches of road in some of the Balkan capitals, and in none a better one than the main road which leads from the station to the town. It is where the slopes of the main hill widen out that Angora will seek extension. As the Station Road, after a short straight course over the plain, begins to climb the foot-hill it has the new Parliament Building on its left, and immediately opposite is rising a new hotel of sufficient proportions to remove ultimately from the town the reproach of a complete lack of modern hotel accommodation. The two buildings that do duty to-day as hotels are certainly primitive in character. Both are clean, but a shortage of rooms compels visitors to be housed for the most part in couples, and, apart from a modest breakfast, meals have to be obtained elsewhere. It is here that "Fresco's" comes to the rescue—a large restaurant which caters for the foreign community of Angora, and for a good many of its Turkish visitors, while a conscientious and well-meaning orchestra does its best to make up for the lack of other forms of entertainment or relaxation in the new capital. New roads in good condition—a luxury unknown to more than one Balkan capital—serve as an encouragement to private enterprise in building, with the result that the growth of villa residences is beginning to outstrip the State provision of Government offices. It is unnecessary to probe deeply into the subject of public works and the various services that loom large in the amenities of modern life elsewhere. The capital of new Turkey is not going to be built in a day. It does not claim to be a health resort; a few weeks ago, indeed, it was inclined to extend a sincere welcome to the first signs of the approach of winter weather as a respite from a visitation of malaria. For the rest, it exists primarily for



Angora: The Fortress Walls.

the convenience of the Turks. In their present frame of mind they are not allowing themselves to be much exercised by possible differences between what is good enough for them and that with which custom has familiarised the foreigner from the West; but it would be a mistake to imagine that they are not conscious of the shortcomings of Angora as a capital. It is, however, a case of not only having made their bed, but also of having taken it up and walked with it to the farthest point away from Constantinople that

Digitized by Google

was available. The Turks, therefore, can be relied upon to sleep in the bed, at least for the present, even if the operation calls at times for a rather grim setting of teeth to carry it through.

The Angora experiment need evoke no regret outside Turkey. Prejudice against it in the foreign mind is counter-balanced by prejudice on the part of the Turk against the foreigner and places that bear his impress. Further acquaintance with the town and a sense of proportion tend to modify the former, and there seems to be no reason why the latter should not ultimately be eliminated.

Angora: Where the goats come from.

In Angora the Turk is finding time for reflection. Looking back over the recent history of the country, no one will deny him the right to be dissatisfied with things as they were under the old régime. He was out for change, and in the circumstances the more drastic it should be the more it promised to commend itself to him. The proper antithesis to despotism is constitutional government; and it is at least arguable that, if the Turks had considered that anything constitutional was to be obtained from the House of Othman, there might still be a monarchy in Turkey. To secure constitutionalism, it seemed to them necessary to resort to republicanism, or perhaps it would be more accurate to say that they were the readier to acquiesce in a republic, because they were persuaded that it was essential to constitutionalism. Whether the reflection for which Angora is providing an opportunity will convince them that a republic and constitutionalism are not invariably synonymous must for the present be left an open question; but it is at least significant that the parliamentary Opposition in new Turkey is laying more and more stress on what it regards as encroachments upon constitutional privileges.

Again, it is hardly a matter for wonder that the Turk came to regard the foreigner as responsible for all his ills. The best of us is rarely inclined to attribute the buffets of an outrageous fortune to his own sins or shortcomings. Defeat in a fair and square war was one thing, and the Turks made no attempt to challenge the verdict of their struggle with the Allies. For what has happened since, the responsibility does not lie solely with Turkey. No one personally unacquainted with conditions in the Near East can appreciate the effect upon the Turks of the employment of the Greeks as the Allies' instrument for exacting from Turkey the penalties of defeat. The harshest terms imposed directly by the Western Powers would have been accepted with fatalistic submission; the sight of the Greeks as agents of their humiliation outraged the Turks' sense of justice and fair play, and drove them to risk everything in a desperate venture. How it succeeded is recent history. The defeat of the Greeks raised the Turkish people from the depths of despair to the pinnacle of self-conceit. From the remoteness of Angora the Allied world appeared in the first flush of victory to have been successfully trampled upon for all time. New Turkey had won for herself a clean slate, and who was there to prevent her from writing upon it what she willed? It called for older and wiser heads than the Turks could muster to be proof against the intoxicating effects of their triumph. No counsels of moderation could reach the Anatolian fastness. Constantinople was wholly identified by the successful "insurgents" with the hated Allies, and any Turk who hesitated to look at the future exclusively through Angora's spectacles was suspect. It was, indeed, difficult for a Turk to attempt the defence of the Allies in the face of his compatriot's chauvinism. The Allied Occupation of Constantinople had given too many causes for pointing the finger of scorn at the Allies to every Turk with the most superficial knowledge of the pretensions of Western civilisation. There is no need to labour the point; for even if it had not been so, the achievements of Angora had so completely put the subservience of European Turkey in the wrong that there was no alternative for the latter to keeping its mouth shut. The appetite for freedom grew with each fresh indulgence in the luxury. So elated was Angora with its success that it cared not whether European Turkey was with it or against it. From this stage it was an easy step to a virtual declaration of war on Constantinople, inasmuch as in so doing shrewd blows could be dealt at the foreigners, who were supposed to be battening on the city.

The antagonism between Angora and Constantinople is, however, capable of being exaggerated.

A Horse Fair in Angora.

It is not easy, in the mass of rules and regulations with which the daily life of the latter has been hedged about, to tell whether any one set will really be fatal to commerce or whether it merely represents a policy of pin-pricks The accumulative effect has undoubtedly been to stir up among the Turks of Constantinople a strong hatred of Angora, as is evidenced by the consistent and not always measured hostility of the Press of the city.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.

On the other hand, Constantinople has its score of Deputies representing it at the capital, among them Fethi Bey, the present Prime Minister, and, if the elections have been impartially conducted, they will be able to contend that they are unlikely to identify themselves with a régime that is deliberately hostile to the interests of their constituents. It will probably not be wide of the mark to suppose that in matters economic, as in matters political and international, Angora is profiting by its opportunities for reflection, and is learning, to the manifest benefit of Constantinople and of Turkey as a whole, that it is folly to kill the goose that lays the golden egg

H. T. MONTAGUE BELL.

CONDITIONS IN THE BALKANS.

At a meeting of the Near and Middle East Association held, by the kind invitation of Mrs. Cobham, at 14, Hans Crescent, on January 8, an admirable summary of present-day conditions in the Balkans was given by Sir Edward Boyle, Bart., who, with Lady Boyle, has recently completed a three months' tour in the Peninsula. Major-General Lord Edward Gleichen was in the chair, and among those present were:—the Swedish Minister, the Albanian Minister, representatives of the German Embassy, and of the Polish, Hungarian, Bulgarian, Egyptian, and Afghan Legations, Viscountess Dupplin, Sir Maurice de Bunsen, the Dowager Countess of Carnarvon, Sir Harry Lamb, Sir Edward and Lady Boyle, the Dowager Lady Boyle, Sir Henry and Lady Burt, Lady Connolly, Lady Spriggs, Sir Armine Dew, Archdeacon Potter, Mr. and Mrs. Leland Buxton, and Mr. Alex Devine.

Dealing first with Albania, Sir Edward Boyle pointed out that, like other Balkan States, Albania in its turn was suffering from too much politics, too much violence, and outside interference. Italy and Yugoslavia, in this connection, had assumed the rôle of Austria-Hungary and Russia in pre-War days, and the Albanians had divided themselves into pro-Italians and pro-Serbs. The differences between the parties in Albania, he was convinced, were not religious. There had certainly been something sinister in the preparations for the recent rebellion; but Italy had decided to turn a blind eye to what had happened. Everything pointed to the Albanians' need for unity, and he hoped that it would yet be possible for the factions represented by Ahmed Bey Zogu and Mgr. Fan Noli to come together. In regard to Greece, Sir Edward Boyle gave a brief sketch of the political situation, which he did not regard as necessarily stable, and went on to discuss the refugee problem. Twenty-five per cent. of the refugees would still be under canvas this winter, and it seemed impossible that people suffering the privations and hardships that they were called upon to endure should ever be able to prove of much advantage, industrially or in agriculture, to the country. Bulgaria's troubles, he said, were much in evidence. Bolshevists, the menace from the Macedonians on the one hand and from Serbia on the other, refugees from Macedonia and Thrace, and finally the Treaty obligations. He was of opinion that the Government would shortly be reconstituted. The situation in Yugoslavia Sir E. Boyle considered more dangerous than anywhere. The difficulties centred in relations with Italy, for neither side seemed to have any faith in the stability of the recent pacts; in the Serb-Croatian dispute, and he viewed the developments in regard to the Raditch party with grave misgiving; and in Montenegro. He hoped that the Yugoslav Government would appreciate the need for appeasing the Montenegrins, a goal that could be reached by some measure of local autonomy under Montenegrin officials, by undertaking public works in the country and opening up its communications. In Yugoslavia as a whole trade was good. What was necessary for its adequate development was internal peace. Finally, there was the crux of Macedonia; here the solution which would be accepted was federal autonomy within Yugoslavia.

A paper on the Serajevo Murder was read by Miss Durham, and Sir Maurice de Bunsen spoke of conditions in Austria-Hungary in 1913-14, at the time when he was Ambassador in Vienna.

OBITUARY.

The death occurred on December 29, at the age of 69, of Colonel Edward William Herbert, C.B., of Orleton Hall, Wellington, Shropshire. He went through the whole of the Sudan campaign of 1884, and later held a staff appointment in Cyprus.

Major-General Joseph Barnard Smith died at Hampstead on January 2, at the age of eighty-five. He was commissioned to the Indian Army in 1856, and served until 1898. His war services were both on the North-West and the North-East Frontiers. He went through the second Afghan war.

The death occurred last week of Dr. Lilias Hamilton, whose name was associated mainly with Afghanistan in the régime of the Ameer Abdur Rahman, to whom she acted as Court Physician. To the hospital which she opened at Kabul all sorts of representatives of the tribes of the Frontier and the Border used to come.

The death is announced from Cairo of Mr. Stewart Herbert Capper, a member of the European Department of the Ministry of the Interior, and formerly Professor of Architecture at the McGill and Manchester Universities. Mr. Capper did very valuable work in the Intelligence Department in Egypt during and after the War.

The name of Sir William Garstin, whose death occurred last week, will always be linked up with the regeneration of Egypt, for the prosperity of which country he did so much. Before going to Egypt he had served, during the seventies, with the Indian Public Works Department. It was in 1885 that he began his irrigation work on the Nile. In 1892 his connection with the Indian service officially ended, and he was appointed Inspector-General of Irrigation in Egypt. Subsequently he became Under-Secretary of State for Public Works, and, in 1904, Adviser to the Ministry of Public Works. He retired in 1908, but retained his connection with the land he had served so well as a Director of the Suez Canal.

It is difficult to value the work of this engineer of the Nile. Perhaps Lord Cromer's words that Sir William "had raised himself to the rank of the greatest hydraulic engineer in this or any other country," sum up his services as well as any. Whole areas of Egyptian and Sudanese lands that were profitless he reclaimed: the White Nile was cleared; the Assiout Barrage and the Assouan Reservoir were built. His achievements were indeed invaluable; and the Egyptian Government did what it could to recognise them when, in 1905, it made him a gift of £15,000.

At the memorial service, which was held at St. Peter's Church, on January 12, Sesostris Sidarouss Bey, Egyptian *Chargé d'Affaires* in London, attended, and he also instructed his secretary to lay a wreath on the coffin.

NEAR EAST BOOKSHELF.

"THE OCEAN OF STORY" AGAIN.

"THE OCEAN OF STORY: BEING C. H. TAWNEY'S TRANSLATION OF SANADEVA'S KATHA SARIT SAGARA (OR OCEAN OF STREAMS OF STORY)." Edited by N. M. Penzer. In ten volumes. Vol. II. With a Foreword by Sir George Grierson. (London: C. J. Sawyer, Ltd. 42s. Privately printed for subscribers only.)

It is only very recently that we drew our readers' special attention to the first volume of this entrancing book. Volume II. is now in our hands. We are now away from all the introductions, and have definitely started our voyage over the "Ocean." Almost all the stories in this volume are excellent, but we would select the long tales about Vidushaka and about the Golden City as the best of all. How William Morris would have rejoiced in them! We like King Adityasena's horse, which "seemed with fearless eye to measure the earth, as if thinking: 'What shall be the limit of my speed?'" It carried the king so fast and far that all trace of him was lost, and when it "happened to stand still" the king found himself in an impassable forest "haunted by horrible lions." However, the horse "was full of regret—for excellent horses are divine beings," and forthwith set to work to undo the mischief he had done, landing his master, however, in a string of adventures.

Nearly nine centuries ago these splendid tales were told by a master of his art. They have been Englished by an ideal translator, the late Mr. C. H. Tawney, and are now given to us with revision and quantities of most interesting notes by Mr. Penzer, whose learning sits easily on him, but is none the less encyclopædic, and the whole is produced in a most satisfactory and beautiful form at a price very reasonable considering the beauty of the book.

The edition is limited. If any sets are still available, they should be applied for at once. Vol. III. is already in the Press, and Vol. IV. is nearly ready to follow. C. S. W.

INDIAN RAILWAYS.

"INDIA OF TO-DAY, VOL. VII., INDIAN RAILWAYS." By K. V. Iyer. (London: Humphrey Milford. 3s. net.)

Mr. Iyer has produced a creditable account of the Indian railway system as it exists to-day, with sufficient references to reports and other works to put the reader on the track of its history. The treatment is, very properly, descriptive rather than critical, and, where opinions are offered on controversial topics, they are, as a rule, eminently reasonable. Sufficient figures are given to make the booklet useful to serious students, and they are, on the whole, presented in convenient form, but a protest must be entered against the statistical chart on p. 32. A glance at it shows that the year 1912-13 was marked by some tremendous cataclysm, when gross earnings fell suddenly to about a quarter of the normal. One seeks in vain for a record of war, pestilence, or famine, but the true explanation can be disinterred from an appendix, which allows the expert to see that the "year" in question consisted of three months only. That chart should certainly be relegated to some chamber of statistical horrors, but the rest of the booklet can be recommended with confidence.

BOOKS RECEIVED.

"'The New Past' and Other Essays on the Development of Civilisation." By J. H. Breasted, etc. Edited by E. H. Carter M.A. (Oxford: Basil Blackwell. 5s. net.)

"Crop Production in India." By Albert Howard, C.I.E., M.A. (London: Oxford University Press. 10s. 6d.)

"Ethics in India." By E. Washburn Hopkins, Ph.D., LL.D. (London: Humphrey Milford. 14s. net.)

BRITISH MUSEUM ACQUISITIONS.

The British Museum has recently acquired a number of ancient Egyptian amulets and some early seals from Iraq, also some rare coins from Cyprus and Asia Minor. The amulets were secured at the sale of the collection of Captain Richard Bethell. The objects for the Babylonian Department were bought by the Trustees of the Museum very cheaply; and the Coins Department received its Cyprian coins from a resident of that island.

QUARANTINE BOARD OF ALEXANDRIA.

It has been decided to appoint Major G. P. Thomson, until recently Inspector of the Public Health Department, President of the International Quarantine Board of Alexandria. The post has been vacant since the resignation of Dr. Alexander Granville a year ago, owing to the refusal of the Government of Zaghloul Pasha to appoint an Englishman on the ground that an Egyptian should now fill the post.

A CYPRUS MESSAGE.

We have received the following message from the Greek Press Bureau, Limassol:—"New elections to the National Council are finished. Councillors express confidence that the last Cyprus appeal to Parliament will meet with kind attention."

Sheikh Mohamed Hassanein, formerly a member of the Superior Council of the University of Al Azhar in Cairo, died on January 5. He was the father of Ahmed Bey Hassanein, the well-known Egyptian explorer, whose imminent departure for London to take up his new appointment as First Secretary in the Egyptian Legation has thus been delayed.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Lloyds Bank's Profits.

The dividend statement of Lloyds Bank for 1924 shows a marked expansion in profits, which total £2,468,934, as compared with £2,047,934 for 1923 and £2,068,875 for 1922. In this respect the experience of Lloyds Bank is typical of that of the other leading banks, and it may be regarded as reflecting the improvement in trade which took place in the latter half of last year. The dividends of the banks are unchanged, that of Lloyds being 16⅔ per cent., while those of Westminster Bank are again maintained at 20 per cent. in respect of the £20 shares and 12½ per cent. (the maximum) in respect of the £1 shares.

Japan and Roumanian Oil.

In recent months various rumours have been forthcoming as to Japanese efforts to obtain some participation in the oilfields in various countries, though how far the rumours have been accurate or not it is impossible to say. It is, however, of interest to record the fact that a Japanese delegation is at present in Roumania, and that while it will occupy itself, it is understood, with the economic relations between the two countries generally, its main concern will be the question of oil supplies. One can well appreciate Japan's desire to be free from dependence on one source for this vital fuel, and it may be that a successful move in Roumania will be the prelude to other departures in the Near East.

Suez Canal Dues.

It is excellent hearing that the Suez Canal Company has decided to reduce the transit dues by 25 centimes as from April 1 next, making the dues for loaded ships 7.25 francs and for ships in ballast 4.75 francs per ton. The rates are, of course, still considerably above the 1914 level, when the dues for loaded ships were 6.25 francs. For more than three years from the commencement of 1917 the rate was 8.50 francs, and from that time there have been gradual reductions, the last being in January, 1924, when the rate was reduced from 7.75 francs to 7.50 francs.

Automatic Telephones for Cairo.

A contract for the installation of an automatic telephone exchange in Cairo has been given to the Associated British Manufacturers (Egypt), Ltd. The cost is estimated at £50,000, and the materials will be supplied by Siemens Bros., of Woolwich.

Indian Railway Results.

Recent reports of the Indian railways have been uniformly favourable, disclosing increasing receipts and a declining ratio of expenditure. The report of the Great Indian Peninsular Railway Co. for the half-year to September 30, which has just been issued, illustrates this tendency. The gross receipts amounted to Rs. 6,60,27,739, as compared with Rs. 5,76,86,792 for the corresponding period of 1923, while the expenditure was Rs. 4,70,21,844, as against Rs. 4,33,76,739 for the same period, there being thus an increase of Rs. 83,40,947 in receipts and one of only Rs. 36,45,105 in expenditure. The net revenue amounted to Rs. 1,90,05,895, as compared with Rs. 1,43,10,053 for the corresponding six months of 1923, and there is a surplus of Rs. 5,58,281.

Trade with Czecho-Slovakia.

According to the *Narodni List* the Czecho-Slovak Government has put before the National Assembly a Bill empowering the reduction of import duties on machinery not manufactured in the country. The reduced duty will amount to the original duty multiplied by a co-efficient of 4, whereas the duty paid up till now has been multiplied by a co-efficient of 16 to 25. The result of thus reducing the co-efficients of import duties would probably be a reduction in the price at which such machinery could be sold in Czecho-Slovakia. It is the view of the British Commercial Secretary at Prague that the first effect of the measure will be to increase widely a market for imported machinery, and he suggests that British firms should take every possible opportunity to bring their products before the notice of Czecho-Slovak manufacturers, more particularly at the present time, when apparently deliveries from Germany are subject to delay and uncertainty. As regards agricultural machinery, he states that there are at present possibilities for the sale of binders.

The Late Sir William Garstin.

The death of Sir William Garstin will occasion widespread regret, and in Anglo-Egyptian circles in particular there will be universal sorrow at the loss of one who was justly entitled to be regarded as one of the makers of modern Egypt. One of the Indian officials who was lent to Egypt, his period there lasted for twenty-three years, and, among the principal works carried out under him were the Assiout Barrage and the Aswan Dam. His knowledge of the problems of Egypt in regard to irrigation was unsurpassed, and the opportunity was his of utilising his knowledge to the benefit of the country to such an extent that he may, indeed, be said to have carved out for himself an abiding place in the history of Egypt.

COMMUNICATIONS AND TRANSPORT IN TURKEY.

At a meeting of the Anglo-Turkish Society, held on January 7, at Anderton's Hotel, London, Captain E. H. Griffin, D.S.O., M.C., in the chair, a report was read by the hon. secretary, Mr. Arthur Field, on "Communications and Transport in Turkey." The paper referred to the difficulty experienced in obtaining exact figures relative to railway development in Turkey, and pointed out that a recent contribution to the subject had been made in an article in *The Times* of December 30, from which the following passage was quoted:—

"These words (the reference is to military considerations) go very far towards explaining the zeal with which the Cabinet is urging on the construction of the Samsoun-Sivas-Angora Railway. £T9,500,000 (about £1,100,000) was voted for the line during the current year, and I was officially informed that £T11,000,000 is to be spent during the financial year 1925-26. This is no small proportion of the £T17,500,000 allocated to the Ministry of Public Works in the draft Budget which was distributed the other day to the members of the Assembly. 4,000 workmen, I was further informed, are now employed on the line; and, though the track has only been laid as far as the 27th kilometre stone (not 17 miles) from Angora, a large proportion of the rails has now been bought, much of the engineering has been done, and the coming year will see a great advance of the track. But if strategic considerations are helping to urge on the building of this line, the zeal for railway construction should not be attributed solely to this cause. There have been several indications lately that Turkey is genuinely concerned to mind her own business, and (not troubling herself with the affairs of her neighbours more than is absolutely necessary in the national interests) to bend her energies to the work of internal reconstruction and development. . . . If we except the sums devoted to the Army, Navy, public security, and gendarmerie—in themselves a shield behind which the people is to be free to work—we see that some of the largest votes are being given to the three Ministries of Education, Agriculture, and Public Works, the importance of which has again and again been preached by the President and by the Cabinet. Education is to receive a grant of nearly £T8,000,000; Public Works, as we have already seen, will swallow up £T17,500,000, and nearer six than five millions will be devoted to Agriculture."

The two standard-gauge lines—Samsoun to Sivas, and Angora to Moussakeni (a station on the former) are financially assured by the law of March 23, 1924, allotting a credit of £T65,000,000 (£8,000,000) for a period of five years, and it is anticipated that the two lines will be finished in 1929. Work is also in hand on the construction of a narrow-gauge line from Arghana to Arada, a station on the Baghdad Railway west of Nisibin, designed to assist the copper mines at Arghana. A number of short, narrow-gauge lines connecting the Black Sea ports with their immediate interior is contemplated, and one concession has already been granted to a Turkish company for a line from Samsoun to Bafra. The paper went on to speak of the Turkish desire to enlist foreign capital for the development of Asia Minor, with special reference to its mineral wealth. In this connection the speaker referred to a "petroliferous belt" giving on to the Mediterranean, round the Gulf of Alexandretta, but it did not appear that any definite steps had been taken to establish the existence of oil in this region. In a passage on ports in Turkey and the handicap suffered from the lack of modern facilities, reference was made to the efforts now being put forward to develop Youmountalik, on the Gulf of Alexandretta, as an offset to the continued occupation of Alexandretta by France. Information regarding foreign railway concessions in Turkey was also given. Among those who took part in the discussion were Dr. Henri M. Léon and Mr. Arnold Lupton.

STEAUA ROMANA PRODUCTION.

Steaua Romana (British) Ltd., are advised that the production of the Steaua Romana Co., Bucharest, for December was 27,370 tons, an increase of 3,000 tons on November production.

The production for 1924 was approximately 275,382 tons, as compared with 222,735 tons in 1923, an increase of 52,647 tons. This is the highest production obtained by the company from its own fields since 1918, and is exclusive of about 10,000 tons received in payment of royalties on drilling contracts carried out for other companies.

COMPANY NOTES AND REPORTS.

Westminster Bank Dividend.

The directors of Westminster Bank, Ltd., have declared a final dividend of 10 per cent. in respect of the £20 shares, making 20 per cent. for the year; and a final dividend of 6¼ per cent. on the £1 shares, making the maximum of 12½ per cent. for the year. The dividends will be payable (less income-tax) on February 2.

Dacia Romano.—The production for December amounted to 295 tons.

Sir Charles Macara celebrated his eightieth birthday on January 11. He has received congratulations from all parts of the world.

The Persian Parliament has sanctioned the exemption from Customs duties for a period of ten years of agricultural and technical machinery accessories, with certain exceptions.

EGYPTIAN COTTON CROPS AND PRICES.

An Uncertain Outlook.

BY JOHN A. TODD, B.L.

Egyptian cotton has passed through many vicissitudes in its time, but it would be hard to equal the history of the last two years. In the summer of last year the nominal quotations in Liverpool showed Egyptian actually at a lower price than American, while Uppers were above Sakel! To-day the premium of Egyptian over American is over 130 per cent., while Sakel stands at 54 per cent. above Uppers. The events which have led to these extraordinary fluctuations are well worth recalling.

In the first place, it is necessary to provide a background showing, first, the modern history of the crop, and, second, what may be regarded as the normal conditions of relative price. The accompanying table provides the necessary data for this history-giving area, crop and yield for both American and Egyptian, with the season's average prices in each case and the premium of Egyptian over American. (See table below.)

The main facts of the history may be briefly outlined as follows:—Prior to the War both crops were increasing on the whole steadily in total quantity, but this was only being secured by the rapid extension of the acreage, and the yield per acre was, on the whole, falling steadily. This culminated in the very serious crop failure of 1909 in both countries. In the case of the American crop this proved to be more or less an accident, for the yields after that date up till 1914 were almost as high as they had been before 1909. From about 1914, however, a steady decline set in during the war years, followed by an isolated recovery in 1920. This, again, however, was succeeded by the most calamitous failure of all in 1921, which proved to be the first of a series of three exceedingly bad years. It appears now that 1924 is again almost certain to mark a definite recovery, but not to anything like the figures of pre-war years, nor even of 1920. The fact is that the long-expected arrival of the boll-weevil in the Atlantic States has permanently reduced the maximum probable yield of the American crop, and the comparatively good yield of 1924 is due to the fact that the weather during the summer proved extraordinarily unfavourable to the weevil. Unfortunately it was also not good for the crop, but, thanks to an extraordinary combination of good fortune the weather throughout the whole of the picking season has been almost miraculously favourable to the saving of the crop, and that at a stage when it was too late for the weevil to do much harm.

In the case of the Egyptian crop, however, though a marked recovery was made from 1909 till 1913, this again gave way to a declining yield, which in 1916 carried the average actually below 1909. Since then, however, the average yield seems to have become more stable at a figure of something like 350 lbs. per acre.

So much for the supply side of the equation. On the demand side developments have been almost equally abnormal. Before 1909 the rela-

tive price of Egyptian had been rising, on the whole, steadily, due to the improved quality of fabrics that could be produced from Egyptian owing to the development of technical processes such as mercerising, and the general increase in the demand for these fine fabrics. The crop failure of 1909, however, carried these developments to extremes, for the premium on Egyptian cotton at one time went to about 100 per cent. This extraordinary appreciation of Egyptian gave the cotton world their first lesson in the possibilities of substitution of the finer American varieties for Egyptian, which had until then been regarded as almost impossible. The result was that the high prices of 1909-10 were followed by a very sharp reaction, which carried the premium down to 35 per cent. for the next season, or barely half of the previous year's average figure.

During the War there were again violent fluctuations; in 1916-17, for example, the season's premium averaged 75 per cent.; but the really dramatic development came after the War, when in 1919 the sudden expansion of the demand in America for Egyptian cotton for tyre fabric resulted in a natural corner in Alexandria, which, combined with the general rise of prices of all sorts in that memorable year of the post-War boom, sent Egyptian prices up to a premium of 211 per cent. This again had its natural effect. At such prices the tyre fabric makers were forced to experiment in the substitution of shorter cotton in tyre yarns, which until then they had absolutely declined to consider, and they very soon began to find that, except for the best tyres, a much lower grade of cotton would serve perfectly well. On top of this came the awful slump due to deflation in 1920, and the expensive goods made from Egyptian cotton naturally suffered most severely in the period of universal depression which followed. This time, however, the reaction was carried to an extent which until then would have been universally regarded as impossible; indeed it would be hard to find a precedent for what actually happened. That Egyptian cotton should sell for less than American is a thing as difficult to understand as that, say, cream should sell for less than milk. There are, of course, some people who do not like cream or cannot digest it, and the analogy is helpful. What happened was simply this: After the big American crop of 1920 and the deflation slump, the world found itself at the end of 1920-21 with an unprecedented carry-over of American cotton, nearly 10 million bales (see Table II.). The result was

AMERICAN AND EGYPTIAN CARRY-OVER AT THE CLOSE OF EACH SEASON.

End of	American 000's running bales.	Egyptian 000's kantars.

1924	2,824	2,506

an appalling slump in American, which actually brought prices for a time below pre-War figures; this was followed, in 1921, by a curtailment of acreage which, coinciding with the worst damage the boll weevil has ever done, produced three calamitously short crops in succession. This not only wiped out the huge carry-over, but actually reduced the world's stocks well below normal by July 31, 1923. The result was that the world

The Greatest Name in the Tyre World-

DUNLOP

'DUNLOP TYRES' have been household words for 36 years. The story of Dunlop is the story of the Tyre Industry, and this long experience is your safeguard, your assurance of that perfect quality which is a Dunlop tradition. Dunlop Cords are built for *mileage*. Every detail of the construction of both tread and casing is carried out with meticulous care. Nothing is left to chance—that is why you get maximum miles from Dunlop Cords at minimum cost-per-mile

was faced with something very near a famine of American cotton; and it is more difficult for spinners of American to use Egyptian than it was thought to be in the old days for spinners of Egyptian to use American. But so serious was the scarcity of American, especially of the rather better varieties which Lancashire requires, that for the first time in history spinners in Oldham, the great centre of the American trade, were actually using Uppers or even Sakel in place of American. The result was that while the American section of the industry was severely curtailed by organised short time the Egyptian section was able to carry on almost unrestricted, and Egyptian was practically the only variety of which the world's consumption continued to increase throughout 1923.

Table III. above gives a summary of the International Cotton Federation's figures of world's consumption of Egyptian cotton.

The effect was very quickly seen in the rapid depletion of the world's carry-over of Egyptian cotton. As will be seen from Table II., the Egyptian carry-over had been well above normal at the end of season 1920-21, and remained fairly high till the end of 1922-23, but during the following season it was very quickly brought down, and at the end of July, 1924, was once more well below normal, like the American. The complete disappearance of the premium of Egyptian over American in the summer of 1923 was, therefore, due to the coincidence of a fairly ample supply of Egyptian cotton, with a scarcity of American almost amounting to famine; but once more these conditions were to be followed by an extreme reaction, partly the result of the very causes that had produced the abnormal state of affairs. In America the steady rise of prices had already led to an upward movement in the acreage which beat all records in 1924 with an acreage planted now estimated at nearly 41½ million acres. At first it looked as if the weather conditions and the boll-weevil together would destroy the hopes of a really large crop even from such an enormous acreage. The season began badly, cold and wet like its predecessors, but in June it suddenly picked up, and fine weather, combined with reports that the weevil had suffered heavily from severe frost during the winter, which had reduced the emergence of live weevils in spring, sent hopes of the new crop soaring. As the summer went on, however, the beneficent sunshine changed to an alarming drought, which again penalised the weevil very severely, but, unfortunately, seemed likely also to destroy the crop. The drought broke, however, about the middle of September, and gave place to a spell of continuous and excessive rain, which looked like being the last straw for the unfortunate crop. But that also picked up just in time, and since early October the crop has been favoured with what is probably the finest picking weather that has ever been experienced, except, perhaps, in 1920, and with the same result. Every possible lock of cotton has been saved, and the late growth, or top crop, which came after the breaking of the drought, appears in most cases to have been carried right through to ripening. The result is that the estimates of the crop are steadily creeping up, and it seems safe now to assume that it will be not less than 13¼ million bales, and perhaps 13½ millions.

Contrast with this the conditions affecting the Egyptian crop. There has been great confusion in recent years with regard to the Government statistics, with the result that the market has for some time simply declined to consider their estimates at all. When, therefore, the Government published an estimate of the acreage planted this year as 1,787,843 feddans, or 200,000 more than last year, the market put their own interpretation on these figures and added the 200,000 feddans to their own estimate of the acreage last year, which was about 1,800,000 feddans. This would have given a record acreage in 1924 of 2,000,000 feddans, and from such an acreage the trade naturally expected a big crop, 7½ to 8 million kantars being spoken of early in the season. There was, however, a good deal of uncertainty as to the proportion of the best qualities to be expected from this crop. All over the world the disappearance of the Egyptian premium had inevitably discouraged growers of staple cotton. Sea Island, for example, has practically disappeared, and the Pima crop of American Egyptian cotton in Arizona has also been replaced this year by short staple American to the extent of probably 90 per cent. In Egypt the effect was seen in the wholesale substitution of Zagora, an Upper Egyptian variety, for Sakel in the Delta, though it is, unfortunately, impossible to get statistics of this which the trade are prepared to accept. When, therefore, the Government's estimate of the crop in September stated that the total of 6,379,862 kantars was expected to include only 2,497,640 kantars Sakel, the market declined to take the estimate seriously. Subsequent events, however, have proved their mistake. It is now apparently generally accepted that the supply of good Sakel is really very short, though there seems to be much doubt here as to the real cause of the scarcity. It is alleged that a great deal of Sakel has been spoilt by mixing with it a quantity of Pilion, another shorter staple variety, though longer than Zagora, which found its way into the Delta a few years ago, and at first

was hailed as the true successor of the old Brown Afifi cotton. Another view is that the quantity of Sakel has not been seriously reduced, but that so much of it now is of inferior quality that it may easily be confused with shorter varieties.

On the other hand, the demand for Egyptian has received an unexpected reinforcement through the shortage of the best staple American varieties, especially the 1¼ in. improved Upland and Delta cottons, which seem to have suffered very seriously in staple from the drought this summer. The result has been almost a scramble for Egyptian cotton, which, as already noted, has sent Sakel premiums soaring again.

Looking to the future, it is very hard to say what the next year or two may bring forth. The first result will inevitably be a very determined movement by the spinners to substitute cheaper varieties for Sakel. That is already going on, and the logic of prices will force it to its fullest development. The next effect will be a rush to grow Sakel again next year, certainly in Egypt (and also in the Sudan) and perhaps to some extent in Arizona, though there it will be very difficult to get the growers back to Pima once they have abandoned it. The community system of growing only one variety in the Salt River Valley had been developed almost to perfection, but once a system like that breaks down, it is extremely difficult to restore it.

But what of the American crop next year? The fall in price (it is now 13d. against about 22d. in November, 1923, and last season's average of nearly 18d.) will almost certainly lead to a reduction of acreage in 1925. The real problem, however, is the weather and its effect on the weevil. There are certainly plenty of weevils left to start again next year if the weather proves favourable. It is, therefore, quite impossible to predict what the American crop this year will be, though the *chances* are that it will not equal the high total of 1924. On the whole, therefore, it seems probable that the present high level of Egyptian will not last beyond this season, if, indeed, it lasts as long. That will depend on whether the world's spinners manage to cut their consumption down to the restricted supply quickly, or whether the process of readjustment takes time.

In the meantime, the moral of the whole business is (1) that there are no water-tight bulkheads between American and Egyptian cotton, or between Uppers and Sakel; (2) that a shortage of supply or an excessive demand for one or other variety will, through the medium of relative prices, very quickly shift the demand from one to another; and (3) that the effect of relative prices soon produces the natural reaction on supply, unless abnormal conditions affecting the different crops should happen to prevent the necessary readjustment.

SUDAN LIGHT AND POWER.

The Sudan Light and Power has been registered as a public company with a nominal capital of £356,000, in £1 shares. The objects are to construct and control public works and conveniences in the Sudan or elsewhere, including railways, tramways, docks, water, gas, electric light, telephonic, telegraphic, and power supply works, etc. The first directors are: Baron Meston of Agra and Dunottar, Hurst, Cookham Dene, Berks, director of English Electric Company; Sir Thos. O. Callender, Bidborough Court, near Tunbridge Wells, Kent, managing director Callender's Cable and Construction Company; Col. F. J. Byrne, C.M.G., 36, Sloane Court, S.W.3, director Dorman Long and Co.; P. J. Pybus, 21, Whitehall Court, S.W.1, managing director of English Electric Company; Sir Geo. E. May, Bucknalls, near Watford, Herts, secretary to Prudential Assurance Company; Lt.-Col. G. E. Schuster, M.C., Nether Worton House, Steeple Aston, Oxon, Financial Secretary to Sudan Government. The Sudan Government has the right to nominate one director, Lt.-Col. G. E. Schuster being the first nominee. The registered office is at Queen's House, Kingsway, W.C.2.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, January 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Stockwell for Port Said, Colombo, Madras, and Calcutta (London, January 24).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, January 28).

British India Line.—S.s. Mandala for Bombay and Karachi (London, January 21); s.s. Madura for Colombo, Madras, and Calcutta (London, January 31).

Ellerman "City" Line.—S.s. City of Agra for Calcutta (Birkenhead, January 22).

Ellerman's Westcott and Laurance Line.—S.s. Bulgarian for Gibraltar, Malta, Piræus, Salonika, Constantinople, and Smyrna (London, January 24).

Johnston Line.—M.v. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 31). M.s. Sycamore for Galatz and Braila (the first steamer of the season for the Danube) (Liverpool, February 7). S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 28).

P. and O. Line.—S.s. Devanha for Bombay (London, January 23); s.s. Padua for Colombo, Madras, and Calcutta (London, January 24).

Prince Line.—S.s. Merchant Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, January 21).

The Associated Cotton Ginners of Egypt have declared a dividend of 1s. per share.

All male Turks between the ages of eighteen and sixty will have to do from six to twelve days work on the roads every year under a new law recently voted by the Angora Assembly.

The progress reports of Phœnix Oil and Transport Company and allied companies for December show that the total crude oil production for the month was 24,137 tons, and the throughput of the refineries 20,971 tons.

RAILWAY MATERIAL FOR EGYPT.

The Egyptian Ministry of Finance, when submitting the railway programme to the Council of Ministers, accompanied it by an explanatory note stating that the objects at which it aimed were:

(a) The urgent replacement of material and rolling stock in bad condition, the renewal of which has been neglected during the last eleven years.

(b) The adoption of a permanent annual programme in order to ensure the future upkeep and renewal of railway material and rolling stock in proportion to current needs.

The execution of the permanent programme will necessitate a fixed annual credit of £E567,000 distributed as follows: Double track, 100 kilometres, £E220,000; new locomotives, 20, £E100,000; goods trucks, 320, £E112,000; passenger coaches, 30, £E105,000; bridges, £E20,000, signals, £E10,000—total, £E567,000.

Independently of this credit, a sum of £E3,105,000 will be devoted to the renewal and repair of much-used material which has been neglected during the last eleven years. This sum is to be used as follows: Double track, 400 kilometres, £E880,000; new locomotives, 120, £E600,000; goods trucks, 1,500, £E525,000; passenger coaches, 200, £E700,000; bridges, £E200,000; signals, £E200,000—total, £E3,105,000.

The Finance Committee was desirous of spreading this sum of £E3,105,000 over four years, instead of the three proposed by the Ministry of Communications, in order to reduce somewhat the annual deficit in the railway budget, but the Council of Ministers, considering the work to be of an urgent nature, decided, when approving on November 10 of this programme, that it is to be spent during the financial years 1925-26 to 1927-28 inclusive.

This programme cannot, of course, be put into execution unless and until the Egyptian Parliament approves the State Budget.

COMPANY MEETING.

IONIAN BANK.

Economic Strength of Greece.

The annual general meeting of the Ionian Bank, Ltd., was held on January 13, at the offices of the company, Basildon House, Moorgate, E.C.2, the Chairman, Sir John Stavridi, presiding.

The Secretary (Mr. W. A. Shaw, Litt.D.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: In attempting to estimate the financial strength and resilience of Greece and her immediate prospects economically, we must bear in mind that she is still in a state of transition, that it is only about a year since she has ceased to be at war, so that the process of post-war reconstruction in her case is in the same initial stage as it was, say, at the end of 1919 for the Great Powers. It is substantially for this reason that the currency of Greece is still depreciated and the cost of living is still high; so high, indeed, that whilst the drachma has remained fairly stable during the year, round about 250 to the £, within the same period the index figure of the cost of living has risen from 1112 to 1357. The present Government has, however, set up a strong "Economic Committee" on the lines of our own Geddes Committee with a view to the reduction of all unnecessary and indiscriminate expenditure in Government offices, and we can only hope that it will be successful in its endeavours. This, however, is but one side of the picture. On the whole, it is possible to assert that Greece has progressed far along the road of reconstruction, and this notwithstanding the enormous burden cast upon her by the exchange of populations which brought over 1,500,000 refugees to the shores of Greece. The successive Governments have faced the situation with courage and imagination; and have succeeded in avoiding what might have been an appalling catastrophe. They have constantly endeavoured to bring about an equilibrium in their budget by increasing taxation. Since 1914, which is only a matter of ten years, we find that the ordinary revenue and expenditure has increased fifteenfold, in spite of all the desolation of war and loss of human life. It may safely be asserted that there is no other country in Europe which can show such a substantial expansion, and, even so, it is claimed that the taxable capacity of the country has not yet been fully reached.

The issue of the prospectus of the recently floated Greek Refugee Loan came as a surprise to the market in England. People had not understood or realised the intrinsic soundness and strength of the security which the country could offer nor the vast progress it had made during the last decade. When these facts were brought to their knowledge the response was such that the applications for the loan amounted to twenty-five times the amount offered. No other reconstruction loan has had such overwhelming success. It is a pleasure to me to inform you that the subscriptions to the loan through our bank practically covered the portion of the loan issued in Greece and also a considerable portion of the London issue.

It must furthermore be borne in mind that in Macedonia and Thrace there are more than two million acres of the most productive soil under the sun which are still waste and devastated as the result of the successive wars; and just as there is this expansible margin of rich cultivatable land, so there is an expansible margin of Greek flesh and blood in the million and a-half refugees who have been landed on her shores and who will, in the course of time, add to the richness and prosperity of the country. It is impossible even to adumbrate the ultimate possibilities for the economic life of Greece of this addition of sober, hard-working people to her population.

Finally, let me add that the Greek Government is anxious to encourage the investment of foreign capital in Greece for the construction of public works. With this end in view, a syndicate of banks has been formed in Athens, under the auspices of the National Bank, which in this, as in all other questions involving the economic development of the country, has taken the lead. Our institution has, of course, participated in the formation of this syndicate.

And now as regards Egypt, our second most important field of activities. With regard to the financial position, the country is quickly recovering from the crisis of 1921. Its chief product being cotton of a superior quality which has fetched high prices, it has been in a position to export during the years 1922-23 and 1923-24 cotton and cotton-seed to the value of £E100,302,146, the total exports during this period being £E114,695,626, whilst the imports totalled £E88,918,636, showing a balance of trade in favour of the country of some £E25,777,000 in two years, which is a very satisfactory result.

It may also interest you to have a few figures relating to the cotton crop, which directly affects our business in Egypt and our participation in financing its movement. The total arrivals in Alexandria from September 1, 1923, to August 31, 1924, were 7,267,000 cantars, of a total value of some £50,000,000, of which we handled 744,000 cantars, being 10.24 per cent. of the total arrivals. This is a very considerable proportion of the total crop, and shows a satisfactory result of our working when taking into consideration that there are eleven other important banks established in Egypt competing with us, as well as many exporting firms and private bankers.

The motion was carried unanimously, and after the usual formal business, the meeting terminated.

GUARDIAN EASTERN INSURANCE COMPANY, LIMITED.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Advance in Futures.

The Alexandria Commercial Co., in their report for the week ended December 31, state :—

Since our last report, the futures market has displayed much strength and prices secured all-round substantial advances : the net changes on the week are the following : Sakellaridis : $2.30 up for January; $2.50 up for March; $2.75 up for May; $2.70 up for July; $1.10 up for November, 1925. Ashmouni : $1.30 up for February; $1.25 up for April; $1.30 up for October, 1925. The advance of the market must be attributed principally to heavy speculative purchases which have been induced by the strength of the statistical position and the recent rise in New York. The demand from abroad has fallen off considerably, but the holidays have probably been the cause. Exports during the week have been extremely heavy, and in view of the fact that the daily arrivals in Alexandria from up-country have now diminished considerably, the consequence is a decrease in the stock at Alexandria, a quite uncommon occurrence for this period of the year. The strength of the statistical position is further emphasised when one considers that stocks in Liverpool, Manchester, and on the Continent, plus cotton at sea, are this week 152,000, against 188,000 bales same time last year, whilst the latest available figures of stocks in America show about 30,000 bales less than last year. The position judged on the strength of the above figures is decidedly bullish, and, further, it must be considered that the admitted improved conditions in the principal textile centres of the world would necessarily have as result an increased consumption of cotton, if the price did not check it. The approach of the maturity of January Sakel and the decrease of activity on the spot market has induced many people to transfer their holdings to March, and the result has been a narrowing of the difference between these two months. However, spot cotton continues to fetch a heavy premium over "future basis," and we do not expect dockets of any size to be tendered against January contracts. The position of February Ashmouni is getting interesting : Ashmouni spot is well held, and F.G.F. commands a full dollar premium over February contracts. The week's receipts amount to 211,828 krs., against exports 299,585 krs.; the stock stands at 1,964,059 krs.

Spot.—This week has been a short one, due to the holidays, and Minet-el-Bassal has only been open three days. Sales amount to about 14,700 bales, of which we estimate 5,600 bales Sakel, 5,000 bales Uppers, 3,600 bales Zagora, 250 bales Pilion, 200 bales Brown, and 50 bales White.

Sakellaridis.—Medium and good qualities have absorbed most of the demand. The lower grades continue neglected. Spot premiums are without much change, except for good and better, which are slightly dearer.

Upper Egypt and Lower Egypt Zagora.—A good business has been done in all grades from good fair upwards. Below good fair there has been very little demand. Spot premiums are well maintained at last week's rates for the grades from fully good fair upwards, but below fully good fair they are a little easier.

Pilion.—A fair business has been done. Spot premiums are unchanged.

Brown.—A moderate business has been done at about last week's spot premiums.

White.—A retail business has been done. Spot premiums are unchanged, but this growth is neglected and prices have not been really tested.

LIVERPOOL COTTON REPORT.

Improved Inquiry for Egyptian Spot.

Messrs. Reynolds and Gibson report as follows for the week ended January 7 :—

Egyptian Spot.—The first week of the New Year has brought a slightly improved inquiry, and, during the last two days particularly, there has been rather more business about. It is too early as yet to interpret this as the forerunner of another buying wave, and we are more inclined to attribute it to a natural desire on the part of spinners to cover themselves against shipments which may have been damaged by fire on board the s.s. Chinese Prince, now lying in Manchester Docks. Inquiry on the spot has been of a fairly general character, practically all qualities and growths participating, with the exception of Sudan, which has been lifeless.

In Sakellaridis, Low cotton 19.00d. to 22.00d. has again received attention, and a moderate turnover has resulted. Cotton at from 50 to 150 on January has been a popular range, and a fair selection of this quality now seems to be available. There has been some indication latterly on the part of holders to meet buyers in the Low and Medium qualities (particularly in the former), but in the higher grades, although business has resulted up to nearly 34.00d. per lb., trading is difficult, and spinners complain that they find it impossible to make a profit at current rates. These top grades, however, are strongly held.

Uppers have been in comparatively good request, but here again there are signs that spinners are slowly beginning to boycott the top priced cotton, and that the demand is being forced down to the medium qualities. This is probably only a temporary phase, as in our opinion best Uppers at about 22.00d. are not dear compared with Sakellaridis and Pilion. There is considerable irregularity in the prices asked for the medium qualities, and it is possible to buy Fully Good Fair Uppers to-day at fully ½d. under the official quotation for that quality.

Pilion has been in improved request, but we have heard of no business of any weight going

through. There is a fair selection available, and up to 26.00d. is being asked to-day for the best. C.i.f. business has been very quiet. The majority of spinners seem to have enough cotton to last them for a while, probably well into February, and present rates are not encouraging them to buy ahead. Alexandria, with the exception of one sharp break early in the week, has maintained a very steady front, and there is no doubt that from their point of view the statistical position of Egyptian cotton this season is a strong one. Forwardings to spinners for the week ending 2nd inst. were returned as 9,512 bales. Estimated sales 2,200 bales Egyptian. Quotations of Brown and Uppers are advanced 10 points on the week. Sakellaridis is 85 points higher for Extra Fine, 35 higher for Fine down to Good Fair, whilst Fair is exceptionally 40 points lower. F.G.F. Sakel, 30.00d.

SAFEGUARDING THE QUALITY OF EGYPTIAN COTTON.

A communiqué issued by the Royal Egyptian Legation in London states that, in view of the rumours which have prevailed among cotton spinners in England to the effect that it is impossible to obtain pure cotton seeds for the forthcoming season, more especially of the Sakel variety, owing to the admixture of different cottons, the Egyptian Ministry of Agriculture has decided to take effective measures for the prevention of any possible deterioration in the quality and purity of cotton seeds. For this purpose the following procedure has been decided upon :—

(1) The Ministry will undertake to distribute Sakel seeds from the first picking of Domains seeds to large farmers reputed for their excellence in cultivation and for the careful management of their own farms. The distribution will, however, be subject to certain stipulated conditions which will enable the Ministry of Agriculture to supervise and control the various agricultural operations from the time of sowing to the time of ginning, so that it will be possible to ascertain that such farms are free from any foreign cotton plants, and that "mabroma" cottons and other impurities are eliminated. In this way pure seeds for the next season will be available for distribution among a greater number of cotton growers for sowing a larger area of land. These measures will be followed in future years until pure sakel seeds become so abundant as to meet all the requirements of all sakel growers. The same measures will be applied to "Assili" and "310" cottons.

(2) The above measures will also be applied to Upper Egypt, with a view to propagating selected seeds for the two varieties, Royal Ashmouni and Zagora.

(3) For the benefit of small cultivators who usually obtain their takawy on credit from the seeds selected by the Ministry from ginneries in Lower Egypt, a committee, presided over by the Chief Inspector, and composed of two technical experts from the Botanical and Agronomic Sections of the Ministry, will examine the seeds at the ginneries and satisfy themselves that the seeds are pure, and that they have not been subjected to any such admixing as is likely to occur in some ginneries. Having satisfied themselves on these points, the committee will again examine the seeds to ascertain their power of germination.

In this way the Ministry will, before distribution to small growers, make sure that the seeds are of good quality, free from admixture with other varieties, and, finally, of a high germinating power. Serious efforts on these lines are being taken with the desire to maintain and improve the characteristics of Egyptian cottons. With this purpose in view, specialists will be appointed to make a thorough control of the matter under the supervision of the high officials of the Ministry.

To put into force the foregoing scheme, which will gradually ensure the maintenance of the high position in commercial markets, and of the characteristics of Egyptian cottons, as well as to ensure in the near future the satisfaction of all applicants for good and pure seeds, the Ministry has, with regret, been obliged to refuse most of the orders made for Domain Sakel.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LAL-IMLI PURE WOOL

Makers of the famous Lal-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPOREWOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Everything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Croat Arrests.

The liberation of the Croat leaders, with the exception of M. Raditch, and of the rank and file of the Croat Peasant Party by the Zagreb Court does not affect the decree dissolving the organisation and prohibiting its members from standing at the approaching election; but it does place the Yugoslav Government in a curious position. Justification for the steps taken against the party was based on its connection with the Moscow Peasant International, which was held to be identified with the Third International, and the thoroughness with which the Government carried out the proscription may be judged from the fact that nearly two thousand arrests were made. The Zagreb Court has ruled that the Peasant International is not to be identified with the Third International, and that there was no evidence to connect the accused with the latter; it was further satisfied by the statements of the accused and the evidence which they produced that the Croatian Peasant Party was entirely pacific in its policy and had no intention of resorting to revolution. As far as M. Raditch was concerned, the Court decided that, as he had refused to give any explanation on the ground that he was immune from arrest as a member of the Skupshtina, he must remain in prison until the decision of the responsible authorities had been ascertained. It may be unfortunate for the Government if the evidence against M. Raditch is not stronger than that produced against his subordinates; for, in spite of the assurances that the measures adopted are not to be regarded as a *démarche* against the Croats as a whole, feeling in Croatia is likely to be aroused by the numerous arrests. A late report states that M. Raditch has also been released, but confirmation at the time of going to press is lacking.

Minorities in the Balkans.

The Greek Government has announced its decision not to carry into effect the Protocol drawn up in Geneva last September concerning Greek minorities in Bulgaria and Bulgarian minorities in Greece. This Protocol gave extended powers to two delegates of the League of Nations in connection with the minorities in question, and promised to be the means of introducing a notable improvement in the relations between the two countries. For a long time past the lot of the respective minorities has not been a happy one; Greeks have found it necessary or advisable to leave Bulgaria, Bulgarians have been obliged to leave Greece. There have also been unexplained murders on each side. A scheme that would safeguard the interests of the unfortunate people concerned, enable them to yield with the minimum of personal loss and discomfort to the dictates of national hatred, and regulate a voluntary exchange of populations had much to commend it. The two delegates appointed by the League were well known in both countries, and have been engaged for some time in studying the position with a view to carrying out the terms of the Protocol. The first sign of opposition came from Yugoslavia, where it was supposed that the formal recognition of Greece's Macedonian subjects as Bulgarians might prejudice Serbia's claim on these people as her nationals. Whether such a fear played any part in prompting the Yugoslav Government to denounce the treaty with Greece must be left an open question. In Greece itself exception was taken to the Protocol on a variety of grounds, most of them leading back to the feeling that it was derogatory to Greece to admit that there was any need to invite outside supervision of minorities, particularly as these were already safeguarded by the provisions of the Treaty of Lausanne. The Greek Government's decision is to be regretted, if only because it is a backward step in the promotion of better relations with Bulgaria. It is idle to pretend that all is as it should be in regard to the minorities in the two countries; the occurrence of murders proves that it is not so. A country that faces facts and lays itself out to remove causes of friction between neighbours in the Balkans stands to gain, not to lose, prestige.

Angora and Constantinople.

The antagonism between Angora and Constantinople displays itself in many ways. At the present moment trouble centres in the position of the Prefect of Constantinople. The Govern-

Digitized by Google

ment of Fethi Bey, who does not forget that he is one of the representatives of the old capital, has proposed that Constantincple should be brought into line with other towns and be allowed to elect its own Prefect. The suggestion has evoked considerable opposition in the Popular Party in Angora, on the ground that if Constantinople is accorded so much liberty of action it may run entirely off the rails, and the Cabinet has been obliged to postpone a decision on the subject. In the meantime, the actual Prefect and the Vali, both Government nominees, provide relief for political tempers by coming into conflict on no more serious subject than whether Constantinople should not or should be allowed to keep late hours, the Prefect proposing to make 11.30 p.m. the general closing time. So long as the Constantinople Press adopts an attitude of unrelieved hostility towards Angora and all its doings, it is to be feared that it will be difficult for the Government to adopt a more conciliatory policy. There are signs that the latter has begun to appreciate the unwisdom of legislation that restricts the business activities of the largest revenue producer in the country; but it will not climb down to the bidding of the Press, and what is wanted is a period of freedom from abuse, in order that time may be given for the inauguration of a different policy. The sentencing of the editor-owner of an Opposition paper in Constantinople to six months' imprisonment for abuse of the liberty of the Press will seem to anyone unable to take newspaper lucubrations as seriously as Angora does an excessive penalty; but it will serve a useful purpose if it reminds the Turkish Press as a whole that it can do far more good by reasoned and restrained criticism than by flamboyant abuse, which may be left to the politicians. It is on much sounder ground when, as in the last few days, it has taken up the question of the necessity of encouraging the introduction of foreign capital.

Tutankhamen.

The Tutankhamen squabble is over. Mr. Howard Carter returns to Luxor to continue his operations in the tomb in a better temper, we may hope, than when he left it ten months ago. Commonsense has triumphed on both sides; the tomb belongs to Egypt; Mr. Carter is obviously the right man to finish the work that he had begun, and his licence holds good until 1926. Better still, the bogey of commercialism which for so long was seated astride of the discovery has been exorcised, and the patient public will have its intellectual curiosity satisfied without being dragged into a quarrel which showed up all the disputants in the worst possible light. Visitors, provided with special permits from the Government, are to be admitted to the tomb on Tuesdays. Tutankhamen, therefore, will play his part in the tourist programme in the orderly manner that befits such a venerable item, while Mr. Carter will have the greater part of the week to himself for his own work. The only people likely to find fault with this arrangement are the rush parties, whose timetable allows them only two days at Luxor, neither of which happens to be a Tuesday. Even they, however, will be able to gaze on the outside of Tutankhamen's tomb and persuade themselves that they have actually seen its occupant when they gaze on the features of Amenhetep II. close by.

The Sudan Defence Force.

The formation of a Sudan Defence Force, announced by the new Governor-General, Sir Geoffrey Archer, on January 17, is the logical sequel to the expulsion from the Sudan of Egyptian officers and purely Egyptian units of the Army and the subsequent refusal of the Egyptian Government to accept responsibility for the employment of Sudanese officers. As soon as a conflict of opinion arose between the two Governments responsible for the Sudan, and that conflict was pushed by the Egyptian Government of the day to the lengths to which it actually was pushed, the dual allegiance of the Sudanese Army became impossible. A new force has accordingly had to be created from the old material, and henceforth it will owe undivided allegiance to Great Britain in the person of the Governor-General. Although, as we have seen, no section of Egyptian public opinion has openly declared itself prepared to accept the separation of the Sudan from Egypt, many thinking people among the Egyptians realise that the real interests of their country will not only be best served by, but actually require, a peaceful and progressive Sudan; at the same time they know that for many years to come this goal could not be reached under an administration solely in Egyptian hands. For the irreconcilables the formation of the Sudan Defence Force will add fuel to their wrath; others will see in it yet another proof of the stupidity of Zaghloul Pasha's tactics, and, while not liking it, will be further strengthened in their resolve to try to make Egypt worthier of trust and consideration as an original partner in the Sudan condominium. By friendly arrangement much can be achieved in the Valley of the Nile; the attempt of Egypt to browbeat Great Britain has led only to humiliation.

INDIA.

Politics in Bengal.

With the approach of the Budget season increased interest is being displayed in the prospects of politics in the two provinces where the Constitution is temporarily out of order. So far as Bengal is concerned, there are no indications of immediate improvement. The legislature has had two opportunities of modifying its original attitude, but neither has been used, and, to all outward appearance, it is still determined to throw grit into the machinery of government. The last of these opportunities, the vote on the so-called repressive Ordinance, can, however, scarcely be regarded as a fair test, because it asked for too much. There is, indeed, an element of courage, or even of truculence, in the Bengali character, but at the moment it appears mainly among the extremist leaders, while among the rank and file of politicians the outstanding characteristic is still reluctance to take a stand against a vocal and organised minority. There are signs, such as the attempt to organise the landholders, that a reaction against the dominant clique is in process of generation, but it needs time to develop, and apparently Lord Lytton's Administration will have to carry on for another year or so on the present footing, with the primary functions of government provided for, but with practically no chance of pushing forward the constructive policy which the province needs so much.

The Position in the Central Provinces.

In the Central Provinces, on the other hand, the reaction against the sterilisation of the Constitution seems to be making more rapid headway, partly as the result of the retiring Governor's outspoken farewells to the people, partly in consequence of the practical inconveniences which have been experienced during the past year. The latest news indicates that the members of the extremist party have been driven to do some hard thinking, and the immediate result is that they are willing to

Digitized by Google

work the Constitution, provided the Ministers are given what is described as "real and genuine" responsibility. That description, tautological as it is, applies precisely to the position secured to Ministers by the Constitution, and we take it that what is meant is that the time has come, or nearly come, for saving people's faces. Whether this operation is possible or desirable is a question for Sir Montagu Butler, who assumes office as Governor next week. He may possibly think it wiser to rely on those elements of the electorate which allowed themselves to be eclipsed at the last election. But, whatever his decision on this point may be, the conclusion appears to be justified that the province has learned an important lesson, not without some temporary discomfort, but, all things considered, at a very reasonable cost.

The Evil of Parochialism.

A glance over the criticisms passed in India on some recent high appointments impels us to protest once again against the parochial attitude adopted in such matters by almost every part of the country. The Viceroy calls to his aid a gentleman from Calcutta, and Bombay resents his action as a personal slight. An appointment given to the South provokes gibes and sneers from East and West and North. Hindus "crab" a Moslem, and Moslems a Hindu, though both will combine to flout a Christian or a Parsee, and, speaking generally, a prophet has no honour outside his own parish or conventicle. It is not open to the authorities to complain of this attitude, because they have done so much to encourage it by their own past actions, but surely the time has come when this administrative rotativism should be definitely stopped. The Viceroy's Council is necessarily far too small to be representative of all the races, regions, and religions of India, and the attempt to make it partially representative can only weaken it at a time when it needs to be strongest. The Council has one paramount function—to guide British India along the road marked out by Parliament, and the choice of its members ought to be determined by considerations of their efficiency for this purpose, to the exclusion of all other matters.

THE WEEK AT HOME.

London, Tuesday Morning.

Mr. Asquith's Future.

The return of Mr. Asquith from his visit to the Near East has set all the quidnuncs of London a-prattling about his future; one feels quite lonely, indeed, in one's ignorance about the intentions of the great Liberal leader. You may hear it definitely asserted that the sun will set on his last days in some mellow academy; that it has long been desired in the highest circles to award him a peerage, so that, by his presence in the Lords, his noble sonorities shall not be lost to the country; and that, whatever happens, the Liberal Party will continue to be led by him.

What to make of all this perhaps Mrs. Asquith alone knows. Supposing, for instance, that Mr. Asquith prefers London to Oxford as his platform for the expression of his political profundities, or that he still does not care—as he was known formerly not to care—for the House of Lords, or that in the near future there will be no Liberal Party to lead? The sphinxlike attitude on the part of the object of their vain imaginings is exasperating the journalists.

One thing one may hope for: that whatever fate awaits Mr. Asquith, it will be in consonance with the dignity and the serenity of his career. At the time of his eclipse by Mr. Lloyd George it was said of his departure from the House: "There goes the last English gentleman." And it was very nearly true.

The Church and Politics.

The Church—or, rather, the churchman—is providing the papers with some very good "copy" just now. Not that religious matters can claim yet to be treated on all fours with, say, a murder case, but there is no doubt that the sagacious (I had nearly written salacious) editors of certain daily journals believe that the discreetest or the emptiest words that fall from the mouths of eminent bishops can be used as manna to the starveling flocks.

A great to-do—that is to say, something that lasted well into the second day—was caused by the innocent remark of some divine that our age was declining into paganism. It was an innocent remark, because the speaker, although obviously aware that his true gods had been widely overthrown, was unaware of the tragic fact that no other gods have been found to replace them. A meeting face to face can be made between a Christian and a pagan, but the type of man and woman of the present against which the Bishop was railing has no counterpart except in the nonentities of all histories.

Again, the Dean of St. Paul's, who now provides almost as much copy as he produces, has been taken severely (to the length of two, sometimes even three, paragraphs) to task by the omniscient typewriter of the jejune Fleet Street hack for having had the audacity to break through the old lie that churchmen should be the keenest politicians. Briefly, Dean Inge's case is that the Church has nothing to do with politics. He believes that the fashionable attacks from the pulpit upon economic systems are, when they are not mere rhetoric, calculated only to bring the Church into disrepute; it was only the other day that he delivered, in his best satirical vein, a terrific attack upon C.O.P.E.C.—the organisation of the Churches which is seeking to impose a Christian interpretation of daily life upon this ungodly realm.

It is by no means because one is in agreement with the Dean of St. Paul's that one resents these attacks upon him; it is because they represent the very vagueness or hypocrisy that are the curses of or the substitute for modern social thought. It may well be that the Dean is wrong—one may think of the way in which the Church in England in the Middle Ages dominated politics and economics; but at least he believes what he says. The

present plaint is that it is the duty of someone else to supply us with beliefs.

The Dames of Labour.

Nothing is more remarkable about the Labour movement than the way in which its female supporters bandy charges. The latest one to throw down the glove to her erstwhile knight is Mrs. Philip Snowden, wife of the ex-Chancellor of the Exchequer. She has, according to the cables, just spoken of Mr. Ramsay MacDonald's direction of the Socialist Party as "the worst political leadership of modern times"—a description so obviously just and intimate that the reader irks at the brevity of the Canadian cable.

Not to be outdone, however, Miss Wilkinson, a Labour M.P., steps into the ex-Premier's breach and suggests that Mrs. Snowden deserves slapping.

Now all these things have what is called a "news-value," and therefore get extensively reported in the Press, although what they have to do with politics it is difficult to understand. The only comfort to be drawn from the incident is that if the Labour Party contains women on, so to speak, different sides, its unity is afar off indeed.

Socialism and the Stage.

It has, I believe, been a long-standing grievance with the Socialists that they could never obtain a theatre for Sunday use in which they might propagate their ideas. At last their wishes are to be fulfilled. Mr. Arthur Bourchier, whom everybody knows as an actor and a few as a recent convert to the Labour Party, has arranged to let Socialist messages sweeten the atmosphere of the Strand Theatre, Aldwych.

Naturally, the *Morning Post* is furious about it. It flies in a fine fury to the example of Moscow, which has, it is said, captured the theatre for Communist purposes, and lashes out the charge that dramatic art is, even in London, now to be used as a decoy to political proselytisation. This onslaught was, to say the least (and perhaps the most), very readable.

Whether anyone else worries about it I rather doubt. No one has ever felt safe about the politics of artistic people, who have generally been against the prevailing régime.

Relics of Byron.

It is to the scholar and the expert that the exhibition of Byron's manuscripts and first editions which the First Edition Club has prepared in its delightful premises at 6, Little Russell Street, W.C., will principally appeal, for the man who thinks of this show merely in terms of its monetary worth or of the degree of envy to which it would provoke American millionaires is not worth considering. The whole collection has been lent by two men, Mr. John Murray and Mr. T. J. Wise, and it is certainly an amazing one. There is, for instance, that reply to an imagined attack on his poems which Byron wrote for the *Grandmother's Review*—which not even the British Museum possesses; and there is the unpublished dedication to Don Juan.

Of course it is very gratifying that such a collection could not possibly be found in America, where, I believe, there are at least fifty First Edition Clubs. But it is an extremely lucky accident that Byron's works should have become so closely associated with one patriotic publishing family—the Murray's.

The Spencer Portraits.

In connection with this, it is impossible to put down as anything but hypocrisy most of the outcry which has been raised against Lord Spencer for his selling to America of Reynolds and Gainsborough portraits. After all, the world has accepted the monetary value as *the* value, and those who wish to live as the world does must conform to this value.

The philosophical will regard this latest transmission of works of art with continence and detachment. They will reflect that America, with all her wealth and ability to buy artists and works of art, has hardly yet produced a musician or a painter who will achieve or has achieved universal fame. There need be few tears at the apparent triumph of the acquisitive over the creative nation.

Sherwood Forest.

What respect the great railway companies of Britain really have for the beauty of the countryside—of which they are unceasingly talking in their advertisements, and whose allurements they lavishly commission eminent artists to paint—can be seen from the recent proposal of the L.M.S. to run a line right through the heart of Robin Hood's country. It is being proposed that, for the purposes of serving a new colliery now being sunk between Edwinstowe and Ollerton, a branch railway shall be made, involving the destruction of Beech Avenue, which, as some think, is the most notable and lovely of all England's woodlands.

Fortunately, the local Sherwood Foresters are determined not to tolerate this monstrous proposal. Even more fortunately, the new colliery is being served by a branch line of the L.N.E.R., which is already being built. But the battle is not won yet.

Overcrowded Museums.

The museums of this country are just now full of a complaint that they are not allowed to destroy useless matter, and that consequently the space at their disposal is approaching its limit. Obviously, in cases like those of the British Museum or the Natural History Museum of Kensington, the matter must become increasingly serious, and it is being suggested that the State should now decide to keep its treasures in houses capable of unlimited expansion.

It is not an easy problem, as anyone faced with the necessity of destruction knows. But when it is remembered that the space which the British Museum devotes to newspapers is increasing at the rate of much more than a hundred yards a year, it is patent that something severe must be done.

ALTER EGO.

Mrs. Rosita Forbes left India last week for Abyssinia.

The date of the opening of the International Geographical Congress, which is to be held in Cairo, has been fixed for April 1.

The League of Nations Mosul Boundary Commission arrived in Baghdad on January 16 from Damascus, and are proceeding to Mosul about January 26.

A Royal Decree issued in Cairo on January 18 postpones the first degree elections to February 2, the second degree to March 12, and the meeting of Parliament to March 23.

A Royal Air Force aeroplane crashed last Saturday near Ramleh, in Palestine. Three of the crew were seriously injured, and one is reported to have died since in the military hospital.

The 1st Battalion of the Hampshire Regiment left Cairo last week for India, and is being succeeded at the Cairo Citadel by the 1st Battalion of the Argyll and Sutherland Highlanders, from Ismailia.

Prominent Egyptian ladies are arranging to produce a feminist review, to be published in French and Arabic, and to be edited by a French lady. Efforts are also being made to form an Egyptian Ladies' Club.

According to the Syrian papers, movements are afoot, and are being encouraged by Ibn Saud, to secure the election of Shereef Ali Haidar as Shereef of Mecca and Caliph at the forthcoming Islamic Congress at Mecca.

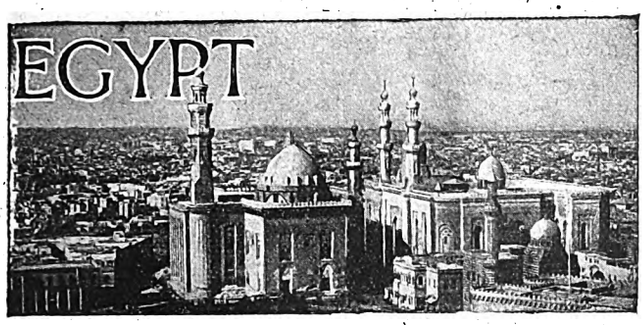
The Near and Middle East.*

From Our Own Correspondents.



Cairo, January 10.

Liberal Revelations.

The sensation of the week has been the revelation made by *Assyassa*, the Liberal Constitutional organ, of the overtures which it alleges were recently made by Zaghloul Pasha to the British authorities. The allegation was that Zaghloul Pasha on two occasions sent an emissary to the Residency proposing an agreement on lines acceptable to the British Government, on the understanding that the Ziwar Cabinet should be made to resign and be replaced by a Cabinet formed by the Wafd, but not necessarily presided over by Zaghloul Pasha.

No sooner were these revelations made public than an indignant denial was published by the Wafd and by the editor of its European organ, who confessed that he had made overtures, but entirely on his own responsibility. Those who remember the hubbub caused in Wafd circles last November by the publication of the *modus vivendi* by the same person will see a striking similarity between the two events, and there is not the slightest doubt—in fact, I am in a position to know—that the emissary on this, as on the previous occasion, acted with the full connivance and approval of Zaghloul Pasha and his colleagues. The truth is that, to quote a keen European student of Egyptian politics, the Wafd is so anxious to regain its old position that it would sell Egypt if thereby it could assure itself a return to power; and this would serve to explain the amazing lack of self-respect displayed by the Wafd in making these overtures in the face of the scathing criticism contained in the King's Speech.

Wafd Defections.

What is certainly disconcerting the Wafd is the defections which are taking place amongst the candidates whom it has nominated for elections. Since Saturday last, the final date for nominations, when the statistics showed that it had presented 207 candidates for 211 seats, no less than 20 of these candidates have declared that they no longer belong to the Wafdist Party, but intend to stand as Independents. To these can be added half a dozen Senators who have officially forsaken the Wafd fold.

The main reason given by these defecting members is the hostile attitude to the Throne adopted by Zaghloul Pasha and his associates; and such an unfavourable effect has this had on the general public that Zaghloul Pasha has felt himself compelled to issue a manifesto protesting his past and present loyalty towards the King and to make in the several speeches he has delivered to students and others copious references to his devotion to the Throne.

But his protestations are of little avail, for his own actions of recent date are too fresh in the public memory for the latter to swallow his assertion that he has never been, and never will be, hostile to the Palace. He has always been an anti-Royalist, a Republican at heart, and during the past few years Zaghloul Pasha's whole attitude has been one of studied antagonism towards King Fuad. It started with his endeavours in 1920, when in London, to persuade the British Government to agree to a change in Sovereign; it continued with his well-known aspirations to become the first President of the Egyptian Republic; and it ended but six weeks ago with the open challenge he directed at the King when he accused his entourage of intriguing against him, sent the mob to shout "Saad or revolution" below the windows of the Palace while he was within discussing the situation with his Sovereign, and withdrew his resignation with the announcement that he had gained a great constitutional victory.

To what extent all this will affect the elections it is difficult to foresee. It is certain, however, that Zaghloul Pasha has done neither himself nor his colleagues any good by the irresponsible declarations he has made. The threat which he uttered in the course of an interview that as soon as he got back to power he would arraign the present Ministers and their associates savours indeed of a mood which bodes no good, and, indeed, his whole attitude has been such as to confirm the feeling amongst all European communities that his return or that of his party to power would have disastrous consequences on the country.

The Death of Major Capper.

The death of Major Capper, of the European Department of the Ministry of the Interior, which occurred suddenly on Thursday, has aroused widespread regret. Belonging to a family which has gained distinction in the service of the Empire, Major Capper had himself had a most distinguished academic record before he came to Egypt on the outbreak of war as an officer in the East Lancs Division. It spoke eloquently of his grit and public spirit that at the age of 55, as he then was,

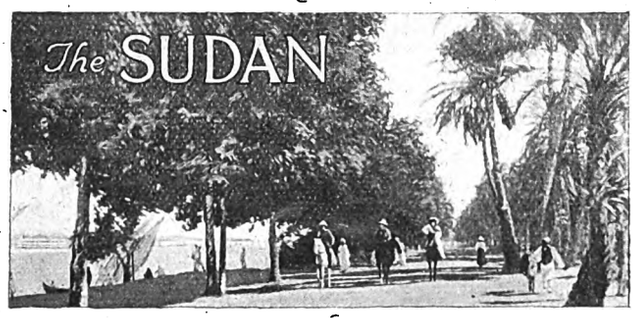
he should have volunteered for active service; and through all the subsequent ten years he spent in Egypt he displayed the same sterling qualities. He was soon drafted into the Intelligence Department, and his wide general knowledge and vast fund of common sense made him an invaluable asset in the Field Censor's Office, where he worked for several years. Three years ago, when the European Department of the Ministry of the Interior was formed, he was transferred to it, doing there work of which his chiefs speak in the highest of terms.

The unsatisfactory nature of the censorship in Egypt during the War has become a by-word, but Capper had no hand in the foolish things done by that régime. On the contrary, he was painfully aware of its shortcomings, and did his best to smooth matters. Indeed, those of us who in those troublous times had daily, almost hourly intercourse with that Section of Intelligence, preserve the happiest recollections of the genial personality whose kindly and cheerful disposition did more than anything else to lighten the troubles which the rules of the censorship set up for us in the accomplishment of our duty towards our principals.

Stewart Henbest Capper was such a modest character that few who met him for the first time had any inkling of the fact that in his own walk of life he was a distinguished man. But no one, after conversing with him for a while, could fail to be struck by his unusual qualifications, his high culture, keen intellect, and strong sense of humour.



Khartoum, January 7.

Political Prospects.

At the moment it may be said that the political horizon appears fairly clear and that the country can, with reason, look forward to a much brighter and more peaceful epoch. At the same time, it would be ridiculous to believe that the bursting of the bubble last November has entirely eliminated the possibility of a recurrence of political agitation and intrigue by Egyptian extremists in the Sudan. No one believes for a moment that the punishment meted out to the Egyptian nation by the British Government for the murder of Sir Lee Stack will be accepted with complacence, and it must be anticipated that if anti-British activities are commenced by any section of Egypt's population, such activity will surely revolve round the Sudan question.

Already emissaries of the Egyptian extremist party are said to be attempting to enter the Sudan with the object of fostering trouble and strife. These persons have, according to report, discarded the tarbush and the immaculate European dress, and are representatives of the Egyptian artisan class—painters, carpenters, and such like—with flowing gallabieh and fellahin headdress. With such clothes and a little above the average brain they can effect an entrance into the Sudan without difficulty, and can spread throughout the whole of the Northern Sudan without any immediate fear of arrest. Should such prove to be the case, a certain measure of success will obviously attend their efforts in the dissemination of propaganda. Many of the older generation of natives, who still suffer from a lack of initiative, a strong and inherited objection to work, intolerance of control, and an intense conservatism which is the natural legacy of slave owners, are really unappreciative of the Government's attitude towards them, and any anti-Administration propagandists with wily tongue will, with these people, find sympathetic and even eager listeners.

The Sudanese and Britain.

With the better class and more enlightened sections of the inhabitants the existing arrangements between England and Egypt present an anomaly they cannot comprehend. The two nations represent a control which is both good and bad. These sections of the people recognise the soundness of the British Administration, and that it is doing its very utmost to develop and safeguard the Sudanese nation. On the other hand, they know full well the type of Government the Egyptian nation represents, a knowledge based on past experience, when slavery was not only countenanced, but encouraged, and maladministration and exploitation of the inhabitants were general. They recognise that Egypt, subsequent to the reoccupation, is only a sleeping partner in the condominium, and takes no place in the actual administration of the country. They also recognise that this so-called partner has been endeavouring to undermine the present Government, to destroy law and order, and in attempting to gain this end has been responsible for the deaths of both British and Sudanese. Yet withal the Egyptian flag is permitted to fly from the mastbead on all Government buildings with the British. This is entirely beyond their apprehension.

The Story of Sedition.

It is understood that the authorities are gradually gathering together such evidence as will eventually provide a connected story of events dating from the visit of one of the Nationalist leaders, Mohammed Ramadan, to the Sudan early last year. The story will embrace the whole series of disturbances, the murder of Sir Lee Stack, and the mutiny of the 11th Battalion Sudanese—up to the present day. It will prove beyond all doubt that the Egyptian Nationalist or Extremist Party was entirely responsible for the whole trouble, and it is hoped that the publication of this official report will

result in the hauling down of the Egyptian flag in the Sudan for ever.

Trial of Prisoners.

The trial commenced yesterday of some 72 prisoners. It is being held within the Central Prison at Khartoum North instead of the Mudir's Court in Khartoum. This procedure has been considered by the authorities as the best course to adopt, because, had these prisoners been marched through the city, their numbers and shouting would probably have resulted in demonstrations. This trial constitutes one of the largest ever held in the Sudan, and has naturally created considerable excitement. Among the prisoners are all those Sudanese and Egyptians arrested during the August and September demonstrations and those arrested as being members or influential abettors of the White Flag Society. The balance are those cadets of the Military School, already convicted, who mutinied inside the prison during the period of the evacuation of Egyptian units. These young men destroyed everything in the prison compound that was possible of destruction, and they refused to obey any order whatsoever from the prison authorities. No corrective action was taken at the time, presumably because it was thought that any measure taken to quell the mutiny would be the signal for the Egyptians to come forward and rescue their "brethren" from the clutches of the "overbearing British." Following the departure of these troops, however, British forces were drafted to the prison, and the prisoners quickly rounded up and placed in chains.

Although the trial is being held inside the prison building, where, naturally, the public is forbidden entrance, the proceedings are to be given full publicity, and with this object the local Press, both English and Arabic, has been invited to attend the trial. The proceedings are expected to last at least one week.

Arrival of Sir Geoffrey Archer.

The new Governor-General of the Sudan, Sir Geoffrey Archer, accompanied by Lady Archer, arrived at Khartoum on January 5. He had travelled direct from Entebbe *via* Rejaf and the Nile. Owing to slight delays on the river his arrival was retarded for twenty-four hours. At 9 a.m. on Monday the steamer drew level to the Palace, and His Excellency stepped ashore, where he was greeted by the Acting Governor-General, Sir Wasey Sterry. On reaching the top of the steps, where a guard of honour composed of Sudanese troops were paraded, the National Anthem was played and a salute of seventeen guns fired. Sir Geoffrey, after inspecting the troops, passed through the Palace building and across the Terrace Garden, on the steps of which he took the salute whilst the National Anthem was again rendered. He then proceeded to the marquee, where he received the various senior officials of the Government, senior officers of the British Army, and the leading members of the commercial community. With the reception concluded he retired to the Palace and the various residents dispersed. The Governor-General wore the Colonial Office uniform.

ROUMANIA.

Bucharest, January 12.

The People's National Party.

M. Argetoianu, former Minister of Finance, and later Minister of the Interior, one of the most profound connoisseurs of the public finances and political life of this country, and the soul of the People's National Party, of which M. Iorga is the leader, has been good enough to express for THE NEAR EAST some of his opinions, which show in a new light the situation of the Liberal Party in Roumania.

Its Attitude Towards the Liberals.

Political life in this country, says M. Argetoianu, is represented by two great camps—on the one hand the Liberal Party and on the other hand all the other parties; and this has always been so. Properly speaking, according to M. Argetoianu, the Liberal Party is to be regarded rather as a group constituted with a view to important commercial enterprises, which, while they are of interest, by their development, to the country as a whole, create and maintain a very special link between the members of the party. The large banking enterprises and industrial and commercial companies, which are such powerful weapons in their hands, are at the same time the basis of their recognised (solidarity). It is, to use M. Argetoianu's expression, *une solidarité de caisse*.

The Liberals, then, "do business," while the other parties "make politics"—that is the difference.

As a matter of fact, the Liberal Party has always come to power with an economic programme as the basis of its activities. Until three years ago, says M. Argetoianu, the Liberals had sound ideas and a right conception of the most telling modes of action, and Roumania owes to them a great deal of her prosperity.

To-day, however, the Liberal programme has failed, and the fault, he thinks, lies with the Minister of Finance, M. Vintila Bratianu. It would, indeed, appear to be true that the plan of M. Vintila Bratianu, although carried out by him with a perseverance worthy of all praise, has not been the right one—that is to say, it has not met the very special needs of the after-War period.

M. Argetoianu points out the large place occupied in the pre-War programme of the Liberals by the sound ideas of M. Carada, the carrying out of which was always crowned with success. The death of M. Carada deprived the Liberals of the well of wisdom from which they had always drawn their strength in economic matters, and his was, therefore, a much-felt loss.

M. Argetoianu does not consider that the Liberal Party can endure much longer after its redoubt-

Digitized by Google

able experiences during the last three years, and he predicts its fall—as far as it is possible to foresee such events, especially in Roumania—at the latest during next spring.

Foreign Capital.

It is interesting to note that M. Argetoianu has extremely broad ideas in regard to the collaboration of foreign capital in Roumanian enterprises. He favours an extensive collaboration, both for the realisation of the reform of the currency, which is necessary to the stabilisation of the leu, and for the alimentation of private industries and the exploitation of the immense natural riches of the country.

The investment of capital in Roumania might undoubtedly be of the greatest interest to those countries which at the present time possess the necessary reserves for the financing of commercial enterprises that offer some guarantees, for Roumania is a new ground, fertile and favourable to profitable operations both commercial and industrial. In the programmes of all the Opposition groups an important place is given to the introduction of foreign capital, and that is, indeed, one of the most noticeable; if not, indeed, *the* most outstanding point of difference between the Liberal Party and the others, for the well-known motto of the former is "By ourselves." It would appear, however, that this line of conduct does not correspond to post-War needs. Indeed, M. Vintila Bratianu has recently gone to Paris, and intends to go on to London, and one of the objects of his visits is, contrary to his professed doctrine, to try to raise a loan for the reconstruction of the railways. The result of his visits is awaited with interest, for, in case of a successful issue, an improvement might take place in the situation of the Liberal Party, and perhaps even some change in their political economic attitude, which would tend to keep them in power.

General News.

The Parliament, being still in vacation, provides no subject for comment at the moment.

The annual Christmas celebrations of the Orthodox Church took place, as is customary, amidst popular rejoicings, and the citizens of Bucharest are now resting after their efforts.

The various Opposition parties, however, appear to be manifesting a return to activity; indeed, the situation of the Liberals is becoming more and more difficult, according to the general opinion, and this may account for the feverishness which seems to prevail in political circles. Unfortunately, no formula has yet been found which would allow of the union, however precarious, of the Opposition parties which remain hostile to each other, and if one may judge from a recent public manifesto in the Press the Peasants' Party has even renounced for the moment its attempts at an agreement with the National Party.

Jerusalem, January 3.

The Hebrew University.

The "Opening of the Hebrew University" just before Christmas was an extremely modest affair. Actually it was not an "opening of the Hebrew University" at all, but only the public inauguration of lectures organised by the "Institute of Jewish Studies" affiliated to the Hebrew University. The "Hebrew University," in the full sense conveyed by the term "university," is still only a scheme in the making. Very many years must elapse before the building on Mount Scopus houses sufficient faculties, professors, and undergraduates to show anything remotely resembling a university in the accepted sense. But in this, as in so many other things Palestinian, faith is accepted as a temporary substitute for fact. What, for the time being, this "Institute of Jewish Studies" is undertaking is simply three courses of free popular lectures on the Biblical text, Palestinian topography, and Talmud introduction. Perhaps the best parallel is to be found in the "Workers' Educational Association" run by university professors in England.

The Arab Parties.

No tangible progress seems to have been made in the Palestinian Arab camp. Some weeks ago the Arab Executive was confident that the National Party and Peasant Parties were on the verge of coming to such terms as would enable all to take part in a United Arab Congress. The weeks have gone by, and though amicable exchanges of opinion have been conducted between the Arab Executive and nominees of the National Party, no common working basis seems to have been reached; the National Party is not averse from the congress idea—but it would take part in such a congress only in a party capacity, and in order to press its own party programme—that of partial compromise and co-operation with the Government. The Peasant Parties are purely territorial, mainly concerned with making the best of things as they are, and they ignore or denounce the political schemes of their brother Arabs. The following document, published in the local Press as an open letter to the High Commissioner from the Nablus Peasant Party, may help to illustrate a portion of local Arab opinion. But how widely backed this opinion is it is quite impossible to say—and the same applies equally to the published views of the other Arab parties.

"Everybody in the country knows that the Arab Executive of the Moslem-Christian Association is not the representative of the Arab people living in Palestine, but is only the representative of a small group of the population, and that all the efforts of the Moslem-Christian Association and its Arab Executive to bring together the people to take part

Digitized by Google

in the seventh Arab Congress have been in vain, owing to the lack of public confidence in these men. In spite of this, the Government recognises this Arab Executive as the representative of the Arabs, and treats it seriously as such.

"This is the business of the Government; it is doubtless moved by its own reasons.

"But we, the representatives of the fellahin, 80 per cent. of the total population of the country, do not recognise them as our representatives any more than we recognise this party which would provoke the population to extremism. Were it not for the position which they have assumed as representatives of the people in the face of the civilised world, and as leaders of the people, we should not have reached the depths to which we have descended; they are only interested in their own welfare, and the consequence of their self-assumed position of representatives is a lowered estimate of the worth of the Arabs of this land in the eyes of the entire civilised world and of the mandatory Power—as is proved by the notorious Memorandum of the Arab Executive and the Government's reply to it.

"This correspondence has filled us with feelings of sorrow and shame when we consider that the members of the Mandates Committee have seen the kind of chosen representatives of our country who make use of untrue facts; and the impression which this memorandum has made on the League of Nations is one that brings upon us, the inhabitants of this country, shame and contempt—if, in truth, they have taken these men seriously as the chosen representatives of the country.

"Therefore we appeal to Your Excellency to take notice that we, the delegates of the Fellahin, do not recognise the work of this Arab Executive in any matter or question that may arise, and we express our strong wish to work together with the Palestinian Government and with all communities and religions of the population for the general good of all who live in our country, so as to improve the condition, morally and materially, of the Fellahin, and to secure for them the necessary peace and tranquillity."

PERSIA.

Teheran, December 16.

The Situation in the South.

As anticipated in my last letter, the Sheikh of Mohammerah has eventually had to submit unconditionally to Sardar Sepah, although he was at first very little disposed to do this immediately on receipt of the Prime Minister's curt reply to his first telegram. Wiser counsels, however, prevailed, and the Sheikh was made to see the futility of any further resistance to the Central Government.

Sardar Sepah waited a few days in Shiraz for a reply to his wire demanding complete submission. Then, none being forthcoming, he left that place for Bushire, where, after inspecting the troops, he embarked and proceeded to the port of Bunder Dilam, some 100 miles further up the coast, going from there to Army Headquarters at Behbehan, and arriving at the front on November 28. From here he sent a *communiqué* to the Military Governor of Teheran advising his arrival and receipt of a further telegram from Sheikh Khazal apologising for the delay in replying to the Prime Minister, and reiterating his submission, and renewing his plea for pardon. The latter replied to this that he must come personally to meet him at headquarters, and this elicited a reply from Sheikh Khazal, couched in the meekest terms, stating his willingness to meet Sardar Sepah as soon as possible, but pleading illness as an excuse for not proceeding the whole way, and stating that he is sending one of his sons to accompany the Prime Minister from headquarters. The latter agreeing, he was met as arranged, and Sardar Sepah entered Ahwaz on December 5. Here, according to the official *communiqué*, he was received with much enthusiasm, and was accorded a great ovation from the inhabitants of the town, which was decorated for the occasion. Here he was met by the Sheikh and one of the Bakhtiari Chiefs, Morteza Kuli Khan (son of the old head of the tribe, Samsam es Saltaneh), who had thrown in his lot with him, and, in the picturesque wording of the Prime Minister's telegram announcing the fact, "begging for safety from me, they succeeded in obtaining it." This final act of submission over, Sardar Sepah left Ahwaz for a tour of inspection of the oilfields of the Anglo-Persian Oil Company at Maidan-i-Naftun and Masjid-i-Suleiman, and, this accomplished, he returned to Ahwaz on December 15. In his wire from this place he states that, thanks to God, he now considers the question of Arabistan to be settled, and that until such time as order and tranquillity are generally restored, the expeditionary forces will remain, and that he has appointed General Fazlollah Khan Governor-General of the province, with power to appoint local military Governors and also tribal Governors. He concludes by saying that, his mission in that part of the country being concluded happily and order being restored, he would leave for Teheran on December 17 by way of Mesopotamia, so as to give him an opportunity of fulfilling his long-cherished wish of visiting the holy city of Kerbela, spending only a week in a tour of the sacred shrines, and adding that his journey through these parts would naturally be purely unofficial.

Thus Sardar Sepah (who, throughout this campaign, it must be remembered, has been acting as Commander-in-Chief and Minister in War, in addition to his position as head of the Government) has brought to a satisfactory conclusion a situation in the South which has for months past been most disquieting, affecting as it has in no small degree British interests, in view of the considerable amount of capital invested by the British Government and private individuals in the Anglo-Persian oilfields and the danger of the pipe-line being cut and other damages inflicted on property and machinery in the event of serious hostilities. It is but another instance of the ability of Persia's "strong man" to cope with internal disorders, thanks to the efficient armed force which he has been instrumental in creating, and great praise is due to Sardar Sepah for his strong action throughout and his personal direction of affairs on the scene. All is over now except the shouting, and of this there will undoubtedly be plenty when the Prime Minister returns to Teheran, for I understand he is going to be given a great reception on his return, and his welcome will be well merited.

Air Service to Russia.

Aeroplanes, which, before the advent of the British Army in Persia during the War, were practically unknown and unthought of in this country, are nowadays a quite common sight in the sky, and latterly the German Junkers Company, who have now a good number of planes here, have frequently been treating the inhabitants of the

Digitized by Google

town to a series of flights and stunts which never fail to attract attention. I am told (though I cannot vouch for the accuracy of the statement) that one of the last monoplanes to arrive from Enzeli carried two Persian ladies as passengers. This is indeed a strange innovation, and indicative of the rapid change coming over the hitherto supposed immutable East! The Junkers Company's latest venture is the inauguration of an air service for passengers between Persia and Russia, and the first aeroplane in this connection left Teheran this morning for Baku, stopping at Enzeli (the Caspian port) to set down passengers, and continuing after a brief interval. The journey to Enzeli by air is advertised as taking 2½ hours, whereas by car it takes two days on the average, and by this air service a passenger can be in Baku the same day as leaving Teheran, in comparison with the shortest time of three or four days hitherto. The cost, too, is unlike that in most countries, considerably less than by car or carriage in a country which boasts no railways, and Persia is, therefore, in the rather unique position of having an aerial service before a railway system! The Junkers Company state in their notice that they hope shortly to extend this air service to Moscow on the one side and across the interior of Persia on the other, via Ispahan due south to Bushire, thus connecting the Persian Gulf with the capital in a day or two, which, at the present time, even with the motor transport on the road, takes over a fortnight. This service, if brought into execution, will eventually bring India (five or six days by steamer to Bushire) within much quicker communication with Persia, and mails carried by aeroplane thence to Teheran should reach the latter place within little over a week, whereas by the present route via Basra, Baghdad, they usually take little less than a month. The air-mail service to Baku and Moscow (which I understand is contemplated in the near future) will likewise bring England into much closer touch with Persia, and should reduce the present time for postage from the average 17 or 18 days to something averaging the pre-War time of 10 days.

General News.

The British Minister, Sir Percy Loraine, who went home on leave last spring, arrived here last Monday afternoon, Mr. Ovey, who acted as Chargé d'Affaires during his absence, having left here some two weeks ago.

The Imperial Bank of Persia have put into circulation a new issue of bank notes, and these are a welcome change from the old notes, which have been in circulation for the past thirty years.

The Persian Government have recently added to their fleet in the Persian Gulf, which at present consists of an antiquated gunboat, a more modern vessel, the "Pehlevi," which they have had built in Germany, the armament being added and the ship completed in Italy. It was reported to have arrived at Bushire a week or two ago, but this is apparently not the case. It has not yet reached that port, though it is expected shortly.

OBITUARY.

The death of Mr. John Ross, at Alexandria, removes a figure very well known in Anglo-Egyptian circles. He played a prominent part in helping the British when Alexandria was bombarded in 1882, and was officially thanked by the authorities.

The death occurred in Cairo on January 18 of General Sir Ibrahim Fathy Pasha, who was associated with Lord Kitchener in the Sudan Wars. He was Minister of War in the Sarwat Cabinet in 1922 and Minister of Pious Foundations in the Rushdi Cabinet from 1917 to 1919.

Brigadier-General William Hugh Wooldridge, C.M.G., late Indian Army, died suddenly on January 10, at the age of 56. He was commissioned in the Berkshire Regiment, and transferred to the 126th Baluchistan Infantry. He served in East Africa in 1895-6, and in Kurdistan in 1918-19.

The death has occurred of Sir Thomas Jewell Bennett, chief proprietor of the *Times of India*, and formerly M.P. for Sevenoaks, at the age of 72. It was in 1884 that he began his long and honourable connection with India. Under his guidance the *Times of India* became markedly prosperous, and later, in the House of Commons, his influence was of considerable value when Indian affairs were being discussed.

The death of Mme. Palli, one of the oldest British residents in Athens, occurred there last week. She was the eldest daughter of Sir Walter Wyndham Burrell, fifth baronet, of Knepp Castle, Sussex, and aunt of the present baronet. She was very well known in Athenian Society. Her marriage to Philip Alexander Palli, eldest son of Professor Alexis Palli, of the University, Athens, took place in 1881, and she was left a widow in 1892.

Mrs. Elizabeth Sarah Hagopian, who died recently at Fulham, at the age of 78, was for twenty-five years an active member of the Executive Committee of the Women's Armenian Relief Fund, organised by the late Mrs. Madeleine Cole. At the funeral service at St. Augustine's, Fulham, on January 12, the Armenian Community of London and the Armenian United Societies were represented, and special prayers were offered in Armenian.

The death is announced of Dr. Casartelli, Bishop of Salford. In addition to his ecclesiastical distinction Dr. Casartelli was an eminent Orientalist. He first seriously studied the Orient at Louvain, under Professor Charles de Horlez. In 1884 he published a dissertation, in French, on Zoroastrianism from the third to the seventh century of the Christian era. Subsequently he contributed many studies of Oriental questions to various learned journals, and at one time he was co-director of the *Babylonian and Oriental Record*. On the death of de Harlez, Dr. Casartelli succeeded him, and for five years lectured at Louvain on Zend and Pehlevi. In 1903 he lectured to Manchester University on Iranian languages. He also was a profound student of Sanskrit, Hebrew, Syriac, Arabic, and other Semitic languages. Recently he had accepted the new Katrak lectureship at Oxford University, and was to have delivered there a first series of lectures during this month.

THURSDAY, JANUARY 22, 1925.

EGYPT'S PURGE.

In the course of conversation with a foreign correspondent, Ismail Pasha Sidky, the vigorous Minister of the Interior in Ziwar-Pasha's Cabinet, is reported to have stated that the British have nothing to do with the present struggle in Egypt, "which does not concern the cause of independence, but is simply a struggle between the forces of order and discipline on the one side and agitation on the other." It is well that this point should be appreciated, both in Egypt and elsewhere. Whenever, during recent years, an Egyptian politician has come forward to attempt to get on with the practical work of administering the country, he has been denounced by the Zaghloulists as being in the pocket of the British Government, and has been afforded little chance of proving himself a level-headed, patriotic Egyptian. Not until Zaghloul Pasha had clearly shown that his tactics were endangering the measure of independence that Egypt had already secured, and Ziwar Pasha stepped into the breach, has any considerable section of Egyptian public opinion stopped to think out the logical consequences of Zaghloulism. The murder of Sir Lee Stack, however, was so outrageous a crime, and the British ultimatum showed up the inherent weakness of Egypt's case, that the utter folly of continuing to adopt Zaghloulist tactics appealed at once to any really patriotic Egyptian capable of dispassionate thinking. There was no need for his view of the country's aims to differ from that of Zaghloul Pasha's; it was solely a question of the methods to be adopted in order to attain them—whether Egypt should try to make practical progress, or whether she should continue to run her head up against a brick wall. Thus there has been no official repudiation by any anti-Zaghloulist organisation of the Egyptian claim for the independence of Egypt and the Sudan (whatever the contradiction in terms that expression, as used, may entail); but definite steps have been taken to purge Egypt's administration of abuses introduced by Zaghloul Pasha, which must ultimately have brought the country once more to the *impasse* which led to foreign intervention under the Khedive Ismail.

There is nothing to warrant the supposition that Ziwar Pasha's purge has been undertaken at British bidding. It has dealt primarily with matters of personal concern to Egyptians—among others, the honesty and freedom of elections. In this connection a circular addressed by the present Government to provincial Governors is particularly eloquent, as it lifts the veil on a state of affairs initiated and encouraged by Zaghloul Pasha during the first days of Egypt's independence. At the last elections it would appear that electors were forced by means of an oath on the Koran, or by some other means of coercion, to vote for Government candidates; threatening letters were sent to them to the same end; electoral campaigns degenerated into mere mob demonstrations, headed by banners and music, and attracting boys and riff-raff, which proved detrimental to public security. There were much chicanery and falsification in electioneering literature, and newspapers were terrorised into publishing anonymous contributions. Finally, the elections were largely in the hands of students, who proceeded in bands from place to place, organising meetings and terrorising the unsophisticated electors. Ziwar Pasha's Government has decreed that in future students and schoolboys are to mind their own business. The courage entailed in this step can be gauged from the fact that under the Zaghloulist régime it was open to any group of students to organise a demonstration with the help of a Cairo mob, and virtually to force Zaghloul Pasha—still more so his subordinates—to do their will. Little wonder that Egyptians themselves have been found to denounce a régime that was making a farce of government and bringing the country into disrepute.

It follows, therefore, that even if the Ziwar Ministry is defeated at the coming elections, it will have made its contribution to progress by having couched its lance in the cause of good government in Egypt. There is a tendency in certain British quarters to view the whole outlook pessimistically, because no political party can be found to dissociate itself from the extravagant demand for the incorporation of the Sudan in Egypt, and because there is still a possibility of the Zaghloulists being returned to power. In the latter event there is no need to cater for trouble until Zaghloul Pasha makes it. The secessions from his party have been so numerous and important that he may find himself too occupied in holding his own in Egyptian politics to have much time for a further exhibition of foolhardy intransigence towards Great Britain. The last elections had left his political opponents negligible numerically; they are hardly likely to remain that in the next Parliament. Moreover, they will be able to command, unless the ballot works havoc in the anti-Zaghloulist ranks, a marked intellectual superiority. Great Britain's course is clear. She has been obliged to lay down certain rules for further negotiations with Egypt; if an Egyptian Government cares to negotiate on those terms, the whole situation can be reviewed dispassionately and a fresh advance in rounding off Egyptian independence can be made. If Egypt prefers, by placing Zaghloul Pasha again in power, to make further negotiations impossible, Great Britain will have to wait until the leaven already introduced by the Ziwar Ministry has had opportunity to influence a larger section of the Egyptian people.

RECENT EVENTS IN ALBANIA.

(FROM A CORRESPONDENT IN ITALY.)

A counter-revolution in Albania during the last days of 1924 has resulted in the overthrow of the Government of Monsignor Fan Noli and the re-establishment in power of Ahmed Bey Zogu, victim of the revolution which took place last spring.

The ugly feature in Ahmed Zogu's success lies in the fact that the whole of the preparations for his counter-stroke were organised across the frontier in Yugoslavia. In Albania itself Fan Noli's Government had every appearance of a fair stability; and no doubt can be entertained whatever that had Albania been an island, Ahmed Zogu would never have had the smallest chance of returning to power.

The Yugoslav Government has categorically denied any overt participation in Zogu's preparations. Unfortunately, however, he was able to collect and to organise a large body of men within Yugoslav territory, to equip and arm them with rifles, machine-guns, several batteries of mountain guns, and abundant supplies of ammunition, and to attack Albania from three points across the frontier. It is true that in the mountainous regions of Kossovo the task of surveillance by the Yugoslav authorities is not an easy one. The inhabitants are mainly Albanians, and they are tribally organised and well armed with rifles, if not with guns. The general conditions of the district, as in Macedonia, can hardly be regarded as either civilised or peaceful. *Komitajis* continue to form and disband themselves beyond the regular control of the Yugoslav military forces. Certain features, however, besides the suspicious presence of machine-guns and guns in Ahmed's train, are difficult to account for on these premises alone.

The main attack started from Dibra, a garrisoned township in Yugoslav territory. Dibra is connected by a good road with Struma and Ochrida to the South and with Gostivar to the East. When the Conference of Ambassadors decided to allot Dibra to Yugoslavia, the main reason given (in spite of the injustice inflicted on the Albanian countryside in depriving it of the only natural market in this district) was that this road, connecting two important frontier posts in Yugoslavia should be left entirely in the latter's hands, in order to enable the Yugoslav military forces to keep order in this turbulent district, and to prevent incursions in and out of Albanian territory. But apparently the Yugoslav military forces have made no attempt to carry out this primary duty.

Moreover, during the first two days of the fighting, a field gun was actually in action from a point close to Dibra, firing across the frontier. Lastly, among Ahmed's forces a considerable number of non-Albanian volunteers were enrolled. The reports that many of these were Serbians, ex-officers and men of the Serbian army, must be regarded as untrue. It is more probable that they were composed of adventurers drawn mainly from the ranks of Russian refugees. The fact remains that among the shouts that welcomed Ahmed back to his capital were mingled the "Giva, Giva" of quite 300 Slavonic throats.

Monsignor Fan Noli, M. Gurakuqi, late Minister of Finance, together with all the chiefs of their party, have taken refuge in Italy. Monsignor Fan Noli had not shown himself a strong Prime Minister. Personal intrigue, which dominates Albanian politics, can only be held at bay by strong leadership, and in this Fan Noli must be held to have failed. His administration effected some notable economies, and gained some diplomatic successes, though he probably made a serious mistake in recognising the Soviet Republics; for he thus forged a handle for his enemies to wield. But no adequate steps were taken by him to ward off the gathering storm across the frontier. The Army was left after the spring revolution practically without any supplies of ammunition, and only at the last moment were any attempts made to remedy this defect by entering into negotiations with Italian firms for a considerable supply. The export of ammunition from Italy is free, provided certain formalities are adhered to, but the negotiations took a long time, as the Italian Government was unwilling to grant any special facilities in order that no one could say that it had departed in any way from its strict attitude of neutrality. Meantime matters in Albania came to a head.

The first attack was from the north-east. It was beaten back, chiefly by the aid of the old guerilla chief Bairam Tsuri. The attack in the south was little more than a feint. The main attack followed in the centre, and proved overwhelming. Ahmed is a good condottiero, and the Government troops were soon left with scarcely a cartridge to their credit. The loss of life was consequently inconsiderable. It is conceivable the situation might have been saved had the Central Government shown itself capable of taking decisions. Shefqet Korcha, the energetic Commander of the Gendarmerie, was the only man who might have saved the situation—but only when it was too late was he given the command, personal jealousies having intervened to prevent his appointment earlier.

So the curtain has been rung down on the second act of the Albanian revolutionary drama. The third act is likely to be no less dramatic; and one sincerely hopes it will prove the last. It is not probable that Ahmed Bey will be able to maintain himself for long. The former Prime Minister, Elias Bey Vrioni, who was associated with Ahmed before the spring revolution, and is no friend of Fan Noli, has refused to return to Albania with Ahmed and accept a post in his Cabinet. Elias's great virtue is his disinterested patriotism, and his action, therefore, is not without meaning. Ahmed lacks too much the confidence of the country at large, and he has no administrative gifts. Sooner or later we are likely to see his second eclipse. Even so, it is improbable that Monsignor Fan Noli will again be his successor. A stronger man is wanted, who is at the same time no less patriotic. Such Albanians do exist, and undoubtedly other opportunities will occur for such men to come forward before many months have passed.

To conclude. The triumph of Ahmed has been regarded in some circles as a set-back in certain respects for Italian diplomacy. This view is unwarranted, for Italy can boast of clean hands and of having stood loyally to her bargain, without the necessity of making this an excuse for any loss of prestige. Italy regards Albania with a certain amount of diffidence. She is doubtful whether the experiment of an independent Albania can succeed. But as long as it is not a proven failure Mussolini's Government wishes to remain aloof. Only the event of a real threat to Albanian independence would justify her departing from a strictly neutral attitude as between the various Albanian factions, even if one of them happens to rely on Yugoslav support. But if Albanian independence were really threatened, there is no shadow of doubt that Mussolini would act with the utmost energy. Meanwhile, he is not going to permit questions of a secondary import to disturb the good relations existing between his Government and that of M. Pashitch.

TURKEY TO-DAY.

"Turkey To-day" was the subject of an address given before the Central Asian Society at the Royal United Service Institution on January 16 by Lieutenant-Colonel J. H. M. Cornwall. The lecturer, who was introduced by Lord Peel, had had considerable experience of Turkey, for he not only commanded the British forces at Chanak, but had, since the Mudania Conference, made extensive journeys throughout Anatolia.

Colonel Cornwall began by sketching in the background of Turkey as it is to-day. The exchange of populations had created a difference in Turkey, which was hardly realised yet in this country. The Anatolian Greeks (who, incidentally, had little real connection with the Hellenes) had, before 1923, practically the whole of Turkey's internal running in their hands; they were merchants, cobblers, shopkeepers, carpenters, blacksmiths. Now all was different. You could not get a pair of boots repaired in Turkey at the present time—the lecturer had tried. These million of people whom Turkey had sent to Greece were her loss and Greece's gain; and it was a fact worth remembering, in anticipating the future shaping of events in the Near East, that whereas Turkey's population—now about 8,000,000—was declining, the Greeks already numbered 6,500,000. In speaking of the inevitable hardships in connection with the exchange of populations, which he had personally witnessed, Colonel Cornwall did not put down the sufferings of the Greeks to Turkish ill-will, but rather to apathy and to lack of organisation. Their own incoming Moslem brothers had been treated just as badly, and the case was on all fours with the treatment during the War of British prisoners.

The measures that the Turks had taken to realise their ideals—with which, by the way, the lecturer had considerable sympathy—were, without question, ruining the country. The Turks' dog-in-the-manger attitude really amounted to: "Even if we can't develop the country, we will not let anyone else do so." They would like to trade with the British, but feared our political influence. At the moment things were favourable to Germany, which obviously could exert no political influence. The interior of Anatolia was a desert. Thrace, whose pre-War population of 650,000 farmers was now decreased to 200,000, was rapidly declining. Communications were falling into decay; roads had become so bad that he recently had to make a journey from Constantinople to a town in N.E. Thrace by sea in a Turkish vessel! Railways built in the War were falling to pieces, and even the roads in Anatolia, which were built either by Germans or by Greeks, were now breaking up. Everywhere was evidence, in fact, of the essential incompetence of the Turk.

Colonel Cornwall then described a journey which he undertook in 1924 through Anatolia in company with his wife. This he illustrated with excellent lantern slides. He showed, notably, buildings in Konieh, Hittite monuments, the Troglodyte remains in Cappadocia, and the Cilician Gates, through which every army passing westwards had come from time immemorial. He paid a striking tribute to the fact of internal security, even in the heart of Anatolia. This he attributed to the excellence of the gendarmerie, who had achieved what had not been possible in the pre-Mustapha Kemal régime—the abolition of brigandage. He explained the efficiency of the gendarmerie of the country as compared with the police of the towns as being at least partly due to the fact that it had, when in Constantinople, been trained by British officers.

Turning to Angora, he pictured this as a mere village town of 30,000 inhabitants, and completely lacking in amenities. To its strategical position he paid, however, great testimony, and demonstrated it with lantern slides. The lands beneath it were malarial, and the breed of the famous Angora goat had been considerably diminished by the activities of the Greeks in the campaigns of 1921 and 1922. In Angora the Germans were extremely busy, and if they were allowed a free hand the capital might one day become a considerable city. The intention was to build roads and railways radiating from Angora in all directions.

In conclusion, Colonel Cornwall deprecated optimism in regard to the new Turkey. There were undoubtedly a few—but only a few—very charming Turks, and the peasant was always a decent fellow; but the practice of being imposed upon by the enthusiasm of these, which was extensively indulged in by journalists and propagandists (particularly ladies), was absurd. A wider experience of the country forbade extravagant hopes. He doubted whether the Ethiopian could ever change his spots; and whenever he met anyone talking of the arising of a new heaven and a new earth on the shores of the Bosphorus, he invariably thought of an old Turkish proverb, which he explained as meaning: "It's the same old bath and the same old bath bowl."

In the subsequent discussion Colonel Stokes expressed the view that Colonel Cornwall had been a little hard on the modern Turk. After all, he had been fighting continuously since 1911, and mistakes were inevitable. For our part, we had done little enough to encourage him, although it was cryingly obvious that the safety of our Indian Empire depended on the friendship of Turkey, Persia, and Afghanistan. The anti-Islamic policy, which had for the last twenty-five years been indulged, was fatal; it was driving Turkey into the arms of Germany. In Berlin two mosques already were in existence; there was one in Paris; but what had Britain done? Afghan students eagerly went to Germany and France; were there any Afghan students in this country? The Foreign Office, as if in revenge for having been beaten by the Turks, showed consistent lack of sympathy towards the Moslem nations.

Lord Peel admitted to considerable affection for the Turks, but he thought that their present experiment in, for instance, abolishing the Sultanate and the Caliphate, and in expelling those on whom their industries depended, was an extremely hazardous one. The reaction in Moslem countries for Turkey's abolition of the Ottoman Caliphate was extensive, and particularly keen in India. In all probability, however, there would come about a change in Angora's attitude towards foreign Powers and towards foreign capital, because the policy of splendid isolation, though admirable enough in theory, in practice was more or less unworkable. Lord Peel also expressed sympathy with the diplomats who preferred remaining at Constantinople to residence at Angora, which lacked the amenities that so soft a type of man found essential!

The following five Conservative Members of Parliament—Major Boyd-Carpenter, Sir Victor Warrender, Commander Fanshawe, Mr. L. R. Lumley, and Captain Eden—arrived in Baghdad on January 17 on their way to visit the Anglo-Persian oilfields.

THE INTERLUDE IN SANSKRIT DRAMA.

"PRIYADARSIKA," a Sanskrit Drama by Harsha, King of Northern India in the seventh century A.D., translated by G. K. Nariman, A. V. William» Jackson, Ph.D., and Charles J. Ogden, Ph.D. (New York: The Columbia University Press, 9s. net.)

The Sanskrit language stands unrivalled as a medium for expressing complex ideas, and has long had a peculiar fascination for philologists, although few are capable of mastering the subtleties of its diction and the extreme difficulty of its grammatical formation. Sir William Jones was the first European to reveal the beauties of India's classical tongue to his fellow-countrymen. But the British adventurers who flocked to India in his day were mostly intent on "shaking the pagoda-tree," and the finer intellects among them had more than enough to do in defending their mushroom empire. When at length the task of consolidation was complete, the torch of Sanskrit learning passed from British to German hands. It has now been seized by American scholars; there are Professors of Sanskrit on the staff of many Universities across the Atlantic, and the American Oriental Society collaborates with Indian pundits in producing ancient texts with a degree of erudition which should stimulate those who are responsible for the welfare of India to emulate their zeal. A translation of King Harsha's "Priyadarsiká," published at the close of last year by the Columbia University, is a triumph of scholarship of which America may justly be proud. The text is prefaced by an Introduction of 111 pages which sketches the Royal author's career, gives an exhaustive analysis of his greatest comedy, with a complete bibliography of the editions through which it has run. One of India's heroic eras lives again in these pages.

Harsha was the son of a King of Thaneswar, a petty State about ninety miles north of Indraprastha, now Delhi. On succeeding to the throne in 606 A.D., he embarked on an incessant warfare with neighbouring potentates, and became lord paramount throughout Northern India, Rájputáná and the Panjáb excepted. For forty years he governed an empire extending from Guzerat to Central Bengal with wisdom and toleration. But Harsha was much more than an able soldier and administrator. He zealously promoted education, and realised that his claims to remembrance by posterity should not rest on inscriptions graven on stone or metal, but be evidenced by the writings of men of letters attracted to his brilliant court. He was a poet and dramatist of distinction: it is possible that he had literary help in composing the plays which bear his name: but every scene displays the stamp of his personality.

"Priyadarsiká," a comedy in four acts, is a story of love and intrigue. Its eponymous heroine is a princess who has been brought captive to the court of King Vatsa Udayana, and is under the care of his consort, Vásavadattá. The monarch falls in love with Priyadarsiká, and declares his passion in an interlude enacted before the Queen, which purports to describe the manner in which he won his consort by giving her lessons on the lute. The rôle of Queen Vásavadattá is taken by her young protégée; but the King secretly assumes that of a lady-in-waiting who was "billed" to personify himself. The real issue of his acting is a revelation to the jealous Queen, who breaks up the performance in wrath, and casts her rival into prison. Priyadarsiká takes poison in despair, but is cured by King Vatsa's magic, and the curtain falls on an affianced pair.

This curious comedy exhibits many crude devices; every act is preceded by a scene explaining its action, which is further developed by the elephantine attempts at wit by a royal jester. But the "play within a play," which suspends action but leads up to the dénouement, was unknown to Greek and Roman playwrights. It indicates a considerable development of the dramatic art, and was used with great effect by Shakespeare in "Hamlet" and "A Winter's Tale."

F. H. S.

ARTIST-SPORTSMEN IN THE BAHR-EL-GHAZAL.

"FAR AWAY UP THE NILE." By J. G. Millais. (London: Longmans, Green and Co. 30s. net.)

Mr. Millais has written this very thick volume, seen it through the press, and issued it with some fifty illustrations to the public within six or seven months. This *tour de force* has certainly enabled him to bring it out at a very opportune time, but the book (or, at least, the text of it) has had to suffer for the haste. For the very numerous and finely produced illustrations we have nothing but praise. They are from sketches by Mr. Millais and his son, who accompanied him. It is not a little wonderful to find this artistic talent already in its third generation. Most of the pictures are of the animals which they hunted and shot, while others depict the various human races found by them. All are exceedingly good, and infinitely better than the photographs with which we have become so distressingly familiar in books of this kind.

As to the letterpress, we have the usual big game hunter's chronicle, which tends to become monotonous. We make an exception for the things incidentally observed and noted, many of which are of interest. Here and there Mr. Millais has most lamentably allowed himself to be "facetious," with tragic results. And whole chapters are put together out of scraps from books, reports, and hearsay. It is here that we find ourselves wondering how far the "facts" recorded are accurate. It is a little disconcerting to be told on page 37 that the Sudan irrigation will all be done by water which would otherwise pass uselessly into the sea, and at page 75 to learn that not a drop of Nile water ever reaches the sea, though, as an afterthought, this last statement is said in a footnote to be doubtful. On page 174 we are told that the Nuer population numbers 320,000 in all. Five districts are enumerated in which these people live, and we are told that in *one* of them the Nuers have 150,000 huts. These are clear inaccuracies, and we fear that there are many others. Certainly our faith was severely tried when we read that, on passing through Paris this spring on their way home, they spent the afternoon and evening "enjoying the marvellous architecture of the Tuileries, surely the finest thing of its kind in Europe, and the collection of statues in the courtyard formed by the French Government."

ARMENIAN REFUGEES.

A report showing the progress of the plan for settling Armenian refugees has been issued by the Lord Mayor's Fund (Armenia), nominated by the British Government for this purpose.

The nature of the scheme is twofold, aiming in the first place at immediately relieving the Armenian refugees from Turkey who are destitute in Greece and elsewhere, and, secondly, making possible their absorption in the Erivan Republic, the native territory of the Russian Armenians in Southern Caucasia, which is to constitute the homeland of the entire people.

The report states that about 20 per cent. of the Armenian refugees from Turkey are destitute on the southern shores of Greece, chiefly in the Peloponnese. The remainder, about 40,000, are temporarily occupied in some sort of self-supporting employment. In Syria there are 120,000 refugees whose future is problematical. All classes of refugees need a permanent home. As the little Republic of Armenia in the Russian Caucasus has given shelter to about 300,000 refugees during the last few years, its capacity to take more is very limited, but can be sensibly increased if more land were irrigated for wheat-growing, and assistance were afforded for promoting industries such as cotton-spinning and fruit-canning. The report states that the average cost per head of settling the refugees is £15 per head for each settler already in Armenia, and £20 for each refugee brought in from outside; it recalls the fact that the present Prime Minister, Mr. Baldwin, and Mr. Asquith urged Mr. MacDonald last September, as head of the Government, to give a substantial grant to the work of settlement, and concludes that unless such assistance is forthcoming the work of succour will have to cease. Thousands of the sufferers will, it states, inevitably perish if the grant is not made.

A CRUISE TO GALLIPOLI BATTLEFIELDS.

The s.s. Ormonde, of the Orient Line, will make a cruise in the Mediterranean in May, when it is hoped to give the passengers an opportunity of visiting the Anzac and Helles battlefields. On the way to Constantinople the Ormonde will lie at Khelia Bay and land those who desire to visit Anzac, where at Gaba Tepe and "Z" Beach the Australian and New Zealand Army Corps landed on April 25, 1915. The Ormonde will leave Constantinople on the evening of May 14, and, if the weather permits, passengers will be landed next morning at Cape Helles, the site of "Lancashire Landing," named in honour of the 1st Battalion Lancashire Fusiliers, and "V" Beach, where the River Clyde was beached. The Imperial War Graves Commission will provide guides for a visit to the cemeteries at Anzac and Cape Helles.

King Hussein was reported to have arrived last week at Maan, in the Transjordan, on his way from Akaba to Basra.

Reuter's Calcutta correspondent reports that Lord Lytton has certified the Bengal Criminal Law Amendment Bill, designed to give effect to the Ordinance for the suppression of terrorism in Bengal. Leave to introduce the Bill was rejected by the Legislative Council on January 7, and its certification was expected.

His Holiness Mar Shimun XXI., Katholikos and Patriarch of the East, head of the Nestorian or Assyrian Christians, arrived in Jerusalem on January 12 to stay for a short period as the guest of the Anglican Bishop at St. George's before proceeding to England as the guest of the Archbishop of Canterbury.

NAVAL COMMAND CHANGES.

The following flag appointments were announced by the Admiralty recently :—

Rear-Admiral William A. H. Kelly, C.B., C.M.G., M.V.O., to be Rear-Admiral Commanding the 2nd Cruiser Squadron, in succession to Rear-Admiral Thomas D. Gilbert, C.B., to date May 15.

Rear-Admiral Francis H. Mitchell, C.B., D.S.O., to be Rear-Admiral in the 2nd Battle Squadron, Atlantic Fleet, in succession to Rear-Admiral William H. D. Boyle, C.B., to date May 3.

Rear-Admiral Kelly has been serving at the Admiralty since June last year, and was previously Rear-Admiral, 1st Battle Squadron, Atlantic Fleet. He will be remembered as the officer commanding the cruiser Gloucester in chase of the Goeben during the opening days of the War. In September, 1917, he was Commodore, 1st class, on board the Weymouth, and afterwards was at the head of the British Naval Mission to Greece.

This is Rear-Admiral Mitchell's first appointment since his promotion to flag rank in May, 1924. He gained the D.S.O. for services with the R.N. Division in Gallipoli. Later he was Naval Adviser at G.H.Q. of the Mediterranean Expeditionary Force. being commended for his work in the withdrawal from the peninsula, and also for service in Egypt.

Air Vice-Marshal Sir Sefton Brancker, the Director of Civil Aviation, piloted by Mr. Alan Cobham, arrived at Calcutta from Allahabad on January 13.

An official decree has been published in Athens dealing with the purchase of Mussulman property in Western Thrace. It is hoped that the settlement of the question will help to bring about an improvement in the relations with Turkey.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Turkey and Foreign Capital.

A very significant note is now being struck by the Turkish Press in regard to the question of obtaining foreign capital, and the articles that have been published suggest that there is a growing realisation of the fact that the only way for Turkey to obtain external assistance on an adequate scale is by putting her financial house in order. As one journal very truly points out, it is not enough to invite the co-operation of foreign capitalists, for they will not accept the invitation unless they have confidence. It is further noted that recent tenders have met with an unsatisfactory response, and the inference drawn is that this is the result of Turkey's action in regard to the Galata Bridge tolls. Straws show the way the wind blows, and these lucubrations of the Turkish Press may be taken as an indication of a change of mind on the part of the rulers of the country. It may take some time for the leaven to take effect, but it is eminently satisfactory to know that there is now an increasing tendency to face the facts in Turkey.

M. Bratianu's Visit.

Considerable interest attaches to the visit of M. Bratianu to London. He is accompanied by M. Oromolu, the Governor of the National Bank of Roumania, and this week will see other important arrivals, including the chairman of one of the oil companies. This gathering naturally suggests the possibility of a loan, and one has been, of course, on the tapis for a very considerable time. The inference may also be drawn that the development of the Roumanian oilfields may come up for discussion, possibly in connection with a loan. Judged by the exchange, Roumania's position as regards a loan is not nearly so favourable as that of Greece, but it is impossible to make comparisons of this kind, for the two countries are essentially different in character, and the problems with which they have been faced since 1918 are quite distinct. Greece's troubles have been severe enough, but no country in the Balkans suffered in the Great War to the extent that Roumania did, and the present level of the leu reflects her difficulties in the work of reconstruction. But Roumania's resources, be it emphasised, both mineral and agricultural, are without a parallel in the Balkans, and her potentialities are unbounded, and if the question of an immediate loan is to be raised, there is not likely to be very serious difficulty in arranging it. In taking this view of the visit, it has to be borne in mind that Roumania still has great need of material for the work of reconstruction, and the only way of obtaining it speedily is through the medium of a loan.

Cotton Growing in Asia Minor.

It goes without saying that new sources of cotton supply are of very great concern to Lancashire, and it is interesting to note that within the next week a consignment of 1,000 bales of cotton from Mersina, in Asia Minor, is due to reach Liverpool. This is not the first shipment, for there have already been trial consignments, and these have given rise to the hope that in time Asia Minor will be able to make a considerable contribution to the world's cotton supplies. Appreciation of the possibilities of the crop has led to the establishment of a cotton-ginning factory at Adana, and it is estimated that the region which this centre serves is capable of producing very large supplies of cotton. It will be interesting to see how the present shipment is received on the market.

The Coming Budget.

It is no exaggeration to say that Mr. Churchill's first Budget is awaited with a quite unusual degree of impatience. Last year's Budget gave relief in a number of directions, but not in those which the taxpayer feels. In fact, the effect of Mr. Snowden's changes may be said to have been negligible as regards the majority of people. This time, however, there is reason for hoping for something different. I am afraid that it is no good expecting such a substantial cut in the income-tax as 1s., but it seems quite reasonable to expect one of 6d., and of half that amount in the case of smaller incomes. Even that would not make the hard-hit taxpayer enthuse, but it would be something to go on with, and would certainly afford a most welcome relief. Still, we must wait and see, with this proviso, that anything less than this concession would be quite unthinkable.

The Empire Exhibition.

Prima facie, things are not going too well with regard to Wembley. As regards the participation of the different parts of the Empire, all would appear to be more or less plain sailing, but the converse is the case with regard to the home front. Three of the associations which were prominent last year in the Engineering section do not propose to participate on this occasion, one of them being the Motor Transport Manufacturers and Traders. Other schemes are proposed which will go some way to filling the gap, but the absence of these associations would be serious, and without them Wembley would not be the index of Empire potentialities that it must be if it is to be a success at the second time of asking.

RAILWAY CONSTRUCTION IN YUGO-SLAVIA.

Links With the Adriatic.

The problem of reconstruction in the Near East resolves itself very largely into a question of communications. This is more especially so in the case of countries like Yugoslavia, where the position has been rendered more difficult by the necessity for co-ordinating the railways systems of regions hitherto distinct. The present position in this country is the subject of an informative article in the current issue of the *Economic and Financial Review* of Belgrade by M. Zdravko Vaskovitch, who deals in detail with the question of railway construction in the State.

To-day, he states, the Serbian railway system is in a far better state than it was before the War, while the lines in the new provinces have also been put right, though the rolling stock has not yet been entirely repaired. *En passant*, he points out that the grave state of the communications was not wholly due to the effects of the War, for Yugoslavia found herself in possession of parts of five different railway systems, unconnected and constructed for purposes other than those they are now destined to serve. He continues :—

The greater part of the normal gauge system of Slovenia, Croatia, Slavonia, Srem, and the Vojvodina, which stretches over 6,000 kilometres, is nothing more than a piece cut off from the old Austro-Hungarian system, centred on Vienna and Budapest and having, as sole outlets to the sea, Trieste and Fiume. To-day these four centres are outside our frontiers, and the rest of this system is, so to speak, isolated. Bosnia and Herzegovina have a separate, narrow-gauge (0.76) system, which has but one good connection with the normal-gauge system, at Brod, and no connection at all with the Serbian narrow-gauge lines. Dalmatia, Montenegro, the old Sandjak of Novi Bazar, and the greater part of Southern Serbia have no railways to speak of, or are served simply by unimportant branch lines which have no connections with the interior of the country. Important and rich provinces have no railway connection between them; for example, Serbia is not joined up with Bosnia, nor with Montenegro, nor the Banat. Croatia and Slovenia have no junction with Dalmatia. The rich Banat is connected with the other provinces at one single point only, at Senta.

The provinces are not connected up with one another, and the lines which we have are divided up among the different parts of the country in a very unequal way. While on the one hand we have provinces such as the Vojvodina, which has as great a length of line per square kilometre as France, we have also territories such as that which includes Montenegro and the old Sandjak, of an area of 45,000 sq. kms.—that is to say, equal in size to some small States—which have no railways at all worth mentioning. There is only one connection, through Belgrade, by means of a single line of normal gauge. We possess nearly 1,000 kms. of coast on the Adriatic, and yet we have not a single line carrying thither the produce of the rich valleys of the Save, the Danube, the Morava, and the Vardar. We cannot, however, develop our economic life without these connections, and that is why our first task must be to create an outlet for the wealth of our land.

M. Vaskovitch proceeds to deal with the work of the past year, and states that some 820 million dinars have been spent on construction. Among the lines to be completed in 1924 are three of special importance—the normal-gauge line from Gratchatze to Knin, connecting the normal-gauge system with the ports of Shibenik and Split, the narrow-gauge line from Oudjitza to Vishegrad, connecting Serbia with Bosnia and giving the Serbian narrow-gauge system outlets on the Adriatic at Grouj and Zelenika, and the normal-gauge line from Titel to Orlovat, connecting the Banat with the Batchka. He urges that it is now necessary to begin the reconstruction of the different systems so that there may be an outlet through Yugoslav ports for all the national produce. He goes on :—

The work which must be done to this end is as follows :—A better connection between Croatia and Slovenia and Serbia and the diverting towards the south-east of the lines of this district which lead now in a northerly direction. The Liubliana—Zagreb—Belgrade — Nish — Skoplje — Salonika line, which represents the backbone of our national communication, has not at present an equal capacity over its whole length. The sector from Zagreb to Belgrade has the least capacity, although it is precisely the most important to us, for this line was built without regard for the present orientation of traffic, and this explains the presence of important bifurcations at Indjia and Vinkovtzi. The question of communications between Belgrade and Zagreb cannot be solved without a new line being constructed with a more direct route and a double track; a single line is insufficient. This new line would pass through Belgrade—Shabatz Bielina—Brtchko—Doubica (where it would join the Zagreb—Brod line), and would have a length of 310 kms. . . .

As regards the joining up of the interior with the Adriatic ports, we must, in the interest of a rational solution of this problem, emphasise the fact that our country is elongated in shape; the longitudinal axis is about 900 kms. long. Besides this, the Dinaric Alps lie parallel to the coast, and have a very restricted number of passes. For all these reasons it is impossible to connect our whole country to the Adriatic by one single line determined by consideration of the shortest and most rational route. On the contrary, we should construct several lines which would connect the whole country securely with the sea. These would be as follows :—1. The junction of the Rieka line to the port of Bakar; length, 12 kms.; cost, about 2 million gold dinars. 2. The line from Ouna—Bihatch—Zrmagnia; 87 kms.; 13 million gold dinars. 3. The Belgrade—Sarajevo—Metkovich—Split line; 668 kms.; 106 million gold dinars. 4. The Nish—Prishtina—Petch—Andrijevitza — Podgorica—Kotor Estuary line; 483 kms.; 190 million gold dinars, including the construction of a modern port at Kotor. 5. The Kragujevatz—Kraljevo—Mitrovitza line; 200 kms.; 35 million gold dinars.

A MEDITERRANEAN CRUISE.

The s.s. Laconia, which left Liverpool for New York on Saturday last, is due to leave the latter port on the 31st inst. for a cruise of 10,000 miles in the Mediterranean. She will carry 700 passengers, and, on arrival at Haifa, the tourists will be allowed six days for extended shore excursions into the Holy Land. A three days' stay at Alexandria will enable the travellers to make a tour of the Valley of the Tombs and the ruins of ancient Egypt. Other places of interest included in the Laconia's itinerary are Madeira, Cadiz, Gibraltar, Algiers, Phaleron Bay, Constantinople, Naples, and Villefranche. The tour terminates at Cherbourg on March 28.

According to the *Tanin*, the name of the suburb of San Stefano, on the Marmara, near Constantinople, is to be changed to Yeshilkeuy ("Green Village").

(Reports from Our Own Correspondents.)

GREECE.

Athens (undated).

Athens Water Supply.

A contract has been signed by the Greek Government with an American firm, the Ulen Company, for the construction of a reservoir near Marathon to collect the rain water in an area of 124 square kilometres. It is calculated that the supply will be sufficient to give to 800,000 inhabitants of Athens and Piræus 100,000 cubic metres of water per day in winter and 160,000 cubic metres per day in summer. This includes the water necessary for domestic, public, and commercial use.

The present water supplied to the residents in Athens has a hardness of 30 degrees and a temperature of 18 degrees, instead of 18 and 10 degrees respectively, which are supposed to be the absolute maxima. The number of microbes to the cubic centimetre is from 800 to 3,750, instead of an absolute maximum of 100.

The barrage to be erected will have a maximum height of 50 metres and a breadth at the base of 45 ins. The aqueduct will be 38 kilometres in length, of which about 28 kilometres will be underground. Four reservoirs will be built in the two towns to assure an equitable distribution of water, and they will contain sufficient water for two days' supply. It is expected that the work will be completed in about three years' time, and it is the first real effort to bring water to Athens since the time of the Emperor Hadrian. M. Yannadounis is to be warmly congratulated on his services to his country.

Cost of Living in Athens in 1924.

The Minister of National Economy has published the following statistics showing the cost of living during the last year as compared with the index number of 100 for 1914:—January 1,340, February 1,358, March 1,424, April 1,275, May 1,198, June 1,206, July 1,206, August 1,263, September 1,291, October 1,314, November 1,334, December 1,394. When it is considered that the drachma has depreciated ten times, it will be seen that even for holders of foreign money life is more expensive than in 1914, when Athens was known as one of the most expensive cities in Europe.

Installation of Refugees.

The Government has now arranged to take over the work of assisting the pauper refugees, thus leaving the Refugee Settlement Commission to carry out their work of installing the great mass of refugees in profitable productive work. In Athens and district the men of the labouring classes have practically all been absorbed, and are no longer a burden on the country. Very many women and children have also found employment in the numerous carpet factories, large and small, which have been erected. In fact, the absorption has been miraculous, and to-day no man who really is capable is out of work. There are, of course, many who are incapacitated, and women and children, who require assistance, who, in fact, will remain a burden on the country until the children grow up and the older ones pass away. The Government estimates that the sum of two hundred million drachmæ will be required still to house the urban refugees.

Budget Deficit.

The Budget deficit for 1924-5 is estimated at slightly under 1,000,000,000 drachmæ, and is to be met by the issue of 6 per cent. Treasury bonds. This is almost the equivalent of issuing paper money to meet the needs of the Government, and will adversely affect the exchange. It is hoped, however, that the United States Government will allow Greece to make use of the balance of credits unused by M. Venizelos, which action would have a beneficial effect on the exchange.

Aviation.

The Blackburn Aeroplane and Motor Company has signed a contract with the Greek Government to take over the Government workshops at Old Phaleron for a period of years, and to manufacture aeroplanes for the Government; also to train workmen so that at the termination of the contract the Government will be able to produce their own aeroplanes.

The output of the Anglo-Egyptian Oilfields for the week ended January 16 was:—Gemsah, 18 tons (previous week, 8 tons); Hurghada, 3,265 tons (against 3,266 tons).

The Arbitral Court of Professor Borel, who has been appointed by the League of Nations to give judgment regarding the assignment of the Ottoman debt among Turkey and the States of the former Turkish Empire, was to hold a preliminary meeting on January 20.

The Legation of the Kingdom of the Serbs, Croats, and Slovenes announces that the amount of £5,902 is placed at the disposal of Lloyds Bank for the payment of the January coupons of the Five per Cent. Montenegrin Loan of 1909. The payment of those coupons is being made by Lloyds Bank and not by Messrs. Boulton Bros.

EUROPEAN DANUBE COMMISSION.

Navigation Dues.

By a decision taken by the European Danube Commission in May, 1920, the tariff of navigation dues which had been in force since 1908 was increased by multiplying the amounts of the dues prescribed in 1908 for each class of vessel by the co-efficient 3, so that a ship of more than 1,500 tons net paid in dues 5.10 gold francs instead of 1.70 gold francs per net registered ton.

A decision of 1922 had the effect of substituting for the rate of 5.10 gold francs the rate of 10.9 paper francs per ton, but the European Commission decided in May, 1924, to return to the gold basis. On January 1, 1925, the co-efficient of 3, referred to above, was reduced to 2½, and the dues now chargeable (says the *Board of Trade Journal*) are as stated in the following extract from the tariff :—

(1) Every steamship or sailing vessel and every transport without exception which enters the Lower Danube will pay on its leaving Sulina the following specified dues per ton register :—Vessels loading or unloading in the Port of Sulina only—201-600 tons, 0.75 gold francs; 601-1,000 tons, 1.50; 1,001-1,500 tons, 2.25; over 1,500 tons, 2.75. Vessels loading or unloading up river—201-600 tons, 1.37 gold francs; 601-1,000 tons, 2.75; 1,001-1,500 tons, 3.50; over 1,500 tons, 4.25.

(2) Vessels coming in from sea and loading or unloading at Sulina only, without proceeding up-river, as also all river vessels loading or unloading in the port of Sulina, will pay a special supplementary tax of 50 gold centimes per ton register.

(3) Mail boats providing a regular postal and passenger service will be allowed a reduction of 60 per cent. on the dues set out in Article 1.

(4) Every sailing vessel or steamer, except the passenger and mail boats mentioned in Article 3, shall pay on its first voyage on the Danube in each year the full dues applicable to it under the terms of the present tariff. For each subsequent voyage effected during the same year she shall pay only 80 per cent. of the dues applicable. A first voyage in ballast does not confer a right to this benefit, the full amount of the dues having to be paid for a first voyage. This reduction to 80 per cent. is not applicable to the supplementary tax of Article 2.

(5) Every vessel loading in the roads at Sulina will pay a fixed due of 250 gold francs, and the lighters which bring them their cargo and which are not exempted by their small tonnage will pay 1.37 gold francs per ton register, as well as the supplementary tax of Article 2.

(7) Every sailing vessel or steamer and every transport entering the port of Sulina in ballast and leaving in ballast, as well as vessels ascending the river in ballast and also leaving in ballast, will pay a tax of 40 gold centimes per ton register. At the same time, vessels which ascend and descend the river in ballast, and then load in the port of Sulina, are subjected to the full dues applicable to vessels which have loaded at an up-river port. If they load exclusively in the roads they will pay, besides the fixed dues and the dues on lighters provided by Article 5, the 40 gold centimes per ton above mentioned. The navigation dues will be levied in French francs or in the currency of the country whose flag the vessel flies, German, Austrian, Hungarian, Bulgarian, Turkish, and Russian being excluded for the time being. The rate of exchange of the currency accepted in payment will be fixed by the Commission fortnightly in accordance with the mean rate of exchange for such currencies during the preceding fortnight.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended December 31 : The arrivals of sultanas since the opening of the season is estimated at 39,300 tons, and the sales to date are put at 36,950 tons.

Business in sultanas since the middle of November to date has been on restricted lines, limited to some 2,800 tons shipped to Holland and Germany, about 120 tons to the U.K., and 250 tons to the States and Canada. Stocks at December 31 available for shipment are variously estimated at 7,000 to 9,000 tons. This quantity may be considered moderate, and not more than will be required for the world's demand up to next September, when the new crop will be available. At present local dealers are acting with reserve in not pressing stocks for sale, as climatic conditions obtaining this winter have so far been such as to give cause for apprehensions concerning all crops next season. We have had two long months of drought at a time when rain is expected and required, and complaints by farmers are general.

The stocks of figs in Smyrna and the interior are completely exhausted.

NEWS FROM ALL SOURCES.

The Polish Government has approved of the appointment of Assad Khan as Persian Minister at Warsaw.

Sir Alfred Hamilton Grant, K.C.S.I., K.C.I.E., has been elected a director of the Huronian Belt Co., Ltd.

Captain R. E. Sassoon, M.C., director of Messrs. E. D. Sassoon and Co., Ltd., has joined the board of the Eastern Bank in succession to the late Mr. Meyer Sassoon.

Sir Robert Horne during his recent stay in Peshawar as the guest of the Chief Commissioner visited the Khyber Pass and afterwards took a run by car to Razmak, via Bannu.

The Bulgarian Government has instructed a mixed Græco-Bulgarian Commission to study and report on the position of Greek minorities in Bulgaria and Bulgarian minorities in Greece.

Mr. Howard Carter, having made a final agreement for the reopening of Tutankhamen's tomb, proceeded to Luxor on January 15 to commence operations on the 25th inst. The discovery of a tomb and passages of the Third Dynasty has recently been made at Sakkara.

The Roumanian Minister for Industry, who left Bucharest recently for Paris and London, has announced that his journey was being undertaken in connection with negotiations for the participation of foreign capital in Roumanian State enterprises, which are to be put on a commercial basis in accordance with the law recently promulgated.

Indian Army manœuvres began in Delhi on January 15 under the direction of Lieutenant-General Sir George Barrow, General Officer Commanding-in-Chief, Eastern Command, India. Lord Rawlinson, the Commander-in-Chief, and all the principal staff officers, as well as Japanese and Afghan Army officers, the Nepalese Envoy, and several newspaper correspondents, witnessed the proceedings.

GREECE IN TRANSITION.

The Factor of the Refugees.

(From a Correspondent.)

In regard to none of the Balkan countries is the immediate outlook more hopeful than in the case of Greece. The difficulties with which the country has been faced since 1918 have been very great, but the indications suggest that she is well on the way to surmounting them, and that she will probably be the first country in the peninsula to approach the normal. Throughout Greece has remained solvent, and though it is not much over a year that the country has enjoyed peace, the figures for the ordinary revenue in 1924 show a balance on the ordinary expenditure, and with the proceeds of the Refugee Loan to meet the vast obligations imposed as a result of the resettlement of populations, it will not be surprising if the country goes rapidly ahead. As Sir John Stavridi pointed out at last week's meeting of the Ionian Bank, Greece is at present in a state of transition, and it is substantially because in her case reconstruction is only at the stage that it was in in 1919, as regards the Great Powers, that her currency is still depreciated and the cost of living is still high. Only firm guidance could have brought Greece safely along the hard road of reconstruction to the position in which she now stands, and, as Sir John justly pointed out, she has been fortunate in that successive administrations have faced the situation with courage and imagination. When the Refugee Loan came to be offered, facts and figures were adduced to show the strength of Greece's financial position, and it is certainly no exaggeration to say that the picture thus presented of the country came as a great surprise to many people. It would equally have been a surprise to quite a number if it had not been so, for if there is one thing certain about the Balkan countries it is the almost complete ignorance that obtains concerning them amongst otherwise well-educated people. Such is the influence of tradition, and the Balkan countries as a whole must share the responsibility for their not being understood, for they have laid the foundation for it as they wrote the pages of the history of their innumerable wars. The fate of the Refugee Loan aptly illustrates the effect of the appreciation by the British investor of the soundness of the country as a whole, of the abundant security of the issue, and of the progress that Greece has continued to make, despite the fluctuations of her fortunes. It was, in short, a certificate given by this country to the satisfactory nature of the general conditions in Greece, and it carries with it the lesson for other Near Eastern countries who will be requiring accommodation in the form of a loan in the future that the London market is always accessible to countries who can show a clean bill of financial health, and the converse is emphatically also the case.

Given freedom from external difficulties—a proviso which, unfortunately, history shows to be only too advisable in writing of the Balkans—it is possible to view the future of Greece with the greatest optimism. The country, it is true, lacks the factors which could lead to any great industrial expansion, but she has ample compensations in other directions—good agricultural land, a capable and industrious population, and an important shipping industry which has been in the past a great source of wealth and promises to be so again in the future. An excellent survey of the general position in the country is given in a recently issued brochure,* in which it is emphasised that Greece is an agricultural land and that her geographical formation and the variety of the climate favours the growth of a great many products. Wheat, currants, tobacco, olive oil, and wine are the principal products, the first-named of which is consumed locally, while the others form the principal articles of export. The writer points out that much still remains to be accomplished before the soil is fully exploited. He says :—

"According to rough calculations worked out by experts, there are to-day more than a million hectares of most productive areas which remain uncultivated. The individual capital will contribute immensely to the exploiting of these lands by the construction of anti-flooding, draining, and irrigation works, as well as by the drainage of the marshes. . . . The construction of such works, the wider propagation of the modern methods of cultivation, and the increasing of the means of communication will improve the sanitary condition of the inhabitants, and will allow the intensive cultivation not only of the grounds already under cultivation, but also of the vast and fertile plains of Macedonia, Thrace, and Thessaly, which remain to-day almost entirely unexploited. The productive power of these regions is far too great, and it is quite rightly expected that their intensive and proper cultivation will give a strong impulse both to agriculture and cattle-breeding, thus making of Greece a self-supporting country from an agricultural point of view, and allowing her to save a fairly big surplus for export abroad."

Sir John Stavridi, at the meeting already referred to, laid great stress on the prospects in Macedonia and Thessaly, where he said there are more than two million acres of the most productive soil under the sun which are still waste and devastated as the result of the successive wars. Greece, he pointed out, has at her disposal a margin of population for this cultivable land in the million refugees, and in them undoubtedly lies one of Greece's principal hopes for the future. The problem of their settlement has been one of finance, which has been finally solved by the Refugee Loan, and henceforward we may expect them to make an ever-increasing contribution to the prosperity of their country. It has been agreed that the hardships which they have endured must have resulted in lessening their capacity; but while this may have had some effect, there is no reason for thinking that it will seriously prejudice the outlook. This view is amply borne out by the latest report of the League of Nations Refugee Settlement Committee, in which reference is made to the activity and vitality of most of the settlers, while a most satisfactory testimonial is given to them by the National Bank as "active, honest, and mindful of their liabilities and keeping faith with the bank and any third party concerned. They have introduced new methods of cultivation, as well as improving some of the methods already in use, and have increased the productive capacity of the districts where they have settled." That speaks for itself, and is abundant cause for hope in the future.

The address of Messrs. Herbert Green and Co., Ltd., has been changed from 83, Pall Mall, S.W.1, to 50, Pall Mall, S.W.1.

The address of the Agricultural Bank of Egypt (London Committee) has been altered from 57½ to 111, Old Broad Street, E.C.2, in consequence of the renumbering of the street.

---

*"Greece: Economic and Financial." By D. E. Protecdicos, Secretary of the National Bank of Greece. (Eyre and Spottiswoode, Ltd. 1s.)

Shipping Intelligence.

TANKER CHARTERING REVIEW.

A Better Outlook.

Messrs. John I. Jacobs and Co., Ltd., of London, in their half-yearly report on oil-tanker chartering, state :—

The period under review has seen tank steamer rates of freight fall to very low levels with improved conditions during the declining months of 1924, caused by firmer and more stabilised prices in America for petroleum products, which had the natural effect of giving confidence to the foreign buyer and stimulating business in all classes of oil.

Tankers built to Lloyd's classification during the twelve months to October last amounted to 18 of 82,706 tons gross. Tankers afloat in July, 1924, had a gross tonnage of 5,243,238, as compared with a gross tonnage of 1,478,988 in July, 1914. In October of this year there were building throughout the world 43 steamers and motor ships for the carriage of oil in bulk, each over 1,000 tons and totalling 290,220 gross tons. Of these 22 of 133,820 gross were under construction in the United Kingdom and 11 of 95,500 gross in Germany. For the year ending December, Lloyd's returns show a total of 50 tankers under construction with a gross tonnage of 309,270.

Nearly 30 per cent. of steamers building are being fitted for oil burning, and the total number of steamers so fitted is now over 17 million tons gross, as against barely 1½ million tons gross in 1914. The popularity of the Diesel engine as a means of propulsion continues to increase, and of all tonnage building at present, about 60 per cent. is fitted with internal combustion engines; whilst of tankers building, roughly 75 per cent. are being so driven. This large percentage is largely due to the whole-hearted adoption of the internal combustion engine by American and Scandinavian owners. The initial cost of the internal combustion engine, coupled with the greater cost of upkeep and greater difficulty in adequate technical supervision, outweighs in the minds of many owners the marked saving in oil consumption and extra carrying capacity of motor ships.

Bunkering facilities throughout the world have been greatly extended, but the disparity between the price of oil and the price of coal keeps the bulk of tramp tonnage to the older form of combustible. The present shows no signs of any substantial fall in fuel oil prices, and many owners who favoured oil have returned to coal.

The number of European countries continuing to make great efforts to ensure their supplies of oil by legislation and other means is to be noted. The world's production of crude oil continues to increase, owing to intensive drilling stimulated by the ever-increasing world demand for petroleum products. Russia and Roumania both report increased production, whilst no limit at present can be seen to the possibilities of Persia. In Mexico the oil situation is somewhat critical, but to offset this the remarkable developments in Venezuela and adjacent republics can be mentioned. In spite of lower production in California, the United States figures remain in the neighbourhood of the two million barrel a day mark, which is about the daily average demand for crude oil made by the refineries.

The traffic in crude oil between California and the Gulf of Mexico and Atlantic seaboard refineries shows a further decline, and the daily average of crude oil arriving at the Atlantic and Gulf ports in November was about 95,000 barrels. In spite of this decreased traffic, which at one time absorbed a great proportion of American flag tankers, it has been found that European tanker owners have not experienced any marked competition from American tank steamers in the Trans-Atlantic trade. This is due in a measure to the longer voyages tankers are now required to perform to transport oil to the four corners of the world.

Enormous over-production in 1923 made itself felt in unstable prices through a great part of the year, but by the autumn American stocks were reduced owing to record summer consumption of gasoline in that country, and prices have hardened during the fall of the year. In August the gasoline consumption in the United States itself was the largest ever known, and amounted to about 820 million gallons, whilst foreign demand is also increasing, but in a lesser degree. Firmer prices are now ruling and expected to continue.

Tank steamer owners herald the New Year with considerable confidence. The immediate outlook shows no reason for any drop in freights from their present remunerative level, in spite of a very considerable visible building programme.

Representative rates of freight in the principal markets are to be noted as follows :—

Time Charter.—As high as 10s. on the d.w. was paid for a handy clean steamer, but for the crude

Digitized by Google

and/or fuel oil trades a number of boats have been taken at 6s. 9d. to 7s. 1½d. for 12 to 18 months, and this remains the market rate. Diesel vessels commanded from 11s. to 8s. 3d. on the d.w.

Northern States of America.—As usual, the amount of tonnage fixed from the Northern Ports has been on a small scale compared to the Gulf. The main demand is for lubricating oil carriers, and rates have varied from 25s. to 29s. to U.K. Continent, whilst Trieste took a boat at 30s. For clean oils we may instance as high as 34s. for North Spain, 45s. for Rio de Janeiro, and 35s. Marseilles. 27s. 6d. was paid for Lisbon.

Gulf of Mexico.—Again has the tanker of 7-8,000 capacity for cargo had the preference for clean oils, and the larger sizes to 10,000 tons for dark oils. In former trade the highest paid for U.K. Continent was 37s. 6d. and the lowest 20s. The Mediterranean not east of West Coast of Italy gets tonnage at about 2s. 6d. more, and Scandinavia pays from 1s. 6d. to 2s. 6d. extra according to port of discharge. Helsingfors has paid 35s. for April. Black oil freights have, as usual, been on a lower level, the highest paid being 28s. 6d. Hamburg, or 27s. 6d. other Continental ports. Bergen paid as low as 21s. 6d., and Copenhagen 23s. 6d., whilst Toulon figures vary from 22s. to 25s. and West Italy 25s. to 31s. 6d. Port Said took a boat at 24s. Gulf-Buenos Aires was recorded as having paid $6.75 in August.

Mexico to United States Refineries.—In spite of decreased production in Mexico recorded elsewhere, there has again been considerable movement of crude oil. Tampico-New Orleans varied from 13½ cents to 15½ cents per barrel, whilst Tampico-Philadelphia paid from 23 cents to 30 cents, with Boston and Fall River 1 to 2 cents per barrel more. Chile recorded fixtures at from 60 to 65 cents.

California.—Lessened production and lower volume of shipments. San Pedro to New York fluctuated between 65 cents and 72½ cents per barrel. Wellington (N.Z.) paid from 80 cents in September to 92 cents in October. A fixture of 45s. per ton spirit is recorded to Hamburg.

Russia is making efforts to stimulate the export of oil, and a considerable volume of chartering has taken place. For refined oil and/or spirit the lowest paid was 19s. and the highest 32s. 6d. to U.K. Continent, with 1s. extra for Hamburg if used. A fixture of a large boat for Vladivostock took place at 61s., Kerosene with a return cargo of bean oil to U.K. Continent at 70s. Tanker rates for lubricating oil to U.K. Continent varied from 21s. to 27s. 6d.

Roumania has done little chartering, but a handy boat can get 37s. 6d. for spirit to U.K. Continent.

Creosote.—A fair volume of tonnage has been fixed and rates have been pretty well stabilised on the basis of 12s. 6d. for 7,000 tons from two ports to one port, or vice-versa, with 1s. to 1s. 6d. more, according to quantity for each additional port used and 1s. per ton increase or decrease for each 1,000 tons one way or the other. These rates hold good for Northern Atlantic as well as U.S. Gulf ports. A fixture of 9,000 tons to three ports Pacific Coast at 31s. 3d. can be noted.

A Turkish concern has been awarded a concession for the construction and operation of a narrow-gauge line from Samsoun on the Black Sea to Charshanba, a distance of 28 miles (says an American Consular report). A three-year option on the construction of 72 miles more of line was also granted to the concessionaire.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, January 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Stockwell for Port Said, Colombo, Madras, and Calcutta (London, January 24).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, January 28).

British India Line.—S.s. Domala for Bombay and Karachi (London, January 30); s.s. Madura for Colombo, Madras, and Calcutta (London, January 31).

Ellerman "City" Line.—S.s. City of Venice for Calcutta (Birkenhead, January 30).

Ellerman's Westcott and Laurance Line.—S s. Bulgarian for Gibraltar, Malta, Piræus, Salonika, Constantinople, and Smyrna (London, January 28).

Johnston Line.—M.v. Tramore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 31). M.s. Sycamore for Galatz and Braila (the first steamer of the season for the Danube) (Liverpool, February 7). S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 28).

P. and O. Line.—S.s. Caledonia for Bombay (London, February 6); s.s. Nyanza for Colombo, Madras, and Calcutta (London, February 7).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Beyrout, Jaffa, and Haifa (Manchester, January 31).

M. Tsamados, the Greek Minister to Yugoslavia, has had an interview with M. Markovitch, the acting Yugoslav Minister of Foreign Affairs, in regard to the forthcoming negotiations for the renewal of the Treaty between Yugoslavia and Greece.

According to the Meshed correspondent of the Allahabad *Pioneer*, the mysterious disease which recently appeared on the Perso-Afghan frontier is abating. The Persian doctors believe that the number of deaths has been exaggerated, though undoubtedly many died.

The Barsi Light Railway Company states that the 50,000 Six and a-Half per Cent. Cumulative Convertible Preference shares of £10 each, offered to the shareholders and Debenture holders, have been oversubscribed, and that allotment letters are being posted.

The Dunlop Rubber Company, Ltd., have been informed by cable from America that the United States Golf Association have decided after all not to introduce a new standard golf ball as had been intended this month. The American standard ball is at present the same as the British, with a minimum diameter of 1.62 inches and a maximum weight of 1.62 ounces. The new proposal, consideration of which has now been deferred for twelve months, was to increase the size to a minimum diameter of 1.68 inches, and to decrease the weight to a maximum of 1.55 ounces.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Quiet but Firm.

The Alexandria Commercial Company, in their report for the week ended January 8, state :—

Since our last report the futures market has been quieter, but the undertone has remained firm. The net changes on the week are the following :—Sakellaridis : $0.80 down for January, $0.55 down for March, $0.35 down for May, $0.15 down for July, $0.90 up for November. Ashmouni : $0.50 down for February, $0.60 down for April, $1.25 down for October. There is not much news to give about the market this week; the demand from abroad has been rather restricted, but prices keep firm, mainly owing to the bullish sentiment which prevails here, and which must be principally attributed to the strength of the statistical position. The available supplies at present in Egypt may be estimated at about 3½ million kantars, a figure about equal to the quantity of cotton shipped during the period from January to August last year. We do not think that it is an exaggeration to assume that we shall ship during the remaining eight months of the season at least as much cotton as last year, if one considers that the visible stocks abroad are about ½ million kantars less than at the same time a year ago, and that the world textile conditions are, in general, much improved as compared to those which prevailed during last year. January has now lost its importance, and March has become the most active Sakel position; apparently most of the business transacted has been for speculative account. February Ashmouni has been in good request, and we believe is rather oversold. November and October new crop have been fairly actively dealt in this week, many of the operations being purchases of November against sales of October. The present difference between Sakel and Ashmouni old crop has apparently tempted some operators to speculate on the narrower new crop difference. The week's receipts amount to 215,125 krs., against exports 259,454 krs.; the stock stands at 1,919,730 krs.

Spot.—We have had a week of quiet markets at Minet el Bassal, and sales for the five business days amount to about 15,700 bales, of which we estimate 6,000 bales Sakel, 5,900 bales Uppers, 3,400 bales Zagora, 50 bales Brown, 300 bales Pilion, and 50 bales White. Demand from spinners has been only moderate, especially for Sakellaridis.

Sakellaridis : As for some time past, the demand continues mainly for the grades above fully good fair. The other grades have met with a very limited inquiry. Spot premiums are without quotable change for fully good fair and above, and have eased somewhat for the lower grades. It is becoming more difficult to buy good stapled cotton in the grades from fully good fair upwards.

Upper Egypt and Zagora Lower Egypt have met with a good inquiry for all grades except the very low qualities. Spot premiums are unchanged for the grades from good fair upwards, the good grades being very well held. The lower grades have eased a little.

Pilion.—A fair business has been done. Spot parities are unchanged except for good, which is rather stiffer.

Brown and white have met with a very poor inquiry, and only a very small business has been done. Spot parities of brown are unchanged except for good, which is dearer. In white, premiums for spot are generally easier.

LIVERPOOL COTTON REPORT.

Market Very Quiet.

Messrs. Reynolds and Gibson report as follows for the week ended January 14 :—

Egyptian Spot.— The slight improvement in spot conditions referred to in our last report failed to hold, and the past seven days have been very quiet, with prices showing a sagging tendency. At the moment, spinners do not appear to be making much headway. The majority are comfortably supplied with cotton up to March, and prices are not such as to encourage them to engage in further commitments. In the meantime, prices have fallen away for lack of fresh support, and F.G.F. Sakel is quoted to-day at 1¼d. below the highest point reached so far this season. A period of quietness, such as we are now undergoing, is quite a normal turn of the wheel, and was more or less to have been expected after the heavy buying which took place at the end of the year. Spinners are still receiving large quantities of cotton, as witness last week's forwarding figures of over 16,000 bales, and a certain period must inevitably elapse before the trade will be compelled to come into the market again. That they will come again is certain, and, in our opinion, any drop in values which takes place in the interim will be more than recovered. The statistical position of Egyptian cotton this season is too strong, and the selection of Sakellaridis in our market too poor for it to be otherwise.

Sakel has been in only moderate request, but holders are not giving anything away, and buyers search in vain for the officially recorded drop of 75 points which has occurred this week. For anything over F.G.F. very stiff prices are being asked, and the selection, for the time of the year, is most disappointing. For example, although Good Sakel is quoted to-day at 30.50d., we doubt very much if it can actually be purchased at a penny over this price. For the grades below F.G.F. there is practically no offtake. Uppers have been in good request, and prices for this cotton show rather more irregularity. A fair business has been transacted. Pilion still continues to attract notice, but either the prices asked are considered excessive, or spinners lack courage to commit themselves, for no business of weight has been reported. We cannot but think that this cotton will come into its own later in the season. A small business has been done in Sudan cotton. Other growths have been neglected. C.i.f. business has been very quiet. Forwardings to spinners for the week ending the 9th instant, were returned as 16,493 bales. Estimated sales, 1,700 bales Egyptian and 250 bales Sudan. Quotations of Sakel show a decline of 75 to 95 points. Uppers and Brown are reduced 35 points for Extra Fine, and 15 points for all other grades. F.G.F. Sakel to-day 29.25d.

COTTON TRADE REVIEW.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended January 10 states :—

Business has fallen away somewhat during the past week as compared with the two preceding it. There has been no lack of inquiry, but it has been difficult to transform it into actual orders.

Yarn.

In American yarns spinners of medium counts have had a fairly satisfactory week, but business in the coarser counts is not so good. On balance, perhaps, the market is a shade weaker. Quotations for the finer Egyptian yarns are such as to render business almost impossible, but a fair amount goes through in the lower qualities. Substitutes for Sakellarides cotton are being sought and, it is said, found. Were it not for the large orders booked some time ago, this section would be in a very difficult position, and the outlook, when they run off, is not reassuring.

Cloth.

There has been no feature of special interest in this section. A miscellaneous business of only moderate extent has gone through. As usual, India has sent the bulk of the inquiry, but the result in orders booked has been disappointing. Trade with China is sluggish, but for numerous smaller outlets a useful number of contracts have been placed day by day.

Raw Cotton.

An active business has taken place in Liverpool, and imports have been on a large scale. American has lost the gain it made last week, and New York seems to have been the source of the weakness. On the other hand, the price of Egyptian has again been very slightly increased, but, as previously reported, the position here is abnormal, and there is much uneasiness as to the future. Closing quotations yesterday were as follows :—American middling, 13.03; Egyptian fully good fair, 30.20.

COMPANY NOTES AND REPORTS.

Westminster Bank.

The net profits of Westminster Bank, Limited, for the past year, after providing for bad and doubtful debts and all expenses, amount to £2,913,501 18s. 7d. This sum, added to £568,479 15s. 8d. brought forward from 1923, makes available the sum of £2,581,981 14s. 3d. The dividends, 20 per cent. on the £20 shares, and 12½ per cent. on the £1 shares, absorb £1,287,886 9s. 6d. £100,000 has been transferred to bank premises account, £300,000 to rebuilding account, £200,000 to contingent fund, and £100,000 to staff provident fund, leaving a balance of £594,095 4s. 9d. to be carried forward.

Imperial Bank of India.

A cablegram has been received from the central office of the Imperial Bank of India giving the figures for the half-year ended December 31 last. These show that the net profit was Rs.49.05.800, against Rs.49.13.400 for the corresponding figure of 1923. Adding Rs.21.52.800 brought forward, the available total is Rs.70.58.600. The governors have declared a dividend of 16 per cent. per annum free of income-tax, absorbing Rs.45.00.000 (the same), and have transferred to the Reserve fund Rs.10.00.000, and to the pension fund Rs.3.00.000 (both these amounts being unchanged), leaving to be carried forward Rs.12.58.600, as against Rs.10.21.200 a year ago.

Bengal and North-Western Railway.

The report of the Bengal and North-Western Railway Company for the year ended September 30, 1924, shows net earnings of Rs.1,77,69,475, against Rs.1,68,53,685 for 1923. The company's share is Rs.1,04,96,764, against Rs.98.67,000. The rates of exchange were above that of 1s. 4d., the book rate, and adding the gain in remittance—namely, £34,466, the net earnings are £734,250, against £662,650 in 1923, when the gain in remittance was £4,850. After bringing forward £157,281, providing for corporation and income taxes, interest on debenture and preference stocks, interim dividend and bonus, contribution to provident fund, £35,000 for sinking fund for redemption of capital in 1982, £30,000 to reserve and making other adjustments, the amount available is £341,752. The directors recommend a final dividend of £5 per cent., together with a bonus of 2 per cent. on ordinary stock, subject to tax at 2s. 5d. in the £, carrying £157,127 forward. Dividend and bonus will make 13 per cent. for the year. The gross earnings show an increase of Rs.10,62,214, the working expenses an increase of Rs.1,46,424, and the net earnings an increase of Rs.9,15,790. Coaching traffic increased by Rs. 1,25,864, goods traffic by Rs.6,62,968, steamboat earnings by Rs.1,09,323, and sundries by Rs.1,61,679.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Paper and Stationery.—The Ministry of Finance, Egypt, invites tenders for the supply of paper, stationery, and various other allied goods required by the Central Stationery Stores Department during the year 1925-6. February 2. (D.O.T.)

Candles.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of two English tons of candles. February 3.

Mirrors.—The Egyptian War Department invites tenders for double reflecting mirrors, complete, and spare mirrors for same. February 9.

Calico and Sash.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of calico and sash required for the next financial year, 1925-1926. February 10.

Pumping Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of pumping plant. February 15. (D.O.T.)

Uniforms.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of uniforms required during the financial year 1925-26. February 20.

Cement.—The General Manager, Egyptian State Railways, Cairo Station, invites tenders for the supply of 2,000 metrical tons Portland cement. February 21.

Printing Plates.—The Surveyor General of Egypt, Giza (Mudiriya), invites tenders for the supply of aluminium lithographic printing plates required for 1925-1926. March 18.

Roumania.

Turbo-Generator.—The Municipal Electric Works of Timisoara (Transylvania) invites tenders for the supply of a turbo-generator, Scott transformers, a high-tension feeder, and various accessories. March 26 (D.O.T.)

Locomotives.—H.M. Consul at Cluj (Mr. Charles Goodwin) reports that a firm has approached him asking to be furnished with quotations for a locomotive. The type of locomotive required is about 70 h.p. (D.O.T.)

Weighing Machines.—The Roumanian State Railways invite tenders for the supply of weighing machines. January 30. (D.O.T.)

Porcelain Insulators.—The Roumanian State Railways invite tenders for the supply of porcelain insulators, sleeves, and plates. February 3. (D.O.T.)

Sulphate of Copper.—The Roumanian State Railways invite tenders for the supply of sulphate of copper. (D.O.T.)

Turkey.

Sacks.—The Administration of the Ottoman Public Debt invites tenders for the supply and delivery at the port of Smyrna of 400,000 sacks. March 15. (D.O.T.)

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Case Against M. Raditch.

It is not unusual in the Balkans when a State trial is pending for the Government to publish its case against the defendant instead of waiting for the formal indictment in Court. In keeping with this custom, the Yugoslav Government has published a memorandum purporting to have been written by M. Raditch to the Soviet authorities to notify them of a draft agreement drawn up between himself and a Hungarian diplomatist. From this document it appears that M. Raditch during his stay in London in November, 1923, met an unnamed Hungarian, and drafted with him an agreement on behalf of the Croat Republicans that was subsequently repudiated by the Magyar Government. Only the actual proceedings in Court can establish whether M. Raditch's action in this instance is more treasonable than other lapses on his part, for it is already well known that he openly favoured a republic for Croatia, and that not only was he in communication with Moscow, but that he also went there. The purpose of the "agreement" was apparently to secure the goodwill of Hungary for Croatia's efforts to win autonomy and to bespeak her support for the Croatian Republic-to-be. Hungary was to recognise the Republic as soon as it was recognised by any Great Power, and was to conclude with it a political as well as a military defensive alliance. In the event of Croatia and Serbia coming to terms, there was to be a commercial treaty with Hungary embodying complete economic reciprocity.

Treason or Pose?

In view of the attitude of Serbia towards Hungary, it is natural that this agreement should be regarded by the Serbian public as rank treason. Others who are able to approach the subject more dispassionately may find it difficult to decide whether a man in Raditch's position, who at that stage in Yugoslav affairs spends six days in drawing up such a document, was really plotting treason or merely adopting a pose in order to impress his Soviet friends for purposes of his own. The fact remains, however, that he is, or has been until now, a power in Yugoslavia, for at the last elections he polled 473,000 votes as against the 562,000 of M. Pashitch's party, or 21.8 per cent. as compared with 25.6 per cent. of the total number of votes. Whether his popularity in Croatia will be proof against the revelation of the "Hungarian agreement," the near future will show; but he has certainly placed a useful weapon in M. Pashitch's hands. With his elimination the Croatian question will not be solved, although it ought to prove easier of solution, with good will on both sides; but it is conceivable that, unless the Belgrade Government is prepared to meet the Croats halfway, a more rational and less stupid politician than M. Raditch at the head of the Croatian Party would prove a more serious thorn in the Serbian flesh.

Montenegro.

An Exchange telegram is responsible for the statement that two members of the Yugoslav Government have recently returned from a visit to Montenegro, and are recommending certain measures designed to pacify that country. Among the recommendations is an amnesty for political offenders in Montenegro, and it is added that King Alexander has already signed a decree granting an amnesty to over two thousand Montenegrins. A second recommendation, the reconstruction of five thousand houses alleged to have been burnt down as reprisals against revolutionaries, it is said cannot be carried out for lack of funds. Reference has already been made in these columns to the apparent desire of M. Pashitch's Government to make its peace with Montenegro, but it may be advisable to await confirmation of the Exchange telegram before it is accepted *au pied de la lettre*. What would seem to be required now is that someone who is trusted by the Montenegrins should take upon himself to advise them to respond to the overtures now being made. Burying the hatchet is not a favourite pastime in the Balkans; but it is obviously prudent for the Montenegrins to come to terms while there are still enough of them left to benefit by a compromise. The Serbs, unless we are mistaken, are anxious only to make sure that for all practical purposes Serbia and Montenegro shall speak with one voice in all Yugoslav Councils; the Montenegrins, on the other hand, are prepared to be loyal to Serbia

Digitized by Google

if full recognition is given to their nationality. The two claims are easily reconcilable.

Greece and Bulgaria.

The danger of friction over their respective minority grievances was recognised by Greece and Bulgaria when their representatives at Geneva drew up a protocol providing for foreign supervision in regard to minority matters. Unfortunately, the Greek Government appears to have made up its mind not to ratify this protocol, and almost inevitably the accusations of maltreatment of minorities bandied between the two countries tend at once to increase in bitterness. In view of the charges brought against it, the Bulgarian Government has clearly taken the right step in asking the Mixed Commission of the League of Nations to make an inquiry in the districts where the persecutions of Greeks by Bulgarians are alleged to have occurred. Why the Greek Government should forbid its delegate to take part in the proposed inquiry is not clear. The proper body for an investigation into the charges is obviously one on which foreigners are serving as well as a Greek and a Bulgarian representative, and such is the constitution of the League of Nations Mixed Commission, which is on the spot, even if it was brought into existence for a different purpose. If these persecutions are taking place, it is difficult to understand why any Government should prefer to see them continued for one day longer rather than afford its nationals the protection that an international commission of inquiry is bound to give them, at least during the period of investigation. Bulgaria might have been within her rights in regarding an international commission as an encroachment upon her sovereign privileges; but when she invites one to investigate the charges brought against her, it might have been expected that Greece would at once accept the proposal or suggest an alternative commission of inquiry.

The Greek Police.

An interesting experiment has been in progress for some time in Greece—the training of policemen under a British officer. Until last week the British-trained police had been confined to the towns of the Piræus, Patras, and Corfu, but they have now made their appearance at a few important points in Athens, where the regulation of traffic is becoming a problem for the municipal authorities as a result of the rapid increase in the population of the capital. Now that the success of the Greek experiment has been established, it is to be hoped that it will be imitated in other Balkan countries. Traffic problems may not be so pressing elsewhere, but every State would benefit by having an efficient police force entirely removed from the sphere of politics, which, although necessarily under the jurisdiction of the Minister of the Interior of the day, would not be looked upon or used as a political weapon in the hands of the Administration, nor be subject to changes in its higher personnel with every change of Government. Such a police force in each country would be an important factor in the introduction of more stable conditions throughout the Balkans.

Another Republic.

The number of Near Eastern Republics has now been increased to three by the proclamation of the Albanian Republic. After the Armistice Albania continued to be a monarchy in name, but syndicated the office of Sovereign in a Council of Four known as the Regency. Tentative invitations to the Throne were issued, but the only offer received, if report be true, was from an enterprising American millionaire. In the meantime the centrifugal tendencies of the Albanians manifested themselves and played as much havoc with the Regency as with the Albanian people. The monarchy in commission proved unworkable, and Ahmed Bey Zogu has terminated the farce by proclaiming a republic. The decision to postpone for seven weeks the election of a President and the election of a new Parliament is a sound one. If Ahmed Bey Zogu himself becomes President, he will have avoided the charge of having rushed his election on the heels of his successful invasion of Albania. So far as is known, the recent change of Government was effected with little or no participation of the Albanian people as a whole. Ahmed Bey Zogu and a small force marched into the country from Yugoslavia; Monsignor Fan Noli at about the same time marched out. There were reports of artillery in action, on one side; but it may be inferred that Central and Southern Albania remained completely indifferent to the proceedings in the North. Ahmed Beg Zogu's task will be to deter any part of the country from lending its ear to the promptings of those who wish to turn him out. Probably the best way will be to give every part of the Republic the sense of participation in the Government by forming a real Coalition Cabinet, which will cry halt to rebellions and turn its attention to Albania's material needs, which are legion.

Desert Arithmetic.

The long-deferred elections in Iraq have met with a further postponement, this time because the returns show an electorate of over nine million voters in a total population of three million. Except in the case of armies in the field, the tendency in the East is usually to under-estimate numbers in view of the connection between a census and the payment of taxes. In Iraq, however, either the tribes must be moved by a sudden enthusiasm for constitutional government or the Sheikhs must have decided that the moment is opportune for magnifying their importance in the eyes of the Baghdad Government. The suggestion that the electoral returns would have to be used as the basis of any future poll-tax would probably produce an abundant crop of amended returns; but the Government has rightly decided to proceed on more regular lines, and is instituting a general inquiry into the matter. The incident illustrates one of the difficulties experienced in introducing Western innovations into the East. It is particularly to be regretted that there should be any further delay in the meeting of the Iraq Parliament, as there is much business of an important character awaiting its decisions.

INDIA.

Lord Reading on Bengal.

The Viceroy's speech at the opening of the legislative session in Delhi has been noticed rather widely in this country, and his observations regarding the murder conspiracies in Bengal were honoured with headlines by journals which, as a rule, tell their readers very little about Indian politics. We cannot find anything new in his remarks, unless it be the explicit statement that his Council was unanimous, but we do not complain of the lack of novelty. India is still very slow to appreciate unpalatable facts, and, as we have recently urged, the great need just now is to go on repeating them until the lesson has been learned. We must wait for the proceedings of the Assembly to know the progress made in that direction, but there are some indications that the attitude of portions of the anti-Government *bloc* has been modified since last year. The *bloc* was never homogeneous,

Digitized by Google

though it could on occasion present an aspect of unanimity, and, while the stalwarts probably stand where they did, some of the weaker members seem to have been doing a little thinking during the recess. The process may not lead to anything just yet, or at most to a few cases of slight fever about division-time, but at least it will add to the interest of the session now in progress.

The Exchange Position.

Lord Reading's references to the position of the rupee, supplemented by Sir Basil Blackett's speech on the same topic, make it clear that stabilisation is again a question of practical politics. On the whole we think there is wisdom in the decision to wait just a little longer, for most authorities agree in holding that the discount on sterling will shortly vanish, and, when the pound is again worth a sovereign, the rupee can be linked to it with much greater confidence than when its value fluctuates. At the same time we feel some sympathy with the insistent demand of Bombay to settle the matter at once. The Finance Member practically admitted that the value of the rupee is at present subject to bureaucratic regulation when he stated that the Government purchases of sterling were motived by the desire to control the level of internal prices, and that is too dangerous to go on for long. There is very much to be said for a policy of effective stabilisation, and there is a little, just a little, to be said for the alternative of letting the rupee find its own level, but there is nothing whatever to be said for a position where a gentleman, or for that matter an archangel, sitting in an office should be able to pull the rupee now this way, now that, on the strength of his ideas of what will suit the country best.

The Economic Inquiry.

A point of some interest in the Viceroy's speech was his announcement that the Government is moving towards that inquiry into the economic condition of the people for which educated India has been clamouring for so long. The inquiry itself is not yet, but there is to be a committee to inquire about having an inquiry, so we may say that the reluctant bather, after shivering for some time on the brink, is now dipping his toes into the water to see whether it is really as cold as it looks. Our own view is that the task ought to be faced promptly, however difficult it may be. The questions whether the national income is rising or falling, and of the rate of its movement, lie at the root of almost every problem now before the Administration, and a glance at the futilities which witnesses have recently been unloading on the unfortunate Taxation Committee will convince anyone that even professors of economics may be utterly in the dark on this matter of fundamental importance. As a matter of fact, something like nine-tenths of the required information is probably already on record in blue books which the professors have not read. To set out that information clearly, and to collect the odd tenth, is not really so stupendous an undertaking as the official spokesmen have argued.

Greece has been informed officially that the new Albanian Government has proclaimed a Republic.

Orhan Bey has returned to Turkey from London to take up his new appointment at the Turkish Foreign Office at Angora.

Princess Marie of Greece has given the French Geographical Society more than 50,000 books on geography which belonged to her father, the late Prince Roland Buonaparte, who was for nearly 15 years president of the society.

In commemoration of the 40th anniversary of the death of General Gordon at Khartoum, the council of the Shaftesbury Society and Ragged School Union on January 26 placed upon the statue erected to his memory in Trafalgar Square a wreath.

THE WEEK AT HOME.

London, Tuesday Morning.

The Earl of Oxford.

The honour that has as much as any, perhaps, been thoroughly merited has at last been accepted by Mr. Asquith; he has consented to become the Earl of Oxford. The whole matter is one for congratulation—upon those who made the award, upon the recipient of the award, and upon the choice of the award.

There is something peculiarly heartening in the survival into our time of one who is both a first-class politician and a cultured Englishman, for the cases that may be cited. as instancing the latter, of Mr. Baldwin and Mr. Ramsay MacDonald, hardly include the first accomplishment. The thinking part of the nation is indeed proud of Mr. Asquith, and would never forget him if it were only for his dignified steadiness in the quaking days of 1914. It has been said, in fact, that future historians will estimate him as the greatest Premier since Pitt. Whatever be the ultimate fate of Liberalism, there is little doubt that, with Earl Grey and the Earl of Oxford together in the Lords, its strength there will be as the strength of a hundred men. No party can boast two such eminent counsellors as these.

Mr. Asquith.

It is a little pathetic to see the pang with which the Radicals are saying farewell to "Mr. Asquith," the last of the Gladstonians, and the welcome with which the Tories are greeting "the Earl of Oxford." The former seem almost to think that a link has been broken, the latter that the chain has been repaired.

Standing outside both parties, one observes all this with gratification, for is it not the sincerest tribute to this quintessential Englishman's greatness? It is not for nothing, one may be sure, that the *Morning Post* can be induced, or, rather, be eager, to express the opinion that Mr. Asquith is to-day "the most popular man in England."

This new honour will scarcely, in the great Commoner's estimation, be "a plum": yet it is good to repeat that for the cracking of this walnut he still (as the Spaniards say) possesses sound teeth. For the historic title will certainly receive a worthy adorning.

Mr. Lloyd George and the Tories.

Against the impregnable walls of the Conservative Party the sharp flying arrows of Mr. Lloyd George, despatched from the Liberal wallet, do but blunt their noses. The temporary leader of the Liberals now likes to talk of the torpor of the present Administration, during which, as he confides to us, our enemies are insidiously violating our integrity. As far as one can discover, Mr. Lloyd George's bogeys at present are landlordism and drink—an obsession that implies a reversion to his early type. The Liberals, if they are to be taken seriously, must do better than this: surely they can see that Mr. Lloyd George's wildest words disturb not in the least the serenity of the Tories.

Mr. Baldwin's Pipes.

Whatever one may think of the Prime Minister's political leadership, one is forced again and again to admire the ease with which he conducts non-political gatherings. At such affairs he proves himself to be the homely Englishman. Last week, for instance, he dissociated himself for all time from the merely wealthy politician, the cosmopolitan frequenter and the financial hobnobber by declaring simply and unconcernedly that he had never paid more than three shillings for a pipe. Round so distinguished a man as this how can the democrats restrain themselves from swarming? His disclosure of this fact, together with his simultaneously expressed approval of the cross-word problem, should, indeed, secure him the backing of the whole country.

Meat Rings.

The evidence given last week before the Royal Commission by the magnates of the meat business was of engrossing interest; yet even more engrossing, one imagines, was the evidence which was given in private. Quite bluntly, these big meat men created the worst possible of impressions, and their protests against ignorant judgments on the part of the public failed to get home. Considerable surprise and disappointment were caused by the decision of Sir Auckland Geddes, the chairman of the Commission, to close the sessions to the public just as the core of the argument was being approached. Doubtless he knows best how to get the information that the Royal Commission desires, but it did seem regrettable that these extremely wealthy men, who, on their own assertion, exist but to serve the public, should be unable at the critical moment to take that public into their confidence. It is always so very difficult, when something is hidden, subsequently to deny that there was something to hide.

THE ESSENCE OF INSURANCE IS SECURITY.

The All Blacks.

The all-conquering New Zealanders have come and gone, preservers of an unbeaten record. They had, it appears, a very good time here, and if hospitality could permanently efface anything, the hospitality that they received, both officially and unofficially, in the last few weeks must have effaced the very painful impression that the sending off of one of their forwards at Twickenham caused.

In any case, that occurrence is no subject now for any but futile comment: the fact remains—it is a proud and glorious fact—that they return to New Zealand knowing that they have beaten fairly and squarely every team that the Mother Country could put up against them. It is a record of which men will talk in years to come, and one that cannot well be eclipsed.

Cricket.

Never in the peace-time history of our Empire can any hours so terrible as those which Gilligan, Freeman, and Strudwick endured last week while waiting to bat for England have been passed by any man. There is nothing in any game quite so bad as the waiting for one's innings at cricket when the world is looking at you. And that these three men failed in the endeavour which must have been the highest in their lives but makes one's sympathy with them all the keener.

As all the world now knows, England lost the third Test (and, consequently, the Ashes) by the narrowest of margins, but, as the world also knows, English cricket has been reinstated in its prestige. To prattle about the luck of this last Test is the most foolish thing possible: to exploit the confidence gained through it is the great thing. Personally, I should not in the least be surprised to see Australia lose the last two Tests.

While everyone was spending sleepless nights and, in the early morning following, spending countless pennies in discovering, through the evening papers, how the Test match was going, an unpleasant controversy broke out—and eddies of it are still discernible—about the relative merits of amateurs and professionals in cricket. In some speech Lord Hawke said, among many wise things with which every cricketer will agree, notably, his strictures on the disgraceful, absolutely inexcusable, criticisms of Parkin upon the choosing of the Test teams, these words: "Pray God no professional may ever captain England." As soon as one read these words one foresaw the storm of criticism that would inevitably follow.

It has been explained that Lord Hawke is a poor speaker, that no man has done more for the lot of the professional than he, that no man has done more for English cricket generally, and so on. This is all perfectly true; the fact remains that he uttered this extreme stupidity. Other eminent cricketers have been quick to assert the true attitude of the amateur towards the professional: which is—precisely that of the professional towards the amateur. "If he's the best captain, he's the best captain. That's all about it."

The Eclipse.

The eclipse on Saturday, the like of which, we were told by the newspapers, had not been seen for 200 years, turned out to be rather a frost. Round London, at any rate, it interfered in no way with normal activities, and there was none of that eeriness and stirring of primeval fear which characterised the eclipse of 1912. The War seems to have changed everything!

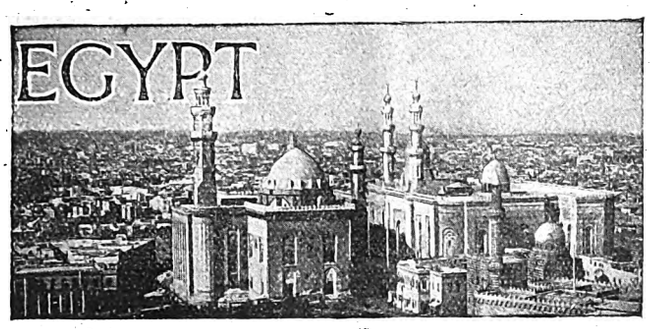
From Our Own Correspondents.



Cairo, January 17.

Tutankhamen's Tomb.

After nearly a year's suspension of work a settlement has been arrived at with regard to the tomb of Tutankhamen, and both Mr. Carter and the Egyptian Government are to be congratulated at having contrived to put an end to an incident that from a scientific as well as a public point of view should never have been allowed to assume the proportions it did. There is little doubt that the personality of the Wafdist Minister of Public Works, who pushed his xenophobia to the limit of having all the china used on his Administration's steamers and in its rest-houses scrapped because they bore inscriptions in European characters, was in great measure responsible for the antagonism that crept into the controversy, and it speaks volumes for the more reasonable attitude and sympathetic personality of the present Cabinet that, without abating one iota of the requirements of the Departments concerned, they have managed to come to an arrangement which Mr. Carter felt he could accept.

Archæology benefits by this termination of the delay which the work has suffered, for the objects still left within the tomb cannot in the interval have escaped deterioration. The filling-in of the tomb entrance with earth is by no means a sure protection against the outside atmosphere, and the sooner the objects pass into the chemist's hands the more certain will it be that these treasures will be preserved. The resumption of work is also a subject for rejoicing for the hotels, which have suffered very much by the competition of other resorts, and now feel that the knowledge that it will be possible to visit this much-advertised tomb with a Government permit during the next couple of months will serve as a useful counter-attraction.

The Electoral Campaign.

The electoral campaign continues apace, and a new element has appeared in the field in the shape of a new party called *Al Ettehad* (Union), having exactly the same object as each of the three other parties—viz., the complete independence of Egypt and the Sudan—but proposing to attain it by different methods, such as, for instance, internal reforms. It is understood that a very large proportion of the Independent candidates have joined the new party, and it is expected that the remainder will declare their adhesion as soon as the elections are over, so that *Al Ettehad* does not lack support. But neither it nor the organ of the same name that was launched the same day seem so far to be making any great mark. Perhaps this is due to the fact that the party lacks a head, and the paper has as yet no proper journalistic staff. It is true that, owing to the imminence of the elections, things had to be done in somewhat of a hurry, but one would certainly have thought that by this time it would have been possible to remedy what is a most serious defect in any political organisation, and must constitute an enormous handicap to a party at its birth.

Meanwhile great activity is being displayed in combating the Wafd, and daily more defections are reported. The most sensational has been that of Mohamed Said Pasha, followed by Ismail Sirry Pasha, Abany Pasha, and Yussuf Wahba Pasha. These, particularly the first named, are bound to influence the electorate, as well as other candidates, and by the time the general elections take place it is possible that the Wafdist list will have become considerably less.

The preparation of the lists is being feverishly carried out, but, in spite of all the efforts, it will not be possible to complete the work by the 20th instant, the date originally fixed for the primary elections. These are about to be postponed to February 4—which will entail an alteration in the dates for the general elections and the opening of Parliament, which will now take place on March 12 and March 23 respectively.

The Wafd, which appears to be much distressed by the development of the situation, is trying to make great capital out of this postponement, which it alleges has been ordered by the Cabinet in order to further its own political ends. It is generally admitted that the non-Wafdists would stand a much better chance of victory if a longer period could have intervened before the elections, but no stretch of the imagination could persuade any reasonably-minded person that the present change in dates could have been prompted by purely political considerations. Fifteen days, which is the extent of the postponement, cannot furnish any material advantage to any political party. Had it been for two months the Wafd might have had some justification for complaint, and its present grievance is merely another illustration of its perverse and desperate frame of mind.

The following is an analysis, based on official

BULGARIA.

Sofia, January 21.

Criticism of the Government.

This week the Sobranye meets, and various economic questions will be discussed. Of late there has been a growing inclination on the part of the Opposition, and even amongst certain Governmental circles, to criticise the Government on account of the rise in the cost of living. The fact that wheat has had to be imported from abroad has in particular caused adverse criticism, while the danger of bread's growing dearer is another matter which greatly concerns public opinion. The Government has defended itself against its critics by arguing that in most European countries the cost of living is becoming dearer. This is true, but it is not much of a solace to the private citizen. However, the Opposition is, comparatively speaking, so small and so disunited that the Government runs no risk of being defeated in Parliament. But the spring is not far off, and the various subversive elements which delight in troubling the peace of the country will very probably try to exploit the economic situation for their own ends. In unofficial circles connected with the Government, there is talk of a Cabinet reconstruction specially designed to deal with economic and financial matters. At present there are several able economists who are not in the Government, and whose advice has unfortunately very often been disregarded. Whether it will be decided to include some of these economists in the Government depends on the spirit which reigns amongst the Democratic Entente during the coming session. At present the tendency seems to be towards carrying on without any changes.

Greek Minorities in Bulgaria.

Since the New Year, there has been much talk regarding the persecution of Greeks living in Bulgaria. The Athens Press has published many bitter attacks on the Bulgarian authorities for their alleged brutal conduct towards Greek subjects. Upwards of fifteen incidents are stated to have occurred, and the Greek Legation in Sofia has made several protests to the Bulgarian Government. The latter, whilst deprecating the attitude taken up by the Greek Press, has let it be known that it is perfectly willing for an inquiry to be held, and forthwith invited the two neutral delegates of the League of Nations, Colonel Corfe and Commandant De Roover, to investigate the alleged persecutions. It is believed that the two delegates in question were to have begun their inquiry this week, but the Greek Government appears to have taken exception to this, saying that no inquiry is necessary or possible, as the facts are already proved. Such an attitude on the part of the Greek Government cannot fail to produce a painful impression in Bulgaria. This country maintains that, if the Greek case is as strong as it makes itself out to be, then it has nothing to fear from an impartial inquiry. In addition, the Bulgarians resent being accused of having persecuted minorities and not being able to get an impartial tribunal to pronounce on the veracity of the accusations.

Relations between Greece and Bulgaria are unhappily becoming steadily worse. Feeling on both sides is running high, and it is therefore very satisfactory to read an article by M. Ivan Majaroff, formerly Bulgarian Minister in London, which is a model of moderation and common sense. (This article is reproduced at the end of my letter.)

The Greek Parliament met yesterday, and it is surmised that if the Protocol relating to Greek and Bulgarian Minorities is brought forward, it will be rejected by the Parliament. But the resignation of M. Roussos, the Greek Foreign Minister, may mean that the Government has not the intention of bringing the Protocol before Parliament for ratification. It would, in fact, seem that the idea is to let it die a natural death. Naturally the non-ratification of the Protocol will arouse resentment in Bulgaria, and at the Council of the League of Nations, due to be held in Geneva during March, Bulgaria is practically certain to raise the question. Meanwhile, the League of Nations' delegates, along with the Mixed Commission for Greek-Bulgarian voluntary emigration, are leaving Sofia at the end of February for Athens, where they will instal themselves. It is to be sincerely hoped that the delegates, who naturally enjoy the full moral support of the League of Nations, may succeed in creating a better atmosphere between Greece and Bulgaria. For there is no use hiding the fact that a somewhat serious situation has arisen, and when racial passions are inflamed in the Balkans there is no saying what may happen.

The Treasure of Vultchi-Treune.

The discovery of a massive gold vase, with its component parts, by some peasants working near Vultchi-Treune, in the district of Plevna, is of considerable archæological interest. Other gold vases have been found in Bulgaria, but they have all been of much smaller dimensions. Local experts, notably M. Protitch and Professor Filoff, incline to the belief that the vase in question is of Persian workmanship, and was formerly used by

the disciples of the Zarathustra religion. It has lain buried in Bulgaria for many hundreds of years, and it was quite by chance that the peasants found it. A spice of humour is lent to the proceedings by the fact that the peasants believed the vase to be bronze, and, therefore, handed it over to the Mayor. Their honesty will, however, be rewarded, as the law of the country provides for a certain percentage of the value of an art treasure being handed over to the finder thereof. It is calculated that the vase in question is worth, measured in gold, about £5,000. It is now on view at the National Museum in Sofia, where it has attracted much attention.

Anarchists.

There has been a recrudescence of Anarchist activity. Ten days ago a Sofia detective named Stephanoff was shot dead in the street. His assailant escaped, but it was believed that he was a notorious Anarchist. Two days ago the police received information of the whereabouts of this individual. Preparations were made on a large scale to effect his capture, and in the afternoon a big force of police and soldiers, accompanied by a machine-gun detachment, rounded up the Anarchists in a house standing in a commanding position on the outskirts of the town. A cordon was drawn round this house, and field artillery was brought up with the intention of blowing it to pieces. But the approach of darkness and the fear that damage would be done to surrounding houses induced the authorities not to use artillery. Meanwhile, it was learned that the Anarchists were two in number. It was then decided to set fire to the house, but in the interval some detectives and police forced an entry. The Anarchists had apparently established a stronghold in the attics, and for a long time they defied all the efforts of the authorities. Firing took place on both sides, but no detectives or police were hurt. One of the Anarchists was, however, killed, and late in the evening the second one was found dead. Whether he was suffocated, killed himself, or was shot is not known. About him was found a store of revolvers and bombs, and as he and his companion had long been sought for by the police, the latter seem to have registered a distinct success.

News in Brief.

To-day M. Bilciuresco, the new Roumanian Minister, presented his letters of credence to King Boris.

The British Minister, the Honourable W. A. F. Erskine, has returned from leave and resumed his duties.

The Protocol of Geneva.

The following is the translation of an article published in the *Slovo* of January 12, and written by M. Ivan Majaroff :—

If one judges by what one reads, and by what is being said in Greece, one arrives at the conclusion that our Southern neighbour has really decided not to respect the engagement which her representative at the League of Nations took in the name of the Greek Government and nation. If a country takes such a decision, one is entitled to think that the engagement is very heavy, even unsupportable, or that the country has a singular conception of the League of Nations and the importance of its decisions.

We know that the Protocol, signed at the last Assembly of the League at Geneva, regarding minorities is an inevitable consequence of Treaties already signed and that the only new feature is that two League delegates are appointed to control the execution of these Treaties. And it is that, so we hear, that is frightening our neighbours. We cannot see, however, what there is to be frightened about, if Greece is inspired by a sincere desire to carry out engagements assumed by her and respect the Treaties.

There are two Slav races, Czechoslovaks and Poles, who have accorded rights to their minorities without being obliged to by the League of Nations, and without any reciprocity. In so far as Greek and Bulgarian minorities are concerned, reciprocity is, on the contrary, assured.

Thus, what makes Greeks, notably prudent men like M. Venizelos, advise the Government not to apply the Protocol and to place it before Parliament with the recommendation not to ratify it? In certain circles it is said that the negotiations with Yugoslavia regarding the renewal of the Treaty of Alliance being imminent, the Greek Government, wishing to be "prévenant" for the Serbs, has decided to expose itself in the eyes of the League of Nations.

This theory seems absurd. First of all, it is not probable that the old Serbs would like to see the Slav element disappear entirely from Greek Macedonia. In addition, the vital interests of Yugoslavia will not be met by the platonic success of the Geneva Protocol being rejected.

As to the question of what nationality are the Slavs living in Greek Macedonia, this will not be decided by the Protocol.

But recent events have proved to Bulgaria, as well as to Greece and Serbia, that to-day the elements which serve as a base for dividing up territory are other than physical. It would thus be naive to believe that such insinuations are able to satisfy the economic needs of the population living to the north of Salonika. The Greek authorities seem to be under the influence of the thousands of refugees who are feeling their way and who come into opposition not only with the Bulgarians, but also with the local Greek population, whom they regard with hate and envy. The Opposition group, in its struggles to attain power, exaggerates the importance of the Geneva Protocol, and encourages the refugees to commit acts of violence. These latter believe that the expulsion of the Bulgarians will bring them large tracts of fertile lands on which hundreds of thousands of Asia Minor refugees will be able to instal themselves.

In addition, the Geneva Protocol may be used as a pretext for overthrowing the Government.

In other countries responsible statesmen would have preferred to resign from power instead of risking theirs and their country's reputation, but in Greece the revolutionary spirit has not yet disappeared, and parliamentary methods in vogue in more democratic countries have not yet been entirely adopted.

It is very sad for us that this situation has arisen, but we shall do our duty to the end. When the Protocol was signed, we did not fear any pacific intervention by the League; on the contrary, we desired the presence of an arbiter. There are, perhaps, in our country unreasonable people, or refugees greedy to gain land, but in general our country is against the expulsion of minorities. Although we do not pretend to be more advanced than our neighbours, we believe that if minorities are well treated, they become attached to their properties, they learn the language, and become good citizens.

Our neighbours are losing an excellent chance of inaugurating a friendly policy with us. For the Greeks living in Bulgaria and the Bulgarians living in Greece could have become the pivots for a better political and economic development. It is only necessary that the two Governments treat the minorities with more confidence. But we have not altogether lost hope that a better and brighter era in Greek-Bulgarian relations may open.

GREECE.

Athens, January 19.

Græco-Bulgarian Relations.

The persistent reports of the persecution of Greeks in Bulgaria are the subject of much un-

friendly comment on Bulgaria in the Greek Press, and ill-feeling between the two countries is by no means subsiding. The Bulgarian Government denies these reports, and proposes the institution of an inquiry by the Græco-Bulgarian Mixed Commission in view of the establishment of the truth as regards the position of the Greek minorities in Bulgaria and the Bulgarian minorities in Greece. The Greek Government is not disposed to accept the Bulgarian proposal, inasmuch as the Mixed Commission is not qualified to carry out the task with which the Bulgarian Government proposes to entrust it. The Commission has only the right to intervene in questions regarding Greek subjects of Bulgarian origin and Bulgarian subjects of Greek origin The reported persecutions which are the constant cause of friction between the two countries concern *Hellenic subjects* established in Bulgaria.

According to information emanating from semi-official sources, the following crimes of which Greeks have been the victims have been perpetrated in Bulgaria since July last :—

August.—Bomb thrown at Bourgas in the court of the house of the brothers Bezis, Hellenic subjects.

September.—Murder of Apostolos N. Christodoulo, Hellenic subject.

October.—Bomb thrown at Bourgas against the house of a Hellenic subject named Kokkinos.

November.—Five Greeks, of whom three were Hellenic subjects, killed or wounded at Staminaka.

December.—The house of a Hellenic subject, Nicoglou by name, was bombed at Sofia.

January.—The house of Svoronos, a Hellenic subject, was bombed at Bourgas. The Greek Consul at Bourgas lives in the same house.

It is added that no arrests whatever have been made in connection with the above-mentioned crimes, which are obviously the work of *komitajis*, over whom the Sofia Government has perhaps no control. M. Roussos, the retiring Minister for Foreign Affairs, stated in the National Assembly not long ago that the terror spread by the *komitajis* is such that no Bulgarian or Greek dares to give evidence against them. The Mayor of Vodena, M. Kaloussis, who last summer reported to the Mixed Commission the names of Bulgarians who committed various crimes in his district, was brutally murdered.

The insecurity of Greeks in Bulgaria owing to the activity of the *komitajis* is doubtless one of the reasons, if not the principal reason, which has impelled the Michalakopoulos Government to ignore the Geneva Protocol. The Government fears that the recognition of any rights to the Bulgarian minorities in Macedonia would encourage the *komitajis* to commit more misdeeds. The eminent jurisconsults, including M. Politis, who are responsible for the Geneva Protocol, are obviously not familiar with affairs in Macedonia, and with the racial feuds which are the scourge of that province.

The Michalakopoulos Government found itself in an extremely difficult position. The application of the Geneva Protocol, which was signed by M. Politis during the Premiership of M. Sofoulis, with M. Roussos as Foreign Minister, would have been detrimental to the interests of the country; it would not only have further complicated affairs in Macedonia, but it would also have rendered particularly difficult the negotiations to be shortly opened with Yugoslavia for the renewal of the Græco-Serbian Treaty. The Government's action in considering the Protocol as non-existent has met with the general approval of the nation. Only M. Papanastassiou's party will make capital out of the Government's action in order to continue its policy of obstruction in the National Assembly. The question which now arises is: How did M. Politis come to sign the Protocol? Has he any personal responsibility in the matter? Be that as it may, by withdrawing from the Ministry for Foreign Affairs (he has long desired to do so), M. Roussos assumes the responsibility for M. Politis' action.

The Police Force.

The police force organised by the British Mission under the able leadership of Sir Frederick Loch Halliday, which has been operating for some time at Piræus, Patras, and Corfu, has taken over the principal centres at Athens, and its jurisdiction will gradually be extended all over the capital. The Greek police has from all times left much to be desired, and its inefficiency at Athens became more and more evident as the population increased. Some ten years ago the population of Athens and the Piræus was 200,000. To-day, as far as can be ascertained, it is 700,000. It is easy to understand how difficult circulation is nowadays in the Greek capital, and particularly in the narrow streets dating back to the Bavarian Regency.

When M. Venizelos visited London towards the end of the Great War he was struck by the smart appearance and efficiency of the Metropolitan police. Always anxious to improve conditions in his own country, M. Venizelos consulted the Marquis Curzon as to the possibility of sending to Greece a special mission for the reorganisation of the police in the principal towns. The British Government raised no objection; a mission was formed, and Sir Frederick Halliday, who had so distinguished himself as organiser of police in India, was placed at its head. The mission first endeavoured to organise a police force by picking men from the gendarmerie, but this scheme fell through under the Royalist régime in 1921. The Mission's second effort, which was crowned with much success, was the organisation of a body of picked men trained at a police school at Corfu, specially instituted for that purpose. The new police has done excellent work in Piræus, Patras, and Corfu, and the extension of its activities has given general satisfaction. The police conditions in the capital had become intolerable. The highest credit reflects on Sir Frederick Halliday for what he has already achieved, and his presence at the head of the new police force suffices to inspire confidence in that body.

Campaign Against Refugees Commission.

The Royalist Press and the official organ of M. Alexandre Papanastassiou, leader of the Republican Union, which, inconsistent with reason as it may appear, have joined hands to combat the powers that be in this country to-day, are leading a systematic campaign against the Refugee Settlement Commission. Their latest grievance is a contract for the supply of wheat concluded with the Bodossaki Athanassiadi firm. The charges brought against the Refugee Commission rest on no more foundation than those levelled at Mr. Henry Morgenthau, late chairman of the Commission, in connection with orders placed in Germany for sectional habitations for the refugees, and referred to in The Near East in August last. As a matter of fact, the Bodossaki contract, which is furnishing the Royalist-Republican Opposition with a pretext to attack the Refugee Settlement Commission, is, as has been ascertained by your Correspondent, concluded on more favourable terms than any contract hitherto signed by the Commission for the supply of wheat.

Constantinople, January 20.

Turco-Greek Differences.

No satisfactory settlement of the Turco-Greek problems now being negotiated at Athens has yet been reached. During the past week there was a certain optimism regarding the issue of the *pourparlers*, as it was believed that Angora's reply to the Greek Government was favourable. The Greek Government's decision to restore to the Mussulmans of Thrace all the seized property contributed largely to a smoothing over of the existing differences between the two countries. At the moment, however, no progress is being reported, and it is supposed that the question of the return of Constantinople Greeks is responsible for the delay in arriving at a settlement. It is evident, from the attitude of the Turkish Council, that amicable relations with all the neighbouring countries are desired, and the delay in inaugurating the reprisals against the Greeks appears to show a conciliatory spirit on the part of the Angora Government.

Of course, the proposed reprisal measures are of comparative small importance, and it is doubtful whether the benefit realisable is worth the trouble of their application. This delay is attributed by many to the reluctance of some of the Cabinet Ministers to put into force any measures likely to have detrimental influence on the possible settlement. On the other hand, however, there is a considerable number of deputies who continually press for the immediate application of reprisals, and consider the present proposed measures as far too weak. But, on the whole, and to-day more than ever, one feels that beneath the exterior of petty quarrels and long outstanding differences, there is a strong undercurrent tending to conciliation, which possibly may be forced, but, nevertheless, exists, because it is beginning to be realised that in the interests of national prosperity economic necessities must have predominance.

Demilitarised Zones.

A temporary suspension of the work of the Commission for the Delimitation of Demilitarised Zones has been given much unnecessary importance by the local Press. The difference of opinions between the Allied Delegates and the Turkish Delegate is one regarding the tracing of the line denoting the extension of the demilitarised zone. According to the Treaty of Lausanne, this line shall be traced in such a manner as to form a zone fifteen kilometres from the coast. The Turkish Delegate wishes to trace a line fifteen kilometres from and parallel to the coast. By such a process, however, the line would, in various places, come within twelve kilometres of the coast, because of certain small bays and peninsulas. For this reason the Allied Delegates objected to such procedure, and proposed that the procedure of the Boundary Commission be followed, which is that of describing a series of arcs at fifteen kilometres distance from the coast at all points and tracing the line thus; but as in this way the line would sometimes exceed the fifteen kilometres distance for the above reason of bays and peninsulas, the Turkish Delegate disagreed. The matter has been referred to and taken up by the respective diplomatic representatives, but as yet no settlement has been reported.

Restoring St. Sophia.

The proposed repairs to the supports of the dome of Saint Paul's Cathedral appears to have been responsible for the drawing of attention of Constantinople architects to the dome of Saint Sophia, which, after examination, is reported to have slight cracks in numerous places. The sum necessary to repair this dome is about £3,500. This sum is to be provided from Government funds.

Jerusalem, January 10.

A Paper in English Again.

Next week Palestine is again to have the luxury of a daily paper in English. There is an organisation called the "Jewish Telegraphic Agency" for providing Jews and newspapers the world over with news of Jewish interest. They have, naturally, an office in Jerusalem for the dispatch of news to the main centres of the agency. For more than a year past this Jerusalem office has been in the habit of producing a cyclostyled bulletin daily, consisting of four or five foolscap sheets, giving a few cables from Europe of general interest, a few items of local news, Government official *communiqués*, and extracts of Palestinian and Jewish interest taken from the Press generally. Beginning with next week this modest local effort is to blossom into a printed news sheet, entitled *The Palestine Bulletin*. This is a brave venture in view of the wreckage of the four or five former English dailies, strewed over the past five years. This attempt may possibly succeed, since it is only a single sideshow of a world-wide concern; a daily English paper in Palestine has no chance of surviving by itself without a very heavy subsidy. The circulation in the country is not likely to exceed three hundred, and few local firms can afford a regular heavy outlay for advertisements; an even more harassing difficulty is the paucity of local news of interest to the specifically English-reading community, and the even greater paucity of those able to write in English! Members of the Administration are, of course, forbidden under the Colonial Office regulations to write for publication except under certain conditions, and outside their circle those with sufficient time, ability, energy, or interest to spare to contribute to a local Press are almost negligible.

The Rutenberg Scheme at Haifa.

The Rutenberg Electrical Power Station at Haifa is progressing apace, and there seems little likelihood of much effective concerted opposition from Arab sources, as threatened to be the case in Jaffa a year ago; *El-Carmel*, the Haifa Arab paper, bemoans the fact that certain pillars of the Moslem Christian Association, members of the Haifa Municipality, are actually supporting this Jewish venture.

Haifa Jewish Communists.

From Haifa comes news of a certain activity on the part of Jewish Communists, the "Fraksiat ha-

Digitized by Google

Poalim." They are estimated as about sixty in number. Almost weekly, they have been turning out proclamations, hectographed, in Yiddish, and secretly circulated, denouncing British and Zionist Imperialism and Capitalism, and the more moderate elements of Jewish Labour. It is only fair to point out that their strongest opponents are among the Jewish organised Labour forces, who are prompt to expel from their body all suspected of sympathy with the "Third International." In connection with the new Zionist settlements, much is heard of co-operative or "Communist" groups. These, however, have little in common with Communism as a political ideal. They are, in reality, nothing more than small co-operative guilds engaged in the experiment of testing whether the organised group consisting of from forty to two hundred members, sharing equally in the work as a whole, can support themselves easier and get better results in agriculture (and, at the same time, get a better agricultural education), than can families separately cultivating individual small-holdings. Members of such co-operative groups often, after gaining experience in such conditions, transfer themselves and family to another colony run on small-holding lines, where, instead of living a common life, with a common fund and a common kitchen (not to mention a common nursery), they have a separate cottage and allotment. Those responsible for the general agricultural policy of the Zionist Organisation have as yet no fixed opinions on whether the co-operative guild or the individual holding will produce the better economic results; though it is becoming apparent that for large-scale production the "guild" is cheaper to run, while "intensive cultivation" is best worked by the system of small-holdings; also the "guild" has advantages as an educational centre for the young Jewish would-be agriculturist, and serves as a useful preliminary stage before undertaking work on his own responsibility. Yet even in such small-holding colonies as Nahalal and Kefar Ezekiel co-operative buying and selling is, on its own merits, becoming the rule.

January 18.

The Assyrian Patriarch.

During this past week there has been staying in Jerusalem that curiously romantic and pathetic figure, the boy-Patriarch of the Assyrian Christians. He left Baghdad on January 8, and after his week's stay here, will make directly for England, where he is to stay for some time until he is of age to assume the full ecclesiastical and civil government of his people. Mar Shimun is not yet sixteen years old, but he has borne on his shoulders for five years the dignity of "Patriarch Katholikos of the East." It has been a quaint sight to see him visiting and receiving the hoary Patriarchs and dignitaries of all (always excepting the Latin) the Eastern and Western Churches; his dignity never in the least fell short of theirs, and never did he seem to run dry of the necessary official reception small-talk.

He goes to England primarily for the benefit of his education, but one hopes that his presence there will help in some degree to bring home to the British public the deplorable condition to which his people, the "Assyrian Christians," have been reduced—very largely as a result of their keen co-operation with the British forces in the later stages of the War in Mesopotamia. The student of Eastern history can never forget that it is these same Assyrians, or Nestorian Christians, who had spread throughout the length and breadth of Asia in the days of Marco Polo. They have left their mark as far as China and India; by the end of the thirteenth century the "Patriarch Katholikos of the East" ruled over twenty-five metropolitan sees, with something like two hundred bishops.

Now there is nothing left of them except a few thousand homeless refugees in the Caucasus and in the Mosul plain. Their old territory in Kurdistan seems finally to be handed back to the Turks, who are not likely to look benevolently on the Assyrians if they try to return. The climate of the plain in Iraq is killing off the fugitives rapidly, and the future of these people—through no fault of their own, seems well-nigh as hopeless as it could well be.

Hopes of Transjordan.

Reports from Transjordan begin to be encouraging; there are a few signs that financial and administrative order are being raised to a perceptible level. Since Colonel Cox took over the post of Chief British Representative the Government accounts have been assiduously nursed, and they ended the old year with a balance of £17,000. The Transjordan Administration satisfied French Syria's demands to the extent of handing over twenty-three persons suspected in connection with the August raids. Public confidence in Rikabi Pasha and the Government generally is on the increase; public security is improving, and there was a recent case in the Courts when a Christian won his case against the chief sheikh of the Beni Sakhr, who had made free with the Christian's land. The Palestine Government has lent an official to advise in the Transjordan Posts and Telegraphs service, and is to do the same soon for the Public Works Department.

The Arab Executive.

The Arab Executive has just published a joyful proclamation announcing that it has received from the Mandates Commission of the League of Nations a copy of the Minutes of the discussion on the Palestine Report. From these Minutes the Executive discovers that the Arab cause is a very rosy one, and that Arab agitation during the past five years has abundantly justified itself. The proclamation attacks the High Commissioner for the very biased character of the evidence which he is alleged to have given before the Commission, and rebukes the rival Arab parties for the material they have provided for those who would argue that Arab opinion is *not* solid against present British policy. The Arab Executive announces its intention of publishing in detail the complete Minutes of the discussion because of its importance for the Arab case. Curiously, within a few days of this proclamation comes a statement, widely published in the local Press, that "it is announced semi-officially" that after consultation with the Colonial Office the Palestine Government will not publish these same Minutes, although only a fortnight ago it announced its intention of publishing them at the same time as the Palestine Government's and the League of Nations' Reports on the Palestine Mandate.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

The Rev. C. Steer will vacate the Vicarage of Hornchurch, Essex, next month, to go to Jerusalem as curate-in-charge of St. George's Cathedral.

PERSONAL AND GENERAL.

TO-DAY.

January 29, 1925 (New Style).
January 16, 1925 (Old Style).
Rajab 4, 1343 A.H., of the Moslem Calendar.
Shebat 4, 5685, of the Jewish Calendar.

The Roumanian Consul-General and Mme. Beza last week returned to London from Paris.

Lord Glentanar will shortly start on a cruise to the Greek Islands in his yacht Pleiosaurus.

Zekiai Bey, Turkish Financial Commissioner, arrived in London last week from Constantinople.

Sir Richard and Lady Brooke are leaving England this week for a tour in Palestine and Syria.

Sir George Lloyd, M.P., accompanied by the Honourable Lady Lloyd, left London this week for Morocco.

Sir Arthur and Lady Downes, accompanied by Sir George Manners, have returned to Cairo from Upper Egypt.

Sir Hamar Greenwood, Bt., M.P., and Lady Greenwood will return shortly to 2, Wetherby Gardens, from Cairo.

The Crown Prince and Crown Princess of Roumania arrived last Friday at 50, Grosvenor Street, on a visit to the Roumanian Minister.

The Bulgarian Minister, who is also accredited to the Netherlands, returned to London last Friday from The Hague, whither he went to present his Letter of Credence to Queen Wilhelmina.

The will of the Rev. William Babington Preston, M.A., of Conduit Street, Bedford, Senior Chaplain (retired) Bombay Ecclesiastical Establishment (net personalty, £3,420), has been proved at £4,955.

Lord and Lady Edward Gleichen will visit Cairo in the middle of March, and Lord Edward Gleichen will attend a conference there of International Geographical Societies as delegate for the Royal Geographical Society.

Lord Stanley, M.P., and Lady Stanley and the Hon. Mrs. Ferdinand Stanley spent a few days at Luxor recently before leaving for the Sudan on their shooting trip. Lord Stanley hopes to return to England for the opening of Parliament.

The engagement is announced, and the marriage will take place in February in India, between Lt.-Colonel Richard Arthur Needham, C.I.E., D.S.O., Indian Medical Service, and Nell, widow of Major-General Sir William Rice Edwards, K.C.B., K.C.I.E., C.M.G.

Sir Atul Chandra Chatterjee, K.C.I.E., was entertained to luncheon last Monday by the Royal Colonial Institute on his appointment as High Commissioner for India at the Edward VII. Rooms, Hotel Victoria. Sir Charles McLeod, Chairman of the Council, presided.

Lady Maud Warrender left London last Thursday by the P. and O. express to join the s.s. Maloja at Marseilles for Port Said en route for Jerusalem, and Sir Harry and Lady Greer left for Colombo. Sir Frederick and Lady Young also embarked at Marseilles for Colombo.

HONOURS, APPOINTMENTS, ETC.

M. Popovitch has been appointed Yugoslav Minister to Rome.

M. Antonievitch, Yugoslav Minister at Rome, has been transferred to Brussels.

The French Government has conferred on M. Michel Salvago, President of the Hellenic Community in Alexandria, the decoration of the Legion of Honour.

Major C. P. Thomson, M.D., D.S.O., Director, Epidemics Section, Public Health Department, has been appointed President of the International Quarantine Board, in succession to Dr. Granville.

OBITUARY.

The death is reported of General Kuropatkin, formerly Russian Minister of War. He had seen service among other places, in Central Asia and in Transcaspia.

The death has occurred of Mr. W. R. H. Merk, a distinguished political officer on the Indian Frontier. It is said that he knew more about the frontier and trans-frontier conditions than any other I.C.S. officer of his time. His frontier service extended, approximately, from 1879 to 1910.

The death is announced of Sir Guilford Lindsey Molesworth, the veteran engineer. His connection with the East began in 1859. At first his principal work was in connection with railways in Ceylon. In 1871 he was appointed technical adviser to the Government of India in the construction and the working of the State railways. In addition, he saw service in Burma, Afghanistan, and East Africa.

Admiral Armand Temple Powlett, who has died at The Manor House, Rugby, in his eighty-fourth year, entered the Navy in 1853, and as a naval cadet on the Terrible served through the Crimean War, including the Bombardment of Odessa and Sebastopol. While commanding the White Swan in 1878 Admiral Powlett received the approval of the Foreign Office for his services in carrying out the provisions of the Anglo-Egyptian Slave Convention.

TURKEY'S CHOICE.

Withdrawal to Angora has not reduced the number of problems which the Turkish Government is called upon to solve. At the present moment the questions which are exercising its mind most are international relationships and the financial stringency. In regard to the former it seems to be generally accepted in responsible Turkish circles that indefinite isolation is neither good nor practical for the country; but it is easier to keep foreign Powers at a distance than to bridge the gulf afterwards. In a matter of this nature there is no room for sentimentality; it is essentially a business proposition. The four possible directions in which a bridge might be built to rescue Turkey from her isolation are towards France, Germany, Italy, and Great Britain respectively. A candid Turkish diagnosis would probably decide that France is too uncertain a quantity for the peace of mind of an associate; she lives for the day only, and can give no guarantee that the morrow will not undo the work of yesterday. Germany, the diagnosis might continue, has much to commend her: there is a practical efficiency in her business methods; she is generous in the provision of ready money, and does not insist upon it in return; but German domination during the War has left unpleasant memories, and Germany, after all, is a defeated nation. Italy, again, has her uses; but in Turkish eyes she has not yet attained as a world-force to the standard of the others, and her capacity to help financially is negligible. There remains the enigmatical Britain, with regard to whom the Turk is in two minds. In one mood he sees her as a cold, calculating vampire, with Turkey as one of her latest victims. The next moment he is conscious of an innate liking for the British character, however much individual persons and actions may have aroused his resentment. Sooner or later he is brought up with a jerk by his military instinct—probably the most steadying influence to which he is subject. Britain, he finds, has a knack of coming out on top, and the Turk appreciates success. The German Army was wonderful, but it did go under; the British Navy remains without any serious challenge. Great Britain, moreover, could, if she would, provide Turkey with all the money that the latter is likely to require. No sooner, however, has the Turk reached this stage in his reasonings than he is beset with misgivings. The last few years have witnessed a rather hectic indulgence in Anglophobia; he asks himself whether Britain can forgive Turkey for becoming a republic; he notes in a section of the British Press a contemptuous attitude towards his country, and on the part of the British Government a studied aloofness, which together suggest to his mind that friendly relations with Great Britain can be attained only at the cost to Turkey of much humiliation or the losing of face.

If Turkey should have passed through some such process of reasoning, it is not difficult to understand why she hesitates over the next move in her foreign policy. Financial considerations are no less insistent than the desirability of ending her present political isolation, and the two are inevitably linked together. At this point the dilemma becomes intensified. In financial matters perhaps more than in any other sphere the Turkish Republic has had to buy its experience. If the belief that it could pay its way without recourse to a large foreign loan was ever genuinely held it has had to be abandoned. A real fear, however, exists that financial dependence may lead sooner or later, at the hands of shrewder economists, to the undermining of Turkey's political independence, and this fear is largely responsible for the desperate attempts to stave off the day of a loan by resort to every device for raising money within the country. The selling of the Bosphorus palaces may reduce the deficit one year, but it does not bring financial equilibrium any nearer. If Turkey is to pay her way after the serious shock to her economic system caused by the expulsion of the Greeks and in the face of world-wide stagnation of trade, which in her case has become intensified by the further damage done to Constantinople by the removal of the capital to Angora, she must begin to build up slowly and on sure foundations. A loan is needed to improve her communications, both for the sake of trade and to enable the resources of Asia Minor to be exploited. But a loan is impossible until Turkey's financial credit is re-established abroad, and to secure this the Turkish Government realises that it must face certain payments which it has hitherto found it convenient to ignore, if not to repudiate. Altogether, Turkey finds herself in an unenviable position, and in making her choice of a way out may be guided solely by the not unnatural resolve to eat as little humble-pie as possible.

As far as Great Britain is concerned, there is no desire that Turkey should eat humble-pie at all. British regard for the Turks as a people has received a series of shocks during recent years, but there is the recognition of the fact that, whatever may be the policy of the moment of her rulers, Turkey remains a factor in the world's scheme of things, and Great Britain must always retain an interest in her well-being. The only possible attitude towards Angora's Anglophobia was one of aloofness, but the Anglophobia has not been taken very seriously by the British, who are equally indifferent as to whether Turkey elects to be a monarchy or a republic. Any indication that the Turkish Government is genuinely anxious to resume normal relations with Great Britain will be welcomed in this country. The test of this anxiety, however, will inevitably be the degree of Turkey's readiness to meet her obligations. It may not be possible for her to pay all her debts at once in full; but what has been lacking so far is an expression of willingness to pay at all. When the obligation is admitted, an adjustment can be made, and it is to Great Britain's interest to see that any arrangement does not bear too hardly upon Turkey at the beginning. There are many signs that the Turks are in earnest in trying to put their house in order: their initial difficulties are lack of funds and lack of technical knowledge. They appreciate the need for foreign experts, but have not the means of knowing whether they are receiving adequate value for their money. Thus a Dutch specialist is invited to reorganise the Turkish ports: but his services are not employed, because he requires a salary of three thousand pounds a year. Yet the sum is not excessive if the man is at the top of his profession, and would easily be recovered from the increased revenue to be derived from the ports; but in the present state of Angora's exchequer it may well seem to those who are sus-

Digitized by Google

picious of foreigners an extravagant figure. For her own peace of mind it would be well if Turkey could bring herself to engage the services of a foreign Adviser-in-Chief, who would so far identify himself with Turkey's interests as to give her the benefit of Western experience in the handling of State affairs. Such a man would be better able to decide whether an expert was cheap at three thousand a year or dear at six hundred; he would know where to apply to for the best material in the reorganisation of Turkey, and the Angora Government would have the satisfaction of knowing that its outlay in this direction was certain in each case to be repaid a hundredfold without unnecessary anxiety on its part. If the Ghazi and one or more of his Ministers could tear themselves away from Angora to visit the capitals of the Western Powers, they might gain much information which would simplify the task of governing the Turkish Republic.

THE SHIAHS OF IRAQ.

To the Editor of THE NEAR EAST.

Sir,—I have read the article published in your issue of the 8th inst. dealing with the Shiahs and Iraq, and I must admit that I found it to be, on the whole, a fair statement. There are, however, some details concerning the reason for the former abstention of the Shiahs from either assisting the British Government in Iraq or entering the political arena, an abstention which is in direct contrast to their present attitude.

One of the reasons is that the Shiahs have not found any attention or support given them by the British since their entry into Iraq, and that those of the Shiahs who gained the ear of the British during and since the occupation, or whom the British themselves have regarded as leaders, are men of no social standing or influence even among their own co-religionists, and men obnoxious to the Shiahs themselves. Another reason is that the British administration appointed non-Moslem officials in the holy places of the Shiahs, Nejef, Kerbela, Kadhimain, and Samarra, and these subordinate officials, besides being non-Moslems, came into conflict with the leaders and ulema of the Shiahs. Now it is well known that the Shiite ulema are the leaders of opinion in Iraq and that the most powerful tribes and the majority of the inhabitants are Shiahs, who follow blindly the views of their mujtahids in matters of friendship and enmity, and only very rarely oppose them. For these and other reasons, therefore, the idea of opposing Great Britain took more definite shape every day.

From the time when the British entered Iraq, however, and up to the present, the course of events has revealed to the Shiahs their real friends and enemies, and has made them perceive clearly their political errors, and forced them to understand many matters of which they were totally ignorant. There is no cause for astonishment, therefore, that the Shiahs, great and small, learned and ignorant, have risen as one man to demand their political rights, and have gathered their forces to intervene in the political arena, to become reconciled with the British, and to put an end to the misunderstanding which has been caused by those Turkophils who have stirred up strife and who are in reality the enemies of both parties.

The Shiahs in Baghdad have now a political party of their own, founded on August 19, 1922, under the title of *Hizb an-Nahdah*, which has branches in the other towns of Iraq, and includes amongst its members all the leading men of the Shiahs and the chiefs of their tribes, great and small. This party is working energetically on behalf of its interests, which are the interests of Iraq as a whole, since they compose the majority of the population. I assure you that the Shiite political movement in Iraq is wholly a matter of internal politics, and aims solely at defeating the opposing parties, in a manner similar to that of the Conservative and Labour parties in England. The Shiahs to-day are by no means anti-British, especially since the ratification of the Anglo-Iraq Treaty by the Constituent Assembly last year.

I see no cause for rousing the apprehensions of the British Government at the growing power of the Shiahs in the Government of Iraq, whether now or in the future. My own opinion is that Britain will benefit greatly if she assists them to obtain complete freedom in the forthcoming election, in order that they may obtain that parliamentary majority which is their due, and take the responsibility of government upon themselves. They will then be obliged to maintain tranquillity and loyalty in the country, in accordance with the necessities of their function, and thus the internal and external policy of Iraq will develop on the right lines. It may even be that the British Government will be able—by their means—to improve its relations with Persia, since the ulema of the Shiahs wield a great influence in that country.

I do not deny that the majority of the Shiahs, if not all of them, have no experience at all of politics, on account of their non-intervention in the administration during the Turkish and British occupations, as I have said. But is it to the advantage of Britain to debar a people who form the majority in Iraq from taking part in its government, and from gradually acquiring experience in administration, on no other grounds than the apprehensions she has of them, and when, moreover, she has undertaken for the League of Nations to direct the progress of Iraq towards self-government and to bring her into the ranks of the civilised nations? —I am, etc.,

YUGOSLAV POLITICS.

To the Editor of THE NEAR EAST.

Sir,—Having recently spent four months in the Balkans, I am able to appreciate the sound sense of the leading article in your issue for January 15, dealing with the Serbo-Croat question. My work in the Balkans, which I undertook for a number of British and American newspaper interests, brought me into personal contact with most of the men who matter in Yugoslavia, Bulgaria, and Albania, and I was able to study most of the outstanding Balkan problems on the spot. This experience, together with the fact that I have been for some years an interested student of Near

Eastern affairs, puts me in the position to add my testimony to a good deal of the things you say in the article to which I refer.

Unfortunately, a number of well-meaning but ill-informed persons, both British and Americans, go to the Balkans on self-appointed "missions." They are well received in some quarters, and given the cold shoulder in others. The result is that they have their pets and preferences amongst the Balkan peoples in accordance with the degree to which their vanity has been flattered, and they come home to lecture and write articles about matters upon which they have more prejudice than exact knowledge. A great deal of nonsense is spread about in this way—a good deal of it dangerous nonsense. As the old saying has it: "A little knowledge is a dangerous thing."

To come from the general to the particular. The "missionaries" of whom I am speaking have raised a hue-and-cry with regard to Stephan Raditch and the present Belgrade Government. The former is represented as a kind of Liberal martyr, the apostle of Croatia's fight for freedom and democracy against the reaction and tyranny of M. Pashitch. All this is, of course, hopelessly out of perspective. To begin with, Croatia's desire for local administrative autonomy was on the point of being satisfied last autumn, and it was only (to quote your own words) "the Communist leanings and impossible tactics" of M. Raditch which shipwrecked the whole thing and "played into the hands of M. Pashitch." I was in the country at the time of the last Ministerial crisis, and I was able to watch developments from the inside. I can affirm positively that whenever the Serbo-Croat *rapprochement* came within sight, it was M. Raditch who always wrecked its chances of accomplishment by an unexpected *volte face* at the eleventh hour. To the impartial observer it seemed that M. Raditch wanted to bite off more than he could chew, and that his personal ambitions would not be satisfied with Croatian autonomy, but required something altogether more grandiose. A careful study of M. Raditch's past career and a compilation of his written and spoken utterances lead one to believe that the good Austro-Hungarian citizen and ardent Hapsburgist of past years has not changed much for all his spectacular flirtations with Moscow. His Republicanism and his Agrarianism and his Separatism all bear very clearly the stamp of the old Germano-Austro-Magyar policy of *Drang nach Osten*. His alliance with comrades Zinovieff and Smirnoff, by which he definitely brought the Croat Peasant Republican Party alongside the Third International was, I believe, a *beau geste*, with which he thought to frighten M. Pashitch. That astute statesman was not frightened, of course, and the *détente* with Moscow only resulted in giving him just cause to take strong measures against M. Raditch and his party. The point which most of our English sentimentalists seem to miss is this: that no reasonable man in Yugoslavia objects to the more reasonable of Croatian aspirations, but no responsible Government in Belgrade could possibly comply with the demands of M. Raditch, which mean nothing more or less than the break-up of the Serb-Croat-Slovene Kingdom. Many interested neighbours would doubtless like to see such a disintegration of Yugoslavia, particularly the two extremes at Vienna and Buda-Pest, i.e., the notorious "Red" Cominteme at the former and the equally notorious "Awakening Magyars" at the latter capital. If there is any doubt about this one need only read the recent speeches of M. Raditch's friend, the Hungarian Deputy, Friedrich, the inspiration of the pan-German, Hapsburgist, and "White" reactionaries of Buda-Pest. Herr Friedrich recently associated Hungarian *revangiste* sympathy with the cause of M. Raditch, and advocated a regrouping with Hungary of all the different Slav people formerly forming a part of the Austro-Hungarian Empire, and now belonging to the different Little Entente Powers.

The moral for our over-zealous and ill-informed "missionaries" is this: that the Serbo-Croat question is a matter of Yugoslav national politics, and that the fight between M. Pashitch and M. Raditch is essentially a fight between the ideals of the old Austria and the new Serbia. It has nothing whatever to do with democracy and reaction as we understand these terms, in their domestic political sense, at home. Perhaps one could draw the analogy with our own Irish questions, only that the Serb and the Croat are both Slavs, speaking an identical language, whereas there is a world of difference between Anglo-Saxon and Celt.

As one who has many happy memories of Yugoslavia and has witnessed all the signs there of a real "birth of a nation," I beg the courtesy of your influential columns in which to make this plea for a spirit of fair play and understanding for the difficulties of our late comrades-in-arms. Such a spirit will do more to help the Yugoslavs to put their house in order than a spirit of carping criticism or of partnership for individual politicians. Destructive politicians of the type of M. Raditch thrive too much on the latter spirit, which has been evinced all too frequently in England of late months.—I am, etc.,

CYPRUS.

To the Editor of THE NEAR EAST.

Sir,—I beg to inform you that some of the information contained in your issue No. 709 of December 11, 1924, as regards Cyprus, is misleading, and it would only be fair if you would allow me to correct them through your valuable columns.

1. *Crime.*—According to a statement made recently by the Acting Chief Secretary in the Legislative Council, the total number of cases of serious crime in 1921 was 4,116; this figure was reduced in 1922 by 120 cases, and in 1923 by 42 cases. The returns for 1924 were available up to the end of

November only, but are expected to be extremely satisfactory. It is calculated that on a proportional basis the decrease during the twelve months ended on December 31, 1924, will have amounted to 806 cases, representing a decrease of over 20 per cent. on the figures for 1923.

For similar periods in 1923 and 1924 cases of other assaults and threatening with weapons had been decreased by 227, or about 30 per cent.; cases of robbery and theft by 165, or 40 per cent.; cases of animal stealing by 108, or more than 30 per cent.; and cases of malicious injury to animals and property to the value of £1 and upwards by 108, or approximately 60 per cent.

2. *Seed Corn.*—According to the official returns, there was issued in 1923 9,069 kilehs of wheat and 9,147 of barley, whereas in 1924 the issue of seed corn was 36,324 kilehs of wheat and 28,218 kilehs of barley.—I am, etc.,

THE EVOLUTION OF THE INDIAN STAGE.

"THE SANSKRIT DRAMA." By A. Berriedale Keith, D.CL., D.Litt. (Oxford: The Clarendon Press. 21s. net.)

There is a curious similarity in the evolution of dramatic representation throughout the civilised world. In ancient Hellas it originated in the recitation of heroic legends, and had a strong religious colouring. Horace tells us that Thespis, the father of Greek theatricals, used to carry his company about in a wagon; but the dramatic writers of his time were slavish imitators of Aristophanes and Menander. The English stage sprang from miracle-plays which were enacted during religious festivals; and there can be no doubt that the interior arrangement in theatres of the present day were suggested by the galleried inn-yards in which the earliest actors "strutted and fretted their brief hour on the stage." Dramatic representation was unknown in the Indo-Vedic age, although we can trace its germ in the hymns and dialogues of the sacred books. In later centuries the great epic poems were publicly recited with music and dancing; and the influence of Greek plays, which were rendered at the courts of Indian princes, began to make itself felt. But the drama was a very late development of Sanskrit poetry; and nearly a millennium rolled by ere it became a recognised branch of literature. Bhasa, whose plays were discovered twelve years ago, flourished before 350 A.D. His plots were derived from epic poetry and the popular tales, or kathas, which succeeded it. His love passages are often pathetic, but the devices he adopted in order to maintain dramatic action are primitive in the extreme. Kálidása, who lived about fifty years later, may be regarded as India's Shakespeare. His Sakuntalá has often been translated into English, and still holds the Indian stage It is couched in the purest Sanskrit, and, indeed, represents the apogee of Indian poetry. Kálidása was a master of dramatic technique; his plays breathe heroism and pathos; nor are touches of irony wanting in them. Those of King Harsa of Kanouj (fl. 418 A.D.) have been noticed in these columns; and Bhavabúti, who belonged to the eighth century of our era, was the last of India's great dramatists. Succeeding ages witnessed the supersession of Sanskrit as a living tongue by a multitude of dialects. The works of the ancient authors became "caviare to the general"; and the fanatical Mohammedans who swept over the peninsula set their faces against any form of literature which had been inspired by Hinduism. Although the Indian theatre is decadent, if not actually dead, Hindus have the dramatic instinct in a high degree; and their spasmodic efforts to give expression to it should receive encouragement from the powers that be.

All this—and much besides—is set forth in Dr. Berriedale Keith's exhaustive history of the Indian stage, a work which displays profound learning and an intimate knowledge of vanished civilisation. It should be taken to heart by all who recognise that an earnest endeavour to foster the indigenous drama should figure prominently among the functions of a progressive government.

THE CAMPAIGN IN
MESOPOTAMIA
1914-1918
By BRIG.-GENERAL F. J. MOBERLY,
C.B., C.S.I., D.S.O., *p.s.c.*
Compiled under the direction of the Committee of Imperial Defence, this work is based on official documents supplemented by private accounts from those who took part in the operations. Volume I, published in 1923, received an enthusiastic welcome. The "Manchester Guardian" declared it to be "a fine piece of military history." Col. Repington, in the "Daily Telegraph," said, "I frankly admit that I have read every word of this book with the deepest interest and have scarcely been able to put it down. It will certainly become a classic on the subject with which it deals." The second volume which has just appeared maintains this high standard. "General Moberly has done his work well, and the Army owes him gratitude for his clear exposition," says the "Times Literary Supplement," while in the opinion of "Truth," the author "is to be congratulated on having produced exactly what an official history should be. . . It is indispensable to all students of the war."
Vol. I, 1914—Oct., 1915 ... ... 15s.
Vol. II. Oct., 1915—April, 1916 ... 21s.

AN ENGLISH-TURKISH DICTIONARY.

"A CONDENSED DICTIONARY, ENGLISH-TURKISH." By Commander A. Vahid Bey, Turkish Navy. (Constantinople: Ltqs. 5½.)

Commander A. Vahid Bey's English-Turkish Dictionary has been officially adopted by the Commissariat for Public Instruction, endorsed by a Fleet Order of the Navy Dept. of the Commissariat for National Defence, and recommended by the President of the Constantinople College. After this, it would seem almost presumption for the reviewer to question his own approval of a work which fills a long-felt want on the reference shelf of every sympathiser with modern Turkey; and the presumption was punished by the only two people to whom he has so far shown Commander Vahid Bey's work by their expressed determination to order a copy immediately.

Since Sir J. W. Redhouse's lexicon, published in 1884, there has been no work of this character, and modern students of Turkish—both savants and business men—have found themselves seriously handicapped. Commander Vahid Bey has brought to his labours not only erudition and much labour, but a knowledge of European languages and acquaintanceship with those words and phrases which are so necessary, not only to the banker, but to the lady furnishing a house—from "chintz" to "Wedgwood china," from "acceptance" to "tort" and "philatelist," he has combined in his 40,000 words all the idiom and phraseology necessary to the most captious critic.

The book is admirably produced; the pronunciation of both English and Turkish is shown clearly and simply; there is a wonderful lack of misprints and errors. It is to be hoped that Commander Vahid Bey will delay the companion volume no longer than is necessary to produce an equal standard of excellence.

J. H. B.

THE STORY OF A GREAT HEART.

"RONALD BURROWS." By George Glasgow. With a Foreword by M. Venizelos. (London: Nisbet and Co. 15s. net.)

Readers of this journal will naturally associate the name of Dr. Ronald Burrows with the series of strong pro-Venizelist articles and letters of *The New Europe* and other periodicals produced by him during and soon after the Great War. Of the wisdom of his views many of us had the gravest doubts which have not been removed by later events. But none of us could fail to admire the chivalrous, whole-hearted attitude and the magnificent energy of the author. He threw himself into this controversy with all his vigour at a time when he was feeling the great strain of his high duties as Principal of King's College, London, as well as of the numerous interests which his restless and generous heart had made him responsible for. It was no wonder, but none the less lamentable, that his zeal burned out his bodily powers, and that he died, when at his best, at the age of only 52.

In spite of too great length and the inclusion of far too much irrelevant detail, Mr. Glasgow succeeds in giving us the picture of a singularly winning personality. A clean gentleman, a true Christian, a fine scholar, a genuine lover of his fellow-man, a practical philanthropist, and withal always happy and merry, and possessed of an almost incredibly energetic temperament in spite of bodily health which was never too good. We could have wished that the story of Dr. Burrows' plunge into the difficult waters of amateur diplomacy and propaganda had been told by a more impartial narrator. Mr. Glasgow appears to us to handle this matter without much sense of proportion. The truth seems to have been that, while the Principal's heart was undeniably "in the right place," it would, in this controversy at least, have been the better for far more rigorous discipline on the part of his very capable intellect.

Perhaps the very fact that on occasion he allowed his heart to take command explains part of his great charm and part of the fine personal influence exercised by him on every one who came into contact with him. Truly, he left the world better for his having lived in it. Wistfully we wonder what would have been the result to England and the Balkan countries had his wide sympathy, his knowledge and his magnetic personality only been spared to us for some years longer. C. S. W.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Suez Canal Traffic.

An indication of the shipping revival that is taking place is to be found in the statistics of the Suez Canal traffic in 1924. Once again the total net tonnage passing through the Canal was a record, the figures being 25,109,921 tons, an increase of 2,379,759 tons on the previous year. The greatest increase was in the last quarter of the year—a fact of considerable significance from the point of view of the trade outlook. As already indicated, the Canal dues are being reduced, and no doubt the further expansion of traffic will lead in due course to a further reduction, which, in turn, will act as a stimulus to shipping enterprise.

Egyptian Cotton.

Representations have frequently been made to the Egyptian authorities by the Manchester Cotton Association with regard to the condition of Egyptian cotton. It is now announced that a committee has been appointed to investigate the complaints of the Association with regard to foreign matter and humidity in the cotton, and that it will include representatives of the Ministries of Agriculture, the Interior, and Finance. Last year the Egyptian Minister in London visited Manchester, and it may be assumed that the present development is a direct sequel to this visit, which brought about the personal contact between British and Egyptian interests which is so essential for the correct appreciation of problems that may arise, whether in politics or commerce.

Yugoslavia and Great Britain.

The economic relations between Great Britain and Yugoslavia are the subject of an interesting article by M. Pilya in the *Economic and Financial Review* of Belgrade. The writer points out that the statistics of exports and imports show that though there is a constant and considerable improvement in the trade between the two countries, the position is not satisfactory, and, as he justly remarks, since Yugoslavia is a producer of raw materials and agricultural products, and Great Britain is an industrial State, it should be to the mutual interest of the countries to develop a larger and more varied trade. During the first six months of 1924 the exports from Great Britain to Yugoslavia were valued at 374,387,745 dinars, while Yugoslavia exported to us goods to the value of 79,041,115 dinars. These figures cannot be regarded as satisfactory. There is no question that British traders ought to find a larger outlet in Yugoslavia, while it is equally certain that, as M. Pilya says, Yugoslavia should find a much better market here for her varied products, which include flour, wheat, prunes, wine, tobacco, eggs, and flax.

Reasons for Poor Trade.

Naturally, one of the principal reasons for the relatively low level of British trade with Yugoslavia is to be found in the exchange, but there is no question at all that there is a very great deal in M. Pilya's contention that British industry and commerce are not sufficiently interested in the Yugoslav market. It holds good not only with regard to Yugoslavia, but in the case of the other Balkan markets, and arises, rightly or wrongly, from the view that business with the Balkans is only too often rather hazardous. For this idea to be removed it is essential that British business men should be more fully acquainted with Yugoslavia and the other Balkan countries. More frequent visits to Yugoslavia by British business men and vice versa, M. Pilya argues, "and a more frequent personal contact between buyers and sellers, would allow British merchants the opportunity of seeing on the spot that our country has made real progress recently in many fields. Many prejudices would disappear, and an unjustifiable reserve would give way to greater mutual confidence."

The Expansion of India's Trade.

The statistics of India's trade for the year ended December 31 show very clearly how rapidly the country is working back to something approaching normal conditions. The value of the exports is roughly £255,000,000, while that of the imports is £162,000,000, there being thus a very substantial favourable balance of trade. For some time India has been buying more freely, and the indications are that this tendency should continue steadily to develop.

The Rupee Problem.

The question of the fixed rate of the rupee is coming more and more to the front in India, and it would seem that the time cannot be far distant when we shall have the rupee at 1s. 4d. instead of its present rate, which bears no relation to the realities of the situation. India is at the moment suffering from financial stringency, and it is urged that the obvious solution is the readjustment of the rupee rate, and the demand is now being made that a committee should be appointed to examine the question. Bombay is strongly in favour of this move, and it is extremely doubtful whether, in view of the pressure of commerce, action of a decided character can long be delayed.

ROUMANIA'S MINERAL RESOURCES.

Judged by the level of the exchange, Roumania has made less progress in reconstruction than any other of the Balkan countries. This is, however, not an altogether accurate index of the situation, and once the country is in a position to profit by its great natural resources it must go rapidly ahead. A most interesting review of Roumania's mineral riches by M. Dinu appears in the current issue of *Correspondance Economique Roumaine*. After dealing in detail with oil, he proceeds to discuss coal and natural gas, and says :—

Like petroleum, coal plays a most important part in Roumania, its output exceeding 2.5 million tons in 1923, representing 27 per cent. of the total value of the mining production of Roumania, namely, 1.8 milliard lei. Starting with the youngest of coal varieties, *e.g.*, peat, which contains 45 per cent. to 63 per cent. carbon, Roumania has at its disposal in Ardeal alone above 200 million c.m., to which we must add the peat-bogs in the north of Moldova and those on the Carpathians. Peat could successfully replace older kinds of coal in domestic life; in addition, it could be used to manufacture chemical fertilisers on a large scale. Let us hope that as time goes on this product will acquire the value it really deserves.

Lignite, which contains, like brown coal, approx. 70 per cent. carbon, has a calorific power of 2,500-5,000 calories, and it occurs in layers, up to five metres thick, in the dacian formation of the marginal mountainous zone of the Old Kingdom, with the main exploitations at Sotanga-Doiceshti in county Dambovitza, in Schitul Goleshti, Poenari in the county Mushcel, Prahova in county Bacau, and also in Corcioveni in South Bessarabia.

The production of lignite in Roumania recorded for 1923, was 560,000 tons, *e.g.*, 22 per cent. of the coal output. Our effective lignite reserves amount to 2.5 million tons in the Old Kingdom and 3.5 million tons in Ardeal. The possible reserves are great in the Old Kingdom and relatively small in Ardeal. The exploitation of lignite has not reached a development which would correspond to the wealth of its deposits. It is used mainly on railways, where it is mixed with oil remains.

Brown coal, which is a lignite of a superior quality, has a calorific power of 3,000-6,000 calories, and occurs in the Miocene of Comaneshti in Bacau, where we have at our disposal an effective reserve of 225,000 tons, and a probable reserve of above 11,000,000 tons. The possible reserve is moderate. The main brown coal deposit is found in Ardeal, in the Petroshani basin, in layers up to 40 metres thick, and with a calorific power of 6,800-7,400 calories, where we have at our disposal an effective reserve exceeding 35,000,000 tons, and a probable reserve of 575,000,000 tons. The possible reserve is relatively small.

Coal, containing 70-90 per cent. carbon, is found only in Banat and in the Brashov region, recording an output of 233,000 tons in 1923, *e.g.*, only 9.2 per cent. of the coal output of the country. The effective reserve of this coal is nearly 1.5 million tons, and the reserve 20 million tons; the probable reserve is small. Anthracite, which contains 90 per cent. carbon, occurs in Gorj, where it is exploited on a very limited scale.

Roumania has at its disposal, besides petroleum and coal, another mineral energy generator of a great importance, which is natural gas. It occurs either together with petroleum, and is exploited at the same time, or in special deposits.

Nearly all our petroleum deposits contain natural gases in various proportions, dissolved under a great pressure. The presence of these gases in oil deposits is due to the violent eruptions of various oil shafts. Their composition varies, being different for every deposit. They contain in the first place methane (CH_4) (64 per cent. in volume at Moreni, 85 per cent. at Bushtenari, 90 per cent. at Bordeni, 93 per cent. at Doicheshti, etc.); next other higher hydrocarbons, hydrogen, oxygen, nitrogen, carbon monoxide and dioxide, all these in smaller or greater quantities. The calorific power of these gases varies very much; in general it lies between 4,000 and 7,500 calories per c.m., recording 8,600 calories at Bushtenari.

Besides natural gases from petroleum deposits, we find, on the external side of the Carpathian arc, natural gases occurring in separate deposits, and, namely, in Ariceshti-Rahtivan and Boldeshti in Prahova and in Ocnele-Mari in Valcea. Although the latter field has been left nearly unexploited, on the other fields a great amount of drilling is being done. The workings are still, however, in the exploring stage, thus it would be rather premature to talk about their value.

But the main region where natural gases occur separately in Roumania is the Transylvanian Plain, with its fields rich in gases at Sarmashel, Saroshul Unguresc, Basna, etc. By Transylvanian Plain we mean the basin of an approximate area of 20,000 square km., which is surrounded by the mountains: Crasnei, Lapushului, Rodnei, and Calimanului, in the north and north-east, Hargita in the east, Southern Carpathians in the south, and Apuseni and Bihor mountains in the west. The borderings of the plain belong geologically to the Eocene, Oligocene, and inferior Mediterranean.

The gas deposits were discovered on this plain in 1908 at Sarmashel, a place situated nearly 60 km. west of Cluj, occasionally when drilling in search of potassium salts. They occur towards the interior of the basin, soaking the sarmatic sand and sandstone and forming short anticlinal vaults, called "domes."

The natural gases from the Transylvanian Plain are nearly perfectly pure, containing not below 98-99.25 per cent. methane, while the gases occuring in separate deposits of United States of America contain only 80-93 per cent. approximately, and only exceptionally 98 per cent. The area of the fields is estimated to be about 10,000 square km., while the quantity of gas discovered exceeds 6,000,000 c.m. daily, emanating from the fifty-eight shafts drilled up to the end of 1923.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Cables.—The Egyptian State Railways, Telegraphs and Telephones invite tenders for cables for new development in 1924/25, Cairo. February 2.

Creosoted Poles.—The Egyptian State Railways, Telegraphs and Telephones invite tenders for the supply of creosoted poles, stout, 40 ft. long, to E.S.R., specification No. 51C. February 12.

Pumping Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of pumping plant. February 15. (D.O.T.)

Uniforms.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of uniforms required during the financial year 1925-26. February 20.

Roumania.

Porcelain Insulators.—The Roumanian State Railways invite tenders for the supply of porcelain insulators, sleeves, and plates. February 3. (D.O.T.)

THE BULLION MARKET IN 1924.

Messrs. Samuel Montagu and Co.'s Review.

Developments during the past year lend a special interest to Messrs. Samuel Montagu and Co.'s annual bullion review, especially in regard to the prospects of a return to an effective gold standard. They say :—

The year 1924 has been noteworthy for an improvement in world politics. The Ruhr pressure upon Germany's economic existence has been relaxed, and a decided advance in international amity has been achieved by the adoption of the Dawes Scheme on the part of the nations concerned and by the floating of a loan to Germany by its erstwhile enemies in order to assist its financial recovery. Though sufficient time has not elapsed for results to be shown, these indications of a return to normal international conditions are a hopeful augury of that trade revival for which the world stands so much in need. The effective working of the gold standard will obviously be furthered by a settlement of reparations and inter-allied debt.

When the cost of living, labour, and raw material on the Continent becomes adjusted to the depreciated exchanges of those countries, and an improvement is made in the relations between employers and employed in this country, the return of the United Kingdom to an effective use of the gold standard will be much simplified. If the means advocated in some quarters—an increased bank rate, deflation, etc.—were exerted to correct our adverse exchange *before* international trade competition is thus placed upon a fairer footing, they might prove a serious danger to our economic life, and, even then, fail in their ultimate object.

Europe Restoring Freedom to Gold.

Several European countries are now considering the restoration of their exchanges to gold parity, such as Switzerland and Holland, whilst the position of Sweden is such that there may be little difficulty in its following suit. Nor must the anxiety of the Union of South Africa also to make its gold standard effective be overlooked. Considering, therefore, the currency conditions as a whole, the year 1925 is likely to show a decided improvement, and the balance of trade may ere long be again adjusted by bullion, more perhaps by transfers of gold credits than by actual movement of gold from one country to another. This desired result would tend towards the restoration of financial and commercial confidence.

Other Continental nations have stabilised their currency by jettisoning the currency systems which they employed before the Great War. Their debts, at home and abroad, have been practically wiped out by the adoption of new currency units, which (in some cases by the aid of gold loans from countries still cleaving to their old units) they hope to maintain upon a stable footing.

The re-establishment of these new currency systems was preceded by conditions that resembled those of the ancient Chinese. The earliest form of Chinese metal money was fashioned in copper after the pattern of a sword, spade, or shirt simulacra of articles once bartered directly for each other. The frantic collapse of local currency caused the populace to practise like methods of exchange to those of thousands of years ago. Stocks, shares, or buildings possessing economic value were acquired in preference to the scraps of paper called notes, the value of which was rapidly sinking to zero, and houses became stocked with an odd collection of articles purchased almost haphazard (if easily realeable), such as household or industrial implements—in other words, the sword, spade, or shirt of ancient China.

The latter part of the year was marked by more disposition on the part of the United States of America to take part in the financial reconstruction of Europe, and gold shipments were made with that end in view. These movements, together with a broadening market for European securities in the United States, had a distinct bearing upon the exchange of the United Kingdom with that country, and brought about an approximation toward the gold parity. Such action on the part of the United States was bound to come, for the amount of gold pouring, and likely to pour, into that country was a serious embarrassment, and could only be checked by the purchase of goods or by loans to foreign countries. As the strong U.S tariff wall was not likely to be removed, some such alternative had to be adopted.

Indian Gold Purchases.

The absorption of gold by India presents a strong contrast to the present small acquisition by Europe. Heavy imports have poured persistently into that Empire from the United Kingdom, the Union of South Africa, the United States of America, and elsewhere. The total of the imports for 1923 was £26,229,000. The imports during the year under review will probably exceed that amount, for during two and a half months of the summer alone purchases for India amounted to £10,350,000. The hunger of the Indian natives for gold has been accompanied, not lessened, by the spread of banking facilities in that country.

Financial circles in the Indian Empire are much exercised at the anomalous position of the Indian currency. The nominal value of the rupee still stands at one-tenth of the gold sovereign, without any apparent chance of gold sovereigns—holding legal tender for that number of rupees—being paid out of the Treasury against notes. They hold that the fixing of a more reasonable ratio between the rupee and gold would give stability to the exchange, encourage the flow of capital to India, and incidentally encourage Indian trade. The problem, however, can hardly be solved until the United Kingdom, to whom the Indian exchange is almost as important as to India itself, is again working freely on the gold standard. Meanwhile, the more gold that India takes from the world the longer is the return of the United Kingdom to an effective gold standard deferred, for imports of gold into the United States of America from the United Kingdom have a decisive effect upon the U.S. exchange, which is the index of the gold value of the currency pound. After all, the prosperity of India is so welded with that of the British Empire that it can hardly ignore the interests of the Power to which this happy condition is chiefly due.

Indian Hoarding.

It by no means follows that gold coin will freely circulate when the gold sovereign can be imported into India on a currency basis or notes can be cashed in gold. Gold, whether coined or uncoined, has always been a favourite means of hoarding. In these circumstances, it is not incumbent upon the Indian Government to render this practice easier, more particularly if Imperial interests would be injured by so doing. A nation that can absorb more than three hundred million pounds worth of gold in sixty years and leave little visible trace of its voracity, hardly needs its appetite to be stimulated. When the extent of hoarding in the precious metals that takes place in India—often over £40,000,000 a year—is considered, the very great advantage to the country of substituting fructifying assets is obvious.

Silver.

The range of prices during the year was slightly more than that which obtained in 1923. Throughout the major part of the year, particularly the earlier portion, forward silver was at a discount. A good deal of the steadiness of the market in the spring was attributable to a diminution in the sales of demonetised silver. On the contrary, considerable coinage orders began to be received from the Continent. As care was taken that these purchases should not compete with demands as they arose from India and China, they were usually executed upon the market when it was in their favour, and a considerable amount was purchased at lower prices than had to be paid later in the year.

The strength of the Indian demand, and the inquiry for Continental coinage, together with the political situation in China, imparted a very steady tone to the market. From the middle of May to the middle of November the level ruled between 34¼d. and 35¼d. Owing to competition between bear covering and Continental orders, there was a sharp advance on October 9 to 36 1-16d. for both deliveries, the record price of the year in each case.

The lull in Continental coinage orders was reflected in the easier tone of the market in the closing months of the year. Though occasionally sustained, or even rallied, by bear covering, the trend of prices was downward. Stocks in India and in China became rather excessive, and the retrograde movement was accelerated by fresh sales from China, where speculation in exchange had become active. Naturally the improvement in the sterling exchange with the United States made silver a cheaper proposition, and the lowest quotations were touched two days before the close of the year.

Reduced London Shipments.

Official figures show a heavy reduction in the exports of silver to India from the United Kingdom. This means that much of the silver which used to pass through London goes either direct to India from America or on a through bill via the United Kingdom. The cause of these reduced U.K. exports is that a through rate is quoted, by arrangement between two great British shipping companies, cheaper than they quote for the two separate parts of the journey, hence the journey is no longer broken in London. The London market is therefore seriously handicapped by being prevented from competing with the United States on equal terms, and from replenishing its stock except at an additional cost to that borne by the Far East. Since September 8 last, however, this disadvantage has been lessened by a reduction of the freight to India on silver from ¾ per cent. to ½ per cent. As the separate rates are ¾ per cent. (New York to London) and ½ per cent. (London to India), and the through rate is 1 per cent., the London Market is still penalised to the extent of ¼ per cent.

Though actual movements of silver in London have been diminished owing to the reasons above set out, dealings in silver for forward delivery have been quite active. Very large speculative accounts for China and India have been opened and closed, necessitating, as customary, extension from one two month period to another, and a considerable amount of business has been transacted in London as the world's silver centre for foreign clients, though the silver was not imported into the United Kingdom, but was shipped on instructions of the buyers direct to them from America and elsewhere.

The outstanding feature has been the "volte face" of the Continent from the rôle of seller to that of buyer. Demonetisation almost ceased, and purchases were made for coinage by several countries. The chief buyer was Russia. It is understood that the amount of silver acquired in London on behalf of the U.S.S.R. was about 30,000,000 ounces, in addition to which about 7,000,000 were sent from that country to be refined here. Amongst other countries were Germany, Austria, and Poland. The amount purchased in London was in the neighbourhood of sixty million ounces. Each of the countries concerned has sought to link their new currency systems with gold, and the new silver coins are intended to be subsidiary. It is remarkable that, not many months after the despatch of newly minted coins from London, London received bars of silver, which, there was every reason to believe, were composed of melted coins from more than one of the countries concerned.

The objects these Continental Governments had in view were:—(1) To regularise the currency; (2) to remove the discomfort of constantly handling notes of small nominal value, obviously an insanitary and hazardous practice; (3) to confer additional confidence in the new currency system; (4) to supply a form of currency intrinsically cheaper than gold.

Risks of failure, temporary or otherwise, had to be faced. A populace that had been suffering from a return to barter, or from painful efforts to trade with the aid of almost worthless paper money, would naturally cling to wealth in the tangible form of silver coin, and a certain amount of hoarding was bound to take place. To so great an extent has this proved to be true, that both Austria and Poland have had to pause in their policy of minting silver. Only one method can ensure eventual success in such circumstances, and that is to pour out a continual stream until saturation takes place sufficient to ensure that the coins remain in circulation. The recognised function of a mint is not to provide the means of hoarding, and, unless coin can be induced to remain in circulation, mintage will probably come to a speedy end.

In these circumstances the continuance of the policy of coining silver on the Continent will be determined chiefly by these considerations:—(1) Whether such countries possess the financial means to buy and coin silver until saturation point is reached; (2) whether the profit secured by coining silver at a less ratio to gold than its intrinsic worth warrants making and putting silver coin into circulation, though their circulating life be very short. Experience has shown that as long as coin can be obtained upon demand it circulates; but should there be any doubt upon this point, hoarding ensues. (3) Whether silver coins should be minted and *not* put into circulation, but held in reserve against notes. In this case, the note issues would appear to be better secured than it really is,

because the nominal value of the silver coin would be returned at a larger figure than if their intrinsic worth in gold was placed in the currency reserve.

Applying these considerations to Russian and Germany—the chief buyers of the year—we consider that further purchases of a substantial character for mintage will probably have to be made in the near future, though whether the coins will be put into circulation will be a matter of individual concern to the Governments of those countries.

Indian Unrest and Trade.

The link between India and the United Kingdom and British Dominions is very real, for upon it depends an immense body of trade. The activity of that trade and the balance in favour of India is immediately felt in the demand for silver and gold. The value of Indian export trade (including re-exports) was about £205,000,000 in 1922-23. Whereas before the war 37 per cent. of the Indian exports were shared by the United Kingdom and the British Dominions in proportion of 23 per cent. and 14 per cent. respectively, the 1922-23 percentage was 39, shared in the proportion of 22 per cent. and 17 per cent.

Fifty per cent. of India's exports before the War were consigned to European countries: when these markets became largely inoperative, the export trade of India was seriously affected, and even yet has not completely recovered. Owing, however, to profit acquired from munitions, etc., internal trade conditions considerably improved, and, provided no political unrest or bad monsoon occur, there is no reason why India should not be increasingly prosperous and in a position to draw still more heavily upon the world's supplies of the precious metals. The inclination of the demand during the year has been towards gold rather than silver, and it is possible that India's demand for the white metal will not be so keen in 1925.

Prospects of Silver.

The production of silver is hardly likely to fall off to any great extent, unless there is a heavy fall in prices, and there is always a possibility that Mexico may be able to profit more substantially by her unrivalled silver deposits. Nevertheless, it must be borne in mind that no heavy offerings of demonetised silver are likely to come on the market.

The Eastern Hemisphere, notwithstanding perennial civil strife in China, possesses the elements of advancing prosperity, and is entering upon a period of industrial expansion. Its raw material is of vital consequence to the more highly developed civilisation of the West, and payment for this will be made largely in silver—the currency of the masses. An indifferent monsoon in India might cause a setback, perhaps acute, for Eastern speculation is a powerful force. The evils of a bad rainfall, however, have been minimised in recent years by vast irrigation schemes, improved conditions of communication by land or water, and the very careful organisation and reserves, built up specially to deal with such an emergency when it arises. The great danger used to be the difficulty of bringing help to famine-stricken areas. Aeroplanes, however, cannot fail to be of great assistance in cases of extreme isolation.

Taking into account the improved conditions of trade in the Far East, the possibility of coinage demand from the Continent, and the present comparatively low level reached by the price of silver, there appears to be some ground for a hopeful view of the future of the market during 1925.

VICKERS' DEVELOPMENTS.

The president of the International Combustion Engineering Corporation of New York and director of Vickers and International Combustion Engineering, Limited, of Africa House, Kingsway, is again visiting London in connection with big developments of the above companies and Messrs. Vickers, Limited, and associated concerns. Interviewed on his arrival, Mr. Learnard said that the progress made in American power plant design, particularly in regard to pulverised fuel firing, had been phenomenal, contracts placed in 1924 being for equipment to serve boilers having over a million square feet of heating surface. The total heating surface installed in American power stations for firing pulverised fuel firing is therefore now well over 2½ million square feet, and the rapidity of expansion is shown by the fact that it is double the figure for 1923. One of the more striking developments of the past year has been the adoption of Murray water tubes on the side walls of large combustion chambers in which pulverised fuel is burned, and Mr. Learnard states that his company has important contracts in hand for them.

One such order from the Ford Motor Co. is to apply Murray side wall tubes, air preheaters, and "Lopulco" water screens to the boilers at the River Rouge power house, which will double their capacity, so that each of the eight boilers will thus evaporate over 500,000 lbs. of steam per hour. "Lopulco" water screen tubes have fully proved their utility in preventing ashes falling as slag into the hopper, and they and the tubes on the back and side walls have proved so efficient that the sizes of combustion chambers for given evaporative capacities of boilers are substantially reduced. Mr. Learnard is interested in developing several new inventions in connection with the more economical utilisation of coal, especially low grade fuels, and a good deal will be heard about these improvements in the near future.

In Canada Messrs. Vickers, Limited, and the International Combustion Engineering Corporation have formed a new company known as Vickers and Combustion Engineering Co., Limited, at the head of which is the well-known British engineer Mr. A. J. T. Taylor. Mr. Learnard said he was very pleased with the way in which pulverised fuel had been accepted in this country, as indicated by the important contracts already secured by Vickers and International Combustion Engineering, Limited, of Africa House, Kingsway, W.C.2.

Near East Markets.

LONDON PRODUCE REPORT.

Poor Demand for Currants.

(From Our Own Correspondent.)

London, Tuesday Morning.

Oilcakes.—A dull tone has prevailed. Linseed cake is 5s. down at 260s., coconut cake is 5s. down at 220s., while cottonseed cake is the same at 157s. 6d.

Sugar.—Home refined has continued in fair request at unchanged prices Tate's cubes are 37s. 3d., London granulated is 32s. 3d., while Lyle's granulated is 32s. 6d. Foreign descriptions have been firm. White Java spot has sold at 30s. 9d., while Czech granulated has been done at 31s. 3d. Futures have been steady, January being 17s. 7½d., March 17s. 6d., May 17s. 6d., and August 17s. 7½d.

Coffee.—The market has been very firm. Costa Rica is unchanged at 176s. East Indian is unaltered at 164s., Kenya is the same at 160s., while Santos remains at 122s.

Rice.—The market has remained steady, and prices are unchanged. Burma has been done at 18s. 6d. spot.

Maize.—The demand has continued to be moderate. La Plata has been offered at 47s. 6d., while 48s. 9d. has been asked for February-March.

Barley.—The tone of the market has been very firm. Californian has been done at 48s.

Oilseeds.—Linseed has been firm, Calcutta being at 24s. 7½d., while La Plata has been done at 22s. 3d. Rapeseed has also been firm, Toria being 20s. 9d. Cottonseed has been quiet. Bombay is 10s. 6d., Egyptian black is 12s. 7½d., while Sakellaridis is 12s. 4½d.

Seed Oils.—Linseed oil has been firm and is 49s. 6d. spot and 48s. 9d. for March-April. Rape oil has been steady, with crude at 50s. and technical refined at 53s. Cotton oil has been quiet. Refined common edible is 51s. Egyptian crude is 47s., while deodorised is 53s.

Currants.—Business has continued to be on a poor scale, and the tone of the market is distinctly easier. The bulk of the trade done has been over Amalias and Patras. Australian fruit has moved off fairly well.

Sultanas.—Rather more business has been done, Smyrnas and Cretans being in good request, while Greeks have also been in demand.

Figs.—The demand for this commodity has continued. Prices are relatively low, and the realisation of this fact has led to the expansion of business. Layers and Locoums have been in good request.

Plums.—The development of business is to be noted, and all grades of fruit have been in demand. Prices have advanced sharply, and it is quite likely that the near future will see a further increase in rates.

Dates.—There is nothing of interest to report as regards this commodity. Business has been on a small scale, and prices are unchanged.

Almonds.—Stocks of this commodity are now very restricted, and prices are tending to rise.

Oranges.—Larger supplies are to hand, but the quotations show little change, as the demand is keeping pace with the supply.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Haifa, December 27.—The grain market continues firm, despite the continual offerings and the arrivals from abroad. The rise in prices goes on except in the case of sesame, which remains weak.

Jaffa, December 27.—The grain market is very quiet. The export of oranges continues normally. The abundant rain that has fallen during the past week has favoured the oranges and the autumn sowings.

Cyprus, December 27.—The weather conditions continue favourable for the growing crop. There is greater activity in imports.

The Leeds Forge Company, of Leeds, has received orders for a large number of goods and hopper ballast wagons from Indian railways.

The area sown with winter wheat in Roumania is provisionally estimated at 5,677,000 acres, a reduction of 954,000 acres as compared with the area last year.

The Indian Legislative Assembly last week adjourned the discussion of Sir Basil Blackett's Finance Bill until this week on the motion of Sir Purshotamdas Thakurdas.

The Secretary of State for India acknowledges receipt of sums amounting to £50 received anonymously at various times for the Government of India Military Department.

Lord Winterton, Under-Secretary for India, was the chief guest of the Preston and District Incorporated Chamber of Commerce at their annual dinner. He afterwards addressed members of the Chamber on "British and Indian Trade."

The Greek torpedo-boat destroyer Ierrax, which has undergone thorough overhaul and reconditioning, including new boilers and reconstructing bunkers for carrying oil fuel, by Messrs. J. Samuel White and Co., and the fitting of additional armament by Messrs. Vickers, left Cowes last Saturday for Piræus.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Still Firm.

The Alexandria Commercial Company, in their report for the week ended January 15, state :—

Since our last report the futures market has been again firm, but not as active as during recent weeks. The net changes on the week are the following :—Sakellaridis : $0.40 down for January, $0.45 down for March, $0.55 down for May, $0.70 down for July, $0.30 up for November. Ashmouni : $0.37 up for February, $0.35 up for April, $0.30 up for June. $0.25 up for October. The demand from abroad has continued to be rather poor for Sakel and moderately good for Ashmouni. Spinners show reluctance in filling their requirements at the present high levels, and have reverted to the policy of buying only when compelled to. Liverpool Egyptian futures have been distinctly weak, and prices again show $2 to $3 discount compared to Alexandria, without taking into account the shipping expenses. These discounts are rather surprising if one considers the relatively small quantity of stocks held in England at present. Reversing of straddles with Uppers and some liquidation of long Sakel positions have slightly affected the Sakel market; on the other hand, the firm tone of Uppers is mainly due to commercial buying. Sakel near positions maintain a heavy premium over distants, which confirms the strength of the statistical position, and the tendency has of late been for February Ashmouni to be also quoted at a premium over the more distant Ashmouni positions. Dealings in new crops have been but moderate, and have again mainly consisted of straddle operations.

The week's receipts amount to Crs. 152,361, against exports Crs. 98,387; the stock stands at Crs. 1,973,704.

Spot.—Minet el Bassal has been more active this week, and sales for the five business days amount to about 19,100 B/s, of which we estimate 7,900 B/s Sakel, 7,500 B/s Uppers, 3,100 B/s Zagora, 100 B/s Brown, 200 B/s Pilion, and 300 B/s White. There is not much improvement in the demand from abroad for Sakel, though a little more interest has been shown in Uppers.

Sakellarides.—All styles have been dealt in, but the grades above fully good fair have attracted most attention. Good fair and below have only attracted a moderate inquiry. Good and above have been much sought after at good prices, especially for staple cotton. Spot premiums are unchanged for good fair and fully good fair, and rather dearer for the grades above fully good fair and for fully fair and below.

Uppers and Zagora.—All styles have been dealt in and the high grades have been in good request. Spot premiums are without much change except for good and better, which are markedly dearer.

Brown.—A small business has been done. Prices are unchanged, except for good, which is dearer.

Pilion has been in fair request, especially for the better grades, without change in prices, except good and above, which have hardened somewhat.

White.—A fair business has been done. Spot premiums have improved somewhat during the week.

LIVERPOOL COTTON REPORT.

Better Inquiry.

Messrs. Reynolds and Gibson report as follows for the week ended January 21 :—

Egyptian Spot.—A rather better inquiry has been in evidence during the past week, and in spite of the fact that spinners have been almost unanimous of late in protesting that Sakel cotton possessed no interest for the trade at present prices, it is of interest to find that Sakel has been by no means neglected. Both the Lower and Finer grades have engaged quite a fair share of attention, particularly during the last few days. Of course, this may mean nothing more than that some were merely feeling the market, but judging by the daily record of business done, there would appear to be a steady, if small business taking place in Sakel between 31.00d. and 32.00d. As we have already pointed out, one can hardly expect a large spot business at present. For one thing, manufacturers are no longer buying yarn as freely as they were doing towards the close of the year, and, for another, the weekly forwardings have continued on such a large scale that spinners must be comfortably supplied for all immediate needs. Alexandria continues to be the mainstay of prices, and it would undoubtedly be to the advantage of our trade here if a thoroughly good shake-out should occur in that market. A substantial reaction appears to be much overdue, but at the same time one cannot deny that they are in a very strong position over there.

Uppers continue to be the centre of attraction, and although no remarkable weight of business has been reported, a steady appreciation continues. With the shortage of American staple cotton (and the high prices asked for it) it seems certain that more and more attention will be drawn to this growth as the season progresses. On all sides, one hears reports of mills turning from Sakel on to Uppers or American staple cotton. Pilion has been in fair request, but spinners continue to be very conservative in their ideas of its value. This week the inquiry has scarcely ventured beyond 22.00d., and we are of the opinion that only a very moderate amount of business has been transacted at this price. Other growths have been neglected. Forwardings for the week ending 16th instant were returned at the large figure of 17,279 bales. Estimated sales 1,800 Egyptians. Quotations of Sakel have been raised 50 points for Fair, to 150 points for Extra Fine. Brown and Upper are 20 to 35 points higher. F.G.F. Sakel to-day 30.35d.

A trunk telephone service is to be opened next month between Bombay and Delhi.

The traffic receipts of the South Indian Railway Company for the week ended December 27 amounted to Rs.9,62,440, making the total since April 1 Rs.3,66,77,614.

Sir H. O. Bax-Ironside, K.C.M.G., is resigning the chairmanship of Benzol and By-Products owing to stress of other engagements, and will be succeeded by Sir A. H. McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I., the Egyptian Government's representative on the board of the Anglo-Egyptian Oilfields, and a director of the Imperial Bank of Persia.

COTTON TRADE REVIEW.

Another Quiet Week.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended January 24 states :—

A very quiet state of affairs has again prevailed, and the amount of business transacted has been by no means satisfactory. The reduction in the workable inquiry is decidedly disappointing. A few months ago, when cotton was fluctuating widely, there was every appearance that, given stability and a somewhat lower level of prices, a really large business would materialise. These conditions have prevailed for several weeks past, and the market is at a loss to account for the absence of what it considered to be the certain consequences.

Yarn.

Under the circumstances above referred to the position of spinners has naturally weakened, and margins are now smaller than for some weeks past. The Committee of the Master Cotton Spinners' Federation stated on Tuesday last that stocks were again beginning to accumulate, and, failing an early improvement, the question of returning to shorter hours of labour would have to be considered. Egyptian Spinnings remain very irregular.

Cloth.

Business has been on a small scale. Neither India nor China have done anything of note, and most of the inquiries which have come along have been unworkable. Perhaps the brightest spot in this section has been the Near East, for which and Egypt a number of orders have been placed. The home trade, too, has been rather more active than recently.

Raw Cotton.

Once more American cotton has been remarkably steady. Purchases in Liverpool have been only moderate. The ginning report issued yesterday afternoon gave a total of 13,308,000 bales, which was approximately what was expected, and the figures were practically without effect here. It is interesting to note, however, that the final crop estimate of the American Agricultural Bureau has already been exceeded. The welcome fall in Egyptian which took place last week was unfortunately short-lived, and prices have again advanced very considerably for both spot and futures. Closing quotations yesterday were as follows :—American Middling, 12.87 ; Egyptian Fully Good Fair, 31.00.

KASSALA COTTON.

The following circular has been issued by the Kassala Cotton Company :—In their annual report dated April 25 last year the directors informed the shareholders that the Government of Eritrea were reported to be studying the possibility of using water from the River Gash for irrigation in that country. The company is now informed that negotiations have recently taken place between the Government of the Sudan and that of Eritrea, as a result of which the Government of Eritrea have undertaken to restrict irrigation from the River Gash in their country to a single project, for which a quantity of water limited to a fixed maximum may be taken. This agreement marks a stage in the clarification of the position, but the maximum fixed is substantial, and any abstraction of water must affect the possible earnings of this company. It is not possible to estimate at the moment the extent to which the company's prospects may be affected by this agreement, but the directors have every confidence that this aspect will be fairly considered by the Sudan Government.

SHIPPING INTELLIGENCE

NEW BRITISH INDIA STEAMER.

The trials took place recently of the steamer Queda, built by Messrs. Wm. Gray and Co., Ltd., West Hartlepool, to the order of the British India Steam Navigation Co., Ltd. The vessel is of the following dimensions : Length, overall, 502 ft. ; breadth, 60 ft. 9 in. ; depth, moulded, 32 ft. 8 in. She has ample accommodation for a few passengers and for officers and crew, is fitted with wireless telegraphy, and has an electric light installation throughout. The outfit includes an ice-house for provisions, fresh water distiller, steam windlass, and steam steering gear aft, with telemotor control on bridge, cellular double bottom, deep ballast tank and fore and aft peak tanks, eighteen derricks, fitted on masts and derrick uprights, and one 25-ton derrick, nineteen steam winches exhausting into winch condenser.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, February 7). (For passengers sailings and dates see advertisement.)

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Expulsion of the Patriarch.

The controversy over the status of the Œcumenical Patriarch, who had been warned before his election that he belonged to the category of exchangeable Greeks, but who claimed exemption on the ground that at Lausanne the Turks had agreed to withdraw their claim for the removal of the Patriarchate, has been abruptly cut short by the expulsion of Mgr. Constantine VI. from Constantinople. On instructions received at midnight by telegram from Angora, the Constantinople police notified the Patriarch in the early morning that he had to leave the city, and there and then conveyed him to the Passport Office in Stamboul. Two hours later Mgr. Constantine Araboglou left by train for Salonika, where, it is understood, the See may be temporarily established. Last week the status of the Patriarch had been discussed by the Exchange Commission, which recorded the decision that, whereas as a civil personality the Patriarch was exchangeable, the Commission found itself incompetent to pronounce on his case in respect of his position as a Metropolitan. Immediately after this dubious pronouncement, the Greek Government would have been well advised to come to an agreement with the Turks to have the matter submitted to the arbitration of The Hague Tribunal or of the League of Nations. Whatever steps were taken in this direction in Athens were begun without agreement with Turkey, and in Constantinople the Greek attitude adopted seems to have been that of daring the Turks to do their worst. In any case, the correspondent of the *Manchester Guardian* stated in a despatch announcing the verdict of the Exchange Commission: "This decision throws the next move on to the Turks, who are agitating for the Patriarch's expulsion outright. The Greek delegate intends to wait here to see whether they will carry out this *coup*." Even if Greece did think that the Turks were bluffing, she was hardly in a position to call their bluff.

The Patriarchate.

There can be no doubt that the Turks have been ill-advised in the step they have taken, and still more so in the manner of carrying it out. Their treatment of the head of their own religion was more or less their own affair; but in proceeding unceremoniously to eject from Constantinople the Head of the Greek Orthodox Church they have been betrayed into an exhibition of tactlessness. The Angora Government had a technical case against the new Patriarch; but whether it wished merely to be "nasty" to the Greeks by insisting upon the letter of the law, or whether it was resolved, by hook or by crook, to oust the Patriarchate from Turkish territory, it stood to lose nothing by carrying through its purpose with due regard to diplomatic etiquette in such matters. The incident may, in the opinion of the Turks, concern only themselves and the Greeks; but the status of the Patriarchate is too high in the world to allow other nations to affect indifference to the brusque way in which the Turks have treated the Patriarch. In spite of holding this view, we do not subscribe to the exaggerations that the expulsion of the Patriarch has provoked in Greece and in certain other quarters. The incident cannot give rise to any "crisis." Greece will very rightly protest; but it is not easy to see how an outside body can intervene unless both parties agree to arbitration.

The Greek Case.

In basing her attitude on the purely negative contention that Turkey had not pressed her claim at Lausanne for the expulsion of the Patriarchate, Greece was not in a strong enough position to defy the Angora Government. Her best chance lay in friendly negotiation, but for this, we fear, the obstacles in the way were too great. As things are, dignified restraint in Athens might yet prompt the Turks, for their own reputation, at a time when they are anxious to cultivate better relations with Western Europe, to reconsider the question, and to permit Mgr. Constantine VI. to return to Constantinople. If that does not happen, we shall still hope to find that the Greek Orthodox Church has sufficient vitality to be indifferent to the place of residence of the Œcumenical Patriarch. The severance of the old association with Constantinople will be a blow to its pride; but it survived a period of sixty years' exile 700 years ago, and should be able to manifest equal resource and fortitude to-day. Just as the influx of refugees from Turkey will undoubtedly prove a blessing in disguise to Greece in the material world, so it may be that the transference of the Patriarchate to Greek soil may ultimately prove of inestimable advantage to the Church in the spiritual sphere. To be free from political distractions and to be able to give undivided attention solely to matters of religion cannot be a serious hurt to the

Digitized by Google

Patriarchate; the spiritual supervision of the Greeks in Constantinople can be left to an Archbishop who is not also Patriarch. It will not be overlooked, however, that the Turks disclaim any designs on the Patriarchate, but merely insist that the Patriarch, who has to be an Ottoman subject, shall not come within the category of exchangeable Greeks.

The Election in Yugoslavia.

The news from Yugoslavia in connection with the elections that are to be held next Sunday is mainly devoted to a record of casualties in the frequent collisions between the parties or between the police and the Opposition. From this information it may be inferred that party feeling is running high, and that the Radicals are straining every nerve to secure their return to power in sufficient strength to be independent of any other parliamentary group, apart from M. Pribitchevitch's Democrats. In the political passions thus raised the calm reasoning that the country so badly needs for the settlement of its difficulties will go by the board, and a Radical victory will leave the non-Serb portion of Yugoslavia embittered and unwilling to accept a verdict which, it will be alleged, has been obtained by unconstitutional means. What is not yet clear is whether the Raditch or Croatian Peasant Party is to be entirely debarred from the elections, as the Communists were at the 1923 elections, or whether the Croat electorate will proceed to elect representatives without a definite party label. In the latter case the attitude of the Croat members in the Skupshtina would presumably be the same as that of the Raditch deputies. The reason for the strenuous efforts now being put forth by all the parties is to be found in the constitution of the last Skupshtina. M. Pashitch's Radicals numbered 107 out of a total of 312 deputies, and M. Pribitchevitch's support added only fifteen to this total. On the Opposition side were 68 of the Croatian Peasant Party, 32 Democrats under M. Davidovitch, 24 Clericals under M. Koroshets, and 18 Bosnian Mussulmans under Dr. Spaho. Of the fourteen Turks five sided with the Radicals, nine with the Opposition; the balance of the seats was held by a number of small groups. This year, with a seat allotted to Zara, in Dalmatia, the total number of deputies in the Skupshtina will be 313.

The Albanian Republic.

Ahmed Bey Zogu's position in the new Albanian Republic has been regularised by his election as President for seven years, and he has lost no time in trying to reassure public opinion in Italy. His telegram to Signor Mussolini, which is a pattern of diplomatic correctness, expresses confidence that the benevolence and moral assistance of the Italian Government, which contributed so much towards the realisation of Albania's independence, will continue to aid him in establishing an administration capable of ensuring a period of political stability to Albania. In the meantime the process of clearing up has been begun, and already one prominent Albanian has been captured and "shot while attempting to escape." It is possible that the unrest of recent years has thrown up a number of people whose elimination will be an advantage to Albania; but it is to be hoped that the execution of Zia Bey Dibra is not the prelude to extreme measures against the President's former political opponents. Such methods will not make for "political stability" in the country. On the other hand, Ahmed Bey Zogu appears to have convinced some of the more undesirable characters on whose help he relied in his *coup d'état* that their continued presence near the capital is not required, and they have returned to their former profession in the mountains, to the embarrassment of the authorities and population in Southern Serbia.

The Egyptian Elections.

Speaking at Birmingham on January 30, Mr. Austen Chamberlain, Secretary of State for Foreign Affairs, addressed very earnest words to Egypt on the subject of the approaching elections. He showed how Zaghloul Pasha had persisted in a line of policy which he had been warned must ultimately end in the expulsion of the Egyptian Forces from the Sudan. Thus it was Zaghloul Pasha who had endangered Egyptian liberties so seriously; but, faced with the result of his campaign, he sought to evade responsibility by resignation, and left to others the task of solving the difficulties that he had himself created. The British Government, Mr. Chamberlain continued, was profoundly interested in the establishment and maintenance of good and friendly relations with Egypt; and he expressed the hope that the Egyptian people would weigh well at the coming elections the consequences of the decision they are called upon to give and the result of the choice they will have to make. He added:—

"I hope they will realise how important it is, not only for the future of their relations with us, who are resolved at all costs to defend the vital interests of the British Empire, but also for the maintenance and enjoyment by Egypt itself of the liberties which we had conferred on it, that their Government should follow a wise and prudent policy. . . . If the new Government will co-operate with us in a spirit of comradeship and loyalty, they will find us anxious to preserve their liberties, glad to promote their prosperity, and as proud of our connection with them as we hope they may be proud of their connection with our great Empire."

The trend of events in the country, we may hope, suggests that the wisdom of this advice is becoming gradually more and more appreciated by responsible Egyptians.

INDIA.

The Legislative Assembly.

The week's proceedings in the Legislative Assembly do not throw much light on the intentions of that body regarding the immediate future. The debate on Bengal was adjourned, while the acceptance of the steel bounties, and the demand for immediate, instead of early, action in regard to the currency, were foregone conclusions, and the most important feature of the discussions has been the indication they afford that extremist politicians are becoming increasingly anxious concerning the influence of the steel interest in politics. From the educational point of view this anxiety must be taken as a healthy reaction. The Indian belief in fostering industry by fiscal methods is not to any appreciable extent based on accurate knowledge, economic, commercial, or industrial. It is not a conclusion, but a creed, and probably very few of its adherents were aware of the fact that protection and "interests" are inseparable. If half of what we hear about the lobbies and verandahs of the Legislature is true, the "interests" have been making themselves very much at home, and are quickly teaching members a lesson which they

Digitized by Google

failed to learn at college—the lesson that if you want a protective policy you must be prepared for its inevitable inconveniences.

The Cotton Ginning Bill.

The Assembly will very soon be face to face with another set of "interests" when it takes up the Bill for regulating ginning and pressing factories. The Bill represents a further instalment of the legislation recommended by the Cotton Committee, we forget how many years ago, but so diluted that there is some doubt whether it will do very much good. Its main object is to check the practice of mixing bad cotton with good, a practice which makes the improvement of Indian cotton very nearly hopeless. To take a recent example, vouched for by the Central Cotton Committee, a year ago cotton grown in the Punjab was meeting "middling American" on equal terms in the Liverpool market, but, as the season wore on, the deliveries became so mixed that Punjabs went out of favour, and fell nearly 2d. a pound below their competitor. The old India could on occasion deal effectively with such practices, and it is on record that when the Emperor Shahjahan made adulteration of indigo a capital offence, the trade was purified as if by magic. We do not expect the new Legislature to follow that particular precedent, but the fate of Indian cotton is now in their hands, and if they yield to the powerful interests in favour of adulteration, they may find later on that the growers' interest is even more important in the long run.

Indian Students Abroad.

Compared with their action in regard to cotton, the authorities may almost be congratulated on the rapidity of their handling the Indian students' question, for it is little more than two years since the Report of the Lytton Committee was signed. We are glad to see that the more eccentric recommendations of that Committee have been thrown overboard, and that the High Commissioner is to remain responsible, as the agent of the Indian Government, for the expenditure of Indian funds in this country, though he is to be encouraged to delegate the purely social duties to unofficial bodies, if they can be found. As to organisation in India, the only change seems to be one of nomenclature. The "provincial advisory committees," some of which have done very good work, are to be replaced by "University Students' Information Bureaux," but in practice they will be manned by very much the same people, and they may be a little more, or a little less, efficient, as circumstances may permit. On the whole, then, the decision is to make only minor alterations in the existing machinery, and the statement issued here last week lets the Committee down as easily as possible, which, in our opinion, is exactly what was wanted.

THE WEEK AT HOME.

London, Tuesday Morning.

Up the Liberals!

Banners flew and trumpets blew, and brave words sped to the comfortèd, in a grand rally last week of the Liberals. Two thousand stout hearts assembled in London for the purpose of hearing Mr. Asquith and Mr. Lloyd George pledging eternal (past, present, and future) friendship, of keeping the Earl of Oxford as the leader of the party and Mr. Lloyd George as its "sessional chairman," and, incidentally, of resolving to collect a "fighting fund" of £1,000,000.

But perhaps it is unsporting so to contemn the Liberals' little efforts. It is so futile to ask what and whom they propose to fight with their million pounds (and, by the by, whoever heard of a capitalist seeking honours who was willing to pay into the funds of a party which obviously would never be in a position to dole out peerages?): for there is, simply, no answer. There is in traditional Liberalism not a vestige of a unified, reasoned policy; and even if there were the acceptance of it by Mr. Lloyd George would of itself be sufficient to make it doubted by a large section of the party. Liberals must wait, it seems, for the passing of its mighty heroes of the past; by which time there may, of course, be nothing to wait for.

Their "Ginger Group."

Not the most ignorant about the prospects of Liberalism are certain of the Liberals themselves; but these, a minority, are in positive despair whither to turn for the remedy. For a start they have made of the Radical Group, which was formed just after the last General Election in order to "put ginger" into Liberalism, a permanent organisation. That is good, but for the rest they appear to prate as vaguely and as idly as ever of such impossible generalisations as "free land, free trade, free people," and even seek to infuse Dutch courage into themselves with such heady ditties as the recently composed "Land Song," for which masterpiece the *Daily News* gave a prize of £50.

Were the Liberals even to attain the perfection of machinery for which they are so strenuously seeking (they will have to find a hundred Brunners and a hundred Monds before their exchequer allows absolutely free play to their mechanism), it is still doubtful whether mere "ginger" and prestige are adequate substitutes for a policy.

The Irish Famine.

There is no fashion more out of date than that of bespeaking sympathy for Ireland, which is experiencing, in the poorer districts of the West, a real famine, both in food and in peat. But John Bull was always impractical, and it is a curious fact that, quite apart from the practical cessation of responsibility for the economic condition of Ireland, he has been once again moved by the miserable tale of Western Irish peasants whose fires have for the first time in a hundred years perforce died out. Politics or no politics, he cannot listen aloofly to the story of the winds and floods that have washed out the potato crops and have so soaked the peat that it cannot replenish the fire that is often the peasant's sole comfort. He knows that the best of all Governments could not prevent the Thames Valley from being flooded, and is not disposed to make capital out of the fact that the less efficient Government of the Home Rulers can no better stave off the hand of Providence. Carson and de Valera are for the nonce forgotten, and the generous Englishman is again showing the romantic and illogical basis of his nature.

Lord Birkenhead's Philistinism.

I do not know to what extent one could maintain the thesis that Lord Birkenhead is not a Philistine, but from time to time he certainly makes it very difficult to those who would so stoutly defend the virtues of the late F. E. Smith. Not long ago he came, with considerable noise and ado, bump up against the outer defences of the idealists; how far he encroached upon their impregnable fortress is still a matter of opinion.

But, however inconsistent he may be in his politics, at least in his indifference to the finer qualities he is amazingly constant. Last week, with all the daring and eloquence and studied originality that become so well this erstwhile Lord Chancellor, he told the world that "though he was

Digitized by Google

a very poor man he would rather pay £50 than sit through any classical concert." Mr. Lloyd George also—how similarly the same things appear to great minds!—once said that he was a poor man; but that may be let pass. But the rest of it! Of course, there are many people whose attitude towards music is like Lord Birkenhead's: but they do not boast about it.

However, it might be worse, and perhaps we should be grateful. For he (instead of whom we have a finely cultured mind) might have been Prime Minister. For a few dreadful weeks was there not a possibility of his becoming so?

The Shingled and Shaven.

One remembers Mr. Arthur Ponsonby, who was Under-Secretary for Foreign Affairs in the Labour Administration, for the pertness of his answers in the House—a pertness that was sometimes, I think, achieved at the expense of accuracy. It was with this recollection, confirmed and yet modified, that one read his very ingenious exposition of modern female and male fashions It was an exposition that is bringing him a good deal of temporary renown. He explains the dominance of the modern young woman by the docility, or lack of virility, of the modern young man. At times when, he says, the male loses the manly quality the female acquires it. "When virility is at its height the female seeks defence in her draperies. When virility is at a low ebb the female exposes herself to attract the reluctant male." The crinoline of the Victorian era found its counterpart in the bushy whiskers of the male; and the hairless male face of to-day is reflected in—whatever the modern young woman wears, and in such ebullitions as shingling.

A few days ago a prominent scientist, Mr. Julian Huxley, announced that the craze of shingling was merely one more example of the periodic manifestations of the female's proclivity, shown in all forms of creation, to imitate the male.

For the bewildered observer, who is neither politician nor scientist, it is a little difficult what to make of these tremendous discoveries. It is easy to engage in the delightful flippancy that the once popular quest of the "beaver" was society's instinctive effort to redress the balance and rediscover the dominant male (*Manchester Guardian*); but will the shingled (or the "bingled," as I am told those who in the very latest fashion have compromised between shingling and bobbing call themselves) allow so light a treatment of so sacred an institution?

Piccadilly and its Fountain.

To their very roots the hearts of lovers of London are being stirred by the announcement that Gilbert's Shaftesbury memorial fountain in Piccadilly Circus is to disappear, and that in a very few days. This is because of the construction of the huge Tube station at the Circus, which, it is said, will stagger the world. In eighteen months' time there will be a station with two tiers of escalators, the top one with five escalators running to a platform from which four will descend to the trains. And instead of those long, annoying walks through the tunnels there will be large spaces, in which the atmosphere will not be, as it is now, something that resembles the smell of washing clothes.

Meanwhile, the statue of Eros, whose darts have been showered on the dazzled Circus crowds since 1893, is, I hear, to be removed to the Tate, where Londoners will be able surprisedly to discover that this sprightly god, besides being ten feet high, is made of aluminium. Whether it will ever again cheer the young and old men as they stroll about the Circus by day and excitedly amble by night is uncertain; the traffic authorities are against it. And not even the bloods and the flower-women will prevail against these.

Drury Lane's Future.

Hopes were rising a few months ago that Drury Lane, in which "A Midsummer Night's Dream" is now being played to very large houses, might become an unofficial national theatre. This was the end which Mr. Basil Dean, one of the theatre's directors, had in view. Now our hopes are dissolved. Mr. Dean has resigned; and the policy of commercial opportunism is reinstated.

It is not for the outsider to take sides in this matter; at any rate, it is now my duty but to record that Shakespeare is to be followed by an American musical comedy. One supposes that large-scale productions are colossal gambles; and, of course, there is the fact that Mr. Dean is an artist. There are still people who say that successful commercial men must be artists; but you may never more believe them.

St. Paul's.

The fund that *The Times* is conducting for the restoration of St. Paul's has been well subscribed, but with the growth of the surplus has come a growth of difference in the experts' opinions. Generally speaking, public opinion is on the side of making what it calls a permanent job of it—which entails the renewing of the piers that support the great dome. Certainly if anything were to happen to the dome the tragedy to London would not be finished when it had stopped rolling down Ludgate Hill. I visited the cathedral again last week and felt again how it dominates the capital. The feeling of greatness and reverence as one gazed up through the misty ethereal light to the topmost windows was quite apart from religious considerations; one came out saying that anything rather than Wren's masterpiece might be sacrificed. After all, he is not responsible for the junk that reposes in the cathedral—that is mostly due to the Victorians. Alter Ego.

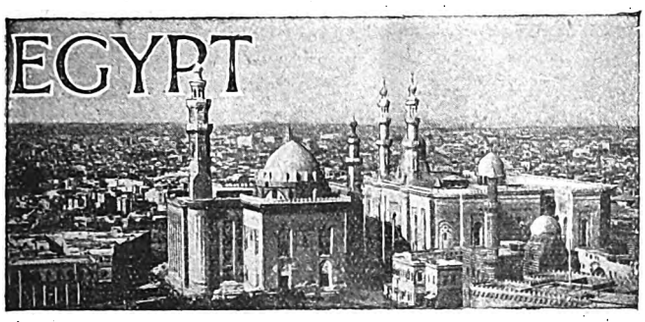
The Near and Middle East.*

From Our Own Correspondents.



Cairo, January 24.

The Sudan Defence Force.

The chief event of the week has been the announcement made at Khartoum by Sir Geoffrey Archer, the new Governor-General, of the creation of a Sudan Defence Force. This announcement has by no means made the stir here that, basing oneself on past experiences, one would have expected. The explanation is possibly that the electoral campaign is in full swing, and so is absorbing public attention, and that the element of surprise had been removed by the fact that the creation of this force to replace the Egyptian Army had been already mentioned in the ultimatum of November 22.

There was a slight flare-up at the time, and the announcement was a subject of discussion in the cafés for a day or so. But all has since calmed down, and the local Press is now merely calling upon the Government to take action in defence of Egypt's interests. The Cabinet will possibly make a protest. That is all that in the circumstances it can do, with no hope of satisfaction, since the step taken by the British authorities is but the logical consequence of the policy followed by its predecessor.

Naturally, the Wafd organs have not failed to seize upon this development as a further opportunity for hitting out at the present Cabinet, and reiterating their accusations that it is too friendly disposed towards Great Britain, and is willing to sacrifice the interests of the country in order to be allowed to remain in power. Those who know all the circumstances, however, pay not the slightest heed to these vapourings. They recognise that the present Cabinet cannot be held responsible for what has been done in the Sudan.

The removal of the Egyptian Army and, as already mentioned, the creation of the Sudan Defence Force were in fact already decided upon—the decision was already officially known to it—while the Wafdist Cabinet was still in office; and the present Cabinet could perfectly well retaliate by accusing the Wafd of having abandoned office in order not to have to bear the consequence of its own misdeeds, and in order to be able to make the more ignorant masses believe that the subsequent events affecting Egypt's so-called rights were entirely the fault of its successors because they were taking place during their tenure of office. When the terms of the agreement with regard to the water are announced, the present Cabinet will indeed be able to add that if, as is alleged, it is friendly disposed towards Great Britain, its friendly attitude has, at any rate, been more fruitful in safeguarding national interests than that adopted by the Wafd, since it has enabled it to stave off the danger with regard to Egypt's water supply which had arisen before the Wafdist Cabinet deserted its responsibilities.

A Distinguished Egyptian Soldier.

All who have had anything to do with Egypt during the past thirty years, and particularly members of the Anglo-Egyptian community, will have learned with deep regret of the death of Sir Ibrahim Fathy Pasha, which occurred suddenly last Sunday. He was one of the few survivors of the pre-Occupation Egyptian Army, and had had a most distinguished career. Of his ability, both as a military leader—he commanded a battalion in the Sudan campaign—and as an administrator—he had been for several years a Provincial Governor and had held the portfolios of War and Wakfs—the late Lord Kitchener and Sir Reginald Wingate, who had had opportunities of watching him closely at his work, had the highest opinion, and he enjoyed the respect and esteem not only of his fellow-countrymen, but also of all non-Egyptians who came into contact with him.

Fathy Pasha had attained a ripe old age, but showed few signs of it, and was more active and more mentally alert than many a much younger man. His death is, indeed, a serious loss to his country, for he was that *rara avis*—an Egyptian who was not afraid to speak his mind. He had great ascendancy over the officers of the Egyptian Army, both past and present, and his influence for good would have been invaluable at the present juncture. As was his due, he had an imposing funeral, representatives of every element in the population and of all the foreign communities taking part in the procession.

Fathy Pasha was a candidate at the forthcoming elections, in which he was to have as adversary another War Minister, Hassan Hassib Pasha, who held that portfolio in the Wafdist Cabinet. As a result of his death the problem has arisen of whether another candidate should be nominated in his place or whether Hassib Pasha automatically becomes returned unopposed. The law officers are understood to have expressed the opinion that as the law stands another candidate must be nominated, and to base this opinion on the fact that the electoral law lays down that a candidate

A Posthumous Dismissal.

In my letter of the 10th instant I referred to the sad death of Major S. H. Capper, of the Foreign Department of the Ministry of the Interior, which occurred on the 8th instant. To the general consternation, a morning paper of the 22nd instant contained an announcement to the effect that the Egyptian Government had dispensed with his services because he had attained the age of 65. Those of us who knew him realise that this posthumous dismissal was just the thing that would have appealed to Capper's keen sense of humour.

GREECE.

Athens, January 26.

The Bulgaro-Greek Minority Protocol.

What practically amounts to the cancelling of the Bulgaro-Greek minority protocol, and particularly the procedure followed by M. Michalakopoulos to that end have given rise to much criticism of the Government in Opposition circles. A former Minister for Foreign Affairs and to-day a pillar of the Papanastassiou party, stated in a public interview that by his attitude in the matter of the Geneva protocol M. Michalakopoulos has rendered his position untenable, and that it was his bounden duty to resign in order to save the country from the consequences of his political mistakes. It is argued that the Government should either have cancelled the protocol from the outset, or have submitted it to the National Assembly, which alone was qualified to ratify it or to reject it. The Government, on the other hand, says that in order to avoid creating in international diplomatic circles the impression that it disregarded its signature, it paved the way beforehand for the non-application of the protocol by laying before all the interested parties the reasons which impelled it to consider that instrument as non-existent.

In its explanatory communication to the League of Nations it is said in substance that there is no question of the Government's not abiding by its Treaty engagements in regard to the protection of minorities, but that it does not see its way to submitting to the National Assembly for ratification the protocol signed at Geneva by M. Politis. It is added that, to judge by public utterances, the interpretation put on the protocol in Bulgarian official circles, an interpretation echoed in the Bulgarian Press, is of a nature to convince both Greek and Serbian public opinion that the application of the minority protocol would be liable to lead to new complications in the Balkans.

The arguments set forth in the above communication are worthy of a lawyer of the standing of the present Prime Minister. The general opinion in this country is, however, that the minority protocol, without taking Bulgarian interpretations of it into account, would prove in many respects injurious to the interests of the country, and would, above all, render most difficult the negotiations about to be opened for the renewal of the Græco-Yugoslav Treaty. This is sufficient reason, it is said, to justify the non-application of the protocol.

As for the course followed by M. Michalakopoulos for rendering the protocol a dead letter, this is a matter for him to fight out with the Papanastassiou party, which has been on the warpath ever since its overthrow. The National Assembly reassembles to-day after the Christmas recess, and it is to be hoped that the Opposition will, in the interest of the country, change its tactics and allow some useful work to be achieved.

Foreigners' Purchase of Land.

A Bill is shortly to come before the National Assembly for the prohibition to foreigners to purchase land in certain frontier districts; also in certain islands of the Ægean near the Anatolian coast, and at Corfu. This measure has found critics in Italy, and a certain Rome journal sees in it a disposition of the Greek Government to injure Italian interests. The remarks of the Italian journal regarding a precautionary measure at the frontiers would have passed unobserved in this country had reference not been made "to the Italian interests at Corfu, interests based on tradition." This last phrase of the Italian paper has given rise here rather to hilarity than to annoyance, and it is generally asked: Is it to the Venetian occupation of Corfu that the Italian journal alludes, or to the empty Italian shells, of much more recent date, which are preserved at Corfu as emblems of Italian modern civilisation?

Communists in Greece.

The Communists are again making themselves very busy in Greece, but so far all their efforts to create disorders have been nipped in the bud. In certain provinces where martial law is not in force and public meetings in the open are never prohibited, the Communists are constantly endeavouring to make trouble, and the military authorities have to follow their movements very closely. According to information which reached the military authorities here the Communists were preparing a demonstration for the night before last, which was to have been followed by a memorial service for Lenin yesterday morning. Severe police and military measures were promptly adopted, and the plans of the Communists were, as usual, thwarted. With General Kondylis as Minister of the Interior, the Communists have little chance of making any headway in this country in spite of the substantial and moral support they are said to receive from the Soviet Legation. It will be remembered that General Kondylis left the Papanastassiou party because of the alleged Communist tendencies of its leader.

activities of M. Vintila Bratianu abroad. In the first place, the participation of the Roumanian Minister of Finance in the Conference in Paris has brought up again the question of reparations, and the Press has with one voice lamented the small percentage allotted to Roumania at Spa, which puts her on a level with such countries as Portugal.

The business world, the general public, who have had cause to note personally the economic crisis, and to whom the need for financial aid from abroad has been made clear, and, indeed, the whole country, have manifested the liveliest interest in the negotiations in London, where M. Vintila Bratianu has been joined by M. Oromolu, Governor of the Banca Nationala, M. Tancred Constantinescu, Minister of Industry and Commerce, M. Mrazec, an engineer, and M. Barbu Stirbey.

Liberal circles have maintained the greatest reserve on the subject of these conversations in London, and as they pretend not to expect any immediate results, they give no details whatever as to the course they are taking, but the Roumanian Press has clearly discerned the new tendency of politics in Roumania, who is turning to England as the only country capable of succouring her at the present time, and for the sake of England's collaboration in Roumanian industrial enterprises it is possible that a mutually profitable agreement may be happily arrived at. It is clear indeed that Roumania need not appeal for financial aid on the grounds of her political credit, but she could very well offer as guarantee her immense economic resources, which up till now have been insufficiently and too unprofitably exploited. Whatever be the immediate and tangible result of the present negotiations they will have served to bring anew before British capitalists and industrialists the latent resources of this new country capable of a magnificent development.

The Appeal of M. Maniu.

In the meantime a political development has taken place in Bucharest which seems destined to exercise considerable influence on Roumanian politics. M. Maniu, President of the National Party, issued an appeal on January 23 to all the heads of the Opposition parties, calling upon them to induce their groups to unite with his for the formation of one homogeneous anti-Liberal Opposition group. In this address, which seems to be due to the personal initiative of M. Maniu, the latter passes final judgment on the Liberals, and demonstrates the necessity for a united Opposition.

The manifesto is arranged under ten principal headings, excluding all selfish party motives, and advocates the formation of an overpowering Opposition which would tend to overthrow the present Government immediately.

This sudden and tolerant action on the part of the President of the National Party seems to have been inspired by his conviction of the urgent necessity for smoothing over the personal differences which have hitherto retarded the union of the Opposition. If it is sincere it will not fail to have far-reaching effects.

The Attitude of the Opposition Parties.

The National People's Party, headed by M. Argetoianu, immediately responded to the appeal of M. Maniu, and yesterday morning handed the latter their definite and official promise of union.

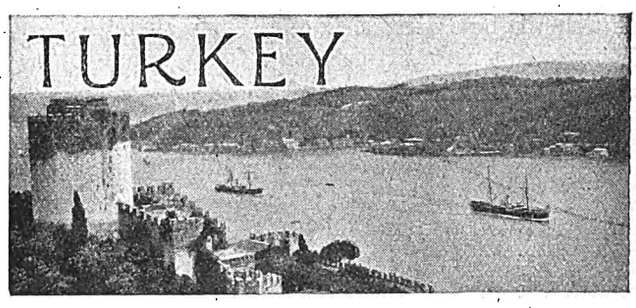
The Peasant Party still hesitates, and its administrative committee is divided as to the course to pursue. Some, distrusting M. Maniu's action, declare that it is a manœuvre intended to isolate the Peasant Party, in case of its refusal (which is probable). Fruitless discussions have taken place, and the Committee has decided to convoke next Sunday a meeting of the heads of all the departmental organisations of the party.

The People's Party, in the absence of its leader, General Averescu, have decided to reserve their decision pending the return of the latter at the end of the week. One of the leaders of the party, however, has already visited M. Maniu in order to obtain his statements on certain subjects, and so prepare the material for discussion on the return of General Averescu.

Finally, it would appear that the partisans of M. Marghiloman and their chief are in favour of the acceptance of the collaboration proposed by M. Maniu.

Under these conditions, even if a complete union of the Opposition be not achieved, one result will at least have been attained—namely, the formation of two very distinct currents of a more homogeneous nature which will admit of new developments.

By the beginning of next week the actual results of M. Maniu's manifesto will in all probability be known.



Constantinople, January 27.

The Progressist Republican Party.

The Progressist Republican Party is displaying considerable activity at the present time, and every day the papers report further recruits. To-day this newly-formed party is inaugurating its Constantinople Club, and, as if in celebration, comes the news of many newly-acquired adherents at Makrikeuy. Since Fethi Bey's coming into office the portion of the Press who favour the newly-formed party, and who, three months ago, canvassed its support, have restricted their publications to reports on the headway made by the Progressists which, though frequently exaggerated, is nevertheless considerable. This decreased canvassing is attributed largely to the similarity between the Progressists' programme and Fethi Bey's declared moderate policy. The Popular Party is also reported to be taking steps to maintain its majority, but in the Constantinople district it appears to be gradually

losing ground. An important member of the Progressist Party is stated to have recently said that they have no desire to take up the reins of government, but wish only to become strong enough to form efficacious control in the Assembly. This view, apparently, is not accepted by the Popular Party, who continue to regard the Progressists as an active opposition and a possible and probable successful rival, and the President of the Republic, who some short time ago professed his satisfaction at the possible formation of other groups in the Assembly than that of the Popular Party, is reported to have declared this last week: "I should have liked the new party to have been a conservative one, who would have served as a regulator, and whom it would have been our duty to aid. But this one being, on the contrary, more progressist than ourselves, makes opposition obligatory."

The Patriarchate.

M. Exindaris, the Principal Greek Delegate of the Mixed Commission for the Exchange of Populations, having returned here, it is possible that a solution to the Patriarchal question may be found. There is a plenary sitting of the Commission to-day to discuss this difficult question, and a final decision is expected to-night or to-morrow. The task of the Commission is, however, rendered exceedingly difficult owing to the hostile publications of the Press on the subject under discussion, and M. Exindaris, because of these publications, is not very optimistic regarding the possible Turco-Greek entente. The Turkish delegates of the Commission still maintain that, in the event of the decision being against them, they will be forced to retire from the Commission and resort to forcible measures in order to gain satisfactory settlement.

Angora or Constantinople?

During the past week the question of diplomatic representatives residing at Angora has again been brought on the carpet. Angora is doing all in its power to convince foreign Powers of the necessity that their representatives should be found in the capital. It is proposed to abolish in March the representative in Constantinople of the Ministry of Foreign Affairs, who, up to the present, has formed the *liaison* between Angora and foreign diplomatic representatives. Such a course, if adopted, will necessitate either the establishment of embassies or legations of foreign Powers at Angora, or the nomination by them of *liaison* representatives there should it be decided that Ambassadors or Ministers continue to reside in Constantinople. The Ministry of Foreign Affairs is selecting possible sites for embassies, which will be all together and on the outskirts of the town. The intention of Great Britain in regard to this question is understood to be to maintain the Embassy in Constantinople and appoint for the present a *liaison* officer at Angora.

IRAQ.

Baghdad, January 21.

The King's Tour.

King Faisal received an enthusiastic welcome on his visit to Arbil on December 18. The town was decorated with flags and bunting, and hundreds of tribesmen came in for their first sight of the King, who, besides receiving a number of notables and attending prayers at the Mosque, laid the foundation-stone of the new Civil Hospital. His Majesty went on to Kirkuk, whence his return to Baghdad was delayed several days owing to the floods on the Kingerban road.

The Frontier Commission.

Great excitement has been caused in Baghdad by the arrival of the League of Nations Frontier Commission, which is to settle the disputed boundary between Iraq and Turkey. The Commissioners, who are the guests of the High Commissioner, were given a very cordial welcome, crowds of Baghdadis waiting for hours to see their arrival at the Residency. They are accompanied by their secretaries and by Jevad Pasha (the Turkish General who was defeated by General Allenby in Palestine in 1918), with four Turkish assistant assessors. Mr. Jardine, of the Ministry of the Interior, has been selected by the Foreign Office to act as British assessor. The Commission travelled by way of Aleppo and Damascus, crossing the desert by a special convoy of the Nairn Transport Company, and reaching Baghdad on January 16. The National Party and the lawyers of Baghdad are said to be preparing a memorandum setting out Iraq's claim to the Mosul vilayet. A strong protest against the connection of Turkish members with the Commission has been made in the Baghdad paper, *Al Mufid*, which says that while Iraquis are perfectly willing to submit to the decision of the League of Nations, "founded on the noble principles of the late Mr. Wilson," they are convinced that the coming of "these Turkish intriguers, who are well-known agitators," must have very serious results. *Al Mufid* welcomes the most exhaustive inquiries of the Commission as to the real wishes of the people of Mosul, but it "cannot accept that it should be accompanied by Turkish intriguers, who will spy out our land."

The Elections.

The elections for the Iraq Parliament are once more held up, and for a somewhat surprising reason—that too many electors have appeared on the registers! The total population of Iraq is estimated at about three millions, yet, if the electoral returns are to be believed, the number of voters reaches ten millions. Many of the tribal sheikhs, wishing to secure a seat in Parliament, have exaggerated the numbers of their tribesmen. On the other hand, a few who look forward with dread to a possible day of conscription in Iraq have been careful to give a number considerably less than the real total of their tribes. These cautious ones, however, were a small minority, and the general excess was, in the words of the Prime Minister, "quite unacceptable." A committee has accordingly been appointed, under the suitable presidency of the Minister of Justice, to investigate the matter, and the elections will not be proceeded with until the correct figure has been reached.

Turkish Public Debt.

As mentioned in my last letter, Iraq is aghast at the very large proportion of the Ottoman Public Debt which has been allotted as her share. For interest alone she is expected to find no less than 65 lakhs of rupees annually, and for a country whose annual total revenues amount to only a little more than 500 lakhs this is an insupportable drain. Mr. Parlby, Auditor-General to the Government of Iraq, accompanied by Ibrahim Effendi Kabir, Assistant Accountant-General, has left for London, his mission being to try to procure some abatement of the allotted share of debt.

Baghdad Municipality.

A new bridge across the Tigris was opened on January 1, connecting Baghdad with the suburb of Kadhimain, one of the great pilgrim centres of the Shiah world. It consists of a floating portion carried on thirty-four steel pontoons, and two adjustable approaches or ramps. The centre of the bridge when swung allows a clear opening of 118 feet for the passage of shipping. The roadway provides a width of nine feet for wheeled traffic, and two footpaths each three feet wide. The bridge has been built on a very economical plan, but the greatest saving was effected by the purchase of a great proportion of the material at less than cost price from the Disposals Commission. The total cost has thus amounted to the very moderate sum of Rs. 120,000. On the Kadhiman side of the bridge the old road to Baghdad has been widened and improved, and the P.W.D. has opened a new motor road from Baghdad West to the bridge.

The condition of New Street, Baghdad's main thoroughfare, is causing great dissatisfaction locally, but the proposal to cement it this year is held up by the consideration that it would have to be done again next year, when the new waterpipes are laid. Moreover, the authorities have not yet decided whether the proposed new tramway is to run through New Street or through minor parallel streets. The construction of a new road for the use of heavy mechanical transport and other slow traffic is under the consideration of the Council of Ministers. Meanwhile, New Street after the rains is a bog, and a bog full of congested motor, animal-drawn, and pack traffic.

Ikhwan Raids on Iraq.

On December 26 a party of the Ikhwan crossed the Iraq frontier and attacked an encampment of the Bani Huchaim and the Badur, west of Nasiriyah, killing 46. Information was wired to Air Headquarters by a British Special Service Officer who was with the Bani Huchaim at the time, having visited their camp in order to warn them that they had moved dangerously far into the desert. No movement could be made by the Royal Air Force on the following day owing to the extreme weather conditions, wind and snow making flying impossible; but on December 28 aeroplanes caught and attacked the raiders before they had reached the frontier. They scattered, abandoning some of their loot, and the next day were caught again, when 53 of their camels were killed.

On December 30 another raid occurred at Haddaniyah, some distance south-west of Samawah. One hundred and fifty tents of the Bani Huchaim were destroyed. The raiders had made good their escape before information was received at headquarters, but planes were at once sent out to search for them, and on January 7 they were attacked by air, their casualties being 49 men and a number of camels.

The High Commissioner has telegraphed to Ibn Saoud, asking him to issue orders immediately for the prevention of further raids and the return of loot, and warning him that the raiders will be severely punished.

The building of a blockhouse at Abu Ghar, fifteen miles south of Nasiriyah, is being contemplated by the Ministry of Defence, at the suggestion of the Air Officer Commanding. It is proposed to garrison this post with Iraq infantry, and to equip it with wireless, so that news of raids may be sent without delay to headquarters.

The Asfar Concession.

Dr. Najib Asfar, who has obtained from the Iraq Government a concession for the agricultural development of large areas on the Diyala and Euphrates, is now in Baghdad. He has just returned from a visit to England in connection with the flotation of the company in London which will finance the irrigation schemes. The concession is granted subject to the Iraq Government's approval of the financial status of this company. The members of the board of directors are the Rt. Hon. Sir Auckland Geddes, G.C.M.G., K.C.B., Sir Edward Manville, M.P. (chairman of the Daimler Motor Company), Sir Douglas Newton, M.P. for Cambridge Borough; Sir John Norton Griffiths, M.P. (general director of Norton Griffiths and Co., prominent public works contractors), Sir Lionel Fletcher, C.B.E., and Messrs. R. Wilson and W. H. Midwood, both prominent figures in the British cotton industry. Sir Thomas Ward is consulting engineer to the company.

General.

Iraq is experiencing a winter of most unusual severity. On Boxing Day there was a slight fall of snow, the first since 1911, followed by a hard frost, which held for several days, and was accompanied by a biting North wind. The population of the capital, unused to eight degrees of frost, and very insufficiently clad for resisting it, has suffered considerable hardship. Those unfortunate persons who were crossing the desert in the Nairn Transport Company's cars relate that during a stop of twenty minutes the water froze in the radiators. The cultivators welcome the frost because of its beneficial action on the soil, but sheep have suffered very heavily: in some areas, where the flocks were weak because of the scarcity of grazing this year, as many as 50 per cent. were lost.

Near East Bookshelf.

THE EAST AND THE WEST.

"THE OCCIDENT AND THE ORIENT." By Sir Valentine Chirol. (The University of Chicago Press. 2.00 dol.)

It was a most happy choice which the authorities of Chicago University made when they invited Sir Valentine Chirol to inaugurate last year the series of Harris Foundation Lectures, which are designed to promote "a better understanding on the part of American citizens of the other peoples of the world," because for the exposition of so important a subject as the relations of America towards the East, a lecturer with more sympathy, learning, and impartiality than are possessed by Sir Valentine could scarcely be found. The giving of these Harris Foundation lectures and their subsequent publication in book form will, indeed, if the level of the first series be maintained, be of benefit to students far outside the shores of America.

This book is called "The Occident and the Orient" for local American purposes; here it would be normally entitled "The East and the West." For the author, in his six lectures, traces the history of the reaction of the Moslem world upon Western civilisation, concentrating mainly upon Turkey, Egypt, Morocco, Mesopotamia, Persia, and India in their respective, or collective, relationships towards the West. One cannot too much praise the lucidity and skill with which through six chapters, the titles of which are "Their Ancient Battleground," "The Passing of the Ottoman Empire," "The Peculiar Case of Egypt," "The Great British Experiment in India," "Protectorates and Mandates," and "The New Factor of Bolshevism and Some General Conclusions," Sir Valentine threads and adorns his tale. Accepted fact is most judiciously woven into, illustrated by, or frankly separated from, personal opinion; and, to speak frankly, there are few of his judgments with which we do not agree.

There is a peculiar aptness in which, in his first chapter, he shows how the Turks, by closing the old trade routes to the East, directly forced men to discover America. That which was discovered because of Islam must naturally and increasingly be interested in the development of Islam. It was still, incidentally, the question of the trade routes to the East that led England, in the mid-nineteenth century, to act in a way for which Sir Valentine, in one of the most interesting passages of his book, shows regret. When, in 1844 and in 1853, Tsar Nicholas made overtures to Britain for the final partitioning of the Ottoman Empire—a partitioning that would for all time have secured to this country her sea route to India and her overland route across Egypt—Britain so strongly suspected Russia of designs upon India that she rejected them. "It was the parting of the ways," says Sir Valentine, "and England took what many Englishmen, including myself, have long since held to be the wrong turning." However, of the potentialities of Republican Turkey the author has not a high opinion. "Owing to her geographical position and to the fighting qualities of her people, the new Turkey can never be a wholly negligible factor in the Near East, but she can hardly aspire to a much higher position than that of a third-rate Power barely equal in general resources to any of the Balkan states over which she used to rule."

On the problem of Egypt, it is difficult to summarise Sir Valentine's estimate, for judgment is to a great extent reserved. Notwithstanding, his chapter on this subject is one of the best in the book.

As for India, the essential thing is to go forward on the path upon which Britain set out five or six years ago, for, whatever be the disappointments so far encountered, upon the success of this great experiment more than upon anything else the peaceful readjustment of the East with the West depends.

With the chapter upon Protectorates and Mandates we cannot imagine that even the most sceptical or querulous American will find cause to quarrel. Sir Valentine has many good words for the French experiment in Morocco, but he admits that in that country the difficulties that have so beset places like Iraq, Syria, and Palestine, have not been encountered. He does not disguise the fact that very incomplete success has been attained in these three other countries; he does not, for instance, believe that Zionism has yet shown whether it has sufficient vitality to make good, or that in the autonomous and federated provinces of Syria there is not much popular discontent.

In conclusion, Sir Valentine deals with the racial issue, which, he says, is now raised all over the world. With a fine show of practical and informed sympathy he shows that he does not believe a solution of the issue impossible. He says: "I will say this, that the more firmly we ourselves believe in the superiority of a civilisation which, so far, it has been the privilege of the white man to build up in his occidental homelands, the more are we bound by its principles and the principles of the common Christianity which are its one sure foundation to do all in our power to temper the bitterness of a racial discord which, if it spreads and deepens, may threaten the future of the whole human race."

THE NEW "SMITH'S INDIA."

"THE EARLY HISTORY OF INDIA." By V. A. Smith. Fourth Edition, revised by S. M. Edwardes. (Oxford: Clarendon Press. 16s. net.)

We can do little more than record the appearance of this revised edition of the late Dr. Vincent Smith's classic work. The editor has had a hard task, for in these days there is a small but steady stream of new facts, and something like a flood of ingenious conjectures, scattered through a large mass of periodicals, all to be taken into account and weighed in the scales of dispassionate criticism. We confess ourselves unable to give an authoritative verdict on his work; there are not many men in the world competent to do so, and, as things go, if they were empanelled on a jury, they would probably disagree. All we can say is that we have detected no serious omissions, and that the attitude taken towards recent work appears to us to be reasonable. It is suggestive that the word "Sumerian" does not appear in the index; the next edition will have to take into account the new chapter which has been opened by the extraordinary discoveries in the Indus valley.

January 23, 1925 (Old Style).
Rajab 11, 1343 A.H., of the Moslem Calendar.
Shebat 11, 5685, of the Jewish Calendar.

M. Fadenhecht, formerly Bulgarian Minister of Justice, left London last Friday for Sofia.

Mr. St. John Philby is due shortly in England. He has been travelling by long sea route from Aden.

Mr. F. Hedges Butler left England last week by the P. and O. steamship Khyber for Biskra and the Sahara Desert.

Sir Joseph Nunan, K.C., LL.D., who recently arrived at the Authors' Club from India and the West Indies, will for the present reside in London.

The Persian Minister in London was confined to his room last week with an attack of influenza, and has been compelled to cancel all his engagements.

Major Sir Richard Leighton left London last Thursday to join the Devanha at Marseilles for Port Said. Major-General M. R. W. Nightingale is sailing in the same vessel for Bombay.

Mr. and Lady Winifred Pennoyer left St. Donat's Castle, Glamorgan, last week for London. Mr. Pennoyer is leaving England shortly with the Marquess of Graham on a business trip to Turkey and Asia Minor.

Sir Edward M. Cook, formerly Secretary to the Government of India in the Finance Department, left England by the s.s. Khyber last Friday to take up his duties as the newly appointed Financial Adviser to the Government of Siam.

Viscount and Viscountess Inchcape, who have been laid up at Glenapp for the last few weeks with influenza, are now well again. They returned to London last Sunday, and leave to-day to join the P. and O. steamer Mantua at Marseilles for a run to Egypt.

M. Caclamanos, the Greek Minister, left London last Sunday for Greece, where he will stay for a few weeks. M. Caclamanos is proceeding to Athens on the invitation of the Government to discuss certain questions with them. During the absence of the Minister, M. George V. Mélas will act as Chargé d'Affaires.

At a meeting of the Indian Section of the Royal Society of Arts on Friday afternoon a paper by Mr. J. T. Marten, I.C.S., on "Population Problems from the Indian Census" will be read by Mr. H. R. Crosthwaite, C.I.E., C.B.E. The chair will be taken at 4.30 o'clock by Sir Edward A. Gait, Member of the Council of India.

The Crown Prince of Roumania, who came to England a fortnight ago with the Crown Princess and her sister, Princess Irene of Greece, left London on January 28 for Bucharest. The Crown Princess and Princess Irene and the Roumanian Minister were among those at Victoria Station to take leave of his Royal Highness. The Crown Princess is remaining in London until about the end of this month.

The wedding of M. Ivan Stancioff, only son of M. Dimitri Stancioff and of Madame Stancioff (née Comtesse de Grenaud), with Miss Marion Mitchell, only daughter of the late Mr. James Mitchell and Mrs. Mitchell, of 46, Mount Street, Mayfair, will take place on February 17 at the Brompton Oratory.

HONOURS, APPOINTMENTS, ETC.

According to *The Times* Cairo correspondent, Ismail Bey Sherin is to be appointed Sub-Governor of Cairo.

Ahmed Zogu, Prime Minister of Albania, has been elected by the Constituent Assembly to be President of the Republic.

Rabbi Haïm Nahoun Effendi, former Chief Rabbi of Turkey, has been elected Chief Rabbi of Cairo, in succession to Rabbi Raphael Bension, who retired three years ago.

M. Sesostris Sidarouss Bey, formerly First Secretary to the Egyptian Legation in Paris and Chargé d'Affaires of the Egyptian Legation in Brussels, who has been delegated by his Government since December 20, 1924, to act as Chargé d'Affaires of the Egyptian Legation in London, is definitely appointed, from the beginning of January, 1925, Counsellor of the Legation, in the place of Mohamed Fehmy Hussein Bey, who has been transferred to the post of Assistant Royal Counsellor in Cairo.

OBITUARY.

We regret to have to record the death on January 16 of Mr. Frederick Charles Marshall, eldest son of Mr. G. B. Marshall, British Vice-Consul at Sulina. At the time of his death Mr. F. C. Marshall, who was twenty-two years of age, was Acting British Vice-Consul.

The death is announced of Field-Marshal Lord Grenfell, who made his name in many countries. He was, for instance, present at the battle of Tel-el-Kebir, he served with the Egyptian Army from 1883-1893, and was in Cairo again from 1897-1899. In 1899 he was appointed Governor and Commander-in-Chief in Malta.

POLITICS IN ROUMANIA.

The domestic life of political parties in the Balkans does not as a rule hold any special interest for the outside world; but the recent stirring of the waters in Roumanian politics may not be without significance in regard to future developments in that country. M. Bratianu's Government has lately completed its third year in office—a considerable period for tenure of political power these days in a Balkan State. A new parliamentary session has just begun, and it is proposed to carry reconstruction several stages farther in accordance with the Liberal programme, as embodied in the Constitution of 1923. One of the measures for which provision was made in that Constitution was reform of the electoral law. As a new law would almost inevitably require to be put to the test at once, it is not surprising that the Bratianu Ministry has preferred to carry through first other items in its programme, and to postpone the making of an appeal to the country necessary. That it has now decided to carry into effect the clause in the Constitution providing for electoral reform may be taken as an indication that the Liberal leaders consider that further retention of office is not likely to bring any additional strength to their position, even if it should not, as a result of coalition among the Opposition parties, begin to undermine that undoubtedly strong position. In spite of the confident assertions of the Opposition that the Liberal Government has been on the eve of dissolution every day during the last two years, not only has it remained unshaken in office, but also at no time has there been the least sign of any other party being ready to assume the reins of government. With its mind apparently made up as to the policy that it intended to adopt, M. Bratianu's Ministry has worked steadily through its programme and it is able to make out a good case for its stewardship, within the limits of post-War conditions and the disadvantages under which Roumania has laboured. There have been, however, many points on which political opponents could seize, with the result that the Government, although never allowing itself to be turned from its line of policy, has not been able to count on any general popularity, and now for the first time it is faced with certain ominous mutterings within its own hitherto compact ranks. A Young Liberal movement appears to have realised that in many ways, without affecting the policy of the party, Liberal methods could be improved, and more consideration could be paid to actual conditions in the details of the system of taxation, and the party dissociated from responsibility in connection with those of its members who have known how to turn the Liberal tenure of office to their own monetary advantage.

The Opposition parties are five in number—the People's Party, under General Averescu, who held office in 1921, to be succeeded by M. Take Jonescu's interim Government before the Liberals came into power in January, 1922; the Popular National Party, under M. Jorga, whose following of National Democrats has been strengthened by secessionists under M. Argetoianu from General Averescu's group, and the two are now merged under the new title; the Transylvanian Nationalists, or Nationalist Roumanian Party, with Dr. Maniu at their head and M. Vaida Voivod his second-in-command; the Tsaranists or Peasants Party, under Dr. Lupu; and the Progressists, led by M. Marghiloman, generally regarded as one of the ablest of Roumania's politicians, but with his influence and following still impaired by his pro-German leanings of the War period. After many efforts, a working agreement has now been reached between the Popular National or National Democratic Party of M. Jorga and the Nationalists of Dr. Maniu, and an attempt is to be made to bring in the Progressists as well into the understanding. The practical success of an Opposition *bloc* would seem to turn on the adhesion of the People's Party; but at this particular moment General Averescu has not only refused his support to M. Jorga and M. Maniu, but it is stated that he has decided to abandon his boycott of the Chamber and to take part again in its deliberations with a view to co-operating with the Government in regard to administrative and electoral reform. A simultaneous split among the Tsaranists, from whom a group has seceded on the ground that the Communist anti-monarchical tendencies usually associated with the leadership of the party do not represent either the views or the interests of the peasants, should bring at least the seceders as a unit into the Opposition *bloc*, but will not make up for the aloofness of the People's Party.

As General Averescu has been regarded as M. Bratianu's most probable successor, his reluctance to carry other Opposition leaders and their parties on the shoulders of the People's Party is more comprehensible than any measures calculated to prolong the life of the Liberal Government. It remains to be seen, therefore, whether his participation in the present session has behind it some understanding with the Liberals, or is prompted by personal disappointment arising from the successful fusion of the Democrats and Transylvanians after his own abortive attempts to bring the Progressists into his own party. In spite of the difficulties of a Coalition Government, there can be little doubt that the co-operation of a number of parties in the formation of a Ministry would be a good thing for Roumania at the present stage in her history. As far as their parliamentary majority is concerned, the Liberals have no need for the step; but they will have realised, or their leaders will have, that the prospect of a foreign loan will be considerably improved when it can be shown not only that financial consolidation has been achieved, but that the general financial policy has now met with the approval of the country as a whole, and represents a more or less permanent factor in Roumanian life. To win this approval, it may be necessary to meet the non-Liberal parties on certain other points. Not one of them, as far as is known, has any sufficiently far-reaching financial scheme to put in the place of the Liberal policy; but the extreme bitterness of party feeling and the tendency to scrap everything associated with a previous Government are apt to make foreign capital shy of entrusting itself to a country where a Government, whatever its ability, is demonstrably unpopular, and has to rely on a parliamentary majority which its opponents declare to have been secured by unconstitutional means. It might be well, therefore, if the Liberals find that they have not yet overcome the difficulties in the way of a foreign loan, that they should themselves prepare for a future Coalition Government. An understanding with the Opposition parties on this point would enable the work of the present session, in-

Digitized by Google

cluding electoral reform, to be expedited, and then, after the elections, the leader of the strongest party in the new Parliament would be pledged to form a Coalition Ministry, which would carry on the financial policy of the Liberals in so far as it had received the support of the country as a whole.

FINANCIAL AND ECONOMIC PROBLEMS IN PALESTINE.

By Lieut.-Colonel J. B. BARRON, O.B.E., M.C.
(Late Director of Customs and Trade, Government of Palestine.)

The financial position in Palestine is probably without parallel to that in any other British colony or mandatory territory. The rival claims of Arab and Jew, the religious differences of the many faiths, and the uncertain frontier conditions have raised into prominence the more interesting and debatable questions of politics. The no less urgent needs of finance connected with budgetary requirements and the restoration of trade have been pushed into the background or allowed to lapse through the necessity of providing solutions to the many disturbing issues raised by the Balfour Declaration or by political propaganda.

It was unfortunate that at the time when the Military Administration gave place to a civil Government a wave of prosperity following the trade boom in Europe during 1919-1920 gave an entirely false impression of the commercial and financial possibilities of the territory. Receipts from taxes and Customs duties were swollen to an unprecedented degree. Thus, for the first complete financial year ending March 31, 1922, the revenue amounted to £2,048,000, and the expenditure to £1,809,000. For a small country of less than eight hundred thousand people, without any industries other than agriculture and its ancillary industries, these figures may appear highly encouraging, but the estimates for 1923-4 show that the revenue has fallen to £1,833,000, while the expenditure has slightly increased. The actuals for the year have not yet been made public, and it will probably be found that the receipts have decreased to a figure considerably lower.

The financial summaries given in the annual reports do not, however, include a number of capital charges which must be met in part next year and in succeeding years. It is a consideration of these commitments that show the difficult position in which the Palestine Administration now finds itself.

The Question of the Loan.

Since 1920 the authorities have waited for the propitious moment to float a loan of £3,000,000. Against the proposed loan the Government has borrowed from the Crown Agents in London and from accumulated funds owing to that section of the Ottoman Public Debt Administration which formerly operated in Palestine large sums to expend upon works of a capital nature. At March 31, 1923, the total liabilities were approximately £4,500,000, which includes borrowed capital to the extent of £1,719,000. The sum of £2,190,000 is due to the British Government for military works, such as roads, railways, and stores taken over by the civil Administration. This debt may be subject to reduction at the final valuation, and is not bearing interest, but there remains a sum of £2,210,000 that must be met in the near future. In addition, an annuity now becomes payable to the Ottoman Public Debt, which may amount to £150,000, and the Budget must also, on the flotation of the loan, bear amortization and interest charges.

The possibility of retrieving the situation lies in a successful loan. But Palestine is a mandatory territory, and as such it is doubtful whether the various British Finance Acts can be applied to Palestine. These Acts have enabled undeveloped portions of the Empire to raise large amounts of money at little cost or at no inconvenience to themselves, except a formal declaration from the colony concerned that it will follow the narrow path of sound finance. In particular, the Colonial Stock Act of 1900 requires that a colony shall satisfy the British Treasury as to the existence of adequate funds for the payment of loan charges. As an alternative the guarantee of the home authorities would provide an adequate safeguard for investors. Of the funds available from the proposed loan, after repayment of £1,719,000 borrowed from the Crown Agents, etc., has been made, scarcely a million and a quarter pounds will remain for development schemes.

To balance the Budget during the next few years steps must be taken either to reduce recurrent expenditure by "cuts" or to expand revenue. An additional sum of approximately £150,000 is required to cover the likelihood of an annual deficit, and with a falling revenue it is doubtful whether this sum can be made good by new taxation.

A general review of the possibilities of increasing taxation has already been made, but agricultural countries do not offer an extensive field for experiments. The introduction of an income-tax has been considered and rejected. Customs and Excise duties have recently been substantially increased in order to provide against a deficit in the present Budget, and it remains to be seen where funds can be found to cover the interest charges and sinking fund for the proposed loan.

Imports and Exports.

With diminishing revenue returns it is no surprise to find that the trade returns have shown a steady decline since 1921. In that year the imports amounted to six millions sterling, while the average for the past three years falls short of this total by £600,000. Exports in 1923 amounted to £1,600,000.

The remarkable difference in the import and export figures is difficult to explain, the more so as the export values include heavy specie payments to America. There can be no doubt that there is a large investment of money in Palestine, and much purchase of land by means of outside capital, but no reliable calculations can be quoted. The invisible indebtedness may also be reduced by remittances to immigrants and to religious and other charitable institutions. Jewish enterprises remit large sums for educational, colonisation, and land reclamation schemes, whilst various Christian institutions distribute charity in goods or in money amounting to considerable sums. It is probable that capital to the extent of a million sterling reaches Palestine annually in this form; and, though not entirely a healthy sign, it serves to reduce the adverse balance of trade. To these credits may be added substantial sums brought in annually by an increasing and lucrative tourist traffic.

The state of international demand which results in commercial equilibrium being realised cannot for many years be attained, and the unsatisfactory position of an excess of imports over exports is likely to continue. Whatever factors may be taken into consideration theoretically to reduce the dimensions of this excess, it is doubtful whether any improvement can be recorded until the productivity of the territory has increased to an extent that allows of its products being marketed in neighbouring countries at prices equal to its com-

Digitized by Google

petitors. The chief and controlling cause is one of labour, and so long as the costs of labour are in advance of those elsewhere, the Palestine export trade must stand at a disadvantage. Further, the conservative tendencies of the rural population have served to perpetuate antiquated methods of cultivation. The Jewish and German agricultural colonies should, however, be cited as exceptions, the colonists having experimented successfully with new crops, besides introducing many profitable industries dependent upon agriculture.

With the high cost of labour and with an Arab population of conservative tendencies, whose handiwork and methods of agriculture are behind those of Egypt and Syria, the economic possibilities of Palestine require a far-seeing and progressive scheme of expansion. Side by side there exist two races having different standards of industrial enterprise—the Arab majority, out of touch with Western methods, and the Jewish minority, whose resourceful purpose introduces modern processes of industry. The territory has suffered during the past four years from attempts on the part of European agencies to establish industries with little or no economic basis upon which success could be attained. Small industries have been started dependent upon imported raw materials, and much capital has been expended in unremunerative projects both by the Government and by business men, but this phase of inflation is passing, and is being succeeded by surer, if slower, methods of investment.

Reform of Land Tenure.

The immediate necessities of finance demand that every avenue of possible economy should be explored, with the two-fold object of relieving the present deadweight of expenditure and of rescuing agricultural and other industries from the stagnation and clogging effects of three years of depression. Important as this consideration must be, the development of the territory should proceed side by side with financial reform, and now that the maladministration of the country for centuries by the Turks has given place to an ordered Government, it is possible to introduce reforms and improvements.

The civil Government has been in power for four years, and during that period it has accumulated knowledge and experience sufficient to proceed with a policy calculated to make Palestine a self-sufficient and economically sound State. Agriculture is the only reliable basis for the establishment of healthy national economy, and though in future assistance may be obtained from the mineral resources of the Dead Sea, the trade of the territory is dependent upon agriculture. There are two causes that operate against it—*i.e.*, the confusion existing in the system of land tenure and the absence of land settlement and the crushing burden of taxation.

A primitive form of land registration exists, the chief weakness of the system being the fact that no cadastral or other survey permits land to be correctly described by reference either to area or to boundaries. The chaos arising from the absence of any proper form of land registration or of title has had the effect of removing an incentive to improve the methods of agriculture, and has prevented to a very serious degree the investment of capital. The establishment of an agricultural bank is of an urgent need, and would be productive of immediate results, yet in the absence of land settlement the potent influence of ready money for improvements and for the purchase of good seed must to a large extent be denied to cultivators. An authoritative investigation of real rights and a reform of the obsolete land laws appear to be a preliminary to the establishment of economic prosperity.

The evil consequences of a defective system of land tenure and registration are enhanced through a mediæval fiscal system. The cultivator bears a triple tax in the payment of a small tax upon the capital value of land, a tithe on his produce, and a tax *per capita* upon sheep, goats, and camels. The tithe is a survival of the Koranic law, and is an extremely heavy impost. One-eighth of the actual crop harvested is compulsorily commuted into a cash payment before the cultivator has marketed his crop. In a report published by the Government of Palestine it is calculated that the tithe was equivalent in 1921 to an average minimum income-tax on the cultivator of 30 per cent. in one district and of 45 per cent. in another. The tithe system arose out of the ruler's proprietorship of the soil, and its sole merit is that it is adjusted to the fertility of the land. It does not allow for the expenses of production nor the proximity of markets, and it is, moreover, inconvenient in the form of assessment. Under the Roman Empire the disabilities of the tax were met by efforts at differentiation in the fertility of the soil; even the Turkish Government recognised the extreme inconvenience and hardship caused to the cultivator, and efforts were made in 1911 to commute the tithe to an annual tax based upon the average yield of seven years. Its substitution by a fixed land tax is a very urgent necessity, and should be initiated side by side with a cadastral survey.

A competent authority has recently estimated that a survey of Palestine may be completed within six years. Agriculture can never attain economic stability until the settlement of rights is completed and a fixed statutory tax is introduced. Indeed, the facts would appear to be so little capable of dispute that it is a matter of surprise that they have not already received recognition through legislation. The payment of a fixed annual contribution must be expected to meet with opposition from those who have left the land undeveloped and uncultivated, but it must steadily operate to force an increase in the acreage under cultivation, together with intensive methods of agriculture. Political opposition may also ensue, but the consciousness that the system weighs with exceptional severity on the people of Palestine is evident from the amount of criticism that the assessment of tithe brings forward each year.

The defects of land systems of Oriental States and the inequalities of their fiscal methods are due to the conservative ideas of their native rulers. Time has rendered them obsolete, and in some Eastern countries, under European influence, the dead wood has been lopped away, or the old systems have been entirely replaced by modern legislation. In Egypt Mohammed Ali did much to simplify the land code by requiring the compulsory division of all lands held in common tenure. The French in Algeria commenced a cadastral survey in the sixties of the last century, and as late as 1917 reformed taxation by abolishing the tithe and other taxes in favour of a land tax.

Harbours.

To this general survey mention must be made of the proposed scheme for the construction of a port at Haifa or Jaffa. The claims of both localities are under consideration, but it is questionable whether in the present state of the territory's finance the proposal must not be shelved for some years. It will involve a second loan of not less than a million pounds, with a recurrent expenditure of £100,000, including maintenance and interest charges.

Politics and Economics.

The influence of politics has set its stamp on the economic situation of the territory. It is impossible to ignore the effects of the unnatural boundaries fixed by agreement during the War, or to exaggerate the dislocation of trade occasioned by the disturbances and disputes arising from the actions of political factions within the territory. It cannot look for financial assistance to Great Britain; it must be self-supporting. This it can never be so long as political considerations outweigh questions of public and private finance. History has proved that a sound economic policy goes far towards solving the problems of the statesman.

THE PALESTINE WEEKLY.

The *Palestine Weekly*, of Jerusalem, has issued an attractive special tourist number. Contrary to custom, it concentrates mainly on the present condition and the potentialities of the Holy Land, attempting to survey the actual endeavours in regard to such things as archæology, industry, commerce, agriculture, civics, communications, and so on that are now being made. The articles are fairly comprehensive, and a very good idea of Jewish activities can be obtained from them. They are well set out, and, for the most part, well illustrated. Altogether, it is a useful and worthy compendium.

PALESTINE AND THE JEWS.

In commemoration of the entry of the first Anglican Bishop into Jerusalem in 1842, the London Society for Promoting Christianity Among the Jews held a meeting at Westminster, on January 21. The Rev. Dr. A. E. Richardson (Warden of the Church Army), who presided, said that one of the signs of the coming of the Messiah was the flocking of the Jews to Jerusalem. They were returning at the rate of over 2,000 a month, and everything that was happening in the world seemed to be driving the Jews back into Palestine. Just before Christmas, 1923, a proclamation was issued by the Chief Rabbi at Jerusalem exhorting the Jews to return to Palestine, and expressing the opinion that the Messiah was coming in the year 1925. Dr. Richardson said that he saw no reason why the Messiah should not come back this year. "We are looking for Christ," he added, "and the Jews are looking for the Messiah, and we know that He is one and the same."

The Commission appointed by the League of Nations to report on the Mosul boundary question arrived in Mosul last week.

A collection of "Papers relating to the application to Iraq of the principles of Article 22 of the Covenant of the League of Nations" has been published by H.M. Stationery Office as a White Paper (Cmd. 2317), price 2d.

Mr. A. Lucas, formerly director of the Egyptian Government laboratories and chemical expert to the Antiquities Department, left Cairo last week for Luxor in order to resume work on Mr. Howard Carter's staff at Tutankhamen's tomb.

THE ARAB HORSE SOCIETY.

A council meeting of the Arab Horse Society was held on January 21 at the Grosvenor Hotel, London, Mr. T. C. Armitage (President) being in the chair. There were also present Messrs. H. V. M. Clark, C. W. Hough, Edward Hurtley, Major G. B. Ollivant, Mr. W. F. Saunt, Lieut.-Col. P. D. Stewart, D.S.O., Mr. R. S. Summerhays, Major C. B. Toms, O.B.E., and the Secretary, the Rev. D. B. Montefiore. Letters of regret for not being able to be present were received from Lieut.-Col. T. R. Badger, Major G. H. Barker, Messrs. E. R. Calthrop, R. B. Colton Fox, Col. J. Hamilton Leigh, Lieut.-Col. W. A. MacDougall, D.S.O., Major Sydney A. Medcalf, T.D., Col. T. G. Peacocke, C.I.E., C.V.O., and Capt. the Hon. G. Savile.

Arrangements were made with regard to the London, the Royal, the Bath and West, and the Northumberland Shows.

The following new members were elected:—Mrs. M. S. Bolam, The Wharie Stud, South Sway, Hants; Roy Falcey, Park Nook, Gosforth, Cumberland (proposed by Brig.-Gen. F. F. Lance); W. F. Holman, Lake House, Prestbury, Glos.; W. B. D. Muirhead, The Wharie Stud, South Sway, Hants; Lady F. Warner, Woodcroft, Mottingham Lane, S.E. (proposed by C. W. Hough).

CHAPLAIN-GENERAL TO THE FORCES.

The King, on the recommendation of the Secretary of State for War, has approved the appointment of the Rev. A. C. E. Jarvis, Chaplain to the Forces, 1st Class, and Assistant Chaplain-General, Northern Command, to be Chaplain-General to the Forces, in succession to Bishop J. Taylor-Smith, who relinquishes that appointment on attaining the age limit next April. The new Chaplain-General, who has chief charge of the spiritual welfare of the troops, did faithful work during the War in Gallipoli, Salonika, and Egypt, and in the later stages he was the principal chaplain in Mesopotamia. Not only was he often mentioned in despatches and specially promoted, but he received the M.C., the C.M.G., and the Serbian Order of the White Eagle. Since 1920 he has been the Assistant Chaplain-General and attached to the headquarters of the Northern Command.

Mr. C. R. Das left Patna on January 27, for a month's rest and holiday.

A Treaty of friendship between Denmark and Turkey was signed at Angora on January 26.

THE CONDITION OF OMAN.

A letter received recently from Muskat, Oman, Arabia, dated December 14, 1924, contains the following interesting information :—

"Oman is now suffering from a dreadful aridity, due to the scantiness of rainfall in the country during the last few years. Many trees have died; the water is scanty, and the losses resulting from this aridity are very heavy.

"His Highness Saiyid Taimour, the Sultan of Muskat, has been on a visit to India, where he has been staying for the last seven months. He is expected to return soon to Muskat.

"It is rumoured that the Sultan will, after the middle of February, 1925, leave for Dhofar, the south-western district of Oman, lying on the coast of the Indian Ocean, where his brother, Saiyid Mohammed Bin Faisal, lately died.

"The Government of Muskat is now administered by a Council of State, formed of Saiyid Nadir, His Highness's brother, as President, Saiyid Mohammed Bin Ghashsham, and Sheikh Rashid Bin Ozaiviz as members, and Zobair Bin Ali Jumaah as Secretary of this Council.

"Owing to the Sultan's dissatisfaction with the said Council's proceedings, he spends a great deal of his time out of Muskat. It is believed that a new Council will soon replace the present one.

"The Sultan intends to create the post of a Legal Adviser to his Court. The post, if created, will be occupied by a British officer.

"Mr. Bower, an Englishman, has been put in charge of the Customs in Oman for four months as probationer."

LORD GRENFELL AND EGYPT.

Sesostris Sidarouss Bey, Chargé d'Affaires of the Egyptian Legation in London, who has already joined in the mourning for the regretted death of Field-Marshal Lord Grenfell by wiring his sympathy to the family, offering a wreath and by attending the memorial service, went on February 1 to the Foresters, Windlesham, Surrey, in order to communicate to the family the cable of the President of the Egyptian Council of Ministers, Minister of Foreign Affairs, expressing the condolence of His Majesty the King of Egypt, and to present, as desired, the sincere condolences of the Egyptian Government.

He was received by the Honourable Pascoe Grenfell and other members of the family, who expressed to him their high appreciation and deep gratitude for the sympathy of His Majesty the King of Egypt and of the Egyptian Government.

NEWS IN BRIEF.

Queen Olga, of Greece, has taken up her residence in Rome.

M. Dragomier Yankovitch, State Chamberlain at the Yugoslav Court, has returned to Belgrade from Paris.

General Yoximovitch, of the Serbian War Office, has returned to Belgrade after visiting London on a special mission.

M. Michalakopoulos, Greek Prime Minister, has taken over the portfolio of Foreign Minister in succession to M. Roussos, who has resigned.

Sir Rabindranath Tagore arrived last week in Genoa from South America, and has arranged to give a series of lectures in Italy, the first of which was held at Milan on January 22.

Hilmi Gayar, the student leader who, on December 22, gave himself up to the Public Prosecutor in Cairo conducting the inquiry into the murder of the Sirdar, was released recently.

Last Friday was the thirty-first anniversary of the birth of the King of Bulgaria. The Bulgarian Minister, on behalf of the members of the colony in London, sent a congratulatory message to King Boris at Sofia.

Motor lorries entering Persia have been exempted from Customs duties for five years.

Amateur wireless communication was established between Melbourne and Mesopotamia on January 29.

Lieutenant Mittelholzer, the Swiss pilot, who left Zurich on December 18 on a flight to Persia, arrived last week at Teheran.

Zia Bey, a prominent Albanian politician, is reported to have been shot dead in Tirana, where, it is stated, he was trying to escape from pursuers.

It is stated that a new Pro-Zionist Society, comprising Chinese, Japanese, Parsees. Hindus and Moslems, both Arab and Indian, has been formed by Dr. Ariel Bension, in Shanghai.

Zaghloul Pasha, as President of the Wafd, has telegraphed to the British Foreign Minister protesting against the recent British action in the Sudan, which he declares portends the separation of the Sudan from Egypt.

Captain P. K. Campbell, the Black Watch, formerly A.D.C. to Major-General Sir Lee Stack, has arrived in Cairo to assist in the inquiry into the Sirdar's murder in the hope that he will be able to identify some of the assailants.

H.H. the Aga Khan arrived at Port Said on January 27. from Alexandria. He was met at the station by the Governor and other officials, and left early the following day by special train for Suez to join the steamer Dumbea for Mombasa and Zanzibar.

The introduction in the Indian Legislative Assembly of the Pundit Motital Nehru's Bill to supersede the Bengal Ordinance for the suppression of terrorist crime has been refused by the Viceroy, but the Assembly discussed a resolution on the subject on January 28.

Mar Shimun XXI., the Patriarch of the Assyrian Christians, who is visiting England for a course of education under English teachers, arrived at St. Augustine's College, Canterbury, on January 27. A special course of instruction is being arranged for him at Canterbury.

On the proposal of the Yugoslav Minister of Justice. King Alexander has signed a decree granting an amnesty to a number of Montenegrins condemned for political offences up to the end of 1919, the amnesty to include offences committed during the period of enemy occupation, but excepting persons who fled to foreign countries and were sentenced *in contumaciam*.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Insurance of Credits.

Quite the most interesting event for many weeks from the point of view of the business world was the speech delivered at the Leeds Chamber of Commerce last Thursday by Mr. A. M. Samuel, Parliamentary Secretary to the Department of Overseas Trade. After referring to the great "tramways" of the export trade, such as the banks and insurance, he declared that he felt that a new tramway should be established in the shape of credit insurance. He asked whether the Chambers of Commerce could consult the insurance companies and see if they could devise a scheme for the insurance of bills drawn for British goods exported to countries where there might be risks other than those usually faced by commerce. He indicated that if the insurance companies were prepared to issue policies of this order providing *inter alia* for the risks of default through war, he would consult with the Chancellor of the Exchequer and see if it was possible, through the Department of Overseas Trade, for a premium to take the war risk from the insurance companies.

A Serious Obstacle to Trade.

There is no question whatever that the lack of security attached to credits granted for goods in certain countries has been one of the gravest obstacles in the way of the extension of our export trade, and Mr. Samuel's remarks will be widely welcomed in business circles as indicative of the intention of the Government to do all that lies in their power to overcome the difficulties that lie in the way of the expansion of commerce. As I have frequently pointed out, we need all the markets that exist if our export trade is to develop to a point which will enable the absorption of the present surplus of labour. The markets where conditions are good will not suffice, and the competition in them is constantly growing, while our position in some of our best pre-war markets is not what it was. These considerations make it essential that no possible outlet for trade should remain unexplored, and the insurance of credits is unquestionably the most far-reaching step that could be taken in present conditions to achieve the desired end.

The Existing Scheme.

One would be entitled, I think, to see in Mr. Samuel's remarks a recognition of the successful working of the scheme for credits insurance which has been in operation for certain countries on the Continent for a considerable time. At the present time the scheme covers countries like France, Holland, and Germany, and it has not yet been applied to the region in which it is most needed —the Near East—because it has been felt that it would be better first to establish a chain of organisations in the countries nearer home. Preliminary steps have been taken, however, as I have already pointed out, I believe, in these Notes, with a view to preparing the ground in at least two of the Near Eastern countries, but it is not such an easy matter to arrange in the Near East as in Continental countries—the question of the co-operation of the local insurance companies being one serious obstacle. It is, however, merely a matter of time for the scheme to be extended in this direction, and if, as would seem certain from what Mr. Samuel said, the Government is now going to help indirectly in the matter, it will go far to accelerate matters, and it need not be emphasised that in no region would British trade be more likely to derive immediate benefit from such a scheme than in the Near East. There is ample trade to be obtained, but it is all a question of credits, as it always has been there, and, of course, under the existing conditions of the exchange, it naturally follows that the demand for extended credit is much more pronounced. At any rate, we now have a remedy—in part, at least—if only it can be applied.

The Rubber Position.

The last week of January saw a most interesting position arise with regard to rubber. January 31 was the end of the current quarter under the restriction scheme, and the increase in the percentage of rubber production by 5 or 10 per cent. depended on a fractional rise in the price of the raw commodity. By a very narrow margin it failed to average 1s. 6d. for the quarter, and so the increase is only 5 per cent. One grows wary of prophesying what the course of rubber will be in the light of what has happened in the past, but, in view of the low stocks in London—which now amount to no more than three weeks' world's supply—and their gradual reduction (for the past week there was again a substantial fall), it seems inevitable that the next month or so should witness a sharp rise in the price of the commodity. At any rate, that would be the rational outcome of the situation, but then the only safe attitude to take up with regard to rubber is to look for the unexpected, and even then one may be disappointed.

THE LIUBLIANA FUR FAIR.

(From Our Liubliana Correspondent.)

For many years past there has been an annual fur fair in Liubliana, held by old tradition on the third Monday after Twelfth Night, and in very informal fashion, at some accessible and available place, with unofficial annexes at various popular inns of the town. The best of the business, indeed, was said to be done there, and not on the advertised premises. This year, for the first time, an attempt has been made to develop this fair into an event of more than local importance. To this end the Liubliana Fair Committee and the Hunters' Association *(Lovska Zadruga)* jointly made arrangements to have the fair held on January 21, in the grounds and buildings of the Liubliana Samples Fair. The result has been encouraging, though the methods of sale were still those pursued on former occasions, and nothing had been done as yet to adapt them to the conclusion of wholesale deals.

The number of skins brought in for sale was greatly in excess of that of last year. This year there were 2,500 fox skins, whereas last year there were only 835; 700 marten, both yellow and white-breasted (better known to the ultimate fortunate wearer as sables), as against 140 last year; 400 badgers (last year only 30); 5,000 dormouse skins; 200 polecat, which certainly sounds less attractive than fitch; 70 wild cat; 1,000 mole; 14,000 hamster; and 20,000 hares. Of course, the skins varied very widely in quality, but there were some very fine specimens to be seen. Prices ruled considerably lower in dinars than last year, owing to the rise of the dinar, rather to the disappointment of the local farmers and hunters. Foxes fetched from 300 to 400 dinars, or even less; white-breasted marten 800 to 900 dinars; yellow-breasted marten from 1,000 to 1,300 dinars. The writer saw some really beautiful and exceptionally large furs at the latter price. Dormouse skin is something of a Slovene speciality. The men wear caps of it in winter; made up into collars and cuffs it is not unbecoming, and is not a bad substitute for grey squirrel as lining or trimming. Dormouse skins fetched from 10 to 12 dinars; squirrels, 15; hares, 14 to 21; otters, 800 to 1,000 dinars; badgers 80 to 120 dinars; roe deers, 25 to 30 dinars; hamster rats, 10 to 12 dinars; polecats (fitch), 100 to 150 dinars; wild cats, 80 to 110; and moles, 7 to 10 dinars. Most of the skins were of Slovene origin. The large number of hamster skins seemed, however, to have been brought mainly from Slavonia.

It is one of the attractive side interests of these fairs that they give one a chance of seeing not only the products of the various parts of the country, but the people as well. One could not help noting the contrast between the melodious speech of the Croat trappers and the homely monosyllabic talk of the Slovene hunters. Yet to one who understands both idioms, each has its charm, and long may the countryfolk preserve the tradition of their respective dialects! Apparently, the ultimate fate of most of the hamster skins—fat cosy grey pads of fur edged with glossy black of rather finer texture—is to be worked up into large pieces of mahogany-coloured fur for rugs and linings, to be called by some totally different name, and unrecognisably different in appearance from the original animal.

The sales effected at the fair were, as far as absolute figures go, far larger than last year. But owing to unexpectedly large supplies on the

WESTMINSTER BANK
LIMITED

LETTERS OF CREDIT & CIRCULAR NOTES
The Bank's Letters of Credit and Circular Notes provide travellers with the safest means of obtaining cash in any part of the world. With them is supplied a list of Agents, and the customer is thus brought into touch with first-class bankers in every town, all of whom are under obligation to give him courteous and fair treatment. The customer is also sure of profiting by the most favourable rates of exchange

Head Office: 41 LOTHBURY, LONDON, E.C.2

Digitized by Google

one hand, and insufficient publicity on the other, not enough business was done. Few foreign buyers had come, and rather than let their goods go at any price, the owners decided to hold back and wait for another opportunity. The result of this is that a second fur fair will be held at Liubliana later on —probably on March 4—under the auspices of the Hunters' Association, when the furs left over from the January fair will be put up for sale once more, together with fresh stocks. The *Lovska Zadruga* (Hunters' Association) would, by arrangement, undertake to buy direct from the hunters for foreign firms.

CROP CONDITIONS IN IRAQ.

The following particulars are taken from the Agricultural Bulletin of Iraq for the month ended December 15 :—

In Northern Iraq beneficial rains have fallen during the month, the measurements at Mosul and Arbil being 1.15 in. and 4.76 in. respectively, but in Lower Iraq small showers only have been recorded. Owing to the absence of rain, the sowing of the cereal crop in Lower Iraq has been materially delayed, but in Northern Iraq good progress is reported. A rainfall of .74 in. was recorded at Baghdad on December 15, 1924, and this has enabled cultivators in Middle Iraq to go ahead with their winter sowings.

The water supply in irrigation canals is reported as being good, and winter sowings on irrigated lands are well in hand. A rise of about 3 metres was recorded both in the Tigris at Baghdad and in the Euphrates at Fellujah during the first few days of December.

Early sown wheat and barley on irrigated lands have germinated well, and good growth is reported. The harvesting of the rice crop is completed. Good acre-yields of rice have been reported from Amarah, although the total crop for that area is less than usual due to the smaller area cultivated. The average yield of late rice in this area is approximately 1,600 kilos per acre. Grazing still continues to be scanty, and green fodder from early sown barley is not yet available in quantity.

At the Government Experimental Farm, Rustam, good progress has been made with the sowing of winter cereals, both in the varietal tests and in the propagation areas. The bulk crop of cotton grown at Rustam is now finished and has given an average yield of 800 lbs. seed cotton per acre over an area of 95 acres. Weekly pickings still continue on the varietal test cottons, but they are now small. The different varieties of cotton under experiment had given yields varying from 1,341 lb. to 1,945 lb. per acre up to the end of November, with an average yield of 1,695 lb. per acre, as compared with 1,537 lb. and 2,110 lb. for complete crops for the two preceding years. It is of interest to note that the variety of cotton that has given the lowest yield in this year's experiments is the local variety which has been grown yearly for purposes of comparison. In this year's experiments the cotton pickings from plots grown after lucerne and heurteman show about 25 per cent. better yield than those following bare fallow. All varieties of sugarcane under test are ripening, and the effect of cold nights and occasional frost is beginning to show on the leaves. Sowings of flax and linseed have been made.

Cotton pickings continued throughout the month. The deliveries of seed cotton to Messrs. British Cotton Growing Association Ginnery up to the end of November, 1924, totalled 3,045,719 lb., equal to approximately 2,000 bales of 400 lb. lint, as compared with 1,000 bales for the same period in 1923, 300 bales in 1922, and 60 bales in 1921.

A consignment of approximately 18 tons of wheat arrived from India during the month, and has been disposed of to cultivators.

Work in connection with the locust campaign is proceeding. A good deal of reliable information has now been collected by the Agricultural Circle Officer, Mosul, with regard to the situation of breeding grounds and possible methods of destroying locusts in the egg stage.

Three hundred and twenty packets of silk eggs have been received from Europe. They have arrived in good condition. A further 200 packets are en route. A tour has been made by the Silk Inspector of the Basrah and Amarah Liwahs with the view to stimulating the industry in those areas.

The retting of the flax crop grown at the Ba'qubah Demonstration Farm was started at Salachivah on November 19. As soon as it is ready, it will be scutched together with a further quantity which has been retted at Rustam.

The July to November, 1924, exports of wheat from Iraq were 1,022 tons, and of barley 25,100 tons—total 26,122 tons, as compared with 104,775 tons for the same period last year. The August-November, 1924, exports of dates from Iraq were 127,472 tons, valued at Rs. 1,65,07,972, as compared with 87,182 tons, valued at Rs. 1,15,133 for the corresponding season last year. The July-November, 1924, exports of wool from Iraq were 13,161 tons, as compared with 2,745 tons exported during the same seasons last year.

IMPORTANT CONTRACT FOR VICKERS.

Owing to the increased demand for light and power in the Fulham area, considerable extensions were rendered necessary to the generating station of the borough. The contract, which covers two 6,000 kw. steam turbine generators, condensers, boilers, and complete equipment, together with foundations and buildings, etc., was awarded last year to Messrs. Vickers, Limited, as main contractors in keen competition with home and foreign manufacturers. The obtaining of a contract placed by the borough of Fulham with a firm in a position to manufacture practically a complete power station in their own or associated companies' factories is in itself an achievement that any British firm might be proud of, especially as these factories are in Great Britain, employing thousands of British workmen. In compliance with the urgent request of the electricity committee and Mr. A. J. Fuller, the borough engineer, to meet the heavy winter requirements, the contractors proceeded sufficiently far to enable the supply of energy from the first of the new units to be available early in December (less than eight months from the commencement of the work), despite the fact that progress on the buildings and foundation was seriously handicapped for a period of eight weeks last summer, due to the builders' strike. The firms included, among the sub-contractors, all of whom are members of the Vickers group, are :— Messrs. Metropolitan Vickers Electrical Co., Limited, who are responsible for the steam turbines, generator plant, switchgear, etc.; Messrs. Vickers-Spearing Boiler Co., Limited, who are supplying the boilers, with attendant equipment; and Messrs. W. T. Glover and Co., Limited, who are providing the cables; while the condensers are the product of the Barrow Works of Vickers, Limited. Messrs. Sir William Arrol and Sons, Limited, are supplying the 50-ton electric overhead travelling crane.

Near East Markets.

LONDON PRODUCE REPORT.

Demand for Dried Fruit.

(From Our Own Correspondent.)

London, Tuesday Morning.

Coffee.—A steady tone has prevailed. Stocks of Brazilian in London are now 12,358 bags, as compared with 15,030 bags a year ago. Futures are: —March, 117s. 6d.; May, 117s.

Sugar.—Home refined has continued in fair demand at unchanged prices. Foreign descriptions have been steady. White Java spot has been done at 30s. 9d., while Czech granulated has come to business at 31s. 6d. Futures are harder. Quotations are:—March, 17s. 10½d.; May, 18s.; August, 18s.; December, 17s. 10½d.

Tea.—Prices have been irregular during the week, and, on the whole, the tone has been rather easier. Common broken Pekoe was done at 1s. 5¾d., while broken orange Pekoe brought from 1s. 9½d. to 3s.

Oilseeds.—Linseed has been a firm spot. Indian has come to business at 25s. 3d., while for February-March the rate is the same. La Plata is harder at 23s. 4¾d., while 23s. 6d. is asked for February-March. Rapeseed has been dull. Toria is 20s. 6d. spot, and 19s. 9d. for February-March. Cottonseed has made a firm showing. Indian is 10s. 6d., Egyptian black is 13s. 4½d., while Sakellarides is 12s. 10½d.

Seed Oils.—Linseed oil has been a very firm spot, and has risen sharply to 53s. For March-April the rate asked is 51s. 9d., while for May-August it is the same. Rape oil has been featureless, with crude at 50s. and technical refined at 53s. Cotton oil has been steady. Refined common edible is 50s. 6d., Bombay crude is 43s. 6d., Egyptian crude is 46s. 6d., while deodorised is 52s. 6d.

Currants.—There has been a revival in the demand for currants during the past week. Gulf and Panariti have been the medium of a good deal of business, though the bulk of the inquiry has centred round Vostizzas. The tone of the market generally is steady, but it would not be surprising if prices were to firm up a little in the near future.

Sultanas.—A firm tone has continued to rule in this market, and Smyrnas and Cretans have again been the medium of a large trade.

Figs.—Supplies of figs are now very short as the result of the good and sustained demand, and the market generally is very firm, the tendency being for prices to move upwards.

Plums.—The market is very firm, supplies being decidedly small, and prices are advancing.

Dates.—There has been a steady demand for this commodity, and with supplies on an adequate scale it is reasonable to look for an expansion of business.

Oranges.—Supplies are now coming to hand very freely, but the market position is more or less the same, for the demand grows in keeping with larger stocks. Jaffas have been a very firm spot, and are readily going into consumption.

Maize.—The market is firm. La Plata spot has been done at 47s., while for February-March 49s. is asked. Bulgarian February-March has come to business at 48s.

As was the case last year, letters handled by the General Post Office will advertise the coming British Empire Exhibition.

Mr. J. A. Todd, M.A., B.L., Principal of the Liverpool School of Commerce, is giving a course of nine lectures at the school on "Shipping Economics."

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their monthly report dated February 2, state:—

Currants.—With the exception of some sales of Zante effected during one brief period of activity, January trading was characterised by the extreme quietude which is usually associated with that month. Holders, in view of the statistical position, showed no impatience to force matters, and the slight decline in values noticeable is attributable to the decline in the Greek exchange. With any improvement of the drachma values should quickly recover, and this, coupled with the spirit of optimism prevailing in the country as to improvement of trading conditions, makes the outlook encouraging. Business reported:—Pyrgos, 40s; Pyrgos, cleaned, 41s. 6d. to 42s.; Amalias and Patras, cleaned, 43s. to 46s.; Zante, 42s. to 46s; Gulf, 48s. to 50s.; Vostizza, ordinary, 46s.; Vostizza, shade dried, 50s. to 53s.; Vostizza, few fine, 56s. to 62s. The Flaminian, with about 200 tons, arrived.

Sultanas.—The market keeps steady, although business has not expanded as was hoped for, considering the stock carried over on December 31 compared with previous year, and the continued reports from Smyrna of months of drought at a season when rain is a vital necessity to the growing crops. Cretans have been offered, and some parcels changed hands round 60s. to 62s., representing excellent value. Some business in Smyrna, good 60s. and fine 72s. 6d. to 80s., but ordinary and medium grades were neglected. Greeks: Selling slowly, 58s. to 63s. 6d. up to 70s. fine. Australians: Holders have raised their limits, and very few parcels are now obtainable under 50s. Sales were 47s. 6d. to 50s. Capes: Sun-dried variety passed into consumption 44s.

Figs.—Small boxes were pressed for sale at 37s. 6d., and fair business resulted; large boxes, 45s. to 47s. Bags naturals, slow sale, 28s. to 33s.

DECLINE IN IVORY PRICES.

Messrs. Hale and Son, in their report on the quarterly ivory sales which concluded on January 28, state:—

They comprised 56¼ tons (against 43½ tons same time last year), viz.: 28¾ tons Zanzibar, Bombay, Mozambique, East African, and Siam, 4½ tons Abyssinian, 11½ tons Egyptian (10½ tons Alexandrian, 1 ton Malta description), 9½ tons Congo, West Coast African, and Lisbon, and 2 tons land carriage; also 6¼ tons mammoth tusks, ¼ ton sea-horse tusks, ¼ ton rhinoceros horns, ½ ton narwhal horns, and ¼ ton walrus tusks. Total 63¾ tons. Of the above quantities only 3¾ tons consisted of lots previously offered or indirect import, viz.: ¼ ton East Indian and Egyptian, ½ ton Abyssinian, 2 tons land carriage, and 1 ton mammoth tusks.

The following was the assortment of the East Indian description: 17¾ tons soft tusks, 1 ton hard ditto, and few Siam, 1¼ tons billiard ball pieces, ¼ ton bagatelle pieces, 1½ tons cut points for balls, 1¼ tons cut points off large tusks, ½ ton under-size and defective points, etc., 1¼ tons billiard ball scrivelloes, ¼ ton bagatelle scrivelloes, ½ ton scrivelloes, and 3¼ tons cut hollows. During the progress of the sales 9¾ tons were bought in, viz.: 3¼ tons East Indian, ¼ ton Egyptian, ¾ ton Abyssinian, 2 tons Congo, and 3½ tons mammoth tusks.

The sales were well attended, and there was good competition throughout. America and the Con-

Digitized by Google

tinent bought freely, and the home trade took its usual quantity. The quantity catalogued was larger than the preceding auctions, owing to larger imports from Zanzibar and East Africa. Prices for soft large and medium tusks showed some irregularity, but were generally well maintained to rather dearer. Hard was steady to £2 to £3 per cwt. lower. Billiard ball ivory declined from £5 to £15 per cwt.

Zanzibar, Bombay, Mozambique, East Africa, and Siam.—Soft large and medium tusks were steady to £2 to £4 per cwt. higher. Hard was steady to £2 to £3 per cwt. lower. Billiard ball pieces and scrivelloes.—The larger sizes were £5 to £10 per cwt. lower on the average, although some prime lots brought full prices, but the smaller sizes declined £10 to £15 per cwt. Bagatelle points and scrivelloes were also about £10 per cwt. lower. Cut points for balls and cut points off large teeth.—Although some lots brought previous rates they were generally £10 to £15 per cwt. lower. Scrivelloes were firm to rather dearer. Cut hollows, on the whole, were steady. Soft bangle tusks were irregular, the larger sizes in some instances being a little higher, and small rather lower.

Abyssinian.—Large and medium tusks were steady to £2 per cwt. higher. Scrivelloes firm to rather dearer. Ball scrivelloes from £5 to £15 per cwt. lower.

Egyptian.—The quantity offered of this description was less than at last auctions. Soft large and medium tusks were about steady to £2 to £4 per cwt. dearer, and hard were steady to £2 to £3 per cwt. lower. Scrivelloes firm to rather dearer. Ball scrivelloes £5 to £15 per cwt. lower.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Creosoted Poles.—The Egyptian State Railways, Telegraphs and Telephones invite tenders for the supply of creosoted poles, stout, 40 ft. long, to E.S.R., specification No. 51C. February 12.

Pumping Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and erection of pumping plant. February 15. (D.O.T.)

Bunting, etc.—The Secretary General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of bunting, ropes, canvas, hose, etc., required for 1925-1926. February 16.

Uniforms.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of uniforms required during the financial year 1925-26. February 20.

Cement.—The General Manager, Egyptian State Railways, Cairo Station, invites tenders for the supply of 2,000 metrical tons Portland cement. February 21.

Photographic Material.—The Ministry of Interior invites tenders for the supply for the year 1925 of various photographic materials. March 16. (D.O.T.)

Printing Plates.—The Surveyor General of Egypt, Giza (Mudiriya), invites tenders for the supply of aluminium lithographic printing plates required for 1925-1926. March 18.

Roumania.

Turbo-Generator.—The Municipal Electric Works of Timisoara (Transylvania) invites tenders for the supply of a turbo-generator, Scott transformers, a high-tension feeder, and various accessories. March 26 (D.O.T.)

Locomotives.—H.M. Consul at Cluj (Mr. Charles Goodwin) reports that a firm has approached him asking to be furnished with quotations for a locomotive. The type of locomotive required is about 70 h.p. (D.O.T.)

Turkey.

Sacks.—The Administration of the Ottoman Public Debt invites tenders for the supply and delivery at the port of Smyrna of 400,000 sacks. March 15. (D.O.T.)

COTTON AND COTTON GOODS.

THE EGYPTIAN MARKET.

Futures Firm.

The Alexandria Commercial Company in their report for the week ended January 22 state :—

Since our last report the futures market has been firm. The net changes on the week are :—Sakellaridis : $4.10 up for January, $2.85 up for March, $2 up for May, $1.60 up for July, $0.45 up for November; Ashmouni : $1.10 up for February, $1 up for April, $1 up for June, $0.25 up for October.

The extraordinary firmness of the Sakel market must be attributed to speculative operations. The demand from abroad for this variety has this week again been poor, and all reports emphasise the fact that, owing to the high prices ruling, spinners are beginning to go off this variety. A large proportion of the world's spinners will, of course, continue on Sakel irrespective of price, and one must not read into these reports the idea that the demand for Sakel will fall off entirely; it does seem, however, that the tendency is to drop the use of Sakel if any cheaper variety can be used in its place. In the meantime the statistical position remains very strong. The demand on the spot continues to be good, although we think that the bulk of the purchases are destined for the covering of old sales made for shipment later on in the season; with the supply of tenderable grades so small exporters are apparently afraid of a squeeze, and accordingly prefer to cover their commitments now. The Interior movement is slackening considerably, and many factories are only working intermittently. The week's receipts amount to Crs. 168,658, against exports Crs. 169,627; the stocks stand at Crs. 1,972,735.

Spot.—Minet el Bassal has been fairly active this week, and sales amount to about 24,100 bales, of which we estimate 8,700 bales Sakellaridis, 11,800 bales Uppers, 3,000 bales Zagora, 200 bales Brown, 100 bales Pilion, and 300 bales White.

Sakellarides.—The demand for this growth is only moderate, and mainly for the better grades. There is a fairly good demand for Fully Good Fair to Good and Better, and for the Extra qualities high premiums have been paid. A certain amount of cotton about Fully Good Fair has changed hands, but the lower qualities have been neglected. It is now getting difficult to find really good staple cotton in Sakel. Spot premiums are without much change for Fully Good Fair, somewhat dearer for Good, and above and decidedly cheaper for the grades below Fully Good Fair.

Uppers and Zagora Lower Egypt have met with a good demand in all grades from Good Fair upwards. Below Good Fair there have not been many buyers. The grades above Good have met with a good demand at full prices. Holders have met the demand fairly well, and have offered their cotton freely. Spot parities are on the easy side for Fully Good Fair and below, but are rather dearer for the grades above Fully Good Fair. Fully Good and Extra are markedly dearer.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887).

Digitized by Google

Brown.—A moderate business has been done. Spot premiums are a little cheaper.

Pilion has met with only a small demand, and spot parities are rather easier.

White.—A fair business has been done. Spot premiums are considerably cheaper.

Crop 1925.—Very little has yet been done in the way of preparations for the new crop, but it is probable that, in view of the high prices ruling, the acreage will be somewhat superior to that of last year. Zagora, in Lower Egypt, will probably show a decrease in acreage to the advantage of Sakel, the present difference in price of the latter over the former more than compensating the difference in yield, and it is this large difference which will influence growers in deciding to sow this variety.

LIVERPOOL COTTON REPORT.

Improved Inquiry.

Messrs. Reynolds and Gibson report as follows for the week ended January 28 :—

Egyptian Spot.—A much improved inquiry has been in evidence during the past week, and the daily spot sales have averaged very nearly 700 bales. The feature of the week has been the activity of several Alexandria shippers, who, taking advantage of the relative cheapness of our market as compared with their own, have bought here against c.i.f. contracts entered into earlier in the season. This undoubtedly has accounted for a large proportion of the business done, but at the same time the inquiry from the trade has also shown improvement. Again, we emphasise the fact that, in spite of the doleful prophesies emanating from Manchester, Sakel cotton is not being neglected; quite a brisk demand, in fact, has been experienced. Prices paid have ranged from 19.75d. to 35⅛d., and even higher prices have been bid for the best cotton. The bulk of the business was done in Strict Good Fair to Fully Good Fair at between 31.00d. and 32.00d. Interest in the lower qualities has again increased, and for the first time for months a revival of the demand for the re-cleaned, or machined cotton, has been noticed. We do not consider that this style of cotton will ever obtain a permanent hold in Lancashire, as it has been proved that spun alone it is unsuitable for our requirements. In times of emergency, as at present, when the price of the "straight" cotton is taxing the ingenuity of the spinner to the utmost, some spinners will use a small quantity here and there in an endeavour to cheapen their mixings. The amount which can be satisfactorily used in this way, however, is very small, and as soon as the price of the "straight" cotton drops to a marginal basis, the spinner at once gives it the cold shoulder. The spot selection of Sakel here shows no improvement, and prices are firm in spite of the recent decline in the Alexandria futures market.

A fair inquiry for Uppers has been felt, and prices still remain very irregular. Nominally, the "best" are worth between 22.00d. and 23.00d., but spinners who "go through the market" thoroughly can often get in at considerably under this price. The Pilion market is even more erratic than the Upper. Here and there one hears of some fancy prices having been paid for Extra Pilion. The market value of Good Pilion, of good staple, is probably about 25.50d. to-day. Brown and White cottons have been almost neglected. A small business has been done in Sudan, chiefly of the White variety. C.i.f. business has shown some slight improvement. Forwardings to spinners for the week ending the 23rd instant were returned as 9,220 bales. Estimated sales, 3,500 Egyptian and 650 Sudan. Quotations of Brown and Upper have been advanced 70 to 105 points. Sakellaridis is 130 to 140 points higher on the week. F.G.F. Sakellaridis to-day 31.75d.

Egyptian Futures.—The past week has been principally noteworthy on account of a fresh outburst of "bullish" activity in the Alexandria market, where prices of the near Sakel positions have been forced up well over $60. This has naturally reacted on local values, and despite a somewhat disappointing trade demand, we show at to-night's close the substantial appreciation of 150 to 215 points for near, and 100 to 140 for distant positions on the week. Even at this early date in the season stocks of desirable cotton show evidence of a decided shortage, and even allowing for the maximum curtailment possible on the part of local spinners, the Continent, and particularly Russia, are proving such consistent buyers that they may counterbalance to a great extent the reduced business from this side. Manchester reports continue to show a dearth of business, especially in the fine counts, and probably some little time will elapse before manufacturers will be in the position to pay current rates. The tendency is to switch on to the coarser qualities wherever possible, but it is very doubtful whether Sakel cotton, which is the basis of both the Alexandria and Liverpool contracts, can be dispensed with to the extent necessary to influence values in view of the present strong statistical position of this growth. The Sudan crops, which are just about to be marketed, will provide a welcome addition to the local stock, and may cause a temporary check should values start a runaway tendency. Whilst the probability is for still higher prices, we consider the position too dangerous for those not in very close touch with the market. The new Sakel and Upper contracts still show narrow markets with restricted trading; the former has advanced 60 points and the latter 35 points on the week.

M. Vintila Bratianu, the Roumanian Finance Minister, has concluded his special mission to this country, and, accompanied by M. Romolo, Governor of the Bank of Roumania, left London on January 28 for Paris. After spending a few days there he returned to Bucharest to report to the Government the result of his conversations with English and French Ministers. At the station to take leave were the Roumanian Minister and the personnel of the Legation. During his stay in London M. Vintila Bratianu was received by Mr. Austen Chamberlain on January 24 and visited Mr. Churchill at the Treasury on January 27.

Company Meetings.

WESTMINSTER BANK.

Mr. Walter Leaf's Address.

The annual general meeting of the shareholders of Westminster Bank was held on January 29 at the head office, Lothbury, E.C. Mr. Walter Leaf (the Chairman) presided.

After referring with gratification to the completion of the first section of their new building operations—work worthy alike of the bank and of the City of London—the Chairman went on to allude to last year's great scheme of European reconstruction. The Dawes Report, he said, was the most important State document which had appeared since the Versailles Treaty. It showed a width of view, combined with a stern but reasonable and impartial sense of justice which distinguished it in various ways from the earlier document. After referring in detail to the main provisions of the scheme, and to the conditions it imposed upon Germany, he asked how they should stand when the two years of recuperation had given way to the unlimited years of reparation. How the enormous excess of exports, which they were forcing upon Germany, were to be absorbed by the world at large, without a ruinous competition with their own export trade, was a problem now exercising the best brains of Europe and America. An earnest attempt was being made to find the solution by common agreement between the nations of the world. In this connection he called attention to the excellent work of the International Chamber of Commerce, expressing the firm hope that a small committee of experts of the highest ranks appointed from that body would be able to submit to the next congress, to be held in Brussels in June next, the essential elements leading to a solution of the great problem of the receipt of Reparation payments.

The Dawes Report, he proceeded to say, had already begun to bear fruits, and, among these, the appreciation of the £ sterling in terms of the $. This had taken place in spite of obvious difficulties—large sterling loans to foreign countries, an increase in what was called the "adverse" balance of their foreign trade, a rise in their own index number of prices of about the same magnitude as that of the American index. If, notwithstanding all those adverse circumstances, sterling had continued to rise, they could only attribute it, he believed, to anxiety in the United States to employ on this side of the Atlantic that immense power of credit which had been given them by their accumulations of gold. America had grown tired of sterilising this great fund and was seeking some interest on it. Having set forth some comparative figures showing the amount of the foreign loans of America and of this country during the last year—England having lent an amount equal to only about one-half of that which America had loaned abroad—the Chairman expressed the belief that the rise in sterling had been based upon a more solid basis than mere exchange.

Proceeding, he said it did not, of course, follow that because they had arrived at parity they could at once remove the embargo on the export of gold. This, he added, was due to expire at the end of 1925, and one might, at least, confidently hope that it would not be renewed. Dealing with the question of the power to keep the gold when it came to them, the Chairman asked whether the time had not arrived for that conference of National Banks of Issue for the formulation of a scheme of co-operation in regard to gold reserves which was called for by the Geneva Conference?

Meanwhile, however, the re-establishment of the parity was of immense assistance to international trade. It would be welcomed particularly by their great Dominions in Australia and South Africa. It would diminish the cost of the great purchases of raw material which they had to make in the United States, notably of wheat and cotton. And the end had been gained without any of the disturbance to industry and production which had been so confidently predicted by the opponents, open or hidden, of what had been called "deflation." It was not without some modest sense of satisfaction that he recalled the controversies of last summer, and reflected that the recovery of sterling might be dated to the suggestion of a rise in the Bank Rate from 4 per cent. to 5 per cent. The mere proposal of such a measure was sufficient to tighten their market rates here to such an extent that the rise was rendered unnecessary; and the desired end had been attained in a manner which had proved the most decisive refutation of the disasters so freely prophesied by the amateur economists and scaremongers of the public Press.

Dealing with the internal history of the bank, he called attention to the welcome growth of their advances to customers, which had increased during the year under review by 20 per cent., from just over 101 millions to 121 millions, the proportion to the current accounts and deposits having risen from 37 per cent., as at twelve months ago, to the more reasonable figure of 44 per cent.

Finally, he referred to the proposal made in some quarters for the nationalisation of the banks as a whole. If all the banks were nationalised, the measure would have to be applied to the foreign banks which at present operated in Great Britain, as well as to the overseas banks, colonial and foreign, which, while domiciled in Great Britain, carried on their operations abroad. Unless, therefore, the nationalisation of their own banks were combined with some measure for ensuring the preservation of foreign banking facilities for international trade, their own commerce and industry, notably that with the Colonies, would certainly suffer by the exclusion of foreign and overseas banks.

Assuming that it was decided that the advantages of nationalisation of banking were deemed to be so overwhelming that foreign competition was expelled at any cost, and the field reserved for their own home banking system, henceforth amalgamated into a single bank, the property of the State, who would be the sufferers? Not the shareholders. For the time had not come when they need regard bare spoliation as within the range of practical politics. He refused even to contemplate a state of things in which the proprietors of the banks would not be offered compensation for their property on some equitable basis—at all events, an assured income equal to that which they had been receiving in dividends, with some allowance for future expansion of profits. He anticipated, in short, that shareholders would receive justice, but not generosity. Would the taxpayer suffer? Would the State continue to make out of the banking business a net revenue equal to that which it was, by hypothesis, paying to the dispossessed shareholders? That was a question which he might leave to them to decide. Nor again could he say that the staffs would suffer. Very likely not, so far as the rank and file were concerned, though it was almost certain that the big prizes which served at present to stimulate ambition in the service would be largely curtailed. But there would be sufferers, and sufferers in their vital interests—namely, the trading community, alike industrial and commercial. An inevitable result of the nationalisation of the banks, as he saw it, would be a most serious reduction in the amount of accommodation given to borrowers. The mainspring of the help which banks gave to their customers—help which included a great deal beyond the mere

A Sound Buying and Selling Organisation

British manufacturers desirous of developing their trade with the Near East are invited to write us. Our knowledge of these markets extends over many years and we know the requirements.

Similarly we place our organisation at the disposal of exporters generally in the Near East who wish to enter the Home market. We have a selling service of which we are justly proud; let us demonstrate to you our claims.

lending of money—was inter-bank competition. He did not hesitate to say that this competition had become far more severe since the great bank amalgamations of a few years ago, and it was growing more severe every day. The talk of a "money trust" or, as no less a person than Mr. William Graham, ex-Financial Secretary to the Treasury, put it the other day, an "undoubted monopoly," could only raise a smile in those who saw in practice the zeal with which all the banks were attempting to attract new business by the offer of more and more favourable conditions.

Having shown the severe loss in other directions which would fall upon the commercial community under a nationalised banking system, he pointed out that the party in power from time to time would be placed in possession of an inestimable lever for political propaganda. However short the legitimate commerce of the country might come when credit was being dealt out, there was no likelihood that the political funds of the ruling party would ever find themselves depleted; and no new experiment in political enterprise which might happen to commend itself to a Parliamentary majority would ever be likely to languish for lack of money.

Alluding to the call for the nationalisation of the Bank of England, he showed that under such a scheme the currency would be managed solely by the Treasury under purely political influences, with only a secondary regard to the needs and opinions of the commerce and industry of the country. It was to be hoped that the far-reaching effects of such a measure might be thoroughly considered before it was placed upon the Statute Book.

The report was unanimously adopted and other formal business transacted.

A cordial vote of thanks to the Chairman terminated the proceedings.

CREDIT FONCIER EGYPTIEN.

Conditions in Egypt.

An Enviable Position.

The following is a translation of the report of the Crédit Foncier Egyptien, which was presented to the shareholders at the annual general meeting, held at Cairo on January 16:—

The Cotton Crop.

The cotton season of 1923 realised the anticipations which we formed last year. The stock at Alexandria at September 1, 1923, stood at 803,000 kantars. The arrivals of the year amounted to 6,531,457 kantars. The trade disposed thus of 7,334,457 kantars. At August 31 last the stock was reduced to the insignificant total of 260,000 kantars. The consumption has thus risen to 7,074,457 kantars, and the sales have been favoured by the price, which has varied between 30 and 50 talaris. The crop of 1924 is reported to be not less satisfactory. The area under cotton has risen from 1,588,100 feddans to 1,787,843. The arrivals at December 31 stood at 5,424,294 kantars, against 4,963,090 at the same period of the previous year. Prices have been very firm, round about 50 talaris for Sakellarides, the less fine cottons having, it is true, undergone a relative depreciation.

Egypt's Prosperity.

The succession of several prosperous years places Egypt at present in a most enviable financial position. Money is easy and abundant. The general well-being has shown itself in the towns by a marked improvement in living conditions favouring the rapid construction of dwelling houses. The State finances show reserve funds continually increasing, which stood at March 31, 1924, at £E17,800,000. It is to be hoped that these reserve funds, at present invested in State securities will be able to be utilised to permit the improvement and expansion of the agricultural production of the country. The ease with which financial settlements are negotiated will be made clear from an examination of the principal heads which characterise our mortgage business in the balance-sheet submitted to you.

The Balance Sheet.

The realisation of loans during the year 1924 have been £E1,170,562, £E444,600 below the amount of redemptions, which stand at £E1,615,162. The redemptions anticipated in cash have been £E304,866. The sales by auction have represented £E78,965. The stagnation of mortgage business is explained by the prolonged absence of transactions in real estate which generally accompany in Egypt the recourse to credit. Preoccupations of a political kind which have marked recent months have not been foreign to this situation.

The balance of the account for annual and half-yearly payments and interest due amounted at October 31, 1923, to £E1,326,762. Adding the maturities of the year, £E2,030,455, we have a total of £E3,357,217. At October 31, 1924, we had collected £E2,146,614. The amount of our arrears was thus reduced to £E1,210,603, an improvement of £E116,159 on the corresponding total of the previous year. The item of "Tiers Adjudicataires" was reduced during the year from £E112,563 to £E107,503. The real estate account due to expropriation, in regard to three properties, shows a negligible and temporary balance of £E12,903.

Investments.

As regards the composition of our portfolio, there is no change to record as regards English securities. The French Treasury paid us on April 1 last the first instalment of the loan of £E4,000,000 which was granted in 1919. The amount of that instalment was £E2,000,000. Our Egyptian securities show an increase of £E1,361,529. Our purchases have been £E254,600 nominal of Egyptian Priv. 3½ per cent. and £E955,820 nominal of Egyptian Unified 4 per cent. We have further continued the redemption of our bonds. The purchases effected during the year totalled 43,690 shares. At October 31, 1924, we had in hand 209,987 bonds representing an investment at an average rate of 5.70 per cent. These bonds have been acquired at a total price of £E2,364,013, at which they figure in the balance-sheet. This total is £E1,062,358 below the cost price of the bonds in our books without taking account of the redemption premiums.

The revenues of the portfolio have compensated for the decrease in the interest on mortgage loans, and have maintained the receipts of the profit and loss account at the level of the previous year. Various reductions in charges and expenses have, on the other hand, neutralised the increase of taxes to which we have been subject during the year on account of the double tithe established by the Finance Law of 1924. For the current year we have further to envisage the raising of the transfer fees. It is fortunate that the Commission des Valeurs Mobilières has made a new reduction in the taxable part of our bonds.

Profit and Loss Account.

The gross revenue of the year amounted to £E2,032,295. The corresponding expenditure was £E1,331,658. The amount of distributable profit stands thus at £E700,637, enabling the allocation of P.T. 140 to the ordinary shares and £E35 to the founders' shares, subject to deduction of French taxes, or P.T. 28 for the shares which circulate in France, or on which the coupon No. 50 has been paid in France. The founders' shares presented in France will be subject to the retention of the tax affecting foreign uncompounded shares.

If you agree to these proposals the position of the various reserve and provision accounts will stand as follows on November 1, 1924:—Statutory reserve, £E922,298.102, or 23,909,218.45 frs.; extraordinary reserve, £E970,773.067, or 25,165,860.45 frs.; provision for the reduction of the premium on bonds, £E574,416.580, or 14,890,902.92 frs.; provision and reserve for sundry contingencies, £E1,344,826.816, or 34,862,652.39 frs.; provision for dividend on shares, £E244,902.870, or 6,348,745.82 frs.; total, £E4,057,217.435,

or 105,177,380.03 frs. ; loan account for drawings of the 1911 issue, £E144,057.045, or 3,734,466.49 frs. ; total, £E4,201,274.480, or 108,911,846.52 frs. ; for the account " Provision for the amortisation of bonds," £E1,062,489.039, or 27,543,461.80 frs. In conclusion, we wish to thank our staff for the zeal and devotion which they have carried out their work.

Resolutions of Meeting.

The general meeting (1) approved the accounts for the year ended October 31, 1924 ; (2) adopted the division of profits proposed by the board of directors, and decided in consequence on (a) the distribution for the year on the 400,000 shares of a dividend of P.T. 140 per share, £E560,000, or 14,517,174.34 frs. ; on the 2,000 founders' shares of P.T. 3,500 per share, £E70,000, or 1,814,646.79 frs. ; (b) the allocation to the statutory reserve of £E46,918.757, or 1,216,299.59 frs. ; to the board of directors, £E23,459.378, or 608,149.79 frs. ; (c) to carry forward for the account of the ordinary shares £E13,987.642, or 362,608.99 frs. ; for the account of the founders' shares, £E732.213, or 18,981.54 frs. ; total, £E715,097.990, or 18,537,861.04 frs., representing the amounts of the profits of the year and the sums brought forward from the previous year ; (3) decided that the dividend on the ordinary shares and on the founders' shares should be payable in Cairo in piastres, and in Paris and in London at the rates of exchange fixed by the board of directors, less French taxes, or P.T. 28 for the shares which circulate in France, or on which Coupon No. 50 has been paid in France ; (4) re-elected in accordance with Articles 15 and 36 of the statutes as directors for five years MM. Miriel, de Sérionne, and Lascaris ; (5) confirmed in accordance with Article 77 of the statutes the appointment as directors provisionally made by the board of MM. B. Hornsby and Mohamed Talaat Harb Bey ; (6) re-elected as auditor for one year M. E. Berthy ; (7) elected auditor for one year M. E. Papasian, previously chosen as provisional auditor for the year's audit, in accordance with Article 25 of the statutes. These resolutions were carried unanimously.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, February 7). (For passengers sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Valdura for Port Said, Colombo, Madras, and Calcutta (London, February 7).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, February 11).

British India Line.—S.s. Modasa for Bombay and Karachi (London, February 13) ; s.s. Margha for Colombo, Madras, and Calcutta (London, February 14).

Ellerman " City " Line.—S.s. City of Cairo for Calcutta (Birkenhead, February 12).

Ellerman's Westcott and Laurance Line.—S.s. Bulgarian for Gibraltar, Malta, Piræus, Salonika, Constantinople, and Smyrna (London, February 14).

Johnston Line.—M.s. Sycamore for Galatz and Braila (the first steamer of the season for the Danube) (Liverpool, February 7). S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 28).

P. and O. Line.—S.s. Caledonia for Bombay (London, February 6) ; s.s. Nyanza for Colombo, Madras, and Calcutta (London, February 7).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout. (London, February 11).

NEWS FROM ALL SOURCES.

The production of the Anglo-Egyptian Oilfields at Gemsah for the week ended January 23 was 18 tons (previous week, 18 tons) ; and at Hurghada, 3,131 tons (3,265 tons).

The launch took place, on January 27, of the Federiko Glavis, a shelter-deck vessel of 3,400 tons (net), which is being built at the yard of Messrs. Workman, Clark and Co., Ltd., Belfast, for Yugoslav owners.

Steaua Romana (British), Limited, are advised that Steaua Romana well No. 14 Runcu came into production again on January 25, and was still in eruption on January 30. From January 25 to 28 the well produced 800 tons.

The British Vice-Consul at Skoplje reports that as from the end of December last the Greek Railway Administration have reduced by 40 per cent. the freight charges for all merchandise passing along the line Ghevgeli-Salonika in either direction.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 10 amounted to £E10,669, making the total from April 1 £E280,546. For the corresponding periods of the previous year the totals were £T11,043 and £E255,834.

Under the auspices of the Zionist Organisation, a carnival ball was held in Munich on January 26. The proceeds, which amount to approximately £500, will be transmitted to London for the assistance of Jewish emigrants to Palestine and the furthering of irrigation projects there.

The Nordenfjeldske Dampskibs Selskap has extended its service to the Mediterranean so as to include Greece and Asia Minor. The ports of call will be the Piræus, Salonika, Smyrna, and Patras, and there will be a three-weekly service.

The traffic receipts of the South Indian Railway Company for the week ended January 3 amounted to Rs. 9,72,440, making the total from April 1 Rs. 3,76,50,054. For the previous year the respective totals were Rs. 9,35,845 and Rs. 3,84,99,169.

M. Tsouderos, the former Greek Finance Minister, leaves London this week for Paris, where it is understood that he will have conversations with the French Government regarding a difference over the 300,000,000 drachmæ advanced by the National Bank of Greece for the defrayment of expenses of the French army in East Macedonia during the war.

The Chartered Bank of India, Australia, and China announce that Mr. Henry Bateson, of Messrs. Ogilvy, Gillanders and Co. (London), and Messrs. Gillanders, Arbuthnot and Co. (Calcutta), has been elected a director of the bank, to fill the vacancy caused by the death of Mr. J. M. G. Prophit.

A Bucharest message says that an agreement has been reached between the Swiss pre-War creditors and their Roumanian debtors. It is similar to that concluded with the British creditors. A party of Roumanian delegates are shortly proceeding to Rome to negotiate with the Italian pre-War creditors.

The tea industry in Transcaucasia has considerably developed, and great success has been achieved during the last three years (says the *Soviet Union Review*). Whereas private organisations had been growing tea before the war on 405 acres, the State is now exploiting 2,700 acres. The current year established a new record with regard to crop in comparison with the previous years (including pre-war years). The Georgian Gosplan (State Planning Commission) has framed an extensive programme of development for the next five years. In 1929, it is expected that the area of tea plantations will reach 16,200 acres.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Œcumenical Patriarchate.

The expulsion by the Turks of Mgr. Constantine VI. from Constantinople continues to be discussed with much fervour in a number of countries. A consensus of opinion inclines to the view that, whereas the Turks have a good case at law, it was not a tactful step on their part to expel the Patriarch so unceremoniously. Greece meets with no support for a sabre-rattling attitude, but can count upon the cordial sympathy of Christendom with her efforts to maintain the Œcumenical Patriarchate of the East. Unfortunately the Greek Government prepared the way for what has happened by ignoring the Turkish warning against the election of Mgr. Constantine Araboglou as Patriarch on the ground that he was an "exchangeable" Greek. In the face of that notification the only wise course to have adopted was to postpone the election and to endeavour to secure by friendly negotiation the exemption of the personnel of the Patriarchate from compulsory exchange. If the Greeks had done this, they would have been supported by all the signatories of the Lausanne Treaty, and it is most unlikely that Turkey would have thought it politic to withstand such a wide appeal. As things are, Greece preferred to ignore the Turkish warning, and Mgr. Constantine was elected. When once Turkey has taken action that is admittedly within her rights, however harsh or unwise it may be, it is a difficult matter for the Powers to press for a reversal of the decree of expulsion. The limit of the consolation offered Greece now is that Mgr. Constantine VI. should be regarded as deposed, and that Turkish good will for a successor and for the future exemption of the Patriarchate from the scope of the exchange should be secured.

The Turkish Case.

While on all sides the Turkish action is deprecated, there has been, as far as can be seen, no attempt in any quarter to answer the Turkish contention. Fethi Bey, the Prime Minister, has every shade of opinion in the country behind him in declaring that Turkey could not countenance the Greek effort to go back on the scheme for compulsory exchange by sheltering an "exchangeable" in the Patriarchate. He repudiated the charge that his Government were attempting to attack the office of the Patriarchate. It must be admitted that those who are trying to make out that "the beacon light of Christianity in the Near East" has deliberately been extinguished by the Turks, elect to ignore the connection between Mgr. Constantine's expulsion and the controversy over the exchange of populations. Action more unprovoked than this particular move will have to be taken by the Turks before the Patriarchate as an institution is in danger, and it is to be hoped that if the subject is debated in the House of Lords on the motion of the Archbishop of Canterbury, all the facts of the case will be taken into consideration by the speakers. We may regret that at Lausanne no attempt was made to regulate the position of the Patriarchate. Turkey had proposed that it should be removed entirely from Turkish territory, but had withdrawn the demand on the understanding that the Patriarch should be shorn of his temporal power. The suggestion that the members should be exempted from exchange does not appear to have been made at any time. The omission was unfortunate, but it might still have been rectified if the Turkish warning against the election of Mgr. Constantine Araboglou had been met in the right spirit.

The Yugoslav Elections.

After a somewhat stormy electoral campaign, election day in Yugoslavia passed almost without incident, the exception being in one town in Croatia, where three deaths are reported. Wise counsels prevailed at the last in Belgrade, and there was no interference with the movements of the Croat electorate. The Radicals head the poll with 141 seats, as compared with 107 in the last Parliament. M. Pribitchevitch returns with a following of 22 Independent Democrats, and thus M. Pashitch is able to count upon 163 votes in the new Skupshtina of 315 deputies, or a majority of eleven. The Opposition *bloc* includes the Croat Peasant Party, 68 seats; Democrats, under M. Davidovitch, 39; Slovene Clericals, under M. Koroshets, 19; Bosnian Moslems, under Dr. Spaho, 12. The bal-

Digitized by Google

ance of the 152 seats is divided among Montenegrin Federalists, 3; German Party, 5; Serbian Agrarian, 4; Slovene Agrarian and Albanian Moslem, 1 each. Whether M. Pashitch's majority of eleven will prove sufficient for the chances and changes of a Parliamentary session must depend on the powers of persuasion which the veteran Prime Minister can bring to bear on the various small groups. The result of the elections will confirm the opinion of those who imagined that this preliminary trial of strength would have to be followed by another election in the autumn, by which time M. Pashitch will have learnt the measure of success that he is likely to have in attracting some of the more or less isolated politicians to his standard. The policy of centralisation holds its own for the present; but under the conditions regulating the elections it cannot claim any very pronounced mandate. In any case, the Government is to be congratulated on the freedom with which the elections appear to have been conducted.

Turkey and Mosul.

There is some ground for the belief that the present Turkish Government does not wish to perpetuate the acute form of xenophobia which has served Turkey as a foreign policy during the last two or three years; but every now and then some official act suggests that the spirit is not entirely dead or that the control on subordinates leaves something to be desired. A case in point would seem to be the despatch with the Turkish assessor to the League of Nations' Commission for the settlement of the Iraq frontier of two Turks who at one time became outlaws as the result of intriguing against the Iraq Government in Mosul. According to the Turkish version the men are "good Turkish patriots, who worked in the interest of retaining Mosul for the Mother Country, just as British subjects worked for the retention of Mosul in the British Mandate." That may be; but the fact remains that, as far as Mosul to-day is concerned, the two men fell foul of the authorities and evaded arrest only by making good their escape. Their patriotism is not a subject of challenge, but the action of the Turkish Government in selecting two such men to accompany the Commission to Mosul. Not only is their presence an affront to Great Britain, which may quite well be a matter of indifference to Turkey, but it is also calculated to injure the Turkish case in the eyes of the Commission appointed to decide the Mosul question. The men have proved a source of embarrassment to the Commission, which will naturally resent being used as an instrument of Turkish propaganda.

Accident or Design.

If the Turkish Government imagined that it was scoring a point by sending as "experts" men who in their unofficial capacity would have been arrested on showing themselves in Iraq, or if it merely ignored the past history of the men, it shows how far the authorities at Angora have yet to travel before they can take their place with any degree of confidence as equals with Western Governments. Both Fethi Bey and the Foreign Minister will have to defend in public the official responsible for the *gaucherie*, but there is nothing in the record of either to lead one to suppose that they would have sanctioned the appointment if the facts had been known to them. Thus an insight is gained into present conditions in Turkey. The desire to live up to Western standards exists; but the number of people capable of interpreting those standards is limited, and while there is a conscious endeavour to improve the standard of government and to practise the reciprocity and good faith which form the basis of international relations among modern civilised States, every now and then comes a throwback to more primitive methods—as a result perhaps of extremist action—and the world has the experience of the Mosul incident or the sudden expulsion of the Patriarchate. It is not, however, a case of the Ethiopian never changing his skin, but of the evolution of a State being a slow and laborious process. Fortunately in Great Britain the belief is widely held that Turkey, in spite of frequent lapses, can yet make good.

The Egyptian Elections.

A certain piquancy has been lent to the primary elections in Egypt by the failure of Zaghloul Pasha to secure election as an elector-delegate for a Cairo division. There have been other notable "casualties" in the Zaghloulist ranks; but it is recognised that they do not offer a criterion as to how the elections will ultimately go. In the provinces, indeed, the Zaghloulists claim to have gained sweeping victories. The best news from Egypt, however, is that the police appear at last to have been successful in drawing their net round those directly responsible for the murder of Sir Lee Stack. The dramatic arrest of two students in the train, while trying to escape to the Sollum district, appears to have provided the authorities with useful information, even if the two men should not prove to belong to the band that actually killed the Sirdar, and it has been followed with many fresh arrests. More than three months have elapsed since the murder, and it was feared that, owing to the difficulties encountered by the police in their investigations, the criminals would never be discovered.

INDIA.

Railways in Politics.

The determination of the extremist opposition at Delhi to interfere in the details of railway management promises to create a very interesting constitutional situation. When the Government decided on a large extension of State management, it relied on the good sense of the Assembly to accept the convention, which has grown up in one or two countries, that members of the Legislature should not take up matters of administration, such as the personal grievances of individual employees. Good sense, however, is not very conspicuous just now on the Opposition benches in the Assembly: the members revel in personal questions, and some of them, at least, explicitly refuse to regard the suggested convention as desirable. A convention which is not accepted has, of course, no existence, and for the present the majority of the Assembly stands committed to a course which, according to the Government spokesmen, will ruin the whole administration of the railways. That statement is, perhaps, a rhetorical exaggeration, but there is no doubt that the difficulties of the Railway Commissioner will be very much increased, while ordinary people, who want efficient management, will soon begin to sigh for the good old days of the private companies, which were reviled while they existed, but were better than the new alternative.

The Politicians' Nemesis.

To our mind it is very doubtful whether the Government was justified in expecting Indian politicians to exercise so much self-restraint. Con-

INDEX TO VOLUME XXVI.

The Index to Volume XXVI. of "The Near East" (July 3, 1924—December 25, 1924) is now ready, and copies will be sent to subscribers gratis on application to the Manager, "The Near East," 167, Strand, London, W.C.2.

Digitized by Google

ventions are plants of slow growth, and by no means easy to acclimatise; but even if the politicians should ultimately agree to accept this particular convention, there are still the constituencies to be reckoned with. Practically every family in India has its stock of personal grievances, and from time immemorial the humblest slave has cherished the hope of laying down his burden at the foot of the throne. In the new régime the dissatisfied booking-clerk, or the dismissed foreman, will undoubtedly expect the member for his constituency to take the matter up, and failure to do so will mean loss of votes. Members will probably soon get thoroughly sick of the game in which they have rashly taken a hand, but their stakes will still be in the pool, and it is quite possible that in the end they will be forced to accept a reversion to company management as the only escape from an intolerable position. In any case, they will have the advantage of one of those object-lessons in the practical working of democracy which the country needs so much.

"Mr. Speaker."

Another, and perhaps a more serious, difficulty of the same kind may arise in connection with the choice of Presidents of the various legislatures. The first Presidents were nominated, but their successors are now being elected, and the future working of these institutions will depend very largely on the minority's attitude towards the choice of the majority. In England "Mr. Speaker" steps out of politics when he steps into the chair, and to question his impartiality is to commit political suicide. In the Punjab we see from the last mail that the choice of President was being discussed strictly on religious lines, and since almost the only point on which Hindus and Moslems are agreed is their firm conviction of the bias of their opponents, it is asking a great deal of inexpert politicians to expect that the elected President will be at once accepted as impartial. In this matter also the probabilities are that India will have to learn by experience, perhaps of an unpleasant nature. We notice that Hindus in Lahore are described as apprehensive of the power of a Moslem Minister "with his creature in the chair," and the phrase may serve as a measure of the distance which still separates the province from its political goal.

THE WEEK AT HOME.

London, Tuesday Morning.

St. Paul's Appals and Appeals.

We are being played with; and we do not like it. No sooner are our deepest feelings moved (and moved to the depths of our pockets) by the threat that the dome of St. Paul's may soon fall down, than we are simultaneously told that there is no need for alarm, and that the whole structure must, within a period of twelve years, be moved, at a cost of £2,000,000. It is all too puzzling: the normal man does not know where he is.

One thing is clear: someone has blundered. Whether it is the architectural experts, or the Cathedral authorities, or the newspapers, it is difficult to say; but it is certain that no appeal for so national an institution as St. Paul's has so appalled the people. The procedure of almost everybody connected with the scare has been most baffling and bewildering, and one will not feel really satisfied until an independent body of practical experts appointed by the Government (a great chance, one would think, for Mr. Baldwin's Fine Art Commission) pronounce a final verdict.

Tariffs.

Party journals spread themselves in quite the pre-War style last week when the Government's new Tariff policy was announced, and may even have convinced their readers that the writers of the articles *pro* and *con* the Government really believed either in Protection or in Free Trade. As a matter of fact, of course, the whole pother was the veriest eye-wash. The Government is in no sense warping the Safeguarding of Industries Act to be a means of wholesale Protection. Any trade which wishes to be protected must first survive a Board of Trade inquiry, and then it must get a special Act of Parliament of its own. Obviously, each separate tariff will be minutely discussed by the House of Commons, which can dispose of any particular case that it dislikes.

Meat Rings.

For the benefit of those who became disheartened at the melancholy and monotonous way in which the magnates before the Royal Commission which is dealing with the price of meat denied that their calling was in any sense a lucrative one, and who consequently desisted from reading what they considered useless evidence, it ought to be recorded that, one fine and dazzling day last week, there was to be found a business man who admitted that he was in business for and at a profit. Thus to have extracted an admission that all was not wholly ill in the meat world (from the magnates' point of view) was almost a triumph for the Commission, who had hitherto had to listen to little but the most impossible tales of poverty-stricken and anxious cold-storage merchants.

It is to be hoped that the Commission's joy over the one man who pleaded as he ought to have pleaded will not too violently upset the dismay with which they heard the ninety and nine others.

Out of all this talk has so far come one concrete suggestion: that the State should control the meat supply. The very proposal has tempestuously thrown a large section of the non-thinking on to the meat capitalists' side; and, of course, it will never be realised in this country.

The Menace of Oil.

There are few stories more exciting than that of the discovery, and of the rivalry experienced in the obtaining, of oil as one of the most potent factors in human existence; but it is, quite apart from the baneful influence it exerts upon national politics, far from being an unmixed good. From all

parts of the world evidence is now accumulating upon the subject of coast pollution, an evil which is directly attributable to oil. The discharge of oil from ships is indeed capable of very serious harm, for, although in our own island complaints are chiefly made against it on æsthetic or sentimental grounds—the spoiling of sea-birds' wings or of bathing costumes, and so on—there is abundant proof that the smaller forms of marine life, including fish's eggs, are killed even by a thin film of oil.

How to rid ourselves of this obvious danger to the larger fish is admittedly a problem. The Liverpool shipping interests have just suggested the prohibition of oily ballast water within 150 miles of the nearest coast. But, of course, all maritime nations would have to adopt the practice.

A Boxing Exhibition.

Art exhibitions are not usually a source of much entertainment, for the æsthetic and the risible faculties are in this country treated as foreigners. But the new galleries which have been opened in King Street, Covent Garden, called the Sporting Galleries, hit a very human note when they organised an exhibition, consisting of paintings, prints, and relics connected with the history of Boxing. Here you may see all the old champions of England—Sayers, Gribb, Belcher, and the rest; may learn that Byron regularly engaged a professional pugilist to check his corpulency; may admire a plaster arm of Sayers; or may laugh at H. M. Bateman's portrayal of boxing nerves. There are hundreds of other things, too, which will stir the older generation to memories that there were never fighters like those of their time, and the younger fry to wonderment at the endurance and hardness of the older masters. Altogether, it is a stimulating show, well worth the visiting by all sportsmen.

The Origin of Man.

I am no more an anthropologist than are the writers in the popular papers upon the recent find by Professor Dart of some skull in Bechuanaland. The amount of tosh—it is nothing else—that some folk will swallow about "the missing link" is perfectly extraordinary, although, to be sure, it is only another manifestation of that extreme and almost superstitious reverence of Science which is our modern substitute for religion.

A moment's reflection will convince anyone that no one skull can possibly provide "the missing link." What is really much more interesting than this question of the origin of man, which, in essence an academic one, has probably been already exploited for all it is worth, is the problem of which country in the world was the first home of man? Hitherto, I believe, Mesopotamia, Central Asia, and Egypt have vied with Java for this distinction; now it appears to be South Africa. In time, no doubt, some other place will be discovered.

The Warm South.

It is meet on such spring days as these to enjoy such an exhibition of sunny, lightful pictures as those which Mr. Richard Jack has painted of places like the Midi of France, Albi, Cahors, and the South of England, and which are being shown in the Fine Art Society's Galleries, New Bond Street. True, there is more urbanity than subtlety in his work, but it is very good to look upon the hot bridges of Cahors, or to see the "Cutty Sark" in Fowey Harbour and the yachts in Salcombe. A very pleasant, if not a great show.

Odilon Redon.

In the exhibition of Odilon Redon's etchings and pastels at the Leicester Galleries, on the other hand, there is very definitely the element of greatness. Redon, who died in 1916, was a master of the spiritually fantastic, a sort of combination of the mediæval mystic, of Blake, and of Poe. His lithographs are quite unusually fascinating and deep. And the colour in his pastels reminds one of the intensity which, so far as I know, is a secret mainly in the keeping of the Orientals (though our own Brangwyn has it in some degree), particularly of the Russians and the Armenians. His is primarily a show for artists and poets and mystics.

THE RIF PROBLEM.

The Near and Middle East Association have submitted the following memorial to the Secretary of State for Foreign Affairs:—

(1) The Committee of the Near and Middle East Association venture to express their complete satisfaction with your recent statement informing the members of the House of Commons that his Majesty's Government are using their influence to localise so far as possible any questions which may arise owing to the present situation in what is known as Spanish Morocco.

(2) The Committee are extremely glad to learn that his Majesty's Government have no intention of taking action, either singly or conjointly with other European Powers, to deprive the people of the Rif of the independence they have so gallantly maintained for themselves after a long and arduous struggle; especially so as the Committee feel sure that any such action would create both misapprehension and bitter resentment among our Muslim fellow-subjects.

(3) The Committee venture to suggest that a possible solution of this difficult problem, and one that might prove satisfactory to both Spaniards and Rifi, and to the interested Powers, might be the creation of an independent, autonomous Rifi State recognising a nominal suzerainty on the part of Spain.

The death was reported from Peshawar on February 6 of the Nawab of Dir.

Prince and Princess Arthur of Connaught were escorted up the Khyber Pass on February 6 by the Chief Commissioner and visited Landi Kotal.

Air Vice-Marshal Sir Sefton Brancker, Director of Civil Aviation, arrived at Akyab on February 8 by air from Rangoon, on his return journey to Calcutta.

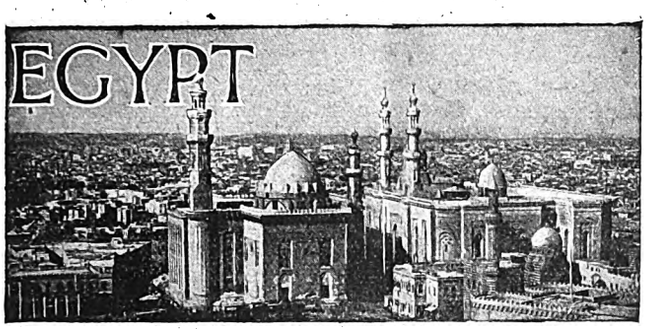
From Our Own Correspondents.



Cairo, January 31.

The Nile Waters.

The events of the week have been the arrangement with regard to the "water-clause" in the ultimatum of November last, and the Egyptian Government's protest at the creation of the Sudan Defence Force. The settlement with regard to the much-criticised revocation of the limit placed on the irrigation of the Gezira contained in the ultimatum had to a great extent already been discounted. It was known that a new Commission was to be set up to re-examine this much-discussed question, though the actual composition of the Commission was unknown. Generally speaking, Great Britain's action in this matter has been approved, though the Egyptian Press has been at some pains to criticise the acquiescence of the Egyptian Government in the submission of this question to a mixed commission, their contention being that the Nile belongs to Egypt and Egypt alone should have a say in the allocation of its water. There is, indeed, every indication that when the Commission reports, pressure will once again be brought to bear on the Government to reject its recommendations, and it will be interesting to see whether this time the Egyptian authorities will have the courage to place the economic needs of the country before considerations of political expediency.

The Sudan Defence Force.

Although the Cabinet must have known full well that nothing it might say would alter the British decision with regard to the creation of the Sudan Defence Force, it could not, for political reasons, ignore the demand for action addressed to it by the vernacular Press of every colour, and in presenting its protest to the Residency it followed the only course open to it in the circumstances. The Egyptian Government is naturally free to reserve its rights and declare that the present step cannot prejudice the eventual settlement regarding the future status of the Sudan; but, as all instructed Egyptians realise, the direct cause of the decision to separate the Sudan militarily from Egypt has been the unfortunate experience of the past year resulting from the Egyptian Government's own foolish and disloyal policy, and, no matter what settlement future negotiations may produce, there is no hope that, as regards the military force defending the Sudan, it will provide any return to the arrangement which held prior to the ultimatum of November 30, 1924.

Egyptian circles have not been sparing in their criticisms of the announcement, and the manner in which it was made. They complain that it omitted all reference to King Fuad, from whom the Governor-General holds his appointment; that the Egyptian National Anthem was not played, as had been customary on all official ceremonies in the Sudan; that the Governor-General called on the Sudanese to forget the past as if the 1899 Convention no longer existed; and, finally, that Sir Geoffrey Archer wore a plumed helmet and British Colonial uniform instead of a tarbush and Egyptian military uniform.

The last-named criticism is deserving of comment because it reveals a characteristic disregard of facts. In making it, Egyptians—and I have heard this criticism voiced in circles usually well-informed—quite overlook the fact that Sir Geoffrey Archer was appointed Governor-General only. If his predecessors wore a tarbush, it was in virtue of their rank of Sirdar, which they then combined with the Governor-Generalship of the Sudan. The Royal decree by which Sir Geoffrey was appointed officially separated the two posts, and Sir Geoffrey, in appearing in the garb which is now criticised, presented himself to the people of the Sudan as the civilian head of the Sudan Government, which is now a purely civil administration. It may be added that a special uniform, with helmet or cap, was prescribed over fifteen years ago for the senior members of the Sudan Government, and that none of them have ever worn a tarbush unless in virtue of their military rank in the Egyptian Army.

The Grand Cadi of Egypt.

The dastardly outrage on the Grand Cadi, Sheikh Mohamed Mustapha El Maraghi, created considerable sensation in Cairo. His Eminence had an almost miraculous escape, for the sulphuric acid completely covered his chest and left arm and only just missed his face. A tribute to the high esteem in which Sheikh El Maraghi is held was afforded by the ceaseless stream of callers at his house, who hailed from every class and every section of the community, irrespective of party, religion, or nationality. There is good reason to believe that the crime was instigated by one of the parties in a very important inheritance case which the Grand Cadi recently judged, and it is now observed as more than a coincidence that something of an untoward nature has happened to several of those who have been called upon to deal with this case in its many phases.

Khartoum, January 21.

Sudan Defence Force.

On the occasion of the Garden Party held at the Palace on King's Day, January 17, the thirteenth anniversary of the visit of Their Majesties King George V. and Queen Mary to the Sudan, the Governor-General of the Sudan, Sir Geoffrey Archer, issued a Proclamation calling into being the Sudan Defence Force.

It was a most opportune moment to deliver such a speech, as among the many hundreds invited to the garden party were many dignitaries, religious leaders, sheikhs, and notables from all over the Northern Sudan, who had been invited to Khartoum, according to custom, to take part in the King's Day celebrations.

The speech of the Governor-General was as follows— :

"I, Geoffrey Francis Archer, Knight Commander of the Most Distinguished Order of St. Michael and St. George, Governor-General of the Sudan, in exercise of the supreme Military and Civil Command vested in me under the terms of my appointment, do hereby proclaim as follows :— That whereas, in view of the withdrawal of Egyptian troops from the Sudan, it has become necessary to constitute a Sudan Force. And whereas, it is desirable to remove any misapprehension as to their position which may exist in the minds of officers, natives of the Sudan, who have served in the Egyptian Army, and are now able to transfer to the Sudan Force,

"Now, therefore, I proclaim as follows :—

"1. The new force to be created as aforesaid shall be styled the Sudan Defence Force, and shall owe allegiance to the Governor-General of the Sudan.

"2. The Governor-General shall appoint and dismiss all officers, and all commissions shall be issued in his name.

"3. The Egyptian Government being no longer able to employ the officers of the Egyptian Army who are natives of the Sudan, all such officers whom I consider worthy will be accepted for service in the Sudan Defence Force on the terms governing the issue of commissions therein, which are this day being communicated to such officers.

"4. On the issue of new commissions the Sudan Government will assume responsibility for the pay, pensions, and gratuities to which the said officers are at present entitled under their conditions of service in the Egyptian Army."

His Excellency then addressed the assembled company as follows :—

"Now to you, officers and notables of the Sudan, I have certain things I wish to say. It is necessary for me to be brief, as there are many sheikhs here who have journeyed far to see me and in order to attend this ceremony, which, as you know, is held in honour and in proud recollection of the visit to this country of His Majesty King George.

"5. I address my words first to you, officers of the Army. This day a force has been created to preserve the authority of your Governor-General and to maintain the internal peace and security of your country—the Sudan.

"It is incumbent on every man to serve his country to the best of his ability and in the capacity for which he is best fitted. In this force it is my wish and intention to confirm the appointment of all officers in whom I can place my trust and reliance. This trust I give you freely. In return I expect your loyalty, your courage, and your devotion. With but few exceptions I offer commissions in the new Sudan Defence Force to all serving officers.

"You officers have had a clear indication that the Egyptian Government is unable to offer you employment. In the Sudan Defence Force you are guaranteed, as has been made plain to you in my proclamation, all your existing rights as regards pay, pensions, and gratuities in respect of past service. Your oath of allegiance to the Governor-General of the Sudan, as well as the form of the commissions which I intend to bestow upon you, will be fully explained by your Commanding Officers. Thereafter, without delay, I will convene parades at all military centres in order to hand to you personally your new commissions as officers of the Sudan Defence Force.

"Finally, I pray Almighty God that the force may prosper in peace and war, that it may be worthy of the high confidence reposed in it, and that, by mutual understanding and respect between British and native officers, the bonds of comradeship in arms among all ranks may be firmly cemented.

"To you, dignitaries, sheikhs, and notables, on this happy occasion of our first meeting I offer salutations and greetings.

"I feel it especially appropriate that I should welcome you here for the first time on King's Day, and I am impressed as I look round to observe how many among you wear the personal decoration of His Majesty King George. It recalls to my mind that not long ago the Sudan Delegation, headed by Sir Sayed Ali Mirghani, was accorded an audience by His Majesty in London.

"To pass to the unfortunate political disturbances of recent months, I can only tell you that it was with deep regret and indignation that I heard of the cowardly assassination of your late Governor-General, Sir Lee Stack, in the streets of Cairo, and I shared in your profound grief at the loss of a man so well loved by you all, who had spent the best years of his life in the service of your country. I am happy to know that you, the religious and tribal leaders, together with your responsible people, remained throughout these disturbances true, loyal, and steadfast to the confidence reposed in you, thus proving the strength of the ties and the good rela-

tionships existing between the people of the Sudan and the British Administration. And it is only a matter of regret to me, as I know it is to you, that there should have been irresponsible persons who have been misled by extravagant ideas which have brought them within the scope of the law.

"I express to you the earnest hope that my declaration to-day may be the signal for the opening of a new era, in which all will co-operate to obliterate the foolish errors and misjudgments of the past. In the confident belief that this will be the case, I propose to give directions that no persons, other than those already in custody, will be arrested or charted in connection with the recent disturbances. Moreover, in the case of some of those already convicted, I hope at a later date, with the passing of the political agitation, it may be possible to exercise the prerogative of mercy vested in me. On the conclusions of these trials I shall certainly review most carefully the sentence of each individual. I make this declaration the more gladly in the assurance that it is a course which would have commended itself to my distinguished predecessor, Sir Lee Stack, had he lived, for he was ever ready to temper justice with mercy.

"I wish to end now on the question of personal relations. It has been my custom elsewhere, and it is my desire here, to establish close personal relations with the tribal and religious leaders and with the native peoples for whose welfare and prosperity I am directly responsible. To establish such relations, I propose to travel as soon as possible, and as widely as possible, throughout the Sudan, in order that I may study on the spot the problems and the conditions as they exist, and in order that I may extend my acquaintanceship with you, the leaders, which to-day has been so happily begun."

BULGARIA.

Sofia, February 4.

Greece and Bulgaria.

The outstanding question of the day is the attitude of Greece towards the Minority Protocol which she and Bulgaria concluded with the League of Nations in Geneva last September. Last week the Greek Parliament discussed this Protocol, and it was obvious that it had no chance of being approved. The Prime Minister, M. Michalakopoulos, in a long speech made references to the alleged ill-treatment of Greek subjects in Bulgaria, the prompt action of the Greek Government in punishing those guilty of the murder of Bulgarians at Tarlis, the need for Greece to obtain a foreign loan and the consequent necessity of gaining the sympathy of the civilised world, and many other matters. What all these things have to do with the rejection of the Protocol is not understood here, and, indeed, it is doubtful whether they are understood even in Greece.

If the truth be told, none of the flimsy excuses which have appeared in the Press are the real reason for Greece's refusal to adhere to the Geneva Protocol. The real cause is that external interests have constrained her to refuse ratification to an international document. These external reasons are perfectly plain, and are not wholly unconnected with Greece's hold on Salonika and the surrounding country.

It is, of course, deplorable that such a situation should have arisen, but it must be insisted on that it is no concern of Bulgaria if Greece fails to ratify the Protocol. It is the affair of the League of Nations, and the League of Nations alone. This international institution has had many bigger problems to deal with since its inception, but the question which it will probably be called on to deal with during the month of March is one of the most delicate it has ever had. For the League of Nations is responsible for the treatment of Minorities. But, quite naturally, States belonging to the League of Nations who have foreign Minorities residing within their frontiers are reluctant to see the League intervene. They say that they cannot brook any interference in internal matters, and so on. Up to date, the League has more or less surmounted Minority difficulties in the Balkans through the offices of the competent Mixed Græco-Bulgarian Commission. Now Minorities are entering into a new and even more important phase, and it may be necessary for the League to devote greater attention to this question than it has hitherto done.

The Agrarian Conference.

Recently the permanent Committee of the Agrarian Union held a meeting to consider the election of new chiefs. As a result, M. Zanko Bakaloff, former Minister of Public Works, and M. Yaneff, ex-Minister of Finance, were elected to the Committee which runs the party. M. Thomoff, another ex-Minister who was formerly on this Committee, was not re-elected.

These elections are considered to have furnished another proof that the Agrarians are still friendly with the Communists, and that their assertion that they have nothing in common with the latter cannot be believed. For although MM. Bakaloff and Yaneff are not extremists, it is thought they will be tools in the hands of others, while the moderate element, which was represented by M. Thomoff, has now disappeared. In any case, the Agrarian Party continue to be disorganised, and until a new leader is found, there does not seem very much chance of the party playing an important rôle.

The King's Birthday.

On Friday, January 30, King Boris celebrated his thirty-first birthday. A service was held in the St. Alexander Nevsky Cathedral, but, according to custom, His Majesty was absent from Sofia, as he invariably makes a pilgrimage to his mother's grave at Philippopolis, where she died on January 31, 1899.

Constantinople, February 3.

The Patriarchate.

By far the most important event here during the last week has been the expulsion of the Œcumenical Patriarch, Mgr. Constantine Araboglou. The presentation of the *fait accompli* left the numerous speculators on the situation completely mystified, especially in view of the expeditious manner in which the Turkish Government's instructions were issued and carried out. The decision of the Mixed Commission for the Exchange of Populations left the question still in suspense as far as the exchangeability of the Patriarch was concerned. It was established that as an ordinary individual he was subject to the exchange, but in his quality as Patriarch the Commission declared themselves incompetent to pronounce a decision regarding his exchangeability. This final decision of the Commission was evidently to many ambiguous, as the local Greek Press were fully convinced that the points were in Greece's favour; whilst, on the other hand, Turkey left no doubt as to her interpretation. No matter to what extent one may stretch imagination, it is impossible, after careful reading of the Commission's *communiqué*, to conclude otherwise than that the Commission washed its hands of the whole question. A rider was also added to the decision that the Commission would issue no exchange passport to Mgr. Constantine. It was, therefore, with great surprise that the news of the Patriarch's expulsion was received at 10 o'clock on Friday morning. Angora had telegraphed instructions during the night, and at about 6 o'clock on Friday morning the Assistant Director of the Police, together with four policemen, presented themselves at the Phanar, and on awaking him gave the Patriarch short time to complete preparations for his departure. He was escorted by the police to the Sirkeji Station and left at 8.45 a.m. by the *conventionnel*.

The whole situation at present is one of suspense; the Turkish reply to the Greek protest is awaited. The President of the Republic returned to Angora yesterday, and is reported to have proceeded directly to an examination of the draft reply. The Press believes that the terms of this reply will be that Turkey is unable to see why any reference to the League of Nations should be made, as the question is merely one of internal interest, and, further, that no intervention in the question by any Power will be admitted. Turkey appears to be firmly resolved to follow her own course in this question, and even though complications are possible the seriousness of which it is impossible to foresee, it is to be hoped that once again a settlement may be found through diplomatic channels. It appears probable that the local Greek Press might be made to suffer for the publication of articles during the last few days which are considered as hostile. The authorities have ordered a careful analysis of every publication, and in case of offence stringent measures will be taken.

Another Cabinet Crisis?

Recent events at Angora point to the possibility of another Cabinet crisis. Members of the Popular Party, who are also firm supporters of Ismet Pasha, are reported to have taken offence at certain declarations made by Fethi Bey regarding the granting of various travelling allowances to deputies, which were authorised under the previous Cabinet. The above members consider the declarations of the President of the Council as hostile to Ismet Pasha's Cabinet, and uneasiness and dissatisfaction amongst the Popular Party are reported to be very evident at Angora. The possibility of any trouble in the Cabinet at the moment, when the external situation is uncertain, is looked upon with concern and disapproval, and the somewhat unexpected return to Angora of Mustapha Kemal Pasha is thought to be in order to again smooth over present difficulties.

PERSIA.

Teheran, January 7.

Sardar Sepah's Return.

The Prime Minister returned to the capital last Thursday after his visit to the South to direct personally, as Minister of War and Commander-in-Chief, military operations against the defiant Sheikh of Mohammerah, and to conduct, as Prime Minister, negotiations and come to terms with him, after having received his complete submission, which Sardar Sepah made a *sine qua non*. Most elaborate preparations had been made during the previous week to make the welcome a fitting one for Persia's "strong man" who had restored peace in the South, and once more proved his ability to cope with any internal troubles by the help of the army which he has been instrumental in creating, and by his own masterful character. More than twenty triumphal arches had been erected along the line of route from the Shah Abdul Azim Gate, through which Sardar Sepah entered the town, to his house near the Bagh-i-Shah Gate, a distance of nearly three miles, and the Artillery Square was particularly brilliantly decorated, no less than four arches being erected here alone. Great crowds assembled in the Square long before the time fixed for the Prime Minister's arrival, and I have never seen it so thronged before. The whole reception, in fact, was on a scale hitherto unprecedented and a far more imposing one than has ever been accorded to even the Shahs in the past, and a significant feature was the firing of guns at the moment of Sardar Sepah's arrival in the town, a salute which has hitherto been reserved exclusively for Royalty, and never before has such an honour been accorded to a Prime Minister.

Sardar Sepah drove through the streets, gay with bunting and other forms of Persian decoration, in an open car, in service cap and khaki great-

coat, followed by the high military officials in Teheran on horseback in full-dress uniform. A procession of dust-stained cars from off the road, some twenty or thirty in number, containing the members of the Prime Minister's retinue (it resembled a Sovereign's suite rather than a Commander-in-Chief's staff!) followed Sardar Sepah's picturesque bodyguard of mounted tribesmen, Lurs, Kurds, and Arabs, and numerous carriages completed the procession. As soon as the Minister of War entered the square, a camel, garlanded and beribboned, was slaughtered opposite the Imperial Bank as a sacrifice, and this survival of the old barbaric custom of Scriptural days was rather out of keeping with the very modern nature of the decorations and illuminations; the incongruity was rather a jar on one.

Throughout the afternoon six of the Persian Government's aeroplanes at present in Teheran flew over the town, especially over the most crowded places, and provided a welcome form of amusement until the arrival of Sardar Sepah, a small scouting machine being especially noticeable, performing "stunts" and looping the loop continuously, to the delight of the onlookers. The other heavier planes frequently gave exhibitions of low flying, just skimming the housetops, and causing quite a thrill to the spectators on the roofs. They also dropped pamphlets of welcome from the sky, and these were eagerly scrambled for as they dropped among the crowds. In the evening the Artillery Square was brilliantly illuminated, the Municipal Hall on the north, the Imperial Bank of Persia on the east, the telegraph office on the south, and the police station on the west all being a blaze of electric lights of various colours, fireworks adding to the brilliance of the spectacle. The next day, Friday, being a public holiday, was taken advantage of by the crowds to admire the decorations, and the illuminations were continued in the evening, when Sardar Sepah drove to the Municipal Hall, where he was greeted enthusiastically by the large crowds present in the square. A reception was held in the hall, to welcome the Prime Minister, who was received by Colonel Karim Agha, the head of the municipality.

Sardar Sepah, in reply to the address of welcome, made a speech in which he said that it was owing to the weakness of previous Governments that people in Khuzistan had been encouraged to believe themselves an independent province, but now that the Persian flag floats over its most distant borders, it is, and will always remain, an integral part of the Persian Empire. The Premier then proceeded across the square to the Nazmieh (police station), where he met with an equally cordial reception. Subsequently the Military Governor of Teheran, General Morteza Khan, following the European custom, presented Sardar Sepah, on behalf of the Municipality, with a golden casket bearing a design of the Baladieh (Municipal Hall), and containing a golden key, representing, presumably, the freedom of the city, the Prime Minister being thus the first freeman of Teheran.

The excitement has now subsided, and the town is resuming its normal aspect, the arches and decorations having been taken down. The papers announced the other day that a certain number of the recently issued provisional stamps, printed at the Parliament press to remedy a sorely felt lack of stamps caused by the non-arrival of supplies the current issue from Holland, will be surcharged in honour of the Prime Minister's return.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

Teheran and Arabistan.

The terms of the settlement arrived at between the Sardar Sepah and Sheikh Khazal are not yet publicly known, but, if reports are true, they are entirely satisfactory to the Central Government, as well as to the Sheikh, who has apparently quite saved his face and retained most of his authority in Arabistan over the various tribes, though being under a Military Governor appointed by the Teheran Government, and the province being occupied by Government troops. The Sheikh has also agreed to pay all taxes and revenue due by him to the Treasury, and this will mean a quite considerable annual addition to the State coffers. One of the Sheikh's sons, Sheikh Abdul Karim, who has been given the title of Sardar Lashkar, has come to Teheran to act as an A.D.C. to the Commander-in-Chief with the rank of colonel in the army.

The Weather.

After a comparatively mild autumn, winter has now set in in earnest, and most of the country is frostbound. For a week before Christmas it rained almost incessantly, turning on Christmas Eve to a slight snowfall, and making of the streets a sea of liquid mud such as only Teheran streets can boast of. That night, however, it froze, and since then the mercury has been falling steadily, as much as 20 degrees of frost being recorded during the nights. The last few days have, however, been somewhat warmer, and the bright, crisp, sunny days make the cold more bearable than would be the case in a damp climate. Shiraz, a short while ago, experienced slight earthquake shocks, which occurred frequently during a fortnight and caused a certain amount of panic among the inhabitants. A snowfall of over 3 feet is reported from Mazanderan, and also from Enzeli and Resht, a most unusual occurrence in this district, lying as it does some 80 feet below the level of the Black Sea, and communications with these places by road have been interrupted for the past fortnight, during which time no mails from Europe via Russia have reached the capital. Severe weather is likewise reported from the Northern, Southern, and Western Provinces, and floods have caused much damage in the Duzdab, Kain, and Seistan districts.

A French Airman.

Much anxiety was felt in European circles a week or two ago as to the fate of M. Berhault, the French airman engaged by the Persian Government, who had a distinguished career in the French Air Force during the War. He left Bunder Dilam on the Persian Gulf to fly direct to Ispahan, although doubt was expressed as to the feasibility of such a feat. He flew without an observer, so as to be lighter, but he apparently was unable to cross the high Bakhtiari mountains, and all trace of him was lost for nineteen days. Last week, when he had been given up for dead, news reached Teheran that he had been brought in to Ispahan. It appears he had to make a forced landing on a mountain without, it is said, damaging his machine at all, and, abandoning it, he wandered about in the bitter weather for two days without anything to eat, eventually reaching a small village, whence he sent word to Ispahan, which, however, took some time to reach the latter place, some fifty miles away. He is now in hospital in Ispahan suffering from severe frostbite, and it is feared he will lose two or three toes.

PERSONAL AND GENERAL.

TO-DAY.

February 12, 1925 (New Style).
January 30, 1925 (Old Style).
Rajab 18, 1343 A.H., of the Moslem Calendar.
Shebat 18, 5685, of the Jewish Calendar.

The Bulgarian Minister returned to London on February 3 from Paris.

The Persian Minister in London has now recovered from his recent indisposition.

M. D. N. Ciotori, of the Roumanian Legation, left London last Sunday for Brussels.

M. and Mme. Jean Masaryk have left for India, and will be away some three months.

The Lithuanian Minister in London last Thursday visited the Egyptian Chargé d'Affaires.

Queen Olga of Greece, who is at present residing in Rome, has arranged to visit London during the spring.

Mr. and Mrs. Charles Buckley, who are spending the winter in India, will be returning early in April to 57, Brompton Square.

Mme. Titulesco, who has been lying ill in Paris for six weeks, is now very much better, and has left France for Switzerland.

Prince Frederick Duleep Singh is staying at the Grand Pump Room Hotel, Bath, and is taking a course of the baths and waters.

Colonel A. D. Bannerman, Political A.D.C. to the Secretary of State for India, who has recently been ill, is now recuperating at Cheltenham.

Prince Antoine Bibesco, Roumanian Minister to the United States, and Princess Bibesco will sail from England on February 18 for New York.

Mr. Sheldon L. Crosby, Counsellor of the American Embassy, Constantinople, left London last Friday for Constantinople, via Paris, to take up his new duties.

Mr. Norman Nairn, of the Nairn Transport Company, who arrived in London from Beyrout last week, left for New York on business in the s.s. Mauretania on February 7.

M. Titulesco, the Roumanian Minister, left London on February 5 for Geneva to attend the League of Nations. Monsieur N. Mishu will act as Chargé d'Affaires during his absence.

The will of Colonel Henry Davison Love (72), R.E. (retired), of Moorlands, Chagford, Devon, at one time Principal of the Civil Engineering College at Madras (net personalty, £21,750), has been proved at £21,958.

Sir Charles Greenway, Bart., chairman of the Anglo-Persian Oil Company, sailed for Buenos Aires on the Almanzora on February 6, on a mission to the Argentine Government. He is accompanied by Sir Arnold T. Wilson, and Lady Greenway is also a member of the party.

Sir Geoffrey de Montmorency, private secretary to the Viceroy of India, who last week reached London on six months' leave, proceeded to his home in Ireland. The Earl of Reading has appointed Mr. H. Graham Haig, for some years Deputy-Secretary of the Finance Department, to act as his private secretary.

OBITUARY.

Brigade-Surgeon Francis Collins, a veteran of the Indian Mutiny, died at St. Andrews, Lyme Regis, on February 3, in his 93rd year. He served with the 5th Foot, and was present at the Relief of Lucknow. He was also with General Outram's Division during the occupation of the Alum Bagh, and was present at the final capture of Lucknow under Sir Colin Campbell.

The death occurred on February 2, in her 96th year, of Mrs. Huxham, who must have been one of the last, if not the last, of those heroic Englishwomen who endured the siege of Lucknow during the Indian Mutiny in 1857.

Lieutenant-Colonel Charles David Myers Gall, whose death, in his 72nd year, took place at Melton last Thursday, served in the Afghan War of 1879 and the following year, taking part in the defence of Kandahar, in the sortie of Deh Khoja, and in the battle of Kandahar. He was also in the Sudan Expedition of 1885.

HONOURS, APPOINTMENTS, ETC.

Hassanein Bey, who recently became First Secretary at the Egyptian Legation, has been appointed Chamberlain to King Fuad. He will probably be succeeded in London by the Second Secretary, Mohamed Kamel Moursy Bey.

It is understood, says *The Times*, that Major-General John H. K. Stewart, C.B., D.S.O., will shortly be appointed to the command at Aden as General Officer Commanding the troops and Political Resident. Lieutenant-General Sir Thomas Scott has been there since 1920, a year longer than is customary. Aden is increasing in importance, owing to its position for air flight, and it has a detachment of the Royal Air Force at Khar Maksar, in support of the fortress personnel at Steamer Point and the garrison at Crater, and of the Yemen infantry at Perim, Kamaran, and other places.

THE ARABIAN UPHEAVAL.

The situation in the Arabian Peninsula is still obscure, but less tantalisingly so than it was formerly. For certain definite things do emerge from the darkness which enshrouds the activities and the intentions of Sultan Abdul Aziz Ibn Saoud of Nejd. There is, for example, the patent fact that the Kingdom of the Hejaz is a ruin; there is the fact that Jeddah, which, being, as one says, defended but by King Ali and a wild Russian with an aeroplane, is like, and has anxiously been expected, to fall at any moment into the hands of the Wahhabis, is enjoying a reprieve because of the existence of larger game, so to speak, farther south—we mean the person of the Idrisi of Asir, who yet holds the port of Hodeida, the proper outlet of the Yemen. It is considered probable, incidentally, although it has not actually been confirmed, that this Wahhabi attack upon the Idrisi is being made in concert with the Imam Yehia of the Yemen: in which case there is as little chance—and there need be little regret for the fact—of the protracted survival of the Idrisi. However this may be, no one can question that the Wahhabis now dominate the peninsula. Their conquests are not so spectacular nor so far-reaching as were those of their forbears at the beginning of last century, it is true; but at least their domain extends from Persian Gulf to Red Sea. This successful ebullition of the Nejdis needs the exercise of very considerable ingenuity and strength to keep it within manageable bounds; the further from Riyadh the Wahhabi ripples extend the weaker becomes the impelling and controlling force, and it may conceivably be that even the fervour of the Ikhwan may a little decrease in the heady pleasaunces of such a place as Taif, or grow less disciplined in front of the temptation of fresh and richer pasturages in Iraq. At the moment, in fact, it is impossible to say whether the Wahhabis will rest content with their present victories, consolidating what they have won, or yielding certain portions of it to their friends; or, in a wild and ungoverned surge, attempt to sweep north and west and south, in order to make a united Arabia. For our part, we should say that, Ibn Saoud being still at the head of the Wahhabis, they will not further strive, but, after disposing as best they can of their already rather unmanageable booty, retire, strengthened and decidedly refreshed, to their own and proper Nejd.

What are the effects of this Puritanical surge? Will it, as is sometimes averred, completely upset the political balance of Islam? Will it reinform its religious shape and direction? These are questions, important though they be, that are difficult enough to answer. So much depends on the controlling of the movement by the greatest Arab of to-day, Ibn Saoud. While he retains command, it may be anticipated that no attempt at Wahhabi domination outside the Peninsula proper will be made; it is even thought that the present width of his domain is not wholly to his liking. It is certain, at any rate, that his sapient restraint can be perceived in the fact that the Hejazis are yet allowed to remain in Medina, for Ibn Saoud, though first a Wahhabi and a Nejdi, does not forget that he, too, is of Islam, nor that the actions of his predecessors in Medina more than a century ago shocked the Moslem world. To all the important Arab chiefs inside the Peninsula Ibn Saoud is a friend—those who are his enemies he could, and probably will, crush. To the British, who control the mandated territories to the north of his charge, he is also a friend; and there is no need to suppose that he will be faithless to his word to this country. Politically, therefore, it would appear that the effect of his striking successes will be confined to Arabia proper. The religious repercussion is much more difficult to estimate. It is a fact, not generally known, but of considerable pertinence, that the Wahhabi brotherhoods which were founded in India last century after the success of the Wahhabis in the eighteenth and nineteenth centuries, very materially worried the British authorities in India. Such a stimulant and such a consequence might again be provided, and the effect is impossible to gauge. Again, fresh attention will inevitably be drawn to the possibilities for insurrection among the Senussi in North Africa. Taking all in all, however, we should incline to say that the Wahhabi revival will have less general result upon the world of Islam and the world of Christendom than, say, the success of the Rifi under Abdul Kerim against a Christian Power. It follows from this that, as we have before indicated, we believe the policy of the British Government in maintaining neutrality in the dispute between the Nejd and the Hejaz was a correct one. Had Hussein had the common sense to conclude an Anglo-Hejazi Treaty, the issue might conceivably have assumed a different aspect; as it happened, in no sense were the interests involved sufficient to justify our intervention.

Arising immediately out of this Wahhabi upheaval there are, of course, several important problems—important, first, to Islam, and, next, to Europe, particularly to Great Britain. The most urgent question is that of the future of the Holy Places. Mecca could be kept in Wahhabi hands; besides being a source of revenue, which might go to the Riyadh exchequer, it would probably redound to the benefit of Ibn Saoud, who certainly would govern it, or have it and the routes to it governed, better than in the bad old days of ex-King Hussein. But it seems that Ibn Saoud is not particularly happy in Mecca, and by no means wishes to be wholly responsible for it. He has decided, in fact, to let a Moslem Commission decide upon its future jurisdiction, even though the fact that Shereef Ali Haidar has been more or less nominated for the post may be a sufficient indication that a unanimous vote which should also coincide with the opinion of the Sultan of Nejd might be the best possible solution. In any case, this question of the Holy Places must be decided in some way or other before the Pilgrimage next summer. Again, there is the question of the Caliphate. For the moment Cairo, whose Conference was next month to have resolved this problem, is under a cloud, and the most important administrative centre of Islam at present is Mecca. Finally, there is the question of the *haj*. Ever since the War the lot of the pilgrims had, in the hands of the rapacious Hussein, been very far from enviable. The Pilgrimage of the post-War period compares, moreover, in no way with that of the pre-War period. This may be explained partly, of course, by reference to temporary causes—the breakdown of the Hejaz Railway, for example, the unsettled political conditions in the Middle East, and so on; but there are grounds for believing that Mecca, although it must naturally always be the centre of

Digitized by Google

the Prophet's religion, may decline in importance. That, however, is a speculation for and against which there is much to be said: the immediate point is that, whatever fire the Wahhabi revival may put into Islam, and whatever improvements the Ikhwan may effect in Arabia, particularly in the Hejaz, it can hardly be argued that this great stirring will induce distant Moslems to risk close contact with and conversion by a people that boasts a fanaticism which, after all, is more a product of geographical conditions than of religious insight.

A MIDDLE EASTERN TOUR.

By ARTHUR CARR.

Alexandria and Haifa.

My aim in this article is to be of use to business men who may themselves be intending to make a journey or who may wish to send travellers out to the Middle East. The route which I intend to describe was covered by me within the last few months under conditions varying from the most modern to the most ancient, and in the following stages:—London to Baghdad, Baghdad to Teheran, Teheran to Tabriz, Tabriz to Trebizond, Trebizond to London.

I left London on September 9, and went by the usual route via Calais, Marseilles, to Alexandria. The beauties of the Mediterranean, the passage through the Straits of Messina, the eruption of Stromboli have been so often described as to have become commonplace. I shall not, therefore, attempt to add anything to what has already been written. I left Marseilles on September 11 at 6 p.m. by the General Metzinger, and arrived at Alexandria at 8 a.m. Monday, the 15th.

As the object of my journey was not Egypt, but farther eastward, I did not waste much time in Alexandria. After two hours' delay in getting through the Customs, I drove straight to the Splendid Hotel by Mehmed Ali Square, and had a good breakfast. After that, as I had a few hours to spare, I thought I would just have a walk round and see what alterations had been made since my previous visits before the War. All is much the same. Mehmed Ali still looks down unmoved on the same dirty natives whom he ruled with such an iron hand. I missed, however, several names over shops which I had seen before. To give one only—"Stein," which had always stood out so conspicuously. Well I remember standing on this same square at the time Turkey was waging war with Italy in Tripoli. The Egyptians were elated over a reported victory by the Turks, and speeches were being made. A contingent of Italians arrived, and, becoming irritated

THE AUTHOR.

at the jubilation of the Egyptians, quarrels commenced, blows were struck, and revolvers flashed out. Then commenced a terrible scene. Red fezes seemed to come up out of the ground. The Italians were beaten off, every shop front was smashed in, and looting commenced. That night Kitchener ordered out the military police, and, as if by magic, all was calm again. What a pity we have no Kitchener in Egypt now! Perhaps had we had, this most recent tragedy would not have been. As I still walked about, I felt the call of Cairo and the Pyramids, but this time I was to pass them by. I left Alexandria at 4 p.m. the same day for Kantara West, crossed the Suez Canal by the pontoon at Kantara East, passed again through the Customs, and took train at 11.30 p.m. for Haifa. I was very surprised to find such a comfortable train, provided with both sleeping and dining cars. At 9.30 next morning, September 16, we arrived in Haifa Station. Up to here I had travelled by the orthodox routes and methods, but from here for thousands of miles I was to travel over one of the most ancient routes in the world in modern motor-cars. Routes which

until now had been trodden only by camels, mules, bullocks, and other animals, doing ten miles or at most twenty miles a day from sunrise to sunset. The Nairn Transport Company have now altered all this. At Haifa Station a representative of this company met me, took my luggage, secured it along the running board of a Buick car, started up the engine, and at 10.30 a.m. I was on my way to Beyrout *en route* for Baghdad. On the black bonnet of the car was painted, in large, white letters, "Nairn Transport Company. Haifa—Beyrout." What a splendid advertisement!

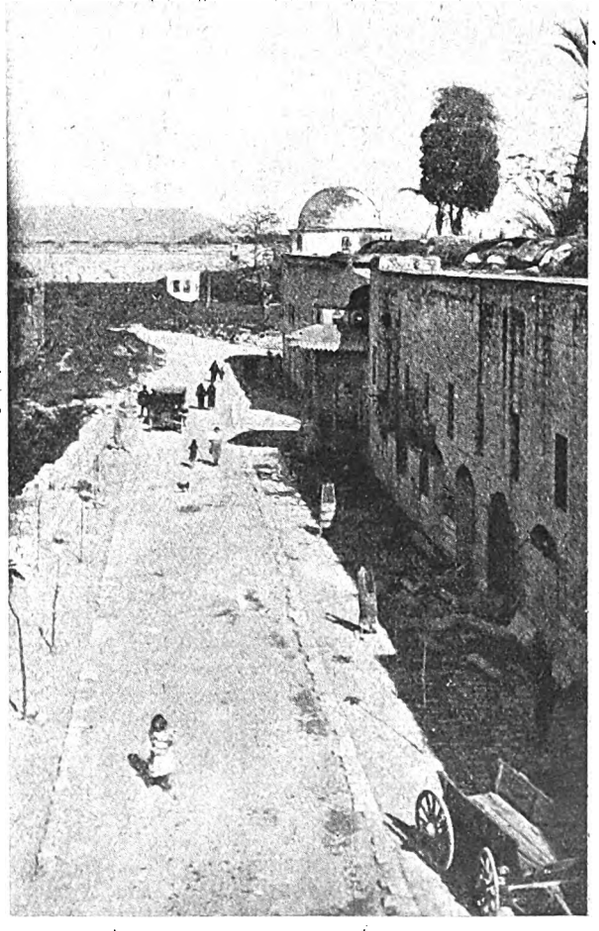
Haifa to Beyrout.

For a few miles out of Haifa it is not an ideal motor way. Nothing but ruts and sand, in some places covered with wire netting, which I understood had been put down during the War to stop the wheels of motor lorries sinking too deep in this loose sand. However, the chauffeur seemed to be quite unconscious of the terrible bumps which threatened to pitch me clean out of the car. Finally we ran clear of the loose sand and for miles skirted the edge of the waves. We went smoothly and swiftly, as the surface was now an ideal one, firm and hard. The object of this article is a practical one, but still I cannot refrain from making some remarks regarding the beauty of this drive. Starting from under the shadow of Mount Carmel, sometimes we were skirting the seaboard, and then suddenly we ran inland amongst vineyards and olive groves. With a turquoise-blue sky overhead, the blue Mediterranean at our feet, surrounded by luxuriant verdure, one almost felt in dreamland. I think one of the most beautiful sights I have ever seen was the dream picture of the white walls of Acre glistening in the sun and lapped by the blue sea. As we glided along I thought how many men of different civilisations must have looked on these ancient white walls and desired this rich land. What a history has had this ancient Ptolmais, taken by Crusaders, recovered by Saladin, retaken by Richard I, at the cost of 100,000 men; its white walls must have been drenched in red blood! Taken again by the Turk, by the French, by the Egyptians, again and again changing rulers, and now once more taken by English and French. All nations seem to have coveted this rich land. Thousands of soldiers who have fought and died now sleep well, but this beautiful land, with its century-old fortresses, with its limestone and chalk hills, with its bursting vineyards and teeming orchards, still survives. I, an ordinary, plain business man, travelling in a Buick car, with its flaring advertisement "Nairn Transport Company, Haifa—Beyrout," came under the spell of this lovely country, and it was good to think that it was left to my own countrymen to wrest it from the hands of the Turk once more.

I was brought back to earth by the motor slowing down. We were ascending a beautiful white road, up a hill close by the sea, where the view was marvellous. Then the motor stopped. A British "Tommy" saluted. We were at the frontier. I showed my passport, which he glanced at and returned with a "Good-day, sir." On we sped again, with the road glistening white in the brilliant sunshine. The route for some fifteen miles from Beyrout is quite good, but the white road becomes very trying to the eyes unless one has tinted glasses. We reached Beyrout at 4 p.m. Actual running time from Haifa about five hours. I put up at the "Hotel d'Orient," which I think is the best. I dined at the restaurant "Alphonse" by the sea, and as the sun went down I once more sat and marvelled at the wondrous purple haze on the hills of Lebanon across the Bay, which I have always considered one of the most lovely things to be seen on this ever-beautiful Mediterranean coast.

Beyrout.

As the motor did not leave for Damascus until Thursday, to my regret, I must waste a day here However, it was not all loss, because this old Phœnician seaport, situated in this most picturesque position at the foot of Lebanon, has ever much of interest to show. There is also Baalbek which one can visit, and Dog River, with its rock inscriptions. This was not, however, my first visit to Beyrout, and I had already seen these places. I therefore simply walked slowly along the streets of this ancient town, where one finds such a medley of the East and West inextricably mixed up. Here is a dirty little shop, where one finds articles of real Eastern craftsmanship, real Damascene blades at which one marvels. Here is another shop showing many articles of the Orient, but too obviously Oriental, and only meant for American or European globe-trotters. Beyrout as a commercial port has lost much of its former importance, but with new methods of transport over Lebanon to Damascus and now to distant Iraq, there seems the probability of its becoming once again one of the important ports of the world. Let us hope that the new orientation of power in this part of the world will lead to stability and progress. For nearly 500 years under the stagnant rule of the Turk this country has added nothing to history, nor to the progress of mankind. Islam does not stand for progress.



A STREET IN ACRE.

Digitized by Google

The Desert Mail.

I left Beyrout at 2.30 on Thursday, September 18, en route for Damascus, again in a Buick car, but this time the black bonnet was painted "Nairn Desert Mail Transport Company." The man who had the idea to write that on the bonnet would have made his mark as an advertising agent. "Desert Mail"—what ideas those two words conjure up! Tales read in boyhood of the limitless desert, of camels, caravans, and camp fires. Even I, an old hardened traveller for more than twenty years, who have met many men in many climes, in Africa, in Asia, who have travelled the Libyan and Nubian deserts, once again my imagination was caught, and I wondered. "Desert Mail:" I have travelled these Eastern countries by horse, by camel, by caravan, but here was something new. Across 600 miles of desert by motor. The Syrian Desert from Damascus to Baghdad!

A touch on the starter and we were off, three other passengers and myself. One of the brothers "Nairn" at the wheel, a fine type of Colonial, straight and slim of figure. If I am any judge of character, and if it is in the hands of such men, I would fearlessly predict success for the Nairn Transport Company.

We left Beyrout behind and began a steady climb of the Lebanon hills. "Lebanon" means white, or, rather, is derived from a Semitic root meaning "white," and these hills are truly white, evidently belonging to a geologically cretaceous system; they consist principally of limestone and chalk. What a climb and what a view of the blue Mediterranean, 3,000, 6,000, to 7,000 and 8,000 feet below! Every turn brought a new panorama, ever more wonderful than the one just passed, whilst Nairn at the wheel took gradients and hair-raising bends as coolly as if he had been on a laid track. What a magnificent ride, with thrills and sensations enough to satisfy the most daring! Finally, we reached the top, and I can understand the thrill of delight of the traveller coming in the opposite direction when he reaches this spot, and sees the Mediterranean for the first time, with Europe lying beyond. After the seeming interminable sands of the desert from Baghdad to Damascus, he must feel like Moses of old as he viewed the "Promised Land." And now we commenced to descend towards Damascus, which lies some 2,000 to 3,000 feet above the level of the sea, catching now and again a glimpse of the single-line railway which runs from Beyrout to Damascus. I well remember the slow and tedious journey I once made by this line at about ten miles per hour. We arrived at Damascus at 6.30 p.m., Thursday, September 18.

(To be continued.)

The Lord Chancellor has settled the following presentation:—The Rev. C. W. Wootton, Hon. C.F., who has spent some years in India as chaplain at Trivandrum, Travancore, to the Vicarage of Great Ness, Shrewsbury.

At a plenary meeting in Bucharest on February 4, the Holy Synod decided upon the creation of a Patriarchate for the Roumanian Orthodox Church, and raised the Primate, Mgr. Miron Cristea, to the rank of Patriarch with the title of Archbishop and Metropolitan of Ungro-Vlachj, Patriarch of Roumania.

DIGGING IN THE NEAR EAST.

The Hellenic Society held a meeting on February 6 at Westminster School, when Dr. D. G. Hogarth gave an address to the boys on "Travel and Digging in the Near East." For thirty-five years, he said, he had done many diggings in Greece, Cyprus, Crete, Asia Minor, Syria, and Egypt; and he could tell them that digging was not all joy. It was a hard life, with certain dangers and innumerable difficulties. He showed by means of films how digging was done, and explained how much more important tomb digging was than ordinary digging. In 1904 he went out for the British Museum to the Great Temple of Diana of the Ephesians, where tomb digging entailed great responsibility and practical difficulty. He explained the nature of the discoveries he made there; and, referring to the work that was again being done at Tutankhamen's tomb, said he had not the slightest doubt that if the Egyptian Government had not been able to make an arrangement with Mr. Howard Carter to continue the work he had begun there they would not have found anyone else to go on with it. Mr. Carter would not, however, be entitled to anything he found; but after his experience there he would be able to save several years in conducting the investigation to a conclusion.

M. Gavrilovitch, the new Yugoslav Minister to Greece, arrived at Athens on February 3.

General Sarrail, the French High Commissioner in Syria, returned to Beyrout last Friday from Damascus, where his reception by the Syrian population was extremely cordial.

According to a telegram from Tiflis published in the *Izvestia*, Kuchukhidse, the head of the Kutais (Georgia) Political Bureau (Secret Police) was assassinated in that town on the night of January 28, by "a band of Menshevists."

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Trade Outlook.

The speeches at the annual meetings of the banks have revealed a fairly hopeful attitude with regard to the trade outlook. The Chairman of Lloyds Bank, Mr. Beaumont Pease, whose speech at the general meeting (a report of which will be found on another page) was read by the Deputy-Chairman owing to his absence through illness, takes a cheerful if somewhat guarded view of the position The bank's figures show a marked increase in advances and a considerable increase in profits, and Mr. Pease points out that from these figures one would correctly gather that trade has been on the upward trend. He pointed out last year that signs were not wanting that this would be the case. "It may well be," he added, "that historians will look back on the tenth anniversary of the war as the first that showed any indications of a real peace."

The Dawes Report.

Mr. Pease referred to the Dawes report, which he regards as an indication of a real return to sanity on the part of the nations involved, as the outstanding event of the year. As he justly pointed out, it constitutes the chief practical attempt at reconstruction after the War. Even the Dawes scheme, however, is not without its critics, and Mr. Pease devoted some attention to the objections which have been raised against it. There is in the first place the natural prejudice against a loan, combined with the fear that a restored Germany would be a serious industrial menace. There is also the view that the experts erred on the side of optimism on the financial aspect of the scheme. On the latter point Mr. Pease remarks that if this did prove to be the case it should not necessarily involve the breakdown of the whole scheme, for there is a provision against the possibility of a default arising, if it is unavoidable and not due to bad faith on the part of Germany. In regard to the other criticism, the public of all the Allied nations took a broad and, he believed, a statesmanlike view, arguing that the reconstruction of Germany is only part of the larger problem of the reconstruction of Europe.

German Trade Rivalry.

Proceeding to deal with the question of German commercial competition, Mr. Pease stated that the competitive advantage in international trade which Germany now has, owing to the fact that her internal debt has been practically wiped out by inflation, will be largely counterbalanced by the increased taxes and charges on industry which will have to be levied to provide reparation payments. One of the advantages will disappear with the stabilisation of the currency, while the receipt by this country of reparation payments, although it may temporarily depress some of the export industries, will increase the real income of the people, and therefore add to the purchasing power of the home markets. Mr. Pease added that it must be remembered that German imports at present largely exceed her exports, and there is still a long way to go before her exports reach their pre-war level, and any disadvantage which we may suffer from her competition will, in his opinion, be more than counterbalanced by the beneficial results of a revival of international trade which the Dawes scheme is likely to bring about. "I trust," he continued, "that it is not too much to hope that the economic regeneration of Europe has now definitely commenced. The example of the help given to Austria has been followed by similar aids to Hungary, Czecho-Slovakia, and Greece."

The Exhibition.

In a few weeks time the Exhibition will be upon us again. The work of preparation is now in full swing, and the plans in view suggest that this year's undertaking will be even more interesting than last year's, which is saying a good deal. As to whether it will prove an equal attraction is, however, another matter. The crowds who thronged the Exhibition last summer were very largely composed of people who had given up a seaside holiday for one in London, and what they have done once they may not be prepared to do again, though against that the railways are to arrange most attractive excursions to London, which at long last they have discovered is entitled to take a place among holiday resorts. It is also probable that there will be a much larger influx of visitors from abroad, especially from the Continent, in consequence of the improvement in economic conditions generally, so that, given fine weather, Wembley may be just as unpleasantly crowded as it was at times last year.

The Sudan Contract.

Our Khartoum Correspondent, in a letter which will be found on another page, gives full details of the contract that has been made with the Sudan Government by a British group for the erection of a bridge across the White Nile from Khartoum to Omdurman and the taking over of the water, light, and tramway systems. As will be seen, the work for which the new company will be responsible is of a most varied character. The company is to take over its duties on November 1 next.

THE SUDAN.

Khartoum, January 21.

Contract for British Group.

Lord Meston has recently returned to London after signing the final and binding contract with the Sudan Government for the erection of a bridge across the White Nile from Khartoum to Omdurman, and the taking over of the existing Government services, such as the water, light, and tramway systems. He was the representative of an English group formed last summer, comprising the Prudential Insurance Company, the English Electric Co., Ltd., Dorman, Long and Co., Ltd., and Callander's Cable and Construction Co., Ltd. This group is to form a limited company with a capital of £356,000. In addition to this, the company will issue £400,000 debentures, to be guaranteed by the British Treasury under the Trade Facilities Acts, 1921-1924. The basic principle of the contract or agreement is that all works and extensions constructed by the company, as well as the existing services, shall be the property of the Sudan Government, and that during the period of concession, which expires on December 31, 1955, the whole will revert to the Government, which will repay the share capital and provide for the redemption of the debentures.

The work for which the company will be responsible may be briefly stated:—

1. The erection of a nine-span bridge (steel) from Khartoum (Moghren) to Omdurman. Its length will be 1,150 yards, and its width 9½ yards, and its cost is estimated at between £250,000 and £300,000.

2. Take over the existing steam tramway service in the three towns and replace it by an electric system, and with the completion of the bridge, to extend it to Omdurman as one "through" service, the whole to operate for the transport of goods and passengers.

3. The extension of the existing power station in Khartoum and the installation of new generating plant capable of supplying sufficient power for the whole undertaking, with ample reserve to meet emergencies arising from unforeseen circumstances.

4. The provision of electric light and power to Omdurman, with a long main connection with the power station.

5. The development of the present distribution system of electric light and power in Khartoum and Khartoum North.

6. The provision of a complete waterworks system for Omdurman, the water being delivered to consumers by means of the normal town development.

7. The installation of sufficient plant to supply ice manufactured from filtered water to the inhabitants of the three towns, the supply to be sufficient to meet all public demands.

The company is to take over its duties on November 1, 1925, and from that date will operate all services with efficiency and without intermission. Work has already commenced, particularly in regard to the bridge, as full advantage is to be taken of this year's low Nile, which commences during October. This work is naturally confined to plant and equipment production at home, and local work on anything like a large scale cannot possibly commence until the autumn.

The Government is to be congratulated on having found such a group of first-class business firms to take an interest in this first municipal venture, and it is the hope of every resident here that success will be achieved, and that the introduction of British capital in this instance will be but the forerunner of many similar ventures.

COMMISSION FOR THE ASSESSMENT OF DAMAGE SUFFERED IN TURKEY.

The Commission for the Assessment of Damage suffered in Turkey, which was set up in August last, has laid down its procedure, and is receiving claims from nationals of the Powers concerned.

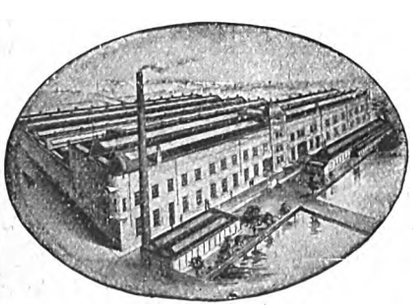
It is understood that the British, French, and Italian delegates will visit the Near East in March next, going first to Constantinople, whence they will proceed to Smyrna, Syria, Palestine, and Egypt.

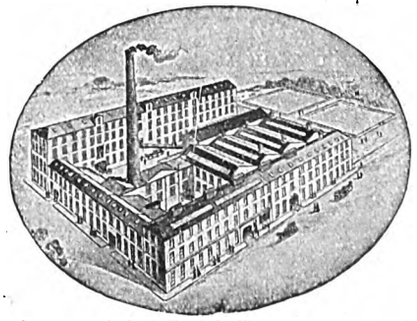
The number of claims received to date is so considerable that it will be necessary to send sub-commissions to the Near East, if the claims are to be investigated and paid within a reasonable time. Consequently, the objects of the Commission in their forthcoming visit will be confined to the exchange of information with diplomatic and consular officers, to hearing the views of local chambers of commerce and other organisations, and generally to ascertaining local conditions with a view to future procedure.

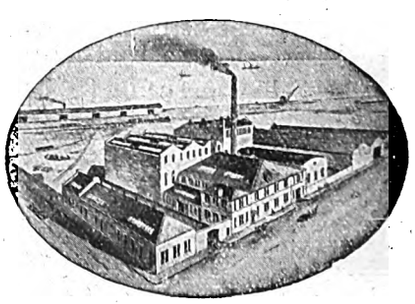
A cable received by the Phœnix Oil and Transport Co., Ltd., from Bucharest states that the well at Runcu announced on the 2nd inst. as flowing at the rate of 200 tons per day, is not one previously reported, but No. 5, a new well to reach the recently discovered lower oil sand.

Cable Address: "Lobo. Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** *All Cable Codes used.*

Manufacturers of JUTE SACKS and JUTE CLOTH for all purposes.
Also of WATERPROOF CANVAS and TARPAULINS, YARNS, TWINES, ROPES, etc.







Shippers of all classes of JUTE, LINEN and COTTON FABRICS.
Also of CALCUTTA SACKS.

POPULATION PROBLEMS FROM THE INDIAN CENSUS.

At a meeting of the Indian Section of the Royal Society of Arts on February 6 a paper was read by Mr. J. T. Marten, M.A., I.C.S., Census Commissioner for India, on "Population Problems from the Indian Census."

Dealing with the growth of population, Mr. Marten said:—The population of India as a whole and, with the exception of Assam and some few concentrated industrial areas, of the administrative units—the Provinces and States—is self-contained. Migration is small and quantitatively unimportant. The population grows by natural reproduction, the chief characteristics of this growth being a high birth rate, owing chiefly to the universality of marriage, and a correspondingly high death rate, a large proportion of which represents infant mortality. The measure of progress, *i.e.*, the difference between the birth and death rates, is not greater than that of many countries of Europe, and may, perhaps, be estimated at a normal of 7 or 8 per cent. in a decade. It would be interesting if we could arrive at some definite estimate of the factors which govern the standards of growth and the periodical fluctuations from them. The official birth and death rates are too incomplete and imperfect to be of much use, and they do not classify the community in different social and economic strata. It is frequently stated that the variations in the "economic" circumstances of the people, due to good and bad harvests, form the principal factors in determining the variations in the birth and death rates. A confusion arises from the use of the word economic. In its wider sense, *i.e.*, as referring to all the conditions and circumstances of a "household," social, traditional, material, and domestic, the word expresses somewhat the same idea as that contained in the expression "standard of life." But it is easy to slip from the wider to the more restricted use of the word, as implying merely the financial and material resources of living, and this is where I think a very popular fallacy arises. In India, as in every other country, the most prolific portion of the population is at the lowest stratum, and modern theories incline to the view that a maximum fertility is associated with a simplicity of life, which usually includes a minimum subsistence diet, and that fertility automatically declines as life becomes more complex, more luxurious, more individualised, and more subject to nervous strain. This economic simplicity of living in the larger portion of the Indian population, along with the custom of universal marriage, has given India a high average birth rate. Diseases, due to climate and physical conditions, combined with the non-hygienic customs and traditions of the people, and their ignorance and indifference to maternal and infant welfare, lessen their resistance to disease and keep up the level of the death rate. These are the constants which regulate the vital standards, and which can change only slowly with the progress of education and social culture and with the improvement of the environment. Of the fluctuating influences which determine the periodical variations from the average the most important, if we except catastrophic years of famine, is the direct effect of climate on health, and not, I think, the smaller variations in the material conditions of the people. In the matter of housing, clothing, and diet the lowest strata of the Indian people are probably not worse off than the slum population of western towns, taking into consideration the differences of climate; and Mr. Calvert, in his interesting book, "The Wealth and Welfare of the Punjab," is able to show that the average Punjab peasant lives at a standard of life which is distinctly above that of a large portion of the peasantry in Southern and Eastern Europe. It has usually been held that high prices are accompanied by a high death rate, but the Health Officer of Bengal has recently shown that the opposite is the case. Dr. Mann, in his study of economic conditions in the Bombay Presidency, shows that the economic effect of prices differs in different classes of the agricultural community, and it is well known that dry years are, on the whole, the healthiest, though they are not usually years of economic prosperity. On the one hand, there appears to be an intimate connection between the quantity and distribution of the rainfall and the intensity of the infection of the diseases, such as malaria, dysentery, and so forth, which are chiefly responsible for the mortality, while on the other hand there is always in an agricultural population, even among those near the subsistence limit, a considerable margin of resource, which enables them to resist in a remarkable way temporary economic stringency.

The annual fluctuations of the birth and death rates are, therefore, probably much more dependent on the intensity and onslaught of the principal diseases than on any supposed variations in the resisting power to them of the people, owing to economic circumstances. In a graph showing the death rates over a long period of years a mean line drawn through the fluctuations would indicate the cultural and material progress of the population and its surroundings, while the annual fluctuations from the mean would show usually the result of temporary climatic and environmental changes and only occasionally economic catastrophes. The undoubted development of material resources has not, in the ordinary agricultural community, been accompanied by a cultural advance such as would affect the population quantitatively. To put the argument as simply as possible, if you could double or treble the annual income of every family in the poorer portions of the population, the effect on the vital statistics would not be noticeable for several decades, while if you could ensure each household against the economic effect of the ordinary fluctuations of the harvests it would not affect the annual variations in the birth and death rates. The chief factors are cultural, climate, and environmental rather than directly economic.

He went on to deal with migration, and said that the birthplace statistics of the Census give a valuable indication as to the manner in which local pressure of population is being relieved by redistribution. The completion of the great irrigation works of the Jhelum and Chenab Rivers have thrown open in the last ten years large areas of

land in Northern India for cultivation. There has been an important movement of surplus population from the congested tracts of the centre and north of the Punjab into the canal areas of the south-west of the province. In the east of India the undeveloped lands of Assam have attracted thousands of permanent agricultural colonists from the dense areas of Eastern Bengal, while the tea garden population is steadily drawn from the lower strata of the United Provinces, Central Provinces, and Bihar and Orissa. Assam has almost doubled her population in the last fifty years, and it has been calculated that nearly a quarter of her present population is of foreign extraction. In the same way the waste lands of Orissa and the Santal Parganas are attracting increasing numbers of colonists from the neighbouring areas, especially the congested areas of the Ganges Valley in the United Provinces. But apart from the movements of agricultural colonists, there are important streams of labour migration partly for agricultural and partly for industrial purposes. Bihar and the western portions of the Central Provinces pour out their labouring population eastward to gather the harvests of Bengal and to fill the coal mines, jute factories and docks of the eastern industrial areas. The United Provinces sends three-quarters of a million labourers to Bengal, Bombay, the Central Provinces, Assam, and Burma. The enormous reservoir of labour filled by the backward classes of the Madras Presidency overflows into the plantations of Mysore and Travancore, and supplies the larger part of the overseas stream to the plantations and factories of Ceylon, the Malay States, and Burma. Burma has now more than half a million Indians, two-thirds of whom are Hindus or aboriginals. The majority are labourers from Madras, Bengal, and the United Provinces, and the increase in the decade is about 16 per cent. Labour emigration out of India has recently been checked by legislation, but there are nearly $1\frac{3}{4}$ millions of Indians in other parts of the British Empire, most of whom are labourers. While a considerable part of the movement of labour in India is periodic and temporary, the labourers leaving their families behind and returning to their homes after the harvests or at periodic intervals, there is undoubtedly an increasing tendency towards permanent movement and settlement, and in many cases the migration which is here described, and which the improvement of communications has done much to stimulate, is an important factor both in the material improvement of the resources of the people, and as a moral stimulus which is gradually overcoming the conservative and immobile character of the population.

Another aspect of the redistribution of the population which has in India some interesting and characteristic features is the distribution between country and town. The Indian is not, as a rule, a genuine town dweller, and urbanisation has made very slow progress, the whole increase in the urban population in the last thirty years amounting to only 1 per cent. Even this increase is confined within very limited areas. Many of the areas classed as towns have few genuine urban characteristics, a considerable portion of their population being actually or virtually agricultural. The figures show very clearly that the medium-sized country town is either stationary or decadent, and that it is only, or at any rate chiefly, in the large towns and cities that, under the influence of commercial or industrial expansion, there has been any considerable growth of population. In these larger classes of towns—viz., towns of over 50,000 persons, the increase in the urban population amounts to 16 per cent. or more in the decade: in towns between 20,000 and 50,000, 8 per cent., and in towns between 10,000 and 20,000, less than 1 per cent. A somewhat ominous feature in connection with this urban industrialisation is disclosed by the sex statistics of the larger industrial towns. While, for example, in Bengal the proportion of women to men in all towns has been steadily falling, showing that a growing proportion of the town populations consists of more or less temporary immigrants who have left their families behind, this growing disparity in the sex ratio is specially conspicuous in Calcutta and the industrial towns, and is becoming a real danger signal. The influx into the industrial areas of male labourers who have left their families behind has steadily increased, so that in Calcutta males outnumber females by over two to one; and the corresponding change in the average sized industrial or commercial town is still more remarkable. In Calcutta, there are only 374 married women per 1,000 married men, and only 47 p.c. of the women were returned as married. The male labourers being nearly all married with a wife somewhere away at home in the country, this disparity means that most of the workers are leading an unnatural existence, missing the steadying influence of home life, and only anxious to earn enough to get back to their homes and families. It is not unnatural that their employers find that they have little heart in their work and that they are notoriously unsteady. Similar conditions obtain in other large industrial centres.

(To be concluded.)

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Cyprus, January 10.

The local markets are very dull, and very little is doing. The weather conditions are favourable for the growing crops.

Cyprus, January 17.

The local prices of carobs continue to rise. Sales have been effected at Limassol at 25s. per kantar. The weather conditions continue favourable for the growing crops.

Baghdad, December 27.

Business stagnation exists owing to the requisition of transport on the frontiers by the Persian authorities.

Basrah, December 27.

The market has shown a slight improvement. Sugar, tea, and other colonial produce are in demand, and tend to rise. After the heavy rains, a freezing cold has prevailed everywhere, thus hampering communications with the interior.

ELECTRICAL INSTALLATIONS IN EGYPT.

The presence of large quantities of cheap German wiring materials and devices gives the wiring practice of Egypt a decidedly German stamp (says an American Consular report). France shares in a small portion of the better-grade material, while British devices are too expensive for common use by the large number of small Egyptian electrical contractors.

There is no organisation in this country which tests or approves wiring material. This lack of a regulatory body to pass upon the fitness or safety of devices for dwellings, offices, or factories has filled the market with inferior grades of wire, sockets, fuses, etc., to their own ultimate detriment and the immediate detriment of quality materials.

Before the authorities of the local electric lighting companies will sanction new installations they require an estimate of the number of electric lighting and other fixtures to be used. The lighting company makes use of this information to calculate the size of meter to be installed on the premises.

Approximately 90 per cent. of the electric installations use flexible twisted pair carried across walls and ceilings on small porcelain knobs or "button insulators." Frequently porcelain tubes are put through the stone walls and partitions of buildings, but it is not the general rule. The semi-fireproof character of the buildings does not require the use of armoured cable or tubing for protection, especially in dwellings and offices. Some factories, such as ginneries and cotton-pressing establishments, which have a real fire hazard, do employ these safety devices, the armoured cable in particular.

There is no standard copper wire gauge in use. There are no regulations governing the size of wire permitted in the wiring of dwellings. Rubber-covered wire is not required, but is generally used by the better class of contractors.

Porcelain rotary switches from Germany are the most popular, and enjoy a large sale on account of the very low price. Other types kept in stock by the large contractors are the tumbler and push button, but sales are small.

The prevailing type of socket in use is the bayonet, but many electrical fixtures from Germany and Czecho-Slovakia, especially the cluster chandelier fixtures, are fitted with the Edison screw socket. The screw socket, however, is found only in a few of the better class of dwellings, and hardly ever in offices and factories.

As the electric wires are normally carried across walls and not concealed, on account of the solid stone partitions, it is an easy matter to put in special connections near the floor. The plugs are invariably porcelain on a wooden base. The most usual extensions commonly used with plugs are small table or floor portable lights and fans, electric irons and vacuum cleaners. Radiators find but a small sale in this country. Plugs flush with the wall are never installed in any building having solid partitions.

Germany supplies about all of the fuses. They are of the open-link type, either in round or rectangular porcelain boxes. Some contractors show a preference for the British "thumb-grip" type or the German "Z" type plug fuse, but the more attractive price of the open link gives this type a decided advantage. American fuses are considered too expensive.

Electric meters are installed for each individual consumer of electricity regardless of the type of installation. The lighting company will not connect the installation without a meter. For dwellings a 5-ampere meter is invariably installed. For offices and factories meters of either 10 or 15 amperes are connected.

Since practically all buildings in Egypt are constructed of stone or reinforced cement, armoured cable or any other special form of conductor is not required in old dwellings. The fire hazard, even in the most densely populated and oldest sections of the Egyptian cities, is small.

As exposed wiring is the common practice of this country, it is not difficult to wire buildings after they have been built. In fact, almost all wiring installations are put into buildings after they are finished.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Condensers. The Egyptian State Railways, Telegraphs and Telephones invite tenders for condensers.—February 26.

Miscellaneous Stores.—The Port and Lighthouses Administration at Alexandria invites tenders for the supply of various stores, comprising paints (mixed and in powder), varnishes, oils (boiled and raw linseed, bicycle, colza, clock, etc.), shellac, coal, and wood tar, tallow, soap, etc. March 6. (D.O.T.)

Filter.—The Ministry of the Interior invites tenders for the supply and erection of a mechanical filter, complete with accessories and necessary foundations, and also the supply of material for two existing filters. March 16. (D.O.T.)

Clothing, etc.—The Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the Egyptian Police and Ghafir Services during 1925. The principal requirements include woollen blankets, ankle boots, chevrons, non-inflammable shirt collars, cotton shirts and drawers, cotton gloves, cotton and woollen socks, uniforms, boot blacking, heel-balls and palm-oil soap. Tenders will be received by the Director of Equipment Department, Ministry of the Interior, Cairo, up to March 28. (D.O.T.)

The arrival of 1,000 bales of cotton from Turkey was celebrated at a luncheon in Manchester last Friday.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 20 amounted to £E10,112, making the total from April 1 £E290,658.

The Lords Commissioners of his Majesty's Treasury have appointed Lord Bradbury of Winsford, G.C.B., to be an *ex-officio* director of the Anglo-Persian Oil Company in the place of Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E., who has resigned.

It is stated (says a Reuter message from Bucharest dated February 7) that Germany having refused to recognise the rights of Roumania to special reparations not embodied in the Dawes Scheme, the Roumanian Government intends to order the liquidation and confiscation of German property in Roumania, the introduction of a 26 per cent. ad valorem tax on German goods, in conformity with the Treaty of Versailles, and the application to them of a triple-rate gold tariff. The Press generally censures Germany's uncompromising attitude, which has led to such measures being taken.

OIL WELL PUMPS AND SUCKER RODS. Acquaint yourself with "Axelson" superiority. 27 years successful oil production. Several combinations. All parts interchangeable. 100 per cent. efficient. Send for catalogue.

Axelson Machine Co.

P.O. BOX 337, LOS ANGELES, CALIFORNIA.
Foreign Correspondence Invited.
Cable Address: "Axelson, Los Angeles." Codes: A.B.C. 6th Marconi, Western Union, Also 30, Church Street, New York. Cable: "Axelmach."

Company Meeting.

LLOYDS BANK, LIMITED.

A Satisfactory Year: Marked Increase in Advances.

The sixty-seventh ordinary general meeting of the shareholders of Lloyds Bank, Ltd., was held on February 6 at the Cannon Street Hotel, E.C.

Mr. J. Beaumont Pease (Chairman) was unable to be present on account of indisposition, and the speech which he had prepared was read by the Deputy-Chairman, Sir Austin E. Harris, K.B.E., who presided.

Mr. Pease's speech contained the following passages:—

In reviewing the events of the past year, the matter of chief importance to ourselves is the balance-sheet and report, which to-day we present to you, and in them I think you will find indications of the general trend of events. May I ask you to consider them with me for a moment?

Our deposits remain at practically the same figure of £340,000,000 and the acceptances show an increase of £3,500,000, but the chief alterations in our figures are to be found on the other side of the balance-sheet. In common with other banks, our advances show a marked increase. In our case it is no less than £23,300,000, and the proportion of our advances to deposits has risen in the year from 41.6 per cent. to 48.2 per cent

Large as is this increase, the proportion is still considerably below that which ruled in the years before the war. It may be interesting to you to be reminded that the highest point reached in the four years commencing with 1911 was 59 per cent., 59.6 per cent., 60.3 per cent., and 58 per cent. respectively. There is a considerable way, therefore, yet to go before we reach pre-war proportions, and, in my opinion, we are justified in assuming that we are in a position to meet any demands for financial assistance which increased activity in trade is likely to make upon us.

Increased Profits.

None the less, the increase shown last year is considerable, and is largely responsible for the fact that we have been able to earn greater profits. If we take the figures of the last three years we see that our advances have increased from £123,000,000 to £164,000,000, a rise of no less than £41,000,000, while our deposits have increased to the extent of £10,000,000. To provide the wherewithal to meet the increased accommodation to the public during the last year, we have realised investments to the extent of £22,000,000 and have let our bills run off to the extent of £10,500,000. These realisations, together with our increased deposits, have enabled us not only to find the money necessary to meet increased demands for advances, but also to increase our cash to the extent of nearly £4,000,000 and our cash at call to the extent of nearly £6,000,000. The result has been, as I have already stated, that our profits are larger, as we have employed our money more profitably, and the profit figure we present to you to-day exceeds that of last year by £421,800. Incidentally, too, I may mention that the sales of investments which we have effected have also yielded substantial profits, but these we have not brought into our profit and loss figures, preferring the more conservative method of keeping them in our internal reserves. It is not necessary for me to point out to you that they are by no means lost there, but internal reserves are of a somewhat shy disposition and do not like exposing themselves to the public gaze. They are safely there, however, employed in the business, ready for any emergency, earning you extra profits, and, subject to any possible calls upon them in the future, are as much your property as the capital or published reserves. Our holdings in our affiliated banks remain at practically the same figure as last year, and I am happy to tell you that, in the case of all of them, last year proved to be a profitable and satisfactory one.

You will have seen from the report our proposals as to the distribution of our profits. We have at our disposition a figure of £2,972,857 15s. 2d., which includes the sum of £503,923 0s. 5d. brought forward from the previous year. The interim dividend absorbed £928,253 8s. 2d., we have placed £250,000 to bank premises account, £250,000 to the staff superannuation fund, and £100,000 to the staff widows' and orphans' fund. The final dividend which we now recommend amounts to £928,253 8s. 2d., and we shall have left over to be carried to the new account £516,350 18s. 10d. some £12,000 more than we brought in.

Now, from all these figures you would naturally and correctly gather that trade has been on the upgrade trend. Last year I ventured to say that signs were not wanting to suggest that this would be the case. But I should have been a bold man if I had attempted to forecast all that 1924 had in store for us. It may well be that historians will look back on the tenth anniversary of the war as the first that showed any indications of a real peace. If in future it becomes known as the year of reconciliation, it will be because, after all the previous fumblings and failures of statesmanship, the simple common-sense suggestion of the year before to discover by an impartial commission of economic experts, working under American auspices, the exact ability of Germany to pay reparations, and the precise manner in which she should pay them, was at length acted upon

The Dawes Report.

The Dawes Report was produced on April 10 and accepted by the Reparations Commission. In July the London Conference succeeded in establishing a harmony which had long ceased to exist between the Allies, adopted the recommendations, and set up a series of mixed committees to carry them into effect. I should like to take this opportunity of congratulating both our colleague, Mr. Bell, and ourselves on the fact that he has been chosen to sit on what is called the Transfer Committee, with the responsibility, among other highly important duties, of determining the methods by which the reparation payments made in marks can be converted into foreign currencies. I regard the adoption of this report as the outstanding event of the year, and as an indication of a real return to sanity on the part of the nations involved. It constitutes the chief practical attempt we have yet seen to sweep up and tidy into heaps the litter caused by the war. It created a new enthusiasm and was undoubtedly largely responsible for the greater feeling of optimism observable in the latter half of 1924.

Before I refer to some of the other events in the tidying process, I would like to examine shortly some of the criticisms raised against the Dawes Report itself. They are aimed from different angles. On the one hand it is feared that, without a complete moratorium of several years for Germany, even after due allowance has been made for the effect of the German loan, which was an integral part of the scheme, it may break down in the initial stages. On the other hand, the natural prejudice against a loan to an

ex enemy was combined with the fear lest a rehabilitated Germany would constitute a serious competitive menace to our own industrialists. Time alone will show whether the experts erred on the side of optimism in believing that, with the proceeds of the loan and the interest on German Railway bonds, etc., Germany would be able to meet the cost of the armies of occupation, deliveries in kind and similar liabilities, without encroaching on any revenue from the ordinary Budget in the first two years. But even if this does not prove to be possible it should not necessarily involve the breakdown of the whole scheme, for there is a provision against the possibility of a default arising, if it is unavoidable and not due to bad faith on the part of Germany.

In regard to the other criticism, the public of all the Allied nations took a broad and, I believe, a statesmanlike view. They argued, as the experts themselves have stated, that "the reconstruction of Germany is not an end in itself. It is only part of the larger problem of the reconstruction of Europe," and the issue of the loan was a triumphant success. The competitive advantage in international trade which Germany now has, owing to the fact that her internal debt has been practically wiped out by inflation, will be largely counterbalanced by the increased taxes and charges on industry which will have to be levied to provide reparation payments.

Effects on British Trade.

With the stabilisation of her currency, one of the competitive advantages will disappear, while the receipt by us of German reparation payments, whether in kind or cash, although it may temporarily depress some of our export industries, will increase the real income of our people generally, and therefore add to the purchasing power of our home markets. It must also be remembered that German imports at present largely exceed her exports, and there is still a long way to go before her exports reach their pre-war level, and any disadvantage which we may suffer from her competition will, in my opinion, be more than counterbalanced by the beneficial results of a revival of international trade which the Dawes scheme is likely to bring about. I trust that it is not too much to hope that the economic regeneration of Europe has now definitely commenced. The example of the help given to Austria has been followed by similar aids to Hungary, Czecho Slovakia, and Greece.

At home, also, we have seen various favourable features: 130,000 persons formerly unemployed have last year found work, and this increase to the ranks of the employed follows after the larger figure of the previous year of 300,000. It has been computed that at the modest valuation of their production at £4 a week, this means that the country is adding to the national income at the rate of about £100,000,000 a year, as compared with the position two years ago.

You have seen the increased figures of the loans to trade by this and other banks, and the discount houses report a much larger proportion of commercial bills in their portfolios, while the London Bankers' Clearing House discloses an expansion of £2,600,000,000 in its turnover.

All these features in the past year are cheering signs, and I do not wish to end this catalogue on a note of depression, but I should be failing in my duty if I did not utter a word of serious warning. Much yet remains to be done. Political uncertainties and industrial strife may wreck the most hopeful plans. The most fruitful soil may be robbed of its harvest by accident or lack of hard work and attention. Here at home we have every prospect of stability in political affairs, but it is not possible to say the same of all other countries on the Continent, while in the industrial world there are threatenings of disturbances which may retard indefinitely the process of recovery from the ills of the war. It should be the endeavour of all men of good will to do each what he can in restoring the sick world to health again. After the favourable symptoms to which I have alluded, it would be a thousand pities if there were any serious set-back.

I have already mentioned the stabilisation of German currency, which is one of the objects of the Dawes scheme, and the question generally of exchanges has been a matter of special interest during last year. Fluctuations and uncertainty in exchanges, in spite of the assitance which banks give in their forward exchange operations with the object of preventing speculation in exchanges, are among the chief obstacles to a recovery of international trade, and important steps have been taken recently to minimise this serious disadvantage.

I cannot conclude without alluding to the fact that this is the first time we have met in London for our annual meeting. I indicated last year that, in spite of the feelings of sentiment attaching to the city of our birth, we felt that, in the interest of convenience and economy to the business, it was desirable that the annual meeting should take place in London. I am glad to see several of our friends from Birmingham here to support us as usual, and I would like to express the hope that in all our future meetings I shall be in a position to present to you an equally satisfactory balance-sheet to the one you have in your hands.

The Deputy-Chairman moved: "That the report just taken as read be received and adopted, and that, in accordance with the recommendation of the directors therein, a dividend for the half-year ended December 31 last of 1s. 8d. per share, being at the rate of 16 2-3 per cent. per annum on the paid-up capital of the company, be declared, such dividend to be payable on and after February 7, less income-tax."

The resolution was seconded by Mr. C. E. Barnett and carried unanimously.

The retiring directors were re-elected, and Messrs. Price Waterhouse and Co. were reappointed auditors for the year 1925; and after votes of thanks to the directors for their services, to the joint general managers and staff for their excellent work, and to the chairman for presiding, the proceedings terminated.

NEW ELLERMAN LINES' STEAMER.

The single-screw steamer Rydal Hall, built by Messrs. Barclay, Curle, and Co., Ltd., for the Ellerman Lines, Ltd., carried out successful trials in the Firth of Clyde on the 29th ult., when a mean speed of 13 knots was attained. The vessel is 416 ft. 6 in. long by 54 ft. 9 in. beam by 32 ft. deep, has a gross tonnage of 7,000, and a d.w. carrying capacity of 10,000.

She is a thoroughly up-to-date cargo carrier, with large open hatches and long erections, has a very complete installation of winches and derricks, serving large-sized hatches for dealing with bulky cargo, and the poop has been arranged specially high for the stowage of machinery.

The propelling machinery consists of one set of triple-expansion engines, having cylinders 23½ in., 40½ in., 71 in. by 48 in. stroke, constructed at the builders' Stobcross Engineering Works, steam being supplied by two single-ended boilers fitted with superheaters and Howden's forced draught. It is of interest to note that this vessel is the forty-seventh constructed by Messrs. Barclay, Curle, and Co., Ltd., for this company.

The Privileged Company to Protect Production and Trade in Currants announces that the whole of the outstanding bonds of the Five per Cent. Sterling Loan, due to be redeemed February 1, 1925, will be paid off forthwith. The bonds, with coupon No. 31 attached, are payable in London by Messrs. Erlangers, 8, Crosby Square, E.C., also at the Bank of Athens and its branches. Coupon No. 30, representing the half-year's interest due February 1, 1925, will be paid forthwith at either of the above offices.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Erratic Tendency in Futures.

The Alexandria Commercial Company, in their report for the week ended January 29, state :—

Since our last report the futures market has been very erratic; at the close a weaker tendency developed. The net changes on the week are the following :—Sakellaridis : $1.40 up for March; $1.15 up for May, $0.80 up for July, $0.10 down for November. Ashmouni : $1.62 down for February, $1.35 down for April, $1.45 down for June, $0.25 down for October.

The Sakel market has again been subjected to wide fluctuations, and March, after touching $64.50, closes at $60.25. The bulk of the business transacted has been of a speculative character, and the trade, for the time being, appears to be almost totally absent from the market, the prevailing high prices having killed the demand. Egyptians in Liverpool have more or less followed our fluctuations; they are still quoted at a heavy discount in comparison to Alexandria prices. At the third January tender 1,500 krs. dockets were issued. The total quantity of cotton tendered against January contracts is 3,000 krs. The smallness of these tenders, in spite of the discount of $3 from January to March, testifies to the strength of the position from a statistical point of view. The Ashmouni market has also fluctuated fairly sharply, and February, after reaching $36.40, has reacted to $34.10. The demand from abroad for this variety has been fair, but there are rumours that heavy dockets will be issued against February contracts, and this has adversely influenced the position. With New York at 23.70, present prices may look dear, but the cotton is firmly held, and the future course of prices will depend on those of the competing varieties in the leading distributing centres.

The stock in Alexandria of all varieties stands now at $1\frac{7}{8}$ million krs., and we estimate the remaining quantity in the interior at about $1\frac{1}{8}$ million kantars. This gives us a total supply for the remaining seven months of the season of about 3 million kantars. We would point out that the quantity of cotton shipped last year during the period February to end August was about $2\frac{5}{8}$ million kantars, and the present stocks of Egyptian abroad are about $\frac{3}{4}$ million kantars less than at the same date last year. Transactions in new crops have been rather scarce, and have consisted mainly again of straddles between November and October. The week's receipts amount to 150,504 krs., against exports 231,569 krs.; the stock stands at 1,891,670 krs.

Spot.—We have had a week of quiet markets at Minet el Bassal. Demand from abroad has fallen away considerably and is very moderate. Sales for the week amount to about 19,100 bales, of which we estimate 7,400 bales Sakel, 7,500 bales Uppers, 3,850 bales Zagora, 100 bales Brown, 150 bales Pilion, and 100 bales White.

Sakellaridis has met with a very moderate inquiry, mainly for the better grades. A small inquiry has, however, been met with for very low cotton. Medium qualities are very much neglected. Spot parities are generally a little cheaper.

Uppers and Zagora Lower Egypt continue in fairly good demand, principally for medium and good grades. Spot parities are without much change, though the lower grades are not so readily or cheaply offered as last week. Extra qualities have met with a good demand at high premiums.

Pilion.—A moderate business has been done. Spot premiums are unchanged except for Good and better, which are rather stiffer.

Brown.—A small business has been done. Spot premiums are generally rather dearer.

White has been in limited request. Spot parities have weakened somewhat.

COTTON TRADE REVIEW.

Outlook Rather Better.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended February 7 states :—

A somewhat more cheerful tone has prevailed this week. Business is still very restricted, but there has been a larger volume of inquiry, and in some quarters it is reported that more actual orders have been booked than during the weeks immediately preceding.

Yarn.—In American yarns a little more activity has been displayed, chiefly, however, in those counts of which makers were already fairly well employed. The experience of various mills has therefore differed considerably, and some are finding it difficult to discover sufficient outlet to keep pace with their production. It is expected that the ballot now in progress will result in the necessary majority being obtained in favour of shorter working hours. Egyptian spinnings are still adversely affected by the prohibitive price of the raw staple, the quotation for which has again materially increased.

Cloth.—Nothing more than a mixed inquiry for small lots can be reported. The demand from both India and China has been disappointing, though a little more has been done for the latter than recently. A fair number of transactions have been carried through for Egypt and the Levant, and South America has not been altogether idle. The Home trade has been featureless.

Raw Cotton.—In American a firmer tendency has been noticeable. "Spot" sales have been rather larger. Egyptian has again been a very strong market, and prices are higher by no less than 2.75d. on the week. Quotations for the later months of this year, however, show a very big discount on those for near delivery, and this situation, of course, entails considerable risk. Closing quotations yesterday were as follows :—American Middling, 13.28; Egyptian Full Good Fair, 34.50.

LIVERPOOL COTTON REPORT.

Inquiry on Good Scale.

Messrs. Reynolds and Gibson report as follows for the week ended February 4 :—

Egyptian Spot.—A fair inquiry has been witnessed during the past week, and spot sales have averaged roughly 400 bales per diem. Sakel, Upper, and Pilion have all been in request, and the feature of the week has been the further widening to a marked extent of the difference between Sakel and Uppers. The high prices ruling have tempted speculators and importers to take profits, and in Sakel, as well as in Uppers, considerable irregularity prevails, but it is most noticeable in the Upper market. It had been generally anticipated that any rise in the price of American cotton would be at once reflected in the price of Uppers. Just the opposite has occurred, however. This week, after a long period of quiescence, the American markets have all displayed distinct "bullish" tendency, and Uppers, instead of responding, have actually eased. In our opinion, this weakness is not likely to last very long. The cheaper cotton will move out of sight very rapidly, and the remainder will probably command higher prices than those ruling to-day.

In Sakels we find history repeating itself. Spinners are experimenting with the lower grades of cotton, many of which contain just as good staple as the better grades. Quite a fair business is now taking place in the recently despised "low cotton" at between 19.00d. and 20.00d. Basing our views on past experience, we expect the demand will slowly but surely work upwards as cotton goes out of sight. At the other end of the scale, Strict Good Fair cotton and Fully Good Fair is in steady demand at from about 32.50d. to 34.00d. Beyond the latter figure business is practically nil. A few spinners are still keeping in close touch with the Fine Sakel market, but the prices of this style of cotton are based almost in every case on the Alexandria market, and the result is prohibitive.

In Pilion a small, steady business persists, but prices have to be cut considerably in order to trade. Sudan has been neglected. Slightly more inquiry has been seen for Brown and White cotton. C.i.f. business has been very quiet. Forwardings to spinners for the week ending 30th ult. were returned as 12,062 bales. Estimated sales, 2,000 bales Egyptians and 150 Sudan. Quotations of Brown and Upper have been reduced 40 points, but those of Sakellaridis have been advanced 100 points for Fair, 180 for Good Fair, 190 for Fully Good Fair, and 215 points for Good, Fine, and Extra Fine. Fully Good Fair Sakel to-day 33.65d.

NOTES OF THE WEEK.

The Mosul Difficulty.

The tenacity with which the Turkish Government has clung to its Mosul claim is undoubtedly inspired more by economic considerations than by political motives or national feeling. It has unfortunately been encouraged by a British group to believe that, if the Mosul Vilayet were allocated to Turkey, the oilfields could be made the subject of a fresh deal, with immediate advantage to the Republic; and to secure this end it is prepared to make the widest possible concessions in other directions. Should the verdict of the League of Nations' Commission be unfavourable to Turkey, the disappointment felt will have nothing to do with any sense of racial kinship to a handful of Kurds, but will turn on the loss of what is regarded as an invaluable bargaining-counter and a source of possibly untold wealth. It would make for better relations between Turkey and Great Britain if by some means the edge could be taken off Turkish disappointment. The Republic is in a vicious circle; it cannot obtain a loan until it begins to meet its obligations, and it cannot meet its obligations until it obtains a loan. To cut this circle, to the advantage of Anglo-Turkish relations, should not prove beyond the capacity of British statesmanship.

The Œcumenical Patriarchate.

The Greek Government has made its formal appeal to the League of Nations on the subject of the expulsion of the Patriarch from Constantinople, basing its action on Article XI. of the Covenant, which empowers members of the League to bring to the attention of the Council any circumstance affecting international relations "which threatens to disturb international peace or the good understanding between nations upon which peace depends." On this point Turkey's attitude would seem to be that the expulsion of the Patriarch is a matter of internal routine which does not constitute a menace to the world's peace. If the Turkish Government should decline to send a representative to the Council meeting in March, it is not clear what steps the League can take in view of the fact that no disturbance of the peace had resulted. A more hopeful issue to the controversy is promised by direct negotiations between Greece and Turkey. At present informal discussions are taking place in Constantinople between representatives of the two countries, and it is an earnest of a practical solution that the official communication of the Greek Government to Turkey is couched in moderate and correct terms. A certain amount of the ill-feeling created has been due to inaccurate statements in the Press of what took place at Lausanne, when the Turkish delegation merely withdrew its claim for the expulsion of the Patriarchate without committing itself in any way on the subject of exchangeability.

Italy and Albania.

The Italian Government is understood to have manifested some uneasiness over the prospect of a concession being granted in Albania to the Anglo-Persian Oil Company. If the concession entailed anything in the nature of an oil monopoly in Albania, there might be some ground for an Italian protest, but exception can hardly be taken with any justification to an ordinary grant of exclusive rights over a certain limited area, as we may suppose the Anglo-Persian Company's concession to be. Italy can always count upon a sympathetic appreciation in Great Britain of her position in regard to Albania. She has pledged herself by a self-denying ordinance not to interfere in the internal affairs of the country, but she cannot allow another Power to occupy a position that she has voluntarily evacuated. There is, however, not the least risk that Great Britain will ever aspire to that position. On the other hand, Italy is concerned to see Albania become a peaceful and progressive State, and, as she cannot take an active part in the process without incurring the resentment of Yugoslavia, it is to her interest that the Albanians should turn for help to the nationals of the one country whose attitude towards Albania is above suspicion. Thus we may hope that not only will the successful exploitation of oil by the Anglo-Persian Oil Company promote the material progress of Albania, but that the employment of Englishmen as officials of the Albanian Government will also tend to the speedier introduction of order and good administration in the country.

Macedonia Again.

Another murder in Sofia will have still further alienated foreign sympathy from the Macedonian cause. The victim on this last occasion was M. Mileff, Minister-Designate in Washington, who was also connected with a semi-official newspaper in Sofia. Again the murderer escaped, but it is believed that the crime is connected with the internal quarrels of the Macedonian Organisation, which came to a head last August with the murder of the leader, Todor Alexandroff. Several assassinations followed in Bulgaria, but the crowning act of revenge was not accomplished until Peter Chaüleff was killed last December in Milan by order of the Macedonian Revolutionary Organisation. He had parted company from Alexandroff and Protoguéroff, because he favoured Soviet support, and, indeed, had been in receipt of Soviet funds. The murder of Alexandroff shortly after a quarrel between the leaders on this subject was laid at the door of Chaüleff, and his death was accordingly decreed. The next important stage in the vendetta is the death of Mileff. In this way it can be only a matter of time before the Macedonian question solves itself. Unfortunately no one seems available to direct the Macedonians to a better policy. The younger generation, who should be benefiting by contact with the outside world at the Universities of Paris, Vienna, Berlin, and Leipzig, seem only capable of fanning the flames of hatred and egging on their hapless compatriots to further acts of self-extermination.

The Yugoslav Elections.

In spite of the order maintained on election day in Yugoslavia, it is to be feared that there will be much recrimination over what happened during the electoral campaign. On this subject British standards form no criterion by which to pass judgment on what takes place in Yugoslavia. In a letter from Zagreb published in this issue the Croat version of the conduct of the elections is given without comment by our correspondent. The Serbian reply will no doubt be given in due course. Here we need only draw attention to the risk of allowing party passions free rein at election time. It is quite possible that any of the alleged excesses could have happened spontaneously at any given spot as a result of the high feeling prevailing: but every misdemeanour is at once attributed to Government inspiration or Government orders. If, therefore, any Balkan Government wishes to avoid the charge of making or "terrorising" elections, it must exercise severe control over its followers, and, above all, its officials.

Lord Balfour's Visit to Palestine.

It was inevitable that the Arab community in Palestine, or at least the Arab Executive, should declare a strike on the occasion of Lord Balfour's visit to Jerusalem to open the Hebrew University. In the circumstances it may be an open question whether the author of the "Balfour Declaration," which has served as the starting-point for Arab-Jew hostility, has been well advised to fan anew the gradually cooling fires of that hostility. Lord Balfour can with some justification claim to be an innocent party. The trouble that has arisen has been due less to the Declaration than to what the Jews affected to read into it and the Arabs' fears of this comprehensive interpretation. The Arabs will feel called upon to mark their disapproval of the author of the Declaration, and the Jews may consider it their duty to mark their disapproval of the discourtesy shown to their guest, with the result that there may be a regrettable setback to the *rapprochement* that unofficially, if not officially, had shown signs of beginning. On the other hand, it can be argued that the Declaration stands; the British Government has shown that it does not mean all that the Jews tried to read into it, nor all that the Arabs imagined from the tenour of Jewish statements that it must mean; therefore, there was no reason for Lord Balfour to deny himself the pleasure of being present at a ceremony which must make a strong personal appeal to him. Certainly an Arab "strike," however much it may satisfy the *amour propre* of the Executive Committee, will impress no one else favourably. The Arabs would be better advised to accord the author of the Declaration a special reception, in order to have the best possible setting for a full-dress statement of their case. Unfortunately, the Arab Executive has never once shown the least glimmering of political intelligence, much less of statesmanship.

Hobson's Choice in Persia.

Riza Khan, Persia's Prime Minister, and one strong man, in a peremptory message to the Mejliss, has recalled the words of the Preacher that a living dog is better than a dead lion, and has bidden that Assembly to make choice, as it were, between the two. For the official Lion of Persia, in the person of the Shah, who displays a youthful weakness for the fleshpots of France in preference to the politics of Persia, might be dead as far as any benefits that his own country derives from his existence are concerned, whereas the Sardar Sepah is very much alive. He has recently returned from a successful expedition, or series of expeditions, in the course of which he brought to book all those who had previously challenged his authority, followed up by a pilgrimage to the chief Shiah shrines of Iraq. Back in Teheran, he finds himself thwarted in the beneficent reforms that he has planned for the country by the active or passive resistance of the Valiahd, or Heir-Presumptive, who is acting as Regent in the Shah's absence. He has, therefore, called upon the Mejliss to free him from all arbitrary interference on the part of the Shah or the Valiahd, and the demand has promptly been satisfied. Whether this implies that Riza Khan is reverting by a more devious route to the idea of a republic for Persia, which he was obliged to abandon a year ago owing to the opposition of the Ulema, remains to be seen. He has already done more for his country than any other man of his generation, but his régime cannot yet be said to have educated public opinion to an adequate appreciation of good government. The people will no doubt reflect that any progress made by the country is faithfully reflected in the progress of the Sardar Sepah's personal fortunes, and may be tempted to draw the moral that it is better to be strong than merely good. The elimination of Riza Khan at this stage, however, must of necessity be a misfortune for Persia, and it is to be hoped that he will remain long enough to evolve a form of ordered government that will be able to carry on with its own momentum when the original motive power has been withdrawn.

THE YEMEN INFANTRY.

The following Reuter message from Delhi, dated February 13, will cause regret, though not surprise, to many British visitors to Aden:—"The Yemen Infantry, an Arab force under British officers, which was raised during the War for service in the Aden territory, has been disbanded. It has proved inefficient from a military point of view, and some of its men were concerned in the murder of Lieut. Lawrence a few months ago."

THE WEEK AT HOME.

London, Tuesday Morning.

The Weir Houses.

For some weeks now the talk of the third-class railway carriage has been raging round the question of steel houses, or, as they should more accurately be called, the Weir houses. I have not yet seen one of these constructions, but I understand that they are wooden dwellings with steel sheets for the outer lining of the wall. Their value, if they have any, is, as I see it, rather as a supplement to the ordinary brick house than as a substitute for it. But the reason that they have come so much into the public eye is because the trade unions and the Labour Party have declared war upon them.

The other day in Parliament, which has as yet scarcely settled down to real business, there was a debate on the Weir house. Very little was to be gained from it, except the fact, which everybody previously knew, that the Labour Party cares more for trade unionism than for the practical needs of the class which it is supposed primarily to represent. The whole point about this housing problem is that unless there is found an alternative to the brick house, the poor and wretched of this country will have to go unhoused for yet another generation.

The Political Levy.

A great to-do is now being made in the Conservative and Liberal Press over the political levy, which, willy-nilly, the trade unionist is compelled to pay. The highest sort of political morality is being doled out to us in very large spoons; and, of course, the thing is rather iniquitous. But what else could be done by those who wish to return people of their own kidney? Elections cost money, and impecunious men must be provided with the means to fight their wealthier opponents. Do away with the political levy, and to a great extent you make the House of Commons once more a preserve of the rich. It is a fact, moreover, that trade unionists do not commonly feel this violation of their political liberties that the virtuous Liberals and Tories say that they ought to feel. And if they do not complain, what is the use of raising a fuss? It may drive popularity from the Labour Party in the House, but it will assuredly fly out of Westminster to repose more surely in the country.

Territorials.

It used to be a jest (not, of course, during the War, but before it), not wholly unjustified, that the Territorials were soldiers playing at war. Everybody knows that their weekly drills and a fortnight's camping once a year were in the interests of "home defence" only. Now, however, confirmation has been made of the policy which Mr. Churchill proclaimed in 1920. In future the Territorials are to be the reservoir from which, in time of war, the regulars will be expanded. In other words, we shall not see a simultaneous or rival appearance of new "Kitchener Armies" and "Terrier Armies." This simpler plan ought to be the better.

War seems very distant, however. Yet it is well to remember that the new Territorials have in effect to fulfil the obligations of the regulars for overseas service. It will be interesting to see whether any difference in the constitution of the Territorial Army will be noticeable.

Railways and Roads.

This year is the centenary of railways. The occasion is bound to focus attention upon the competition between the railroad and the road. Actually, of course, the rail-line is but a form of road, and in a properly regulated society the one would be in happy supplement or complement to the other. But with us, who for a time deified the railway and allowed our roads to decay, the case has assumed the nature of a strife. On one side the matter is fairly clear: the railways cannot develop very much farther. Our road policy, on the other hand, is capable of almost infinite changes, and the advent of the petrol engine has made a new road policy an absolute necessity. As yet we are still groping after a policy, hesitating whether it is worth while to spend millions on perfecting our roads. It appears to be thought that something, like the aeroplane or the airship, will make roads of subordinate importance. For myself, I do not think so; and I incline to the belief, which I heard Mr. Belloc recently suggest, that civilisation may be judged by the roads which they produced.

Cruft's and the Woman.

It was as fine an exhibition as ever that the organisers of Cruft's Dog Show at Islington put up last week, but one thing more than any struck one: the hold which women now have in the breeding of pedigree dogs. Certainly there might be no harm in that—the sight of a woman who is an out-of-doors mistress of a fine dog is a sight indeed. But it contains one danger, and that is that this breeding is likely, as is everything else, to be subject to whim and fashion. The modern woman, who once loved the little terrier or the fawning spaniel or the drawing-room midget, now plumps for Alsatians and Irish wolfhounds. Heaven knows that this reaction from the decorative creature that barked and snarled from the feminine bosom is a healthy one, but, all the same, one feels that there may be something wrong in the hodiernal adoration of thews and sinews. It's all a sign of the times, one supposes; and, in any case, even in England, an Alsatian is more suitable a creature than a snappy "toy."

Twickenham.

The luck of Twickenham, of which so much tosh is always written before international Rugby matches, more or less came to an end on Saturday, when Ireland drew with England, each side scoring two tries. It was not a great match, but it was a very good fight. The defensive play of both fifteens was extremely efficient, but the handling was of the sort which would have made the All Blacks weep. Yet the last onrush of the English forwards was a thing to remember; the pluck with which the Irish went down to it was enormous. On the whole, the result was a fair one.

Bardsey Island.

One of the most pathetic results of the continued gales from which we have been lately suffering is the surrender to the elements of Bardsey Island, off the Welsh coast. This tiny island, which, in the heyday of Christian history, the thirteenth century, played a very important part in the reli-

Digitized by Google

gious life of the country, having an abbey to itself and boasting the bones of hundreds of distinguished monks, has gradually declined in popular esteem until there were but fifty people left there. It had no "wireless," no cinema—nothing, in fact, of that which the modern intelligence yearns for. And so, leaving the whole place, lock, stock, and barrel, to the birds and the sheep and the lighthouse keepers, the inhabitants have moved *en bloc* to the mainland. Perhaps, after a time, the ghost of some monks will call them back. Can it be that our fathers, whose winters were surely sometimes as wild as is this one, were of tougher stuff than is this generation?

Women Artists.

The Society of Women Artists are holding their seventieth exhibition at the Galleries of the Royal Institute, Piccadilly. It completely represents the artistic activities of a certain type of woman: I mean the faithful, industrious, and skilful woman. There are paintings here and sculpture, and many representations of the various crafts. But it is all a little dull. Imagination does not shine from these walls; the whole show is impregnated with the principle of "safety first." One sighs for a Laura Knight or an Ethel Walker.

The truth is, I suppose, that there are in this world far too many people who can do a thing very well indeed, and all too few who can do it surpassingly well. Although why the former should always take themselves so much more seriously than the latter is one of those things that may be revealed to babes, but which is certainly hidden from the normal observer.

London Plays.

"St. Joan" still stands out head and shoulders above any play now running; I am not sure yet whether it is a really great, but certainly it is a big, play. Compared with it, practically all the rest are so much kittle-kattle. We are on the crest, apparently, of a wave of social comedies or tragedies, by which is meant the taking of abnormal, unhealthy, and vastly depressing types of modern neurasthenics or wantons and the putting into their mouths of vapid audacities. The movement in this direction has even gone so far as for the less responsible of the critics to cry out that we have in it an up to date version of the "Restoration" period. Fortunately for our reputation, a certain proportion of these baneful affairs have reached London theatres only because they were first successes in New York or some other American home of cheap culture.

For the rest, a jolly revue or two, the revival (how bold our managers are in their despair!) of a musical comedy or two, and one or two funny plays that depend more upon acting than upon their contexts. In other words, rather above the average.

ALTER EGO.

The Haifa Technical College was opened by Sir Alfred Mond on February 9.

Major R. T. Little, Commissioner for the Palestine Pavilion at Wembley last year, has been appointed by the Palestine Government to the same office for 1925.

Under the joint auspices of the Brondesbury and Cricklewood Keren Hayesod Association and the Hampstead Keren Hayesod Committee, a film, entitled "The Land of Promise," was shown at the Maida Vale Picture House, Maida Vale, N.W.6, last Sunday. The film gives a delightful pictorial survey of Jewish life and work in Palestine and of the achievements of the Jewish pioneers in the building of the Jewish National Home. This form of propaganda should prove a great asset in the task of collecting financial support for the Keren Hayesod (Foundation Fund), and the scenes portrayed will doubtless result in an increase of both visitors and pioneers (Chalutzim) to "the land of Promise." Both Mr. J. Prag and Miss Janet Franklin made a moving appeal in support of the Fund.

NEWS IN BRIEF.

Prince and Princess Arthur of Connaught have left Calcutta for Rangoon.

Youssouf Hikmet Bey has been appointed Counsellor at the Turkish Legation.

Shumiatsky, the Soviet diplomatic representative in Persia, has returned to Teheran after a visit to Russia.

Sir Sefton Brancker, Director of Civil Aviation, arrived at Delhi last Sunday evening in the aeroplane piloted by Mr. Alan Cobham.

The Bill appointing the Sardar Sipah to be Commander-in-Chief of the Persian Forces, removable by vote of the Mejliss [Parliament], has been passed.

Abdel Hamid Mustapha Pasha, the Egyptian Under-Secretary for Foreign Affairs, died of apoplexy while taking part in a conference on February 11 at Cairo.

M. Mileff, manager of the semi-official Bulgarian newspaper *Slovo*, who was recently appointed Bulgarian Minister in Washington, was assassinated in Sofia last Friday.

A message from Patiala last week stated that the Maharaja's second son had met with a serious gunshot accident, necessitating the amputation of the right foot.

It is announced here that the third session of the Council of the Executive Committee of the Union of Soviet Republics will be held in the first half of March at Tiflis.

M. Caclamanos last week began the preliminary negotiations with the Yugoslav Minister in Athens, M. Gavrilovitch, for the renewal of the Græco-Yugoslav Alliance. Both parties desire the conclusion of a new Treaty.

Mr. Nichamal Lekhral, an Indian commercial traveller employed by a firm of Indian merchants at Gibraltar, was returning by rail from Tetuan to Ceuta when a party of Moors in ambush fired at the train, and he was shot dead.

After a long discussion the Greek National Assembly on February 3 unanimously rejected the Geneva Protocol for the settlement of the Græco-Bulgarian minorities question. A resolution of confidence in the Government was adopted.

According to reports from Moscow, 67 people and 27,000 cattle and horses were frozen to death during the recent severe weather in Transcaucasia. Many persons are said to have been devoured by wolves, which were seen even in large towns such as Batoum and Kutais.

The Tranin motor-car expedition, which is making a journey across Africa from Konakry, in French Guinea, to Jibouti in French Somaliland, arrived recently at Khartoum. M. Tranin and his party had a difficult journey from El Fasher across the desert to Darfur and Kordofan.

The case between the Greek and British Governments in the matter of the concessions made at Jerusalem under the Turkish *régime* to M. Mavrommatis, which were subsequently repudiated by the British Government, was opened on February 10, before the Court of International Justice at The Hague.

In a statement to Press representatives before leaving Bucharest for a holiday, M. Horiguchi, the Japanese Minister to Roumania, declared that the Treaty recently signed between Soviet Russia and Japan could not affect in any way the ratification by Japan of the Treaty dealing with Bessarabia.

The new Albanian Government has asked for the withdrawal from the agenda of the next meeting of the League of Nations Council of its predecessor's request for an inquiry into disturbances alleged to have been organised from Yugoslavia territory, as it considers the late Government's accusations to be unfounded.

Ahmadiya Moslems in London propose to hold a meeting of protest against the stoning to death, after a trial for apostasy, of two members of the Ahmadiya community in Kabul. This action by the Afghan Government is described as "one of a series of barbarous murders of citizens on account of mere religious differences."

According to the *Morning Post* Belgrade correspondent, the Yugoslav Minister for Education, M. Pribitchevitch, has decided to close down the German classes in Yugoslav secondary schools because there are not sufficient pupils to warrant their existence. Moreover, the Yugoslav national minorities in Austria do not possess similar privileges.

The Postmaster-General announces that Press telegrams are now accepted between the hours of 6 p.m. and 9 a.m., for transmission to Turkey at the rate of 3d. per word, with a minimum charge of 10d. per telegram. The necessary cards of authority for sending such telegrams will be furnished on application to the Secretary, General Post Office, E.C.1.

Mr. Walter Sherratt, an amateur wireless enthusiast at Cowes, Isle of Wight, states at 1.40 last Saturday morning he received a direct message from G.H.Q. of Mosul, in Mesopotamia, and transmitted it by telephone to the person to whom the message was intended in England. Mr. Sherratt added that he and the person in Mosul have exchanged transmissions by wireless, getting messages very clearly.

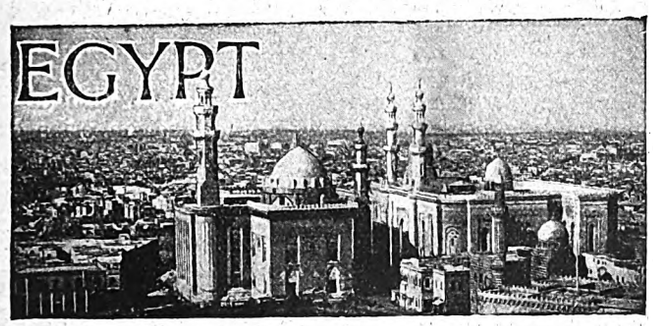
The Near and Middle East.*

From Our Own Correspondents.



Cairo, February 7.

The First-Degree Elections.

The first-degree elections took place on Wednesday last simultaneously throughout the country. With but one exception they gave rise to no incidents worthy of attention. At Mehalla-El-Kebir what was for all practical purposes an outbreak against authority was engineered by the Wafdist organisation, and it was only thanks to the prompt and energetic measures taken by the Government that it did not have more serious consequences.

If the Wafd wanted to create abroad an impression of popular irritation with the methods adopted by the Government, which it has so freely criticised, it could not have adopted a more stupid plan, for a display of disorderliness in one solitary election-centre out of a total of 90,000 can scarcely be regarded as a proof of general dissatisfaction with the way the elections are being organised and conducted. Rather is one confirmed by its isolated nature in the impression given by the character of the outbreak that, far from being spontaneous, it was deliberately organised.

As to the effect which these first-degree elections will have on the final election of deputies fixed for March 12, it is quite impossible to give even a forecast. Zaghloul Pasha himself, as well as several of his followers, have failed to secure election as electors-delegate. Various of the leading anti-Wafdists have, on the other hand, been successful. Both sides, however, shout victory, but neither can put forward definite proofs of the other's defeat, and it is useless for a layman to try to come to any even approximate conclusion.

Indeed, however much an elector-delegate may be regarded as carrying particular political colours, he cannot at this distance from the polling date be relied upon to vote for that party. One cannot forget that at the last elections men who had given their word to vote for a particular candidate went in the opposite direction when polling day arrived, while successful candidates themselves actually crossed over to join the party against which they had fought at the elections.

He would indeed be foolish who even on the eve of the polling ventured to make any prognostication in this country of surprises and paradoxes.

The Stack Inquiry.

Very satisfactory progress has been made in connection with the inquiry into the assassination of Sir Lee Stack. The arrest of the two students on their flight to the Tripoli frontier appears to have provided the link not only with this outrage but with several of its predecessors for which the authorities have been waiting; and it is expected that the investigation will now make rapid progress and enable the whole band to be brought to trial at an early date.

The work done by the police and public security authorities has indeed been most remarkable. The public has complained somewhat bitterly at the innumerable arrests followed by releases without evidence of any indication that the investigators were getting any nearer to the truth. In fact, only ten days ago the general tone in the clubs was one of despair, and criticism of those responsible for the inquiry was not sparing. What the public did not and could not of course know was that the authorities were waiting for certain plans to mature. For the success of these plans secrecy and patience were absolutely essential, but even to-day, although the investigation has undergone such considerable development, it is not possible to give all the details of the course which it has followed. There need, however, no longer be any lack of confidence in the results, and when it is possible to reveal exactly what has happened and how the murder-gang has been tracked down, it will, I am convinced, be generally agreed that the responsible authorities have accomplished a wonderful piece of detective and investigation work.

The Case of Mr. Anthony.

The acquittal of Mr. Anthony, the Director-General of State Domains, of the charges brought against him by the Wafdist Cabinet has given great satisfaction in all circles, although no other decision was expected, since all who knew him or had ever been in contact with him had never believed for one moment that there was any justification for these accusations.

There is, indeed, little doubt that the charges, which have now been unanimously disproved by the Mixed Council of Discipline, were merely framed to serve the policy of the Wafd by justifying the dismissal of an Under-Secretary who belonged to the opposition camp, and by lowering British prestige in the country.

I have heard the opinion freely expressed amongst Egyptians of all classes that the attitude adopted by the late Cabinet towards a man who, like Mr. Anthony, had for over thirty years rendered such honourable and faithful service was a

disgrace to the name of Egypt; but it is noteworthy that no Egyptian paper has had the decency to comment appropriately on this acquittal.

Mr. Anthony resumed his duties to-day, but it is not certain whether he will continue in the service of the Egyptian Government.

Zagreb, February 12.

The Yugoslav General Election.

In the last, short-lived Skupshtina the position was as follows: The majority in Parliament was decidedly in favour of M. Davidovitch's policy of agreement between Serbs and Croats. This policy was successful. Proof of that was that the Croatian Deputies once more put in appearance in the Skupshtina and took the Oath of Allegiance to King and Constitution.

But the Davidovitch majority had the grievous flaw that it was dependent for its existence upon M. Raditch's support. And M. Raditch proved an all but impossible ally. Whenever the Davidovitch Government was in for a particularly stiff struggle with the then Opposition, M. Raditch would promptly, with some ill-considered utterance, provide that Opposition with some powerful argument. And this process was regularly repeated, until at length one fine day the Minister for War tendered his resignation, and so opened up the Government crisis.

From this crisis the Opposition (the Radicals and their allies) emerged victorious, despite its minority. Supported by feeling in the army, and strong in its united front, it succeeded in obtaining the mandate for the General Election at the moment when the Davidovitch side made the mistake of refusing all compromise.

This solution of the crisis came as a surprise as great as the manner of its arising. The worst about it was that it was contrary to Parliamentary principle.

COLONIAL OUTFITS A SPECIALITE.

Telegrams: "MENTALLY." *'Phone:* MAYFAIR 1558.

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

Thus the country had an electoral campaign forced upon it. Books might be written about the fashion in which it was waged. The Radical Government was well aware that the greater part of the whole population was definitely opposed to it. Above all, it knew that Slovenia and Croatia would vote solid against it, and that its defeat was, therefore, other things being equal, a foregone conclusion. The problem was, how to prevent this defeat—at all costs. Not so much because Serbdom or the State was in danger—although these were in effect the election cries of the Government—as because the inevitable consequence of an Opposition victory would be the passing of the Anti-Corruption Law, and in that case the indictments of certain Radical ex-Ministers would likewise have been put to the vote in the Skupshtina. To prevent this, those in power staked their all on the very last card—political terror.

Election Making.

The first step was an attempt to discredit the Raditch Party by the charge of Bolshevism because of its adherence to the Moscow Peasant International—not the Third International. To this end the *Obznana* was launched against the party, and its leaders were imprisoned. Hereby the Government was presently to find itself in a quandary. The Court pronounced the charges brought by the police against the arrested Raditch partisans to be devoid of foundation, and demanded their immediate release. The Court of Appeal confirmed the finding of the lower instance, and decided that all the prisoners must be set at liberty at once. It should be noted, by the way, that Dr. Matchek was the Vice-President of the Skupshtina, and actually in receipt of his daily allowance as deputy; wherefore he was—or ought to have been—protected by his parliamentary immunity. In spite of this he is still in custody at this time of writing, although he was re-elected last Sunday.

After this set-back at the hands of the Courts, the Government could no longer proceed against the Raditch Party as it had hoped to do. The idea of wholesale arrests had to be dropped. A second scheme likewise miscarried, owing to the firmness of the Courts. All police orders to the effect that the electoral lists of the Raditch Party were pronounced illegal were invalidated by the Courts of law. The Opposition, too, did its part, and all Raditch adherents were made to realise that they must vote Opposition if so be that the Raditch lists failed to be put up. In these circumstances the Government had to reckon with the danger that in that case M. Davidovitch might score over one hundred mandates, and so found itself compelled to permit the Raditch lists. Other plans for breaking Croat opposition were attended by no better success, and so it seems to have been held necessary to make sure of its majority in the Serbian regions.

The Croat Version.

From this point I can merely give the version of the elections current in Croatia and Slovenia. Whether it is right in every or any particular will be known for certain only after a time. If it is accurate, the country is sure to hear more of the subject.

Measures to ensure a majority were adopted, above all, in South Serbia, where rougher methods are a more or less time-honoured custom. The Turks, united in the Jemiyet, so-called, who had scored a whole fourteen votes at the last election when they were the allies of the Radicals, were the first now to feel the heavy

Digitized by Google

hand of the Government. Their Press was muzzled, their leaders were imprisoned along with Ferad Beg Draga. In vain the former Minister for Internal Affairs, M. Nastas Petrovitch, went to South Serbia in person. He achieved but little, and was himself made to feel the power of the Government. After the Turks, it was the Independent Radicals and the Agrarians (*Zemljoradnici*) who had to bear the brunt of the Government's displeasure, and who were quite unsuccessful, moreover, at the election. The Opposition rallied round the Democrats, who did comparatively well, though not as well as they might have done had they not suffered likewise from Government pressure—and, it may be added, from the persistent failure of the Opposition to achieve efficient unity of front.

As regards election terror, Bosnia and Herzegovina came next to South Serbia, and then the Voivodina. Old Serbia was left, relatively speaking, in peace; for the Serbian peasant loves his liberty and knows, too, how to defend it. But even from Serbia some queer things are reported. In Croatia, for State political reasons, the election terror had to be kept within bounds. In Slovenia it was practically impossible to exercise it at all, and it had to be limited to bringing moral pressure to bear upon Government officials and economic pressure upon persons of limited means.

The net results, moreover, make the following facts abundantly plain. Large parties were able to hold their own throughout against Government coercion; small parties went down under it. The large opposition parties have come out of the election practically as strong as they went in, whereas the lesser parties have been almost wiped out.

Governmental Electoral Resources.

What were the terroristic methods employed? As to that one is told many things. First of all, the officials were mobilised to do the canvassing for the Government. Who failed in this was in danger of losing his job. As, however, the Government's first precaution had been to pension off such as might prove tiresome, special regulations for Government officials during the actual campaign were rendered superfluous.

After purging the administrative apparatus, the Government proceeded to economic pressure, and where that failed, to pressure upon individuals. Candidates were attacked and beaten by organised bands of rowdies. This happened to the German leader, Dr. Kraft; also to the Serbian war hero and Agrarian leader, Dr. Stayitch, to Dr. Tomlyenovitch, ex-Ban of Croatia, and several others who had proved on more than one occasion that they considered no sacrifice too great for Yugoslavia. It would be quite a mistake to assume that the Germans or any other national minority had a monopoly of persecution, which was directed against all that belonged to the Opposition—and none fared worse than its Serbian adherents.

But violence failed to cow the Opposition. On several occasions the peasants took to their defence, and bloodshed resulted. Then the Government, it is said, had recourse to other means, especially on the eve of the election. Opposition candidates were arrested, and their prospective electors faced with the question, whether they cared to give their votes to a man who had been run in by the police!

In exceptional cases even the men in charge of the voting urns were placed under arrest. Every party has the right to appoint special persons to watch its own urns, and these men have also to sign the returns. In the absence of these guards it is possible to "cook" the said returns. Then again, under the law, the appointed presidents of the elections are for the most part taken from among the judges. On this occasion, and contrary to law, these judges were largely replaced by trusted servants of the Government. There are reports of methods even more crude. Electoral urns disappeared. Special regulations, quite out of order in their tenour, whereby special passes were required for access to the polls, made it impossible for Opposition electors to exercise their vote. This particular proceeding is reported from Subotica. Special editions, purporting to be those of Opposition papers, called upon the electors to vote for the Government, as a compromise had been arrived at.

These are grave allegations. But at this time of writing it is too early to do anything save to record them. Doubtless there will be investigations and inquiries, and already one is told of doubtful and disputed elections in a very large number of cases.

Yet, whatever the means employed, the Government failed to score that complete victory upon which it had counted. This was perfectly natural. Its election prospects had not been at all rosy at the last. The Radical Party was disunited to the point that in thirty-one constituencies out of fifty-six it had to combat seceders, who brought the gravest accusations against it. The Opposition was much more united than in 1923. As the Radicals had been in charge of the election on that occasion also, it was expected that at the best they would maintain their strength, and that the Independent Democrats would lose. But that, in any case, the Government would come out of the General Election without a majority.

The Results.

These forecasts have proved mistaken. The Government won by a majority of nine. Of 315 mandates, the Radicals obtained 140, the Independent Democrats 22. Of the Opposition, M. Raditch obtained 68 mandates (minus 2); M. Davidovitch, 37 (plus 4); Dr. Koroshets, 19 (minus 1); M. Spaho, 15 (minus 3); the Agrarians, 5 (minus 6); the Germans, 5 (minus 3); the Montenegrin Federalists, 3 (plus 1); and the Jemiyet, 1 (minus 13).

These are the results, as officially published by the Government. But so far nobody knows whether they are correct. The Government confines itself to declaring that the Government commands 162 mandates, and the Opposition 153. How these mandates are divided is a matter concerning which reports differ rather widely.

Of course this uncertainty is everywhere creating the worst of impressions, and it is not to be wondered at that the public at large is strongly inclined to believe the Opposition papers, which maintain that the Government has actually come out in the minority!

Be that as it may. One thing is abundantly clear. Had the election been, indeed, free and

untrammelled, the Opposition would have scored a sure and overwhelming victory. But, even so, it has proved that the Slovenes and Croats, and a great part of the Serbs, are in favour of a brotherly agreement, and opposed to the Government policy of heretofore.

The way of M. Pribitchevitch is not the way that will lead to a solution, and this is being recognised more and more, even in Radical circles. But whether the more judicious among the Radicals will get the upper hand in the near future is not yet clear, and, therefore, it is impossible as yet to hazard forecasts concerning the future Government.

The first sitting of the Skupshtina will not take place until March 7, and it is then that the decision will fall. Yet, however it may fall, it is plain even to-day that Yugoslavia's man of the future is the man who will achieve the agreement between Serbs, Croats, and Slovenes. And at this moment M. Davidovitch's prospects in this respect are brighter than those of anyone else.

ALBANIA.

Tirana, February 3.

Normal Life Again.

Tirana has settled down again to an apparently normal life since the recent stirring events. It is curious to note how the ordinary business of the country is no more disturbed by armed revolution than it is by an election. In outward appearance there are no changes to signalise. The new Government has announced its programme, which contains nothing that is remarkable. Stringent economies and administrative reforms stand in the forefront, together with the cultivation of cordial relations with all Albania's neighbours. In this the programme resembles that of all predecessors. Elections are promised at an early date, and the results are certain to be favourable to the Government.

The Government.

All the most prominent members of the Opposition, whether civilian or military, are in exile. So is the ex-Regent, Dr. Petsi, whose place has been taken by Jafer Ypi. Ahmed Zogu remains dictator. Nevertheless, he has not found the task of forming a Government an easy one. Elias Vrioni has repudiated him, and has retired to his estates. Several other prominent ex-colleagues are professing to remain aloof. The new Ministry at present accordingly remains as follows :—

Prime Minister and Minister of the Interior.—Ahmed Zogu.
Minister of Finance and (*ad interim*) of Justice.—Mufid Libohova.
Minister of Public Instruction and (*ad interim*) of Public Works.—Kocho Kotta.

The Prime Minister, aided by Mufid Libohova, who is an experienced ex-Turkish Administrator, has also assumed *ad interim* the Ministry of Foreign Affairs. The Ministry of War has been abolished and a Commander appointed, enjoying the confidence of the Cabinet, charged with the task of reorganising the Army. The idea is to disband the existing Army, the majority of which has been compromised as unfavourable to Ahmed, and to reorganise it, taking the Swiss system as a model. Meanwhile a force composed of Ahmed's staunch adherents remains the only well-equipped body of men in the country.

The "rump" of the Constitutional Assembly has met to sanction the present Prime Minister's *coup*, and is now adjourned, after voting an order of the day in favour of a republican form of Government.

A Revival of the Clique?

The only symptom of interest that emerged from its sitting was the attitude of the ex-Speaker, M. Eshref Frasheri. The latter has been a staunch supporter of Ahmed, and was the prime mover of the "Clique" which arose in the first place as a patriotic association, but later degenerated into a secret mutual benefit society, until Ahmed practically destroyed it by splitting it into various sections, some for and some against him. It appears that Eshref is now anxious to pursue an independent policy and to revive the organisation of the Clique, purged both of the immediate followers of Ahmed and of the extreme Opposition. This, on the one hand, and the independent followers of Elias Vrioni will therefore presumably constitute the "Constitutional Opposition."

Concession.

The Prime Minister has announced that he intends on the earliest occasion to conclude the agreement with the Anglo-Persian Oil Company and to reopen negotiations with regard to the tobacco concession.

ROUMANIA.

Bucharest, February 11.

The Liberal Party.

M. Duca, Minister of Foreign Affairs, has been good enough to give the following summary of the work of the Liberal Government since it came into power three years ago—the work which it is still striving to complete in the best interests of the country.

Consolidation of Greater Roumania.

The National Liberal Party, during its three years of office, has concentrated all its efforts upon the consolidation of Greater Roumania. This work had to be considered from different points of view :

(a) From the Constitutional point of view.
(b) From the administrative and legislative point of view.
(c) From the economic and financial point of view.

Each of these aspects of the problem has been taken up in its turn, and in less than three years the Government has succeeded in providing the necessary solutions.

Constitutional Aspect.

As regards the Constitution, it was evident that the actual organisation of the country could not be undertaken until a working basis had been formed. The new Constitution is a very democratic one : it contains nothing which differs greatly from the Constitutions of other countries, drawn up since the War. One point, however, deserves special notice, and that is the nationalisation of the sub-soil. According to the new Constitution all the sub-soil belongs to the State. If one adds to this the expropriation of land, and universal suffrage, which are also due to the initiative of the National Liberal Party, it will be understood why this party

can afford to smile ironically at the attacks of those who would represent it as a party without political ideals or truly democratic aspirations.

Administrative Consolidation.

As regards the administrative and legislative consolidation, the Liberals have worked for co-ordination in the organisation of the country in this respect. It was, indeed, impossible to continue with the existing system, i.e., with the Roumanian legislation in the Old Kingdom, the Hungarian legislation in Transylvania, the Austrian in the Bukovina, and the Russian in Bessarabia.

The law for administrative co-ordination, based upon a wide decentralisation, will be voted by Parliament within the next few months; the law for the unification of schools has been partly voted; and there only remains to be passed during the present session the law for private and secondary education. The law for the general organisation of the magistrature was passed last year.

This work has been guided by two main ideas. In the first place, the Liberals have systematically avoided the imposing upon the whole of the New Roumania of the legislation of the Old Kingdom. On the contrary, an attempt has been made to accept the best of the legislation of each province.

Secondly, an effort was made to give to this work of organisation and legislation a democratic character, compatible with the spirit of modern times.

The co-ordination of the Codes was a harder task. The Penal Code is finished, and certain parts of the Commercial Code also, but the unification of the Civil Code is a very difficult and delicate matter, and will doubtless not be completed for several years.

Financial Situation.

As regards the financial and economic consolidation, the task of the Government was particularly difficult. On coming into power it was faced by a deplorable financial situation and a bad economic one. A deplorable financial situation because the Budget showed a deficit, there was an enormous floating debt not consolidated, both at home and abroad; crying debts everywhere; in fact, there was complete and discouraging financial disorder, and a depreciated currency losing value every day.

From the economic point of view, the trade balance showed a deficit, speculation was rife, all kinds of new enterprises were being founded which, owing to imperfect organisation, were foredoomed to failure.

In less than three years the Liberals have completely re-established the financial situation. This year's Budget is the third balanced one; the foreign floating debt is entirely consolidated, and the internal floating debt almost paid off. The Government has liquidated the crying debts. It has introduced order into the public finances and re-established the normal working of the service of the public debt. There now only remain the war debts to be arranged for, and those, be it said, represent a comparatively moderate sum, considering the possibilities of Roumania.

The Liberals have stopped the fall in the value of the leu, the present fluctuations in the exchange being such that the national currency may be regarded as stabilised in relation to the gold standard, so that Roumanian commerce and industry are enabled to work under practically normal conditions.

Moreover, they have re-established the commercial balance which has now been on the credit side for the last two years, and is daily tending further in that direction. They have put an end to speculation and the foundation of mushroom companies: those unmistakable signs of financial instability and money crisis.

They have also begun to cope with the important problem of the development of the natural riches of the country, including the natural sources of energy, and in this connection they have appealed to foreign capital for its collaboration. Their programme, which, indeed, is not a new one, is in no way hostile to foreign capital. They are perfectly well aware that it is impossible to develop the country's riches by means of its own financial resources only. What they do want, however, is to collaborate with foreign capital in such a way that the Roumanian element is enabled to participate in the economic development of the country. Their formulæ for this collaboration are to be found exemplified in the Law of Commercialisation. On the basis of this law they have begun to make provision for the expansion of the exploitation of mines, water power, metallurgical industries, and M. Duca said that he was bound to say that, in spite of the campaign that has been waged against this vast and interesting programme, the Liberals had the satisfaction of noting that foreign capital with serious intentions has not refused its participation, and they are on the eve of the realisation of certain creations of the greatest importance, both from the point of view of the organisation of our economic future and from the point of view of national defence.

It is true that this work is far from completion, and that many imperfections may be found in it, but it is none the less true that it represents an effort of incontestable importance, in consideration of which the Government can well afford to treat as negligible the agitations of an opposition which is more or less impatient to come into power.

The Government and Foreign Opinion.

It is, proceeded M. Duca, neither the Liberals' custom nor their wish to attack in foreign countries their political adversaries. Suffice it to say here simply that the interests of the country demand the existence of a strong and serious opposition capable of completing the work of consolidation of Roumania from the moment when the Liberals are unable to continue it. Their only regret is that up till now no such opposition has been formed, and that is why they continue their efforts without regard to the agitations or attacks, of which THE NEAR EAST published certain echoes, keeping in view their main aim, which is the consolidation of that Roumania which has been created at the expense of such great sacrifices and so much bloodshed.

KARACHI AS AIRSHIP BASE.

It is understood that the discussions on the choice of a base in India for the airship service will be settled in favour of Karachi, and that Bombay will be a halting-place with a mooring mast. The Rangoon Correspondent of the *Times* has stated that Rangoon may also be a port of call. The idea is a line of mooring masts at Calcutta, Rangoon, and Singapore on the way to Australia.

It is reported from Bucharest that the Senate has ratified the Bill providing for the creation of a Roumanian Patriarchate.

The dispute between Roumania and Bulgaria concerning agrarian reform and Bulgarian minorities in the South Dobruja, which came up before the Council of the League of Nations at Brussels recently, has been settled in a friendly manner.

TURKEY TO-DAY.

To the Editor of THE NEAR EAST.

Sir,—It would be a pity if the address given before the Central Asian Society by Lieut.-Colonel J. H. M. Cornwall, and reported in THE NEAR EAST of January 22, should go unchallenged. He has represented Turkey to the British public in a very unfavourable and unfair light, and, as Colonel Stokes commented at that meeting, our Eastern interests depend upon friendship with Turkey—which the Turkish Government has declared itself quite willing to reciprocate. But friendship can only be attained if we have a true understanding, and not one jaundiced by misinformation or prejudice.

Colonel Cornwall is entitled to his opinions, based as they are on his knowledge of Turkey a year ago. But those who know the country intimately are aware that the opinions and prejudices one held a year ago are already antiquated; for the past year has made a marked change in the Government policy, the mentality of the public mind, and the economic condition of the country. The whole situation now is vastly more promising.

The population of the country is not declining—except for a sudden loss of a million inhabitants to Greece, which does not mean a declining birth-rate. The total population of Turkey is now 13,300,000 (according to latest Government figures), and not 8,000,000, as Colonel Cornwall states. It is not true that it is impossible to get a pair of shoes repaired in Turkey: in the cities there are whole sections of the bazaars given up to cobblers, and in many villages—quite possibly not all—there are cobblers who do cheap and good work. Although immediately after the exodus of the non-Moslem population skilled workmen were apparently scarce, there are now plenty of carpenters, builders, and all kinds of craftsmen among the Turks. The rapid rebuilding of the burned villages and the extension of many railway lines and improvement and construction of roads indicates plenty of sufficiently competent labour.

The Turkish authorities are still reluctant to admit foreign capital, but the day is drawing close when they will permit this. Already business is penetrating rapidly, foreign firms are establishing themselves and gaining large concessions from Angora. The Turkish Press is starting an agitation for a better policy in respect to foreign capital, and the Government, faced by an increasingly powerful Opposition party, is bound to take cognisance of the Press demands.

I might adduce many other reasons for a more optimistic outlook upon the immediate future of this country, but space forbids. Colonel Cornwall either has not witnessed the remarkable progress the young and handicapped Republic has made during the past twelve months, or he has seen things with rather an *a priori* pessimism. British residents who have remained in Turkey are much more optimistic.—I am, etc.,

KENNETH P. KIRKWOOD.

International College, Smyrna.
February 2, 1925.

[Between Mr. Kirkwood's optimism and Colonel Cornwall's pessimism we do not care to choose, but in fairness to Colonel Cornwall we must point out that his impressions were based on experiences in Turkey at least as recently as last summer.—ED.]

EARLY MOSLEM ARCHITECTURE.

At the School of Oriental Studies in Finsbury Circus, E.C., Mr. Ernest Richmond, F.R.I.B.A., is delivering a series of five lectures on Early Moslem Architecture. Mr. Richmond was at one time employed by the Egyptian Government in the restoration of Moslem and other monuments, and afterwards went to Palestine at the request of Lord Allenby to inquire into the condition of the building known as the Dome of the Rock.

In the course of the first lecture—delivered on February 11—Mr. Richmond traced the growth of the mosque from its beginning with the one founded at Medina in the year of the Hegira (622 A.D.). This was, he said, a very simple building, square in plan, the sides each one hundred cubits long. Foundations and enclosing wall were of stone to a height of 4½ ft., and above that of brick. By means of lantern slides the lecturer illustrated the plan of this mosque, also the plans and elevations of others erected within the following ninety years, by which time Moslem rule had been extended over the whole of Arabia, Syria, Palestine, Egypt, North Africa, Spain, Persia, Afghanistan, Baluchistan, and a part of North-Western India. The Arabs of that time were far from being savages, and wherever they went they found noble buildings, and craftsmen highly skilled in the building arts. Thus in the period named they evolved a unified and balanced architectural expression for their needs. Those needs were partly physical, partly ritual, and partly political. The physical needs were met by the provision of a secluded area, a sheltered sanctuary, and sheltered access to it from every side. The ritual needs were met by the provision of minarets from which to call to prayer, a basin in a fountain for use before prayer, a pulpit from which to preach after prayer, and a niche in the sanctuary to indicate the direction of prayer—this was at first towards Jerusalem, but afterwards towards Mecca. The political needs were met by a majesty and symmetry of plan and a splendour of ornament which would rival and surpass if possible the architecture of the conquered Greek civilisation in the provinces of the Byzantime Empire that had been overrun, and so illustrate in a manner visible to everyone the high and dominant place in the world that had been taken by the followers of Islam.

EGYPTIAN DIPLOMATIC APPOINTMENTS.

Reuter's Cairo Correspondent, writing on February 4, states:—The following appointments in the Egyptian Diplomatic Service are awaiting the Royal sanction:—

Seifulla Pasha Yusry, Egyptian Minister at Washington, is to be transferred to Berlin.

Mahmoud Pasha Samy, former Under-Secretary of State for Communications, will replace Seifulla Pasha Yusry at Washington.

Mahmoud Bey Fayed, formerly Engineer of the Public Works Department, is appointed Minister at Madrid.

Saddek Pasha Wahba, Director-General of the Ministry of Foreign Affairs, is appointed Minister at Brussels.

Mahmoud Bey Sabet, formerly First Secretary of Legation in London, is appointed Minister at Prague.

Heddaya Pasha, Governor of Cairo, is appointed Minister at Athens.

These appointments involve the creation of five new Legations.

PERSONAL AND GENERAL.

TO-DAY.

February 19, 1925 (New Style).
February 6, 1925 (Old Style).
Rajab 25, 1343 A.H., of the Moslem Calendar.
Shebat 25, 5685, of the Jewish Calendar.

The Earl and Countess of Dalkeith have returned to London from India.

Mr. and Mrs. John Walter left London last week for Egypt and Palestine.

Lady Archer, wife of Sir Geoffrey Archer, Governor-General of the Sudan, left Cairo last week for England.

Sir Alfred Mond, M.P., and Lady Mond and Miss Nora Mond have returned from Upper Egypt to Palestine.

Sir Victor Warrender, M.P., and Lady Warrender have returned to 18, Upper Grosvenor Street, from Palestine.

Sir Harold and Lady Snagge left London last Thursday for Egypt, and will not be back in England before the end of March.

The Earl and Countess of Berkeley have left Claridge's for a short visit to Luxor. They will return to London early in the spring.

Colonel and Mrs. A. M. Gage, who accompanied their son to Bombay, have now returned to London, and are residing in Park Lane.

Lord and Lady Monkswell have left England for Egypt, and do not expect to be at 69, Cambridge Terrace, W.2, till the end of March.

Mr. H. Charles Woods has left London for Palestine and Syria. He expects to return to England by way of Turkey and the Balkan States.

Sir Atul C. Chatterjee, High Commissioner for India, was among the Fellows elected at the last meeting of the Council of the Royal Colonial Institute.

The Crown Princess of Roumania and Princess Irene of Greece visited Their Majesties the King and Queen last Sunday at Buckingham Palace and remained to luncheon.

Their Excellencies the Bulgarian Minister, M. Pantcho Haji-Mischeff, and the Turkish Minister, Zekiai Bey, had the honour of being received by the Queen at Buckingham Palace last Thursday.

Mrs. Patrick Ness will lecture before the Central Asian Society on Friday, February 27, at 74, Grosvenor Street, W., on "Across the Syrian Desert to Persia," with lantern illustrations, at 5 p.m.

Professor G. Elliot-Smith, F.R.S., delivered a lecture on "Medical and Biological Science Among the Egyptians" last Tuesday, at the Royal Society, Burlington House (by kind permission of the Council), under the auspices of the Egyptian Exploration Society.

DOMESTIC ANNOUNCEMENT.

PERKINS—On January 24 at Moda, Constantinople, Millicent (née Whitehouse), wife of William Jackson Perkins (Junior), of Constantinople (late of Guildford, Surrey)—a daughter.

The Egyptian Chargé d'Affaires in London, Sesostris Sidarouss Bey, gave a dinner party on February 10 at Claridge's Hotel in celebration of the birthday of Prince Farouq, the Crown Prince of Egypt.

Under the auspices of the East India Association, Mr. Stanley P. Rice will read a paper entitled "India's Gifts to England"; the meeting, which will be presided over by Lord Ampthill, will take place on February 23 at 3.30 p.m. in the Caxton Hall, Westminster.

The marriage took place last Tuesday at the Brompton Oratory of Mr. Ivan Stancioff, only son of H.E. Monsieur Dimitri Stancioff and of Madame Stancioff (née Comtesse de Grenaud), and Miss Marion Mitchell, only daughter of the late Mr. James Mitchell and Mrs. Mitchell, of 46, Mount Street, Mayfair.

A series of lectures, the first of which was delivered last Thursday, is being given in the Lecture Theatre of the Victoria and Albert Museum by Mr. A. J. B. Wace on "Greek Embroideries." These lectures, admission to which is free, without ticket, will be continued to-day and every Thursday at 6 p.m. until April.

The engagement is announced of Lionel George Archer Cust, Royal Artillery, District Officer, Jerusalem, only son of Mr. Lionel Cust, C.V.O., and the Hon. Mrs. Cust, of Datchet House, Datchet, and Margaret Violet Louisa Clowes, eldest daughter of the late Lieutenant-Colonel Henry Arthur Clowes, 1st Life Guards and Staffordshire Yeomanry, of Norbury, Derbyshire, and of Lady Storrs, The Residence, Jerusalem.

Mrs. Charles Hancock gave an "at home" on February 11 at 125, Queen's Gate, for the Kensington branch of the League of Nations Union to discuss the Geneva Protocol. Lord Phillimore was in the chair, and Rear-Admiral Drury Lowe, Mr. Sidebotham, Mr. Stein, and Mr. Hancock spoke. Among those who accepted invitations were:—The Chargé d'Affaires of the Serbs, Croats, and Slovenes, the Persian Minister, the Afghan Chargé d'Affaires, the Albanian Minister, Sir John and Lady Brunner, Sir Edward and Lady Boyle, and the Dowager Lady Boyle.

TAKING STOCK IN INDIA.

We referred recently to the decision of the Government of India to move some way towards meeting the demand for an inquiry into the economic condition of the country. The announcement last week of the appointment of a small preliminary committee to clear the ground shows that no time is being lost, and it is pleasant to be able to recognise the fitness of the members—two Indian administrators and one English economist—for the limited task assigned to them. The inquiry is thus in being, and it may be well to explain, more fully than we have yet done, what is wanted, and why. A demand for such a national stocktaking exists in three very different quarters. To begin with, the extremist politicians in India clamour for it, but their eagerness is discounted by the conditions on which they insist. They claim to nominate a majority of the investigators, or, in other words, to pack what should be a strictly impartial tribunal, and they do not conceal the hope that by this measure they will obtain fresh supplies of garbage to throw at the British Administration and the British people. If these politicians stood alone, we should object to any inquiry whatever being made at the expense of the Indian taxpayer. People who want cooked statistics may fairly be expected to pay for the cost of cooking, and the manufacture of party ammunition is a fair charge on the party chest, but not on the public treasury. The demand of other classes stands, however, on a different footing. Many of the best men in India are increasingly perplexed at the disparity between national aspirations and the national income. So many things are urgently wanted, so little money is available, progress seems so slow, and hearts are so very faint, that they ask to be told exactly how the country really stands, what is the national income, what proportion of it can now be set aside for nation-building, and what prospect there is of a progressive increase in the amount.

In our view, these serious thinkers are perfectly justified in asking the Government to furnish them with answers to such questions as these, and the case for an inquiry is strengthened by the feeling of uncertainty which is growing up in countries outside India. The English nation, the Empire, and the world in general have been accustomed for nearly a century to hear of the material benefits which have accrued to India under British rule, and, in the absence of effective contradiction, they have regarded the matter as settled fact. They are becoming disturbed by the activities of the men who put forward the contrary view, sometimes as professional politicians, sometimes masquerading in the disguise of professed economists. No private individual has leisure or opportunity to study the whole vast subject for himself; the foreign student sees at most assertions and denials which he is not in a position to test with effect, expressions of individual opinion are necessarily open to more or less suspicion, and the time has come when the question should be submitted to the judgment of impartial experts. For Englishmen in particular the matter is one which seems to us to touch the national honour. Acting as trustees for the Indian peoples, we have claimed credit for a slow but real development of the wards' estate. That claim is now vehemently denied, and in justice to ourselves we are bound to give the world an opportunity of judging the value of our work. It is true that most of the relevant facts have been published from year to year, but the mass of figures has become far too great for individuals to grasp, and what is wanted now is to review this mass of figures, to eliminate the accidents, direct attention to the more durable tendencies, and provide a definite answer to the questions: What has been the national income during the period of thirty years or so for which it can be statistically measured? Is it increasing or diminishing? What is the rate of movement? And is the rate itself changing, either favourably or unfavourably? On the answers to these questions depends the verdict on the material side of our work in India, and it is due to ourselves, even more than to the rest of the world, that the answers should be formulated in the plainest terms.

An inquiry of this sort must fulfil two conditions—it must be strictly expert, and it must be strictly impartial. There is no room for amateurs, and there is no room for experts who have already made up their minds on any of the questions in issue. The main burden must be borne by men familiar with the economics of peasant life, and the number of these in England, as in India, is, unfortunately, very small. Happily there are peasant-economists in other countries, in France and Belgium, in Japan and America, and a strong foreign element on the tribunal appears to us to be most desirable, because we should then find the union of competence and impartiality which is indispensable, and we should in effect be submitting the whole matter to the judgment of the civilised world. We would have no Indian administrators on the tribunal itself: they should rank as assessors, helping the members to get at the facts, but having no voice in the decisions. Similarly, the Legislative Assembly might be invited to appoint assessors, to ensure that unofficial views should receive due attention; but with no other influence on the tribunal than could be secured by the presentation of relevant matters of fact. We realise that the Assembly, in its present temper, might refuse to have anything to do with an inquiry of the type we have indicated. In that case, the members should be appointed by the Cabinet, and paid by Parliament. We realise also that many Indian politicians, according to their habit, would endeavour to discredit such an inquiry in advance, and would ostentatiously refuse to accept its findings. It is not, however, of the politicians that we are thinking, but of the reasonable people, in India and elsewhere, who want to know the facts, and also of the Indian administration, which, under existing conditions, would undoubtedly benefit by a verdict from outside. The essential thing is to put the truth before the public in a form which the public can grasp. If that is done, the truth will gradually win acceptance, until even politicians at last get tired of denying it; but so long as the truth remains buried in the archives, the public must remain perplexed, and increasingly suspicious that there is something to hide.

LITTLE NIGHTINGALE.

By F. W. CHARDIN.

The Albu Hamed was a house, or rather a tribe, divided against itself. True it is that, politically speaking, this was of no great moment, for the tribe was a small and uninfluential one of semi-settled graziers, in contradistinction to the great nomad fraternities of the wide desert.

The persons profiting by this domestic discord were the tribe of the Hadidin and Little Nightingale, the former hereditary foes of our friends the Albu Hamed and a similar semi-settled fraternity noted only for their pusillanimity and for the large number of sheep they possessed, quite possibly many of them having formerly belonged to the Albu Hamed. The latter were generally considered far bolder in raid than their enemies, yet their unfortunate dissension meant for them a continual victimisation to the puny efforts of their despised adversaries.

As we have stated, Little Nightingale also profited, and he was the cause of all the trouble.

Never was a name more ridiculously inappropriate, and never was a more idyllic-sounding title applied to a more arrant scoundrel. For Bulaibil, to give his name untranslated, it being the Arabic diminutive of Bulbul, the Perso-Arabic for "nightingale," was a negro who had usurped the position of Sheikh of a portion of his tribe, the Albu Hamed.

The history of this gentleman furnishes us with a magnificent illustration of the doctrine of "self-help" in the Smilesian sense used in conjunction with the truly Arab doctrine of "helping one's-self" to the property of others, the great be-all and end-all of the desert man's existence.

In the beginning, Bulaibil was the negro *abd* or slave of the Sheikh of the Albu Hamed, but by means of his personality, ability, courage, and skill in intrigue, had displaced his chief as leader of, shall we say, the most progressive half of his tribe. His career throughout had been one of lawlessness, an amazing episode in it being his appointment as an officer in the *zabtieh* or gendarmerie. This he had obtained as a result of his intrigue at the seat of government, and from the Turkish Vali had he secured the appointment for himself as aforesaid and for his son as a *shaoush* or sergeant in the same force. All this, of course, happened before the Great War, and it is a sufficient commentary on the condition of the Turkish Empire under the Young Turks, that this illiterate negro criminal should receive a commissioned appointment in an Imperial force of the Sublime Porte.

What followed during his term of Government service history does not record, the tale of his exploits being doubtless snowed under by those of many other officials anxious to improve their positions and to fill their pockets. The old proverb "Set a thief to catch a thief" was, one may assume, well justified in him, for if he caught anyone, it would be a thief, the desert community among whom he operated being one where all are more or less thieves. The evidence goes to show, however, that with his change of position, he suffered no change of heart, and that he did not discontinue his former life, and that Bulaibil the negro Bedawi robber and Bulaibil the *mulazim* of gendarmes were one and the same in word and deed.

When the temporary but none the less deep, *Pax Britannica* fell on the land in late 1918, Bulaibil had rejoined his tribe, having jockeyed himself into position as Sheikh of half the tribe and receiving official recognition as such. He thereupon became a most assiduous representative of the tribe's interest or, perhaps more correctly, his own interest, at the local seat of government.

Ever and anon he appeared before the Political Officer with petition after petition and complaint after complaint, about sheep or donkeys stolen or crops damaged, generally by those swashbuckling bravoes, the Hadidin. Needless to say, when this happened, the poor innocent members of the Albu Hamed were sleeping or on their lawful occasions. His dark brown, gnarled, cunning old face, framed in its scraggy beard of grey hair, his piteous, appealing, shifty, bold black eyes gazed beseechingly, while he wrung his brown monkey-like hands and whiningly pressed his case for restitution of something which, ten to one, had never been stolen from him.

The old villain, however, when caught out in some piece of lying, would be quite prepared to laugh at his own discomfiture, and took the first opportunity of having another shot at a possible something for a probable nothing. He was always at it and made himself a regular old nuisance.

When he was not exasperating the Political Officer he was plaguing his co-Sheikh, the rightful head of his tribe, proving that it is quite possible for a little nightingale to play the part of a stormy petrel.

And so it was until the early part of the rising of 1920. It then came about that the cowardly Hadidin, seeing the Government in difficulties from many quarters, resolved to make hay while the sun shone. So, setting out in force, they proceeded to overawe the inhabitants of the Christian villages of the plains, people more cowardly even than they, and the only ones they dare attack. They frightened a whole countryside tens of times more numerous than they into submission, and secured great loot in cattle.

Bulaibil meanwhile had collected a band of choice spirits, cut-throats and outlaws, from various tribal elements, and had established a highly creditable organisation for the pursuit of "self determination," which meant, to him, attacking peaceful villages and "shooting up" roads whenever a rich or important traveller was seen to be travelling thereon, and for some weeks pursued his aims openly and boldly.

In a short time, however, order was re-established, the situation was again in hand, and administration was again being carried on in the outlying districts.

Bulaibil then, the erstwhile gendarme officer, became an outlaw with a price on his head, and accordingly, together with his merry men, retired into the desert solitudes of the wild rocky district near the Turkish frontier, and established himself in a hill fortress, stark and well-nigh impregnable. From this refuge he used to issue, and many a peaceful traveller met his end on the lonely desert tracks of the district, until, despite all the exertions of the authorities and the military, some roads became a byword for insecurity. Aeroplanes were sent to bomb him in his stronghold, tribal raids against him were organised by Political Officers amongst tribes who wished to stand well with the Government. But all was of little effect,

THE PERSIA SOCIETY.

as, when his refuge became too hot for him, he and his desperadoes retired into Turkish territory, thence to sally forth and harass law-abiding people under British control. Strict orders were issued by G.H.Q. that, for international reasons, no aeroplanes were to fly over the frontier nor was any armed force to cross the boundary.

Thus Bulaibil here was safe, and it is even reported that Turkish machine-gunners used to open defensive fire when his desert stronghold was menaced.

But the Albu Hamed was once again a united tribe; the cause of its internal dissensions was gone, and it could now deal more effectually with the pretensions of the Hadidin. Its evil genius, the "Little Nightingale," had flown, and was now doubtless singing its wooing song to the "Rose" of the Turkish Nationalist governor of the frontier district.

ALBANIAN MONUMENTS.

The Greek journal *Hestia* recently published some most interesting information, contributed by M. Sotiriou, "Ephor" for Byzantine antiquities, upon the fourteen villages of the region of Lake Prespa, which the Conference of Ambassadors recently assigned to Albania. These places have a quite unsuspected archæological value.

"I have just visited these villages (says M. Sotiriou), which are situated near the banks of the Great Prespa and in the region of Castoria. The Frontier Commission place the border line near the territory of the village Orovo. In this way Albania obtains the village of Postesti, with the little island of St. Paul opposite, which is known under the name of Mali-Grad; the village of Globotsani, in the neighbourhood of which the curious mediæval hermitage of Evanghelistria is to be found; and other villages, High and Low Goritsa, Rakitzka, Soulin, and so on. These villages possess monuments which go back to the Middle Hellenic period.

"In the island of Mali-Grad, in front of Postesti, there exists, in a large grotto, what is the most remarkable monument in the region of Prespa. The church is called after St. Paul, but actually it is dedicated to the Birth of the Virgin. It is an extremely graceful building of the Byzantine epoch, decorated both inside and out, particularly on its south and west walls, with mural paintings that date from 1369. Preserved intact until this day, they are a very useful element in the study of the last renascence of the old Albanian art.

"The mediæval hermitage of Globotsani is built, among abrupt rocks, in a large gap which opens upon the lake. The side of the gap which faces the lake has been closed by a wall. In the grotto thus formed one finds, down below, the chapel, adorned with mural paintings. Above are cells, with balconies overlooking the lake and communicating with the chapel by means of a trap-door. One mounts to the cellules from the lake by a staircase.

"This hermitage belongs to a whole series of similar hermitages and convents, situated in grottoes or gaps which open in the rocks bordering on the lake. Here is evidence, then, that a monachal fraternity, similar to that on Mount Athos, flourished in these places. But the hermitages of the Prespa are much more picturesque and more precious for the history of old Albanian art by reason of their paintings, the inscriptions on which fix their date."

The following is taken from the Report of the French Archæological Mission in Albania, and is dated November, 1924:—

"In the course of its most recent excavations, the French Archæological Mission discovered two Græco-Roman houses. Under their foundations M. Léon Rey found the ruins of an older building, dating from about the fifth century B.C.; that is to say, the period of the Corinthian column. All the objects, architectural débris, vases, coins, and so on, found in the excavations, have been sent, duplicates included, to the Government delegate. Among them should be noted a ravishing little feminine head in white marble. This *chef d'œuvre* of the Hellenic period will show prominently in the National Museum at Tirana."

INDIA AND DEMOCRACY.

Sir Atul Chandra Chatterjee, High Commissioner for India, presiding at the fifth anniversary of the Indian Students' Union and Hostel on February 4, said that to any Indian that institution must be a source of pride, for it was an institution meant for Indians, run to a very large extent by Indians, and supervised by Indians. The hostel showed the advantages of co-operation between different races. One of the objects of Indian sojourn in England for study was to gain an understanding of British people and institutions; and the students would not make the best use of their opportunities if they did not come in contact with their British contemporaries, and mix with British people and the people from other countries who came to London.

Mr. Philip Kerr, speaking on democracy, said that, as one who wished India to take over control of her own affairs as soon as the many obstacles in the way could be overcome, he challenged the view that the 1919 reforms had failed. Democracy meant rows, not calm going as in a kind of lotus land. Looking at the wave of post-War emotionalism in which the reforms were conceived and the many grave problems they raised, he thought that both England and India were to be congratulated on having made a very good start on the road to responsible government in India.

THE NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association will be held on Wednesday, February 25, at 8.30 p.m., at 55, Harrington Gardens, South Kensington, by kind permission of Mrs. Bruce Dick. The subject of discussion will be "Islam and Christianity," and the speakers include Sir Thomas Arnold and Lord Headley. Papers by the Rt. Hon. Ameer Ali and the Rev. D. Miller Kay will be read by Dr. Ernest Griffin. Major-General Lord Edward Gleichen will preside.

Last Thursday the Indian Legislative Assembly at Delhi carried, without a division, a resolution against the Government's recommending that the Indian representatives should be instructed to place the grievances of Indians in the Tanganyika mandated territory before the League of Nations.

THE MANICHEES' RELIGION.

"THE RELIGION OF THE MANICHEES." By F. C. Burkitt, Hon.D.D.(Dubl.). (Cambridge University Press. 6s. net.)

Professor Burkitt has placed students of religious history under a great obligation by his courage in bringing together, in the Donnellan Lectures, the materials for determining what the Manichees really believed. The word "Manichee" in mediæval Latin was a term of vulgar abuse hurled at every heretic in turn, just as its descendant, through a racial medium, is still to be heard in circles where the stronger forms of the English language are not taboo. The Churchman never attempted to understand the faith he abused, and the convert who had understood it has left behind him only the relics of his zeal as a Christian controversialist and the order:

Incendite omnes illas membranas elegantesque tecturas decoris pellibus exquisitas.

But the Christian Church is not alone in its antagonism to the faith of Mani. The Sasanian monarch and his Muslim successor found it expedient to exterminate such an evil heresy and creed, and the question presented to the reader after reading Professor Burkitt's book is: "What was the cause of this antagonism?" To assert that it was religious bigotry only carries us part of the way, for there was much more than that. The fierceness of the antagonism of three empires and three faiths requires a more solid reason, or set of reasons, than mere bigotry, and it can be found in the associations of the word in later times. Now these associations are what a famous Cambridge professor would have called "altogether beastly," so it may be assumed that the beliefs set forth by Mani were, at any rate, regarded as a menace to society. This supposition is substantiated by Professor Burkitt's investigations.

Mani, as he shows, faced the question of the existence of evil, and had the courage to eliminate man from the responsibility of its existence. With that elimination, under the ingenious solution of the conflict of dark and light, moral responsibility ceases to exist, and that solution no State can be expected to allow to gain acceptance, for with it seems to vanish all possibility of order. The Decalogue, it is true, appears in Manichæan teaching, also other "moral" elements, but they seem to be superfluous to the system.

Professor Burkitt in his first lecture outlines the history of the Manichees, and, after giving the extant authorities, he proceeds to work out the system of Manis, beginning with his account of the Past. In the second lecture he deals with the Present and Future—completing the "Three Moments" in the conflict of the "two Roots"—the Light and the Dark. In the third lecture he deals with the sources of the system, which he traces in the main to Marcion and Bardaison. He concludes with an estimate of the influence of Manichæan terminology, through S. Augustine, on Christian modes of expression. He gives an interesting sketch of Manichæan tendencies in modern thought. But perhaps the most striking instance we know of purely Manichæan sentiment is to be found in Dr. T. Binney's hymn:

> Eternal Light! eternal Light!
> How pure the soul must be,
> When placed within Thy searching sight,
> It shrinks not, but, with calm delight,
> Can live, and look on Thee!

The hymn from beginning to end is in complete accord with the system outlined in this work, and, although it appears in a well-known Christian hymnal, it contains no characteristic sentiment of Christianity whatsoever.

Professor Burkitt acknowledges his debt to the work of Professor v. Le Coq and M. Prosper Alfaric, and the debt is clearly great, but in using their work he has produced much more than a mere compilation. He has presented Manichæism, perhaps for the first time, as a religion whose great following is not beyond comprehension; indeed, he has shown that it was a very real attempt to grapple with a theological problem which is still unsolved—the nature of evil—producing a theory at least less grotesque than the Hebrew theory of the fruit of the forbidden tree and the idea underlying it.

F. W. BUCKLER.

SYMBOLISM IN INDIAN ART.

"THE HIMALAYAS IN INDIAN ART." By E. B. Havell. (London: John Murray. 12s.)

Mr. Havell has thoroughly established himself as an authoritative writer on the art of India, and this book, like all its predecessors by him, is distinguished by scholarship, knowledge, and keen artistic appreciation. No student of the subject can afford to neglect it, and representing, as it does, a series of Forlong Bequest lectures given at the School of Oriental Studies, it has also a strong appeal to the non-learned inquirer.

As a critic Mr. Havell has a position all his own, and he owes this in great part to his deep studies in the symbolism which is the key to the understanding of Hindu religious art. It is unfortunate that these very studies have led him to confuse mystical interpretations of artistic conventions with the historical evolution of these conventions. To us it appears that this confusion vitiates the whole foundation of the book. It is no doubt, for instance, true that much of the symbolism of Hindu art is now connected with the far heights and waters of the Himalayas where the gods abide. But it is a far step from this to assert that Hindu religious architecture, sculpture, and painting derive from some "Aryan" or "Vedic" ancestors who lived in the Himalayas and there founded the artistic conventions which we now see. There is, of course, not the vestige of proof of this theory, and much can be said against its possibility. Even more fanciful is the theory, set forth in beautiful language, that the figure of the Dancing Siva so familiar in the art of Southern India is the fruit of contemplation of the Indian Ocean from the Western Ghats at calm sunset and in storm.

We regret that want of space prevents us from doing justice to the many desirable points in this book. We must, however, thank the author for his chapter on the livingness of Indian art at the present day, and for his insistence on the necessity for the powers that be to alter their attitude to the hereditary artists of the country, specially as their own efforts are usually nothing to be specially proud of.

The illustrations are numerous and in every way excellent.

JEWISH HISTORY FOR THE YOUNG.

"THE STORY OF THE JEWISH PEOPLE." Vol. II. Being a History of the Jewish People since Bible Times. By Jack M. Myers. With a Prefatory Note by the Very Rev. the Chief Rabbi. With Illustrations. (London: Kegan Paul, Trench, Trubner and Co., Ltd. 3s. 6d. net.)

Mr. Jack M. Myers is to be congratulated on having continued the good work which he commenced in 1909, when he presented his young

Digitized by Google

readers with the first part of "The Story of the Jewish People." In Volume I. the author sketched the history of the Jews from 175 B.C. to 220 A.D. in a style sufficiently simple to be adapted to the needs of young readers between the ages of eleven and seventeen. In Volume II. of this very attractive text-book Mr. Myers continues his historical sketches in an equally fascinating manner, and brings his readers to the year 1270. Chapters are devoted to the history of the Jews in Spain, the Crusades, and the great writers and travellers of the period. This little book will doubtless prove as popular among young Jewish people as has Volume I., and should make a welcome addition to the library of every school and home where Jewish children are encouraged to take an intelligent interest in the history of their ancestors.

INDIAN GOVERNORS' LEAVE OF ABSENCE.

The India Office issues the following communiqué:—

The Secretary of State for India in Council has sanctioned, on the recommendation of the Governor-General in Council, the grant of leave of absence for four months for urgent reasons of health and private affairs to Sir Henry Wheeler, K.C.S.I., C.I.E., I.C.S., Governor of Bihar and Orissa, and Sir John Henry Kerr, K.C.S.I., K.C.I.E., I.C.S., Governor of Assam. For the period of their absence on leave the King has appointed Sir Hugh McPherson, K.C.I.E., C.S.I., I.C.S., and Sir William James Reid, K.C.I.E., C.S.I., I.C.S., to hold and execute the offices of Governor of Bihar and Orissa and Governor of Assam respectively.

Sir Henry Wheeler will proceed on leave with effect from March 26, 1925, and Sir John Kerr with effect from July 1, 1925.

WAR OFFICE APPOINTMENTS.

The following appointments are announced by the War Office:—

Colonel C. E. Kitson, D.S.O., to be Officer in Charge of Records, Lichfield, vice Colonel J. H. Hall, C.M.G., D.S.O.

Brevet Lieutenant-Colonel Sir F. N. Elphinstone-Dalrymple, Bart., C.B.E., D.S.O., R.A., to be Commandant, Royal Military School of Music, Kneller Hall, vice Colonel J. A. C. Somerville, C.M.G., C.B.E.

Colonel Kitson has the triple experience of service in the Militia, Regular Army, and Volunteer Force, having been a subaltern in the Kent Artillery before transfer to the Royal West Kent Regiment, of whose 1st Volunteer Battalion at Tunbridge he was adjutant. He was with the famous Force D in Mesopotamia, serving with the 14th Division, and he afterwards returned to India to join Lieutenant-General Sir Michael Tighe's staff at Poona.

Lieutenant-Colonel Elphinstone-Dalrymple goes to the headquarters of Army music at Twickenham at the age of forty-two, and carries with him the traditions of his regiment for good music, as the Royal Artillery bands, mounted and foot, have a world-wide reputation. Early in the War he was Adjutant with the Regular Artillery, and was also on the Dardanelles staff in association with the gunnery chief, Sir Webb Gillman, and other artillerists. He was with Lord Allenby in Egypt and Palestine, and came home for a long spell of service in Ireland.

What will be known as the "African Olympic Games" are to be held at Alexandria in 1927. The Egyptian Government has decided to subsidise the Games.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Turkey and Foreign Capital.

An interesting point was raised in the Angora Assembly by the leader of the Opposition, who complained that the Government had loaded the Budget with a large expenditure on public works that could well be given to foreign groups. In this matter the Turkish Government finds itself in a quandary. The Budget for the current year shows a deficit of seventeen million Turkish pounds, and it is precisely this sum that is allocated to public works, over and above an expenditure of nearly sixty-two millions on National Defence and Gendarmerie, out of a total expenditure of one hundred and sixty-two millions. There can be no doubt that the Government would gladly see foreign capital interesting itself in Turkey; but up to the present either the capital that the Turks would like to see offering itself has not come forward, or that which has offered has propounded terms which are unacceptable. In these circumstances the Government has been compelled to make provision on paper for at least a modicum of the public works so urgently needed in the country.

Concessions in Turkey.

It is reported that the Deutsche Bank and a German firm in Frankfurt have obtained a concession to work the valuable copper mines at Arghana, north-west of Diarbekr, in Asia Minor. These mines, it will be recalled, were at one time virtually promised to the French, for, by a supplementary agreement to the Angora Treaty, the Turkish Government pledged itself to take under advisement the award to French capitalists of concessions for the exploitation of the Arghana copper mines, and for the development of cotton-growing in Cilicia. In spite of the many months' stay of M. Mougin in Angora—many Frenchmen, I fear, will say on account of it—French stock in Turkey is at a discount these days. As far as I am aware, British firms have made no serious bid for this particular concession, and, if that is so, not much capital can be made out of the grant to German houses, as far as Great Britain is concerned. Turkey is in dire need of money; the attempt by the Turks themselves to exploit the mines was melancholy, and in the meantime work on the railway to connect the copper fields with the Baghdad Railway near Nisibin is proceeding apace. If British houses are anxious to obtain concessions in Turkey, now is the time to get busy.

The Egyptian Indemnity.

There will be general approval of the manner in which the British Government intends to dispose of the sum of £500,000 paid by the Egyptian Government as a fine for the murder of Sir Lee Stack. To have placed this money to the credit of the British taxpayer would have made the fine still more of an echo of the indemnity demanded by Italy from Greece for a murder committed under very different conditions, and would have strengthened the dislike taken at the time in many quarters to the imposition of a monetary fine. After the payment of a grant of £40,000 to Lady Stack, and of grants of £3,000 and £5,000 to Sir Lee Stack's aide-de-camp and the chauffeur, the balance of the half-million pounds is to be devoted to benevolent objects in the Sudan, such as education and the treatment of disease. In view of the fact that the Nile Waters Commission has just begun its deliberations, it may be as well if the definite allocation of the balance of the fine is postponed until the Commission has reported. There is some ground for supposing that the best way of regulating the water problem in Egypt will be found to be by means of works in Uganda. Further research in this direction would benefit both Egypt and the Sudan, and the employment of part of the Egyptian fine to this end would be clear proof to the people of Egypt that the imposition of the fine was not prompted by vindictiveness or a spirit of bullying, but was a reasoned course, adopted as the most likely to bring home to those responsible for the murder campaign in Egypt the boomerang effect of their policy.

The Development of Yugoslavia.

A vivid glimpse of one aspect of the problems with which Yugoslavia has been faced in the work of reconstruction and development can be obtained from an illuminating article by M. Varskovitch on the narrow gauge railways of the country. Throughout the Balkans the question of communications is the key to development, and in Yugoslavia's case the problem to be solved is the utilisation of various systems of railways which were not designed for the purpose which they are now called upon to perform. Yugoslavia may, however, be considered fortunate in that it is not a question with her of building up *de novo*, though vast schemes of new construction work have still to be undertaken.

The British Industries Fair.

This week saw the opening of the British Industries Fair at Birmingham. After so many years of the White City section it seems strange to think of the whole Fair being housed elsewhere, and it is difficult to see the advisability of it, for the pending exhibition will surely interfere with the Fair at Birmingham as much or as little as it would if the White City section had been preserved as a separate entity. But it is no good to dwell on this now, and one can only hope that the united Fair will be the success it should be in view of the generally improving trade position.

A MIDDLE EASTERN TOUR.

By ARTHUR CARR.

(*Continued from page 172.*)

Damascus.

For me to try to describe the feeling one experiences on arriving in this, the "oldest city of civilisation in the world," would be impossible. A city teeming with memories, especially for Christians—a city evoking memories of St. Paul, and in which still exists the street called "Straight." Forests of minarets rising above beautiful domes from out the bosom of this green-carpeted city, fed by perennial rivers by whose crystal waters tradition says that Abraham, on his march westward, lingered, and ruled the city in peace. At a first glance one only sees mud walls, as in many Eastern cities, and badly paved streets. But behind these mud walls and wretched mud alleys are splendid houses in Damascus, and if one has the good fortune to enter, one is simply dazzled by barbaric splendour. In the gardens snowy white fountains play amongst lemon trees and trellised vines; one walks on marble pavements along walls frescoed and decorated with mosaics and Persian tiles. Only in Persia have I seen similar gardens. Damascus, with its river running through its centre, reminded me, above all things, of another sacred city, Meshed, which also has its splendid mosque and its central running river. I should like to spend six months in Damascus to explore its mysteries and beauties. However, I must leave the description of its charms to a more facile pen than mine.

The Desert in a Buick.

We left Damascus on Friday morning at 9 o'clock, September 19, direct for Baghdad. It took us a long time to get clear of the narrow street leading to the bazaar, as this was absolutely crowded with vehicles, camels, and so on. However, we finally got clear, and ran for many miles along a good road bordered on both sides by luxuriant, wide-spreading trees. Then the trees grew more sparsely, the going was more rough, the vast spaces of the desert loomed before us, where nothing grew but a low scrub. Then we passed a signpost marked "To Aleppo" on our left. We went to the right, the direct route almost as the crow flies for Baghdad. For hours we sped on, mile after mile, nothing but scrub and sand, not a blade of grass, not an animal, not even a bird, for nothing can live here where there is no water. The sand was hard and smooth, making an ideal track, and our Buick did an easy fifty miles per hour. There were three cars in the convoy, with a distance between each of a few miles. At 1.30 all three cars drew up and lunch was prepared. A fire was lit, and certain dishes were warmed up and others cooked; also enormous-sized Thermos flasks were brought out and tea was served all round. I enjoyed the food, which was very good, but I think I never enjoyed a cup of tea so much in all my life. Some of the passengers had drunk from the water-bags specially provided, but as I have ever made it a rule never, if avoidable, to drink water on my Eastern travels, I think I enjoyed the tea all the more. Fruit also was provided, of which I ate sparingly, knowing the dangers of eating much uncooked fruit in hot climes; for although we were in the middle of September, the heat in the desert was very great. Particularly did I warn a young American against eating too much fruit and drinking too much water. However, he only laughed good-humouredly and said he was all right. He was a fine young fellow, about twenty-two years of age and over 6 feet in height. He had cause to remember my warning later. In Baghdad he became ill, and later on I left him in charge of the American doctor in Kermanshah very poorly. His destination was Hamadan, and I hope he recovered and got there later. I never heard.

After we had passed about an hour, all was packed up, we each got in our respective cars, and we were off again. Ever in front of us and stretching to the horizon sand, and more sand. The sun was now directly overhead, and if we got out of the car we had not to forget our topé (helmet) for a single minute. As we went along at forty, and sometimes fifty, miles an hour, and as I regarded the two cars in front, I was struck with the insignificance of these machines against the broad expanse, nothing to be seen—only these fast-moving, distance-annihilating machines. Science was conquering Nature's obstacles. Darkness descended, as it does in the East, suddenly. The sun drops down over the Western horizon, and it is dark.

At 9.30 the cars again drew up. It was time for the evening meal. A large camp fire was lit, made from empty boxes dragged from the motors, and cooking commenced. Whilst this was going on we strolled about within a short distance of the cars. What a night! The sky was one mass of stars—not stars as we understand them, but brilliant shining orbs, seeming to hang from the middle air. Then, as one looked, a wonderful sight was presented. The waning moon rose and threw over the desert a wonderful light. As I watched the drivers round the camp fire cooking the dinner and our small company, all told, nine passengers and three drivers, gathered there in the middle of the Syrian desert, I thought how little those at home could realise such a scene. It was beautiful, it

was weird, and, to my mind, just wonderful. Hundreds of miles away from civilisation, from water and food, and yet here we were with plenty of everything we required, and we had no doubt but that those men on those machines would drive us into Baghdad the next day, as they did.

Again we were away on an all-night non-stop run to the City of the Caliphs. We did not camp in the desert, as, being all men, we preferred to go right through. There is not much to tell, in fact, the cars ran so well; on our car not even a tyre was changed the whole journey; it was almost disappointing. We slept right through the night in the car, and except for a jolt now and again it was fairly comfortable. The next morning I woke up as the sun shot into the sky. On and on, then we got our first glimpse of the Euphrates, and from there onwards the desert began to change, more and more green along the banks of this mighty river. Then we came to Ramadi, and saw the guiding marks on the desert for the aeroplanes. We had been running since Rutba on their track. About noon we crossed the Euphrates at Fellujah. We stayed here some thirty minutes, and then continued our journey along the now burning sands; nearer and nearer we approached, then over the Tigris to Baghdad, which we finally reached at 2.30 p.m. on Saturday, September 20.

Actual running time from Damascus to Baghdad, allowing for meals, twenty-six hours. The Nairn Transport Company seems to me a good business proposition, and is run on good, sound lines. As a business man I should think it will prove a financial success, the more so as, with the exception perhaps of a few weeks in the rainy season, the cars can run all the year round. I can recommend the journey as being speedy and comfortable. This was my first visit to Baghdad, and from accounts I had heard from certain other travellers I thought I should be disappointed; but now it seems to me that these men must have been very lacking in imagination.

Baghdad.

Baghdad is for the most part a city of narrow, winding, evil-smelling streets, filled with wretched dogs and more wretched people, just as one might say of almost any other Eastern city. But for me it held an indescribable charm, knowing that every foot of land of this city of Baghdad is replete with history and romance. One might easily imagine Haroun al Rashid, with his Vizier, treading its streets amongst this truly cosmopolitan Oriental crowd, even as he did hundreds of years ago. For the city is still pervaded with mystery. In the reign of Al Mansur, was it not the seat of Arabic learning, literature, glory, and romance? Did not Hulaka here massacre, murder, and destroy? Afterwards, did not Timur wreck even what was left, turning a fair land, well watered, and luxuriant in verdure, into an unproductive wilderness? And such it has remained for hundreds of years. Baghdad, with a mighty river like the Tigris flowing through its centre, must always have great possibilities. The soil of Iraq is rich, and with a proper system of watering or irrigation this waste desert land might once more become the granary of the East or the cotton field of Lancashire. After hundreds of years of stagnation, with modern science and engineering, and now that the rule of the Turk has been shattered, let us hope that under a wise, progressive Government prosperity will return to this land once more, and that Baghdad will renew its ancient glory.

Iraq to Persia.

I left Baghdad on Sunday, September 21, at 9 p.m. by train for Khanikin, where I arrived next morning at 7.30 a.m. Messrs. Lumsden and Greene, of Baghdad, had arranged for a motor of the Parsons Transport Company to meet me here. The Parsons Transport Co. (of whom Messrs. Lumsden and Greene are the agents in Baghdad) runs in conjunction with the Nairn Transport Co., and carries the mails from Baghdad to Teheran. I left Khanikin at 9 a.m. for Kermanshah *en route* for Teheran. From Khanikin to Kermanshah there is very little of interest for the traveller. The present road is good and well made. I understand that a railway was at one time projected, and it seems to me there would be very little difficulty in making such a line; at any rate, from an engineering point of view. I arrived in Kermanshah at 6 p.m., September 22. Kermanshah is the capital of Persian Kurdistan, and here the routes from Baghdad, Ispahan, and Teheran meet. The town lies very prettily amongst a grove of trees, but is otherwise uninteresting. I was kindly invited to dinner by the manager of the Imperial Bank of Persia, Mr. Coffey, whose wife is the daughter of Mr. Stevens, a well-known—I might say an historic—figure in Tabriz, of whom I shall have more to say later. Next day I continued my journey, but this time the Buick car had its work cut out, because between Kermanshah and Hamadan there are some steep climbs to be made through the mountains. The road, however, is good, and we reached this latter town, situated at the northern base of Mount Elevend, 160 miles from Teheran, at 5 p.m., after six hours' actual running. At Hamadan the routes from Baghdad, Erivan, Teheran, and Ispahan converge, and accordingly the town is the seat of a large transit trade. Also here is a large barracks, in which are stationed many Persian troops. This town has every appearance of prosperity, and should a railway ever be made would undoubtedly become a most important, if not the most important, city in Persia. Here is a very good hotel, called, I think, "Hotel de France," where I stayed the night.

Hamadan to Teheran.

As I wanted to arrive at Teheran, 160 miles away, the next day, I left Hamadan early. In fact, the Buick was under way at 5 a.m. The going was fairly good, and, after climbing the last mountain, we came down on to the Kasvin plains with the road stretching level and white for miles ahead. It was fortunate, however, that we started early, for between Hamadan and Teheran we had five tyre punctures, with the result that it was exactly midnight when we entered the "Lala Zar," the main street of Teheran, on September 24. The whole of the above journey from London to Teheran had been completed in fifteen days, or fourteen days' actual travelling time.

(To be continued.)

Algerian Oilfields.—Reports from the Algerian property—in which the Algerian Oilfields, Ltd., is interested—state that the production for January was 121 tons. Wells Nos. 38 and 39 have reached a depth of 188 metres and 114 metres respectively. A new well that has been put down—No. 40—has reached a depth of 60 metres.

According to Reuter's Delhi correspondent, it is understood that the Government of India has offered to grant a license to the Indian Radio Telegraph Company to operate a beam wireless station in India for communication with the United Kingdom, subject to an agreement, of which the terms will shortly be signed.

Messrs. Vickers, Ltd., have received an order for four low temperature 4 ft. diameter by 50 ft. long fusion rotary retorts, to be installed at the Burghlee Colliery at Loanhead, Midlothian. This plant, which is being manufactured at the Barrow-in-Furness works of Messrs. Vickers, Ltd., will work on colliery waste coal for the purpose of obtaining oil and other products.

Shipping Intelligence.

STAGNATION AT FIUME.

Fiume presents a startling contrast to Trieste, says the American Commercial Attaché at Rome in a recent report, for in place of great activity one finds complete stagnation. Under the agreement with Yugoslavia, the city and the old port of Fiume were annexed to Italy, with which they are connected by a narrow strip of territory which runs along the coast for a distance of nearly 10 miles. East of the port is a triangular area, separated by a short canal on one hand and by a river on the other, which is called the Delta; at the south-west corner of this area is the small outer basin known as Porto Baross. All of this area was annexed to Yugoslavia, to which one of the principal basins of the old port also was leased. The principal railway line from Fiume leads directly to Yugoslavia, and, although there is also rail connection with Italy, it offers only a roundabout connection with the territory that formerly constituted the hinterland of the port.

Fiume's hopes of prosperity after its annexation by Italy have not been realised. Whereas Porto Baross and the Delta show signs of great activity, the old port of Fiume, with its fine equipment, is empty, and there appears to be no immediate prospect of any improvement, for the facilities at the disposal of Yugoslavia seem to meet its requirements to such an extent that the basin leased from Italy is not being used, and it will not be easy again to attract traffic from Hungary and other territory which has now for years been following other routes. The lumber trade, which has always constituted an important factor of the trade of Fiume, was concentrated in the Delta, and there it continues in the hands of Yugoslavia. Plans are being made for the provision of new yards, etc., for the handling of lumber on the Italian side, but the extent to which it will be possible to compete with Yugoslavia is problematic.

Altogether the depression at Fiume has reached a point where it will be an extremely difficult matter to turn the tide toward a real improvement. Owing to the manner in which the new boundary has been drawn, the city still has to depend primarily on the transit trade, for it is practically isolated, so far as local trade with Italian territory is concerned; the outlook for the population, which has dwindled to not much more than one-half of the former number, is not encouraging.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar & Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.

Passenger sailing dates:—

*CIRCASSIA, Feb. 27. *CASTALIA, April 1.
*OLYMPIA, March 13. *SCINDIA, April 28.

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS, carrying 1st, 2nd, and 3rd class passengers, sails from LIVERPOOL Oct. 14, MARSEILLES Oct. 20. All 1st and 2nd class state rooms are fitted with Punkah Louvres and with Fans. This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE (HENDERSON BROTHERS), LTD.,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, February 23). (For passengers sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Media for Port Said, Colombo, Madras, and Calcutta (London, February 21).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, February 25).

British India Line.—S.s. Dumana for Bombay and Karachi (London, February 27); s.s. Matiana for Colombo, Madras, and Calcutta (London, February 28).

Ellerman "City" Line.—S.s. City of Valencia for Calcutta (Birkenhead, March 2).

Ellerman's Westcott and Laurance Line.—S.s. Trentino for Gibraltar, Malta, Piræus, Salonika, Constantinople, and Smyrna (London, February 28).

Johnston Line.—S.s. Wigmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 28); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 7).

P. and O. Line.—S.s. Naldera for Bombay (London, March 6); s.s. Nore for Colombo, Madras, and Calcutta (London, March 7).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, March 4).

NEW COMPANIES.

Abyssinian Produce Co.

The Abyssinian Produce Co., Ltd., has been registered as a private company with a nominal capital of £20,000, in £1 shares. The objects are: To acquire (1) the businesses *inter alia* of produce buyers, importers and exporters, and merchants carried on by Noel Webster at 83, Cannon Street, E.C., as N. Webster and Sons, and (2) the similar business carried on by Colonel D. A. Sandford at Addis Ababa, Abyssinia, and elsewhere; to carry on, develop, and extend the businesses in Abyssinia and elsewhere of buyers and exporters of and dealers in hides, skins, coffee, wax, wool, mohair, horns, and generally all kinds of Abyssinian and other produce, and to carry on in Europe, Abyssinia, and elsewhere in Africa the businesses of shippers and importers of all kinds of machinery and merchandise, fellmongers, cleaners, scourers, wool brokers, pressers, warehousemen, carriers, forwarding agents, shipowners, etc. The first directors are: C. A. Chidell (director of African Produce Co., Ltd.); A. Moulsdale, hide merchant; Colonel D. A. Sandford, Addis Ababa, Abyssinia, hide exporter; and H. W. Chadwick, 21, Beechcroft Mansions, Streatham, S.W., hide broker. Colonel D. A. Sandford may retain office as director so long as he holds the office of general manager in Abyssinia and holds £2,000 shares.

Asiatic Petroleum Co. (Syria) Ltd.

The Asiatic Petroleum Company (Syria), Ltd., has been registered as a private company with a capital of £5,000 in £10 shares. The objects are to act as producers, refiners, transporters, and distributors of petroleum, etc. The registered office is at St. Helen's Court, Great St. Helen's, E.C.3.

THE NARROW GAUGE RAILWAYS OF YUGOSLAVIA.

In an article in the current issue of the *Economic and Financial Review* of Belgrade M. Varshovitch deals with the narrow gauge railway system of Yugoslavia, and points out that the problem of organising communications in the country has been complicated by the fact that Yugoslavia has inherited two kinds of railway systems. It has been urged in some quarters that the narrow gauge system should be done away with, and this has been supported by the bad results of the narrow gauge system in Serbia, but in Bosnia and Herzegovina the narrow gauge lines have rendered very good service. M. Varshovitch maintains that it is not a question of considering the utility of the narrow gauge lines, but of examining the organisation of the system. He continues :—

The narrow gauge lines cannot be transformed into normal gauge lines for the simple reason that the whole system of construction of a narrow gauge line is absolutely different from that of a normal gauge line. The 0.76 cm. lines built with a radius of about 60 m., while the more important normal gauge lines have a radius of over 250 m. Besides this, the gradients on the narrow gauge lines are as steep as 30 degrees, while those of the normal gauge have very rarely such gradients.

As a general rule, the route taken by a narrow gauge line in a country divided by rivers and other obstacles does not coincide with that of a normal gauge line, and therefore to transform a narrow gauge line into a normal gauge line simply means, in practice, to build a normal gauge line alongside the narrow one and quite independent of it, and then to abandon the narrow one entirely, as was done in Bosnia. In the State narrow gauge system in Bosnia, which includes some 938 kms., there are about 285 kms which would entirely disappear in the case of the line being transformed eventually. But that does not mean to say that the other 635 kms. could be transformed into normal gauge line, for, as we have pointed out before, the route taken by a normal gauge line rarely coincides with that followed by a narrow gauge line.

As narrow gauge lines can more easily adapt themselves to the country than normal gauge ones (a reason why they are found in greater proportion in mountainous countries) they have a special importance in Yugoslavia.

Half of our territories are covered by the Dinaric Alps and their ramifications, which make it a difficult and mountainous country. The constructions of a normal gauge system which could satisfy all the needs of the country and render possible the complete exploitation of all its numerous natural riches, would not be possible on account of financial reasons. It follows therefore that, even if we had no narrow gauge system we should have to create one. Therefore we should perfect and complete the narrow gauge system which already covers 3,500 kms., so as to make it into a system capable of satisfying all the needs, from the point of view of transport, of one-half of the kingdom.

No railway programme could be more rational than that which includes the completion of the narrow gauge system ; its realisation would entail little expense, and, nevertheless, would give great profits. This programme would include :—

(1) The connection of Belgrade with the narrow gauge system by a line from Belgrade to Obrenovatz (40 kms.).

(2) The construction of the Vishegrad, Fotcha, Trebigne line (215 kms.). By the construction of these two lines of a total length of 255 kms., the shortest line to the Adriatic, Belgrade to Grouj, 580 kms. long, would be obtained. At the same time a connection with the Kotor Estuary would be made by a line 636 kms. long.

(3) The construction of the Obrenovatz, Loznitza, Zvornik, Touzla line, 146 kms. long, and the Doboji, Banja-Louka line, 25 kms. These two lines would connect certain districts accounted among the richest of the country, such as the Tamnava district, the Machva district, the Spretcha district, and the valleys of the Bosna and the Vrbas, with the capital. The greatest coal basin, the coal reserves of which constitute half of the entire reserves of the country, would then be directly connected with the capital. The salt of Simin Han, near Touzla, cannot be fully exploited at present, because of the lack of transport facilities, and so it is that we have to import salt from abroad, although the supplies from these deposits would be sufficient to satisfy the needs of the whole country.

(4) The line from Sarajevo to Mostar is the only one connecting the narrow gauge system with Grouj and the Kotor Estuary. On this line, in the Ivan mountains, the watershed between Sarajevo and Mostar, is an obstacle created by a hairpin bend on a very steep slope. This obstacle literally stifles transport, especially at the present time, when Serbia is connected with Bosnia only by the Oujitza-Vardishte line. Communication can only be developed if a necessary alteration is made at this point—that is to say, if a tunnel 5,400 metres long is cut and a new line 30 kms. long constructed. The total cost of this alteration, including the cutting of the tunnel, would be about 14 million dinars, and it would increase the capacity of the line from 600,000 tons to over 1,000,000 tons, a figure to which the traffic of the district would amount most probably within one or two years. The export trade of the country, and, above all, that of the export of wood, which is at present greatly handicapped by the lack of transport facilities, would be favoured by the construction of this line.

(5) The junction of the Timok basin, the Serbian Ruhr, with the Danube by the Zayetchar, Pojarevatz, Danube line (85 kms. of new line).

(6) The direct connection of Montenegro with Serbia by the Virpazar, Podgoritza, Biletche line (175 kms.) and the junction with the Vishegrad, Trebigne line so that the port of Bar should be connected up and the question of an outlet for Montenegro be solved.

(7) The connection of the railway of the Steinheiss company in Western Bosnia (400 kms.) with Shibenik, their natural port (68 kms. of new line).

(8) The junction of the whole narrow gauge system with Split by a line from Tchaplina, Imotski, Split (147 kms.).

(9) The junction of Zvornic with Oustipratcha by way of Han Piessak (147 kms.) in order to give a direct outlet to the Drina plain and that of the Sava through Grouj by way of Fotcha and Trebigne.

The realisation of this programme of narrow gauge lines of over 1,078 kms. in length of new line would not cost more than 120,000,000 dinars.

Steaua Romana (British) is advised that the production of the Steaua Romana Company, Bucharest, for January was 23,740 tons.

Progress reports of Phœnix Oil and Transport Co., Ltd., and allied companies for January show that the total crude oil production for the month was 22,258 tons and the through-put of the refineries 21,600 tons.

The Egyptian State Railways intend to invite the submission of designs of a new type of Pullman car suited to local conditions. Such cars would be utilised for tourist traffic in winter and summer between Alexandria and Cairo.

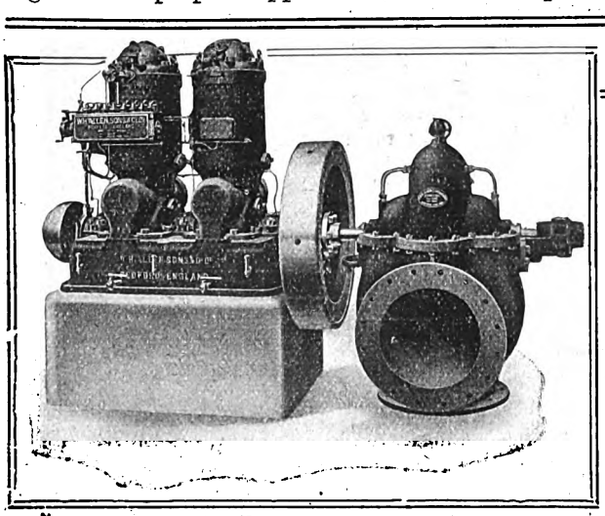
POPULATION PROBLEMS FROM THE INDIAN CENSUS.

In point of view of interest and importance the statistics of occupation are the most valuable of all those obtained at a periodical census. At the same time they are undoubtedly the most difficult to collect with accuracy and compile with precision. In the first place, we must decide whether we desire to know the means of subsistence of the whole population or the occupation of workers only or both. If we wish to record occupation as well as means of subsistence as has been done since 1901 in India it is necessary to distinguish between workers and dependants, and here we are faced with the first difficulty, since a large part of the population, including many women and children, contribute by work something to the resources of a household without necessarily being full-time workers. Again a man may have several occupations, all of which are remunerative. He should obviously be entered under the category which includes his primary or most remunerative occupation, but it is not always easy to say which this is, especially in such cases as agricultural labour combined with weaving, or fishing with boating and so forth, which form the dual occupations of so large a part of the lower classes. The distinctions between worker and dependant and between dual occupations involve subtleties of interpretation which continually give trouble in individual cases and the extent to which the occupations of women and children actually contribute to the income of a family must always be a matter of opinion and give rise to inconsistencies in the returns. Having obtained our statistics, it is necessary to classify them under appropriate categories. Experience shows that the Indian statistics are not sufficiently accurate to admit of an extremely detailed classification. The scheme used at the present census is the same, with some small modifications, as that introduced in 1911 by Sir Edward Gait, and is founded on a classification scheme devised by Bertillon, which has been adopted in a modified form for the census of England and of some of the dominions. It must, however, be remembered that the occupational statistics collected in the census give at best only a general sketch of the functional distribution of the people, and are too vague and imperfect to afford any detailed comparison in most of the smaller categories with statistics of the past or figures of other countries.

India is essentially an agricultural country and agriculture proper supports 224 millions of persons, or 71 per cent. of the population of the Empire. If we add the pastoral and hunting occupations, the percentage is 73. Industries support 10 per cent. of the population but the bulk of these are unorganised industries connected with the supply of personal and household necessities and the simple implements of work. Organised industries occupy only 1 per cent. of the people. In trade and transport on which less than 6 per cent. and 2 per cent. respectively depend, a not inconsiderable number are connected with the disposal of the various kinds of agricultural products. The administration and protection of the country engages less than five millions or 1½ per cent. of the population and the remainder are supported by domestic and miscellaneous occupations. Though the extent to which agriculture predominates varies in different provinces, there is no region in which it does not in some form easily take first place. Of industrial workers the largest proportions in the local populations are in the Punjab, the United Provinces, and in Bombay. The industrial occupations are, of course, in India mostly of the cottage industry type. In Bombay the development of organised industries is of considerable importance, but it is largely confined to a few of the biggest cities. Compared with 1911, agriculturists have increased a little faster than the total population; so also has trade, especially trade in textiles. Industries, however, have substantially decreased, the textile workers having dropped considerably. As has already been said, however, too much emphasis must not be laid on these comparisons. The huge amorphous category of "labour," which fluctuates between agricultural and industrial employment and is capable of being recorded equally under either group, is almost sufficient to turn the scale, where the general increase in the population has been so small as in the present decade. But there seems to have been a real increase in the number of cultivators in the United Provinces at the expense of labour, and the rise in the Punjab is undoubtedly due to the extension of the canal irrigation areas.

The term "agricultural occupation" includes the owners of land who receive rent from the land, the actual cultivators of the land, and the farm and field labourers. We distinguish the figures under these various categories, and some interesting comparisons can be made between these figures themselves and between them and figures obtainable from other official records. For example, we can illustrate the varying size of landed property in Bengal by calculating that the number of cultivators per 100 landlords varies from over 17,000 in



THE 'ALLEN' HEAVY FUEL OIL ENGINE

From 15 BHP to 200 BHP.

Power at Minimum Cost.
Extreme simplicity.
Suitable for placing in the hands of native or other unskilled attendants.
Easy to start.
Runs unattended for long periods.

the Chittagong Hills to 750 in Howrah. Or an even more interesting comparison can be made between the number of cultivators (workers) and the acreage cultivated. The figures for some of the main provinces show variations between 1,215 acres per 100 cultivators in Bombay to 251 acres in the United Provinces. India is a country of comparatively small holdings, often of the allotment size, but cultivated on an extensive system applicable to large areas and under a method which, as it utilises to the full neither the energy of the worker nor the productivity of the soil, is the reverse of economic. In the British territory of Bengal there is an average of 2¼ acres to each agricultural worker, including cultivator and labourer. It is in such figures that the explanation of the poverty of the cultivator lies. The cultivation of such a plot cannot employ a man for more than a comparatively small number of days in the year, and even in the Punjab Mr. Calvert estimates that the work done by the ordinary cultivator does not represent more than 150 days of full labour in twelve months, and that even in the occupied days the idea of the Indian cultivator of what constitutes a full day's task is well below that prevalent in more progressive countries. If Mr. Ghandi could find to occupy the leisure of the cultivator something which is not quite so economically hopeless as yarn-spinning he would confer a real boon on the Indian peasant. Another interesting comparison could be made between the number of field labourers and the number of cultivators. For example, in Bengal the number of field and farm labourers works out to an average of one labourer to every five cultivators, and in Eastern Bengal to as few as 1 labourer to 8 cultivators. We may contrast the conditions in England and Wales, where, according to the census of 1911, there were over 3 hired labourers to each farmer, and in 1851, before the spread of machinery, there were in England about 6 labourers to each farmer. In the United Provinces the proportion is approximately 1 labourer to every 6 cultivators. These figures again illustrate the fact that the average holding is usually so small that the cultivation of it is not too much for the owner of it himself to accomplish.

ELECTRICAL INSTALLATIONS IN GREECE.

Wiring materials and devices used in Greece generally conform to the practice of Germany, influenced by that of the United States (says the United States Assistant Trade Commissioner at Athens, Mr. C. E. Dickerson, in a recent report). Although house installations are exempt from inspection and wiring materials and devices are not generally tested or approved by any government service or private organisation, installations in factories or electric light and power generating plants must conform to regulations prescribed by law. This law pertains to large installations only; it does not limit wiring materials or devices specifically.

In wiring new dwellings it is customary to string the wire or flexible pair, whichever is used, on porcelain knobs on the surface of the walls and ceilings. Tubing concealed in the walls is used occasionally in the homes of the wealthy, and in the new and more expensive buildings. Armoured cable is used only in a few large industrial installations and in generating plants. Wire in rigid iron conduits on the surface is occasionally seen, but Bergmann tubing, lead-covered wires, and wooden casings are not used. The metric (German) standard copper wire gauge is employed, and there are no restrictions as to size. Rubber-covered wire, as well as that covered with cotton or silk, is used.

Rotary switches and the Edison screw socket are in general use. Occasionally in new, expensive houses plug fittings are installed at or near the floor level. The Edison screw plug fuse is the most common, although American cartridge-type fuses have been introduced recently to a very small extent. German "Z" type plug fuses are occasionally found, but no British "thumb-grip" types are used. American fuse blocks are not favoured, the objection being that the fuses are too close together. Electric meters are installed for each household, the usual size being 3 to 5 amperes. In case the tenant of a portion of a house pays separately for his light or power, a small individual meter is installed.

No rules or regulations require the use of armoured cable or any other special form of conductor in the wiring of old dwellings. As most buildings in Greece are constructed of stone or brick, it is difficult to wire houses after they are built. Wires are frequently passed through doors and windows in wiring old houses, and surface wiring is generally used throughout.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Uniforms.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of uniforms required during the financial year 1925-26. February 20.

Condensers. The Egyptian State Railways, Telegraphs and Telephones invite tenders for condensers.—February 26.

Miscellaneous Stores.—The Port and Lighthouses Administration at Alexandria invites tenders for the supply of various stores, comprising paints (mixed and in powder), varnishes, oils (boiled and raw linseed, bicycle, colza, clock, etc.), shellac, coal, and wood tar, tallow, soap, etc. March 6. (D.O.T.)

Filter.—The Ministry of the Interior invites tenders for the supply and erection of a mechanical filter, complete with accessories and necessary foundations, and also the supply of material for two existing filters. March 16. (D.O.T.)

Printing Plates.—The Surveyor General of Egypt, Gîza (Mudiriya), invites tenders for the supply of aluminium lithographic printing plates required for 1925-1926. March 18.

Clothing, etc.—The Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the Egyptian Police and Ghafir Services during 1925. The principal requirements include woollen blankets, ankle boots, chevrons, non-inflammable shirt collars, cotton shirts and drawers, cotton gloves, cotton and woollen socks, uniforms, boot blacking, heel-balls and palm-oil soap. Tenders will be received by the Director of Equipment Department, Ministry of the Interior, Cairo, up to March 28. (D.O.T.)

Launch.—The Ministry of Public Works, Cairo, invites tenders for the supply of a motor launch for the Public Health Department. March 16. (D.O.T.)

Yugoslavia.

Knives.—The Serb-Croat-Slovene Administration invites tenders for the supply of 2,184 knives for use in tobacco and cigarette factories. March 10. (D.O.T.)

Roumania.

Turbo-Generator.—The Municipal Electric Works of Timisoara (Transylvania) invites tenders for the supply of a turbo-generator, Scott transformers, a high-tension feeder, and various accessories. March 26 (D.O.T.)

Locomotives.—H.M. Consul at Cluj (Mr. Charles Goodwin) reports that a firm has approached him asking to be furnished with quotations for a locomotive. The type of locomotive required is about 70 h.p. (D.O.T.)

Turkey.

Sacks.—The Administration of the Ottoman Public Debt invites tenders for the supply and delivery at the port of Smyrna of 400,000 sacks. March 15. (D.O.T.)

Digitized by Google

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Sakel Futures Firm.

The Alexandria Commercial Company, in their report for the week ended February 5, state :—

Since our last report the futures market has been very firm for Sakel and rather quiet for Uppers. The net changes on the week are the following :— Sakellaridis : $5.15 up for March, $4.80 up for May, $3.65 up for July, $1 up for November; $0.60 up for January, 1926; Ashmouni : $0.80 up for February, $0.90 up for April, $1 up for June, $1.55 up for October.

Much activity and excitement has prevailed during the whole week in the Sakel market, and March during to-day's session touched $65.90, a record price for the season. The rise has been again almost entirely due to speculative buying; existing Sakel stocks are far from ample, especially the tenderable grades, and fully good fair spot cotton keeps a high premium over fully good fair futures, making tendering against futures very unattractive. The continued rise has put holders into a strong position, and has made them, in general, very exacting; there is still a small demand from abroad which absorbs the small amount offering, and local bull speculators thus have the field free to operate leisure. It is certainly a rather dangerous situation, as old crop prices are being raised so much higher than new crop. Ashmounis have been rather quieter; the demand from abroad has been moderate, and if prices have advanced it is mainly in sympathy with the rise in Sakel. At the first February tender Crs. 7,250 dockets were issued; they were taken up by exporters. Egyptians in Liverpool have this week been rather firm, and the advance in prices has been even more marked there than in Alexandria. More attention has been paid by the trade to new crop options, and it is said that a few orders have been placed with spinners. The week's receipts amount to Crs.109,691, against exports Crs.204,385 The stock stands at Crs.1,796,976.

Spot.—Minet el Bassal has been rather quieter this week, and demand has been distinctly poor, though a little more inquiry has been met with the last two days. Sales amount to about 16,000 B/s, of which we estimate 6,600 B/s Sakel, 6,800 B/s Uppers, 1,900 B/s Zagora, 150 B/s Brown, 150 B/s pilion, and 400 B/s white.

Sakellaridis.—Rather more interest has been taken in the lower grades this week, although the good grades continue to absorb the greater portion of the business and command high premiums. Spot premiums are rather dearer for the grades above fully good fair; for good fair and fully good fair they are without much change, and for the grades below good fair they are decidedly easier. We would draw spinners' attention to the comparatively reasonable prices of the lower qualities of Sakellarides, which have not followed the full rise in contracts, as compared with the high grades, which are at very high premiums on a rising contract market.

Ashmouni and Zagora have been in fairly good request for all qualities, though the demand for Zagora, except for the high grades, has fallen away a little. Spot parities are without much change except for good and better, which are in good request and distinctly dearer.

Pilion has been in small demand. Spot parities are unchanged.

Brown.—A moderate business has been done at about last week's spot parities.

White has met with an improved demand, mainly for medium qualities. Spot parities are considerably cheaper than last week, sellers apparently being anxious to realise their stocks.

Crop, 1925.—Preparation of land is now actively being carried on. The demand for Zagora sowing seed in the Delta is rather smaller than last year, and there is no doubt that a good many growers in the Northern and Central districts who planted Zagora will revert to Sakellaridis. Present Nile gauges readings forecast a supply of water during the summer about equal to that of last year.

COTTON TRADE REVIEW.

Position Improving.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended February 14 states :—

There is little change to report in the state of this market; if anything, conditions are perhaps a little better. Raw cotton has shown a steadily hardening tendency, and this may have caused some business to be definitely concluded with regard to which hesitation had previously been displayed. As anticipated, the spinners' ballot resulted in the requisite majority being obtained for the curtailment of hours from 39¼ to 35 per week, and this will be put into effect. This result has had a steadying effect on prices.

Yarn.—More business has been done during the past week, though the difference can only be called moderate. Prices of yarn spun from American cotton are higher to the full extent of the advance in the raw material. The actual transactions passing in Egyptian qualities remain small having regard to the exceedingly high price of the raw staple. Shipments of yarn last month amounted to 15,904,900 lb., against 13,522,700 lb. in December and 10,991,500 lb. in January, 1924. These figures, of course, demonstrate the more active conditions of the trade during December.

Cloth.—Though no individual overseas market has shown special activity, there has been a slight all-round increase in the business done for miscellaneous markets. China and India have been slightly more active, and Egypt and the Levant have placed very acceptable orders. Shipments of cotton piece-goods last month amounted to 402,808,400 sq. yds., against 409,566,00 sq. yds. in December, and 353,965,900 sq. yds. in January of last year.

Raw Cotton.—As already mentioned, there has been a very firm tone in the American raw cotton market. "Spot" sales have been larger, and, for better qualities considerably higher prices than that quoted below have had to be paid. In spite of a further rise in Egyptian varieties there has been a fair amount of buying. In this section fluctuations in "futures" have been very wide, and the market is thoroughly disorganised. Closing quotations yesterday were as follows :—American Middling, 13.62; Egyptian Fully Good Fair, 35.40.

LIVERPOOL COTTON REPORT.

Brighter Tone.

Messrs. Reynolds and Gibson report as follows for the week ended February 11 :—

Egyptian Spot.—A somewhat brighter tone has been noticeable on the spot this week, and, in spite of a further substantial rise in prices, a welcome addition to the volume of sales has been recorded. Business remains decidedly patchy in character, and prices all round still show considerable irregularity. Manchester advices have been less pessimistic, and the cry of "high prices killing all business" has not been heard quite so frequently. It is significant that there has been decidedly more inquiry for Sakel, with F.G.F. quoted in the neighbourhood of 35.00d., than there was a month ago, when the same cotton was quoted sixpence a pound lower!

Practically all grades of Sakel have been inquired for, and prices paid have ranged from 8½d. to 39.00d. Alexandria has maintained a very strong basis, and it is, generally speaking, impossible to place cotton, the selling limit for which is based on that market. When actually tested with a cabled bid, however, sellers have been found to be not unreasonable. Untenderable cotton has eased still further, and holders have evinced increased nervousness as to the position. Uppers, which last week showed some signs of weakening, have since recovered and are now firmly held. The best staple lots are already becoming scarce, and with a difference of 16.00d. per lb. between the quotations of F.G.F. Sakel and Upper, it seems not unreasonable to expect that a further hardening may be imminent.

Considerable interest has been shown this week in White cotton, a good style of which changed hands this week at about 33.00d. Spinners are evidently finding it a useful stop-gap. Pilion has continued in fair request, and the cheaper lots are being rapidly swept up. The better style is on offer at from 26.00d. to 27.00d., but the demand at this price is small. A small business has been done in Sudan cotton, chiefly in the Kassala variety, and one isolated lot of last year's Tokar Sakel changed hands at about 38.00d. per lb.

C.i.f. business has again been quiet, but at the commencement of the week there were reports that here and there a disposition on the part of spinners to buy forward had again become manifest. This movement, however, lasted only a short time. Some interest has been displayed in New Crop cotton, a rather unusual feature for this time of the season. Forwardings to spinners for the week ending 6th instant were returned as 5,631 bales. Estimated sales, 3,200 Egyptian and 400 Sudan. Quotations of Sakellaridis are advanced 225 points; Brown cotton has been raised 110 points (all quotations still nominal) and Uppers have hardened 10 points. Fully Good Fair Sakel to-day 35.90d.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Kermanshah, January 10.

It is hoped that after the signature of the Treaty between Persia and Iraq the Persian Government will withdraw the prohibition of pilgrimage in Mesopotamia and will regulate conditions. There are, on an average, 100,000 Persians who visit each year the different shrines round about Baghdad, each spending on an average £40, partly in goods which they sell on the road or in Mesopotamia, and partly in silver. This pilgrim movement will help to assist the exchange between Persia and Iraq, as well as business transactions in the country.

Jaffa, January 24.

The export of oranges continues at a normal rate. A slight improvement is to be noted in prices on foreign markets. Prices of cereals are gradually rising, and seem to be firm.

USE OF ELECTRICITY IN TURKEY.

Constantinople is the only city in Turkey that has a central electric power plant. This plant generates alternating current which is transformed to 550 volts for the electric street car service and to 110 volts for lighting and other household uses (says an American Consular report). Except for such purposes electricity is little used. Some of the larger seaport towns have small installations, but they have no central generating plants. In the principal cities of the interior there are no electric installations capable of supplying more than one or two houses.

The number of people living in electric-lighted homes in Constantinople is estimated to be about 200,000. The total number of central station customers in Constantinople at the end of 1923 was 30,228. The central station operating company is the Société Anonyme Turque d'Electricite, Constantinople, a French-Belgian concern with head offices at Brussels. The generator rating totals 36,000 kilovolt amperes. The same company has another plant located at the end of the Golden Horn at the junction of Silighdar and the river of the Sweet Waters of Europe.

There are no central hydro-electric generating plants in Turkey, nor are there any adequate sites. There are, however, important deposits of coal in the Heraclean coal basin, on the Turkish Black Sea coast, from which coal is shipped to Constantinople.

The generation of electrical energy during 1923 was as follows :—For lighting purposes, 11,550,000 kilowatt hours; for industrial power purposes, 8,320,000; for electric street car service, 7,830,000; for line losses, 5,350,000; total energy generated during 1923, 33,050,000 kilowatt hours. Of the energy distributed in 1923 for lighting purposes, 1,000,000 kilowatt hours were supplied gratuitously for street lights in the city.

Owing to the prevailing economic crisis and business depression, as well as to the departure of certain groups of well-to-do people from this city, and also as a result of the exchange of populations, the distribution of electric energy will undoubtedly show a decrease for the year ended December 31, 1924.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen and Co., The North-West Tannery, The Empire Engineering Co. and the Naini Tal M.T. Co. These firms, by pooling their resources and centralising control, form a Corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots, and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LAL-IMLI PURE WOOL

Makers of the famous Lal-Imli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPOREWOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE.

COOPER, ALLEN AND COMPANY.

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Everything in Leather.

COOPER, ALLEN & CO., CAWNPORE.

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include: Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mills Co., DHARIWAL.

BUSINESS DIRECTORY.

ASHWELL & NESBIT, LTD.
Barkby Lane, Leicester.
Makers of the RUNWELL SEMI-ROTARY PUMP.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Œcumenical Patriarchate.

As was to be expected, the Turkish Government has refused to admit the jurisdiction of the League of Nations in the matter of the expulsion of Mgr. Constantine Arapoglou from Constantinople, on the ground that it is a domestic concern of Turkey's. If, therefore, a committee of the League, under the presidency of the Japanese delegate, who is presumably neither a Christian nor a Moslem, investigates the matter, any finding that it may deliver will have academic, rather than practical, interest. From the point of view of the Patriarchate, it is more important that Greece should come to a satisfactory arrangement with Turkey regarding the future than that she should obtain a ruling as to when a particular "exchangeable" is not subject to exchange. The Greek Prime Minister has done well not to allow a discussion on the subject in the Chamber, as the debate would not be likely to pour oil on the troubled waters. Greece will be wise to rely mainly on direct negotiations with Turkey, and for this reason it is to be hoped that the reference of the question to the League of Nations will not unduly delay a final settlement. If Mgr. Constantine VI. were to resign, it would be necessary to appoint a successor, and the steps could then be taken that might with advantage have been taken at the time of the last appointment. In the meantime all attempts to conjure up the bogey of war between Greece and Turkey may be discounted as idle vapourings. Neither country is in the least anxious to fight, and there would have to be a far more important *casus belli* than the fate of Mgr. Constantine to induce either to attack the other. The political situation in Turkey is not such as to require a foreign war to distract attention from internal difficulties.

The Greeks of Constantinople.

Greece has a more legitimate cause for anxiety in the suggestions now being made in the Turkish Press that the Greeks of Constantinople should be exchanged for Turks from Western Thrace. It is not likely that the League of Nations would sanction any such breach of the Lausanne Treaty; but past experience prompts the fear that the *ballon d'essai* may be followed by a deliberate act of defiance. Report credits the President of the Republic with a resolve to get rid, by hook or by crook, of all Greeks in Turkey; on what authority, however, is not stated, and it is difficult to believe that the Turks, after having experienced some of the disadvantages of the wholesale expulsion of the Greeks from Asia Minor, will want to carry the policy to further lengths. On the question as to what gives Greeks in Constantinople the status of having been "established" before October 30, 1918, for the purpose of being exempt from compulsory exchange, the Permanent Court of International Justice at The Hague has decided that all that was necessary apart from actual residence was "the intention of residing there for an extended period," thus ruling out the Turkish interpretation, which would require various formalities in the way of registration, etc. After this decision Turkey would lose nothing by adopting a policy of live and let live. She has put an end, for many generations, to Greek aspirations to Asia Minor, and from the vantage ground in this connection with which she now starts she can afford to leave Constantinople as the international city that it has always been.

Italy and Egypt.

With the rectification of the Jubaland frontier, Italy has become anxious to secure an adjustment of the boundary line between Cyrenaica and Egypt. In 1919 Great Britain agreed that the oasis of Jarabub, situated just within the present frontier, at a distance of a hundred and thirty miles from Sollum, should be allocated to Italy, but the details of the transfer were left for subsequent discussion. The negotiations on the subject had not been concluded when Great Britain recognised the independence of Egypt in 1922, and the Italian Government was notified that the matter from that moment became one for direct settlement between Egypt and Italy. After an unsuccessful attempt to settle the question with Zaghloul Pasha, the Italian Government has now returned to the subject, in the hope that it will find the Cabinet of Ziwar Pasha more amenable. The moment can

Digitized by Google

hardly be considered opportune, in view of the fact that Egypt is in the middle of an electoral contest, and the Government has replied to Italy to this effect. It declares itself animated by the friendliest spirit towards Italy, and to be prepared to carry out any mutually agreeable *modus vivendi* for the maintenance of peace on the frontier and the control of contraband; but it points out that it is not in a position to make any definite settlement in view of the local political situation. The justice of this contention is unchallengeable. Unless Italy can show any pressing reason for an immediate settlement, it is to be hoped that she will allow the matter to stand over for some time. Even if the anti-Zaghloulists obtain a majority at the elections, the Government will not want to inaugurate the new Parliament by asking for the ratification of a cession of territory. Egypt hopes to obtain a *quid pro quo* in the form of a tract of territory, which will place Sollum farther away from the western boundary; but, even so, the Government will be anxious to have consolidated its position in the country before entering upon the negotiations.

Roumania and Germany.

A third dispute occupying the Near Eastern stage at the present moment is between Roumania and Germany. During their occupation of Roumanian territory the Germans issued paper currency in the form of notes of the Banca Generale to the extent of over two thousand million lei. Roumania, being unable to obtain the redemption of these notes through Allied machinery, has called upon Germany to redeem them at their face value of eighty million pounds. The German Government offered two and a-half million pounds, the equivalent at the present rate of exchange, and when this suggestion was rejected, refused to consider the Roumanian demands any further. With a view to obtaining satisfaction, the Roumanian Government has declared its intention of enforcing certain economic penalties on German goods entering Roumania and on German property in the country; but before any steps in this direction were taken, the German Press published reports of the expulsion of Germans from Roumania, and generally worked itself up into such a state of excitement, that "counter-reprisals" were instituted in Germany first. As the notes in question have actually been redeemed by the Roumanian Government, it should not prove difficult to effect a compromise. Possibly, when interested parties have exploited the differences between the two countries to the required extent, a settlement will be found by the two Governments.

INDIA.

Marking Time.

We think the Prime Minister showed a just appreciation of the position, when he refused to find an early day for an Indian debate on the ground that there was no reason for upsetting the programme of financial business. At the moment, in fact, there is very little to be said about India in this country. There is no use talking over constitutional questions until the Muddiman Report has been published and digested, a process which may need a little time, while, apart from constitutional worries, India is, on the whole, doing very well. A further reason for abstaining from official discussions just now may perhaps be drawn from the proceedings of the Legislature at Delhi. The daily reports which reach us are, of course, much condensed, but there seems to be very little talk about wrecking things nowadays, and the permutations and combinations of the various groups suggest that some members at least are getting into closer touch with realities. The financial debates next month will afford a better opportunity of judging the sense and the temper of the Assembly: with them, and with the Muddiman Report, Parliament can have a useful discussion after Easter.

Wrecker or Statesman?

Perhaps the most striking feature in the recent proceedings of the Assembly has been the appearance of Pundit Moti Lal Nehru as a convinced supporter of the system under which the final appeal from Indian courts lies to the Judicial Committee of the Privy Council. Ardent Indian nationalism yearns for a Supreme Court, but the Pundit, an ardent nationalist, but also one of the best lawyers in India, maintains that for the redress of injustice the Judicial Committee is the more effective institution. On that matter he is perfectly right, though, as we have said before, we wish it could be found possible for the Committee to hold sittings in India from time to time; but, however that may be, such arguments will not help to wreck the Constitution, and in point of fact, the Pundit's position is very different from what it seemed in the excitement of the last elections. He is amply endowed with the qualities of a parliamentarian, and we suspect he also possesses some, at least, of the higher gifts of statesmanship. If he should decide to pull his weight in the constitutional boat, he could have a splendid career for himself, and do far more for his country than will ever be accomplished on the lines to which his party is committed.

Ministers in Bengal.

The decision of the Bengal Council that it is desirable in theory to have Ministers appointed is an advance from the position taken up last year, but its practical value is still doubtful. Last year the Council wrecked the omnibus because it disliked the driver; it has now decided, in principle, that a driver is wanted, because the omnibus is a real convenience; but we have still to see, first, whether it can agree to a particular driver, and, secondly, whether any driver will care to take the job. The central fact is that there is far too much personality in Calcutta politics. Bengal has an evil reputation for jealousy in other parts of India, themselves not wholly free from the same failing, and there is still a good deal of life in the old tradition of starting to undermine the position of a Minister on the day his appointment is announced. The question now is whether active politicians have got far enough on to recognise the danger of that tradition in the circumstances of to-day. If they

Digitized by Google

can now agree to sink personal jealousies in order to let Ministers get to work, Ministers who will stand or fall by their record in office, then the inconveniences of the last year will have served a most useful purpose as an object-lesson in the art of practical politics.

THE WEEK AT HOME.

London, Tuesday Morning.

Votes for Women.

In fields other than that of politics a reaction against the feminism of the years before the War may have set in, but so firmly did the poor, deluded male during the War plant his steps on the slippery path called "Equality of the Sexes" that even his wiser promptings will not now serve to drag him from it. Even this Government has just promised that at the next General Election male and female voters shall be of the same age (that age is to be determined), though surely it knows that the suggested reform is the wish only of a minority of women. One supposes, however, that politicians, even more than journalists, are sensitive to the vocal few and absolutely oblivious of the indifferent majority. The practice is what is called keeping one's ear to the ground; and it is all part, of course, of the huge monstrosity yclept (as Milton and the cross-words say) "progress."

Wasn't it G. K. Chesterton who remarked that it isn't that women are not good enough for the vote, but that the vote is not good enough for women? After which wisdom there is nothing more to be said.

The Air Estimates.

Our Air programme was virtually decided upon last year, and the estimates which were published last week are but a register of that programme. Two million more pounds are to be spent; but most of this goes on the special Air Arm for the Navy. There are undoubted signs that the country is now wide awake to the importance of its air routes; some of the most brilliant men of our time, in fact, are assisting the Government in its decision in this matter. One has little anxiety now that, both from the point of view of home defence and of commercial aerial enterprise, our air policy will contain grounds for misgiving.

The English Calendar.

The House of Clergy last week discussed the most interesting question of whether or not saints should be created for our English calendar. Undoubtedly there is a feeling in this country that our calendar, which boasts no name since the seventeenth century, is hopelessly out of date, but equally without doubt it would be an extremely difficult matter to secure unanimity in the problem of who exactly the new saints should be.

But it is a welcome sign of the times that the gap is being increasingly felt—it has come about, of course, not through the absence of men worthy of the honour, but from the varying historical positions in which the Church has from time to time found itself—and this sentiment is by no means the monopoly of the High Church or of the severely ecclesiastical party.

One of the most interesting suggestions was that the creation, or, rather, the adoration, of certain saints might be made a matter of diocesan arrangement, in consideration of the intensity of any particular regional patriotism. For what is called "superstitious reverence" is much more prevalent than our moderns would suppose among men like the fishermen and sailors and husbandrymen of this country.

The University Hockey Match.

It was a perfect winter day for the University hockey match last week at Beckenham, and the crowd was more numerous and bright than I have ever seen it. Oxford, who won by three goals to two, were certainly, but not without anxiety, the better side; as a team they had more dash, and there was no one on the Cambridge side quite so good as Maturin, Summerhayes, and Singh. It was thrilling enough to watch, however, particularly in the second half, when Oxford twice had to draw level, and the enthusiasm was such as is rarely heard in what is probably the least elemental of the winter games.

Spring Blossoms.

Winter is not yet over, but there are already people who appear to imagine that spring is at hand. These blithe optimists are revelling in the lengthening of the days, in the increasing sunshine, in the bursting of the snowdrops and crocuses and almond-trees. And it is true that the sight and feeling of these things do make one gay indeed. Even in London you may get flowers that no longer have had to be purchased in the Channel Islands or in France; and in the parks, the pink petals would, but for the rapaciousness of the wood-pigeons, be abounding.

The Theatre.

It must be a long time since we had in London three such plays as "Hamlet," "St. Joan," and "The Duenna" (the last of which, a most delightful thing, has just been transferred from Hammersmith to Golders Green) running at the same time. The fact can make us forget the existence of our "Vortexes," our "Spring Cleanings," our "Silences," and the rest.

The production last week at the Haymarket of "Hamlet" by an American actor, Mr. John Barrymore, seems to have attracted all the intelligence of London. A most impressive cast has been collected, and most accounts, though differing in details of criticism, agree in regarding this latest attempt to bring Shakespeare to the West End as worthily made. Naturally—for only at the Old Vic. is Shakespeare given in his entirety—cuts have been made, and it is chiefly over these that wranglings have been indulged.

Mr. Barrymore is playing only for six weeks, so that the chance of London to create a reputation for discrimination is a great one. One imagines

that the Haymarket will be filled at each performance.

Alter Ego.

AN ARMENIAN VIOLINIST.

Mr. and Mrs. Leland Buxton and the Rev. Harold Buxton were At Home at the Sesame Club, London, on February 20, to enable a large number of people interested in the Near East to hear a young Armenian violinist, M. Gudenian. As the result of extended tours through Asia Minor and the Balkans, M. Gudenian has collected many melodies peculiar to that part of the world, and has woven them into violin fantasies of his own. Among the themes that he played on this occasion were a cradle song, the passing of a caravan with its camel bells as symbolical of man's passage along the track of life, and a shepherd's soliloquy, in which, after regretting his estrangement from the pleasures of love, he ends with a burst of mocking laughter at his own folly. M. Gudenian is an accomplished musician, and made his violin speak in a way that must have carried many of his hearers back to scenes very different and distant from the setting of a London clubroom.

ETCHINGS AND THE EAST.

In the fascinating exhibition of original etchings which is being held this month in the Galleries of the Fine Art Society, New Bond Street, there is a remarkable number of artists who have gone to the East for their subject. Unfortunately, there is space here but to enumerate some of them. There is, first, John Winkler, who has some charming studies, done in traditional style, of Oriental quarters and alleys and shops. Again, there is James McBey, whose "First Sight of Jerusalem," a war picture, is one of the most impressive etchings in the exhibition. In Rembrandt's examples one can study Oriental heads—these, of course, are above comment. Charles W. Cain, whose drawings and etchings of Iraq have deservedly brought him prominence, has two studies of Baghdad—"The Latticed Window" and "The Promenade." E. J. Detmold's work can be mentioned here because there is a fantastic hint of the East in it. One did not previously know that Frank Brangwyn had visited Yugoslavia, but here is a delightful sketch of the old bridge at Mostar. Finally, Beaupère's "Flight into Egypt" and Lumsden's "Mela Crowd, Benares" are to be noted by students of the Orient.

It is a very pleasing show altogether, in which Eileen Soper smiles on Zorn, and the liquid peace of Norman Wilkinson finds reflection in Durer. But, of course, the major portion of the exhibits are by living artists.

"SUMURUN."

The story of "Sumurun," which Friedrich Freksa made from "The Arabian Nights," for which Victor Hollander set music, and which, as will be remembered, Reinhardt brought to London before the War, is with us again, at the Coliseum. How the times have changed! Before the War, what was really known of sheikhs and dancing girls and eunuchs and bazaars? Now, thanks to the Russian Ballet and, still more, to our Dells and Hulls and Hichens, everyone is quite at his (or rather her) ease in tales of Oriental splendour and cruelty and unnaturalness.

But, to tell the truth, it is not possible to take this wordless play in seven scenes very seriously. Everything in it, music, décor, miming, dancing, has been far, far better done by English and Russian artists: one cannot forget "Hassan," or "Prince Igor," or "The Rite of Spring," you know.

Concerning the artists in this production, who for the most part appear to be German or Austrian, one notices with surprise that most praise has been lavished on Sumurun herself (Maria Solveg), on Nur-ed-Din (Walter Rilla), and on the Hunchback (Ernst Matray); but their performances do not compare for freshness and continuity (and, incidentally, the whole show is lacking in movement) with that of Sumurun's maid, Katta Sterna.

It seems a fair point of criticism that the production has not been sufficiently localised, that the producer has not sufficiently determined whether he is in Persia or Iraq or Syria. At times he is (the composer is always) decidedly in the West.

But it was certainly, as one is taught daily to say, "well received." The public which takes avidly to those fantasies of desert love, which Mr. Knox (one thinks) has mortally called "as dull as Hell," is certainly loyal to its fancies.

And there are other, and excellent, things in the Coliseum programme.

SUN INSURANCE OFFICE

FOUNDED **1710.**

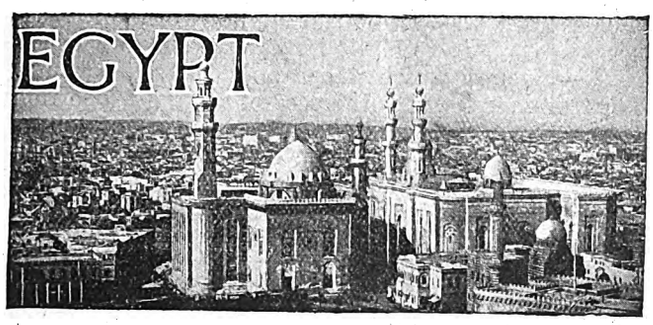
The Near and Middle East.*

From Our Own Correspondents.



Cairo, February 14.

The Stack Outrage.

The dramatic arrest a fortnight ago of two students trying to escape to the Tripoli frontier has had sensational consequences, which will have far-reaching effect on the results of the investigation that has been proceeding since the outrage on the Sirdar. The medical legal authorities have established that one of the revolvers found on these students was used in the outrage, and that the dum-dum bullets they possessed are identical with those used on that occasion, particularly with the one extracted from the late Sirdar. Major Campbell, Sir Lee Stack's Aide-de-Camp, next identified one of the students as having been among those who fired on the car, and now Abdel Fattah Enayat, the student in question, has made a confession which serves to complete the chain of evidence in this respect. I understand that his confession implicates his brother, who was arrested with him on the train, and several others, and that it is highly probable that, as the result of the information now in their possession, the authorities will be able to trace the criminal organisation that has been responsible for the outrages of the past two or three years, much further back than was at first thought possible.

There seems indeed little doubt that, although the post-War outrages had their ostensible cause in the unsettled political situation, the direct inspiration has come from a group who started their activities some considerable time before the War. And if, as is hoped, the further investigation leads to the rounding-up and punishment of the band of miscreants—it is not a very large one—who, after sowing the seed of political crime in Egypt, have persistently fostered its propagation, the country will be relieved of a cancer that threatened its national life at its very root.

Even so far as it has now gone the authorities responsible for the present investigation, who include Taha Noor Bey, Procureur-General Mr. Keown-Boyd, Director-General of the European Section of the Ministry of the Interior; Mr. G. H. Hughes, Chief Inspector of the Native Appeal Court Parquet; Russel Pasha, Commandant of the Cairo City Police; and Ingram Bey, Sub-Commandant of the Cairo City Police, deserve the warmest congratulations for the courageous and steady manner in which, in spite of the serious initial obstacles, they have persisted along the lines of investigation they had originally traced.

Egypt's Diplomatic Service.

Various decisions entailing diplomatic moves and appointments have been taken by the Egyptian Government. The most important are the creation of Legations at Berlin, Constantinople, Athens, and Prague. Seifulla Yusri Pasha, Minister at Washington, is being transferred to Berlin, and will be succeeded by Mahmud Samy Pasha. The latter is a somewhat surprising appointment, for it was understood that he was not exactly *persona grata* with the present Government. Nor, in spite of his anti-British sentiments, was he popular either with the Wafdist Cabinet, who dismissed him from the Under-Secretaryship for Communications. The explanation of the loss of his post was undoubtedly that, even for the Zaghloulists, he pushed his Anglophobe activities too far—he was, in fact, entirely responsible for the serious state of affairs that arose in the Railways, where he deliberately undermined the authority of and obstructed the British officials. The decision of the present Cabinet to give him employment is no doubt due to a desire to placate his mother-in-law, Madame Hoda Shaarawi, who is one of the leading Egyptian feminists, and exercises a certain amount of political influence; but, as an Egyptian wag truly remarked when he heard of the appointment: "The Government has taken care to send him to the post farthest away from Egypt."

To Prague Mahmud Sabit Bey, until recently First Secretary in London, has been appointed. It has not yet, however, been decided who shall succeed him there, for Ahmed Hassanein Bey, who was to have been transferred from Washington to London, has now been appointed Second Chamberlain to King Fuad! The latter appointment represents well-deserved promotion, but there is general agreement that his right place is London, where his personality and connections would have enabled him to render at the present critical juncture far greater services to his country than he could possibly do in the Royal household.

Abdel Hamid Pasha.

The sudden death of Abdel Hamid Mustapha Pasha, Under-Secretary of State for Foreign Affairs, cast a gloom over the community, European as well as Egyptian. Abdel Hamid Pasha, who was only forty-three years of age, had had a brilliant career. Judge of the Native Court of Appeal at a somewhat early age, he was one of the quartette of young Egyptians who were appointed to Under-Secretaryships on the declaration of independence in 1922, when he went to the Ministry of Finance in that capacity. There he quickly made his mark, but

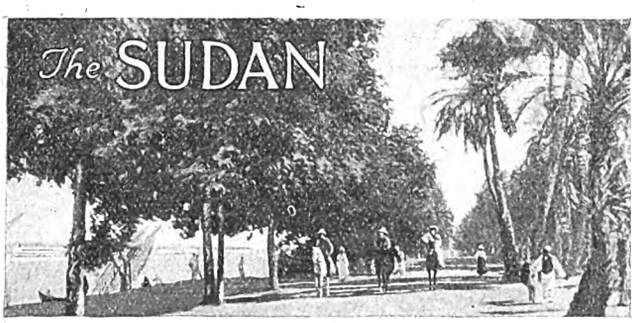
Digitized by Google

overworked to such an extent that illness overtook him, and when he recovered he was transferred as Royal Counsellor to the Ministry of Foreign Affairs, where the work was relatively lighter. Only recently he was promoted to the post of Under-Secretary that had meanwhile become vacant, but his first illness had clearly undermined his health, and the manner in which he taxed his constitution while at the Ministry of Finance was no doubt responsible for his sudden and premature demise.

Abdel Hamid Pasha was a man of peculiar charm and marked ability, which would have carried him far. He enjoyed the respect and esteem of his fellow-countrymen, regardless of party, as was indicated by the fact that, although it was known that he did not see eye to eye with the Wafd, Zaghloul Pasha, when he came to power, did not retire him, as he did to so many others, none the less capable, who did not embrace his doctrines. His death is a loss to Egypt, which, at the present juncture particularly, can ill-spare men of the type of Abdel Hamid Pasha Mustapha; and in the wide-spread regret that has been expressed have joined the members of the Diplomatic Corps, who, in the short time that he had been at the Ministry of Foreign Affairs, had been able to appreciate his personality and his capacity.



Khartoum, February 7.

Presentation to Khartoum Police.

On Wednesday morning last, the 4th inst., Sir Geoffrey Archer, Governor-General of the Sudan, officiated at one of the most pleasant ceremonies since his arrival in this country early in January. This ceremony consisted of the presentation by him of three medals and a general testimonial to the Khartoum Police.

It was an event of considerable importance. In addition to the fact that it was the first time on record this or any other Sudanese provincial police had received official recognition for loyalty and gallantry, the three medals won by individual members of the force were for such meritorious acts as must portray to all the excellent calibre and keenness of the police personnel.

All of us who were in Khartoum during the latter part of 1924 still retain vivid memories of those most trying incidents which began in June with pro-Egyptian (anti-Government) demonstrations and culminated with the mutiny of the 11th Battalion in November. During all this period the Khartoum Police were called upon to carry out every conceivable kind of additional duties. These were all performed so well that the general public were entirely ignorant of this activity, and, therefore, the immense value of this police work was passed unnoticed and unappreciated.

The force was recompensed, however, on Wednesday when it received its reward for the excellent manner in which it had applied itself to duty. This ceremony was witnessed by a large proportion of the European population of the city, as well as by a vast concord of native inhabitants, who had to be controlled by a special section of Ghaffirs.

The ceremony took place outside the Provincial Headquarters at 10 a.m. Sir Geoffrey first inspected the three sections of police, which were drawn up to represent three sides of an oblong. These sections comprised the Mounted Police, the Foot Police, and the Camel Police. After being introduced to the British Superintendent and his two assistants, Sir Geoffrey faced the force and delivered the following address, which was repeated in Arabic :—

It gives me great pleasure to come here to-day in order to present to you testimonials to your loyalty and gallantry.

I myself was not present during the disturbed periods when your efficiency and courage were so severely tested. But the Acting Governor-General and Huddleston Pasha have spoken to me in the highest terms of your conduct and steadiness in trying circumstances.

The medals for gallantry which I am about to present to three of you should be regarded not alone as a personal recognition by His Most Gracious Majesty the King of England of conspicuous acts of gallantry performed by the recipients. They should also be regarded as an exceptional mark of His Majesty's appreciation of the fine work performed by the whole of the Khartoum Province Police.

I trust that the testimonial I am now about to present to you will be regarded by all ranks as a record of duty bravely carried out. I hope also that it will be an incentive to new recruits to your ranks to maintain the high standard of efficiency which now exists.

The Awards.

On the conclusion of this address the Governor-General presented the three medals awarded for deeds of gallantry. The Acting Military Secretary read aloud the particulars of their deeds, and as each was told the Governor-General stepped forward and pinned the decoration to the breast of the recipient. The names of these policemen and the account of their gallantry is given below :—

Sol Ibrahim Negib.—Owing to the necessary scattering of the police force he was often called upon to act alone without the instructions of a British superior. He showed presence of mind, a power of quick decision, and ability to act on his own initiative. Though suffering from a bad attack of fever he refused to fall out. His gallantry and coolness were praiseworthy in the extreme. His example in the face of the enemy inspired every member of the police force, and their exemplary behaviour was very largely due to the example set them by this warrant officer.

Shawish Jak Taha.—When the mutiny first started he proceeded through the enemy in plain clothes. He moved among them endeavouring to discover their intentions. He

was shot at, but escaped, and returned to headquarters with valuable information.

At night he was in charge of a post in one of the streets. Two of the mutineers tried to cross the street, and on being fired at attempted to take refuge behind a heap of stones on the opposite side of the street. This Shawish dashed across the road under the full glare of a 500 watt lamp to dislodge the enemy. When he got to the stones the mutineers had dispersed.

Throughout the action he set a most gallant example to the men under him, and during the remainder of the day was always foremost to round up isolated men of the enemy.

Nafar Mohammed Abdulla Mohammed.—On Friday, November 28, this Nafar, a newly joined recruit, was one of a party engaged in rounding up seven of the mutineers who were loose in the town. One of these had entered a private courtyard surrounded by houses and was occupying a small outhouse to which there was only one small opening. This Nafar at once climbed a wall in full view of the mutineers. He made his way along same, a distance of 15 yards, and climbed on to the roof of the outhouse and endeavoured to make a hole in it. All this time he was being fired at by the mutineer. The outhouse was only four feet square. He succeeded in opening the roof and fired on the mutineer, who ran out of the outhouse and surrendered. The gallantry of this policeman undoubtedly saved many casualties, and had a most reassuring effect on the population of a very crowded quarter of the town.

The Governor-General concluded this pleasant task by presenting the testimonial to the Khartoum Police. This took the shape of a beautifully designed address on goat skin and parchment paper. Around the border were drawn the various police units and other appropriate matter touching the personnel of the police.

Sir Geoffrey, in presenting this, read a translation of the Arabic inscription, which ran :—

To the Police of Khartoum Province.

During the months of June, July, August, and September of 1924 you were called upon to cope with a series of demonstrations against the Sudan Government organised by societies of disaffected persons, and, finally, in November of the same year, you were called upon to co-operate with the military in putting down a mutiny. Throughout all these days of trouble, in spite of efforts to undermine your loyalty, your loyalty remained unshaken.

You have shown energy and zeal and gallantry in protecting the inhabitants of Khartoum Province, and your conduct has been recognised by His Majesty King George.

This memorial, which will be hung in your barrack room, will commemorate for all time our thanks to every one of you.

An Unrehearsed Incident.

With the expression of thanks to the Governor-General by the Superintendent, Mr. Kinmonth, the ceremony should have ended, but at the last moment a policeman stepped from the ranks, and, after smartly saluting the Governor-General, delivered a speech of some length. It would be unnecessary to give this in detail in these columns, but one would like to say that it was entirely a spontaneous effort, and was the production of the police rank and file. It was, indeed, a remarkable example of the whole-hearted support of the Sudanese towards the British Administration. Following this speech, the police warrant officer called for three cheers for His Majesty King George of England.

The march past, which was the closing item of the ceremony, was most ably done.

GREECE.

Athens, February 16.

The Question of the Patriarchate.

The indifference of the Powers in the Patriarchal outrage, an indifference faithfully reflected here by their diplomatic representatives, does not appear to have caused much surprise. In the opinion of the Greeks, however, the Turks, by their expulsion of the Œcumenical Patriarch, not only violated their Treaty obligations, but their treatment of Constantine VI. constitutes an affront to all the orthodox Balkan States and to the Christian world in general. The Turks, rightly or wrongly, believe that the Powers have ceased to take any interest in the Christian minorities in Turkey. They conceived this belief after the signature of the inhuman convention for the Exchange of Populations, a convention all in favour of the Turks when one considers the disproportion existing between the property owned by Greeks in Turkey and that owned by Turks in Greece. The Turks are, it seems, determined to rid themselves of all the Greek Ottomans (Rayahs) in Turkey; and it is thought here that when all the *non-établis* are gone, they will render life so unbearable to the *établis* that in course of time all the non-Turks will emigrate.

It is argued in Athens by those familiar with Turkish methods that one can see at a glance that the expulsion of Mgr. Constantine is the first step towards the abolition of the Œcumenical Patriarchate, which the Turks rightly consider will have no *raison d'être* when no Ottoman Greeks are left in Turkey. The reasons for which the Patriarchate was vested with extensive powers by Mahomed the Conqueror will no longer exist.

The Turkish View.

The reply of the Angora Government to the Greek protest is couched in almost friendly terms, but it nevertheless misrepresents to a degree the facts of the question at issue. The reply states that the Turkish Government will abide by the engagements taken by Ismet Pasha at Lausanne for the maintenance at Constantinople of the Patriarchate as an ecclesiastical institution. The first move of the Angora Government was, however, to order the expulsion of the head of that institution in violation of the Lausanne Treaty. The Greek Government will now endeavour to place matters in their true light, and hopes to that end to secure the support of the other signatories of the Lausanne Treaty.

situation there is drawing up a report, which it will submit to the Government and to the National Assembly. It is understood that the impressions gathered by the Commission are, on the whole, quite satisfactory. Thanks to the work of the refugees, agriculture has made immense progress, and wheat and tobacco are cultivated on a large scale throughout Macedonia. In spite of the inevitable incompleteness of the refugee services, excellent results have been obtained from an agricultural point of view, and if weather conditions are favourable, this year's crops are expected to be most abundant.

Graeco-Yugoslav Treaty.

M. Caclamanos, Greek Minister in London, who has been summoned to Athens to act as chief Greek delegate in the negotiations for a new Græco-Yugoslav Treaty, has already had some preliminary conversations with M. Gavrilovitch, the Yugoslav Minister in Athens. A certain section of the Athens Press suggested the adjournment of negotiations for a new Treaty until the internal situation in Yugoslavia becomes clearer than it is to-day. But, in dealing with this subject, M. Michalakopoulos remarked that there is no reason for adjourning the negotiations, inasmuch as Yugoslavia has a legally constituted Government recognised by all other States.

Athens Police.

Athens has assumed a quite new aspect since the Metropolitan Police entered upon its duties. The *laisser aller* of the former police no longer exists, and the public respects the police regulations. The streets are infinitely cleaner, and the manner in which wheeled traffic has been regulated is an eloquent proof of the ability of Sir Frederick Halliday's policemen.

A rather amusing episode occurred the other day when a policeman arrested two men who jumped on to a tramcar in motion. The culprits were taken to the police-court, where they gave their names. The one was Admiral Cacoulides, a member of the National Assembly, and the other General Scarlatos. The Admiral was fined 13.60 drs. (10d.) and the General 16.60 drs. (1s.). Admiral Cacoulides did not prosecute his rights to Parliamentary immunity.

A Parliamentary Scene.

What to all appearances was an altogether unwarranted attack on M. Spirides, Minister of National Economy, in the National Assembly on Saturday evening, gave rise to scenes about which the less said the better. The Opposition's attack on M. Spirides was nothing but a new effort of the Papanastassiou party to overthrow the Government. M. Spirides enjoys general esteem, and is well known in British commercial circles (he was Minister of National Economy when an exhibition of British Industries was held at Athens in 1919). Saturday's debate ended in a vote of confidence, which resulted in a majority for the Government, in spite of the Opposition's efforts to prevent a quorum by leaving the House. In official circles it was said to-day that the Government does not attach particular importance to Saturday's incidents in the Assembly, inasmuch as it has every reason to believe it will continue to enjoy the confidence of the parties which have hitherto supported it. There is a possibility, however, of the Cabinet's being reconstructed under M. Michalakopoulos.

BULGARIA.

Sofia, February 17.

The Murder of M. Mileff.

Yet another murder, and, up to the present, no news as to who the murderers are. On Friday evening, February 13, M. Nicolas Mileff, editor of the newspaper *Slovo*, was returning to his home along the Boulevard Dondoukoff when he was shot at by a group of men. The first shot missed, and Mileff started to run; but the assassins followed up and shot him stone dead.

This assassination has caused great indignation amongst Governmental, Macedonian, and journalistic circles. Mileff was forty-three years old, and had recently been appointed Minister to Washington, where he was due to proceed at the end of this month. Deputy, President of the Journalists' Association, Professor of History, and an ardent Macedonian, Mileff was one of the "pillars" of M. Zankoff's Government. Before the *coup d'état* in June, 1923, he had been marked out for the post of Foreign Minister, but, being a Macedonian, it was feared that his appointment might displease Yugoslavia; so Mileff occupied himself with journalism, in which he excelled.

No definite proofs are as yet to hand regarding the motives which dictated his assassination, but public opinion is unanimous in attributing it to the Communists and extreme Agrarians, with the possible connivance of the Federalist Macedonians. As Mileff was a strong supporter of the Autonomist section amongst the Macedonians, this last supposition must not be ruled out. In any case, the Government are once more determined to keep down all Communist activities. Legislation will, therefore, be introduced whereby the Communist Deputies will be disqualified from holding their seats in the Sobranye. In addition, no Communist newspapers will be allowed to appear.

The Cult of Political Crime.

Although the Balkans have always been more or less associated with political violence, the series of political assassinations which have taken place in Bulgaria during the last few years must be something in the nature of a record. The value of life seems, indeed, to be growing less and less, and what is more serious is that the people struck down are often amongst the most able and intelligent that the country possesses. Then, again, one murder only seems to provoke another, and the vendetta, so to speak, which is going on between Autonomist Macedonians and Federalists, Government and Communists, shows no signs of cessation. Passions become inflamed so easily, and assassins are apparently able to be hired at not too great a cost. No words are strong enough to condemn this

state of affairs, which, if it continues, cannot but do irreparable harm to the country at large.

Congress of the Democratic Entente.

This Congress, which does not comprise the rank and file of the party, but only the leaders, is at present sitting. It is a well-known fact that a certain section of the Entente is desirous of seeing a change in the Government. But the actual Ministers seem to be fairly unanimous in wishing to remain on. Nevertheless, the name of Liaptcheff continues to be on every lip, and it is practically certain that if M. Zankoff does decide to retire, M. Liaptcheff will be his successor. On the other hand, it is said that certain of the military supporters of the present Government desire no change, and that M. Thodoroff, Minister of Finance, is at the head of this group, and possesses a good deal of influence.

Sofia's Water Supply.

In the last two years the Sofia Municipality has been studying ways and means whereby the capital would receive a bigger supply of water. An American company has made at least one tangible offer, and it is possible that this may be accepted, as a continued drought during the winter months has served to convince the municipality that it is essential to do something.

Foreign Capital.

Although it is proverbial that projects of law in Bulgaria are very often quashed before they reach Parliament, it is, nevertheless, unpleasant to have to record that legislation which will undoubtedly tend towards hindering the entry and free development of foreign capital is being contemplated. The project in question concerns insurance companies, and aims at penalising foreign companies at the expense of local. In addition, there is talk of 75 per cent. of the directorate and the employees of Bulgarian companies having to be Bulgarians. In her present position Bulgaria cannot afford to indulge in any legislation, however slight it may be, which will prejudice the investment of foreign capital.

THE DOME OF THE ROCK.

Lecturing on February 18 at the London School of Oriental Studies, Mr. Ernest Richmond said that the celebrated building at Jerusalem known as the Dome of the Rock had experienced the wear and tear of thirteen centuries, had suffered from fire, from neglect, and from the not always well-instructed efforts of repairers. Yet in plan and general arrangement, as well as in much of its decoration, it was still the original building of Abdul Malik, dating from the last quarter of the seventh century. It was the earliest existing monument of Moslem architecture, and one of the most interesting and impressive. Its builders had sought to surpass the magnificence of neighbouring Christian buildings, and by adding architectural splendour to religious associations to attract as many Moslem pilgrims as possible to Jerusalem. For such a purpose, the first care of the Caliph would be to obtain the most skilful architects and craftsmen that could be found, but of these we knew little more than the names of the two men chosen to superintend the work. These were Riza ibn Hazab, an Arab, who probably had charge of the finances of the construction, and Yazid ibn Saltam, a native of Jerusalem, in whose hands was most probably the technical direction. The problem before the builders had been to provide a building that would enclose and cover the rock in a fitting manner, and would allow within the enclosing wall ample space for the circulation of pilgrims round the rock. To achieve this purpose they had raised a dome over the rock, placing it on a substructure circular in plan, and of a diameter not greater than was necessary to encompass the rock. Around this substructure were the ambulatories, formed by an outer wall and an inner arcade, both octagonal in plan. The original dome had been thrown down in 1016, the present one dating from about three years after that date. It was a double dome, the inner and outer ones being structurally independent. The cushion of air between the two kept the inner dome at an even temperature. Changes of temperature would have caused expansion and contraction, as well as the condensation of moisture from the air within the building on the inner surface of the dome, and the result would have been disastrous to the internal decoration.

Of the interior of the building, Mr. Richmond said that the decoration of mosaic, of painting, and of marble, lit by windows filled with coloured glass, produced an astonishingly rich and varied effect. No one could enter without being impressed by an indescribable quality of majesty, of dignity, and of peace. Nor was the impression of solemnity and quiet lessened by the coloured mosaics with their glittering gold ground, the coloured marbles, the painted ceilings, and the brilliant glass of the windows through which the light trickled so pleasantly. This colour and glitter seemed only to add splendour to gravity. But externally the building was not so impressive. The original method of decoration had been by mosaic externally as well as internally: the present external decoration by tiles dated probably from the fifteenth century. Defects were remedied whenever new tiles to replace those that had fallen could be brought into Jerusalem or manufactured there, or whenever tiles left in store from previous repairs happened to be available; and in the result all unity of design was destroyed. There were upon the walls tiles of every century from the fifteenth to the twentieth.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

The funeral of M. Mileff, who was assassinated last Friday week, was celebrated with impressive ceremony in the Cathedral at Sofia on February 17.

M. Herriot last Thursday conferred with Jevad Bey, the Turkish Ambassador in Paris, who stated that Turkey had decided not to carry out any more expulsions.

A number of students have been arrested at Bucharest and at Jassy for causing a disturbance at the Universities in an effort to prevent the classes from being held.

The Egyptian Government has obtained the agreement of the Turkish Government to the appointment of Mehmed Pasha as Egyptian Diplomatic representative at Angora.

Bishop Gore arrived in Jerusalem last Friday. He is staying over Easter as the guest of the Anglican Bishop, the High Commissioner, and the Patriarch of the Orthodox Church.

Several hundred Greeks and Yugoslavs who had been unable to find employment in Australia, many of them being destitute and unable to speak English, embarked on the Messageries Maritimes steamer Cephée at Melbourne last Friday for their native lands.

By order of the Reparation Commission, 12,508 shares in various Near Eastern companies, formerly the property of German subjects, were, according to the *Daily Telegraph* Paris correspondent, offered for sale by auction at the Hotel Astoria, Paris, on February 18. The bidders were almost entirely representative of three French banks.

A MIDDLE EASTERN TOUR.—III.

By ARTHUR CARR.

(*Continued from page* 201.)

Teheran.

In Teheran I remained fourteen days for business reasons. Of all the Eastern cities I have visited I like Teheran the least. Certainly great improvements are being made, or, rather, shall I say, it is being more Europeanised. The "Tup Maidan" is being made into a miniature park, with gardens, lake, and gravelled walks. I much preferred the ancient square, with its old guns. Then the Bagh-i-Shah almost makes one weep, with its miniature racecourse and its childish imitation of the Place de l'Etoile in Paris. A walk down the "Lala Zar" is most depressing, with its tawdry rows of shops. One almost smiles to think that "Lala Zar" means the "Place of Tulips." The water holes running down the side of the street are positively dangerous, especially after dark. One feels here that the East has lost much in its contact with the West. As in all capital cities, one hears more politics, and the present Premier seems to be inspiring confidence both in the political and merchant classes. Certainly the tone in general is one of confidence in the present Government. Roads are being constructed, trade is improving, and, taken altogether, optimism prevails. There is only one thing lacking, and it is a chronic disease in Persia—money. However, a Persian always hopes for the best and accepts the worst with his soul-lulling "Inshallah." The bazaars of Teheran are spacious and well built. Here, as everywhere in the Orient, are to be found the true life of the place and the centre of trade. The environs of Teheran are very charming, with wide avenues and good roads. The sunset on the hills is beautiful, whilst the mighty Demavand towers 20,000 ft. into the clouds, capped with everlasting snow.

Teheran to Tabriz.

I left Teheran *en route* for Tabriz on Saturday, October 11, in a Steyr car belonging to my friend Mr. Charles Stevens, of Tabriz, returning as far as Kasvin over the road I had already come. This road is fairly good, as far as roads go in Persia. About one hour past Kasvin we left the Hamadan road, striking to the right. From now on we simply travelled along the caravan track, with many bumps and shakings. We were travelling through the rich, well-watered, and well-cultivated province of Khamseh, and as the watercourses very often cut right across the track we were travelling on, the motor was all the time going through deep ruts filled with water, which necessitated constant care at the wheel. We reached Zendjan at 6 p.m., and as there is not even an apology for an hotel anywhere between Teheran and Tabriz, we slept in a room at the Indo-European Telegraph Co.

A Wild Ride.

We left Zendjan at 4 a.m. next morning, and during the day I was destined to experience the most thrilling motor ride I have ever had in my life. If yesterday we were travelling over camel-tracks, watercourses, and ruts, this day beggars all description. We forded rivers with water up to the middle of the radiator, bumping over stones in the river beds which threatened every moment to smash the springs to atoms. Out of the river beds we climbed up embankments which seemed impossible. This Steyr 25 h.p. car was indeed a marvel, and as I told my friend Stevens at the wheel, I am sure that gallant car could do anything but climb telegraph poles. No need of a cinematograph to have thrills; every few minutes one hung on the face of a rising embankment, or looked into the water which we were plunging through, fearing every minute one would be pitched into eternity. The breaking of a spring or an axle in any of these circumstances would have meant certain death. It was a wild, mad ride, and certainly that road was never meant for motor traffic. However, I must continue my story. We reached the mountain called "Kuflan Kuh" at 12 a.m. The climb from Jemalabad was made fairly easy. Now came the descent to Mianeh. At the summit I got out, because from there ropes had to be attached on account of the steep gradient; with twenty to thirty men hanging on behind, and with only my friend Stevens at the wheel, the car slowly descended. It almost made one afraid as it skidded or slid down, sometimes with all four wheels locked. It did not run down, it simply lurched down, and was held to the road by the men hanging on behind. I told my friend that I would not take a car down that hill at any price. However, in these countries these things must be, and are, done. Finally we reached Mianeh at 4.30, the descent having taken nearly three hours. We started again next day threshing through streams and ravines, and finally down the dangerous Chibley Pass. We reached Tabriz at 4 p.m., Saturday, October 13.

MR. HILD F. STEVENS.

Tabriz.

I remained in Tabriz fourteen days on business. Tabriz, capital of Azerbaijan, lies forty miles east of Lake Urmia, and is the chief trade centre of North Persia, doing also a large transit trade, lying as it does at the end of the caravan route from Trebizond, on the Black Sea.

Here I was the guest of the family Stevens, the head of which is Mr. Hild F. Stevens, now over seventy years of age, fifty years of which have been passed in Tabriz. He went out, I understand, as the representative of a British textile firm, was at one time British Consul, and has from time to time received many tokens of appreciation from the British authorities. Mr. Stevens is known among the natives as "Sahib Buzurg," or the "Big Sahib," and he is big in every way, standing over 6 ft. high and broad in proportion. He has a heart of gold, and his life in this the most fanatical

INDIAN HUMOUR.

"THE WIT AND WISDOM OF INDIA." By Pandit Shyáma Shankar, M.A. (London: George Routledge and Sons, Ltd. 3s. 6d.)

A sense of humour arises from a keen perception of the ludicrous side of things. It sweetens life by emphasising the fact that most clouds have a silver lining; and the majority who do not possess it are much to be pitied. The quality of humour varies from age to age. Jokes which excited Homeric laughter in the guests at Trimalcion's Feast, as related by Petronius Arbiter, are quite incomprehensible by moderns, and Cowper's "John Gilpin," which set all England roaring with delight 140 years ago, would probably be "returned with thanks" were it offered to *Punch* in the present year of grace.

Europeans are apt to deny a sense of humour to their Indian fellow-subjects, but this prejudice is due to the etiquette which forbids the latter to laugh in a superior's presence. That they are endowed with this precious gift is proved by a collection of funny stories which have recently been published on behalf of Pandit Shyáma Shankar. Many of them are inspired by the hostility which has always raged between townsmen and country folk. It is instanced by the following tale:—

One night there was a festival in the village of Baglolegáon. The villagers gathered together at the landlord's house to make merry at a drinking-bout. They were far gone in liquor, when a man broke in with the news that he had found a plate of living gold shining in the river! The landlord was at once seized with the desire of possessing it. So he, at the head of all his party, proceeded to the spot where the great discoverer led them. "Look!" said the man, pointing to the moonbeams reflected by the river. "Look, did I tell you a lie? Is it not gold?" "Certainly, certainly," cried all; and the landlord ordered the village fishermen to cast a net in order to fish the treasure out. So they set to work and caught many fish, but no gold plate. It kept shifting its place with the moon's decline, and finally disappeared when the moon set. But the people of Baglolegáon thought that the golden dish had sunk deep into the water, and their progeny still casts net and dives down in the river-bed in the hope of finding the precious lump of gold.

It is not generally known that our word "pagan," denoting heathen beyond the Christian pale, is derived from the Latin *pagani*, which was contemptuously applied to villagers living outside the walls of Rome. The following anecdote shows that "the fierce light which beats upon a throne" did not exempt Indian Princes from the shafts of humour:—

There was once a King who did not smoke, and often took his courtiers to task for indulging in that bad habit. One day the King, accompanied by them, walked out into a field where tobacco was growing. At one end of it there stood a donkey silently gazing at the tobacco plants, but making no attempt to eat them. "Look here," said the King, "tobacco is such an evil thing that even donkeys will have nothing to do with it!" "Pardon, your Majesty," said the Court Jester Birbal, "it is only such stupid things as donkeys that do not enjoy tobacco. No brilliant idea ever strikes a donkey." The King was pleased with the humour, but not with the truth of the remark, for the cap fitted him rather well!

The *naiveté* and charm of Pandit Shyáma Shankar's little book are enhanced by characteristic pictures; and, to quote Mr. F. H. Skrine's Introduction:—

These stories have a flavour of their own, and may be placed between the fanciful fairy-tale and the fable which conceals a moral. Our young folks will enter a new world, radiant with quaint imaginings, while their parents will discover an underlying vein of philosophic thought and one proof the more that human nature does not vary greatly on the banks of the Ganges and the Thames.

THE CONTINUITY OF PERSIA.

"SURVIVALS OF SASANIAN AND MANICHÆAN ART IN PERSIAN PAINTING." By Sir Thomas W. Arnold, C.I.E., Litt.D. (Oxford University Press. 10s. 6d.)

One of the greatest difficulties which confront the historian of Persia is the presence of great gaps in her historical record. Each set of historians or annalists seems to start either from the beginning of the dynasty whose memory it wishes to perpetuate—often at the expense of the preceding dynasty—or it links up its history with the semi-mythological past as recorded in the Shahnama of Firdausi. Despite this lack of continuity in records, however, there exists a continuity in the life of Persia, and every conqueror of that empire from Alexander the Great onwards has been forced, ultimately, to bow before her spell. This continuity it is most difficult to demonstrate, and the student of Persian history is therefore placed under a great debt to Sir Thomas Arnold for choosing this subject for the Charlton Lecture in Newcastle-on-Tyne.

Sir Thomas introduces the subject with a consideration of the adaptation of existing art by all religions when they succeed in imposing their acceptance on a people, indicating, however, that "Islam, unlike Christianity, has never taken pictorial art under its protection." With the Arab the human figure was not regarded as a suitable subject for artistic treatment, and his prejudices were ultimately reinforced by his religion. He then gives a short historical sketch of Persia, and observes:—

"It is therefore a noteworthy phenomenon in the history of art that, in spite of the Islamic condemnation of representations of the human figure, it is just such forms of artistic expression that emerge once again after a lapse of six centuries. What happened during that long interval we can only conjecture. There was probably some form of artistic activity, though little evidence of it has survived to us."

He then considers certain "characteristics of later Persian painting, the prototypes of which are to be found in Sasanian art, such as the figures of victory in the 'Taq-i-Bustan,'" which "occur again and again in Persian painting," with remarkable similarities either in facial feature, dress, or position.

Similarly he deals with hunting scenes, in which the later treatment of the rider and the animals clearly owes a debt to the more primitive art not only in general principle, but in detail.

In passing to the Manichæan contribution to Persian art the treatment is more summary, but Sir Thomas has produced sufficient evidence, in the form of coloured reproductions, to show the debt of Muslim art to the art of the despised religion in religious subjects. The forms and figures are clearly not of Byzantine origin, and there seems to be no alternative, since Professor Le Coq's discoveries, to the acceptance of the writer's contention that the forms were of Manichæan origin.

The lecture is beautifully illustrated, and the reproduction of several pictures of Biblical scenes belonging to this hitherto lost tradition should be of interest to a wider circle than Orientalists. As a specimen of artistic bookmaking it is perfect.

PERSONAL AND GENERAL.

TO-DAY.

February 26, 1925 (New Style).
February 13, 1925 (Old Style).
Shaaban 2, 1343 A.H., of the Moslem Calendar.
Adar 2, 5685, of the Jewish Calendar.

Sir George and the Hon. Lady Lloyd have returned to London from abroad.

Mrs. Austen Chamberlain will leave London early in March for the Greek Islands and Palestine.

Mr. Francis Fitzgerald, C.B.E., chairman of the Anglo-Belgian Co. of Egypt, has left London for Cairo.

Colonel Ion Antonescu, Military Attaché at the Roumanian Legation, left London on February 17 for Brussels.

Sir George Saltmarsh and Miss Saltmarsh left London last Friday in the P. and O. s.s. Narkunda for Bombay.

Mr. and Mrs. d'Avigdor-Goldsmid left England last week for Iraq and Palestine, and will be absent for seven weeks.

Colonel Douglas Capitaneano, formerly Military Attaché at the Roumanian Legation, arrived in London last Friday from Paris.

Viscount and Viscountess Ullswater left London on February 18 for Egypt and Palestine, and will not return to England until April.

Earl Winterton, M.P., Under-Secretary of State for India, who had been confined to his London residence with a chill, has now recovered.

M. C. Laptew, the newly appointed Counsellor at the Roumanian Legation, arrived in London on February 17 from Warsaw, where he has been acting as Chargé d'Affaires.

Lieut.-Colonel H. F. Jacob, C.S.I., gave an address to members of the London Chamber of Commerce last Tuesday on the "Resources and Commercial Possibilities of the Yemen."

The Right Rev. Charles Hope Gill, who last year resigned the bishopric of Travancore and Cochin, South India, is spending the winter at Tangier, and hopes to arrive in England in May.

The marriage will take place early in March from the house of Sir Grimwood and Lady Mears, at Allahabad, of Lieutenant Gerald Mears, M.C., R.A., with Miss Margaret Delicia Giffard.

The Afghan Chargé d'Affaires in London will give a reception on Wednesday, March 4, at the Afghan Legation, 42, Grosvenor Place, to celebrate the anniversary of the signing of the Declaration of Independence.

A marriage has been arranged, and will take place quietly in Cairo in March, between Charles Anthony Williams, Egyptian Civil Service, Cairo, and Marjorie, elder daughter of the late Thomas Harrison Rymer and Mrs. Rymer, of Calder Abbey, Cumberland.

The King of Roumania has conferred the Order of the Crown of Roumania upon Mr. Roper Barrett, who was Chief Commoner last year, and was Chairman of the Special Committee of the Corporation which made the arrangements for the reception of the King and Queen of Roumania at the Guildhall during their visit to London.

APPOINTMENTS, PROMOTIONS, ETC.

The Secretary of State for India has appointed the following to be Assistant Divisional Engineers in the Posts and Telegraphs Department of the Government of India:—Lachlan Colvile Patrick MacAlpine Grant, Conrad Reginald Cooke, Bodh Raj Batra.

It is announced that the King has approved the appointment of Mr. Charles Henry Bentinck, C.M.G., as His Majesty's Minister in Abyssinia, in succession to Mr. C. F. W. Russell.

OBITUARY.

Major-General Euston Henry Sartorius, V.C., C.B., who won the supreme award for bravery in Afghanistan in 1879, died on Thursday, aged 81. General Sartorius was born at Cintra, the third son of the late Admiral of the Fleet Sir George Sartorius, G.C.B., and won the Victoria Cross while serving in the Afghan War with the old 59th Foot, now the 2nd Battalion of the East Lancashire Regiment. In the Egyptian War of 1882 he served as D.A.A.G.

Lieutenant-Colonel Percy B. Bramley, O.B.E., formerly Director of Public Security in Palestine, died last Thursday, after a sudden and brief illness, at 24, Tregunter Street, South Kensington, in his 57th year. He was the eldest son of the late Colonel Howard Bramley, Indian Army, and was born in India. During the late War he held the post of Commandant at Basra on lines of communication, and received the Order of the British Empire for his services. In 1922 he came to this country in connection with the raising of the British Gendarmerie Force under Major-General H. H. Tudor, and was received in audience by the King. In the following year he retired. He was a valued and prominent member of various societies devoted to the study of the East.

TROUBLE IN BULGARIA.

There is something awry in the state of Bulgaria. When M. Mileff was assassinated in Sofia last week it seemed probable that he had fallen a victim to the vendetta now raging in the ranks of the Macedonians. His was one of the leading intellects in the party of the Macedonian Autonomists, and for this reason he might well be marked down by the Federalists to pay the penalty for the murder of Peter Chaüleff, who had championed the acceptance of Soviet support for Macedonian aims. Subsequent events, however, suggest that the death of M. Mileff may have been merely an episode in a campaign of terrorism which, it is believed in Bulgaria, has been planned by the Communists. The murder of a sentry outside the main military barracks in Sofia could have no political significance apart from the challenge it contained to all constituted authority; and it becomes invested with additional importance when a woman arrested in connection with the murder is reported to have committed suicide in prison. M. Rousseff, Minister of the Interior, has declared in the Sobranye that a group in the Agrarian-Communist Party is systematically pursuing by crimes of every kind a policy of extermination of the prominent persons in the present Administration, and the Government is asking for legislation to strengthen the legal penalties now in force. If it is known that sentence of death has been passed on several Ministers by the committee directing this Communist organisation, the Government's anxiety is comprehensible, and it cannot be blamed for the decision to have recourse once more to repressive measures. On this, however, has apparently been built a report of a "military plot" against the Government, in which the King is represented as playing a part. Such stories merely betray ignorance of the present situation in Bulgaria. M. Zankoff's Government was placed in power by the military organisation that carried out the *coup d'état* of June, 1923, and may be said to have always been identified with the Army. It is possible that changes in the composition of the Ministry may be considered advisable in order to strengthen the Administration; but anything in the nature of a plot could, strictly speaking, be associated only with Agrarian-Communist activities.

It is inevitable that recent occurrences should severely test the Government's position. Two schools of thought are likely to arise; those who demand more and more drastic measures, and those who deprecate a policy that must ultimately divide the country into two bitterly hostile camps of more or less equal strength. The murder of a Communist deputy so soon after the assassination of the Government's supporter has provoked a discussion on the merits or demerits of "reprisals"; but it would be imagined that no responsible person could conceive of a Government policy based on such methods, for it could lead nowhere. No one is likely to urge the Zankoff Government to attempt to come to terms with the Communists; but many of its supporters must be seriously exercised in mind at the prospect of carrying on the administration of the country in the face of the determined hostility of Macedonians, Agrarians, and Communists. The more resolved those supporters are to clip the wings of Communism, the more anxious they should be to eliminate any sense of permanent incompatibility of aims between the bourgeois parties and the bulk of the peasants, or indeed the Macedonians. As far as the latter are concerned, there is no need, and no justification, for embroiling Bulgaria in their quarrel with Yugoslavia. However much sympathy may be felt in the country with the Macedonian movement, it has been clearly shown that no gesture on the part of the Sofia Government can do the Macedonians any good or fail to prejudice Bulgaria. In regard to the peasants, the situation is more complicated. The Agrarian Party cannot by any means speak for the whole mass of the peasantry; but it is essentially a peasant organisation. When the first measures against the Communists were undertaken by the Zankoff Government there was, up and down the country, a lamentable lack of discrimination between Agrarians, who may have been merely political opponents of the bourgeois parties, and Communists, who were prepared to give effect to their opposition by resort to arms. For the mistakes then committed there has been, so far as is known, no definite attempt on the part of the Government to make its peace with the section, by no means negligible, of the peasantry, whose loyalty was severely strained by its being officially identified with the Communists. In the absence of such an attempt it would be quite in keeping with the Balkan temperament that peasants profoundly loyal to their King and country should deliberately throw in their lot with the Communists in order to be avenged on the authorities of the day.

If, then, the situation in Bulgaria is as critical as the events of recent weeks and Government utterances imply, it is evident that drastic measures on an indiscriminate scale will provide no satisfactory settlement. The Communist danger would seem to justify an attempt to dislodge those of the Agrarian Party who have drifted into Communism as the only effective Opposition camp, but are far from subscribing to Third International principles. To achieve this end, the Government may have to go back on much that it has said or done during the last eighteen months, when it was refusing to recognise the fact that the peasantry had any grounds for complaint. An appeal to the patriotism of Bulgarians, however, is not likely to miscarry. The indefinite prolongation of the existing state of affairs cannot fail to have serious consequences for the country. The genius of the Bulgarian lies in hard practical work, and if ever there was a time calling for the undivided attention of the nation to the business that it has on hand it is now when so much leeway has to be made up, as a result of the War. The spectacle that the country presents abroad in the face of all these murders is not an edifying one. It is recognised that if a murder is determined upon, and a resolute man can be found willing to carry it out, no standard of police efficiency is likely to prevent the crime; but it is a serious matter if time after time the assassins escape. The analogy of other countries would argue collusion or cowardice on the part of the general public; in Bulgaria there can be no question of such a thing. Impunity of criminals from arrest, however, must sooner or later react on the state of public security, and Bulgaria will then have added to the disabilities imposed on her from abroad others of her own devising. Rather than face this risk, the Government would be well advised to take all the naturally law-abiding elements in the country into its confidence.

MAP OF YUGOSLAVIA.

THE KINGDOM OF THE SERBS, CROATS, AND SLOVENES.

Monthly Supplement to THE NEAR EAST.

No. 1.

SURVEY OF THE ECONOMIC AND FINANCIAL YEAR.

THE BALANCE OF TRADE.

The year 1924 has ended for the Kingdom of Serbs, Croats, and Slovenes with results which are worth reviewing, both as a record of work accomplished and as an indication of what still remains to be done in the sphere of economic life.

Exports.

The balance of trade, though expected, is one of the clearest proofs of the reconstitution of the country. Exports have increased over those of the preceding year, both in quantity and value. The monthly figures for the year read as follows :—

	EXPORTS.	
Month.	Tonnage.	Value in Dinars.
January	220,110	668,989,032
February	228,436	646,073,582
March	266,718	746,3 5,840
April	260,9:0	725,294,276
May	318,973	738,583,584
June	289,782	650,664,631
July	335,949	686,286,373
August	389,674	854,687,891
September	384,596	937,368,216
October	415,726	1,007,833,266
November	379,980	922,463,063
December	406,836	953,194,679

Thus the totals for the year are 391,570 trucks of goods, representing a value of 9,540,574,433 dinars.

In 1923, 275,198 trucks were exported, representing a value of 7,230,689,823 dinars. The increase is, therefore, considerable, and it will be recalled that the 1923 results were looked upon as very satisfactory. Export during December was very large, especially of maize, of which the quantity still available for export is estimated at 20,000 truckloads. Thus from 220,110 tons in January exports amounted to an average of 400,000 for the last three months of the year. This steady progress is most significant. It shows that the improvement of the means of transport and the adjustment of the customs tariff to competitive articles can only increase the amount of exports in the years to come.

Imports.

Import figures are available only for the first three quarters of 1924 :—

		Amount.		Value.	
1st Qr.	Kgs	204,971,986	...	1,832,654,674	dinars
	Pieces	317,935	...	31,757,561	,,
	Cu m.	27,780	...	3,745,180	,,
				1,928,157,415	,,
2nd Qr.	Kgs	253,303,753	...	1,833,217,061	dinars
	Pieces	229 013	...	41,099,399	,,
	Cu.m.	54,513	...	12,84 ,105	,,
				1,892,158,565	,,
3rd Qr.	Kgs	280,075,895	...	2,112,568,269	dinars
	Pieces	407.605	...	49,091,942	,,
	Cu.m.	60.204	...	14,489,105	,,
				2,176,149,316	,,

For the first nine months of 1924 the total results for imports were thus :—Kilograms, 738,351,634 ; pieces, 954,553 ; cubic metres, 142,497, of a total value of 5,995,365,296 dinars. Exports for the same period were 6,654,263,425 dinars. It is estimated that the final returns for the year 1924 will show imports amounting to 8,400,000,000 dinars.

The Dinar.

The recovery of the dinar went on steadily throughout 1924. Starting at 6.40 Swiss francs, the rate moved as follows :—

January	6·40	July	6·42
February	6·68	August	6·60
March	6·75	September	7·20
April	7·05	October	7·55
May	7·0	November	7·50
June	6·90	December	7·80

At the present time the dinar is stable in the neighbourhood of 8.35-8.50, after having risen to a maximum of 9.25 on January 10. In official circles a rapid and indefinite rise of the Yugoslav exchange is not considered as essential. Such a rise, indeed, might prove a serious obstacle to the export of cereals. Nevertheless, there are no indications, apart from the desires or interests of exporters, of a fall in the rate of the dinar.

Digitized by Google

FOREIGN TRADE OF THE S.H.S. KINGDOM.

The damage done during the War caused the trade of the S.H.S. Kingdom to be passive for several years. The commercial balance of the Kingdom was as follows (in millions of dinars) :—

	1919.	1920.	1921.	1922.	1923.	1924. (approx.).
Imports...	2,982·0	3,465·8	4,122·0	6,441·1	8,309·6	8,400·3
Exports...	686·8	1,320·6	2,460·7	3,691·1	8,048·8	9,540·5

Thus the percentage of the value of exports as compared with that of imports was as follows :—

1919.	1920.	1921.	1922.	1923.	1924.
%	%	%	%	%	
23·03 ...	38·10 ...	59·69 ...	57·29...	96·86 ...	116·38 (approx.

The percentages for the years 1922 and 1921, especially for 1922, are misleading, because by a mistake of the Customs Service consignments of German reparations in kind were entered under imports for that year. If the statistics of reparations receipts in kind had been kept in separate records, the trade balance for the Kingdom for that year would have been shown as much more favourable. In 1923 equilibrium was almost reached; and last year the balance in favour of exports will amount to over a milliard dinars.

Imports during 1923 amounted to 3,025,914 tons, as compared with 3,915,700 tons in 1924, an increase in the latter year of 29.4 per cent.

The chief articles of export in 1924 were :—

		Amount.	Mil. dinars.
Wood (a) timber	tons...	1,046,292	1,620·2
(b) for fuel	tons...	508,797	166·6
Corn (a) wheat	tons...	172,401	683·6
(b) other cereals	tons...	36,499	121·1
Live cattle	head..	168,100	745·3
Eggs	tons...	20,129	618·5
Maize	tons...	245,146	585·2
Meat (a) fresh	tons...	17,183	452·9
(b) products	tons...	2,013	85·5
Raw copper	tons...	7,605	346·5
Wheaten flour	tons...	59,075	343·1
Pigs	head .	86,183	271·4
Horses	head .	55,193	231·7
Cement	tons...	341,628	189·4
Prunes	tons...	19,940	179·1
Hemp	tons...	6,975	158·2
Haricot beans	tons...	32,259	155·7
Hides of game	tons...	201	154·5
Sheet lead	tons...	9,370	122·8
Kachkavalj cheese	tons...	2,898	108·1
Stock : small live	head .	387,020	100·1
Hop	tons...	1,278	91·4
Calcium carbide	tons...	18,105	81·4
All other goods	tons...	1,228,608	1,926·4
Total	tons...	3,915,700	9,538·7

The chief articles of export were exported to the following countries (the figures in parentheses represent the value in millions of dinars) :—

Wood.—(a) Timber : Italy (1,171.1), Hungary (91.1), France (82.1); (b) for fuel : Italy (78.2), Hungary (70.9), Switzerland (8.8).

Live Cattle.—Italy (339.9), Austria (223.2), Greece (94.8).

Corn.—(a) Wheat : Czechoslovakia (177.5), Austria (157.1), Hungary (140.6); (b) other cereals : Greece (59.1), Austria (35.2), Roumania (11.8).

Eggs.—Switzerland (271.9), Austria (188.4), Italy (65.8).

Meat.—(a) Fresh : Austria (329.8), Italy (66.8), Czechoslovakia (19.2); (b) products : Italy (40.9), Austria (16.3), Czechoslovakia (10.1).

Maize.—Austria (285.9, Czechoslovakia (146.2), Roumania (48.9).

Raw Copper.—France (233.9), Germany (89.1), Roumania (22.6).

Wheaten Flour.—Austria (167.9), Czechoslovakia (119.6), Hungary (22.5).

Pigs.—Austria (172.1), Czechoslovakia (87.6), Italy (7.9).

Horses.—Italy (109.6), Austria (49.5), Greece (49.3).

The chief countries of destination during 1924 were :—

	Tons.	Dinars.	%
Italy	1,530,878	2,757,305,162	23·91
Austria	452,338	2,332,971,109	24·46
Czechoslovakia	244,333	943,747,132	9·89
Hungary	699,284	756,133,382	7·93
Greece	255,374	676,169,377	7·09
Switzerland	70,226	389,554,057	4·08
Germany	45,461	388,962,378	4·08
France	84,205	362,874,301	3·08
Roumania	91,656	252,623,807	2·65
England	75,602	131,529,807	1·38
Other countries	366,343	546,904,285	5·73
Total	3,915,700	9,538,774,432	100%

The five most important countries of destination during the last four years were (percentages given) :—

	1921.	1922.	1923.	1924.
Italy	23·45	8·05	28·66	28·91
Austria	35·86	22·97	28·93	24·46
Czechoslovakia	4·10	8·11	7·82	9·89
Hungary	1·21	5·24	4·79	7·93
Greece	5·19	4·67	5·74	7·09

AGRICULTURE IN YUGOSLAVIA.

I.—THE YEAR'S PRODUCTION.

As regards agricultural production, last year gave more satisfactory results than any other post-War year. Production increased, not only because a larger surface came under production, but also because the methods of production were more modern and scientific.

In 1924 over 4½ million hectares were under cereals, which is a considerable advance on 1923. The distribution was as follows :—

	1924. Hectares.	1923. Hectares.
Wheat	1,688,337	1,623,982
Maize	—	1,943,525
Rye	195,000	194,000
Barley	380,000	373,000
Oats	384,257	386,000
Sugar beet	55,000	28,406

Last year's harvest was good, and satisfied the expectations of even the greatest optimists, both as to quantity and quality. This was particularly true of the harvest of maize, beet, and tobacco.

Wheat promised throughout the year to give a yield such as is rarely realised, but, unfortunately, as a result of unfavourable weather, its quality was much spoiled at the very last. The wheat became light, and at the same time large quantities of weeds appeared. In Voivodina the average weight was 75-76 kgs., with 3 per cent. weed, and in the south 68.72 kgs., with 8-15 per cent. weed. The price of wheat varied throughout the year between 290 and 350 dinars, and at the end of the year rose to 390.

Export of wheat last year began almost immediately after the harvest. The largest buyer was Czechoslovakia; then came Austria and Italy. For Western countries purchases were made by Belgian firms. This enhanced export was due mainly to the fact that last year's wheat harvest failed in general throughout Europe, especially in countries which consume Yugoslav wheat, while the crop was also poor in competing countries—Hungary, Roumania, and Bulgaria. According to the estimate of the International Agricultural Institute at Rome, the production of wheat fell by 16 per cent.

A rather smaller surface was sown with maize than in the preceding year, but the crop was so extraordinarily good, both in quantity and quality,

Digitized by Google

that it exceeded those of all former years. Such a harvest attracted foreign buyers. To make the maize suitable for export, drying houses were erected in many places, and the drying houses for prunes were also used for maize. Thus large quantities of maize were exported in October, November, and December. Advance bookings of maize were also made last year, for delivery in March, April, and May of this year. At the beginning of last year the price of maize was 270 dinars, but by the end of the year it had fallen to 190-210. A very lively export of maize is expected this year.

Plums.

The plum crop was very poor last year, and fell below the amounts estimated. Rainy weather had a bad effect on the orchards, and even from the flower it was evident that the crop would be poor. A good quantity of fresh plums was exported, for the producers found it more profitable to sell the fruit fresh than to dry it and sell with very small return. Only a small quantity of plums was used for brandy, because a considerable quantity of brandy remained over from the previous year. There was not much drying, the quality of the plums being inferior to that of the preceding season.

According to the statistics available, about 450 trucks of dried plums were brought to the markets. After drying, most of the plums were large, running for the most part from 80 to 85 to the half-kilo, then 70 to 75 and 95 to 100. The price of prunes was on the average 8.50 dinars during the first half-year, and for the second half the starting price was 9.50. Prunes were exported mainly to Austria and Czecho-Slovakia, in smaller quantities to Italy, Switzerland, Holland, Poland, and the Scandinavian countries. Very little plum preserve was exported last year, the demand being very small.

The number of plum trees in the S.H.S. Kingdom is 56,000,000.

Statistics of Live Stock.

The numbers of stock at the beginning of 1924 showed an increase over the figures for 1923, except in the case of cattle and pigs, which had decreased somewhat owing to the lack of fodder in the previous year. The returns are as follow :—

	1924.		1923.
Horses	1,062,893	.....	1,034,139
Cattle	3,869,9?5	.....	4,053,115
Pigs	2,496,723	.....	2,577 704
Sheep	7,639.257	.....	7,542,110
Goats	1,730,204	.....	1,681,219
Poultry	14,195,968	.....	13,153,670

Industrial Production.

Industrial production considerably increased last year, although it had difficulties to surmount and high rates of interest to pay. In 1923 the total export of the country was 8,048,000,000 dinars, and of this 3,600,000,000 dinars were industrial products. In the first half of 1924 industrial products accounted for 2,200,000,000 dinars, out of a total of 4,176,000,000. It is estimated that during the twelve months September 1, 1924, to August 31, 1925, the export of industrial products will amount to 4,439,000,000 dinars.

II.—CEREALS IN 1924.

In contrast to the preceding year, 1924 was a year of abundant rain. All the cereal crops developed, and right up to the eve of harvest the prospects were most favourable. But torrential rains just at that time spoilt the quality of the grain. From the point of view of weight the wheat was inferior to that of the preceding year; on the other hand, the frequent rains caused much blight, and increased the amount of waste.

Barley was lighter, and the grain was blackish green, and is likely to spoil quickly. The greater part of the crop, therefore, has an odour known as "storage odour." Such barley is rarely used by breweries. Export began briskly, but demands ceased as soon as buyers found that the quality was inferior.

The rye crop was far inferior to that of the preceding year, and the whole crop was exported in the three months following the harvest. The harvest in general in 1924 was satisfactory as to quantity, but below the average in quality.

In 1923 the average weight of wheat was 78 kg. in Voivodina, and 76 in Serbia and the south. In 1924 wheat scarcely reached 75 kg. in Voivodina, and 70 in Serbia and the south. In the neighbouring countries the harvest was very poor. Czecho-Slovakia, in particular, was obliged to import large quantities of wheat. Hungary, which is ordinarily one of the greatest producing countries, had to import in order to protect its milling industry, which would otherwise have suffered severely from the poor crops.

Roumania and Bulgaria have forbidden the export of wheat. Towards the end of the year Bulgaria ran short of wheat, and since the end of November has appeared as a buyer. This has had a considerable influence on prices here. At the end of December also Bulgaria received a large consignment from America, an event which had never happened previously.

Judging from data received so far, it seems that in general last year's harvest was in Europe 20 per cent. and in America 10 per cent. inferior to that of the preceding year.

With the opening of the export of wheat from this country, the first buyers were Austria and Czechoslovakia, and then the great firms of Antwerp. The demand became very lively, and export took place both up the Danube and towards Braila for transhipment for the Eastern ports. Since the end of the harvest export has been very brisk, and it is safe to say that during the last three months as much has been exported as is usually spread over nine months. Naturally this large demand has had a great influence on the level of prices, which rose from 290 to 320 at the beginning (July to August) to 400 and 435 in the middle of October. These prices were maintained until the most urgent foreign needs were supplied. Later, export fell off rapidly, and continued to fall until in the middle of November prices reached a level below world parity. The fall was due to the lack of liquid funds both in this country and in the consuming States. The financial position of this country removed the possibility of speculation, so that exporters limited their purchases to the amounts which they were sure to sell quickly. The consumers in the same way only bought to supply their most urgent needs. This practice was adopted by the mills which had only limited amounts of liquid capital, and therefore did not dare to amass stocks of raw material or flour.

The stagnation of wheat export continued till the second half of November. The market then became lively again as a result of renewed demands from the neighbouring States. During December Bulgaria made large purchases of wheat, especially from Serbia, and prices began to improve rapidly until in the Serbian centres they reached 400 dinars, and in Batchka and the Banat 435 dinars. The mills within the country were themselves obliged as a result to buy at high prices.

It was not until the end of the year that the insufficiency of the world harvest became felt in all

Digitized by Google

the producing countries. Thus towards the end of December Budapest and Vienna quoted 540 dinars for wheat weighing only 76 kgs.

Yugoslavia opened the new year with considerably diminished wheat reserves, while prices are now as high as on foreign markets. The producers still have sufficient stocks in hand to supply the needs of the country until the next harvest, and, also as a result of the excellent maize crop, are able to export large amounts.

The maize harvest throughout the land was much better than that of wheat. The good quality of the crop and the low prices in comparison with world prices attracted foreign buyers. Export has been going on in all directions in barges ever since October and November. Artificial drying ceased in December, when the export of dried maize began.

Picking off the grain followed immediately, and the maize in grain came on the market. The export of maize in trucks reached its apex in December. The first consignments inspired confidence among foreign buyers, so that the demand increased. Important orders have been booked for delivery in January and February. Besides Czechoslovakia, the chief buyers are Italy, Switzerland, and Southern Germany. It should also be noted that barge deliveries continued steadily throughout November and December. The winter has been mild, and navigation on the Sava and Danube has not been interrupted. Exporters profited by this circumstance to load barges with "provisionally dried" maize for export to Austria and Czechoslovakia.

III.—THE MOVEMENT OF WHEAT AND FLOUR.

Exports.

Figures are not yet available of the export of wheat for the whole of 1924. The returns so far cover eleven months only, but for this period show an export of 15,582 trucks, of a value of 579.4 million dinars, as compared with 9,645 trucks, valued at 381.5 dinars, in 1923.

In the countries of destination there has also been a great change. In 1924 Czechoslovakia bought 4,361 trucks, to the value of 170.7 million dinars: Austria 3,613 trucks, worth 139.6 million. During the whole of 1923 Czechoslovakia bought 243 trucks, worth 9 million dinars, and Austria 7,628 trucks, worth 303.8 million. Thus Czechoslovakia took the first place in 1924, whereas in 1923 she was only fifth, and after Greece and Fiume. In 1924 Austria, Hungary, and Roumania all came after Czechoslovakia in this respect.

Export of flour during the same period amounted to 5,079 trucks, of a value of 291.8 million dinars. During the whole of 1923 the export was 3,824 trucks, valued at 233.1 million dinars.

In 1924 Austria was the principal buyer of Yugoslav flour, with 2,703 trucks, worth 154.1 million dinars, while in 1923 she purchased 2,599 trucks, valued at 137.7 million. In 1924 Czechoslovakia was second with 1,779 trucks, worth 104 million dinars, while in 1923 she was only fourth with 218 trucks, worth 12.8 million dinars. Greece also increased her purchase of Yugoslav flour in 1924.

Imports.

During the first nine months of 1924 Yugoslavia imported 66 trucks of cereals, of a value of 2,283,200 dinars. Hungary was the chief importing country, with 41 trucks, worth 1,378,075 dinars: Italy was second with 17 trucks, worth 674,072 dinars. The imports for the whole of 1923 were 211 trucks of cereals, worth 7,797,619 dinars. The greater part came from Hungary (112 trucks, worth 3.2 million dinars); the United States of America were second with 24 trucks, worth 970,185 dinars, and the Argentine third with 20 trucks, worth 1,242,000 dinars. It is noticeable that in 1924 the imports of wheat from the Argentine did not exceed those from Albania and the Indies. On the other hand, in the first nine months of 1924 there was an importation of 100 kgs. of French wheat, whereas in 1923 there was none from that country.

During the first nine months of 1924 the import of flour into Yugoslavia was greater in value than that for the whole of 1923, 1,653 trucks of flour, worth 70,483,210 dinars, as compared with 1,661 trucks, worth 69,114,048 dinars, for the whole of the preceding twelve months. During the two years the import of flour has been mainly Italian (1,357 trucks, worth 54.7 million dinars for the whole of 1923, as compared with 1,590 trucks, worth 67.8 million, for the first nine months of 1924). The import of flour from America decreased considerably in 1924.

IV.—EXPORT OF TOBACCO.

A beginning has been made by the management of the State Monopolies of the S.H.S. Kingdom with the sale of leaf tobacco prepared for export. The total amount of tobacco prepared is 6,000,000 kgs., of which the following quantities have been sold:—

(1) Czechoslovak Tobacco Administration—
  (a) Serbian and South Serbian tobacco, 1920 and 1921 yield, 193,071 kgs.
  (b) Serbian, South Serbian, Herzegovinian, and Dalmatian, 1922 yield, 316,000 kgs.

(2) Polish State Administration—
  Serbian, South Serbian, Herzegovinian, and Dalmatian, 1923 yield, 232,000 kgs.

Further sales are anticipated shortly, as there is an increasing interest in tobacco from the S.H.S. Kingdom. It is understood that the Monopoly is negotiating not only with the Czech and Polish Administrations, but also with other wholesale tobacco merchants, and that the prospects for an agreement are favourable.

In view of the good quality of Yugoslav leaf, known on the international market as "Oriental tobacco," and as a result of the great care now being devoted to its preparation for export, the Monopoly is confident of being able to guarantee the satisfaction of buyers, and anticipates large sales in the future. Yugoslav tobacco in the past has made no effort to meet the competition of inferior leaf, which has also been less carefully prepared.

V.—LIVESTOCK.

Cattle.—The year 1924 was very favourable for stock raising. Throughout the country cattle were in good condition and pasturage abundant, with the result that the price of lean beasts rose (a rare occurrence), for the breeders reserved cattle for fattening. This was especially the case in Serbia, where the numbers of stock had fallen off considerably in 1923 by reason of the drought, and the owners had sold them off at any price. Thus there had been a relatively poor export in 1923. Last year export went mainly to Italy, to which country the best horned cattle, *i.e.*, heifers and young bullocks, are exported for slaughter. After Italy came Austria, with an export of animals for slaughter and

Digitized by Google

of milk cows; Czechoslovakia, with animals for slaughter and lean bullocks for fattening at the refineries and alcohol factories; and lastly, Greece, with small cattle, partly from South Serbia and partly from Bosnia.

Sheep.—The export of sheep diminished considerably, both because of the abundance of grazing and because of the increase of the manufacture of *Kachkavalj* cheese. The cultivators of South Serbia, and especially of the busy Pirot district, bought milk from Voivodina, Slavonia, and Croatia —cow's milk at 2-2.5 dinars and ewe milk at 3, 4, and 5 dinars for the manufacture of *Kachkavalj* cheese, which was exported via Salonika and Constantinople even to America. In the mountainous parts of Serbia the milk contains a large percentage of caseine, and the cheese is of excellent quality. In these parts the price of milk is very high.

Pigs.—There was a diminution in the number of pigs. Disease caused some falling off, but the greatest blow was the prohibition of export issued in 1922. At that time many pig-breeders got rid of their herds, and have not since renewed them. Moreover, last year in general was not favourable for pig-raising. It began with very high prices for unfattened pigs (up to 100 dinars), while the price of maize remained at about 300 dinars. Prices reached 24 to 25 dinars only temporarily. Later on there was a fall in the price of unfattened pigs and maize, and a rise in that of fattened animals. In August the European market was flooded with pigs from Poland and Roumania, which ousted those of Denmark and the Netherlands.

Not much has been done for the improvement of the breeds of pigs. Towards the end of the year some stud animals were purchased in Switzerland, but the official report does not say of what kind. They were utilised in Slovenia, Croatia, Voivodina, and Serbia for the improvement of degenerate breeds. On the other hand, Slovenian and Croatian beasts were sent to Bosnia and Herzegovina to help in the removal of the poor breed known as "Boushak."

Advantage should be taken of the extension of the *Kachkavalj* industry and the increase of the flocks of sheep to assist the development of the textile industry. Not much has been done in this direction, although many trials on large estates have shown that *Rambulja* might very well be developed in this country.

VI.—THE HIDE MARKET.

Raw Hides.—An examination of the movement of the prices of raw hides in 1924 shows that the year began with firm quotations, which weakened in summer and again strengthened towards the end of the year. The world markets were fluctuating throughout the year, and this had disturbing effects in Yugoslavia. Until May prices remained steady, based on foreign quotations and the rate of the dinar. But in that month a change took place abroad, and the prices of large raw hides began to fall rapidly. With this came the slow but steady improvement of the dinar. As a result, merchants in the country and industries employing raw hides found that it paid them better to import from abroad than to purchase within the country. Naturally this had a fatal influence on the local market; prices fell by 15 to 20 per cent. Towards the end of the year, however, conditions in foreign markets improved. A greater activity in the industry took place everywhere, with a better demand for raw materials. Higher prices ruled, but more so abroad than in Yugoslavia, for the dinar continued to rise at the same time. The year ended with prices 10 per cent. lower than in January.

Tanned Hides.—The last auction organised by the Butchers' Co-operative at Zagreb realised the following prices:—

For hides of horned cattle, up to 30 kgs., 20.50 dinars; above 30 kgs., 22.50 dinars; calf hides, 34.25 dinars per kilogram. These prices showed that conditions for hides had not changed very much from those of the preceding month. Prices of calf hides alone had increased by 0.25 dinars.

VII.—BRANDY.

No article of internal trade has experienced such a rise in price as brandy. The plum harvest in 1923 was abundant. Six thousand truck loads of prunes were dried, and large quantities of brandy were distilled. At the end of 1923, therefore, prices reached their minimum of 0.40 dinars per degree of alcohol at Belgrade, and 0.30-0.35 in the interior. At the opening of 1924 there were abundant stocks of brandy everywhere, so that prices were maintained until May, when forecasts for the 1924 harvest could be made. Then it was evident that the yield was small and that the harvest would be poor. Prices strengthened, and during May rose by 10 per cent. The rise would have been even greater if there had not still been large supplies from the old stocks. During June and July the plum harvest was definitely gauged. From almost every district news arrived of a deficit. The whole yield was dried, for the prices of prunes were favourable. In June, brandy prices had already increased by 100 per cent. over January, and the rise continued throughout August and September. In October, November, and December it became evident that the old stocks were exhausted, and the rise continued up to 250 per cent. by the end of the year. What will the position be in 1925?

Whatever happens, prices will be maintained until September, even if the yield of plums is greater than the estimate. A good harvest cannot take effect in the spring or summer, and from September onwards there will be no more of last year's brandy.

"*Spiritulja*," a substitute for brandy, will appear on the market. It is, therefore, possible that the larger part of the last harvest will be used for distillation.

RAILWAY CONSTRUCTION IN 1924.

Throughout 1924 the State, in common with merchants and business in general, suffered severely from lack of funds; but, in spite of this circumstance, the Ministry of Communications not only did not interrupt work already begun, but also undertook new work and the construction of new lines. In the course of the year there were finished and opened 66 kilometres of normal-gauge line between Topchider and Mala Krsna, which give Belgrade a double connection with the interior of Serbia, and its first link by railway with Pozarevatz. This is very important for the maintenance of normal business between Belgrade and its economic hinterland. Further, the 53 kilometres of normal line between Veles and Shtip were also completed and opened during the year, as well as 28 kilometres of the new line Titel-Orlovat, which,

Digitized by Google

by way of the Tissa, will connect the Banat with Batchka and Srem. This latter line, although completed some months ago, is not yet opened, because the large bridge over the Tissa could not be finished at the same time owing to the stoppage of deliveries on account of reparations from Germany. Work was also continued in connection with an Adriatic line, Prahovo-Lower Danube-Nish-Merdare-Adriatic. A branch line of 28 kilometres has been begun from the Nish-Vranje line near Doljevatz towards Prokuplje. The 67 kilometres of the branch line Grachatz-Knin have also been completed, by means of which the ports of Shibenik and Split are linked via Ogoulin with the normal-gauge system. This very important line will soon be ready. The narrow-gauge line Uzhitze-Vardishte, 58 kilometres, was opened to traffic on January 25. This line provides direct connection across Serbia and Bosnia for a distance of 900 kilometres, from the Lower Danube via Zajechar, Parachin, Stalach, Uzhitze-Sarajevo to the Adriatic ports, Metkovitch, Gruj-Ragusa, and Zelenika, on the Gulf of Cattaro. The line Chachak-Lajkovatz-Mladenovatz-Belgrade has also been completed, with a connection by boat to Obrenovatz-Zabrezhije, until the narrow-gauge line Obrenovatz-Belgrade is constructed.

VIII.—THE SUGAR INDUSTRY.

This article of consumption passed through two chief phases during 1924, the first comprising the period from January to September, and the other from September to the end of the year. During the first period Yugoslavia was supplied with sugar partly from local refineries and partly from abroad. In 1923 national production covered two-thirds of the consumption. The refineries sold most of their production before March, and from March to September recourse was necessary to imported sugar and to the stocks conserved at the factories. During this time prices conformed strictly to those abroad. Yugoslav refineries were able to benefit by Customs protection and the difference in the prices of transport. Thus, as a result of the high prices of foreign sugar, they could sell their goods advantageously. Prices at this time varied between 22 and 19.50 dinars for lump sugar, i.e., 17 to 14.50 after deduction of the State tax on consumption. The cost price was 16.50 dinars, not reckoning duty. The sugar factories, therefore, made a profit of 200 per cent.

This was due to favourable conditions abroad and Customs protection, by which home production benefited. In 1923 the world-production of sugar decreased, while consumption constantly increased. In such conditions prices steadily rose, and this favoured the national industry. The refineries in the country, encouraged by their good fortune, decided to increase their production to cover the whole consumption of the nation. They offered cultivators instalments of payment in advance, seeds, etc. Weather conditions were altogether favourable, and the beet crop reached an unprecedented amount. It is estimated that the sugar production would reach from 4,000 to 5,000 trucks more than the country's requirements. Thus importers became exporters of sugar.

Just when the first stocks of the season's sugar arrived on the market a quick change in prices took place. From 19.70 dinars in August they fell to 13.50 in September. The cartel of the factories broke up, each trying to get rid of its own production. Through this competition prices reached an average level of 13.50 dinars in October. This is when the second period begins. The factories had several aims: to cover the country's consumption, to utilise all the raw material, to export the surplus, and to offer to the consumers at home the cheapest sugar possible. At first they achieved their aim, to the satisfaction of all. They competed against one another as to who should use most beet and who would be first on the market. The competition did not hinder them from realising good profits. But such goodwill did not last. They could not make 200 per cent. profit as they had done in 1923. and they re-formed the cartel. But instead of forming a cartel to organise export, in order to assure the rational sale of produce on foreign markets, their cartel was designed exclusively for the exploitation of the home market, each factory being free to export according to its own convenience. The fact that the State factories have joined the cartel has provoked lively protest from public opinion.

Immediately on its formation the cartel increased prices by 20 per cent. over those of the period of free competition, and these remained until the end of the year.

IX.—THE COFFEE MARKET.

Conditions in the coffee market depended on foreign markets and the rate of the dinar. At the beginning of the year ordinary Rio quoted 36 dinars, while the year finished with prices varying from 43 to 44, *i.e.*, a rise of 20 per cent., while the dinar had improved by 28 per cent. Thus the real rise in price was 48 per cent. Abroad prices increased by 40 per cent., the additional 8 per cent. in Yugoslavia resulting from the increase of the agio, municipal duties, and other costs.

YUGOSLAV PORTS: 1—SIBENIK.

Sibenik (Sibenico) is one of the Yugoslav harbours on the Adriatic which deserves to be rather better known than it is. At this moment it is still sorely handicapped by the disability it shares with almost every other Yugoslav port—to wit, the lack of communication by rail with the interior. Of all Yugoslav ports (except Susak), Gruz alone has a terminus by the waterside, and though the line in question is only the Bosnian narrow-gauge railway, it is considerably better than nothing. Yet Split (Spalato) and Sibenik are magnificent natural ports, and the country behind them has many valuable products for export. Fortunately, the broad-gauge line through Gracac and Knin is on the point of completion, and then both ports will at last be linked up with the normal-gauge system of Northern Yugoslavia. Even under existing conditions, however, Sibenik's trade is relatively large and important. During a visit to the place towards the end of last year, I took the trouble to find out what the actual export trade of Sibenik amounted to, and was rather surprised when I was given the following figures for the average monthly export to Great Britain alone: 50 tons of carbide, 30 tons of cellulose (for cardboard), 4,000 tons of bauxite, small consignments of textiles, mainly thick woollen blankets.

In the region not far behind Sibenik there are large deposits of bauxite, the exploitation of which is only just beginning. As it is, bauxite is by far the most important, as well as the largest, item on the list of Sibenik's exports, and there are always great consignments of it piled up on the wharf, ready for shipment.

Digitized by Google

As a town, Sibenik is not without charm. The approach to the harbour is scarcely less beautiful than that of Gruz (Gravosa) itself, the view from the heights above the town over the maze of islands stretching away out to sea as far as the eye can reach, second to none from the other ports. Like Bakar, it is built very compactly on a steep slope topped by fortifications. No less than three formidable castles keep watch over Sibenik. The oldest dates back to the early Middle Ages, the youngest belongs to the latter days of the Austrian régime. There are no streets in the town proper, any more than in other Dalmatian towns—only narrow pavements and flights of steps between tall mediæval houses, one broad walk which serves as a market-place, and a spacious square on the harbour front. The greater part of the town dates back to the era of the great Subitch Bans, whose power and the part they played in the history of Dalmatia and Croatia recall the story of the Earls of Douglas in Scotland. The architectural glory of Sibenik is, of course, its famous cathedral—not a large building, but very ornate, and crowned by a beautiful lantern tower. The most remarkable feature of its decoration is an amazing frieze of heads round the outside of the east end of the church. These heads were obviously portraits, or, at least, modelled from life, and a very extraordinary collection of racial types the originals must have been! It is not known with absolute certainty why these heads should thus decorate the cathedral walls; but the received explanation seems to be that they are portraits of persons who subscribed to the cost of the building.

In and around Sibenik it is, or was until quite recently, still usual to see the handsome Dalmatian national dress in all its traditional beauty and picturesqueness. If you are an expert in these matters, you can tell by a glance at the little red or orange pill-box cap and the embroidery on bodice or shirt what is the precise home of the wearer, and whether he or she is Orthodox or Catholic. The Orthodox colours incline to be sombre—purple, dark blue, and olive predominate—whereas the Catholics introduce patches of scarlet and other bright hues. From Sibenik you can take the local steamer to the little old town of Skradin, whence you can easily make the delightful trip to the Falls of the Krka—Dalmatia's miniature Niagara, still unspoilt in its setting of green vegetation amid the surrounding grey of the typical Dalmatian cliffs, and wasting its I don't remember how many h.p. upon a mere display of beauty.

From Skradin you can go on, if you like, by motor coach to Benkovats, one of the few Dalmatian inland towns, not dramatically picturesque, but interesting as the centre of the Serbian Orthodox community of those parts, and a place where the peasant costumes are specially beautiful. Within a mile or two of Benkovats is the well-defined site of the Roman city or fort of Asseria, the vast foundations of its outer walls still very little the worse for war and wear, although some experts place them even before the Roman era.

It is the historic pride of Sibenik and the countryside around that it was never in any way conquered by Venice. It was always a specifically Yugoslav stronghold. Only the beauty of its buildings recalls Italian influence, although the actual architect of the Cathedral is assumed, on good grounds, to have been a Yugoslav.

There is no British consul or consular agent in Sibenik, and British interests are left to the care of such English-speaking Dalmatians as will take the trouble to look after them. Efforts are being made to start an English-speaking society in Sibenik on the model of the one in Ljubljana, which M. Bogdanovitch, who lives in Sibenik, helped to start.

Under the heading "Cash" a gold dinar is reckoned as a dinar, an English pound as 25 dinars, a dollar as 5 dinars, and an Italian lira, a Swiss or French franc and a coined silver dinar as one dinar, etc.

Discount rate 6%, loans on securities 8%.

PICTURES OF YUGOSLAVIA.

It is a very gay show of water-colours and drawings that Mr. and Mrs. Gordon, those peripatetic artists whose books have attained an easy and merited popularity, have organised at the Twenty-One Gallery, Adelphi. The zest of living in, the joy of reproducing, or, rather, of representing, the characteristics of such places as Bosnia and Dalmatia and Sweden and Lapland, the whole fun of the artistic outlook and experience, are very manifest in this exhibition. The little walls of this tiny gallery almost quiver with the enthusiasm of their dependents.

But upon the water-colours, to most of which Mr. Ian Gordon must plead guilty, what shall one say? It seems a little ungracious to one who has so breathlessly and brightly put down what he thought such places as Mostar and Najac and Kortsula looked like, to say that almost every picture suggests a mental echo of camouflaged battleships, of a rioting of colours the object of which, however useful it might be, was not artistic. At times, of course, he gets his effects with striking accuracy, as in "Mountain Railway in Bosnia," but often, and particularly in his studies of Najac, he resembles Mr. Eric Kennington at his wilfullest. Possibly it is because one has not been there, but one cannot help thinking that the cheery little sketches of Lapland (one, especially delightful, is called "Suorva Dam, Lapland") are more faithful and less strained than are the Dalmatian and Bosnian water-colours. It

Digitized by Google

is a characteristic sign of discretion, anyway, that the Balkan pictures are less highly priced than those of Sweden and of Lapland.

On the whole, one prefers Mrs. Cora Gordon's drawings. In this medium she is enabled to convey without exaggeration the essential quaintness of her subjects. She has some charming sketches of Mostar, and one of Najac, showing the fountain, is very attractive.

This exhibition should not be missed by anyone, whatever he may think of the artists' technique, who wishes to renew in a fresh way the memories of his travels in one of the most picturesque parts of the Balkans.

CORRESPONDENCE.

***The columns of* The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.**

BRITAIN AND YUGOSLAVIA.

To the Editor of The Near East.

Sir,—The elections in Yugoslavia have passed off with comparatively little excitement, and with no untoward incidents to speak of. Reports appear to agree that the poll was quite free, and that the authorities put no pressure of any kind upon the electors. M. Pashitch's party has been returned with a clear majority over the aggregate strength of the Opposition *bloc*, and continuity of administration would, therefore, seem to be assured to Yugoslavia for some time to come.

It would be difficult to over-estimate the importance of such a result. It means that a calmer political atmosphere will be found in Yugoslavia than has obtained hitherto, and consequently the economic development of the country should now be able to go forward without interruption in the form of recurrent governmental crises.

Political stability will bring with it increased economic stability; while the continuance in office of M. Stoyadinovitch—the able Finance Minister who is imbued with sound British ideas of the necessity of living on income and not on capital—is a guarantee that the policy of gradual deflation will continue, with a consequent steady improvement in the exchange. That the Yugoslav dinar should stand at approximately 290 after having had to redeem, shortly after the Armistice, countless millions of worthless Austro-Hungarian kronen, and that the Budget is balanced and exports exceed imports, these things alone afford striking proof of the resources of the country. The natural wealth of Yugoslavia is not realised in England, nor is it generally known here that the pre-war policy of Austro-Hungary was to hold back the commercial development of her South Slav provinces until she had consolidated her own position and won through to Salonika.

Yugoslavia stands in urgent need of foreign capital and technical skill to develop her natural wealth—mainly in foodstuffs, timber and minerals—and England might well supply part of it; in return there is a population almost wholly agricultural, of from 13 millions, who import practically all the manufactured articles they use. It only remains to add that Yugoslavia now has her own port where British ships can unload British goods, and a rapidly developing railway system to carry these goods throughout the country.

One of the chief obstacles to the development of British-Yugoslav commercial relations so far has been the almost complete ignorance of Yugoslavia which prevails in England. Information about Yugoslavia usually emanates from neighbouring and often hostile countries, and is supplemented by the anti-Serb propaganda here of ardent partisans of Bulgaria and Albania. As a result Yugoslavia is still generally regarded as an unsettled country where the security of life and property hardly exists, whereas in reality the new Kingdom has, since the Armistice, been making valiant efforts to put its economic and political house in order, and to bring the country to the point where adequate security can be given to foreign capital.

Few serious students of Near Eastern affairs will deny that in the uncertain years to come it would be advantageous to Great Britain to play her part in helping to build up Yugoslavia's future, for the existence in South-Eastern Europe of a friendly country, strong, prosperous and bound to us by the close ties of a common effort in a great cause, *and resolved to fight Communism to the bitter end*, might well prove a factor of great value to us which we should do ill to overlook or underestimate.

With a little more goodwill and a little less criticism from this side, the temporary difficulties of Yugoslavia will in time be overcome and a great future for the peoples of the Triune Kingdom will be assured.—I am, etc.,

E. A. Plunkett, Brig.-General,
Formerly British Military Attaché, Belgrade.

A MIDDLE EASTERN TOUR.

(*Continued from page* 219.)

of Eastern cities stands out as an example of all that a Briton should be—one to inspire respect and honour.

Tabriz is a truly Oriental city, and has gone through many vicissitudes, stands 1,200 feet above sea-level, and is, as its name indicates, healthy—*i.e.*, "tab riz," "free from fever."

The older generation speak only a Turkish dialect, especially in business, but all the younger generation speak Persian. Persian is now being taught in all the schools, and is the official language. The War has left the Persians very poor, and much money was lost through speculation in the Russian rouble, so that the buying capacity of the people is at a very low ebb, and whereas before the War there was a very good trade in high-class goods, now only the very cheapest is being bought. The market for British goods at present practically does not exist, and Italy, with her depreciated exchange, cheap labour, and cheap water power, is monopolising this market.

(To be concluded.)

NEWS IN BRIEF.

A little booklet, "Notes for Travellers," by the Right Rev. Rennie MacInnes, the Anglican Bishop of Jerusalem, has just been published. The price in England is 1s. and may be obtained from the Rev. E. M. Bickersteth, 12, Warwick Square, S.W.1.

Prince and Princess Arthur of Connaught arrived at Rangoon on February 18 by steamer from Calcutta, and were received by the Governor and his staff. At the conclusion of the festivities arranged in their honour at Government House, their Royal Highnesses will visit Upper Burma.

The *Daily Telegraph* reports from Allahabad that an epidemic of plague has broken out in the Sitapur district, and it is considered necessary to restrict pilgrim traffic. The Government has therefore instructed the railway authorities to cancel special trains in connection with the religious fairs at Nimsar and Misrikh.

While flying from Whitley Aerodrome on February 18 an officer of the Roumanian Air Force, Major Stefan Sanatescu, aged 35, was killed near Coventry. He had not left the aerodrome many minutes when the machine was seen to nose-dive, and he was found dead on the ground near his smashed machine. He had been flying from Whitley for a year or more.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

Progress in Yugoslavia.

In this issue appears the first of a series of Monthly Supplements devoted to the affairs of Yugoslavia. As the information is compiled from official sources, these Supplements will furnish a record of the progress made by the country in the different spheres of public activity. The first Supplement contains a survey of the economic situation in 1924, and deals with different aspects of the agricultural position last year. In common with other Balkan States, the recovery of Yugoslavia from the effects of the War has necessarily been slow; but it will be found that, as soon as the leeway of the empty years has been overtaken, the great natural resources of the Triune Kingdom will enable it to play a prominent part in the development of the Balkan Peninsula, with its aggregate population of over forty-five millions.

Yugoslavia's Trade.

Considering the great difficulties which had to be faced, the country has progressed more rapidly than might have been expected. The trade figures for the past year plainly illustrate the position. Yugoslavia's exports in 1924 totalled four million tons of the value of 9½ milliard dinars, these totals representing increases respectively of 30 and 19 per cent. on the 1923 figures. Among the principal items of export are maize, wheat, wood, meat, and livestock, and these commodities are now taken principally by Italy, Austria, and Czecho-Slovakia. Trade with Great Britain, as I pointed out recently, is still on a rather small scale, but the tendency in recent months has been for it steadily to improve, and there are sound grounds for the belief that before long the commercial relations between the two countries will be on a fairly substantial basis.

A Balkan Exhibition.

It would no doubt greatly conduce towards this end if it were possible to have an exhibition of Yugoslav products in London. It is unfortunately true that we have had rather too much of exhibitions since the Armistice, but an exhibition of this kind has so much to commend it that I hope something may be done in this connection. Of course, it would be impossible to restrict it to Yugoslav products. If an exhibition were to be held it would have to cover the Balkan countries, and when one considers the various industries and agricultural products of these countries it will be evident that such an undertaking should prove most attractive to the public, and should be well worth while for the great effect it should have on British commercial relations with the peninsula.

Turkish Reparations.

On another page in this issue will be found an article detailing the story of developments in regard to Turkish reparations. The article concludes with a plea for patience on the part of claimants during the interval which must elapse while claims are being investigated, and it is pointed out that "reparations are not designed to give compensation for the effects of war which have been experienced by the rest of His Majesty's subjects, but only such special damage as their peculiar situation and circumstances enabled the late enemy to inflict by their acts or negligence." It would be surprising, seeing the time that has elapsed since the War, if those concerned were not impatient, and no one can fail to sympathise with them to the fullest degree, for they represent a body of individuals who took a leading part in the development of British trade overseas, and it is a cruel dispensation of providence that they should thus have to suffer for their enterprise. A meeting was held at the House of Commons on February 23 of those interested in the question, when Mr. E. A. St. A. Harney, K.C., M.P., outlined the facts of the case, and said that he was satisfied that members of the House of Commons did not appreciate the position, or it would long since have been remedied. The difficulty is, however, that it is impossible for the British taxpayer to meet everything, and he is already overburdened as it is.

Egypt's Trade Expansion.

Given that cotton is at a high price, and one need not be told that the trade statistics of Egypt are making an excellent showing, for the two things are synonymous. For 1924 there was a considerable expansion both as regards imports and exports, this tendency being more marked as regards the latter, with the result that the balance of trade

in favour of Egypt is further increased. The value of the exports rose from £E58,387,327 to £E65,733,935, while that of the imports was £E50,736,918, as compared with £E45,276,963. It follows from these figures that there is a greatly increased potential purchasing power in the country which another successful tourist season (which all the indications point to) should considerably enhance. In the coming months, therefore, Egypt should loom much larger as a market, and with the cotton outlook decidedly firm, it is evident that there is no reason to anticipate any change in this position for a long time.

A Result of Wembley.

One development which it can only be assumed is the consequence of the great success achieved by some of the exhibitors from other parts of the Empire at Wembley is the appearance at one or two of what may be called the local exhibitions of goods from other countries. This is a hopeful augury as to the prospects of the new Wembley, where I anticipate that one of the most interesting pavilions will be that of Palestine. The exhibitors in that section as a whole did remarkably well last time, and it will be surprising if this year the number of stalls is not considerably increased. *En passant*, it is very welcome news to learn that it is possible after all that Burmah will again participate. The Burmese pavilion was one of the chief attractions from the artistic point of view.

COMMENTATOR.

TURKISH REPARATIONS.

The Present Position.

By Article 232 of the Treaty of Versailles Germany undertook to make compensation for all damage done to the civilian population of the Allied and Associated Powers by the aggression of Germany and her allies, and on May 4, 1920, the policy of His Majesty's Government as regards individual claimants was announced. At that date, speaking in the House of Commons concerning the payment of compensation to individual civilians for losses sustained by them in the War, the Chancellor of the Exchequer informed the House that His Majesty's Government proposed to set aside a sum of five million pounds out of the first receipts on account of reparation which were allocated to the Exchequer of the United Kingdom, as distinct from the British Empire, to be used as a fund out of which payments might be made to individuals as an act of grace on the part of His Majesty's Government. At the same time the Chancellor of the Exchequer stated that a special Commission would be appointed to examine claims upon this fund and to make awards out of it, which Commission was duly set up on August 15, 1921, and has become known as the Royal Commission on Compensation for Suffering and Damage by Enemy Action.

As a result of these administrative measures, persons belonging to the United Kingdom, as distinguished from those belonging to other parts of the British Empire, who had suffered damage in Turkey and former Turkish territory, were invited to send in their claims to the Reparation Claims Department of the Board of Trade, which claims were investigated by a special Commissioner sent to Turkey for the purpose.

The five million pounds being taken out of the first receipts on account of reparations allocated to the Exchequer of the United Kingdom only those British subjects who belonged to the United Kingdom, as distinguished from those entitled in other parts of the British Empire, were admitted to claim compensation against the fund at the disposal of the Royal Commission.

The Royal Commission made its first report on January 22, 1923, which report dealt especially with loss of life, injury to health, maltreatment during interment, and loss of personal effects at sea, and as a result upwards of two million pounds were distributed amongst individuals who had made claims in respect of these categories of damage.

The second and final report of the Royal Commission appeared on February 26, 1924, and dealt with damage to property; after reviewing the whole of the work done by the Commission, it recommended that the fairest way to distribute the portion of the five million pounds allocated to property claims would be to give the first £250 of the assessment in full, and to pay in excess as follows: £250 to £1,000, 50 per cent.; £1,000 to £50,000, 30 per cent.; £50.000 to £100,000, 25 per cent.; over £100,000, 10 per cent.; but with the restriction that the compensation payable under these scales should not in any case exceed fifty thousand pounds.

The Treaty of Sevres, which was signed on August 10, 1920, provided that the Turkish Government should pay for all losses or damage suffered by civilian nationals in respect of their persons or property through the action or negligence of the Turkish authorities during the war, and a Financial Commission was to have been set up to ensure that all the resources of Turkey should be made available for this and other charges. But this treaty was never ratified, and when, after the Greek disasters in Asia Minor, the question of Turkish Reparations again came under discussion at Lausanne from November, 1923, to July, 1924, the Allied delegates at the Conference were confronted with the choice of accepting a paper covenant to pay a considerable sum, which could never materialise, or of making use of certain funds which the Peace Settlement with Turkey might make available. These funds consisted of 57,919,687.34 gold marks and 43,317,650 gold kroner, which had been lying in the Austro-Hungarian Bank in Vienna, which sums in gold had been deposited by Turkey with Germany and Austria at the Reichsbank in Berlin and the Austro-Hungarian Bank in Vienna respectively as a gold reserve against Turkey's first issue of paper money during the war. (Under the Treaties of Versailles, St. Germain, and Trianon, the gold marks and gold kroner had been placed at the disposal of the principal Allied and Associated Powers.)

The Allied delegates decided on the second alternative, and by Article 58 of the Treaty of Lausanne,

whilst Turkey, on the one hand, and the contracting Powers, on the other hand, reciprocally renounced all pecuniary claims for losses and damage suffered by their nationals during the late war, Turkey renounced in favour of the other contracting parties (except Greece) any rights she might have in the sums in gold to which reference has been made, and this was followed by a Convention between the United Kingdom, France, Italy, and Japan, signed in Paris on November 23, 1923, whereby the contracting Powers agreed to devote jointly to the reparation of the damage suffered by their nationals the sums in gold in question.

The British Government further agreed, by the Convention of November 23, 1923, to transfer to the Commission to be set up by that Convention the £846,100 5 per cent. Turkish Government Treasury Bills which the British Government had purchased from the holders in 1914 as a consequence of the Turkish repudiation of the bills owing to the requisition in August, 1914, by Great Britain of two battleships that were then completing in British yards. (This requisition no doubt gave Turkey a right to compensation, but this was extinguished by Turkey's entry into the War, and by Article 58 of the Treaty of Lausanne Turkey further agreed not to claim from the British Government or its nationals the repayment of the sums paid for the warships, and renounced all claims in the matter.)

Payments under the recommendations of the Royal Commission were commenced immediately after the issue of the Reports, persons belonging to the United Kingdom who had suffered damage in Turkey receiving compensation upon the same footing as other claimants wherever the damage had arisen, but as provision had been made by the Convention of November 23, 1923, for the further compensation of claimants whose damage had arisen in Turkey, payments were made only to those claimants as advances repayable out of any sums which they might receive from the Assessment Commission, which was to be set up under the Convention of November 23, 1923.

Owing to the General Elections in England and the fall of the Poincaré Ministry in France, some delay occurred in the ratification of the Treaty of Lausanne, but the Protocols of ratification were eventually duly deposited, and the Treaty came into force as regards Great Britain, Italy, and Japan on August 6, 1924, and as regards France on August 30, 1924

The Commission provided for under Article 2 of the Convention of November 23, 1923, was set up by the appointment on August 6, 1924, of a British Delegate by H.M. Government, which was followed by the appointment of the French delegate on August 13, and of the Italian delegate on the 26th of the same month. The Commission immediately got to work. The gold and Turkish Treasury Bills were transferred to it, the Budget was submitted to the Governments concerned, and approved towards the end of November, and the Commission's procedure was laid down, with the consequence that on December 10, 1924, the Commission was in a position to invite claimants to send particulars of the damage that they had incurred and of the compensation they claimed in respect of it to the delegations of their respective nationalities.

Some criticism had been levelled at the Commission from claimants resident in the Near East because of its decision to make its headquarters in Paris, but the reception of claims has abundantly justified the Commission's decision. It was found, as had been expected, that Constantinople and Smyrna, although the principal centres of damage, were far from being the places of residence of the majority of the claimants, scattered as they had been throughout the world by the events which had occurred between August, 1914, and the coming into being of the Commission in 1924. The British claimants resident in Constantinople and Smyrna represent, in fact, less than 20 per cent. of the total number of claimants, against 40 per cent. resident in the United Kingdom, whilst the balance are scattered throughout the world, some being in the Americas and others in the Far East.

With the setting up of the Commission those British subjects who were excluded from participation in the five million fund distributed by the Royal Commission have now the opportunity of sharing in the funds at the disposal of the new Commission, and not only are all British subjects covered to whatever part of the Empire they belong, but the Convention provides for the compensation of categories of damage which were not included in the provisions of the Treaty of Versailles.

Turkey did not become an ally of Germany until November 5, 1914, and, consequently, damage suffered in Turkey before that date could not be attributed to Germany. Again, the fire of Smyrna and much further damage had occurred after the Treaty with Germany had come into force, and could not be charged to her. Under the Convention damage suffered between August 1, 1914, and the coming into force of the Treaty of Lausanne in August, 1924, may be the subject of compensation, and nationals of the British Empire who suffered damage in Turkey or in former Turkish territory or at sea, notwithstanding that they have already received compensation (by way of advances) on the same footing as and at the same time as other British nationals, are now to participate in the distribution of a further fund in competition only with the claimants of the other contracting Powers.

It should, however, be borne in mind that the number of claims is very considerable, and since the funds at the Commission's disposal will not suffice to pay the whole of them in full, each claimant is, quite apart from the question of nationality, virtually in competition with every other claimant, whose rights may be less able to bear investigation. In their own interests, claimants should, therefore, be patient during the interval which must necessarily elapse whilst claims are being examined, and to prevent eventual disappointment, should remember that reparations are not designed to give compensation for the effects of war which have been experienced by the rest of His Majesty's subjects, but only such special damage as their peculiar situation and circumstances enabled the late enemy to inflict by their acts or negligence.

BOILER TESTS IN INDIA.

It is announced that a very interesting series of boiler tests have been conducted with the "Turbine" forced-draft furnace at the Ganges Jute Mill, Seebpore, near Calcutta, under the superintendence of the chief engineer, Mr. J. D. Campbell.

The conditions in India for steam raising in general are extremely unsatisfactory, most of the available native coal being of a very infeiror character, extremely friable, with a high ash content, and the particularly objectionable feature of great variation in the quality, whilst in the jute industry there is considerable fluctuation in the demand for steam. Consequently there is, for example, considerable difficulty in the way of getting up steam after cleaning out, and the firemen often became exhausted in the hot months of the year.

The coals available at the above mill are various Bengal coals: Alkusa slack, 10,000 B.Th.U. per lb.; Alkusa steam coal, 12,000 B.Th.U.; new Tetruria coal, 8,000-9,000 B.Th.U.; and Damaguria slack, 12,000 B.Th.U., all of which possess a high ash content between 22 per cent. and 32 per cent.

For the tests, a standard 30 ft. by 8 ft. cylindrical "Lancashire" boiler was fitted with the "Turbine" furnace, and a detailed series of trial runs alongside a similar boiler under the ordinary conditions of natural draft, all, of course, on hand firing. The greatest care was taken to ensure similar conditions as regards steam output, both boilers supplying one engine only, whilst all the water evaporated was weighed in tanks, so there was no possibility of mistakes in this direction.

The net result of a long series of tests was that the saving obtained by the use of the "Turbine" furnace varied between 25 per cent. and 45 per cent. of the coal bill, depending upon the fuel used and the conditions, and so highly satisfactory are the results that an order has now been placed to equip all the boilers in the mill, seventeen in number.

INDIA'S TRADE IN DECEMBER.

The trade returns of British India for the month of December, 1924, showed, as compared with the preceding month, an increase in the value of exports with a decrease in imports. The imports of private merchandise totalled Rs. 17,22 lakhs, and showed a decrease of Rs. 5,32 lakhs, as compared with the preceding month. The value of the exports of Indian produce and manufactures rose, from Rs. 32,44 lakhs in November to Rs. 34,91 lakhs in December, while re-exports decreased by only Rs. 3 lakhs to Rs. 1,17 lakhs.

Measured by the statistics of merchandise and treasure, the visible balance of trade was in favour of India to the extent of Rs. 14,83 lakhs in December, as compared with Rs. 2,61 lakhs in November and Rs. 15,45 lakhs a year ago. During the nine months ending December, the visible balance of trade in merchandise and treasure was Rs. 36,22 lakhs in favour of India, as compared with Rs. 52,43 lakhs in the corresponding period of the preceding year. The balance of the remittances of funds in December, 1924, was minus Rs. 7,45 lakhs.

PALESTINE GRAPE SYRUP AND GRAPE PASTE.

Grape syrup is a very common substitute for honey in Palestine. Large quantities are prepared in Hebron from second-grade grapes which are not fit for raisin making (says Mr. A. Grasovsky in an article in the *Commercial Bulletin* of Palestine). The grapes are placed in especially constructed culverts in the rock, and are pressed with hands and feet. The crushed mass is put in sacks, which are again pressed or beaten with stones. The juice is then collected and filtered through a cloth. It is then boiled in large copper tanks, and subsequently allowed to cool. A solution of yellow soil is mixed with the cool juice, and settles down, taking with it all the impurities. (This soil is known as "Houwar," and is found in the hills of Hebron.) The clear juice is decanted in the boiler, and is boiled down until it thickens up to the required consistency.

In manufacturing grape paste or "Malban" only good grapes are used. The grapes are pressed, and the juice is collected and filtered as described above for the making of grape syrup. The clear juice is then boiled, and as it warms about 1 rotl of semolina is mixed with every 16 rotls of juice. The mass is stirred all the time, and when it reaches the required consistency shelled seeds of "Pinus halepensis" and "Pinus pinea" are mixed with the paste. The mass is then poured on to white sheets, and is well flattened up with boards to a given thickness. The paste dries in about three days according to the weather conditions and the thickness of the slab. It then takes the form of a greyish leather-like substance mottled with pine seeds. The slab is then folded up and sold on the local market at a good price. The "Malban" is considered a great delicacy, and is especially used at festivals. Travellers going on long journeys usually take some Malban with them, and use it as a food of great nutritive value.

Near East Markets.

BULGARIA'S TOBACCO STOCKS.

The Export of Maize.

The Bulgarska Banka in its current report states :—

The production of tobacco in Bulgaria during the current year amounts to about 42,000,000 kgs., as compared with 52,000,000 kgs. for the past year. This marked decrease in production is due to the fact that on account of the low prices realised for the past harvest the cultivators have reduced the area devoted to the crop. At present Bulgaria has available for export not more than 30 to 40 million kgs., or about 1 per cent. of the world production. That small quantity cannot be sold at a remunerative price unless the exporters follow carefully the fluctuations in prices and know how to profit by the favourable moment. A country which only produces 1 per cent. of the world production cannot impose its prices on the markets, despite the high quality of the tobaccos, much of which is quite up to the standard of the best Greek tobaccos, thanks to the truly excellent conditions as regards soil and climate which Bulgaria offers for the cultivation of tobaccos of the best quality.

From information provided by the municipalities, merchants, and others, it appears that after the deduction of internal consumption Bulgaria will be able to export this year about 25,000 wagons of maize. The transport of this product by rail will amount monthly to 1,500 to 2,000 wagons, which enables one to anticipate an export of maize equal to 4,000 wagons in the two following months. The meeting called by the Minister of Commerce to examine the question of the prohibition of the export of maize from Bulgaria has decided that the regulation of the export of maize would be altogether useless and would only disturb the market, and lead the peasants to conceal the product under the influence of panic, which would result in raising the prices of maize in Bulgaria. The export of this product will be more considerable in April, when the Danube will be open to navigation. But it is to be foreseen that then the peasants will flood the market not only with maize, but also with wheat, especially in view of the favourable outlook for the harvest of 1925.

GOOD DEMAND FOR FURS.

The report of the London Fur Trade Association (Inc.) states that the London winter fur auctions attracted a very large attendance of buyers, chiefly from the home trade and the Continent. Representatives of the American trade were fewer than usual. Owing in part to the unusually mild weather generally experienced, and in part to the trend of fashion, the demand at these sales was strongest for the staple articles, which fully maintained their values and in many cases advanced, whilst for the choicer kinds it was hardly equal to the supply, and consequently values of some few of the fine furs have become a trifle easier. Competition on the whole was, however, very good, and large quantities of furs were sold. There is no doubt a more confident feeling in trade circles generally. The hope of some reduction in taxation and the more settled condition of international affairs should in themselves help to foster a revival of business. The comparison of prices is with those of October-November last : — American badger, a poor collection; values remain unaltered; Russian badger, unaltered; black bear, declined 25 per cent., neglected; brown bear, unaltered; grizzly bear, declined 25 per cent.; white bear, full last prices; beaver, advanced 5 per cent., taken principally for America; civet cat, quantity too small for comparison; chinchilla, quantity too small for comparison; American and Russian ermine, advanced 25 per cent., mainly bought for America; fisher, declined 20 per cent.; fitch, unaltered; blue fox, very limited demand, declined 30 per cent.; cross fox, slightly easier; grey fox, sold at firm prices; red fox, the best sections advanced slightly, the lower grades being somewhat easier; silver fox, the best skins sold at full October prices, the lower grades averaged about 20 per cent. lower; white fox, unaltered; South American fox, declined 10 per cent.; white hare, a poor offering, values very firm; kolinsky, good grades sold at full values, lower sorts slightly easier; Persian lamb, very few sold at slightly easier prices; broadtail lamb, mostly unsold, limits being too high; leopard, unchanged to slightly higher; lynx, American declined 15 per cent., Russian unaltered; American marten, declined 12½ per cent.; Baum marten, slightly lower; Stone marten, unaltered; mink, firm at October prices; mole, a poor collection, sold at somewhat easier rates; monkey, unaltered; black musquash, mostly unsold on account of high limits; brown musquash, declined 15 per cent.; southern musquash, advanced 25 per cent.; nutria, unaltered; American opossum, advanced 15 per cent., a good collection; otter, unaltered; raccoon, advanced 25 per cent.; Russian sable, full October prices; skunk, black and short striped advanced 15 per cent., long striped advanced 20 per cent., whites advanced 20 per cent. to 25 per cent., a good collection; squirrel, sold well at full prices; wolf, declined 10 per cent.; wolverine, declined 10 per cent.; fur seals, unaltered.

CROP PROSPECTS IN TUNISIA.

H.M. Consul-General at Tunis (Mr. J. M. MacLeod, C.M.G.) reports that grave fears are expressed locally as to the probable failure of the crops in Tunisia this year because of the lack of rain. Although abundant rain fell last winter, the intense heat during May very largely destroyed the crops in the south of Tunisia, and considerable quantities of wheat and maize had to be imported to feed the population. As Tunisia depends so much on agriculture, another failure of the crops would naturally be very disastrous for the country.

Shipping Intelligence.

NEW B.I. STEAMER.

The successful trial trip is announced of the fine passenger and cargo steamer Santhia, which has been built by Messrs. Swan, Hunter and Wigham Richardson, Ltd., at their Neptune Works, Newcastle-on-Tyne, to the order of the British India Steam Navigation Co., Ltd., London.

The vessel is built of steel, being 451 ft. in length by 57 ft. 9 in. broad by 36 ft. 6 in. depth moulded, and will carry a d.w. of 9,500 tons on a draft of 27 ft. Amidships there is well-furnished accommodation for twenty-four first-class passengers, including a large dining saloon on the bridge deck, which is tastefully panelled in white and gold, with mahogany furniture. The staterooms for the first-class passengers are finished in white enamel and furnished in mahogany.

The second-class passengers, twenty-four in number, are on the same decks. Their rooms include a dining saloon finished in white enamel, with entrance and lounge in grey, the furniture in all cases being of mahogany. The staterooms for these passengers are finished in white enamel, with mahogany furniture. Arrangements can be made for carrying about 3,000 native passengers in part of the upper deck and 'tween decks.

The steamer is propelled by twin-screws driven by triple expansion engines, which, with the boilers, have also been constructed at the Neptune Works of Swan, Hunter and Wigham Richardson, Ltd., and on the trial trip they worked without the slightest hitch, driving the vessel at a speed of 14 knots. Electric light is fitted throughout, and there is also a wireless installation and refrigerating machinery.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Olympia for Bombay (Liverpool, March 6). (For passengers sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (London, March 7).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, March 11).

British India Line.—S.s. Dumana for Bombay and Karachi (London, February 27); s.s. Matiana for Colombo, Madras, and Calcutta (London, February 28).

Ellerman "City" Line.—S.s. City of Valencia for Calcutta (Birkenhead, March 2).

Ellerman's Westcott and Laurance Line.—S.s. Trentino for Gibraltar, Malta, Piræus, Salonika, Constantinople, and Smyrna (London, February 28).

Johnston Line.—S.s. Wigmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 28); s.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 7); s.s. Aviemore for Galatz and Braila (Liverpool, March 28); s.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 11).

P. and O. Line.—S.s. Naldera for Bombay (London, March 6); s.s. Nore for Colombo, Madras, and Calcutta (London, March 7).

Prince Line.—S.s. Sailor Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, March 4).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Variable.

The Alexandria Commercial Company in their report for the week ended February 12 state :— Since our last report the futures market has been very erratic for Sakel and quiet but firm for Uppers. The net changes on the week are the following :— Sakellaridis : $2.95 up for March, $3.20 up for May, $2.85 up for July, $1.75 up for November, $1.65 up for January, 1926. Ashmouni : $0.35 up for February, $0.35 up for April, $0.35 up for June, $0.75 up for October. We have had during the past week most exciting markets for Sakel, differences of three to four dollars being registered during the same session; March to-day touched $71.10, but the rise induced profit-taking on a large scale, and prices reacted down to $67.30; at the close the market recovered somewhat, but the tendency remains very uncertain. The Uppers market has been firm but with very little doing. The steady rise of the New York market and the decision of the Master Spinners' Federation to reduce the working hours of the American section has somewhat strengthened the position of Uppers. That large quantities of cotton have been held back in Upper Egypt this season is demonstrated by the abnormally high proportion of Uppers in the daily arrivals in Alexandria during the last few weeks. At the second February tender 2,000 krs. dockets were issued. October Ashmouni and November Sakel have appreciated somewhat in sympathy with the rise of old crops and owing to some business having been concluded with spinners for new crop shipments. The week's receipts amount to 84,922 krs., against exports 132,757 krs.; the stock stands at 1,749,141 krs.

Spot.—We have had a week of small markets at Minet-el-Bassal, due to a reduced demand from abroad. Sales amount to about 14,500 bales, of which we estimate 5,700 bales Sakellaridis, 6,000 bales Uppers, 2,100 bales Zagora, 200 bales Pilion, 100 bales Brown, and 400 bales White.

Sakellaridis.—All qualities have been dealt in, but on a very limited scale. Spot premiums and discounts are without change for Fully Good Fair/Good and Good, somewhat cheaper for Good Fair and Fully Good Fair, and much cheaper for the lower grades. Prices generally are very irregular, due to the rapid and wide fluctuations in the Sakel contract market.

Ashmouni and Zagora have been in fair request. Spot premiums and discounts are unchanged for Fully Good Fair, rather dearer for Good and higher grades, and a little easier for the other qualities.

Pilion.—A fair business has been done. Spot premiums and discounts are unchanged for the Good qualities and rather easier for the lower styles.

Brown.—A small business has been done. Spot premiums and discounts have eased somewhat except for Good, which is unchanged.

White has met with a good inquiry, and an improved business has been done. Spot premiums are generally dearer.

Crop 1925.—An extensive survey of the quantity still remaining in the interior makes us expect that the total arrivals in Alexandria for the current season will amount to 7 to 7¼ million kantars. It is very difficult to give an accurate figure owing to the reluctance of the natives to declare correctly the quantities they hold in their warehouses in the small villages.

LIVERPOOL COTTON REPORT.

Inquiry on Good Scale.

Messrs. Reynolds and Gibson report as follows for the week ended February 18 :—

Egyptian Spot.—A good inquiry has again been in evidence and a fair business has resulted. Violent fluctuations have been taking place in futures, and reactions have naturally been felt in the spot market, particularly with reference to Sakel cotton, which this week has been the centre of attraction. Spinners and speculators have both bought with more confidence than has been seen for many weeks past, and yesterday, when the setback in futures had reached the lowest (about 31.00d. for March), quite a lot of trade fixing became noticeable. The impression conveyed is that spinners are gradually becoming more reconciled to the shortage of Sakel and the consequent high prices ruling.

There is no doubt that this shortage is being felt more and more each week, in spite of the fact that the majority of spinners have cut down their Sakel consumption to the irreducible minimum. Grades from Fair to Good have been chiefly in request. For the quality round about Fair the market is very irregular, and there is a tendency on the part of holders to dispose of their cotton at what appears to be easy prices. For cotton about Good Fair, and upwards to Good, there is every indication that the basis is likely to harden considerably. The finer cotton has not attracted so much attention, although as much as 40.50d. was paid on one occasion.

Uppers have been rather quieter, but, considering all things, this cotton has maintained its position extraordinarily well. Really good staple lots are now hard to find. There has been a fair demand for Pilion, but business has not resulted on anything like an extensive scale. Prices vary from about 23.00d. to 25.50d. White and Brown cotton have been in poor request. In Sudan cotton there has been little business doing; one lot of last year's Tokar Sakel (second quality) changed hands at 37.00d., and considerable interest has been displayed by spinners in the first arrivals of White Sudan cotton, a small parcel of which was sold to-day at about 600 on (American March delivery). C.i.f. business has been comparatively quiet. Forwardings to spinners for the week ending 13th inst. were returned as 11,778 bales. Estimated sales 2,700 bales Egyptians and 110 Sudan. Quotations of Sakel show a decline of 160 to 185 points; those of Upper are 35 points lower, and those of Brown 60 lower. F.G.F. Sakel to-day 34.30d.

The production of the Dacia Romano Petroleum Syndicate for January amounted to 460 tons.

Mr. A. G. M. Dickson has been elected to a seat on the Board of the Agricultural Bank of Egypt (London Committee).

Raw silk spun in Syria and the Lebanon, destined for foreign countries, has been exempted from the export duty of 1 per cent. *ad valorem*.

British Burmah Petroleum.—A cable received by the British Burmah Petroleum Company reports that the production of crude oil by this company and the Rangoon Oil Co., Ltd., for January amounted to 59,703 barrels.

A meeting of the Obligation and Certificate holders of the Constantinople Telephone Company will be held at Winchester House, on March 4 to consider a resolution that the interest on the 6 per cent. Obligation bonds and 5 per cent. Certificates, due January 1, 1925, and the payments due up to and including January 1, 1927, be postponed until January 1, 1928. The overdue coupons will bear interest at the rate of 6 per cent. per annum. The directors further propose to raise additional capital ranking before the Obligations and Certificates.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Œcumenical Patriarchate.

The controversy over the Œcumenical Patriarchate has entered upon a more satisfactory phase. There is no longer any attempt to represent the expulsion of Mgr. Constantine VI. from Constantinople, on the ground that he was an "exchangeable" Greek, and had been elected despite the warning of the Turkish authorities, as a challenge to Christianity. It is now seen in its proper proportions, as a small-minded quarrel. The Turkish warning had been regarded by the Holy Synod as bluff, and the Turks, as soon as their supposed bluff was called, unceremoniously bundled the Patriarch out of Turkey. After this unnecessary trial of strength both parties are settling down to a more reasonable frame of mind, having realised that neither has benefited from the quarrel. The Holy Synod has lost Mgr. Constantine as Patriarch when it might have retained him if it had set about his election in the right way; the Turks have had the empty satisfaction of showing that they do not intend to stand any nonsense from the Greeks in their midst. A solution of the *contretemps* seemed to have been found in the proposal that the Greeks should elect a new Patriarch, and the Turks should guarantee the personnel of the Phanar exemption from exchangeability. Delay on the part of the Synod to close with this offer has allowed the Turks to interpose a further condition that Greece must withdraw her application to the League of Nations, and let the matter be settled by direct negotiation with Turkey. It is to be feared that the dispute will be prolonged by the attitude of the Greek Government, which now declares that it has nothing to do with negotiations between the Phanar and the Turkish Government, but is concerned in what it regards as an infringement of the Lausanne Treaty. This may be, strictly speaking, correct, but it will be easy for the Turks to retort that, if Greece negotiated on behalf of the Phanar at Lausanne, she must accept responsibility now; and, further, that there would be no point in a friendly settlement on the basis of a new election if the whole question is to be reopened by the League of Nations.

Parties in Yugoslavia.

In commenting last week on the Croat version of the recent elections in Yugoslavia that our Correspondent had sent in order that both sides of a controversy might be represented, we expressed the hope that the Serbian point of view might also be given. Our Yugoslav letter this week sets out to analyse the political situation from the detached point of view of a foreigner, when the dust and heat of a strenuously contested election have had time to subside and it will be seen that the verdict does not endorse altogether the Croat view. Our Correspondent is inclined to justify the internment of M. Raditch and some of his colleagues over the election, if only in the cause of order, and does not consider that the action materially affected the results of the polling. In the case of countries where denunciation of rivals by political parties has no recognised limits there is always the danger that the wildest statements will be accepted abroad in their literal significance. There are many friends of Yugoslavia in Great Britain who do not like to think of the country's being in the hands of people who, if they were as black as they are painted, could not be regarded as the Government that the country deserves. The attempt to dictate to the Yugoslavs in regard to the men whom they ought to place at the head of affairs can only be a waste of time. What is of chief importance is that Yugoslavia should achieve political stability in one form or another, in order that greater confidence may be felt abroad in the country's economic future. Whether political stability is to be attained by "rendering more stringent such laws as have been too lax," as would seem to be the Government's plan, remains to be seen. In view of the peculiar conditions of the Triune Kingdom it might be thought that the first desideratum was a friendly agreement with the Opposition regarding measures destined to promote the material well-being of Yugoslavia rather than partisan legislation to strengthen the position of the political group in power.

Communist Activities.

Further measures against Communists have been taken in Bulgaria, and the Government is reported to have obtained useful evidence of the way in which Communist activities have been carried on in the country in the past. There can be little doubt that foreign money has played an important part in the manufacture of Communists in Bulgaria among a population which has little or nothing in common with Communist principles. Just as political parties in any Balkan country never hesitate to credit their opponents with treasonable designs, so those who have a more serious grudge against the party in power are prepared to stop at nothing which may enable them to pay off old scores. It is, therefore, by no means improbable that the Bulgarian Government has been up against perfectly loyal Bulgarians in the rôle of outlaws, using Soviet money and weapons forwarded by other Bulgarians who have held responsible positions, but are now in exile. Much good may come out of the evil if it brings the Yugoslav and Bulgarian Governments together in a joint and conscientious attempt to eliminate the various kinds of incident that keep the relations of the two countries in a state of constant friction. Bulgaria accuses Yugoslavia of harbouring political refugees who are in league with the Communists in her midst; Yugoslavia accuses Bulgaria of sheltering Macedonians whose sole aim it is to stir up trouble in Southern Serbia; both complain of Vienna as a hatching ground for intrigues in their respective countries. The acid test of the sincerity of any understanding between the two countries should be a resolve on the part of each not to offer refuge within its territory to prominent political exiles from the other. Not that the right of asylum should be withheld from Balkan political refugees, whose numbers are an indication of the need for such asylum, but that it should be sought at a greater distance from the native country, in order to reduce the temptation to further personal interests at the expense of international relations.

Lord Balfour's Visit to Palestine.

Lord Balfour's projected visit to Palestine has brought to an untimely end the period of uneventful history which, in the country's interests, ought to have been indefinitely prolonged. Palestine is capable of making useful headway when it is not too much in the limelight; but for the next month or so it will be forcibly projected into that undesirable position. The change of plans that might have been welcomed would now appear almost unfortunate, in the light of the insolent message that the Arab Executive has telegraphed to Lord Balfour. This document sets out the Executive's programme for the visit. On the day of arrival all work is to be stopped and gatherings are to be held in places of worship for protest and prayer. Representatives of Arab bodies, recognised or unrecognised, and other national bodies and notables are to refrain from meeting Lord Balfour publicly or privately. The authorities responsible for the Holy Places and national institutions are to withhold leave of access. Arabic papers will appear with black borders. It will be of interest to see whether the Executive's fiat will be carried into effect. An excellent opportunity is offered to the Arab organisations which have been started in opposition to the Executive's shortsighted policy to show that there is some political sense among the Arabs. The Declaration was a statement of policy by the British Government. Lord Balfour visits Palestine as a private individual, actuated by personal regard for the high mission that it is given to Jewish enterprise in Palestine to fulfil. To make the visit an occasion for public demonstrations of protest will hurt no one but the Arabs themselves, for it will serve to emphasise their unfitness for the serious business of administrative responsibility.

Reports, Wise and Otherwise.

A telegraphic agency in Palestine which, in the language of the film industry, "features" its imagination almost as often as its information, brought a force of 10,000 Wahhabis, under the Sultan Ibn Saud himself, into Transjordan last week, and, after killing "over a thousand of the inhabitants of the frontier zone," left the Wahhabis marching on to Amman. Unfortunately, the agency's imagination did not "feature" the Royal Air Force in Palestine or the British Government's explicit notification to the Sultan of Nejd that it would not remain indifferent to any act of aggression on Transjordan or Iraq. No such invasion as reported took place; but a short time previously a wandering body of Wahhabis had reached the borderland of Transjordan without doing any serious damage before they were driven off. A more plausible report last week was that which appeared in the *Morning Post* to the effect that Lord Allenby had resigned his position as High Commissioner. This particular statement has been officially contradicted, but there can be little doubt that, if persisted in long enough this year, will one day be proved true. The soldier in Lord Allenby dominates the statesman, and it is well known to have been his desire for some time that, as soon as the field is clear for the latter alone, he should be allowed to withdraw. A victory for the anti-Zaghloulists at the elections, if substantial enough, would make the presence of a soldier-statesman at Cairo less necessary, and Lord Allenby might well feel justified in pressing his point, as no difficulty arises in regard to a suitable successor.

INDIA.

The South African Question.

The old difficulties between India and South Africa have unfortunately again become acute. The last mail brought the full report of the Viceroy's reply to a deputation which had pressed the subject on his attention, a deputation of Hindus and Moslems, Christians, Sikhs, and Parsees, which represented no mere political movement, but the very essence of India, both provinces and States. Lord Reading dealt mainly with the Natal Ordinance, which has put a stop to the admission of Indians to the municipal electorate, but, while that measure has produced a serious reaction in India, it is a small matter compared with the general legislation now on the anvil, which links Asiatics with native Africans in a single "colour-bar," and excludes them from all responsible employment in mines and factories. The local conditions which may be held to justify such a measure lie outside our purview, but, looking at it from the Indian standpoint, we are bound to say that no more hopeful method of driving educated and semi-educated India frantic could have been devised than to draw a definite economic line having "whites" on one side and Africans and Asiatics on the other.

The Indian Case.

To judge from the cabled reports, the Indian case was put very fairly by General Smuts, whose attitude on some former occasions has made him an intensely unpopular figure in India. The matter is one of sentiment, but sentiments are among the hardest facts in politics, and this particular sentiment is worthy of respect, because it is a part of the growth of the healthy national feeling which is essential to India's progress in the world. Reasonable Indians admit the social necessity of certain adjustments in practice, and these adjustments can be effected where there is good will on both sides. The way to render them impossible is to start by imposing on one side a formal stigma of inferiority, and this is the course chosen by the South African Government. As General Smuts said, only a few Asiatics are directly affected, but the inclusion of their name in the Bill will win for South Africa the hatred of Asia as a whole. Whether that is worth doing is primarily a question for South Africa, which has considerable interests in Asiatic markets, particularly in the sale of coal, diamonds, and gold, but the inevitable reaction in India is a matter to which the British Empire cannot be indifferent.

The Indian Legislature.

There are still no very definite signs of anything in particular crystallising out of that very fluid body, the Legislative Assembly. The Independent and Extremist groups, which suppose themselves to be a *bloc*, have again been telling a certain amount of truth about each other, and it does not seem possible to forecast whether they will be in the same lobby or not in any specified division. We take it that members of the former group mean well in a general way, but cannot yet shake off the old habit of opposing the Government, while the Extremists mean to oppose the Government, but find the process increasingly distasteful as its results become more and more apparent. Regarded as education in practical politics, we think the proceedings are by no means discouraging, and we notice that so good an authority as Mr. Philip Kerr declared recently that India had made an excellent start on the road before her, but we confess to a good deal of sympathy with the men who have to keep the administrative machine running while the lessons are in progress. Whatever highbrows and mugwumps may say, a reasonable party system is a very great practical convenience.

THE WEEK AT HOME.

London, Tuesday Morning.

The Walsall By-Election.

Nothing could better exemplify the stability—stagnancy, if you will—which our national politics have attained than the result of the by-election at Walsall last week. There was very little difference in the number of votes cast respectively for the Conservative, the Liberal, and the Labour candidates, even though the Liberals had so strong a man as Dr. Macnamara to relieve them of the unfortunate reputation they have won for losing elections.

It seems obvious that either the country is tired of politics or that, in suspending its judgment on Governmental action, it has decided to maintain the *status quo*. The Government has not yet had time to gain either respect or hatred, and it is quite possible, of course, that it will succeed in doing neither.

The Political Levy.

One pitfall, however, it has already avoided: I refer to the one that Mr. Macquisten, in his Bill for the regulating of trade union levies for political purposes, had digged for it. When this Bill comes up for its second reading this week the Government will oppose it. And, although this decision of the Cabinet has bitterly disappointed the Die-Hard section of the Tory Party, there is much wisdom in it.

It is not a question of cowardice, this refusal of the Government to support a measure which in effect aims a blow at the Socialist Party; it is the result of the exercise of plain common sense. Why should Conservatives, except the interfering meddlers, so burden themselves with the rights of trade unionists as to suppose that they alone (and not the partly trade unionist administration which preceded them) really understand the workingman's political interests? Possibly, of course, these Die-Hards imagine that the men whom they would rescue from the obligation to contribute to the union's political fighting funds are really, if they were allowed a free vote, Tories; but that is an unprovable assumption, and to stir up a class war merely for the sake of testing its accuracy is not the kind of inquisition in which Mr. Baldwin and his associates (or most of them) are choosing at this moment to indulge.

The Bank Rate.

Financial markets fluttered considerably towards the end of last week, when it was announced that the Bank Rate would be advanced to 5 per cent. The raising of the New York Bank rate had what is called a devastating effect on gilt-edged securities, and the general atmosphere on the Stock Exchange appeared to be one of rather gloomy apprehension. However, things seem quickly to be righting themselves, and there will be little real anxiety so long as the American exchange remains in its comparatively firm position.

The enormous interest taken in this affair contrasts significantly with that taken in the matter of the Political Levy; the fact of our governance by the financiers rather than by the politicians is becoming increasingly realised.

Ireland's Real Masters.

There will perhaps always be discussion on who are the real masters of Ireland. It is commonly said in England that it is a priest-ridden and a priest-ruled country; in Ireland that the English still, in fact, rule the island; and it is even said in some parts now that Irishmen rule Ireland.

Last week, however, we were regaled with yet another version. It appears that Mr. de Valera has gathered to himself one Father O'Flanagan, who has come out with a startling denunciation of the bishops of Ireland. No words can, in fact, be too bad for the bishops, who are in league with the English, and who muzzle Republican priests. "We suffer," continued this impetuous curate, in his tilt at the mitre, "we suffer from the accusation that we are a priest-ridden people; we are a bishop-ridden people." And it was with the further charm of novelty that we read that Irishmen "tolerate too much ecclesiastical influence in their secular affairs," and that a return was desirable to the policy of O'Connell, who said: "We take our religion from Rome and our politics from home."

This outburst is, of course, the expression of the sentiment of but one man, but there are grounds for believing that the ecclesiastics' hold upon the political life of Ireland is loosening. This fact—if it be a fact—would be more welcomed in England if it implied a decrease in the hatred of England; unfortunately, however, it seems to imply an intensifying of it. It would, indeed, be a strange

Digitized by Google

turn of the wheel if the Church in Ireland were to prove the chief bulwark of England's position there.

Ireland and the Kinema.

In one or two points, however, Ireland can give points to this country. There can be no question that the Free State Film Appeal Board is infinitely superior to anything we have here. The defence of the Irish attitude towards the films that are to be allowed into Ireland, as outlined a few days ago by Senator Oliver St. John Gogarty, was admirable. Not for Ireland are to be "outrageous adventures, murders, false sentiments, and the grasping gesticulations and contortions supposed by their exotic creators to be the inseparable accompaniment of lovemaking in every country."

This is extremely good. But better followed. In England people seem impotent against the American and cosmopolitan financiers of films, but this is how the Irishman "gets next to" his man, the film-trader. "Let us tell them once for all that we will stand none of their dictation. . . . The kinema should be under the control and at the service of the Board of Education." And, as showing how far less materialistic Ireland is than England, it is suggested that a tariff be imposed on foreign kinemas.

Wembley, 1925.

One never really doubted, but one is, all the same, glad to have positive assurance that the British Empire Exhibition is to be held again this year. The House of Commons has approved in Committee the Government's proposal to guarantee a further sum of £500,000 for the Exhibition, which is to be opened, I believe, in the first week in May. There was a debate, it is true, over this granting; but those who opposed it could offer no argument but that of pounds, shillings, and pence. You cannot, however, reduce an idea by such an argument, and Wembley is in essence an Imperial idea. Our provincials, who last year provided 70 per cent. of the Exhibition's visitors, must by this time almost all be Imperialists; and the summer of 1925 will surely have to be at its worst to inhibit a similar conversion of Londoners. I have no means of forecasting whether in 1925 the Exhibition will be a success, but, in any case, to expect a return so soon from so mighty an undertaking seems to me a shortsighted policy.

Imperial Reflections.

It was after reading about this year's Exhibition, staged in what has been described as "the greatest Imperial city of all time," that one turned to read Dean Inge's weekly lucubrations, or illuminations, or lamentations, in the *Morning Post*. He was studying the fate of Rome and examining its decline. It was very well done, but one always feels that the Dean does these things with an idea at the back of his mind that a disease is upon our own modern civilisation.

Has the decay to which our Empire is, in the course of things, ultimately doomed, yet started? To those who look inwards, who see the precarious nature of the Mother Country's existence, the temper of her people, the decline of their religion, and so on, it may appear as if degeneration had set in; but to those who look outward, who see the strength and the direction of the colonies, the desire still to commit ourselves to foreign governance, the ideals of our lonely, distant governors, all will seem well.

NEWS IN BRIEF.

It is reported that M. Pierre Plamenatz, who was formerly Montenegrin Minister for Foreign Affairs, has been arrested by the Yugoslav authorities while on a visit to his mother at Vir Pazar.

The Queen of Bulgaria arrived last week in Belgrade on a visit to her daughter, the Queen of Yugoslavia.

Nine persons, mostly of the student class, of those detained in connection with the Stack inquiry, were released in Egypt on February 24.

Thirty persons have lost their lives and 38 have been injured in a fire which broke out on February 22 at Rahmania, a village of Behera province in the Delta.

The Yugoslav-Hungarian negotiations in regard to matters left over in the agreement of last summer have resulted in the conclusion of a transit and tariff agreement satisfactory to both sides.

Mahmud Effendi Nekrashi, who was Under-Secretary of State for the Interior at the time of the murder of Sir Lee Stack at Cairo, and was one of the first to be arrested, was released on February 23.

A Greek naval mission, consisting of 113 officers and men, arrived at Marseilles on February 26 from the Piræus en route for England, where they will take over the Greek destroyers which are being refitted.

The Reparations Commission will ask Roumania to reply to the German argument that Roumania can only be indemnified out of the Dawes annuities for the banknotes which Germany issued in Roumania during the occupation.

Lord Willingdon has accepted an invitation of the Canadian National Council of Education to undertake a speech-making tour in all parts of the Dominion, and will leave for Canada on April 9. He will devote most of his addresses to Indian problems.

Mrs. W. B. Leeds gave birth to a daughter in New York on February 24. Mrs. Leeds, who was formerly known as Princess Xenia, is the daughter of Princess Marie of Greece (Mme. Joannides), and her husband is the son of the late Princess Christopher of Greece.

The fifth annual dinner of the Institution of Engineers in India was held in Delhi on February 25. Sir Charles Innes, member for Railways in the Indian Government, was present and complimented the institution on its progress and its membership, which is expected soon to reach 1,000.

Negotiations between Greece and Yugoslavia, which were suspended recently in consequence of the illness of M. Caclamanos, have been resumed. It is hoped that they will be sufficiently advanced to enable M. Gavrilovitch to return to Belgrade before March 10, shortly after which the negotiations will be continued in the Yugoslav capital.

Captain F. Kingdon Ward and Lord Cawdor, who have been on a botanical expedition in Tibet since March, 1924, have returned to Calcutta, after a most successful year. More than a thousand specimens were secured, as well as 300 seeds, mainly belonging to the rhododendron, primula, and poppy classes, which they propose to distribute to the Botanical Garden in Kew, Edinburgh, and London.

The body of Major Sanatescu, of the Roumanian Air Force, who was killed while flying near Coventry two weeks ago, was on February 25 taken to Holy Trinity Church, Coventry, where a funeral service was held. Madame Sanatescu (widow), the director of the Roumanian Air Force, a representative of the Roumanian Delegation in London, and members of the British Air Force were present. Afterwards the body left en route for Roumania.

Sir William Earnshaw Cooper, C.I.E., of Castle Carey, Guernsey, and of Cawnpore, India, for many years chairman of Messrs. Cooper Allen and Co., manufacturers, of Cawnpore, for seven years a member of the United Provinces Legislature, and a former President of the Upper India Chamber of Commerce, who died on July 2, aged 81, left estate of the gross value of £55,085, with net personalty £50,163. Among other bequests he left:—30,000 rupees to the Ramsay Hospital at Maini Tal, United Provinces, India, for the maintenance of the Cooper Ward for poor and non-paying patients; and 10,000 rupees to the Summer Home for soldiers' children at Mussouri, United Provinces; 10,000 rupees to the Allahabad Free School and Orphanage.

The Near and Middle East.*

From Our Own Correspondents.

[*On February 19 we published a letter from Croatia which set out to describe the recent elections in Yugoslavia before party passions had had time to die down. In the following letter, by our Correspondent in Yugoslavia, and written from Liubliana, an attempt is made to explain the position as it now is.*—Ed.]

Liubliana, February 26.

After the General Election.

The political storm which raged before and up to the General Election has subsided, and, as is usual on these occasions, most of the savage threats hurled from either side at the other, have by this time died away, leaving scarcely an echo.

Within a short time the new Parliament will assemble and get to work on some most important legislative measures. Among the first in order to be dealt with stand the law regulating election procedure and the Press Law.

A Constitution on modern lines, with an Electoral Law to match, drawn up on the model of up-to-date but old-established States, in which each citizen takes a proper pride in his native land, might easily prove disastrous to Yugoslavia, a State in which the various elements have not yet found their level in regard to each other. Yugoslavia, as she stands at present, consists of a nucleus of Serbs of Serbia—a nation that has already "found itself"—and of their brother nations which belong to them geographically no less than nationally, but who, owing to their unfortunate political past under alien rule and influence, have been *in part* set against their Serbian brothers, and cannot claim overmuch credit for their own liberation either. Meantime the Serbs and such of the new citizens of the State as under Austria resented their national thraldom, and therefore helped to bring about the union—some as volunteers in the Allied ranks (all honour to these heroes, about whom even now far too little is known to the world at large), and some in the fields of politics and diplomacy, whereas others were content to help by encouraging and countenancing these efforts—indulged in far too rosy illusions, and failed to realise that such an upheaval as the War entails an aftermath of internal troubles even in old and stable States, let alone in a State that has constituted itself in haste in the midst of the general disorganisation.

Nevertheless, Yugoslavia gave herself a Constitution on modern lines, and took the risk of its effects on the recently liberated. Soon the presence of "defeatist" elements made itself felt in Parliament, hampering the work of consolidation. First, there was trouble with the Communists, then with the Raditch Party, and so on. Last autumn it came to this, that the Crown deemed it the wisest course to order a new General Election, entrusting the charge of it to the most constitutional ("State-constructive" is the accepted expression here) of the Parliamentary groups, viz., that which stands for centralism—the only form of government suitable in the case of such small State units as, *e.g.*, the Slovenes with their one million, for whom some would claim Home Rule.

The group represented by M. Pashitch (the Radicals), M. Pribitchevitch (Independent Democrats), and Dr. Tseryav (National Democrats), which mustered 118 mandates in the last Skupshtina, combined to form the National *Bloc*, and carried out the General Election, at which it strove to obtain a working majority, *i.e.*, a majority upon which it could rely, and which would be independent of the support of small and fickle factions, and the concessions for which such allies would bargain.

It goes without saying that the Opposition put up a determined and embittered fight. Its weakness was that it consisted of a large number of parties representing divergent aims and principles, with no common bond except the attitude of opposition to the Government group.

Truth About the "Terror."

Much has been said and written about the terrorist methods employed by the Government incidentally to the election. Much of this is rank misrepresentation. The internment of M. Raditch and his chief lieutenants was a perfectly intelligible step, and it would have been suicidal on the part of any Government in charge of the election to do anything else, because the action of these men, once the active champions of the Central Powers, and now the apologists of the old régime, exceeded all decent limits. Their dealings with Russia and various other factors compelled the authorities to prevent further danger to the State and its citizens from that quarter.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

That was the worst of what the Opposition could call terror. The voting urns of the Raditch Party were left undisturbed. The censor confiscated a few papers for seditious agitation.

The Opposition.

The outcome of the General Election has been to give the National *Bloc* 163 deputies and a majority of eleven over the Opposition, which is further handicapped by disunion. There are serious differences as regards principle; but, apart from these, there are both factions and individuals in the Opposition who by their political convictions incline towards the National *Bloc*, and will in all probability give it their support. And other members of the Opposition, who brought their heaviest guns into the field against the National *Bloc*, are already seeking a *rapprochement* with the Radicals as the largest unit in the Government group, at the expense of the National Democrats, the second largest party in that group. Of course, this attempt has failed, for the Radicals know by former experience that it would not be wise for them to join with parties which differ from them in principle, and so endanger the life of this Parliament.

The Opposition, whose recognised head is M. Liuba Davidovitch, consists of 38 Davidovitch Democrats, some of whom are by no means satisfied with the trend of the party, and are inclined to favour the National *Bloc;* further 20 Slovene Clericals under Father Koroshets, 15 Yugoslav Moslems, and a few Agrarians. The last-named party did very badly at the election. The Raditch Party scored 67 mandates in territory formerly Austro-Hungarian. In its ranks, too, there is disaffection. There is danger of a split precisely over this question of M. Raditch's connection with Bolshevist Russia. The Raditch Party is not a reliable prop of the Opposition.

The Tasks of Parliament.

The National *Bloc*, which was in power at the time of the election, has the majority, and is prepared to get to work. In accordance with the King's wish, one of the first measures to be dealt with will be the Disabled Soldiers Law (*Invalidski Zakon*). Next will come the Press Law and the revision of the Electoral Law. The Press Law will be fairly stringent, because experience has shown that the liberty hitherto permitted has been abused for seditious purposes.

Apparently this Skupshtina intends to make up for former omissions, and to modify and render more stringent such laws as have been too lax, too democratic, one might almost say, for present conditions, while the nation, owing to post-War mentality and enmity, is not yet conscious of its civic duties.

Another distinctly important political question is the conclusion of the Concordat with the Vatican. In Yugoslavia, and especially in Slovenia, the Clerical Party commands considerable power. With the argument that the Faith is in danger, the Catholic clergy are in the habit (with exceptions, of course) of taking a very active hand in politics, especially in times of General Elections. In order to prevent the continuance of this in the future, the Government has decided to draw the attention of His Holiness the Pope to it, incidentally to the conclusion of the Concordat, and to request him to use his authority with the clergy, so that religion and religious influence may no longer be exploited for political purposes.

ALBANIA.

Tirana, February 20.

The Anglo-Persian Concession.

One of the first acts of Ahmed Bey's Government has been to obtain the ratification by Parliament of the concession granted in 1921 to the Anglo-Persian Oil Company. He had given his word, when the question was adjourned prior to the elections in October, 1922, that he would lose no time in obtaining ratification if and when he was returned to power. The vicissitudes of fortune have prevented him doing anything until last Monday, but, like a true Albanian mountain chief, he honoured his word on the first opportunity that presented itself.

The concession gives the exploration company of the Anglo-Persian first pick in Albania to the extent of 200,000 hectares for exploration purposes. The area reserved, however, to the Anglo-Persian Oil Company for exploitation is limited to 50,000 hectares. There is, therefore, no monopoly.

Some fears were entertained by the Italian Government with regard to this point when the news came through that the concession had been ratified. Sir Ronald Graham, British Ambassador in Rome, was, however, able to reassure Signor Mussolini. Although the Anglo-Persian Oil Company thereby secures first choice, the area to be assigned to them is not only limited in extent, but there is an area reserved to Italy in addition, part of which, though not large, covers the most promising oil zone. Moreover, the Anglo-Persian Oil Company are pledged to offer participation to Italian capital within their own area, and everything points now to the business being inaugurated to the mutual satisfaction of both the British company and the Italians, whose interests in Albania are rightly considered to be paramount.

Italians are apt to forget that Italy possesses neither the capital to risk the proving of a concession of this kind, nor the expert experience. The presence, therefore, of the Anglo-Persian Oil Company in Albania, working in co-operation with Italian interests, should prove the most satisfactory arrangement possible even from Italy's most extreme point of view.

General News.

M. Lipohova, brother of the Minister of Foreign Affairs, has been appointed Minister in Rome in the place of M. Tewfik Mborja.

M. Poga has joined the Ministry in the capacity of Minister of Justice.

The Republican Constitution voted by Parliament, under which Ahmed Bey Zogu was elected President for a period of seven years, has been modelled on the principle of the American Constitution, by which the Executive is separated from the Legislature, and the President elected for a term of years to preside actively over the Executive. As a strong Government, above all things, is needed in Albania, this system is probably better adapted to present needs than the former one.

Cairo, February 21.

The Tripoli Frontier Bogey.

At the moment of writing, the Press—I refer to what one may call the purely Egyptian Press—is working itself up considerably over the ultimatum which it alleges the Italian Government has delivered to the Egyptian Government in the matter of the occupation of Jerabub. Once again, as in August last, there would appear to be no foundation either for the alarm expressed or for the attacks made on Italy for her attitude in this matter. As far as can be ascertained, all that has happened is that the Italian Government has inquired of the Egyptian Cabinet whether it is ready now to come to a final settlement with regard to the Tripoli frontier on the lines of the Milner-Sciaioja agreement. The present campaign is another illustration of the complete lack of sense of proportion of the Egyptian Press.

Tutankhamen.

Owing to the great demand made for tickets, the Egyptian Government has agreed to raise to sixty the maximum that can be admitted every Tuesday to the tomb of King Tutankhamen. This should please those interested in the hotel industry, who have complained at the ridiculously small maximum fixed. As a matter of fact, this limit could well be increased to double that number without any extra trouble being involved, for there is little to see, and the time occupied by each party is consequently very small.

Mention of the tourist traffic reminds one that, while the Government has been criticised for not helping the tourist industry by admitting a much larger number every week to the tomb, and so providing a counter-attraction to what other winter resorts can offer, there has been very serious complaint of some of the recently appointed Egyptian Consuls in Europe, who are reported to have deliberately dissuaded intending visitors from coming to Egypt, and to have urged them instead to visit the winter resorts of the countries to which they were accredited. A more ingenious organ for propaganda against Egypt, and one more likely to meet with success, could not well be devised; but it is amazing to learn that Egyptian officials should have lent themselves to such a manœuvre.

Contrary to what he stated when he went up to Luxor, Mr. Howard Carter is doing no work in the tomb of Tutankhamen itself, but is devoting his whole time to the laboratory. The latter still contains a lot of material taken out of the tomb last year, which had been left untreated, and both from the point of view of their preservation and in order to leave as much room as possible for handling next year the large number of objects that still remain to be brought out after the mummy has been investigated, it has been considered advisable to devote the very short time that still remains this season to a clearance of the laboratory.

Meanwhile, practically no other "digging" is being done at Thebes owing to the dispute with the Government over the new antiquities law and the terms of the concessions to be granted under it. Neither the Metropolitan Museum nor the Chicago University is doing any field-work, and, unless the Government materially modifies its attitude, excavations on behalf of learned institutions abroad will come to an end, both there and elsewhere in Egypt. A recital of the details of the dispute would absorb considerable space, but a good idea of the merits of the policy which the Egyptian Government has adopted can probably be obtained from the statement that the terms which it is trying to force on concessionaires are the very terms which the Indian Government has decided to be impracticable for the furtherance of scientific research in the field, and that that Government has now adopted as the sole satisfactory system of concession the very conditions which the Egyptian Government to-day declines to grant any more to qualified applicants for digging concessions.

The Water Commission.

Mr. Canter Cremers, the eminent Dutch water engineer, and chairman of the recently appointed Nile Irrigation Commission, has arrived, and the Commission has embarked on its labours. At present it is collecting the data already available in the Ministry of Public Works, and towards the beginning of March it will proceed to the Sudan, where, under present arrangements, it will inspect Makwar and Gebel Aulia. On the conclusion of its visit there it will tour Egypt and examine the irrigation works and drainage system, and it will commence its deliberations towards the middle of April. It is quite possible that it will present its report before June 30, the date fixed by the "Water-Clause" correspondence.

IRAQ.

Baghdad, February 17.

Threatened Famine.

Iraq is suffering from a serious shortage of grain supplies owing to the poor harvests of last year, which in the Mosul vilayet were aggravated by an invasion of locusts so severe that the Government has been obliged to grant an agricultural loan of one lakh to the impoverished cultivators.

This shortage, combined with the unusual lateness of the winter rains, led to a rapid rise in grain prices, which were forced up by speculating merchants to nearly five times their normal value. The Government at once took the matter in hand, and as a preliminary measure, permitted the import of grain by land or sea free of customs duty; further measures were also under consideration, but their introduction was rendered unnecessary by a timely

Digitized by Google

fall of 42 hours' rain last Thursday and Friday, which caused prices to fall with a rush. Thanks to the severe cold of this winter, which has killed off many insect pests, it is expected that the wheat and barley harvest will be an excellent one. The frost has been effective also in destroying boll-worm, the enemy of cotton.

It is interesting to note that since official records were first instituted in 1888, no long unbroken sequence of frosts, such as was experienced last month, has ever occurred in Iraq. The lowest reading for January was 18.8 F., and only once, in 1905, has a lower temperature been recorded. The cold, in conjunction with the fodder shortage, has had very serious effects on animal stock throughout the country; in some areas, particularly in the north, as many as 50 per cent. of the total number of sheep, camels, and cattle have died of exposure.

The Elections.

The elections for Parliament are still held up, pending the Government inquiry into the true electoral population of Iraq. In the local Press it is reported that the numbers have already been ascertained, and are:—

Baghdad	760,858
Mosul	391,577
Basrah	364,512

The chief political parties in Iraq at the moment are the Progressives, the Nationalists, and the Independents. The first, which is almost exclusively Shiah, aims at an united country, with complete independence as soon as possible, a better army, and a stronger educational policy. The second is the lawyers' party, and has on paper much the same aims, with the addition of a desire to hasten the development of Iraq's natural resources. "Al Istiqlal," which has its headquarters, not in Baghdad, but in Mosul, devotes its energies chiefly towards the attainment of complete independence.

The Port of Basrah.

Great improvements have been made at Basrah in the facilities provided for shipment of grain. At present, grain exported from Iraq commands a low price in the world's markets, owing to its reputation for bad grading and cleaning. It is hoped that the improvements at the port will encourage exporters to alter this state of things, so that Iraq grain may compete fairly with that of other countries. A new seif has been laid down at Magil, and a series of railway sidings provided to deal with the grain as it is unloaded from river craft. With regard to outward shipping, six berths have been laid down so that ocean-going steamers can load direct from the seif. It will thus be possible to deal with 2,000 tons of grain in a day—a great advance on previous figures.

The Frontier Commission.

The Commissioners sent by the League of Nations to delimit the boundary between Iraq and Turkey arrived on January 27 at Mosul, where they were visited last week by the High Commissioner. The presence of the Commission is exciting considerable patriotic excitement in Mosul. According to a Baghdad vernacular paper, "the Commissioners were surprised, and the Turkish assessors annoyed, at the fervour of the people." The Minister of Interior has issued a warning against popular demonstrations which may impede the work of the Commission, but the situation is complicated by the inclusion in the Turkish delegation of two renegade Iraqi members, both of whom have in the past incited rebellion against the Iraq and Mandatory Governments. A strong protest was made to the Commission by the High Commissioner, and to the League of Nations by Mr. Austen Chamberlain, the British Foreign Minister, at the presence with the Commission of these "notorious outlaw inhabitants of the Mosul vilayet." Popular feeling runs so high against Turkey that it has been necessary to take strong police precautions in Mosul. The Commissioners were at first inclined to regard these as superfluous, but a sudden fanatical outburst, which ended in bloodshed, has perhaps convinced them of the wisdom of the Iraq Government's measures. The vernacular Press reflects the general attitude in a number of diatribes against Turkish misrule, as the following example (one of the more restrained) will show.

"... The coming of refugees from Anatolia and Armenia increased these calamities. Thousands of them came to Mosul, overcrowding the town and heightening the famine prices. These refugees were a grazing ground for those human brutes, the Turkish military leaders; they drove them as a shepherd drives his sheep. ... Mosul became a centre of disease, and death reaped souls as the harvester his harvest. The military authorities did nothing but satisfy their personal desires; forgetting their national duty, they did nothing to help the people.

"Free speech and thought were prohibited to the people of Mosul; even the most enlightened did not dare to meet together to discuss means of helping their country. Spies were everywhere. ... This is the painful truth about Turkish rule in our dear country."

JEWISH IMMIGRATION INTO PALESTINE.

Official returns show that 11,851 Jews—4,573 men, 3,836 women, and 3,442 children—entered Palestine as immigrants during the twelve months ending on December 31 last. During the same period the Jewish emigrants numbered 2,037, so that the net increase of the population through immigration during the year was 9,814. The corresponding increase in 1923 was 3,788. In recent months immigration has somewhat changed in character, a large proportion of those entering the country being people with means. A substantial number are already founding new industries, and others are being readily absorbed into the labour market. As a result, there is, for the present, practically no unemployment among the Jewish population, and the number of non-Jews reported to be out of work has also decreased.

CORRESPONDENCE

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

TURKEY TO-DAY.

To the Editor of The Near East.

Sir,—The letter under the above heading from Mr. Kenneth P. Kirkwood, which appeared in your issue of February 19, is interesting, but, if he will forgive me the expression, it is marred by the implications it contains regarding the fairness of Lieut.-Colonel J. H. M. Cornwall's criticisms.

If Mr. Kirkwood can read, write, and speak Turkish with the accuracy of Colonel Cornwall he may class himself as a rare exception amongst foreigners resident in Turkey. If he has travelled as widely in Anatolia he should, indeed, speak with knowledge of the cobblers in many villages, for he would certainly have required their services! If, further, he would realise that Colonel Cornwall, like the majority of our Army men, has a distinct weakness for the fighting Turk, he would, perhaps, give more generous consideration to the valuable lecture delivered by Colonel Cornwall.

Mr. Kirkwood agrees that "friendship (with Turkey) can only be obtained if we have a true understanding." He should not, therefore, so lightly brush aside the views of a friendly critic.

Mr. Kirkwood boldly states that "the population of the country is not declining." He may be right, but Turkish statistics must be carefully scrutinised lest, perchance, the vilayet of, say, Mosul, is included. That the Turkish population of Anatolia has been steadily shrinking for many long years past cannot, I suppose, be denied. This may have ceased. Turkey is certainly relieved of the constant drain on her manhood entailed by the occupation of the Yemen. On the other hand, the terrible scourge which wastes the Castamboul and other districts has not been curbed, nor, I fear, has anything been done to fight phthisis and malaria.

Mr. Kirkwood is on more solid ground where he refers to handicrafts, and to these he could have added husbandry. The Turk can produce cobblers, leather workers, brass, iron and silver smiths, carpenters, and builders of fair ability, though they were unable to compete in efficiency with Greek, Armenian, and foreign workers. Hence the desire to exclude these elements.

Turkish authorities are certainly reluctant to admit foreign capital, for with the capital come the foreigners, and Turkey has no small reason to mistrust and even to hate foreign intervention, intrigues, and ambitions. It may be assumed, therefore, that foreign capital will not be sought till every possible expedient has been tried to allow of "All Turkish" enterprise.

It is at this point that something in the nature of a vicious circle is encountered, which, no doubt, exercises the mind of the Government. The Turk, when not at war, turns instinctively to agriculture, in which his pronounced individualism is unrestricted. Land is plentiful and fertile in sparsely populated Anatolia. A large proportion of available labour is therefore absorbed in this congenial occupation. This leaves an acute shortage of man-power for industrial employment. Turkey is therefore obliged to choose between doing without factories, when the consequent economic loss through excessive importations is considerable, or of permitting foreign labour to settle in the country, with all the woes and worries which the past has shown this expedient connotes.

Nevertheless, Mr. Kirkwood is probably right in believing that the day is drawing close when foreign capital will be sought, despite the drawbacks.—I am, etc.,

J. C. T.

Fleet, Hants.
February 21, 1925.

To the Editor of The Near East.

Sir,—As a British resident who has remained, I would like to remark that, as far as my experience among a large circle of friends and acquaintances also remaining in Turkey goes, there is a much larger tendency to share Lt.-Col. Cornwall's views than to express Mr. Kirkwood's optimism.

It is surprising to learn that the opinions and prejudices of a year ago are already antiquated. Indeed, the word "prejudice" itself seems to indicate a lack of appreciation of the sentiments of the British residents, who, with Lt.-Col. Cornwall, have considerable sympathy with the Turkish ideals, but their opinion of the measures taken to secure them has undergone no great change in the past year.

Lt.-Col. Cornwall's experience with the cobblers is undoubtedly the experience of most of us, and the example can be extended to almost all trades. For a further example, during the present winter, for three months, and in spite of the work of five workmen, my roof leaked continuously, until at last a Greek workman was unearthed and promptly repaired the damage in an hour. Building work, and, indeed, all kinds of work requiring skilled labour, are very much hindered, as such labour is practically non-existent.

The economic condition of the country is reflected in the further depreciation of the Turkish lira, which now stands at 930 to the £, a fall of about 100 points in the past twelve months. Also there is the detail of a deficit of Ltqs. 17 millions on a Budget of Ltqs. 162 millions. Money is very scarce indeed, and is reflected in the wholesale reductions of rents, as landlords cannot get tenants to pay even moderate rents. A quite good lock-up shop in a prominent position near the Tunnell, which a month ago was on offer for Ltqs. 40 per month, has now been let for Ltqs. 25 per month, or less than £3.

The fanaticism of the Government is directed against its own subjects no less than against foreigners. Witness the forcing of the concessionaire companies to employ Turks only, the definition of a Turk being a Moslem, Christian Turks being as greatly objected to as Greeks. Jewish and Christian Turks, although Turks for the purposes of taxation, are not Turks for the purpose of earning wages to pay such taxation!

If Mr. Kirkwood really considers that the Government is bound to take cognisance of the Press demands, I fear he is doomed to disappointment, as the much vaunted liberty of the Press is a dead letter, as witness the suppression of several papers, including the very innocuous *Orient News*, the only British daily published here.

What little optimism remains is due to the opinion that things are so bad that they can

scarcely get worse, and that possibly an empty exchequer may result in a change of policy, though not necessarily of heart.

An appreciation of Lt.-Col. Cornwall's wide knowledge of the conditions of Turkey and of the truth and fearlessness of his opinions has led me to write in support of his statements.—I am, etc.,

"Observer."

Another correspondent writes:—

"A finer man than Colonel Cornwall would be hard to find. I like him immensely, but, for all that, I do not fall in with his views, although I have suffered much more at the hands of the Turks than he is ever likely to. You will find that certain business negotiations now in progress with Angora are much more a reflection of the times than Colonel Cornwall's views. It must not be forgotten that he was G.S. (Intelligence) with the Army of Occupation, and as he did not leave with the forces, it is not to be wondered at if the Turks regarded him with a certain amount of suspicion. I really believe that he is voicing his own personal opinion formulated and based upon a certain amount of inconvenience that he has experienced at some time or other. He certainly has not had business relations with the country or its people, nor has he ever conducted any negotiations other than military, which, to my mind, do not count when it comes to judging the present-day Turk."

NEAR EAST BOOKSHELF.

THE WEALTH OF PEASANTS.

"CROP PRODUCTION IN INDIA." By A. Howard. (Oxford University Press. 10s. 6d. net.)

In this commendably small volume Mr. Albert Howard, the well-known economic botanist, attempts to set out in plain language the problems which have still to be solved by men of science before the Indian peasant can come into his fortune. So far as the agricultural side is concerned, we can fairly describe the attempt as a success, and, while different authorities may be expected to take various views on particular questions, the book as a whole can safely be recommended to readers who want to know how Lord Curzon's great undertaking stands after twenty years of active work. On the commercial side we notice a few weaknesses. The trade will stare at the statement on page 61 that India does not export wool: what are the East India wool sales for? Economists will smile at the naive assumption on page 123 that the purchase of foreign goods involves a serious drain on the people who buy them; on that theory poor old England would have been drained dry long ago. Such lapses, however, are rare, and ordinarily well-informed readers will not be seriously troubled by them.

The concluding section, on the organisation of research, is disappointing. Influenced perhaps by his environment, Mr. Howard regards the main problem of organisation as the liberation of State-paid individual investigators from the control of the State which pays for their investigations. The real problem of to-day is how to replace individual investigation by co-ordinated team-work without sacrificing the benefits of individual initiative: when that problem has been solved, the question of State control will lose all its difficulty, but English men of science will probably continue to boggle at co-ordination for some time to come, and the world will have to wait a little longer for the knowledge which it needs.

THE
Great Betrayal

EAST OF PRAGUE.

"EAST OF PRAGUE. IMPRESSIONS OF CZECHOSLOVAKIA." By Major C. J. C. Street. (London: Geoffrey Bles. 10s. 6d. net.)

Major Street has accomplished gracefully a most difficult task—the description of a young Republic as seen from a motor-car. "East of Prague," the result of a five or six hundred miles' run through Bohemia, Moravia, Slovakia, and Ruthenia affords, from the British point of view, a charming introduction to Czechoslovakia, and from the Czech point of view an invaluable advertisement throughout the English-speaking world. Unless we are mistaken, a large public will be found for the book in Czechoslovakia itself.

When his car crosses from Slovakia into Ruthenia to obtain an intimate acquaintance with the glorious forest valleys of the Eastern Carpathians and the mountain tributaries of the black Theiss, or Tserna Tisa, our author's powers of word-painting attain a high level. Uzok, Uzcorna, Jasina come vividly on the screen with their peasants, their poverty, and their aloofness from civilisation; until at the top of the Jablonica Pass we look down upon the terrible eastern slopes which the Russian masses under Brusiloff vainly stormed against the forest-hidden Austro-Hungarian guns. In the dense forests on the western side the Ruthenian villagers in some valleys were unaware of the mighty combats taking place. The Russians never broke through. Russia broke up instead. The Republic of Czechoslovakia arose out of the bloody welter, and Major Street entices us most artfully to know the new Republic better. The book has some excellent photographs, and a map by the author.

PERSONAL AND GENERAL.

TO-DAY.

March 5, 1925 (New Style).
February 20, 1925 (Old Style).
Shaaban 9, 1343 A.H., of the Moslem Calendar.
Adar 9, 5685, of the Jewish Calendar.

Sir Seymour Tritton has arrived in England from Bombay.

Lady Tweedmouth has returned to 57, Seymour Street from Egypt.

Sir Montagu and Lady Sharpe have left Brent Lodge, Hanwell, for Cairo.

Sir Adam Block arrived in London last week from Constantinople and the Riviera.

The Indian Empire Club will hold dances on March 14 and March 28 at the Hyde Park Hotel.

Lord and Lady Swaythling will return to 28, Kensington Court, at the end of March from India.

Colonel F. Ramsay sailed last Thursday in the transport Assaye to take up a command in India.

The Crown Princess of Roumania paid a visit on February 24 to Queen Mary's Maternity Home at Hampstead.

Sir Arthur and Lady Downes and Sir George Manners, who recently went a trip up the Nile, have now returned to Cairo.

Hechmat Bey, Secretary at the Egyptian Legation, returned to London on February 25 from Cairo after several months' absence.

Sir Atul Chandra Chatterjee, High Commissioner for India, and Lady Chatterjee have moved from the Grosvenor Hotel to 131, Ashley Gardens, S.W.

H.E. M. Caclamanos, the Greek Minister in London, who was taken ill whilst in Athens, has now recovered. He will remain abroad for several weeks more.

The Crown Princess of Roumania, who has been paying a visit to England, left last Sunday for Bucharest. Her sister, Princess Irene of Greece, accompanied her as far as Paris.

Sir Francis and Lady Macnaghten, Sir John and Lady Harington, Lieutenant-General Sir Charles Barter, and Mrs. Ballard Smith are among the recent arrivals at the Semiramis Hotel, Cairo.

To celebrate the anniversary of the signing of the Declaration of the Independence of Afghanistan, the Afghan Chargé d'Affaires in London held a reception at 42, Grosvenor Place, last night.

Aziz Izzett Pasha gave a farewell banquet on February 24 at Semiramis Hotel, Cairo, prior to his departure for London. Viscount Allenby, Viscount Jellicoe, and all the Ministers were present.

Sesostris Sidarouss Bey, Chargé d'Affaires of the Egyptian Legation, has returned to London. He has been representing the Egyptian Government at the Conference of International Travel, held in Paris lately, and whilst there he took leave of the official authorities and the Diplomatic Corps.

On February 27, Sir Kay and Lady (Nadejda) Muir were host and hostess to the Pytchley Hunt, when the meet took place for the first time at Whilton Lodge, Northants, Sir Kay's English home.

In celebration of the seventy-fifth birthday of the President of the Czechoslovak Republic, Mrs. Bruce will, under the auspices of the Czech Society of Great Britain, hold an "At Home" on March 7, at 23, Cornwall Road, S.W.

Prince Antoine Bibesco, Roumanian Minister to the United States, and his daughter Priscilla, sailed on February 25 in the White Star liner Olympic for New York. Princess Bibesco is remaining in London for the present.

As a result of the appointment of Mr. Tite as general manager in London of the International Sleeping Car Company, Mr. J. H. Chaker, assistant manager in Egypt since 1906, has been appointed general manager for Egypt and Palestine.

On February 28, at Grosvenor Chapel, Mayfair, by the Rev. Hugh Embling, the marriage took place of Torick, younger son of the Right Hon. Syed Ameer Ali and Mrs. Ameer Ali, to Mary Louise, only daughter of Mr. and Mrs. R. E. Carter.

Mrs. Austen Chamberlain, with Master Chamberlain and Miss Chamberlain, the Marchioness Curzon of Kedleston, and Miss Marcel Duggan, and Lord Askwith and the Hon. Betty Askwith, sailed from Monaco yesterday in the s.y. Meteor for a cruise to Egypt, Palestine and Greece.

Viscount Chelmsford will preside at a meeting of the Indian Section of the Royal Society of Arts on Friday, March 6, when Sir Henry Sharp, Secretary to the Statutory Commission on Oxford and late Secretary to the Government of India, will read a paper on "The Development of Indian Universities." The chair will be taken at 4.30 o'clock.

TURKEY AND THE KURDS.

The outbreak of a revolt in Kurdistan must be particularly galling to the Turkish Government at the present time. Although relations between the two peoples have never been characterised by much friendliness, the Kurds have so far done nothing to belie the solicitude which the Republican authorities have protested for them in furtherance of their claim to the Mosul vilayet. The famous National Pact speaks of an Ottoman Moslem majority "united in religion, in race, and in aim, imbued with sentiments of mutual respect for each other and of sacrifice, and wholly respectful of each other's racial and social rights and surrounding conditions," and only fourteen months ago Ismet Pasha, then Prime Minister, declared that the Kurds were included in that term "Moslem majority," and that both Turks and Kurds must be considered as a single element. A sudden rising of practically the whole of Turkish Kurdistan against the authority of Angora throws a curious light on these claims. The outbreak must have taken the Turks unawares, for prisons were seized, gendarmes and guards captured, and telegraphic communications cut, before the Government appears to have had knowledge that anything was wrong in Kurdistan. Aided by the wintry weather, which impedes the movements of troops, the Kurds have made the most of their start, and have made themselves masters of the greater part of Western Kurdistan, between Kharput and Urfa. Their success is hardly likely to outlive the winter months, for the insurgents should prove no match for a disciplined Turkish army, unless the presence of Turkish exiles has the effect of bringing about greater cohesion than is usually shown in Kurdish movements. Later reports from Turkey suggest that the rebel tide has already begun to recede, even before the Turkish army has arrived on the scene. The local population is said to have turned on the insurgent forces, who had given themselves up to looting, and to have been able to drive them out of one or two towns; but it is not likely that the rising will be finally quelled until the Turkish army has taken the field in some force.

For the present it is impossible to determine with any certainty what is behind the outbreak. It is inevitable that the Turks should attribute it to British intrigue, designed to score a point at the time of the League of Nations' inquiry into the Mosul question. But Arghana is a long way from Iraq, and the most rabid Anglophobe among the Turks will find it difficult to convince himself that Great Britain has really had a hand in starting a revolt almost in the centre of Anatolia. If it be true that some proscribed Turks have made their way to Kurdistan, and that one of the sons of Abdul Hamid has been proclaimed King, some national consciousness may have in this instance supplied the torch to fire Kurdish lawlessness. The head of the movement is said to be Sheikh Said, who has denounced Turkish interference with the Caliphate, and poses as a champion of Islam against the atheistic tendencies of Angora. Although the Sheikh is a leader of a Dervish sect, religion has always sat so lightly on a Kurd that it is difficult to believe that religious fervour has supplied the real motive power to the revolt. Sheikh Said, if he has any military or political instinct, will naturally make his indictment of the Turks cover as wide a ground as possible, in order to increase the numbers of the insurgents; but he has probably found that the well-meant reforms of the Angora Government in the administration of the country a sufficient stimulus to rally the Kurds to their national calling. "Whatever the Kurd does," says Dr. D. G. Hogarth in "The Wandering Scholar," "is done for the sake neither of Crescent nor Cross, for he bears neither one emblem nor the other in his heart, but just because he is Ishmael, his hand against every man who has aught to lose." If this diagnosis holds good to-day, the proclamation in which Sheikh Said announces his intention of restoring the Caliphate and requiring women to veil again will probably appeal to him personally as head of a religious order more than to his followers, in whom the first stirrings of a national consciousness have a less compelling influence than the hereditary instinct for fighting and looting.

Whether the insurrection is put down easily or only after an organised campaign, its significance will not be lost upon the Turks. They can hardly be blamed for not sharing the optimism of the framers of the Treaty of Sèvres in regard to an autonomous Kurdistan, and there are several reasons why they should not want to see Turkey still further reduced by being deprived of those Kurds who have been left in Turkish territory. The anxiety to secure possession of the Mosul vilayet may be based on economic or financial grounds, but it will also have taken note of the fact that, if any considerable section of the Kurds come under a more satisfactory type of administration, the Turkish task of governing the Kurds in Turkey will be rendered far more difficult. The present insurrection is an indication of the troubles that will always be liable to descend on the Angora Government. If it is stamped out in the approved style, peace may be secured for a certain number of years, but the more effectually this is done the more completely will the Kurds of Iraq—that is to say, of the Mosul vilayet—be estranged from the Turks. That this lesson should be brought home to them just at the time when the fate of the Mosul area may be said to be in the balance must be a bad blow to Angora. Few people can be of opinion that the Kurds at the present time would make a success of autonomy. In the past they have not found Turkish suzerainty particularly irksome, and they would probably be prepared to put up with the kind of rule to which they have been accustomed. Republican Turkey, however, is desirous of leaving its mark on Kurdistan as clearly as on the rest of the Turkish territory. Unfortunately for it, this reforming zeal coincides in point of time with the first beginnings of a sense of national unity among the Kurds. The problem for Turkey, therefore, as one of the results of the present outbreak, is to decide whether it will run the risk of completely estranging Kurdish opinion by a ruthless suppression of the revolt, or will try to profit by the admitted unreadiness of the Kurd for autonomy and by the advantage that he stands to derive from ordered government under administrators bound to him by ties of religion, in order to humour the Kurdish hankering for a decentralised system of administration, while keeping Kurdistan within the orbit of the Turkish Republic.

A MIDDLE EASTERN TOUR.—IV.

BY ARTHUR CARR.

(*Continued from page* 230.)

The Caravan Route to the Black Sea.

I left Tabriz on Wednesday, October 29, en route for Trebizond, via Armenia. This has been for centuries the caravan route from the Black Sea, and to-day the methods of transport are almost as primitive as they were 2,000 years ago. Persian, Mongolian, Turkish, Grecian, and Russian armies have all trodden this famous caravan route, but it has altered little. It is true that from Tabriz to Joulfa, and again from Erzeroum to Trebizond, the Russians have made a fairly good road, but for the greater part of 600 miles it still remains a camel track. This ancient route, even in this age of engineering, has no railway, and goods are forwarded by animal transport alone. There are at least always 3,000 camels coming and going, and I myself counted one caravan of 400. At present, with the route to Persia via Batoum and Tiflis practically closed to transport, this road is experiencing a boom. The great pity of it is, however, that Persian exports, being so small, it often happens that the transport animals return with very light loads, and sometimes without any load at all. This makes the cost of transport heavy, as the outgoing caravans have to cover the cost both ways. Even should a railway be made, this would make it a very doubtful financial proposition.

To Erzeroum.

I engaged a carriage with three horses and two men to take me to Erzeroum, a distance of roughly 400 miles. When I say "carriage" I must be sure that I am properly understood. These carriages in Persia are called "phætons," and they are the perfection of discomfort. No leg room—a very necessary thing when one has to sit in the same vehicle twelve days on end—no protection from the wind or rain, and with a very inefficient hood coming up from the back. When on the level or going down hill the horses go at a slow trot, but as soon as a rise appears they immediately slow down to a walk. Going up hills very often means getting out and walking. Travelling in the summer by this means is tedious and trying, but in winter, with the North wind almost constantly blowing and snow falling, it is just horrible. However, we made a quite brave appearance as we wound our way through the crooked streets of Tabriz and finally emerged on the wide Joulfa road. It was hard going, for three days before there had been a very heavy fall of snow, so that the first day we got no further than Sofian, where we put up for the night. I occupied here what is called a "Manzel," or a guest room; just a bare room with an iron stove in the middle. One window looked out on to the Russian railway running from Tabriz to Joulfa, and the other window on to the yard of the caravanserai. To anyone who has ever passed a night in one of Persia's salubrious caravanserai I have no need to describe the "Perfumes of Araby" which wafted into my chamber. However, there was one thing for which I was thankful —I was alone. Lack of privacy is what makes these journeys irksome. At sunrise next morning, Thursday, October 30, the horses were hitched up and we started off towards Marand. As we went along, the sun gradually climbed over the hills behind, and as its rays caught the snow which lay thick on the ground, it glittered like a million diamonds; it was a beautiful sight, such as one gets in Switzerland. Also, the glow of the rising sun tinted the snow-covered hills in front with purple. We reached Marand at 10 a.m., where we had the usual glass of tea, and then turned from the main road to Joulfa to the left towards Khoi. From Marand the road was very bad, and the next stage quite impossible for anything but animal transport; even for camels it must be rough going. At 5 p.m. we arrived at (I believe the name is) Erisi, and put in the caravanserai for the night. Here was no "Manzel," and I had to share the same room as the caravan drivers and the rest of them—no privacy whatever. This was a very long, oblong-shaped room, along the sides of which ran broad mud benches, as also at the top end. At the entrance stood a large "Samavar," always kept boiling. I was given the bench at the top end, where I arranged my camp bed, and from there I could see all that went on. I was much interested to watch the muleteers and camel drivers as they came in, after having first made safe and comfortable their mules, camels, and so on. Before eating, these men invariably washed their hands and went through their devotions. What struck me was with what earnestness and with what complete detachment these rough men prayed. As they murmured their *Salaam Aleikums*, one felt that these men knew themselves in the actual presence of God. No matter that others were talking, eating, laughing, no matter that I, the "infidel," was there, they conversed with their God in intimate tones. Devotions finished, tea was brought, then food and cigarettes. At the other end, by the door, sat two gendarmes, guardians of the caravanserai, their revolvers, rifles, and belts of cartridges hung on the wall over their heads. Then came the blind "Asher," or strolling singer, who sang and recited for hours, with these ragged drivers, who, one could see, thoroughly enjoyed the songs, laughing or applauding, according as they were comic or sentimental. All the time tea was handed round. It was a strange sight, where one saw human nature in a fairly primitive state, but it was interesting. At 11 p.m. the "Asher" finished his songs, the lamp was extinguished, and all these different men curled themselves up on the benches, covered themselves with rough blankets or skins, and slept.

Next morning, Friday, October 31, we left at sunrise direct for Khoi. The going was very bad, for many hours over a marshy plain until we reached the main road running from Joulfa to Khoi, and which was built by the Russians. It was a weary, tedious ride over this muddy plain, flanked by mud hills without a tree or shrub to relieve the monotony. From Marand to Khoi even our old friends the telegraph lines had deserted us. To one who is used to European travel, I must explain that in such countries as Persia the telegraph lines and posts are often the only companions one has for scores of miles, so that finally one gets on very good terms with the wires, the insulators, and the posts. One always looks for them in the distance, watching them, talking to them, so that when they finally disappeared, as they did between Marand and Khoi, one felt very sad. However, on striking the road again just

outside Khoi, everything was more interesting, and I came to the conclusion that Khoi must be a place of importance. We arrived at this town at 12 noon. Here I had a letter of introduction to a certain merchant, "Haji Reza." I left the horses at the caravanserai, and after a lot of trouble found my friend.

Persian Hospitality.

Here I must try and give some idea of the hospitality which one finds everywhere in Persia. It is extraordinary what a Persian, be he rich or poor, will do for a stranger. When we met, Haji Reza invited me to his house, put a special room at my disposal, and so that I should be more at ease, invited several of his friends, two of whom spoke French. In the evening he had the table set in the European way, and he himself even ate with a knife and fork, which was the greatest compliment he could pay me. I shall never forget that dinner or the man who put himself to such inconvenience to do me honour. That night I slept on a clean soft bed—of course, on the floor, as there are few bedsteads amongst the Persians, but I slept like a babe and woke up in the morning beautifully refreshed. Haji accompanied me to the caravanserai, where I joined my phæton, and left Khoi at 9 a.m. for another stage.

Khoi Cemeteries.

Khoi lies in a fertile plain, and grain, cotton, fruit, as well as large quantities of mulberry trees, are cultivated. The environs are beautiful, and one approaches and leaves this prosperous town by broad tree-bordered avenues. Here I noticed the cemeteries were better kept than in any part of Persia which I had previously visited, each grave having a headstone with the name neatly carved at the top. This is a very rare thing in Persia, where the cemeteries are universally neglected. I wondered what trait in the character of the people of Khoi was responsible for this.

Zorabad and Garany.

After a very cold ride I reached Zorabad at 9.30 p.m., November 1. On the road I met a party of Russians who had started out for Trebizond, and who were returning in a "phæton" to Tabriz. They told me that I could not possibly get through, as at Garany snow lay 2 metres deep on the road. I spoke to my driver, who replied *Inshallah miravim sahib* ("God willing, sahib, we go forward"), and on we went. I was in no mind to go back, but I knew it was a race against the snow to Erzeroum. Zorabad is simply the usual filthy Persian village. Next morning we started out at 6 a.m. because I was very anxious to push forward. The day was terribly cold on account of the wind's blowing like ice from the snow-covered mountains. We arrived at Garany at 5.30 p.m., Sunday, November 2. Here a Persian put a room at my disposal, which he particularly explained to me was not a "Manzel," a room one could hire, but was one of the rooms of his own private dwelling. The room was certainly very clean, but, unfortunately, there was no stove, and I think I never passed such a cold night in my life. In spite of being fully dressed, even with boots and overcoat on, and over this a heavy "Pushteen" (a sheepskin rug), I could not keep myself warm. At Garany there is a fine camping-ground for caravans, and in the evening I watched hundreds of camels being unloaded, formed into circles, and fed. Out of curiosity I strolled through the camp, and was interested to see some scores of bales carrying the marks of my own firm. At least, one can understand why packing must be strong and thoroughly waterproof. Nevertheless, the bales and cases are handled in a very workmanlike manner, and large quantities are loaded or unloaded in a very short time. In the morning, with sunrise, and before its rays top the Eastern hills, the camels are formed up and loaded. Then the whole train gets on the move, and long strings of camels disappear with noiseless tread, just like dreamships, the only sound being the klonk, klonk, and boom, boom of their bells.

(*To be concluded.*)

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1.

THE FOUNDATION OF CAIRO.

On February 25, in the third of the series of lectures that he is delivering at the London School of Oriental Studies, Mr. Ernest Richmond covered a considerable period of history, ending with the rise to power of the Fatimid Caliphs and the foundation of Cairo. Of this last event he said that on the same night, August 5, 969, that the Fatimid General entered Fustat, the old capital of Egypt, the new capital was commenced on a sandy waste near by. Here a square had been laid out about 1,200 yards along each side. In order to determine the auspicious moment for the workmen to begin the trenches for the foundations for the enclosing wall, Moorish astrologers had been consulted. Poles had been set up along the lines of the proposed trenches, and these poles were connected by ropes on which were hung bells. The excavators were awaiting the signal, which was to be given by the astrologers pulling on the ropes and setting the bells ringing; when, before the auspicious hour could arrive, a raven settling upon one of the ropes caused all the bells to jingle. Whereupon every mattock struck the earth and digging was begun. What was done could not be undone, but it was an unlucky hour. Mars was in the ascendant. The name Cairo, derived from the Arabic name for the planet Mars, commemorates the incident.

Of Al Azhar, the lecturer said that the foundation of the great mosque which has since become the University was commenced in the year following the foundation of Cairo. As originally designed and built, it was about 300 feet in width and 250 feet in length. It was enclosed by a brick wall. The broad side of the rectangle faced south-east towards Mecca. The arcade of the sanctuary consisted of ancient columns and capitals carrying pointed arches of the form known as Persian, this being the first appearance of that form of arch. The walls and arches were thickly covered with plaster, in which ornaments and inscriptions were carved. At this period Moslem architecture in Egypt was still the brick architecture of Mesopotamia. Its origin had been in mud, and in the earlier days of Islam, before the development of glazed tiles, it depended on plaster and paint for its decoration.

Air-Vice-Marshal Sir Sefton Brancker arrived in Baghdad last Saturday on his return flight from India.

The Turkish Government has notified the Secretariat of the League of Nations that it will send delegates to the International Conference for the Control of Armaments which assembles to-day.

The Afghan Government will introduce on March 21 a new silver coin called the "amania," after Amanullah Khan, the Ameer, of the value approximately of the present Kabuli rupee. A half-amania, with nickel coins of smaller denominations, will also be minted.

ISLAM AND CHRISTIANITY.

A meeting of the Near and Middle East Association was held on February 25, by kind permission of Mrs. Bruce Dick, at 55, Harrington Gardens, S.W., to discuss the subject of "Islam and Christianity." Major-General Lord Edward Gleichen presided, and among those present were: H.E. the Swedish Minister, H.E. the Albanian Minister, the Afghan Chargé d'Affaires, M. Nelky, Hungarian Legation; Count Raczynski, Polish Legation; Princess Dolgorouky, Prince and Princess Soumbatoff, Viscountess Combermere, Viscountess Dupplin, Sir Richard Butler, Sir Armine Dew, Sir Aurel Stein, Sir John Foster Fraser, Sir William Clark, Sir Harry Lamb, Mr. Leland Buxton, Mrs. Stewart Erskine, Mr. W. H. Nevinson, Mrs. Charles Hancock, Mr. Ernest Richmond, Mr. C. R. Ashbee, Mr. Percy Molteno, Mr. and Mrs. Fred Graham, and Mr. and Mrs. James Conchie.

Sir Thomas Arnold first addressed the meeting. He pointed out the necessity of a wider attitude towards the Muslim subjects of the British Empire. The world was not now what it had formerly been, and with the geographical shrinking, owing to the development of communications, motor-cars, wireless, and so on, had come an increased sensitiveness on the part of Islam towards the West. The old superiority which it was the fashion of the nineteenth and earlier centuries to assume towards Islam was false and must be altered, and its continued indulgence by writers, and particularly by politicians, did infinite harm. Sir Thomas instanced remarks made by Mr. Lloyd George as having had a very bad effect on Indian Muslims, and he disapproved of Mr. Stanley Baldwin's recent reference to Layard on the subject of Mosul. Further, it might be that a renascence of Islam was at hand. The Mohammedan year was 1343—the age corresponding in our Christian time to that of Petrarch. Such a comparison itself was sufficiently pregnant. Islam and Christianity must get to understand one another. After all, if the world were divided into West and East, Islam and Christianity fell together in the West. A return should be made to the spirit in which the great Pope Gregory VII. wrote in 1076 to an Emir in Algeria, saying that the fundamental fact which should govern the relations between Christians and Muslims was that they both believed in one and the same God.

Next, two papers, written by Mr. Ameer Ali and the Rev. Dr. Miller Kay respectively, were read by Dr. E. H. Griffin.

Mr. Ameer Ali contended that the attitude of Islam towards Christianity had ever since the Prophet granted his famous charter to the Christians of Najran been one of friendship and toleration. When other feelings had been entertained, the origin was to be found not in religious but in political causes. In Saracenic Spain it was one long history of bigotry and fanaticism on one side and continuous effort at conciliation on the part of the Arabs. However, Christianity and Islam were offshoots of the same stock, and it was by an accident that Christianity, when it was transplanted in Europe, became identified with conceptions foreign to the teachings of Jesus. This proved the cause of future wars.

A further note by Mr. Ameer Ali was read on the subject of polygamy, in which it appeared to be held that more than one wife was allowed to Muslims because of an economic necessity, and that where such necessity did not exist, monogamy was the tendency. Further, Islam inhibited slavery.

Professor D. M. Kay (of St. Andrews University) suggested that all the religions which acknowledge Abraham as the Father of the Faithful might profitably co-operate for the advancement of knowledge and for the cultivation of international goodwill. For instance, the history of the period before Christ was of equal interest to Christians and Muslims. There was significance in the precedent established by Haroun-er-Rashid when he founded in Jerusalem a hostel which should enable Christian pilgrims to exercise their faith and to make the acquaintance of their hosts. In Jerusalem there might again be a *studium generale*, a habitation for Semitic wisdom of every type. And from the point of view of international good will it should be remembered that Islam, the latest version of the religion of Abraham, commands the glad assent of one-eighth of the human race. The Bible and the Koran are more widely distributed than any other books. The chief end of Islam was (as its name implied) peace; and the support of Islam for the aims of a League of Peace was far more important than the adhesion of any single national State.

Finally, a paper on the differences between Christians and Muslims was read by Lord Headley. He began by asserting that far more Englishmen would proclaim themselves Muslims but for the social consequences, and continued with a statement of the impossibility of being a good Muslim without being a good Christian. Duty to God and Duty to Neighbour formed the one solid basis of Islam and unfettered Christianity. Unfettered Christianity he explained as that form which lacked the dogmas "invented by Monks and Priests in the Middle Ages." It was these dogmas, this priestcraft or sacerdotalisms, to which the Muslim objected. At the present time he believed that there was an increasing revolt against mediæval superstition and dogmatic intolerance.

In the subsequent discussion a variety of matters were touched upon. Mr. Yussuf Ali, in explaining the desirability of co-operation between Islam and Christianity, spoke of the breadth of view which the writers of the papers had expressed. What was necessary was for Muslims to produce more Ameer Alis and for Christians to produce more Sir Thomas Arnolds. Personally, he, a Muslim, found it as easy to worship his Maker in a Roman Catholic church or a Protestant church as in a mosque.

A Catholic speaker, in welcoming the idea of closer co-operation with Islam wherever it was possible, deprecated the idea of attacks upon Catholic tenets as the best way of fostering such co-operation.

The Rev. Dr. Frew, of Constantinople, humourously pleaded with his audience not to accept the idea that the Turk (his very good friend) was a better man than his fellow-Christian, or that he was kinder to the lower animals, or that he was any more strict in his observance of Fridays than were Christians of their Sundays.

This last view was contradicted by Professor Henri Léon, who asserted that the Turk, at any rate before the 1908 Revolution, was far humaner to animals than were the Christians. In Turkey the idea of a bullfight was impossible. But toleration was the main thing. Just as one could not grow carrots in the same field as turnips, so must the relations of Islam and Christianity be.

Mr. Lovegrove inquired whether it had yet been

found necessary to establish an R.S.P.C.A. in Turkey.

Mr. Nevinson, describing himself neither as a Christian nor a Muslim ("neither a carrot nor a turnip"), asked what, if Islam forbade slavery, was the point of the activities of British ships patrolling the Red Sea, and what, if no wars were waged by Muslims except in political causes, was the fighting between Albanian Christians and Albanian Muslims caused by?

ARCHÆOLOGICAL DISCOVERY IN ARMENIA.

The latest news and photographs from Erivan (the capital of the Soviet Republic of Armenia) to hand point to an archæological discovery of great historical importance. This discovery may not only throw a good deal of light on the history and art of Armenia under Arshakuni (Arsacid) kings, but also lead to the exact location of the site of Artashab (Artaxata of the old Roman historians), the capital of Armenia under Arshakuni dynasty.

On January 25 last Prof. S. der Hagopian, the Keeper of the Museum of Antiquities at Erivan, found near Dovin the life-size head of a statute amid a mass of débris near a stream draining into the Arax. This statue, of whitish sandstone, bears all evidence of being the head of a king, similar to the effigy of King Tigran the Great (96-51 B.C.) as it appears on coins bearing the name of that Armenian Arshakuni king. The statue is 39 centimetres in length, broken off the body at the neck, and diagonally slashed on the left cheek up to the mouth.

At present there are two large villages in Armenia which bear the name of Dovin. The upper Dovin, north of River Arax and some twenty miles south-east of Erivan, is undoubtedly the ancient site of the capital of Persarmenia of the same name. The statue was discovered near this Dovin. The lower Dovin is a smaller village to the west, inhabited now by the Nestorian refugees from Turkey.

A. Kalantar, the President of the Armenian Antiquities Protection Committee and a well-known archæologist, carefully examined the statue and expressed the following opinion:—"The head carries a crown in the shape of a square coin. Various ornaments hanging from both sides of the crown fall down on the ears. It appears that the artist who made this monument left the orbits of the eyes empty (about six centimetres in length) and then put into the eyes valuable shining jewels. It is impossible as yet to say anything definite about the origin, the date, and the identity of the statue. But even from the first examination there is little doubt that it is an Armenian king's head. This type of crown was worn by Tigran the Great and his successors. The later Arshakuni kings maintained the tradition, and introduced small modifications in the shape of the crown. As there are little crosses among the ornaments hanging over the ears, I assume this statute to be of Christian era, belonging to one of the later Arshakuni kings. The type of cross worked on the monument was common in the fourth and fifth centuries.

"The assumption that it may belong to that period of Armenian history is the more important for us, as we possess up to now no monument whatever from the period of Christian Arshakunis (303-428 A.D.); that is why many unfounded asservations are made by archæological investigators in regard to the political relationships existing between Armenia and Sarsanid Persia.

"As a life-size portrait of an Armenian king—made in Armenia in the form of a statue—was known to us until now, the statue of Kagig I. Bagratuni (885-92 A.D.), which was discovered in 1906 at Ani by Professor N. Marr."

The Antiquities Protection Committee, in a meeting presided over by the Minister of Education, decided to carry out excavations in the neighbourhood of Dovin in order to discover the body of the statue, and perhaps many other important monuments.

A. S.

FROM MEDITERRANEAN TO CASPIAN.

On February 27, at 74, Grosvenor Street, Mrs. Patrick Ness lectured to the Central Asian Society upon her adventures along the motor-route from Beyrout to Teheran, or, rather, to Enzeli on the Caspian. A fascinating narrative was illustrated with plentiful slides both of the Arabian Desert and of the Persian country beyond Khanikin. The contrast between the motor service from Beyrout to Baghdad and that existing in Persia was humorously emphasised, the difference not being due solely to the distinction between a Buick and a Ford.

The Hungarian Archæological Society has elected Sir Aurel Stein, the archæological explorer of Central Asia, an honorary member. Sir Aurel Stein was born in Budapest in 1862.

M. Radeff, the Bulgarian Commissioner, has returned to Constantinople to resume the negotiations for a Treaty of friendship between Bulgaria and Turkey. The outstanding question for settlement is that of the minorities.

Brigands have captured a party of Greek sportsmen hunting big game in the Katerina district of Macedonia. The party included Professor Photinos, of the University of Athens, and M. Stais, a former Royalist Minister. All have been released except one, who has been detained for ransom.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

The Indian Budget.

In introducing the Indian Budget Sir Basil Blackett had the satisfaction of being able to announce that there was a surplus of Rs. 4 crores on the past year, or £3,000,000, instead of the estimated surplus of Rs. 18 lakhs, or £135,000. A year ago the Budget just balanced, and the present result is a measure of the improvement that has taken place in India's financial situation. Up to the past two years there had been a long series of deficits, amounting in the aggregate to a very large sum, and with a view to the solution of this problem, the Retrenchment Committee over which Lord Inchcape presided was set up to go over the expenditure. The work of this committee finds its reflection in the present surplus, while the effect of the series of good monsoons which India has been fortunate in having has been to provide a solid basis on which to build up a sound financial position. India, in short, is now definitely on the upgrade, and the favourable economic outlook will not be slow in having a marked influence on the trade situation.

Budget Features.

Turning to the Budget for the coming year, it is interesting to note that there is no necessity for any increase in taxation, as a surplus is anticipated of Rs. 3.24 crores, of which, Sir Basil thinks, Rs. 2.68 may be regarded as a recurrent surplus. He pointed out that the Government had repeatedly said that their financial policy was directed to the reduction and eventual extinction of provincial contributions at the earliest possible date. The surplus does not include the Rs. 63 lakhs from Bengal which has been remitted, and this remission is to be continued for three years more, while it is proposed to reduce other provincial contributions by Rs. 2½ crores, giving Madras a remission of Rs. 126 lakhs, the United Provinces one of Rs. 56 lakhs, the Punjab one of 65 lakhs, and Burma one of 7 lakhs. These remissions leave a balance of Rs. 6,75 crores, which will have to be dealt with before there can be any question of the reduction of general taxation.

Rupee Exchange.

In the course of his speech, Sir Basil dealt at length with the question of rupee exchange. He said that he had no intention of prophesying or promising any particular rates, but they were compelled to adopt some definite figure, and as for nearly half the year the exchange had been fairly steady in the neighbourhood of 1s. 6d., he proposed to take that as the average rate for the Budget. He pointed out that natural causes connected with world movements of exchange and prices had recently tended to raise the exchange value of the rupee, and he asked why the taxpayer should be arbitrarily deprived of this advantage, which had come from natural causes. "Is it not better," he added, "to let natural causes continue to operate as the Government of India propose, and leave the final decision of the ratio to be determined by the Currency Committee in the light of the further experience which a few more months will give us, when, in addition to dealing with the wider questions which must come before them, the Committee can finally fix the ratio at whatever figure may be most truly in the interest not of this or that section, not of producer or consumer or taxpayer considered in isolation, but in the best interests of India as a whole?"

Manchester Ship Canal Company.

Manchester can claim to have been "made" before its Ship Canal was built, but there can be no question of the value that that vast enterprise has been to the city. In view of the trade between it and the Near and Middle East, the report of the annual general meeting which appears on another page is of special interest. The chairman drew attention to the saving effected on direct shipments of cotton and other Eastern products, and it is satisfactory to find that the cotton imports for 1924 exceeded those of 1923 by over 40 per cent., the shipments of Egyptian cotton to Manchester being well ahead of those to Liverpool.

British Trade Corporation.

A satisfactory report is forthcoming from the British Trade Corporation for the year ended December 31. There was a profit on the year of £75,710, which, with the sum of £10,480 brought forward, gives a total of £86,190. From this £35,000 has been utilised to write down investments, leaving £51,190. The directors propose the payment of the fixed dividend of 6 per cent. per annum on the "A" shares, leaving £21,190 to be carried forward

The Rubber Position.

The rubber position grows more interesting. After a dull period in the commodity market, brisk buying has been resumed, and during the last two weeks the London stocks have again been rapidly depleted, and now stand at only 23,255 tons. At this rate they will be of negligible proportions by the time the next increase in the exportable percentage is made. So far the share market has failed to react to the commodity movements, but if, as seems at least probable, there is a further rise in the price of rubber, it is inevitable that values must appreciate. Still, with rubber anything may happen.

THE COMMERCIAL POSSIBILITIES OF THE YEMEN.

An address on "The Resources and Commercial Possibilities of the Yemen" was given at the London Chamber of Commerce on February 24 by Lieut.-Col. H. F. Jacob, C.S.I.

Mr. R. L. Barclay, C.B.E. (Chairman of the Council of the Chamber), who presided, mentioned that the Yemen was an independent province in South-west Arabia. For years it had been administered by the Turks, who collected just sufficient revenue to pay for administration charges. He believed that in the Yemen there were great commercial possibilities, although they had thought of it as a desert because it was so marked on the map.

Col. Jacob began with a short *résumé* of the political situation. For many years the Yemen had been almost a sealed book, and its ruler, the Imam, was scarcely known, and but little discussed. This was due to the jealousy of the Turks, who had administered this province during the last phase of their rule, from 1873 to the Armistice of 1918. The Yemen was, roughly, in the south-west corner of Arabia, and its metes and bounds were not yet wholly fixed. It included Nejran to its north and Marib, the headquarters of the Queen of Sheba, to its east, while westwards it was bounded by the Tihama or Netherlands, flanking the Red Sea. The Yemen geographically comprised the Province of Asir, with its capital in the highlands at Abha, and such ports as Medi and Jezan, etc. The capital town—Abha—was in the hands of Ibn Saud of Nejd, the potentate who was fighting with the King of Hejaz. The ports of Asir, and a few inland towns were held by the Idrisi ruler, who established his authority there so late as 1907, and in 1920 took over the port of Hodeida. The Imam was Lord of the Yemen proper, including the highlands and the major part of the lowlands, travelling south till they met the confines of our Aden Protectorate. On retiring from the Service in 1921, Col. Jacob said he at once looked to the Yemen and its trading possibilities. The Imam had long wished to open up his country, but was unable to do so so long as the Turkish incubus rested there. In 1923 the Imam asked Col. Jacob to his capital of San'a with the express object of discussing trade, and throughout the whole of his stay he was received with the utmost courtesy and cordiality.

The Yemen Col. Jacob described as "par excellence," the most fertile tract in all Arabia. The population exceeds five million, and large and flourishing towns are dotted all over the country. Cultivation is intense; wheat, barley, and millet crops abound, and there are large and wholly cultivated plateaux in the Upper Yemen. San'a, a walled city with eight gates, lies in a fertile plain at an altitude of 7,260 feet, above sea-level, and has a population of 45,000. Here one found all the English vegetables and magnificent potatoes. Most of the English fruits grow there, and there are twenty-four distinct varieties of grapes. Referring to the coffee territory, he said that if Mocca coffee has now temporarily yielded to the Kenya product, and if the berries of Costa Rica and Santos are now more in prominence, this was due to the Turkish régime, to the war, and to the necessary interval that must pass before the Imam can consolidate his domains after the Turkish exit. There is also a great future for cotton, for apart from irrigation there is a three-months' monsoon, and where millet grows in a marked degree of excellence cotton is a promising crop. Of minerals there are gold, iron and coal to be exploited. The Turks had reports of the existence of mines, and offered the Arabs sums of money to disclose the sources, but the Arabs, who were tired of Turkish over-rule, have refused to divulge them. As a pledge for the successful exploitation of the resources of the country, Col. Jacob mentioned that the Imam is a man 55 years of age, energetic, exercising an enlightened rule, and starting various reforms. He is a deservedly popular ruler, and what is a most important point, his country is secure internally. The telegraph is established, and connects all the large towns with San'a, and of late wireless has been introduced. The country is civilised in many respects. At San'a there is a spacious barracks for the training of the Imam's troops, and a powder factory is under construction outside the town walls. This state of security is a strong asset, giving great promise for trade. The roads in many parts are quite good, and their amelioration is not confronted by any topographical or engineering difficulties. The route from Hodeida to San'a runs by the Turkish military road, and along it the Turks before the war had planned a railroad, but peculation and inefficiency thwarted the construction. The Imam was fascinated when informed of the possibilities of railway transport in his country, but Col. Jacob expressed the opinion that the first essential is to improve the roads and to introduce some form of motor-traction. There is no stint of labour. All the labour used by the port of Aden on the wharves and coal stacks and in the various godowns comes from the Imam's side of the water, as do the majority of the firemen sought by the shipping agencies. The present means of conveyance is by camel, mule, and, to a small extent, by human porterage. Hodeida, the nearest port to San'a and its key, is temporarily in the hands of the Imam's rival, the Idrisi, but there are many possible openings below this port, and the Imam is considering the work of construction here. At the present time the Imam of the Yemen is patiently awaiting the conclusion of a long-discussed treaty with the British Government. With a stable Government now in office, and Mr. Amery, the sympathetic and far-seeing Secretary of State, in charge of affairs, Col. Jacob thought that the slight which the Imam's prestige had received through the Home Government allowing the entrance into Hodeida of the Idrisi chieftain would be removed. So soon as the Imam has convincing proof of the Government's goodwill by the transfer of this important port to its rightful owner he will be able and willing to open up his country to the mutual benefit of both contracting parties. The Idrisi chief's country had also commodities to offer, such as oil, hides and skins, pearls, rock-salt, and some

mines inland, but the country is in a state of political turmoil and transition. In answer to questions, Col. Jacob mentioned that some of the agricultural implements in use in the Yemen were rather primitive, but the Imam had expressed a desire for motor-tractors to plough the land. Ali the coffee tracts were in the Imam's territory, but the greatest potential commercial possibilities were in respect of cotton, of which at present an inferior type was grown on a very small scale. The country was solvent.

THE IDEAL HOME EXHIBITION.

The ninth *Daily Mail* Ideal Home Exhibition, which was opened on Monday at Olympia by Princess Marie Louise, promises to be an even greater attraction than any of the previous exhibitions of the series. There are people who, as a general rule, avoid exhibitions, but most of them make a point of seeing the Ideal Home Exhibition, and this inconsistency is easily understandable, for the *Daily Mail* undertaking is a superlative attraction, teeming with interest and new ideas. One can go from end to end of it without being wearied by an endless series of stands, for all the way it is novelty, and the purpose of the Exhibition itself is sufficient to make it a never-ending attraction, for everyone wishes to see the things that go to make an ideal home, even if at the moment a home of any kind that an Englishman can call his own is out of the question for very many people.

First among the features of the Exhibition must be put the steel houses—the hope of so many thousands as a solution of the housing difficulty—and probably the crowds who go to Olympia will make them their immediate Mecca. The houses are arranged in an admirable setting. Through the side hall ripples a little river spanned by three charming bridges, and beyond the village green are the houses, calling forth ideas of life in the most pleasant surroundings. Hard by is the Queen's Dolls' House, placed in a structure designed by Sir Edwin Lutyens. In the central hall are several rows of the adjuncts that go towards a perfect domestic existence, and here the housewife can well pass many enthralling hours. Beyond this hall is the supreme triumph of the Exhibition —the series of glorious gardens calculated to entrance everyone who has anything of the gardener in him, and to make even those pause who do not care for these things, if such there be. It is a veritable horticultural paradise, a place for the dreamer, where most pleasant imaginings can be conjured up. One could wish that those who deal with the public parks would come to Olympia and imbibe the lessons to be learnt from these charmingly contrived gardens.

Another feature of the Exhibition of special interest is the inclusion of a number of exhibits from other countries. In the gallery of the new hall is a stand devoted to Palestine arts and crafts, where are to be seen a choice selection of mother-of-pearl ornaments, Jerusalem pottery, and blue Hebron glass. Near by is the stand of the Egyptian Produce and Industries, Ltd., showing a most attractive range of the products of Egypt, such as donkey boy cloth, leather goods, mummy bead necklaces, Assiout shawls, and brasswork. There are also interesting exhibits of Armenian handicrafts, such as hand-woven table covers and rugs. At another stand examples of Burmese handicrafts are displayed, such as teak carving, bags and umbrellas.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows, under date March 2 :—

Currants.—A very unsettled and extremely difficult state of affairs has prevailed, and in considering the influences affecting the market, the dominating feature has undoubtedly been the weakness of the Greek exchange, which made it quite impossible to prevent values falling. On the whole, prices have stood up remarkably well, and with the exception of pressure in one or two directions, holders prefer to await a renewal of country activity, although willing to make some concession to meet buyers. The feeling is that with any improvement of the drachma values should appreciate. Business has mostly centred round the lower grades, Calamata and Pyrgos selling at 35s. to 36s., cleaned Amalias and Patras at 37s. to 40s.

Gulf.—An arrival of excellent quality per Flaminian, cleaned and uncleaned, changed hands at 43s. to 45s.

Vostizza.—Some inquiry for best quality Shade Dried. Sales were made at 51s. to 54s., ordinary grades being slow of sale at 45s. to 46s.

Quotations.—Calamata and Pyrgos, 35s. to 36s.; Calamata and Pyrgos cleaned, 36s. to 37s.; Amalias and Patras, cleaned, 37s. to 40s.; Gulf, 40s. to 43s.; Vostizza, 46s.; Vostizza, Shade Dried, 50s. to 54s. Arrivals were per Destro, Clyne Rock, and Dido, totalling 800 tons

Valencia Raisins.—A few quarter-boxes were disposed of at 36s. to 40s.

Sultanas.—There has been a fairly steady trade passing during the month, and while there is no evidence of a marked recovery in prices, certainly an increase in trading has been noticeable, and more interest has been displayed by the buyers. Business done was chiefly in the lower qualities at 49s. to 50s., and some trade was possible in Cleaned, 55s. to 60s., Good, 62s. to 65s., and Fine, 70s. to 75s. Greeks have been sold at 56s. to 60s. Australians in active demand. Stocks are now practically cleared. Dullest colour sold at 47s. to 48s., better grades 50s., few 52s.

Figs.—Small boxes have quietly been disposed of at 40s. Bags Naturals moving slowly, Good 29s., genuine 32s. to 33s.

REPORT OF THE AUDITORS.

To the Shareholders of the BRITISH TRADE CORPORATION.

We have audited the above Balance-sheet with the books of the Corporation and with the Returns from the Branches signed by the Local Management, and have obtained all the information and explanations we have required.

The Assets and Liabilities of the Branches have been incorporated in the Balance-sheet as at the 30th September last.

We report that, in our opinion, the Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs according to the best of our information and the explanations given to us and as shown by the books in London and the Returns from the Branches.

5, London Wall Buildings,

NEW P. AND O. STEAMER.

The Razmak's Trials.

The P. and O. Company's new s.s. Razmak ran a series of successful official trials on February 26 in Belfast Lough, and was taken over from the builders, Messrs. Harland and Wolff, Ltd., by Mr. Frank Ritchie (joint managing director with Lord Inchcape) on behalf of the P. and O. Company.

The Razmak has been especially designed for continuous service in Indian waters, and will be employed on fortnightly trips each way between Bombay and Aden, taking, on the Aden-Bombay voyage, mails and passengers for India by transshipment from the outward-bound fortnightly Australia steamer, and transferring, on the Bombay-Aden trip, to the homeward Australia steamer, mails and passengers from India for Egypt, Marseilles, and London. She will alternate on this line with the fortnightly direct steamers in each direction between London and Bombay, thus maintaining the weekly frequency of the Indian mail service.

Her principal dimensions are: length, 518 ft. 6 ins.; breadth, 63 ft.; moulded depth, 37 ft. 9 ins; she has a straight stem and elliptical stern, and is fitted with two sets of quadruple expansion engines of the balanced type developing 12,000 i.h.p., and burning oil fuel with forced draught under Scotch boilers.

Accommodation is provided on the bridge, upper and main decks for 142 first and 142 second-class passengers, and the dining saloons are arranged to seat simultaneously the whole of her passengers. The first saloon music-room, lounge, smoking-rooms, and verandah café are placed forward amidships on the bridge deck, while towards the after end of the same deck are the second music saloon, verandah, and smoking-rooms. The decorative and colour schemes of the Razmak's public rooms have been designed from suggestions by Lady Inchcape and the Hon. Elsie Mackay, and carried out under their supervision. On the "upper" deck, beneath, the forward three-quarters of the deck are occupied by large first-class cabins arranged on the tandem principle, approximately every fourth one being a single-berth cabin. The first-class accommodation includes four pairs of cabines de luxe, each arranged for one or two passengers, and each including a private bathroom. The after parts of the upper and main decks are occupied by second saloon cabins for two or three passengers, with one or two four-berth cabins to meet passengers' occasional especial needs in this respect. Amidships, within both the upper and main deck ranges of cabins, the provision of bathroom and lavatory accommodation is on a generous scale. Midway on the main deck is the second-class dining saloon, extending through the width of the ship, naturally lighted by sixteen large square windows, with tables arranged for large or smaller parties. Forward on the same deck, beyond the kitchens and service rooms, is the first dining saloon, seating at tables for two, four, or more passengers, 146 persons. This saloon also extends through the entire width of the vessel, and derives from twenty-four windows natural light and air. The ship has been installed throughout with mechanical ventilation for use in the Tropics, and every cabin is provided with natural light and air from its own porthole. There is a separate wardrobe for each passenger, and the cabins generally are amply furnished in all other respects.

The Razmak, as Lord Rawlinson recalled on the occasion of her launching, is named after a remote Indian military station which Lord Inchcape visited during a tour of the North-West frontier at the conclusion of his work as Chairman of the Indian Retrenchment Committte. She replaces the Salsette, of 6,000 tons, which was withdrawn from the Aden-Bombay Line during the war, and which was sunk by an enemy submarine in the Channel on July 20, 1917. The Rasmak's arrival on the Aden-Bombay station simultaneously with the resumption of fortnightly sailings on the P. and O. Australia mail line is among the final steps towards restoration of the company's services to the pre-war level.

The Razmak will leave London on her maiden voyage on March 13, with passengers for Gibraltar, Marseilles, Aden, and Bombay, embarking mails and overland passengers at Marseilles a week later.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Olympia for Bombay (Liverpool, March 6). (For passengers sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (London, March 7).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, March 11).

British India Line.—S.s. Warfield for Bombay and Karachi (London, March 14); s.s. Santhia for Colombo, Madras, and Calcutta (London, March 14).

Ellerman "City" Line.—S.s. City of Calcutta for Calcutta (Birkenhead, March 14).

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 7); s.s. Aviemore for Galatz and Braila (Liverpool, March 28); s.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 11).

P. and O. Line.—S.s. Naldera for Bombay (London, March 6); s.s. Nore for Colombo, Madras, and Calcutta (London, March 7).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, March 10).

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar & Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.

Company Meeting.

MANCHESTER SHIP CANAL COMPANY.

Mr. Bacon's Speech.

The annual general meeting of the Manchester Ship Canal Company was held at the Houldsworth Hall, Manchester, on February 26.

Mr. W. C. Bacon, the chairman, in moving the adoption of the report and accounts, said:—You have before you the report of the directors and the financial accounts for the past year, which I trust you will agree are eminently satisfactory, and that you all approve of the recommendation of your directors as to the disposal of the available balance. This is, I think, especially satisfactory when you realise that the past year has been a bad year for trade generally, and, of course, in that condition of affairs the competition with other ports is more severe. The report is so explanatory both in regard to the new works and the upkeep of the undertaking, as well as indicating the policy of the directors for the future, that it would simply be a waste of your time for me to elaborate these matters at any great length.

As stated in the report, the company have purchased a plot of land in King Street, Manchester—a splendid site, one of the best in the city—on which head offices for the company are about to be erected. It is also proposed to erect dock offices in Trafford Road, Salford, on a site of land adjoining the docks.

The net income for the year amounted to £857,739, to which must be added the balance brought forward from last year's account, £35,451, making a total income of £893,190. Deducting from this interest, rentals, and other fixed charges amounting to £425,569, there is a balance available of £467,621. Out of this £10,000 has been placed to the reserve for contingencies and repairs, and it is recommended that the following dividends should be declared: 3½ per cent on the Manchester Ship Canal Corporation preference stock; 10s. per share (5 per cent.) on preference shares; 10s. per share (5 per cent.) on ordinary shares; and that the balance, after payment of these dividends, namely £32,929, should be carried forward to the next year's account. I should mention that, including the £10,000 added during the past year, the reserve now amounts to £69,307.

I have been asked to say a word about Ellesmere Port. You will remember that three years ago we leased Ellesmere Port from the London, Midland, and Scottish Railway Company for a period of 50 years. I am glad to say that the result of the working up to the present time has given quite a nice little income from ship canal tolls which we should not otherwise have received, in addition to which the balance for the actual working at Ellesmere Port has been on the right side. The full benefit of this new venture, however, cannot be achieved until certain developments which have already been planned are carried out, and these will involve some capital expenditure. One of these I have already mentioned—the deepening of the ship canal as far as Stanlow.

As regards the question of delay to ships, there is one vexatious matter to which I made reference at the last meeting, and that is the question of the dock workers being unwilling to work more overtime, or, alternatively, night shifts, when necessary. You will remember that I stated that negotiations were then taking place with the Dock Workers' Union with this object in view, but I am sorry to say that no progress has yet been made. It is very galling when the company have incurred large capital expenditure in up-to-date works and plant of every description in order to ensure good despatch of vessels that these efforts are frequently negatived by the arbitrary limitation of overtime to three hours per night from Monday to Friday and none at all on Saturday. It very often happens that a ship is so nearly finished that two or three extra hours' work would enable her to get away promptly instead of having to wait until the next day, or possibly over the week-end. The matter is all the more unsatisfactory because such a limitation of overtime is not uniform at all the ports. I trust that the union leaders, with whom we continue to negotiate, and the men will take a wider view of this matter than they have in the past, because it is undoubtedly in the interests of the country as well as of the port to get rid of the disability. I believe it is also in the interests of the men, as vessels would return with further cargoes so much sooner, and a larger tonnage would therefore be dealt with.

The imports of all growths of cotton at the Manchester Docks last season totalled 544,796 bales, compared with 380,098 in 1922-23. The imports of American cotton showed an increase of 111,157 bales over the previous season, and of Egyptian an increase of 38,794 bales. The imports so far this season, August 1-February 20, amount to 451,638 bales, compared with 392,835 bales at the same period last season. In regard to the Egyptian imports, these are most encouraging, the shipments from Alexandria to Manchester being well ahead of Liverpool. For instance, the shipments from Alexandria to Manchester since August 1 to February 18 were 170,012 bales, whereas for Liverpool they were 151,206 bales.

In regard to American cotton, the imports into this country in recent years have been small, due to the wretched state of trade prevailing in the American section, and Manchester, along with the sister port, suffered. With the prospect of improving trade, and in spite of the curtailment of production on the part of the mills which still continues, there is a more hopeful feeling, and therefore we look for larger shipments of American cotton direct to Manchester, though this must largely depend upon the spinners, and we are doing all we can to make them realise that unless they insist, at the time of making their contracts, upon the cotton coming by direct steamer to Manchester, the cotton will not come to this port, and in that way they will not be able to secure a financial saving of roughly 5s. per ton in the case of a mill in Oldham by importing via Manchester as against importing via Liverpool. At a time when the American spinning section of the trade has, and continues to experience, a difficult period, and when there is a general outcry on the part of industry for the lowering of transport costs, the mills using American cotton have not taken the maximum advantage of the financial savings which they could effect by having their cotton direct to Manchester.

By the spinner who uses American cotton showing a little more enterprise in this direction, there would be no question of steamers making several calls, but they would come direct to Manchester. In this respect, however, there has been more encouragement latterly. We are also making greater efforts to secure greater quantities of Indian cotton shipped direct to our port, and with the assistance of the Royton spinners we are hopeful of obtaining larger imports of this growth. In addition, we are anxious that Manchester should handle other growths of cotton, and in this respect we recently received our first shipment of Turkish cotton, and there is a movement on foot that there shall be direct shipments of Brazilian cotton. In regard to the Empire cottons, the claims of Manchester are being kept to the fore.

Frequent opportunities are now available for merchants interested in the East Indian trade to have their shipments direct to Manchester by the Ellerman-Hall line from Bombay and Karachi. Large consignments of cotton, grain, cotton seed, and manganese ore have already been imported, and the Manchester Cotton Association is interesting itself in this service, which it is of opinion will be of great advantage to the cotton industry in particular.

I should like to remind our wool importers that Manchester is the nearest port to Bradford and other woollen manufacturing towns in Yorkshire, the distance from the Manchester Docks by rail being 43 miles, compared with 61 miles from Hull and 70 miles from Liverpool. This advantage is reflected in the cost of transit from the ship's side to warehouses in Yorkshire towns, and Manchester continues to be the cheapest port for this great industry. The handling facilities and warehouses are peculiarly adapted for the wool traffic, and the regular services of steamers from Australian ports should attract a considerable volume of this business.

I should like to say a word about future prospects as I view them.

Now that we have recovered our stride and the tonnage nearly reached the 1913 level, we have every hope that we shall retain the trade, and not be satisfied only with that, but use every effort to increase it, as I feel justified in saying that, having regard to the works we have in hand, we shall be able easily to deal (without fear of congestion) with a very much larger traffic than we presently handle. We all know that except in specialised trades business is still bad all round, and unemployment, although decreasing gradually, is still a problem which causes great anxiety to all classes of the community. Shipowners are of necessity suffering from this depression in trade, and, although a gleam of light is seen in certain shipping routes, mostly long distance, generally freights are low and owners are having an unprofitable time.

Notwithstanding these depressed conditions, the results of the past year are, as I have already stated, full of encouragement for the future, so far as the Port of Manchester is concerned. There are, of course, difficulties ahead, but I hope that the year 1925 will be satisfactory, not only for the Port of Manchester, but for the whole trade of the district.

Near East Markets.

AGRICULTURAL CONDITIONS IN IRAQ.

The following particulars are taken from the Agricultural Bulletin of Iraq for the month ended January 15 :—

On December 26 snow fell almost over the whole of Iraq. This is a most unusual occurrence in the Baghdad district and south of it. The only other records of snow since 1888 are light falls in 1898, 1907, and 1911. The snow was accompanied by a frosty spell. These severe frosts, which continued into January, were badly felt by most plant life, and citrous fruits in particular were damaged. Shade trees planted in gardens have apparently suffered badly, but the older trees will recover, though a very large proportion of seedling nursery stock has been killed outright. The effect of the frosts on insect and fungoid pests is, however, extremely beneficial.

The seasonal rains which commenced in Middle Iraq on the 11th instant enabled cultivators to get ahead with their sowings of winter cereals. Large areas had already been sown in Northern Iraq, but the heavy falls of snow towards the end of December put an end to agricultural activity in that area. "Daim" cereals were sown extensively in the lower "Daim" areas during the month. Early sown wheat and barley germinated well. Bad attacks of "rust" were noticed in many cases, but the cold weather improved them considerably, and though slight frosting was reported, they may be expected to do well. It is reported from Northern Iraq that the scarcity of seed is adversely influencing the areas sown, but in Middle Iraq the continued high price of grain seems to be stimulating the cultivators to greater efforts than usual.

Owing to the heavy rain and snow, sowings were completely interrupted during the latter half of December, and recommenced only in January. With the first rains the price of cereals went down a little, but hardened again with the advent of the cold spell. Irrigation water is reported as plentiful from all districts, but owing to universal rains little need for it was felt.

The condition of stock, which was previously reported to be below average due to scanty fodder, has been very adversely affected by the cold weather. Deaths of all stock, particularly sheep, from cold and exposure, are reported from all districts. The condition of the flocks sent out for desert grazing would appear from the reports to hand to be particularly bad, and the mortality heavy.

The last pickings of cotton were taken during December. In many cases these were spoiled by rain. Sheep have been turned in to the plantations to graze, and this has been of very great value in view of the extreme shortness of fodder. The deliveries of cotton to the ginnery reached a total equivalent to 2,150 bales of ginned cotton by the end of December as compared with the equivalent of 1,100 bales up to the same date last year. Cultivators are already preparing land for next season's sowing. In particular, ploughing on a fairly extensive scale has been started by the concessionaires now operating on the Mahrut canal.

The varietal tests of cotton at the Experimental Farm gave their last pickings during December. Yields varied from a rate of 1,978 lb. per acre to a rate of 1,350 lb. per acre, according to variety.

Autumn sown flax germinated very satisfactorily, and appears to have withstood the frosts well. The retting of last year's experimental crop has now been completed, and scutching is in progress. The flax from the previous year's experiments was bulked and sent to England for sale. A fairly satisfactory report has been received. This flax was very mixed in quality, but it is estimated to be worth £.90 per ton.

The anti-locust campaign in the Mosul vilayet progresses satisfactorily. The chief breeding grounds are now localised. Locust committees have been formed, and egg-buying has been started. Ploughing up of lands known to contain eggs was interfered with by snow. The cold spell, however, has certainly had a very beneficial effect in destroying large quantities of eggs.

Orders have been taken by the silk inspectors for imported eggs, and a number of landowners have put in hand mulberry orchards with a view to developing silk work in the future.

The Entomologist continued his observations of the spotted boll-worm of cotton. On plants expressly left over for observation purposes this pest continued to feed. The intensity of the attack on these plants remained fairly steady until December 25. Between this date and December 28 it was found that 82 per cent. of the worms had perished from cold. Between December 28 and January 3, although a large number of dead worms were found, no single living worm or pupa could be discovered. It would appear certain that this pest, therefore, has no hibernation period, but breeds continuously, and that, in consequence, it suffers a high mortality during the winter. After an abnormally cold spell such as has been experienced, we may, therefore, expect a particularly slight attack from the pest next year.

The July to December, 1924, exports of wheat from Iraq were 1,040 tons, and of barley 25,645 tons, total 26,685 tons, as compared with 131,130 tons exported during the same period last year. The August to December, 1924, exports of dates from Iraq were 134,871 tons, valued at Rs. 1,75,00,903, as compared with 97,382 tons, valued at Rs. 1,26,98,737 for the corresponding season last year. The July to December, 1924, exports of wool from Iraq were 13,849 tons, as compared with 3,174 tons exported during the same season last year.

Commander Charles Worthington Craven, R.N., who has been a special director in charge of the Vickers Works at Barrow-in-Furness, has been elected on the Board of Vickers, Limited.

The electric winding engine jointly exhibited by Messrs. Vickers, Ltd., Barrow-in-Furness, and Metropolitan-Vickers Electrical Co., Ltd., at Wembley last year has been purchased by the Burradon and Coxlodge Coal Co., Newcastle-on-Tyne, for their Weetslade pit. This winder was the subject of considerable interest at the Vickers stand, where it was shown in operation.

A Sound Buying and Selling Organisation

British manufacturers desirous of developing their trade with the Near East are invited to write us. Our knowledge of these markets extends over many years and we know the requirements.

Similarly we place our organisation at the disposal of exporters generally in the Near East who wish to enter the Home market. We have a selling service of which we are justly proud; let us demonstrate to you our claims.

HEAVY GREEK DEMAND FOR TIMBER.

Greek lumber imports in 1924 were stimulated by a considerable building boom, and during the latter half of the year the market was unusually active. Prospects for 1925 are said to be bright. Many thousand houses are now under construction and more will be built, as the housing crisis continues acute (says an American Consular report). Large quantities of lumber are in immediate demand—even though most Greek houses are of stone and cement. The recent conclusion of the £10,000,000 refugee loan largely solves the refugee question. In connection with refugee housing operations considerable quantities of the lower grades of lumber will be needed, most of which will be purchased from European sources, especially Roumania, on account of lower prices and transportation costs.

A considerable number of more sumptuous residences are being built in Athens and its suburbs, and in the neighbouring summer resorts, although the major portion of the building constructed in Greece employ the cheaper varieties of lumber. The furnishings and fittings of these costly houses require the more valuable woods—*i.e.*, hardwood flooring, walnut, mahogany, etc., for which the improved demand for American lumber felt during the latter part of 1924 has developed.

Greek lumber imports in 1924, it is estimated, will total between 106,000,000 and 118,720,000 board feet; the Ministry of National Economy advises that these imports to November 1 totalled 89,156,176 board feet, valued at $3,573,000. Prices during the year have risen about 15 per cent. on an average, and are still increasing. Approximately 85 per cent. of the lumber imported is for house construction and the remaining 15 per cent. for furniture manufacture. A very small quantity is also imported for shipbuilding purposes, amongst which is some American southern pine merchantable timber, which is resawn for the construction of small boats, etc.

The principal competitor of the United States in the Greek lumber market is Sweden. Low-grade stock from that country has also competed seriously with Roumanian lumber during 1924. Yugoslav lumber exports to Greece have fallen off, owing to the higher prices asked in comparison with the Roumanian quotations. While stocks of imported lumber are large, building is proceeding uninterruptedly; and, although dealers are slow in placing new business, the outlook is encouraging.

TEA CULTIVATION IN PERSIA.

The Secretary in charge of Commercial Affairs at the British Legation, Teheran, informs the Department of Overseas Trade that, according to Teheran Press reports, the Persian Government is studying the possibility of increasing tea cultivation in the regions bordering upon the Caspian Sea, and the Dutch Government is being approached with a view to the engagement of a "specialist" in tea cultivation.

It will be known that the small quantity of tea at present cultivated in the Lehijan district was originated by the importation of tea plants from India, but so far as can be ascertained, it is difficult to increase the present area for lack of suitable shrubs. The tea at present sold is expensive (5s. to 10s. per lb.), but is much prized for its flavour, which somewhat resembles that of China tea. The tea is pale in colour.

The British Representative at Athens reports that the Greek Government propose to postpone the introduction of the new Customs Tariff until May 1.

Cotton and Cotton Goods.

EMPIRE COTTON-GROWING CORPORATION.

A meeting of the Administrative Council of the Corporation was held in London on February 25. In the unavoidable absence of the President, Lord Derby, the chair was taken by Mr. R. H. Jackson.

The Chairman reported that, with a few exceptions, the bodies empowered by the Charter to appoint members to represent them on the Council had re-appointed those gentlemen who had represented them for the past three years. The new nominees were as follows:—Mr. J. E. Ashworth to succeed Mr. J. S. Addison as one of the representatives of the Cotton Spinners' and Manufacturers' Association; Lieut.-Comm. F. W. Astbury, M.P., to succeed Mr. Swallow as the representative of the Allied Association of Bleachers, Dyers, Printers, and Finishers; Mr. J. H. Dimond as the representative of the Government of the Union of South Africa; Dr. Ernest Goulding as the representative of the Imperial Institute; and Mr. G. B. Zochonis as a representative of the British Cotton Growing Association.

Mr. R. H. Jackson was unanimously re-elected Chairman of the Council, and Mr. Arthur Foster was elected Vice-Chairman, both to hold office for three years.—The following gentlemen were co-opted members of the Administrative Council:—Mr. J. S. Addison, Dr. W. L. Balls, Mr. J. Bell, Sir Edgar Bonham-Carter, Mr. J. Crinion, Mr. T. Garnett, the Hon. Bernard Rollo, Lord Stanley, Mr. J. M. Thomas, Mr. W. J. Tout, Mr. R. Waddington, and the Presidents of the Liverpool and Manchester Cotton Associations. The members of the Executive Committee, other than those representing the Government Departments, tendered their resignation under By-Law 27, and, being eligible, were unanimously re-elected for the ensuing year. The report of the Executive Committee on the work carried out during the past three months was received and adopted. It was decided that the next meeting of the Council should be held on Thursday, May 21.

At the close of the formal business the Hon. W. G. A. Ormsby-Gore, M.P., Under-Secretary of State for the Colonies, spoke on the tour through Eastern Africa of the Parliamentary Commission, of which he was Chairman. Mr. Ormsby-Gore summarised the cotton-growing possibilities of the various countries that were visited by the Commission, and pointed out that the provision of increased transport facilities was the key to increased cotton production in Eastern Africa. At the close of the meeting a hearty vote of thanks to Mr. Ormsby-Gore was passed for his very interesting address.

Steaua Romana (British), Limited, are advised that Steaua Romana Well No. 14 Runcu is still in eruption and producing 120 tons a day.

According to the *Cyprus Agricultural Journal*, the cereal production in the island last year was as follows (in kilos):—Wheat, 1,851,000; barley, 1,695,000; oats, 205,000; vetches, 165,000, favetta, 30,000; vicos, 80; rye, 40.

Mr. E. Harland Hutchinson, who has for many years specialised in burning coal in pulverised form, has accepted an important executive position with Vickers and International Combustion Engineering, of Africa House, Kingsway, W.C.2, owners of the well-known Lopulco Patented system of pulverised fuel firing. He will have charge of developments of the firm's interests in the Dominions and Colonies, and is shortly proceeding to Australia via the United States of America and Canada.

TEXTILES.

IF you wish to obtain your Textile goods from England at the lowest possible prices, communicate with K. JEBARA, 25, Princess Street, Manchester. (Established 1887).

MANCHESTER COTTON MARKET.

Good Inquiry for Cloth.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ending February 28 states:—

The past week has not been an encouraging one for this market. For cloth there has been a well-spread inquiry of good dimensions, but, seeing that the bulk of the negotiations prove fruitless, it would appear that merchants abroad either think present prices too high for the consumer to pay or have no faith that they will be maintained. The recent rise in raw cotton places many producers who hold stocks in the position of being able to quote rates slightly lower than those which would be justified on the basis of present quotations, and it is thought that this concession has been granted in many cases in order to secure immediate business.

Yarn.—Nominally quotations of American yarns have had to be advanced owing to dearer raw cotton. Actually, however, it has not been practicable, except in very isolated cases, to secure this advance. Operations have been very irregular, but, on the whole, it appears doubtful whether the output has been cleared. As regards Egyptian spinnings, a somewhat better state of affairs has prevailed, particularly in medium counts.

Cloth.—As already mentioned, the amount of inquiry has been disproportionate to the business booked. India still maintains, for her, only a very modest activity, but possibly a little more has been done for China than recently. Nothing notable has transpired with regard to Egypt, the Near East, or other markets.

Raw Cotton.—American has maintained the strength of the last week or two, and quotations are roughly ¼d. per lb. higher. There has been a fair demand for cotton on the spot in Liverpool, and for the higher qualities prices are very firm. Fluctuations in Egyptian have not been quite so violent, but the market is still far from steady. Closing quotations yesterday were as follows:—American middling, 13.94; Egyptian fully good fair, 34.90.

A Reuter message from Berlin states that in view of the present political tension between Germany and Roumania, the Berlin banks have issued a joint declaration to the effect that they are unable to assume responsibility for any damage to their clients resulting therefrom, especially from the confiscation by Roumania of the credits which the banks have opened for their clients with Roumanian banks.

NOTES OF THE WEEK.

Palestine Paying Its Way.

Our Jerusalem Correspondent, in a letter published in this issue, sends the interesting and important information that for the financial year ending January 31, 1925, the Palestine Administration shows a surplus balance of over half a million pounds. The British public has become so accustomed to listening to jeremiads over Palestine, and its expense to the British Treasury, that it has almost lost sight of the possibility of the country's paying its way. No doubt there is still a substantial debt scored up against the Mandated Territory, but it does not by any means represent wholly unproductive expenditure. If a balance on the right side is registered this year, there is no reason why it should not be repeated; the more so if there is now a better prospect for floating a loan for a much-needed harbour project.

The Kurdish Revolt.

The Kurdish revolt is running a rather obscure course, but there can be no doubt as to the effect it has had in Turkey. The Ministry of Fethi Bey has fallen for reasons that have not been divulged, but would seem to be connected with the proclamation of martial law, and Ismet Pasha is again Prime Minister. Feeling in Angora and Constantinople has been profoundly stirred, but outside the ranks of the Popular Party there is no clear understanding why it was considered necessary to replace Fethi Bey. The steps taken by him to deal with the outbreak do not at present appear to have been materially modified by the new Government, which will also be handicapped by geographical and weather conditions in bringing military pressure to bear upon the Kurds. In the meantime Angora has allowed itself to be obsessed by the belief that the republican system is in danger, and Ismet Pasha has been accorded exceptional powers for the protection of the State. Once again the Republic is shown to be a plant of very tender growth that has to be carefully watched and shielded. If it enjoys the popular support that is claimed for it, it would be thought that nothing happening in Kurdistan could affect the stability of the new régime. The few voices raised against a policy of panic, however, carried no weight in the Assembly, and it is to be feared that the spirit in which the rising is being met does not augur well for the adoption of practical methods for a satisfactory settlement of the Kurdish question when once the outbreak has been quelled.

Protecting the Republic.

Acting under the stimulus of the revolt in Kurdistan, the new Government of Ismet Pasha is determined to run no risks if measures to be taken to safeguard the Republic can avoid them. In addition to the specially constituted Tribunals of Independence, which will act as Courts-Martial, no less than eight publications in Constantinople and the provinces have been suspended. The strongest champion of the liberty of the Press would be hard put to it to defend all that appears in Constantinople newspapers; but we could wish that the Angora Government felt surer of itself than is suggested by its sensitiveness to Press criticism. There is much to be said for the contention that Turkey's most imperious need is economic reconstruction, and that for this purpose freedom from political unrest is necessary. In a message to the nation the President of the Republic implies that the new powers of the Government are to be used only for the purpose of preserving order and tranquillity. This at best, however, is merely a negative policy, and leaves untouched the problem of mobilising in harmonious agreement all that is best in the nation for the furtherance of economic reconstruction. It would be interesting to have an analysis of the support accorded to the Government and of the forces that are inclined to criticise it. The outside world has little to guide it in forming judgment beyond the fact that Constantinople, the first city of the Republic and the centre of the country's trade, is on one side, and Angora, a small inland town with practically no trade or industries to its credit, and deriving such importance as it has solely from its selection as the capital, is on the other. The suggested analysis could show how far a majority vote in the Assembly represented the business and intellectual strength of Turkey or whether there is any ground for Constantinople's contention that its interests are being subordinated to the ill-informed political theories of inexperienced backwoodsmen.

The Powers and Turkey.

The British, French, and Italian Governments have decided to revive the status of Ambassador for their representatives in Turkey, and Sir Robert Lindsay becomes the first British post-War Ambassador. His French colleague will be M. Albert Sarraud, formerly Governor-General of Indo-China and Minister for the Colonies in 1922. The post was offered to M. Franklin-Bouillon, who declined it; his appointment would not have met with unanimous approval in French circles in the Near East, where the opinion is strongly held, at least by an influential section, that the policy identified with the name of M. Franklin-Bouillon neither impressed the Turks nor redounded to the prestige of France. M. Herriot is known to have called upon French representatives to make the *entente* between France and Great Britain rather more of a factor in the Near East than it has been hitherto. Left to their own devices, many French officials seem to have been under the impression that they would commend themselves more to their Government if they pursued a policy of intrigue against or open hostility to British interests in the East. M. Herriot's good intentions would virtually have been stultified by the appointment of M. Franklin-Bouillon as French Ambassador to Turkey; even as things are, these intentions must have appeared to many Frenchmen to have been at variance with the continued presence of M. Mougin at Angora. With a new man as Ambassador, it is to be hoped that French policy and British policy in the Near East will become a little more assimilated than they have been in the past.

The Attack on a Desert Convoy.

According to official returns, the number of passengers proceeding by motor convoy between Syria and Iraq during the nine months, February to October, 1924, was 5,652. Of these, 2,417 were conveyed from Baghdad to Damascus, and 3,235 outwards to Baghdad. The great bulk of this traffic is native, as is shown by the fact that over two thousand passengers were conveyed eastwards during the months of August and September, when the main stream of pilgrims would be returning from Mecca or Medina, and nearly all the native traffic is conveyed under native auspices at rates considerably cheaper than those charged by the British or the Anglo-French company. During the same period, however, some fifteen hundred passengers used the Desert Mail Service, conducted by the Nairn Transport Company, and a few hundreds more may have travelled by the northern route via Palmyra and Hit. Thus, as a result of the opening-up of the mail route across the Syrian Desert, there is now a weekly average of fifty foreigners travelling by car between Syria and Iraq, and the news of an armed attack on a convoy becomes a serious matter. The outrage occurred on the northern route about half-way between Hit and the Syrian frontier, when a convoy of the Anglo-French company, with M. Maillard, French Vice-Consul at Baghdad, and Mme. Maillard as passengers, was attacked by four men. Both were wounded. Aeroplanes were sent out by the Royal Air Force with medical aid, but Mme. Maillard, we regret to report, died of her wounds. The perpetrators of the outrage were not discovered, after an interval of two days. It is unfortunate that the Anglo-French company, in order to include a visit to Palmyra in its itinerary, should be committed to a route along a recognised line of wells, which brings its convoys within reach of marauding parties of Bedouin. Passengers by the Mail Service follow the direct route between Damascus and Baghdad, with only a single well, about half-way across, along the whole desert track. The danger of molestation by Bedouin is thus reduced to a minimum, and, as a further precaution, the good will of the responsible sheikh of the district, Mohammed ibn Bassam, has been secured by a liberal subsidy. [A map of the Trans-Desert Route is given on p. 279.]

The Cabinet and Iraq.

Mr. L. S. Amery, Secretary of State for the Colonies, and consequently Minister in Charge of the Mandated Territories, has made a sound move in deciding to pay a personal visit to Iraq, in company with Sir Samuel Hoare, Secretary of State for the Air. Lieut.-Commander Hilton Young has already left for Baghdad on a mission to inquire into the finances of the country, but there is a wider aspect of the Iraq question which is well worth the personal attention of the two Secretaries of State. The post of Financial Adviser to the Iraq Government is still vacant, and Commander Young will no doubt have to report on the vexed problem of Iraq's financial contributions to Great Britain under the terms of the Treaty, which, in the opinion of the British officials, as well as of the Iraq Government, were assessed at figures that the country is unable to meet. Owing to the preoccupations of Mr. Ramsay MacDonald's Cabinet, no attempt was made to get to grips with this question of the financial contributions, although the promise was given that, if the Treaty was duly ratified by the Iraq Assembly, the financial clauses would be reconsidered. The presence of Mr. Amery in Iraq will reassure the Iraqis that the delay in the negotiations, however regrettable, in no way implied a breach of faith on Great Britain's part, but was due to an unfortunate chain of circumstances. Inasmuch as the four-year period for which the Anglo-Iraqi Treaty holds good may expire during the present Government's tenure of office, it is well that no time should be lost by the responsible Minister in gaining that intimate knowledge of conditions in the country which only a personal visit can give.

Transjordan.

An interesting and informative statement regarding Transjordan was given in the House of Lords last week by the Under-Secretary to the War Office. This small Arab State has not attracted much attention recently, apart from the successful repulse of unauthorised Wahhabi attacks. It is satisfactory, therefore, to know that there has been a distinct improvement in the internal situation. According to the Earl of Onslow's statement, there have latterly been great reforms in the Government of Transjordan. Since Colonel Cox assumed office as chief British representative, about ten months ago, there has been "a really remarkable change in the whole political situation in the country." The most important reform is the introduction of a new system of financial control, which came into operation on October 1 last and has been most satisfactory in its result. It will be recalled that the chief difficulty under the régime that preceded Colonel Cox's arrival was the absence of any check or guidance in regard to the budget of the Transjordan Government. Expenditure now is properly regulated and controlled in accordance with written estimates, with the result that there has been an immediate improvement in the cash balance in the Treasury. Salaries are paid up to date, and the expenses of the Court are kept within the limits of the Civil List. Great improvements have also been made in public security, and control is being exercised over tribes who have defied the authority of the Government in the past. On the whole, the Earl of Onslow concluded, the position in Transjordan may be regarded as very satisfactory.

THE WEEK AT HOME.

London, Tuesday Morning.

The Prime Minister.

Mr. Baldwin has at last made a speech upon a political subject which places him in a higher position than that occupied by any Prime Minister since the War. His oration last Friday in the House of Commons upon the Political Levy was, at least to my mind, one of the superbest utterances of our time. It was a sermon preached by a politician; it was politics preached by a Christian; it was common sense preached by an Englishman. No wonder that all parties rose to him, and that the Press, with a few mean and churlish exceptions, paid testimony in exultant description and blessing.

Mr. Baldwin can, it seems, quote anybody, always with the utmost felicity, but not always with the same results. His Rossetti did not sink very deeply into the House; his Layard did not too greatly please all our students of the East; his Housman would have better pleased the observers of St. David's Day had he been a Welshman; but his Prayer-Book went directly to the hearts and minds of the Commons and of the country, and men who never go to church nor read their Bible felt a tugging at their best and, perhaps, their most forgotten strings when they read his plea of "Give peace in our time, O Lord."

To admit that one of your own followers—and this was freely conceded to Mr. Macquisten, who was trying to get through the second reading of his Political Levy Bill—has an excellent case, and then, by the presentation of a larger, grander case, to destroy its present significance—this was statesmanship and courage such as have not been seen in Parliament for a very long time The Prime Minister, in his interpretation of the position, the responsibilities, and the definition of industry in our modern society, not only morally won over the Opposition, but he re-directed those of his own party who had hitherto been irreconcilable. He has been accused, it is true, of being maladroit, stupid, and weak, but it can now be seen that these accusations sprang from the exercise of Mr. Baldwin's respective convictions, humanity and spirit of conciliation. He has touched the heights, and it is henceforward only the time-servers and the opportunists who will revile him.

The Political Levy.

Quite frankly, the mover and the seconder of the Bill to abolish the compulsory paying by trade unionists into a Socialist Fund made out an excellent case. If the matter which they wished to cleanse were unrelated to anything else, they would have easily and deservedly carried their Bill. But, as the Prime Minister pointed out, this Bill touched the core of the industrial system, and that core should be affected neither by intellectuals nor by politicians, but only by industrialists themselves. Particularly, it was not for the Conservative Party, who were but part of that larger mass of the nation which had recently put his party in power, to make this attack, this challenge, this cry of battle upon the Socialists. It might be that a day would come when the State would be threatened by industrial amalgamation, but that menace was the care of the nation, not of a party. In any case, the freedom and salvation of industry cannot be achieved by political means: industry must emerge from politics. And such emergence can only come in an atmosphere of good will and of peace.

The non-passage of this Political Bill will certainly be reckoned one of the most notable achievements of the Conservative Party of 1925.

Mr. Wheatley's Attitude.

Mr. Wheatley, however, who was one of the late Labour Administration's lights, and who the other day in the House honestly confessed his opinion that activity outside the House (called by those who disapprove of it "unconstitutional action") was a force to be taken advantage of in the securing of Socialist desires, has not been slow to comment upon the burden of the Prime Minister's speech. He explains that industrial relations have become so hopelessly materialistic that something more than Sermons on the Mount are needed to dissolve their bitterness.

There is a good deal in all this, and from Mr. Wheatley's intense, if partial, point of view it is fair comment; but it in no way destroys Mr. Baldwin's major thesis that any dealing in what the ex-Minister of Health calls "concrete facts," by whichsoever side it may be indulged, whether masters or men, cannot touch the problem unless it implies the creation of a new atmosphere. People would be foolish to deny to Mr. Wheatley that the immediate interests, apart from other kinds of interest, are not identical between master and man—for the greater energy a master displays, the more, generally speaking, are his profits, whereas the man's wages, however he works, are, generally speaking, fixed. This psychological difference in the motives of work for masters and men is a basic difference, whose solution by political means is beginning to be despaired of by Mr. Wheatley and is frankly stated to be impossible by the Prime Minister. In short, the problem, as it has been stated in the last few days, resolves itself into the old dictum—that a spiritual revolution must precede an economic one. It is something, at any rate, to have a reiteration of this truth.

The L.C.C. Elections.

It seems always to happen that whatever is best to be said on any particular problem, and would have been said by the Liberals, has already been said by one of the other parties. Thus it was in the case of the Political Levy, where the Liberals were left speechless by the amazing generosity and idealism of the Prime Minister. And thus it has been in the L.C.C. elections, in which the Municipal Reformers and the Labour candidates took all the wise words out of the Liberals' mouths.

Here the Liberals were literally snowed under, because they have nothing with which to battle

against the storms of inquiry that are blowing about. The Municipal Reformers remained steady, and the Labour people made very definite progress. It appears that local affairs are informing themselves on the lines of political affairs; in fact, it has already been given out by the official organs that municipal contests should be waged on party lines. This seems a great pity, but it is one of the instances where the battle between uniformification and the assertion of local and diverse individualities is resulting in triumph for the former.

The Life of Edward VII.

I have not seen Sir Sidney Lee's recently published "Life of King Edward VII.," but it has been interesting enough to read the different reviews of it. Whereas it is in some quarters heartily praised as a full and adequate account of the earlier years of the late King, in others it has been attacked as a sad case of "white-washing." These latter critics do not mean that Sir Sidney has attempted to wash white what was black, but rather that the multiple colours of King Edward's life have been reduced to a rather uniform hue.

Perhaps we shall not know the truth about these things for another fifty years; it is rather early days for shedding what may be called the Lytton-Strachey beam upon the late King's paths.

Mr. David Kirkwood.

To those, like myself, who have never seen Mr. Kirkwood at his damnédest in the House of Commons, the reading of his suspension last week seemed a little hard. It appeared not for so very much that the Deputy Speaker named him, and one's sympathies were certainly on the side of the Labour Party, who really could do little else than walk out as a protest.

But, apparently, there are times when the Scots member's interruptions are a little more than the House can bear, and this—Mr. Chamberlain was making a statement on foreign affairs—was one of them. It was, however, a disagreeable incident, which reflected little credit on either side, and which will not, as it has been suggested it should become, be quickly forgotten.

Methodist Reunion.

Every now and then, and in later years with increasing frequency, the news that the various churches in England are about to unite is announced to us. Everyone knows that such fusion is desirable—who does not know the village which, having but 1,500 inhabitants, has four or five Non-conformist churches and one Anglican, each accommodating 500 people? And the differences—at any rate, the differences between the Free Churches—are extremely hard to discover. No one with whom I have discussed this question has explained to me any insuperable doctrinal disagreement; it all seems to hinge on the question of church government.

The Wesleyan Methodists—there are three Methodist Churches—seem nearer the attainment of unity than anyone else. In the last few days they have been casting about to find a basis for agreement—with what result I do not yet know. But the movement is certainly worth chronicling.

MINORITIES IN THE BALKANS.

The following letter, dated February 27, has been sent by the Near and Middle East Association to the Secretary-General, League of Nations, Geneva:—

Sir,—In view of the unrest produced in the Balkans by violations of the frontier between Yugoslavia and Albania, and the consequent difficulty in obtaining stable stage government or economic development in the latter country, the Near and Middle East Association of Great Britain desires to urge the appointment by the League of Nations of a permanent Frontier Commission. This Commission should, it is suggested, consist of representatives of the Yugoslav and Albanian Governments and of a neutral president appointed by the League; but in case of refusal on the part of either of these Governments, the League should appoint its own members.

Further, the Association desires to point out that the distress caused by the inequitable treatment of minorities, and the destitution resulting from their being forced to emigrate, has created a situation of grave danger in the Balkan Peninsula. According to information received from various sources, these racial minorities are gradually turning towards Soviet Russia as the only hope of deliverance from the oppression of their own Governments. This is not because they have any sympathy with Communism, but because, having waited long and vainly for the protection promised them by the Peace Treaties, they have at last begun to despair of any help from the Western Powers or the League of Nations.

We beg, therefore, to emphasise the urgent importance of adequate measures being taken for their protection, and we invite a further consideration of the methods of procedure now in force under the League, and the establishment of a more expeditious and effective system for dealing with the grievances of minorities.

(Signatories), Edward Gleichen, President,
Henry Bentinck, Vice-President,
Hon. Col. Sir Armine B. Dew, K.C.I.E.,

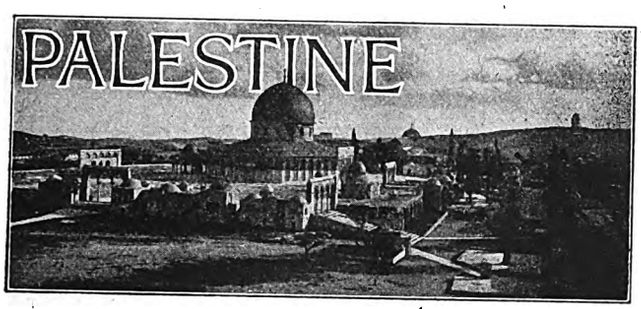
The Near and Middle East.*

From Our Own Correspondents.



Jerusalem, February 28.

The Economic Position of Palestine.

Mr. J. B. Barron's article in THE NEAR EAST of February 5 on "Financial and Economic Problems in Palestine" is, in many ways, informative; but his tone and his occasional inferences are unduly and even misleadingly pessimistic. Some of his pessimism is not justified by the facts which provoke it, while more recent information would have helped him to be a little more hopeful than he seems to be on Palestine's economic position as a whole.

Mr. Barron left Palestine in May, 1924, and even in the intervening few months the economic and financial condition has developed somewhat. Much can happen in seven months in a newly reborn country like this.

It is true that the total liabilities of Palestine at March 31, 1923, were approximately £4,500,000, and at March 31, 1925, they are estimated to be £3,753,000. But this sum by no means represents a dead weight of debt. It is offset in the main by credit in the shape of assets—most of them revenue-producing, such as railroads (including the Jaffa-Jerusalem section purchased outright from a French company), telegraphs and telephones, roads and water supplies, besides a large quantity of stores of all kinds for the service of the various departments. And Mr. Barron forgets to mention that the liabilities included half a million pounds borrowed from the Anglo-Egyptian Bank by Government to be distributed to Palestinian farmers in long term agricultural loans at low interest.

Mr. Barron makes a great point of the excess of the value of imports over exports. Yet he would surely not question the prosperity of the United Kingdom where the average annual pre-War excess of imports was 135 million pounds, and the same excess in 1921 as much as 180 million pounds. Nor does he appear to take into account the capital which accrues to Palestine in the form of imported building materials, machinery, drainage plant, and the like. He suggests that the influx of money to Palestine, amounting to a million sterling each year, for Jewish enterprises or Christian religious and charitable works, is not entirely a healthy sign. Mr. Barron would, perhaps, explain why not? A large part of this money buys imported goods, but no corresponding item appears on the export side. Other countries regarded as more or less financially stable are in receipt of unproductive remittances—for instance, Syria, Greece, Italy, Ireland—whose emigrants contribute largely to the revenues of their homelands in the shape of moneys sent to their relatives. Palestine, however, is the depository of invested capital far more than of charity doles. In any case, the balance of trade shows signs of being progressively redressed. In 1920 imports were £5,410,000 to £1,361,000 of exports. In 1924 the figures were £5,266,349 and £1,979,089.

Mr. Barron remarks that large capital has been expended on unremunerative projects both by the Government and by private enterprise. One would like Mr. Barron to name the unremunerative projects of the Government. Does he mean the Palestine Railways, with a permanent way and rolling-stock second to none in the Near East, and yielding a large profit over expenses? Does he mean the network of new roads, the reinforced bridges, which are so important a factor in the development of Palestine's trade and industry? Does he mean the admirable system of telegraphs and telephones? Does he mean the 190 new village schools? As to private enterprises, there have been since 1920 just a dozen bankruptcies or liquidations, mostly voluntary. On the other hand, these few years have seen the prosperous establishment of scores of workshops and many factories, including a brick factory, with a daily output of 40,000 bricks; an important cement factory, with a capital of £300,000; a soap factory and oil refinery, a modern mill, each involving a capital expenditure of more than £100,000, a textile factory, a large tannery, and power stations at Jaffa, Haifa, and Tiberias; to say nothing of a growing tobacco industry, a developing export business in a variety of commodities, and a record orange trade.

Mr. Barron has apparently forgotten the visit of Sir Ernest Dowson—an acknowledged expert—in 1923 to advise Government on land settlement, land taxation, and cadastral survey, and does not seem to know that Sir Ernest is actually again in Palestine at the moment of writing, engaged in the final investigations which are to precede the realisation of his proposals. In the circumstances Mr. Barron's demand for "an authoritative investigation of real rights and a reform of the obsolete land laws" is gratuitous.

Mr. Barron has in any case failed to put on record the extensive work already accomplished in the last three years by the Government Survey, by which 1,146,500 dunoms have already been surveyed in detail and nearly 8,000,000 dunoms covered by 3rd and 4th order triangulation.

But perhaps the most simple and effective retort to Mr. Barron's arguments is that the surplus balance of the Palestine Government on January 31, 1925, amounted (the fact is startling, but the figures are reliable) to *something over half a million pounds;* while the Customs revenue (in which Mr. Barron is perhaps mainly interested) has risen from £41,000 in April, 1924, to £55,000 in January, 1925, and has not fallen below £51,000 in any month since August, 1924.

The Arabs and Lord Balfour.

It is still too early to know just how seriously one ought to take the Arab Executive's detailed manifesto about the "strike" which they propose to organise in welcome of Lord Balfour. As it stands, it is no more than a bare resolution drafted by a few Arabs, with a following indeterminate both in numbers and tenacity; and it goes without saying, in a country like this, that there is a body of Arab opinion (equally, it has to be admitted, indeterminate in numbers and tenacity, but greatly inferior to the Arab Executive in its power to assert itself) not in favour of the "strike" notion and the political extremism of which it is a symptom. But, for all that, most people in Palestine, including even many of the Jews, would be profoundly relieved to hear that Lord Balfour had decided not to be present at the opening of the Hebrew University. The "strike" may or may not amount to anything; the Arab Executive may or may not represent the mass of thoughtful or thoughtless Arab opinion. The nuisance, however, is that such a promising weapon has been flung into the hands of the local malcontents, who are determined to work their hardest to use it as a means for digging out their brother Arabs from their slough of seeming content and apathy, and so re-creating, for the benefit of the outer world, a situation equivalent to that of 1920.

It is the Zionist leaders who have brought about the present situation—though with the very best intentions. It remains for the Zionist leaders concerned to balance the gain to their cause by the world-wide publicity which is certain to be given to the opening of the University on April 1, with the possible loss to their cause (in the event of there being any unfortunate incident)—both by the worsening of the general local political situation (so vastly improved of late) and by the bad effect that it will have on the minds of their thousands of Jewish guests, who are to include the most distinguished and wealthy men of Jewry. It is just humanly possible that the moment of the solemn inauguration of the University, which the Zionists hope will mark a climax in the work of the National Home (and a huge piece of propaganda in its favour), may, in reality, mark a climax of hopelessness for a Jewish future in Palestine in the minds of those Jews (including some of the most wealthy and influential) who are still not wholly sympathetic to the Zionist ideal.

Liubliana, March 2.

The Opposition Programme.

At the end of this week the Skupshtina will resume its sittings after an altogether unintentional pause, and all parties are preparing for this re-assembling, which will in all probability be of decisive importance for the trend of Yugoslavia's internal policy in the immediate future. A determined struggle is to be expected. Whether this struggle will degenerate into hostilities entailing deplorable consequences depends upon the attitude of the Government parties, which are called upon in this session of the Skupshtina to pass a pretty severe test in ability to govern.

The proportion of strength in the Skupshtina is as follows: The "National Bloc," as the Government parties style themselves, disposes of 163 Deputies (142 Radicals and 21 followers of M. Prebitchevitch); the "Bloc for National Agreement and Popular Democracy," as the main body of the Opposition now calls itself collectively, numbers 139 Deputies, and the remaining Opposition parties number 13. Thus the Government has the majority in the Skupshtina. But outside Parliament the Bloc for National Agreement is stronger by far. It alone scored more than 100,000 votes in excess of all the Government parties put together, and, collectively, the Opposition scored over 300,000 votes more than the Government. Technically, this circumstance is of small consequence. But its moral importance is very great, with the result that the struggle between the Government and the Opposition will be waged as between evenly matched opponents.

On former occasions the chief weakness of the Opposition was a lack of cohesion. Monarchists and Republicans, factions of the Right and of the Left—the most divergent views—were united in one Bloc! Add to this the extras of M. Raditch, which invariably and with mathematical precision would happen at the most inopportune moment.

This lack of cohesion has now been thoroughly overcome, and the leaders of the individual groups in the Opposition realise that they must pursue a unified policy if they intend to carry the day in the great struggle over the internal development and Constitution of Yugoslavia. As a result, the Opposition chiefs have agreed upon a common programme, and on the strength of this compromise of ideas formed a unified Bloc known as the Bloc for National Agreement and Popular Democracy. The text of their agreement has not yet

Digitized by Google

been published, because the various clubs have still to discuss and confirm the understanding. Nevertheless, the main outlines of the joint Opposition programme are well known. It is a point of cardinal importance that the Raditch party has jettisoned its republicanism, and decided in favour of a Monarchy on the British model. The question of a revision of the Constitution is also viewed by it more soberly than before. The Raditch Party, in brief, is confining itself to essentials and giving up the trimmings. Obviously the party could not be expected merely to make concessions without receiving anything in return. And therefore it insisted firmly upon its Agrarian programme and upon the general principles of democracy, yielding only over questions which are the outcome of post-War conditions, and arise rather from demagogic agitation than from actual and vital needs. The Bloc for National Agreement stands for the Davidovitch policy, for the Bloc of Agrarian Democracy, and for M. Raditch's demands, and the resulting programme may be summarised thus: A unified State, administered on a basis of liberal autonomy (local government, not independent Home Rule), with special consideration for the agricultural character of the country.

Unquestionably this affords a solid foundation for the building up of Yugoslavia, and, therefore, the announcement of the new Bloc made a profound impression even in the Government camp. For it is clear that Yugoslavia's Man of the Future can only be he who will realise the agreement between Serbs and Croats. And as it is the Democrats who have so far solved that problem, their position is stronger than that of the Radicals, although for the moment the Radicals command by far the greater number of mandates.

The new Bloc for National Agreement has resolved that it will not negotiate with the Radical Party as a whole, but only with individual Deputies. This resolution is a proof of the strength and unity of the Opposition Bloc, and, moreover, of great importance for the further development of Yugoslavia. Differently expressed, this resolution means that the Bloc for National Agreement is fully aware that the agreement between Serbs and Croats cannot be definitely realised until the majority of the Serbian pople fall in with it. Hence it is necessary that the Radicals should come into the agreement; but not any member of the party who stands compromised by corrupt practices. The Opposition cannot see its way to admitting corrupt elements for the sake even of the agreement. For the agreement is not a political deal, but a cause designed to serve only the good of the nation and the welfare of Yugoslavia. By this attitude the Bloc for National Agreement has again insisted upon its moral advantage and reinforced its influence.

As for the Raditch Party, it has really gone as far as it could in the matter of yielding, and it is now for the Crown not to miss the opportunity. If the present goodwill of the Croats should fail to meet with consideration, they may hardly be expected to remain good monarchists. The Serbs will have the chance of showing their goodwill over the verification of the Raditch mandates. If the mandates are verified without boggling, and the interned deputies restored to liberty, the atmosphere will become sensibly clearer. But if the Raditch mandates should not be verified, the entire Opposition may leave the Skupshtina, and the rift grow wider than ever. Wherefore it is to be hoped most earnestly that neither of the great groups will proceed to extremes.

The Government's Work.

Meanwhile the Government is setting to work upon its programme without allowing itself to be disturbed too much by the clash of parties in internal politics. And the first-fruits of its labours is the new Press Law.

The Minister for the Standardisation of Laws—for there is a special Minister for this department in Yugoslavia—Dr. Srskitch, has already explained the main outlines of the new law to the Yugoslav pressmen, and pointed out that it was certainly stringent, yet only towards such as fail to respect the honour of the individual or the dignity of the State, but that in other respects it was liberal, and that the freedom of the Press was maintained.

After being passed by the Council of Ministers and obtaining the preliminary sanction of the Crown, the text of the draft of the new Press Law has now been published, and in many quarters, especially in Opposition circles, the opinion prevails that it does not in the least justify the Minister's description. Critics of the new law say that it absolutely destroys the liberty of the Press; that all that is left of the latter is the assurance at the beginning of the text to the effect that the Press is free, whereas every succeeding paragraph proceeds to circumscribe that freedom. The Editor is made responsible, also the publisher, the printer, and finally the vendor. And the penalties are rigorous. If a notice in a given paper cause disturbance of the domestic peace of the party concerned, the Editor is liable to a penalty of a fine and a term of imprisonment ranging from one month to one year. In other cases the penalties range from three months' to ten years' imprisonment, with fines of from 1,000 to 200,000 dinars. Corroborative proof must be produced within sixteen days. Material submitted on the seventeenth day is not taken into consideration. In view of the Yugoslav failing of dilatoriness this is a serious handicap. On the other hand, as regards rectifications, criticism avers that the new law opens up distinct possibilities for abuse. A paper is compelled to print almost every rectification, no matter whether it corresponds to the truth or no. In brief, the Opposition says that the draft of the new Press Law is such as only a thorough-going reactionary Government would dream of passing.

In defence of the law, its supporters say that experience has shown that the Yugoslav Press as a

Digitized by Google

whole requires such restrictions as the new law proposes, and that these will not press at all hardly upon papers which of their own accord exercise such good taste and discretion as are becoming to a dignified Press in a civilised State.

The next law the draft of which is to be submitted to the Skupshtina is the new Housing Law. This, too, is being sharply criticised as failing to give landlords their full and proper rights while affording no adequate protection to the tenant. A credit of 30,000,000 dinars is proposed for subsidising the building of new dwelling-houses. It is estimated that at this rate something like one million dinars would fall to the share of most of the larger towns, and this sum certainly falls far short of actual requirements. It must be borne in mind, however, that both the above laws exist as yet only in the draft, and it is too early to say what will be their ultimate form. If the Opposition can make its will felt, they are sure to be considerably modified before coming into force.

GREECE.

Athens, February 22.

The Government's Position.

Last week the Government summoned a meeting of its supporters so as to see what its real position was; over 200 Deputies appeared, showing thereby that all the various groups which form the Government *bloc* were ready to support it. Thus the Government's position seems safe for the time being, as M. Papanastasiou, the Leader of the Democratic Union, extreme Republicans who refuse to obey the orders of M. Venizelos, can muster only 80 odd votes.

General Kondylis.

The Government would be not at all unwilling to drop General Kondylis, Minister of the Interior, if it dared; his militaristic ideas rather frighten his fellow Ministers. With this idea General Othonaios, G.O.C. the Macedonian and Thracian troops, was summoned to Athens to give his views as to the amount of support General Kondylis would find in the Army. The result was not very pleasing to the Ministry, who have decided to leave General Kondylis alone. He has fifty supporters in the House, and might well join General Pangalos, a similarly impulsive man, in the Opposition, and the temptation for the two to seize power and proclaim a military dictatorship might prove irresistible.

Governmental and Other Parties.

It is probable that the Government will try to strengthen its position by opening up negotiations with the more moderate groups who have no seats in the House because they abstained from voting at the last elections, but who have, nevertheless, a preponderance in the South. If successful, the Government might form a Ministry of the Centre, offering the moderate Royalists certain portfolios in return for recognition of the Republic. Thus the Left, M. Papanastasiou, and the Right, Die-hard Royalists, would be kept at bay. It is known that the ex-King has stated he will not return unless invited by *all* parties: in other words, he will probably not return at all.

In the meantime, the Government have risen for a short recess, after which the two vacant Ministries of War and Education will be filled; the former will probably go to M. Gontikas, a Republican lawyer, who was Minister of Education, and later of War, in 1923; he is a very able person.

Greece and Yugoslavia.

Preliminary negotiations are taking place in Athens between M. Caclamanos, representing Greece, and M. Gavrilovitch, for Yugoslavia, regarding the latter's claims in Macedonia before the renewal of the Græco-Yugoslav alliance. So far, the Greeks have been agreeably surprised at the moderation of the Yugoslav claims. They include the doubling of the line from Ghevgeli, the frontier station north of Salonika, down to Salonika itself; secondly, a large increase in the area of the Serb mercantile zone in Salonika, whereby it becomes almost a Serb enclave. It is stated the Serbs would also be willing to cede to Greece the shares she recently bought in the line, and which form a majority of shares—for a profit, be it understood.

Brigandage.

Some excitement has been caused by a sudden revival of brigandage. M. Stais, ex-Minister of Education in Royalist days, and a large party of sportsmen from Salonika, were held up and robbed by a band of brigands at Ekaterini, on the northern side of Mount Olympus. One unfortunate person was detained till ransom was paid, three days later. It is stated the brigands told M. Stais that they let him off comparatively lightly, as he was a Royalist like themselves! General Kondylis, who, as Minister for the Interior, is responsible for law and order, at once dashed to the spot, and threatens to deport whole villages whose inhabitants are suspected—probably rightly—of being in alliance with the brigands. The result of this is awaited with interest.

Athens.

The Town Council of Athens is successfully bringing to a close a series of operations in the form of asphalting a number of the larger streets of the town; though this resulted in a temporary dislocation of the traffic, undoubtedly it will, when finished, considerably alleviate the dust plague, which is at present the scourge of the place after two consecutive days of fine weather. Previously the Town Council had been so busy in politics that it never had any money to spend on mere improvements.

A scheme is at last being adopted also to remedy the water supply of the town; at present this year there has been a very severe shortage of rain, and prayers by the united ecclesiastical forces were offered for rain. Already, in February, the authorities are talking despondingly of what may be in store for Athens this summer. In the meantime, the new scheme, which should be started before very long, looks to an artificial lake behind Mount Pentelikon, where there is a stream flowing the whole summer. It should be capable of putting an end to the trouble for some years to come.

Sofia, March 3.

The Political Situation.

Since my last letter there has been another political assassination—namely, that of M. Strashmiroff, a Communist Deputy. This murder occurred three days after that of M. Mileff, and, curiously enough, at almost the same spot and at approximately the same hour. Needless to say, the assassins escaped.

A few days afterwards questions regarding the

Digitized by Google

murders of these two Deputies were asked in the Sobranye, and much indignation was shown by all parties. The Government replied through M. Roussoff, Minister of the Interior, who, in a long speech, dealt with the various activities of Communists in Bulgaria and in neighbouring countries. The Minister maintained that the Communists and their friends were determined to bring about trouble, and that the taking of severe measures was essential if peace was to be assured. Last week a supplementary Defence of the Realm Act was introduced into the Sobranye, and, after two days' discussion, it was passed, and has become law. The Government and the Liberals voted for the Act, but the Socialists, dissident Democrats and Radicals, Agrarians, and Communists, voted against. The Act was, however, passed by a large majority. Its most important clauses are those in which Communist Deputies are debarred from holding seats in the Sobranye, and Communist newspapers are forbidden from being published. Otherwise the Act will permit the authorities to use more extreme measures against subversive elements.

The opposition shown to the Act by the Socialists and dissident Democrats and Radicals is somewhat surprising, as these three parties unhesitatingly condemn Communist methods. But their leaders—MM. Pastourkoff, Malinoff, and Kostourkoff—declare that the Act will not in any way serve to calm the country. Partisans of the Government retort that it is by force, and force alone, that the Communists can be kept quiet. This remains to be seen.

Geneva Minority Protocol.

On Monday, March 9, the Council of the League of Nations will open its sittings at Geneva. Item 15 on the agenda concerns the Minority Protocol which Greece signed with the League of Nations in September, 1924, but which she has since decided to reject. Mr. Austen Chamberlain will act as "Reporter" to this matter. Although it is realised in Bulgaria that having once rejected the Protocol, Greece is not now likely to change her mind, it is universally hoped that the League will see fit to go thoroughly into the whole question of Bulgarian and Greek minorities, and will not be content with verbal promises regarding future treatment of the said minorities. If the League, acting at the behest of the Great Powers, takes up the line of least resistance and refrains from further interesting herself in Bulgarian and Greek minorities, she runs the risk of being accused of having acted in a pre-War diplomatic manner.

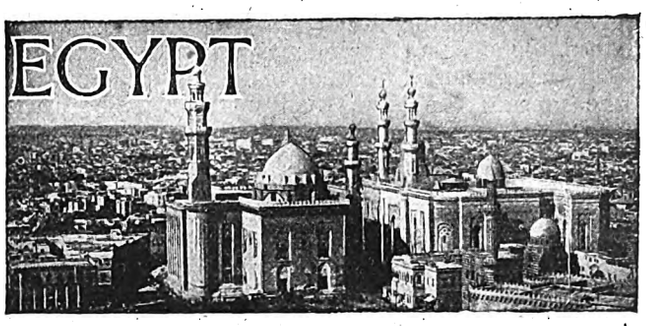
Irrigation of S.W. Bulgaria.

It is much to be regretted that the offer which the American firm, "Ulen and Co.," made to the Bulgarian Government for the irrigation of South-Western Bulgaria has fallen through. The representatives of the company have left Sofia after a long stay, and it is whispered that the manner in which they were treated leaves a good deal to be desired. It is thought, however, that the Government will hardly let the matter drop, as the advantages of a well-thought-out irrigation scheme are enormous. Furthermore, this scheme has been one of the chief planks in the Government economic programme, and it is believed that definite promises have been made to the electors in the districts concerned.

News in Brief.

M. Destailleurs, who succeeds Comte de Chérisey as French Representative on the Inter-Allied Reparation Commission, has arrived in Sofia.

On Wednesday, March 4, Bulgaria will celebrate the 47th anniversary of her independence.



Cairo, February 28.

The Tripolitan Frontier.

Jerabub has provided us with the only political thrill of the past week, and even the wordy warfare waging over the obscure oasis on the Tripolitan frontier has not been very interesting. In the first place, very few people know where Jerabub's precise location on the map is, still fewer care, and, worst of all, the situation of Egypt with regard to Jerabub and to any intentions that Italy may have regarding that home of Senussi reclusion, does not admit of either doubt or argument. If Italy, choosing to settle the matter without further ado, elects to occupy Jerabub, the question will be settled, for the Egyptian Government could certainly do no more towards turning the Italian troops out again than would be accomplished by registering a formal protest. But such action on the part of the Italians would certainly embarrass the Zewar Ministry, and would afford the Zaghloulists with another excellent stick with which to beat their opponents. For the sake of internal peace and calm it is to be hoped that the Italian Government will refrain from forcible action, and that a final settlement may be left until such time as there is an Egyptian Government in power with a Parliament behind it.

The Geographical Congress.

To judge by the programme just published, the delegates to the International Geographical Congress, which opens here on April 1, will have a busy time. The inaugural ceremony, at which King Fuad will be present, will take place in the Royal Opera House, and between that event and the ending of the Congress, on April 9, there are to be numerous official dinner-parties, a gala on the Nile, visits to the Pyramids, Sakkara, the Egyptian Museum, the Citadel, and other of the most interesting monuments and sights in the neighbourhood of Cairo.

A Busy Season.

Lent, in Cairo, is a season of feasting, not of fasting, and now that the last month of the winter season is upon us, we are settling down to

give every fleeting moment something to keep in store. The lean, hot months of summer are near at hand, and if we do not make the most of what the present can give, there will be little further chance of merriment until next December. Almost every day sees some cruising vessel or other discharging hundreds of tourists on our shores. Their stay is usually short, but they are no sooner gone than others take their places. In sport, too, this is a busy season. Captain Hime, of Alexandria, has won the Open Golf Championship with a record score, the 3rd Hussars have won the Command Boxing Team Championship, the 9th Lancers, for the fourth year in succession, have lifted the Inter-Regimental Polo Tournament, and last Sunday at Heliopolis, El Ward, Hefni Bey Mahmoud's wonderful Arab horse, won the King's Cup by a short head, in a race which nearly caused several heart failures. There are other things in Egypt besides politics.

ROUMANIA.

Bucharest, February 25.

Inter-Oppositional Strife.

Since the fusion of the National Party with that of M. Iorga, and in consequence of this important event in the political life of Roumania, there has been an effervescence among the Opposition groups. General Averescu in rejecting the appeal of M. Maniu (mentioned in a previous letter) gave as his reason for doing so the fact that M. Argetoianu was a member of the new party, hurling against his former Minister of Finance the severest criticisms, which were published in the form of an open letter in the Roumanian Press.

This new attack upon the morality of M. Argetoianu, by which General Averescu appears to make a personal matter of his refusal of the proposed fusion, cannot deceive well-informed people or mislead them on the real reasons for this step, or on the line of conduct which has been adopted by the People's Party.

General Averescu's Policy.

General Averescu and all the elements of his party believe that a change of Government is approaching, and they are convinced, rightly or wrongly, that the power is bound to fall to them. According to General Averescu's calculations, he is sure of a large majority in the Old Kingdom, and as for Transylvania, which is the province of M. Maniu, he thinks his recent recruit, M. Goga, has also a certain following in the Ardeal, and that he might very possibly checkmate the leader of the old National Party. The other provinces are an unknown quantity, and only an appeal to the voters can show whether General Averescu has sufficient influence there to gain the number of votes he requires. He hopes, moreover, to be able to arrange with the Liberals that they recommend him to the King, when the time comes, as their successor.

This arrangement, however, has not yet been completed, and it is to be supposed that the Liberals will not allow the party of General Averescu to succeed them without sufficient guarantees that it will, so to speak, remain in their hands and at their discretion. On the other hand, it is natural for General Averecsu to calculate that, once in power, and strong in the experience gained during his last Government, he will be able to throw off that tutelage. The future will show whether these conceptions, which appear to be cherished by the leaders of the People's Party, are not founded upon illusions.

Tsaranist and National Parties.

The Tsaranist Party, as was to be expected, did not respond favourably to the appeal of M. Maniu. This party, which is founded upon principles of pure democracy and of a constitutional monarchy, could hardly be expected to combine with a conservative group such as that of M. Maniu. In order to bring matters to a head, after the appeal of M. Maniu had been issued. M. Sever Dan, Secretary to the National Party, drew the attention of the Tsaranist Party in a curious public letter to the consequences which would follow their refusal, naively explaining the procedure which could be followed against the Tsaranist Party in order to weaken it. The leaders of the Tsaranist Party, however, appear to have perceived the manœuvre at once, and have decided to face the consequences of the isolation involved by their inevitable refusal. A certain amount of defection has been registered, but the persons who have gone over from the Tsaranist Party to the new one formed by the fusion above referred to do not appear to be influential members, and the Tsaranists seem disposed to regard their action as operating rather towards the consolidation of their party by the elimination of uncertain elements. Moreover, a back current is being formed by a group of the old National Party, with M. Goldis as its leading spirit, which is visibly tending towards the Tsaranists, with whom already cordial political relations exist.

M. Marghiloman's Position.

M. Marghiloman, still standing apart, has shown no sign of wishing to take part in the conversations of the leaders of the other parties. In well-informed circles, however, it is considered certain that some kind of understanding exists, more or less secretly, between M. Marghiloman and General Averescu, by which the General, if he came into power, would offer the portfolio of Finance to M. Marghiloman, a statesman who, though not popular in Roumania, enjoys an authority supported by remarkable eloquence, which gives him a real power not to be overlooked.

The Liberals and Their Successors.

The Liberal Government appears to be in no way disturbed by these internal manifestations of the Opposition parties. It apparently intends to continue its efforts towards the achievement of its great legislative work, and to remain in power till that is completed. Nevertheless, it does not appear to be neglecting the question of its succession, and is already speculating on the dissensions which are likely to take place in the new party, for certain more or less direct manœuvres have been made against M. Argetoianu (who is now unanimously regarded as a disintegrating element) with a view to creating friction between him and M. Iorga. But this question will be dealt with later.

PERSONAL AND GENERAL.

TO-DAY.

March 12, 1925 (New Style).
February 27, 1925 (Old Style).
Shaaban 16, 1343 A.H., of the Moslem Calendar.
Adar 16, 5685, of the Jewish Calendar.

The Persian Minister left London last week for Teheran.

Lord and Lady Cable have returned to England from Bombay.

Mr. and Lady Cynthia Mosley have returned from India.

Lady Helen Brocklehurst has arrived in London from the Sudan.

The Marquis of Graham has returned to Brodrick Castle, Isle of Arran, from Turkey.

Lady Margaret Bickersteth and Miss Ruth Bickersteth left London last week for Cairo.

Sir John and Lady Harrington have left Cairo for an extended tour in Palestine, Syria, and Mesopotamia.

Sir Alfred Mond, Bt., M.P., has returned to London from his visits to Egypt, Palestine, and Athens.

Sir Fazulbhoy Currimbhoy left London last Friday after a brief visit, for Paris, en route for Bombay.

The Earl of Balfour will leave London on March 15 for Palestine, where he will open the University in Jerusalem.

Captain Douglas Capitaneano, formerly Military Attaché at the Roumanian Legation, left London on March 3 for Paris.

Lieut.-General Sir John Shea (Adjutant-General in India) had the honour of being received by the Queen at Buckingham Palace on March 2.

M. Grégoire Michaesco, Commercial Attaché at the Roumanian Legation, left London last week for Bucharest.

Commander Hilton Young left London on March 4 for Baghdad to undertake a financial mission to Iraq on behalf of the Secretary for the Colonies. He is accompanied by Mr. R. V. Vernon, of the Colonial Office.

The Hellenic Government has conferred the Golden Cross of the Order of George I. on Judge Vryakos, of the Cairo Mixed Tribunals, and the Silver Cross of the Redeemer on M. M. Lascaris, manager of the Bank of Athens in Alexandria.

The engagement is announced between Captain H. G. Rivett-Carnac, Assistant Resident, Kolhapur, son of Mr. and Mrs. J. T. Rivett-Carnac, of Shillong, and Cushla, elder daughter of Lieutenant-Colonel R. S. Pottinger, Resident at Kolhapur.

The engagement is announced between Captain Duncan McCallum, M.C., the East Yorkshire Regiment, late British liaison officer with the French Army in Syria, third son of Colin Whitton and Ellen McCallum, and Violet Mary, widow of Edward Archibald Hume, Barrister-at-Law, Captain (7th) South Staffordshire Regiment, and daughter of the late James L. A. Hope, of Whitney Court, Herefordshire. The wedding will take place in Egypt next month.

In celebration of the anniversary of the signing of the Declaration of Independence of Afghanistan, the Afghan Chargé d'Affaires held an evening reception on March 4 at the Legation in Grosvenor Place. In addition to many of the Foreign Ambassadors and Ministers, the company, which numbered about 200, included Lord Danesfort, Lord Phillimore, Lord Headley, Sir John Hanbury-Williams, Sir Armine Dew, Sir Edward and Lady Boyle, Mr. Ramsay MacDonald, Mr. and Mrs. N. C. Sen, Mr. George Mounsey, Mr. Ogilvy Forbes, Mr. J. B. Monck, Mr. Graeme Scott, Mr. Hamilton Lamplugh, and Mrs. B. Arbuthnot.

APPOINTMENTS, PROMOTIONS, ETC.

The King has been graciously pleased to approve the appointment of Mr. Howard William Kennard, C.M.G., C.V.O., as His Majesty's Minister Plenipotentiary in Yugoslavia.

The following appointments have been officially announced :—

Mr. J. Prosser, to Assistant Collector and Harbour Master, Cyprus.

Mr. D. M. Hussey, B.A., to Lecturer in English, University College; Miss R. M. McLeod, to Inspectress of Girls' School, Ceylon.

Fayid Sabet Bey has been appointed First Secretary at the Egyptian Legation in London.

Abdul Rahman Fikry has been appointed Second Secretary to the Egyptian Legation in London. At present he is in Cairo.

Lieut.-General A. F. C. Williams, D.S.O., Indian Army, has been appointed as Chief of Staff to Major-General G. McK. Franks, commanding the Kohat District.

Major G. Ireland, Indian Army, has been appointed Assistant Quartermaster-General on the Southern Staff under Lieut.-General Sir Harold Walker.

THURSDAY, MARCH 12, 1925.

THE SITUATION IN BULGARIA..

The situation in Bulgaria threatens to become more and more disconcerting to the country's friends abroad. When men like Petkoff, Mileff, Ivanoff, and Strashmiroff are murdered in quick succession, it is not difficult to gauge the extent to which party feeling must have outstripped the sense of national unity. The murder of these men is a blot on the country as a whole, and can hardly fail to lower the prestige of the Government. Foreign opinion that is well disposed towards Bulgaria is left aghast at the constant reports of assassinations and counter-assassinations; for it is felt that the nation is deliberately sacrificing the good will that its correct foreign policy since the Armistice has won for it. The trouble would seem to have arisen from a failure to think out a given line of policy far enough ahead. After the *coup d'état* in 1923 it was obvious that the only justification for a change of Government was that the new Ministry should make a definite point of breaking with Bulgaria's political past. The grievance against Stambolisky was that he had subordinated the interests of the country as a whole to those of a political party, and by making war on the intelligentsia, was crippling the progress of the nation. The composition of the Zankoff Ministry gave rise to the hope that it would prove to be a Bulgarian Government as distinct from a party or class Government. Yet very early in its existence it started to follow the example of its predecessors in regard to wholesale arrests and the interning of its political opponents. Everyone acquainted with Balkan conditions will recognise how hard it was for the new Government to adopt any other policy; its own position was precarious; it seemed a deliberate invitation to disaster to leave influential opponents at liberty to rally their forces against the relatively weak party that had usurped power. Yet a mere swing of the political pendulum could hardly bring salvation to Bulgaria if the bourgeois parties were to carry out against the peasants the identical policy that the Agrarians under Stambolisky had inflicted upon them. No such policy, we are confident, was actually contemplated by the new Ministry; but before the task of securing the position of the Zankoff Cabinet was accomplished, a determined challenge to its authority was launched in the September rising, and it found itself embarked on a line of action from which it has not been able to withdraw.

By the time the Communist menace was scotched, almost irreparable damage had been done to the cause of internal peace in Bulgaria. The opportunity that presented itself immediately after the accession to power of the Zankoff Cabinet of bringing the Agrarian Party to reason was lost. Its more moderate leaders were kept in prison until too late; for when they were liberated with a view to winning back the rank and file to sanity, they were at once repudiated by the party caucus. To-day it may be said, without much exaggeration, that the Agrarians and the Communists have been welded into a single party by the bourgeois themselves. So severe in certain districts has been the persecution of the peasant that he has come to regard the townsfolk as his natural enemy; leaders of Communists and Agrarian groups take to the hills in order to keep their heads on their shoulders, and the peasant looks to these bands of political brigands as his defenders. In the meantime prominent Agrarians who fled abroad in June or September, 1923, remain in exile; they have come to regard the present régime in an even worse light than the intelligentsia regarded Stambolisky, and are prepared to stop at nothing to bring about, if they can, the fall of an administration which they affect to regard as a tyranny. However contemptible and treasonable their action may be, it plays an important part in the formation of the vicious circle in which Bulgaria now finds herself. It is not too late yet for the Government to retrieve the situation, but it may be doubted whether it can be done without measures that in Bulgaria will seem to be heroic. If the picture that has been drawn is applicable only to a certain number of districts, the tendency must be for the serious conditions to spread to other parts rather than to contract, in the absence of a definite remedy. The political vendetta not only carries with it its own condemnation, but also threatens to introduce difficulties among the followers of the Government *bloc*.

Is there, then, no way out of the difficulty for the Bulgarians? The Government would seem to pin its faith to stronger measures of repression, and hopes to succeed in a policy that has never yet been successful against the Bulgarian people. If the liberty of the peasants to air their grievances in public, whether in the Sobranye or in the market-place, is taken from them, it is certain that discontent will only be driven underground, where it will tend to grow more rapidly than if it were left to take its chance in the open air. A virile people acting under a sense that its rights are being infringed becomes the more exposed to the temptation to defend its cause with revolver and bomb. It is not contended that the Agrarians have all the right on their side, for the question at issue is not so much one of right and wrong as of personal feeling. Unless Bulgaria is to stumble yet deeper into the morass of political vendetta, an attempt should be made to bridge the gulf that now exists between the bourgeois parties and the Agrarians. The latter have been brought to believe that they are in danger of losing their political rights in the event of a prolonged tenure of office by their political opponents. By calling a conference with the moderate leaders of the party, the Government should be able to convince the Agrarians that it has no quarrel with legitimate political opposition, but is resolved to put an end to murder campaigns. The Bulgarian peasant, as is well known, has admirable qualities, and he was never intended to degenerate into a mere Apache. Nothing is more natural than that there should be an Agrarian Party in Bulgaria, but it should be representative of the peasantry and its interests, without aspiring to an undisguised tyranny. If a chance were given to the moderate leaders to reorganise the party on sound democratic lines and not as a military organisation, much of the suspicion which now exists in the country between the political parties would subside. Because Stambolisky waged war on his political opponents, the bourgeois parties, as soon as they had obtained power, felt constrained to turn the tables on the Agrarians. They believed themselves to be acting in the best interests of the State, but the policy has brought the country to a

Digitized by Google

dangerous crisis, from which it can be rescued only by the co-operation of all patriotic citizens. Let those who consider themselves Communists first and Bulgarians second remain outside the pale; but the rest should be brought together by a conference of the representatives of all parties in an honest attempt to save the country from further bloodshed and the certainty of ultimate ruin.

THE INDIAN BUDGET.

We have already recorded the salient features of the Budget presented to the Legislative Assembly at Delhi, and to-day we propose to examine its significance for the people of India, regarded as a whole. The subject can be discussed from two very different standpoints—the present position and the prospects for the future. The critic who is concerned with things as they are may fairly express almost unqualified satisfaction at the figures placed before him, but his colleague, who is looking further ahead, finds his satisfaction tempered with grave anxiety at the persistence of some evil tendencies, and the failure of some beneficent forces to materialise. The grounds for present satisfaction can be stated quite shortly. The year now closing yields an adequate surplus, and, after making reasonable provision for reduction of unproductive debt, another surplus is in sight for next year, and so well assured that the bulk of it can be disposed of permanently in advance. At the same time, provision is made for a programme of capital expenditure, which is not indeed adequate for the country's needs, but is probably as great as is warranted by the country's spending power. This programme is to be financed without borrowing abroad, and more than a quarter of the money to be raised in the country is to be found by that new phenomenon in Indian finance, the small investor, who is already providing more than could be raised a few years ago from the entire resources of the organised money-market. When we record the avoidance of foreign loans as a matter for satisfaction, it must not be inferred that we subscribe to the doctrine, so fashionable in India, that to borrow abroad is in itself an evil. The fact is simply that foreign lenders are at the moment rather scarce, and, consequently, in a position to charge rather highly for their services, and in these circumstances necessary expenditure might have to be curtailed if India could not raise the capital within her own borders. As things stand, however, the Central Government is paying its way, and rather more, while it can count on finding capital to a reasonable extent at a cost which it is prepared to meet. That is a situation which, in these days, may fairly be regarded with satisfaction.

The position is different when we turn our eyes to the future, and ask what the Government is doing for the years to come. It is not, indeed, wholly unmindful of them. There is, first, the capital expenditure, mainly on railways, to which we have referred. There is, next, a small increase in the meagre provision for research, which we welcome, partly for itself, and partly because it indicates a definite reaction against the injurious policy favoured, in this matter, by the Inchcape Committee. There is, thirdly, the wise decision not to waste the surplus in remitting taxes, but to use it to enable some of the provincial administrations to get on with their proper work. We have still to learn whether this decision will be endorsed by the Legislature. The Bombay millowners are making a vigorous effort to get the surplus for themselves, in the form of a reduction in the cotton-excise, which, in the present state of markets, would be simply a bonus to shareholders. They are, of course, entitled to do the best they can for themselves and their partners in the industry, but, as a poet once observed, "We are not cotton spinners all," and we think Indians unconnected with the industry will be well advised to unite in support of the statesmanlike determination of the Government not to talk about reducing taxation until the provincial contributions have been finally wiped out.

For it is in regard to provincial finance that the gravest grounds for anxiety exist. Under the new Constitution the Central Government is concerned mainly with stability, while the provinces have to find the money for progress. Vast additional sums are needed for the work which it has become the fashion to call nation-building—that is to say, for sanitation, education, economic development, and a general uplift in the lives of the people. In most provinces things are almost at a standstill for want of funds, and even when the whole of the contributions to the central exchequer shall finally have been abolished, the money so set free will scarcely suffice for more than a beginning. The provinces must provide the cost if the country as a whole is to go forward, and at present they are very much disinclined to do anything of the sort. Their recent efforts to develop new sources of revenue, even under the whip of actual deficits, have in truth been rather puerile. Some of them have taxed, or proposed to tax, motor-cars, and some of them picture-houses, others have increased the fees on litigation, or on business transactions, but it is not on such foundations that the nation can be built, and as yet we see no signs of the advent of any real leader, who shall persuade the people to tax themselves to provide the things they need. It is absurd to say, as so many Indian politicians do, that there is no surplus income to tax, for when people are buying jewellery on an extravagant scale there is undoubtedly room for the tax-collector to get busy. We wrote last year that India was spending about a crore of rupees a week on gold and silver in excess of any real needs. She is spending more than that now—apparently it will soon be two crores—and when the jewellers' bill for the year is mounting up towards a thousand million rupees, it is preposterous to argue that there is no money in the country to spend on schools and doctors. Here, then, is the main cause for anxiety in regard to Indian finance, considered in the widest sense. The people are unwilling to pay for what they need, and persist in wasting their surplus income, which in the aggregate is large enough to do real good, if only it were wisely spent. While this attitude is maintained, the country cannot go forward as it should, and, at the same time, the new forces now in operation involve either national progress or national disaster. It is, however, too soon for pessimism. If so little constructive statesmanship has yet appeared, the opportunity for it is still very recent. It would have been little short of a miracle if the first set of popular Ministers had displayed the necessary qualities. All over India, politicians are just beginning to learn their business, and we must be content to wait a little yet before the statesman emerges from the crowd. When he does emerge, he will find a worthy task awaiting him.

In answer to a question in the House of Commons, the Under-Secretary of State for India said that according to the reports of the Health Officer of the Bombay Municipality the infant mortality in Bombay City was 667 per 1,000 births in 1921, 403 per 1,000 in 1922, 411 per 1,000 in 1923, and 419 per 1,000 in 1924.

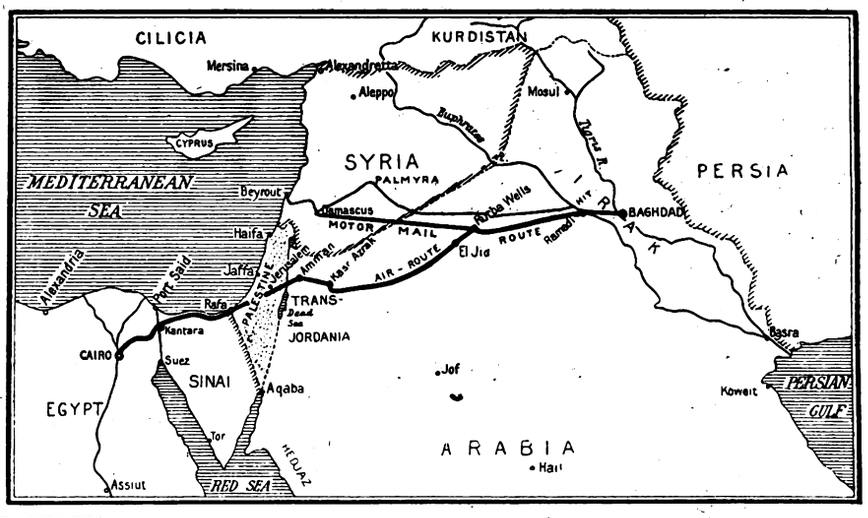
AIR AND MOTOR SERVICES ACROSS THE SYRIAN DESERT.



THE ABOVE MAP SHOWS:—

1. **The Air Mail route between Cairo and Baghdad (heavy black line). Fortnightly Mail Service by the Royal Air Force.**
2. **The Desert Mail Service of the Nairn Transport Company (Beyrout—Damascus—Rutba Wells—along the Air Mail track—Ramadi—Baghdad). The mails are taken to and from Haifa by the same company.**
3. **The Eastern Transport Company's Service (Beyrout—Damascus—Palmyra—Hit—Ramadi—Baghdad). The spot where last week's attack took place was about half way between Hit and the Syrian frontier.**

CONSTANTIN GUYS.

At the Goupil Gallery, Regent Street, W., there is an interesting exhibition now being held of drawings by French artists, particularly by Constantin Guys.

Guys, whose drawings here are mostly of horses and of mid-nineteenth century bourgeois types, had a fascinating career. Born at Flushing in 1805, this young Frenchman helped Byron in the Greek War of Liberation, and afterwards, having joined and left the French Army, travelled widely in Europe and in the Near East. Later on he was found acting as war correspondent in the Crimean War for the *Illustrated London News*, and finally settled down in Paris.

There are no actual drawings of the Near East in this exhibition, but it is a stimulating show. Guys was very quick to seize the essential points of a scene. It would be very interesting to know whether he did anything representing the Greek War.

Dr. Orphanides, the Minister of Public Welfare in the Greek Cabinet, has resigned.

The Bulgarian Communist deputy, M. Haralambi Stoyanoff, was assassinated in Sofia last Friday. The murderer, who was arrested, is a young native of Macedonia named Razwigoroff.

The motion introduced by a Nationalist member in the Punjab Legislative Council demanding the immediate removal from its site on the Mall, Lahore, of the statue of Lord Lawrence has been rejected.

The Roumanian Minister at Berne is attending the League of Nations Conference at Geneva, which meets this week.

M. Albert Sarraud, who was formerly Governor-General of Indo-China, has been appointed to the French Embassy in Angora, which M. Franklin-Bouillon declined to accept.

It is officially announced that the Secretary of State for the Colonies and the Secretary of State for Air will visit Iraq and Palestine on official business during Easter recess. As at present arranged, Mr. Amery and Sir Samuel Hoare, accompanied by officials of the Colonial Office and of the Air Ministry, will leave England on March 19, and will return towards the end of April.

Sir Geoffrey Archer, the new Governor-General of the Sudan, arrived in Cairo last Thursday. He was met at the station by Mr. Henderson from the Residency, by representatives of the King of Egypt, by the Prime Minister, the Minister for War, and other high officials. He was received in audience by King Fuad, and left the same evening with Lord Allenby, the British High Commissioner, on a duck-shooting expedition.

NEWS IN BRIEF.

M. Michalokopoulos has filled the vacancies in the Greek Cabinet by appointing M. Gontikas Minister for War, instead of himself, and M. Misyroglou Minister of Assistance. The Premier retains the Foreign Office.

It was reported from Constantinople on March 6 that three important newspapers and three reviews have been suspended by virtue of the new law for the preservation of public safety.

Yehia Pasha Ibrahim, the former Egyptian Prime Minister, who has just been made a Senator, has been elected as the first President of the Ettehad (Unionist) Party which was formed in January.

The appointment of Sir Ronald Charles Lindsay, K.C.M.G., Diplomatic Representative in Constantinople, to be British Ambassador to the Turkish Republic was gazetted on March 6.

Eight persons were killed and 28 injured at Mogosoaia railway station, on the outskirts of Bucharest, last Friday, when two goods trains, in one of which some soldiers were travelling, came into collision owing to faulty shunting. Both engines and ten coaches were completely smashed.

According to official returns, the candidates at the Egyptian elections to be held to-day (Thursday) will include 178 Wafdists, 92 Ettehadists (Unionists), 83 Liberal Constitutionalists, 61 Independents, and 30 Nationalists. Of the 20 uncontested seats, the Independents secure 7, the Ettehadists 6, the Wafdists 5, and the Liberal Constitutionalists 2.

According to *The Times* Belgrade correspondent, the Yugoslav negotiations with Albania for the exchange of the monastery of Sveti Naum, on Lake Ochrida, are not likely, owing to the exaggerated demands of Albania, to reach a satisfactory conclusion before the next meeting of the Conference of Ambassadors, which must decide the question in the event of no agreement being reached.

Sesostris Sidarouss Bey, the Egyptian Chargé d'Affaires in London, accompanied by Dr. Salama, was present at a banquet offered by the members of the Pharaoh's Club in Cambridge, on the occasion of the anniversary of the foundation of that club, March 7. The Egyptian Colony in Cambridge were present at the dinner, together with some University Professors. The room was decorated with Egyptian flags, and the portrait of His Majesty King Fuad I. was in the place of honour. A toast to the King of Egypt was proposed by the President of the club. Sesostris Sidarouss Bey delivered a speech thanking the President and members of the club for their kind invitation, and he expressed the hope that their aim would always be to tighten the bond of true friendship and understanding between Great Britain and Egypt to the mutual benefit and happiness of the two nations.

OBITUARY.

The death is announced from Delhi of Sir Leslie Miller, an ex-Judge of the Madras High Court, and lately Chief Judge of Mysore.

The death is announced of Paymaster Rear-Admiral Sir John H. G. Chapple, K.C.B., C.V.O. He served, among other campaigns, in the Egyptian War of 1882, and in the operations in Eastern India in 1884.

At Cheltenham on February 24 the death occurred of Major-General Charles Alexander Cuningham, aged 83. He served for over forty years before going on half-pay, fought in Afghanistan, and for more than twenty years held staff appointments, finishing up as Political Resident at Aden. His eldest son was killed at Gallipoli.

Major-General Sir Richard Westmacott, K.C.B., D.S.O., died last Friday near the close of his 84th year. He belonged to the now small band of Indian Army officers recruited by the East India Company. Entering the Bombay Army early enough to be a Mutiny veteran, he remained on the active list long enough to command a brigade in the Tirah Expedition.

Mr. Clovis Maurice Camille Bévenot, late Professor of French at the University of Birmingham, who died at Torquay on February 21, examined in the Romance languages, including Roumanian, at many universities in the United Kingdom, and for the Indian Civil Service, and was appointed Professor of French at Birmingham in 1889, retiring on a pension in 1909.

Colonel James Ross O'Connell, who died in Dublin on February 25, at the age of 61, served with the Dongola Expedition in 1896, and was with the 3rd Egyptian Battalion at Firket and Hafir, being mentioned in despatches and receiving the Mejidieh Order. In the operations of 1898 he served with the 12th Sudanese, including the Battle of Khartoum, when he was again mentioned, and received the Osmanieh Order; also in the final advance against the Khalifa in 1899. From 1904 to 1907 he was Governor of Kordofan, in the Sudan.

Mr. Henry Maughan Liardet, late lieutenant in her Majesty's Indian Navy, died at Nantwich on February 15. He served during the Pegu War, in Burma, in 1852, and received the Pegu medal and clasp. He was a lieutenant of the Assaye, the flagship of Sir Henry Leek, and was at the taking of Reshire and Bushire, in the Persian Gulf, in 1856, for which he received the Persian clasp. He held the position of flag lieutenant to Admiral Sir Henry Leek and George Grenville Wellesley, and was with the first expedition which went up the River Selang, Burma, to navigate its waters, and received the thanks of the Bengal Government for his services. During the Indian Mutiny in 1858-9 he was at Bombay and Scinde. At the conclusion of the Persian War he carried dispatches from the Government of Bombay to General Sir James Outram, who commanded the expeditionary field force in Persia.

The Right Rev. Charles Harvey Stileman, late Bishop in Persia, died suddenly on February 23 in a nursing home at Wimbledon, at the age of 62. The youngest son of Major-General W. C. Stileman, Indian Army, he began in 1889 his long association with the East as C.M.S. Missionary at Baghdad, and in 1891 he removed to Julfa. From 1895 till 1906, with the exception of a year on furlough, he served as secretary of the C.M.S. Persia Mission. Then (says *The Times*), after a short period as C.M.S. organising secretary in the West of England, he became clerical secretary of the Church of England Zenana Missionary Society. In 1912 he was consecrated as Bishop in Persia. The centenary of the early death of Henry Martyn, Fellow of St. John's, Cambridge, who translated the New Testament into Persian, was commemorated that year, and when the Public Orator, the late Sir John Sandys, presented Bishop Stileman for his honorary D.D., he made reference to the Bishop's appeal for a Cambridge mission to Shiraz with its memories of Martyn. To his work in Persia Dr. Stileman brought a thorough knowledge, both of the language and of the national life and thought, and he wrote a book called "The Subjects of the Shah."

Queen Olga of Greece, who is residing in Athens, will pay a visit to London during May.

The Nationalist motion for the removal of the Lawrence statue from the present site has been rejected by the Punjab Legislative Council.

Professor Newberry, the Egyptologist, who has been assisting Mr. Howard Carter in the examination of the tomb of Tutankhamen at Luxor, was taken to Cairo on March 4 suffering from fever.

The Imperial War Graves Commission announce that the date of the dedication ceremonies in the British War Cemeteries at Gaza and Deir-el-Belah, Palestine, has now been altered from April 20 to April 28.

Emil Effendi Khouri, a Syrian, and chief editor of the Zaghlulist newspaper *El Ahram*, was ordered to quit Cairo on March 2 at an hour's notice, and was escorted to Port Said by Egyptian police. *Al Siassah* states that the French Consul associated himself with the action of the Egyptian authorities.

NOTES AND NEWS.

167, Strand, London, W.C.2,
Tuesday Morning.

An Important Hungaro-Yugoslav Agreement.

An agreement which seems likely to be of great importance in the development of Near Eastern trade has just been made in Belgrade between Yugoslavia and Hungary as regards reduced rates and facilities for transit traffic. The Hungarian State Railways are to allow large reductions on Yugoslav agricultural products and half-finished commodities consigned to Austria, Germany, Czecho-Slovakia, and Poland. In return Yugoslavia will give preferential treatment to goods from Hungary destined for Italy, Bulgaria, Turkey, and Greece. Any measure that will help the wheels of trade in the Balkans to revolve freely again is to be welcomed, for it is only by the development of commerce that the exchanges can possibly improve.

The Leipzig Fair.

It had been feared that the decision not to hold the London section of the British Industries Fair as a separate entity this time might give a special opportunity to the Leipzig Fair to re-establish itself as the chief world mart for those goods that have been displayed at the White City. Reports from Leipzig hardly suggest that there is any real foundation for anxiety on this score. The fair, indeed, seems to be a failure this time. The exhibits, it seems, are mainly of the cheap kind, and there is an almost total absence of the novelties and improvements that were such a feature in the pre-War era and helped to make the fair such a powerful weapon for German economic penetration. There have been a fair number of foreign buyers, and one can only hope that they have visited the White City in previous years, because they will then know where they must come for quality and novelty.

India and Wembley.

So far as it goes, writes a correspondent, the decision to continue India's representation at Wembley is extremely welcome, but the organisation of a series of exhibits that will really represent India is a task of a good many months. As it is, we are told that the Indian States that were at Wembley last year are being invited to participate again, which rather gives the impression that an affair like this can be very speedily settled. The Indian Pavilion last year, however charmingly depicted by the scribes, was in plain English an extremely poor apology for a display of India's potentialities, and unless great efforts are made from now onwards, and unless India as a whole takes up the idea of Wembley with enthusiasm (as to which I have my doubts), it seems highly probable that once more the East will disappoint the West.

Last Year's Display.

Thus my correspondent in terms which should make all these good people who think that whatever is is for the best shudder. As I have pointed out in these columns, the Indian Pavilion was admirable, but India is a large subject, and to give a potted impression of it in one edifice is rather like attempting to précis an encyclopædia into a page. You get a result of sorts, but not what is desired. During the exhibition I heard a variety of views on the different pavilions, and while there was a general agreement that India was good, I found the impression that a good many parts of the pavilion very singularly lacking in interest—that is, compared with the displays in some of the other pavilions. However that may be, the fact remains that every time I visited the Indian Pavilion I found it thronged, and on at least two occasions I had very considerable difficulty in getting round at all, which rather tends to controvert this impression.

London and Wembley.

It appears that great hopes are being based on the development by Londoners of what is known as the Wembley habit. I am very dubious on the point myself. After all, Wembley as a Mecca is one thing when viewed through provincial spectacles, and another when regarded by the Londoner after a day's work. Were it centrally situated I have no doubt that the Exhibition would receive masses of Londoners every night—but not at Wembley. If anyone doubts it let him or her picture the attitude of a resident at Lewisham or Croydon or Catford or any similar outlying parts of London to the suggestion that Wembley ought to be visited at least once a week. The very thought is enough to make such a person tired. Of course, if the Government would arrange for a series of Grand Babylons at Wembley for tired Londoners to stay at free I would not be prepared to say that we should not develop the Wembley habit rapidly, but short of something like that—well, I think not.

Aeroplanes for Turkey.

There have been a good many reports regarding Turkey's intentions in respect of air services, one of which is that a German firm is to establish an aeroplane factory in Turkey in return for a concession in regard to commercial air services and certain other concessions. It may be correct, but in view of previous developments I am rather inclined to doubt it. After all, the Turk is an adept at keeping potential clients in a state of uncertainty, and it is much more probable that his hopes as regards the air are based on this country.

COMMERCE AND INDUSTRY.

Reports from Our Own Correspondents.

EGYPT.

Cairo, February 28.

The Chamber of Commerce.

There was an alarmist note in the speech at the annual meeting in Alexandria of the British Chamber of Commerce by the President, Mr. Davies Bryan. Mr. Davies Bryan drew attention to the anomalous circumstance that Egypt has had a cotton boom and a depression in the retail trade simultaneously. But, and of this Mr. Davies Bryan seemed, by his subsequent remarks, to be convinced, the retail depression has been more imaginary than real. Egypt at the present time is in a remarkably prosperous condition; and it is almost true to say that there is so much money in the country that people do not know what to do with it. One phenomenon, most marked during recent years but not touched upon by the President of the British Chamber of Commerce, is the way in which wealthy Egyptians who, until quite recently, would not put their money into anything but land, or, alternatively, locked it up, often without taking interest, in banks, are now investing in commercial companies' shares. If this movement continues, as it almost certainly will, a corresponding increased interest on the part of Egyptians in business matters may be seen, and, at last, a breaking down of the old prejudice against business as a career, which has turned so many of the country's young men of the upper middle class into either Government clerks or idlers.

Commercial Neglect of Egypt.

The really serious part of the President's speech dealt with the falling away in the imports of British goods. Mr. Davies Bryan was not overstating the case when he said that last year's trade returns reveal, from a British point of view, a grave situation. While almost our competitors have forged ahead, some, like Italy, in a remarkable manner, British imports have declined in value, and our percentage of Egypt's total purchases from abroad is now lower than it has ever been. Mr. Davies Bryan, not content with pointing out the danger which British trade in Egypt is running, made several useful suggestions regarding measures for recovering lost ground. It is to be hoped that his remarks will find their way to manufacturers interested in the Egyptian market. One example of the manner in which this country is neglected by British business men is afforded by the motor-car industry. There is probably no country more suitable for the British light car of the £150-£250 class than is Egypt, yet, until a year ago, British light cars here could be counted on the fingers of both hands. Now the situation in this respect is a little better, but the remarkable fact about most cars of the type now to be seen here is that they have been bought in England and brought out here by their owners. Very few British cars are sold here, and the reason is that no attempt is made to compete with the clever sales campaigns and excellent service facilities offered by American, French, and Italian makers. Ford, Citroen, and F.I.A.T. have been allowed to have it all their own way. Five hundred British cars could be sold here this year if the market were properly tackled, and the number could be greatly increased in every succeeding year.

The quantity of gold extracted from the mines in India during November last amounted to 36,301 ozs., valued at Rs. 19,49,549.

The Associated Portland Cement Manufacturers have placed the order for the three kiln shells, each 250 ft. long, which will be the largest yet installed in this country, for Bevan's works, with Vickers, Limited, Barrow-in-Furness.

SOME PERSIAN PRODUCTS AND THEIR COMMERCIAL VALUE.

(From a Correspondent.)

Persia is an agricultural country, industry so far playing a very secondary part. A brief description of some of the principal products of the country may be of interest.

Wheat is cultivated all over the country, except in the Caspian provinces of Gilan and Mazanderan, where the climate is too damp, and also along part of the coast of the Persian Gulf. The grain is of excellent quality, but the quantity produced is not large enough to provide for any export trade. In Gilan and Mazanderan provinces rice is produced in such large quantities that it not only provides for local needs, but is also largely distributed over the other parts of Persia, and, in addition, much is exported to Russia. In other parts of Persia rice is only cultivated sporadically in places where the climate and the water supply are favourable for its growth. Rice is a national food of Persia, and therefore the best long-grained sorts are mostly used in the country itself, and only the inferior types are exported.

Cotton is cultivated sporadically in many districts in Mazanderan; in the district of Barferush the culture of cotton has been considerably developed during the past two decades, and there are several cotton cleaning factories in the town of Barferush. The principal cotton regions are in the neighbourhood of Teheran, Ispahan, Kazvin, Damghan, Shahrud, Salzevar, Nishapur, Meshed, Karman, etc. Mazanderan cotton is of the American type, has a longer fibre than the indigenous product, and fetches higher prices. The greater part of the cotton produced is exported to Russia.

Three kinds of tobacco are cultivated in Persia, viz.: (1) The water-pipe tobacco (Tambaku), which is grown in particular in the environs of Shiraz. It is much used in Persia, and is famous for its quality. A great part of it is exported to Turkey, Egypt, Afghanistan, and India. (2) A cigarette tobacco (Tutun) of Turkish seed is grown in the neighbourhood of Resht and Barferush. It is used in Persia, and part of it is exported to Russia; but its quality is not so good as the Turkish or South Russian tobacco of the same kind. (3) An unfermented green tobacco, crushed by hands, and used only for ordinary pipes (tchubuk), is grown in many parts of Persia.

Vineyards exists everywhere, and the grapes are of great variety and excellent quality. The Persians eat the grapes with bread, and wine is made only by the Armenians, Parsees, Jews, and Europeans. The best wine, made at Shiraz, is very much like sherry. The Jews at Hamadan manufacture a very good white wine, and from certain kinds of red grapes wine like the burgundy and claret can be made. The most important grapes are the "Kishmish," a small, very sweet, thin-skinned, and nearly seedless sort. The raisins made from it are called "Sabza," and are exported to Russia in very great quantities. They are mostly cultivated in the Azerbaijan province and in the neighbourhood of Kazvin. From the husks of grapes after the manufacture of wine the Armenians distill a strong but disagreeable smelling spirit called "Arrak," which is much used by them.

Sugar cane is sparsely cultivated at Mazanderan; the juice of it and sometimes of the sorgo plant, primitively extracted, is boiled down to a nearly dry condition, and is thus used by the inhabitants. On the leaves of some oak trees at Kurdistan and about the Astrabad bay, through the stings of some

Digitized by Google

insects, a sweet juice flows out, which soon dries to a sugar-like mass, and this, mixed up with parts of the leaves, is collected and sold in the bazaars as a cough medicine. As Ispahan a certain sweet cake is prepared from it called "Gaz," which is much appreciated by the Persians.

Of the different kinds of wood and timber in the immense forests of the Caspian province only box-wood, walnut, and oak have value for export. For the other less valuable kinds of timber the Persian table-land would be a good customer if cheaper and more effective means of transport could be created.

Resht and its environs produce the largest amount of silk cocoons, which are steamed and dried and exported to France via Baku-Batoum. This trade is entirely in the hands of Greek and Armenian contractors. The seeds used to be brought from Constantinople, as the seeds collected at Gilan are of inferior quality. All the villagers around Resht are occupied with this business, and the plantations of mulberry trees cover a considerable area.

Carpets are the only really valuable articles for export of Persian industry. The most precious carpets are manufactured at Kurdistan; they are thin, of original pattern, and their size is generally not very large. Splendid silk carpets of medium size were also manufactured some years ago by a firm at Tabriz. The carpets of Farahan are of large size, soft, and thick. Next to them in value are the carpets of Khorassan, with a long frieze and brilliant colours.

THE BRITISH CHAMBER OF COMMERCE OF TURKEY AND THE BALKAN STATES.

The report of the British Chamber of Commerce of Turkey and the Balkan States for 1924, presented at the annual meeting of the Chamber, held at Constantinople on March 5, states :—

"Early in the year the Council appointed a Committee, consisting of Colonel Woods and Mr. Tubini, to study the question of adding a standard arbitration clause to local contracts. The Committee reported that it was of the opinion that for an arbitration clause to be effective it must be accepted by all local Chambers of Commerce, and that it would be advisable for the Consultative Committee to take this matter up with the Chamber of Commerce of Constantinople. As the Consultative Committee was not formed the question is in abeyance.

"The high import duties are having some effect on local industries. Fresh efforts are being made to stimulate manufacture. Rice is now being imported in its natural state and prepared for consumption at rates which compete successfully with the imported finished product. Sacking from Dundee and Czecho-Slovakia is being cut and sewn into bags by recently erected machinery. The manufacture of glucose, of which there is a large import into this country, is being considered. The flour-milling industry has received the encouragement for which it has asked in vain for over fifty years, viz., a discriminating duty against flour, with the result that the flour mills have never been so busy as they are at present.

"On the removal of the roof over Rue Reshadieh in Stamboul it was feared that a congestion in the Stamboul Custom House might follow. A Committee, consisting of Colonel Woods and Mr. Walter Seager, was asked to call on the Director of Customs and remind him of the inconvenience caused to trade when the Custom Houses were congested three years ago. The Committee was informed that the Sefkiat Depot at Seraglio Point had been allotted to the Custom House authorities, who would take every measure possible to prepare for a revival of imports.

"The Government issued special regulations during the year covering the right to import patent medicines and other pharmaceutical specialities. Under these regulations only specialities for which special permission is granted may be imported into Turkey. The Commission granting these licences to be issued sits in Angora once a month only, so that the issue of permits is proceeding very slowly. Licences applied for over six months ago have not yet been dealt with. A large number of applications have been refused. The result of these measures and delays has been seriously to affect the trade in these articles, particularly as the Commission would appear to be extending restriction to articles other than patent medicines, and pharmaceutical preparations, such as toilet requisites.

"It is satisfactory to be able to say that the Turkish General Post Office has, after the first natural confusion, shown considerable improvement. It would have given the council equal pleasure to report favourably with respect to the telegraph service. Unfortunately, it is unable to do so. Complaints have come in during the whole year. The position has been gravely aggravated, and the trade of the country, already suffering very badly from depression, has been further hampered by the closing of the Eastern Telegraph Company. The council, with the help of the Commercial Secretary, has made representations to the authorities, and continues to take active steps with a view of obtaining the much-needed improvement.

"When the Chamber was incorporated in 1913 no British Chamber existed in Greece, Bulgaria, Serbia, and Roumania. To-day there are independent British Chambers with which the Cham-

ber maintains cordial relations. In these circumstances the moment seems opportune for the Chamber to revert to its original title. If the annual general meeting approves the suggestion it will be necessary to obtain the permission of the Board of Trade, a special resolution will have to be passed and confirmed at two extraordinary general meetings."

THE TANNING INDUSTRIES OF YUGOSLAVIA.

The supply of hides and skins in Yugoslavia is insufficient, despite the fact that there are 5,000,000 head of cattle in the country, according to official statistics (says an American Consular report). The neglectful care of the buffalo, which is the leading hide-producing animal, renders its hides unsuitable for the production of sole leather. Buffalo hides are used only by the smaller tanners for the making of an inferior-quality leather, which is manufactured into opanks, or the national peasant shoe. The large tanners depend almost entirely upon foreign sources for the better grades of raw materials.

Despite the low domestic production of cattle hides, some of these are exported, thereby increasing the existing shortage. Until lately the Yugoslav leather industry had been obtaining large cowhides from Northern Italy, but since the restriction placed by Italy on these exports other sources for these hides must be found, and to do this it will be necessary to pay increased prices.

The quality of hides and skins in this country varies considerably, according to the regions of origin. Those originating in many parts of the country, as Bosnia and Herzegovina, are of very poor quality, and many of them cannot be used because of the grub holes caused by the warble pest. The best regions are Banat, Voivodina, and Slovenia, where the pest does not seem to have attacked the herds. The take-off in Bosnia and Herzegovina is very poor, and will require much improvement before the skins are marketable to any large extent. The skins in these regions are ordinarily dried in the sun without caution, and many show cracks and grub holes. The best skins are those coming from the region of Slovenia, where more care is exercised in the take-off and drying methods.

Among the infant industries of Yugoslavia, the leather industry is the leading one. There is room for much improvement in the quality of the leather produced, and the largest output consists of harness leather. Practically all the leather produced is of a rapid tannage, the density is very great, and the grain very brittle, showing dark spots or blemishes in the shoulders and sides. New tanneries are frequently organised, but generally do not have sufficient capital or technical experience to establish a sound and important business. In spite of the financial and economic difficulty through which Yugoslavia is passing, the leather trade is considered good. The two important centres for the leather trade are Zagreb and Belgrade.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

Egypt.

Lubricating Oils.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 1,310 metrical tons of mineral lubricating oils. March 25.

Clothing, etc.—The Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the Egyptian Police and Ghafir Services during 1925. The principal requirements include woollen blankets, ankle boots, chevrons, non-inflammable shirt collars, cotton shirts and drawers, cotton gloves, cotton and woollen socks, uniforms, boot blacking, heel-balls and palm-oil soap. Tenders will be received by the Director of Equipment Department, Ministry of the Interior, Cairo, up to March 28. (D.O.T.)

Stores.—The Ministry of the Interior invites tenders for the supply of goods required by the Central Police Stores for the year 1925-1926. The range of articles required is wide, covering accoutrements, harness and saddlery, fire-engine accessories, barrack-room, etc., furniture, tools, permanent and consumable stores (including brooms, flannelette, oils and paints, sacking, cotton thread). April 21. (D.O.T.)

Telephone Exchange.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply and erection of a manual full common battery telephone equipment in Cairo and of subscribers' telephones and other apparatus to work therewith. The exchange to be equipped for 6,000 subscribers' lines and to have an ultimate capacity of 8,000 lines; 3,900 table and 700 wall telephones will be required, together with a certain quantity of three-position switches and private branch exchanges. April 30.

Chemical Manures.—The Egyptian Ministry of Agriculture invites tenders for the supply of the following chemical manures:—Nitrate of soda, 21,000 metric tons; nitrate of lime, 2,000 metric tons; sulphate of ammonia, 1,000 metric tons; superphosphate of lime, 3,000 metric tons. Six hundred bales of E bags for bagging the nitrate of soda are also required. May 2. (D.O.T.)

Clothing, etc.—The Egyptian Postal Administration invites tenders for the supply of clothing and general stores for the year 1925-26. The general stores cover a wide range, although frequently in quite small quantities. May 12. (D.O.T.)

Roumania.

Locomotives.—H.M. Consul at Cluj (Mr. Charles Goodwin) reports that a firm has approached him asking to be furnished with quotations for a locomotive. The type of locomotive required is about 70 h.p. (D.O.T.)

Turbo-Generator.—The Municipal Electric Works of Timisoara (Transylvania) invites tenders for the supply of a turbo-generator, Scott transformers, a high-tension feeder, and various accessories. March 26 (D.O.T.)

Greece.

Telephone Exchange.—The Greek Government invite tenders for the supply of a manual telephone exchange for the City of Athens. April 15. (D.O.T.)

Bulgaria.

Passenger Cars.—The Bulgarian Ministry of Railways, Posts, and Telegraphs invite tenders for the supply of narrow gauge passenger cars and goods wagons. March 23. (D.O.T.)

Turkey.

Passenger Coaches and Goods Trucks.—The Direction Generale des Chemins de Fer d'Anatolie invite tenders for the supply of six passenger coaches and six goods trucks. April 1. (D.O.T.)

Reconstruction of Bridges.—The Direction Générale des Chemins de fer d'Anatolie invite tenders for the reconstruction of ten iron bridges on the Haidar Pacha-Eski Chehir section of the Anatolian Railway. April 2. (D.O.T.)

SHIPPING INTELLIGENCE

YUGOSLAV PORT TRAFFIC.

Three Yugoslav ports receive imports from foreign countries in any large quantities—Gravosa (Gruz), Spalato (Split), and Sebenico (Sibenik), says the *Monthly Review* of the Anglo-Austrian Bank in a survey of Yugoslavia's trade in 1924. Italy is the principal importer, followed at a distance by Great Britain, and then at a still longer interval by France, Holland, Egypt, etc. The ships carrying these imports were 80 per cent. Yugoslav, 14 per cent. Italian, 2.4 per cent. Russian, 2 per cent. British, and 1 per cent. Greek. Besides the three ports above mentioned, other ports forwarded exports to foreign countries—Sushak, Bakar, Segna (only timber), Vranjic (chiefly cement to Far East and South America). Of goods leaving Adriatic ports 21 per cent. represent internal coastal traffic. Foreign countries receiving exports are in the first place Italy, then Egypt, Greece, Malta, China. These exports are carried up to 61 per cent. under the Italian flag, 33 per cent. under the Yugoslav, 2 per cent. under the British flag.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, March 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Makalla for Port Said, Colombo, Madras, and Calcutta (London, March 21).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, March 25).

British India Line.—S.s. Masula for Bombay and Karachi (London, March 28); s.s. Mulbera for Colombo, Madras, and Calcutta (London, March 28).

Ellerman "City" Line.—S.s. City of Calcutta for Calcutta (Birkenhead, March 14).

Johnston Line.—S.s. Aviemore for Galatz and Braila (Liverpool, March 28); s.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 11).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, March 20); s.s. Nellore for Colombo, Madras, and Calcutta (London, March 21).

Prince Line.—S.s. Stuart Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, March 24).

THE INDIAN EXHIBITION COMMISSIONER.

Dewan Bahadur T. Vijayaraghavacharya, Indian Exhibition Commissioner, gave a dinner at the Trocadero Restaurant on February 24. The guests included:—Sir Atul Chatterjee, High Commissioner for India, and Lady Chatterjee, Lord Olivier, Sir Arthur and Lady Hirtzel, Lieutenant-General Sir Travers and Lady Clarke, Mr. Wickham Steed, Sir Malcolm and Lady Seton, Sir Louis and Lady Kershaw, Sir William and Lady Clark, Sir Francis and Lady Younghusband, Sir Israel and Lady Gollancz, Sir Thomas Carey-Evans, Sir Howard d'Egville, Sir Lawrence and Lady Weaver, Sir John Maffey, Major-General Sir John Burnett-Stuart, Sir John Biles, Professor William and Lady Rothenstein, Mr. and Mrs. Alexander Howard, Mr. J. C. B. Drake, Mr. and Mrs. N. C. Sen, Mr. F. H. Brown, Mr. and Mrs. Yusuf Ali, Mr. William Defries, Mr. and Mrs. Ernest Joseph, Professor Edwyn Bevan, Mr. and Mrs. George Joseph, the Misses Koman, Mr. Ranganathan, and Mr. Ramkrishna Pillai.

RAILWAY MATERIAL FOR EGYPT.

The British Commercial Secretary at Cairo (Mr. E. Homan Mulock) reports that the exact numbers and respective cost of each category of Egypt's railway requirements are as follows:—275 kilometres of double track, £E600,000; 80 locomotives, £E400,000; *90 passenger coaches, £E315,000; 1,035 goods waggons, £E362,000; bridges, £E120,000; signals, £E110,000; total, £E1,907,000. *Of these, twenty bodies are to be built in the Egyptian State Railway workshops at Boulac.

The Commercial Secretary cannot, however, obtain any approximate date for the call for tenders for the eighty locomotives, as the chief locomotive engineer's report, it is understood, has not yet been received. Tenders for the 275 kilometres of double track will be called for during 1925-26.

All calls for tenders are handled by the Inspecting Engineer to the Egyptian Government, Queen Anne's Chambers, Westminster, London, S.W.1, who will in due course issue invitations to tender to firms on that Administration's approved list of tenderers.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended February 10 amounted to £E10,503, making the total from April 1 £E312,599.

Sir William Edward Garstin, G.C.M.G., G.B.E., of Welbeck House, Wigmore Street, W., formerly of the Indian Works Department, later Inspector of Irrigation in Egypt, and Under-Secretary of State for Public Works in Egypt, who was largely responsible for the Assiut Barrage and the Assuan Reservoirs, who died on January 8, aged 76, left estate of the gross value of £23,085 with net personalty £22,776. He left:—His Banner as Knight Grand Cross of the Order of St. Michael and St. George, hanging over his stall in the Chapel of the Order in St. Paul's Cathedral, all his decorations and Orders, his miniatures and silver plate, to his cousin, Colonel Henry Edward Garstin, D.S.O., R.A. To Cheltenham College (his old School), for the Museum, a large pair of elephant tusks marked as shot by him June 3, 1905; to the British Museum and Art Gallery, Bristol, all his stuffed heads, hunting trophies, and his collection of African arms and implements; to the Natural History Museum, South Kensington, five oil paintings of wild elephants, wild buffalo, lion, tiger, and roan antelope by the German painter Wilhelm Kuhnart, and the picture by Whymper of the Whale-Headed Stork. Two sketches by Howard Carter (one of Luxor Temple and one of Memnon Statues) to Mrs. Henry Wakeman, of Lowndes Street, S.W.; the picture of Philæ Temples at Sunset, by Lady Wenlock, to the Hon. Lady Lloyd, wife of the Governor of Bombay; his picture of a Mounted South African Yeoman, by Lady Butler, to the Dowager Countess of Airlie; £75 each (or £150 to the survivor) to Herbert Reeve and his wife if still in his service; £40 to his housemaid Hetty Harris if still in his service.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

Futures Irregular.

The Alexandria Commercial Company, in their report for the week ended February 26, state :—

Since our last report the futures market has been very irregular for Sakel and quiet but rather firm for Uppers. The net changes on the week are the following :—Sakellaridis : $0.05 down for March, $0.05 up for May, $0.50 down for July, $0.20 down for November, $0.25 down for January, 1926. Ashmouni : $0.30 up for April, $0.38 up for June, $0.25 up for October.

The Sakel market has been again subjected to violent fluctuations due to speculative manipulation. March contracts have firmly maintained their premium over May, despite the fact that spot Fully Good Fair cotton has undergone a heavy drop; it can now be bought at about parity March contracts, whereas a short time back $1 to $1½ premium was readily paid. The Uppers market has been firm but rather inactive. The recent advance in New York has not affected prices much, as the actual prices are generally considered rather high in comparison to American. Furthermore, cotton from Upper Egypt continues to come down steadily, and there is no doubt now that this year's production is almost as large as last year's. At the third February tender 1,500 krs. dockets were issued : the total during the month is 10,750 krs. Liverpool Egyptians have been very firm indeed; reports emphasise the poor selection of the available stocks, and point out that consumption of Sakel has now been reduced to the irreducible minimum. The week's receipts amount to 100,744 krs., against exports 184,006 krs.; the stock stands at 1,614,031 krs.

Spot.—Business continues very quiet at Minet el Bassal, and demand from abroad shows little or no signs of improvement. Sales amount to about 13,100 B/s, of which we estimate 4,800 B/s Sakel, 5,900 B/s Uppers, 1,900 B/s Zagora, 200 B/s Pilion, 100 B/s Brown, and 200 B/s White.

Sakellarides continues in very moderate request. Spinners attention has been mainly directed to the medium and lower grades, and only a very small inquiry has appeared for the better qualities, due, beyond doubt, to their very high prices, which have put them beyond the reach of most users. Spot differences are unchanged for Good and better and for Fully Fair and below; for Fully Good Fair they are rather easier, and for Good Fair rather dearer.

Ashmouni and Zagora continue in steady request, and there is a persistent demand for the top qualities at good prices. Spot differences are a little easier in the lower grades, unchanged for the medium grades, but decidedly dearer for Good and better.

Pilion.—A moderate business has been done, without much change in the spot differences from last week.

Brown has met with only a poor inquiry at about last week's rates.

White has been in fair request. Spot premiums and discounts are a little easier than last week.

Crop 1925.—The weather has now become settled, and sowing in the Southern Delta is well advanced; in the Central districts it has just started. Growers in general show the same tendency as last year for early sowings, and this is a rather favourable factor. Great care is being exercised by growers in selecting pure Sakel seed for planting, and it is to be hoped that next year's crop will be purer than this year's, in consequence of the steps taken to prevent any further mixing of cotton in seed before ginning.

LIVERPOOL COTTON REPORT.

Business on Fair Scale.

Messrs. Reynolds and Gibson report as follows for the week ended March 4 :—

Egyptian Spot.—A quiet, steady business has been done during the past week, and price fluctuations have been of a comparatively minor order. The feature of the week has been the renewed interest displayed in cotton of the Upper description, and a subsequent tendency for the quotations of this cotton to harden at the expense of Sakel. At the same time it is a curious fact that this week there have been several lots of spinners' cotton (Uppers) on offer for resale at reasonable prices. The majority of the spot business here has been for the best quality, for which about 22.25d. to 22.75d. is being paid. Fully good fair at about 20.50d. to 75d. comes next, and rather more interest has been shown in the fair to good fair quality. In Sakellaridis a small business has taken place in the "best," for which up to 40.00d. has been paid. Most of the inquiry, however, is still for the fully good fair cotton. The basis for this so-called bread-and-butter cotton has shown signs of wavering recently, and from what one hears buyers have had rather the best of it during the past few days. A slow but steady increase of interest in the low qualities, say, 15.50d. to 22.00d., has again been noticeable. Pilion, brown, and white cotton have all received a small share of attention, but business in these growths has been of a very limited extent. Sudan cotton has been neglected, with the sole exception of one lot of American seed cotton, which changed hands at 13.25d. Trade reports from Manchester have latterly shown some improvement, and inquiry on the whole shows signs of a distant broadening. Forwardings for the week ending the 27th ult. were returned as 12,156 bales. Estimated sales, 2,400 bales Egyptian and 50 Sudan. Quotations of upper and brown are advanced 30 to 45 points. Sakellaridis remains unchanged, with the exception of fair, which is reduced 20 points. F.G.F. Sakel to-day 35.30d.

The British Representative at Bucharest has forwarded a translation of a notice to debtors relative to debts contracted in England between November 11, 1918, and January 1, 1922, recently issued by the "Oficiul Pratilor Straine" and published in the *Universul*. The notice, which has further reference to the payment of the fourth instalment on February 14 last, calls attention to paragraph 7 (b) and paragraph 9 of the London Agreement and to Article 9 (b) and Article 10 of the Manchester Agreement. According to these articles debtors have the option of paying their instalments through the Banca Nationala, and the remittance of the fourth instalment to the creditor by the Banca Nationala can be made at the end of the year 1925 along with the fifth instalment, which is due on August 15, 1925.

CONDITIONS IN INDIA IN 1924.

Improving Trade Outlook.

The annual market review of Messrs. Premchand, Roychand, and Sons, of Bombay, gives a most interesting survey of economic developments in India in 1924. We give the following extracts :—

In India, while the year did not see any definite return to normal trading conditions, there has been a further general improvement, and the prospects for a more rapid revival of trade in the near future have become distinctly promising. For the fourth year in succession the monsoon was generally good, and crops were satisfactory. Exports of Indian produce, from which all restrictions were removed in the previous year, have shown an all-round increase, and the balance of trade during the year has been strongly in favour of India. With the final completion of the liquidation of stocks of imports accumulated during the short boom period of 1919-20, the markets are in a healthier condition, and although the improvement in trade has as yet been somewhat one-sided, there can be no doubt that the latent buying power of the country will make itself felt as soon as there is a return of confidence in the stability of prices. The development of more favourable conditions in the export trade has been accompanied by a notable improvement in the exchange value of the rupee, which opened with a rate of 1s. 5d. and closed with 1s. 6⅛d.

Together with the general improvement in trade the year has seen further developments in the placing of the internal finances of the country on a sound basis. The change from a series of annual deficits in the national accounts to an equilibrium between income and expenditure had been achieved in the previous year, and in introducing the budget for 1924-5 the Finance Member of the Government of India was able to estimate for a surplus. No new taxation was imposed, the Customs duties were not this year increased, as had been the case during previous years, and the improvement in revenue was obtained by a reduction in expenditure. While the Central Government have succeeded in steering clear of any further foreign loans, the credit of India in the financial world has been increased, and the improvement in the position is reflected in the enhanced market price of the rupee securities. Definite steps have been taken to ensure a progressive movement in the general financial position by the devising of a scheme for debt redemption and the holding of an inquiry with a view to instituting a scientific system of taxation. The redemption scheme provides for a call amounting to Rs. 4 crores from each year's revenue, during five years with effect from the year 1925-6, as an annual provision for redemption of the debt outstanding on March 31, 1923. The taxation inquiry has been instituted after full effect has been given to a drastic policy of retrenchment, and aims at revising the incidence of taxation and devising an equitable system to meet the changed conditions arising from the effects of the war on the level of prices and the increased State expenditure due to the reform scheme. During the year the short-term obligations of the Government of India, in the form of Treasury Bills, which had been first issued to the public under the stress of war conditions, were finally discharged, the outstandings being entirely paid off by July.

But while the general financial position exhibited these satisfactory features, in the money market the year was characterised by exceptional difficulties which, more particularly in the first half of the year, were of an unprecedented nature. An extremity of monetary stringency, of much greater severity than the customary annual conditions of the export season, was experienced in the early months of the year, and there was little material improvement until the second half of the year, well into the slack season. The record established by the high rates of interest of the Imperial Bank, which from 8 per cent. on January 3 was raised to 9 per cent. on February 14, and did not go below 7 per cent. until June, provide an indication of the striking extremity of the trouble which arose from more than one cause. The difficulties created were necessarily severe, and in some quarters there was a disposition, if not actually to lay at the doors of the Government of India the blame for the existing conditions, at least to impute to the Finance Minister a culpable disregard of the requirements of the business world. It would seem that there is always a group of critics that is only too ready to attribute monetary difficulties as due almost entirely to unsoundness in the official financial policy. On the other hand, in the opinion of practical business men, the present Finance Member has always shown sympathy towards trade requirements; and in point of fact Sir Basil Blackett has rendered valuable assistance to the money market during the year, alike by active intervention through issues of emergency currency and by refraining from operations which in the past have disturbed the market.

There is no doubt that the causes of the extreme stringency were of an exceptional nature. At the turn of the year 1923-4 the trade demand for money from Rangoon and Calcutta on account of the rice and jute crops had continued at high pressure to a later period than usual, and overlapped an exceptionally strong demand for finance in Bombay, where the ruling prices of cotton were at an abnormally high level. Cotton prices were at least Rs. 200 per candy above the average of the previous busy season, and on a crop of five million bales this meant that some Rs. 50 crores more money was needed to pay for the crop. At the same time the price of bullion was higher than purchasers up country were willing to pay, with the result that imports were restricted, and there was a check to the normal return of money from up country to trading circles. The holding up of money resources due to anticipations of lower rates for gold, which did not materialise until the second half of the year, was largely responsible for the prolonged nature of the stringency in the money market. In these circumstances the assistance rendered by Government proved inadequate. But the extent of the assistance given should at least be recognised. There were issues of nearly Rs. 14 crores of currency notes, against British Treasury Bills deposited in the Paper Currency Reserve in London, during the period of stringent money in the export season 1923-4, and material assistance was rendered by the large deposits which the

OIL WELL PUMPS AND SUCKER RODS. The result of 27 years' scientific engineering. They increase oil production and lower overhead costs. Every part is interchangeable and replacements can be made in the field without trouble. Send for catalogue.

Government of India left with the Imperial Bank. These deposits were higher than the cash balance of the Bank until after the close of June. In addition, the Imperial Bank utilised to the full amount of Rs. 12 crores the facilities for borrowing from Government provided by the Paper Currency Act.

During the year the first practical steps were taken towards the protection of Indian industries. A policy of discriminate protection had been recommended by the Indian Fiscal Commission in 1922, and was since accepted by the Government of India and the Central Legislature. In July, 1923, the Tariff Board was appointed with the object of advising the Government as to what means and what effect could be given to that policy. The Board was first directed to examine the claim of the steel industry in India for protection against foreign competition, and the results of the inquiry were made known in the year under report. While the Board did not accede to the full demand of the Tata Iron and Steel Company for a 33½ per cent. import duty, proposals were made for the imposition of tariff duties on imported steel for a period of three years; and these proposals, being accepted by Government and the Legislature, were incorporated in the Steel Industry (Protection) Act, 1924. Unfortunately, the benefits accorded by the Act were nullified by a notable fall in the prices at which foreign steel was imported in the second half of the year. As the Act itself provided for the imposition of additional or off-setting duties in the event of a fall in the price of imported steel rendering it ineffective, a further representation was made by the company, and towards the close of the year further protection by means of a bounty was afforded. The Tariff Board were also engaged during the year upon an inquiry into the claims of the paper and cement industries, and will be called upon also to deal with claims from other sources. Industries have to satisfy the Board that they possess natural advantages, that without protection they are not likely to develop in the manner desirable in the interests of the country, and that they are likely to be able eventually to face competition without the assistance of protection. The Indian cement industry has undoubtedly been severely handicapped in common with some other indigenous industries by competition from foreign sources. The claim of Indian cement for protection has, however, not met with general support, and it has been urged that the chief difficulty with which the companies are confronted arise from the fact that too many cement companies with large-capacity plants were launched in the boom period in excess of the market requirements for the cement they are capable of producing. But there is considerable evidence that the use of cement in India is expanding, and even if the demand for the product in this country is not as great as was believed when these companies were launched, there seems no reason why the imported article should be allowed to narrow the market still further, provided the Indian companies can produce cement at a cost which would not be prohibitive for consumers.

With the cotton mill industry passing through a difficult trading period, and with many mills faced with losses instead of profits, the question of the abolition of the cotton Excise duties became during the year 1924 of more than academic interest, and there arose an agitation for their removal. The Government have made no attempt to justify the retention of the Excise duty on economic grounds or from any other standpoint than that of expediency for purposes of revenue. The duty is paid whether a profit or a loss is made by the mills, and, having regard to the trading position and the heavy direct and indirect taxation now borne by the cotton-mill industry, it would seem imperative that Government should explore other avenues for raising the revenue now obtained by the Excise duty. Other industries in the country are, moreover, more leniently treated in the matter of taxation than the cotton-mill industry, and there would seem no justification for taxing the production of cotton piecegoods in India while jute, silk, woollen, leather, steel, and all other manufactured articles are not handicapped in this manner. The representations made by the Millowners' Association, which have been supported in the Legislative Assembly, have behind them wide public support, and it is to be expected that Government will at the earliest opportunity take the step demanded in the interests of the cotton-mill industry.

There was not much evidence of new industrial enterprise during the year, and the number of new companies of any importance that were registered was small. . . . many promising schemes had to be laid aside until a more propitious moment should arrive for their development, but well-established industries have found it difficult to obtain the capital necessary for desirable extensions. Although the difficulties have not as yet been altogether resolved, the year has seen a development towards a better situation; and while the overdue revival in trade is looming in sight, there is also promise of an industrial revival.

His Exalted Highness the Nizam's Guaranteed State Railways Company announces an interim dividend of 4 per cent. (less tax) on the capital stock, payable April 17.

Mr. F. A. Tomlinson, a member of the firm of C. Tattersall and Co., cotton brokers, Manchester, has been elected a director of the Manchester Ship Canal Company by the shareholders, to fill the vacancy caused by the death of Mr. J. D. Williams.

The condensing plant to be installed in connection with the new 6,000 k.w turbo set recently ordered by the Brighton Corporation, is to be supplied by Vickers, Limited, Barrow-in-Furness. This constitutes a repeat order for a duplicate of the Vickers Condenser put into commission in the same station last year.

In connection with the power station extensions for the Poplar Borough Council which are being carried out by Vickers and International Combustion Engineering, Limited, as main contractors, low-pressure flash evaporating and deaerating plant is to be installed, and this will be supplied by Vickers, Limited, Barrow-in-Furness, who are also constructing the condensing plant for the new 10,000 k.w. turbo set.

It is stated from Delhi that the *Gazette* has published the Government's proposals based on some of the recommendations of Lord Lytton's Committee on Indian Students in England, whose labours in 1921-22 were abruptly concluded owing to the refusal of the Legislative Assembly to grant the necessary expenditure. The Government of India considers that the Indian Students' Department of the High Commissioner's Office should be retained under a different title to carry on the work required of the central agency in England.

Near East Markets.

INDIA'S IMPROVING TRADE.

Nine Months' Imports.

H.M. Trade Commissioner at Calcutta (Mr. D. M. Clarke), in forwarding to the Department of Overseas Trade the December issue of the monthly trade returns, briefly surveys, as follows, the salient features of the returns :—

During the nine months ended December, 1924, as compared with the corresponding period of 1923, the value of the imports increased by Rs. 16 crores, or 10 per cent., to Rs. 184 crores, while the total exports, including re-exports, increased by Rs. 21 crores, or 8 per cent., to Rs. 268 crores. The exports of Indian merchandise showed an increase of Rs. 20,29 lakhs, or 9 per cent., and re-exports of Rs. 58 lakhs, or 6 per cent. The grand total of imports, exports, and re-exports amounted to Rs. 452 crores, as against Rs. 415 crores, or an increase of 37 crores, or 9 per cent.

The balance of trade in merchandise is in favour of India to the extent of Rs. 87½ crores. Of this amount Rs. 51¼ crores have been met by net imports of gold and silver, while a further Rs. 51½ crores represent Council Bills, purchases of sterling, and other Government remittances to the United Kingdom. The exchange during this period remained firm, and the telegraphic transfer rate on the last day of December was 1s. 6⅛d.

Although the total imports from the United Kingdom rose from Rs. 96½ crores to Rs. 98 crores, the proportion of British share fell from 57.7 per cent. to 53.3 per cent., while the undernoted foreign countries increased their percentages of the total imports :—Germany, from 4.7 to 6; Belgium, from 2.3 to 2.9; France, from 0.96 to 1; Italy, from 1.2 to 1.6; Japan, from 5.9 to 6.9; United States, from 5.6 to 5.8.

AGRICULTURE IN CZECHO-SLOVAKIA IN 1924.

Although Czecho-Slovakia is rightly regarded as pre-eminently an industrial country, and one that, therefore, depends for its prosperity upon a large export trade, agriculture plays a very important rôle in the economy of the State. In the first place, close upon half the population (52.52 per cent.) are, according to the census of 1921, occupied in agricultural pursuits. Secondly, a considerable quantity of the agricultural output is worked up in the industries for export, and is thus included in industrial output. This applies particularly to the sugar trade, beer, spirits, and malt production, starch and paper-making, and the provisions trade. Finally, the agricultural output has to provide, of course, for home consumption, and this task it accomplishes satisfactorily in respect of fruit and vegetables, potatoes, barley, sugarbeet, malt, and other less important products. In wheat and rye, however, large imports are necessary, and these have been unusually extensive during 1924, when the total grain and flour imports attained a value of 2,355 million crowns, compared with 870 million in 1923.

The total area of Czecho-Slovakia, according to the figures for 1924, is distributed as follows (in hectares, the figures in brackets representing the percentage of the whole) :—Arable land, 5,907,300 (42.1); permanent meadows, 1,384,700 (9.9); gardens, 146,700 (1.0); vineyards, 10,500 (0.1); pastures, 1,201,400 (8.6); forests, 4,652,200 (33.1); water, 78,100 (0.6); land built on or otherwise unproductive, 647,800 (4.6).

The areas under individual crops in 1924 were (in hectares) : Wheat, 606,800; rye, 838,900; barley, 679,100; oats, 864,300; maize, 157,300; potatoes, 634,500; sugarbeet, 302,700; hops, 8,800.

The total yield, in tons, for 1924 was as follows : Wheat, 930,000; rye, 1,180,000; barley, 1,040,000; oats, 1,230,000; maize, 240,000; potatoes, 6,210,000; sugarbeet, 7,810,000; hops (cwts.), 150,000.

In regard to the output of wheat, Czecho-Slovakia occupies the tenth place among the countries of Europe; in regard to rye, the fourth place; barley, fifth place; oats, sixth; maize, tenth; sugarbeet, second; potatoes, sixth; and hops, third. In respect of all these categories, with the exception of hops, Czecho-Slovakia occupies a lower place in regard to the area under cultivation in each case, so that in proportion to the quantity of land under seed, Czecho-Slovakia's crops are above the European average.

Wheat and rye imports totalled 494,000 tons, against 20,000 in 1923; those of flour and other milled products, 398,000 tons, compared with 240,000 tons in 1923. The main countries providing these supplies were Hungary, Austria, Germany, U.S.A., Yugoslavia, and Roumania.

NEW COMPANY.

Iraq Produce.

Iraq Produce Company has been registered as a private company, with a nominal capital of £5,000, in £1 shares, to carry on the business of merchants, etc., in respect of any produce (except dates for shipment direct or indirect to America), oil and minerals of Iraq or Persia (Bushire and Bunder Abbas excepted), etc. The subscribers (each with one share) are :—F. D. Samuel, Shell House, 25-37, Bishopsgate, E.C., merchant, and F. C. Strick, Baltic House, E.C., shipowner. Two directors are to be appointed by holders of shares No. 1 to 2,500, and two by holders of shares 2,501 to 5,000.

The British Vice-Consul at Prague reports that in view of the development of heavy motor lorry and steam wagon transport a great deal of work will probably require to be done on the roads in the course of the next few years, and there would appear to be an opening for a British firm specialising in tar macadamisation and concrete road making which would be prepared to establish a branch in Czecho-Slovakia.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Minorities in the Balkans.

Among the subjects discussed in Geneva last week by the Council of the League of Nations none concerned the Near East more closely than the refusal of the Greek Government to ratify the Protocol for the protection of Bulgarian minorities in Greece that had been signed by the Greek representative last September and formally endorsed by the League. It was one of the most hopeful signs of a new spirit in the Balkans when Greece and Bulgaria severally pledged themselves to the League to utilise the services of the Mixed Commission appointed to supervise the exchange of Bulgars and Greeks for all questions affecting the respective minorities in the two countries. In other words, Greece and Bulgaria agreed to put into operation under international supervision the minority clauses to which both were pledged by the Treaty of Neuilly. It was an eminently sensible arrangement, beneficial to both parties in view of all the existing circumstances. Unfortunately an attempt was made in Bulgaria to represent the Protocol as a justification of Bulgarian claims and contentions, and in this way undue attention was called to the agreement. No fault, however, was found with it by Greek public opinion until Yugoslavia denounced her treaty with Greece. Rightly or wrongly, the Greeks decided that the denunciation was prompted solely by the existence of the Protocol, on the ground that it would encourage Macedonian subjects of Yugoslavia to call themselves Bulgars, and might lead to a demand for international supervision in regard to minorities in Yugoslavia. Immediately a variety of arguments against the Protocol were discovered in Greece, and the Chamber refused to ratify it.

The Problem Still Unsolved.

It was the situation created by the Greek refusal to ratify the Protocol with which Mr. Chamberlain had to deal as "rapporteur" at the Council meeting on March 14. He disposed at once of the contention that the terms of the Protocol were in any way in contradiction with the general dispositions of the Minorities Treaties, and announced that a *questionnaire* would be addressed to the Greek Government, calling for a statement of the steps taken to carry out the provisions of those treaties. Greece, he stated, would be invited to say what measures had already been taken to this end, what it was proposed to do further, what were the needs of the Slav-speaking minorities in regard to religion and public education, and what measures had been adopted or were to be adopted to meet these needs. M. Venizelos replied at once by pleading guilty on behalf of Greece and admitting that Mr. Chamberlain's criticisms were justified. The Greek Government's intentions, however, were correct, and he urged that it would be better able to give effect to those intentions if the Protocol were out of the way. Whether the Council of the League is of a contrary opinion or not, it is hardly likely that it will call upon Greece to ratify an agreement which is liable to embroil her with Yugoslavia. The business of discovering a satisfactory solution of the minorities problem, therefore, remains. The whole incident emphasises the necessity that any Balkan settlement, to be effective, should be imposed from without. The Protocol represented a wise attempt on the part of Greece and Bulgaria to settle the differences between them, and it encountered the opposition of Yugoslavia. If the principle embodied in the Protocol had been imposed in the first instance by the League of Nations the Yugoslav Government would, presumably, have raised no objection.

The Yugoslav Elections.

The Yugoslav Government has decided to annul the Parliamentary mandates of the Croatian Peasant Party, the followers of M. Raditch, on the ground that the leader has been guilty of conspiracy with Soviet Russia and of favouring the detachment of Macedonia from Yugoslavia. In a matter of this nature public opinion in Great Britain will have difficulty in understanding Yugoslav procedure, and it will be of interest to have a

Digitized by Google

full statement of the reasons that have prompted the decision. If the Courts had passed sentence on M. Raditch and other leaders of the party, it would follow, as a matter of course, that they forfeit their seats in Parliament; but that the whole party should be proscribed after the individual members had been allowed to stand for election seems a drastic course to adopt. The immediate effect will be, if, as is stated, the vacant seats are not to be filled by further elections, that the Government, instead of a majority of nine, will have one of over fifty. Such a majority may facilitate the business of the Skupshtina, if a quorum is available, but whether the cause of Yugoslav unity will be promoted must be left an open question. At the moment of writing it appears that the Verifications Committee of the Skupshtina, on which the Government is represented by a majority, will make the formal pronouncement in regard to the fate of the Raditch mandates. As a preliminary step it has called for a fuller statement of the Government's views. In the meantime the Opposition *bloc* threatens to take no part in the proceedings of Parliament if the mandates are annulled.

The Kurdish Rising.
